REPORT ON THE FINANCES.

DECEMBER, 1839.

TREASURY DEPARTMENT, *December 3, 1839.*

The undersigned respectfully submits to Congress the following report on the finances, in obedience to the "act supplementary to the act to establish the Treasury Department."

It is gratifying to be able to state, notwithstanding the embarrassments of the present year, that the revenues of the General Government have been increased, the expenditures diminished, and most of the Treasury notes redeemed.

REVENUE AND MEANS FOR 1839, EXCLUSIVE OF TRUSTS AND THE POST OFFICE.

The balance in the Treasury on the 1st of January, 1839, which could be considered available for general purposes was.....\$2,466,961 95

The data on which this computation rests are in the table annexed, (A.) The receipts from customs, the first three quarters, as appearing on the Register's books, are.....\$18,328,393 50

This includes about two millions and three-fourths collected last year in Treasury notes, but not carried on his books till 1839. From this cause the actual receipts in this year will, to that extent, appear larger than they ought.

Receipts from lands the first three quarters, including also some collected last year in Treasury notes..... 5,417,286 31

Miscellaneous receipts..... 125,208 78

Estimated receipts for the fourth quarter from all those sources..... 5,700,000 00

Receipts on some of the debts against banks not available on 1st January, 1839, but since paid..... 1,322,686 00

From the third issue of Treasury notes under the act of March 2, 1839..... 3,857,276 21

Aggregate means.....\$37,217,812 75

EXPENDITURES FOR 1839, EXCLUSIVE OF THE POST OFFICE AND TRUSTS.

Civil, foreign, and miscellaneous, for the first three quarters	\$3,649,508	23
Military, for the first three quarters.....	10,791,799	21
Naval, for the first three quarters.....	4,713,701	57
Estimate for all, during the fourth quarter.....	5,600,000	00
Funded debt for the year.....	14,658	98

24,769,667 99

Redemption of Treasury notes in the first three quarters, interest as well as principal.....	9,891,759	83
--	-----------	----

This includes two millions and three fourths paid in for duties and lands last year, but not carried on the Register's books till 1839. From this cause the expenditures on that account will appear larger by that amount than they actually have been within those quarters.

Estimated amount of notes redeemed in the fourth quarter	1,000,000	00
--	-----------	----

Aggregate payments.....35,661,427 82

Leaving an available balance of money in the Treasury on the 31st of December, 1839, of.....	1,556,384	93
--	-----------	----

\$37,217,812 75

General exhibits of the receipts and expenditures in 1838 are presented in the table annexed, (B.)

The funds computed, to be not available nor applicable to public purposes at the commencement and at the close of the present year, can be seen in the table before mentioned, (A.)

Details of the expenditures in the first three quarters of 1839 are also given in the subjoined statement, (C.)

PUBLIC DEBT AND TREASURY NOTES.

The condition of the small remains of the funded debt has not materially altered since the last annual report. A statement of it, with the several payments made within the year is herewith exhibited, (D.)

Though incommoded by repeated pressures in the money market and suspensions of specie payment by the banks within the last three years, the interest and all the principal due on that debt, as well as on Treasury notes, have been punctually paid in specie whenever desired. A detailed statement of the issue and redemption of Treasury notes during 1839 is annexed, (E.)

Not more than one fourth of a million of the first and second emissions, and two millions and a half of the third, will probably remain outstanding at the close of the year. The former emissions have been for some months redeemable, but the last one does not begin to be till March, 1840, except as previously offered in payment of public dues. The aggregate of two millions and three fourths of principal is therefore all that is computed will be unpaid of nearly twenty millions, which were issued since October, 1837, in consequence of indulgences granted to the

merchants on their bonds, and the banks on their deposit debts. At no time has the amount of notes outstanding been allowed to exceed ten millions, and the present very reduced aggregate unredeemed is less than the sums still owing from the banks that suspended specie payments in 1837, and from the Pennsylvania Bank of the United States on its bond due in September next; and might with ease have been paid during the present year had the money been received on those claims.

EXPORTS AND IMPORTS WITHIN THE COMMERCIAL YEAR 1839.

The exports during the year ending September 30, 1839, are computed to have been \$118,359,004. This is \$9,872,388 more than those in the year 1838.

Of the whole exports only \$17,408,000 were of foreign origin; and of the excess in exports over 1838, only about five millions were domestic produce.

The imports during the same year were about \$157,609,560, being the very large excess of \$43,892,156 over those during the previous year. This may be a solution of a portion of the pressure in the money market. The difference between the imports and exports, being \$39,250,556 in favor of the former, is larger than in any year, except three, since 1789, and is much larger than any difference in the valuation of the same articles with the profits in the foreign trade added. It must, therefore, except so far as reduced by an unusual quantity of goods consigned here from abroad, and yet in store unsold, be a very decisive evidence of an increased indebtedness by this country to other nations. And except so far as this new indebtedness may consist of stocks sold and the proceeds returned here in merchandise, it must furnish another proof of one immediate cause of the present pecuniary pressure.

The history of our commerce during the twenty years from 1818 to 1838, presents a singular change in the last half of that period, which tends strongly to illustrate the correctness of these suggestions. During the first half of it the excess of imports over exports was only about seventy-five millions of dollars, or in the proportion of nearly seven millions and a half annually on an average.

But during the last ten years of it the excess was nearly two hundred and twelve millions, or over twenty millions annually; and thus more than two hundred and fifty per cent. greater than it had been. Supposing that the seven and a half millions were composed principally of the fair profits and difference in valuation, the excess over that rate in the last ten years must constitute a debt, either mercantile, State, or corporate. It equals nearly one hundred and thirty-seven millions before 1839. The debt thus computed to have been created abroad, by stocks and otherwise, within that period, will, with the amount of previous indebtedness, form an aggregate quite as large as has been estimated by many from other data.

Further particulars, possessing a general interest and relating to this subject during the last six years, are exhibited in the statement annexed, (F.) Additional information of some importance concerning our exports and imports from the commencement of the Government to 1838, inclusive,

has been prepared, and is subjoined in other tables, (G and H.) These tables are intended to be in a form convenient for reference, and are calculated, by easy as well as extensive comparisons, to throw new light on several subjects of commerce and other branches of industry connected with the finances. They exhibit not only the whole exports and imports in each year, but the consumption of the latter; and the changes in the whole aggregate value of each principal article, whether exported or imported, and the progress of our foreign trade to and from each State separately, as far back as is practicable, and to and from each country of much commercial importance abroad. A few of the most striking results are condensed in a note, (I.)

ESTIMATE OF THE RECEIPTS AND EXPENDITURES FOR 1840.

For reasons hereafter to be explained, the receipts into the Treasury the ensuing year cannot be estimated so high as in 1839.

From the best information possessed by this Department, it is computed that the aggregate of them available for public purposes will not exceed \$18,600,000, viz: from

Customs	\$15,000,000 00
Lands	3,500,000 00
Miscellaneous	100,000 00

Add to these the balance available and applicable to other purposes, which it is supposed will be in the Treasury on the 1st of January, 1840.....	1,556,385 00
--	--------------

The efficient means in that year will then amount, in the aggregate to	20,156,385 00
--	---------------

If Congress should make appropriations to the extent desired by the different Departments, the expenditures for 1840, independent of the redemption of Treasury notes, are estimated at.....	20,000,000 00
--	---------------

Including all the Treasury notes to be redeemed, the aggregate expenditure would be about.....	22,750,000 00
--	---------------

This would leave a deficit in the Treasury at the close of the year, amounting to.....	2,593,615 00
--	--------------

But there will be due from the United States Bank, in September next, on its fourth bond, about.....	2,526,576 00
--	--------------

The principal now due on the Treasurer's deposits in other banks, which suspended specie payments in 1837, is	1,149,904 00
---	--------------

Should all these claims be collected in 1840, they would prevent a deficiency, and leave an available balance in the Treasury of nearly.....	1,082,865 00
--	--------------

It is not, however, considered prudent to rely exclusively on the collection of these debts.

One mode, then, of obviating any difficulty from that circumstance, will be to reduce the aggregate of new appropriations, by postponing some and lessening others, so that the means probably available will be

sufficient to meet all calls upon the Treasury, and leave in it an average balance of about two millions.

It is believed, for reasons enumerated hereafter, that such a reduction is possible without essential injury to any useful object, and that this balance is the smallest which is adequate to secure promptitude and good faith in public payments so heavy in amount as ours, so unexpected at times in the demands for them, and so dispersed over a wide territory. If the appropriations are not thus reduced it will be wise to provide seasonably in some other way for the amounts of the contingent deficiency, and of such a balance.

According to the opinions of the different Departments as to the sums of money proper for each, and which constitute the basis of the estimates submitted to Congress, the new appropriations required for the next year will equal the sum of..... \$18,280,600 55

Viz:

Civil, foreign intercourse, and miscellaneous.....	\$4,981,344 19
Military services, pensions, &c.....	8,213,610 74
Naval service.....	<u>5,085,645 62</u>

For further particulars as to these, see the annual estimates herewith submitted, (J.) Besides these, the permanent appropriations which, by existing laws and the modification of them recommended, first become chargeable on the Treasury in 1840, amount to \$1,586,000. They are in the War Department \$1,236,000; in the Navy, \$340,000; and public debt, \$10,000. The principal on Treasury notes falling due will be about \$2,750,000 more. The appropriations already made and chargeable, which will remain uncalled for at the end of the present year, are estimated by the different Departments at the further sum of \$11,827,371; though that is considered by the undersigned as likely to be about two millions too small. Of these they compute that nearly \$8,270,793 will be required, in order to accomplish the objects contemplated by them. It is proposed to apply \$3,014,711 to the service of the ensuing year without reappropriation; and the residue of about \$541,866; not being required in order to accomplish these objects, will go to the surplus fund. It therefore follows, if all the new appropriations called for are made, that the whole charge upon the Treasury in 1840, exclusive of the Treasury notes outstanding, will amount at least to \$31,152,106, of which, as previously observed, it is computed that \$20,000,000 will be expended within that year for ordinary purposes, or two millions and three-fourths more, including the redemption of Treasury notes. From these statements it must be perceived that our condition in relation to the deposit of another instalment of public money with the States remains much the same as at the close of the year 1838. Consequently, the views then expressed by the Department have continued to govern its course.

