

REPORT

OF THE

SECRETARY OF THE TREASURY,

ON

THE STATE OF THE FINANCES,

FOR

THE YEAR ENDING JUNE 30, 1856.

WASHINGTON
CORNELIUS WENDELL, PRINTER.
1856.

450
u

REPORT
OF
THE SECRETARY OF THE TREASURY
ON
THE STATE OF THE FINANCES.

DECEMBER 9, 1856.—Referred to the Committee of Ways and Means, and ordered to be printed.

DECEMBER 17, 1856.—*Resolved*, That 15,000 extra copies of the report of the Secretary of the Treasury on the state of the Finances be printed for the use of the members of the House.

TREASURY DEPARTMENT, *December 1, 1856.*

SIR: In obedience to the act entitled "An act to establish the Treasury Department," approved May 10, 1800, the following report is submitted:

The balance in the treasury on the 1st of July,
1855, was..... \$18,931,976 01

The actual receipts of the first quarter of the fiscal year 1856, viz: the quarter ending September 30, 1855, were, as stated in my former report:

From customs.....	\$17,085,238 28
From lands.....	2,355,725 87
Miscellaneous.....	333,495 98
	<hr/>
	19,774,460 13

The estimated receipts for the remaining three quarters were as follow:

From customs.....	\$42,000,000 00
From lands.....	5,644,274 13
Miscellaneous.....	500,000 00
	<hr/>
	48,144,274 13

349

REPORT ON THE FINANCES.

Making the actual receipts for the first quarter, and the estimated receipts, for the remaining three quarters.....	\$67,918,734 26
Add balance in the treasury July 1, 1855.....	18,931,976 01
Giving the estimated sum for the service of said year.....	86,850,710 27

The actual expenditures of the first quarter of said year, viz: the quarter ending September 30, 1855, were as follow:

Civil, miscellaneous, and foreign intercourse.....	\$5,117,860 25
Interior.....	1,799,642 19
War.....	5,142,111 38
Navy.....	4,282,292 57
Redemption of public debt, interest and premium..	252,209 71
	16,594,116 10

The estimated expenditures for the remaining three quarters were as follow:

Civil, miscellaneous, and foreign intercourse.....	\$18,651,974 85
Deficiency in Post Office.....	2,669,368 00
Interior, pensions, and Indians.....	3,532,033 92
War.....	8,773,523 31
Navy.....	10,956,030 73
Interest on public debt.....	2,299,800 00
Redemption of debt.....	7,750,000 00
	54,632,430 81

Making the actual and estimated expenditures \$71,226,846 91, and leaving an estimated balance in the treasury on the 30th of June, 1856, of \$15,623,863 36.

The actual receipts into the treasury for the fiscal year ending 30th of June, 1856, were, for the,

1st quarter.—From customs.....	\$17,085,238 28
From lands.....	2,355,725 87
Miscellaneous and incidental.....	333,495 98
	19,774,460 13
2d quarter.—From customs.....	\$13,424,038 57
From lands.....	3,273,868 02
Miscellaneous and incidental.....	195,840 33
	16,893,746 92

REPORT ON THE FINANCES.

5

3d quarter.—From customs.....	\$16,737,114 01
From lands.....	1,450,073 04
Miscellaneous and incidental.....	160,113 20
	<hr/> 18,347,300 25 <hr/>
4th quarter.—From customs.....	\$16,776,472 64
From lands.....	1,837,978 00
Miscellaneous and incidental	288,183 52
	<hr/> 18,902,634 16 <hr/>
Making	\$73,918,141 46
Balance in the treasury 1st July, 1855.....	18,931,976 01
	<hr/>
Total sum for the service of the fiscal year ending 30th June, 1856.....	92,850,117 47 <hr/>
	<hr/>
The receipts from customs were.....	\$64,022,863 50
The receipts from lands were.....	8,917,644 93
Miscellaneous and incidental.....	977,633 03
	<hr/> 73,918,141 46 <hr/>

The actual expenditures of the year were as follow :

1st quarter.....	\$16,594,116 10
2d quarter.....	16,580,880 34
3d quarter.....	16,993,074 36
4th quarter.....	22,780,721 22
	<hr/> 72,948,792 02 <hr/>

The expenditures were divided as follow :

Civil, foreign intercourse, and miscellaneous.....	\$25,274,330 99
Interior, pensions, and Indians.....	3,872,826 64
War.....	16,948,196 89
Navy.....	14,077,047 12
Redemption of public debt, interest and premium..	12,776,390 38
	<hr/> 72,948,792 02 <hr/>

Balance in the treasury 1st July, 1856, as appears in detail, per statement No. 1.....	\$19,901,325 45 <hr/>
---	-----------------------

In my last report the estimated receipts into the treasury, for the fiscal year ending the 30th of June, 1857, were as follow :

From customs.....	\$64,000,000 00
From lands.....	7,000,000 00
Miscellaneous.....	500,000 00
	<hr/>
	71,500,000 00
To this add the estimated balance in the treasury, July 1, 1856.....	15,623,863 36
	<hr/>
	87,123,863 36
	<hr/>

This gave \$87,123,863 36 for the service of the fiscal year ending the 30th of June, 1857.

The estimated expenditures for said year were as follow :

Balance of former appropriations to be expended during the year.....	\$16,696,689 99
Permanent and indefinite appropriations to be ex- pended during the year.....	7,639,910 14
Appropriations asked for.....	45,114,765 45
	<hr/>
	69,451,365 58
	<hr/>

Making the estimated expenditures \$69,451,365 58, less \$12,000,-000 not expected to be called for during the year, and leaving an estimated balance in the treasury, on the 1st of July, 1857, of \$29,-672,497 78, without any estimate for the redemption of the public debt.

The actual receipts into the treasury, for the 1st quarter of said year, viz: the quarter ending the 30th September, 1856, have been as follow :

From customs.....	\$20,677,740 40
From lands.....	892,380 39
Miscellaneous.....	355,310 57
	<hr/>
	21,925,431 36

Making the actual receipts for the first, and the receipts for the remaining three quarters, as now estimated :

2d quarter.....	17,224,799 47
3d quarter.....	16,902,539 87
4th quarter.....	16,902,539 87
	<hr/>
In all.....	72,955,310 57
And, with the actual balance in the treasury on the 1st of July, 1856, of.....	19,901,325 45
	<hr/>
Making the sum of.....	92,856,636 02

for the service of the fiscal year 1857.

The actual expenditures for the first quarter of the fiscal year 1857, viz: the quarter ending the 30th of September, 1856, being..... \$18,675,113 21
the estimated expenditures for the remaining three quarters of the year, are set down as follow:

In the second quarter.....	18,000,000 00
In the third quarter	17,168,178 76
In the fourth quarter.....	16,668,121 24

Making the actual expenditures for the first quarter, and the estimated expenditures, for the remaining three quarters	70,511,413 21
--	---------------

Which leaves an estimated balance in the treasury, on the 30th of June, 1857, of.....	\$22,345,222 81
--	-----------------

For the actual receipts and expenditures of the first quarter of the year, viz: the quarter ending the 30th of September, 1856, see statement No. 2.

The actual expenditures of the first quarter, exhibit the sum of \$902,096 63 expended in the redemption of the public debt, and in payment of interest and premium. A like amount is included in the estimates, for the expenditure of each of the remaining three quarters.

The receipts into the treasury, for the fiscal year ending the 30th of June 1858, are estimated, as follow:

From customs	\$66,000,000 00
From lands.....	6,000,000 00
Miscellaneous.....	955,310 57
	72,955,310 57

To which add the estimated balance in the treasury 30th June 1857.....	22,345,222 81
--	---------------

Making the sum of.....	95,300,533 38
------------------------	---------------

for the service of the fiscal year 1858.

The expenditures are estimated, as follow:

Balance of former appropriations, to be expended this year.....	15,336,464 60
Permanent and indefinite appropriations.....	7,498,510 14
Appropriations asked for	48,469,848 02
	71,304,822 76

Less the amount that may not be expended during the year, estimated at	20,000,000 00
---	---------------

Would leave an estimated balance in the treasury on the 30th of June, 1858, of.....	43,995,710 62
--	---------------

The public debt, on the 4th of March, 1853, amounted to the sum of \$69,129,937 27, and was subsequently increased to liquidate the debt of Texas, by the sum of \$2,750,000; which gives the public debt

at, \$71,879,937 27. It has since been reduced, up to the 15th day of November 1856, the date of the Register's last report, to the sum of \$30,963,909 64. See statement No. 3. In making this reduction, the sum of \$40,916,027 63 has been paid for the principal thereof, and \$4,609,882 31, for premium on portions of it redeemed, before maturity, saving the sum of \$14,606,441 39 by paying in advance, and leaving the public debt, on the 15th day of November 1856, \$30,963,909 64, as per statement No. 3, parts 1 and 2.

In addition to the public debt, as above stated, there is due under treaties with various Indian tribes, payable on time, the sum of \$21,066,501 36, as per statement No. 4 of this report. This debt, as it becomes payable, constitutes an item of annual expenditure, and is estimated for, by the Interior Department. It is an incident, growing out of the extinction of the Indian possessory title, to the public lands, and is a charge on the annual sales. Besides this debt, the United States have invested money in stocks, for several of the tribes, to the amount of \$3,511,624 08, and hold the principal of the Smithsonian fund, amounting to \$515,169, under the act of the 7th July 1838, in stocks for that institution, as per statement No. 5. The United States having made these investments for the Indians, and of the Smithsonian fund, annually provide for the payment of the interest, which interest is or is not received on the stocks. The arrearages of the interest appear, in the tables, to the amount of \$120,704 74 on the stocks held for the Indians, and \$437,731 92 on the stocks of the Smithsonian fund. Statement No. 6 gives the balances of appropriations of trust or special funds, on the books of the treasury, at the close of the fiscal year 1856. Statement No. 7 gives the stocks belonging to the United States, in the Dismal Swamp, Chesapeake and Delaware, Chesapeake and Ohio and Louisville and Portland, canals.

The estimated receipts for the fiscal year 1856, with the actual receipts of the first quarter, and the balance in the treasury on the 1st of July, 1855, were \$86,850,710 27; and the actual receipts with the same addition \$92,850,117 47, being an excess over the estimates of \$5,999,407 20.

The customs, actual and estimated, were \$59,085,238 28, and the receipts \$64,022,863 50.

The lands, actual and estimated, were \$8,000,000, and the receipts \$8,917,644 93.

Miscellaneous, actual and estimated, were \$833,495 98, and the receipts \$977,633 03.

The estimated expenditures for the fiscal year 1856, were \$71,226,846 91, and the actual expenditures \$72,948,792 02, being \$1,721,945 11, in excess of the estimates.

It will be seen, from an examination of statement No. 1, that the sum of \$12,776,390 38 was expended during the year, in payment of interest, premium and redemption of the public debt, making the expenditure upon all other objects, \$60,242,401 64; the estimated expenditure for interest, premium and redemption of the public debt, being \$10,301,009 71, and the payments \$2,475,390 67 more than the estimate, making the expenditures upon other objects, less than estimated.

In making estimates to be submitted to Congress, for the annual expenditures, they present themselves in three classes.

In the first class, are the balances of unexpended appropriations, expected to be called for during the year.

In the second class, are the expenditures under existing standing indefinite appropriations. This includes the redemption and interest of the public debt, the expenses of collecting the public revenue, and some pensions and other items.

In the third, are all moneys necessary to comply with existing treaties and laws, including the expenses of Congress, the necessary public printing, and moneys due under treaty stipulations, the payment of the civil list, foreign ministers, consuls, and commercial agents, the expenses of the army and navy, Indian intercourse, the survey of the public lands, the expenses of the United States courts, maintaining lights in established light-houses, with a variety of other objects, provided for by law.

The several executive departments prepare estimates, for the branches of the public service, respectively, committed to their charge, with reference to expenditures, arising under existing laws, as in Class 3, and which they cannot discharge, out of existing or standing appropriations. In addition, the Secretaries estimate for such appropriations, as in their judgment, are required for their respective departments. This class embraces the estimates printed and sent to Congress, at the commencement of each session; but each Secretary sends, during the session, such additional estimates, as in his judgment, the exigency of the service under his charge requires.

There are other appropriations which the Secretary of the Treasury has to consider, in his report on the finances. These are appropriations by Congress, in addition to the existing and standing appropriations, and in addition to the appropriations, for compliance with treaties, and to pay demands arising under existing laws, and the additional appropriations estimated for by the respective departments, and include all appropriations for public and private claims, objects of internal improvement not estimated for, and all miscellaneous appropriations, originating with Congress during the session, although no specific sum is set down, in the estimates.

The receipts from customs fluctuate, with the increase or diminution of the imports of duty-paying goods, and the receipts from public lands, with increased or diminished sales; whilst the expenditures, to a very considerable extent, depend upon the action of Congress, and the delay in applying for, and settlement of, claims at the treasury.

The legislative power is responsible for all wasteful, extravagant, and unnecessary expenditures, authorized by standing appropriations and required to comply with existing laws, as well as for all such as may, from time to time, be authorized; because with that power, rests the right, to lop off all such waste and extravagance, by a repeal or modification of the laws, or by a refusal to grant any such appropriations. The executive power is responsible, for a correct construction of existing laws, and an honest application of the funds placed by Congress, at its disposal, in the execution of the laws, and for the objects, for which the appropriations are made. The Execu-

tive has the right, to recommend the repeal or modification of laws, for the purpose of lopping off all waste, extravagant or unnecessary expenditures, and to recommend all such, as public interest may call for, within the limits of the constitution; but the legislature is not bound, by the recommendations, nor to await executive recommendation, as to a repeal or modification of laws, or as to appropriations, and has the right, by new enactments, to enforce the proper construction of the laws, and their economical administration. It is not necessary to inquire, whether the legislative power has the right to omit appropriations, necessary to pay the charges accruing under existing laws, but it is manifest, it would be better to repeal or modify the law, so as to make the expenditures conform to present views, rather than hazard the injustice and discredit, of failing to pay charges, accrued and accruing, under existing laws. Economy is a legislative as well as an administrative virtue, which it is easy to commend and prescribe rules for, but which it is difficult to observe, with an overflowing treasury and a strong outside pressure. The legislative and executive branches should act in harmony, and work to the same end. If the legislative branch fails, waste, extravagance and unnecessary expenditure, are the result. The executive branch is without the full preventive power; but if the executive branch fails, the legislature can restrain and correct its abuses. The first step in the right direction, is so to modify the revenue laws, that no more money shall be collected from the people, than is required for an economical administration of the government, in fulfilment of all its obligations and duties, external and internal. The second, is the honest and faithful application of the moneys, to the legitimate purposes of the government.

The actual receipts from customs into the treasury, for the first quarter of the fiscal year 1857, viz: the quarter ending the 30th of September 1856, have been \$21,925,431 36, being \$2,150,971 23 more than the corresponding quarter, of the preceding year. The same causes that operated to increase the revenue from customs, during the last year, may be expected to influence, in the same way, the receipts of the succeeding three quarters, but probably not to the same extent. The estimate of receipts from customs has, therefore, been advanced to \$66,000,000. The receipts from lands, for the same first quarter of the fiscal year 1857, have been \$892,380 39, being \$1,443,345 48 less than the receipts of the corresponding quarter, of the preceding year. The large tracts of land, withdrawn from market, for railroads, under acts of the last session, and the lands which will be entered, under the land warrants, issued and being issued, are calculated to reduce the receipts from lands, from what they were, in the corresponding three quarters, of last year; on which account, the estimate from lands, has been reduced to \$6,000,000. The receipts from miscellaneous sources, have been put at, \$955,310 57, as per estimate.

The advance, in the estimate of receipts from customs, is made, with the knowledge of the large duty-paying imports, already in warehouse, and under the expectation that the demand for provisions abroad, at remunerating prices, will not be equal to that of last year; also, of the pressure in the European money-market, and the great

demand for our cotton and tobacco, with the abundance of money in this country, increased by the payment of the Texas debt and the California war bonds; also the failure of the sugar crop of Louisiana, acting in favor of increased sugar importation, and at an advanced price. The ability of the people of the United States to purchase and pay, not only for necessities, but for superfluities, may be relied upon, for the consumption of duty-paying merchandise, to an extent sufficient to meet the estimated expenditures, and allow the continued redemption of the public debt, as fast as, the holders of the stock shall be willing to accept the principal and interest, with a reasonable premium.

Statements from Nos. 8 to 37, and from B No. 1 to B No. 9, are a continuation of those, which accompanied my last report, on the finances, with the addition, where necessary, of the corresponding items, belonging to the fiscal year 1856, and are again submitted.

Statement No. 11 gives, for the fiscal year ending 30th June 1856, the domestic and foreign merchandise exported, at \$326,964,918, and our imports, for the same time, at \$314,639,942, making the exports \$12,325,066, in excess of the imports. The continued increase of our population, and of imports and exports, with that of our agricultural, manufacturing and mining wealth, and our facilities for internal and external commerce, as exhibited by the combined tables of this report, encourage me, again, to recommend a modification of the tariff of 1846, and a reduction of the revenue from customs. It is assumed as a fact, beyond question, that a tariff on imports is a tax, and that the tax is paid by the consumer of the imports, and that it is undeniable, that no tax should be imposed or continued, not required for an economical administration of the government, allowing for the fulfilment of all its duties, present and prospective; and that the collection of a greater revenue, is a wrong against the people, who pay the tax, and imparts to the agents who administer the government, a tendency to undue power, waste and extravagance.

Many believe, that the \$6,000,000 or \$7,000,000 annually expended, out of the national treasury, for carrying the mails and for printing books, &c., has been caused by a redundant and overflowing treasury, and that the same cause has operated to increase our expenditures, upon other objects, and upon some not called for, by the present or future exigency of the government, nor by the justice of the claims provided for; whilst but few, if any, believe there is any necessity for continuing to increase our expenditures, with the continued increase of our revenue. The tables of imports and exports, for the last ten years, exhibit a constant and continued, although not an annual increase, of our imports and our exports, and, consequently, of our revenue from customs. We should consider the same causes, that have operated to produce this increase, for the past years, will operate to continue it, in future years, and place still larger sums, in the national treasury. The productions of our planting and provision States, as well as our mining and manufacturing States, continue and will continue to increase, with the increased and increasing foreign and domestic demand; commerce being the exchange of the productions of one country or nation, for the productions of another, whether made indirectly, by sale and

purchase for money, or directly, by barter, the conclusion is irresistible, that both our domestic and foreign commerce have, generally, been of equivalents, and profitable to all parties; and as they have increased, so they will, under the same circumstances, continue to increase and justify a modification of the tariff, and a reduction of the revenue from customs. In the modification I have heretofore suggested, the propriety of increasing our free list, by admitting the raw material used in our manufactures, to free entry, and thereby giving to the capital and labor of our people, equal competition with the capital and labor of those countries, which have, for the benefit of their manufactures, admitted the raw material, without duty, and have recommended the same articles to be admitted free, that are admitted free, by Great Britain. This would reduce the revenue between \$7,000,000 and \$8,000,000. I have also suggested, that some articles of general consumption, such as salt, should be added to the free list, and the tariff, on some other imports, should be reduced some \$7,000,000 or \$8,000,000. This, upon the imports of last year, would reduce the revenue, to about \$50,000,000 from customs, which, with the receipts from the public lands, is deemed all-sufficient for the necessary requirements of the government; the average expenditures of the last five years, excluding the public debt and the \$10,000,000 paid, under the treaty with Mexico, having but little exceeded \$48,000,000. If, in future years, there should be increased demands on the government, the revenue from customs may be expected to increase, so as to meet them, without the imposition of additional duties; but if not, the propriety of taxation will then be, for the consideration of the constituted authorities.

Instead of a modification of the tariff and the reduction of the revenue from customs, many persons suggest, that we should repeal all tariffs, and establish the same free trade with foreign nations, that exists between the States of the Union, particularly those who deem the revenue now raised from imports, unjustly levied and extravagantly and wastefully expended. They urge, that the only remedy applicable to existing evils, is the experiment of free trade with foreign nations, and direct taxation on our people. I have considered that foreign nations, are not prepared for the same free trade, we enjoy with each other, and that we cannot have reciprocal free trade, without their consent; and that until they agree to admit our productions free, it would not be expedient, to admit theirs, free, and allow them to tax our labor, when we do not tax theirs, in return. I have considered that free trade, if expedient, should be approached gradually, and *pari passu* with the advance to that end, by foreign nations, and that the modification and reduction of the revenue, as proposed, would be a movement in the right direction, which might be followed, when experience and the condition of our commerce with other nations, should justify it, and have contemplated the time, when the productions of each State, in exchange for the productions of the others, would constitute an abundant supply for most of our wants, at cheaper rates, than other nations could afford them, and make a resort, to other modes of raising revenue, a question of necessity; but that, for many years to come, our national treasury would be supplied, from a tariff on

imports, and that in the modification and reduction, now called for, we should make it, as equal and just as possible, to our own people, and take away the discrimination now existing against us, principally arising out of the legislation of other countries, in contravention of the industry of our people.

The question of the tariff, and the propriety and mode of reduction, have been the subject of remark, in my former reports, on the finances. Further reflection has served to confirm me, in the views then taken, and to which the attention of Congress is again called, in addition to what is here said, and to what may be said, in response to the resolutions of the House of Representatives, of the 12th of August, 1856, calling for information of facts and suggestions, upon points connected with the subject.

At the instance of the Committee of Ways and Means, the House, on the 12th of August 1856, passed resolutions from A No. 1 to A No. 16, inclusive, and A No. 17, on the motion of a member. They accompany this report, and call for information and suggestions as specified in the resolutions.

The first resolution calls for a statement of the farming, planting, and sugar crops of the United States, for 1840 and 1850, as given by the census of those years, with an estimate of the crops of 1855, in tabular form. Statements Nos. 39, 40 and 41, of this report, give the information called for.

The second resolution calls for a statement, of the number of acres devoted to the various crops, in 1840 and 1850, with an estimate of the same for 1855,³ adding thereto such columns and figures, as may be necessary to exhibit, the increase and decrease, in the number of acres cultivated, in the principal crops in 1855, and the increased and decreased product per acre, with additional columns, showing the percentage of increase and decrease in acres, product per acre and aggregate product of each crop, together with such suggestions for the enlargement of the market, at home and abroad, as the Secretary of the Treasury may deem expedient. Statements Nos. 42 and 43 give the information called for, in this resolution, as furnished by the census of 1850, there being no data in that of 1840, and none upon which to make an estimate for 1855; and no data from which to furnish the other specified details. The suggestions requested, for the enlargement of the markets, at home and abroad, will be found in a subsequent part of this report.

The third resolution calls for information, on the wool-growing interest of the United States. Statement No. 44 gives the woollen manufactures in the United States, as shown by the census of 1840 and that of 1850, with an estimate for 1855, upon the same ratio of increase; and statement No. 45 exhibits the import and export of wool, for each year, from 1840 to 30th June, 1856; also the annual import and export of woollen manufactures, for the same period, with an estimate of the value of the wool, in the manufactured goods imported, in order to exhibit the quantity of wool, required for annual consumption, and the portion produced in the country. Statement No. 46 gives a recapitulation of the foregoing tables on wool, with the allotment, *per capita*, of the various exhibits therein contained, for the years 1840,

1850 and 1855; and statement No. 47 exhibits the number of pounds of wool produced and its value; the number of pounds of domestic wool exported and its value, and the home consumption; the number of pounds of wool imported and its value; the number of pounds of foreign wool re-exported and its value, and the home consumption, with the value thereof; the value of imported woollen manufactures and of those re-exported, and the home consumption, together with the total number of pounds of domestic and imported wool consumed, and the total value of domestic and imported woollen manufactures consumed, in the United States, for the years 1840, 1850 and 1855.

The fourth resolution calls for a statement and estimate, of the capital employed, in manufacturing wool in 1840, 1842, 1846 and 1856, designating the number of mills producing broadcloths, at said dates, with such suggestions in regard to the revenue laws, as the Secretary may deem expedient, for the permanent establishment of the wool-manufacturing interest, in the United States. Statement No. 44 gives the manufactures of wool, according to the census of 1840 and that of 1850, showing the rate of increase, between those periods, with an estimate at the same ratio for 1855; but the number of establishments in 1840, the census of that year does not give. There are no data in the department, from which the other specified details can be furnished. Suggestions upon the subject of this resolution, will be found in another part of this report.

The fifth resolution calls for information, on the present condition of the cotton-manufacturing interest, and for suggestions, how to promote the manufacture, of the finer fabrics in the United States, and enlarge the market for cotton, at home and abroad. Statement No. 48 gives the amount of cotton manufactures, as derived from the census of 1840 and that of 1850, with the estimate for 1855, at the same ratio of increase; and statement No. 49 gives the annual export of United States manufactured cottons, from 1840 to the 30th of June 1856, and the export of cotton, from the United States, during the same period; and statements Nos. 50 and 51 give an allotment, *per capita*, of the information contained in Nos. 48 and 49, for the years 1840, 1850 and 1855. These tables give the condition of the cotton manufacturing interest, and of the cotton-growing interest, from 1840 to 1856. The suggestions called for, will be found, in another part of this report.

The sixth resolution calls for information on the iron manufactures of the United States, also the manufactures of steel and iron and steel. Statements Nos. 52, 53, and 54, exhibit the manufactures of these articles, as taken from the census of 1840 and that of 1850, with an estimate for 1855, at the same ratio of increase, and statement No. 55 the export and import of iron and steel, and manufactures of iron and steel, from 1840 to 30th of June 1856, and the export of iron and steel and manufactures of iron and steel; also, statements Nos. 56 and 57, recapitulating the above tables, with the *per capita*, of the exhibits therein contained; and statements Nos. 58 and 59 give the prices of iron and steel, at the principal ports, for a series of years, which, combined, give the condition of the iron and steel interest, in the United States.

The seventh resolution calls for information, as to articles not produced in the United States, with reference to the enlargement of the free list. Statement No. 60 gives a list of articles imported into, and not grown or produced, in sufficient quantities in the United States. Most, if not all, other articles imported, are also partially produced or manufactured in the United States. The resolution also calls for information, on the leather, and manufactures of leather, in the United States. The census of 1850 does not furnish any information on the manufactures of leather. Statement No. 61 gives the export and import of leather, and the manufactures thereof, from 1840 to 30th June 1856; and statement No. 62 gives a recapitulation of the preceding statement, with the allotment, *per capita*, of the various exhibits therein contained, for the years 1840, 1850 and 1855. Statement No. 63 gives the annual importation of hides and skins, into the United States, from 1840 to 30th June 1856; and statement No. 64 gives a recapitulation of statement No. 63, and the various exhibits therein contained, for 1840, 1850 and 1855. The resolution also calls for information, as to the manufacture of glass, porcelain and stone ware, in the United States; statements Nos. 65, 66, 67 and 68 give the annual importations of those articles, from 1840 to the 30th June 1856, and the allotment, *per capita*, of the home consumption, for 1840, 1850 and 1855. The census of 1850 does not give these manufactures. It also calls for information, of the growth and manufacture of hemp and flax, in the United States. Statements Nos. 69, 70, 71, 72, and 73 give the importations of hemp and flax, and the manufactures of hemp and flax, from 1840 to 30th of June 1856, and the allotment, *per capita*, of the home consumption, for 1840, 1850 and 1855. The census of 1850 does not give these manufactures. It also calls for information, as to the coal, lead and copper interest of the United States. Statements Nos. 74, 75, 76, 77, 78 and 79, give the importations of the same, from 1840 to 30th of June 1856, and the allotment, *per capita*, of the home consumption, for 1840, 1850 and 1855. The census of 1850 does not give these manufactures. It also calls for the growth and manufacture of silk, in the United States. Statements Nos. 80 and 81 give the information according to the census of 1840 and that of 1850, and the importations of silk and manufactures of silk, from 1840 to 30th June, 1856, and the allotment, *per capita*, of the home consumption of foreign silk and manufactures of silk, for 1840, 1850; and 1855. The census of 1850 does not give these manufactures.

The eighth resolution calls for, information as to the shipping interest of the United States, with a statement of the tonnage employed in the foreign, lake, coasting and river trade, and the railway and carriage tonnage. Statements Nos. 12 and 13 give the tonnage of the United States for each year, from 1789 to 30th June 1856, and exhibit the sail and steam registered tonnage, engaged in the foreign trade, and the enrolled and licensed sail and steam tonnage, engaged in the coasting, lake, and river trade, and the States where the same is registered or enrolled, and to which it belongs, for the fiscal year 1856; and statement No. 82 gives the number of railroads, with the length of the road, capital invested, earnings, and profits, with the number of persons and tons of freight carried, within the year.

The ninth resolution calls for information, as to the aggregate amount of federal, State, city, county, railroad, canal and other corporate debts, held in Europe, on the 30th of June, 1856 specifying the same separately, as far as the same can be ascertained. Statement No. 83 gives an estimate thereof from the best data, within the knowledge of the department.

The tenth resolution calls for a statement of gold and silver coined, at the United States mint and branches, from 1793 to 1st July, 1856. This information is given in statement No. 8 of this report. It also calls for a statement of the entire cost of coinage, since the establishment of the mint, including buildings, machinery &c. This information is given in statement No. 84 of this report, showing the cost of ground, buildings, machinery and repairs, separately, from that of coining. It also calls for, an estimate of the amount of gold and silver, now remaining in the United States. This information is given in statement No. 85 of this report.

The eleventh resolution calls for, a statement of the export and import of gold and silver, from 1793 to the 1st July, 1856, with such suggestions, to prevent and restrain the export thereof, as the Secretary may deem relevant to the establishment of a sound, stable, and healthy hard-money currency, and to retire the small denominations of bank bills, as fast as, gold and silver can be obtained and substituted. This information, from 1820 to the 1st of July, 1856, is given in statement No. 10 of this report. No account of the export and import having been kept, at the custom-house until 1820, the department has no means of giving it, prior to that year.

The twelfth resolution calls for suggestions, as to the method of stimulating and increasing the export of agricultural and other productions of the United States, with a view of preventing the export of the precious metals, stocks and bonds, by requiring and making it the interest of foreign nations, to take our surplus agricultural and other productions, instead of making it their interest, to take our gold and silver, to purchase wheat, cotton, tobacco &c., from other nations. Remarks upon the suggestions, called for in the eleventh and twelfth resolutions, will be found in a subsequent part of this report.

The thirteenth resolution calls for a report of the frauds and under-valuations in customs, under the acts passed the 30th of August 1842 and 30th July 1846, designating the number of cases, and the amount of frauds and under-valuations, which occurred under the respective acts; and the fourteenth resolution calls for a report, as near as practicable, of the amount and proportions of imports, made by American-born citizens, on their own account, and the amount imported by citizens of foreign birth, aliens and citizens of other countries. The regulations of the department did not require accounts and returns, from which the information, called for in the thirteenth and fourteenth resolutions, could be given. Circulars were sent to some of the principal custom-houses, for the required information, but all did not appear on their books, and it was found to involve too much labor to give what did, and the disposable force in the custom-houses, could not have furnished it, in time to be laid before Congress, at the present session. Certain information was then called for, to enable the department to

make a reliable estimate, which will be found in statements Nos. 86 and 87.

The fifteenth resolution calls for a report of the advantages and disadvantages of specific and ad valorem duties, in reference to the interest of the country, and the frauds of, and under-valuations incident to, the two classes or systems of duties; and the sixteenth calls for a report upon the advantages and disadvantages of the home valuation system, in the collection of customs, as adopted and practised by the British government, with reference to its incorporation into the revenue laws of the United States. Remarks upon the subject-matter of the fifteenth and sixteenth resolutions, will be found in the after part of this report.

The seventeenth resolution passed by the House of Representatives at the same time, calls for a report, under specific heads, of the amount of appropriations and expenditures of every kind incurred by the government, annually, since the 30th of June, 1825, in the construction, repair, rent and preservation of custom-houses; the cost, expense and maintenance of revenue cutters and other vessels engaged permanently and temporarily in the revenue service, and the amount of all other expenditures incurred in, or resulting from, the collection of the customs, or duties on imports, since the above date. The information called for is given in statement No. 88 of this report, with the items separate on the Atlantic and Pacific coasts.

The statistical information called for in the first and second resolutions, taken in connexion with the information given in the statistics of this report, places before Congress the whole information, within the reach of the department, upon the agricultural, planting and manufacturing interests of the United States, as they existed in 1840 and 1850, and the basis for an estimate as to the present condition thereof, sufficiently accurate, for any practical purpose.

The statistics upon the production and importation of wool, and manufactures of wool, have been prepared with care, in order to place the questions, connected with the production and importation of wool and manufactures of wool, involved in the proposition, to admit wool as a raw material free of duty, fully and fairly before Congress. It will be seen that in 1840, according to the census of that year, we manufactured woollen goods, to the value of \$20,696,999, and that in addition, we imported manufactures of wool, to the value of \$8,652,785; making our consumption of the manufactures of wool \$29,349,784, and the consumption of \$1 71 $\frac{3}{10}$ for each person, then in the United States. The census of 1840 does not give the number of factories devoted to, nor the capital employed in, the manufacture of wool. The census of 1850, shows there were 1,559 factories in the United States, with \$28,118,650 of capital, devoted to the manufacture of wool, with the particular States, in which the factories were situated; also, that the manufactures of wool amounted to \$43,207,545, and we imported manufactures of wool to the value of \$16,976,575, making our consumption of manufactures of wool \$60,184,120, and the consumption of \$2 59 $\frac{1}{2}$ for each person in the United States. If we estimate the increased value of our woollen manufactures, since 1850, at the ratio of the increase between 1840 and 1850, it gives our manufactures of wool at \$56,406,786, for

the year 1855; and we find the value of our importations of manufactures of wool, for the year 1855 \$23,297,384, making our consumption \$79,704,170, and \$2 $93\frac{1}{100}$ as the consumption of each person, then in the United States. These tables also show, at the periods of 1840, 1850 and 1855, the value of the wool produced in the United States, and also the value of wool imported into the United States, at the same periods, less the exports of wool. They also show the value of the wool, in the imported manufactures of wool, at each of those periods, estimating the value of the wool, at one-third of the value of the imports, and exhibit the value of the wool consumed by each person, in 1840 at $71\frac{2}{100}$ cents, and in 1850, at $75\frac{1}{100}$ cents, and in 1855, at $93\frac{1}{100}$ cents; and that we consumed, in 1840 \$3,704,092 more than we produced, and in 1850, \$7,317,771, and in 1855, \$9,678,690. There are no data, from which to exhibit, the number of factories, nor the amount of capital, employed in the manufacture of wool, in 1855, nor the character of the goods manufactured; but it is represented that all our factories heretofore engaged in the manufacture of broadcloths and the finer woolen fabrics, have been forced to abandon that description of manufacture, and yield our markets for those articles, to the foreign manufacturer. These tables show that in 1855, we consumed \$23,297,384 of the manufactures of wool, more than we manufactured, and that we consumed \$9,678,690 of wool, more than we produced, estimating the wool in the manufactured article, at one-third of the value. Now we import \$1,940,697, of wool for our manufacturers, who pay a duty of 30 per cent. upon it; and we import \$23,297,384, of the manufactures of wool, on which we pay different rates of duty, viz: 30 per cent. on part, 25 per cent. on part, and 20 per cent. on part; whilst with wool free of duty in other manufacturing countries, the duty operates a discrimination against the labor and capital of our own people. This is peculiarly the case, as to the coarser fabrics, which we admit at a less duty, than we impose upon wool.

The climate of the United States is such, that manufactures of wool are used winter and summer, in some of the States, and in the winter months, in all, and the finer fabrics are used in all. It is an article for clothing and other uses, that our climate and our habits do not permit us to dispense with, and which our people can and will manufacture for themselves, if our tariff laws are arranged, so as not to discriminate against them, and in favor of other manufacturing nations.

When we first imposed a tax on foreign wool, Great Britain and other manufacturing nations taxed it also, and as high as we taxed it. We discriminated in the tax upon the manufactures of wool, imposing a higher tax upon the finer fabrics; whereupon Great Britain and other manufacturing nations repealed their tax on wool, and secured to their manufacturers, the advantage of obtaining the raw material, free of duty. This advantage over us they will continue to enjoy as long as our tax is continued. The reasons why they admit wool free, are to be found in the fact, that they manufacture more than they produce, and it is necessary they should be able to sell cheap, in order to enter advantageously the markets of the world, and it may be, also, to secure the market of the United States, to the suppression of manufacturing in

this country. We also manufacture more wool than we produce, and consume more manufactures of wool than we manufacture, and continue our tax on wool. The duty on wool was imposed to promote its production in the United States, and was expected to enhance the price. It has failed to secure the object for which it was imposed. The production has not kept pace with our population and consumption of woollen manufactures, and although the prices have been fair, they have not been such as to make wool-growing as profitable a pursuit as many others in the country. In the trial of ten years under the tariff of 1846, there is no greater production of wool, in proportion to the population, than there was prior to that time. It is said we do not produce the inferior priced wools, costing twenty cents per pound, or less; nor the higher priced wools, costing fifty cents or more to the pound, and that it is the lower and higher priced wools, that we import, for our manufactures, and that the duty has no effect, and does not enhance the price of the wool that we produce. In consequence of which, we are undersold in our own markets, in both the finer and coarser fabrics, and that the repeal of the tariff on low and the higher priced wools, would not affect the price of the wool we produce, and would enable our manufacturers to use more of our wool, by judicious mixture with foreign wool, and give them a fairer competition for the home market, and induce the manufacture of the finer fabrics in this country. There would be difficulty in the execution of such a tariff, because it would be the interest of the importer, to put the foreign value of his wool, above the fifty or below the twenty cents, to obtain free entry. It is believed these causes would render the tax uncertain and unpopular, and make free trade in wool more desirable and more beneficial, to the wool-grower as well as the manufacturer. In Great Britain, the tax on the foreign wool, when it was as much as sixpence a pound, did not enhance the price to the English wool-grower, although it had been imposed and continued, as well to encourage the growth of wool at home, as for revenue. The English prices current and statistics show that the price of wool ranged higher, the very first year after the duty was repealed, than it had for years before, and has continued to range higher ever since. It is confidently believed such would be the case in this country, if the duty on the importation of wool was repealed, thereby giving our manufacturers wool, on the same terms the foreign manufacturers obtain theirs, viz: by purchase in the open markets of the world, and that they would be encouraged to increase and extend their business, in order to enjoy the benefit of the home market for their goods, the consequence of which would be, a constant and greater home demand, at higher and better prices.

The ratio at which our population is increasing, will render necessary a continued increase, in the manufactures of wool required for consumption. The importance of a home-supply, of this useful and indispensable article of clothing, calls for the most careful investigation of the effects of our laws, and a prompt remedy by their repeal, wherever they shall be found prejudicial, to a constant and cheap supply, from the capital and labor of our own people.

In 1790, but little manufacturing was done in the country, as a distinct business. Nearly all that was done was in private families, for

domestic use. Now manufacturing is a separate pursuit, and immense capital is employed in its various branches. In 1840, the value of our manufactures was returned in the census of that year, at \$483,278,215, and in 1850, they were returned in the census of that year, at \$1,055,595,899. The ratio of increase makes our manufactures for 1855 \$1,391,031,293. In this result, we recognise the fact that we have become a great manufacturing people, and the tables accompanying this report prove, we are likewise a great agricultural and commercial people. An impulse, in accordance with the national sentiment, was given to manufacturing, by the imposition of duties on imports in our first revenue laws, and the impulse was increased, from time to time, by the imposition of additional duties. At first we manufactured the coarser and more bulky articles required by our population: gradually we have extended our operations, to a great variety of articles, and to some requiring much skill in the execution, and now our manufacturers are in possession of the home market, in a great variety of articles. In 1790, our planters raised no cotton for exportation; now it is the great crop of our planting States, and they furnish it, as a raw material to the manufacturing States, as well as to foreign nations, and now we manufacture the coarser cotton goods for the consumption of our entire population, and export near \$7,000,000 annually, to foreign countries. Our manufacture of cotton in 1840 was \$46,350,453, in 1850 \$61,869,184, and the same ratio of increase in 1855, would give \$70,964,712.

The history of the rise and progress of our manufactures, as given in the tables of this report, together with that of the growth of cotton and other productions, is suggestive of all that is required to extend our cotton manufactures, to that of the finer fabrics, and to the enlargement of the home and foreign market, for our cotton and cottons, and, indeed, for all branches of our manufacturing and agricultural productions. Allow the incidental protection of a revenue tariff, and place our manufactures and productions upon the same beneficial footing, that foreign manufacturers and producers enjoy, in our own and foreign countries, by taking off the duty we now impose on the raw material, and give them fair and equal competition, for the home and foreign markets, and we may safely leave all the rest, to the skill and enterprise of our people.

Iron and steel being articles of general use, in all our States and Territories, and necessary in the prosecution of all industrial pursuits, the annual consumption and the annual home production and import, become a matter of solicitude with many, and of interest to all. It appears from the census of 1840, that we produced and manufactured iron and steel, that year, to the amount of \$29,909,162, and that we imported iron and steel, and the manufactures of iron and steel, to the amount of \$7,088,739, and exported iron and steel, and the manufactures of iron and steel, to the amount of \$1,104,455, leaving for consumption \$35,893,446; and from the census of 1850, that we produced and manufactured iron and steel, that year, to the amount of \$60,485,653, and that we imported iron and steel, and the manufactures of iron and steel, to the amount of \$17,524,459, and exported iron and steel, and the manufactures of iron and steel,

to the amount of \$1,911,320; leaving for the consumption of the year, \$76,098,792. The same ratio of increase, in the production and manufacture of iron and steel from 1850 to 1855, that is found to exist between the years 1840 and 1850, gives the production and manufactures of iron and steel for 1855, at \$78,406,538. To this add \$23,945,274, for the amount of the imports of iron and steel, and manufactures of iron and steel, for the year 1855, first deducting the export of those articles, and there is iron and steel, and the manufactures of iron and steel, to the amount of \$98,598,340, for the consumption of the year. The estimate of \$78,406,538 for the year 1855 is, no doubt, some ten or fifteen millions less than the production.

A comparison of the population of 1840, with the production and manufacture, import, export and consumption of iron and steel, and manufactures of iron and steel, and the like comparison of the population of 1850, with the production and manufacture, import, export and consumption of those articles in 1850, extended by estimate, for the production and manufacture in 1855, and by the import and export and amount left for consumption of that year, places the subject fairly before us, in connexion with our past and future supplies and future wants. The table of prices at Boston, New York, Philadelphia and Baltimore, for the last seventeen years, furnishes the fluctuations in the prices of bar iron, and a criterion for the value of the other descriptions, and proves that this indispensable article, like all others, obeys the laws of demand and supply, in affecting the profits of the producer and manufacturer, operating favorably or unfavorably, upon the amount prepared for general use.

We have in the United States more iron ore and more coal, with the usual fluxes, in convenient connexion and of cheaper access, than all the other civilized nations of the world, and have the necessary capital, skill and labor to produce all the iron and steel, and manufactures of iron and steel, required for our consumption, or that may be required for our consumption, for centuries to come, and also to enable us to supply the markets of other countries, in fair competition, with the iron and steel of other nations. These tables show that our production of iron and steel, and manufactures of iron and steel, was greater, in proportion to population, in 1850, than it was in 1840, and that it was greater in 1855, than it was in 1850, giving us the right to assume that, influenced by the same causes, it will be greater in 1860 than it now is, and in time, will be sufficient for our own consumption, and then give us a surplus for export. But taking into consideration our present population, and accumulated capital, with the amount of capital, annually, drawn from other countries, in the course of emigration, and the great cost of carriage, to the interior of our country, with the late improvements, in the modes of production and manufacture of iron and steel, it would not be rash, to expect a full supply for our own consumption, between this and the returns of the census of 1870.

The tax upon iron and steel, and the manufactures thereof, because of their general use, in all sections and in all industrial pursuits, has been considered as equitable and fair a tax, as it was possible to im-

pose upon the country; consequently no material change has been contemplated or recommended; but if continued at present rates, it is not supposed the same amount of revenue will continue to be derived from it, even should the use of iron, as no doubt it will, be extended to many other purposes, and be consumed in much greater quantities. In commercial intercourse with other nations, based upon equivalent exchanges, as it must always be, if profitable and continuous, we may well look forward to the time, when we shall produce, within our own limits, all articles that are essential to national defence, and the use and comfort of our own people; and of these there is none more necessary to the defence of the country and the use and comfort of the people, and of which we have better means of producing in the country, than iron and steel, and the manufactures of iron and steel. Yet the production should not be stimulated, by unequal and unjust taxation, nor the period of an abundant supply, from our mines and factories, retarded by impolitic legislation. The home production, of iron and manufactures of iron and steel, is on the increase. The tables prove the production and manufacture of these articles, have increased with our increased population, and that we import less, in proportion to our population and consumption, than formerly.

Statement No. 60 gives the articles not grown or produced in the United States, as called for in the resolutions. They are not, all raw material used for manufacturing purposes. The making such of them free, as are so used, would not accomplish the object aimed at, in the proposed reduction of the revenue, by that mode. There are several articles partially produced in this country, but not in sufficient quantity, to supply the demand, which might be admitted to free entry, without prejudice to any home interest, and among them are wool, silk, hides, &c. Statements Nos. 61, 62, 63 and 64 give all the information upon the subject of hides, skins, and leather and the manufactures of leather, within the control of the department. The demand and supply of hides, skins, and leather, and manufactures of leather are matters of great and growing interest to the country. Statements Nos. 65, 66, 67 and 68 give the annual importation of glass, porcelain and stone ware, for the last seventeen years. The census returns of 1850, give no account as to the production and manufacture of those articles, in the United States, in consequence of which, the department is not able to furnish the additional information called for, in relation to them. It is known, however, that these articles are manufactured in the country—glass and stone ware to a very considerable amount—and the manufacture is being rapidly extended, so as, more and more, to meet the home consumption. The manufacture of porcelain, although introduced, has not increased much, and may be expected to be among the last, that will fully supply the home demand. Statements Nos. 69 and 70, in giving the growth and manufacture of hemp and flax, in the United States, and the importations of hemp and flax, and the manufactures of hemp and flax, show the home demand and home supply, and the foreign supply, and prove that the home supply, is not adequate to the wants of the country. Statements Nos. 71, 72 and 73 give the importation of these articles, for 1840 and 1850, with an estimate for 1855. The

census of 1850, does not give the home production of coal, lead and copper, and the department is without the means of giving the residue of the information called for, yet it is known that the country contains coal, lead and copper, more than adequate to supply all the wants of the country, and that the home supply, is on the increase. Statements Nos. 80 and 81 give the growth and manufacture of silk, in the United States. The department has not the means of giving the number of establishments, engaged in the manufacture of silk, nor the character of the articles manufactured; yet it is known there are numerous establishments engaged in the manufacture of silk, on moderate scale, and that sewing-silk, ribbons and various articles are manufactured. The statement also exhibits the importations of silk, and the manufactures of silk, for the last seventeen years. The extended and increased consumption of the manufactures of silk, induces large and increasing importations, whilst the growth of silk, when compared with population, is on the decline, and the home manufacture, on the increase. The tax on foreign manufactures of silk, from the general and extended use thereof, is considered expedient, and as just and equal, as can be imposed on any importations, and peculiarly proper, taken in connexion with our commerce with the countries, from which we obtain our principal supplies. The admission of raw silk, free of duty, would injure no home interest, and might, in time, so increase our manufacture of the article, as to reduce foreign importations. The manufacture of glass, porcelain, stone-ware, the mining of coal, and productions of lead and copper, and the manufacture of silk, may be expected to be increased and extended, so as to take possession of the home market, in less time, than it has taken the production and manufactures of cotton, to gain their present prosperous possession of the home market.

It will be seen by reference to statement No. 12, exhibiting the United States tonnage, engaged in the foreign and coasting trade, from 1789 to the 30th of June, 1856, that the tonnage on the 30th of June 1856, is 340,349, less than shown by the statement for the 30th of June 1855. This has arisen in part from a stricter examination of the returns of former years, and a correction, by striking out vessels formerly sold without the United States, or lost by marine and other casualties. This statement exhibits the sail and steam tonnage, separately, and shows there has been a regular progressive increase, with our increasing population and commerce, although retarded at times by the accidents of war, the casualties of trade and commercial difficulties. It also exhibits the registered tonnage, which is alone authorized to engage in the foreign trade, separately, from the enrolled and licensed tonnage, which is only authorized to engage in our coasting trade, with partial exceptions, on the northern lakes, and of vessels in the coasting trade, authorized to touch at Cuba; and statement No. 13 exhibits the States and ports, in which the sail and steam tonnage is registered, or enrolled and licensed, and consequently where it is owned.

The use of steam tonnage, in the commerce between the United States and other American nations, and Great Britain, France, and other commercial nations, may, and it is thought by some will,

considerably, reduce the sail tonnage used in commerce, and that cheaper capital in Great Britain, will give to that nation an advantage, over the United States, in steam tonnage, and the carrying trade of our own and other countries, and they attribute the reduction of our tonnage, to that cause. This may be so, to some extent, but no continued reduction of our commercial tonnage is apprehended; nor is it apprehended there is any just reason to suppose, our enterprising ship-builders and merchants will surrender, the navigation of the seas, to Great Britain, and place that nation in possession of the carrying business of the world; yet the subject is one of interest, and calls for a careful examination of our tonnage laws, and the removal of all impediments, to an equal and fair competition, for our foreign trade and the trade of other nations.

When our navigation laws were first enacted, in 1789, the registered tonnage of the United States was secured, against the protecting navigation laws of other nations, by countervailing or protecting provisions. Such provisions were, from time to time, extended, so as to countervail the prohibitory enactments, of the commercial nations, with which we had intercourse. These commercial restrictions have gradually yielded to the more liberal principles of free trade, in the transportation of freight and passengers, until in that business, we have free trade with almost all the nations of the earth, only marred, by the charge of light-money to our vessels, where we charge none. This removal of restrictions, in our commercial intercourse with other nations, in the carrying business, has not been prejudicial to our foreign commercial marine. The burden of light-money, to which our tonnage, in the ports of Great Britain and other commercial nations, is subject, should be removed by mutual agreement, or countervailing legislation on our part, and the tonnage duty, now charged on our vessels, in the ports of France and some other countries, and on their vessels, in our ports, should, by like mutual agreement, be taken off, and port charges equalized.

The coasting trade of the United States has, from the beginning, been strictly reserved for vessels, built within the United States, and owned by citizens of the United States, to the exclusion of foreign-built and foreign-owned vessels. The American tonnage engaged in foreign trade and in the coasting trade, has been American-built, and has had the absolute protection of our laws, and the licensed tonnage absolute protection, in the carrying trade on our coast, and in our own waters. The protection given to our foreign commercial and to our coasting commercial marine, has secured a large and efficient body of skilful officers and sailors, at all times, ready for the defence of our cities and coast, for repelling aggression on our commerce, and for manning our ships of war. In the protection given to our shipping interest, for the purpose of having, at all times, the power to repel foreign aggression and protect our coast and trade, there appears to have been but little division of sentiment, from the earliest times, to the present, whilst the yearly increase of our tonnage, proves the wisdom of our laws in this particular. We have no data to ascertain the annual number of persons, or the annual tons of freight carried, in our coasting trade, nor the value thereof. Each person must make his own

estimate of the tonnage employed, and the average number of trips the vessels can make, combined with the facts that capital constantly tends to that business, and the growth of our enrolled and licensed tonnage keeps pace, with our increasing population and wealth. To exhibit in connexion with the tonnage employed in our coasting trade, the passengers and freight transported on railroads, the department has had prepared statement No. 82 accompanying this report, of most of the railroads in the several States and Territories, showing the capital invested, the length of road completed in each of them, the annual number of passengers and tons of freight carried, and other interesting statistics of said roads. The amount of coasting tonnage, and the annual number of tons of freight transported on our railroads, with an estimate of that carried by other modes of transfer, exhibit the magnitude of the means required for our internal trade.

A reference to the table of production, taken from the census of 1840, will show that our agricultural and manufacturing production in that year, amounted to \$1,006,133,599 ; and a reference to the like table of production, taken from the census of 1850, will show the agricultural and manufacturing production, for that year, to have been \$2,012,520,539, and the ratio of increase. A like ratio of increase, for the five succeeding years, gives \$2,602,363,924 as the value for the year 1855. Suppose \$1,000,000,000 to be consumed at the places of production, and there is left \$1,602,363,924 of production, as the basis of our foreign and internal trade, and the source from which we derive profitable employment, for our registered and licensed tonnage and our railroads. Take fifteen per cent. of this for our foreign trade, which is about equal to our exports, and there is left \$1,352,009,336 for our internal trade, constituting the commercial ligament, that binds us together, as one nation and one people. There is no tax or tariff upon the transportation of the articles, of which our internal trade consists, from one place to another, within any of the States and Territories, nor upon the articles themselves ; the cost of transportation is the only burden, on the free interchange, over and above the cost of the article, and the profit of the producer or dealer.

The effect of reciprocal free trade is shown by statement No. 29, of our commerce with the British North American provinces, before and since the reciprocity treaty, which went into effect in 1854. In 1853, the exports of American produce to those provinces amounted to \$7,404,087, and our imports from them to \$7,550,718 ; whilst, in 1856, the exports of American produce to said provinces amounted to \$22,714,697, and our imports from them to \$21,310,421.

