THE STATE OF THE FINANCES

THE YEAR 1865.

FOÈ

WASHINGTON: GOVERNMENT PRINTING OFFICE. 1865.

INDEX TO REPORT ON THE FINANCES.

450 U

The Secretary's report
Statement No. 1. Receipts and expenditures for the fiscal year ending June 30, 1864.
Statement No. 2. Receipts and expenditures as estimated for the fiscal year ending
June 30, 1866
Statement No. 3. Duties, revenues, and public expenditures during the fiscal year
ending June 30, 1864, agreeably to warrants issued, exclusive of trust funds
Statement No. 4. Receipts and expenditures for the quarter ending September 30, 1864,
exclusive of trust funds
Statement No. 5. The indebtedness of the United States
Statement No. 6. Paper money circulation, and domestic exports
Report of the Comptroller of the Currency
Report of the Commissioner of Internal Revenue
Report of the Treasurer
Report of the Register
Report of the Solicitor
Report of the First Comptroller
Report of the Second Comptroller
Report of the First Auditor
Report of the Second Auditor
Report of the Decond Auditor
Report of the Fourth Auditor
Report of the Fifth Auditor
Report of the Sixth Auditor
Report of the Commissioner of Customs
Report of the Supervising Architect
Report of the Light-house Board
Report of the Superintendent of the Coast Survey
Report of the Supervising Inspector of Steamboats
Report of the Director of the Mint
Statement No. 7. Gold, silver, and copper coinage at the mint of the United States
in the several years from its establishment in 1792, and the coinage at the branch
mints and the New York assay office from their organization to June 30, 1864.
Statement No. 8. Amount of the public debt on the first day of January in each of
the years from 1791 to 1842 inclusive, and at various dates in subsequent years,
to July 1, 1864
Statement No. 9. Revenue collected from the beginning of the government to June
30, 1864, under the several heads of customs, internal revenue, direct tax, post-
age, public lands, and miscellaneous sources, with the receipts from loans and
treasury notes, and the total receipts
Statement No. 10. Expenditures from the beginning of the government to June 30,
1864, under the several heads of civil list, foreign intercourse, Navy Depart-
ment, War Department, pensions, Indian department, and miscellaneous, with
the interest and principal of the public debt, and total expenditures
Statement No. 11. Domestic exports for fiscal year ending June 30, 1865
Statement No. 12. Foreign exports for fiscal year ending June 30, 1865
Statement No. 13. Imports for fiscal year ending June 30, 1865
Statement No. 14. Foreign tonnage, entrances and clearances, by districts, for fiscal
vest ending June 30 1865

FINANCE REPORT.

LETTER

FROM

THE SECRETARY OF THE TREASURY,

TRANSMITTING

His annual report for the year 1865.

DECEMBER 5, 1865.-Laid on the table and ordered to be printed.

TREASURY DEPARTMENT, December 5, 1865. SIR : I have the honor to transmit to the House of Representatives the annual report of the Secretary of the Treasury, as required by law.

With great respect,

HUGH McCULLOCH, Secretary of the Treasury.

Hon. SCHUYLER COLFAX, Speaker of the House of Representatives.

REPORT

OF

THE SECRETARY OF THE TREASURY.

TREASURY DEPARTMENT, Washington, December 4, 1865.

In conformity with law, the Secretary of the Treasury has the honor to submit to Congress his annual report.

Next in importance to the great questions involved in the restoration of the federal authority over the southern States, and the re-establishment of civil government therein under the Constitution, are the financial questions, embracing---

The currency;

The public debt; and

The revenue;

all of which demand the early and careful attention of Congress.

In presenting these important subjects, with their various connexions, the Secretary is painfully conscious of his own inability properly to discuss them, difficult as they are, and involving as they do the national honor and the pecuniary interests of thirty millions of people. He will, however, offer as clearly and definitely as he can his own views in relation to them, not doubting that Congress will sustain and carry out by appropriate legislation those that are approved by their superior wisdom, and reject those which are regarded as either impracticable or unsound.

The fact that means have been raised, without foreign loans, to meet the expenses of a protracted and very costly war, is evidence not only of the great. resources of the country, but of the wisdom of Congress in passing the necessary laws, and of the distinguished ability of the immediate predecessors of the present Secretary in administering them. It is hardly necessary to suggest, however, that the legislation which was proper and wise during the progress of hostilities may not be appropriate or even justifiable in a time of peace.

The right of Congress, at all times, to borrow money and to issue obligation⁸ for loans in such form as may be convenient, is unquestionable; but their authority to issue obligations for a circulating medium as money, and to make these obligations a legal tender, can only be found in the unwritten law which sanctions whatever the representatives of the people, whose duty it is to maintain the government against its enemies, may consider in a great emergency

necessary to be done. The present legal-tender acts were war measures, and while the repeal of those provisions which made the United States notes lawful money is not now recommended, the Secretary is of the opinion that they ought not to remain in force one day longer than shall be necessary to enable the people to prepare for a return to the constitutional currency. It is not supposed that it was the intention of Congress, by these acts, to introduce a standard of value, in times of peace, lower than the coin standard, much less to perpetuate the discredit which must attach to a great nation which dishonors its own obligations by unnecessarily keeping in circulation an irredeemable paper currency. It has not, in past times, been regarded as the province of Congress to furnish the people directly with money in any form. Their authority is "to coin money and fix the value thereof;" and, inasmuch as a mixed currency, consisting of paper and specie, has been found to be a commercial necessity, it would seem also to be their duty to provide, as has been done by the National Currency act, that this paper currency should be secured beyond any reasonable contingency. To go beyond this, however, and issue government obligations, making them by statute a legal tender for all debts, public and private, is not believed to be, under ordinary circumstances, within the scope of their duties or constitutional powers.

The reasons which are sometimes urged in favor of United States notes a_s a permanent currency are, the saving of interest and their perfect safety and uniform value.

The objections to such a policy are, that the paper circulation of the country should be flexible, increasing and decreasing according to the requirements of legitimate business, while, if furnished by the government, it would be quite likely to be governed by the necessities of the treasury or the interests of parties, rather than the demands of commerce and trade. Besides, a permanent government currency would be greatly in the way of public economy, and would give to the party in possession of the government a power which it might be under strong temptations to use for other purposes than the public good keeping the question of the currency constantly before the people as a political question, than which few things would be more injurious to business.

But the great and insuperable objection, as already stated, to the direct issue of notes by the government, as a policy, is the fact, that the government of the United States is one of limited and defined powers, and that the authority to issue notes as money is neither expressly given to Congress by the Constitution, nor fairly to be inferred, except as a measure of necessity in a great national exigency. No consideration of a mere pecuniary character should induce an exercise by Congress of powers not clearly contemplated by the instrument upon which our political fabric was established. The government, in the great contest which has been recently closed, has not sought to increase its own powers, nor to interfere with the rightful powers of the States. The questions decided by the war are, that the Union is indissoluble; that whatever is essentially opposed to it must be removed; that the federal authority, within its proper sphere, is supreme; and that the validity of acts of Congress

not to be determined by the States, but by that tribunal which the complex character of the government made a necessity. It is the crowning glory of the Constitution that this great war has been waged and closed without the powers of the government being enlarged or its relations to the States being changed.

The issue of United States notes as lawful money was a measure expedient, doubtless, and necessary in the great emergency in which it was adopted, but this emergency no longer exists, and however desirable may be the saving of interest, and however satisfactory these notes may be as a circulating medium, these considerations will not, it is respectfully submitted, justify a departure from that strict construction of the Constitution given to it previous to the war by patriotic men of all parties, and which is essential to the equal and harmonious working of our peculiar institutions. The strength of the government has been proved by the manner in which it has carried on the greatest war of modern times; it only remains, for the vindication of its excellence and the perfection of its triumphs, that all powers exercised for its preservation, but not expressly granted by the Constitution, be relinquished with the return of peace. While, therefore, the Secretary is of the opinion that the immediate repeal of the legaltender provisions of the acts referred to would be unwise, as being likely to affect injuriously the legitimate business of the country, upon the prosperity of which depend the welfare of the people and the revenues which are necessary for the maintenance of the national credit, and unjust to the holders of the notes, he is of the opinion that not only these provisions but the acts also should be regarded as only temporary, and that the work of retiring the notes which have been issued under them should be commenced without delay, and carefully and persistently continued until all are retired.

In speaking of the legal-tender acts, reference has only been made to those which authorized the issue of United States notes. The interestbearing notes which are a legal tender for their face value were intended to be a security rather than a circulating medium, and it would be neither injurious to the public, nor an act of bad faith to the holders, for Congress to declare that, after their maturity, they shall cease to be a legal tender, while such a declaration would aid the government in its efforts to retire them, and is therefore recommended.

The rapidity with which the government notes can be withdrawn will depend upon the ability of the Secretary to dispose of securities. The influences of funding upon the money market will sufficiently prevent their too rapid withdrawal. The Secretary, however, believes that a decided movement towards a contraction of the currency is not only a public necessity, but that it will speedily dissipate the apprehension which very generally exists, that the effect of such a policy must necessarily be to make money scarce and to diminish the prosperity of the country.

It is a well-established fact, which has not escaped the attention of all intelligent observers, that the demand for money increases (by reason of an advance of prices) with the supply, and that this demand is not unfrequently most pressing when the volume of currency is the largest and inflation has reached

 $\mathbf{5}$

the culminating point. Money being an unprofitable article to hold, very little is withheld from active use, and in proportion to its increase prices advance; on the other hand, a reduction of it reduces prices, and as prices are reduced the demand for it falls off; so that, paradoxical as it may seem, a diminution of the currency may in fact increase the supply of it.

Nor need there be any apprehension that a reduction of the currency—unless it be a violent one—will injuriously affect real prosperity. Labor is the great source of national wealth, and industry invariably declines on an inflated currency. The value of money depends upon the manner in which it is used. If it stimulates productive industry, it is a benefit, and to the extent only to which it does this is it a benefit. If, on the other hand, it diminishes industry, and to the extent to which it diminishes it, it is an evil. Even in the form of the precious metals, it may not prove to be wealth to a nation. The idea that a country is necessarily rich in proportion to the amount of gold or silver which it possesses, is a common and natural but an erroneous one, while the opinion that real prosperity is advanced by an increase of paper money beyond what is absolutely needed as a medium for exchanges of real values, is so totally fallacious, that few sane men entertain it whose judgment is not clouded by the peculiar financial atmosphere which an inflation is so apt to produce.

An irredeemable paper currency may be a necessity, but it can scarcely fail, if long continued, to be a calamity to any people. Gold and silver are the only proper measure of value. They have been made so by the tacit agreement of nations, and are the necessary regulator of trade, the medium by which balances are settled between different countries and between sections of the same country. As a universal measure of value they are a commercial necessity. The trade between different nations and between sections of the same country is carried on by an exchange of commodities, but is never equally balanced by them; and unless credits are being established, the movements of coin unerringly indicate on which side the balance exists.

If the United States buy of other nations—as they now and too generally do more than they sell to them, it is evident that a balance is thus created which must either be settled in coin or continued as a debt.

That balances between nations should be promptly paid is the dictate of wisdom, because by prompt payment the adverse current is checked before the debtor nation becomes seriously involved; while, on the other hand, if they are permitted to accumulate, they may; when the day of payment can no longer be deferred, prove not only disastrous to the debtor, but greatly disturb the business of the creditor nation. Even with the vast increase of gold and silver which has taken place within the last quarter of a century, the specie which is possessed by commercial nations is a very inconsiderable sum in comparison with their foreign and domestic property exchanges; and no nation can afford to continue a traffic which leaves it with a heavy debt to be paid in the precious metals, unless these metals are a part of its productions, and then only to the extent that they are productions. When there are no artificial obstacles in the way, and balances between nations are promptly settled, the flow of coin from one to the other produces but little embarrassment to the debtor nation. The nation that loses coin either diminishes its purchases, or, by a reduction of the prices of its commodities which the loss occasions, becomes a more inviting market than before, and, by attracting purchasers, reverses the current and draws again to itself the coin of which it had been deprived.

All this is well understood; and if trade between nations were carried on by an exchange of products and a prompt payment of balances in specie, no nation would ever become indebted to another to an extent seriously to affect its prosperity.

All serious embarrassment growing out of commercial intercourse between the people of different nations results from failure in the prompt payment of balances, and the carrying forward of these balances by extensions of credits.

The trade between the different sections of the United States is subject to the same laws. If one section, in the course of trade, becomes a debtor to another, the balances must be carried in the form of debt—always expensive, and generally dangerous to the debtor section—or settled with money. If the measure of value is a convertible currency, and trade and exchanges are left to the natural laws that govern them, settlements take place promptly and without embarrassment to business. The banks of the debtor section are drawn upon by their depositors and note-holders for coin or exchange. This return of notes and withdrawal of deposits, if considerable in amount, produce a contraction of discounts; andthis contraction either checks overtrading, or so reduces the price of products as to increase the demand for them until the current changes and the equilibrium is restored.

This brief statement of the well-known laws of trade not only illustrates the necessity of prompt payment of balances between the United States and foreign nations and between the different sections of the United States, but the necessity of having everywhere the same standard of value.

It is admitted that on a coin basis there will be periods of expansion. Times of the greatest expansion and speculation in the United States have been, indeed, when the banks were nominally paying specie. This was the case prior to the revulsions of 1837 and 1857, the expansion of credits having, in both instances, preceded suspension; but this does not militate against the theory just stated.

The great expansion of 1835 and 1836, ending with the terrible financial collapse of 1837, from the effects of which the country did not rally for years, was the consequence of excessive bank circulation and discounts, and an abuse of the credit system, stimulated in the first place by government deposits with the State banks, and swelled by currency and credits until, under the wild spirit of speculation which pervaded the country, labor and production decreased to such an extent that the country which should have been the great food-producing country of the world became an importer of breadstuffs.

The balance of trade had been for a long time favorable to Europe and against

the United States, and also in favor of the commercial cities of the seaboard and against the interior, but a vicious system of credits prevented the prompt settlement of balances. The importers established large credits abroad, by means of which they were enabled to give favorable terms to the jobbers. The jobbers, in turn, were thus, and by liberal accommodations from the banks, able to give "their own time" to country merchants, who, in turn, sold to their customers on an indefinite credit. It then seemed to be more reputable to borrow money than to earn it, and pleasanter, and apparently more profitable, to speculate than to work; and so the people ran headlong into debt, labor decreased, production fell off, and ruin followed.

The financial crisis of 1857 was the result of a similar cause, namely, the unhealthy extension of the various forms of credit. But, as in this case the evihad not been long at work, and productive industry had not been seriously diminished, the reaction, though sharp and destructive, was not general, nor were the embarrassments resulting from it protracted.

Now, in both these instances the expansions occurred while the business of the country was upon a specie basis, but it was only nominally so. A false system of credits had intervened, under which payments were deferred, and specie as a measure of value and a regulator of trade was practically ignored. Everything moved smoothly and apparently prosperously as long as credits could be established and continued, but as soon as payments were demanded and specie was in requisition, distrust commenced, and collapse ensued. In these instances the expansions preceded and contractions followed the suspensions, but it will be recollected that while the waves were rising specie ceased to be a regulator, by reason of a credit system which prevented the use of it.