This state of the finances renders it also unnecessary to submit any remarks upon the impolicy of providing for the additional deposit or distribution of surpluses not likely to occur, or for any donation of the

proceeds of the public lands, while they are all needed to defray the ordinary expenses of the General Government.

Besides the further objection to some of these measures arising from their apparent conflict with constitutional principles, it must be manifest that if the proceeds of the lands should be given away when needed to discharge the appropriations, the deficiency must be made up by the unpleasant alternative of a resort to loans or increased taxation.

EXPLANATIONS CONCERNING THE ESTIMATES OF RECEIPTS.

The estimates of receipts from duties and lands during the next year have been made lower than for 1839; for the following reasons:

A further reduction of certain duties, amounting to nearly \$800,000, will take place after the close of the present year. It likewise happens that subsequent to a large importation and a fall of prices in articles exported, as in 1839, the amount of imports often declines for one or two years. After 1825, it declined uninterruptedly for six years.

The contractions and expansions of our paper currency have at times proved another striking indication of the reduction and increase in importations. Without dwelling here on the intimate connection between them as cause and effect, by means of the foreign exchanges, and the necessity, after overtrading and overissues by the banks, of drawing on them and adjusting large balances in specie, it may be observed that a diminution in the circulation of paper has been going on for several months. Hence a diminution in the imports has already commenced, and is confidently expected to continue for some time.

The country is also supposed to be supplied with foreign merchandise in greater abundance than it was a year ago. This will lead not only to a reduced demand for the importation of more goods, but to a greater export of what is already here to other and better markets, and thus by increased drawbacks, as well as diminished imports, materially lessen the net receipts from customs.

The price of some of our principal articles of export being lower, the same quantity will likewise furnish less ability to make purchases abroad; and where the quantity is larger, the commercial embarrassments both there and here will tend to prevent buying, on either side of the Atlantic, much beyond what is needed for early consumption. The greatly increased liabilities on the part of many corporations and States, for the payments of interest and dividends on their stocks owned by foreigners, will still more sensibly affect the revenue. Those payments must require millions of exports either in produce or specie, which will lead to no returns in additional imports. It is believed that within a few years past an annual tax or drain on this country has thus been created, equal to twelve or thirteen millions of dollars.

This is a new and important element, besides overbanking and overtrading, to disturb the industry, the commerce, and finances of the Union. Its rapid growth has been accelerated by the distribution of the surplus in deposit among the States, tempting them in several instances to new and unprofitable enterprises, and stimulating delusive hopes of still further distributions. Its influence for evil has been aggravated by a

few other causes, some of them temporary in duration and limited in extent, but others diffused in a degree over considerable portions of the civilized world, and presenting some singular anomalies, in credit, currency, and trade. But without enlarging on the consideration of them here, the following conclusions may be regarded as inevitable.

Should the States not speedily suspend more of their undertakings which are unproductive, but, by new loans or otherwise, find means to employ armies of laborers in consuming rather than raising crops, and should prices thus continue in many cases to be unnaturally inflated, as they have been of late years in the face of a contracting currency, the effect of it on our finances will be still more to lessen exports, and consequently the prosperity and revenue of our foreign trade. It will also impede the sale of the public lands, by diverting labor from the soil to works which, for some time, must be wholly without profit. Circumstances like those, with the scarcity of money and high rate of interest abroad produced by them and other occurrences not necessary to be now repeated, have already diminished the income in the present year below what it otherwise would have been, and will probably manifest their power much more in the year to come.

The estimates for revenue from lands have been reduced the most in proportion, because, besides the diminution of sales which will probably be caused by the present and prospective scarcity of money and fall of the prices of produce, the amount received from them during the present year has, as was anticipated by the Department, been much increased by the temporary influence of the late preemption law.

The unusual quantity of land newly advertised during the year 1839, and the consequent large receipts connected with that cause and the preemptions, are circumstances not likely to recur in 1840. It is believed, therefore, that the low estimates submitted as to lands will prove sufficiently high, unless a graduation bill should pass. The effect of such a bill, judging from reason and from analogy to the graduated prices, under which lands are now selling, on account of the Chickasaw Indians, at Pontotoc, much more freely than elsewhere within the same State, would be to add considerably to the revenue for a few years.

EXPLANATIONS OF THE ESTIMATES AS TO EXPENDITURES AND OF SOME FURTHER REDUCTIONS IN THEM.

The estimates of expenditure for ordinary purposes in 1840 are in the aggregate about five millions less than what it is computed will be spent in 1839. This great reduction has been proposed, although the expenses of 1839 will be quite six millions less than those of 1838; and those of 1838 were somewhat less than the expenses of the previous year.

The various items of new appropriations asked for are, as usual, in the amounts requested by the different Departments having charge of the different subjects. If any omissions or miscalculations occur in them, they must, therefore, happen from inadvertence by those officers best acquainted with the business within their own peculiar province.

But, in the present condition of the country and the finances, it is not expected that much necessity will arise, either in the opinion of those

Departments or of Congress, to make important additions to the sums now requested. On the contrary, it is confidently hoped that some reductions from them can be effected without material injury to any great national interests.

It is difficult in a young, growing, and enterprising community, to restrict public expenditures within reasonable limits. Certain exigencies also occasionally occur requiring extraordinary sacrifices. When patriotism and honor demand large pecuniary contributions, the latter are richly repaid by their tendency to impart vigor and security to the former. But an expenditure of twenty millions for ordinary purposes, though much reduced from the aggregate during a few years past, is believed by the undersigned to be more, instead of less, than sound policy justifies, while the present unusual embarrassment in moneyed affairs shall continue. Indeed, strong doubts exist if it be not more than the real necessities of the General Government usually require. The reasons for this conclusion are briefly these: It is true that such an expenditure, equalling only a dollar and a fourth per head of our population, is not a very large one to sustain a confederacy with such widely extended duties as this. If reduced to the amount of imposts, which are the whole real burden, and if compared with the taxes elsewhere, equalling sometimes fifteen dollars per head, under political institutions of different forms and less frugality, the pressure from that source here would seem to be remarkably light.

But it should be remembered that the people of the United States are obliged to defray a large amount of other public expenses, imposed upon them by State authorities, and, at the same time, that their forms of government, among various excellences, have been preferred particularly for their economy. Hence the true question with them in respect to expenditures is, not how large burdens can be borne, but how much can be dispensed with. It is not what is splendid, but what is useful and necessary; not how much can be collected from them without suffering, but how much can be left with them, both of money and power, and insure all the benefits of the social system.

As the interests and wishes of the people formed the Government, they should control it.

Considering these circumstances, and the severe simplicity and frugality befitting a republic, what amount of public expenses is necessary?

In 1831, it was calculated that the ordinary expenses of the General Government need not exceed fifteen millions of dollars. The undersigned expressed an opinion four or five years afterward, that sixteen or seventeen millions would then be sufficient; and he still believes that, notwithstanding the continued increase of our population and wealth, they might with prudence be limited to eighteen millions in 1840, and, perhaps, after the expiration of most of the present pensions and the removal of the rest of the Indians, be for some time diminished still lower.

Indeed, in point of fact, so recently as 1834 and 1835 the whole yearly expenses were only seventeen and eighteen millions, independent of the public debt. Though the amount has since been increased by wars, pensions, Indian removals, and other peculiar causes, deemed at

the time, in most cases, sufficient to justify the appropriations by large and often unanimous votes in Congress, yet a reduction has been going on during 1838 and 1839, and all the ordinary expenditures would not in the present year, but for the pension list and Indian disbursements, exceed the smallest sum last mentioned. The whole increase, however, has not been confined to these two items, nor could the whole reduction safely be, which, in the opinion of the undersigned, sound economy appears to require.

In the inquiry as to the amount of expenditure which should be considered necessary, light may sometimes be obtained by adverting to the increase of population and wealth. Looking to those, if the expenditure, independent of the public debt, was reasonable in magnitude during the first eight years of our present Government, the sum of seventeen or eighteen millions annually would not now be greatly disproportionate, nor probably be found either much deficient or very unnecessary. It would be nearly five times the average amount about half a century ago, while our population, since that time, has undoubtedly increased more than four-fold, and our wealth and resources have probably increased in a ratio still larger. The last remark, however, is a matter of inference from various data more or less accurate in themselves: such as the average importations, which have only doubled in the last forty or fifty years; the foreign tonnage, which has increased but in a like ratio; the exports of domestic produce, which have quadrupled since 1792; and the whole tonnage, including domestic as well as foreign, which has also quadrupled and become more than proportionally efficient by introducing into it over eight hundred steam vessels.

Other data, less accurate but not less sure indications of a still larger increase in wealth, are to be found in the vast extension of agriculture, manufactures, the mechanic arts, and various useful applications of steam, as well as in opening roads and canals; building up flourishing cities, enlarging our territory, diffusing practical education, and multiplying, by ways too numerous for repetition, the comforts, advantages, and powers of a great and prosperous people.