The combined tables accompanying this report, exhibit our population and elements of greatness in 1790, shortly after the adoption of the constitution and the organization of the government under it, making us, in many respects, one nation and one people. They also exhibit our present population, with all the accumulated wealth of sixty-six years, and all the elements for increasing wealth and greatness, for years to come. We have existed as States and a nation, under wise and equal laws, justly and impartially administered, and have been a constitution and law abiding people, with but occasional

State and individual exceptions. Why may we not hope the history of the past, is to be realized, in our future progress? Under State and national constitutions, we have had free trade with each other, the products of one State supplying the wants of another, and stimulating the industry, enterprise, and prosperity of all. Calls are made for suggestions, for the increase of our internal and foreign trade. Under a conviction that we were collecting, under the existing tariff, more revenue, than a present economical administration of the government, and a wise and prudent outlay for the future, made necessary or called for, and also under the conviction that an overflowing treasury, would induce wasteful and extravagant expenditures, a modification of the tariff of 1846, and a reduction of the revenue from customs, was suggested in my first report, on the finances, and renewed in both my subsequent reports, and is now again repeated, with, if possible, a firmer conviction of its necessity and propriety, and for the same reasons, and others that could be named.

The suggested reduction of the revenue, was, by an enlargement of the free list, so as to admit some articles of consumption and the raw materials used by our manufacturers, to free entry, and lessening the duty on other imports. It was thought that the duties from customs, could well be reduced to some forty-eight or fifty millions of dollars, and leave an ample sum, for all the wants and requirements of the government, including the redemption of the public debt, as it should become due. It seemed to me, that good policy required the raw material used in our manufactures, to be exempt from duty, and our manufacturers placed on an equality, with those of Great Britain and other manufacturing nations, who admit the raw material to free entry. A tax upon the raw material is calculated to increase the cost of the production, by the profits of the importer on the tax on the raw material, and the profits of the manufacturer on his outlay for that tax, and the importer's profit thereon, and of the merchant through whom, it passes to the consumer, interfering with the manufacturers' enjoyment, of both the home and the foreign market, on the same advantageous terms of the manufacturer of other nations, who obtains the raw material, free of duty. A single example illustrates the case: Great Britain admits wool, a raw material, free of duty, and the United States impose upon it, a duty of thirty per cent. This enables the English manufacturer to interfere with the American manufacturer, in the American markets, and to exclude him, from the foreign market. It does more: it surrenders the markets of the countries producing the raw material, to the nations who take it, free of duty. Our manufacturing and commercial States enjoy the markets of our planting and provision States, because there exists no impeding duty, giving preference to foreign nations; but our manufacturing, commercial and provision States do not enjoy the markets of Mexico, Central and South America, and the West Indies, nor of other nations inhabiting the shores of the Pacific, because these nations do not manufacture, and have but little else for commercial exchange, than the raw material, which we tax, and other nations take, free of duty, in exchange for manufactures and other productions; and although we are more favorably situated for commercial intercourse, with them, we yield the

trade to the European nations. Had the suggestion for the admission of the raw material—the productions of those countries—free of duty, received a favorable consideration at the first session of the thirty-third Congress, we would have been importing the raw material, the productions of those countries, in our ships, and those countries would have been taking from us, in exchange, the productions of all sections of the Union. With prejudices and antipathies lessening, we would soon have become bound to them, and they to us, in the strong and enduring ligaments, of mutual and beneficial commerce. Additional employment would have been secured to our tonnage, and additional markets, for our manufactures of cotton and other products. Mexico, Central America, South America, the West Indies, and other nations on the shores of the Pacific, would have been learning to confide in us, and we would have had an increased interest, in the stability and prosperity of their governments. The enlargement of the free list, and the admission of the raw material, is suggested, as the best and surest mode, of giving increased beneficial employment to our tonnage, and increased beneficial markets, for our manufactures and other products, and of cultivating amity and friendship, with our southern neighbors, and also the best mode, of promoting our own prosperity, next after the mutual free trade, we enjoy with each other. Mutual beneficial commerce is all that is required, to establish, with these nations, lasting relations of peace and friendship, and remove from their minds all apprehension, from our expansion. We should seek commerce, and not dominion. When they shall know and feel that commerce, alone, is our object, and that it is as beneficial to them, as to us, we shall win their confidence, and our friendship will be lasting.

It will be seen that the total gold and silver coinage of the United States Mint, from 1793 when the mint was established, to 30th September, 1856, has been \$549,341,914 14, and that the entire import from 1820, when the account was first kept, has been \$293,505,743, and the export \$436,587,354—there being no account of the imports and exports, prior to 1820.

It is not deemed possible for an agricultural, manufacturing and commercial nation, to prevent the export of gold and silver, because in commercial transactions, gold and silver, besides being a measure of value, constitute articles of commerce, and must obey the laws of demand and supply. The export may be restrained, by having gold and silver currency of a fixed value, and allowing the circulation of no bank-notes, or no bank-notes not convertible into gold and silver, on demand, and a foreign commerce that calls for larger exports of other articles, than the wants of our citizens make it necessary to import; but whilst gold and silver continue products of our mines, and remain articles of commerce, internal and external, requiring equivalent exchanges, the export and import of gold and silver will continue, and should be no cause of alarm. The desideratum of a sufficient uniform currency, of a fixed value, in all the States and Territories, is all that is required, so far as currency is concerned, to secure a sound and healthy foreign and internal trade. A currency, partly composed of bank-notes, has a liability, and to some ex-

tent a tendency, to excess, against which convertibility into gold and silver, on demand, is no security ; nor is the confining discounts to notes and bills, representing real transactions, a security and never will be, whilst there is such a thing as over-trading and over-production ; and for the same reasons, a pure metallic currency, would not constitute a perfect security, against a diminished or redundant supply. Coin vanishes under the influence of wars or apprehended wars ; internal revolutions and strifes ; political alarms and apprehended political changes ; a deficiency in the grain crops, requiring large importations from other countries ; the explosion of mercantile speculations ; and a continued unfavorable course of foreign trade.

The establishment of a pure metallic currency, would require the withdrawal of the corporate authority, given by State charters, to 1,398 banks, to issue and circulate bank-notes as money, and the consequent withdrawal of \$195,000,000, now circulated by them. Congress has no power to act upon the charters, granted by the States, and the States may be without power, during the continuance of the charters, and certainly would not agree to make a surrender of the power to Congress ; therefore, a pure metallic currency may be set down, as impracticable, under our constitution and our laws, to say nothing of the sentiment of our people. Statement No. 32 gives, as expected, an increase, in the number of chartered banks in the United States, and an increase, in the capital employed in them. They constitute commercial agencies, with \$344,000,000 of capital. They maintain a circulation of nearly \$200,000,000 of bank-notes, and afford such valuable facilities, to all branches of our industry, as to make it undesirable, now, to dispense with them. Their circulation may be so regulated as to give it practical uniformity and stability, by withdrawing their smaller denominations, of notes, and allowing the gold and silver coinage to take their place. The bank reports do not give the several denominations of notes, and amount of each in circulation, but leave it to an estimate of those of \$5 and under, which may be set down, at one-fourth of the whole, or \$50,000,000.

In 1844, before the gold mines of California were discovered, the amount of gold and silver in the country, was estimated at \$100,000,000. The imports, and the receipts of bullion at the mint from our mines, after deducting the exports, up to the 30th September, 1856, have added at least \$150,000,000 to the amount of gold and silver in the country, without taking into consideration, the amount brought in by emigrants and returning travellers, nor the amount carried out by travellers and merchants, not entered at the custom-house, nor the amount, used in our manufactures or employed in the arts. The superintendent of the mint estimates the gold and silver remaining in the country at \$200,000,000, on the data stated in his communication accompanying this report ; and the department at \$250,000,000, upon the data and for the reasons, stated in my last report. But whether it be the one or the other, there has been added to the gold and silver from \$100,000,000 to \$150,000,000, since the working of the mines in California. This affords satisfactory proof, that the

\$50,000,000 of small-note circulation, could be supplied from our own mines, in the course of three or four years, without deranging our currency, or oppressing any branch of productive industry. The only difference would be the supply of a home demand, instead, of a foreign demand, and the consumption of a less amount of foreign merchandise. This, a healthy operation of trade would soon accomplish. It remains to inquire, in what manner, provision can be made to have the small-note circulation withdrawn, and prohibited. In some of the States, there are no chartered banks, and other of the States have not authorized the issue of small notes; whilst others, under a conviction of the ill effect upon the currency, and upon their productive interest, have prohibited their issue and caused their withdrawal. This is the result of a correct and corrected public sentiment, and may be expected sooner, or later, to extend itself to the other States, and thus accomplish the entire withdrawal of small notes, and the substitution of gold and silver, in their stead, for all the small daily transactions, including the payment of wages. This may not be accomplished for years; but justice to those compelled to use small notes, and to those States, that have not used, or have prohibited their use, in connexion with the losses, a failure to redeem them on demand, always inflicts upon labor, or such a use of them, as to render presentation for payment impracticable, and the infliction of a like loss, may well induce an amendment of the constitution, giving Congress authority to prohibit and restrain their use, and induce such an amendment to be called for by the States that have not used, or have ceased to use, them. At present, an attempt to prohibit and restrain the issue and circulation of small notes, by a resort to taxation, or by applying bankrupt laws to these corporations, would be premature. In my former reports, the subject has been brought to the attention of Congress, with a view to the full consideration of the evil and danger to our currency, from their continued use, under the hope that Congress, or the States authorizing their issue, would take action, to extend the restriction and make it general.

If the small notes are withdrawn and prohibited, it is believed the operations of the treasury, in the collection and disbursement of the national revenue, would be as salutary a restraint upon the banks and upon commercial transactions, as could be interposed, and all-sufficient to secure as sound, healthy, and uniform a currency, as it is practicable to have.

An examination of the bank reports shows that the profits of banking, in the great cities and commercial centres arise, principally, from the use of the large deposits kept by merchants, and capitalists in their vaults, whilst the profits of banks, in the rural districts, arise, principally, from the substitution of their notes for money, viz: from circulation. The banks with large deposits, in prosperous times, rely that the loss from withdrawals, will be supplied by other deposits; and the banks of circulation, that the new issues on loans and discounts, will give the means, for the redemption of returning notes. It requires the same character of prudence and foresight, to be able to pay deposits, and to be able to pay returning notes. The new feature in banking, presented in the last bank report, showing the extent of capital employed in unchartered banks, proves banking, a popular as well as

a profitable pursuit, even without the privilege of substituting bank notes for money. The chartered banks are mostly confined, by their charters, to the legitimate business of banking, viz: dealing in money; and as they are joint-stock companies, they generally obtain men of integrity, prudence, and experience to conduct their business, and encounter, only, the hazard of improvident losses and discounts, to their customers; whilst the unchartered banks, encounter the same hazard from improvident discounts, and also the temptation to engage portions of their capital, in outside speculations. Banking, whether in chartered or unchartered banks, confined to the legitimate business of dealing in money, with prudence and skill, encounters less hazards, than most other mercantile pursuits. The one thousand three hundred and ninety-eight chartered banks and branches, with a capital of \$344,000,000, and the private banks, with a capital of \$118,000,000, constitute so many establishments, dealing in money, as an article of trade and commerce. They are managed by a large corps of intelligent, experienced, and practical men, who, in the general, control them with great integrity, skill and judgment, not only for the interest of the stockholders and the proprietors, but for that of the public. This conclusion is warranted by the few instances of bankruptcy, or embarrassment presented in the year, or a course of years, and by the absence of great fluctuations, in the amount of their circulation and discounts. However, great vigilance should be bestowed, on the operations of banks, and they should be rigidly confined, to the legitimate business of dealing in money.

The most objectionable feature, in contemplating these banks, arises from the fact, that many of them issue and circulate small notes, and have not sufficient capital, to justify the employment of intelligent, skilful and experienced bankers, in their management. The States, by appropriate laws, do prohibit individuals from issuing and circulating notes as money, and may prohibit the issuing of small notes, or the business of banking, without adequate capital, restrict their operations within prescribed limits, and make abstraction or diversion of the funds, by the banks, or their officers, a criminal offence. Statements Nos. 32 and 35 exhibit these chartered and unchartered banks, in the aggregate, with a combined capital of \$462,000,000, and with a combined circulation, for the chartered banks, of \$195,000,000, (the unchartered banks having no circulation,) and with deposits, in the chartered banks, of \$212,000,000, (the unchartered banks showing no deposits, and no gold and silver.) The gold and silver, in the chartered banks, amounts to about \$60,000,000. An estimate of one-half that amount in the unchartered banks, in proportion to capital, would give \$10,000,000 more, and make \$70,000,000 in both. An estimate of one-half of the amount of deposits in the unchartered banks, in proportion to the amount in the chartered banks, would give at least \$38,000,000 in those banks, and make \$250,000,000 of deposits in the chartered and unchartered banks. The chartered banks have an aggregate of \$704,534,362, due on the bill and discount line, maturing, on an average, in from one to ninety days, and bank and other balances due to them, to the amount of \$62,639,725, payable on demand. The unchartered banks have an amount, in proportion to

their capital, and the daily demands of their business. The daily receipts from these sources, constitute the means of the banks to meet the daily demands, for the payment of deposits, redemption of notes and other outstanding claims, and for the purchase of bills and discount of notes. The gold and silver, upon which all this is based, is but about \$70,000,000. These banks, and their operations, are diffused throughout the States, and excite but little attention, in their respective localities, although exerting considerable influence, on the business and trade of the country. In this aggregate view of their capital and business, the volume of influence they may exert, upon the business and prosperity of the country, is fairly presented for consideration. An aggregate of the daily receipts and daily payments, at all these banks, would satisfactorily prove that this \$70,000,000 is not dead capital, but performs its full part, in our various commercial transactions.

The money statements of the treasury, and statements of deposits by disbursing officers, exhibit about \$30,000,000, at all times, in the national treasury. The daily receipts and daily payments, covering more than \$73,000,000 of annual receipts, and more than \$72,000,000 of annual payments, are daily drawing from banks and business men, large amounts of gold and silver, into the national treasury, in payment of customs duty, and in payment for public lands, and controlling the banks and the traders, in their operations, whilst the daily payments, at the national treasury, supply the gold and silver, to new channels of circulation, without causing undue pressure in monetary affairs. For the weekly transactions of the national treasury, see statement No. 37. This \$30,000,000 is not dead capital. The \$10,000,000 or \$12,000,000 of it allowed to the mint and branches, for the purchase of bullion, is always active, being exchanged for bullion and replaced by coinage, yet always ready for the wants of the national treasury, whilst the balance constitutes the distributive fund, that gives confidence in the ability of the treasury, to meet all demands.

In the United States, all real and personal property is saleable, as well as the annual productions of agriculture, manufactures and commerce, and in prosperous times, can easily be exchanged for money, and is the basis of enlarged and extended credits, and acts in conjunction with the bank credits and money in circulation, giving increase to the value of real and personal estate, all articles of commerce, and the wages of labor, and thereby creating a demand for more money. It is upon this state of things that wars, or apprehended wars, internal revolutions and strifes, political alarms and apprehended political changes, deficiencies of crops, the explosion of large mercantile speculations and unfavorable trade, act, destroying confidence, and with it credit, inducing the hoarding the precious metals, the withdrawal of deposits, the return of bank notes for redemption, the consequent stagnation of commerce, in all its channels and operations, the reduction of prices and wages, with inability to purchase and pay, bank suspensions and general insolvency. There are no means of entirely preventing this destruction of confidence, credit, and commerce. The failure of a few banks, merchants, and dealers, occurs in periods of the greatest prosperity, and occurs annually, without much

effect, upon the great interests of society, and serves to warn and direct the more cautious and prudent. The destruction of all confidence; credit and commerce, affects, in its remorseless march, every interest and almost every individual. For this, the remedy must be looked for, in a sound currency, well managed banks, and prudent merchants and dealers. Under a system of wise and just laws, giving security to property, a fair reward to labor, and affording a temperate and timely control of the currency and all mercantile transactions, we may confidently hope such a disaster will rarely occur. The independent treasury, when over-trading takes place, gradually fills its vaults, withdraws the deposits, and, pressing the banks, the merchants and the dealers, exercises that temperate and timely control, which serves to secure the fortunes of individuals, and preserve the general prosperity.

The independent treasury, however, may exercise a fatal control over the currency, the banks, and the trade of the country, and will do so, whenever the revenue shall greatly exceed the expenditures. There has been expended, since the 4th of March, 1853, more than \$45,525,000, in the redemption of the public debt. This debt has been presented, from time to time, as the money accumulated in the national treasury, and caused stringency in the money market. If there had been no public debt, and no means of disbursing this large sum, and again giving it to the channels of commerce, the accumulated sum, would have acted, fatally, on the banks and on trade. The only remedy would have been a reduction of the revenue, there being no demand and no reason, for increased expenditure.

After determining to raise revenue, by a tariff or tax upon imports, the question arises as to the best mode of fixing the amount. It may be done, by levying a specific sum, with or without minimums, on all articles of weight or measure, or by a certain per cent. on the foreign value, or on the home value, or by a combination of the specific and ad valorem principles. The first mode requires weighers, gaugers, and measurers, for the ascertainment of the quantity, and with that, the sum to be paid. The second requires not only weighers, gaugers, and measurers to ascertain the quantity, but appraisers to ascertain the foreign or home value, and with that, the sum to be paid. The first has but one set of officers; whilst the second has the same set, and appraisers, in addition. The weighers, gaugers and measurers may, from accident, want of knowledge, or design, fail in ascertaining the true quantity, and so may the appraisers, the dutiable value. In the first case, there may be errors to the prejudice of the government; in the second case, like errors may, for like causes, exist in the appraisal; and with the double set of officers, the chances of error and fraud are doubled. The specific sum attaches alike to all quantities, and results in unequal and unjust taxation. The article that costs a dollar, pays the same tax as the article, that costs five. A strong sense of the injustice; resulting from levying a fixed sum, with or without a minimum, upon all articles, no matter what the difference in value, renders it inexpedient and unjust to resort to that mode of levying duties. Those who favor a tariff, for protection, prefer a specific tax, because the tax is generally higher, and always the same, notwithstanding the fluctuations, in the foreign and home value. Those who

favor a tax, for revenue, desire *ad valorem* duties, as the most equal and equitable mode, that a just government can resort to. If, to avoid the injustice and inequality resulting from specific taxation, it is provided, the value shall also be ascertained, and a specific sum attach, *pro rata*, according to the value, it becomes *ad valorem*. There may be some two hundred articles of commerce, to which specific duties might be attached, according to weight or measure, but there are many, to which specific taxation is not applicable. It is understood that Great Britain adopts specific taxation, upon most imported articles, not admitted to free entry, and the home valuation, upon the residue. There remains the question, between the home value and the foreign value. One objection to the home value, arises from the difference in freight and insurance, from foreign ports to the several ports of the United States, because freight and insurance would be a component part of the home value, and result in making a different home value, in the different ports, to the benefit of one and the prejudice of another. For this and other reasons, the home value is objectionable. The question was fully considered, and my suggestions given to the committee of the House of Representatives, in a letter under date of June 7, 1856, which accompanies this report, and is now referred to. In addition to what is there said, it is suggested, that the *ad valorem* principle has been in force and practice, for ten years, is well understood by the experts in the treasury and in the custom-houses, and most of the questions which have presented themselves, during the ten years of its operation, have had the decision of the department, and many of them, the sanction of the judiciary. I do not think it would be expedient, now, to make a change, and give up the knowledge and experience of the past ten years.

The existing tariff laws might be so modified, as to be of more certain and easy execution, and to the prevention of that fluctuation in duties, of which the manufacturers and the friends of protection complain. The greater part of the revenue, now collected, is from iron and steel and manufactures of iron and steel, silk and manufactures of silk, wool and manufactures of wool, hemp and flax and the manufactures of hemp and flax, and the manufactures of cotton, and manufactures of which silk, wool, hemp, flax, and cotton are component parts, and brandies, wines, and sugars. The import of these articles for the fiscal year 1856 amounted to \$166,089,379, and the duties on them to \$47,168,850 05, as per statement No. 28 of this report.

The present tariff laws place portions of these articles, in different schedules, and impose different rates of duty, on the articles placed in the several schedules, according to value and use, and to the chief value of the article, composing the fabric. This makes it the duty of the examiners and appraisers to examine, classify, and place the article in its appropriate schedule, and requires skill and time to accomplish it correctly. A part of this skill and labor could be dispensed with, by putting all manufactures of silk, wool, hemp, flax and cotton, or of which any of said articles is a component part, into one schedule, and at one rate of duty, and render the duty more certain, and the law, more practicable in the execution. The fluctuation in prices, and consequently the fluctuation of duties,

could be greatly lessened, if not wholly removed, by authorizing and requiring the appraisers, to fix the value at the time of exportation, at the average foreign value, for the last three or four years. The appraisers must have knowledge of all articles of commerce, the countries of their production, and their quality and value, also of the shipping and other charges, and must keep themselves informed upon all these points, in past years, as well as at the current time. If the law authorized them to go back, and take the average of the preceding three or four years, in fixing upon the appraised value, the extreme fluctuations in price and duties would be avoided, and the temptation to invoice below value, lessened. The articles enumerated have been selected for illustration: the reasoning is applicable to duties, on other articles, embraced in the schedules, but the difficulty is not so great. The existing laws require the importer to produce to the collector, his invoice of imported goods, prior to making entry, and that invoice and entry is the importer's declaration of the foreign value, at the date of exportation, and gives the right to the importer of purchased goods, to advance the cost, on making his entry, so as to be equal to the foreign value, at the time of exportation, and imposes an additional duty of 20 per cent. when the entered value of such goods, is found to be 10 per cent. or more, below the appraised value, but gives no such privilege of raising the value, to goods imported by the producer or manufacturer, and does not impose the duty of 20 per cent. when such goods are appraised 10 per cent. or more, above the invoice value. The department has considered, as to unpurchased goods, the act of 1842 is in force, and that under said act, when found 10 per cent. or more below the appraised value, they are liable to 50 per cent. duty on the duty, under the provisions of said act, but the inferior courts hold, that that act is also confined to purchased goods, and no case has arisen, in which the department has had the question decided, by the Supreme Court. The provisions of the act of 1846, should be made applicable to all imported goods. The attention of Congress was called to this subject, in a letter addressed to the Speaker of the House of Representatives and President of the Senate, under date of the 22d day of July, 1856, and the proper modifications of the law suggested. That letter accompanies this report. It is true, existing law authorizes the seizure and forfeiture of goods fraudulently entered below their value; but when the duty is levied upon the foreign value, at the date of exportation, such a difference, between the invoice value and the appraised value, is not always such evidence of fraud, without other circumstances, as will justify seizure and condemnation; whilst ten per cent. or more, in the case of purchased goods, gives the additional duty, and makes it the interest of the importer, to look well to his invoice and entry. The law, by not making it the interest of the importer of unpurchased goods, to look with like vigilance, to his invoice and his entry, places him in a more favorable condition, than the importer of purchased goods. It is alleged that more than two-thirds of all imported goods are, on account of the foreign producer or manufacturer. If they were placed on the same footing, there would be fewer attempts to enter goods, below their foreign

value, and no advantage allowed to the foreign producer or manufacturer, over the American purchaser and importer.

In answer to the call for the amount of United States and State stocks, &c., held in foreign countries, the general summary from my report of the 2d March, 1854, upon that subject, made in compliance with a resolution of the Senate, under date of the 4th of April, 1853, is given, of the amount of such debts, and the part held abroad, corrected, as to the United States stocks, by information in the Treasury Department, and as to railroad stocks by the actual returns of railroads, as given in statement No. 82 of this report. There was not time to resort, again, to the original sources, for the necessary information, to make a more authentic statement. The condition of the European money market, during the recent war between Great Britain, France, and Russia, and since, has not been such, as to afford a market for additional American stocks, whilst many of them have been returned to America and cashed. There can have been no increase of American stocks, held in foreign countries, since the report from which the summary is taken. It will be seen that the United States stocks, the State stocks, the stocks and bonds of 113 cities and towns, 347 counties, 985 banks, 75 insurance companies, 360 railroads, 16 canals, and 15 miscellaneous companies, are all set down at \$1,407,518,894 and the amount held by foreigners at \$202,922,937.

Statement No. 88 gives the information called for in the 17th resolution of the House of Representatives, and exhibits the aggregate sum expended for construction, repairs, rent and preservation of custom-houses, from 1825 to 30th June, 1856, at \$9,116,987 77, and the aggregate cost and maintenance of revenue cutters and other vessels for same service, at \$7,670,045 68, and all other expenses incurred in the collection of customs for same time at \$48,299,168 30, the two latter sums making an aggregate of \$55,969,213 98, expended in the collection. This statement gives \$1,023,116,676 55, as the revenue collected from customs, for the same time; and taking the whole expenditure of \$55,969,213 98, the cost of collection has been less than 5½ per cent. The \$4,738,968 17 expended in the collection, on the west coast, part of the aggregate expenses of collection, has increased the cost of collection, owing to the high prices there, and the large salaries heretofore allowed.

The reports of the First, Second, Third, Fourth, Fifth and Sixth Auditors, and of the First and Second Comptrollers, the Commissioner of Customs, who acts as comptroller of the revenue collected from customs and accounts connected therewith, and those of the Treasurer, Solicitor and Register of the Treasury, accompanying this report, lettered from A to L, inclusive, give the operations of their respective offices, since my last report, which are highly creditable to the incumbents. The current business has been, in the general, satisfactorily and promptly attended to, but the arrearages have not been fully brought up, nor the condition of the department all that it should be, considering the various and complicated interests involved.

In my last report, it was stated there was still outstanding on the

books of the treasury the sum of \$24,739,133 41 of the \$132,521,154 50 found to be outstanding, on the 4th of March, 1853. Since that report, various corrections in the accounts have been made, and also many collections, and accounts closed to the amount of \$1,916,345 30, and there has been added in adjustment \$1,076,164 30. The balance now outstanding is \$23,898,952 41. The department, after a careful examination and investigation, has ascertained that \$6,213,345 69 of the amount, now outstanding, is utterly lost to the government, by the death of the parties, without leaving any estate, or by hopeless insolvency. Statement M, gives a schedule of the names and amounts, under seven heads: No. 1 shows \$1,415,631 55 lost in the Navy Department; No. 2, \$2,942,155 71 in the War Department; No. 3, \$570,393 16 in the collection of customs; No. 4, \$24,360 84 in foreign intercourse; No. 5, \$89,490 40 on account of Indians; No. 6, \$290,627 13 on sales of public lands; and No. 7, \$870,688 69 on miscellaneous accounts. It is proposed, with the consent of Congress, to carry these balances to the account of profit and loss, on the books of the several Auditors and Comptrollers, and on the books of the Register.

In the investigation of balances due to the United States, on judgments obtained on customs bonds, against principals and sureties, it was ascertained, many of the parties so indebted, had taken the benefit of the late bankrupt law, and claimed to be discharged from the payment of these judgments, in favor of the United States, under their certificates of discharge. The admission of this claim, would add several hundred thousand dollars to the amount lost, by insolvency, in the collection of the customs. But not considering that these debts to the United States were embraced in the provisions of the bankrupt law, several executions were issued, on such judgments, in the southern district of New York, and placed in the marshal's hands, for collection. The parties moved the court to quash the executions, because of the discharge in bankruptcy. The circuit court sustained the motion, and quashed the executions. This did not constitute such a case, as could be brought to the Supreme Court, in consequence of which, an action of debt was directed, upon one of the judgments, for the purpose of having the question finally settled, by the decision of the Supreme Court.

It was also ascertained, that, of the outstanding balances due the United States, the sum of \$1,609,072 32 was due, from the late deposite banks, or from persons against whom, some of said banks had assigned debts and demands in payment, or to secure said balances. An investigation has been carefully made of the condition of those banks, and the assigned debts. The accompanying statement N, upon the subject, gives all the information the department has been able to collect, in relation to them, from which it appears, that most, if not all, of it is lost, by lapse of time and insolvency. It is submitted, authority should be given, from time to time, to carry these balances to the account of profit and loss, and relieve the treasury statements from these, as well as other insolvencies. The better to prosecute the investigation of balances due, an alphabetical list has been made and kept

in this office, for the purpose of its being able to retain the amounts, whenever the parties should be entitled to receive other moneys at the treasury. This list has saved much labor, and gives great facilities, in ascertaining the persons indebted to the United States. The settlement of the balances due on this list, was placed in the hands of two clerks in the immediate office of the Secretary; and many of these balances have been closed, by the production of additional vouchers, and by payments. The closing of these balances must necessarily be a work of much and continuous labor, and result in placing many of them, in the account of profit and loss, owing to the hopeless insolvency of the parties. The receipts into the national treasury from March 4, 1789, to 30th June, 1856, during which time these balances have accrued, have been \$1,886,136,014 26, and the expenditures \$1,837,721,045 16.

In the system adopted for the sale of the public lands, in 1796 and 1800, the price was fixed, and part required in cash and part on time, and credits given for part of the purchase money, until 24th April, 1820, when Congress reduced the price to \$1 25 per acre, and adopted the cash system, and interposed for the relief of the purchasers of the public lands, by allowing the concentration of the partial payments to one or more tracts, and the surrender of the residue. This relieved the purchasers, and freed the government from the embarrassment of an immense and accumulating debt against purchasers. In the system adopted in 1789, for the collection of the revenue from customs, importers were allowed credit for the duties, upon giving bond and security, for the payment at a future day. These bonds accumulated, and during commercial difficulties, many of the parties failed, and the bonds were put in suit. This class of debt, also, became embarrassing to the government, and the bonds unreliable as revenue. The system was changed in 1842, when the cash system was introduced, followed in 1846 by the addition of the warehouse system; and now, in the collection of the revenue from customs and lands, there is no loss from credit sales or credit duties. The only loss to be encountered is the defalcation of collectors and receivers, who give security for the faithful discharge of their duties, and the due payment of all the public money they receive. In the customs branch, the system of monthly accounts and monthly settlements, with daily deposit of receipts, where there are assistant treasurers and depositaries, and prompt drafts or orders to deposite, with an assistant treasurer or depositary, when there are none, at the place, has been in force, for more than three years. And in the land branch, like drafts or orders to deposite, when the receipts accumulate, beyond a certain sum, has also been rigidly enforced, and has tended to lessen the hazards, in the collection and receipt of the public revenue; and with the practice of examining, by an officer of the department, at a moment's warning, in connexion with the penalties for embezzlement, we have as great practical security as can well be attained, if the proper care is taken to appoint none but men of integrity and capacity to office, and to dismiss all, who fail in the prompt, correct and honest discharge of their duties. The receipt of the public revenue being thus provided

for and secured, a system of laws, for its disbursement in accordance with the appropriations, and for accounting and settling for the same at the treasury, was also provided. These laws, except where the disbursement is confided to certain army officers, require from the disbursing officers bond and security, for the safe-keeping, faithful application and proper accounting for the public money, confided to their care. These laws also prohibit, under pain of felony for embezzlement, from depositing the public money in banks, or loaning, or the application of it to any private, or other use, than the public one, for which it is placed in their hands. They also require disbursing officers to pay out to the persons entitled, nothing but the gold and silver confided to them, and prohibit them, under like penalty, from taking, accepting, receiving, or transmitting to the accounting officers for credit any voucher, without having paid the full amount named in the voucher. It is also made embezzlement to fail or refuse to account for the public money, and pay over the balance.

It is deemed essential to the honest and faithful application of money, by disbursing officers, and the correct accounting for the same, that all accounts of disbursements, with the proper vouchers, should be made at fixed and short intervals. The periods of accounting and settling with disbursing officers were fixed for the War and Navy Departments, and for some other branches of the service, quarter-yearly, and the same provision was made for accounting by collectors of the customs and receivers of public money, and for disbursing officers of the treasury, but with authority to the Secretary of the Treasury, to require accounts in his department, to be rendered as much oftener, as he might deem proper. Considering, as stated in my last report, that it was perfectly practicable, to have all disbursing officers of the treasury, render and settle their accounts monthly, the system of monthly accounts and monthly settlements, was adopted at the treasury, for all the accounts, to which the system could be applied, without a change of the existing laws. The result to be expected, from monthly accounts and monthly settlements, is fairly presented, in the report of the Commissioner of Customs. The fact of but one defalcation, since its adoption, speaks more than volumes, in its favor. The system, so far, has been successful, and no doubt is entertained of its entire practicability, not only in the treasury, but in other branches of the public service, with much additional security for the faithful application of, and accounting for, the public money. It is true, each officer will have to make twelve instead of four accounts, and there will have to be twelve instead of four settlements; but the twelve accounts and twelve settlements will involve the taking and examination, of no greater number of vouchers, than four accounts and the four settlements, whilst the monthly accounts and settlements will, timely, impart to the officer, a knowledge of the payments, he is authorized to make, and the character of the vouchers he must produce, and the necessity of paying no money without a proper voucher. The monthly accounts and monthly settlements will, at once, enable the superintending officers to see and know, how the duties are performed, and to displace incompetent and dishonest disbursing officers.

It may, at first, require a few more clerks, in the accounting offices; but after the system shall be in full operation, and the accounting and settling promptly enforced, it will take less time and less labor, than it did, under the system of quarterly accounts and quarterly settlements. Had monthly accounts and monthly settlements been regularly enforced, and all failing disbursing officers promptly dismissed, the large balances, now outstanding on the books of the treasury, could not have accumulated.

The Independent Treasury act, by prohibiting the deposit of public money in banks, or its application by collectors, receivers, disbursing agents and others, to any other use than that, for which it was collected or appropriated, made the declaration of a sound and correct principle, and by authorizing the deposit thereof with the treasurer, assistant treasurer, and designated depositories, placed it in the power of the public officers, to have it kept safely, in the government vaults, without hazard to them, or their sureties, and provided means, by which, supervising officers could know, whether the funds were kept always on deposit, and only checked out, in a due course of disbursement, in favor of the persons entitled to it. All disbursing officers should be required to make deposit of the funds intrusted to them, with the treasurer, assistant treasurer, or designated depositories, and to check only in favor of those entitled, and to make monthly returns of the sums disbursed by them, with a statement of the balance on deposit, except in that class of cases, where the party is not convenient to a place of United States deposit. These depositories, however, should be established in all sections, where there is or shall be considerable public money collected, or to be disbursed. The regulations of the War, and most of the other departments, require monthly statements from disbursing officers, of the amount disbursed, although required only to render quarterly accounts to the treasury, for settlement. These monthly statements of disbursements, could readily be converted into monthly accounts, with proper vouchers for settlement at the treasury, and for the information of the supervising officers, and thus a correct and prompt system of accounting and settling, be established in all branches of the public service. The efficiency of the provisions of the independent treasury act, will never fully manifest itself, until the depositories are sufficiently diffused, so that collecting, receiving, and disbursing officers can deposit in their vaults, and monthly accounting and settling at the treasury, is required and enforced. The cash system, in the disposal of the public lands, and in the collection of custom duties, has caused absolute certainty, in the payments to receivers and collectors. The system of daily deposits, where it can be done, and drafts and standing orders to deposit, as the amount accumulates, where there are no depositories at the place of reception, with monthly accounts and settlements, makes the receipts into the national treasury, almost certain. Why will not the deposit system, and monthly accounts and settlements, give the same certainty in its disbursement?

The system of selling the public lands on credit, and giving credit for the duties on imports, has yielded to the simple and better system

now in force, and quarterly accounts and settlements with the collectors of customs, has yielded to the better system of monthly accounts and settlements; and in the treasury, monthly accounts and settlements by disbursing officers, is taking the place of quarterly accounts and settlements. The increased receipts and expenditures require a prompt rendition and settlement of accounts. Formerly, when the annual receipts and expenditures were only \$12,000,000 or \$15,000,000, the quarterly accounts only included some \$3,000,000 or \$4,000,000; now, they would include some \$15,000,000 or \$16,000,000 of receipts and the like amount of expenditures, and, now, the monthly accounts would exceed \$5,000,000 of both; and if, as formerly, the quarterly accounts were not rendered, until near the close of the next quarter, and not settled at the treasury, until near the close of the third quarter, the unsettled accounts at the treasury would exceed some \$45,000,000 of receipts, and some \$45,000,000 of disbursements, with almost an impossibility of the heads of departments knowing whether receivers, collectors and disbursing officers were properly discharging their duties. The public money collected from the tax-payers, for the exigencies of the government, in all well regulated and well administered governments, should be safely kept and honestly applied to the objects, for which it was levied, and such a system of laws and accounting established, as to make it impossible for the officers intrusted, with its receipt and disbursement, to apply it to their own use, or allow their friends to have the use of it. A strict examination into the origin and history of the large balance, now outstanding at the treasury, would make it manifest, that the public money was heretofore devoted to private use, and allowed to remain unaccounted for until, in many cases, the parties became insolvent, and in order to cover sums wasted and lost by private use, set up unfounded claims, for credits and services. This habit of applying the public money to private use, had become so established, as to be considered allowable, and no disgrace to the officer—so much so, that the offices were sought, for the use of the public money, more than, for the honor of the office and its salary. The Independent Treasury act was intended to remove this practice, inculcate sound and honest principles, as to the use of the public money, and brand the delinquent officer with crime. To have this effect, the act must be rigorously enforced, and have the active vigilance of the supervising officers, with the aid of monthly accounts and settlements, and the prompt dismissal of all who violate the principle. In fact, no one is worthy to have or retain public office or situation, who does not acknowledge that principle of the Independent Treasury act, and give it practical effect, in all his official transactions. An agent or officer of the government cannot, without a sacrifice of principle, use the public money for his own purposes, nor allow others to use it, nor speculate upon the government, whose interest he is appointed and paid, to guard and protect. Heads of departments are entitled to the most certain means of ascertaining the conduct of persons, employed to receive or disburse public money, and it is believed none can be devised, that would prove more efficacious, than monthly accounts and settlements.

In this connexion, attention is called to the various and complicated duties of the accounting officers of the treasury, who state and settle the annual accounts of receivers and collectors, to over \$73,000,000, and the annual accounts of claimants and disbursing agents, to more than \$72,000,000. This subject was referred to, in my last annual report, with a statement of the manner and principles of accounting, at the treasury, representing the high qualities required and essential to the proper discharge of the duties, confided to these treasury officers, and especially so, as to the chiefs of bureaus and heads of divisions. A further consideration of the subject, and its great importance, confirm me in the statements there made, that both wisdom and economy call for the soundest and ablest lawyers, of integrity and administrative qualities, that can be secured for those positions, and that the salaries of those officers, should be revised and increased. The change in the value of money, mode of living, price of provisions, and other necessities, since Congress passed upon their compensation, with the great increase in the receipts and expenditures, and consequent increase of responsibility, justify a revision and increase of compensation. The salaries now given are far less, than many of the banks, manufacturing and mercantile establishments, pay their confidential, competent, and skilful officers, whilst the amount involved and passed upon, is not a tithe of the government receipts and expenditures. The persons competent to take these positions, are necessarily men in the meridian of life, of established character, and should possess the high qualities indicated. The services of such men, ought to command salaries, sufficient to enable them to maintain a proper position, for themselves and families, and the education of their children, without exhausting their private fortunes, or involving themselves, in speculating and money-making schemes. They are in the position of judges, whose duty it is to guard the interest of the treasury, without prejudice to the right of individuals, and should have competent salaries, and be able to devote themselves to the special duties of their offices, without distracting interest. They should be always in place, and know that the accountants and clerks are capable, and attentive to their duties; that all arrearages are brought up, the records and files in good order, and the current business promptly and correctly disposed of. They should also feel an active zeal and pride, in the proper discharge of the duties of their offices, and inspire like zeal and pride, in all officials under them. Such officers are essential to just and prompt settlements at the treasury, and the proper condition of that branch of the public service. The government cannot afford to appoint, or to retain men, in these offices, who do not possess these qualifications, or who fail to give their whole time, to the duties confided to their charge, or who are indifferent to the condition of their offices, and the manner in which the duties are discharged, or to the qualification, integrity and attention of their assistants.

Attention is called to the remarks of the Third Auditor, upon the act of the last session, providing for the payment of the California war bonds, and the departure, in that instance, from the hitherto

almost universal practice of the government, in causing all claims of that kind, to be passed upon, by the accounting officers of the treasury, after an investigation of the facts, or by authorized commissioners, for the investigation of the facts. If the departure, in this instance, is made a precedent, for the payment of such expenditures, by the States and Territories, bordering on the Indian territory, and by the States, in time of war and insurrection, the national treasury would be placed at the will of State and Territorial officers, over whom, the government that pays, has and can have no control. The precedent, if established in this class of cases, would soon be extended to other classes of claims, where the claimants desired to avoid the examinations, by the experts of the treasury." This established, Congress itself would be the investigators and accountants, where everything would be, *ex parte*. In this connexion, I would call the attention of Congress, to a species of special legislation, that has lately had its sanction; that is, the reference of a particular claim, to a named officer, whose award is made conclusive. The case of Glover & Mather, referred by act of Congress, to the First Comptroller, at the second session of the thirty-third Congress, and the case of Carmick & Ramsay, at the first session of the thirty-fourth Congress, are cases of this description. The claimants, in both these cases, set up large demands against the United States. The claims are based upon alleged breaches of contracts; which fact being assumed by Congress, the amount of damages against the government, is the only question referred, where, if referred to the accounting officers, both questions would be open. The action of the Auditor is dispensed with. The action of the Comptroller is not upon appeal, but that of an arbitrator, whose decision, no one can revise. The objection to this system of legislation is, that it takes the particular case out of the operation of the general law, and gives an easier and more favorable mode of reaching the national treasury, and takes from the selected officer, the responsibility of his official position. If the system adopted and enforced, from the beginning of the government was, and is, expedient and just, for one class of demands against the government, it is equally expedient and just, in all like cases, and should be adhered to; but if not, the mode of settling and adjusting claims against the treasury, should be changed, so as to afford equal benefits and advantages to all.

The Independent Treasury act has been carried into effect, the past year, as far as it has been practicable, for the department to enforce it. Most of the disbursing officers of the government, where conveniently situated, have, and continue to avail themselves of the convenience and security of depositing, in the vaults of the treasurer, assistant treasurers, and public depositories, as will be seen by statement No. 89 of this report. Those who have not deposited, in the vaults of the government, although convenient, construe the act of 1846, as allowing the officer, a discretion upon the subject. This they sometimes exercise, by making what they term special deposites, with chartered and unchartered banks. The security of the public money, and the prevention of its application, to any other than public use,

calls for explicit legislation upon the subject, and the extension of the penalties of the act of 1846 to those receiving public money, from disbursing agents and others, who have public money in their hands. The courts have found difficulty in applying the act, to all cases within its spirit, because thought not to be, technically, within its terms.

The amount transferred for disbursement, during the past fiscal year, was \$38,088,113 92, at a cost of \$12,945 87, whilst the premiums paid on sale of treasury drafts, have been \$54,924 16, leaving \$41,978 29 over and above the expenses. It is believed that, with care and vigilance, the transfer of public money will hereafter be made, through the agencies of the treasurer, assistant treasurers, and depositaries, without charge and without risk, except under extraordinary circumstances, and in peculiar times. The receipts and expenditures, during the past fiscal year, have amounted, in the aggregate, to \$146,866,933 48, and have all been, in the constitutional currency of gold and silver, without any disturbing effect upon the currency, the banks, or business of the country. However, the withdrawal and prohibition of the small-note circulation of the banks is still deemed essential, to a sound and stable currency, and to be called for, by the best interest of all the States.

The accounts of collectors of the customs continue to be rendered, at the close of each month, and to be adjusted at the treasury, within the succeeding month, with but few exceptions, and those principally on the Pacific coast, which require a few weeks longer, for their receipt and adjustment. The system of monthly disbursement and emolument accounts, with like monthly adjustments at the treasury, has been introduced, since the date of my last report, and promises to be equally, if not more, beneficial than the system of accounts and adjustments, established for customs. The system adopted for keeping books, making entry for consumption, warehousing, and transportation and exportation of merchandise, and of making returns to the department, mentioned in my last report, has been attentively continued and enforced, with certainty and uniformity, in the returns of the collectors of the public revenue. The statement No. 30 contains a full exhibit, of goods in warehouse, on the 1st of July, 1855, and on the first of each succeeding month, until the 1st of July, 1856, with the amount of merchandise, entered for consumption, during each month, whether in the original entry, or from warehouse, and the goods entered for transportation, to interior ports and for exportation, during each month, and the amount received, during each month, from other ports. These returns are made direct to the Treasury Department, and are confided to a clerk, whose duty it is to keep the files, enter the returns and make up the monthly statements. He also keeps the abstracts required to be sent to the department, of goods entered and bonded for transportation, and the acknowledgments, of the receipt of the merchandise, at the ports of destination, and enforces the sending the abstracts and acknowledgments, and the due cancelment of the transportation bonds. The returns thus required, enable the department to understand, how the business is

being conducted, and when it is necessary to have the books of the port examined, and its business investigated. The statement exhibits the movements of merchandise, during each month of the year.

The revision of the revenue laws, prepared by the department, under a resolution of the Senate, and sent to that body, at the first session of the thirty-third Congress, and referred to, in my last report, still remains for the action of Congress. The revenue laws consist of various acts of Congress, commencing with the organization of the government, with so many amending, repealing and conflicting provisions, that it is exceedingly difficult to ascertain what is, and what is not, in force—consequently, what is the law upon any particular point. The department, in making this revision, conformed to existing laws, with such modifications and new provisions, as were deemed proper to make the law conform to the present condition of things, and the wants of the service. This revision has been again considered by the department, and sundry amendments and additions recommended, which had the sanction of the Committee on Commerce in the House of Representatives, at its late session, and, with the revision, now remain for the consideration of Congress. It was hoped Congress would have passed upon this revision, at its late session, and that the department could have conformed the revision of the circulars, then being made, to the revised act. The enforcement of the revenue laws, as now existing, called for a revision and modification of the circular instructions of the department, upon the subject. The collection and revision of the circulars, as one code, is now nearly complete, and will soon be put in force. If Congress should pass the revision of the revenue laws, the instructions can readily be made to conform to the revision they may adopt. It is believed that the enactment of the revision, would result in great advantages to the revenue, and great convenience, to those engaged in commerce and navigation, and place the revenue laws before the people, so as to be easily understood by those, whose duty it is to carry them into effect, and by those whose interest and rights, are involved in their enforcement. There are no penalties or forfeitures, on importers and freighters, in the revision that are not, now, in the existing laws, and none which are not believed necessary and proper, for the due collecting the revenue. The revenue laws require revision on many accounts, but upon none more than upon the subject of invoices, entries, appraisements, compensation to officials, and in relation to enrolling and licensing vessels for the coasting trade. There are suits against collectors involving questions upon all these subjects. The conflicting decisions of the department and the circuit courts, in most of these cases, cannot be reviewed in the Supreme Court, owing to the amount involved.

The report of Captain A. H. Bowman, No. 90, who is in charge of the construction and repair of buildings, confided to the Treasury Department, exhibits, in detail, the operations of the department, since the date of my last report. The plans and specifications for these buildings and repairs are prepared in the department. The work is contracted for, and let to the lowest bidder, except in a few instances where it is done by days' work, as stated in the report. When a con-

tract is made, a competent person is appointed to superintend the construction, and to be present and see that the materials and work are such, as the contract calls for. An account of work done and materials furnished is made at the close of each month, and returned to the department, and payments made according to contract; and when necessary, the works are visited by Captain Bowman, or an agent of the department. The buildings are all constructed fire-proof, and of the most durable materials. The regulations for these buildings accompanied my first report, with directions for keeping and rendering the accounts. The report is accompanied by a list of all custom-houses purchased, all constructed by the United States, and those in the course of construction; also, with a similar list of the marine hospitals; also court-houses and post offices in charge of the department. For further information upon the subject of custom-houses, reference is made to the letter of the department, No. , under date of the 3d day of July, 1854, published with this report. Statement No. 91, made out from the hospital returns, exhibits the number of sick sailors, who have had the benefit of the hospital fund, and the expense, at each place. The economical administration of the hospitals, to the proper relief of the sailors, who contribute to the fund, is one of much interest, and has given the department considerable anxiety, because of the tendency, to improper and wasteful expenditure. It has been considered necessary, to give new instructions, as to the collection and proper accounting for the hospital fund; the provisions, medicines, and other supplies; the employment of stewards, nurses, and other servants; and the government and supervision of the hospitals. These instructions have been published, and are now being enforced. They will be found in the revised code of circular instructions, heretofore mentioned. The furnishing sick sailors relief, under the contract system, as mentioned in my last report, is now in force at New York, Philadelphia, Baltimore and other places, as will be seen in the table of sick sailors in hospital, and affords the same necessary comfortable relief to sick sailors that is furnished in the government hospitals, and at less cost. It is believed, that the contract system could be beneficially extended, to many places where the government has hospitals, by allowing the use of the hospital and grounds, and a certain per diem for the sick; and that under the contract system, sick sailors can be just as well, if not better, provided and cared for, than they can be in the hospitals, under charge of persons appointed by the department, and it is suggested, that authority be given to make such contracts.

Report No. 92, with the accompanying documents, gives the operations of the Light-house Board, since the date of my last report, with the condition of the works under their charge. The duties of the board have been performed with commendable vigilance and ability. The great facilities afforded to our commerce, by the operations of this board, impart interest to the subject, and recommend it to the continued favor of Congress.

The Coast Survey continues to engage the constant and vigilant attention of the Superintendent in charge, and it is believed, the money appropriated is beneficially and economically applied, to the early ac-

complishment of the survey. The fullest and most reliable information, as to our extensive coasts and numerous harbors, cannot be obtained, without such a survey. It is believed, the importance of the survey to national defence, and to commerce, and the publication of all the ascertained facts, will continue, as heretofore, to recommend the survey to the favor of Congress, until it shall be fully accomplished. The report of the Superintendent will, as usual, be made to Congress during the session.

The report of the Supervising Inspectors, No. 93, also accompanies this report, and gives the operations of the law, under which they are appointed, for the past year. I consider the law requires revision, in the particulars set out in my last report.

It is also recommended, there should be an amendment of the law, in relation to payments at the treasury, for the reasons stated in my letter and accompanying papers upon that subject, to the Finance Committee of the Senate, under date of the 28th of April, 1856, which accompanies this report. Attention is also called, to the recommendations of my letter, to the chairman of the Committee on Retrenchment of the Senate, under date of the 17th of April, 1856.

It will be seen from examination of statement No. 6, of the State bonds, held in trust for the Indians and for the Smithsonian Institution, that in some cases, the States have made no provision for the payment of interest, and may not provide for the payment of principal. The United States having made the investments for the Smithsonian Institution, have to provide for the payment of interest, and will have to provide for the payment of principal, if ever that becomes payable. The action of the United States, in carrying out the special powers vested in it, might be kept distinct from the action of the State governments, and without the relation of debtor and creditor, and the irritation growing out of that relation and defaults. It is suggested that good policy requires that course, and that the United States should dispose of the State bonds, now held in trust, and realize the loss, assume these debts, and by a general law provide, when moneys have or shall become payable on time, under Indian treaties, with or without interest, that the treaty obligations shall have the same force as United States stocks on time, or interest-paying stock, and interest and principal payable, as it matures, without other investment. It will also be seen by reference to statement No. 7, that the United States hold stocks in corporations, in some of the States. It is submitted, that it is not well, for the United States to remain a stockholder, in these institutions, and exercise a control, or influence, in the management and direction of their affairs, and that authority should be given, to dispose of these stocks, at the market value, or otherwise dispose of the United States share, in these corporations. These recommendations are made, because it is believed, for reasons that readily suggest themselves, the United States ought not to be, in the relation of creditor to any of the States, nor that of stockholder, in any of the corporations, created by a State.

The Louisville and Portland canal, now the sole property of the United States, has been under the direction of the Treasury Department, the past two years. The tolls, by direction of the department,

were reduced one-half, and the receipts, for the past two years, have been expended in the repair of the locks and enlargement of the canal, improvement of the bridges, &c. The report of the operations will be laid before Congress, as soon as received.

All which is respectfully submitted.

JAMES GUTHRIE,
Secretary of the Treasury.

Hon. JESSE D. BRIGHT,
President pro tem of the Senate U. S.

TABLE OF CONTENTS.