The present inflation, following the suspension of 1861, is the result of heavy expenditures by the government in the prosecution of the war and the introduction of a new measure of value in the form of United States and treasury notes as lawful money. The country, as a whole, notwithstanding the ravages of the war, and the draught which has been made fipon labor, is, by its greatly developed resources, far in advance in real wealth of what it was in 1857, when the last severe financial crisis occurred. The people are now comparatively free from debt; the banks, with their secured circulation and large investments in government securities, although not in an easy condition, and doubtless too much extended, are, it is believed, generally solvent; but the same causes are at work that produced the evils referred to. There is an immense volume of paper money in circulation—under the influence of which prices, already enormously high, are steadily advancing, and speculation is increasing—which must be contracted if similar disasters would be avoided.

If the war could have been prosecuted on a specie basis, there would doubtless have been a considerable advance in the prices of those articles which were in demánd by the government; but inasmuch as, in the condition of our political affairs, extensive credits could not have been established in Europe, the tendency in this direction would have been kept within reasonable check by the outflow of coin to other nations, which would have been the natural result of the advancing prices in the United States. On a basis of paper money, for which

10

there was no outlet, all articles needed for immediate use, of which it became the measure of value, felt and responded to the daily increase of the currency; so that rents and the prices of most articles for which there has been a demand have been, with slight fluctuations, constantly advancing from the commencement of the war, and are higher now, with gold at forty-seven per cent. premium, than they were when it was at one hundred and eighty-five. Even those which were affected by the fall of gold upon the surrender of the confederate armies, or by the increased supply or diminished demand, are advancing again to former if not higher rates. The expansion has now reached such a point as to be absolutely oppressive to a large portion of the people, while at the same time it is diminishing labor, and is becoming subversive of good morals.

There are no indications of real and permanent prosperity in our large importations of foreign fabrics; in the heavy operations at our commercial marts; in the splendid fortunes reported to be made by skilful manipulations at the gold room or the stock board; no evidences of increasing wealth in the facts that railroads and steamboats are crowded with passengers, and hotels with guests; that cities are full to overflowing, and rents and the prices of the necessaries of life, as well as luxuries, are daily advancing. All these things prove rather that a foreign debt is being created, that the number of non-producers is increasing, and that productive industry is being diminished. There is no fact more manifest than that the plethora of paper money is not only undermining the morals of the people by encouraging waste and extravagance, but is striking at the root of our material prosperity by diminishing labor. The evil is not at present beyond the control of legislation, but it is daily increasing, and, if not speedily checked, will, at no distant day, culminate in wide-spread dis-The remedy, and the only remedy within the control of Congress, is, in aster. the opinion of the Secretary, to be found in the reduction of the currency.

The paper circulation of the United States on the 31st of October last was substantially as follows:

1. United States	notes and fractio	onal currency	\$454, 218, 038	20
2. Notes of the	national banks		185, 000, 000	00
3. Notes of Sta	te banks, includi	ng outstanding issues of		
State banks	converted into n	ational banks	65, 000, 000	00
	,	х.	<u> </u>	· · · ·
•		· · · ·	704, 218, 038	20

The amount of notes furnished to the national banks up to and including the 31st of October was a little over \$205,000,000, but it is estimated that \$20,000,000 of these had not then been put into circulation.

In addition to the United States, notes, there were also outstanding \$32,536,900 five per cent. treasury notes, and \$173,012,140 compound interest notes, of which it would doubtless be safe to estimate that \$30,000,000 were in circulation as currency.

From this statement it appears that, without including seven and three-tenths notes, many of the small denominations of which were in circulation as money and all of which tend in some measure to swell the inflation, the paper money of the country amounted, on the 31st of October, to the sum of \$734,218,038 20, which has been daily increased by the notes since furnished to the national banks, and is likely to be still further increased by those to which they are entitled, until the amount authorized by law (\$300,000,000) shall have been reached, subject to such reduction as may be made by the withdrawal of the notes of the State banks.

The following is a statement of the bank note circulation of the country at various periods of highest and lowest issues prior to the war:

January,	1830	\$61,324,000
"	1835	
"	1836	•
"	1837	149,185,890
**	1843	58,564,000
"	1856	195,747,950
	1857	214,778,822
"	1858	155,208,344
44	1860	207,102,000

It will be noticed by this statement that the bank note circulation of the United States increased from \$61,324,000 to \$149,185,890 between the 1st of January, 1830, and the 1st of January, 1837, in which latter year the great financial collapse took place; fell from \$149,185,890 in 1837, to \$58,564,000 in 1843, and rose to \$214,778,822 on the 1st of January, 1857, in which year the next severe crisis occurred; falling during that year to \$155,208,344, and rising to \$207,102,000 on the 1st of January, 1860.

The following is a statement of bank deposits and loans in the same years:

	-	-	
	Years.	Deposits.	Leans.
January	1, 1830	\$55,560,000	\$200,451,000
64	1835	83,081,000	365,163,000
"	1836	115,104,000	457,506,000
"	1837	127,397,000	525,115,000
"	1843	56,168,000	254,544,000
"	1856	212,706,000	634,183,000
"	1857	230,351,000	684,456,000
"	1858	185,932,000	583,165,000
"	1860	253,802,000	691,945,000

Investments in United States bonds and other

United States securities...

427, 731, 600

913, 045, 629

These figures are a history in themselves, exhibiting not only the past and present condition of the country in matters of exceeding interest, but indicating unerringly the dangerous direction in which the financial current is sweeping.

On the 1st of January of the memorable year 1837 the bank note circulation of the United States was \$149,185,890, the deposits were \$127,397,000, the loans \$525,115,000. In January, 1857, the year of the next great crisis, the circulation was \$214,778,822, the deposits were \$230,351,000, the loans, \$684,456,000. There are no statistics to exhibit the amount of specie actually in circulation in those periods, but it would be a liberal estimate to put it at \$30,000,000 for 1837, and \$50,000,000 for 1857.

These were years of great inflation, the effects of which have been already referred to—the revulsion of 1837 not only producing great immediate embarrassment, but a prostration which continued until 1843, at the commencement of which year the bank note circulation amounted only to \$58,564,000, deposits to \$56,168,000, loans \$254,544,000—flour having declined in New York from \$10 25 per barrel on the 1st of January, 1837, to \$4 69 on the 1st of January, 1843, and other articles in about the same proportion.

The reaction in 1857.was severe, but, for the reason before stated, less disastrous and protracted.

On the 30th of September last the deposits of the national banks alone amounted to \$544,150,194; their loans—estimating their national securities as a loan to the government—to \$913,045,629; both of which items must have been increased during the month of October; while on the 31st of that month the circulation, bank and national, had reached the startling amount of upwards of \$700,000,000. Nothing beyond this statement is required to exhibit the present inflation or to explain the causes of the current and advancing prices. If disaster followed the expansions of 1837 and 1857, what must be the consequences of the present expansion unless speedily checked and reduced?

It is undoubtedly true that trade is carried on much more largely for cash than was ever the case previous to 1861, and that there is a much greater proper demand for money than there would be if sales were made, as heretofore, on credit. It is also true that there is a larger demand than formerly for money on the part of manufacturers for the payment of operatives. But, making the most liberal allowances for the increased wholesome demand arising from these causes and from the advance of the country in business and population, it is apparent from the 'foregoing statements, if the advance in prices did not establish the fact, that the circulating medium of the country is altogether excessive.

Before concluding his remarks upon this subject, it may be proper for the Secretary, even at the expense of repetition, to notice briefly some of the popular and plausible objections to a reduction of the currency :

First. That by reducing prices it would operate injuriously, if not disastrously, upon trade, and be quite likely to precipitate a financial crisis.

To this it may be replied, that prices of articles of indispensable necessity are already so high as to be severely oppressive to consumers, especially to persons of fixed and moderate incomes and to the poorer classes. Not only do the interests, but the absolute necessities of the masses, require that the prices of articles needed for their use should decline.

Nor is there any reason to apprehend, by any policy that Congress may adopt, so rapid a reduction of prices as to produce very serious embarrassment to trade. The government currency can only, to any considerable extent, be withdrawn by a sale of bonds, and the demand for bonds will be so affected by the state of the market that a rapid contraction will be difficult, if not impossible, even if it were desirable. There is more danger to be apprehended from the inability of the government to reduce its circulation rapidly enough, than from a too rapid reduction of it. It is, in part, to prevent a financial crisis, that is certain to come without it, that the Secretary recommends contraction. Prices are daily advancing. The longer contraction is deferred, the greater must the fall eventually be, and the more serious will be its consequences. It is not expected that a return to specie payments will bring prices back to the standards of for-The great increase of the precious metals and high taxes will premer vears. vent this; but this consideration makes it the more important that all improper and unnecessary influences in this direction should be removed.

Again it is urged, that a contraction of the currency would reduce the public revenues.

It is possible that this might be the immediate effect, but it would be temporary only. The public revenues depend upon the development of our national resources, upon our surplus productions; in other words, upon labor. The revenues derived from transactions based upon a false standard of value, or from interests that can only flourish in speculative times, are not those upon which reliance can be placed for maintaining the public credit. What a healthy and reliable business requires is a stable basis. This it cannot have as long as the country is inflicted with an inconvertible currency, the value of which, as well as the value of the vast property which is measured by it, is fluctuating and unreliable, and may be, in no small degree, controlled by speculative combinations.

It is also urged that the proposed policy would endanger the public credit, by preventing funding; and that it would compel the government and the people, who are in debt, to pay in a dearer currency than that in which their debts were contracted.

The Secretary is unable to perceive any substantial ground for this objection. He cannot understand how the process of funding is likely to be aided by the continuance of prices on their present high level, or how the credit of the government is to be restored by the perpetuation of an irredeemable currency, especially as that currency consists largely of its own notes. While it is hoped that early provision will be made for the commencement of the reduction of the national debt, an early payment of it is not anticipated. Nor is it understood that those who are apprehensive of the effects of contraction entertain the opinion that the present condition of things should be continued until any considerable portion of this debt shall be paid.

So far as individual indebtedness is regarded, it may be remarked that the people of the United States, if not as free from debt as they were six months ago, are much less in debt than they have been in previous years, and altogether less than they will be when the inevitable day of payment comes round, if the volume of paper money is not curtailed. A financial policy which would prevent the creation of debts and stimulate the payment of those already existing, so far from being injurious, would be in the highest degree beneficial.

It is further urged that a reduction of the government notes would embarrass the national banks, if it did not force many of them into liquidation.

To which it may be said that it is better that the banks should be embarrassed now than bankrupted hereafter. Their business and their customers are now under their control. What will be their condition in these respects if the expansion continues and swells a year or two longer it is not difficult to predict. While there has been no unhealthy expansion of credits in the United States for which the banks have not been largely responsible, there has been none by which they have not been ultimately the losers. Unless their sentiments are misunderstood by the Secretary, the conservative bankers of the country are quite unanimously in favor of a curtailment of the currency, with a view to an early return to specie payments.

Again, it is said that the excessive bank deposits have as much influence in creating and sustaining high prices as a superabundant currency. This is unquestionably true; but it is also true that excessive deposits are the effect of excessive currency, and that whenever the currency is reduced there will be, at least, a corresponding if not a greater reduction of deposits.

The last objection which will be noticed to the measure recommended is that it would, by reducing the rate of foreign exchanges, reduce exports and increase imports.

It is doubtless true that a high rate of exchange did for a time increase the exportations of our productions, and diminish the importation of foreign articles, but this advantage was much more than counterbalanced by the largely increased expenses of the government and of the people resulting from the very cause that produced the high rate of exchange. Besides, this apparent advantage no longer exists. The advance of prices in the United States, notwithstanding the continued high rate of European exchange, is now checking exports and inviting imports, and is creating a balance in favor of Europe that is likely to be the greatest obstacle in the way of an early resumption of specie payments. Nor must it be forgotten, that while the export of our productions was stimulated by the high rate of exchange, this very high rate of exchange enabled Europe to purchase them at exceedingly low prices.

Unless an unusual demand for our products is created in Europe by extraordinary causes, it will be ascertained, by reference to the proper tables, that our imports increase, and our exports diminish, under the influence of a redundant currency. But reference to figures is hardly necessary to substantiate this proposition. It is substantiated by the statement of it. A country in which high prices prevail is an inviting one for sellers, but an uninviting one for pur chasers. Such a country is unfortunately the United States at the present time. In order, however, that there may be no misappreheusion on this point, the attention of Congress is respectfully called to a clear and interesting paper from Dr. Elder, statistician of this department, accompanying this report.

Every consideration, therefore, that has been brought to the mind of the Secretary confirms the correctness of the views he has presented. If the business of the country rested upon a stable basis, or if credits could be kept from being still further increased, there would be less occasion for solicitude on this subject. But such is not the fact. Business is not in a healthy condition; it is speculative, feverish, uncertain. Every day that contraction is deferred increases the difficulty of preventing a financial collapse. Prices and credits will not remain as they are. The tide will either recede or advance; and it will not recede without the exercise of the controlling power of Congress.

The Secretary, therefore, respectfully but earnestly recommends-

First. That Congress declare that the compound interest notes shall cease to be a legal tender from the day of their maturity.

Second. That the Secretary be authorized, in his discretion, to sell bonds of the United States, bearing interest at a rate not exceeding six per cent., and redeemable and payable at such periods as may be conducive to the interests of the government, for the purpose of retiring not only compound interest notes, but the United States notes.

It is the opinion of the Secretary, as has been already stated, that the process of contraction cannot be injuriously rapid; and that it will not be necessary to retire more than one hundred, or, at most, two hundred millions of United States notes, in addition to the compound notes, before the desired result will be attained. But neither the amount of reduction, nor the time that will be required to bring up the currency to the specie standard, can now be estimated with any degree of accuracy. The first thing to be done is to establish the policy of contraction. When this is effected, the Secretary believes that the business of the country will readily accommodate itself to the proposed change in the action of government, and that specie payments may be restored without a shock to trade, and without a diminution of the public revenues or of productive industry.

At the close of a great war, which has been waged on both sides with a vigor and energy, and with an expenditure of money, without a precedent in history, the people of the United States are incumbered with a debt which requires the immediate and careful consideration of their representatives.

Since the commencement of the special session of 1861, the most important subject which has demanded and received the attention of Congress has been that of providing the means to prosecute the war; and the success of the government in raising money is evidence of the wisdom of the measures devised ' for this purpose, as well as of the loyalty of the people and the resources of the country. No nation within the same period ever borrowed so largely, or with so much facility. It is now to be demonstrated that a republican government can not only carry on a war on the most gigantic scale, and create a debt of immense magnitude, but can place this debt on a satisfactory basis, and meet every engagement with fidelity. The same wisdom which has been exhibited

by the national councils in providing the means for preserving the national unity, will not be wanting in devising measures for establishing the national credit.

The maintenance of public faith is a national necessity. Nations do not and cannot safely accumulate moneys to be used at a future day, and exigencies are constantly occurring in which the richest and most powerful are under the necessity of borrowing. The millennial days, when nations shall beat their swords into ploughshares and their spears into pruning-hooks, and learn war no more, are yet, according to all existing indications, far in the future. Weak and defaulting nations may maintain a nominally independent existence, but it will be by reason of the jealousies, rather than the forbearance, of stronger powers. No nation is absolutely safe which is not in a condition to defend itself; nor can it be in this condition, no matter how strong in other respects, without a well-established financial credit. Nations cannot, therefore, afford to be unfaithful to their pecuniary obligations. Credit to them, as to individuals, is money; and money is the war power of the age. But for the unfaltering confidence of the people of the loyal States in the good faith of the government, the late rebellion would have been a success, and this great nation, so rapidly becoming again united and harmonious, would have been broken into weak and belligerent fragments.