But such general considerations, though beneficial in comparative examinations, are usually better tests of the ability to pay than of the propriety of the expenses themselves. A scrutiny into the principal items of the latter, and their amounts at this time, compared with those from forty to fifty years ago, will aid much, in connection with the considerations before mentioned, in forming a more accurate judgment on the propriety and necessity of most of the present expenditures. It will show what branches have since sprung into being, and what, from their character, should or should not be longer continued.

Some suggestions were submitted on this subject in the last annual report, and its importance must be the excuse for adding more on this occasion. The expenditures nominally connected with foreign intercourse have increased least. Those connected with the War Department have increased most. The civil and miscellaneous charges continue comparatively moderate. But several of our heaviest burdens, such as the Navy, the pensions, Indian disbursements, and a class consisting of light-houses, fortifications, roads, and improvements in harbors and rivers,

have augmented very largely since the first eight years of the Government. Some of them have increased more than fifty-fold.

On a careful examination it will be seen that various vindications, more or less plausible, have been made for these additions at different periods; but they cannot be now applicable for the continuance of them all.

Thus, the enlargement of our naval expenses from less than half a million yearly before 1795, to more than six millions now, was in some degree justified, from time to time, as an efficient aid to foreign intercourse with semi-barbarous people, and for the protection of our commerce and citizens against injustice or rapine, whether in remotest Asia or nearer quarters of the globe. The increase of pensions from only forty or fifty thousand dollars yearly at first, and only eighty thousand as late as 1811, to nearly four millions now, was defended on various grounds. But in most cases it was considered less as a liberal charity than as a payment of the revolutionary debt to a patriotic soldiery who advanced arduous services in the field rather than money, and endured sufferings in the establishment of our liberties which a grateful posterity should endeavor to remunerate. The Indian expenditures, enlarged from a few thousands to three or four millions of dollars, have been regarded as the most efficacious means of improving permanently the condition of the aborigines, as wisely extending the boundaries of civilization over the new States; and, in a fiscal view, as profitable advances of money soon to be fully repaid by the sales of lands to which the Indian title has thus been amicably extinguished. The other group of items, for forts, light-houses, roads, harbors, and rivers, some entirely new, and the whole augmented from fifty thousand dollars to three and four millions, have, on several occasions, and to a proper extent, been considered as prudent precautions for national defence and useful aids to the extension and security of commerce. Some expenses of smaller magnitude may have swollen quite as fast as these; others with less rapidity; and others still have been wholly created since 1797. Part of them have apparently become a permanent charge on the Treasury, and part undoubtedly may be, as others have been, properly discontinued. But, without time now to go into the consideration of details as to any except those four enumerated classes, it may be added that these are, when united, nearly quadruple all the other ordinary expenditures; and either of those four classes alone amounts yearly to a sum about equal to all the other ordinary expenditures, and more than the whole of every kind, except the public debt, each year, from 1789 to 1797.

The precise periods when the greatest increases happened, and the ratio of them, have not kept a uniform pace with the progress of population and wealth. In many respects the ratio has not been nearly so great during the last ten or twenty years as in some previous terms. Thus, the whole expenses of the Government in 1793, with the exception before mentioned, were about three millions yearly; and in 1818, after the lapse of a quarter of a century, had increased, though in a period of peace, to fifteen millions of dollars, or five-fold, while our population in that period had only doubled. But, during the next sixteen or seventeen years, as in 1834 and 1835, the expenses had enlarged not twenty-five per cent., while our population had advanced at least sixty-six per cent.

During the present year, though in intermediate periods, chiefly from Indian wars and removals, considerably higher, they will not exceed the amount in 1818 more than sixty-six per cent., while our population has since increased more than eighty-four per cent. Again, take the progress in the ordinary civil expenses, which include those of the executive, legislative, and judicial departments, miscellaneous and foreign intercourse: all of them united were but a little over half a million of dollars in 1793, while in 1818 they had increased to nearly four millions, or eight hundred per cent., though our population had augmented only one hundred per cent.

But since the last date, that class of expenditures has not enlarged forty per cent., having been not over five millions and a half in either 1837, 1838, or probably 1839, while our population has advanced eighty-four per cent., or more than double that rate. All can thus perceive where, when, and in what, the greatest increases have occurred; the principal reasons, whether sufficient or otherwise, assigned for several of them, and the ample opportunity which still exists for further retrenchments, so far as the public interests are supposed by Congress to require them, in any or all of these large burdens on the public Treasury.

As some encouragement to hope for a continued reduction in several of them, without injury to any of the important establishments of the country, it may be observed, that portions of these items of expense, and several smaller ones, must cease forever with the temporary occasion for them, and others will not, when once completed, require renewal soon, if ever. Such are numerous special donations and grants, durable public buildings of all kinds, dry-docks, improvements at navy yards, forts, arsenals, and arms, roads and harbors constructed, obstructions in rivers removed, the manufacture of weights and measures, the survey of the coast, much of the removal of the Indians, the extinguishment of Indian titles, and most of the existing pensions. But unpleasant as is the task of reduction, it may also become necessary to go further and diminish on a general *pro rata* scale or otherwise, the compensation to all officers, civil and military, executive, judicial, and legislative. It is surely much better to do this, so far as the public exigencies may require and justice sanction, than to expose the Treasury to bankruptcy by continuing to make appropriations beyond the certain means provided for the payment of them, or to resort, in a period of peace, to the spendthrift and suicidal policy of effecting permanent loans to defray ordinary expenditures. Peace is the time to pay rather than incur debts; and it would be wiser for any nation even to hoard during peace than to borrow largely, and thus encumber still more those energies and resources which are naturally crippled by war, but whose whole vigor is so conducive to its success.

The preceding remarks are applicable to ordinary expenditures. But for extraordinary ones such as, within a few years past, the expensive removal of the Creeks and Cherokees, the Black Hawk and Florida wars, while equal caution may well be exercised in deciding on their necessity, yet when once that is admitted, less objection exists to temporary measures for relief, like Treasury notes or short loans, provided a permanent increase of taxation is not likely to be required in the end.

In voting for extraordinary charges, as well as in sanctioning, from

sympathy or justice, unexpected appropriations towards large private claims and interesting local objects, it often happens that heavy payments are imposed on the Treasury for purposes not contemplated in the ordinary estimates.

And the obvious propriety of generally making at the same time some new provision of means adequate to the discharge of such additional burdens is sometimes unfortunately overlooked. But, when acting on these or other cases, if Congress cannot, consistently with its views of duty to the country, adopt the course suggested, and restrict the amount of appropriations, whether ordinary or extraordinary, to the certain current revenue, the only remaining courses which seem defensible are these: either to provide for recalling portions of the public money now deposited with the States, or establish an adequate system of direct taxation, or at once resort to the contingent power contemplated in the existing laws concerning the tariff when changes become necessary for purposes of revenue, and restore the duty on several articles of luxury now free.

ON SOME PERMANENT SAFEGUARD UNDER FLUCTUATIONS IN RECEIPTS AND EXPENDITURES.

Much has at times been wisely done by Congress to supply means for meeting unexpected deficiencies. But all legal provisions heretofore adopted for that purpose having expired, our financial operations will be constantly exposed to danger unless some permanent safeguard under contingencies is established.

These circumstances must constitute an apology for once more explaining some of the grounds in favor of such a measure, and earnestly asking speedy legislation concerning it.

The principal sources of our present revenue are sensibly affected by fluctuations not only in commercial prosperity, but in the crops, the banking policy, and credit systems of even foreign nations. The influence of these causes seems to become yearly more changeable and more uncertain in its extent.

Numerous illustrations in support of these views have been referred to in former reports. Some of them show a sudden and great falling off in the regular receipts, though during peace, as the duties in 1816, from nine millions in one quarter to only three in the next; and as the sales of public lands, from twenty-four millions in 1836, or an amount over half of all received in the previous forty years, to less than three millions in 1838. But the returns from the districts in some States, during the last two years, present additional facts equally striking on this subject.

In Michigan, for instance, the sales of public lands in 1836 exceeded five millions of dollars. They fell in 1838 to only \$154,284; and in Mississippi, where in 1835 and 1836 they exceeded three millions each year, they fell in 1838 to only \$96,636. As before intimated, a portion of such extraordinary fluctuations results from the vacillating character of the sources from which our revenue is derived. But most of them are evils inseparable from the periodical contractions and expansions incident to the present defective system of banking, in a country so full

of enterprise as ours, with such freedom in pursuits, such facilities of intercourse, and such strong temptations to rash speculation.

The fluctuations, however, are not confined to the receipts. The expenditures which may be sanctioned by Congress annually are very uncertain in their amount, as well as doubtful in the proportion of them which will be called for within the year, or in any particular portion of it.

All these, and similar considerations in favor of some permanent provision on this subject, apply with still greater force than they have heretofore. The available balance in the Treasury to facilitate its operations is much smaller than has formerly been usual. The receipts on the debts still due from banks, after two previous disappointments as to some of them, must be regarded with increased doubt; and if they should be paid within the coming year, the outstanding Treasury notes become redeemable in the first half of it, and must be discharged some months before the bond of the United States Bank falls due in September.

The introduction of steam in voyages across the Atlantic, besides the great revolution it must produce in other respects, will so expedite orders and imports as to produce a sensible departure from the former more uniform periods of laying in stocks of certain kinds of merchandise in advance, and must thus add to the irregularity in our receipts from imports, as well as to the uncertainty in previously estimating their amount.