	Page.
1. The Secretary's report.....	3
2. Statement No. 1, of the receipts and expenditures for the year ending the 30th June, 1856.....	60
3. Statement No. 2, of the receipts and expenditures for the quarter of the fiscal year 1857, ending 30th September, 1856.....	65
4. Statement No. 3, exhibiting the public debt 4th March, 1853, and on the 15th November, 1856, stating the amount redeemed and premium paid, with the amount saved by paying before due.....	65
5. Statement No. 4, amount due under treaties with various Indian tribes payable on time.....	67
6. Statement No. 5, amount of stocks held in trust by the United States for several of the Indian tribes and Smithsonian Institution.....	77
7. Statement No. 6, balance of various other trust funds.....	78
8. Statement No. 7 exhibits the stock belonging to the United States in the Dismal Swamp, Chesapeake and Delaware, and Chesapeake and Ohio canals, and in the cities of the District of Columbia.....	79
9. Statement No. 8 exhibits the gold and silver coinage at the Mint of the United States in the several years from its establishment in 1792, and including the coinage of the branch mints and the assay office (New York) from their organization to September 30, 1856.....	79
10. Statement No. 9 exhibits the deposits and coinage at the Mint of the United States, branches, and assay office, during the fiscal year ending June 30, 1856.....	81
11. Statement No. 10 exhibits the amount of coin and bullion imported and exported annually from 1821 to 1856, inclusive, and also the amount of importation over exportation, and of exportation over importation, during the same years.....	83
12. Statement No. 11 exhibits the gross value of exports and imports from the beginning of the government to the 30th June, 1856.....	84
13. Statement No. 12, exhibiting the amount of the tonnage of the United States annually from 1789 to 30th June, 1856; also the registered and enrolled and licensed tonnage employed in steam navigation.....	85
14. Statement No. 13 exhibits the registered sail and steam tonnage and enrolled and licensed sail and steam tonnage, in each State and collection district separately.....	87
15. Statement No. 14 exhibits the revenue collected from the beginning of the government to June 30, 1856, under the several heads of customs, public lands, and miscellaneous sources, including loans and treasury notes; also the expenditures during the same period, and the particular tariff and price of lands under which the revenue from those sources was collected.....	96
16. Statement No. 15 exhibits the value of manufactured articles of domestic produce exported to foreign countries from the 30th day of June, 1845, to June 30, 1856.....	99

	Page.
17. Statement No. 16 exhibits the value of foreign merchandise imported, re-exported, and consumed annually from 1821 to 1856, inclusive, and also the estimated population and rate of consumption per capita during the same period	101
18. Statement No. 17 exhibits the total value of imports and the imports consumed in the United States, exclusive of specie, during each fiscal year from 1821 to 1856, showing also the value of foreign and domestic exports, exclusive of specie, and the tonnage employed, during the same periods	102
19. Statement No. 18 exhibits a summary view of the exports of domestic produce, &c., of the United States during the years ending on the 30th June, 1847, 1848, 1849, 1850, 1851, 1852, 1853, 1854, 1855, and 1856	103
20. Statement No. 19 exhibits the value of certain articles imported during the years ending June 30, 1844, 1845, 1846, 1847, 1848, 1849, 1850, 1851, 1852, 1853, 1854, 1855, and 1856, (after deducting the re-exportations,) and the amount of duty which accrued on each during the same period, respectively	104
21. Statement No. 20 exhibits the value of foreign merchandise and domestic produce, &c., exported annually from 1821 to 1856	107
22. Statement No. 21 exhibits the quantity of wine, spirits, &c., imported annually from 1843 to 1856 inclusive	109
23. Statement No. 22 exhibits the value of imports annually from 1821 to 1856	111
24. Statement No. 23 exhibits the value of dutiable merchandise re-exported annually from 1821 to 1856 inclusive, and showing also the value re-exported from warehouses under the act of August 6, 1846	112
25. Statement No. 24 exhibits the aggregate value of breadstuffs and provisions exported annually from 1821 to 1856	113
26. Statement No. 25 exhibits the quantity and value of cotton exported annually from 1821 to 1856 inclusive, and the average price per pound	114
27. Statement No. 26 exhibits the quantity and value of tobacco and rice exported annually from 1821 to 1856 inclusive	115
28. Statement No. 27 exhibits the values of iron and manufactures of iron, and iron and steel, steel, wool and manufactures of wool, manufactures of cotton, silk and manufactures of silk, flax, linen and linen fabrics, hemp and manufactures of hemp, manilla, sun, and other hems of India, and silk and worsted goods, imported from and exported to foreign countries from 1840 to 1856, both years inclusive; and also showing the domestic exports of like articles for the same periods	117
29. Statement No. 28 exhibits the value of iron, manufactures of iron, and iron and steel, steel, sugar, wines, and all fabrics of which wool, cotton, silk, flax, or hemp is a component part, imported annually from 1847 to 1856, both inclusive, with the duties which accrued thereon during each year respectively	123
30. Statement No. 29 exhibits the exports to and the imports from Canada and other British possessions in North America, from the 1st day of July, 1851, to the 30th day of June, 1856	126
31. Statement No. 30 exhibits the amount of goods in warehouse on July 1, 1855, and on the 1st of each succeeding month. until July 1, 1856	126

	Page.
32. Statement No. 31 exhibits a synopsis of the returns of the banks in the different States at the dates annexed.....	133
33. Statement No. 32 exhibits a comparative view of the condition of the banks in different sections of the Union in 1853-'54, 1854-'55; and 1855-'56...	136
34. Statement No. 33 exhibits a general statement of the condition of the banks according to returns dated nearest to January 1, 1856.....	139
35. Statement No. 34 exhibits a comparative view of the condition of the banks of the United States, according to returns nearest to January 1, 1837, 1843, 1851, 1854, 1855, and 1856.....	140
36. Statement No. 35 exhibits the amount of capital employed by bankers banking without charters, and by money and exchange brokers, in the different States	141
37. Statement No. 36 exhibits the population of the different States and Territories, and the value of the real and personal estate therein; it having been prepared in part from official enumerations and valuations, and in part upon estimates	146
38. Statement No. 37 exhibits the amount of moneys in the United States treasury; amount of drafts outstanding; amount subject to draft; amount of receipts, and amount of drafts paid, as shown by the Treasurer's weekly exhibits rendered during the year ending 30th June, 1856.....	149
Statement B No. 1, showing the annual average export price of flour at New York from 1800 till June 30, 1855; also the annual average price of flour in the cities of Boston, New York, Philadelphia, Baltimore, New Orleans, and St. Louis, from 1800 till June 30, 1855.....	154
Statements B No. 2 to B No. 6 inclusive, exhibiting the population of the several States and Territories, with certain statistical information, taken from the censuses of 1790, 1800, 1810, 1820, 1830, 1840, and 1850.....	158
Statement B No. 7, recapitulating the previous statements, and giving the population of the United States according to said census returns.....	168
Statement B No. 8, exhibiting the population of each State and Territory according to census of 1840, and the amount of the agricultural and manufacturing productions of each; to which is added a column exhibiting the amount said production would give to each person in said States and Territories, &c.....	169
Statement B No. 9, making same exhibits from the census returns of 1850..	172
39. From A No. 1 to A No. 17—No. 38—are sundry resolutions of the House of Representatives calling for certain statistical information in connexion with a proposed modification of the tariff of 1846, and a reduction of the revenue by enlarging the free list, and calling for suggestions upon that subject, and in relation to the currency.....	181
[The accompanying tables are prepared in response to the resolutions.]	
40. Statement No. 39 exhibits the population of the States and Territories, and the agricultural productions of each, with the value thereof; the total value of all the products of each State and Territory for the year 1840...	174
41. Statement No. 40 exhibits the population of the States and Territories, and the agricultural productions of each, with the value thereof; the total value of all the products of each State and Territory for the year 1850...	182

	Page
42. Statement No. 41 exhibits a recapitulation of statements Nos. 39 and 40, exhibiting the quantities and values of the agricultural productions of the United States for the decades of 1840 and 1850, with an estimate thereof for 1855, and the total amount of the productions for all the States and Territories, for 1840 and 1850.....	196
43. Statement No. 42 exhibits the number of acres employed in the production of the different crops in the States and Territories, their total product and value, together with the product and value per acre, for the year 1855. Statement No. 43 exhibits the number of farms, plantations, &c., number of acres of improved and unimproved land; average number of acres to each farm; cash value of farms; value of farming implements and machinery; average value of farms; average value of farming implements and machinery; average value of farms, implements, and machinery, for each State and Territory, and the average in all the States and Territories, in 1850, as taken from the last census.....	199
45. Statement No. 44 exhibits the number of establishments, capital employed, raw material used, hands employed, average wages per month, and product of the manufactures of wool for 1850, as taken from the census for that decade; also the product of the manufactures of wool for 1840, the increase for ten years, the decrease for ten years, and an estimate for 1855..	201
46. Statement No. 45 exhibits the foreign importations and exportations, domestic exportations and home consumption of foreign wool, the foreign importations and exportations, and home consumption of foreign woollen manufactures, the estimate of the raw material contained in the foreign manufacture of wool consumed in the United States, the number of pounds of domestic wool consumed, and an estimate of the total consumption of wool consumed in the United States of domestic growth, foreign importations, and one-third of the foreign manufactured article.....	203
47. Statement No. 46 exhibits the population, manufactures of wool in the United States, with an allotment per capita thereof; the domestic wool, and an allotment per capita; home consumption of foreign wool, and the allotment per capita; total home consumption of foreign and domestic wool, and an allotment per capita; manufactures of foreign wool imported and consumed in the United States, and an allotment per capita thereof; total consumption of foreign and domestic woollen manufactures, and the allotment per capita; and the total consumption of foreign and domestic wool, and one-third the value of the foreign woollen imports, (which represents the estimated value of the raw material therein,) together with an allotment per capita thereof, for the years 1840, 1850, and 1855.....	204
48. Statement No. 47 exhibits the number of pounds of wool produced, and its value; the number of pounds of domestic wool exported, and its value, and the home consumption; the number of pounds of wool imported, and its value; the number of pounds of foreign wool re-exported, and its value; and the home consumption, with the value thereof; the value of imported woollen manufactures, and those re-exported, and the home consumption, together with the total number of pounds of domestic and imported wool consumed, and the total value of domestic and imported wool and imported woollen manufactures consumed in the States and Territories, for the years 1840, 1850, and 1855.....	205

Page.

49. Statement No. 48 exhibits the number of establishments, capital employed, raw material used, hands employed, average wages per month, and the product of the manufactures of cotton, for 1850, as given by the census for that decade; also the product of the manufactures of cotton for 1840, increase in ten years, decrease in ten years, and an estimate of the manufactures of cotton for 1855..... 207
50. Statement No. 49 exhibits the foreign importations and re-exportations, domestic exportations and home consumption of foreign cotton goods; together with the consumption of foreign cotton goods over domestic exportations; also, the number of pounds of Sea Island and other cotton annually exported, with the value thereof, and average cost per pound, and the yearly average of the imports and exports, value in gross and per pound of cotton exported, for the last seventeen years..... 209
51. Statement No. 50 exhibits the foreign importations and exportations; domestic exportations; home consumption of foreign cotton goods; home consumption of foreign cotton goods, less domestic exportations; the number of pounds of Sea Island and other cotton exported, the value thereof, and the average cost per pound; manufactures of cotton in the United States; home consumption of domestic cotton goods; total home consumption of foreign and domestic cotton goods, and the total product of manufactures of cotton; and exports of raw cotton, for the years 1840, 1850, and 1855.. 210
52. Statement No. 51 exhibits the population, total product of manufactures of cotton and exports of raw cotton, and the allotment per capita thereof; manufactures of cotton in the United States, and the allotment per capita; home consumption of domestic goods, and the allotment per capita; home consumption of foreign goods, and the allotment per capita; and the total home consumption of foreign and domestic cotton goods, and the allotment per capita, for the years 1840, 1850, and 1855..... 211
53. Statement No. 52 exhibits the number of establishments, capital employed, raw material used, hands employed, average wages per month, annual product and total value of pig iron produced in the United States in 1850, as taken from the census for that year; together with the value of the production of the same article for 1840, the increase in ten years, the decrease in ten years, and an estimate of the amount produced in 1855..... 212
54. Statement No. 53 exhibits the number of establishments, capital employed, raw material used, hands employed, average wages per month, and total value of iron castings produced in the United States in 1850, as taken from the census for that year; together with the value of the production of the same article for 1840, the increase in ten years, the decrease in ten years, and an estimate of the amount produced in 1855..... 214
55. Statement No. 54 exhibits the number of establishments, capital employed, value of raw material, hands employed, average wages per month, and total value of wrought iron manufactures produced in the United States in 1850, as taken from the census for that year; together with the value of the production of the same article for 1840, the increase in ten years, the decrease in ten years, and an estimate of the amount produced in 1855..... 216

56. Statement No. 55 exhibits the yearly value of iron and manufactures of iron and iron and steel, cast, shear, German, and other steel, imported from and exported to foreign countries ; domestic exports of the like articles ; home consumption of foreign iron, and manufactures of iron and iron and steel ; home consumption over the domestic export of the same articles, and the total consumption of foreign iron, manufactures of iron and iron and steel, cast, shear, German, and other steel, over domestic exportations for the last seventeen years, and the yearly average for the aforesaid period 217
57. Statement No. 56 exhibits the value of the foreign importations and exportations, domestic exportations, home consumption of foreign importations, and home consumption of foreign importations, less the domestic exportations, of iron and manufactures of iron, and iron and steel ; also the foreign importations and exportations ; home consumption of foreign importations ; total home consumption of foreign iron and manufactures of iron and iron and steel, and foreign cast, shear, German, and other steel ; the total home consumption of foreign iron and manufactures of iron and iron and steel, and foreign cast, shear, German, and other steel, less the domestic exportations ; also the manufacture of pig iron, iron castings, wrought iron, and the manufactures thereof in the United States ; total manufacture of pig iron, iron castings, and wrought iron, and the manufactures thereof in the United States ; consumption of domestic iron, and the manufactures thereof ; total consumption of foreign and domestic iron ; and the total consumption of foreign and domestic iron and manufactures of iron, also cast, shear, German, and other steel, in the United States for the years 1840 and 1850, with an estimate thereof for 1855, on the same ratio of increase as between the years 1840 and 1850 219
58. Statement No. 57 exhibits the population, production of pig iron, iron castings, and manufactures of wrought iron, with the allotment per capita thereof ; the consumption of domestic iron and the manufactures thereof, with the allotment per capita ; the home consumption of foreign importations of iron and manufactures of iron and iron and steel, and cast, shear, German, and other steel, with the allotment per capita ; and the total consumption of foreign and domestic iron, and manufactures of iron and iron and steel, cast, shear, German, and other steel, in the United States, and the allotment per capita thereof, for the years 1840, 1850, and an estimate for 1855 220
59. Statement No. 58 exhibits comparative statement of the quarterly price of refined bar iron at the ports of Boston, New York, Philadelphia, and Baltimore, with the quarterly and annual average price at the above four ports, for the last seventeen years 221
60. Statement No. 59 exhibits prices of steel in New York, from 1851 to 1856, inclusive 223
61. Statement No. 60 exhibits a list of unmanufactured articles of import, not produced in the United States in sufficient quantities to constitute them articles of trade 224

	Page.
62. Statement No. 61 exhibits the foreign importations and exports, and domestic exports, together with the home consumption, of foreign importations of leather and the manufactures thereof, and the home consumption of foreign importations of leather and the manufactures thereof, less domestic exports, for the last seventeen years, and the yearly average thereof.....	226
63. Statement No. 62 exhibits the population, home consumption of foreign importations of leather and manufactures of leather, and the allotment per capita thereof, together with the home consumption of foreign importations of leather and the manufactures of leather, less domestic exports in the United States, for the years 1840, 1850, and 1855.....	226
64. Statement No. 63 exhibits the foreign importations and exportations, domestic exports, and home consumption of foreign importations of hides and skins; also home consumption of foreign importations of hides and skins, less domestic exports, and domestic exports, less home consumption, of foreign importations of hides and skins in the United States for the last seventeen years, and the yearly average thereof.....	227
65. Statement No. 64 exhibits the population, home consumption of foreign importations of hides and skins, and the per capita thereof; also the home consumption of foreign importations of hides and skins, less domestic exports, and the allotment per capita thereof, for the years 1840, 1850, and 1855.....	227
66. Statement No. 65 exhibits the foreign importations and exportations, domestic exports, and home consumption of foreign importations of manufactures of glass, and the home consumption of foreign importations of manufactured glass, less the domestic exports thereof, in the United States for the last seventeen years, and the annual average thereof.....	228
67. Statement No. 66 exhibits the population, home consumption of the foreign importations of manufactured glass, and the allotment per capita thereof; also the home consumption of the foreign importations of manufactured glass, less domestic exports, and the allotment per capita thereof, in the United States for the years 1840, 1850, and 1855.....	228
68. Statement No. 67 exhibits the foreign importations and exportations, domestic exports, and home consumption of the foreign importations of China, porcelain, earthen, and stone ware; also the home consumption of foreign importations of China, porcelain, earthen, and stone ware, less domestic exports, in the United States for the last seventeen years, and the annual average thereof.....	229
69. Statement No. 68 exhibits the population, home consumption of the foreign importations of manufactures of China, porcelain, earthen, and stone ware, and the allotment per capita thereof; also the home consumption of the foreign importations of manufactures of China, porcelain, earthen, and stone ware, less the domestic exports, and the allotment per capita, in the United States for the years 1840, 1850, and 1855.....	229
70. Statement No. 69 exhibits the foreign importations and exportations, domestic exports and home consumption, less domestic exports of hemp; the foreign importations and exportations and home consumption of Manilla, sun, and other hemp of India, and the total home consumption of all kinds of imported hemp; also the foreign importations and exportations,	

home consumption, domestic exports, and home consumption, less domestic exports, of manufactures of hemp, together with the total home consumption of all kinds of imported hemp, and the imported manufactures thereof over the domestic exports in the United States for the last seventeen years, and the yearly average thereof	230
71. Statement No. 70 exhibits the foreign importations and exportations, and the home consumption of imported flax; also the foreign importations and exportations of linen and linen fabrics, and the home consumption thereof, together with the total home consumption of imports of flax, and the manufactures of flax in the United States for the last seventeen years, and the yearly average thereof	232
72. Statement No. 71 exhibits the population, consumption of imported hemp in the United States, less domestic exports, and the per capita thereof, the consumption of the imported manufactures of hemp, less domestic exports, with the per capita thereof, and the total consumption of hemp, and the manufactures of hemp, less domestic exports, and the per capita thereof, in the United States for the years 1840, 1850, and 1855	233
73. Statement No. 72 exhibits the population, consumption of imported flax in the United States, and the allotment per capita thereof; the consumption of imported manufactures of flax, and the allotment per capita thereof; and the total consumption of imported flax, and imported manufactures of flax, with the allotment per capita thereof, in the United States, for the years 1840, 1850, and 1855	233
74. Statement No. 73 exhibits the population, product of hemp and flax grown in the United States, and the allotment per capita thereof; total consumption of hemp and flax in the United States, less domestic exports, and the allotment per capita thereof, and the total consumption of foreign and domestic hemp and flax, and the foreign manufactures of hemp and flax, less domestic exports, with the allotment per capita, for the years 1840 and 1850	234
75. Statement No. 74 exhibits the foreign importations and exportations, domestic exports and home consumption of coal; also the home consumption of the foreign importations of coal, less the domestic exports, and domestic exports, less the home consumption of foreign importations of coal in the United States for the last seventeen years, and the annual average thereof	235
76. Statement No. 75 exhibits the population, home consumption of the foreign importations of coal, and the per capita thereof, and the home consumption of the foreign importations of coal, less the domestic exports, and the allotment per capita thereof in the United States, for the years 1840, 1850, and 1855	235
77. Statement No. 76 exhibits the foreign importations and exportations, domestic exports and home consumption of foreign importations of lead, and the manufactures thereof; also home consumption of foreign importations, less domestic exports, of lead and the manufactures of lead, and domestic exports, less home consumption of foreign importations, of lead and the manufactures thereof, for the last seventeen years, and the annual average thereof	236

Page.

78. Statement No. 77 exhibits the population, home consumption of foreign im- portations of lead and manufactures of lead, and the allotment per capita thereof; also the home consumption of foreign importations of lead, and the manufactures of lead, less the domestic exports, and the allotment per capita thereof for the years 1840, 1850, and 1855.....	236
79. No. 7.

For the stock belonging to the United States in the following canals, the sums specified were paid from the Treasury.

Dismal Swamp canal.....	\$200, 000 00
Chesapeake and Delaware canal.....	450, 000 00
Chesapeake and Ohio canal.....	999, 990 00

Besides the \$1, 500, 000 assumed for the cities of the District of Columbia, for which their stock was assigned to the United States.

Louisville and Portland canal.....	\$233, 500 00
------------------------------------	---------------

The payment of dividends on the stock of the United States in this canal ceased in 1842, from which date they were applied, under the amended charter of that year, to the purchase of the stock of individuals, and have now resulted in the ownership of the whole canal by the United States—all the private stock having been purchased.

No. 8.

NOTE.

The difference in the tonnage of 1855 compared with the tonnage of 1856, of 340,348 59, arises from corrections made by striking from the balance of outstanding tonnage such vessels as have been lost, sold to foreigners, and condemned in previous years, not heretofore reported to this office by the collectors, viz:

In the registered tonnage.....	196,982 05
In the enrolled tonnage.....	465,382 93
In the licensed tonnage.....	18,770 13

681,135 16

From which deduct the amount of the tonnage of registered and enrolled vessels built this year over and above the tonnage of vessels lost, sold to foreigners, and condemned during the year.....	340,786 52
---	------------

340,348 59

Statement showing the revenue collected from the beginning of the government to June 30, 1856, under the several heads of customs, public lands, and miscellaneous sources, including loans and treasury notes; also the expenditures during the same period, and the particular tariff, and the price of lands, under which the revenue from those sources was collected.

Years.	From customs.	Date of tariff.	From public lands.	Price per acre.	From miscellaneous sources, includ'g loans and treasury notes.	That portion of miscellaneous arising from loans & treasury notes.	Total receipts.	Total expenditures.

Eastern States.—Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, Connecticut.

Middle States.—New York, New Jersey, Pennsylvania, Delaware, Maryland.

Southern States.—Virginia, North Carolina, South Carolina, Georgia.

Southwestern States.—Alabama, Louisiana, Mississippi, Tennessee, Kentucky, Missouri.

Western States.—Illinois, Indiana, Ohio, Michigan, Wisconsin.

In the State of Texas there is one bank (at Galveston,) doing, as is understood, a limited business. It has not sent any statement of its condition to the Treasury Department.

There are no incorporated banks in the States of California, Florida, Arkansas, or Iowa, or in the Territories of Washington, Oregon, New Mexico, Minnesota, Utah, or Kansas. In Nebraska, the legislative assembly recently "passed," the governor of that Territory says, "some five charters, conferring on private companies the privilege of banking under certain restrictions." None of these companies have yet organized themselves as banking institutions.

A general statement of the condition of the banks

The above table is believed to embrace all the banks in operation in the different States at the dates annexed except the Trans-Alleghany Bank, in the State of Virginia, which seems to be still in existence, and which returned a capital in 1854 of \$400,000; the bank at Galveston, Texas, yet in operation, with a capital of \$100,000; and some eight or ten banks in Georgia and Tennessee, from which no returns could be obtained.

In the bank report for last year the Central Railroad and Banking Company, Georgia, appears as owner of \$3,524,427 of real estate. No return has been received from that bank for the year 1855, which will account for the apparent reduction of the real estate in the table. That bank returned also a capital of \$3,500,000.

Since the bank returns were received from New Hampshire two new chartered banks have gone into operation in that State—the Pennichuck Bank at Nashua, with a capital of \$100,000, and the Sonhegan Bank at Milford, with a capital of \$100,000.

Since the bank returns of the banks in New York included in this report, and dated September, 1855, were received, some twenty new banks have been organized in that State. New banks have been organized in other States also during the present year, but nothing is known at the Treasury Department with respect to their amount of capital or their condition.

No. 34.—*Comparative view of the condition of the banks of the United States, according to returns nearest to January 1, 1837, 1843, 1851, 1854, 1855, and 1856.*

NOTES.—In January, 1837, the inflation of paper credits, consequent on the deposit bank system and other causes, had nearly reached its height. The revulsion that followed was most severely felt in the latter part of 1842 and the beginning of 1843.

In 1848 the first deposits of California gold were made at the United States mint.

No. 35.

Statement of the amount of capital employed by bankers banking without charters, and by money and exchange brokers, in the different States.

Total.....		11,317,611,072

NOTES TO TABLE.

In the construction of this table, when the enumerations and valuations are not given from official State returns, it has been assumed that the population and property of the country have increased in the same ratio since the general census of 1850, in which they increased during the decennial period from 1840 to 1850. The increase has, without doubt, been proportionally greater.

In some States, the latest official valuations have been given. These are of various dates, and are, it is believed, much too low. The valuation for Massachusetts is for the year 1850; for Maryland and Michigan, for 1853; for Connecticut, New York, and Missouri, for 1854; and for other States, for 1855.

With respect to some of the States, the official valuation is so very low that it has been deemed necessary to add to it considerably in order to represent fairly the true value of the property in those States. Thus, to Pennsylvania \$500,000,000 have been added; to Virginia, Tennessee, and Missouri, \$100,000,000 each.

Texas and California are exceptional cases, and their population and wealth have been estimated upon such data as could be obtained. The comptroller of Texas is the authority for that State.

The governor of Georgia says, in a letter to the Secretary of the Treasury, dated the 18th of April, 1856, that in that State "the total amount of the taxable property of all kinds is about \$500,000,000."

The governor of Minnesota says, in a letter dated January 29, 1856, that the returns he transmits of the value of the property in that Territory "are but approximations," the returns not being complete.

The official valuation of the property in the Territory of Nebraska, for the year 1855, was so small—only \$617,822—that it was thought proper to double it in the table, and it is still too low, probably.

The auditor of State of the State of Indiana says, in his annual report, (November 24, 1855,) "A new valuation of the real estate would probably make the total taxables \$380,000,000."

The Territories of Kansas, Nebraska, and Washington, do not appear at all in the census of 1850, except as component parts of other States or Territories, and, with respect to them, the estimated numbers and values may be very inaccurate, as they may be indeed with respect to the other Territories, and some of the new States.

The State valuations of property are for assessment purposes, and are not only low, but the taxable property only has been valued; and in all the States there are many kinds of property—some of it valuable—that are not taxed.

Supposing the whole population of the United States to be 27,000,000, then, taking the State of Maine as a criterion with respect to the value of property, the amount for all the States and Territories will be, in round numbers, about \$5,760,000,000.

Taking the State of New York as a criterion, the amount will be, in round numbers, about \$10,611,000,000.

Taking the State of Kentucky, then it will be about \$10,006,000,000.

Taking the State of Illinois, it will be about \$7,290,000,000.

Taking the State of Arkansas, it will be about \$6,750,000,000.

Taking the State of Georgia, it will be about \$14,430,000,000.

Taking the two extremes, the maximum and the minimum, Georgia and Maine united, it will be about \$10,000,000,000.

Taking Ohio and Kentucky, which will make perhaps a very fair mean, the amount will be \$10,268,000,000.

Taking these seven States as a criterion, the amount will be about \$9,233,000,000. This is too low, however, for the official valuation is too low in them all, unless it be Georgia.

The \$1,500,000,000 added for under valuations for property not valued, and for the increase in value since 1850, is not an excessive allowance.

In the calculations, inconsiderable fractions of numbers and values have not been regarded.

No. 37.

Statement exhibiting the amount of moneys in the United States Treasury; amount of drafts outstanding; amount subject to draft; amount of receipts and amount of drafts paid, as shown by the Treasurer's weekly exhibits, rendered during the year ending June 30, 1856.

TREASURY OF THE UNITED STATES, November 6, 1856.

SAM. CASEY, *Treasurer United States.*

No. 38.

A No. 1.

AUGUST 1, 1856.

On motion of Mr. L. D. Campbell,

Resolved, That the Secretary of the Treasury be requested to furnish a statement of the farming, planting and sugar crops of the United States for 1840 and 1850, as given by the census, with an estimate of the crops of 1855 in tabular form.

A No. 2.

Also a statement of the number of acres devoted to the various crops in 1840 and 1850, with an estimate of the same for 1855, adding thereto such columns in figures as may be necessary to exhibit the increase and decrease in the number of acres employed in the principal crops of 1855, and the increased and decreased product per acre, with additional columns showing the per centage of increase and decrease in acres, product per acre, and aggregate product of each crop; together with such suggestions for the enlargement of the market at home and abroad as he may deem expedient.

A No. 3.

Also to collect information on the wool growing interest of the United States.

A No. 4.

Also on the wool manufacturing interests, with an estimate and statement of the capital employed therein in 1840, 1842, 1846, and 1856, designating the number of mills producing broadcloth in the respective periods named, with such suggestions in regard to the revenue laws as he may deem expedient for permanent establishment of the wool manufacturing interests of the United States.

A No. 5.

Also to collect information on the present condition of the cotton manufacturing interest, and to make such suggestions as he may deem necessary to promote the manufacture of the finer fabrics in the United States, and to enlarge the market for cotton, at home and abroad.

A No. 6.

Also to collect information on the iron manufacture of the United States; also on the manufacture of steel; also on the manufacture of iron and steel.

A No. 7.

Also to collect information on articles not grown and produced in the United States, with reference to the enlargement of the free list. Also, on the leather and the manufactures of leather in the United States. Also on the sugar growing interest in the United States and the manufactures thereof. Also on the manufacture of glass, porcelain and stone ware in the United States. Also on the growth and manufacture of hemp and flax in the United States. Also on the mineral coal, lead and copper interests of the United States. Also on the growth and manufacture of silk in the United States, with reference to the gradual domestication of this interesting branch of manufactures.

A No. 8.

Also on the shipping interest of the United States, with a statement of the tonnage employed in the foreign, lake, coasting and river trade, and railway and carriage tonnage.

A No. 9.

Further resolved, That the Secretary of the Treasury be requested to furnish a statement, as far as practicable, of the aggregate amount of federal, State, city, county, railroad, canal, and other corporation bonds, stocks and other evidences of debt held in Europe or other foreign countries on the 30th June, 1856, specifying separately, as far as the same can be ascertained, the amount of each of the above description of bonds, stocks, &c.

A No. 10.

Also to furnish a statement of the amount of gold and silver coined at the United States mint and branches from 1793 to July 1, 1856, with a statement of the entire cost of coinage since the establishment of the mint, including buildings, machinery, &c.; also, an estimate of the amount of gold and silver coins now remaining in the United States.

A No. 11.

Also a statement of the annual export and import of gold and silver from 1793 to July 1, 1856, with such suggestions to prevent and restrain the export thereof, as he may deem relevant to the establishment of a sound, stable and healthy hard money currency, and to retire the smaller denominations of bank bills as fast as gold and silver coin can be obtained and substituted.

A No. 12.

Also to suggest the best method of stimulating and increasing the export of agricultural and other productions of the United States, with

a view of preventing the export of the precious metals, stocks and bonds, by requiring and making it the interest of foreign nations to take our surplus agricultural productions, instead of making it their interest, as we now do, to take our gold to buy wheat, cotton, tobacco, &c., from other nations.

A No. 13.

Further resolved, That the Secretary of the Treasury be requested to report the frauds and under valuations in customs under the act passed 30th August, 1842, and 30th July, 1846, designating the number of cases and the amount of frauds and under valuations which have occurred under the respective acts.

A No. 14.

Also to report the advantages and disadvantages of specific and ad valorem duties in reference to the interests of the country, and the frauds and under valuations incident to the two classes or systems of duties.

A No. 15.

Also to report as near as practicable, the amount and proportion of imports made by American born citizens on their own account, and the amount imported by citizens of foreign birth, aliens and citizens of other countries.

A No. 16.

Also to enquire into and report the advantages and disadvantages of the home valuation system in the collection of customs as adopted and practised by the British government, with reference to its incorporation in the revenue laws of the United States.

A No. 17.

Mr. Quitman's amendment.

Further resolved, That the Secretary of the Treasury be directed to report to this House, at its next session in December, under specific heads, the amount of appropriations and expenditures of every kind incurred by the government annually since the 30th June, 1825, in the construction, repair, rent and preservation of custom-houses; the cost, expense and maintenance of revenue cutters and other vessels engaged permanently or temporarily in the revenue service; and the amount of all other expenditures incurred in or resulting from the collection of the customs or duties on imports since the above date.

Statement showing the annual average export price of flour at New York from 1800 till June 30, 1855; also, the annual average price of flour in the cities of Boston, New York, Philadelphia, Baltimore, New Orleans, and St. Louis, from 1800 till June 30, 1855.

[NOTE.—The price of flour for New Orleans and St. Louis could not be obtained for earlier years than those respectively given.]

[illegible]

Increase in population for this decade 33.13 per cent.

^a The manufactures of cotton, wool, and flax for this decade were mostly in families, and are not given in the Census of 1820.

The iron interests are only partially represented in the above table, the returns being imperfect.

The product of breweries and distilleries but partially given in the Census.

The value of dried and pickled fish exported in the year 1820 was \$1,502,000. (See Pitkin's Statistics, edition of 1835, page 40.)

Statement showing the population and manufactures of the United States and Territories for the year 1830.

Increase per cent. in population for this decade, 33.49.

* The manufacturers of leather, paper, glass and the maple sugar produced in the county of Somerset are included in the above amount. All manufactures in families and those on a small scale are not given.

† In this State there are several hundred blacksmiths' and other shops where a variety of articles are manufactured for the use of cotton and woolen mills, the product of which is not given.

‡ In this State many of the manufacturers declined answering the queries, consequently the returns are defective.

The above statistics are for the year 1831, except the census, and were taken in compliance with a resolution of Congress, passed January 19, 1832. No manufacturing statistics being taken for the decade of 1830, the above is all the data that can be found of a reliable character bearing upon the subject.

REMARKS.

The value of houses have been deducted from the manufactures.

Persons engaged in the naval service have not been included in the calculation.

The productions of wheat, sugar, and molasses, have been deducted from the agricultural products, because they have entered into the manufactures under the head of sugar and molasses, products of mills, and distilleries and breweries.

Statement of the population, manufactures, and agricultural productions of the United States and Territories; the allotment per capita of the manufacturing and agricultural productions per State and nation; value of imports paying duty, less the value of foreign paying exports; value of imports paying duty, less the value of foreign paying exports, to each State, based upon its population; amount per capita of the paying imports, less the foreign paying exports; amount of paying imports, less the foreign paying exports, allotted to each State, based upon its productions; and allotment per capita of the paying imports, less the foreign paying exports, as allotted to each State, based upon its productions, for the year 1850.

States.	Census for 1850.	Value of manufactures.	Value of agricultural products.	Total value of agricultural and manufacturing productions. REMARKS.

Hops, flax, flaxseed, wine, and silk cocoons, estimated at the Census Office at \$3,293,314.

Maple sugar, cane sugar, and molasses included in the manufactures.

Milk and eggs, fodder, wood, addition of 3 per cent. to live stock, poultry, and feathers, estimated at \$125,956,927, and not included.

No. 39.

Statement exhibiting the population of the States and Territories, and the agricultural productions of each, with the value thereof; the total value of all the products of each State and Territory for the year 1840.

[NOTE.—The prices of the different products adopted by Professor Tucker have been used in the calculations, when not given in the census for that decade.]

No. 40.

STATEMENT
EXHIBITING
THE POPULATION
OF
THE STATES AND TERRITORIES,
AND
THE AGRICULTURAL PRODUCTIONS OF EACH
WITH THE VALUE THEREOF,
FOR THE YEAR 1850.

Statement exhibiting the population of the States and Territories and the agricultural productions of each, with the value thereof, and the total value of all the products of each State and Territory, for the year 1850.

[NOTE.—The prices of the different products adopted by Professor Tucker have been used in the calculations.]

NOTES.

The total consumption of foreign wool in England in 1855, was 66,000,000 pounds. Total production of woollens, \$180,000,000; and exports of woollens, \$48,000,000.

The total consumption of foreign wool in France in 1855, was 77,300,000 pounds. Total production of woollens, \$200,000,000; and exports of woollens, \$38,000,000.

The total consumption of foreign wool in the United States in 1853-'54, was 20,000,000 pounds; in 1854-'55, was 18,500,000 pounds. Total production of woollens in the United States in 1853-'54, was \$50,000,000; in 1854-'55, \$48,000,000. Total import of woollens in the United States in 1853-'54, was \$32,382,589; and in 1854-'55, \$24,404,149.

Of the value of woollen imports for the year 1840, the sum of \$1,729,792 was for silk and worsted goods.

Of the value of woollen imports for the year 1850, the sum of \$1,653,809 was for silk and worsted.

Of the value of woollen goods re-exported in 1855, the sum of \$118,557 was for silk and worsted.

The value of wool produced in 1855 is based upon the average price in New York—38 cents per pound—for that year.

No. 48.—Statement exhibiting the number of establishments, capital employed, raw material used, hands employed, average wages per month, and the product of the manufactures of cotton for 1850, as given by the census for that decade; also the product of the manufactures of cotton for 1840, increase in ten years, decrease in ten years, and an estimate of the manufactures of cotton for 1855.

*The production of iron in 1855, on the same ratio of increase as between 1840 and 1850, would be about 700,000 tons, whereas the actual production in 1855 was 1,000,000 tons. See Messrs. Cooper and Hewitt's "Diagram showing the production, consumption, and prices of iron."

Statement exhibiting the population, production of pig iron, iron castings, and manufactures of wrought iron, with the allotment per capita thereof; the consumption of domestic iron and the manufactures thereof, with the allotment per capita; the home consumption of foreign importations of iron, and manufactures of iron and iron and steel, and cast, shear, German, and other steel, with the allotment per capita; and the total consumption of foreign and domestic iron, and manufactures of iron and iron and steel, cast, shear, German, and other steel, in the United States, and the allotment per capita thereof, for the years 1840, 1850, and an estimate for 1855.

Years.	Population.	Total product of pig iron, iron castings, wrought iron, and manufactures of wrought iron, in the United States.	Allotment per capita of the product of pig iron, iron castings, wrought iron, and manufactures of wrought iron, in the United States.	Consumption of domestic iron, and the manufactures thereof, in the United States.	Allotment per capita of the value of the consumption of domestic iron, and the manufactures thereof, in the United States.	Home consumption of foreign importations of iron, and manufactures of iron and steel, and cast, shear, German, and other steel.	Allotment per capita of home consumption of foreign importations of iron, and manufactures of iron and steel, and cast, shear, German, and other steel.	Total consumption of foreign and domestic iron, and manufactures of iron and steel; also, cast, shear, German, and other steel, in the United States.	Allotment per capita of the consumption of foreign and domestic iron, and manufactures of iron and steel; also, cast, shear, German, and other steel, in the United States.

No. 60.

List of unmanufactured articles of import, not produced in the United States in sufficient quantities to constitute them articles of trade:

SCHEDULE B.—*Articles paying an ad valorem duty of 40 per cent.*

Almonds.
Cassia.
Cloves.
Currants (Zante.)
Dates.
Figs.
Ginger-root, dried or green.
Mace.
Nutmegs.
Pimento.
Prunes.
Raisins.

SCHEDULE C.—(30 per cent.)

Balsam Copaiva.
Cayenne pepper.
Cinnamon.
Feathers, ostrich, unmanufactured.
Gum, benzoin or Benjamin.
Olives.
Pepper.
Plums (prunes.)

SCHEDULE D.—(25 per cent.)

Jute, Sisal grass.

SCHEDULE E.—(20 per cent.)

Aloes.
Amber.
Angora, Thibet and other goats' hair, or mohair unmanufactured.
Anniseed.
Bananas.
Boucho leaves.
Cantharides.
Cassia buds.
Cobalt.
Cocoa nuts.
Coffee.
Divi-divi, vegetable used in tanning, &c.
Emery.
Gamboge.
Gutta-percha, unmanufactured.
Manna, a crude gum.

Oranges, lemons and limes.
 Pineapples.
 Plantains.
 Quassia wood, unmanufactured.
 Sarsaparilla.
 Shaddocks.
 Peas.
 Vanilla beans.
 Woods—mahogany, ebony, grenadilla, rose ; satin unmanufactured, not provided for.

SCHEDULE F.—(15 *per cent.*)

Bark—Peruvian, Quilla, and Chincona.
 Bark of the cork tree, unmanufactured.
 Dragon's blood, (a resinous substance.)

SCHEDULE G.—(10 *per cent.*)

Annato, Rancon or Orleans.
 Bamboos.
 Barilla.
 Catechu, extract from the Mimosa catechu tree.
 Cochineal.
 Cocoa.
 Cocoa shells.
 Gum-arabic and gum-senegal, Barbary.
 Gum-tragacanth, East India, Jedda.
 India-rubber, in slabs, sheets, &c., unmanufactured.
 Natron, (a native sesquicarbonate of soda.)
 Palm leaf, unmanufactured.
 Ratans and reeds, unmanufactured.
 Terra Japonica, or catechu.
 Woad, or pastel.

SCHEDULE H.—(5 *per cent.*)

Berries, nuts and vegetables, used exclusively in dyeing or composing dyes, no article to be classed as such that has undergone any manufacture.
 Brazil wood, and all other dye-wood in sticks.
 Ivory, unmanufactured.
 Ivory nuts, or vegetable ivory.
 Madder root.
 Nickel.
 Nutgalls.
 Tortoise shell, unmanufactured.
 Turmeric, a root found in India.
 Weed, herbaceous plant used in dyeing.

No. 61.—Statement exhibiting the foreign imports and exports and domestic exports, together with the home consumption of foreign importations of leather and the manufactures thereof; and the home consumption of foreign importations of leather and the manufactures thereof, less domestic exports, for the last seventeen years, and the yearly average thereof.

Years.	LEATHER AND MANUFACTURES OF LEATHER.

* The census of 1850 does not furnish the manufactures of silk in the United States.

No. 82.

TREASURY DEPARTMENT,
November 27, 1856.

SIR: According to your instructions, I herewith submit tables of Railroad Statistics. They have been compiled from the returns made by their officers, in answer to interrogatories from this department, and from such other means of information as were at the time accessible. It is to be regretted that the tables are not more perfect; but the indisposition on the part of many railroad companies to give their statistics, their neglect to respond to your inquiries, and the incompleteness of some of the statistics when furnished, have necessarily prevented as accurate a return as might reasonably have been expected.

The details of the roads in the eastern, middle, and most of the southern States, are much more exact, and have been more generally furnished, than those in the west and northwest. In Michigan, Illinois and Wisconsin, scarcely any returns have been made from the officers of working roads, while no information of any kind has been received from California, and but little from Texas, either as respects the railroads worked or projected within their limits. It is believed, however, that this compilation will be the basis of more complete and satisfactory statements.

There can be no question as to the importance of such statistics, exhibiting, as they do, not only the immense capital invested in and represented by these works of internal improvement, but also the enormous development of our domestic resources which must necessarily attend upon their completion.

It is proper to observe that a large proportion of the details of these tables is made up from the operations of the year 1855. The travel and business of the present year have been much greater than that of the previous one—estimated on some lines as high as thirty per cent., and exhibiting on all routes an increase of their financial prosperity. Many new roads have been opened for passengers within the last few months, and connexions established between important routes, which have added largely to travel and business. It would be safe, therefore, to add twelve per cent. to the present statistics in estimating the railroad operations of the year 1856.

All which is respectfully submitted.

I have the honor to be, most respectfully, &c.,

WM. HEMPHILL JONES.

Hon. JAMES GUTHRIE,

Secretary of the Treasury.

Railroad Statistics of the United States.

MAINE.

Mem.—The amounts of specie in the banks and of bank notes in circulation from 1835 to 1855, inclusive, have been taken from the annual treasury reports on the condition of the banks. The amount of specie supposed to be in circulation in different years is according to the authorities quoted in the margin. The estimates are from Doc. 34, (page 280,) appended to the Report on Finances of December 4, 1854, except that for 1855, which has been completed from data more lately received.

A.

TREASURY DEPARTMENT,
Comptroller's Office, October 28, 1856.

SIR: For the purpose of exhibiting the operations of this office during the fiscal year last past, I respectfully report that the following accounts have been revised and certified to the Register, viz:

3,908 accounts reported on by the First Auditor.

824 accounts reported on by the Fifth Auditor.

2,200 accounts reported on by the Commissioner of the General Land Office.

That the following named warrants have been countersigned, entered in blotters, and posted, viz:

456 stock warrants,
667 Texas debt warrants,
1,266 quarterly salary warrants,
1,600 treasury (proper) warrants,
2,284 treasury interior warrants,
4,492 customs warrants,
43 appropriation warrants,
743 navy pay warrants,
264 navy repayment warrants,
1,340 customs covering warrants,
948 land covering warrants,
787 miscellaneous covering warrants,
2 treasury funding warrants,
2,847 army pay warrants,
940 army repay warrants,
1,174 army interior pay warrants,
233 army interior repay warrants;
the whole making an aggregate of 20,086 warrants.

2,899 letters have been received, endorsed, registered, and filed.

4,000 letters have been written, registered, recorded, and forwarded, the records of which cover 3,129 pages folio post.

There have been twenty-eight formal decisions made and recorded, their records covering 187 pages folio post.

Fourteen reports have been made to the different departments, the records of which cover 78 pages folio post. Besides various other duties have been done, which it is not deemed necessary to particularize, but which constitute no small proportion of the labors of the office.

Yours, respectfully,

ELISHA WHITTLESEY,
Comptroller.

Hon. JAMES GUTHRIE,
Secretary of the Treasury.

B.

TREASURY DEPARTMENT,
Second Comptroller's Office, October 18, 1856.

SIR: The following report of the operations of this office for the past fiscal year is respectfully submitted:

The accounts which have been examined, passed, and entered on the books of this office during the year, are—

Reported by the Second Auditor.....	1,093
Reported by the Third Auditor.....	3,326
Reported by the Fourth Auditor.....	451
Total.....	4,870

being an increase of sixty-two upon the number of the preceding year.

The accounts from the Fourth Auditor's office, though comparatively few in number, are intricate and voluminous, and require severally much time for examination.

In addition to the foregoing accounts, which were settled by report and requisition, there were small accounts adjusted by the accounting officers, and paid by disbursing agents on certificates originating in—

Second Auditor's office.....	583
Fourth Auditor's office.....	770
Total.....	1,353

being 253 more than in the preceding year.

The requisitions that have been examined, countersigned, and entered upon the books of this office were—

For Department of War.

From Second Auditor's office:

Pay or advance requisitions.....	1,242
Transfer or refunding requisitions.....	178

From Third Auditor's office:

Pay or advance requisitions.....	1,613
Transfer or refunding requisitions.....	765

For Department of the Interior.

From Second Auditor's office:

Pay or advance requisitions.....	370
Transfer or refunding requisitions.....	45

From Third Auditor's office:

Pay or advance requisitions.....	710
Transfer or refunding requisitions.....	149

From Fourth Auditor's office :	
Pay or advance requisitions.....	83
Transfer or refunding requisitions.....	52

For Navy Department.

From Fourth Auditor's office :	
Pay or advance requisitions.....	749
Transfer or refunding requisitions.....	271
Total.....	<u>6,227</u>

The official letters cover 558 pages folio post.

The number of accounts reported for suit is 23.

Since the date of the last preceding report, a portion of the force of this office, formerly occupying rooms in a building opposite to the Treasury, has been transferred to the department building, and is now under the more immediate supervision of the head of the bureau.

The work of the office is kept as nearly up as the nature of the business devolved upon it will permit, and none of it is in arrear.

The bonds of a large proportion of the disbursing officers of the government are required by law to be deposited in this office, where they are carefully filed and recorded in books kept for that purpose. In order to enable the auditors, to whom the accounts of such officers are rendered, to comply promptly with the instructions heretofore given to make immediate settlements under former bonds when new ones are accepted or required, the date, penalty, names, and residences of sureties, &c., of every bond received, is communicated to the proper Auditor.

Upon examining the transactions of this office in relation to suits brought against debtors of the government, it was found that some of the provisions of the law of March 3, 1797, (1 Stat., ch. 20, p. 512,) had never been enforced. The first section of that act declares "that when any revenue officer or other person accountable for public money shall neglect or refuse to pay into the treasury the sum or balance reported to be due to the United States upon the adjustment of his account, it shall be the duty of the Comptroller, and he is hereby required, to institute suit for the recovery of the same, adding to the sum stated to be due on such account the commissions of the delinquent, which shall be forfeited in every instance where suit is commenced and judgment obtained thereon, and an interest of six per cent. per annum from the time of receiving the money until it shall be repaid into the treasury."

On a careful investigation I could find no repeal or modification of this enactment, nor any decision nor reason that would make it inapplicable to the accounts revised in this office. The tendency and object of the law are so manifestly beneficial to the public interest by providing, in effect, heavy pecuniary penalties for an unlawful retention of public money, either from negligence, or on frivolous pretexts of claims in offset, that I considered it to be my duty to direct the Auditors reporting to this office to add to the balance due, in accounts

prepared for suit, the commissions of delinquent officers or agents of the United States; and also an interest of six per cent. per annum on the balance from the time of receiving the money. Circulars have been issued apprising officers and other parties holding public funds of the requirements of the law; and the notice that these requirements will be impartially enforced is already found to produce salutary effects.

In the settlement of accounts some other requirements, deemed important to protect the public interest, have been promulgated, and are now enforced. It had become quite common for disbursing officers to report, in their accounts, large balances as due to them for funds turned over to other officers, for advances on account of the government, or for disbursements from their private moneys on public account. It was found, in some cases, that receipts had been given by creditors of the government, when, in fact, no money had been paid; in others, that duplicate receipts for money transferred had been filed, and that there was reason to suppose that, in one case at least, a very large amount had been erroneously allowed, not by the accounting officers, but by Congress, for an alleged advance from one disbursing officer to another, both of whom were dead.

In the opinion of this office, no disbursing officer of the government has a right to borrow money, or advance his own funds for disbursements or to other officers, ostensibly for the public use, unless he has been requested to do so by competent authority. If he chooses of his own motion to make such advances, he must certainly show that the money and the expenditure have inured to the benefit of the government before he can have even an *equitable* claim to be reimbursed by the United States. It is not believed that a *legal* claim against the United States can possibly arise from such unauthorized proceedings. A point analogous in principle was long since judicially decided. It was held by the court (Maryland district, Winchester, judge) in the United States *vs.* Barney, that no lien could be permitted to exist against the government for advances, and that in such a case no other remedy remained for a creditor than an application to Congress for payment. (Hall's Law Journal, p. 130.) To prevent a recurrence of difficulties arising from what I cannot but consider as an irregular, dangerous, and most reprehensible practice, the most positive directions have been given that no credit shall be allowed for any balance, great or small, on account of advances by a disbursing officer, whose accounts are subject to the revision of this office, until the necessity of the advance and its application to the public service shall have been fully explained and demonstrated. The officers have also been reminded that it is their duty to estimate and make their requisitions in season to be placed in public funds for the official expenditures that may reasonably be expected to fall within the scope of the disbursements devolved upon them.

Another subject, which has been of late years frequently before the accounting officers, has been investigated, and some disputed points adjudicated, so far as this office has authority to do so. The compensation for travel performed under orders, by officers of the army, is generally established by the regulations at a commutation of ten cents

a mile. Numerous and urgent claims have been presented, after the settlement of transportation accounts, for additional allowances, on the ground of an under-estimate of the distance. In all such cases it has been held that payment for travel was designed only as a reimbursement of expenses, and that no executive officer has authority to make it simply as an emolument. It is only upon the theory that the commutation is a ready mode of reaching the probable *actual expense* that the commutation itself is legal; for as an *emolument* it would be a direct violation of the acts of March 3, 1839, and August 23, 1842, by increasing the compensation of the officer beyond the amount authorized by Congress. When, therefore, an account for transportation has been settled, and, under the commutation principle or otherwise, a sum has been paid equal to the necessary *actual* expenses, as no equitable claim could arise for more, it is held that such settlement must stand, and cannot be disturbed for the purpose of making a larger allowance under a commutation, or hypothetical amount of expenses.

In another matter of importance a misconception of some of the provisions in the law of January 25, 1828, providing that no money shall be paid to any person for his compensation who is in arrears to the United States, has heretofore created considerable embarrassment. By the proviso in that act, it is declared that "in all cases where the pay or salary of any person is withheld in *pursuance of this act*, it shall be the duty of the accounting officers, if demanded by the party, his agent or attorney, to report, forthwith, to the agent of the Treasury Department, the balance due; and it shall be the duty of the said agent within sixty days thereafter to order suit to be commenced against such delinquent and his sureties."

This proviso has been interpreted by parties whose pay has been stopped for indebtedness to the United States as imposing upon the officers of government the absolute obligation to bring suit on demand of the debtor, no matter how petty the sum, or under what circumstances of disadvantage to the public interest a suit must be conducted. Such is not thought to be a fair construction of the law. Its main design seems to have been to prohibit to the accounting and other officers a discretion, which they had repeatedly exercised, of paying salaries to persons in default, and not to hamper the government by taking away a right it always held and exercised. The Supreme Court has decided that "the United States possess the general right to apply all sums due for such pay and emoluments to the extinguishment of any balances due to them." (15 Peters, 370.) This right is absolute, and exists independently of any statute upon the subject; and the officers of government have therefore felt at liberty to decline bringing suits when in their judgment it was unnecessary for, or would tend to defeat, the ends of justice. In this view of the subject, the accounting officers are sustained by the head of the Treasury Department, who, under date of March 3, 1856, says, in an official letter: "I consider the department has the election to stop officers' pay for any balances due the United States, and is not compelled to resort to suit at the instance of officers in arrears to the United States. Taking the whole law into consideration and connexion, the election in this class of cases is with the Treasury Department, and not with the officer."

The clerks employed in this office during the year have been punctual, diligent, and faithful, and the public business has never been more promptly and satisfactorily performed.

I am, very respectfully, &c., &c.,

J. M. BRODHEAD, *Comptroller*.

Hon. JAMES GUTHRIE,

Secretary of the Treasury.

C.

TREASURY DEPARTMENT,

Office of Commissioner of Customs, November 8, 1856.

SIR: Presuming that your letter of November last, requesting a report of the operations of this office during the preceding year, was designed to establish a permanent system of annual reports, which should furnish, somewhat in detail, a statement of its transactions for each year, I respectfully ask leave to submit the following exhibit:

The number of accounts of collectors of the customs, and surveyors acting as collectors, received from the First Auditor, revised and finally adjusted in this office, since the first of November last, amounts to two thousand six hundred and forty-eight. There have been received and settled accounts from superintendents of light-houses, agents of marine hospitals, special accounts for the erection of light-houses, beacons, and buoys, the construction of custom-houses and marine hospitals, and for miscellaneous objects, to the number of two thousand nine hundred and forty-two.

The number of requisitions issued upon estimates furnished by the proper officers for the expenses of collecting the revenue from customs, for debentures and excess of deposits, building custom-houses light-houses, and marine hospitals, the support of light-houses, and marine hospitals, and for miscellaneous purposes, amounts to two thousand five hundred and forty-one.

In the execution of these duties, and in the disposal of the large amount of miscellaneous business appertaining to the office, or referred to it by the department, there have been written seven thousand eight hundred and ninety-two letters, all of which have been copied and recorded in the office.

The great number of accounts now required from collectors and disbursing agents, owing to the frequency of the settlements, with the correspondence incident thereto, has very much increased the labors of the office, and will call for some additional force, to dispose of them with the care and promptitude their importance demands.