But the public faith of the United States has higher considerations than these for its support. It rests not only upon the interests of the people, but upon their integrity and virtue. The debt of the United States has been created by the people in their successful struggle for undivided and indivisible nationality. It is not a debt imposed upon unwilling subjects by despotic authority, but one incurred by the people themselves for the preservation of their government by the preservation of which, those who have been leagued together for its overthrow are to be as really benefited as those who have been battling for its maintenance. As it is a debt voluntarily incurred for the common good, its burdens will be cheerfully borne by the people, who will not permit them to be permanent.

The public debt of the United States represents a portion of the accumulated wealth of the country. While it is a debt of the nation, it becomes the capital of the citizen. The means of the merchant, the manufacturer and farmer, and also those of the workingman and the soldier, have been liberally invested in it; and it is an interesting fact—a practical evidence of the great resources of the country—that so large an amount of their wealth could be loaned by the people to the government without embarrassing industrial pursuits. Notwithstanding more than two thousand millions of dollars of the means of the people of the United States have been thus loaned, no branch of useful industry has suffered by the investment. It is undoubtedly true, that, if the wealth which has been invested in United States securities could have been employed in agriculture, in commerce, in mining and manufactures—in opening farms and the better improvement of those already under cultivation, in building railroads and ships, in working the mines, and in increasing the variety and amount of our manufactures—the nation would have been far in advance of what it now is in material prosperity. But it is also true, that, notwithstanding the large investments by the people of the United States in the securities of their government; notwithstanding, also, more than two millions of men, in the northern States alone, were, for longer or shorter periods, in the military service, and at least seven hundred thousand for a good part of the time the war continued were constantly under arms; and notwithstanding the immense waste of life, consequent upon operations so extensive and battles so sanguinary as characterized this memorable struggle, the larger part of the country has still, since eighteen hundred and sixty, progressed both in wealth and population. The loyal States have advanced in material prosperity in spite of the great drain that has been made upon them; and now that the war is closed, the Union is no longer in peril, and the men that made the armies on both sides so effective and formidable are to be again employed in profitable pursuits, the onward march of the country—even if a temporary reaction, as a result of the war, and the redundancy of the currency, shall be experienced—will be decided and resistless.

The debt is large; but if kept at home, as it is desirable it should be, with a judicious system of taxation it need not be oppressive. It is, however, a debt. While it is capital to the holders of the securities, it is still a national debt, and an incumbrance upon the national estate. Neither its advantages nor its burdens are or can be shared or borne equally by the people. Its influences are anti-republican. It adds to the power of the Executive by increasing federal patronage. It must be distasteful to the people because it fills the country with informers and tax-gatherers. It is dangerous to the public virtue, because it involves the collection and disbursement of vast sums of money, and renders rigid national economy almost impracticable. It is, in a word, a national burden, and the work of removing it, no matter how desirable it may be for individual investment, should not be long postponed.

As all true men desire to leave to their heirs unincumbered estates, so should it be the ambition of the people of the United States to relieve their descendants of this national mortgage. We need not be anxious that future generations shall share the burden with us. Wars are not at an end, and posterity will have enough to do to take care of the debts of their own creation.

Various plans have been suggested for the payment of the debt; but the Secretary sees no way of accomplishing it but by an increase of the national income beyond the national expenditures. In a matter of so great importance as this, experiments are out of place. The plain, beaten path of experience is the only safe one to tread.

The first step to be taken is, to institute measures for funding the obligations that are soon to mature. The next is, to provide for raising, in a mannér the least odious and oppressive to taxpayers, the revenues necessary to pay the interest on the debt, and a certain definite amount annually for the reduction of the principal. The Secretary respectfully suggests that on this subject the expression of Congress should be decided and emphatic. It is of the greatest importance, in the management of a matter of so surpassing interest, that the right start should be made. Nothing but revenue will sustain the national credit, and nothing less than a fixed policy for the reduction of the public debt will be likely to prevent its increase.

On the 31st day of October, 1865, since which time no material change has taken place, the public debt, without deducting funds in the treasury, amounted to \$2,808,549,437 55, consisting of the following items:

In the report of the Secretary for the year 1864, there was excluded from the public debt the sum of \$77, 897, 347 02, which amount had been paid out of the treasury, but had not been reimbursed to the Treasurer by warrants, and was not reimbursed until after the commencement of the next fiscal year. This explains the difference between \$18, 842, 558 71, assumed in that report as the balance in the treasury July 1, 1864, and \$96, 739, 905 73, the balance according to the warrant account, as above stated.

The following is a statement of the receipts and expenditures for the quarter ending September 30, 1865:

The debt of the United States was increased during the fiscal year ending June 30, 1865, \$941,902,537 04, and during the first quarter of the present fiscal year \$38,773,097 22. The Secretary has, however, the satisfaction of being able to state that during the months of September and October the public debt was diminished to the amount of about thirteen millions of dollars.

If the expenditures for the remaining three quarters of the present fiscal year shall equal the estimates, there will be a deficiency, to be provided for by loans, of \$112,194,947 20, to which must be added \$32,536,901 for the five per cent. treasury notes, (part of the public debt,) which become due the present month, and are now being paid out of moneys in the treasury, and all other payments which may be made on the public debt.

The heavy expenditures of the last fiscal year, and of the months of July and August of the present fiscal year, are the result of the gigantic scale on which the war was prosecuted during a portion of this period, and the payment of the officers and men mustered out of the service. The large estimates of the War Department for the rest of the year are for the payment of troops which are to remain in the service, and of those which are to be discharged, and for closing up existing balances.

The statement of the probable receipts and expenditures for the next fiscal year is, in the highest degree, satisfactory. According to estimates which are believed to be reliable, the receipts of that year will be sufficient to pay all current expenses of the government, the interest on the public debt, and leave the handsome balance of \$111,682,818 12 to be applied toward the payment of the debt itself.

By the statement of the public debt on the 31st of October, it appears that. besides the compound interest, the United States, and the fractional notes,

The de	or une m	1000 and	1000, 00	101,040,040	τU
The de	bt due in	1867 and	1868, to	848, 323, 591	80

During the month of October about \$50,000,000 of the compound interest notes were funded in 5-20 six per cent. bonds under the provisions of the act of March 3, 1865.

The Secretary would be gratified if the treasury could be put at once in a condition to obviate the necessity of issuing any more certificates of indebtedness, or raising money by any kind of temporary loans; but he may, for a short period, be obliged to avail himself of any means now authorized by law for meeting current expe. ses and other proper demands upon the treasury.

21

Of the debt falling due in 1867 and 1868, \$\$30,000,000 consist of 7 3-10 notes. It may be regarded as premature to fund any considerable amount of these notes within the next year; but in view of the fact that they are convertible into bonds only at the pleasure of the holders, it will be evidently prudent for Congress to authorize the Secretary, whenever it can be advantageously done, to fund them in advance of their maturity.

The Secretary has already recommended that he be authorized to sell bonds of the United States, bearing interest at a rate not exceeding six per cent., for the purpose of retiring treasury notes and United States notes. He further recommends that he be authorized to sell, in his discretion, bonds of a similar character to meet any deficiency for the present fiscal year, to reduce the temporary loan by such an amount as he may deem advisable, to pay the certificates of indebtedness as they mature, and also to take up any portion of the debt maturing prior to 1869 that can be advantageously retired. It is not probable that it will be advisable, even if it could be done without pressing them upon the market, to sell a much larger amount of bonds within the present or the next fiscal year than will be necessary to meet any deficiency of the treasury, to pay the past-due and maturing obligations of the government, and a part of the temporary loan, and to retire an amount of the compound interest notes and United States notes sufficient to bring back the business of the country to a healthier condition. But no harm can result from investing the Secretary with authority to dispose of bonds, if the condition of the market will justify it, in order to anticipate the payment of those obligations that must soon be provided for.

When the whole debt shall be put in such a form that the interest only can be demanded until the government shall be in a condition to pay the principal, it can be easily managed. It is undeniably large, but the resources of the country are even now ample to carry and gradually to reduce it; and with the labor question at the south settled on terms just to the employer and to the laborer, and with entire harmony between the different sections, it will be rapidly diminished, in burden and amount, by the growth of the country, without an increase of taxation.

The following estimate of the time which would be required to pay the national debt (if funded at five per cent. and at five and one-half per cent.) by the payment of two hundred millions of dollars annually on the interest and principal, and also of the diminution of the burden of the debt by the increase of productions, may not be without interest to Congress and to tax-payers.

The national debt, deducting moneys in the treasury, was, on the 31st of October, 1865, \$2,740,854,750. Without attempting a nice calculation of the amount, it may reach, when all our liabilities shall be accurately ascertained, it seems safe to estimate it, on the 1st of July, 1866, at three thousand millions of dollars. The amount of existing indebtedness yet unsettled, and the further amount that may accrue in the interval, are not now capable of exact estimation, and the revenue of the same period can be only approximately calculated; but it will be safe to assume that the debt will not exceed the sum named.

The annual interest upon three thousand millions, if funded at five and onehalf per cent. per annum, would be one hundred and sixty-five millions; but if funded at five per cent., it would be one hundred and fifty millions.

Now, if two hundred millions per annum should be applied, in half-yearly instalments of one hundred millions each, in payment of the accruing interest and in reduction of the principal funded at the higher rate of five and one-half per cent., the debt would be entirely paid in thirty-two and one-eighth years. At five per cent. per annum it would be extinguished, by the like application of one hundred millions every six months, in a little over twenty-eight years.

At the higher rate, the sum applied in the first year in reduction of the principal of the debt would be thirty-five millions of dollars; in the last or thirtysecond year, when the interest would be diminished to a little over nine millions, about one hundred and ninety-one millions of the uniform annual payment would go to the reduction of the principal.

On the assumption that the debt may be funded at 5 per cent., fifty millions would be applicable to the reduction of the principal in the first year, and in the twenty-eighth or last year of the period—the interest falling to less than eight millions—one hundred and ninety-two millions of the annual payment would go to the principal.

The annual interest accruing upon seventeen hundred and twenty-five millions of the debt on the 31st of October last averages 6.62 per cent. A part of this sum is now due, another portion will be payable next year, and the balance will be due or payable, at the option of the government, in 1867 and 1868. If these seventeen hundred and twenty-five millions shall be funded or converted into five per cents by the year 1869, the average interest of the whole debt will be 5.195 per cent. In the year 1871, if the debt then maturing should be funded at the same rate, the average interest would be reduced to 5.15, and in 1881 to 5 per cent., excepting the bonds for fifty millions to be advanced in aid of the Pacific railroad at 6 per cent., which will have thirty years to run from their respective dates. The interest of these bonds, added to the supposed 5 per cents, would, in 1881, make the average rate of the entire debt five and three one-hundredths of one per cent. until the whole should be discharged.

In these calculations of the average rate of interest upon the funded debt the outstanding United States notes and fractional currency are not embraced. Whatever amount of these four hundred and fifty four millions may eventually be funded at five per cent. per annum will proportionally reduce the average rates of interest upon the whole debt.

By the terms and conditions of some portion of the debt, the interest on the whole cannot be reduced to exactly five per cent. unless money may be borrowed at some stage of the process at a trifle below 5 per cent. A bonus of one-tenth of one per cent, paid by the bidders for five per cent. loans, would more than cover the excess, the probability of which fully warrants the calculation submitted as to the payment of the total debt at this rate.

It must be observed, also, that the assumed principal of the debt in July, 1866, must undergo some diminution before the funding in 1867, 1868, and 1869 begins. If only one hundred millions shall be paid off in these three years, the principal, thus reduced to twenty-nine hundred millions, would be extinguished by the process already stated in twenty-nine years, if funded at $5\frac{1}{2}$ per cent., and if at 5 per cent. in something less than twenty-seven years. And it is well worthy of attention that one hundred millions less principal at the commencement of the process of payment will save four hundred millions in round numbers in the end if the rate is $5\frac{1}{2}$ per cent., and three hundred millions if 5 per cent.

The burden of a national debt is, of course, relative to the national resources, and these resources are not, strictly speaking, capital, but the current product of the capital and industry of the country. The annual product, however, is found to bear a certain ratio to capital, and this ratio may be conveniently and safely used in computing the probable resources which must in the future meet the national requirement for the payment of interest and extinguishment of the debt.

It has been estimated by one who has made this subject a study, that the products of agriculture, manufactures, mining, mechanic arts, commerce, fisheries, and forests, in the year 1850 were at 28.9 per cent. of the value of the real and personal property of the United States. A similar calculation makes the products of 1860 26.8 per cent. of the wealth of the country in that year, as fixed by the census returns. In the calculation submitted, the annual products of capital and industry are taken, for convenience, at 25 per cent. of the capital wealth of the country, and the capital of each decennial year of the thirty that our national debt may run before its extinguishment by the application of two bundred millions per annum to the payment of its principal and interest, is here estimated upon the basis of its amount and increase as given by the census of 1860. In the year 1860 the real and personal property of the Union was valued (slaves excluded) at fourteen thousand one hundred and eighty-three millions of dollars. Of this amount the States lately in insurrection held three thousand four hundred and sixty-seven millions, being an increase upon the like property in 1850 of 139.7 per cent. The property of the loyal States was valued at ten thousand seven hundred and sixteen millions, an increase of 126.6 per cent. over 1850; together, averaging a decennial increase of 129.7 per cent.

Now, taking the increase of wealth in the loyal States in the ten years from 1860 to 1870 at 125 per cent., we have, as their capital in 1870. twenty-four thousand one hundred and eleven millions; and if we put the wealth of the other States at the same figure as in 1860, without allowing anything for increase, we have a capital for 1870 of twenty-seven thousand five hundred and seventy-eight millions. This sum gives us the product of the year at six thousand eight hundred and ninety-four and a half millions, upon which a payment on the debt of two hundred millions is 2.9 per cent. If we add but 25 per cent. to the wealth of 1860 for the States lately in insurrection, as their probable valuation in 1870, the charge of two hundred millions upon the products of that year will be 2.81 per cent. But, allowing all that can be claimed in this respect, and taking the lowest estimate for 1870 as the basis for calculating the wealth and products of the year 1880, 125 per cent. increase in this period gives a capital of sixty-two thousand and fifty millions, and a product of fifteen thousand five hundred and twelve millions, upon which sum a charge of two hundred millions falls to 1.29 per cent. In 1890, the wealth, estimated at an increase of only 100 per cent. upon that of 1880, gives the year's products at thirty-one thousand and twenty-five millions, upon which two hundred millions amounts to only 0.644 per cent., or less than two-thirds of one per cent., and in the year 1900 the tax upon the products of the year would fall to 0.322 per cent., or less than one-third of one per cent.