The practice of incurring expenses in certain cases, sometimes legislative and sometimes military or of a different character, in anticipation of appropriations, and occasioned by unexpected necessities or unusual delays, seems to be increasing. It augments the risk of a temporary deficiency because large sums thus become payable in a mass, and forthwith, from the Treasury, when most of the members of Congress, at the time of making the appropriations, expect that the burden will be spread somewhat equally over the whole of the ensuing year.

Why then should not a constant safeguard, or some permanent remedy under such irregularities, be provided? The omission to do this can hardly be considered the true check on extravagant expenditure, as that check would seem to consist rather in a forbearance to make unnecessary appropriations, than in a refusal to provide ample means for paying with promptitude under all probable contingencies what has already been appropriated, and has thus received the deliberate sanction of Congress. The national pride, no less than its honor and credit, appears to be concerned in adopting some measure on this subject, stable, efficient, creditable to free institutions, and possessing a paramount influence to preserve unspotted the public faith.

The States now possess, separately, quite as deep an interest in such an arrangement as the General Government, since a blow on the credit of the latter would, like an electric shock, be felt through the whole of them, and inevitably depreciate still more their immense amounts of stocks.

It is hoped that an actual failure to furnish means to make prompt payment, under all contingencies, and thus producing the very violation of good faith so much to be deprecated, will not be necessary to awaken

its guardians to the urgent importance of some such remedial provision—a measure without which, in the shape of an investment or large balance on hand, or authority given to postpone certain classes of appropriation when the revenue proves insufficient for the whole, or some power to borrow money, or issue, on interest, when necessary, drafts or exchequer bills, no financial system in any enlightened country has been, or can be, long administered with safety and honor.

In our system the provision on this subject was very uniform and permanent, till the extinguishment of the national debt in 1835. Previous to that time, a large balance beyond the expenses for ordinary purposes was generally collected, and being kept on hand till near the close of the year, so as to assist in any contingency, was then, if not thus wanted, applied towards the payment of the debt.

After that time, the first resort in the event of fluctuations was temporary, and consisted of the accidental and unexpected accumulation which immediately followed. When parts of that accumulation were expended, and the residue was divided among the States, instead of being invested and held to meet deficiencies, the recall of it, as fast as needed for the latter purpose, was still sanctioned by Congress, and constituted the next permanent remedy. But this power of recall was afterward taken from the Treasury Department, and instead of it the payment of one instalment was postponed, and a very limited authority given to issue Treasury notes for aid in any contingency. That authority also expired in June last, and while in force contained requisitions immediately to receive those notes in payments when offered, and at the same time preventing the reissue of them, which proved to be exceedingly inconvenient and hazardous; which have already rendered two additional acts of Congress necessary, and which, in a moneyed crisis like the present, not only endangers all fiscal operations, but would have stopped some of the most important of them, if not obviated in a degree by seasonable arrangements made in anticipation of difficulty.

The Department, therefore, is now without any resort, temporary or permanent, in case of material deficiencies; and considering all the circumstances before mentioned, with the dangerous liability in law to have the whole of the outstanding Treasury notes paid in at any moment for public dues, without a power remaining to issue others in their stead; considering also the present revulsions in the commercial world, which affect so seriously the receipts from both duties and lands; considering the disasters which are befalling the banks and rendering our collected funds in some cases wholly unavailable, and the advances necessary to be soon made for the large payments of pensions, and Treasury notes falling due in March, the earliest attention to new legislation on this subject seems highly prudent; if not indispensable for the effectual security of the public credit.

THE MANNER OF KEEPING THE PUBLIC MONEY, WITH THE PROPER GUARDS
AGAINST LOSSES.

During the present year, the public money has been kept in the following manner: Where suitable banks could be obtained, in conformity to

the act of June 23, 1836, it has been placed in them, in general deposite. When such could not be obtained, and the amounts were likely to be permanently large, or were not collected by any public officer, the money has been placed in banks, in special deposite, either in the modified form, as explained last year, or under particular stipulations in writing. In other cases, where it was small in amount, or likely to be wanted immediately for public use, it has remained with those collecting it till drawn for.

Only two banks are now employed as general depositories, under the act of June, 1836. Their names, and the amount of public money in each subject to draft at the last returns, are annexed, (K.)

A tabular statement is also appended, which shows the condition of those banks and the reasons for the discontinuance of three of that class since the last session of Congress, (L.)

In respect to the system at present in use, it is not proposed to add much to the comments which have been submitted on its defects in former reports. The failures among the banks within the last few months have again strongly illustrated those defects.

Without further legislation, this system cannot be made, and it certainly is not now, the most safe and convenient one, whether Congress intend to continue a system of banks, or adopt one independent of banks, or employ a mixed one composed of both. But it is a system forced on the Department by the peculiarities of the existing laws and the present condition of our banking institutions. It is believed to be the best one possible, consistent with them. Under the present arrangements no eventual losses are supposed to have been sustained which are properly attributable to this mode of keeping the public money. Any small ones, which are likely to happen, appear to be the result of the usual risks incident to the mere collection and disbursement of the money, without reference to the manner of keeping it, and these kinds of risks are inseparable from any system heretofore in force on this subject, whether consisting of a United States Bank, or State banks, or either of those mixed with individual officers.

An exclusive use of bank corporations for collecting and disbursing as well as keeping all the public money, could alone dispense with the employment of individual officers for the two former purposes, which has prevailed from the foundation of the Government. Such an innovation has been proposed by some, and more especially in the large seaports. But it would create a radical change in the whole theory of all our collection laws. It would subject the Government, in most of its fiscal concerns, to an entire and humiliating dependence on moneyed corporations. And should the latter, though increased so much in power, not aspire more to misuse it, yet a wider door would thus be opened to sinister influences as well as to great fiscal derangements and ultimate losses. Recent events have evinced the dangers of these so strikingly as to justify all in being more mistrustful, and to render the further consideration of such a plan unnecessary.

The chief difficulty under the old systems need only be understood clearly to be duly appreciated. It has not been in making large payments or large transfers, when using for deposite either the State banks

or the United States Bank. Receivers and collectors have also in many places effected payments with promptitude and to great amounts, and almost every trouble in transfers by them would be obviated by the authority heretofore asked for the Treasurer, to receive money for lands in advance at points mutually convenient to the purchaser and the Treasurer. But the greatest defect in any former system, connected with this disturbing subject, has always been of a different character. It consists in a want of an absolute prohibition to employ the public money for any private purpose whatever, and in the want of severe penalties to enforce such a prohibition, and of other adequate checks and guards possessing a preventive operation on both the minds and acts of officers sufficiently powerful to diminish defalcations.

This defect has exposed the Treasury to constant losses from the foundation of the Government, and under all systems hitherto in use. It can be effectually remedied by no official regulations, as these have neither the extent, respect, nor force of laws, but only by such new legislation, both penal and prohibitory, as has been repeatedly recommended by this Department, and as experience in most other countries has shown to be indispensable to check peculations in the most effective manner.

The correctness of the statement as to the existence of these losses under all systems and all administrations of them which have prevailed since the present form of Government went into operation, has been shown generally from official records in reports made to Congress within the last two years, and it will appear more in detail in a reply, soon to be presented, to a resolution of the House of Representatives, calling for particulars concerning defaults in "each Administration," from 1789 to 1837.

It is not proposed to enter here into minute particulars concerning the results as contained and exhibited in that reply. But a few general statements from them will throw light on the topic under consideration.

Losses appear to have occurred from defaults among officers in every "Administration," or presidential term, from the formation of the present Government. Thus, among disbursing officers, they are found in every term since 1789; among collecting officers, in each since 1793; and among deposit officers, or banks, in all since 1817.

The largest amount of loss from each class within the period described, has been by deposit officers, consisting of banks, and including, as the resolution requires, the depreciation on such of their notes as were taken for public dues. The loss by this class, at the lowest estimate, has exceeded six millions and a half of dollars; and, adopting a computation made by a committee of the House of Representatives in 1832, would equal thirty-five millions. The next largest amount of loss, as ascertained and computed by the proper bureaus, has been by disbursing officers, and has been a little under five millions. And the least loss has been by collecting officers, not much exceeding two millions. The aggregate of all these losses, taking the lowest estimate for banks, is about thirteen millions and a half. If, in connection with this subject, were considered the losses in collecting the revenue by the non-payment

of bonds for duties on which credit was given to merchants; something over seven and a half millions of dollars must be added, increasing the aggregate to more than twenty-one millions. The proportionate losses by these classes have been thus: Those by the banks and by the duty-bonds amount to more than two-thirds of the whole. The losses, either by the banks alone or the merchants' bonds alone, have been nearly as great as by both disbursing and collecting officers united; and either is more than three-fold as great as by collectors and receivers; and several millions more than by them not only from 1789 to 1837, but from 1789 down to the present moment.

The particular losses in each presidential term being also desired by the resolution, they have been ascertained; and as they furnish a striking solution of some of the general causes of those losses, the periods in which the largest and some of the smallest ones happened among each class of public agents may be usefully designated here. Among the banks the largest losses were from 1813 to 1817, then consisting entirely of depreciation on notes taken; and next from 1821 to 1824, consisting then chiefly of deposits; while from 1829 to 1833, and from 1833 to 1837, they were smaller than in any period since 1813. Among disbursing officers, looking to the amount disbursed, the largest losses were from 1821 to 1825, next from 1817 to 1821, and next from 1809 to 1813; and they were smaller from 1829 to 1833, and 1833 to 1837, than in any other term whatever, except from 1789 to 1793. The loss on each \$100 from 1829 to 1833 was only nineteen cents, and from 1833 to 1837 only twenty-six cents; while in some previous terms it was as high as two dollars and sixteen cents. In this class the most numerous losses, compared with all in office, were from 1817 to 1821, next from 1821 to 1825, and next from 1813 to 1817. The smallest proportion in this respect, except during the first two terms under the Constitution, was from 1829 to 1833; and except those and the third term, the next smallest was from 1833 to 1837.