The rendition of these accounts punctually at the end of each month, and their settlement here without unnecessary delay, have very essentially contributed to the security of the public revenue, and proved, in every respect, a judicious and valuable reform.

It affords me great pleasure to state that these accounts continue to be rendered with uniform punctuality, and that the more recent re-

quirement subjecting disbursements and other accounts to the same rule is rapidly attaining the same regularity.

The accounts of agents of marine hospitals at places where there are large expenditures have occasioned much embarrassment, and given occasion for voluminous correspondence. No labor or care has been spared to keep down these expenditures to the proper limit; and all charges that have not been satisfactorily explained have been rejected, and repeated admonitions given to the superintendents in regard to all unnecessary or unauthorized expenses. The circular about to be promulgated in relation to this subject will furnish a complete system for the government of these institutions, and for the administration of the fund in places where no government institutions exist; the directions contained in the circular are so minute and comprehensive in their character, and all the duties of the superintendents are so clearly pointed out, that it is believed their faithful observance will wholly remedy the irregularities referred to.

When this system shall have been fully established, it seems to me that the regulations relating to the collection of the revenue from customs, the disbursements of agents for the expenses necessary thereto, the settlement of accounts, both of collectors and disbursing agents, the administration of the marine hospital fund, and the prompt collection of balances from officers who have gone out of office or ceased to disburse the public moneys, will be as perfect as it is possible to make them. Nothing can exceed the regularity, simplicity, and order of all the accounts relating to the customs; and it is gratifying to be able to state that, with one exception upon the Pacific coast, there has been no instance of defalcation, or even of improper detention of the public money, from any collector appointed since April, 1853; and that, in the exceptional case, the prompt and energetic measures adopted by you have probably secured the government against any considerable loss.

Since the first establishment of the collection district at San Francisco, and until within the last fiscal year, the settlement of the accounts has been attended with great embarrassment, uncertainty, and delay; the expenses were enormous, and the balances uniformly largely against the collectors. Suits have been necessarily resorted to in every instance, and large sums claimed by the United States still remain due. Since the appointment of the present collector, under new instructions issued by the department, the accounts have assumed a new shape. They are now rendered as regularly and punctually as those upon the Atlantic; and what is still better, the expenses incident to the office have been so regulated, systematized, and reduced, as to compare favorably with those upon the Atlantic coast.

In obedience to instructions contained in your letter of November, 1853, particular care has been taken to enforce the prompt settlement of the accounts of such collectors and disbursing agents as have gone out of office or ceased to disburse the public moneys since April of that year.

The number of those officers who have gone out of office, either by death, resignation, or removal, since that period is thirty-seven. Of that number, the accounts of twenty-three are finally closed, and the bal-

ances paid to the United States. All the others are in course of adjustment, and none will be debtors to any considerable amount, with the exception of the late collector at San Francisco, whose accounts are now in suit, but whose official bond may not prove sufficient to cover the judgment which may be recovered against him.

The transfer of the bonds of collectors of the customs and other officers from the office of the First Comptroller to this, will add something to the labor of the office, and, with the large increase of the regular business, which goes on regularly from year to year, requires additional clerical aid. I would therefore recommend that one additional clerk of the third class be added to the force of the office.

I have the honor to be, very respectfully, &c.,

H. J. ANDERSON.

Commissioner of Customs.

Hon. JAMES GUTHRIE,
Secretary of the Treasury.

D.

TREASURY DEPARTMENT,
First Auditor's Office, November 7, 1856.

SIR: I have the honor to submit the following report of the operations of this office for the fiscal year ending June 30, 1856:

Accounts adjusted, viz:

Collectors of the customs.....	1,569
Collectors under the steamboat act.....	266
Collectors and disbursing agents of the Treasury.....	908
Official emoluments of collectors, naval officers, and surveyors.....	261
Additional compensation of collectors, naval officers, surveyors, claims for the refunding of duties illegally exacted, and claims for net proceeds of unclaimed merchandise.....	1,691
The judiciary.....	681
Interest on the public debt.....	52
Treasury notes presented for funding and redemption.....	3
Redemption of United States war bounty scrip.....	
Claims for property lost in the military service of the United States.....	23
Inspectors of steam-vessels, for travelling expenses, &c.....	144
Salaries of officers of the civil list, paid directly from the treasury.....	1,019
Claims for the redemption of United States stock.....	447
Superintendents of lights.....	445
Agents of marine hospitals.....	547
Commissioner of Public Buildings.....	151

Contingent expenses of the Senate and House of Representatives, and of the departments and bureaus of the government.....	537
Coast survey.....	29
The Treasurer of the United States, for general receipts and expenditures.....	4
The Treasurer of the United States, for pay and mileage of the members of the House of Representatives	2
The Secretary of the Senate, for pay and mileage of senators	1

I have the honor to be, very respectfully, your obedient servant,
T. L. SMITH, *Auditor.*

Hon. JAMES GUTHRIE,
Secretary of the Treasury.

E.

TREASURY DEPARTMENT,
Second Auditor's Office, Nov. 10, 1856.

SIR: In obedience to instructions heretofore received, I have the honor to transmit herewith a statement showing an outline of the operations of this office for the fiscal year ending the 30th of June, 1856.

The character of the officers of this bureau continues to be satisfactory, being punctual and diligent in performing their respective duties, which have become laborious in consequence of the increase of the army and the changes in the pay, &c., of the troops.

Very respectfully, your obedient servant,

P. CLAYTON,
Second Auditor.

Hon. JAMES GUTHRIE,
Secretary of the Treasury.

Statement of the operations of the Second Auditor's office during the fiscal year ending June 30, 1856; showing the number of money accounts settled, the expenditure embraced therein, the number of property accounts examined and adjusted, together with other duties performed pertaining to the business of the office; prepared in pursuance of instructions of the Secretary of the Treasury.

The number of money accounts settled is 1,823, embracing an expenditure of \$7,861,389 75, under the following heads, viz:

Pay department of the army.....	\$2,399,019 36
Ordnance Department.....	1,314,650 66
Quartermaster's Department of the army, disbursed on account of "clothing of the army," "contingencies of the army," and the pursuit and apprehension of deserters.....	1,101,995 84
Indian affairs.....	2,793,995 04
Medical and Hospital Department.....	89,332 65
Expenses of recruiting.....	69,555 95
Contingencies of Adjutant General's Department.....	174 31
Mexican hostilities.....	150 00
Private claims.....	42,586 79
Military Asylum.....	41,117 64
Military contributions in Mexico.....	8,811 51
	<hr/>
	\$7,861,389 75

Property accounts examined and adjusted.....	2,178
Private claims examined and rejected or suspended.....	624
Recruits of the army registered.....	11,389
Requisitions registered, recorded, and posted.....	1,844
Certificates of military service issued to Pension Office.....	29,201
Letters, accounts and papers received, briefed and registered..	8,831
Dead and discharged soldiers registered.....	2,017

Annual statement of Indian disbursements, *in duplicate*, for the fiscal year ending June 30, 1856, comprised in 1,220 sheets of foolscap.

Annual statement of the recruiting fund prepared for the Adjutant General of the army.

Annual statement of the contingencies of the army, transmitted in duplicate to the Secretary of War.

Annual statement of contingencies of this office.

Annual reports of balances to First Comptroller.

Quarterly reports of balances and changes in the same, to Second Comptroller, by direction of Secretary.

There are 1,100 cash accounts entered on the book-keeper's register, and 800 of them journalized and posted.

The appropriation ledgers and journals of the War and Interior Departments have been carefully and accurately kept.

P. CLAYTON, *Second Auditor.*

TREASURY DEPARTMENT,

Second Auditor's Office, Nov. 10, 1856.

F.

TREASURY DEPARTMENT,
Third Auditor's Office, November 12, 1856.

SIR: I have the honor to submit the following report of the operations of this branch of the Treasury Department, for the year ending 30th June, 1856:

FIRST DIVISION—BOOK-KEEPERS.

This division has been kept actively employed. In the books here kept are contained all the monetary transactions of the government so far as connected with this office.

From the chief book-keeper's statement it appears that—

The aggregate amount of drafts on the Treasury, by requisition, in the fiscal year ending 30th June, 1856, was \$14,676,046 17.

Objects of Application.

Drafts by requisition charged to personal accounts	\$14,486,945 99
Drafts by requisition on account of military contributions charged to personal accounts.	137,109 85
Drafts by requisition for payment of claims and charged to the appropriation, including acts for the relief of individuals.....	51,990 33
	<hr/> 14,676,046 17 <hr/>

Repayments.

Amount of counter requisitions by transfers.....	\$2,577,673 97
Amount of counter requisitions by deposits.....	53,111 26
	<hr/> 2,630,785 23 <hr/>

The total amount of accounts settled out of advances made and charged to disbursing agents and comprised in 3,326 reports.....	\$16,440,186 26
Amount of accounts settled appertaining to military contributions, act 3d March, 1849.....	331,300 21
Amount of accounts settled appertaining to the civil fund of California.....	627,716 79
Amount of accounts settled and charged to the appropriations, including acts for relief of individuals.....	51,990 33
Total.....	<hr/> \$17,451,193 59 <hr/>

SECOND DIVISION—QUARTERMASTER'S DEPARTMENT.

In this division there were received during the fiscal year 597 accounts of officers doing duty in the Quartermaster's Department of the army, the aggregate disbursements involved therein amounting to \$6,766,230 24.

During the same period there have been settled 610 accounts, (including 57 remaining on hand unsettled 30th June, 1855,) involving the sum of \$5,701,664 86. During the first quarter of the present fiscal year there have been received 229 accounts, involving \$1,423,464 30, and 166 accounts settled, involving \$1,115,537 80.

There remained on hand on the 30th September 107 accounts; of which number, 81 were received in the month of September, and many of them during the latter part of the month. The number of letters written in this division during the fiscal year was 1,958.

THIRD DIVISION—SUBSISTENCE DEPARTMENT.

In this division there were audited, during the past fiscal year, 867 accounts of officers doing duty in the Commissary Department of the army, involving an expenditure of \$1,873,198 43.

The total amount of expenditures and transfers acted upon in this division and certified by the Second Comptroller, for the same period, is \$2,506,618 50.

Number of letters written, same period, 953.

The number of accounts audited during the quarter ending 30th September, 1856, is 219, involving an expenditure of \$645,559 21.

The total amount of expenditures and transfers acted upon and certified by the Second Comptroller, for the same period, is \$847,148 35.

Number of letters written, same period, 225.

There remained on file, unaudited, on the 30th September, 21 accounts of officers, involved in the sum of \$51,415 23.

FOURTH DIVISION—PENSION BRANCH.

To this division is assigned the keeping and settlement of accounts of pension agents; the settlement of claims on account of arrearages of pensions, and for due and unclaimed pensions for a period exceeding fourteen months, and therefore payable at the treasury; and the preparation of reports to Congress and the different departments connected with the pension branch, involving the whole correspondence pertaining thereto.

During the fiscal year ending June 30, 1856, there were received and recorded by this branch of the office 1,804 letters.

Of letters written there were 2,155.

Of calls for information from the Pension Office, &c.—

Received and answered there were.....	411
Of pension agents' accounts received.....	194
Of pension agents' accounts settled.....	179
Of pension claims received and settled or otherwise disposed of	681

The agents' accounts involved the expenditure of.....	\$1,179,213 07
The pension claims an expenditure of.....	24,487 06
On the 30th September last there were of pension agents' accounts on hand and unsettled	14
Of pension claims on hand.....	none

FIFTH DIVISION—ENGINEER DEPARTMENT.

To this division are assigned the accounts of officers and agents disbursing under the direction of the Engineer and Topographical Engineer Bureaus of the War Department, as also the accounts of certain officers and agents disbursing under the special direction of the War Department, and which are sent to this office for settlement. These embrace expenditures for military and geographical surveys; for surveys of routes for a railroad from the Mississippi river to the Pacific ocean; for all works of river and harbor improvement on the lakes and on the Gulf of Mexico; for the construction and repairs of fortifications; for surveys of harbors on the Atlantic and of rivers emptying into it; for the Washington aqueduct, the extension of the United States Capitol, the continuation of the Post Office building, and other miscellaneous accounts diversified in their character.

The number of quarter-yearly accounts that were on file in this division, unadjusted at the commencement of the fiscal year ending 30th June, 1856, was.....	96
The number received during that year was.....	230

And the number for adjustment was therefore.....	326
Of this number, there were adjusted during the year.....	304

And the number remaining unadjusted at its close was.....	22
---	----

The three hundred and four accounts, adjusted within the year, involved the sum of	\$5,813,586 20
--	----------------

In addition to the number of accounts unadjusted on the 1st July last, namely.....	22
There had been received up to the 1st October.....	44

Making an aggregate of.....	66
Of this number, there were adjusted between the 1st of July and the 30th of September last, (in which an amount of \$243,500 13 was involved,).....	41

And there remained unadjusted on the 1st October.....	25
---	----

Of the twenty-five accounts on file and unadjusted on the 1st October, nine were received during the month of September, 1856, and sixteen prior thereto. Letters written.....	345
--	-----

SIXTH DIVISION.—MISCELLANEOUS.

During the fiscal year 241 claims and accounts demanding investigation were received, involving an amount of \$725,770 02; and up to the 30th of September last there were received 342 of such claims and accounts of the aggregate amount of \$1,303,238 95.

In the fiscal year 359 claims and accounts were reported and acted upon, involving an amount of \$278,164 06, of which there was allowed the sum of \$133,446 24, and the remainder, amounting to \$144,717 79, was disallowed and suspended for want of legal authority to allow, or for defective and insufficient evidence. Within the same time, there were also investigated and reports made upon 31 other claims and accounts of the large aggregate amount of \$2,820,692 18, some of them very voluminous, and involving an unusual amount of labor and examination, all upon calls of Congress and the Court of Claims.

Up to the 30th September last 437 claims had been reported and acted upon of the aggregate amount of \$948,703 65, upon which there was allowed the sum of \$794,254 75, and disallowed and suspended the sum of \$154,448 90 for the reasons above mentioned, including in the amount allowed the sum of \$574,389 26, on account on the war loan bonds of the State of California.

In the fiscal year there were 742 letters received, 1,076 other papers received and filed, 873 letters written, copies made covering 430 pages of foolscap paper, and record books filled to the amount of 849 pages. Up to the 30th September, 1856, there were 822 letters received, 1,409 other papers received and filed, 1,044 letters written, copies made covering 544 pages of foolscap, and record books filled to the amount of 926 pages.

SEVENTH DIVISION.—SOLDIERS' CLAIMS AND BOUNTY LAND DEPARTMENT.

During the past fiscal year 1,680 communications relating to pay, pension and bounty land claims were duly investigated and disposed of, including claims of widows and orphans under acts of March 16, 1802, April 16, 1816, and the first section of the act of March 3, 1853, (McRae's volunteers,) which are executed in this office. Of the entire number of claims presented 34 were allowed. The amount of money involved in the payment of the claims allowed was \$3,035 13. 40,746 bounty land claims, with 343 invalid and half-pay pension cases, were examined and certified to the Commissioner of Pensions.

Since the 1st July and up to the 30th September, embracing the first quarter of the current fiscal year, 16,142 bounty land claims, with 63 invalid and half-pay pension cases, have been examined and certified to the Commissioner of Pensions. 389 communications relative to pay, pension and bounty land claims have also been received and registered at this office, all of which have been disposed of. The number of letters written during the year in this division was 2,443.

EIGHTH DIVISION.—COLLECTIONS.

At the commencement of the last fiscal year the balances outstand-
30.

ing on the books of this office, as stated in my last annual report under date of November 9, 1855, were as follows:

On account of arrearages prior to 1820.....	\$2,856,453 77
Charged on the current books since 1820.....	3,127,176 80
Total.....	<u>5,983,630 57</u>

Of the amount due on account of arrearages there was in suit and in the course of prosecution, under the direction of the Solicitor of the Treasury, the sum of \$2,158,018 64, and of the amount charged on the current books \$1,475,906 62, leaving a balance of \$2,349,705 31 for collection by suit or otherwise. During the last fiscal year and the first quarter of the present fiscal year, ending 30th September, 1856, the balance on account of arrearages has been reduced in the sum of \$47,653 60, and of the amount on the current books in the sum of \$195,404 38. Twelve transcripts of accounts, exhibiting a balance of \$304,127 16, were prepared, with a brief of the facts in each case, and transmitted to the Second Comptroller of the Treasury for suit. Of this amount there has been a reduction in the sum of \$10,909 53, by payments and re-adjustments of the accounts. The number of letters written in this division and recorded is 1,656, and the number received and registered is 948. Quarterly reports have also been made to your department, exhibiting the names of the debtors, office or capacity in which disbursing, their residences as far as known, the date to which their accounts were last settled, and the amount due at the end of the quarter.

The business of this division, from the 1st of July, 1855, to the 30th of September, 1856, may be thus briefly stated:

Total balance, June 30, 1855.....	\$5,983,630 57
From which deduct amount closed by settlement and payments into the treasury.....	\$243,057 98
Amount in suit and in course of prosecution, under the direction of the Solicitor of the Treasury, on account of arrearages.....	2,110,365 04
Of amount charged on current books....	<u>1,764,559 72</u>
	4,117,982 74
Balance.....	<u>1,865,647 83</u>
To which add amount charged to officers during the year, reported as having ceased to disburse, and who have accounts and vouchers in process of adjustment.....	79,500 55
Total balance outstanding.....	<u>1,945,148 38</u>
Of which occurred prior to 1820.....	<u>698,434 13</u>
Leaving of balances since 1820, and outstanding September 30, 1856.....	<u>1,246,714 25</u>

The foregoing details of work done in the various divisions of this office compare favorably with those of former years. It will be seen that, on the one hand, the amount of labor necessary to a discharge of the duties of the office has been gradually on the increase, while, on the other hand, the number of clerks employed has diminished:

During the month of June this office was removed from the lower story of the treasury building to its present location. By this change at least one month was lost in labor of removal, re-arrangement of rooms, cases, books and papers, and the confusion inevitably resulting therefrom. It is gratifying, however, to be able to state that notwithstanding the increased business and diminished force, together with the drawback attending the removal of the office, the summary of business, on the 30th September, being the close of the first quarter of the present fiscal year, shows that the labors of the clerks have kept up with the exigencies, so that no material injury has resulted to the public service, either by delay in the examination and settlement of accounts, or in discharge of any of the duties by law assigned to this office. The present working force of the office consists of sixty-six clerks. At the date of my last report there were sixty-eight employed, and during the fiscal year previous thereto there had been at one time as many as eighty-two employed.

These reductions have been made by transfers to other bureaus, at various times, by the head of the department. In this connexion I beg leave to invite your attention to the fact that notwithstanding there are now only sixty-six clerks actually employed in this office, as above stated, yet it is compelled to estimate for the salaries of twenty-four clerks employed in other bureaus, whereby it is apparently charged in the appropriations with \$32,800 of salaries of clerks doing duty elsewhere. It would seem but fair that each office should estimate only for the salaries of the clerks actually employed in it.

During the past year a number of instances have occurred, more especially in the Quartermaster's Department, of disbursing officers rendering accounts claiming a balance to be due them by the government. This has necessarily caused more or less delay in their settlement, for in such cases the accounts are withheld until satisfactory explanations are received showing how the balance accrued. The withholding of the accounts from settlement and calling for explanations have, in several instances, I regret to say, produced bad feelings on the part of the officers rendering the accounts, it being considered by them an implied impeachment, or at least suspicion of the correctness of the account. The regulations provide that disbursing officers shall make timely estimates to their respective chiefs of the amounts required for the public service during each quarter, and thus keep themselves supplied with funds. The accounting officers consider that where circumstances render it impossible for the funds thus to be procured and, therefore, the officer borrows, or advances from his own means, money to defray accruing expenses, and renders his account showing a balance due him, such balance becomes a "claim" which they have a right and are in duty bound to investigate before acting upon it. The mere fact that the vouchers are presented, showing the application of money to the public service is not of itself conclusive;

but explanation should be given of the reason why such an advance was made on the credit of the government and the necessity therefor. The practice should, as far as possible, be avoided and discouraged. With ample means in the treasury, the actual necessity for such advances will seldom occur, if officers make use of a timely precaution; where, however, it is impossible in the nature of the case, it should not be considered as asking too much that the circumstances should be stated and explained fully.

A practice at one time, it is believed, prevailed to a considerable extent amongst disbursing officers, in various departments of the government, of taking receipts or vouchers from persons to whom money was due from the government, the payment to be made when sufficient funds were on hand, and in this way balances would accrue, by the use of such vouchers, in the rendition of accounts, although the money had not been paid and therefore no advance actually made. But such instances cannot now occur without an express violation of law, it being made a penal offence for any officer charged with the disbursement of public moneys to "accept or receive, or transmit to the Treasury Department to be allowed in his favor, any receipt or voucher from a creditor of the United States, without having paid to such creditor in such funds as the said officer may have received for disbursement, &c., the full amount specified in such receipt or voucher."

In my last annual report I alluded to the fact that between the 8th March, 1854, and the date of the report, (9th November, 1855,) forty-seven officers of all grades had resigned their commissions in the army, having balances standing charged against them on the books of this office, amounting in the aggregate to \$43,281 12. Since that time there have been forty-five resignations of officers of all grades, with an aggregate balance against them of \$33,068 54. I also alluded to the fact that paragraph forty-two of the army regulations of 1847 seemed to have in view some restrictions, with reference to resignations of officers of the army, but which was not clearly defined. It would not seem unjust to make payment, or settlement of balances due the government, as a condition precedent to the acceptance of a resignation. Many of these charges are on personal account for over-payments on account of transportation, commutation, or other allowances, the amounts in such cases not being large; and in many instances the officer resigning has no fixed place of residence, or if so it is not known to the accounting officers, and cannot be obtained from the office of the adjutant general. In such cases there is a remedy whilst in the service, viz: a stoppage of pay, and which can be resorted to when other means fail; but after a resignation has been accepted, nothing remains but the personal responsibility of the individual in a suit at law, which is always tedious and often unavailing. It is but just, however, that I should say that generally those officers respond to the calls made on them for settlement of their accounts promptly. In many instances the balances arise from the suspension of vouchers rendered in their accounts, which may be passed to their credit on necessary corrections, explanations, or proof being made.

The claim of the State of California for expenses incurred in the suppression of Indian hostilities within the State, prior to the 1st

January, 1854, which has been on file in this office since August 10, 1854, and to which I referred in my report of 1854, is now being paid, in pursuance of the provisions of an act of Congress passed at the last session.

The principle adopted in the settlement of this claim, by direction of Congress, being entirely at variance with the established usages of the executive departments and the action of Congress since the formation of the government, with respect to similar claims for advances made by States for the use and benefit of the United States, or for expenses incurred by them in the suppression of Indian hostilities within their borders, together with the magnitude of the amount involved, has seemed to me sufficient reason to call for special allusion to it in my report. This principle, if once established and recognized as a precedent for future action, will effectually take away from the general government that right which it has heretofore claimed, without question or objection, so far as I know, to investigate and revise such claims, requiring full and satisfactory evidence, with vouchers, showing that the amount claimed was actually expended for the use and benefit of the United States, or in the suppression of hostilities, as claimed. Such was the mode pursued in the settlement of claims preferred by the States of Virginia, Maryland, Pennsylvania, North Carolina, Connecticut, New Hampshire, Massachusetts, Delaware, New York, New Jersey, Rhode Island, South Carolina, Georgia, and Vermont, for advances made by them during the war of 1812; of Virginia, Louisiana, Tennessee, Alabama, Mississippi, Ohio, Indiana, Pennsylvania, North Carolina, South Carolina, Georgia, Michigan, Texas, and New York, for advances made during the Mexican war; and of South Carolina, Alabama, Georgia, and Florida, for expenses incurred by them during the Seminole Indian hostilities.

In the present case, Congress, in the 9th section of the act making appropriations for the support of the army for the year ending the 30th June, 1855, provided: "That the Secretary of War be, and he is hereby, authorized and directed to examine into and ascertain the amount of expenses incurred and now actually paid by the State of California in the suppression of Indian hostilities within the said State prior to the first of January, anno Domini eighteen hundred and fifty-four, and that the amount of such expenses, when so ascertained, be paid into the treasury of said State: *Provided*, That the sum so paid shall not exceed in amount the sum of nine hundred and twenty-four thousand two hundred and fifty-nine dollars and sixty-five cents; which amount is hereby appropriated out of any moneys in the treasury not otherwise appropriated." Accordingly, the claim of the State was forwarded to the Hon. Secretary of War, and by him referred to this office in the usual course, on the 10th of August, 1854, but not accompanied with vouchers or other evidence going to show how said claim accrued, or for what purpose the money was expended, further than appeared by the legislation of the State authorizing the issue of bonds by the authorities of said State, bearing interest at the rates of seven and twelve per cent. per annum, and certified schedules of the dates, numbers and amounts of the bonds issued, in pursuance of said legislation. The Secretary of War not considering the

evidence furnished sufficient, no further action was had thereon until the commissioners appointed by the State of California to superintend the settlement of the claim with the general government filed in the War Department an abstract of payments made on account of several expeditions against the Indians, with vouchers, rolls, &c., and which were transmitted to this office on the 15th of July, 1856, for investigation and report. It was my intention to have the claim taken up at an early period and examined, but further investigation was precluded by section 8 of the act making appropriations for certain civil expenses of the government for the year ending the 30th June, 1857, passed 18th August, 1856, which provided: "That the Secretary of War is hereby authorized and directed to pay to the holders of the war bonds of the State of California the amount of money appropriated by act of Congress approved May [August] fifth, eighteen hundred and fifty-four, in payment of expenses incurred and now actually paid by the State of California for the suppression of Indian hostilities within the said State, prior to the first day of January, anno Domini eighteen hundred and fifty-four, under the following restrictions and regulations: Before any bonds shall be redeemed by the Secretary of War, they shall be presented to the board of commissioners appointed by the legislature of said State by an act approved April nineteenth, eighteen hundred and fifty-six, and the amount due and payable upon each bond be endorsed thereon by said commissioners. Upon presentation to the Secretary of War of any bond or bonds thus endorsed, it shall be his duty to draw his warrant in favor of the holder or holders thereof for the amount certified to be due upon the same by the said commissioners upon the Secretary of the Treasury, who is hereby directed to pay the same: *Provided*, That said amounts in the aggregate shall not exceed the amount of money appropriated by act of Congress approved August fifth, eighteen hundred and fifty-four," &c.

By this legislation, you will observe, the issue of the bonds was made *conclusive* as to the fact of the "expenses" having been "incurred" and "actually paid," and upon certificate of the board of commissioners that the bonds were genuine, and the amount due and payable thereon endorsed by them, payment was directed to be made at the treasury.

In this connexion I beg leave to remark that large claims of a similar character are understood to have originated within the last year in prosecution of Indian wars in Oregon and Washington Territories, where the same course has been pursued of issuing "scrip," to the amount, as I am informed, of several millions of dollars. The extraordinary prices which are paid for services, supplies, &c., in the prosecution of such hostilities, and the great facility with which immense claims may be created when there is no check to be imposed upon improvidence, so far as the general government is concerned, not to say the opportunities that oftentimes occur under such peculiar circumstances for practising direct frauds upon the treasury, would seem to require that such claims should in all cases be subjected to rigid investigation, and the uniform practice of the government heretofore be not departed from in that respect. It is, of course, impossible

for Congress to give claims of this description the close scrutiny and thorough investigation which they require. But the substitution of this new mode of determining the amount, viz: by the gross amount of "bonds" issued, without reference to whether the amount actually applied to the public service was twenty or fifty or more per cent. on the principal sum, is calculated to stimulate extravagance and lead to alarming abuses, whilst the benefits go not into the pockets of those who furnished the supplies or rendered the service, but of capitalists and speculators, who are always ready, on such occasions, to take advantage of the necessities of the needy and the circumstances of the time. It is not intended in anything which I have said in this report to impeach the correctness of the claim preferred by the State of California, my object being solely to invite attention to the fact that the mode of settlement adopted in this case has been entirely different from that uniformly observed heretofore. Up to this date bonds to the amount of \$765,870 have been filed and reported for payment, of which the sum of \$97,370 is for interest accrued up to 1st January, 1854.

There is a class of claims for horses lost in the military service of the United States, that have been recently coming into the office, under the act of March 3, 1849, to which I invite attention. They are by volunteers engaged in the Rogue river Indian war in Oregon in 1853, and in the suppression of Indian hostilities in California subsequent to the termination of the Mexican war, and prior to the 1st of January, 1854. The volunteers first named, besides the highest rate of pay known to the law, received four dollars per day for the use and risk of their horses until such period as the allowance reached double the appraised value of the horse. The California volunteers were paid five dollars per day for the service of each private, and one dollar per day for each horse, making the extravagant and hitherto unheard of annual compensation of each private mounted volunteer *two thousand one hundred and ninety dollars*, besides subsistence, forage, clothing, and transportation. The pay of officers was equally enormous. Majors ten to fifteen dollars per day; quartermasters, commissaries, surgeons, adjutants, and captains, eight to twelve dollars per day; lieutenants six to ten, and sergeants five to seven dollars per day, with subsistence, forage, and all other allowances. I can scarcely believe that volunteers who have been paid these extraordinary rates are entitled to the beneficiary provisions of acts of Congress intended for volunteers who received only ninety-six dollars per annum for their personal services, and one hundred and forty-six dollars per annum for the use and risk of their horses. None of the claims have yet been allowed.

With great respect, your obedient servant,

ROBERT J. ATKINSON, *Auditor.*

Hon. JAMES GUTHRIE,

Secretary of the Treasury.

G.

TREASURY DEPARTMENT,
Fourth Auditor's Office, November 7, 1856.

SIR: I have the honor to submit to you the required report of the operations and condition of this office during the fiscal year ending on the 30th of June last.

The number of principal accounts settled was one thousand and fifty-one. Many of these were rendered by disbursing officers, and included the accounts of officers and men, each of which had to be separately examined and calculated, to the number of sixty-nine thousand and sixty-three.

The amount involved in the accounts settled was \$15,362,880 06. The reduction made during the year in the balances reported to the department on the 18th of October, 1853, as standing on the books of this office, was \$969,302 82. Five thousand three hundred and fifteen letters were received and registered in the course of the year, and five thousand three hundred and seventy-two were written and recorded. Eleven hundred and thirty-three requisitions, and one thousand and fifty allotments of pay were registered. All the accounts stated and returned, after revision by the Second Comptroller, were journalized and posted.

Four thousand nine hundred and ninety-three applications for bounty land, under the act of March 3, 1855, were received from the Commissioner of Pensions, and after the requisite search were returned to him, with a certificate of the service performed by the applicants. As the names of these persons are scattered through the rolls of many years, made up without regard to alphabetical order, some of which contain the names of more than a thousand men each, and as it is frequently necessary to trace the men from roll to roll, in consequence of transfers from one ship to another, the examination is very arduous and unavoidably consumes a great deal of time. By a resolution of the House of Representatives, passed in 1848, the Secretary of the Navy is required to transmit to that House, annually, "a transcript of the official navy lists, in such form as to affix, opposite the name of each person contained therein, in separate columns, the annual pay of such officer or person; the amount paid him for rations, servants, and forage, and the gross amount paid or allowed him in all respects, for and on his account, for and during the preceding year." The statement thus called for is made out at this office, and being compiled from an immense number of rolls and accounts, the preparation of it employs the whole time of one of the clerks for at least three months.

The disbursing officers of the navy, resident in this country, have been very punctual in the transmission of their accounts within the time prescribed by law. There has always been some irregularity on the part of those abroad; but this is generally attributable to their distance from home, and the apprehension of vouchers being lost.

The business of this office is in good condition, and is not in arrear. There are some accounts, which have been recently rendered, that have

not yet been taken up for examination ; but they can all be settled in a few weeks.

I have the honor to be, sir, very respectfully, your obedient servant,

A. O. DAYTON.

Hon. JAMES GUTHRIE,
Secretary of the Treasury.

H.

TREASURY DEPARTMENT,
Fifth Auditor's Office, November 18, 1856.

SIR : In compliance with the request contained in your letter of the 16th October, 1855, I have the honor to submit the following report as to the character and present condition of the business of this office for the fiscal year ending June 30, 1856.

The accounts adjusted in this office are those of the United States bankers in London, our foreign ministers and secretaries of legation, consuls general, consuls, vice consuls and commercial agents ; of the disbursing agent of the Department of State, General Post Office, Census Bureau, and Commissioner of Patents ; of the various members of the commission for running and marking the boundary line between the United States and Mexico ; the awards of commissioners under treaties with foreign governments, and awards of commissioners under special acts of Congress ; of the owners of vessels for the passage of destitute or criminal seamen, and of the estates of citizens who have died abroad. Of these accounts, with a force of seven clerks, one thousand and seventy-two have been adjusted, and the reports copied into a record-book, and to each minister a full copy of the "statement" of his account has been sent. There have also been written, in relation to the business of the office, eleven hundred and thirty-three letters. The accounts for consuls' salary and fees, growing out of the law for "remodeling the diplomatic and consular system," has largely augmented the labor of this office. Some confusion and delay have occurred in the settlement of consuls' accounts, and the payment of their drafts, incident to organizing a new system.

The instructions for carrying out the law were not received by many consuls in time to make up their accounts, according to the prescribed forms. The instructions, under the amended law, now being prepared with great care in the State Department, will probably remedy all the difficulties that have been experienced by the consuls in the preparation of their accounts, and the adjustment of them in this office. A further increase of the labor of the office has arisen from the more frequent settlement of accounts. It was the usage of the office to adjust the accounts of ministers and salaried consuls annually ; they are now adjusted quarterly. Sometimes a minister incurs contingent expenses which the Secretary of State does not deem necessary for the public interest ; by a prompt adjustment of his account he is saved from a further loss. Not unfrequently the consul sends imperfect vouchers. Unless his accounts are at once examined

and adjusted, he may be unable to perfect his vouchers, and he must lose the amount, unless, to relieve him, the accounting officers relax their well-considered rules. Experience shows that the more frequent the settlement between the treasury and the distant agent of the government the better for both parties. During the year the current work of the office has been kept up and many suspended accounts finally closed; and I am happy to state that every employé has performed the duties assigned to him in a prompt and creditable manner.

I have the honor to be, sir, most respectfully, your obedient servant,

M. McCONNEL, *Auditor.*

Hon. JAMES GUTHRIE,
Secretary of the Treasury.

I.

AUDITOR'S OFFICE, POST OFFICE DEPARTMENT,
November 15, 1856.

SIR: In compliance with your request of the 26th ult., I have the honor to submit the following report, exhibiting the operations of this office during the fiscal year ending June 30, 1856, together with a general outline of its principal duties, the character and attendance of its officers, and the present condition of its business.

EXAMINERS' DIVISION.

This division is first in the order of arrangement, as it receives from the department the quarterly accounts of postmasters, examines them, adjusts the commissions and emoluments, and ascertains the true balance; thus preparing the basis for the labors of the other branches of the office. The following number of accounts was examined during the fiscal year, viz:

For the quarter ending September 30, 1855.....	24,153
For the quarter ending December 31, 1855.....	24,393
For the quarter ending March 31, 1856.....	24,389
For the quarter ending June 30, 1856.....	25,100
	<hr/>
	98,035
	<hr/>

In 13,824 of which errors were discovered, each increasing the balance due to the United States more than fifty cents.

Accurate copies of these (13,824) accounts as rendered by postmasters, and as audited by this office, have been prepared and furnished to the postmasters by whom the errors were committed, accompanied by such instructions as would enable them to guard against errors in future.

Postal accounts with Great Britain, Prussia, Bremen, and other

foreign governments, are adjusted by a clerk in this division, who also disburses the "salary and contingent funds" of the office.

With a view of testing the accuracy of postmasters in transcribing on their "transcripts" rendered to the department, the entries of postage from the "post bills" accompanying the letters for delivery and distribution, on which they collect postage or receive commission, I have caused the "transcripts" and "post bills" to be compared; and this plan will doubtless protect the department from losses arising from inaccuracy or fraud.

The examination of the quarterly accounts of postmasters has invariably been completed within ninety-five days subsequent to the expiration of the quarter for which they were rendered.

REGISTERS' DIVISION.

This division is next in order, as the registers receive daily, as rapidly as they are examined, the accounts that have been adjusted by the examiners; analyze and enter in suitable books all the items embraced in each account, under the proper head of appropriation, and record the various incidental expenses of postmasters; and the fact that each account furnishes an average of fourteen items for entry, that the aggregates of these entries are ascertained and the results proved quarterly, and that 98,035 accounts have been thus registered during the year, is a sufficient guarantee that the nine clerks of the division have labored faithfully and diligently in the performance of their duties.

BOOK-KEEPERS' DIVISION.

This division has received the registers, within twenty days after the expiration of the quarter in which the accounts were rendered; and the balances ascertained have been entered in the ledgers within the quarter.

The current ledgers are forty-one in number, of "imperial" size, and contain all the accounts pertaining to the department, about 46,551 in number. The postings, embracing entries of balances, warrants, drafts, collections, &c., have been completed and examined within the period prescribed by regulation.

PAY DIVISION.

This division has audited and paid, quarterly, 5,293 accounts of contractors, within the period fixed by their contracts, in all cases in which the proper data for settlement could be obtained by this office.

The duties of this division are not simply what its title implies, as it also collects a large portion of the revenues of the department, by means of "collection orders" sent by the pay clerks to contractors, in time to enable them to present them for payment at the close of each fiscal quarter. These "orders" call for payment of all funds belonging to the department in the hands of postmasters on whom they are issued; 71,547 of these orders were sent out during the year, and the

department realized, in the payment of its contractors, \$1,014,054 80 of its revenues, three months in advance of the adjustment by this by this office of the accounts on which payments were made; at the same time relieving the postmasters of the custody of the funds, the risk of loss by fire or robbery, or the inconvenience of transporting them to some distant depository; and removing the temptation to misapply the government money to their private uses. It is, also, a great accommodation to the contractor, as he thus receives about 60 per cent. of his compensation immediately after the termination of his services for each fiscal quarter, some two months prior to the period fixed by his contract for payment by this office.

COLLECTING DIVISION.

It is the duty of this division to collect by issuing drafts, or the institution of suit, all sums due to the department by delinquent postmasters, late postmasters, contractors, failing bidders, and others; to conduct the correspondence growing out of efforts to collect, and to furnish the necessary papers and instructions to United States district attorneys and marshals. The following number and classes of accounts were in charge of the division during the last fiscal year, viz:

Of accounts prior to June 30, 1855.....	11,547
Of accounts of persons whose term of office expired within the year.....	6,423
And of present postmasters.....	25,565
Total.....	<u>43,535</u>

Statements of these accounts have been carefully transcribed from the ledgers, properly endorsed, and arranged alphabetically, geographically, and chronologically; so that no difficulty can arise in obtaining promptly, from the files of the office, any account or paper that may be required.

4,905 "collection drafts" have been issued; and \$58,974 94 collected of delinquent postmasters, who had failed to pay the proceeds of their offices, in accordance with the instructions of the department. The correspondence of the division covers 1,705 folio post pages; in addition to which, 10,836 circular letters have been issued, the large number of analogous cases enabling me to reduce the labor materially by the use of printed letters.

69 suits were instituted during the year, 26 judgments obtained thereon; \$9,609 59 collected, and 40 accounts closed.

The balance due to the United States by late postmasters, on June 30, 1855, not in suit, amounted to \$113,655 44; of which there was apparently due \$33,495 09 by late postmasters in California and Oregon, which should be deducted, as the amount is covered by vouchers, under the provisions of the 4th and 5th sections of an act approved July 27, 1854; leaving due to the United States, by late postmasters in the Atlantic States, \$80,160 35. Of this sum there has been collected \$62,011 44; and of the sum \$124,094 98, due by late postmasters of the last fiscal year, \$55,887 64 has been collected.

The method pursued for the collection of balances due to the department by late postmasters is both simple and effective, and may not be uninteresting. As soon after a postmaster's term of office expires as the sum due to the United States can be ascertained, *i. e.* within the ensuing quarter, drafts are issued in favor of the postmaster at some convenient offices, (or at the same offices if the funds can be used by the department,) for collection of all sums exceeding \$10. The parties are promptly furnished with statements of their accounts, and explanations of any differences between them and this office; and in case of failure to pay the demand; or present adequate ground for abatement, within 30 days, the names of the sureties are furnished, with instructions to demand payment of them. The balances under \$10 are presented for collection, after all the postings have been made in the ledgers, for the quarter in which the person indebted became late postmaster; and in all cases, the demand is urged upon the defaulting principal and his sureties, with a prospect of civil suit upon the bond, and, in extreme cases, criminal prosecution, under the provisions of the "independent treasury act," instead of resorting to compulsory measures upon the first refusal to pay their indebtedness. This course is also recommended by the fact that it is much less oppressive to the sureties, as they are thereby enabled to pay the defalcation of their principal, when necessary, without the annoyance of suit and the payment of costs and interest. Its efficiency is fully attested by the foregoing results.

MISCELLANEOUS DIVISION.

This division adjusts and enters all credits for sums paid to special mail contractors and mail messengers; examines and pays all balances due to late postmasters, special agents, contractors for furnishing blanks, &c.; records all drafts and warrants issued by the Postmaster General; enters all sums deposited in the treasury to the credit of the department; and records, envelops, and directs all official letters, together with a variety of other duties sufficiently indicated by its title.

The principal labor of this division may be thus presented, *viz*:

The number of accounts of special contractors adjusted, quarterly, during the year, was.....	3,134
The number of accounts of mail messengers.....	1,302
The number of warrants entered during the year.....	6,840
The number of drafts entered during the year.....	10,080
The number of folio-post pages recorded.....	2,661
The number of miscellaneous accounts paid.....	660
The number of balances due late postmasters paid.....	1,679

It was the impression of the advocates of compulsory prepayment of letter postage by "postage stamps" that it would simplify and diminish the labors of this office very much; but the experience of two fiscal quarters has shown that, notwithstanding the peremptory instructions of the Postmaster General in regard to affixing postage stamps upon all domestic letters before mailing them, postage amount-

ing to \$511,717 89 has been "*paid in money*," so that the original number of columns in the "transcript of mails sent and received" is still required, and the reduced labor in the addition of "postage unpaid" and "*paid in money*," is more than counterbalanced by the increased number and magnitude of the account presented for adjustment; hence the necessity for an increase of five in the clerical force of this office, indicated in my last annual report, is more urgent than it was at that date.

The immense amount of labor performed by this office during the last fiscal year is partially presented by the following summary, viz:

The number of quarterly accounts of postmasters adjusted and audited was.....	98,035
The number of accounts on the current ledgers.....	46,551
The number of quarterly accounts of contractors audited and paid.....	21,174
The number of special contractors and mail messenger accounts settled.....	17,744
The number of payments made to special and route agents..	3,495
The number of miscellaneous accounts paid.....	660
The number of "collection orders" issued.....	71,547
The number of "collection drafts" issued.....	4,905
The number of department drafts registered.....	10,080
The number of department warrants registered.....	6,840
The number of letters received.....	122,459
The number of letters sent.....	64,715
The number of folio-post pages of manuscript letters sent....	2,661

Accurate copies of 13,824 accounts current, as rendered by postmasters, and as audited, have been furnished in cases in which errors were committed against the department, and a vast variety of other labor performed, which, if presented in detail, would greatly exceed any estimate yet made, and fully establish, for the gentlemen employed in this office, a reputation for capacity and industry in the performance of their respective public duties rarely equalled, and never excelled.

Respectfully submitted,

WM. F. PHILLIPS, *Auditor*.

HON. JAMES GUTHRIE,
Secretary of the Treasury.

J.

OFFICE OF THE SOLICITOR OF THE TREASURY,
November 8, 1856.

SIR: I have the honor to transmit you, herewith, a report of the operations of this office for the fiscal year ending June 30, 1856, consisting of tabular statements showing the suits brought in the several judicial districts; also, the suits decided, dismissed, or otherwise disposed of; the number and amount of judgments obtained, and the amount collected on matters in suit, whether commenced during the year or previous thereto. These tables are numbered 1, 2, 3, and 4.

No. 1 is a statement in detail of suits, judgments, and collections on treasury transcripts.

No. 2 is a statement of suits for fines, penalties, and forfeitures.

No. 3 is a statement of miscellaneous, including all suits not embraced in the two preceding tables.

No. 4, a general statement, showing the aggregates of the preceding tables, of which the following is a summary:

Summary statement.

Districts.	Suits brought during the year.		Suits decided, or otherwise disposed of, during the year.					Collections during the year.			
	Number.	Amount sued for.	Number.	Amount of judgments on suits brought during the year.	Number.	Amount of judgments on suits previously brought.	Number.	Total amount of judgments during the year.	On suits brought during the year.	On suits previously brought.	Total collections during the year.

Northern California	21	340,138 53	2	6	191,658 22	8	191,658 22	5,329 00	5,826 37	11,155 37
Southern California	1	6,672 45						6,672 45		6,672 45
New Mexico	5		1			1		158 88		158 88
Minnesota	22	66,659 48	1			1				
Washington	3									
Total	747	1,271,040 35	112	95	54,480 41	207	277,601 05	366,493 66	150,910 98	517,404 64

From these statements it will appear that during the year 747 suits were brought. Of these, 53 were on treasury transcripts (table No. 1) for \$791,128 45; 210 for fines, penalties, and forfeitures, (table No. 2,) the mass of which are *in rem*, but include specific penalties amounting to \$47,260 08; and 484 suits (table No. 3) of a miscellaneous character for \$432,651 82. This class includes 209 suits on warehouse transportation bonds; also suits brought by importers against collectors of the customs to recover alleged excess of duties paid under protest, and defended under instructions from the department; and 29 suits given in charge of the office by heads of departments, under the orders of the President of July 16, 1855—making up an aggregate of 747 suits brought to recover the sum of \$1,271,040 35, in addition to the amount involved in cases *in rem*.

Of the suits thus brought, 335 have been decided, and finally disposed of, as follows, viz: 112 tried and decided in favor of the United States, 24 tried and decided against the United States, and 199 settled and dismissed before trial; leaving 412 still pending.

It will also appear, from the tables, that 243 suits, brought previous to the commencement of the fiscal year, have been finally disposed of, as follows, viz: 95 tried and decided in favor of the United States, 75 decided against the United States, and 73 settled and dismissed before trial; and there remain pending 393 suits brought previous to the present fiscal year.

The aggregate number of suits tried and finally disposed of during the year is 578. The amount of judgments obtained is \$277,601 05, and the amount collected from all sources is \$517,404 64. The whole number of suits pending undecided, is 805.

I am, with great respect your most obedient servant,

F. B. STREETER, *Solicitor*.

Hon. JAMES GUTHRIE,
Secretary of the Treasury.

K.

TREASURY OF THE UNITED STATES,
November —, 1856.

SIR: In compliance with your instructions, I have the honor to submit the following summary of the business of this office during the fiscal year ending June 30, 1856:

The amount covered into the treasury during the year, on 4,466 warrants, was—

From customs, lands, and miscellaneous sources....	\$74,505,095 84
From Interior Department.....	227,883 71
From War Department.....	2,860,882 45
From Navy Department.....	1,778,521 36

79,372,383 36

which includes repayments of former advances and amounts transferred from one appropriation to another in the settlement of accounts.

The payments during the same period on 15,522 warrants, and about an equal number of drafts, were—

For civil, miscellaneous, diplomatic, and public debt.....	\$38,526,217 68
For Interior Department.....	4,295,522 21
For War Department.....	19,809,079 34
For Navy Department.....	15,870,302 42
	<hr/>
	78,501,121 65
	<hr/>

which also includes payments for the transfer of balances in the settlement of accounts.

The amount received at the several offices of the Treasury, for the use of the Post Office Department, was.....	\$4,459,185 73
And the amount of 6,840 post office warrants drawn thereon.....	4,396,513 11
Balance to the credit of the department at the close of the fiscal year.....	577,158 79

For the purpose of facilitating disbursements, and for the greater security of public moneys collected at remote points, not provided with ample securities for safe keeping, and also to promote the operation of coining, the sum of \$38,088,113 92, composed of coin and bullion, has been moved during the year.

This operation has been effected, as a matter of account, by 737 transfer drafts, issued singly, and 646 issued in duplicate; and, as a matter of fact, in part by actual transportation, and in the other part by using transfer drafts in sums suitable to and supplying the wants of the business community, so far as they came within the range of our own convenience or requirements.

The arrangements introduced by you, as a legitimate consequence of the independent treasury act, (though not specifically provided for by it,) which require the treasurer and the other depositaries of public moneys to open accounts with disbursing officers, and to receive and pay out for them moneys advanced to them from the treasury, have operated, so far, to the entire satisfaction of all parties concerned, and have afforded ample security and facility for carrying out these responsible duties.

This branch of business, however, being entirely an addition to the ordinary transactions of the treasury proper, involves a great deal of labor and responsibility upon those treasury officers who are required to carry it on.

In this office alone the receipts from all sources on treasury account proper, during the year, amounted to \$8,041,975 40.

One thousand two hundred and ninety-three drafts have been satisfied, either by payment in coin or by being entered to the credit of disbursing officers. Accounts have been kept with seventy-five dis-

bursing officers, whose credits have been drawn upon and paid to the amount of \$6,695,410 56 on 17,003 checks.

The sum of \$4,544,129 44 has been transferred during the year from the assistant treasurer at New York to this office, by means of 2,079 checks given in exchange for coin previously placed in my possession, and drawn on amounts placed to my credit by the assistant treasurer in satisfaction of transfer drafts and of drafts in my favor as agent for paying the compensation of the members of the House of Representatives.

These operations, it is evident, have afforded favorable and very acceptable accommodation to our business community, while, at the same time, they have relieved the department from the onus of transporting that amount of specie which it would otherwise have been compelled to encounter.

I am happy to add, in conclusion, that all branches of business in the office proper, and in the special money department, have been conducted with highly commendable promptness and accuracy, and, as I believe, to the entire satisfaction of all persons who have had any business transactions with the office.

Respectfully,

SAMUEL CASEY,
Treasurer United States.

Hon. JAMES GUTHRIE,
Secretary of the Treasury.

L.

REGISTER'S OFFICE,
November 22, 1856.

SIR: In accordance with your request, I have the honor to submit the following partial summary of the business operations of this office during the fiscal year ending 30th June last, and its present condition.

The same order, as to the division of labor, indicated in my report of November 22, 1855, has been continued, and may be enumerated as follows:

First. That pertaining to the receipts and expenditures of the United States;

Second. That to the public debt and loans;

Third. To commerce and navigation; and

Fourth. To the tonnage, registered and enrolled, of the United States.

As to the business in the first division, its details, &c., I respectfully refer the Secretary to my report of last year.

In this branch the business has increased in the year ending 30th June last considerably beyond that of the preceding year, as will be seen by the following comparative statement:

The number of treasury expenditure warrants issued during the year ending June 30, 1856.....	10,784
In the year ending June 30, 1855.....	8,625
In the year ending June 30, 1845.....	3,493

It will be perceived that the number of warrants issued in 1856 was 25 per cent. more than in 1855, and more than 300 per cent. greater than in 1845.

The mode of paying consuls has added greatly to the labor of this branch, and the increase of warrants has added much to the labor of all the clerks connected with this division.

The delay in the completion of the printing of these statistics, for last year, will greatly retard their compilation for this, as it is necessary to refer to the statistics of the former year. Being in the hands of the printer, we cannot refer to them; and to collate them from the various sources from whence originally made up, would be to perform the work of last year over again.

In the loan division there has been no material change since my last report, though the business has in various ways considerably increased.

The stock transactions have consisted chiefly in the redemption of the several loans, the aggregate amount of which has been reduced over eleven and three-quarter millions within the year.

The recent plan of settling accounts throws much responsibility upon this office, as the monthly abstracts of dividends paid by the different government agents are referred to me by the First Auditor for comparison, and, upon my certificate of correctness, and that the items had not been paid before, are audited and settled.

This process enables me to check, on the books of this office, the dividends that are paid, and, after each monthly settlement, tell the amount, to whom, and where dividends are still due.

The coupons paid during each month are regularly repoted, certified, cancelled, and numerically arranged.

In the division pertaining to commerce and navigation, the business has largely increased, as will be indicated by the increased size of the forthcoming volume pertaining to these statistics.

The general statements of exports and imports, by far the largest portion of the work, have been doubled in order to show, in detail, not only the countries to which exports are sent, and from whence imports are received, but also the several districts of the United States into which these imports enter, and from whence the exports depart.

Two additional tables have also been added to those showing the arrival and departure of vessels—one exhibiting the districts from whence they clear, and the countries of their destination; and the other the countries from whence they arrive, and the districts into which they enter.

The statement of indirect trade has also been essentially modified and enlarged so as to embrace not only the states comprising the German Zoll-Verien, Austria, and Switzerland, but also all countries the products and manufactures of which reach the United States through ports other than their own.

Notwithstanding this large addition to the duties of this division, and the increase consequent upon the rapid growth and expansion of the country, the whole labor has been performed by the same clerks without aid or assistance, but not without compelling me to require

some of them to perform extra labor beyond the usual hours assigned to official duty. The statistics for this report were sent up on the 7th instant.

In the division having charge of the tonnage statistics, a large amount of additional labor has devolved upon the clerks in an attempt to correct the tonnage of the United States so as to present something like the true amount. In my report of last year, the amount as shown from the returns was 5,212,001.15. This showed, evidently, too great a tonnage, as it placed us far ahead of any other nation on the globe. To correct it, and, if possible, give as near the true amount as the data to be found at the various ports would furnish, I sent instructions to the several collectors to forward lists of vessels belonging to their respective districts, with their quarterly accounts, and to credit all vessels lost at sea, sold, &c., not heretofore credited. These corrected lists reduce the tonnage to 4,871,652.46, which is very nearly the true amount of the present tonnage. Should this plan be followed up each succeeding year, these statistics will be of a more reliable character than heretofore. These corrections cost much additional labor, and if continued, will throw an additional amount each year upon this branch. In this as well as every other division of my office, the business has been promptly and faithfully attended to by the clerical force allotted me.