To this charge upon the resources of the country if there be added one hundred and forty millions of 1870 for all other expenditures, one hundred and fifty millions in 1880, one hundred and sixty millions in 1890, and one hundred and seventy millions in 1900, the estimated total expenditure will be 4.93 per cent. of the products of capital and industry in 1870, 2.26 per cent. in 1880, 1.17 per cent. in 1890, and barely seven-tenths of one per cent. in 1900. Or, in general statement, the total estimated charges of the national government for the payment of the debt in thirty years, and all other ordinary expenses, begin at less than 5 per cent. of the resources of the country, and end in seven-tenths of one per cent.

These estimates, and the basis upon which they rest, are sustained by the result of English experience upon a debt one-third larger than ours, with ordinary and extraordinary expenses at least one-half larger than ours are likely to reach, and borne through a period of much less wealth-producing power. The government charges for all expenditures fifty years ago took one pound in six of the products of Great Britain, but these charges have now fallen to one pound in nine. We commence our national burdens with resources that, in the very first year, will be required to bear an aggregate of less than 5 per cent., or one dollar in twenty.

It is true that many circumstances may occur to prevent the accomplishment of these anticipated results; but the estimates have been made upon what are regarded as reliable data, and are well calculated to encourage Congress in levying taxes, and the people in paying them.

After careful reflection, the Secretary concludes that no act of Congress (except for raising the necessary revenue) would be more acceptable to the people, or better calculated to strengthen the national credit, than one which should provide that two hundred millions of dollars, commencing with the next fiscal year, shall be annually applied to the payment of the interest and principal of the national debt. The estimates for the next fiscal year indicate that a very much larger amount could be so applied without an increase of taxes.

Before concluding his remarks upon the national debt, the Secretary would suggest that the credit of the five-twenty bonds issued under the acts of February 25, 1862, and June 30, 1864, would be improved in Europe, and, consequently, their market value advanced at home, if Congress should declare that the principal, as well as the interest, of these bonds is to be paid in coin. The policy of the government in regard to its funded debt is well understood in the United States, but the absence of a provision in these acts that the principal of the bonds issued under them should be paid in coin, while such a provision is contained in the act under which the ten-forties were issued, has created some apprehension in Europe that the five-twenty bonds might be called in at the expiration of five years, and paid in United States notes. Although it is not desirable that our securities should be held out of the United States, it is desirable that they should be of good credit in foreign markets on account of the influence which these markets exert upon our own. It is, therefore, important that all misapprehensions on these points should be removed by an explicit declaration of Congress that these bonds are to be paid in coin.

In view of the fact that the exemption of government securities from State taxation is, by many persons, considered an unjust discrimination in their favor, efforts may be made to induce Congress to legislate upon the subject of their taxation. Of course, the existing exemption from State and municipal taxation of bonds and securities now outstanding will be scrupulously regarded. That exemption is a part of the contract under which the securities have been issued and the money loaned thereon to the government, and it would not only be unconstitutional, but a breach of the public faith of the nation to disregard it. It would also, in the judgment of the Secretary, be unwise for Congress to grant to the States the power, which they will not possess unless conferred by express congressional enactment, of imposing local taxes upon securities of the United States which may be hereafter issued. Such taxation, in any form, would result in serious, if not fatal, embarrassment to the government, and, instead of relieving, would eventually injure the great mass of the people, who are to bear their full proportion of the burden of the public debt. This is a subject in relation to which there should be no difference of opinion. Every taxpayer is personally interested in having the public debt placed at home, and at a low rate of interest, which cannot be done if the public securities are to be subject to local taxation. Taxes vary largely in different States, and in different counties and cities of the same State, and are everywhere so high that, unless protected against them, the bonds into which the present debt must be funded cannot be distributed among the people, except in some favored localities, unless they bear a rate of interest so high as to make the debt severely oppressive, and to render the prospect of its extinguishment well-nigh hopeless. Exempted from local taxation, the debt can, it is expected, be funded at an early day at five per cent.; if local taxation is allowed, no considerable portion of the debt which falls due within the next four years can be funded at home at less than eight per cent. The taxpayers of the United States cannot afford to have their burdens thus increased. It is also evident that the relief which local taxpayers would obtain from government taxation, as the result of a low rate of interest on the national securities, would at least be as great as the increase of

local taxes to which they would be subjected on account of the exemption of government securities; while if those securities should bear a rate of interest sufficient to secure their sale when subject to local taxes, few, if any of them, would long remain where those taxes could reach them. They would be rapidly transferred to other countries, into the hands of foreign capitalists, and thus at last the burden of paying a high rate of interest would be left upon the people of this country without compensation or alleviation.

The present system of internal revenue is one of the results of the war. It was framed under circumstances of pressing necessity, affording little opportunity for careful and accurate investigation of the sources of revenue. Its success, however, has exceeded the anticipations of its authors, and is a most honorable testimonial to their wisdom, and to the patriotism of the people who have so cheerfully submitted to its burdens.

With the restoration of peace, industry is returning again to its former channels, and a revision of the system now becomes important to accommodate it to the changed and changing condition of the country.

Every complicated system of taxation opens the way to mistakes, abuses, and deceptions. Temptations to dishonesty and fraud are placed before the revenue officers and the taxpayers, and both are often thereby demoralized. Honest men, who pay their taxes in full, are injured, if not ruined, by the ingenuity of those who successfully evade their share of the public burdens.

The multiplicity of objects at present subject to taxation is one of the most serious objections to the present system. Many of these yield little revenue, while its collection is troublesome to the collector, and irritating and offensive to the taxpayers. This multiplicity also involves as many temptations to fraud, and as many difficult questions for decision, as the objects from which large revenue is derived.

To impose taxes judiciously, so as to obtain revenue without repressing industry, is one of the highest and most difficult duties devolved upon Congress. Taxation which in one year may be scarcely felt may the next year be oppressive; and that which may not be burdensome to those who are well established in business may be fatal to those just commencing. Every branch of industry has its infancy, and ought to be encouraged by liberal legislation. Whatever of industry or enterprise is destroyed, by injudicious taxation or otherwise, is a damage to the national welfare.

Heavy taxation may drive capital from our shores, or prevent its employment in the manner most advantageous to the country, and thus prevent that demand for labor which is the best security for its proper reward.

The taxation which is now extremely productive may in a few years become unproductive, or engender a spirit of opposition and discontent which may endanger the national credit.

It is important, therefore, that our revenue system should be frequently and carefully revised, in order that it may be accommodated to the habits and character of the people, to the industry of the country, to labor and capital, to wages at home and wages abroad. It is also of the highest importance that there should be a careful adjustment of our internal to our external revenue system.

That views somewhat similar to these were entertained by Congress, is indicated by the provision in the amendatory act of March 3, 1865, by which the Secretary of the Treasury was authorized to "appoint a commission, consisting of three persons, to inquire and report, at the earliest practicable moment, upon the subject of raising by taxation such revenue as may be necessary in order to supply the wants of the government, having regard to and including the sources from which such revenue should be drawn, and the best and most efficient mode of raising the same."

This subject received the early attention of the Secretary, and under the authority of the act, after careful deliberation, a commission was organized, consisting of Messrs. David A. Wells, Stephen Colwell, and S. S. Hayes, representing, to a certain extent, different sections and interests, and also different political sentiments. The commission was fully organized in June, and has since then been actively engaged in the prosecution of its labors.

An investigation of the character of the revenue, contemplated by the act authorizing this commission, necessarily involves a careful and comprehensive inquiry into the condition of every industry, trade, or occupation in the country likely to be affected by the national revenue system, and, in the absence of nearly all previously compared and exact data, must necessarily be protracted and laborious. From a preliminary report made to the Secretary by the commission, he has reason to infer that enough has already been accomplished by them to indicate the value of an investigation like that in which they are now engaged, and to demonstrate the necessity of the accumulation of a correct and accurate knowledge, properly digested and presented, as a basis for our future revenue legislation.

The plan pursued by the commission has been, to take up, specifically, those sources of revenue which our own experience, and the experience of other countries, have indicated as likely to be most productive under taxation and most capable of sustaining its burdens. In pursuance of this plan, a large number of witnesses have been examined, and much valuable testimony put upon record.

It is understood to be the opinion of the commissioners that it would be inexpedient at once to make any radical and violent changes in the nature and working of the present revenue system, and that we should rather seek, through experience and study, to perfect the present system by degrees, so as to gradually adapt it to the industrial habits and fiscal capacity of the people. The Secretary is also informed by the commissioners that it seems certain to them that, without any increase in the rate of taxation, but by the enactment of some modifications and amendments of the present law, coupled, positively, even with some reduction in the rates, an increase of revenue from comparatively few sources to the extent of some fifty or sixty millions of dollars per annum over and above that now obtained, may be confidently relied on. If this should be the case, an early repeal of a multitude of small taxes which, from the inquisitorial character of their method of collection, have become extremely odious and objectionable, will be advisable.

Although the work of the commission has been thus far mainly directed to the sources likely to be most productive of revenue, the consideration of the subject of the administration of the law has not been omitted by them; and in this department it is believed that some valuable recommendations will be submitted for the consideration of Congress.

As a gratifying feature of their work, the commission report a most cheerful and prompt co-operation on the part of nearly all the representatives of the industrial interests of the country in the procurement of exact information, and a universal expression of ready acquiescence in any demands upon them which the future necessities of the government may require, united, at the same time, with a request that the government should, on its part, seek to equalize, so far as practicable, and fairly distribute the apportionment of its requirements.

In view of the fact that the revision of the whole revenue system has been committed to this commission, the Secretary does not consider it proper for him to present his views upon this important subject in advance of their final report, which it is hoped will be made early in the session.

There are some subjects, however, presented in the report of the Commissioner of Internal Revenue which require the attention of Congress before the report of the commission is received, and in relation to which there should be early action.

In putting into operation the system of internal revenue in the recently rebellious States, it became necessary for the Secretary to decide whether or not an effort should be made to collect the taxes which accrued prior to the establishment of revenue offices therein. After giving the subject due consideration, the Secretary, in view of the facts that there were no federal revenue officers to whom payment of taxes could be made, that the people (many of them involuntarily) had been subject to heavy taxation by the government which was attempted to be established in opposition to that of the United States, and had been greatly exhausted by the ravages of war, issued a circular, under date of the 21st of June, declaring "that, without waiving in any degree the right of the government in respect to taxes which had before that time accrued in the States and Territories in insurrection, or assuming to exonerate the taxpayer from his legal responsibility for such taxes, the department did not deem it advisable to insist, at present, on their payment, so far as they were payable prior to the establishment of a collection district embracing a territory in which the taxpayer resided."

For substantially the same reasons that induced the Secretary to issue this circular, he deemed it to be his duty to suspend all further sales under the direct tax law. Tax commissioners, however, have been appointed for each State, and collections have been made, as far as it has been practicable to make them, without sales of property. Some sales had, however, been previously made in many of the States, and large amounts of property had been purchased for the government. In South Carolina a portion of the lands thus purchased have since been sold under the 11th section of the act of August, 1863.

During the war the laws in regard to stamps have been, of course, in the insurrectionary States, entirely disregarded; and, as a consequence, immense interests are thereby imperilled.

In view, therefore, of the recent and present condition of the southern States, the Secretary recommends-

First. That the collection of internal revenue taxes which accrued before the establishment of revenue offices in the States recently in rebellion be indefinitely postponed.

Second. That all sales of property in those States, under the direct tax law, be suspended until the States shall have an opportunity of assuming (as was done by the loyal States) the payment of the tax assessed upon them.

Third. That all transactions in such States, which may be invalid by the non-use of stamps, be legalized as far as it is in the power of Congress to legalize them.

What action, if any, should be taken for the relief of persons in those States, whose property has been sold under the direct tax law, and is now held by the government, it will be for Congress to determine. The Secretary is decidedly of the opinion that liberal legislation in regard to the taxes which accrued prior to the suppression of the rebellion will tend to promote harmony between the government and the people of those States, will ultimately increase the public revenues, and vindicate the humane policy of the government.

The Secretary is happy in being able to state that the affairs of the Bureau of Internal Revenue are being satisfactorily administered, and the working of the system throughout the country is being gradually improved.

For want of proper accommodations in the Treasury building the bureau has been removed to the large and commodious building on Fifteenth street, which has been secured for such time as the government may require its use, at an annual rent of \$23,000.

The reciprocity treaty with Great Britain will expire on the 17th of March next, and due notice of this fact has been given by circulars to the officers of customs on the northern frontier.

There are grave doubts whether treaties of this character do not interfere with the legislative power of Congress, and especially with the constitutional power of the House of Representatives to originate revenue bills; and whether such treaties, if they yield anything not granted by our general revenue laws, are not in conflict with the spirit of the usual clause contained in most of our commercial treaties, to treat each nation on the same footing as the most favored nation, and not to grant, without an equivalent, any particular favor to one nation not conceded to another in respect to commerce and navigation.

It appears to be well established that the advantages of this treaty have not been mutual, but have been in favor of the Canadas. Our markets have been strong, extensive, and valuable; theirs have been weak, limited, and generally far less profitable to our citizens. The people of the Canadas and provinces have been sellers and we buyers of the same productions for which we are often forced to seek a foreign market. It is questionable, in fact, whether any actual reciprocity, embracing many of the articles now in the treaty, can be maintained between the two countries. Even in regard to the fisheries, it is by no means certain that, instead of equivalents having been acquired under the treaty, more than equal advantages were not surrendered by it. But, whatever the facts may be, this subject, as well as that of inter-communication through rivers and lakes, and possibly canals and railroads, are proper subjects of negotiation, and their importance should secure early consideration.

It is certain that, in the arrangement of our complex system of revenue through the tariff and internal duties, the treaty has been the cause of no little embarrassment. The subject of the revenue should not be embarrassed by treaty stipulations, but Congress should be left to act upon it freely and independently. Any arrangement between the United States and the Canadas and provinces, that may be considered mutually beneficial, can as readily be carried out by reciprocal legislation as by any other means. No complaint would then arise as to subsequent changes of laws, for each party would be free to act at all times, according to its discretion.

However desirable stability may be, an irrepealable revenue law, even in ordinary times, is open to grave objections, and in any extraordinary crisis is likely to be pernicious. The people of the United States cannot consent to be taxed as producers while those outside of our boundaries, exempt from our burdens, shall be permitted, as competitors, to have free access to our markets. It is desirable to diminish the temptations now existing for smuggling, and if the course suggested, of mutual legislation, should be adopted, a revenue system, both internal and external, more in harmony with our own, might justly be anticipated from the action of our neighbors, by which this result would be most likely to be obtained.

The attention of Congress is again called to the importance of early and definite action upon the subject of our mineral lands, in which subject are involved questions not only of revenue, but social questions of a most interesting character.

Copartnership relations between the government and miners will hardly be proposed, and a system of leasehold, (if it were within the constitutional authority of Congress to adopt it, and if it were consistent with the character and genius of our people,) after the lessons which have been taught of its practical results in the lead and copper districts, cannot of course be recommended.

After giving the subject as much examination as the constant pressure of official duties would permit, the Secretary has come to the conclusion that the best policy to be pursued with regard to these lands is the one which shall substitute an absolute title in fee for the indefinite possessory rights or claims now asserted by miners.

The right to obtain a "fee simple in the soil" would invite to the mineral

0

districts men of character and enterprise; by creating homes, (which will not be found where title to property cannot be secured,) it would give permanency to the settlements, and, by the stimulus which ownership always produces, it would result in a thorough and regular development of the mines.