Among collecting officers, if looking to the amounts collected, the largest losses were from 1797 to 1801, next from 1809 to 1813, next from 1817 to 1821, and next from 1805 to 1809. The most numerous defaults, compared with the whole number of that class in office, were from 1809 to 1813, next from 1805 to 1809, next from 1821 to 1825, next from 1817 to 1821, and next from 1825 to 1828. The ratio of them from 1829 to 1833, and 1833 to 1837, was not one-fourth as large as in some of the periods just enumerated. Indeed it was less than in any previous terms from the foundation of the Government, except four, and the number of such defaulters was less than in any presidential term since 1804.

The accounts of the Post Office establishment being kept separately, and its officers acting in the capacities both of collecting and disbursing, are not included in the above results, but will be given in the special report in distinct tables.

On a careful review of these data it must be obvious, that in the absence of any penal prohibition to use the public money for private purposes, and of other adequate securities against misconduct, the increased losses during some of the terms mentioned must have hap-

pened more from the strong temptations to misuse the money, combined with the calamities incident to war, extraordinary expansions and contractions in the currency, and great speculations and convulsions in trade, than from any peculiar rapacity among those then in public trust; or any special neglect on the part of those who were then either accounting officers or possessed of the power to appoint and remove unfaithful agents.

Thus in 1831, 1832, and 1833; prosperous but not speculating years, in the interior scarcely a single loss is supposed to have happened among receivers, though some were then reported for suit on previous defaults; and the same may be said of collectors then and in 1835, prosperous but not speculating years, on the seaboard. But in more calamitous periods of trade, like 1797 and 1798, 1808 to 1813, 1818 to 1821, and 1837, sometimes succeeding others of rash speculation, the defaults multiplied among collectors as well as disbursing agents. So, in similar periods in the interior, like 1818 to 1821, and 1836 and 1837, they increased among the receivers and the banks much in a ratio with the inordinate thirst for hazardous investments and the overwhelming disasters which ensued from them and overissues of paper money.

Another very strong illustration of this is to be found in the periods of the greatest losses on merchants' bonds, compared with the whole amount of duties collected. These losses were the highest from 1825 to 1829 of any term since the commencement of the Government, doubtless in a great measure growing out of the excessive mercantile speculations and failures of that period; and the next largest were from 1821 to 1825, resulting probably from like causes; while from 1829 to 1833, a period of comparative regularity in trade, the loss was smaller than in any other term since 1809, and less than even from 1793 to 1797, and 1797 to 1801.

On the other topic, as to the feasibility and utility of additional checks and penalties against defalcations, the illustrations referred to, as drawn from examples abroad, are these: Out of twenty-seven Governments in respect to which accurate statements have been obtained, and which include almost every important civilized country in the world, twenty-six seem to prohibit any private use of the public money, either by collecting or disbursing agents. In six cases only do the deposit agents appear to be allowed the use of public funds, and that is only when those agents are banks, and the money is placed with them in general deposit. In a great majority of these Governments the employment of public funds for private purposes by any agents whatever is not only prohibited but punished by severe penalties, such as imprisonment, or the galleys, the penitentiary, and in some instances death. More minute checks and guards also are introduced in most of them, and less is left to discretion or regulation, even in monarchies, than here.

That course of making full and explicit statutory provisions on all these important points, and duly restricting executive discretion, so liable to degenerate into tyranny, has heretofore been repeatedly urged by the undersigned, from a regard as well to correct political principles as to an increase of the public security and a diminution of the difficulties and responsibilities he has of late years been compelled to pass through,

in a period of such immense collections and disbursements, accompanied by so severe revulsions in commerce and such harassing bank suspensions.

Dwelling no longer now on this topic, he is convinced, not only that the measures for greater security in the collection and disbursement of the public money, but the other provisions heretofore recommended, in the establishment of an independent Treasury for keeping and transferring it, should be early adopted. Prominently among these last is the separation between the banks and the principal fiscal operations of the Government. That would be likely to produce many advantages, which have been explained so fully on former occasions that only a few of them need here be adverted to, and this very briefly. It would render a bankruptcy of the Treasury impossible by a wide if not general suspension of specie payments. To the loss, vexation, and discredit of this, the Government has already been more than once subjected, and a United States Bank, judging from experience abroad and analogy at home, would form no more effectual guarantee against it than State banks during periods of extraordinary convulsions in trade, if administered under the present imperfect system of banking; or, in other words, under similar defective charters, and occasionally similar false banking principles. Such a separation would relieve both the banks and the Government from any further exposure to mutual importunities, embarrassments, and criminations. Both, and doubtless beneficially to both, would be left more to their own resources and less to dependence on each other's favor, whether instigated by cupidity on the one hand or political ambition on the other. Instead of increasing, it would diminish executive power; for the latter would be stripped of all bank influence, and be allowed in its stead neither the use nor possession of the public money except under agents not selected by itself alone, as in case of the banks; little increased in number, guarded by additional securities, and forbidden by the severest penalties to use a dollar of it for any private purpose. It would tend to check improvident paper issues, that in some degree deteriorate the exchangeable value of specie itself, as well as of paper, and it would secure the best possible currency in the present state of the Constitution and laws. In fine, it would remove all inducements to hoard what could not be used for profit, to delay payment of what could not be otherwise employed, to augment taxes or tariffs for deposits that can yield no emoluments, and to indulge in reproaches or suffer inconveniences, as banks now do, at being deprived, by public drafts, of funds which, under the proposed system, would only add to the risk and responsibility of the depositary instead of his gains, and would therefore be gladly parted with.

CONDITION OF BANKING INSTITUTIONS GENERALLY, AND THE KIND OF
MONEY RECEIVABLE FOR PUBLIC DUES.

The condition of the banking institutions generally in the United States is always a topic of some financial interest. But it now possesses less with the General Government than it did when the connection between them was more intimate and extensive.

It is regretted that space remains on this occasion for but little more

concerning their condition than a reference to the special report which will soon be submitted from the last authentic returns that can be obtained.

In the mean time, however, it may be inferred from returns not very numerous, and from some general data, that since the 1st of January last the circulation of those banks now paying specie has probably, on an average, been curtailed quite one-third, or between sixteen and twenty millions; that the circulation of most of the others had not been increased at the time of their late suspension; that the aggregate amount of specie in all of them is not reduced more than eight or ten millions; and that, since the fall in foreign exchange, these institutions, with a few exceptions originating in gross departures from correct banking principles by embarking in trade, and by making large investments and long loans, often not to business men nor for common business purposes, are as able as ever to sustain specie payments, provided they felt disposed to exercise their former forbearance and indulgences towards each other, and the community towards them. It is a source of much satisfaction to add that the recent suspension has caused far less embarrassment, delay, and probable loss to the Treasury, whether by deposits in banks or the possession of their notes, than have occurred heretofore on similar occasions.

Two reasons exist for this. The banks have of late been employed and their notes taken to a less extent than was before customary, and the suspensions among them have been less general by not reaching, it is computed, over one-third of the whole number in the United States, though including, perhaps, more than half of the whole banking capital. Of those suspending, fortunately only three or four held any considerable amounts of public money deposited with them since 1837; and they, as well as the rest now in public employ, have made commendable exertions to meet with fidelity their engagements to the Treasury.

The admonitions, however, which the late suspension has given in respect to the importance of some new legal provisions connected with the keeping of the public money, have not been slight, and have already been sufficiently noticed.

They appear to be equally strong in favor of some new legislation or additional regulations as to the kind of currency which should be received for public dues.

In relation to this last point the Constitution and laws are now explicit enough concerning what constitutes money.

But the practices under them in receiving other things than gold and silver as money, or rather as a currency or substitute for money, have continued so long and been at times so loose as to create much danger and difficulty. The views of the Department on all portions of this subject were so fully explained to Congress on previous occasions, and more particularly in September, 1837, as to render it unnecessary to repeat them here.

But some illustrations and confirmations of those views, contained in the transactions of the present year, are new, and are as follows:

In sundry instances banks, as well as individuals, holding the Treasurer's drafts, have insisted on specie in payment, and refused to accept the current notes of specie-paying banks.

This they had an undoubted right to do, and thus the idea has been strongly corroborated that, however much both public and fiscal convenience may be promoted by the use of a paper currency for either large or distant payments, yet the receipt of anything short of specie, or the notes not only of specie-paying banks, but such as are convertible into specie on the spot, and at par, can never effectually protect the public credit. The practical importance of this question under our present system will be the more obvious when it is understood that near twenty millions of the twenty-five expended this year for ordinary purposes, have been or will be paid by drafts drawn directly on collectors and receivers, and must therefore be met, not only by them, but in specie or its equivalent. It seems impossible also, that eventual embarrassment and occasional losses by bank failures and suspensions should be obviated, if anything but specie is long kept on hand by public agents of any description. Nor can any system operate as a check on overissues by banks, restrain the tendency to gambling speculations, and aid gradually in improving the currency of the country, as well as preserve in purity the true constitutional standard of value, unless the notes received are speedily paid over for public debts when acceptable to creditors, and, at brief intervals, any of them left on hand are returned for specie to the institutions that issued them.

It appears that the effect which such a course would produce on the currency at large, by permanently withdrawing specie either from banks or from circulation would, in ordinary times, be much less than many persons have apprehended. In the collection and payment of the above twenty millions by collectors and receivers, the whole amount on hand with all of them, at any one time, has seldom exceeded one million and a half.