Frequent calls are made upon this bureau for transcripts of papers on file, connected with transactions which have become the subject of litigation or controversy, or required for other purposes by this and other departments, members of Congress, committees of Congress, &c., &c., the copying of which frequently would require the labor of one clerk for a month or six weeks; but as they are often wanted in a few days, I am compelled to take a number of the clerks away from their regular duties. Thus is the routine of business interrupted and retarded; and in order to bring it up to its proper point again, necessity compels me to make unreasonable demands upon the clerks, requiring them to return to the office and resume their labor after the usual time of adjournment.

An addition to my force of three clerks would enable me to obviate, in a great degree, this difficulty.

By a systematic division of the labor, and an observance of office hours only, the business of this office could not be kept up. The first has been attempted; but without going beyond the latter, would fail most signally in accomplishing the end.

I would, therefore, most respectfully suggest, whether Congress should, by disregarding your recommendation for additional clerks, as was the case last year, make it necessary to continue the imposition of greater burdens upon these agents of government than are consistent with a reasonable diligence or healthy application to duty.

In 1845 the business of this bureau required the service of twenty-three clerks; now there are twenty-nine. Since that time the labor has increased at least two hundred per cent. This simple statement, for the truth of which I beg leave to refer to my letter of November 22, 1855, published in your report of that year on the finances, it seems to me, should be argument sufficient in favor of granting an increase to my clerical force.

The duties of the clerks in this bureau are as onerous, requiring as much ability, and as intense application, as in any other department of the government; yet, in the General Land Office there are five of class four; in the Pension, four of the same class; in the Indian Bureau, three; and in this, but one. If my first proposition be true, this state of affairs cannot exist without manifest injustice.

Permit me, therefore, to suggest that the classification of the clerks be so changed as to allow two more of class four, and four of class three.

Congress, at its recent sitting, having provided no more than a fair compensation for its members, it is to be hoped will not hesitate to render simple justice to the poor clerk, whose onerous duties require a constant and diligent attention, scarcely allowing him, during the whole course of the year, the respite of a single day. This can be effected by an increase of salary corresponding to that allowed to the other departments, and an augmentation of force sufficient to reduce his labor to a reasonable standard.

In conclusion, allow me to state that the business in each division has been kept up to the extent of the abilities of my force, and that there has been no lagging at any of the desks in the discharge of duty; but I am fearful that delays in other quarters, some of which have been alluded to, will postpone the completion of the statistics on finance beyond the time at which they were furnished by this office last year. To expedite their completion every means in my power shall be used.

I am sir, very respectfully, your obedient servant,

F. BIGGER.

Hon. JAMES GUTHRIE,
Secretary of the Treasury.

	Total.....	890,688 90

STATEMENT N.

Statement of balances due from banks, formerly depositories of the public money, which are unavailable, and have been so reported by the Secretary of the Treasury for a number of years.

No.	Name and style of the banks.	Amount due per last settlement of the treasury.
1	Bank of Vincennes.....	\$168,511 64
2	Bank of Missouri.....	159,199 87
3	Bank of Tombecbee, Alabama.....	98,178 70
4	Bank of Washington, Pennsylvania.....	5,658 15
5	Bank of Steubenville, Ohio.....	300,056 33
6	Elkton Bank of Maryland.....	25,372 19
7	Bank of Somerset, Maryland.....	62,420 36
8	Farmers, Mechanics, and Manufacturers' Bank of Chillicothe, Ohio.....	29,729 45
9	Miami Importing and Exporting Company.....	3,469 54
10	Farmers and Mechanics' Bank of Greencastle.....	595 00
11	Commercial Bank of Buffalo.....	846 94
12	Farmers and Mechanics' Bank of Pittsburg.....	1,311 00
13	Centre Bank of Pennsylvania.....	6,381 73
14	Farmers and Mechanics' Bank of Cincinnati.....	16,753 00
15	Bank of Illinois, Shawneetown.....	46,909 59
16	Saline Bank, Virginia.....	10,121 00
17	Juniata Bank of Pennsylvania.....	3,200 00
18	Bank of Edwardsville, Illinois.....	46,973 00
19	German Bank of Wooster.....	4,023 42
20	Bank of Columbia.....	49,225 66
21	Farmers and Mechanics' Bank of Indiana.....	31,683 90
22	Franklin Bank of Alexandria.....	48,000 00
23	Union Bank of Tennessee.....	246,905 21
24	Planters' Bank of Tennessee and branches.....	271,630 87
25	Franklin Bank of Cincinnati.....	12,753 52
26	Agricultural Bank of Mississippi.....	583,404 30
27	Franklin Bank of Boston.....	12,331 25
28	Merchants' Bank of Alexandria.....	3,217 00
29	Parkersburg Bank.....	198 00
30	Urbana Bank.....	2,839 00
31	Huntington Bank.....	2,380 00
32	Lebanon Miami Banking Company.....	9,575 00
33	Bedford Bank.....	4,059 57
34	Bank of Cincinnati.....	3,846 00
35	Commercial Bank of Cincinnati.....	1,021 50
36	Bank of Columbia, Georgetown.....	469,113 50
37	Commercial Bank of Lake Erie.....	10,900 00
38	Farmers and Mechanics' Bank of Cincinnati.....	20,213 01
39	Bank of the Metropolis.....	3,059 64
		2,776,067 84
Deduct the amounts paid, and held up for payment, in the following banks, viz:		
	Farmers and Mechanics' Bank, Indiana.....	\$31,683 90
	Agricultural Bank, Mississippi.....	583,404 30
	Bedford Bank.....	4,059 57
	Commercial Bank of Lake Erie.....	10,900 00

	Bank of Washington, Pennsylvania.....	5,658 15
		1,166,995 52
		1,609,072 32

No. 1.—*Bank of Vincennes*.—In 1821, an arrangement was made with this bank for the security of this debt, by which sundry tracts and lots of land, and other securities, were vested in trustees, to be sold for its payment. In March, the Secretary of the Treasury was advised that the debt would be nearly all lost. On the 3d September, 1830, the district attorney was instructed to institute suit against the bank and sell all the trust property. One of the tracts of land was sold in 1831 to William H. Neilson for \$6,000, and the remainder of the trust property was disposed of at auction for \$2,650 40; and on the 14th January, 1833, the district attorney reported that the above sums were all he expected to realize in the case, the bank being hopelessly insolvent. On the 16th July, 1834, the department informed the district attorney of a suspected abstraction of the funds of the bank, previous to its failure, to avoid the claims of creditors; and instructed him to inquire into the matter, and if there should appear a probability of establishing the fact, to engage associate council in any legal proceedings that might be necessary. On the 24th March, 1835, the district attorney reported that nothing new could be established, and the matter was suffered to rest. On the 3d January, 1855, the district attorney was again written to by the department, and a full history of the case, from its earliest stages, furnished him, with a request to ascertain what disposition has been made of the assigned property, and the proceeds arising therefrom; and, also, whether there has been legal proceedings commenced against the officers of the bank, to make them liable for the debt due the government beyond the property assigned, to which no reply has been received.

No. 2.—*Bank of Missouri*.—This bank failed in 1821. In 1823, its officers assigned and transferred to the United States, for the security and ultimate payment of this debt, notes, bonds, judgments and real estate due and belonging to it, amounting to \$189,237 19. These evidences of debt were placed in the hands of George S. Strother, esq., a special agent appointed by the Secretary of the Treasury, for collection, and for which he receipted, January 20, 1823. Mr. Strother entered upon the duties of his agency soon after, brought suits, recovered judgments, foreclosed mortgages, caused, executions to be issued and levied on real estate, &c., and the property sold; most of which he bought in as agent of the United States. Mr. Strother surrendered his agency in 1830, and was succeeded by Messrs. Shannon, O'Fallon and Maginis, they by A. S. Jones, and he finally by the district attorney A. S. Maginis.

Of the sum of \$194,402 17, which consisted of judgments, mortgages, rents, interest, &c., in Mr. Strother's hands, but \$40,503 69 and \$6,078 61 compensation, allowed Mr. Strother as agent, have been collected. On the 1st February, 1856, the district attorney was furnished with a history of this case by the department, and requested to give his early attention to the matter, with a view to closing the account against this bank. On the 25th January, 1856, Charles D. Drake, esq., acting district attorney, advised the department that Mr. Reynolds, the district attorney, was then in Cuba, on government business, and on his return would doubtless give the subject his usual diligent attention. This case is now in the hands of the proper gov-

ernment officer, but the department is without advice as to the probable eventuality of success.

No. 3.—*Bank of Tombecbee, Alabama.*—Suit was instituted in this case July 21, 1827, and in December following, a transfer was made by the bank of notes discounted, bonds, judgments, &c., to an amount exceeding the debt to the United States. The district attorney was instructed to suspend legal proceedings, on the debts assigned being secured to his satisfaction, and to grant indulgence to the parties of 1, 2, 3 and 4 years. Henry Hitchcock, esq., then district attorney, was appointed to carry this arrangement into effect, and all the notes, bonds, &c., assigned, were placed in his hands for collection. Mr. Hitchcock collected at different times, and paid over to the United States, the sum of \$117,987 90. A large amount of these debts still remains uncollected. Mr. Hitchcock, although repeatedly requested, failed to make a report before his decease, of his transactions in the premises. On the 1st March, 1856, the district attorney for southern Alabama was put in possession of all the information respecting this case within the knowledge of the department, and requested to ascertain the whereabouts of the missing securities, and the responsibility of the officers of the aforesaid bank to meet their obligations to the government. The district attorney, on the 17th March, and April 8, 1856, advised the department that the case was utterly hopeless, both in regard to a recovery of the lost securities and the balance due.

No. 4.—*Bank of Washington, Pennsylvania.*—This bank failed in 1817. To secure the debt due by this bank to the United States, George Baird, William Baird, and Thomas H. Baird, on January 12, 1821, executed a bond to the United States for \$3,784 47, payable in eight annual instalments, with interest from the date thereof. On the same day, George Baird, John Wilson, and William Baird executed a similar bond for \$4,000, with like conditions, making the debt due and thus secured by the bank \$7,784 47.

The obligors on these bonds made payment on account of interest and principal at different times, amounting to \$9,657 73, leaving a balance due, on the 20th August, 1842, of \$5,658 88. On the 18th August, 1856, an act was passed for the relief of Thomas H. Baird, administrator of Absalom Baird, a commissioned surgeon in the army of the revolution. From the amount thus appropriated, the balance due on the above bonds has been suspended as security for the debt.

No. 5.—*Bank of Steubenville, Ohio.*—This bank stopped payment in 1825, and in that year an agreement was made with the Secretary of the Treasury, by which the bank confessed judgment for \$170,000, and gave its note for the amount, payable January 1, 1827, with interest. B. Wells & Co., debtors to said bank, also confessed judgment for \$120,000, and gave their two notes for \$60,000 each to the United States, one payable January 1, 1830, and the other December 31, 1830, each bearing interest from January, 1827. The parties having failed to comply with the terms of this arrangement, executions issued against both the bank and Wells & Co. The amount collected and paid into the treasury, from the sale of property belonging to the bank and Wells & Co., was \$38,295 13. A general propo-

sition for compromise was made, under the act of March 3, 1837, the result of which is unknown to the department.

On the 13th March, 1856, the district attorney was furnished with a detailed statement of all the facts in this case within the knowledge of the department, and requested to give a full history thereof. The district attorney is now engaged in its investigation, the result of which has not transpired.

No. 6.—*Elkton Bank of Maryland*.—The Bank of Columbia, while acting as fiscal agent of the United States, towards the close of the last war with Great Britain, received and held certain notes of the Elkton Bank on special deposit. Suit having been ordered on these notes, the bank assigned two notes of P. Thomas to the United States, amounting to \$20,000. The payments credited on said notes amount to \$20,184 06, and warrants were drawn to cover the interest in favor of the Treasury of the United States. The balance due the United States, December 31, 1843, for principal and interest, was \$25,372 19. The district attorney, on the 30th April, 1856, advised the department that the debt was desperate, all the officers of the bank having passed away, and the act of the general assembly of Maryland of 1810 having absolved all those concerned therein from individual liability.

No. 7.—*Bank of Somerset, Maryland*.—On the 15th July, 1820, an agreement was entered into between the Comptroller of the Treasury, on behalf of the United States, and directors of this bank, by which the latter entered into bond to pay the principal of this debt on or before the expiration of five years. The bond not being paid at maturity, the district attorney of Maryland was instructed to institute suit against the parties. Suit was instituted, but never decided for want of the report of the accountant, and was finally stricken off the docket. The amount due by this bank, February 1, 1844, exclusive of interest, was \$62,420 36. On the 7th April, 1856, the district attorney was furnished with all the leading facts in this case, and directed to give it his personal attention, but up to this time has made no report of his proceedings.

8.—*Farmers, Mechanics and Manufacturers' Bank of Chillicothe, Ohio*.—At the time this bank stopped payment, in 1817, the receiving and disbursing agents were in possession of its notes and bills to the amount of \$23,905. Suit was instituted against the bank, and at September term, 1823, judgment was obtained for \$29,729 45 and costs, upon which executions issued, which were returned, "no goods, no lands."

On the 16th April, 1856, the district attorney was informed of all the facts in this case known to the department, and requested to give it his immediate attention, to which that officer has made no reply.

9.—*Miami Importing and Exporting Company*.—In this case, the bank claimed a greater sum than the balance against it. The suit brought was tried at June term, 1825, and the court allowed a credit of \$5,417 41, and judgement was rendered for 3,373 59. Further proceedings were suspended to enable the parties to petition Congress for relief. On the 21st April, 1856, the district attorney was written to by the department, and put in possession of all the information within its reach. No report has been received from that officer.

10.—*Farmers and Mechanics' Bank of Greencastle, Pennsylvania.*—This bank stopped payment in 1817. Judgment was obtained in 1821, against Matthew Lund, cashier, and the president, directors and company for \$595, for which an execution was issued, and returned "nulla bona." On the 25th April, 1856, the district attorney for Eastern Pennsylvania was written to concerning the debt, and requested to ascertain the liability of the defendants or their legal representatives to meet the claim of the United States, but the department is unadvised of his action in the premises.

11.—*Commercial Bank, Buffalo.*—On the 25th October, 1837, this bank failed to comply with the requisitions made upon it in conformity with the first section of the act of Congress for adjusting the remaining claims upon the late deposite banks, passed October 16, 1837. On November 13, 1837, its officers entered into bond to secure to the United States the balance then due; payments were made from time to time, until the debt was reduced to \$846 94. The department addressed a communication to the district attorney for Northern New York, setting forth the facts of the case, and requesting his attention thereto, but is without advice as to the result of his inquiries.

12.—*Farmers and Mechanics' Bank, Pittsburg.*—This claim arose from a deposite of the notes of this institution in the Bank of Columbia, as early as January 1, 1817, which were included in the special deposite transferred by the Bank of the United States. On the 29th April, 1856, the district attorney was requested to furnish a full history of this case, with a view to its settlement, but the result of his labors has not yet been communicated to the department.

13.—*Centre Bank of Pennsylvania.*—This bank stopped payment in 1823. On the 26th March, 1826, it executed a bond to the United States for \$10,901 25, and on the 20th June, 1826, paid \$1,000. It also assigned to the United States the bond of John Norris, dated August 8, 1821, for \$11,500, the payment of which was secured by mortgage on real estate, from John Norris and James Chiswell. These papers were delivered to the district attorney, where it is believed they still remain. The sum of \$4,500 has since been collected from the proceeds of a sale of Mr. Norris's property. On the 26th June, 1856, the district attorney was fully advised of all the facts in this case, and requested to report all the proceedings had therein. The department has not yet been advised of the result of his labors.

14.—*Farmers and Mechanics' Bank of Cincinnati.*—On the 8th March, 1822, the bank was indebted to the United States in the sum of \$36,966 01. Joseph S. Benham, esq., by letter dated May 12, 1831, informed the department that while he was district attorney for Ohio he recovered a judgment for a large amount against this bank, in favor of the United States, which was still unsatisfied. A large amount of the stock of this institution was at its failure transferred by the stockholders to the bank, in payment of their debts, and in this way the fund to which the creditors had a right to look for payment was absorbed. The supreme court of Ohio decided that the transfer was illegal, and that the stockholders were liable in chancery to the amount of their stock. Proceedings were commenced against the stockholders in June, 1831, but the result thereof is un-

known at this time to the department. The district attorney, on the 3d July, 1856, was furnished with all the information known to the Solicitor of the Treasury, and requested to investigate the matter thoroughly, with a view to the final disposition of the case. No answer thereto has been received.

No. 15.—*Bank of Illinois, Shawneetown.*—This bank stopped payment in 1825. In 1828 it made an assignment to the district attorney of debts due the bank to a large amount. Of the debts thus assigned, collections had been made to the amount of \$25,173 16, and there yet remained to be collected about \$2,000 of good debts, and \$16,000 of bad or doubtful, on which no calculation could be made, (*vide* district attorney's report dated April 23, 1836.) In April, 1856, the district attorney for southern Illinois was furnished with all the information concerning this case known to the department, with instructions to use his best endeavors to secure the debt, and ultimately close this case. No report has been received.

No. 16.—*Saline Bank, Virginia.*—Suit brought in this case against the stockholders of the bank, the bank itself being hopelessly insolvent, in August, 1820. In 1825 the court decided that the stockholders were not liable, and at January term, 1828, the Supreme Court confirmed the decision.

No. 17.—*Juniata Bank of Pennsylvania.*—This bank stopped payment in 1817. It has never been reported for suit.

No. 18.—*Bank of Edwardsville, Illinois.*—This bank failed in 1821. Suit was brought against it in the United States district court of Illinois, in March, 1823; and judgment was recovered at June term, 1824, for \$53,442 86. In the year 1829 an execution issued on the judgment at law against the bank, under which the banking-house and sundry lots of land were sold by the marshal for \$1,189 29, and the marshal returned "no more property found." On the 6th March, 1833, the district attorney reported that the trustees of the bank were all insolvent. In the years 1834, 1835, and 1836, the district attorney reported that the receiver was using his exertions to make collections, but with little prospect of success; that the chancery suit was still pending, but that he had little hope of making anything out of it.

No. 19.—*German Bank of Wooster.*—Judgment assigned Adamson Bentley \$3,857 72; judgment assigned Robert Bentley \$165 70.

No. 20.—*Bank of Columbia.*—Not reported for suit.

No. 21.—*Farmers and Mechanics' Bank of Indiana.*—Under an act of Congress passed July, 1832, this debt was settled by compromise, and the amount was secured to be paid in three annual instalments of \$10,561 30 each, from 15th March, 1833, without interest. The first instalment of \$10,561 30 was paid at maturity; the second instalment of \$10,561 30 was also paid at maturity; but the third instalment was not paid, and suit was brought to collect it, and the sum of \$10,692 17 was collected, leaving a small balance not accounted for, which the present district attorney is in pursuit of. The whole amount collected is \$31,814 77.

No. 22.—*Franklin Bank of Alexandria.*—Not reported for suit.

No. 23.—*Union Bank of Tennessee.*—Referred statements of pay-

ment to auditor for settlement, 22d April, 1856. Not reported for suit.

No. 24.—*Planters' Bank of Tennessee, and branches.*—Not reported for suit. Referred statement of payments to auditor for settlement 22d April, 1856.

No. 25.—*Franklin Bank of Cincinnati.*—Not reported for suit. Referred to the First Auditor for settlement (money having been paid) 22d April, 1856.

No. 26.—*Agricultural Bank of Mississippi.*—Case closed.

No. 27.—*Franklin Bank, Boston.*—Brought suit January 22, 1838, and the sum of \$4,368 75 was collected. Judgment was obtained August 2, 1839, for \$14,897 10. Execution issued, and was levied upon real estate, which was set off to the United States, by extent, for \$9,784 15, the title to which is in litigation. Nothing further collected. Bank is insolvent.

No. 28.—*Merchants' Bank, Alexandria.*—Suit ordered in 1820, but never brought, the district attorney reporting the bank as hopelessly insolvent.

No. 29.—*Parkersburg Bank.*—Suit brought in 1820. In 1825 the district attorney reported that the cause awaited the decision of the Supreme Court, the questions being the same as Saline Bank in all respects. That case was decided against the United States, and this debt was consequently lost.

No. 30.—*Urbana Bank.*—Not reported for suit.

No. 31.—*Huntingdon Bank.*—Not reported for suit.

No. 32.—*Lebanon Miami Banking Company.*—Not reported for suit.

No. 33.—*Bedford Bank.*—Case closed.

No. 34.—*Bank of Cincinnati.*—Not reported for suit.

No. 35.—*Commercial Bank of Cincinnati.*—Not reported for suit.

No. 36.—*Bank of Columbia, Georgetown.*—Not reported for suit.

No. 37.—*Commercial Bank of Lake Erie.*—Case closed.

No. 38.—*Farmers and Mechanics' Bank, Cincinnati.*—Utterly insolvent. Nothing done since date of settlement.

No. 90.

REPORT OF THE ENGINEER IN CHARGE OF THE OFFICE OF CONSTRUCTION,
UNDER THE TREASURY DEPARTMENT, SEPTEMBER 30, 1856.

OFFICE OF CONSTRUCTION,
Treasury Department, September 30, 1856.

SIR: I have the honor to report the following details of operations during the past year upon the various public buildings constructed, and in the course of construction, under the direction of the Treasury Department, the general superintendence of which has been committed to my charge.

The number of buildings, and the uses for which they were designed, for which appropriations were made during the last session of Con-

gress, or for which unexpended balances existed from former appropriations, is as follows:

Buildings.	Unexpended balances.	New appro- priations.	Total.
Custom-houses, court-houses, and post offices	19	37	56
Marine hospitals	13	7	20
Mints and branches.....	2	2	4
Territorial public buildings (capitols and penitentiaries).....	2	1	3
Extension of Treasury.....		1	1
Ventilating basement of Treasury building		1	1
Atlantic Dock stores, New York.....		1	1
Fire-proof vaults for public funds.....		67	67
Total	36	117	152

The total amount available for the prosecution of these works on the 30th September, 1855, was..... \$5,053,165 54
Amount appropriated last session..... 4,215,122 71

Available for the year 1855-6..... 9,268,288 25
Amount expended from September 30, 1855, to Sep-
tember 30, 1856 2,140,290 46

Unexpended amount applicable to these works on the
30th September, 1856..... 7,127,997 79

Of this amount there is now in the hands of disburs-
ing agents..... \$151,411 42
In the treasury..... 6,976,586 37

7,127,997 79

Contracts have been made during the past year for the following buildings, viz:

CUSTOM-HOUSES, ETC.

Ellsworth, Maine.....	\$9,200 00.
Burlington, Vermont.....	28,238 40
Bristol, Rhode Island.....	17,522 00
Alexandria, Virginia.....	*19,631 79
Petersburg, Virginia.....	49,300 50
Wheeling, Virginia.....	80,159 97
Cleveland, Ohio.....	83,500 00
Sandusky, Ohio.....	31,996 00
Toledo, Ohio.....	31,996 00
Detroit, Michigan.....	80,100 00
Chicago, Illinois.....	84,450 00
Milwaukie, Wisconsin.....	79,870 00

* Exclusive of the iron work.

MARINE HOSPITALS.

Burlington, Vermont.....	\$30,427 64
Cincinnati, Ohio, (in part,).....	49,691 27

Sites for new buildings have been purchased during the year, at the following places, viz :

CUSTOM-HOUSES, ETC.

Georgetown, D. C.....	\$5,000 00
Alexandria, Virginia.....	11,250 00
Cleveland, Ohio.....	30,000 00
Detroit, Michigan.....	24,000 00

MARINE HOSPITALS.

Wilmington, North Carolina.....	5,000 00
Mobile, Alabama, (additional lot,).....	6,000 00
Cincinnati, Ohio.....	36,000 00
Galena, Illinois.....	5,052 00

There still remain to be selected sites for public buildings at the following places, viz :

Portsmouth, New Hampshire.
 Rutland, Vermont.
 Windsor, Vermont.
 Ogdensburgh, New York.
 Plattsburgh, New York.
 New York.
 Philadelphia.
 Baltimore.
 Key West, Florida.
 Pensacola, Florida.
 Nashville, Tennessee.
 Knoxville, Tennessee.
 Springfield, Illinois.
 Galena, Illinois.
 Dubuque, Iowa.

Sites for a United States court-house, and for a post office, have been selected at Baltimore, Md., but difficulties have arisen in both cases in making a perfect title. So soon as these difficulties are removed, plans will be prepared and proposals invited for the erection of the buildings.

The only buildings not erected by contract are the custom-houses at New Orleans, Charleston, and Pensacola. In consequence of the extravagant price asked for the erection of the latter building it was deemed best to have it constructed by hired labor, except the carpenters and joiners' work. For similar reasons, the iron work of the cus-

tom-house at Alexandria and marine hospital at Cincinnati are being done by the United States, through the superintendents of the respective buildings. The completion of the repairs of the mint at Philadelphia are being done by hired labor and will soon be finished. The building may now be considered strictly fire-proof. The additional security given to the vaults renders them so near burglar-proof as to remove all apprehension of robbery, except by collusion with the guard.

During the year just passed, the works under contract have been generally prosecuted with vigor. In some few cases, where contracts have been taken at too low rates, a disposition to slight the work has been manifested, and in these cases the work has not progressed as rapidly as could have been desired. In the case of the custom-house at New Haven, Conn., owing to the slow progress of the work, it was found necessary to enforce that clause of the contract which authorizes the United States, through their agent, to take the work from the hands of the contractor and execute it at his cost.

CUSTOM-HOUSES, POST OFFICES, &c.

BATH, MAINE.

At the time of my last annual report this building was raised to the second story floor. It is now under roof, the floor arches laid, rough plastering done, sash glazed, water tanks made and set, furnace received and ready to be put up. The work which remains to be done is the plastering, flooring and tiling of the first and second stories, painting, putting up furnaces, marble mantles, grates, registers, balustrades, chimney caps, stairs, and a portion of the plumbing.

Total amount of appropriation.....	\$67,000 00
Amount expended to September 30, 1856.....	58,490 82

Balance available for the completion of the work.....	<u>8,509 18</u>
---	-----------------

The amount due the contractor at the completion of the work will be \$12,120, leaving a deficit of \$3,610 82. To this must be added \$16,000 for grading and enclosing the premises; and a further sum, which will be found under its appropriate head, for additional steps, gas fixtures, &c.

BELFAST, MAINE.

This work, during the latter part of the last year and the beginning of the present, was considerably delayed by the illness of the contractor, who is now confined in an asylum. The work has been taken in hand by his bondsmen, and will be vigorously prosecuted to completion. The iron work, brick work, plastering, windows, and exterior finish are completed; and it is expected the entire building

will be finished and ready for occupation by November next. The grading and draining are nearly done.

Total amount of appropriation.....	\$25,800 00
Amount expended to September 30, 1856.....	23,063 14

Balance available for the completion of the work.....	<u>2,736 86</u>
---	-----------------

BANGOR, MAINE.

The building designed for a post office, custom-house, and United States court rooms at this place is entirely completed, and has been for some time occupied. It is situated in the Kenduskeag river. Permanent approaches to it were constructed of stone. Congress, at its last session, appropriated the sum of \$5,300, to be used, in connexion with certain amounts to be furnished by the inhabitants of the city, in bridging the river on each side of the custom-house from the middle bridge to the lower. Nothing has yet been done on this work. As soon as notice is given that the funds to be contributed by Bangor are ready, the work will be put under contract.

ELLSWORTH, MAINE.

No great progress has been made on this work in consequence of the illness of the contractor, he being the same individual who is contractor for the Belfast custom-house. The excavations of the cellar are complete; the stones for the walls are all on hand, and nine hundred and seventy feet are laid. If the contractor continues unfit to prosecute the work, I see no other course but to take it from his hands, under the clause of the contract provided for such cases.

Total amount of appropriation.....	\$17,000 00
Amount expended to September 30, 1856.....	7,708 73

Balance available for the year ending September 30, 1857..	<u>9,291 27</u>
--	-----------------

PORTLAND, MAINE.

The work on this building has been prosecuted satisfactorily during the past year, and would have been completed by the time stipulated in the contract, October 31, A. D. 1856, but from unavoidable hindrances in receiving some of the building materials. In consequence of this delay, an extension of the time for completion is granted to the 15th day of January, 1857, at which time the building will doubtless be ready for occupancy. The work is substantially and faithfully executed.

Total amount of appropriation.....	\$349,000 00
Amount expended to September 30, 1856.....	275,269 43

Balance available for completing the work.....	<u>73,730 57</u>
--	------------------

WALDOBORO' MAINE.

This building was completed on the 27th day of December, 1855, and is now occupied. A contract was made for a wall surrounding the premises, which is also completed, and a substantial iron fence has been built upon the wall. The entire work has been executed in a satisfactory manner.

Total amount of appropriation.....	\$25,000 00
Total amount expended.....	22,867 95
Balance on hand.....	<u>2,132 05</u>

PORTSMOUTH, NEW HAMPSHIRE.

Eighty-eight thousand dollars were appropriated for the erection of a suitable building for the accommodation of the United States courts, custom-house, and post office in this city. Proposals for a suitable lot were invited, and no time will be lost in the selection of the most eligible one after the offers are received.

BURLINGTON, VERMONT.

After the contract was signed for this building, some delay occurred in commencing the work, as it was thought the amount appropriated was sufficient to build it of marble instead of bricks. The time consumed in making the estimates for the proposed change of materials necessarily threw the contractor back in his operations. In consequence of this loss of time the building will not be completed by the time stipulated in the contract, viz: December 1, A. D. 1856. An extension of two months has been granted, and it is expected that the building will be completed and ready for occupancy by the 1st day of February, 1857.

The work is well done, and the building presents a fine appearance. The grading of the lot and the erection of a permanent fence may not be entirely completed before spring.

Total amount of appropriation.....	\$44,000 00
Amount expended to 30th September, 1856.....	21,168 07
Balance available for the completion of the work.....	<u>22,831 93</u>

RUTLAND AND WINDSOR, VERMONT.

An appropriation of \$25,000, for each place, was made during the last session of Congress, for the erection of suitable buildings at Rutland and Windsor, Vermont, for the accommodation of the United States courts, and for post offices, &c. Proposals will be invited for suitable sites for these buildings, and plans prepared; but \$25,000, additional, with ten per cent. for contingences, will be required to make them of sufficient size and fire-proof.

BOSTON, MASSACHUSETTS.

An appropriation of \$15,000 was made by Congress, at its last session, for "filling up the dock between Central and Long wharves, in Boston, the widening of the street on the east front of the custom-house, and the extension and maintenance of the drains." Nothing has yet been done towards carrying this law into effect. As soon as a report is received from the agent of the department the work will be commenced.

BARNSTABLE, MASSACHUSETTS.

At the time of my last annual report but little progress had been made with the building designed for the accommodation of the post office and custom-house business at this place. During the year just closed the entire building has been completed, and when the paint and varnish shall have hardened sufficiently to render it safe to occupy the rooms, it will be turned over for the uses for which it was designed.

An appropriation of \$9,870 80 was made at the last session of Congress for fencing and grading the grounds around this building. The work was commenced without delay, and will be finished in November or December next.

Total amount of appropriation.....	\$35,370 80
Amount expended to September 30, 1856.....	25,363 40
Balance available for completing the work.....	<u>10,007 40</u>

GLOUCESTER, MASSACHUSETTS.

The building designed for a custom-house and post office at Gloucester, Massachusetts, has progressed satisfactorily during the year. The building is enclosed, partition walls all up, the ceilings furred, the outside painted, furnace set, and the entire work will probably be finished by the time called for in the contract, viz: the 1st of March, 1857.

Total amount of appropriations.....	\$51,500 00
Amount expended to 30th of September, 1856.....	30,624 83
Balance available for completing the work.....	<u>20,875 17</u>

BRISTOL, RHODE ISLAND.

An appropriation of \$13,750 was made at the session of Congress before the last for the erection of a custom-house and post office at Bristol, Rhode Island. At its last session, an additional sum of

* This building has been turned over to the collector of the customs since writing this report, December 1, 1856.

\$8,250 was appropriated for increasing the size of the building. Contracts were closed on the 20th of August, 1856, for the entire work ; operations immediately commenced ; and, from the well known energy of the contractor, will, doubtless, be well advanced before the close of the season.

Total amount of appropriation.....	\$26,400 00
Amount expended to September 30, 1856.....	4,400 00
Balance available for the current year.....	<u>22,000 00</u>

PROVIDENCE, RHODE ISLAND.

The work on the custom-house and post office at this place has progressed satisfactorily during the year. The exterior walls are completed, most of the beams and girders set, arches of floors all laid, except in half story, and brick partitions nearly completed. The roof-frame and dome are up and about half covered. The windows and shutters of the first story are in, and those of the remaining stories are being put in. Two flights of iron stairs are up. The whole work is in such a state of forwardness that it is expected to have it enclosed before the cold weather, and finish the whole during the winter.

Total amount of appropriation	*\$324,000 00
Amount expended to September 30, 1856	217,240 73
Balance available for completing the work.....	<u>106,759 27</u>

NEW HAVEN, CONNECTICUT.

The contracts for this work were sent to the contractor in October, 1855, and on the 13th of that month the work was commenced. During the remainder of October, November and December, the cellar was excavated, and the walls raised to the level of the bottoms of the windows, when the work was suspended. Operations were resumed by the contractor in April, 1856, and continued until the 1st of June, not, however, in a satisfactory manner, when they were suspended entirely. On the 26th of July notice was served on the contractor that unless the work was resumed the contract would, according to a provision to that effect, be taken from him, and the work executed by the superintendent at his cost. This did not cause a resumption of the work, and it was accordingly taken from him, and arrangements entered into to push the work vigorously during the remainder of the season. Some of the work done by the contractor, which did not come up to the standard called for by the specifications, had to be removed. The work will probably be completed this fall up to the arches of the first floor.

* \$50,000 of this amount is estimated as the probable proceeds of lot authorized to be sold.

Total amount of appropriation.....	\$122,300 00
Amount expended to September 30, 1856.....	43,867 71
Balance available for the completion of the work.....	<u>78,432 29</u>

BUFFALO, NEW YORK.

The first appropriation for the erection of a building in Buffalo for the accommodation of the business of the post office, custom-house, and United States court, was \$96,800. The work was commenced, and the walls were completed as high as the sub-base, when an additional appropriation of \$33,000 was made for enlarging the building 25 feet in length. This rendered it necessary to remove the end walls where the extension would be made. The walls of the enlarged building are now raised as high as the belt course of the second or main entrance story. The columns of the basement story have been placed, the floor arches of the main entrance story turned, and a portion of the basement partitions completed. Much delay has been occasioned in the prosecution of this work, by the difficulty of getting perfect stones for the exterior.

In consequence of the extension of the building, and of the delay in procuring suitable stones from the quarries, the building will not, probably, be completed during the current year.

Total amount of appropriation.....	\$169,800 00
Amount expended to September 30, 1856.....	87,971 31
Balance available for the completion of the work.....	<u>81,828 69</u>

OSWEGO, NEW YORK.

The contract for erecting the custom-house and post office at Oswego was awarded to E. B. Soule, September 1, 1855, and operations were at once commenced, but were not prosecuted with vigor. In consequence of the inefficient measures adopted by the contractor for pushing forward his operations, he was permitted to transfer his contract to O. B. and O. S. Latham, but so late in the year that but little was accomplished that season.

The work was resumed as early in the spring as the weather would permit, and the walls of the basement, and of a portion of the main or entrance story are up. The ashlar of this whole story is cut, together with a considerable amount of the stones above. A large quantity of brick and stone is also on hand. The work is progressing satisfactorily. Congress, at its last session, appropriated \$5,000 for fencing, grading, cisterns, and introducing gas. No portion of this has yet been expended.

Total amount of appropriation.....	\$113,800 00
Amount expended to September 30, 1856.....	43,360 52
Balance available for the completion of the work.....	<u>70,439 68</u>

OGDENSBURG, NEW YORK.

An appropriation of \$55,000 was made for a custom-house and post office at Ogdensburg, with a proviso that if the expenses of collecting the revenue exceeded the amount collected, no money should be expended under the act.

During the fiscal year ending June 30, 1856, the revenue collected amounted to.....	\$4,109 83
And for the quarter ending September 30, 1856	2,009 28
Making an aggregate of.....	6,119 11
The expenses during the same periods were.....	11,149 66
Excess of expenses over collections.....	5,030 55

It may not be improper to state that before the reciprocity treaty went into operation the revenue collected for the fiscal year ending June 30, 1855, amounted to...	\$37,064 92
The expenses of collection during the same period were	9,436 97

Leaving a surplus of.....	28,212 46
---------------------------	-----------

Under these circumstances Congress at its next session may think proper to except this building from the operation of the proviso. I would respectfully suggest that proposals be solicited, and a lot selected, conditioned upon such action on the part of Congress. In this way several months would be saved if Congress should authorize the work to go on.

NEWARK, NEW JERSEY.

But little progress was made, after my last annual report, during that year upon the building at Newark designed for a custom-house and post office. Operations were resumed in March of this year and have progressed rapidly. The basement, entrance, and third story walls are up, the window frames of the third story are in their places, and a portion of the ashlar of this story is up. There is now every reason to believe that the building will be enclosed this fall, and the post office ready for occupancy by April next. The building presents a beautiful appearance.

Total amount of appropriations.....	\$146,800 00
Amount expended to 30th September, 1856.....	91,201 63
Balance available for the completion of the work.....	55,598 37

WILMINGTON, DELAWARE.

The building designed for a post office and custom-house at this place is completed. To render it secure against depredations, such as

were recently committed, the lower windows should have iron bars. There should also be inside blinds provided to exclude the sun. An estimate for the amount required will accompany this report.

BALTIMORE, MARYLAND.

An appropriation of \$300,000 was made by Congress, at its late session, to purchase a site and erect a building in this city for a post office. For reasons already given, the site has not yet been purchased. No delay will occur in commencing the work after the title to the site is perfected.

Under the appropriation of \$200,000 made by Congress for the purpose, a site has been selected in Baltimore for a building intended for the use of the United States courts. The title is not yet certified by the Attorney General. The work will proceed as soon as the title is ascertained to be valid.

GEORGETOWN, DISTRICT OF COLUMBIA.

The amount of \$50,000 was appropriated by Congress, at its recent session, for the erection of a building for a custom-house and post office in Georgetown. A site has been purchased, plans completed, and contracts will be awarded on the 22d day of November, 1856, for the erection of the building, unless the appropriation should prove too small.

ALEXANDRIA, VIRGINIA.

A site has been purchased and contracts made (except for the iron work) for the erection of a suitable building for a custom-house and post office at Alexandria. The excavations have been commenced, materials are being collected, and the work will advance rapidly until suspended on account of the cold weather.

Total amount of appropriation.....	\$68,000 00
Amount expended to September 30, 1856.....	13,000 00
Balance available for the completion of the work.....	<u>55,000 00</u>

NORFOLK, VIRGINIA.

The building at Norfolk designed to be used as a custom-house and post office has progressed very slowly during the year, from various causes, but mainly from the delay in the execution of the stone work. This is now nearly completed, and it is hoped the remaining portions of the building will be rapidly carried forward. The workmanship of the building is substantially done, the material of good quality, and looks well.

Total amount of appropriation.....	\$197,652 53
Amount expended to September 30, 1856.....	119,528 75
Balance available for the completion of the work.....	<u>78,123 78</u>

PETERSBURG, VIRGINIA.

The contractor commenced operations on the 3d of May, and proceeded satisfactorily with the excavations and cellar walls, which were finished in June. During this month some granite was received and stonecutters were employed, and the cellar piers and partitions finished. Nearly all of the two base courses of ashlar are laid, and the door and window jambs have been cut. Considerable delay has occurred in procuring a sufficient quantity of granite. The material and workmanship of the granite work is good.

Total amount of appropriation.....	\$83,200 00
Amount expended to September 30, 1856.....	24,724 08
Balance available for the completion of the work:.....	<u>58,475 92</u>

RICHMOND, VIRGINIA.

The work on the building at Richmond, Virginia, designed for the accommodation of the business of the custom-house, post office, and United States courts, was commenced on the 30th of September, 1855, and the operations have been pushed vigorously since that time. The extreme severity of the past winter, and the difficulty of procuring a sufficient supply of granite during the cold weather, prevented the contractors from making as great progress as they otherwise would have done. The stone work of the cellar, first and second stories, and part of the third story, with unimportant exceptions, are completed. A large number of stones are cut for the completion of the third story, such as window-jambs, window-trusses, keystones, plinth-course, rusticated and plain ashlar, brackets, panels for roof-cornice, architrave, and dental course. The brick work has been kept up with the ashlar. The beams and girders of the first, second, and third stories are set and levelled, and the lower story arches turned. All the window-frames of the first and second stories are set, and part of those for the third story are on hand. The water and hot-air tubes are built in the walls.

The building will probably be finished by the time specified in the contract, and will be a substantial structure and an ornament to the city. The beauty of the building is, however, somewhat marred by the neglect of the superintendent to require that style of finish in the stone-cutting called for by the contract and by his instructions; and also by the introduction of stones, portions of which were discolored by spots containing an undue amount of mica; thus destroying the uniformity, in this particular, which should have been carefully preserved.

Total amount of appropriations.....	\$250,000 00
Amount expended to September 30, 1856.....	152,070 56
Balance available for completion of the work:.....	<u>97,929 44</u>

WHEELING, VIRGINIA.

The work on the building designed for the uses of the custom-house and post office at Wheeling, Virginia, was commenced on the 21st day of August, and has progressed without interruption until this time. The excavations for the cellar, and foundations of the cellar walls are complete. The cellar walls and area walls are raised to a level one foot above the window-sills. The beams and girders are partly finished and will be sent forward to the building as fast as they are wanted. The columns for the basement are partly cast, and the patterns for the remaining cast iron are in hand.

Total amount of appropriation.....	\$117,300 00
Amount expended to 30th September, 1856.....	32,182 93
Balance available for the completion of the work.....	<u>85,117 07</u>

CHARLESTON, SOUTH CAROLINA.

The new custom-house in this city has not advanced as rapidly as could have been desired the past year. The superintendent attributes this to the delay in receiving the granite and marble as rapidly as it is required. The contractors for these materials are making every effort to increase their deliveries; but so much of the marble quarried for this building is condemned as below the standard quality required, that it is almost impossible to add much to the monthly delivery. I have several times visited the different quarries from which the marble is procured, and am satisfied that the contractors are doing all they can to supply this material as fast as it is wanted. As the building advances, the marble in the upper part, being farther removed from the eye of the observer, small blemishes such as drys, sand holes, &c., which do not affect the strength or durability of the stone, will not be observed, and a much larger proportion of the material quarried can be used, and it is expected there will hereafter be little or no delay from this cause.

The basement walls are completed to the belt course, inclusive. On the north face, five sills and their trusses, two lintels, four window-jambs, and five bases of columns of the main story are set. The interior columns of the basement are also set. On the south front there are ten sills with their trusses, nine lintels, eighteen window-jambs, twelve bases of columns set, and four columns raised to the height of the tops of the windows.

On the west front, four sills, four lintels, two window jambs, and four bases of columns are set. On the east front, eight sills, with their trusses, four lintels, eight window-jambs, and nine bases of columns are set. The steps on this front are completed, and four moulded and paneled pedestals are finished and set.

The workmanship on the granite and marble is executed in a very superior manner, and the building will present, when completed, a very imposing appearance.

The superintendent contemplates finishing, during the year ending September 30, 1857, the exterior walls to the bottom of the exterior cornice, the portico, and the groining of the brick arches for the principal story floor. The interior brick work will be built, the marble door and window trimmings set, and the floor of the third story laid.

Total amount of appropriation.....	\$1,303,000 00
Amount expended to September 30, 1856	799,001 50

Balance now available for the current year	503,998 50
--	------------

Amount required for the year ending June 30, 1858, \$400,000.

MOBILE, ALABAMA.

During the last year the superintendent reports the following work as completed: The basement story walls from the top of the window caps, the whole of the second story walls, and two courses of ashlar of the third story. The wrought-iron beams and girders of the main story are laid and the arches turned. The columns and antæ of the main story, the wrought-iron girders, and most of the beams of the third story floors, are in place, and will be ready to receive their arches by the middle of October. The post office walls of the basement story have been built, and the iron sliding shutters of the delivery windows hung.

The partition walls of the second story are nearly complete. The supply of cut granite during the year has been prompt and in sufficient quantities. Some delay has occurred in the receipt of cast-iron columns and antæ. The contractors promise to complete the masonry of the building by the first of February next.

Total amount of appropriation.....	\$360,000 00
Expended to September 30, 1856.....	206,344 00

Balance available for the completion of the work.....	153,656 00
---	------------

PENSACOLA, FLORIDA.

Proposals were solicited for erecting the building in Pensacola designed for a custom-house, post office, and United States courts, previous to the last session of Congress, and bids were received, none of which came within the appropriation. An additional sum was asked and granted by Congress. Orders have since gone forward for the collection of materials, and a commencement of the work will shortly take place. The bids received were generally extravagantly high, and only a portion of the work (the carpenters and joiners') will be done by contract.

Total amount of appropriation	\$38,500 00
Amount expended to September 30, 1856	297 63

Balance available for the completion of the work	38,202 37
--	-----------

KEY WEST, FLORIDA.

The sum of eight thousand dollars was appropriated by Congress for the erection of a building at Key West for the accommodation of the district court of the United States for the southern district of Florida. This sum is found to be entirely inadequate for the purpose, and, in compliance with the requirements of the law, the subject is referred back to Congress. An estimate will be submitted of the amount necessary for erecting a suitable building for the purpose designed, to which must be added whatever amount may be necessary for the purchase of a site.

NEW ORLEANS, LOUISIANA.

In my last annual report I referred to the delay in the progress of the work upon the custom-house at New Orleans, growing out of the inadequate supply of marble. The difficulties with the contractors for this material were adjusted in December last, and the supply has since been kept up with the necessities of the work. Some delay has been caused by the non-arrival of iron beams, while the manufacturing of them was temporarily hindered, and the granite work has only been conducted in reference to the interior work. The brick work, in anticipation of floors, is all prepared with the necessary flues, iron ties, &c.

An important era in the history of this lingering work has marked the operations of the past year, in the throwing open to the immediate use of all the officers of the revenue handsome and well finished apartments, covering an area of 39,752 superficial feet of offices and storage. Many of these rooms have been occupied for several months by the appraiser's department, and the whole were turned over to the revenue service on the 5th of August. The steamboat inspectors will be accommodated with rooms in the building by the 25th of the coming month. The actual business of the port is now conducted within the building, to greater advantage than heretofore, and at a much earlier date than had been anticipated.

The subsidence of the walls, referred to in my last report, has continued through the year, but in a diminishing ratio with the present weight of walls which have been but little added to during the past year.

The total maximum settlement since December 6, 1851, is	16.99 inches
The minimum.....	9.88
The mean.....	13.44

The maximum difference in the last year, is.....	3.36
The minimum	0.85
The mean.....	2.10

The greatest settlement in the ten months previous to the last report was four and three-fifths inches, showing a diminishing ratio, which may be indicative of a final resting-place hereafter for the foundations.

Total amount of appropriations.....	\$2,375,258 00
Amount expended to September 30, 1856.....	1,855,795 22
Balance now available	<u>519,462 78</u>
Amount required for the year ending June 30, 1858, \$300,000.	

GALVESTON, TEXAS.

Plans for the building to be erected at Galveston, Texas, for a custom-house and post office, were prepared as early as the duties of this office would permit, and proposals were invited for doing the work. Upon opening the bids submitted, it was discovered that the lowest responsible one was informal; and as this was about *nine thousand dollars* less in amount than the next lowest bid, it was deemed proper, under the authority reserved in the advertisement, to reject the whole, and again advertise for proposals. This has been done, and the time required by law for the advertisement to be open will expire on the 30th of October. It is presumed that this second bidding will result in getting satisfactory proposals, and, if so, the contract will be at once awarded and the work commenced.

Total amount of appropriation.....	\$116,300 00
Amount expended to September 30, 1856.....	11,982 06
Balance available for the completion of the work.....	<u>104,317 94</u>

ST. LOUIS, MISSOURI.

The exterior walls of the building intended for a custom-house at St. Louis are completed to the tops of the belting course of the main story over the basement story. On the west front most of the columns are raised some four or five feet above the tops of the windows of the second story, and all the bases are placed, as well as the sills and jambs of the windows. On the north front the bases of all the columns are laid, and two of the columns raised four or five feet above the window tops of the second story. The sills and jambs of three windows are set. On the east front the bases of all the columns are set, and one of the columns raised five or six feet above the window tops. All the window sills and jambs on this front are set. On the south front, all the bases of columns are set, and one column raised about five feet above the window tops. The sills and window jambs of this story are all set.

All the brick work of the exterior walls of the basement is finished, and a portion of the partitions. The segmental arches for the floor of the main story are turned, and the vault is completed. All the columns, girders, and beams supporting the second story, are up.

The following stone work is cut and ready to put up, viz: 12 column capitals, 7 column shafts, 11 column bases, 221 modillions, 7 antæ bases, 210 feet of balustrade, and 30 pediment window caps.

Total amount of appropriation.....	\$353,300 00
Amount expended to September 30, 1856.....	248,982 06
Balance available for the completion of the work.....	<u>104,317 94</u>

LOUISVILLE, KENTUCKY.

The rubble stone work of the Louisville custom-house is nearly completed, and at the proper time can be finished in a few days. The cut stone work is finished except a few brackets and some of the cornice which will be soon completed. The iron work has kept even pace with the other work. The carpenters' work has advanced as rapidly as possible without interfering with other parts of the work. The failure of the first contractor for this part of the work caused some delay.

The brick work has been kept well up with the stone work, and will probably be completed this fall. The frame of the roof is nearly ready for the tinner, and the tin will probably be gotten on this season. The painting, glazing, plumbing and plastering are not yet commenced, but will be prosecuted with vigor so soon as the brick and stone masons, the carpenters and iron workers are out of the way. The superintendent reports that the unexpended balance of appropriation will not complete the building, and that an additional sum of \$40,000 will be required.

Total amount of appropriation.....	\$218,745 00
Amount expended to the 30th September, 1856.....	169,467 77
Balance available for the completion of the work.....	<u>49,277 23</u>

NASHVILLE, TENNESSEE.

Proposals have been invited, offers received, and a site selected for the building designed for the accommodation of the custom-house, post-office, United States courts, and steamboat inspectors at Nashville, Tennessee. So soon as the legislature shall cede jurisdiction and exempt the lot from taxation, the purchase will be completed and the building be erected. Pending the action of the legislature, plans will be prepared, and contracts awarded contingent upon the favorable action of the legislature.

KNOXVILLE, TENNESSEE.

Proposals were invited at the same time and in the same manner as at Nashville, for a site for the accommodation of a custom-house, post-office, and United States courts, at Knoxville, but the commissioners have not yet reported. As soon as their report is received, the same steps will be taken in this as in the case of Nashville.

CLEVELAND, OHIO.

Since my last annual report, a suitable site has been selected for the custom-house, post office, and United States court-rooms, at Cleveland, and contracts for the erection of the entire building have been given out. The work was commenced late in August. The cellar has been excavated, the foundations commenced, and will be pushed vigorously until the cold weather puts a stop to this part of the work. A large supply of stone for the building is being delivered this fall, and will be cut during the winter. The contractor will thus be prepared to run the building up rapidly in the spring.

Total amount of appropriation.....	\$159,800 00
Amount expended to September 30, 1856.....	34,820 57
Balance available for the completion of the work.....	<u>124,979 43</u>

CINCINNATI, OHIO.

The building designed for a post office, custom-house, and United States courts, at Cincinnati, has advanced as rapidly as possible, and is now completed except the final finish of the interior. With the exception of some alterations for the convenience of the post office, the work was done within the time specified in the contract. The collector now occupies the rooms assigned as his offices, and the vault is finished. The rooms designed for the United States court and its officers will be ready by the 21st of October.

An additional appropriation of \$35,000 was made by Congress at its last session, for erecting a general delivery of the post office. If this appropriation had been available at an earlier period, this addition would have been completed at the same time as the main building. As it is, no serious delay will occur in finishing it.

The amount appropriated is ample for the completion of the whole work. The workmanship is excellent, and the material of this building is beautiful but I fear that it is not of the most durable character. Altogether the appearance of the building is very striking.

Total amount of appropriation.....	\$312,000 00
Amount expended to September 30, 1856.....	250,529 38
Balance available for the completion of the work.....	<u>61,470 62</u>

SANDUSKY, OHIO.

The walls of the building intended for the accommodation of the custom-house and post office at Sandusky are raised to the middle of the second story, and the stones for the remainder of this story are cut. The stones for the cornice are quarried, and if the work is not delayed

for the beams and girders, it is hoped that the contractor will get the roof on this fall. But for the addition of a third story the building would undoubtedly have been enclosed this season. The workmanship and materials are good.

Total amount of appropriation.....	\$76,450 00
Amount expended to September 30, 1856.....	27,943 82
Balance available for the completion of the work.....	<u>48,506 18</u>

TOLEDO, OHIO.

The walls of the building designed for a custom-house and post office in this city are raised as high as the top of the first story, and are advancing in a satisfactory manner. The beams and girders of the second story floor are laid and most of the floor arches turned. It is expected that the second story will be completed, and the arches of the third story floor finished and secured against the frost, before the season closes.