A bill for the subdivision and sale of the gold and silver lands of the United States was under consideration by the last Congress, to which attention is respectfully called. If the enactment of this bill should not be deemed expedient, and no satisfactory substitute can be reported for the sale of these lands to the highest bidder, on account of the possessory claims of miners, it will then be important that the policy of extending the principle of pre-emption to the mineral districts be considered. It is not material, perhaps, how the end shall be attained, but there can be no question that it is of the highest importance, in a financial and social point of view, that ownership of these lands, in limited quantities to each purchaser, should be within the reach of the people of the United States who may desire to explore and develop them.

In this connexion it may be advisable for Congress to consider whether the prosperity of the treasure-producing districts would not be increased, and the convenience of miners greatly promoted, by the establishment of an assay office in every mining district from which an annual production of gold and silver amounting to ten millions of dollars is actually obtained.

The attempts at smuggling, stimulated by the high rates of duties on imports, have engaged the attention of the department, and such arrangements have been made for its detection and prevention as seemed to be required by the circumstances, and available for that purpose.

It is quite apparent, however, that, with our extensive sea-coasts and inland frontier, it is impracticable entirely to prevent illicit traffic, though checks at the most exposed points have, doubtless, been put to such practices.

In this connexion it may be remarked that the revenue cutters are diligently and usefully employed in the preventive service, within cruising limits so defined as to leave no point of sea and gulf coasts unvisited by an adequate force.

A similar arrangement will be extended to the lakes on the reopening of navigation, the cutters built for that destination not having been completed in time to be put in commission before its close.

The cutters are an important auxiliary to the regular customs authorities, in the collection and protection of the public revenue, by the examination of incoming vessels and their manifests of cargo; affording succor to vessels in distress; aiding in the enforcement of the regulations of harbor police, and otherwise preventing or detecting violations or evasions of law. A service of this description is unquestionably useful, if not indispensable, to the administration of the revenue system of a maritime and commercial country with such extensive sea, lake, and gulf coasts as our own.

There are now in the service twenty-seven steamers and nine sailing vessels. Of the steamers, seven are of the average tonnage of 350 tons, and draw nine feet of water. These large vessels were constructed during the progress of the late rebellion, and were designed for the combined purpose of a naval force and a revenue coast guard. Their heavy armaments, large tonnage, and crews, however well fitted for such purposes, are not adapted for the revenue service in a time of peace. In consequence of their great draught of water, they must be used mainly as sea-going vessels, and are incapable of navigating the shallow waters of the coasts and their tributaries, which afford the most favorable opportunities for contraband trade. Independently of these considerations, they are so constructed as to be unable to carry a supply of fuel for more than three, or possibly four days, at the furthest.

It is recommended, therefore, that this department be vested with authority to sell the vessels of this description, and expend the proceeds in the purchase of others of a different character and lighter draught, and, on that account, better fitted to accomplish the purposes of a preventive service, and which can be kept in commission at a cost more than one-third less than those of the former class.

For example, the difference in the cost of running for twelve months the "Mahoning," one of the first named class, and the "Nansemond," one of the latter class, is \$27,606. The "Mahoning," with twelve tons of coal per diem, can make but eight knots per hour; while the "Nansemond," with eight tons of coal per diem, will make twelve knots per hour. The "Nansemond," drawing but six feet nine inches, is enabled to cruise in waters entirely inaccessible to the "Mahoning."

To render the service effective and economical, cutters should be of light draught, manned by a small crew, and able to navigate the shoal waters and penetrate the inland bays, rivers, and creeks with which our sea, lake, and gulf coasts abound, but of sufficient tonnage to enable them to perform efficiently and safely the duties of a coast guard at sea, and to furnish succor to vessels in distress; and at the same time to navigate the interior waters for the prevention of smuggling, and reach readily a port of refuge in the tempestuous weather prevailing at times along our coast, should they be forced to do so.

The working of the marine hospital system, as at present constituted, is not altogether satisfactory. The erection and repair of numerous expensive buildings, and the support of the establishments necessarily connected with their operations, have entailed upon the government a yearly expense far beyond the 'amount contributed by the seamen, which has been met by large annual appropriations by Congress.

The act of July 16, 1798, by which the system was created, and the rate of contribution fixed at twenty cents per month, confined the action of the government to the simple expenditure, for the benefit of the seamen, of the amounts thus contributed by themselves, and contemplated laying no burden on the public treasury. If it is deemed advisable to continue any system of relief, under control of the government, it is respectfully suggested that the original intent of the law should be carried into effect, and the fund made self-sustaining. With this view, it will be necessary to increase the fund, and to make a material reduction in the expenses.

3 F

Experience has shown, and former Secretaries have at various times; and with entire unanimity, represented to Congress that the system of public marine hospitals, maintained and managed by the government, is the least economical method that has been devised for the administration of this fund, and affords the least comparative benefit to the seamen. The expenses of these establishments are large, independently of the number of seamen received in them. When the patients are numerous, the average rate of expense per man is not unreasonable; but where they are few, as at most of the public institutions, the expense per capita is very largely in excess of the cost of maintaining them under contract at private, State, or municipal institutions, where they would be better accommodated, at an expense exactly proportioned to the services rendered.

Mention may be made, in illustration, of one of these public hospitals, which is maintained at an annual expense of upwards of \$4,000, and which accommodates an average of less than a single patient, at a daily cost per capita of more than \$14 50; while quite as satisfactory relief can be had under contract for about \$1 per day.

There are, moreover, several hospital buildings, erected at great cost, now lying idle, out of repair, and not available for their intended use. Some of these have never been occupied, and one, at least, is situated at a point remote from any port, and where relief is never demanded. Others now occupied are in a condition requiring large and immediate outlay to preserve them.

In view of these facts, it is strongly recommended that authority be conferred by law upon this department to sell such hospitals as experience has shown are not needed; retaining only those situated at important ports where, by the course of commerce, demands for relief are likely to be most frequent and pressing, and where contracts, on favorable terms, cannot be procured with private or municipal institutions. The proceeds should either be returned into the treasury in repayment of their cost, or invested for the benefit of the hospital fund.

In favor of the contract system it may be remarked that it is in operation most successfully at New York, where demands for relief are far the heaviest at Baltimore, Philadelphia, St. Louis, Louisville, and Cincinnati; and it is believed that quite as advantageous and satisfactory arrangements might be made ' at other ports where government hospitals are now located. Even at ports where it may be deemed best to retain the ownership of the hospital buildings it might be advisable to lease them to private or municipal hospitals, which would gladly receive the seamen on favorable terms. Such an arrangement was formerly in force at Charleston, South Carolina, much to the advantage of the patients and the fund.

Should these suggestions be adopted, and, at the same time, the rate of contribution fixed at thirty cents a month, instead of twenty, as at present, the proceeds of the tax, thoroughly collected and economically administered, would be ample to meet every demand which a judicious discrimination in affording relief would make upon them; and the seamen would receive far more substantial and efficient benefit than under the present system. As to the increased rate of contribution, it may be said that the existing rate has stood unchanged through all the fluctuations of prices and wages since 1798; that it is quite disproportioned to the benefit derived by the seamen from the marine hospital system; and that persons of this class are, as a general thing, otherwise free from federal taxation. In this view there can be no hardship or injustice in making the moderate increase suggested.

By the report of the Comptroller of the Currency, it appears that sixteen hundred and one banks had been, on the 31st of October last, organized under the National Banking act. Of these, six hundred and seventy-nine were original organizations, and nine hundred and twenty-two conversions from State institutions.

The Comptroller recommends several amendments to the acts, which will arrest the attention of Congress.

The recommendation that the banks shall be compelled to redeem their notes at one of the three cities named is heartily indorsed. At some future day it may be advisable that redemptions shall be authorized at western and southern cities; but as long as exchange continues to be in favor of the seaboard, it is not expedient to permit banks to redeem at interior points. There are very few country banks or banks in the interior cities that do not keep their chief balances in either Boston, New York, or Philadelphia, there being a regular demand for exchange on these cities. Where the current of trade requires the banks to keep accounts for their own accommodation and that of their customers and the public, there should their redemptions be made. Notes that are par in either of these cities will very rarely be at a discount in any part of the United States, and will be as nearly of uniform value as is, perhaps, ever to be expected in a paper currency.

The Secretary is hopeful that the time is not far distant when redemptions will be something more than nominal. Experience and observation have taught him that frequent redemptions are essential to the solvency of banks of circulation. Nothing so well teaches a bank the necessity of keeping its loans in the hands of prompt customers, and its means under its own control, as the certainty of being frequently called upon to meet its own obligations. It is quite important that inexperienced bankers, under the national banking system, should learn that their notes are not money, but promises to pay it; and the sooner and the more effectively this lesson is impressed upon them, the better will it be for their stockholders and the system.

The national banking system was designed not only to furnish the people with a sound circulation, but one of uniform value; and this is not likely to be fully accomplished until the banks, by compulsion or their own voluntary act, keep their notes at par in the principal money markets of the country.

The establishment of the national banking system is one of the great compensations of the war—one of the great achievements of this remarkable period. In about two years and a half from the organization of the first national bank, the whole system of banking under State laws has been superseded, and the people of the United States have been furnished with a circulation bearing upon it the seal of the Treasury Department as a guarantee of its solvency. It only remains that this circulation shall be a redeemable circulation—redeemable not only at the counters of the banks, but at the commercial cities—to make the national banking system of almost inconceivable benefit to the country.

The present law limits the circulation of the national banks to three hundred millions of dollars; and it is not probable, when the business of the country returns to a healthy basis, that a larger paper circulation than this will be required. Indeed, it is doubtful whether a larger bank note circulation can be maintained on a specie basis. Should an increase, however, be necessary, it can be provided for hereafter. It is, perhaps, unfortunate that a greater restriction had not been placed upon the circulation of the large banks already organized, in view of the wants of the southern States. It is quite likely, however, that the anticipated withdrawal of a portion of the United States notes (not to speak of the effect of the restoration of specie payments) will so reduce the circulation of the northern banks as to afford to the south, under the present limitation of the law, all the paper currency which will be required in that quarter.

The act of March 3, 1865, authorized the Secretary to borrow any sums not exceeding six hundred millions of dollars, and to issue therefor bonds or treasury notes of the United States in such form as he might prescribe.

Under this act there was issued during the month of March \$70,000,000 of notes payable three years after date, and bearing an interest payable semiannually in currency at the rate of seven and three-tenths per cent. per annum, and convertible at maturity, at the pleasure of the holders, into five-twenty gold-bearing bonds.

Upon the capture of Richmond and the surrender of the confederate armies it became apparent that there would be an early disbanding of the forces of the United States, and consequently heavy requisitions from the War Department for transportation and payment of the army, including bounties. As it was important that these requisitions should be promptly met, and especially important that not a soldier should remain in the service a single day for want of means to pay him, the Secretary perceived the necessity of realizing as speedily as possible the amount-\$530,000,000-still authorized to be borrowed under this act. The seven and three-tenths notes had proved to be a popular loan, and although a security on longer time and lower interest would have been more advantageous to the government, the Secretary considered it advisable, under the circumstances, to continue, to offer these notes to the public, and to avail himself, as his immediate predecessors had done, of the services of Jay Cooke, esq., in the sale of them. The result was in the highest degree satisfactory. By the admirable skill and energy of the agent, and the hearty cooperation of the national banks, these notes were distributed in every part of the northern and some parts of the southern States, and placed within the reach of every person desiring to invest in them. No loan ever offered in the United States, notwithstanding the large amount of government securities previously taken by the people, was so promptly subscribed for as this. Before the first of August the entire amount of \$530,000,000 had been taken, and the Secretary had the unexpected satisfaction of being able, with the receipts from customs

and internal revenue and a small increase of the temporary loan, to meet all the requisitions upon the treasury.

On two hundred and thirty millions of these notes the government has the option of paying the interest at the rate of six per cent. in coin, instead of seven and three-tenths in currency. The Secretary thought it advisable to reserve this option, because he indulged the hope that before their maturity specie payments would be restored, and because six per cent. in coin is as high a rate of interest as the government should pay on any of its obligations.

The receipts of coin have been for some months past so large that there have been constant accumulations beyond what has been required for the payment of the interest on the public debt. The Secretary has, therefore, deemed it to be his duty to sell, from time to time, a portion of the surplus for the purpose of supplying the wants of importers and furnishing the means for meeting the demands upon the treasury for currency. The sales have been conducted by the assistant treasurer in New York in a manner entirely satisfactory to the department and, it is believed, to the public. The sales, up to the first of November, amounted to \$27,993,216 11, and the premium to \$12,310,459 76; thus placing in the treasury for current use the sum of \$40,503,675 87, without which there would have been a necessity for the further issue of interest-bearing notes.

The necessities of the treasury have been such that a compliance with the requirements of the act of February 25, 1862, for the creation of a sinking fund has been impracticable. As long as it is necessary for the government to borrow money, and to put its obligations upon the market for sale, the purchase of these obligations for the purpose of creating a sinking fund would hardly be judicious. After the expiration of the present year the income of the government will exceed its expenses, and it will then be practicable to carry into effect the provisions of the law. The Secretary is, however, of the opinion that the safe and simple way of sinking the national debt is to apply directly to its payment the excess of receipts over expenditures. He therefore respectfully recommends that so much of the act of February 25, 1862, as requires the application of coin to the purchase or payment of one per cent. of the entire debt of the United States, to be set apart as a sinking fund, be repealed.

By virtue of the authority conferred by the fifth section of the act of March 3, 1863, the Treasurer of the United States and the assistant treasurer in New York have been instructed to receive deposits of coin and bullion, and to issue certificates therefor in denominations of not less than twenty dollars.

Instructions were given for the issue of these certificates to promote the convenience of officers of customs and of the Treasurer and assistant treasurers, and for the accommodation of the public. Other considerations also prompted the Secretary to avail himself of the authority referred to. It is expected that the credit of the government will be strengthened by the coin which will be thus brought into the treasury, and that the effect of the measure will be to facilitate to some extent a return to specie payments. If the experiment should be satisfactory in New York, it will be extended to other commercial cities. For a full explanation of the condition of the mints and their operations during the past year, attention is requested to the report of the director of the mint at Philadelphia.

The total value of the bullion deposited at the mint and branches during the last fiscal year was 32,248,754 97, of which 31,065,349 74 was in gold and 1,183,405 23 in silver. Deducting the redeposits, there remain the actual deposits, amounting to 27,982,849 09.

The coinage for the year was, in gold coin, \$25,107,217 50; gold bars, \$5,578,482 45; silver coin, \$636,308; silver bars, \$313,910 69; cents, including the two and three-cent pieces, \$1,183,330; total coinage, \$32,819,248 64.

Of the bullion deposited, \$5,570,371 27 was received at the assay office in New York. Of the gold bars, \$4,947,809 21, and of silver bars, \$165,003 45, in value, were stamped at the same office.

At the branch mint in San Francisco the gold deposits were \$18,808,318 49, and the silver deposits and purchases \$540,299 20 in value. The value of the gold coined was \$18,670,840; of silver coined, \$320,800; 'and of silver bars, \$145,235 58; total coinage, \$19,144,875 58.

At the branch mint in Denver the total deposits were \$548,609 85, of which \$541,559 04 was in gold, and \$7,050 81 was in silver.