At New York city, where near two thirds of the customs of the whole Union are collected, and where the gross receipts this year will exceed fifteen millions of dollars, the amount on hand at any one time has not averaged half a million of dollars.

As an illustration of the system of drawing for this money speedily, it may be added that the amount left at the close of each week subject to drafts has seldom equalled one-twentieth of a million.

At the recent suspension of specie payments most of the funds in the custom-houses were composed of bank notes; but nearly half of those in the land offices consisted of specie. Though the notes on hand were issued by banks paying specie and in good credit at the time they were taken, yet even a part of them, suddenly becoming irredeemable, has caused some inconvenience, several protests, and a few injurious delays, with both receivers and collectors. At the former suspension, as specie was the only currency then allowed to be taken by receivers, most of these difficulties were obviated with them, and were confined chiefly to the deposit banks and large collectors. The great amount of specie which the receivers then possessed contributed much also to the general relief of the Treasury, and especially furnished most opportune means for making legal as well as satisfactory payments of the heavy Indian annuities soon afterward falling due in the West.

Some considerations were intended to be next presented on the perma-

ment deficiency apprehended as likely to happen in the revenue after 1841, under the operation of the present tariff. But the length to which this communication has already extended, and the doubt whether Congress may deem it advisable to legislate so long beforehand in anticipation of an event which possibly, but not probably, may be avoided, have induced the Department to postpone for the present any particular remarks on a topic involving considerations of so difficult and agitating a character.

MISCELLANEOUS.

Some of the leading changes which this Department during the last five years has thought proper to urge as material in connection with the finances may, before closing, be summarily and perhaps usefully condensed, and presented together to the consideration of Congress.

They are as follows:

A new organization of the Treasury Department in such respects as to insure a more appropriate division of labor, a stricter accountability, and a closer supervision over the collection of the revenue by officers exclusively devoted to it.

An increase of the checks and securities against defaults in all officers, whether collecting, keeping, or disbursing public money, and more especially by prohibiting its use for private purposes under severe penalties.

Some provident fund, to be formed when any occasional and accidental surplus happens to be in the Treasury, (but never designedly raising one by taxation,) which shall be employed to meet contingencies and fluctuations instead of our being compelled frequently to resort to loans or increased taxes; and, in the absence of such a fund, a permanent authority to be given for the procurement of means, when needed, under unexpected deficiencies.

A reduction in the ordinary expenditures, so as for several years not to exceed seventeen or eighteen millions of dollars annually, unless when the revenue is abundant the great national works which it is intended to complete in any event should be hastened more, and when the revenue is smaller, be proportionably retarded.

The passage of occasional preëmption and graduation laws as to the public lands, under judicious limitations concerning the quantity sold in any one case, and for the prevention of frauds and partialities.

To reduce the tariff, whenever the amount of revenue justifies the measure; and always regulate its provisions with a paramount regard to finance, discouraging articles of luxury, and encouraging useful and necessary ones only as incidental objects in tariff legislation.

In connection with this policy of protecting freedom of trade, to resist monopolies and exclusive privileges, whether in banking or commerce.

The exclusion of small bank notes from circulation, so as to enlarge the quantity of specie within the country, increase the use of it, and especially of gold for common purposes, and thus protect as well the banks against runs or panics as the laboring classes from losses and depreciations incident to every paper currency like ours, not founded on a specie basis as broad as the paper itself. And finally the rapid

extinguishment of any national debt, and the creation of no new one of a permanent description in peace.

A prominent feature in the policy which has thus been recommended as to our fiscal affairs, has been to leave to State legislation all matters of doubtful jurisdiction, as well as all clearly of a domestic and State character, whether connected with the revenue or the currency, the exchanges, or commerce, or some other exciting interests of the country less intermingled with the immediate business of this Department. The undersigned takes pleasure in acknowledging that several of those enumerated measures did not originate with him; yet they have all received his earnest official support, and he is gratified that steps have already been taken by Congress insuring in part the success of some of them.

The rest, as well as those, are again respectfully commended to favorable consideration, hoping that the scrutiny of longer discussion and reflection may have satisfied its members that the full adoption of them all would promote the durable prosperity of the finances, and at the same time be in harmony with the Constitution, and favorable to most of the great interests of the country.

In respect to several remaining matters connected with the numerous duties devolved on this Department, it is proposed to postpone the consideration of most of them to special reports to Congress, and separate communications to suitable committees.

Among the latter is a mass of questions, chiefly connected with the public lands and the custom-house establishment. Among the former are the state of the light-houses; the progress in the survey of the coast; the manufacture of weights and measures; the condition of the Mint and its branches; the situation of our trade with the British provinces and West Indies; the disposition made of our deposits with the several States; and various other subjects of minor importance.

In a note annexed (M) are explained briefly a few topics still different, and some of them more urgent in their character, such as the exclusive employment of one of the present comptrollers as a commissioner of the customs; a revision of the number and compensation of officers in the customs, and especially their pay during the past year; the requirement of official security from district attorneys; a change in the commencement of the fiscal year, making also the commercial the same as the calendar year; appropriating in certain cases for five quarters, and keeping and publishing all accounts and returns by quarters as well as years; new provisions concerning papers in whale ships and in vessels on the coast of Africa; a declaratory act as to the duties on silks and worsteds; and the further extension of the laws for the relief of insolvent debtors.

Within the present year, the business as to the French indemnity has been closed by distributing the additional interest obtained on the first four instalments. The sixth payment due from the Kingdom of Naples has also been received and divided among the claimants.

The annual exhibit of the condition and business of the General Land Office usually accompanies this report, but, from its length and importance, it will be presented separately in a few days. The very success-

ful progress made in bringing up the arrears of business, and in the dispatch of the enormous amount of current duties devolved on that office by the unprecedented sales in 1835 and 1836, deserves special notice. It has enabled the Commissioner to dispense with the employment of nineteen of his former clerks. Disagreeable and embarrassing as the discontinuance of official services usually is, a strong sense of its propriety in an economical view has led to the measure on this occasion without any special direction by Congress. It is also again urged as a proper topic for legislation, and without which it cannot be effected, that the number and consequently the expense of the old land offices be reduced, by uniting several with others adjoining, where the quantity of business has become much lessened. A similar course as to some of the collection districts on the sea-board has before been recommended, and is still considered worthy the attention of Congress. In all these, as well as in larger savings, economy is undoubtedly true wisdom.

Respectfully,

LEVI WOODBURY,

Secretary of the Treasury.

To the SPEAKER of the House of Representatives.

LIST OF DOCUMENTS

ANNEXED TO THE REPORT ON THE FINANCES.

- A. Available funds in the Treasury 1st January, 1839.
- B. Receipts and expenditures for 1838.
- C. Expenditures of first three quarters of 1839.
- D. Payments of public debt to 20th November, 1839.
- E. Issue and payment of Treasury notes from 1st January to 20th November, 1839.
- F. Exports and imports in 1839.
- G. and H. Exports and imports from 1789 to 1839—consumption of foreign goods, and value of principal articles imported and exported.
- I. Note on the above tables.
- J. Annual estimates.
- K. Names of general deposit banks, and amounts to the credit of Treasurer therein.
- L. Condition of general deposit banks at last returns—names and reasons of discontinuance since last session.
- M. Note on some miscellaneous topics.

A.

Statement of funds available for general purposes on the 1st of January, 1839.

The gross balance in the Treasury, at that date, exclusive of post office money, was, according to the books of the Register of the Treasury\$36,891,196 94

Of this sum there were deposited with the several States, under the act of 23d June, 1836, and not available for the public service until new directions are given by Congress.....\$28,101,644 99

There were held by the Treasury in trust, for indemnities, &c., about..... 500,000 00

There were, of funds which had been unavailable for a long period, being principally balances due from banks employed as depositories, which had failed previous to 1837..... 1,100,000 00

Debts due, by the Treasurer's statement, from banks which failed in 1837, and which had not paid the balances due, by the sum of..... 2,472,590 00

Portion of balance in the Mint and its branches, which cannot be drawn out without much inconvenience..... 500,000 00

32,674,234 99

Leaving a balance apparently available on 1st Jan., 1839. 4,216,961 95

But the aggregate of warrants outstanding on that day, the amount of which is to be deducted from the balance in the Treasurer's hands, was larger on the 1st January, 1839, than at the commencement of each of the four years preceding 1837, by at least..... 1,750,000 00

As these warrants were deducted from the appropriations to which they were chargeable, it is proper to deduct this excess of these warrants from the amount of what would otherwise have been available means. Computing this excess at the above sum, the effective available balance, on the 1st of January, 1839, was... 2,466,961 95

The aggregate of unavailable funds in the Treasury on the first day of January, 1840, will probably remain about the same amount, excepting that the sums due from deposit banks which became defaulters in 1837 will be diminished to about..... \$1,150,000 00

B.

Receipts and Expenditures of the United States for the year 1838.

Balance in the Treasury on the 1st January, 1838.....\$37,327,252 69

RECEIPTS.

Customs	\$16,158,800 36

(a) For the early years, the aggregate of the value of imports does not appear on the official statement, and has been estimated at different amounts by different persons, and thus that column and the column as to the value of foreign merchandise consumed will not always correspond with former reports. But the difference will not be found so great, as to affect materially any general result.

(b) A greater portion of imports were exported before 1819, or during the long wars in Europe, as may be seen in the other table.

(c) The practice of making regular reports of the value and quantity of each article imported did not commence till 1821. Previous to that, therefore, only detached returns can be obtained for a few articles and a few years.

* The value has been estimated agreeably to the prices current returned by collectors of the customs in their quarterly abstracts of exports for each year.