Total amount of appropriation.....	\$77,450 00
Amount expended to September 30, 1856.....	27,631 74
Balance available for the completion of the work.....	<u>49,818 26</u>

DETROIT, MICHIGAN.

Contracts have been made for the erection of the entire building for the accommodation of the United States court, post office and custom-house in this city. The contractor will probably get the cellar excavated, and a portion, if not all, of the cellar walls erected this season. He will also collect stone for the ashlar, and cut it during the winter, and collect such other materials for the building as can be procured this season, so that operations may commence vigorously with the opening of the spring.

Total amount of appropriation.....	\$153,800 00
Amount expended to September 30, 1856.....	33,487 84
Balance available for the completion of the work.....	<u>120,312 16</u>

CHICAGO, ILLINOIS.

Contracts for the erection of a building in Chicago for the accommodation of the United States courts, post office and custom-house, were given out last year, but the commencement was deferred to await the action of Congress on the subject of a necessary enlargement of the space required for the post office. The foundations have now been commenced, and are being pushed forward with energy. The beams and girders have arrived, and preparations have been made for the

cutting of the ashlar of the building during the winter. Materials will be collected this fall for beginning the superstructure as soon as the weather will permit in the spring.

Since my last annual report a donation has been made of 15 feet additional space on Munroe street, running back the same distance as the lot purchased, making the dimensions of the site 135 by 140 feet, which is ample, and in all respects eligible for the enlarged building.

Total amount of appropriation.....	\$194,400 00
Amount expended to September 30, 1856.....	39,636 05

Balance available for completing the work.....	<u>154,763 95</u>
--	-------------------

GALENA, ILLINOIS.

Proposals have been received for several lots in Galena, as a site for the building intended for a custom-house and post office. No selection, however, has yet been made. When this point is settled, the purchase will be made, conditioned upon the action of the legislature in ceding jurisdiction and exempting the property from taxation. Proposals will also be invited, and contracts awarded, under like conditions, for erecting the building.

Total amount of appropriation.....	\$55,000 00
------------------------------------	-------------

INDIANAPOLIS, INDIANA.

An appropriation was made by Congress for erecting a building at Indianapolis for the accommodation of the post office and United States courts, and a site was selected and purchased, conditioned upon the legislature of the State ceding jurisdiction and exempting the lot from taxation. The sessions of the legislature in this State are biennial, and the first one convening since the appropriation will not be until next January. Measures have been taken to bring the subject before them early during the session. No time will be lost in taking the necessary steps for the prosecution of the work, after the favorable action of the legislature. The amount stipulated to be paid for the site is \$17,000, leaving available for erecting the building \$33,000, which is manifestly too small. There will be required, in addition to the sum in hand, a further appropriation of \$45,000, and ten per cent. for contingencies.

Total amount of appropriation.....	\$50,000 00
------------------------------------	-------------

DUBUQUE, IOWA.

Proposals for a suitable lot for the site of a post office and custom-house at Dubuque have been invited, but the offers are not yet received. So soon as a site is selected, plans of the building will be prepared, proposals received, and contracts awarded, conditioned upon the required legislative action, that no time may be lost in commencing the work as soon after the legislature convenes as is practicable.

Total amount of appropriation.....	\$88,000 00
------------------------------------	-------------

MILWAUKIE, WISCONSIN.

The contractor broke ground for the building designed as a custom-house, post office, and United States court room at Milwaukie during the month of August. The west and north walls of the basement were completed, and the east and south walls were raised to the springing line of the window arches and completed in September. The columns, girders and beams to sustain the floor of the entrance story were placed, the sub-base course set, and backed up with bricks. The work will be prosecuted with vigor until the season closes. During the winter a large amount of stone will be cut, and operations resumed as early in the spring as the weather will permit.

Total amount of appropriations.....	\$142,000 00
Amount expended to September 30, 1856.....	57,183 52
Balance available for the completion of the work.....	<u>84,816 48</u>

ASTORIA, OREGON TERRITORY.

Nothing has been done toward the erection of a building at Astoria for a custom-house and post office beyond the selection of a site.

SAN FRANCISCO, CALIFORNIA.

Since my last annual report the custom-house at San Francisco has been completed.

Annual repairs of custom-houses.

An appropriation of \$30,000 was made by Congress, at its last session, for annual repairs of custom-houses. This fund will be applied, from time to time, as it may be needed, to effect such repairs and alterations as are too inconsiderable in extent to warrant a special appropriation, and such as could not be anticipated in time to provide means in any other way. A like sum will be required for the next year.

MARINE HOSPITALS.

PORTLAND, MAINE..

At the date of this report, September 30, 1856, the marine hospital at Portland, Maine, was reported as almost completed. Since then, notice has been given of its completion, accompanied by a detailed estimate of the amount required to grade and fence the lot, to provide certain necessary fixtures for kitchen, well, stable, and pest-house, amounting in all to the sum of \$15,000.

This building is well constructed, and occupying, as it does, a commanding site, presents a fine appearance.

Total amount of appropriation.....	\$80,000 00
Amount expended to September 30, 1856.....	60,629 08
Balance available for completing the work.....	<u>19,370 92</u>

BURLINGTON, VERMONT.

The work on the building designed for a marine hospital at Burlington, Vt., was commenced on the 28th of July last. The excavation of the main drain, 320 feet in length, much of it in rock, and of the cellar, was mostly completed in August. The foundations of the cellar walls were commenced on the 9th of September, and twenty cubic yards of concrete, with ninety-five cubic yards of stone masonry, were laid during the month. It is expected to get the area wall and the cellar wall finished during the month of October. A large amount of stone, bricks, and other material are on hand, and the work is generally progressing in a satisfactory manner.

Total amount of appropriation.....	\$40,200 00
Amount expended to September 30, 1856.....	4,047 52
Balance available for the completion of the work.....	<u>36,152 48</u>

CHELSEA, MASSACHUSETTS.

At the date of my last annual report, operations had just been commenced on the building designed for a marine hospital at Chelsea, Mass. During the remainder of that season, while the weather permitted, the excavations for the cellar and foundation trenches were completed, most of the cellar walls built, and some material delivered. The delivery of materials continued through the winter, and such carpentry was done as could be in advance of the masonry. In the spring operations were resumed, and have continued uninterruptedly, generally, and in a satisfactory manner. The walls of the building are now up to the required height, the arches nearly all turned, the verandahs being put up, the building covering and inside work progressing. The contractors expect to complete the building within the time specified in their contract, viz: 3d of March, 1857.

The grounds around the hospital are mostly graded, and the material removed used to fill up a large wharf in front of the old marine hospital. The wall enclosing this wharf is nearly completed, and would furnish a good location for a large bonded warehouse. The site for this work, ceded by the Navy Department, was ten acres, but I respectfully suggest that twenty acres is not too much for hospital uses.

Total amount appropriated.....	\$150,000 00
Amount expended to September 30, 1856.....	109,241 69
Balance available for the completion of the work.....	<u>40,758 31</u>

WILMINGTON, NORTH CAROLINA.

A site for a marine hospital at Wilmington has been selected, subject to the condition that the legislature cede jurisdiction and exempt the lot from taxation. When these conditions are complied with the purchase will be consummated, and, in the mean time, plans will be prepared and conditional contracts made for the erection of the building.

Total amount of appropriation.....	\$44,000 00
Amount expended to September 30, 1856.....	46 71
Balance available.....	<u>43,953 29</u>

MOBILE, ALABAMA.

An additional quantity of land adjoining the Mobile marine hospital has been purchased, Congress having appropriated \$6,000 for that purpose. An estimate of the amount required to enclose, grade, and drain this purchase will accompany this report.

ST. MARK'S, FLORIDA.

The amount appropriated by Congress at its last session, in addition to the former appropriation, is sufficient to build the marine hospital at this place. The site has been selected, and plans of the enlarged building will be prepared, and the work contracted for without delay.

Total amount of appropriations.....	\$22,000 00
Amount expended to September 30, 1856	141 64
Balance available.....	<u>21,858 36</u>

PENSACOLA, FLORIDA.

No site has yet been procured for the marine hospital at Pensacola, property holders of such sites as are deemed eligible holding the land at exorbitant prices. I see no means of carrying out the intention of Congress in this case, unless it be thought proper to select a portion of land at the Barrancas, now in the occupancy of the Navy and War Departments, to be used for a hospital and barracks. The tract is sufficiently large, and is elegibly situated for this purpose, and would have the advantage of the constant presence of naval and army surgeons, and competent nurses, who could attend both establishments at a very small increased expense to the government. Its only inconvenience is its distance from the city, being between eight and nine miles from the wharf. Vessels entering or leaving the harbor pass directly in front of the proposed site.

Total amount of appropriation.....	\$25,000 00
Amount expended to September 30, 1856	181 76
Balance available.....	<u>24,818 24</u>

NEW ORLEANS, LOUISIANA.

After the purchase of a site for the New Orleans marine hospital, plans were prepared and proposals invited for a building, either of bricks or iron. Bids were duly received and it proved that there was no formal bid offered that came within the amount appropriated. The matter was, in compliance with the law, reported back to Congress, with an estimate of the amount required. An additional appropriation was made of \$151,659 20, which will be ample to complete the building.

Proposals were again invited for bids for the entire building, to be either of bricks or iron. They will be opened on the 26th day of November next, and the work commenced as soon as practicable. Contracts have, in the mean time, been made for the foundation which, is progressing rapidly.

	<hr/>
Balance available for the completion of the work.....	<u>16,290 80</u>

CINCINNATI, OHIO.

A lot has been selected and purchased as a site for the marine hospital at Cincinnati, Ohio, and contracts awarded for all the construction, except a portion of the iron work and some minor matters. The contractors have just commenced work and will probably have the foundations well advanced this fall.

Total amount of appropriation.....	\$136,000 00
Amount expended to September 30, 1856.....	43,785 99
	<hr/>
Balance available for the completion of the work.....	<u>92,214 01</u>

EVANSVILLE, INDIANA.

Owing to the death of the contractor, and to low water in the Ohio river, by which the stones for this building are received, the work has suffered considerable delay. No report having been received from the superintendent for the past month, the exact condition of the building is not known, but it is believed to be nearly or quite finished.*

The building is not enclosed, and still lacks several necessary appendages, not called for in the contract, such as cisterns, stable, and carriage-house. An estimate of the amount required to fence and grade the lot, and for all necessary fixtures, accompanies this report.

Total amount of appropriation.....	\$47,000 00
Amount expended to September 30, 1856.....	33,482 13

Balance available to complete the work.....	<u>13,517 87</u>
---	------------------

DETROIT, MICHIGAN.

At the date of my last annual report but little had been done on the marine hospital at Detroit. At the close of that season the basement walls were raised, and the top of the water-table, caps of basement windows and window frames, small area windows and coping, all set. A portion of the drain was finished and filled over. During this season the building has been raised to the floor of the third story, and the beams of all the stories are set.

At the time of my last visit to this building in June, I found the materials and workmanship very inferior; so much so, indeed, that I felt it my duty to condemn some of it, and to recommend that commissioners should be appointed to examine it, and to state whether, in their judgment, it should be condemned and taken down. Before the commission assembled, the contractors had raised the walls to a considerable height above the point at which they stood when I inspected the work. The work done subsequently to my inspection was doubtless a great improvement upon what had been previously done, and, unfortunately, the commissioners did not tear down to the work in question; and while they agreed upon the imperfections of the construction, they did not deem it necessary to advise that the whole should be taken down. I have no fears that the building will fall down, but it is not built in conformity with the specifications.

The delay caused by the suspension of the work during the assembling and examination of the commissioners will prevent the contractor from completing his contract by the 31st of December next. The utmost that will probably be done this fall is to get the building under cover, and the arches turned and concreted. It will then be ready by the spring for plastering.

* Since writing this report the superintendent's return has been received, notifying the department of the completion of the building.

Total amount of appropriations.....	\$105,500 00
Amount expended to September 30, 1856.....	45,937 64
Balance available for the completion of the work.....	<u>59,562 36</u>

ST. LOUIS, MISSOURI.

The St. Louis marine hospital is completed. An appropriation for grading and fencing the lot was made at the last session of Congress, and preparations have been made for its application to these objects.

The marine hospitals at *Natchez, Mississippi; Vicksburg, Mississippi; Napoleon, Arkansas; Louisville, Kentucky; Paducah, Kentucky; Cleveland, Ohio; Chicago, Illinois; and San Francisco, California*, are completed. Some little work yet remains to be done in fixtures, grading, and fencing, at *Natchez, Paducah, and Vicksburg*, which will be finished this season.

MISCELLANEOUS WORKS.

UNITED STATES MINT AT PHILADELPHIA.

The appropriation for giving additional security to the United States Mint, and for rendering it fire-proof, was ample for accomplishing that object; but in taking out the floors to insert iron and bricks instead of wood, the machinery had to be removed, and much of it proved to be so far worn out that it was thought expedient to replace it at once. An appropriation was made of \$21,000 for that purpose, and the repairs have been resumed and are nearly completed.

BRANCH MINT, NEW ORLEANS.

The repairs and alterations at the New Orleans branch mint have been prosecuted with vigor, and with no other interruption than some delay in procuring the iron beams for making the floor fire-proof. One shipment had been received at the date of the last report, and bills of lading of two others; and it is hoped that no further delay will arise on this account, and that the whole work will be completed by spring.

BRANCH MINT, CHARLOTTE, NORTH CAROLINA.

Since my last report, some repairs have been required at the Charlotte, North Carolina, branch mint, the most important of which was the substitution of an iron roof for a shingle one; this has been completed, and the small balance unexpended will be applied to some minor matters, such as painting, &c. It is probable a new and more substantial fence will have to be erected to enclose the ground of the mint, the old one having been built over twenty years, and much decayed, so that it does not protect them from encroachments. The superintendent will be instructed to invite estimates for this, and submit them to the department for approval.

NEW YORK ASSAY OFFICE.

Nothing of importance has been done to this building during the year just ended. An expenditure of between eleven and twelve hundred dollars was rendered necessary by the erection of a new bank by the side of the assay office, the builders of which sunk its walls a story below that of the assay building.

BOARDING STATION, PASS À L'OUTRE.

An appropriation of \$12,000 was made for the erection of a boarding station at Pass à l'Outre, Louisiana. Plans have been prepared, and proposals for erecting the building invited. So soon as the contract is closed the work will proceed, and it is hoped the building will be completed next summer.

APPRAISER'S STORES, SAN FRANCISCO.

The building intended for an appraiser's stores at San Francisco, California, is completed, and turned over to its proper occupants.

PUBLIC BUILDINGS, SANTA FE, NEW MEXICO.

The public buildings at New Mexico have progressed satisfactorily, but as no special report of its condition has as yet been received, its exact state of advancement cannot be given. The superintendent estimates that the sum of \$45,000 will be required to complete the State house.

Total amount of appropriation..... \$70,000 00

VAULTS FOR PUBLIC FUNDS.

An appropriation of \$66,000 was made by Congress at its last session for increasing the security of the vaults for public deposits. These will be commenced without delay.

TREASURY EXTENSION.

At the date of my last annual report the excavations for the cellar and foundation of the building were nearly completed. The season was so far advanced that great difficulties were encountered in procuring a sufficient supply of granite and other materials coming from abroad. These difficulties were enhanced by the early closing of the river from which the granite was derived, and of the Potomac, through which most of the materials were received. All the necessary machinery had to be prepared, which also caused delay. During the year ending September 30, 1856, the cellar and area walls were completed, the arches turned for the floor of the basement, and the ashlar of the basement completed to the belt course, inclusive, except a small space left out for introducing some heavy columns. The brick backing to the basement walls is completed to the height for receiving the iron beams,

and the brick partitions are raised to the same level. A large supply of cut granite for the work on the upper stories is on hand, and sufficient brick, cement, and sand, for the remainder of the season, and for two or three months of the spring.

A commencement will be made this season on the garden front of the new building, and if the weather is favorable a large portion of the excavations will be completed, while a portion of the concrete and stone work of the area walls will be laid.

The designs for this building, as authorized by Congress, were contained upon two sheets of drawings, consisting of a general plan of the entrance story, and three elevations upon one sheet, with a perspective view from the southwest upon the other. They contained few or no details and but few admeasurements, while the elevations and perspective view were at variance with each other in several particulars, so that in the execution of the work very much was left to the judgment of the superintendent, who, throughout, having only in view the perfection of the building when complete, endeavored to confine himself as far as possible to what he supposed was the intention of Congress in all essential particulars, and in no case has he made any change not fully warranted by the exigency of the case.

The design seemed to have in view the same columnar ornamentation upon the outside that existed in the old building, except upon the court-yard side, which by the plan showed a different order of arrangement. This seemed to fully warrant any deviation from the details of the building that utility, good taste, or necessity required. At the last session of Congress my action was called in question by one of its committees, and not wishing to do anything to conflict with the wishes of Congress, I would respectfully ask to have designated how far the superintendent is warranted in deviating from any of the details of the old building.

On the court-yard side it is very desirable that the upper windows should be much higher than in the old part, which can be done by dispensing with the architrave and part of the frieze of the entablature on three sides, and carry the windows up into the ashlar that will take their place. To this there can be no objection, inasmuch as the antæ ordonnance is done away with in the court-yard walls.

NEW APPROPRIATIONS.

The following additional appropriations will be required for the operations of the current year:

For enclosing, grading and draining the lot of land recently purchased to enlarge the site of the marine hospital at Mobile, Alabama.....	\$5,400 00
For iron shutters and bars for the windows of the custom-house at Wilmington, Delaware.....	1,000 00

For fencing and grading the site of the marine hospital at Vicksburg, Mississippi, and for supplying the range, hot-water apparatus, &c.....	\$6,500 00
For fencing and grading the ground of the marine hospital at Portland, Maine, and for introducing water, erecting stables, removing and repairing old buildings for pest-house, putting in kitchen range, &c.....	15,000 00
For amount due the contractors on the construction of the marine hospital at Vicksburg, Mississippi.....	762 58
For the amount required in addition to the appropriation already made to erect a suitable building for the United States courts at Key West, Florida.....	30,000 00
10 per cent. on same for contingencies	3,000 00
Sum necessary to purchase a site.....	
For amount necessary to complete the custom-house at Bath, Maine.....	5,500 00
For amount necessary to complete the custom-house at Louisville, Kentucky.....	40,000 00
For fencing and grading the site of the custom-house at Bath, Maine.....	16,000 00
For completing the State-house at Santa Fé, New Mexico	45,000 00
For fencing and grading the site of the marine hospital at Evansville, Indiana, and for erecting stable, supplying water, and other fixtures for the same.....	5,500 00
For constructing the court-house and post office at Indianapolis, Indiana, in addition to the sum already appropriated.....	45,000 00
For contingencies on the same 10 per cent.	
For continuation of the custom-house at New Orleans, Louisiana.....	300,000 00
For continuation of the custom-house at Charleston, South Carolina	400,000 00
For continuation of the Treasury extension.....	500,000 00
For annual repairs of marine hospitals	25,000 00
For annual repairs of custom-houses.....	30,000 00

A comparison of my annual reports for the years ending September 30, 1854, '55, and '56, shows the following increase of business in this office:

The number of public buildings under its charge—

On the 30th September, 1854, was 41.

On the 30th September, 1855, was 68—an increase of 27, or 66 per cent.

On the 30th September, 1856, was 90—an increase of 49, or 120 per cent.

This aggregate of 1856 is exclusive of 66 vaults as depositories for public funds. Including these, the number of separate works is 156, an increase of 380 per cent.

The amount of available funds on hand—

On the 30th of September, 1854, was... \$3,135,744 65

Do.....do.....1855...do.... 5,053,165 54

Do.....do.....1856...do.... 7,127,997 77

Increase of 1855 over 1854..... 1,917,420 89 or 62 per cent.

Do.....1856..do..1854..... 3,992,253 12 or 127 per cent.

The number of pages of letters sent from this office during the two months while the annual report was in preparation, in the year 1854, was..... 380
 During the same period this year..... 641
 Showing an increase of about seventy per cent.

This large increase in the business of this office requires additional force for the prompt and efficient discharge of the duties assigned to it. The present organization consists of—

One engineer in charge and one clerk.

One supervising architect and six draughtsmen.

One computer, who is also a draughtsman.

Six draughtsmen are now employed as above stated; the number, however, varies from time to time as their services may be required.

To insure fidelity in the workmanship and choice of materials for buildings under construction; frequent inspections should be made, especially during the earlier stages of the work. At the period of commencement the standard of materials and workmanship is fixed, and, if not properly started, it is difficult, and in some particulars impossible, to alter it. If the marine hospital at Detroit had been visited at the start, the bad workmanship and materials already referred to in my report would have been avoided. The same thing may be said of the custom-house at Richmond, Virginia, where errors committed at the commencement of the work were corrected by the contractor after the first inspection of the building, but at considerable expense. Frequent inspections of the building I deem essential to secure the faithful execution of the contracts, and that no building should be permitted to advance far without a thorough inspection, to secure a standard by which the local superintendent should be governed in the remainder of the work. The duties of the engineer in charge require so large a portion of his time in the office, that it has been found impossible to visit all the works under his charge as often as once a year; while several works are in course of construction, and some finished, which have not been visited by him at all. A competent assistant would remove this difficulty, and would secure better workmanship and materials, and a more prompt performance of all the duties of the office. It would also be a measure of economy.

The clerical duties of this office cannot be properly performed by one clerk. They are now necessarily divided amongst the clerks of other offices, who are unacquainted with the details of the business passing through their hands, and consequently perform it neither as rapidly nor as well as it should be done. The "record book of contracts" is more than a year behindhand, and the "synopsis book," containing a brief history of each public work in the course of construction, is equally behindhand. All public letters and documents coming to this office are registered in another office and charged to this. It frequently happens that they are miscarried, and in some instances are lost. There should be a record book kept here of all public letters and documents, to be entered as soon as received, and one in which all papers withdrawn should be charged to the person or office withdrawing them. The duties of this office cannot be properly performed without two additional clerks.

The plans and specifications of every building authorized to be erected by act of Congress are prepared by the supervising architect. The labor of preparing these is very great, and, when taken in connexion with the current business of the office for buildings in the course of construction, cannot be performed by one person. Much delay and inconvenience have arisen from this cause. An assistant, capable of attending to the minor details of the current business, would enable the supervising architect to devote his whole time to the plans and specifications of new buildings. The additional expense to the office for the compensation of an assistant architect would be more than saved in the greater despatch of business. The number of draughtsmen must depend on the amount of work to be done.

For the reasons above given, I would respectfully recommend that the organization of the employes for the office of construction of public buildings under the Treasury Department be as follows, viz: one engineer in charge; one assistant in charge; three clerks; one computer; and in the architect's office, one supervising architect; one assistant architect; and as many draughtsmen as may, from time to time, be required.

The additional force proposed above will be sufficient to keep up the current business of each day. With the present organization, during the absence of the engineer in charge on tours of inspection or other duty, only the routine business of the office is transacted. All matter requiring his action is necessarily postponed until his return, thereby delaying the transmission of information called for by the superintendents and contractors of the different works, and interrupting portions of the work which cannot go on without the information sought. The same thing may be said of delays in transmitting drawings from the architect's office, which, from press of business, frequently occurs to the prejudice of the interests of the work. The department is sufficiently acquainted with the details of the duties of these two offices to see, I trust, the necessity of the proposed increase of force.

All of which is respectfully submitted.

I have the honor to be, very respectfully, your obedient servant,

A. H. BOWMAN,

Engineer in charge, Treasury Department.

Hon. JAMES GUTHRIE,

Secretary of the Treasury.

No. 92.

TREASURY DEPARTMENT,
Office Light-house Board, November 1, 1856.

SIR: I have the honor, by direction of this board, respectfully to submit the following report of the operations of the light-house establishment for the past year :

The general condition of the aids to navigation at the date of the last report from this office was such as to leave but little to be done towards completing the systematic plan of improvements of authorized aids to navigation along the coasts beyond the general routine duties of renovating and repairing existing structures, and of providing those aids, for which appropriations had been then recently made.

The system of buoyage and beaconage had been carried out as perfectly, and to as great an extent, as the means provided for that object would admit ; and it is believed that but few localities are known to exist requiring additional aids of that kind.

Renovations and improvements of light-houses and light-vessels, in addition to the ordinary necessary repairs, have been made as extensively during the past year as the means provided, and the period of time for doing so, would permit.

A large number of lens illuminating apparatus has been substituted for the old reflectors and fountain lamps, to the great benefit and economy of the service. Changes are still being made as rapidly as the lens apparatus is available, having in each case due regard to the condition of the old apparatus in the light-house requiring renovation.

New and improved illuminating apparatus has been placed in, or is in course of preparation for, such of the light-vessels as had not been refitted at the date of the last report.

All the aids to navigation for which special appropriations have been made, have been either completed or commenced, except those condemned as being unnecessary by the proper authority, or those to the sites of which perfect titles have not been obtained. (See table appended.)

The late period of the year at which Congress made appropriations at its last regular session for new aids to navigation, rendered it impracticable to commence many of the works this season ; but preliminary steps have been taken for commencing those at the north early next spring, and those at the south will be commenced and prosecuted as far as possible during the ensuing winter.

The frequent inspections of the lights by inspectors and others, the instruction which the keepers have derived from them, and their acquirement of a better knowledge of their duties, as laid down in the printed instructions and directions, have resulted in a gradual but very perceptible improvement in the character, appearance, and reliability of the lights along the entire coast.

Notwithstanding the extraordinary severity of the past winter, and the consequent injury done to the buoys and light-vessels by the masses of floating ice on the coast from the capes of Virginia to the

eastern boundary, it is believed but little serious inconvenience resulted to navigation on account of the temporary absence at times of these aids from their proper stations.

The buoys which were driven from their stations were promptly replaced, by means of the buoy vessels, from the duplicates kept on hand at different points along the coast, and no efforts were spared to have the light-vessels repaired and towed by steamers to their stations with the least practicable delay.

Since the light-vessels have been provided with service and spare moorings of the best description, but few of them have broken adrift from, or left even the most exposed positions.

The supplies have been distributed to the lights on the Atlantic, gulf, and lake coasts by three supply vessels employed, and with as much regularity, and as satisfactorily, as could be expected in a service the successful performance of which depends so much upon the weather.

The great diminution in the quantity of oil required to be delivered at the lights fitted with lens apparatus, will be the means, as the new apparatus is substituted for reflectors, for facilitating the operations of making deliveries; and more frequent and regular visits will be made without increasing the number or expense of the supply vessels.

The following details of the most important operations in the several light-house districts are submitted:

In the first district, embracing the entire seacoast and navigable waters of Maine and New Hampshire, in addition to the ordinary duties of the buoy service, small repairs, inspections, &c., &c., the following light-houses have been renovated during the past year by the substitution of lenses for old reflector apparatus, viz: at Nashe's island, Narraguagus, Bear island, Saddleback ledge, Owl's Head, Beauchamp Point, Grindel's Point, and Pond island. A second-order lens apparatus has been set apart for Manheigan light-house, and several of the smaller lights in the district will be refitted before the close of the season.

The light-houses at West Quoddy Head, Prospect Harbor, Eagle Island Point, Negro island, Dice's Head, Pemmaquid Point, Burnt island, Seguin, and Cape Elizabeth, have been refitted with new and improved reflecting apparatus, which is designed to serve until suitable lens apparatus can be procured for a final refitment of them.

New light-houses have been erected during the year in the first district on Big island, St. Croix river, at Winter Harbor, east end of Edgemoggin reach, and on Kennebunk pier-head.

The light-house at Pond island has been rebuilt, and the one on Brown's head is now in process of reconstruction.

Of the remaining light-houses in this district, for which appropriations have been made, titles to the sites have not been obtained to those on Widow's island, Noddle's island, and the one in the Damariscotta river.

The title-papers to the site of the light in Tenant's harbor are in the hands of the law officers for examination.

All the works in the first district have been carried on in a systematic, economical, and most satisfactory manner, and it is believed that, by the close of the next season, all the light-house towers, illu-

minating apparatus, beaconage, and buoyage of the district, will be in a state of unrivaled efficiency.

Preliminary steps are being taken for commencing, at the opening of the next season, all the new works authorized in this district.

In the second light-house district, embracing all the seacoast and navigable waters of Massachusetts, the ordinary annual repairs of light-houses and light-vessels and beacons have been made, in connexion with the general routine duties of the service.

Fawn bar beacon has been rebuilt; repairs have been made to the Newburyport beacons; a new dwelling has been built for the keeper at the Cape Cod Highlands light-house; the new light-house tower and keeper's dwelling at Gay Head have been completed, fitted with a first-order lens apparatus, and the light will be exhibited on the first December next, 1856.

The light-house at Brant's Point, Nantucket, at Egg Rock, and at the Narrows, and the Point Alderton Bar beacon, Boston bay, have been completed. The buoyage of all the harbors, channels and navigable waters of the second district has been completed in the most thorough and efficient manner, and descriptive lists published for the use of mariners.

The navigation of the several channels through the Vineyard sound, although naturally difficult and dangerous, has been rendered comparatively safe and easy, by placing large buoys at the most prominent points, and by strict attention to the general characteristic distinctions of these aids.

About 400 buoys have been placed during the last year to mark obstructions, or to serve as guides to channels in this district. The eight light-vessels in this district are fitted in the best manner, and are prepared to ride out the heaviest gales. Spare moorings have been provided and placed at points from which they can be despatched without much loss of time to any vessel that may be driven from her station by stress of weather or floating ice.

New illuminating apparatus has been placed in the three beacons at Nantucket, at Hyannis harbor, Mayo's Beach, Newburyport, Bird island, and Boston light-houses. Sixteen small lens apparatus have been placed in lights in this district during the past year as substitutes for old reflectors and lamps.

The erection of the light-house authorized to be placed on the "Bishop and Clerks," and the transfer of the light-vessel now stationed near that ledge to the Handkerchief shoal, will render the passage of the Vineyard sound (the great thoroughfare of the coasting trade) comparatively safe and easy for the careful navigator.

All the aids to navigation, of every description, in this district are in a much better and more efficient state than they have ever been before; and it is expected that the renovations that are to be made to light-houses, as soon as the apparatus required is available, will render them equal in point of efficiency to any others on the coast.

The difficult and important work at Minot's ledge has been prosecuted with zeal and ability during the year. The iron scaffold erected for the safety of the workmen, and to facilitate the tedious and difficult operations on the rock, was completed early in the spring. The

operations in cutting down the rock were resumed on the second day of April last, and have been continued uninterruptedly since that time, whenever it was possible to land on the rock. The season, to about the 1st of October, has been a favorable one. Work has been done on the rock during one hundred and fifty-seven hours since the opening of the season; four-fifths of the rock to be cut away has been removed, and about one-half of the hammering of the vertical and horizontal surfaces has been done. The stonecutters, when unable to work on the rock, are employed preparing the stone for the structure. The whole of the third and fourth, most of the fifth, and part of the sixth courses of stone, have been prepared. The first and second courses of stone have not been cut to dimensions, on account of the difficulty of preparing the patterns before the foundation pit is finished.

In the northern or Rhode Island portion of the third light-house district, the following works have been executed during the past year:

A substantial granite light-house tower, and brick dwelling for the keeper, have been built at Beaver Tail, at the entrance of Narraganset bay. A lens apparatus of the third order by Fresnel has been placed in this tower, and the light will be exhibited at an early day in place of the old light at that place.

A keeper's dwelling is in course of construction at the Lime Rock light station. Important repairs have been made on the dyke wall at Goat Island light-house and at the Fort Wolcott wharf. A new light-house tower is in course of erection at Nayat Point, which will be completed before the close of the present season. New lens apparatus has been placed in the Warwick Neck, Prudence Island, and Sandy Point light-houses.

In the other portions of the third district, the following works have been executed:

Six range-lights for the Gedney, Main, and Swash channels, in the lower bay of New York, have been completed, and the lights will be exhibited on the first of November instant.

New lanterns and lens apparatus have been placed at Cumberland Head and Black Rock light-houses. New lanterns and lens apparatus are nearly ready for being placed at Little Gull Island, Eaton's Neck, Great Captain's Island, Old Field Point, and Split Rock light-houses.

The three beacon-lights authorized to be built in the Connecticut river, below Middletown, have been completed and lighted.

Temporary beacon-lights have been placed on the piers at Burlington, Vermont, at Point au Roche, and at the nine points for stake-lights, near White Hall, Lake Champlain.

The day-beacons authorized August, 1854, for Long Island sound, are in course of erection by contract, and those at Race Rock, Black Ledge, and Groton Long Point, are nearly completed.

Lens apparatus has been placed in the following light-houses, as substitutes for the old reflectors and lamps, viz: Throgg's Neck, New Haven, North Dumpling, Stony Point, Sand's Point, Stonington, and at west beacon, Sandy Hook. Lens apparatus is provided, and will be placed during the present month, at the main light and east beacon at

Sandy Hook, at Execution Rocks, Faulkner's Island, and Plum Island light-houses.

The works of protection and preservation of the foundations and seawalls of the light-houses at Execution Rocks, Sand's Point, Lynde Point, and at the Hudson river lights, are now in progress, and will be completed by the close of the present season.

The Brenton's Reef and Stratford Point light-vessels have been thoroughly repaired, and fitted with new reflector apparatus.

The light-vessel authorized August 18, 1856, to be placed to mark the dangerous shoal in Long Island sound, off Cornfield Point, is now in course of preparation, and it is expected that she will be ready to go to her station by the first of December.

Fog-bell frames, and the machinery and bells, have been placed at Juniper Island and Little Gull Island light-houses.

The buoyage of the entire district, embracing the waters of Narraganset bay, Long Island sound, New York and Newark bays, and the Hudson river, and their tributaries, has been completed in the most thorough and efficient manner, and corrected lists are now in preparation for publication.

The commencement of the erection of the light-houses authorized for Great West bay, Horton's Point, Lloyd's harbor, Race Point, and those on Lake Champlain, and in the Hudson river, is delayed for want of valid titles to the respective sites.

It is contemplated to fit the Montauk Point light-house with a first-order lens apparatus for a fixed light, varied by flashes, at the time of the exhibition of the Great West bay, (first order lens fixed-light,) rendered necessary by the erection of the latter, the apparatus for which is already provided.

In the fourth light-house district, embracing the coast of New Jersey from Barnegat, and of Delaware and Virginia to Metompkin inlet, including the Delaware bay and tributaries, but little has been required during the past year beyond the ordinary routine duties.

All the harbors and inlets on the coast, and the Delaware bay and river, are buoyed in the most satisfactory manner to navigators.

The lights are well kept.

The new first-class light-house under construction at Absecum, on the seacoast of New Jersey, is nearly completed, and the light will be exhibited in January next.

The Cape Henlopen light has been fitted with a first-order lens apparatus, and the fog-bells authorized for the lights on the Delaware have been procured and placed.

The works of protection and repair at the Brandywine light-house are in progress, and the necessary steps have been taken for commencing and completing the light-houses authorized to be built at Barnegat, Ship John shoal, Cross ledge, and Fenwick's Island at the earliest practicable day.

The work at Ready island, for preserving the site, will be prosecuted with all practicable despatch, and will probably be completed this season. The small light authorized to be placed on the pier at Port Penn awaits the erection of the proposed pier upon which it was designed to be placed.

In the fifth light-house district, embracing the coasts and navigable waters from Metomkin inlet, Virginia, to Beaufort, North Carolina, the aids to navigation have been kept in an efficient state.

The light vessels injured by the large masses of floating ice on the Chesapeake bay during the past severe winter, were relieved in turn, repaired, and returned to their respective stations without detriment to the navigating interests.

The buoys injured or swept away by the ice were replaced promptly by new ones.

The following light-houses have been completed during the year: at Seven-foot Knoll, (mouth of the Patapsco river, Maryland,) Jones' Point, (on the Potomac,) Wade's Point, (mouth of Pasquotank river,) Cape Hatteras beacon-light, and beacon-light and fog-bell at Old Point Comfort.

New illuminating apparatus has been placed in the following light-houses, in this district, during the past year, viz: Hog island, New Point Comfort, Pool's island, Turkey Point, Sharpe's island, Pamlico Point, Fishing Battery, Clay island, Blackistone's island, the two at North Point, and Beacon island.

The following light-vessels have been thoroughly repaired and refitted, viz: Brant Island shoal, Roanoke river, Wolf Trap, Smith's Point, Windmill Point, Lower Cedar Point, Hooper's Straits, Craney island, and Jone's island.

The light-vessel authorized for York Spit has been completed and placed at her station.

The buoyage of the entire district has been completed, except at a few points authorized at the last session of Congress to be marked on the eastern side of Chesapeake bay, and these buoys will be placed before the close of the season.

The light-house at the mouth of Pungoteague river, Virginia, on the eastern side of Chesapeake bay, was overturned by a large mass of floating ice. The lantern, illuminating apparatus, and many of the other fixtures and supplies, have been recovered from the wreck.

In the sixth light-house district, embracing the coasts and navigable waters from north of Federal Point, North Carolina, to south of St. Augustine, Florida, the buoyage has been completed in the most thorough and satisfactory manner.

The range-lights on the Cape Fear river, at the upper jettee, have been completed and lighted.

The first-class light-house tower at Cape Romain, South Carolina, is far advanced towards completion, and it is expected that it will be finished during the present season of active operations in that quarter.

The titles to the sites for the lights and beacons authorized to be erected at North and South Points, Battery, Charleston, North Edisto, Hunting island, Hilton Head, and at Calibogue sound, South Carolina, and at St. John's river, Florida, have not been perfected.

The lights authorized to be built at Castle Pinckney and at Fort Sumter (Charleston harbor) have been completed and lighted.

The light-vessel authorized for the Marten's Industry station has been built and placed, and the old vessel thoroughly repaired, fitted

with proper illuminating apparatus, and placed in Calibouge sound, in conformity to the terms of the law.

The south channel (Cockspur island) beacon-light has been rebuilt and fitted with lens apparatus.

Two-day beacons have been erected on the Savannah river: one near the upper end of Long Island, and the other on Jones' island.

The ordinary necessary repairs have been made in the district; and during the ensuing season for active operations on the southern coast, it is designed to substitute lens apparatus, now available, for the old reflectors and lamps, at nearly all of the small lights in this district.

The small light-vessel, authorised at the last session of Congress, to be placed in the St. John's river, Florida, will, it is expected, be ready for her station early in the coming winter.

In the seventh light-house district, the works of construction have been carried on during the period of the working season, and those in progress will be resumed immediately.

All the aids in this district have been placed in as efficient a state as possible. The works now in progress, and those authorized, will, when completed, leave very little to be done towards rendering the navigation through the Florida Pass, and channels around the peninsula of Florida, as safe as that of any other part of the coast.

On the 29th August, the peninsula of Florida was visited by a severe gale; during the continuance of which, many lives were lost, and much property was destroyed and damaged.

Notwithstanding the severity of the gale, the damage to the aids to navigation on that coast was not so great as might have been anticipated from its effects to shipping and to property on shore.

Considerable damage was done to the temporary works erected at Coffin's Patches.

The sand island, upon which the Sand Key light-house is erected, was, with the wooden buildings, wharf, and boats, destroyed, leaving, however, the light-house tower uninjured. The water, during the gale, rose to six feet around the tower, and at the last dates from Key West, it remained at a depth of two feet. The gradual reformation of this little sand island gives strong hopes that there will be no serious permanent injury to the site and foundation.

Many buoys were driven from their moorings, which were promptly replaced at the close of the gale.

The light-houses authorized to be built at Dry Tortugas, and at Egmont Key, will be commenced as soon as the necessary materials can be procured.

The light-house works at Jupiter Inlet have been suspended in consequence of the Indian hostilities in that immediate vicinity.

In the eighth light-house district, from St. Mark's, Florida, to the south of the Mississippi river, extensive repairs have been required and made, during the past year, to light-house buildings, and to the sea-walls erected for their preservation against the encroachment of the sea.

The marking of the bars, channels and harbors by beacons, buoys and stakes, has been prosecuted during the past year, and is now nearly completed.

The prominent points of St. Mark's, Apalachicola, Pensacola, and

Mobile bays, and the mouths of the Mississippi river, have been completely marked, in addition to less important localities.

New light-houses have been completed at Pass à l' Outre, Port Pontchartrain, New Canal, St. Blas, Rigolets, and at Chandeleur island.

The works at Southwest Cape and St. Vincent island, Florida, and at Proctorsville, Louisiana, are delayed for want of perfect titles to the sites.

The erection of the light-house, authorized at the Bayou St. John, Louisiana, is delayed by the works of repairs upon the canal at that point.

The bell-boats, authorized for Ocklocknee shoal, and to mark the entrance to the Southwest Pass of the Mississippi river, have been built and placed at their respective stations.

Extensive examinations by borings, &c., have been made of the site for the light-house authorized to be built at the Southwest Pass of the Mississippi river.

The severe storms of the 9th and 10th and the 29th and 30th of August did considerable injury to the buildings, foundations, and seawalls in this district, and during the latter gale the light-house at Cape St. Blas, Florida, was totally destroyed. The sea rose so high at that place that the waves struck the floor of the keeper's dwelling, elevated eight feet above the ground, and about fourteen feet above the ordinary tides. A lagoon now occupies the site of that light-house.

In the ninth light-house district, embracing the coast from Barataria bay to the Rio Grande, in addition to the routine duties of the service, the Atchafalaya and Cote Blanche bays have been thoroughly buoyed and staked; the Aransas Pass light-house and the two range-lights at Galveston have been built.

The light-houses at the mouth of Sabine river and at Barataria bay, and the beacon on the bar at Galveston, are in progress.

The light-house at Timbalier bay will be commenced as soon as the title to the site is approved.

The sites for the Ship Shoal and Shell Keys light-houses have been examined, and the necessary steps taken for commencing the works at the earliest practicable day.

Extensive repairs were made to the Atchafalaya and Ship Shoals light-vessels, the same being rendered necessary on account of serious damage done to them by the summer and winter gales.

In the tenth light-house district, embracing Lakes Erie and Ontario, and the rivers St. Lawrence and Niagara, the important and difficult work on Horseshoe reef, in the Niagara river, has been completed and the light exhibited. The works at Maumee have been completed; a fog-bell has been placed at Buffalo light-house, and twelve light-house stations have been refitted with lens apparatus during the past year.

Of the fifty lights in this district, including six small range-lights, thirty are now fitted with small-order lenses suited to the wants of navigation. Lenses are available for such of the remaining ones as are in greatest need of renovation, and they will be placed before or soon after the opening of navigation in the coming spring.

"The general condition of the establishment in this district is good.

"The improvement of the keepers is very manifest, both as to attendance upon the lights and in rendering their quarterly returns."

In the eleventh light-house district, embracing the lakes and west

of Lake Erie, in addition to the ordinary routine duties of the service, the light-houses authorized at Round Island, Point Iroquois, Grand island, mouth of Portage river, Rock Harbor, Isle Royal, Menasha, Port Clinton, and Taylorsport, have been completed.

The light at La Pointe is under contract, and will be ready for exhibition this season.

The lights authorized to be built at Eagle river, Point Betsey, and Beaver island are under contract, and also the one authorized to be built at Minnesota Point, at the head of Lake Superior.

The foundation for this latter light-house will be constructed this season, and the materials necessary for the completion of the building placed on the ground, so that it can be completed at an early day next season.

Titles to the sites of the light-houses authorized to be built at South Black river, old Fort Mackinac, harbor of Michilimackinac, Ulaos, and Fond-du-Lac, have not been perfected.

The piers at Michigan City, Milwaukee, and Waukegon, are not sufficiently advanced to admit of the erection of the beacons authorized for these points.

The St. Clair Flats were buoyed in the best manner at the opening of navigation; and when any of the buoys have been destroyed by steamers, their places have been occupied by stakes, which are renewed from time to time.

At the opening of the next season, all the buoys required for that locality will be placed.

All the buoys required in Saginaw bay and river, at the entrance to Chicago river, and at the entrance to Fox river, Green bay, it is believed, have been placed and kept in position. Buoys have recently been placed upon Spectacle and Martin's reefs, in Lake Huron. Buoys will be placed during the next season to mark all obstructions in, and to guide through all channels, so far as the wants of navigation can be ascertained, within the appropriations made for that purpose at the last regular session of Congress.

New illuminating apparatus has been placed during the past year in the light-houses at Windmill Point, Ottawa Point, Saginaw bay, Sheboygan, Beaver Island harbor, Muskegon, Kalamazoo, Port Washington, Bayley's harbor, Tail Point, Copper Harbor, Little Fort and Manitowoc, and it is contemplated to complete the renovations in this district at the opening of the next season.

In the twelfth light-house district, embracing the entire Pacific coast, the light-houses at Point Loma, San Diego, Santa Barbara, Point Conception, Farralones, and Cape Hancock, have been completed and lighted.

Fog-bells have been placed at Point Conception, Farralones, Fort Point, Alcatraz island, and Cape Hancock light-houses.

The light and range at Humboldt harbor will be exhibited about the first of November.

The building of the light-houses authorized to be erected at San Pedro harbor, Santa Cruz harbor, Monterey bay, and Punta de los Reyes, has been delayed for want of approved titles to the sites.

The officer in charge of the light-house service on the Pacific coast

was instructed to lose no time in commencing the erection of the light-house at Umpqua, in Oregon Territory, and it is expected, from the urgent instructions from this office, and the zeal and energy of the officer in charge, that it will be built as soon as the necessary materials can be collected at the site. The illuminating apparatus and lantern for that light reached the Pacific coast in July last.

Instructions were also given to commence the building of the light at New Dungeness, in Washington Territory, and to take the necessary steps for commencing the one at Cape Flattery and at Blunt's island with the least practicable delay. The Indian hostilities in Washington and Oregon Territories, and the difficulties attending, necessarily, operations at such distant and sparsely populated localities, will doubtless account for any seeming delay in the execution of these works.

In the last report from this board attention was invited to the low rate of compensation allowed to light keepers under the existing law. By the fourth section of the act making appropriations for light-houses, &c., approved May 23, 1828, the Secretary of the Treasury is authorized and empowered to regulate and fix the salaries of the respective keepers of light-houses in such manner as he shall deem just and proper, "provided the whole sum allowed shall not exceed an average of four hundred dollars to each keeper."

The board would again respectfully renew its recommendation of last year, that a reasonable increase be made to the present average rate of compensation to light keepers, as the best means of insuring efficiency and true economy in the care and management of the light-houses on our extended, dangerous, and, in many portions, sparsely populated and inhospitable coast.

The present average rate of compensation to the keepers of light-houses on the Pacific coast, as established by the appropriation bills, is \$800 per annum; but the difficulties which have been met with in obtaining the services of competent and reliable keepers for some of the lights at isolated, though important, points on that coast, and the frequent resignations of keepers after a short trial of the duties, lead to the opinion that the main cause of dissatisfaction with the service arises from insufficiency of the compensation in the present state of that part of the country.

Very respectfully submitted. By order of the Light-house Board:
W. B. SHUBRICK, *Chairman.*

THORNTON A. JENKINS, }
JNO. G. PARKE, } *Secretaries.*

TABLE
OF
AIDS TO NAVIGATION,

AUTHORIZED BY CONGRESS PRIOR TO THE FIRST MONDAY OF DECEMBER,
1856, AND THE ACTION TAKEN IN EACH CASE.

Table exhibiting all the aids to navigation authorized by Congress prior to the first Monday of December, 1856, and the action taken in each case.

State.	Locality.	Description of object.	Date of appropriation.	Sum appropriated.	Action taken.
Maine	Buck ledge.....	Beacon	Aug. 3, 1854	\$2,000 00	Completed.
	Penobscot river.....	Two beacons, repairs of..do.....	1,000 00	Do.
	Mount Desert Rock and Martinicus light-houses.	Fog-signals.....do.....	5,000 00	Do.
	St. Croix, Portland breakwater, Kennebec and Penobscot rivers, &c.	Buoys and beacons.....do.....	2,000 00	Placed.
	Kennebunk harbor	Light on pier-head.....do.....	500 00	Completed, and notice issued for lighting.
	Edgemoggin reach	Light-housedo.....	6,000 00	Completed.
	Castine harbor.....	Beaconsdo.....	5,000 00	Do.
	Big island, mouth of St. Croix river.	Light-housedo.....	9,000 00	Do.
	Southern islanddo.....do.....	4,500 00	Title perfected; to be erected next season.
	Winter harbordo.....do.....	4,500 00	Completed.
	West Passamaquoddy bay.....	Two beaconsdo.....	3,000 00	Do.
	Noddle's island.....	Light-housedo.....	4,500 00	Title not perfected to site.
	Dry Point.....do.....do.....	6,000 00	Title to site not perfected.
	Mount Desert Rockdo.....	Aug. 18, 1856	10,000 00	Necessary steps taken to execute this work next season.
	Martinicus Rockdo.....do.....	35,500 00	Do. do.
	Seguindo.....do.....	35,000 00	Do. do.
	West Quoddy Head.....do.....do.....	15,000 00	Do. do.
	Brown's Headdo.....do.....	5,000 00	Under construction.
	Marshall's Pointdo.....do.....	5,000 00	Preparations made for erecting next season.
	Fort Pointdo.....do.....	5,000 00	Do. do.
	Deer Island thoroughfare.....do.....do.....	5,000 00	To be erected next season.
	Bass Head harbor.....do.....do.....	5,000 00	Do. do.
	Spoon island.....do.....do.....	1,000 00	Do. do.

	Widow's island.....	do.....	do.....	7,500 00	Do.	do.
	White Head light-house.....	Bell-buoy.....	do.....	5,000 00	Do.	do.
	On ledge east of Boone island..	do.....	do.....	5,000 00	Do.	do.
	Fiddler's ledge.....	Stone-beacon.....	do.....	3,000 00	Do.	do.
	Water of Maine.....	Buoys.....	do.....	3,000 00	Buoys to be procured and placed next season.	
Massachusetts.....	Round island, Machias bay.....	Light-house.....	do.....	5,000 00	To be erected next season.	
	Sow and igs.....	do.....	do.....	20,000 00	Preliminary steps taken for commencing the work on the site.	
	Gay Head.....	do.....	Aug. 3, 1854	30,000 00	Completed.	
	Truro, (Highlands,) Cape Cod..	do.....	do.....	25,000 00	Keeper's house completed; tower to be built next season.	
	Brant Point.....	do.....	do.....	15,000 00	Completed.	
	Point of Rocks.....	do.....	Aug. 18, 1856	5,000 00	Referred to the Superintendent of the Coast Survey for report as to necessity as an aid to navigation.	
	New south shoal, off Nantucket..	Light-vessel.....	March 3, 1855	30,000 00	Completed and placed at station.	
	Newburyport.....	Beacons.....	Aug. 18, 1856	2,000 00	To be completed next season.	
	Billingsgate island.....	Light-house.....	do.....	14,000 00	New site to be selected, and new tower erected.	
	Old Cock, &c.....	Beacons.....	do.....	3,000 00	To be built next season.	
Vermont.....	Eastern Point light-house.....	Fog-bell.....	do.....	800 00	Under construction.	
	Bishop and Clerks' shoal.....	Light-house.....	do.....	20,000 00	To be built next season.	
	Lane's Point.....	Beacon.....	do.....	700 00		
	Minot's Ledge.....	Light-house.....	do.....	75,000 00	Under construction.	
	Burlington.....	Pier-lights.....	Aug. 3, 1854	2,000 00	Completed and lighted.	
	Juniper island.....	Fog-signal.....	do.....	800 00	Erected.	
	Beaver Tail.....	Light-house and fog-signal..	do.....	14,500 00	Completed and lighted.	
	Watch Hill.....	Light-house, &c.....	do.....	8,300 00	Do.

No. 93.

Proceedings of the fifth annual meeting of the Board of Supervising Inspectors, (appointed under the act of Congress, August 30, 1852,) held at Boston, Massachusetts, October 9, 1856.

Pursuant to adjournment, the board convened in the above city, and in the absence of the president, on motion, Charles W. Copeland was elected president *pro tem.*, when the following members were in attendance:

William Burnett.....	1st district.
Charles W. Copeland.....	2d “
John S. Brown.....	3d “
Davis Embree.....	5th “
Augustus Walker.....	9th “

There being but a quorum of members present, and information having reached the board that other members would arrive during the day, on motion, the board adjourned until Friday morning, 9 o'clock.

FRIDAY, October 10, 1856.

The board met at 9 o'clock, a. m.; was called to order by the president *pro tem.* The secretary called the list of members, and the following were in attendance:

Charles W. Copeland.....	2d district, president <i>pro tem.</i>
William Burnett.....	1st “
John S. Brown.....	3d “ secretary.
Davis Embree.....	5th “
Benjamin Crawford.....	7th “
Isaac Lewis.....	8th “
Augustus Walker.....	9th “

A letter was received this morning by the secretary from Mr. John Shallcross, president of the board, stating his inability to be present at the present session, owing to indisposition. On motion, the secretary was requested to note upon the journal the cause of his absence.

In accordance with instructions from the Navy Department, William E. Everett, chief engineer United States navy, appeared at the opening of the board, and was, on motion, unanimously invited to be present during the session.

At this stage of the proceedings, Mr. Brown asked permission to announce to the board the decease of William E. Muir, esq., of New Orleans, supervising inspector of 4th district. Suitable and appropriate remarks were introduced in reference to his character, and the relation he sustained to the board; at the conclusion of which, the following preamble and resolutions were read and unanimously adopted:

"Impressed with the brevity of human life, we turn to the place now vacant at our board, rendered so by the recent demise of our esteemed friend and colleague, William E. Muir, of New Orleans, who found a watery grave while in the discharge of his duty, by the loss of the steamship Nautilus, in the Gulf of Mexico, on her voyage from Galveston to New Orleans, on the 10th of August last.