The survey of the coast, which is under the administrative direction of this department, has been for the past year prosecuted with vigor. Under special assignments most of the field assistants have co-operated with the naval and military forces of the government, and in that way important service was rendered quite up to the close of the war. Since the termination of hostilities the regular operations of the survey have been pushed forward as rapidly as the available means would permit.

The national importance of this work was clearly evinced during the war, and now seems to be generally appreciated. It is therefore recommended that the necessary appropriations be made for the efficient continuance of the work.

The attention of Congress is called to the report of the Solicitor of the Treasury, which exhibits the satisfactory results of the litigation under his supervision; and also the condition of the measures adopted by him and the officers of the customs for the suppression of frauds upon the revenue.

Attention is also specially called to so much of his report as relates to the administration of the fund appropriated to defray the expenses of detecting and bringing to punishment counterfeiters of the securities and coin of the United States. The measures which have been adopted have been attended with important results, and such as to indicate the wisdom of Congress in creating the fund, and the expediency of continuing appropriations. The Solicitor has been requested to cause a thorough revision of the laws relating to counterfeiting to be made, and a bill to be prepared for the consideration of Congress, with a view to remedying defects in existing statutes.

Operations under the several acts of Congress concerning commercial intercourse with the States declared to be in insurrection, the execution of which was confided to this department, have been nearly brought to a close, partly by the restoration of peace, and partly by Executive proclamations. The provisions of those acts were carried out, as far as it was possible in the disturbed condition of the country, under the rules and regulations adopted by the department, with the approval of the Executive, not only without cost to the government, but in such manner as to add considerably to its revenues.

The regulations adopted in conformity with the requirements of the second section of the act of July 2, 1864, relative to abandoned lands, houses, and tenements, and freedmen, were, at the request of the military authorities, and from considerations of public policy, suspended by orders of August 11, 1864. Since then, from time to time, as it was ready to assume the charge of them, th duties appertaining to these subjects have been transferred to the Bureau of Refugees, Freedmen, and Abandoned Lands, according to the provisions of the act of Congress approved March 3, 1865.

By Executive orders, all operations under sections 8 and 9 of the act approved July 2, 1864, authorizing the purchase, by agents of this department, of the products of the insurrectionary districts, were closed, on the east of the Mississippi river, on the 13th of June last, and west of it on the 24th of the same month. The accounts of the different purchasing agents have not been settled, but it is thought that the net profits of the government, by these purchases, will amount to a million and a half dollars.

Since the suspension of purchases by the government the duties of the agents of this department have been confined to securing the property (chiefly cotton) captured by our military forces in pursuance of the acts of March 12, 1862, and July 2, 1864, relative to captured and abandoned property. Up to the 31st of March last there had been received at New York, Cincinnati, and St. Louis, the places designated for sales—including 38,319 bales obtained at Savannah, 4,151 bales at Charleston, and 2,331 at Mobile—about eighty thousand bales.

The general rule under which agents have been acting since the surrender of the forces which had been waging war against the government of the United States, is to collect and forward, as captured property, all cotton described upon the books and lists of the pretended confederate government, or which there was sufficient reason to believe was owned or controlled by it, and that which belonged to companies formed for the purpose of running the blockade, in support of, if not in direct co-operation with, the league which had been formed to overthrow the government of the United States, leaving individual claimants of the property to their recourse before the Court of Claims, as provided by the third section of the act approved March 12, 1863. In the performance of their duties, the agents have had great difficulties to encounter, from the unwillingness of the planters to surrender the captured property in their possession, from extensive depredations upon it after it was collected, and from powerful combinations formed to prevent, under various pretexts, the property fairly captured from coming into the possession of the United States. In spite of all these obstacles, however, it is estimated, from the accounts already received, and from data furnished by the agents, that there will be secured to

the government not less than one hundred and twenty-five thousand bales of cotton, including the eighty thousand bales already referred to. What part of the proceeds of this property will ultimately be retained by the government will depend upon the success of the claimants before Congress and the courts. In collecting this cotton, there have been doubtless some instances of injustice to individuals who may be entitled to the consideration of the government; but the Secretary believes that the cotton which has been taken by the agents was rightfully seized, and that no equitable claims for the return of any considerable portion of it or the proceeds thereof can be presented.

It may be proper to add, in this connexion, that many and grave charges of corruption and improper practices have been made against agents employed in this branch of the public service. These charges, however, have been mostly vague in their character, and after such investigation as the Secretary has been able to make, he has concluded that they have been generally instigated by malice or disappointed cupidity, and usually without substantial foundation.

A copy of the several rules and regulations alluded to, which have been put in force since the last session of Congress, is appended hereto as a part of this report.

The various public buildings under the control and management of the Treasury Department are in a favorable condition; and it is to be hoped that only limited appropriations will be necessary for the coming year. On account of the difficulty of providing accommodations for the State Department, it has not been deemed advisable to proceed with the construction of the north wing of the Treasury building during the present year. The granite for the extension has, however, been contracted for and is being prepared, so that during the next season the work can be vigorously prosecuted. The grounds between the Treasury Department and the Executive Mansion are being graded and arranged with as great a regard to convenience and beauty as is practicable, considering the unfavorable location of the edifice, and it cannot be doubted that the Treasury building, when fully completed, will compare favorably, in the simplicity, solidity and beauty of its architectural appearance and proportions, with any structure in this country or in Europe.

The southern custom-houses are reported to be in a damaged and dilapidated condition, and an officer of the department has been sent to inspect them, and report what expenditures are necessary to fit them for the transaction of the public business. The appropriations which will be necessary for the purpose of making the repairs needed will be duly indicated.

By the terms of the lease of the premises occupied as a custom-house in New York, the government had the right, by giving three months' previous notice, to purchase the same at the expiration of the lease for one million of dollars. As the property was regarded as being worth a much larger amount, and was needed for custom-house purposes, it was thought advisable that the government should avail itself of the right to purchase. The property was therefore purchased for the sum named, and conveyed by proper deed to the United States.

The attention of Congress is earnestly called to the necessity of providing

for the more adequate compensation of some of the officers connected with the Treasury Department. The salaries of those who are required to furnish bonds with heavy penalties, and who are custodians of large amounts of money, and of others occupying very important positions, are altogether inadequate to the responsibilities which they incur and the services which they render.

For example, the Treasurer, who received and disbursed last year about four thousand millions of dollars, is paid a salary of five thousand dollars per annum. The assistant treasurer in New York, who has in his custody from twenty to forty millions of dollars in coin, and frequently as large an amount in currency, receiving and paying out in the course of the year more than two thousand millions of dollars, receives six thousand dollars. The assistant treasurer in San Francisco receives forty-five hundred dollars in currency, which is an entirely inadequate salary in that State for an officer of character and ability, holding a position of so great responsibility. The Commissioner of Internal Revenue, holding an office which requires in its administration as much executive ability, and as high an order of talent, as any connected with the Treasury Department, receives only four thousand dollars; the Deputy Commissioner twenty-five hundred dollars. The custody of the vast amounts of government securities printed and issued from the Treasury Department is imposed upon the chief of the First Division of the Currency Bureau, who receives an annual compensation of only three thousand dollars. The Comptrollers of the Treasury, whose functions are of supreme importance in the safe transaction of the business of the department, receive salaries which are no just compensation for that business ability and those legal attainments' which are indispensable in the places they occupy. Many other officers might also be named whose compensation is entirely inadequate to their talent and services.

The Secretary is aware of the necessity of economy in the expenditure of the public moneys at the present time; but the government, in order to secure the services of competent and faithful officers, must pay salaries equal to those which are paid by private corporations and individuals; and if such salaries are not paid, the result will inevitably be highly injurious to the public service, because incompetent, unfaithful, and irresponsible men will be allowed to fill offices requiring the highest capacity and most reliable integrity.

The duties devolved upon the officers named are too important to be intrusted to persons less able and reliable than those who now hold them; and it is very questionable if the services of such men can be retained, without an increase of compensation. Expensive as living is in Washington and the other cities named at present, and is likely to be for some time to come, there is scarcely one of these officers who can support his family in a manner corresponding to his position, or even comfortably, on the salary which he receives.

It is not asked that there shall be an indiscriminate raising of salaries, but that provision be made for the payment of such salaries as may be necessary to secure the permanent services of the right men in the most important positions in this department. Unless this shall be done, the department will labor under serious embarrassment in the transaction of its vast business during the coming year.

In this connexion the Secretary desires to advert to the disposition that has been made by the appropriation of the last Congress of the two hundred and fifty thousand dollars for compensation to temporary clerks and additional compensation to those permanently employed. Congress having declined to make any general and indiscriminate increase of the salaries of clerks, it was inferred that it was intended that such portion of the appropriation in question as might not be required to pay salaries of temporary clerks should be used carefully in increasing the compensation of those who were performing difficult and important duties, and whose services could not be dispensed with without injury to the government. Upon making the examination necessary to a proper decision as to the use to be made of the fund, it was ascertained that there was no lack of clerks in the lower grades, but that there was a scarcity of those of the higher grades competent to perform important and responsible duties. It appeared that many clerks receiving the highest salary allowed by law had resigned because they could obtain greater compensation elsewhere. The Treasurer's office had suffered largely in this manner, many of his most valuable clerks having left to accept situations in banks and commercial establishments where they could obtain permanent employment and higher pay. There were indications, also, that many others would do the same unless additional compensation should be made to them. Under these circumstances it was decided to use a part of the fund in slightly increasing the salaries of clerks of this description until the intention of Congress in relation to its disposition should be more clearly indicated. The amount of the fund already expended in this way is about twenty-five thousand dollars. If the disposition which has been thus made of it is not in accordance with the intention of Congress, it is, of course, competent for them to provide a different expenditure of it. The Secretary, however, deems it to be his duty to say that the interests of the service imperatively require that the salaries of clerks who are acting as heads of divisions, or are employed in duties requiring in their performance a high order of ability, as well as the salaries of the officers referred to, should be considerably increased. It would doubtless be a true economy to diminish the number of clerks, and to increase the compensation of those who may be retained.

For information in regard to the condition and operations of the various bureaus of this department, reference is made to the accompanying reports of the proper officers, all of whom, with the Assistant Secretaries, merit the thanks of the country for the efficient manner in which they are discharging their onerous and responsible duties.

HUGH McCULLOCH,

Secretary of the Treasury.

Hon. SCHUYLER COLFAX,

Speaker of the House of Representatives.

No. 5 .- Statement of the indebtedness

	• • •
•	Acts authorizing loans, and synopsis of same.
Act of July 21, 1841, and	Authorized a loan of \$12,000,000, bearing interest at a rate not exceeding 6 per
April 15, 1842.	cent, per annum, and reimbursable at the will of the Secretary, after six months'
	notice, or at any time after three years from January 1, 1842. The act of April 15, 1842, authorized the loan of an additional sum of \$5,000,000, and made the
	9 amount obtained on the loan after the narroade of this act reimburyable after six
	months' notice, or at any time not exceeding twenty years from January 1, 1843.
	This loan was made for the purpose of redeeming outstanding treasury notes,
	months' notice, or at any time not exceeding twenty years from January 1, 1843. This loan was made for the purpose of redeeming outstanding treasury notes, and to defray any of the public expenses.
Act of Jan. 28, 1847	Authorized the issue of \$23,000,000 in treasury notes, bearing interest at a rate not exceeding 6 per cent. per annum, with authority to borrow any portion of the amount, and issue bonds therefor, bearing interest at a rate not exceeding 6 per
i	exceeding b per cent. per annum, with authority to borrow any portion of the
	anount, and issue bonds incretor, bearing interest at a rate not exceeding 6 per
	cent., and redeemable after December 31, 1867. The 13th section authorized the funding of these notes into bonds of the same description. The act limited the
	amount to be borrowed or issued in treasury notes and funded as aforesaid to \$23,000,000, but authorized the funding of treasury notes issued under former acts beyond that amount. The excess of the \$23,000,000 is made up of treasury
	\$23,000,000, but authorized the funding of treasury notes issued under former
	acts beyond that amount. The excess of the \$23,000,000 is made up of treasury
	notes lunded under the 14th section.
Act of March 31, 1848	Authorized a loan of \$16,000,000, bearing interest at a rate not exceeding 6 per cent, per annum, and reimbursable at any time after twenty years from July 1,
	cent. per annum, and reimbursable at any time after twenty years from July 1,
Act of Sept. 9, 1850	1848. Authority was given to the Secretary to purchase the stock at any time.
100 01 00000 0, 1000 0000	deemable at the end of fourteen years to indemnify the State of Texas for her
	Authorized the issue of \$10,000,000 in bonds, bearing 5 per cent. interest, and re- deemable at the end of fourteen years, to indemnify the State of Texas for her relinquishment of all claims upon the United States for liability of the debts of
	Texas, and for compensation for the surrender to the United States of her ships,
	forts, arsenals, custom-houses, &c., which became the property of the United
	States at the time of annexation.
Old funded and unfund- ed debts.	Consisting of unclaimed dividends upon stocks issued before the year 1800, and those issued during the war of 1812.
Acts prior to 1857	Different issues of treasury notes
Act of Dec. 23, 1857	Different issues of treasury notes. Authorized an issue of \$20,000,000 in treasury notes, bearing interest at a rate not exceeding 6 her cent per supur and recursive in neuronate fail public due
, , , , , , , , , , , , , , , , , , , ,	exceeding 6 per cent. per aunum, and receivable in payment of all public dues,
	and to be redeemed after the expiration of one year from the date of said notes.
Act of June 14, 1858	Authorized a loan of \$20,000,000 bearing interest at a rate not exceeding 5 per
-	cent. per annum, and reimbursable at the option of the government at any time
Act of June 22, 1860	cent. per annum, and reimbursable at the option of the government at any time after the expiration of fifteen years from January 1, 1859: Authorized a loan of \$21,000,000, bearing interest at a rate not exceeding 6 per cent, per annum, and reimbursable within a period not beyond twenty years,
Act of 5 tille 22, 1000	cent per sumum and reinhurselle within a period not havond twenty years
	and not less than ten years, for the redemption of outstanding treasury notes,
	and for no other purpose.
Act of Dec. 17, 1860	Authorized an issue of \$10,000,000 in treasury notes to be redeemed after the ex-
	piration of one year from the date of issue, and bearing such a rate of interest as may be offered by the lowest bidders. Authority was given to issue these notes in payment of warrants in favor of public creditors at their par value,
	as may be offered by the lowest bidders. Authority was given to issue these
	bearing 6 per cent interest per connum
Act of Feb. 8, 1861	bearing 6 per cent, interest per annum. Authorized a loan of \$25,000,000, bearing interest at a rate not exceeding 6 per cent nor annum, and rainburschla within a norice not have d twenty work
	cent. per annum, and reimbursable within a period not beyond twenty years,
	nor less than ten years. This loan was made for the payment of the current ex-
	penses, and was to be awarded to the most favorable bidders.
Act of March 2, 1861	Authorized a loan of \$10,000,000, bearing interest at a rate not exceeding 6 per cent. per annum, and reimbursable after the expiration of ten years from July 1.1861. In case, promoved the loan years of the second the interest of the second t