(a) The exports of coffee in 1802 equalled \$6,015,939; in 1803, \$2,338,462; and in 1804, \$12,185,948.—See, as to exports of other articles, 1 Commerce and Navigation, page 658, G. & S. Digest. The exports of sugar and teas were near half the imports, though below that proportion.

(a) The value of articles paying ad valorem rates of duty in 1791 amounted to about two-thirds of the imports, and consisted of cottons, woollens, linens, silks, hemp, iron, crockery-ware, &c. The value of the specific articles has been estimated by adding one-third to the ad valorem. They consisted of spirits, molasses, coffee, sugar, twine, salt, teas, &c. The ad valorem articles imported into each State are taken from actual returns; the others are apportioned among the States, by estimate, in a like ratio.

(a) Not till 1803 were exports regularly distinguished in the returns as to the quantity and value of the different articles.

(b) Tobacco exports, before the Revolution, reached nearly 100,000,000 pounds, and the average since is about the same. The hogshhead has increased in weight from 500 pounds to 1,000 and 1,200 pounds. The price per pound has averaged from 5 to 7 cents, though sometimes as high as 15 cents. About one-fourth of exports to Holland, one-fifth to England, one-sixth to Hanse Towns. More tobacco has since been grown elsewhere, and especially in Europe, when supplies from here were interrupted by the Revolution, and cotton here took extra labor and capital.

STATEMENT H

(a) Before the Revolution we had no trade with China; but it gradually became important, and, in 1821 and 1822, had swelled in exports to Canton to five millions of dollars. According to a report of the British Parliament, made in 1833, (and some American captains were examined as to the facts,) it was ascertained that our trade was equal to three-fourths of that of the East India Company.

NOTE I.

The object of this note is to present some general results concerning our past imports and exports, as appearing in the tables, without aiming at fractional accuracy or a minuteness, which was not attainable but by delay and labor not necessary to this purpose.

It appears that the whole imports have not more than doubled since the first four years of the Government, while the exports of domestic produce have quite quadrupled.

Again: Though we formerly exported more of the foreign merchandise imported than we now do, yet the consumption of it since those earliest years has not increased much over a hundred per cent., while our population has, within the same period, increased quite four hundred per cent.

This disparity has arisen chiefly from the facts that larger proportions of our people are now engaged in manufactures and agriculture, and supply much more than they once did the products of both for home consumption. For one series of three years, about a third of a century ago, and another about twenty years ago, the imports were nearly as large as during the last three years.

The changes in the amount of some of the leading articles both of export and import have been very extraordinary. As to the first, the exports of raw cotton, without reference to the increased consumption of it at home, have altered most. They have augmented from a few thousand dollars' worth to sixty or seventy millions. This vast increase has happened without any real aid from a duty, which should be regarded as protective, but chiefly by means of a congenial soil and climate, assisted by a remarkable improvement in preparing cotton for market, which has proved to be one of the most fortunate inventions on any subject in any age. By the larger capital and population devoted to the cultivation of this great staple, and by the increased domestic demand for other articles of our own production to feed and clothe the greater numbers employed in its cultivation, and in many flourishing manufactures, as well as in an enlarged navy and army, all our other principal exports from agriculture, as well as from the forest and the sea, have remained stationary or declined during the last forty years.

For example: Those of tobacco, ranging near six and seven millions; flour at about four millions; lumber at two and three millions; rice from one to three millions; pork at a million and a half; and furs at nearly three quarters of a million; have remained almost stationary. While the exports of fish have actually fallen from one and two millions to less than one; of beef from one million to half a million; and of butter and cheese from one-half to one-ninth of a million. Indeed the only material increase in any of the important articles of export, besides raw cotton, has been in domestic manufactures. These, from one million in 1793, have augmented to more than eight millions in 1838.

So great have been the changes in some of them, affecting to a certain degree the aggregate exported, that in the single State of Massachusetts, still distinguished for its fisheries and manufactures of cotton and woollen, the fabrics from leather, humble as they may seem in character,

now yearly exceed in value either of those or any other of its great articles of production, and equal nearly one-fourth of the immense exports of raw cotton from the whole Union.

These results show the strong direction which industry often takes from natural causes, such as soil and climate, as well as from habits and other peculiarities, whether accompanied or not by special legislative protection.

This circumstance is further illustrated by some of the changes in the principal articles of import. During many years the demand for those made from cotton has been very great. By means of the increased public taste for their use, and the reduced price of them through improvements in machinery, the imports of cotton manufactures have generally been larger than those of any other article.

On an average they were eleven millions annually for the last three years; and in 1836 they reached seventeen millions, notwithstanding all the flourishing establishments for those manufactures here, and their success to such an extent that considerable amounts of the domestic fabric have long been exported.

The imports of silk were formerly smaller in amount than those of cotton, and in 1821 and 1822 only four to six millions yearly. But of late, some of them having been exempted from duty by Congress, and others more recently having become free by means of judicial constructions, and the demand for all of them having been also quickened perhaps by the progress of luxury, those imports increased in 1836 to twenty-two millions, and during the last three years, have been, on an average, quite twelve millions and a half.

Specie stands next in the list, the imports of it having in the same period been enlarged from three and five millions to about twelve yearly; and those of coffee from four and five millions to eight, though considerable portions of these are, as formerly, reexported.

The imports of woollens have also, in the face of a high duty and an increasing manufacture of them at home, continued to be nearly seven millions annually for the last twenty years; and in 1836, they rose to twelve millions.

But it is worthy of special notice, that with a population to clothe augmented since 1821 quite seventy-five per cent., the great imports of cotton and woollen have augmented but little. And if those of silk have increased three or four-fold in amount, yet such is the enlarged demand for them, and the extended facilities for producing them here on a small capital, that without the aid of any legislative protection in most cases, indications exist that the growth and manufacture of silk may be established in this country wider and deeper than any former article under the highest tariff.

It is a striking fact, that a direct bounty on the growth of silk before the Revolution, leading to a cultivation of it in Georgia and the Carolinas so as to denominate them "Silk colonies," failed to accomplish as much as has recently been effected in almost every quarter of the country by increased skill, experience, and enterprise, in defiance of the reduction of some duties, the total repeal of others, and the absence of any bounty from the General Government. For further details on the preceding

topics, reference can be had to the tables themselves. Some of the alterations in the trade of particular States and cities in the Union, as well as in our commerce with several countries abroad, are remarkable. First stand the exports from New Orleans. This city was not within the boundaries of the Union till several years after the Constitution was adopted, and the exports amounted to only two millions in 1811. But in 1838, by having become the principal outlet of so many new and flourishing communities, the exports from it exceeded thirty-three millions, or six millions more than any of our oldest and largest cities or even States. In only the first quarter of 1839, they have in fact gone beyond eighteen millions of dollars. The immense growth and fine central position of New York have affected its imports much more than its exports. The latter were in 1791 two and a half millions, or more than New Orleans twenty years after; and in 1811 were twelve millions, or six times those of New Orleans in the same year. But they have since increased only so as to average twenty-six millions during the last three years, instead of the thirty-three millions of New Orleans. Again: Mobile, a city not originally within the limits of the Union, and the seaport of a State not large enough to be organized as such till thirty years after the Government went into operation, is now the fourth in the Union in exports, shipping nearly one-half as much domestic produce as New York, and more than all, whether domestic or foreign, of the ancient, prosperous, and commercial State of Massachusetts. But from South Carolina, her rich and ample exports still exceed both the two last, and indeed all others in the Confederacy except the two first-mentioned States.

Passing to the imports, though New Orleans has increased nearly four-fold in the last twenty years, and presents an aggregate of fourteen or fifteen millions yearly, yet she is only the third instead of the first in the Union. Some other cities possess capital and facilities to exceed her in respect to those, and to supply the smaller wants in the lighter kinds of foreign merchandise of these great agricultural States, most of whose bulky exports more readily seek the ocean at the mouth of the mighty stream on whose banks and tributaries they flourish. The imports into New York now constitute over one-half and indeed nearly three-fifths of those within the whole United States. In 1802, they were only a little more than one-fourth of the whole. In 1821, they had enlarged to but twenty-three millions, while in 1836 they reached the astonishing aggregate of one hundred and eighteen millions. In the reduced business of 1838, they were nearly eighty-nine millions. Besides these changes in the imports, those of Boston alone among the old cities and States have indicated a continuance of them proportionate to what they were in 1802. Those of Philadelphia, while remaining similar in amount, have declined in their proportion to the whole, nearly one-half.

Those of Baltimore, lessened still more in both views; and those of Charleston, Norfolk, and Savannah, in a ratio beyond even hers.

But several of these cities have at the same time exhibited an increase in their domestic trade and manufactures, which has amply atoned for a diminution in their foreign commerce, though the details are omitted on the present occasion, as not being so appropriate for explanation here.

The countries abroad with which our foreign commerce has been conducted, and the changes and proportions of it, are matters of no little interest, and of more immediate connection with the finances. It appears that our exports, from being confined during a colonial state almost exclusively to England and her dependencies, suddenly changed; and, in consequence of the Revolution and subsequent difficulties, increased to France, for the first ten years of the Government, to about twenty millions annually, or nearly double their amount to England. Since that period they have increased with the latter to near sixty millions yearly, and remained about stationary with the former, or at only one-third of that amount.

To Spain the exports are next in value, having increased from four to eight millions without including any part of Spanish America, now independent, and classed separately.

But it is a remarkable fact, that the imports from all those countries have remained stationary or declined. Our foreign supplies, as before remarked, have increased but half as much as our exports, and those supplies are drawn by our enterprise and new marts and tastes from a wider sphere, extending indeed, more or less, to almost every portion of the habitable globe.