"The blow thus struck by the common leveler of man under auspices the most favorable, would be well calculated to sadden our hearts; but the sudden and appalling circumstances attending his death may well cause grief of no ordinary kind.

"Death has made its inroad at our board; one of the younger members, in the full vigor of manhood, has perished in that noble but ill-fated steamer, during the terrific storm which swept over that portion of the southern coast.

"The magnificent steamer, with all her living freight, was suddenly engulfed, with the exception of one human being; (the steward of the ship,) whose province it was to exclaim with Job's servant, 'I alone have escaped to tell thee.'

"When the elements of nature are convulsed in overwhelming terror, the works of man are as but chaff before the wind.

"There was no safety in the ship; the life of man was blotted out in a moment.

"We can scarcely realize the fact that our associate, who has been so frequently with us, and of us, arduously engaged in our responsible duties, is now a stiffened corpse in the deep green sea. We reiterate, he died in the performance of his duty; we deeply lament his loss.

"In connexion with this sad event, the board would also notice the death of Anderson Marsh, local inspector of New Orleans, who was in company with our friend and fellow member, and met a similar fate.

"*Resolved*, That in the death of our esteemed friend and fellow member, William E. Muir, of New Orleans, while in the discharge of his duty, we humbly bow in submission to the Divine will, yet feel we have sustained a loss which we cannot adequately express, by the sudden and unexpected removal of him thus taken from us. As a friend, he was true; and in every relation of life, respect and affection attended him, and those who knew him best esteemed him most.

"*Resolved*, That we extend our sympathies to those of the family of Mr. Muir, who, in their bereavement, have thus early been deprived of a careful father and kind protector, and share with the relatives and friends in this, our mutual affliction.

"*Resolved*, That we condole with the family and friends of Anderson Marsh, late local inspector of New Orleans, in the great loss they have sustained in his death, he being in company with Mr. Muir in the discharge of his duties, and with him lost by the sinking of the steamship Nautilus.

"*Resolved*, That the secretary of this board be requested to transmit a copy of the proceedings in relation to William E. Muir and Anderson Marsh to their respective families."

The minutes of proceedings of the fourth annual meeting, held at St. Louis, Missouri, October, 1855; also, the proceedings of special

meeting, held at Washington city, District of Columbia, in April, 1856, were read and approved.

Mr. Embree, from the fifth district, presented a communication from James H. McCord, inspector of boilers and machinery at St. Louis, Missouri, on the subject of fusible alloys and water-gauges; which, when read, was laid on the table for the present.

Mr. Shallcross, from the sixth district, forwarded to the board this morning a letter upon the subject of loss of life and property on steam vessels by fire, making sundry suggestions in reference thereto; which were read, and, on motion, laid on the table for the present. Also, accompanying this communication, were received the reports of the local boards at Louisville, Kentucky, and Nashville, Tennessee, which will be presented when reports are called for.

No other memorials or petitions being presented, reports from supervising inspectors as to the operations of their various local boards during the past year were called for by districts.

Mr. Burnett, from the first district, presented reports from the local boards at Boston, New London, and Portland.

Mr. Copeland submitted reports from the local boards at New York and Philadelphia.

Mr. Brown, from the third district, presented reports from the local boards at Baltimore, Norfolk, Charleston, and Savannah.

Fourth district not represented.

Mr. Embree, from the fifth district, submitted a report from St. Louis, and also a report of inspection of steamers, conducted under his personal attention.

Reports were received from the Louisville board and Nashville board, forwarded by Mr. Shallcross, which were read, embracing the sixth district.

Mr. Crawford read the reports from the Cincinnati and Wheeling board—the Pittsburg report not having been received, but expected; when received, would complete the seventh district.

Mr. Lewis, from the eighth district, presented reports from Chicago and Detroit, together with the list of steamers inspected by himself.

Mr. Walker, from the ninth district, presented reports from Cleveland, Burlington, (Vermont,) Buffalo and Oswego, New York.

The districts having been called over, and the various reports read, on motion, the board adjourned to 7 o'clock, p. m.

EVENING SESSION—7 o'clock.

The Board met and was called to order by the president *pro tem*. Present, all the members in attendance.

The unfinished business of the preceding meetings was called for; the first in order was the committee on signal lights, referred to this meeting. Mr. Burnett, the chairman of the committee, asked further time, which was granted.

The communication of W. W. Guthrie, embracing a letter of Mr. Tolle, on the subject of fusible alloys, placed on file at the last annual

meeting, was taken up and referred to the following committee: Messrs. Crawford, Embree, and Lewis.

The committee appointed at the special meeting held in April last, to whom was referred a form of circular to be sent to masters and owners of steamers, relating to precautions against accidents; also, the rules and regulations adopted by the board, at their different sessions, for the observance of the local boards of inspectors, in reference to fires and accidents; the chairman, Mr. Muir, having died since the last meeting, on motion, Mr. Crawford was substituted as chairman.

The board spent some time in considering the practice of local boards in granting licenses where difference was found to exist. An arrangement was adopted by which the same would be harmonized, when, on motion, the board adjourned until 9 o'clock to-morrow morning.

SATURDAY MORNING—9 o'clock.

The Board met, and was called to order by the president *pro tem.*; members in attendance all present. Proceedings of yesterday read and approved.

On motion, the reports from the local boards, as far as received, were referred to the committee on general report, consisting of the following members, viz: Messrs. Burnett, Crawford, Lewis, and Walker.

On motion, the letter of Mr. Shallcross, making sundry suggestions in regard to fires in steamers, was taken up, and, on motion, was referred to the committee on accidents and fires—Mr. Crawford, chairman.

Congress having, at its session in 1855, passed an act defining the space that shall be allowed for passengers on board all sea-going vessels, (sea steamers included,) and as the rules and regulations laid down by the supervising inspectors in December, 1852, in regard to space for passengers on steam vessels, may not, in all respects, be found to agree with the above act of 1855, therefore—

Resolved, That a committee, consisting of the members from the first, second, and third districts, compare said regulations with the act referred to, and report what differences, if any, are found to exist; and also to prepare regulations in accordance with said act for the action of the board.

A motion was made and adopted, that when the Board adjourn, it stands adjourned to Monday evening, 7 o'clock, in order to allow time for the various committees to prepare their reports for the consideration of the board.

Some time was spent in discussing various matters in regard to effectually carrying out the steamboat law; after which, on motion, the board adjourned to 7 o'clock, p. m., Monday evening.

MONDAY EVENING, *October 13—7 o'clock.*

The board met pursuant to adjournment, and was called to order by the president, *pro tem.* All the members in attendance present.

The minutes of preceding meeting read and approved.

Petitions or memorials called for ; none were presented, when reports from committees were called for.

The committee appointed to compare the regulations adopted by the board in 1852, with the law of Congress passed in 1855, in reference to space for passengers, submitted their report ; which was read, and on motion, adopted.

The committee to whom was referred the subject of signal lights and pilots' rules, submitted a report, which was read, and explanations given with regard to some proposed alterations ; and after some time spent in consideration of the same, on motion, the report was laid on the table, for the purpose of considering the same in committee of the whole. After which, on motion, the board adjourned until two o'clock, p. m. to-morrow, to allow the committees further time to report.

TUESDAY, *October 14—2 o'clock, p. m.*

The board met at the hour appointed ; present, all the members in attendance.

Minutes of previous meeting read and approved.

Memorials or petitions called for ; none presented.

Reports from committees.

The committee on fusible alloys and water-gauges made their report, which was read, and, for the present, action thereon deferred.

The committee who reported at the meeting of yesterday on the subject of space for passengers on sea-going steamers, and which report was adopted, asked leave to have the same returned to them, for the purpose of adding thereto ; the request was granted and the report returned.

Mr. Berry J. Warner appeared before the board with "Thompson's graduating life-preserving seat," and after describing its properties and qualities, on motion, the matter was referred to the following committee, viz. Messrs. Lewis, Embree and Walker.

The committee on the space of passengers asked leave to submit the annexed report, as a substitute for the one yesterday reported, and asked that the first do not appear on the printed minutes, the same being unnecessary:

"Your committee, to whom was referred the matter of space for deck-passengers, having before them the act of Congress of March 3, 1855, have reconsidered their former report; and beg leave to submit the following substitute:

"That they have carefully compared the regulations of this board, as established by their action at the New York meeting, in December, 1852, with the act of Congress passed March 3, 1855, entitled 'An act to regulate the carriage of passengers in steamships and other

vessels,' and find that, in regard to the space allowed, the regulations of the board conflict in some respects with said act.

"Your committee would therefore recommend that the regulations already established by this board, at the New York meeting, in reference to space for passengers, be continued in force in the inspection of all steamers, except sea-going steamers, which are subject to the act of March 3, 1855.

"Such sea-going steamers must be fitted in accordance with said act, and the local boards, in their future inspection, are hereby directed to see that the requirements of this act are complied with.

CHAPTER 213.

"AN ACT to regulate the carriage of passengers in steamships and other vessels.

"Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That no master of any vessel owned in whole or in part by a citizen of the United States, or by a citizen of any foreign country, shall take on board such vessel at any foreign port or place other than foreign contiguous territory of the United States, a greater number of passengers than in proportion of one to every two tons of such vessel, not including children under the age of one year in the computation, and computing two children, over one and under eight years of age, as one passenger. That the spaces appropriated for the use of passengers, and which shall not be occupied by stores or other goods, not the personal baggage of such passengers, shall be in the following proportions, viz: on the main and poop decks or platforms, and in the deck houses, if there be any, one passenger for each sixteen clear superficial feet of deck, if the height or distance between the decks or platforms shall not be less than six feet; or on the lower deck (not being an orlop deck) if any, one passenger for eighteen such clear superficial feet, if the height or distance between the deck or platforms shall not be less than six feet, but so as that no passenger shall be carried on any other deck or platform, nor upon any deck where the height or distance between decks is less than six feet, with intent to bring such passenger to the United States, and shall leave such port or place and bring the same or any number thereof within the jurisdiction of the United States; or if any such master of any vessel shall take on board his vessel, at any port or place within the jurisdiction of the United States, any greater number of passengers than in the proportion aforesaid to the space aforesaid, or to the tonnage aforesaid, with intent to carry the same to any foreign port or place other than foreign contiguous territory as aforesaid, every such master shall be deemed guilty of a misdemeanor, and upon conviction thereof before any circuit or district court of the United States, shall, for each passenger taken on board beyond the limit aforesaid, or the space aforesaid, be fined in the sum of fifty dollars, and may also be imprisoned at the discretion of the judge before whom the penalty shall be recovered, not exceeding six months; but should it be necessary, for the safety or convenience of the vessel, that any portion of her cargo, or any other article or articles, should be placed on, or stored in

any of the decks, cabins, or other places appropriated to the use of passengers, the same may be placed in lockers or inclosures prepared for the purpose, on an exterior surface impervious to the wave, capable of being cleansed in like manner as the decks or platforms of the vessel. In no case, however, shall the places thus provided be deemed to be a part of the space allowable for the use of passengers, but the same shall be deducted therefrom; and in all cases where prepared or used, the upper surface of said lockers or enclosed spaces shall be deemed and taken to be the deck or platform from which measurement shall be made for all the purposes of this act.

"It is also provided, that one hospital, in the spaces appropriated to passengers, and separate therefrom by an appropriate partition, and furnished as its purposes require, may be prepared, and when used, may be included in the space allowable for passengers, but the same shall not occupy more than one hundred superficial feet of deck or platform: *Provided*, That on board two-deck ships, where the height between the decks is seven and one-half feet or more, fourteen clear superficial feet of deck shall be the proportion required for each passenger.

"SEC. 2. *And be it further enacted*, That no such vessel shall have more than two tiers of berths, and the interval between the lowest part thereof and the deck or platform beneath, shall not be less than nine inches, and the berths shall be well constructed, parallel with the sides of the vessel, and separated from each other by partitions, as berths ordinarily are separated, and shall be at least six feet in length, and at least two feet in width, and each berth shall be occupied by no more than one passenger; but double berths of twice the above width may be constructed, each berth to be occupied by no more, and by no other, than two women, or by one woman and two children under the age of eight years, or by husband and wife, or by a man and two of his own children under the age of eight years, or by two men, members of the same family; and if there shall be any violation of this section in any of its provisions, then the master of the vessel, and the owners thereof, shall severally forfeit and pay the sum of five dollars for each passenger on board of said vessel on such voyage, to be recovered by the United States in any port where such vessel may arrive or depart."

"And further, that there may be a uniform practice with the local inspectors in regard to the measurements necessary in determining the number of passengers allowed, the following instructions, issued by the Hon. Secretary of the Treasury for the guidance of collectors and others, are to be observed by them:

"In order to determine the number of passengers a vessel is entitled to carry, in accordance with the spaces prescribed by this act, the height between the decks must be measured, not as heretofore directed, from the bottom edge of the carlines or deck beams, but from the under surface of the upper deck to the top floor below; and no space shall be considered available for passengers, that has not, when measured in this manner, the height called for by law, as the case may be; nor shall any space in the vessel of a less width than four feet be measured; *Provided, however*, if the vessel shall, in accordance with the provisions of the first section of this act, carry any portion of the cargo,

or any other article or articles, on any of the decks, cabins, or other places appropriated to the use of passengers, in lockers or inclosures, prepared for the purpose, the height between decks shall be measured from the under surface of the upper deck to the upper surface of said lockers or inclosed spaces, which shall be deemed and taken to be the deck or platform from which measurement shall be made for all the purposes of this act, and the spaces occupied by said lockers or inclosed spaces shall be deducted from the space allowable for the use of passengers."

"The encumbering by merchandise or stores, not the personal baggage of the passengers, except in lockers or inclosures prepared for the purpose, of any part of the space occupied by the passengers, will vitiate the whole space, unless the part so encumbered be separated from that so occupied by a substantial bulkhead.

"The deck or platform must be of a permanent nature, flush, and impervious to water.

"All of which is respectfully submitted by the committee."

In order to give time to the various committees, on motion the board adjourned to Wednesday morning, 10 o'clock a. m.

WEDNESDAY, October 15—10 o'clock, a. m.

The board met pursuant to adjournment; present, all the members in attendance.

The board was called to order by the president *pro tem*. Minutes of proceedings of previous meeting read and approved.

Memorials and petitions called for; none were presented.

Mr. Burnett stated he had this morning received by mail, the report of the local board of inspectors of Portland; which was read, and on motion, referred to the committee on the general report.

On motion, the report of the committee on fusible alloys and water-gauges was called up, and before proceeding to the consideration of the subject, the letters of W. W. Guthrie, M. Tolle, of Cincinnati, and J. H. McCord, of St. Louis, Missouri, bearing upon these subjects were read, together with the report; when, on motion, said report was unanimously adopted, as follows:

"Your committee to whom was referred the communication of W. W. Guthrie, inspector of boilers for the district of Cincinnati, enclosing a letter from M. Tolle, engineer, relating to fusible alloys, which were presented to the board at the last annual meeting; also, a communication from James H. McCord, inspector of boilers for the district of St. Louis, on the same subject, presented at the present session of the board, and also embracing the subject of water-gauges, have had the same under consideration, and beg leave to report:

"That in relation to the trouble in the use of alloys, the statements made in these communications only corroborate those that have been made from time to time, by many engineers and masters in their complaints to inspectors, in regard to the operation of the alloys.

That the alloys have been a great source of trouble and annoyance to those who have been compelled to use them, is well known to inspectors, and to this board; but, however desirous the board may be to relieve the complainants from these difficulties, or to grant the prayer of Mr. McCord, by a suspension of their application until something be found that will answer what is claimed for them, it is not in the power of this board to do so until there is some action in Congress on the subject. At the last session of Congress, a bill was reported to the House of Representatives from the Committee on Commerce, which, among other matters pertaining to steamboats, provides that rivets or plugs of pure tin shall be substituted for the alloys now required by law, the rivets or plugs to be placed in such parts of the boilers as are most exposed to danger from heat in case of a deficiency of water, whereby the plugs would be melted out and let steam escape before a state of danger would arise, or before the iron of the boiler could be injured by exposure to the heat of the fire; as pure tin melts at about four hundred and forty degrees of heat, whilst the iron will not be injured or deteriorated in strength until its temperature approaches six hundred degrees. It is easily perceived that this will make the tin plug a safeguard against explosions from low water, as the danger of such explosions arises from the over-heating of that part of the boiler which is left exposed to the action of the fire, in consequence of the water being permitted to fall too low to protect the iron from excessive heat. These plugs may be put in the boiler at different places, if necessary—that is, in the most exposed parts of the shell of the boiler, and also in the most exposed parts of the flues. The great advantage claimed for the tin plug over the alloys is, that the tin being a simple, and not a compound metal, like the alloys, it can be used in the shape of a simple plug or rivet, made to fill a hole in the boiler which is prepared for the purpose of receiving it, by which it will be exposed to the direct action of the fire, in the same manner as the boiler itself, without the risk of its changing its nature in consequence of the heat and pressure to which it would be subjected; whereas the alloys, in order to avoid these effects, must be enclosed in an apparatus made suitable for the purpose, and operated upon by some mechanical device in order to relieve a valve which will let steam escape at the melting of the alloy, all of which, as experience has proved, and as clearly set forth in the communications referred to this committee, is attended with difficulty, uncertainty and danger.

“The tin plug, it is true, guards against danger from one source only—that of low water in the boilers; whereas it is claimed that the alloys will guard against both deficiency of water and over-pressure of steam; but inasmuch as the alloys have, from some cause or other, in several instances failed to operate when the conditions of explosion were beyond all doubt in existence, from either too low water or too high steam, it has been thought better to have a more sure guaranty against only one of these causes, than run the risk of failing in both, particularly when that one is very well known to be the source of probably nineteen out of every twenty of the explosions that occur. Besides, it will not be a difficult matter to devise other means

whereby a more perfect security can be obtained against the violation of the law by carrying an over pressure of steam.

"We would further state, that from the best information we can obtain, these views in regard to the use of alloys and tin plugs are fully sustained by the present English and French practice.

"In regard to the subject of water-gauges referred to in Mr. McCord's communication, your committee would respectfully ask that the further consideration of the matter be postponed to the next or some subsequent meeting of the board, for the purpose of obtaining additional information in reference thereto."

The following was offered for the consideration of the board, which was read, and on motion referred to the committee of the whole:

Resolved, That the secretary of this board, who is hereby charged with such duty, request of the Hon. Mr. Washburn, chairman of the Committee of Commerce of the House of Representatives, to have that part of the 13th section of the supplementary steamboat bill, now before Congress, which refers to the appointment of an additional supervising inspector, stricken out, so that said section as amended shall read as follows:

SECTION 13. *And be it further enacted*, That the supervising inspector whose district shall embrace the Pacific coast of the United States, of which San Francisco is the principal port, shall not be under obligations to attend the meetings of the board oftener than once in three years, but shall, in the intervals thereof, communicate with the said board in writing, and in all his official acts and proceedings shall be governed by such rules and regulations as may from time to time be established by said board, and a certified copy of such rules and regulations, and all their proceedings, shall be forwarded to him by the secretary of said board. The compensation of such supervising inspector for the Pacific coast shall be three thousand dollars per annum.

Resolved, That in the event of the passage by Congress of the said supplementary steamboat bill, with the amendment recommended above, or if the substance of said 13th section, as thus amended, should be adopted by special enactment, then, in that case, the following alterations in the division of the supervising districts shall be made, and are hereby made and adopted, conditionally on the passage by Congress of the said section as above amended, or the substance thereof by special enactment, as already set forth; the said alterations in the division of the districts to take effect on the passage thereof by Congress.

First district—to embrace the western coast of the United States, and all the waters of the United States flowing into the Pacific.

Second district—to embrace all the coast and waters flowing into the Atlantic, between the bay of Passamaquoddy and Sandy Hook, in the State of New York.

Third district—to embrace the coast and all the waters flowing into the Atlantic, south and west of the second district, and north of Cape Sable.

Resolved, That the above districts be assigned as follows, viz:

First district, to William Burnett, of Boston, Massachusetts.

Second district, to Charles W. Copeland, of New York, N. Y.

Third district, to John S. Brown, of Baltimore, Maryland.

And that all other districts remain as heretofore established.

The following was read and adopted :

Resolved, That the secretary of this board be requested to address a letter of inquiry to the Hon. Secretary of the Treasury, to ascertain if a circular in regard to stamping of boiler iron, as requested by our action of April 14th, of this year, has been issued by him ; and if so, to request a copy of the same, that it may be communicated to the several inspectors.

On motion, the matter of Hoyt's water gauge, as presented to the board yesterday by Messrs. Hoyt & Co., was referred to the following committee, viz: Messrs. Embree, Walker, and Burnett. On motion, the board adjourned to 7 o'clock, p. m., this evening.

EVENING SESSION.

The board met at the hour appointed ; present, all the members in attendance.

The annexed preamble and resolutions were presented, read, and, on motion, adopted.

WHEREAS, many of the reports from local boards that have been presented at the present meeting are only the mere filling up of the "tabular statement" prepared by this board at the last annual meeting, without being accompanied by any written report, giving an account of the different occurrences in detail, thereby leaving the board entirely without information on many interesting matters, therefore, be it

Resolved, That all local boards be required hereafter, in their annual reports, to give to their supervising inspectors accounts in detail of all accidents to steamers of a serious nature that have occurred in their districts, together with the action of the board in each case. Also, to report all cases of suspension or revocation of licenses, and all cases of refusal of license, together with the reasons that have governed them in their action, and that the "tabular statement" be used as a table of recapitulation only.

After which, on motion, the board resolved itself into committee of the whole, (Mr. Lewis in the chair,) to consider the subjects referred to them ; whereupon the board took up the matter of re-districting the United States, in order more effectually to provide for a more thorough and efficient supervision of the Pacific coast. After a full investigation into the merits of the subject, the committee agreed to report the resolutions referred to them, with the addition of the following preamble :

Whereas, there have from time to time, many complaints been made of the ineffectual manner in which the steamboat law of 1852 has

been carried out and enforced upon the waters of the Pacific coast of the United States, and there have also been presented petitions from citizens requesting that this state of things may be remedied; this board has also been urged to correct the evils complained of, but has been powerless to do so, on account of the inadequate compensation provided by law; this board being desirous that the law should be properly enforced on the Pacific coast, seizes the present as being a propitious time to take the initiatory steps in the matter, for—1st, the steam commerce of the Pacific coast has increased to such an extent that it becomes imperative that it should be set off as a separate district, having the exclusive attention of one of the supervising inspectors; 2d, at the time the country was originally districted, there was little or no steam commerce on the Pacific coast, and it was supposed that the supervising inspector of the fourth district could readily give to the Pacific coast all the attention required. This state of things no longer exists, but, on the contrary, it is impossible that the inspector of the fourth district can give the necessary time and attention to that coast, without entirely neglecting other portions of his district.

With these facts before us, it appears to be imperative that we should at this time set off the Pacific coast as a separate district, to accomplish which it is necessary to re-district the country; it is also important that the inspector to whom is assigned the Pacific coast district should be thoroughly acquainted with the proceedings, rules, views and practice of this board, and also the local boards of the Atlantic section of the country, in order that the practice of the inspectors of the Pacific coast may conform thereto. To accomplish these objects, it is desirable that one of the present inspectors be transferred to that coast.

In the bill which is now before Congress, amending the steamboat law of 1852, is a provision for raising the salary of the supervising inspector of the Pacific coast to such a sum as will command the services of persons competent for the duties; and the inspector of the first district, who has long been connected with the board and is thoroughly acquainted with its rules and practice, has consented to accept the Pacific coast as his district. In case of the passage of said bill, we conceive it will be the readiest and most effectual method of attaining the objects enumerated to assign to him said Pacific coast as his district, and make such other changes in the districts as this transfer renders necessary or proper.

On motion, the committee rose and reported progress, when the board was called to order by the president *pro tem.*; when, on motion, the board adjourned until 11 o'clock, a.m., to-morrow.

THURSDAY, October 16—11 o'clock, a.m.

Board met pursuant to adjournment; present, all the members in attendance.

The minutes of proceedings of yesterday were read and approved. Petitions or memorials called for; none presented.

The unfinished business was taken up, when the preamble and resolutions looking to the re-districting of the country, so far as to provide for a supervising inspector for the Pacific coast, which was referred to the committee of the whole, and by them fully considered and reported back without amendment, were put upon their passage by the board, and were unanimously adopted.

The various committees, as called, reported progress.

The committee on precautions against accidents, also the compiling of regulations for the observance of local boards of inspectors in reference to fires, submitted their report as follows:

That the frequency of accidents to steamers by fire, some of which have been of the most appalling character, call upon inspectors to enforce the provisions of the law to guard against such accidents, in the most rigid manner; no certificate of inspection should be given, in any case whatever, until every part of the vessel is made as secure as possible against damage by fire. Frequent visits should be made by inspectors to all steamers arriving and departing at their different ports, and thorough examinations made to see if their equipments for safety, in all respects, are in conformity with their certificate of inspection; that the buckets, axes, hose, and pumps are all in good order and kept ready for use. And whenever a deficiency of such equipments be found, that a prosecution be instituted against the master, under the provisions of the 27th section of the act of 1852.

The second section of the act of 1852 provides, "that it shall be the duty of the inspectors of hulls of steamers, and the inspectors of boilers and engines, appointed under this act to examine and see that suitable and safe provisions be made throughout such vessel to guard against danger from fire, and no license or other papers, on any application, shall be granted if the provisions of this act for preventing fires are not complied with."

The rules established by this board at their different meetings, in relation to fires, will be found in the proceedings of supervising inspectors, as follows: 1st, page 9. That the boards of local inspectors be directed, in all cases where it is practicable, to suggest to owners of steamers the necessity of a steam pipe to carry steam into the holds of vessels in case of fire. 2d, page 25. On motion, the local inspectors were directed to again call the special attention of the owners of steamers to the importance of having, where practicable, a steam pipe from the boilers to convey steam into the hold, for the more effectual extinguishing of fire.

3d, page 30—"Resolved, That local boards shall be particular to require that the hose be either constantly connected to such pumps, or be placed in a convenient and conspicuous position, that it may be promptly attached thereto; and further, that the local boards shall examine, from time to time, the fire engine pumps and their attachments, and see that they are constantly kept in good order and efficient condition."

4th, page 32—"Resolved, That the local inspectors shall hereafter require all boats using high pressure boilers, when wood is used as fuel, to have sheet iron spark arrestors placed in such a manner as to prevent the sparks from the furnace being driven back alongside the boilers."

5th, page 81—"Resolved, That it shall be the duty of the engineers of all passenger steamers to keep their fire pumps, hose, attachments, and appurtenances in perfect condition for immediate use, and the local boards are hereby directed, in all cases, to see and know that said pumps are so kept by the engineers."

Your committee would recommend, as a further protection against fire, that the local inspectors be instructed to require the fire rooms of steamers that carry their boilers in the hold to be well and thoroughly lined with sheet iron or other metal, and, whenever practicable, in such manner as to leave a stratum of air to circulate between the wood work and the lining; and that they shall also require all wood work that is in any degree exposed to ignition from the heat of the boilers, smokepipes, or chimneys, of all steamers, to be well protected by sheet iron or other metal, in such manner as shall assure them that there will be no danger from fire from such a source.

We have evidence sufficient to warrant the belief that some of the most disastrous fires have occurred from the combustion of some chemical or other dangerous articles which have been secreted in packages, and shipped in a clandestine manner; in such cases, and in any other where fire originates in the hold of vessels, experience has shown that no means are so effectual in extinguishing it as blowing steam from the boilers into the hold, and we cannot too strongly urge the necessity of requiring, in all cases wherever practicable, pipes from the boilers to convey steam into the hold in case of fire.

Should all these precautions against fire be rigidly adhered to, and the law properly enforced, your committee would feel warranted in saying that very few of these appalling disasters would be heard of. We feel justified in saying this from the fact that several instances have come to our knowledge of fires having been prevented or extinguished by the fire apparatus required by law being in good condition and promptly resorted to at the first alarm.

Your committee would beg leave to report the following resolution:

Resolved, The local inspectors, before they give certificates of inspection, shall require, in all cases where boilers are carried in the hold of steamers, that the fire-rooms shall be thoroughly lined with sheet iron or other metal, and, wherever practicable, in such manner as to leave a stratum of air to circulate between the wood work and the lining. They shall also require all wood work that is in any degree exposed to ignition from the heat of the boilers, smokepipes, or chimneys, or any other heated surface, to be well protected by sheet iron or other metal, in such manner as will satisfy them that there will be no danger from such source. They shall also require, in all cases, that means be provided to convey steam from the boilers into the hold for the purpose of extinguishing fires when practicable.

When read, was on motion adopted; after which, on motion, the board adjourned to 4 p. m.

THURSDAY, October 16th—4 p. m.

The board met according to adjournment—present, all the members in attendance.

The committee on the matter of Thompson's graduating life-preserving seat, made the following report, which, on motion, was adopted:

Your committee, to whom was referred the matter of Thompson's life-preserving seat, have thoroughly examined the specimen seat exhibited to the board, and have ample evidence that its sustaining powers are equal to that required by our regulations, and this sustaining power continues unimpaired by use or exposure; it is not liable to injury either by neglect or careless usage. It is with facility attached to the person even when in the water, and, when attached, leaves the limbs entirely unincumbered, and free to be used for the act of swimming, or to give assistance to others.

We conceive that this life-preserving seat combines, in an eminent degree, all the requirements of a good and reliable life preserver with a useful piece of furniture, and that it complies fully with the requirements of the law.

The committee on the general report submitted the following, which was read and adopted:

BOARD OF SUPERVISING INSPECTORS OF STEAMBOATS,

Boston, October 16, 1856.

SIR: The board of supervising inspectors, now in session in this city, conformably with their action at former annual meetings, and believing that there is special propriety in its continuance, beg leave respectfully to lay before you the following general report of the action and proceedings of the several boards, both supervising and local, for the year ending September 30, 1856.

The steamboat law has now been in operation for nearly four years—a length of time in which it should reasonably be expected that some substantial benefits arising from its operation should become fully apparent; and we are happy to be able to state here, that the reports furnished to this board by the several local boards, as also our own observation and personal knowledge of the facts, show conclusively that safety to life on board steam vessels has been already secured to an extent beyond our most sanguine anticipation.

We are also convinced that the full advantages of this wise and humane law are not by any means as yet fully secured, but will only be gained when all comply cheerfully with its requirements. It is true that opposition to the law is daily decreasing, although something of this hostile feeling still exists with a certain class of persons, who are careless as to informing themselves of results, and either believe, or pretend to believe, that no safety to life can arise from a compliance. On the other hand, the inspectors are becoming, by constant practice, daily more familiar with their duties, while differences of opinion have been harmonized, by the action of this board, with marked beneficial effect.

We here insert a tabular statement, embracing the various matters and occurrences relating to steamers navigated under the act of Congress approved August 30, 1852, which have been acted upon, or have come to the notice of the several boards of local inspectors, for the year ending September 30, 1856.

A tabular statement embracing the various matters and occurrences relating to steamers navigated under the act of Congress approved August 30, 1852, which have been acted upon, or have come to the notice of the several boards of local inspectors, for the year ending October 1, 1856.

* Many have been refused upon first application that have subsequently received certificates upon complying with the requirements of law.

It will be observed that the table presented above is incomplete in many respects ; but in almost every district from which there are full returns it will appear, on comparison with reports of former years, that there is great improvement in regard to the safety of life on steam vessels.

We exceedingly regret that no report has been received from the fourth supervising district, probably on account of the death of our esteemed colleague, William E. Muir, of New Orleans, who was lost with the ill-fated steamer "Nautilus," on a passage from Galveston to New Orleans, while returning from the performance of his duties in that district, in company with Anderson Marsh, boiler inspector at New Orleans, who was also lost at the same time.

We give below a statement of the accidents referred to in the foregoing table, as occurring in the several districts, which is condensed from reports of the local inspectors.

First Supervising District.

But one accident of a serious nature has taken place in this district during the year. The steamer "Empire State," of Fall River, on the evening of July 26, while on her passage to New York, collapsed one of her steam chimneys, which resulted in the death of fourteen persons, by being scalded by the issuing steam. A large number of persons cognisant of the circumstances were examined in an investigation held by the local inspectors for the district of Boston and Charlestown, and through them the following facts were elicited : That, at the time of the accident, there was no excess of steam over that allowed to be carried by law, and that the water also was at the proper level. When the chimney collapsed, that portion of the plates which was forced from its position, was driven inward by the pressure, and with such force as to throw it entirely across the chimney in such a manner as to prevent the escape of the steam into the funnel, and compel it to seek an outlet through the furnace and blower channel. The discharge of steam from the chimney was so rapid that the vent thus furnished proved insufficient, and pressure accumulating within the blower channel, the doors were burst open, blowing one fireman, who happened to be in the fire-room at the time, overboard, and scalding a number of passengers and others on the main deck, who unfortunately were standing near. The fourteen persons who were either killed at the time, or have since died of their injuries, were mostly passengers. The boilers of this steamer were comparatively new, having been in use only about fifteen months ; the steam chimneys being even of a later date, having been in use only about two months. At the time these new chimneys were put into the boiler they were subjected to hydrostatic test to the amount of sixty pounds to the square inch, while the pressure at which the collapse took place did not exceed thirty-seven pounds. These boilers were of somewhat peculiar construction, having very short flues with furnaces at both ends ; and it was found in use that very hot fires had to be kept up to furnish a sufficient quantity of steam. From shortness of the flues, together with this circumstance, it was apparent that the interior

steam chimneys had frequently become excessively heated, whether when running or at the wharf is not known. This caused the sheets of the chimney to cripple or bulge inward, affecting the interior staying, and hence the weakening of the chimney in so short a time. These boilers were immediately discarded by the owners of the vessel, and new ones ordered of a different pattern.

The inspectors conclude their report of this case by saying that, after a very careful examination and consideration of the facts, they came to the following conclusion: "That there is no evidence that the engineers did not exercise their best skill and judgment in the management and working of these boilers, using all precautions they considered necessary for safety." One other accident, not resulting, however, in the loss of life, or injury to person, has occurred in this district. On the morning of July 5, the steamer "Menemon Sanford," of Bangor, was run ashore on Thatcher island, near Cape Ann, by which the vessel was damaged to the amount of \$30,000. It was proved on examination that the pilot, whose watch on deck it was at the time, had left the pilot-house at this dangerous part of his route. His place being left vacant at the wheel, the whole management of the vessel thus devolving upon an inexperienced wheelsman, who fell asleep at his post, the vessel being driven at full speed upon the rocks, without the engineer in charge having received notice from the pilot-house even to slow his engine. The examination of this case resulted in the revocation of the license of the pilot for neglect of duty.

Second Supervising District.

Local inspectors of the district of New York report, that during the year they have held four investigations, two of which only were of importance.

The first of these was in relation to the steamer "Shepherd Knapp," plying between New York and Newark, New Jersey, which was totally destroyed by fire in New York bay. Other passenger steamers and tug boats came to her assistance and took off the passengers—the captain of the "Knapp" being badly burned in his efforts to assist his passengers in getting on board of the other steamers. Her life boat was launched safely and brought along side, but was not used, as the captain rightly considered that the safety of his passengers would be best secured by resorting to the other steamers. He also made some judicious efforts to put out the fire, but finding that it would endanger the lives of those on board to persevere, he concluded to let the boat burn, and turn his whole attention to saving life. All the licensed officers on board, as far as they could discover, acted with skill and fidelity to their duties. It was fully ascertained that the fire did not originate from the boilers or furnaces, which were below deck, and far forward in the vessel. It was first discovered nearly under the paddle-wheel shaft, where a vice bench was located below deck; a gang of shop hands were at work on board of her nearly the whole night previous, and we can only suppose that the fire originated from spontaneous combustion of oily waste, or from a lamp left upset between the timbers, or in some other dangerous position. The

second important investigation was in reference to the sinking of the steamer "Knickerbocker," (a large night boat,) on the passage from Albany to New York, on the night of August 31st, of this year. When just below West Point, being under the charge of the second pilot and second engineer, she ran against the broken mast of a sunken sloop, her bottom being stove in three places thereby. The first pilot and engineer were immediately called, and the passengers awakened, great difficulty being experienced in getting them to leave their berths. The life-preservers were then put on, and all stood quietly awaiting orders. The bilge injections were turned on by the engineer to keep the vessel as free of water as possible, and preparations were made to lower boats and run the steamer on shore. In accordance with previous request, the pilot was notified by the engineer that the engine was about to stop, and the vessel was then grounded in the mouth of a small creek emptying into the Hudson. Owing to the low state of the tide, and the depth to which the boat had sunk on account of the leakage, only sixty feet of her hull was aground, the after end hanging over in deep water. Hawfers, with a chain and anchor, were now got out to try to hold her on the bank, the engine also being kept moving; and the passengers were put on board of a sloop which had been hailed after the snagging of the steamer. The hawsers and chain parting, the boat slid off into deep water, having by this time sunk to the promenade deck. After drifting some time in this condition, she rolled over; while lying in this latter position, the broken planks and timbers were repaired, and the vessel was, by means of powerful derricks, righted. Steam pumps were then put on board, the boat pumped out and towed to New York, where she has since been examined by the inspectors. She is a perfect wreck, with broken masts and hog frames, all the cabins on deck destroyed, and both boilers gone, they having dropped off her deck when she rolled over. As far as could be discovered, the captain and all the licensed officers acted with great coolness and skill, and it was supposed that all the passengers had been saved; but on righting the boat, the bodies of two deck passengers were found on deck amongst the freight, who must have been drowned after the boat slid off, having slept through all the noise and confusion. The life-preservers were universally put on, but fortunately there was no occasion to use them, and it is testified that the possession of a certain means of escape, as a last resort, had a great tendency to keep the passengers cool and collected, and lessen the confusion, which, on such occasions, usually prevents the efforts of those who have presence of mind, and know how to take proper steps either to repair a damage or obviate danger arising from accidents. There are three accidents by collision reported from this district: one between the inspected steamer "Metropolis" and the East river ferry-boat; another between a small tug-boat and a Sound steamer; and the third between a sloop and a steamer on the Hudson river. No lives were lost in any of these cases, and nothing worthy of report elicited, except in relation to the first of these accidents, in which the inspectors decided that the fault lay wholly with the ferry-boat. The collision very fortunately happened at an early hour in the morning, when there were only four or five persons on board the ferry-

boat; had it occurred at a later hour, the loss of life must have been fearful.

During the present year, also, the steamer "Crescent City," plying between New York and New Orleans, was wrecked on a reef in the Gulf of Mexico, owing, it has been stated, to the variation in compasses, and improper allowance for currents. As no pilot was employed on this steamer, she being in charge of the master, and as there was no complaint that any of the licensed engineers were originally in fault, or failed in duty after the ship was stranded, and the accident moreover having occurred out of our district, the inspectors made no formal inquiry into the case, further than to obtain the facts alluded to above.

During this year, also, the steamer "Osprey," inspected in this district, was entirely destroyed by fire while lying at the wharf in Kingston, Jamaica—no lives were lost. Since the burning of this steamer, the inspectors report that the only person cognizant of the circumstances, whom they have seen, is one of the engineers, who was severely burned in his efforts to remove some combustible material from the place where the fire originated. She was burned at night, and, as far as our inquiries have progressed, no person injured, except the engineer in question.

The board at Philadelphia report, that on the 1st of December, 1855, a collision occurred on the Delaware river, opposite Red Bank, between the licensed steamer "Palmetto" and the steam-tug "Bird," by which the latter was sunk instantly, but was attended with no loss of life.

Upon thorough investigation, it was clearly shown that the collision was caused by the imprudence of those on board the "Bird" in attempting to cross the bow of the "Palmetto," and the licensed officers of the "Palmetto" were entirely exonerated.

On Sunday, June 8, 1856, the steam-chimney of the steamer "Edwin Forrest" collapsed, when the boat was on her passage up the Delaware river, and near Beverly.

The testimony, given at the investigation, establishes the fact that, at the time of the collapse, there was plenty of water in the boiler, and the pressure of steam was two or three pounds less than it had been within an hour previous to the accident; also, that at the time of the collapse, steam was blowing off from the safety-valve. The accident appears to have been caused by a gradual deterioration of the steam-chimney and its braces, and their gradual yielding under pressure until rupture finally took place.

By this accident, both engineers were slightly scalded, but no passengers were injured.

The local inspectors of this district report, "when steamboat collisions, coming under our official notice, have taken place in our district, they have been invariably with vessels not under the law, which parties have in most cases acknowledged themselves in fault, and paid damages more or less. We have never had a collision case between two vessels under the law."

In the Philadelphia district, there have been carried the present year, 1,659,802 passengers, and no passenger's life has been lost.

The estimate of property lost in the same district, by accident to passenger steamers, is two thousand dollars.

The following ocean steamers, built under contract with the United States, have been inspected, and are as follows :

Steamer Atlantic, tonnage.....	2,849
“ Baltic, “	2,723
“ Pacific, “	2,730
“ Geo. Law, “	2,141
“ Illinois, “	2,100
	<hr/>
	12,643
	<hr/>

We have to report the total loss of the steamer “Pacific,” of the Collins line, during her passage from Liverpool to New York, in the month of February last. She had on board 288 persons, including the crew, all of whom were lost. Not a trace of this vessel has been found, and the immediate cause of the accident is of course one of conjecture, but it is supposed she came in contact with an iceberg.

Third Supervising District.

From the returns made by the local boards, it would appear that five hundred thousand passengers have been carried by steamers within the last year in this supervising district, without the loss of a single life. One of the crew of the steamer “Samuel Berry,” which run ashore at night near the mouth of Cape Fear river, was lost in attempting to swim to the shore, refusing the assistance of a life-preserver, which was offered to him, which, if used, would doubtless have saved his life, as the balance of the crew and passengers were safely landed through the surf by the life-boats. On the Chesapeake bay one passenger was saved, who fell overboard from a steamer, by a marine life-seat. On the Chesapeake bay, also, two collisions have occurred—one between a steamer and schooner, and the other between two steamers, in a fog. No loss of life or serious damage to the vessels occurred in either of these cases.

In the Savannah district, five steamers have been burned while at their wharf or at anchor, occurring between last December and July of the present year. Loss estimated at \$170,000. No lives were lost by these accidents.

These losses by fire in this district cannot be attributed to a defect in the law, or a want of proper regulations adopted by the supervising inspectors—both being sufficient, if carefully observed and complied with.

Fifth Supervising District.

In this district, there have been ten boats burned at their landings in St. Louis and Memphis, one boat partly burned at St. Louis, and two boats burned in the district while on their voyages.

	Cargoes.	Hulls.
Loss.....	\$204,350	\$204,445
Loss by snags, &c.: 14 boats lost, 7 boats sunk and raised.....	238,750	285,104

One grounded, loss.....	1,000
Loss by ice: 3 boats lost, 26 boats injured..	109,345	11,500
	<u>553,445</u>	<u>503,049</u>
Loss this year, amount.....		\$1,056,494
Loss last year, amount.....		955,300
Loss in two years, amount.....		<u>2,011,994</u>

This enormous loss of property to which the district has been subjected, is a tax upon commerce which calls loudly for some remedy; but the remedy is not in the power of inspectors under the present law. The burnings of boats have principally taken place in port; this calls for police regulations, rather than any action on the part of the inspectors or the general government; yet inspectors may do much in seeing that hose, pumps, buckets, &c., are kept at all times in the order required.

Attention is called to the almost absolute necessity of having pipes to convey steam into the hold of boats, where it can be done without risking the lives of persons on board. An instance may here be noticed of the importance of this provision: The steamer "Nebraska," when about starting from port, with a full cargo, was discovered to be on fire in the hold; steam was immediately let in through a pipe, the crew kept up the fires, and kept the engine in motion to prevent the failing of the supply of steam. In this way the fire in the hold was kept under for five hours before it was extinguished. During part of the time the fire was so intense as to burn off some of the beams of the boat, and let a part of the deck fall in. The opening thus made was covered by a tarpaulin, which enabled the crew to save the boat from being wholly consumed.

Explosions and collisions have nearly ceased in this district. Sinking by snags and otherwise is on the increase. This may be owing, in part, to the extreme low water when the channels of the river cut out among stumps and logs that are unknown to pilots; until these be cleared out we can expect but little relief.

While we present this great loss of property, without being able to find a remedy under the law committed to our charge, we have the gratification of presenting a most favorable account of the increased safety to passengers on steamboats in the district. The returns of the number of passengers carried, and the number of lives lost, are as follows:

	Passengers carried.	Passengers lost.	Crews lost.
Last year.....	1,046,249	5	13
This year.....	468,442	1	11
Total.....	<u>1,514,691</u>	<u>6</u>	<u>24</u>

We make this statement and comparison to show the immense loss of property and the safety of life in this district.

It is an unusual state of affairs, and affects the great travelling, commercial, and steamboating interests of the country:

Sixth Supervising District.

On the 21st of December, 1855, the steamer "Charleston" was burnt near Golconda, Illinois, with nine hundred bales of cotton on board, from which the boat took fire, and resulted in the entire loss of the boat and cargo, and a reported loss of two or three persons, the truth of which there was no means to ascertain.

March 8th, a collision occurred between the steamers "Howard" and "Henry Lewis" at the head of Anderson's bar, (Ohio river.) The steamer "Lewis" sunk with a full cargo, and ten lives were lost.

June 12th, the steamer "Magnolia" was totally wrecked near the mouth of the canal, and one young man named Phillips, from Cincinnati, was missing, with two others—supposed to be drowned.

The above are all the accidents reported in which loss of life has occurred, and these are from burning or sinking of the boats—none having taken place from explosion or the escape of steam.

The loss of steamers in this district by fire, sinking, and from the ice, during the past year, will be found in the tabular statement accompanying this report.

Seventh Supervising District.

But one accident, attended with loss of life, has occurred to any passenger steamer in this district during the past year. The steamer "Metropolis" exploded a boiler in March last, by which accident the captain and ten others—crew and passengers—lost their lives. The boat was entirely new, built and inspected at Pittsburg; the boilers and machinery were made of the best materials, and were as perfect as possible in all respects; were furnished with the alloys used in Evans' Safety-Guard; had water gauges and steam gauges, and all the appliances to guard against danger, as required by the law. The boilers had been tested and inspected but a short time before the boat left her port, and were considered by the inspectors as good boilers as ever were put in a boat; and still, with all this guarantee of safety, the explosion took place before the boat had proceeded three hundred miles on her voyage. The matter was investigated by the inspectors at Cincinnati, and it was found that the cause of explosion was deficiency of water in the boilers, by which the exploded boiler became red-hot, and so much softened that the iron literally pulled apart, drawing it down to a thin edge at the place of separation. The boilers were of the kind that is in general use on the western waters, thirty-eight inches in diameter, with return flues; and the thickness of iron allowed a pressure, according to the standard furnished by law, of one hundred and thirty-two pounds per square inch. At the time of the explosion, according to the testimony, there was but one hundred and ten pounds pressure to the inch on the boilers. The en-

gineer was under the impression at the time, and for some time before the explosion took place, that the boilers were full of water. The captain and other officers of the boat, according to the testimony of the case, were of the same opinion. This deception in regard to the water was no doubt owing to the foaming of the same in the boilers, which is very unusual with boilers of that description, and very seldom occurs on the western waters.

When the engineer found the water flowing over into the engines, he took for granted that there was too much water in the boilers, and actually opened the blow-off valves to reduce the quantity, when, in fact, the boilers were already in a dangerous condition for want of water. It having been shown in the investigation that the vessel had been at a landing but a few minutes before the explosion, giving the engineer ample opportunity to have ascertained in what condition his water was while the boat was at rest, the engineer's license was revoked for inattention to duty in this particular, which should be one of the first and most important duties of an engineer.

Seven boats were lost by ice at the wharf at Cincinnati, but no loss of life occurred from these accidents. One boat was lost by fire whilst laying at the wharf at Wheeling. One boat was also lost by being run over a rock in the Ohio river, near Hanging Rock. No lives were lost.

Eighth Supervising District.

There have been in this district three collisions and two steamers burned. The first of these occurred on the evening of October 24, 1855, when the propeller "Manhattan" came in collision with the steamer "Dart," on the Detroit river, by which the "Dart" was but slightly damaged, and no lives lost.

On the night of the 21st of April last, four miles from the Gratiot light-house, on Lake Huron, the steamer "Northerner," of Cleveland, and the steamer "Forest Queen," of Detroit, came in collision, by which accident the "Northerner" became a total loss. The second engineer of the "Northerner" also lost his life.

On the evening of the 2d of June, the steamer "Empire City" came in collision with the steamer "Royal Arch," about thirty miles south of Galena, on the Mississippi river, sinking the latter in about eight feet of water; no lives lost. The "Effie Afton," on her passage through the railroad bridge at Rock island, in consequence of the rapid current at that place, (which runs through the bridge diagonally,) swung to the starboard against a pier, which is a standing part of said bridge, with such force that she became almost a complete wreck. The fire from the furnace and stove communicating to the wood-work of the boat, enveloped the sinking steamer in flames, and in thirty minutes this noble steamer was totally destroyed.

On the 24th of September, the steamer "Niagara" was burned on Lake Michigan, about five miles from Port Washington, on her passage from Collingwood to Chicago. The board at Chicago are now investigating into the cause of the fire, but as no report has been received, its origin is at present unknown. It is supposed from sixty to seventy lives were lost by this sad accident in this district.

Six boilers have been found defective upon the application of the hydrostatic pressure, one of which was condemned from further use.

There have been fifty-three lives saved by life-saving apparatus furnished in accordance with the law.

Ninth Supervising District.

There have been two accidents in this district causing loss of life: The first was the destruction of the "Northern Indiana," by fire, near the head of Lake Erie, off Point au Pelee, on the 17th July last. A full investigation was made by the local board at Buffalo, and after a careful examination of twenty-three persons, (including crew and passengers,) no satisfactory opinion as to the cause of the fire was arrived at. The boat was found to have been well equipped in every respect. The local board also investigated the conduct of the licensed officers on board at the time of the accident, and gave a decision, which being unsatisfactory to them, an appeal was taken to the supervising inspector, who has the case still before him. It appears from the testimony in this disaster, that there were twenty-five lives lost, including ten of the crew. The value of the boat was estimated at \$75,000.

The second disaster occurred on the 29th of July, being the destruction of the steamer "John Jay" by fire. This steamer was one of small size, running as a passenger boat on Lake George, between the ports of Ticonderoga and Caldwell, a distance of thirty-six miles. She had on board at the time of the disaster some sixty or seventy passengers, five of whom were lost. A careful inquiry was made by the local board of that district for the purpose of ascertaining the cause of the fire, and it appears from the testimony that the boat was fully equipped as the law directs, and that every effort was made to save the lives of all on board. The evidence conclusively shows that the fire originated by a recoil or back draught in the furnace, caused by the eddying of a sudden squall of wind over a high bluff of rocks under which the boat was running. The board came to the conclusion that no blame could be attached to the officers of the boat under the circumstances.

The propeller "Paugasset" was burned on the 23d of August while lying at the wharf at Dunkirk; the fire took place in the night, and was supposed to have caught under the furnace. There was no cargo or passengers on board at the time, so that the vessel was the only loss. Inquiries were instituted by the local board, and it appeared that no blame attached to any one belonging to the vessel. The value of the boat is estimated at \$20,000. There have been five collisions in this district:

1st. May 9th, propeller "Jersey City" and steamer "Minnesota," both passenger boats. Undergoing investigation.

2d. May 30th, propeller "Baltic" and schooner "Cincinnati." The cause of this accident could not be satisfactorily ascertained.

3d. August 29th, steamer "Crescent City" and schooner "P. P. Pratt." No decision has as yet been given in this case, as some of the witnesses are out of the State.

4th. On the first of September, the inspected propeller "Dunkirk"

and propeller "Falcon," (uninspected.) Investigation in this case showed that the collision was caused by an imperfection in the green light used on board the propeller "Dunkirk," causing it to show as a white light at a little distance, thereby misleading the captain of the "Falcon" as to the course the "Dunkirk" was running. It was satisfactorily shown that the captain of the "Dunkirk" was not aware of the imperfection in his green light; therefore no penalty was imposed.

5th. September 5th, propeller "Queen of the Lakes" came in contact with a scow near "Put-in Bay." This matter was investigated; and it being evident that the fault lay with those having charge of the scow, the case was dismissed. No person was injured by this accident, and the value of the scow was estimated at \$1,200.

Many of the accidents described in the foregoing reports from the several districts are not given so much in detail as could have been desired. It is reasonable to expect, however, that, as inspectors grow by practice more and more familiar with their duties under the law, the time actually employed in the examinations of steamers and cases of infraction will be much lessened thereby; when they will be enabled in all cases to present reports that in this respect will be complete and satisfactory.

In the annual reports made to you by this board for the years 1853, 1854, and 1855, suggestions were made in reference to the necessity of a supplementary act being passed by Congress to enable the inspectors more readily and efficiently to carry out the provisions of the steamboat law of August 30, 1852. Such a supplementary act is now before Congress, and embodies all that will be required, in our judgment, to insure the attainment of the objects contemplated by the original enactment.

As much that might be said here with regard to the general operation of the law would be a mere repetition of that part of our previous reports which has had reference to this matter, we would not trespass upon your time and attention by such a reiteration, further than to say: that the effects which have followed its proper enforcement are of the most encouraging character, showing that even where in some districts, from many conspiring circumstances, the loss of property has been very great, yet, comparatively with former years, an extremely small loss of life has resulted.

We are pleased to be able to say, also, that the adoption by this board, at its annual meeting held at Detroit in 1854, of the signal by whistle, instead of using the bell, has been of the most signal benefit, having been attended with the most complete success; so much so, that scarcely a collision between passenger steamers has occurred the past year on the western rivers; explosions also on these waters are now hardly known.