No. 5.-Statement of the indebtedness

	-
· .	
	Acts authorizing loans, and synopsis of same.
Act of June 30, 1864	Authorized the issue of \$400,000,000 of bonds redeemable at the pleasure of the government after any period not less than five nor more than thirty years, or,
	if deemed expedient, made payable at any period not more than forty years from date. And said bonds shall bear an annual interest not exceeding 6 per centum, payable semi-annually in coin. And the Secretary of the Treasury may dispose
	of such bonds, or any part thereof, and of any bonds commonly known as five- twenties, remaining unsold, on such terms as he may deem most advisable, for lawful money of the United States, or, at his discretion, for treasury notes, cer- tificates of indebtedness, or certificates of deposit, issued under any act of Con-
	gress. Also, authorizes the issue of and in lieu of an equal amount of bonds authorized
	by the first section, and as a part of said loan, not exceeding \$200,000,000 in , treasury notes of any denomination not less than \$10, payable at any time not exceeding three years from date, or, if thought more expedient, redeemable at
	any time after three years from date, and bearing interest not exceeding the rate of 7 3-10 per centum, payable in lawful money at maturity, or, at the dis- cretion of the Secretary, semi-annually; and such of them as shall be made
· · ·	payable, principal and interest, at maturity, shall be a legal tender to the same extent as United States notes, for their face value, excluding interest, and
• •	may be paid to any creditor of the United States, at their face value, excluding interest, or to any creditor willing to receive them at par, including interest; and
-	any treasury notes issued under the authority of this act may be made converti- ble, at the discretion of the Secretary of the Treasury, into any bonds issued
	under the authority of this act, and the Secretary may redeem and cause to be cancelled and destroyed any treasury notes or United States notes heretofore issued under authority of previous acts of Congress, and substitute in lieu thereof
	an equal amount of treasury notes, such as are authorized by this act, or of other United States notes; nor shall any treasnry note bearing interest issued under this act be a legal tender in payment or redemption of any notes issued by any bank, banking association, or banker, calculated or interded to circulate as money.
Act of Jan. 28, 1865	Whole amount may be issued in bonds or treasury notes, at the discretion of the Secretary.
Acts of July 1, 1862, and July 2, 1864.	Bonds issued to the Central Pacific Railroad Company in accordance with these acts.
Act of March 3, 1865	Authorized an issue of \$600,000,000 in bonds or treasury notes; bonds may be made payable at any period not more than forty years from date of issue, or may be
	made redeemable at the pleasure of the government, at or after any period not less than five years, nor more than forty years from date, or may be made redeem-
	able and payable as aforesaid, as may be expressed upon their face, and so much thereof as may be issued in treasury notes may be made convertible into any
	bonds authorized by this act, and be of such denominations, not less than fifty dollars, and bear such dates, and be made redeemable or payable at such periods as the Secretary of the Treasury may deem expedient. The interest on the bonds
L	payable semi-annually, on treasury notes semi-annually, or annually, or at ma- turity thereof, and the principal or interest, or both, be made payable in coin or other lawfulmoney; if in coin, not to exceed 6 per centum per annum; when not
	payable in coin, not to exceed 7 3-10 per centum per annum. Rate and charac- ter to be expressed on bonds or treasury notes.

No. 6.

Paper money circulation and domestic exports.

TREASURY DEPARTMENT, November 29, 1865.

An unprecedented increase in the quantity of breadstuffs and provisions exported from the loyal States to foreign countries in the fiscal years 1861, '62, '63 and '64, concurring with a vast increase in the amount of currency in circulation, and a consequent enhancement of the premium upon foreign bills of exchange, as measured by the currency, has been taken to prove that the increase of these exports is due to the excess of paper money in use, or to the high currency price of foreign bills corresponding to its rate of depreciation in gold value.

The history of our domestic exports and bank issues during thirty-five years preceding the outbreak of the rebellion affords no evidence that high prices at home, or an over-abundance of paper money, whether redeemable or irredeemable, ever had the effect of stimulating exportation. The official tables of domestic exports show a seeming concurrence of the kind in the years 1854, '55, '56 and '57, but other causes are readily found for the very considerable growth of our foreign commerce in this period, showing that it had no dependence upon thé accompanying increase of paper money circulation.

For the purpose of presenting the facts as they bear upon this question, our export trade in domestic products with the cotemporaneous movements in bank circulation are here given in groups of years, which most clearly exhibit their respective fluctuations. In this statement the exports of breadstuffs and provisions, those of cotton wool, all other than these, and the totals, exclusive of specie, are distinguished. The bank circulation of each period is stated in its average amount *per capita*, for the purpose of showing its relative supply, as well as this method of measuring the business requirements of the time can do; and the percentage of increase and decrease serves for a readier apprehension of the movements in the several divisions of commerce here adopted, and in the paper money circulation of the same periods.

Statement showing the fluctuations of bank note circulation in the United States, the exports of domestic produce, exclusive of specie, and the rates per cent. of increase and decrease in each, in periods, from the year 1825 to 1860.

REPORT ON THE FINANCES.

Exports of breadstuffs and provisions in connexion with the supply of bank currency.

During the eight years 1825-'32 the bank circulation never exceeded sixtyone millions, or an average *per capita* of the total population of \$4 74. and the average export of breadstuffs and provisions was twelve and nine-tenths millions of dollars. In the next four years (1833-'36) the circulation rose to \$7 10, an increase of 49 per cent.; but these exports fell to twelve and onetenth millions, a decline of $6\frac{1}{2}$ per cent. In the years 1837-'38 the circulation varied from \$9 46 to \$7 20, averaging \$8 35, an increase of 76 per cent. upon the first-mentioned period; yet these exports fell to nine and six-tenths millions, a decrease of above 25 per cent. The average exports of the next following seven years (1839-'45) were sixteen and two-tenths millions, an increase of 68 per cent. over the immediately preceding period; but the circulation averaged only \$5 16 per capita, a decrease of 38 per cent.

In the years 1846-'47 our exports of breadstuffs and provisions, under the great demand occasioned by the scarcity in Europe, which commenced in 1846 and amounted to a famine in Ireland in 1847, rose to forty-eight and two-tenths millions, or quite 200 per cent. above those of the next previous period, although the circulation declined 1 per cent.; and the next six years (1848-'53) show a decline of 37 per cent. in these exports, with an increase of 5 per cent. in the circulation.

The four fiscal years 1854-'57 present the first and last concurrence of an excessive currency and enhanced exports of food in any period previous to the rebellion, the former rising nearly 37 per cent. and the latter 111 per cent. upon the average of the preceding six years. But it must be recollected here that the Crimean war actually commenced in March, 1854, with preparation made in the preceding winter, and ended in April, 1856. France, England, Sardinia, Turkey, and Russia were all involved in it, which sufficiently accounts for the very considerable enhancement of all branches of our foreign commerce, except in cotton, the regular increase in which was naturally checked during the period. In 1857 these exports fell off about three millions, but were still at twenty-five millions, or 50 per cent. above those of the next following year, and during this year our chief customer had a war in Persia, another in China, and the great mutiny in India upon her hands. All this very well accounts for an increase of thirty-four millions a year in our provision exports over the undisturbed previous period from 1848 to 1853. In September, 1857, a general bank suspension showed that the circulation had been during four years in excess of legitimate business requirements, standing in the first three at full 40 per cent. above the safe average per capita, and rising to 43 per cent. nearly in the year of the explosion.

In the three years 1858-60 the prices of American breadstuffs and provisions fell in the English market 33 per cent. below those of 1854-57, and our exports declined $43\frac{1}{2}$ per cent., although the currency was still at least 17 per cent. *per capita* above the safe supply, and tending again, as shown by its still further increase of about 3 per cent. more on the 1st of January, 1861, to an early revulsion, if the rebellion had not brought with it a release of the banks from the obligation to redeem their notes in any better currency.

It will be noticed that from 1839 to 1853, inclusive, the average circulation did not vary more than 26 cents *per capita*, standing very uniformly through these fifteen years at about \$5 20. Now, in this period our domestic exports, exclusive of specie and cotton, rose from forty and four-tenths to eighty and four-tenths millions, or 100 per cent., while in the seven years, 1854 to 1860, when the circulation ranged near two hundred millions, and full 30 per cent. *per capita* above the average of the fifteen preceding years, the same kinds of

exports rose only from one hundred and twenty-one and a half to one hundred and twenty-four and a half millions, or 28 per cent. Moreover, the exports of food included in these amounts fell from near sixty-six millions in 1854, the first year of the Crimean war, to forty-five and a quarter millions in 1860. It is true that cotton rose in the same time from ninety-three and a half to one hundred and sixty-two millions, swelling the total exports materially; but it will not be claimed that the state of the currency is to be credited with this result. Ά common cause could not have operated so unequally upon these different branches of our commerce, and the inquiry may be settled, after a fair examination of all the facts, in the clear conclusion that in all the fluctuations of our foreign commerce and bank circulation, occurring in thirty-five years before the rebellion, no fact sustains the notion that an excessive or depreciated currency favors exportation. The real causes of extraordinary increase in the exports we have found in an increased demand in the foreign markets, occasioned either by failures of their own crops or the increased demand of their wars, helped sometimes by the decline of prices arising from our own superabundance of agricultural products.

During the period of the rebellion our exports have been reported in irredeemable-currency prices. Any calculation made upon the figures in which the values are expressed, and any efforts made to ascertain the concurrent quantities of paper money in active circulation at the several stages of change in the produce movements, would be at once very difficult and unreliable; still, we have command of such data as may throw some light upon the question with which we are here concerned.

In the fiscal years 1862, '63, and '64 the exports of cotton have no proper bearing upon this inquiry. The leading manufactures, which, from their variety of kinds, have no common measure but their aggregate value, stood very evenly at thirty-five millions in each of the three years, the currency prices of 1863 and 1864 being reduced to the gold standard. In the years 1858, '59, '60, and '61 they averaged forty-one millions—so there was no increase in the quantity of these exports, but a falling off of about 15 per cent.

In the three years 1858, '59, and '60 all exports, other than specie, cotton, and breadstuffs and provisions, ranged from sixty-nine to seventy-nine millions in the year, averaging seventy-five and eight-tenths millions. In 1862, '63, and '64 they varied from sixty-one to seventy-two millions, giving an average of sixty-five and a half millions a year, the currency prices of 1863 and 1864 being, as before, reduced to the gold standard. Here again there is no increase of quantity, measured by values, but a decrease of over 13 per cent. These points settled, our question is cleared of its disturbing elements. The inquiry is now limited to the exports of breadstuffs and provisions, and the supposed effect of an enormously inflated currency upon them. We will take of these wheat and wheat flour, and hams and bacon, as the chief and the fair representatives of the whole.

In the fiscal years 1854, '55, '56, and '57 the exports of wheat, in grain and flour, amounted to ninety-four millions of bushels, and of hams and bacon to one hundred and sixty-nine and three-quarters millions of pounds. In 1858, '59, and '60 the wheat export was fifty-eight and three-quarters millions bushels; the hams and bacon fifty-eight and three-quarters millions of pounds. In the four fiscal years 1861, '62, '63, and '64 our total exports of wheat and wheat flour, reduced to wheat, rose to 214,135,710 bushels—an increase of 128 per cent., or two and a quarter times the quantity exported in the European war period, 1854, '55, '56, and '57; and of hams and bacon, 520,607,108 pounds an increase upon the same period of 206½ per cent., or more than three times the quantity. If the first three of these years be compared with 1858, '59, and '60 three years of ordinary causes of demand in Europe—the wheat export rises to two and three-quarter times, and the hams and bacon to nearly eight times Once before, in the Irish famine year, we increased our total exports of breadstuffs and provisions in a single year 148 per cent., or two and a half times their value in the next preceding year. And again, in 1854, we doubled them in one year, and sustained them at this proportion for four years together, under the demand created by European wars on the continent and in Asia. But these instances only serve to show our ability to answer any demand that the rest of the world is occasionally compelled to make upon us. They do not explain the immense consumption of American food in the years under consideration.

Without looking to other causes, the prices at which these commodities were sold in the foreign markets show reasons for a largely increased consumption there. Great Britain and Ireland in the five years 1860-'64 took $71\frac{1}{2}$ per cent. of our total exports of wheat and flour, and 84 per cent. of the hams and bacon. The prices at which these were sold in the United Kingdom may therefore be taken to indicate the gold value of the whole export of the period to foreign countries.

In the following table we give the imports of wheat, and wheat flour in its equivalent in wheat, with the computed real value, and the prices of hams and bacon, imported from the United States, as they are found in the publications of the British Parliament:

Calendar years	Wheat.	Price	PRICE PER CWT.		
Caldun yours	per quarter.		Hams.	Bacon.	
· ·	' Crot.	s. d.	s. d.	s. d.	
1854, '55, '56, and '57	20, 771, 740	71 0	66 1	49 6	
1858 and '59	5, 213, 289	47 8	57 9	46 9	
1860	9, 315, 125	57 8	68 9	53 5	
1861	15, 610, 472	55 2	47 0	48 2	
1862	21, 765, 087	50 3	35 5	35 1	
1863	11, 869, 179	43 9	33 2	26 11	
1864	10, 077, 431	38 0			
1865, (8 months)	907, 224	37 3			

NOTE.—The wheat may be approximately rendered into bushels by multiplying the hundred-weights by two, and into quarters by dividing the same figures by four. The changes in the quantities of hams and bacon correspond sufficiently well with those of flour and wheat for our purpose. The prices of these for 1864 and 1865 cannot be obtained with precision, but they seem to have fallen nearly in the same ratio as wheat and flour.

Previous to the year 1860, whenever wheat fell to forty-one or forty-two shillings per quarter in England, our exports to the United Kingdom were merely nominal. In 1859, the price being so low as forty-three shillings and tenpence, our exports fell off to 861,000 bushels. In 1858 the price was forty-eight shillings, and our exports were nine and a half millions of bushels. The price has ranged from forty-one to seventy-one shillings in an interval of four years. Among all the leading commodities of commerce, scarcely one can be found so variant in price as wheat and wheat flour, and very few whose prices so greatly affect the consumption in Europe. There are twenty millions of people in Great Britain and Ireland whose necessary expenditures are so near their income, that they must economize closely when prices rule but little higher than the lowest rates. These people can easily increase their consumption of wheat thirty millions of bushels per annum, when its cost declines as much as the above statement shows, in the period of the prodigious increase of our exports, which supplied two-thirds of the excess of consumption of the four years 1861, '62, '63, and '64.

The prices of nineteen years of peace, from 1829 to 1847, give fifty-seven shillings and tenpence as their average. We may therefore take 57.8 as it

stood in 1860 for the medium or fair and moderate rate, and from it estimate the constant and rapid decrease of price which we assume as the true cause of the inordinately large consumption in the four following years. Thus measured, the decrease of price is $4\frac{1}{3}$ per cent. in 1860, $12\frac{3}{4}$ in 1862, 24 in 1863, and nearly 34 in 1864; four years in wh ch the aggregate American exports of wheat and wheat flour went to the prodigious figure of one hundred and eighteen and a half millions of bushels, or twenty-nine and a half millions per annum. The thing to be explained, however, is, how our farmers could afford to sell such enormous quantities of their produce at prices so much lower than they ever before touched in the foreign market, without either greatly diminishing or entirely stopping exportation.