Thus from England, those imports formerly fluctuated from twenty-three to eighty-six millions annually, and during the last three years averaged only sixty millions; while from France they have usually been about half that amount; some five or six millions less from Spain than France, and with China and India about half as much as with Spain.

Connected with this subject, and further illustrative of results unfavorable to the interests embarked in our foreign trade, is the fact, that the tonnage engaged in it, having been in 1838 only 810,447, was actually less than what appears in the returns thirty years ago. In 1809, those returns exhibited 910,059 tons, and in 1810, no less than 984,269. The tonnage owned abroad, which is engaged in this same business, being lately unmolested by European wars, has also become six times in quantity what it was twenty years ago. On the contrary, the rapid improvements in the domestic trade from 189,153 tons in 1794, to 1,086,238 in 1838; or an addition more than five-fold, is an evidence of the greatly increased commerce at home; and the diffusion of it over regions much more widely extended.

J.

TREASURY DEPARTMENT, *December 2, 1839.*

SIR: I have the honor to transmit, for the information of the House of Representatives, an estimate of the appropriations proposed to be made for the service of the year 1840, amounting to \$18,280,600 55

VIZ:

Civil list, foreign intercourse, and miscellaneous.....	\$4,981,344 19
Military service, including fortifications, armories, arsenals, ordnance, Indian affairs, revolutionary and other pen- sions.....	8,213,610 74
Naval service, including the marine corps.....	<u>5,085,645 62</u>

To the estimates are added statements, showing—

1. The appropriations, for the service of the year 1840, made by former acts of Congress, including arming and equipping the militia, civilization of Indians, revolutionary claims, revolutionary pensions under the act of 7th June, 1832, claims of the State of Virginia, gradual improvement of the Navy, and public debt.....\$1,586,000 00
 2. The existing appropriations which will not be required for the year 1839, and which it is proposed to apply in aid of the service of the year 1840, amounting to 3,014,711 80
 3. The existing appropriations which will be required to complete the service of the year 1839, and former years, but which will be expended in 1840, amounting to... 8,270,793 84
- There is also added to the estimates a statement of the several appropriations which will probably be carried to the surplus fund at the close of the present year, either because these sums will not be required for, or will no longer be applicable to them, amounting to .. 541,866 32

I have the honor to be, very respectfully, your most obedient servant,

LEVI WOODBURY,

Secretary of the Treasury.

The SPEAKER of the House of Representatives.

ESTIMATE OF APPROPRIATIONS FOR THE YEAR 1840.

1839.]

SECRETARY OF THE TREASURY.

299

CIVIL LIST.				Appropriations made in 1839.
LEGISLATURE.				
For compensation and mileage of the Senators and members of the House of Representatives, their officers and clerks, and for the contingent expenses of both Houses of Congress, viz:				
Fifty-two Senators, at \$8 per day, estimating 216 days....	\$89,856 00			
Speaker of the House of Representatives, at \$16 per day.	3,456 00			
Two hundred and forty-one members, at \$8 per day.....	416,448 00			
Delegates from the Territories of Wisconsin, Iowa, and Florida, at \$8 per day each.....	5,184 00			
Travelling expenses to and from the seat of Government..	154,000 00			
Secretary of the Senate.....	3,000 00	\$668,944 00		\$370,944 00
Principal clerk.....	1,800 00			
Two engrossing clerks, at \$1,500 each, and three clerks at \$1,500 each, under resolutions of 13th October, 1837, and 7th July, 1838.....	7,500 00			
Messenger.....	700 00			
Chaplain to the Senate.....	500 00			
Sergeant-at-Arms to the Senate.....	1,500 00			
Assistant Doorkeeper to the Senate.....	1,450 00			
Clerk of the House of Representatives.....	3,000 00			
Principal Clerk.....	1,800 00			
Ten clerks, at \$1,500 each.....	15,000 00			
Messenger.....	700 00			

ESTIMATE—Continued.

				Appropriations made in 1839.
Chaplain to the House of Representatives	\$500 00			
Sergeant-at-Arms to the House	1,500 00			
Doorkeeper to the House	1,500 00			
Assistant Doorkeeper to the House	1,450 00			
Postmaster to the House	1,500 00			
		\$43,400 00		\$43,400 00

ESTIMATE—Continued.

322

REPORTS OF THE

[1839.]

		Appropriations made in 1839.
For surveying in the State of Louisiana, with authority to expend the same at a rate not exceeding \$8 a mile, and to be applied, if hereafter found expedient, for retracing and correcting certain old surveys in said State, chiefly in the St. Helena district.	\$10,000 00	
For completing the custom-house building at New York, \$138,743 is asked for by the commissioners, but it is recommended by the Department to postpone \$20,000 to another year, leaving to be appropriated the sum of . .		\$270,840 00
To meet expenditures for the building of the new custom-house at Boston .		\$47,000 00
		118,743 00
		150,000 00
		121,000 00
		75,000 00
<i>Note.</i> —The further sum of \$79,000 has been asked for by the commissioners for twenty granite columns, but as these may not be essential in the present state of the building, or affect the progress of the work, it is deemed unnecessary that any appropriation for that object should be made for the ensuing year.		
For expenses incurred by the Collector of New York under the act of March 19, 1836, for the relief of the sufferers by fire in the city of New York		3,354 00
For the discharge of such miscellaneous claims against the United States, not otherwise provided for, as shall be admitted in due course of settlement at the Treasury, (nothing required, balance of appropriation deemed sufficient)		12,000 00
Total miscellaneous		\$2,046,663 46

Since the last session of Congress the Insurance Bank of Columbus has been discontinued from the performance of the duties of a public depository, in consequence of the removal of the bank to Macon, a point remote from the land offices in Alabama, (to accommodate which it was principally needed,) and where it could not discharge the financial duties required.

The Brooklyn Bank has also been discontinued as a depository. The amount of money placed therein when further depositories were required to be selected, in 1836 having been drawn out, and the public service not making its employment necessary, the returns required by law were omitted to be transmitted to the Department, and it was accordingly discontinued.

The Citizens Bank of Louisiana having suspended specie payments in October last, it was discontinued as a general depository under the provisions of the act of June 23, 1836.

NOTE M.

A plan for the reorganization of this Department was submitted to Congress by the undersigned as long ago as 1834.

The subject was then deemed of sufficient importance for reference to a select committee. They reported a bill for carrying most of the recommendations into effect.

Since that, though the matter has not entirely slept, no effective progress has been made in relation to it. At the same time, with the great increase of business since, the necessity has increased for the principal change, then earnestly urged, of separating the superintendence of the collection of duties from the office of the Comptroller, where it has been long devolved with so much inconvenience as with other circumstances to lead to the creation of a Second Comptroller.

The additional expense would be little or nothing in having one of the present Comptrollers made exclusively a commissioner of the customs. The improved means and skill of one of them in such a situation, to do nothing but supervise that collection, and of the other to supervise only the settlement of accounts, must be very obvious. Each by such a natural division of labor would act with more promptitude, system, uniformity, and thorough investigation, and the early detection of defaults would become much more probable. A wish has been often repeated for a revision of the number and compensation of custom-house officers, and is still strongly cherished. The different bills reported of late years to carry this object into effect, and at the same time to make other useful changes in some of the collection laws, have failed hitherto, it is hoped, more from the pressure of other business than from serious objection to their final passage. The whole subject is important to promote efficiency and uniformity in that branch of the public service, and part of the legislation proposed is essential as an act of justice to many meritorious collectors. The failure at the last session to pass the usual clause for additional allowances, rendered proper since the reduction of the tariff in 1832, produced great embarrassment and bid fair to suspend the whole business at some of the custom-houses, until it was partially remedied by granting in several cases the per diem compensation authorized by a former act of Congress to all persons assisting in the collection of the customs. Besides these embarrassments, additional onerous duties have been imposed on most of them in keeping a journal of their doings under a resolution of the Senate.

New legal provisions for the security of the public money collected by district attorneys were recommended to Congress by this Department as long ago as December, 1836. Experience seems since strongly to verify their expediency.

A change in the commencement of the fiscal year is again recommended for reasons too obvious to need repetition. The keeping and understanding of our public accounts of receipts and expenditures, and of foreign trade and tonnage, would likewise be much simplified if the year for all of them were made to begin at the same date and to correspond with the commencement of the calendar year. In that event, if the appro-

priations for permanent and ordinary purposes were made for one year, with authority to expend a fifth quarter at the same rate when no new legal provision should intervene, most of the existing difficulties and confusion in the present system would be obviated. Whether these changes be adopted or not, another improvement would be to require all receipts and expenditures, as well as imports and exports, to be stated by quarters of the year separately.

An additional provision concerning the papers of vessels employed in the whale fisheries is respectfully recommended, to remove the inconvenience, expense, and danger resulting from a recent judicial decision in respect to the papers in that class of vessels whose enterprise, skill, and success are so useful to the country, and so richly entitled to liberal legislation. The decision and voluminous correspondence on this subject will be seasonably submitted to the appropriate committee.

Further provisions concerning the registry of vessels, in consequence of abuses of their papers in the West Indies and on the coast of Africa, seem urgently demanded. A declaratory act, as to the duties to be assessed on certain articles of silk, linen, and worsted, seems also proper from a like cause, since the construction of the existing laws, which has prevailed for several years with the Department, has been unexpectedly altered by the courts, to the loss probably of a quarter of a million of revenue yearly. A large number of documents in respect to this question are ready to be communicated.

The existing acts of Congress for the relief of insolvent debtors expire on the 2d of March next, and it is considered proper that the provisions of them should be extended further, and the cases occurring since January 1, 1837, be included within their purview.