In closing, we would simply express the hope that for the purpose of more completely attaining the objects contemplated by the steamboat law of August, 1852, the amendatory bill now before Congress may be passed at an early day.

Hon. JAMES GUTHRIE,
Secretary of the Treasury.

William Burnett, chairman of committee on signal-lights and pilot rules, submitted the following, which was adopted :

As it is probable that a special meeting of this board will soon be called, in case of the passage of the bill amending the steamboat law, to review all the regulations established by them, and to modify and add to them as may be necessary to the carrying properly into execution the provisions of such amendatory bill, your committee on signal-lights would ask that their report be referred back to them, and that they be permitted to defer presenting the same until the next meeting.

The following was offered, and, on motion, adopted :

Resolved, That the next annual meeting of the board be held in Louisville, Kentucky, on the 8th October, 1857.

Resolved, That William Burnett, supervising inspector of the first district, be and he is hereby directed to pay bills for room-rent, stationery, and the services of a clerk at the present meeting, and forward the account to the department for settlement.

After taking a review of the entire proceedings of the present session, on motion, the board adjourned *sine die*.

No. 94.

TREASURY DEPARTMENT, *July 3, 1854.*

SIR: I have had the honor to receive your letter of the 21st ultimo, enclosing, on behalf of the Committee on Commerce, various applications, which you state are pending before the committee, for appropriation for the construction of buildings to accommodate the officers of the customs at the several places mentioned, and of the judiciary and steamboat inspectors at some of said places; and you add, that the committee are anxious to obtain any information in the possession of the department bearing upon the several applications, with such recommendations as may be thought advisable.

In order to comply with the object of your letter, I have caused a table to be constructed, which is herewith enclosed, showing the following particulars in respect to each of the places for which a building is asked, to wit:

1. The accommodations required, whether for officers of the customs and post office alone, or for the courts and steamboat inspectors in addition.
2. The rents paid for the accommodation of these several establishments.
3. The number of vessels built in 1853.
4. The tonnage of vessels built in 1853.
5. The aggregate tonnage of the district in 1853.
6. The exports in 1853.
7. The imports in 1853.
8. The revenue in 1853.
9. The number of persons employed in the custom-house.
10. The post office revenue.

11. The number of persons employed in the post office.
12. The number of supervising and local inspectors of steamboats.
13. The population of each of said cities or towns, by the census of 1853.

These statistics comprehend all the information in possession of the department which appears to it to bear upon the respective applications.

On the 15th April last, I transmitted to you a plan of a medium-sized building, to be constructed of stone, and estimated to cost, if of two stories only, for the accommodation of the custom-house and post office, \$66,000; and if of three stories, for the accommodation of the courts in addition, to cost \$88,000. I now enclose a plan of a minimum sized building, to be constructed of brick, of two stories, to accommodate the custom-house and post office, and estimated to cost \$10,000. Both these plans and estimates may be modified in size with pro rata cost, and both contemplate fire-proof buildings, with iron floors, laid on iron beams, iron roof, shutters, sills, &c.

The cost of ground, where the government does not own it, must be an addition to these estimates, and cannot be reduced to as much certainty; and there must be an addition, say of ten per cent., to cover compensation of architect and superintendent, advertising, &c.

There are now in the United States 129 ports of entry, and ports of delivery having the authority of ports of entry. Of this number, custom-houses have been constructed at twenty-five ports, custom-houses are in progress at eleven ports, and custom-houses are about to be commenced under appropriations heretofore made at four ports, leaving eighty-nine ports unprovided for.

Having carefully considered the question of authorizing, in districts not yet provided for, the erection of permanent and substantial buildings for these public establishments, I am clearly of opinion that such provision ought to be extended for the following reasons:

1. For the better accommodation of the officers, and the better performance and despatch of the duties, and for the security and preservation of the public records and archives.

2. For the saving of the rents, otherwise to be paid, which, as the treasury spare the outlay, should be its policy even more emphatically than an individual similarly circumstanced, as its interests are more enduring than those of the latter.

3. From regard to that rule of equity towards the various portions and districts of the country which is a necessary principle of just government.

For these reasons, I am of opinion that the government should proceed, whilst its means continue to be abundant, to supply suitable buildings for the accommodation of the public business of the ports not provided for; selecting the points at which they appear to be most needed, and providing annually for as many as can, for the time, be conveniently constructed. And in expressing this opinion, I see no reason to except, from the eventual provision, ports at which but little revenue is collected, and where a mainly preventative force is maintained. The revenue collected may, to some extent, regulate the size of the building to be provided; but to leave such points without rev-

venue officers (requiring such accommodation) would be to invite illicit imports to such points to the prejudice of the revenue at large.

Of the places mentioned in the table, (looking to the public service, and having a due regard to the principle of distribution,) I am of opinion that buildings should be erected at Ellsworth and Portland, Maine, (the latter to supply the place of the custom-house lately destroyed by fire;) at Gloucester, Massachusetts; New Haven, Connecticut; Buffalo, New York; Wheeling, Virginia; Toledo, Ohio; Detroit, Michigan; and Milwaukee, Wisconsin. Ellsworth will admit of a custom-house of the minimum size; Gloucester, Toledo, and Milwaukee, of a custom-house, on that plan enlarged, to cost, say \$40,000 each; and New Haven, Buffalo, Wheeling, and Detroit, at each of which there are courts and steamboat inspectors, of a medium sized building, according to the plan heretofore sent, of three stories, to cost \$88,000 each. For the Portland custom-house, a plan and estimate have already been submitted to the Committee of Commerce of the Senate, as you will perceive by the enclosed copy of my letter to the Hon. H. Hamlin, chairman thereof.

I respectfully recommend, if appropriations are made for these buildings, that the buildings be limited to the sums which are named, or are deemed proper, but that provision be also made for the purchase of sites, and ten per cent. for incidental expenses.

I am, respectfully,

JAMES GUTHRIE,
Secretary of the Treasury.

Hon. T. J. D. FULLER,
*Chairman of Committee on Commerce,
House of Representatives.*

No. 95.

TREASURY DEPARTMENT, *July 22, 1856.*

SIR: I have the honor to recommend additional legislation with a view of more effectually preventing the undervaluation of merchandise procured otherwise than by purchase and imported into the United States.

The tariff act of 30th August, 1842, levied an additional duty of forty per cent. of the regular rate on imported merchandise found by appraisement to have been undervalued in the invoice by ten per cent. or more.

It has been always held by this department that the additional duty was leviable on all imports found undervalued to that extent, whether belonging to the manufacturer, producer, or to a party who acquires the same by purchase or otherwise.

The tariff act of 1846 levies an additional duty of twenty per cent. for undervaluation, but expressly limits it to merchandise procured by actual purchase.

The department has always held that the act of 1846 repeals the

act of 1842 in the particulars, and to the extent only, in which their provisions conflict; and as the act of 1846 expressly provides for the undervaluation of purchased goods only, goods procured otherwise than by purchase were still, under the act of 1842, liable for undervaluation to the addition of forty per cent. on the regular rate.

The law, as thus understood, this department has endeavored to enforce. Several of the circuit courts of the United States have, in cases adjudicated by them, taken a different view of the provisions of the act of 1842, and have decided that the provisions respecting the additional duty for undervaluation in that act, as well as the provisions of the act of 1846 on the same subject, relate solely to purchased merchandise; and although the Supreme Court of the United States have not directly decided that question, similar views of the law have been intimated in one of the opinions of that tribunal.

As the law now stands, therefore, upon the construction which the courts appear inclined to give to it, the foreign manufacturer or producer is not subject to an additional duty for undervaluation; that the importer who purchases in the foreign market, and imports into the United States, is. The foreign manufacturer or producer, in any experiments he may choose to try upon the public revenue by undervaluations, runs no such risk of additional duty as that to which his competitor, the American merchant, who purchases his imports abroad, is exposed. This discrimination against the domestic importer in favor of the foreign is as impolitic as it is unjust.

Foreign manufacturers or producers, by establishing partners or agents in this connexion, importing and entering merchandise on their own account, and then making sales in pursuance of orders previous or subsequent to the entry, can thus supply our market with their own products without being subjected to any adequate check against undervaluation. For, while they are not subject to the additional duty, in such cases, to which the domestic importer is liable, nor, indeed, to any additional duty, upon the construction of the law, which seems to be favored by the courts, they could be reached only by forfeiture of their goods in cases in which the badge of fraud is so clear that the United States would have no difficulty in showing that fact, whether, even in such cases, the courts would sustain proceedings for a forfeiture of the imports of a manufacturer or producer under the 66th section of the general collection law of the 2d March, 1799, the only provision which seems at all applicable to the case, may be questioned.

The department has no doubt that the 66th section of the act of 1799 is applicable to all imports; and it has so repeatedly decided, whenever a case has been presented for its action involving that question.

It is proper, however, to remark that, in a case tried in the circuit court of the United States for the first circuit, the learned judge, (Justice Story,) although the point was not made in the case, nor judicially decided, expressed, nevertheless, a very strong doubt whether the 66th section of the act of 2d March, 1799, could be held to apply to other than purchased goods; the terms "actual cost" being, in his opinion, applicable only to a case of purchase. (See case of Al-

fonso *vs.* United States, 2 Story, p. 421.) I am not aware to what extent this *dictum* would be sustained by the courts, should the department be thrown exclusively upon the provisions of the 66th section of the act of 1799, to prevent undervaluations of merchandise imported by and belonging to the manufacturers thereof, or imports procured otherwise than by purchase. I refer to the doubt thus expressed as to the construction of that section only as still further showing the expediency of additional legislation to put all imports on the same footing, in case of undervaluation, and to enable this department and the courts, by some clear and adequate provision of law, to punish all attempts to enter at undervalued invoices, whether made by the purchaser, manufacturer, or producer.

I deem it necessary only further to suggest that a statute of law that subjects to the burden of additional duties for undervaluation a citizen of the United States who purchases merchandise in the foreign market for sale and consumption in the United States, and exempts from such duties the foreign manufacturer and producer, who send the same description of articles for the same purpose to our markets, and who reside beyond our jurisdiction, and can be brought only to a limited extent within the control of our laws for the punishment of fraudulent importations, ought to be corrected; and, with that view, I respectfully recommend an amendment of the eight section of the tariff act of 30th July, 1846. The only changes proposed in the section, as it now stands, are: 1st, to add, in the second line, after the words "actually purchased," the words "*or produced otherwise than by purchase;*" and, 2d, to strike out, in the fifth line, the words "or in which the goods shall have been originally manufactured or produced, as the case may be."

The first amendment will bring the manufacturer and producer under the operation of the law as well as the purchaser, and put them all under the same penalty for undervaluation. The second amendment is rendered necessary by the fact that the appraisement act of 3d March, 1851, providing that imports shall be appraised at their value in the principal markets of the country whence imported, has been held by this department, and decided by the Supreme Court of the United States, in the recent case of *Wm. Stairs et al. vs. C. H. Peaslee*, to repeal the provision proposed to be stricken from the eighth section of the act of 1846 by the second amendment.

I enclose the section as it now stands, and the draft of the section as proposed to be amended; and, for the reasons stated in this communication, earnestly recommend the enactment of the latter as necessary, in my judgment, both for the protection of the honest merchant and the interests of the public revenue.

I am, sir, respectfully, your obedient servant,

JAMES GUTHRIE,

Secretary of the Treasury.

Hon. N. P. BANKS, Jr.,

Speaker House of Representatives, Washington, D. C.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the eighth section of the act approved July 30, 1846, and entitled "An act reducing the duty on imports, and for other purposes," be amended as follows:

SECTION 8. *And be it further enacted,* That it shall be lawful for the owner, consignee, or agent of imports which have been actually purchased, or procured, otherwise than by purchase, on entry of the same, to make such addition in the entry to the cost or value given, as, in his opinion, may raise the same to the true market value of such imports in the principal markets of the country whence the importation shall have been made; and to add thereto all costs and charges, which, under existing laws, would form part of the true value at the port where the same may be entered, upon which the duties should be assessed. And it shall be the duty of the collector, within whose district the same may be imported or entered, to cause the dutiable value of such imports to be appraised, estimated, and ascertained, in accordance with the provisions of existing laws; and if the appraised value thereof shall exceed, by ten per centum or more, the value so declared on the entry, then, in addition to the duties imposed by law on the same, there shall be levied, collected, and paid a duty of twenty per centum ad valorem on such appraised value: *Provided, nevertheless,* That under no circumstances shall the duty be assessed upon an amount less than the invoice value, any law of Congress to the contrary notwithstanding.

No. 96.

TREASURY DEPARTMENT,
June 7, 1856.

SIR: Understanding that the attention of the committee having in charge the subject of proposed changes in the existing tariff of duties has been called to, and they have had under consideration, the propriety of adopting a home valuation for the assessment of duties on imports, instead of that now in force, I feel it my duty to submit a few suggestions on that subject.

The propriety of adopting a home valuation for the assessment of *ad valorem* duties has been often heretofore suggested, and has been very carefully considered by the department. Such, however, have been the acknowledged difficulties of giving it practical effect, without infringing upon the just rights of individuals and endangering the security of the public revenue, that Congress has never adopted it, except in the act of 2d of March, 1833, commonly called the compromise act. That act, so far as the home valuation was concerned, went into effect on the 30th of June, 1842, and was superseded on the 30th of August following by the tariff act of that date, which abandoned the provisions of the former act requiring duties on imported merchandise to be assessed upon the "value thereof at the port where

the same shall have been entered," and substituted therefor the existing mode of assessment.

In the financial report of one of my predecessors, the Hon. W. Forward, under date of the 21st December, 1841, while the readjustment of the tariff, on the approaching termination of the compromise reductions, was under consideration, expressed his decided conviction of the impracticability of a home valuation. I am not aware that any of my predecessors have ever entertained any other opinion.

The nearest approximation to a home valuation which Congress has hitherto deemed safe, is that established by the act of 1842, as amended by the act of 3d March, 1851. The general market value of the merchandise at the time of leaving the foreign ports, with the costs and charges of purchase and shipment, is deemed and taken to be its value, on arrival in the United States, for the assessment of duties.

The valuation, in our own ports, as now proposed, would embrace, in addition to the value in the foreign market and the cost of shipment to the United States, freight, insurance, duty paid to the United States, and the profits of the importer; those items entering as elements into the prices of imported merchandise in the markets of the United States.

The items of freight, insurance, duty, and profits, constitute, substantially, therefore, the difference in the elements between a valuation in our own and in foreign markets.

I presume it will be universally acknowledged that some of these items, at least, are not the proper subjects of taxation. The duty, for instance, or that portion of the price of merchandise in our markets which represents the duty paid on the foreign imports. Under the home valuation, which was on trial for two months in 1842, a proper reduction was attempted to be made on that account; such a value being adopted, as, where increased by the amount of the duty, would equal the wholesale price at the port. It was found necessary, therefore, to exclude the duty. It constituted no part of the price paid by the importer for the merchandise, nor any cost he had incurred in reference to its purchase, shipment, or transportation; and why should not the profits of the merchant also be put on the same footing with the duty, and be excluded as an element of dutiable value? They constitute no part of the price the importer paid for his merchandise, nor any cost or charge incurred by him in its purchase, shipment, or transportation. They are contingent, conjectural—what he may or may not receive—and are, therefore, properly to be excluded.

The only remaining elements which enter into the home value, and are not included in the foreign value, are freight and insurance.

Freight and insurance vary as the port at which the goods are entered is more or less remote from the foreign port of shipment, and the difficulties and perils of the navigation.

The prices of the same description of merchandise, imported from the same foreign port at the Atlantic and Pacific ports of the United States, would differ from the different rates of freight and insurance. Importers at those ports would, by operation of the law itself, be subjected to different amounts of duties on the same description and

quantity of merchandise purchased at the same value in the foreign market, and leaving the foreign port at the same date. Of course, these items, the assessment of duties on which would levy an unequal tax upon importers residing in different sections of the Union, must be excluded from the valuation for duties.

The exclusion of these several items of freight, insurance duty, and profit, would leave the valuation for duties as the law now prescribes, to wit: the wholesale price or general market value in the foreign country, and the cost and charges of purchase and shipment.

The assessment of duties upon the value of the merchandise at the port of entry would induce and facilitate evasions of the legal duty. It would be impossible, by the exercise of any power now vested in this department, to protect the revenue from combinations to depress prices on the periods of importation, and to import through the smaller ports, where there is little or no demand for the merchandise, and where, by fictitious sales, such wholesale prices might be established to regulate the assessments; as would best suit the interests of the importer. It has been with great difficulty that the department has been able, even under our present laws, to maintain a fair system of appraisement at the minor ports, so that merchandise might not be entered at those ports, at a less valuation than at the principal ones to which it was destined for a market. What must, then, be the result when the prices ruling at the port will determine the valuation? By concerted arrangements a fictitious market value of almost every description of imports might be established at the minor ports, at which merchandise might be entered, duties assessed, and then transported, in bond or otherwise, to the great marts for which it was originally destined, and at which the prices would be so much in advance of the value at the original ports of entry as to furnish ample profits to the importer, notwithstanding the increased expense of transportation. Against such combinations, it would be impossible, in my opinion, to protect the honest importer, and secure to the Treasury its just dues, without the enforcement of such a complicated, vexatious, and expensive regulation, as would in itself counterbalance any advantage supposed likely to accrue to the United States by the establishment of a home valuation.

Not only would the revenue be defrauded, but trade forced out of the hands of the honest importer, who could not sustain himself in the market in competition with those who procured their goods at low assessments by circuitous importations and fraudulent or fictitious sales. He must either abandon the business or adopt the practice of his competitors. No government should adopt a system that will put a man in any honest pursuit to a choice between such alternatives.

But a decisive objection to the assessment of duties upon the prices prevailing at the port at which the goods are imported, is the inevitable effect of such a regulation to impair that equality among the citizens of different States which the constitution expressly enjoins. Prices at the several ports must differ with the cost of transportation from the foreign country of shipment and rates of insurance. Merchandises, for instance, imported from France or England into ports on the Atlantic and Pacific coasts of the United States, would differ.

Assessing the duties on the valuation prevailing at the port of entry, importers would necessarily be subjected, as they resided near or remote from the foreign country of shipment, to different amounts of duties on merchandise of the same description, and of the same original cost. Thus a preference is given, by a revenue law, to the ports in one State over the ports in another, notwithstanding the express constitutional prohibition. Nor is the objection weakened by the fact that the regulation does not, in terms, prescribe the inequality, while such is its inevitable result. As to all importations from countries this side of the Cape of Good Hope, it would operate to the extent of the difference in the prices, and consequent amount of duty, as a discrimination against the ports on the Pacific, and in favor of the ports on the Atlantic.

It has been the general policy of Congress—mindful of this constitutional provision—to levy *ad valorem* duties only on such elements entering into the value of imported merchandise, as, in respect to which, every importer of the same description of merchandise from the same country, of the same quality and quantity, exported at the same time, would stand on a perfect equality, and be subjected to the same amount of taxation, in whatever port of the Union the importer might reside. Hence, freight from the foreign port of shipment, and marine insurance, which vary with the proximity or remoteness of the American port of importation in reference to the foreign markets and the perils of the sea, have not been subjected to duty.

Under the present system, the wholesale price, or general market value of the merchandise at the date of exportation from the foreign port, together with certain shipping and other charges, constitute the value on which duties are assessed. Under this provision, if fairly and intelligently applied, the duty levied on importers, at whatever ports within the United States they may reside, on the entry by them of merchandise of the same description, quality, and quantity, exported at the same time from the same country, would be just and equal, and no preference would be given to an importer residing in one section of the Union over another residing in a different section.

To ascertain this value, and these costs and charges, the importer is required to produce the original invoice of the merchandise, supported by his oath. The appraisers, who ascertain the dutiable value on the entry, by printed prices current, commercial circulars, manufacturers' list of prices, and sometimes by consular communications from the country of shipment, or inspection of the invoices of other importers at their own and other ports—from some or all of these, they are enabled to ascertain the fact, with a reasonable certainty, (the only fact they are obliged to ascertain,) at what price the merchandise in question was generally selling for in the foreign market at the date of exportation. If the article comes from a country from which importations are rare, and in regard to the market values of which the appraisers have no information, other than the invoice, they are justified in taking the invoice value, supported by the declaration and oath of the importer, as reliable evidence of the general market value of the article in the country of exportation, upon the presumption that, in the absence of proof to the contrary, the

purchaser pays the price which the article is generally selling for in the foreign market. Such cases are, however, extremely rare; and when they do occur, information as to current foreign prices of similar merchandise is usually obtained from other ports where such importations are more frequent, as a guide to the appraisers.

I have thus far proceeded on the presumption that the prices ruling at the port of importation would, under the proposed system, determine the valuation. Such was the provision in the brief trial of the home valuation made in 1842. If, however, the valuation in the principal markets of the United States be assumed as the criterion of dutiable value, we shall have reason to apprehend the same combinations to depress prices, and establish fictitious market values by feigned or fraudulent sales, and the same inequality of taxation between different sections of the Union, as under the system of assessment at the market value at the port of importation. If a principal market on the Pacific is to regulate the assessments of imports there, and principal markets on the Atlantic are to regulate assessments at Atlantic ports, we shall then have two different standards of dutiable value, and a revenue regulation which, in the language of the constitutional prohibition, gives a preference to the ports in one State over those of another. If, on the other hand, the principal Atlantic ports are to govern the valuation, wherever the import takes place, no assessment of duties nor delivery of merchandise to importers could be made until such value was duly ascertained; and when the importation takes place on the Pacific, and the principal market for the article is on the Atlantic, or the reverse, the entry must be suspended, and merchandise withheld from the owner, until the valuation at the principal port is duly ascertained. In view of the delay which must necessarily occur before the information could be obtained, it is obvious that such a system would be utterly impracticable. If a time previously to the importation be selected at which the market value in the United States is to be taken—say the date of exportation from the foreign port—and (what would seem a necessary limitation to prevent evasion of duties) that the dutiable value shall not be less than the wholesale price in the foreign market, and never less than cost, then we come to the present system, with the additional labor and perplexity of ascertaining the wholesale value in this country as well as abroad, and gain only the duty on freight and insurance, profits of the importers, and duty, if duty be not deducted. Such a system does not obviate but increases the difficulties to which an ad-valorem system is subjected, and results in giving only a slight increase of dutiable value not needed for purposes of revenue, while it will augment the labor of appraisers, impair the simplicity of the system, and expose the revenue to new hazards at home as well as abroad, from which it is to be feared that it will be found difficult, if not impossible, successfully to guard it.

Upon a careful examination of the whole subject, I find my convictions strengthened that it would be unwise, if not impracticable, to

substitute a home valuation for the system now in force for the assessment of ad-valorem duties.

I have the honor to be your obedient servant,

JAMES GUTHRIE,

Secretary of the Treasury.

Hon. L. D. CAMPBELL,

*Chairman of Committee of Ways and Means,
House of Representatives.*

No. 97.

TREASURY DEPARTMENT, November 30, 1855.

SIR: Alfred Greenleaf, having been appointed navy agent in the city of Washington, is entitled, under the act of Congress establishing the office, to a commission of two per cent. on all sums disbursed by him under the orders of the Secretary of the Navy, provided the amount does not exceed \$2,000 per annum, but extended and limited by the act of 3d March, 1855, to \$3,000. Mr. Greenleaf having also received the appointment of navy pension agent in Washington, claims a commission of two per cent. on sums disbursed by him as pension agent, not to exceed \$1,000, in addition to which he is entitled to receive as navy agent. This claim of commission as pension agent is under regulation of the Secretary of the Interior, allowing a compensation not exceeding two per cent. on the amount disbursed, the power being vested in the Secretary to make such regulation.

The proviso to the appropriation for Richard Rush, in the appropriation act for civil and diplomatic expenses for the year 1851, is "that hereafter the proper accounting officers of the treasury, or other pay officers of the United States, shall, in no case, allow or pay to one individual the salary of two different offices on account of having performed the duties thereof at the same time." Mr. Greenleaf filling the office of navy agent, as such, is entitled to the compensation given by law to the person filling that office, and if he fills the office of navy pension agent at the same time, and discharges the duties of both offices, the accounting officers of the treasury, or other pay officers of the United States, are prohibited from allowing him pay but for one of said offices. Mr. Greenleaf has the right to select from which of the offices he will receive the pay; but if he declines the selection, the accounting officers should select the one giving him the highest compensation, and reject compensation for the other office, and settle the account as though he only filled the office giving the highest compensation.

The compensation of navy agent having been fixed by Congress, and that of navy pension agent by the Secretary of the Interior, under authority of law, places the compensation of both officers on the same basis, and the duty of the accounting officers to reject the compensation to one of these offices is the same as though Congress had in express terms fixed the salary or compensation.

The fact that the navy pensions are paid out of a *quasi* trust fund, in no way interferes with the prohibition that one officer shall not receive two salaries.

The fund is used by act of Congress, out of the pay given by law, to all who come under the law entitled to pensions out of it, and the officers to pay these pensions are created under an act of Congress, and are officers of the United States, and there is nothing in the act of 1850 distinguishing one United States officer from another.

You will consider this settled construction of the act in all cases where the salaries for two offices are claimed by any one individual, on account of holding and performing the services of two offices, and the act of 1842 as prohibiting any officer from receiving compensation for the performance of any services for the United States, or any officer of the government, other than those properly belonging to this office.

I am, very respectfully,

JAMES GUTHRIE,
Secretary of the Treasury.

A. O. DAYTON, Esq.,
Fourth Auditor of the Treasury.

No. 98.

TREASURY DEPARTMENT,
January 4, 1856.

SIR: Under the laws regulating the salaries of United States officers and employés, no additional compensation, other than the fixed salary or per diem, can be allowed to the officer or employé for any other services rendered to the United States.

The whole time of the officer or employé is compensated for by the salary or per diem. The official hours are only declared as a matter of convenience, and do not exempt the officer or employé from being required to perform duties out of office hours when his chief and the exigency of the service require it. It is said that, considering the office hours to be a day, a practice has grown up, under the action of the Coast Survey, to pay for additional hours of the same day at the rate of the per diem, thus enabling the employé to receive pay for more than six days in the week, and that it has received the sanction of the accounting officers of the treasury. If the practice be so in the office of the Coast Survey, or anywhere else, it is against law, and without the sanction of the department, and must be corrected. If done for one class of employés and officials, it would soon be claimed for all, and in practice would demoralize the whole corps.

You will please communicate this decision to the several auditors whose accounts are revised by you.

I am, very respectfully,

JAMES GUTHRIE,
Secretary of the Treasury.

H. J. ANDERSON, Esq.,
Commissioner of Customs.

(Similar letters were addressed, on the same date, to the First and Second Comptrollers of the Treasury.)

No. 99.

TREASURY DEPARTMENT,
January 23, 1856.

SIR: After a reconsideration of the subject of compensating employés by the day in the Coast Survey, I feel satisfied that, under existing laws, they cannot receive compensation for extra hours. The employment by the day covers all the twenty-four hours that can be given to business within the meaning of those laws.

To remove the apprehended inconvenience from the enforcement of this construction, you are authorized to make special contracts with those whose services you require in the business for which you have paid for extra hours, and compensate them by the hour, and send the contracts for my approval, which, being approved by the department, upon the proper certificate of the term of service, will authorize payment. As the existing laws were not in force when the practice of paying for extra-hours commenced, there was no illegality in it; and, as it then had the sanction of the head of the department, so far as the superintendent is concerned, he was without blame, and none was intended to be imputed in announcing the future action of the department in the enforcement of the law.

Very respectfully,

JAMES GUTHRIE,
Secretary of the Treasury.

Prof. A. D. BACHE,
Superintendent Coast Survey.

100.

TREASURY DEPARTMENT,
April 17, 1856.

SIR: I have received your letter of the 4th instant, enclosing an extract from the rules of the Senate, providing for the appointment of a Committee on Retrenchment in the expenditures of the government, and you desire me, should my experience or knowledge of the business of this department enable me to point out any objects or expenditures which can be curtailed or retrenched without detriment to the public service, to do so, and also to suggest any improvement in the mode of transacting the public business.

Retrenchment in the expenses of the government, and improvement in the mode of doing the business of the department, are objects which should always be kept in view, both by the executive and legislative departments, and were especially required upon the incoming of the

present administration. The discontinuance of useless officers; a higher degree of competency and attention on the part of those retained; the prompt rendition and settlement of accounts, the limitation of purchases to necessary supplies, and their faithful appropriation to the public use, are points which have engaged a large share of my attention.

I shall ask your permission to state some of the leading measures, within my own authority, adopted towards the accomplishment of these ends, and then proceed to renew suggestions heretofore, at different times, made of improvements, reforms, and retrenchments, which are dependent upon the authority and action of Congress.

On the 8th March, 1853, I issued an order, countermanding an order given on the 2d March, 1853, to distribute as penalties amongst collectors, naval officers, and surveyors, upon authority of an opinion of the Attorney General, the amounts arising from the imposition of twenty per cent. additional duty on invoices under valued ten per cent. The officer holding this fund in New York refusing to pay, proceedings were instituted, and finally carried to the Supreme Court, which decided that such additional duties were not penalties, and were not distributable, and, thereupon, the amount withheld in that case, (about \$70,000,) was paid into the treasury. The saving to the treasury from thus arresting the distribution and trying the question cannot be estimated, taking all the collection districts into view, and the duties which had accrued, and were yet to accrue, at less than a million of dollars.

2. In April, 1853, the employment of secret inspectors of the customs was discontinued, forty-two having been employed between the 20th September, 1850, and 25th February, 1853, (some for limited periods,) at compensations varying from \$3 per day to \$4,000 per annum, and without any benefit to the revenue.

3. On the 14th April, 1853, twenty-nine captains and lieutenants of revenue cutters were dismissed upon the ground of their being employed without authority of law, and beyond the necessities of the service.

4. On the 12th March, 1853, the department commenced making transfers of public money in, or selling its drafts for, coin, when needed for public disbursements, and thereby suspended the issuance of drafts on time, by which bankers and others had had the use of the public funds for the time, in making such transfers. As part of the same system, disbursing officers were required to deposite in the treasury, and other public depositories, the moneys in their hands until they were to be actually paid out to the public creditor. The estimate is that, under the old system, five millions of the funds of the treasury were, on an average, in the hands of bankers and others, and employed in private enterprise. The result of this change is, that the public funds are kept in the treasury, as required, until paid out. A large portion of the transfer drafts, since issued, have been sold at a premium of two per cent., which has been paid into the treasury, and coin has been diffused and infused in large quantities into circulation.

5. Regular hours of business have been established and enforced in all the offices of the Treasury Department, as well as in the custom-

houses, mints, sub-treasuries, &c., and superfluous employés, and those found incompetent or intemperate, have been dismissed.

6. One of the most fatal abuses corrected has been the arrears in the public accounts, and an entire neglect of all attempts to collect the balances in the hands of receiving and disbursing officers who had died, resigned, or been dismissed from office. In March, 1853, there were unsettled accounts on hand (including balances due and uncollected) amounting to \$132,500,154. Instructions were given, in November, 1853, to the proper accounting officers, to close up these accounts and enter vigorously upon the collection of the balances due. Up to the 1st December last, settlements and collections had been made, reducing this amount to \$24,739,133. But, not considering the progress made such as was desirable, and that the business could be prosecuted with more effect in a different form, in the last summer I directed the several auditors to report all the balances on old accounts to me. They have all been incorporated in one compendious volume, and are being prosecuted in my own office and under my eye. Great pains have been taken to ascertain the residence of the debtors, or their representatives, and as fast as this information is obtained demands are made for settlement and payment. The result, so far, encourages the expectation that the accounts will be settled, and the remaining balances, so far as actually due and collectable, will be collected in a reasonable time.

The period of three months embraced in all public accounts, and the time allowed and taken for rendering, and again for settling them, made the accountability of receiving and disbursing officers too remote, in point of time, to be effective. It may be safely assumed that more than a year elapsed before the successive transactions of such officers came under the view of the officers in control. In respect to the most important of the accounts, those for the collection of duties from 1st July, 1853, the department directed they should be rendered for one month, and within four days after the expiration of each month; and they have been so rendered, and, with the exception of those of the most distant collectors, have been settled within the succeeding month. The experiment made in these accounts has induced an extension of the rule to others; and now all accounts of officers of this department are requested to be rendered for, and immediately upon the close of, the month. In requiring monthly accounts from collectors, the forms were revised in order to prevent such frauds as were committed by Richardson, Case, Russel, and Forsyth, or, if committed, to facilitate their detection.

8. Full examinations have been made into the business of every branch of the public service under the control of the treasury, and for most of them new regulations have been devised, designed to promote their efficiency, to secure a strict observance of the law, and prevent impositions upon the public treasury.

9. In my first advertisement, under the charge of this department, for the erection of a public building, it was declared that the contract would only be awarded to a master builder or person engaged in such business, so as to prevent speculations in such contracts and the making of them with incompetent persons.

With this brief recital of some of the most material reforms, introduced into the treasury by my authority, I proceed to enumerate some dependent upon the authority of Congress, and which I have heretofore recommended to its attention.

In my annual report of 6th December, 1853, a modification of the tariff was recommended, so as to reduce the revenue from customs (until the public debt should be paid) to the extent of about twelve millions of dollars annually.

It was also recommended to abolish the bounties allowed to fishing vessels, and the drawback on the importation of pickled fish. It was also recommended that some provision, in the form of limitation in time, or otherwise, against the presentation of claims on the government, and the revival and reversal of previous decisions, however long made, should be adopted.

Certain modifications of the steamboat act of 1852 were recommended, making a new supervising district for the Pacific coast, and bringing ferry boats, &c., left out under the act of 1838, under the inspection provided by the act of 1852. At the same time it was recommended that an act should be passed for the management of the Louisville and Portland canal, in compliance with the terms of the act of Kentucky, the United States having become the proprietors of the whole of the stock.

In consideration of the case of James Collier, indicted for failing to pay over money received by him as collector of the district of California, and arrested, and thereupon taken out of the hands of the marshal, upon habeas corpus, by a State judge, and discharged, it was recommended that provision be made upon that subject.

At the second session of the 33d Congress, I recommended that district attorneys should be allowed a commission on the collection of old debts. The docket fee being generally received by one district attorney, whilst the collection, including inquiries for property and proceedings in equity, to subject it to execution, being left, in most cases, to his successor, and there being no compensation provided in the latter case, the business is not attended to, and large amounts involved in old judgments are neglected, which might, it is believed, be realized, if there were any mode of compensating district attorneys for the service.

I also recommended that provision should be made to prevent collectors of the customs, upon going out of office, from removing their records and documents, and to punish their making false entries in such books, or rendering false returns to the treasury; and I stated a number of instances in which such books had been removed and such false accounts, involving a loss of about two hundred thousand dollars, had been rendered.

I also recommended a revision of the revenue laws, none having been made since 1799, and prepared and submitted to the Senate and House of Representatives a bill for that purpose, embracing the whole body of said laws.

At the first session of the 34th Congress I recommended that allowances of pensions, and the granting of land bounties by the Commissioner of Pensions, should be assimilated to the settlement of ac-

counts and payment of moneys at the treasury, by subjecting such allowances and grants to audit and control, as in the former cases.

I also recommended that provision should be made requiring the rendition and settlement, monthly, of all the accounts against the United States, in every branch of the public service, having since that recommendation carried the same into effect, by my own authority, so far as the accounts proper of this department are concerned.

In order to supersede the unnecessary labor of keeping double accounts of the army, in the Second and Third Auditors' offices, with the liability to confusion and error therein on the one hand, and to harmonize the Interior with other departments of the government on the other, it was recommended that all accounts of the War Department should be transferred to the Third Auditor, and the Second Auditor be vested with the settlement of all accounts of the Interior.

I also recommended that the contract system employed in the case of sick seamen, in ports where the United States do not own the hospitals, should be extended to those ports where they do, by allowing the person contracting the use of the government building, and with a right in the United States to terminate the contract at will upon report of the collector or other visitor appointed by the department.

In the revision of the revenue laws before referred to, there is a provision for discontinuing several collectorships in California, where there are large salaries allowed and but little, if any, duty to do or occasion for the officers.

Most of these recommendations have been repeated more than once, and I am glad of the opportunity of bringing them to the attention of your committee. They are, in my opinion, all deserving of consideration and adoption, and some of them of great importance to the security of the public interests.

You will perceive that my statements and suggestions are confined to subjects within the purview and jurisdiction of the Treasury Department, beyond which it did not seem to me that I was called on or ought, with propriety, to go. If abuses exist in other departments of the executive branch of the government, or in Congress, such as existed in this department, and have been indicated in this letter as corrected, or recommended for correction, it would appear more proper for the heads of such departments and of Congress, respectively, with better knowledge of the facts than I can have, to take them into consideration and apply the proper remedies.

I have the honor to be, very respectfully,

JAMES GUTHRIE,
Secretary of the Treasury.

HON. STEPHEN ADAMS,

Chairman Committee on Retrenchments, U. S. Senate.

SIR: All demands on the United States, payable at the treasury or through disbursing officers or agents, are paid in the United States

standard gold coinage, $23\frac{22}{100}$ grains fine to the dollar, except the salaries of foreign ministers, consuls, commercial agents, and demands for monies disbursed without the United States. Foreign ministers, consuls, and commercial agents, and others usually paid abroad, who present their claims at the treasury, are also paid in the gold coinage. Consuls having to account for fees under the act of 1855, under the circular of the Secretary of State accompanying this, are required to render their accounts quarterly to the Treasury Department, and where the fees are in excess of the quarter's salary, the consul, as there directed, withholds them for the quarter's salary, and holds the balance subject to the order of the department; and where the fees are less, he is authorized to draw for the balance on the treasury, at fifteen days sight, acceptance waived, and transmit the quarterly account at the same time with the draft. The drafts are paid at the treasury in gold. Consuls needing money for disbursement for seamen under said circular, are authorized to draw for the same on the Secretary of State, and their drafts are paid at the treasury in gold; but the consul is allowed, in settlement, the premiums on such drafts, as provided in the circular. For the payment of most of the foreign ministers, the Secretary of State keeps funds in the hands of London bankers, and under his authority the foreign ministers draw for their salaries on those bankers, and receive payment in London. Other incidental expenses of foreign missions are also paid by draft on the foreign bankers. But subsequent to the secretary's circular, he has authorized the consuls in China, Greece, and Turkey to make their drafts for salaries on the London bankers. The money is withdrawn from the treasury on the requisition of the Secretary of State, and drafts purchased on London, and the proceeds deposited with the London bankers. The ministers and consuls, under authority from the Secretary of State, draw on these bankers. The necessary premium is paid to place the money with the bankers in London, and the ministers and consuls pay the premium on their bills on the London bankers, and these premiums are allowed and paid out of the appropriations for contingent expenses of the missions abroad. Thus, the payments exceed the salaries fixed by law, and the other sums disbursed for the use of the government to the extent of the premiums. In addition, the foreign ministers and consuls claim to receive their salaries in the United States silver dollar coinage.

By resolution of the Congress of the confederation, under date of the 8th of August, 1786, regulating the coins of the United States, the silver dollar was to contain $375\frac{64}{100}$ grains of pure silver, and the eagle, valued at ten dollars, was to contain $246\frac{286}{1000}$ grains of pure gold; thus making the value of the American silver dollar, when compared with the exchange dollar, or the standard of England, only $97\frac{37}{1000}$, and the American gold dollar only $96\frac{788}{1000}$.

The act of Congress approved 12th of April, 1792, establishing a mint and regulating the coins of the United States, required the United States silver dollar to contain 416 grains of standard silver, $\frac{1485}{1000}$ fine, or $371\frac{1}{4}$ grains of pure silver; and the eagle of \$10, 270 of standard gold, $\frac{11}{12}$ fine, or $247\frac{1}{2}$ grains of pure gold, and other coins of less value to be of the same proportions; thus making the

relative value of gold to silver fifteen to one. That is, gold of the same weight and fineness was to be worth fifteen times as much as silver of the same weight and fineness, whilst the relative value of gold to silver was then as now, $15\frac{202}{1000}$ to 1 in England, and $15\frac{5}{10}$ to 1 in France. This resulted in making gold more valuable in England and France than in the United States, and, consequently, induced the shipment of gold from the United States to those countries. The rates established under the act of 1792 made gold, as compared with silver, worth, in England, 101.13, and in France 103.17, in consequence of which, and the export of gold, Congress, in 1837, passed another act changing the relative value of gold and silver; but instead of adopting the French standard of $15\frac{5}{10}$ to 1, which is the true difference, or very near it, on the English standard, Congress changed it from 15 to 1 to 16 to 1, viz: the eagle of \$10 was to contain 258 grains of standard gold, $\frac{1}{10}$ fine, or $232\frac{1}{10}$ of pure gold. The silver dollar was not changed except the standard fineness was altered from $\frac{1485}{1000}$ ($\frac{892}{1000}$) to $\frac{900}{1000}$ fine. The amount of pure silver remained the same as in the act of 1792, viz: $371\frac{1}{4}$ of pure silver to the dollar. The effect was to reduce the gold dollar six cents less than its former value, and nine cents less than the dollar of exchange, consequently, gold remained in the country, and silver became an article of export, and rapidly disappeared, and now the silver dollar coined at the United States mint under the act of 1792, is worth, at the same mint, a premium of from four to five per cent.

To remedy this, in part, the act of February 21, 1853, was passed, leaving the silver dollar as under the act of 1792, but reducing the halves, quarters, and pieces of a less denomination, to 384 grains of standard silver $\frac{9}{10}$ fine, or $345\frac{6}{10}$ grains of pure silver, changing the relative value of gold to those silver coinages from 16 to 1 to $14\frac{883}{1000}$ to 1, and more valuable, compared to silver, than it was prior to the act of 1837.

The act of 1853 reduced the silver coinage under it $6\frac{6}{10}$ less than its former value, and the silver dollar under the act of 1792, and eleven cents less than the dollar of exchange, and will have the effect of retaining the new silver coinage, and driving the silver dollar and gold coinage out of the country, in obedience to the ruling principles governing the circulation of money.

Previous to the year 1842, it was the practice for the department to settle the accounts of foreign ministers at the rate of \$4 44 to the pound sterling, or 54 pence to the dollar. For this purpose \$9,000 or £2,025, equal to \$9,854 56 United States currency was deposited to the credit of the State Department with the London bankers, with letters of credit from the State Department to the minister to draw for the amount on the London bankers. The minister was directed to procure vouchers from the broker or banker to whom the bill was sold, stating the rate of exchange at which the bill was sold. The premium, if any, was an item of charge against the minister, or the discount an item of charge in his favor, and adjusted in the settlement.

Then the act of 1842 was passed, regulating the pound sterling at \$4 84; but this did not affect the salaries of ministers, as the old mode continued of settling with them, as in practice prior to its

passage, thus; If the proceeds of the sales of the minister's bills do not amount to \$9,000, valuing them at 54 pence to the dollar, the deficiency is allowed as a loss upon exchange; and he was charged for the proceeds of his drafts at the rate of 49 pence to the dollar, equivalent to \$4 84 to the pound sterling, while no loss is sustained on his bills, because commercial exchange is almost invariably in favor of London. By depositing the amount of his salary with London bankers, at the rate of the gold dollar of 1837, and settling with him at the rate of the silver dollar of 1792, he is paid in a currency more valuable by six cents on the dollar, unless his bills sold at a premium, and that premium accounted for.

If foreign ministers were required to receive their salaries at the treasury, as other salaried officers, they would be paid in the same currency. Now, the State Department pays a premium to place the funds with London bankers, and the minister is allowed the discount on his bill when he draws on those bankers; and he obtains his pay in a better currency than that which the United States pay other salaried officers and other demands upon their treasury.

It is thought a full investigation of this subject will make manifest the importance of foreign ministers being paid in the same currency that is given in payment to others, and that standard should be the value of the gold dollar, whether paid at the United States treasury or the place of residence of the minister or consul.

Appended is a table of the value of the dollar under each act of Congress, taking as the standard of the dollar of exchange of 386.809 grains of pure silver, which is 54 pence sterling, and rating the pound sterling of 113 grains of pure gold at \$4 44 $\frac{1}{2}$ to the pound sterling. Also accompanying this report is statement No. 1, showing the rate of exchange paid by United States consuls to March, 1856. Also statement No. 2, showing the loss in exchange on drafts drawn by a foreign minister, for the fiscal year ending 30th June, 1855. Also statements Nos. 3 and 4, exhibiting the adjustment of accounts at the treasury under the several acts of Congress, and proving the results herein indicated.

It was intended, when this subject was first investigated, to have changed the practice as to the payment of foreign ministers, and require them to receive their salaries at the treasury as other salaried officers, and dispense with the London bankers, and do away with all questions of exchange, and all the complication that now exists in the adjustment of these accounts. But as the mode of transacting the business and adjusting the accounts have their commencement with the government, and the indirect sanction of Congress by appropriations to cover these losses on exchange, it was deemed proper to submit it to Congress for their consideration and action.

I would suggest that foreign ministers and consuls be paid in the same coin as other salaried officers, and that the Secretary of State be authorized to have them paid in such coin, or its equivalent, at the place to which they are accredited, by a disbursing agent or otherwise in his discretion. The propriety of providing for payment by means of drafts on the proper departments would be suggested, in preference to the present mode, under a belief that the growing commerce of the

United States will tend more and more to make such payment by this mode convenient and economical, as every great commercial centre draws to itself, from all the countries engaged in its commerce, facilities in making exchanges at reasonable rates, but for an apprehension the authority to draw might be abused, and the complication in settlement that would arise in adjusting the rate of exchange, and from a belief that the minister, &c., should not incur the loss on exchange.

The apprehended abuse of the privilege of drawing would be obviated by settling the quarters' salary in advance, and forwarding the minister or consul the Treasurer's draft on the Assistant Treasurers at New York or San Francisco. Such drafts would have the highest mercantile value, because of their character, and being payable at the great commercial centres on presentment. This would leave nothing to adjust at the treasury but the discount on the sale of the draft.

The present mode of constituting foreign depositories, with authority to draw on them, should be retained, or the mode of payment might be authorized by contract, viz: an agreement with respectable parties to pay the salaries quarterly, at all the required places, at agreed rates of discount for the year. It might be well in the enactment to have the right to pay by treasury drafts on any of the Assistant Treasurers, on stated account in advance of the quarter, or through the agency of foreign depositories, or by the mode of contract, open to the discretion of the Secretary of State, as to the places at which one or the other mode should be adopted.

A joint resolution is submitted, which, it is thought, would place the subject upon a correct footing and under the control of the Secretary of State, with the sanction of law, without a question as to the propriety thereof, under the Treasury act of 1846.

All which is respectfully submitted.

JAMES GUTHRIE,
Secretary of the Treasury.

HON. R. M. T. HUNTER,
Chairman Committee on Finance United States Senate.

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That the salaries of foreign ministers, consuls and commercial agents, when paid at the treasury of the United States, shall be paid in the standard gold coinage of the United States; and when paid or received by means of drafts in the foreign countries where they are accredited or located, they shall be entitled to payment in a gold or silver currency of equal value to the gold coinage paid at the United States treasury. Also, that the Secretary of State shall cause them to be paid at the treasury of the United States, or with funds kept for that purpose, deposited with any of the Assistant Treasurers of the United States, or with depositories abroad, and allow the necessary and usual discount, or loss on exchange incurred, to be ascertained by the accounting officers of the treasury, on the production of such proof as the regulations may require, so as to make the payment equal to the standard gold coinage of the United States; and the right by contract, to cause the whole or any part of such salaries to be paid in currency of like value at the

places where the ministers, consuls, or commercial agents reside, and allow not exceeding the usual discount existing at such places. All other disbursements of the United States, required to be made abroad, shall be paid in the like coinage, or in gold or silver currency of equal value thereto. And there shall be like authority in the head of the proper department to provide the means and mode of payment.

The following is the value of the dollar, under each act of Congress, taking as the standard the dollar of exchange, of $386\frac{709}{1000}$ grains of pure silver, which is 54d sterling, and rating the pound sterling, of 113 grains of pure gold, at \$4 44 $\frac{2}{3}$ to the pound sterling.

^a Including special mission.

† United States.

‡ London.

NOTE.—To the above estimate for loss in exchange there should be added about 1½ per cent. to those drawing upon the London bankers, the cost of remitting the money to London.

MURRAY McCONNEL, Auditor.

TREASURY DEPARTMENT, Fifth Auditor's Office, April 15, 1856.

No. 3.—Statement showing the value of the dollar of exchange, and of the different values of the United States dollar under the several acts of Congress, now in force; also, showing the standard under which the accounts of the United States' ministers and chargés abroad have been adjusted and paid.

	Amount rec'd.	Loss and gain.
<i>Dollar of exchange of 386.704 grs. of pure silver, equal to 54d. to the dollar, or \$4 44$\frac{2}{3}$ to the pound sterling.</i>		
Minister at London, and some of the ministers and chargés in South America, get, on \$9,000.....	\$8,264 49	\$735 51
Minister at Paris, the other European ministers and chargés, commissioner to China, and some of the ministers and chargés in South America, get, on \$9,000.....	8,560 20	439 80
<p>REMARKS.—Previous to the passage of the act of Congress of the 27th of July, 1842, estimating the pound sterling at \$4 84, the account of the United States minister at London was adjusted under this standard, therefore his loss by the difference of the adjustment is \$735 51. The other ministers' accounts were adjusted by making the United States silver dollar of 1792 the standard, and the difference in the value of the dollar was paid into the treasury, the premium received by the minister on the sale of his drafts; but, under a decision of Mr. Webster, then Secretary of State, the premium was repaid to the ministers, which was equivalent to adjusting their accounts under this standard.</p>		
<i>United States silver dollar of 371$\frac{1}{2}$ grs. pure silver, act of Congress of 12th April, 1792, equal to 51.68d. to the dollar or \$4 62$\frac{2}{3}$ to the pound sterling.</i>		
Ministers at London and other ministers, as above mentioned, get, on \$9,000.....	8,608 37	391 63
Ministers at Paris, &c., get, on \$9,000.....	9,000 00	None.....
<p>REMARKS.—The accounts of the minister at Paris, the other European ministers, commissioner to China, and a portion of the ministers in South America, are adjusted under this standard. Only £1,859 10s. 1d., equal to \$8,627 89, is deposited to their credit, but the remainder, amounting to \$372 11, is paid to them as loss in exchange.</p>		
<i>Adjustment under the act of Congress of 27th July, 1842, estimating the pound sterling at \$4 84.</i>		
Ministers at London, &c., get, on \$9,000.....	9,000 00	None.....
Ministers at Paris, &c., get, on \$9,000.....	9,409 45	409 45
<p>REMARKS.—The accounts of the ministers at London, and some of the ministers in South America, are adjusted under this standard.</p>		
<i>United States gold dollar of 23.22 grains of pure gold, act of Congress of 18th January, 1837, equal to 49.27d. to the dollar, or \$4 86.64 to the pound sterling.</i>		
Ministers at London, &c., get, on \$9,000.....	9,048 33	48 33
Ministers at Paris, &c., get, on \$9,000.....	9,460 75	460 75
<p>REMARKS.—Mr. Kerr, chargé to Nicaragua, is the only person whose account, in part, has been adjusted under this standard, and that occurred on account of charging him with the proceeds which he received as premium on the sale of his drafts upon the London bankers, being the amount over and above the \$4 84 to the pound sterling, the rate at which the pound sterling is deposited at London.</p>		

No. 4.

Statement showing the difference in amount resulting from the settlement of the account of the United States minister at Paris, according to the different values placed upon the United States dollar as fixed by the different laws of Congress.

<i>Dollar of exchange = 386 $\frac{794}{1000}$ grains of pure silver.</i>	
By amount due him for salary one year, for which £1,859 10s. 1d., at \$4 84 per pound sterling, is deposited with the United States bankers at London	\$9,000 00
To amount of his draft on the London bankers for £1,859 10s. 1d., negotiated at Paris at the rate of 24 $\frac{75}{100}$ francs to the pound sterling, being the par of exchange on silver between Paris and London, is 46,022.72 francs. And estimating the franc at 17 $\frac{86}{1000}$ cents, being the par of exchange between the franc at 69 $\frac{453}{1000}$ grains of pure silver, and the dollar of exchange at 386 $\frac{794}{1000}$ grains of pure silver is	8,265 68
Loss by minister is	734 22
<i>United States dollar under act of 12th April, 1792, = 37 $\frac{1}{4}$ grains silver.</i>	
By amount of his salary as above	9,000 00
To amount of draft sold as above for 46,022.72 francs, and estimating the franc at 18 $\frac{557}{1000}$ cents, being the par of exchange between the franc at 69 $\frac{453}{1000}$ grains of pure silver, and the United States dollar of 37 $\frac{1}{4}$ grains of pure silver, as regulated under the act of Congress of April 12, 1792, is	8,627 89
Loss by minister of	372 11
<i>Under act of Congress of 27th July, 1842, estimating the pound sterling at \$4 84.</i>	
By amount of salary as above	9,000 00
To amount of his draft sold as above for 46,022 $\frac{75}{100}$ francs, and estimating the franc at 19 $\frac{55}{1000}$ cents, being the rate established by the act of Congress of July 27, 1842, fixing the pound sterling at \$4 84, is	9,000 00
Loss, none	
<i>United States gold dollar under the act of Congress of January 18, 1837, = 23 $\frac{23}{100}$ grains pure gold.</i>	
By amount of his salary, as above	9,000 00
To amount of his draft sold as above for 46,022 $\frac{75}{100}$ francs, and estimating the franc at 19 $\frac{55}{1000}$ cents, being the par of exchange of the pound sterling of 113 grains of pure gold, and the United States dollar of 23 $\frac{23}{100}$ grains of pure gold under the act of Congress of the 18th January, 1837, is	9,048 06
Gain by the minister of	48 06