• The solution is found in the fact that while they sold at a very low price in gold, they were paid in an unusually high price in the currency in use at home, which, being a legal tender, was worth its face value, without any discount or depreciation, in the payment of debts contracted before this period at the gold standard of prices. A vast amount of such debt is known to have been discharged in this way. In 1864, when the foreign price of wheat went down to about four shillings and ninepence per bushel, covering freight, insurance, commissions, and all intermediate charges and profits, which still further reduced the gold price to the producers, they could still afford to send to England twenty million bushels, the premium upon gold, due to the depreciation of our currency, ranging from 51 to 185 per cent., and all that premium going dollar for dollar, to the extent so applied, in the discharge of old debts. Roughly averaged, the varying premiums of the year were equal to 104 per cent., which quite doubled the farmer's share of the four and ninepence per bushel paid for his wheat in England, when converted into currency at home.

But the agriculturists, owning the farms which they cultivated, and the stock and machinery which they used, had another advantage in the premium, whether they had debts to pay or not. They held their lands, buildings, stock, and implements of husbandry at the gold price of the previous period, and had no expenses of husbandry to meet in the high currency prices of the time, except wages, improvements, repairs, and taxes. These are but a small portion of their investment, and upon all the rest of it its proportion of the premium was clear gain, but in currency, whose purchasing power was measured by the ruling prices, unless invested in government bonds bearing gold interest. Farmers breeding their own stock had a similar profit on the premium to those who owned the lands which they cultivated. The same reasoning applies also to miners, in the proportion that their mines and machinery bear to their total outlay. But to manufacturers the profit of the premium upon foreign sales would only accrue in the proportion of their real estate and machinery bought at the gold prices of the preceding period; all other elements of production to them cost currency prices; and these are so considerable that their exports would bear but little reduction in gold prices-certainly not enough to make or command a foreign market, as we have already seen in the fact that the exports of the leading manufactures of the country actually fell off, while the products of agriculture so greatly increased.

It is held by the authorities on this subject that enhancement of the nominal exchange, or that portion of the expressed rate which is due to depreciation of the currency, can have no effect upon foreign trade, for the reason that where such depreciation exists, the premium which the exporter of commodities derives from the sale of a bill of exchange on a foreign customer is only equivalent to the increase of the price to the exporter occasioned by such depreciation. This is true, doubtless, where all the elements and the whole cost of production are equally enhanced and in equal proportion to the depreciation of the currency; but the facts of our recent history require a modification of this general proposition.

There is a limit, also, to the operation of the causes which we find stimulating exportation of our breadstuffs and provisions. When the foreign gold price falls below a given mark, the premium must hold a relatively high rate, or the trade is checked. In the first eight months of the current calendar year (1865) the imports of wheat, in grain and flour, from the United States into England, fell to a trifle more than one-eighth of the quantity imported in 1864, and to one-sixteenth of the year 1862. The British prices had gone down in these eight months to thirty-seven shillings and three pence per quarter, and the average premium on gold had fallen from 104 to 65 per cent.

The foreign market gorged, and the currency at home recovering itself, tend together to level exchange to its real rate, and as soon as the rate of premium fails to carry the foreign prices up to the actual cost of production exportation must stop.

Respectfully submitted :

WILLIAM ELDER.

Hon. HUGH MCCULLOCH, Secretary of the Treasury.

REPORT ON THE FINANCES.

REPORT OF COMPTROLLER OF THE CURRENCY.

OFFICE OF THE COMPTROLLER OF THE CURRENCY,

Washington, December 4, 1865.

SIR: I have the honor to transmit to the House of Representatives the annual report of the Comptroller of the Currency, as required by the 61st section of the national currency act.

I have the honor to be, very respectfully, your obedient servant,

FREEMAN CLARKE,

Comptroller of the Currency.

Hon. SCHUYLER COLFAX, Speaker of the House of Representatives.

REPORT.

Since the last annual report from this office two hundred and eighty-three new banks have been organized, and seven hundred and thirty-one State banks converted into national associations, making the total number organized to November first sixteen hundred and one; of which six hundred and seventy-nine. were new banks, and nine hundred and twenty-two were conversions from State banks.

A statement of the respective States and Territories in which each bank is located, the paid-in capital, the currency delivered to each, and the bonds deposited with the Treasurer to secure their notes is herewith submitted; also a detailed statement of the affairs of each bank on the first Monday of October last, with an abstract of their condition on that day, an abstract of the condition of all the banks on the first days of January, April, and July, 1865; together with the names and compensation of the clerks and other employés, and the total expenses of the bureau, for the fiscal year ending June 30, 1865.

One bank has voluntarily gone into liquidation, and has been closed under the provisions of the law, viz:

Lawful money has been deposited with the Treasurer for the redemption of the outstanding notes of the above-named bank, and the bonds withdrawn.

The First National Bank of Attica, N. Y., has failed, and a receiver has been appointed to close up its affairs. Its outstanding circulation, none of which has been presented for redeemption, is \$44,000, secured by \$31,500 of six per cent. and \$18,500 of five per cent. bonds.

By section 44 of the national currency act any bank incorporated by special law, or banking institution organized under a general law of any State, is permitted, on the performance of certain specified requirements, to be converted into a national association, with the same powers and privileges, and subject to the same duties, responsibilities, and rules as are prescribed for the associations originally organized under that law.

By the seventh section of the act amending the "Act to provide internal revenue to support the government," approved March 3, 1865, the privilege of conversion on the part of State banks was extended, so as to give a preference to those which should apply prior to the first day of July, 1865, over new associations applying for the privileges of the national currency act.

The result has been that nearly all of the State banks have voluntarily changed into national associations, and it is a gratifying fact that this transformation has been accomplished without deranging the business of these institutions, or affecting essentially the volume of bank note circulation. Since the amendment of the act, no national currency has been delivered to a converted State bank, until the circulation issued by it under State laws, had been reduced below the amount to which its capital as a national bank would have entitled it under the law; and as many of the converted banks had a greater amount of State notes in circulation than they were entitled to under the national act, the result has been to diminish rather than increase the volume of bank note circulation.

This restrictive course in reference to State bank circulation, has been the cause of great complaint on the part of many of the banks, more so, perhaps, for the reason that in several States the enabling acts giving consent to the conversion of the State banks to national associations, contain provisions nominally giving the right to converted banks to continue the issue of their State circulation for a limited time, after the conversion is completed.

It is, however, very clear that it is not the spirit or intent of the law to allow any national bank to have a greater circulation than the amount prescribed in the act, and that after a bank becomes a national association it is, as provided in the 44th section of the law, subject to and bound to observe all its provisions. A converted State bank is unquestionably bound to redeem its State circulation and discharge all the obligations of the State institution, while any State enactments granting privileges or imposing restrictions in conflict with or repugnant to the United States laws are necessarily void.

The national currency act permits the conversion of State into national institutions without reference to State laws, and it must be conceded that the laws of the United States are paramount to State enactments. The 23d section of the act prohibits national banks from issuing or circulating as money any notes other than such as are authorized by the provisions of the national currency act. If a national bank converted from a State institution pays out and circulates' the notes of the State bank which it is bound to redeem, it certainly issues notes prohibited by the act.

If the rights of converted banks to reissue the notes of the State bank, and also to receive national notes to the amount that their capital entitled them to were recognized they would have had a double circulation, and the aggregate at this time would probably have been two-fold the amounts of their present issues.

The amount of national bank notes in actual circulation on the 1st day of October last, was	\$171, 321 903
as appears by returns to the Commissioner of Internal Reve- nue, was	78, 867, 575
Making the bank circulation on the 1st day of October last	250, 189, 478
The amount of legal-tender notes and fractional currency issued	
and outstanding on the 1st of October, 1865, was National bank notes in the hands of banks not yet issued	704, 584, 658 19, 525, 152
National currency yet to be issued to banks	109, 152, 945
Malian the comments on first of level tor der and hards rates in	

Making the aggregate amount of legal-tender and bank notes in circulation as authorized to be issued to and by the banks*. 1,083,452,233

* All statements and comparisons in this report are made up to the 1st of October last, that being the date of the last quarterly return from the banks.

From which sum should be deducted, State bank circulation now outstanding that will be retired about as fast as national currency is issued to converted banks	123, 284, 904
The amount then left as the available currency of the country is	960, 167, 326
In order to ascertain the amount of actual active 'circulation on the 1st day of October last, there should be deducted from the last mentioned sum— The amount of national currency delivered to banks, and not then in circulation National circulation not delivered to banks Amount of legal-tender notes held by banks, in- cluding \$74,261,847 compound interest notes, Compound interest notes, other than those held by banks, mostly held as investments by insu- rance and trust companies and savings banks, less say \$10,000,000 in actual circulation Currency in the treasury of the United States,	•
Total	499, 323, 097
Which will show the actual circulation to be	460, 844, 229

This favorable exhibit of the amount of paper in actual circulation, is owing in a great degree to the accumulation of currency in the hands of the banks, in the absence of the great demands of the government for currency since the close of the war.

As an erroneous impression may prevail as to the aggregate amount of lawful money that banks are required to hold, it is thought proper to state that as the liabilities stood on the first day of October the required sum was \$74,261,847 over the amount that banks were permitted to have to their credit, and count as part of the same, in banks acting as redeeming agents. The banks held at that time \$14,966,143 in coin, which, deducted from \$74,261,847, leaves \$59,295,704, the sum that they should have held in legal-tender notes to fulfil the requirements of the law.

It will be seen, therefore, that the sum held, in lawful money, in excess of the required reserve, was \$170,045,896.

It cannot be necessary to dilate upon the inevitable consequences which must result from this excessive amount of irredeemable currency, if left uncontrolled by the action of government in respect to the reduction of its own issues, and in enforcing a system of redemption which shall curtail by its operations the power and tendency to expansion. So far as bank issues are concerned it is believed that the most efficient check would be found in its compulsory redemption in the great financial and commercial centres of the country—New York, Boston, or Philadelphia. Under such a system, properly enforced, many institutions established chiefly for the advantage arising from the issue of their own promises, without the expectation of being called upon to redeem them, would find that they had exceeded the requirements of legitimate business, and obtain relief in the abatement of their issues. The circulation thus withdrawn from sections where it is not required, could be dispensed to other portions of the country as yet but partially supplied with banking institutions.

In this manner, also, would a remedy be furnished for the unequal distribution which has resulted from the act of the 3d of March last, giving the preference to the conversion of State banks over applications for new national associations, without reference to the amount of currency which by such conversion has been concentrated in localities where the former institutions were the most numerous.

The national banks already organized embody a capital sufficient to entitle them to receive \$309,672,992 of circulation on the deposit of the requisite securities in government bonds. It is not anticipated, however, that more than three hundred millions will be called for by banks now organized, as many of them, located in large cities of the northern States, will not ask for the amount of circulation to which their capital entitles them. Bonds have been deposited to entitle the banks now organized to \$244,754,125 of circulation only. In no event will the limit of the act be exceeded.

Whatever may have been the intention of the framers of the federal constitution in respect to the measure of value to be used in the transaction of business during a time of peace, and in the ordinary flow of events, there is ample justification for a departure from a metallic currency and a bank circulation redeemable in specie on demand, in the necessities of the country as superinduced by the unparallelled civil war through which the nation has been called to pass. Now, however, that the emergency which called for this departure from first principles has happily been surmounted, it would seem to be the dictate of sound policy to return as speedily as the financial condition of the government and the business interests of the country will allow to a more normal condition of the currency, so that the pecuniary relations subsisting between ourselves and other nations may be placed upon a more harmonious basis of value

The evils resulting from an irredeemable currency are too well known to require enumeration. They should be tolerated no longer than absolute necessity requires. The funding, and the consequent retirement of a portion of the inactive circulation shown to be now held in reserve, and liable to be called out as increased speculations and additional enhancement of prices may demand, and the consequent reduction of the same to the amount required by the actual necessities of business would seem to constitute one of the first steps towards that sound condition of finance under which alone a permanent prosperity can be secured. By such a course only can we place the manufacturing and producing interests of the country in a position to compete successfully with other nations, prevent an excess of imports over exports, and thus prevent a drain upon our resources, which must otherwise postpone to an indefinite period the resumption of specie payments.

Under the present inflation of prices the cost of labor and of all the elements entering into the production of staple commodities, whether in agriculture, mer chanics, or manufactures, is such as to invite the direct competition of all otheo countries in our own markets. It is this which makes our market the best to sell in and the worst to buy in on the part of foreigners, and which, in the consequent absence of an adequate export demand, must eventuate in the denuding us of the precious metals and the creation of a debt abroad that will be a greater drain upon our resources than our present national debt.

By a gold valuation of our imports and exports, the balance that has accrued

 $5 \mathbf{\bar{F}}$

against this country during the four years previous to the 30th day of June last, including the interest on American securities held abroad purchased within that time, and also taking into due consideration the difference between the standard of our own and that of foreign gold, (nine and three-eighths per cent.,) has been \$308,000,000 of dollars.

By reason of the probable falling off in the export of coin, and the increased amount of interest to be paid abroad, it is estimated that the accruing balance during the present fiscal year will amount to \$120,000,000, making a total for five years of \$428,000,000.

Our only resource to pay this gold balance against us has been and still is the sale of our securities abroad. The amount required, if sold at an average discount of forty per cent., will be \$713,000,000, and the annual interest at six per cent. will be \$42,780,000. The discount of forty per cent. will amount to \$285,200,000; every dollar of which will be an entire loss to the country.

The almost exclusive use and demand for gold now is for the payment of custom duties to be paid out again for the interest on the public debt; this is followed by the sale of the surplus beyond the amount required to pay the interest, which surplus again accumulates to go repeatedly through the same If one-half of the differences between our imports and exports were, process. paid in gold as they occur, the price of gold and foreign exchange would have long since reached a rate sufficiently high to have materially checked our imports and increased in a corresponding ratio our exports. The price of gold is now governed by the demand for the purposes stated, and the foreign balances against us are paid as before shown, by the sale abroad of government and other securities at a discount of about forty per cent.; thus instead of paying, creating an additional indebtedness to the extent of the difference between the amount received for our securities and their par value, every fraction of which we shall ultimately have to pay in gold, in addition to the interest. It may be said that our exports will be increased by the addition of southern productions. This will undoubtedly be so; but to no greater extent than our imports will increase. The south will need more than all the goods her surplus crops will purchase, and if we cannot compete in the open market with other nations, our relative position in reference to imports and exports will not be improved.

In view of our position, prudential considerations would seem to point to such an adjustment of the tariff, intermediate to the resumption of specie payments, as to discourage inordinate importations; this can be done by increasing the rate of duties just in proportion as the price of gold and foreign exchange may recede, thus keeping up the cost of importations as high as they now are, including the present rate of foreign exchange. This could be followed by a graduated reduction of such increase, say ten per cent., at the expiration of each six months, until brought down to the original rate. Imports would be held back in view of such reduction, and there would be no overwhelming crash resulting from a sudden fall of prices, but business would adjust itself to the present and prospective condition in which it would be placed under the legislation indicated. In the mean time, by a steady reduction of the volume of irredeemable currency and consequent reduction of prices, we would be able once more to place our manufactured and agricultural productions on a footing that would enable them to enter into successful competition with those of other nations in the markets of the world.

As the first step to be taken towards a reduction of the government issues used as currency, sound policy would indicate the conversion of all the interestbearing legal-tender notes into 5.20 six per cent. bonds. It is believed that the slight contraction caused by such conversion would be scarcely perceptible, more especially at this time, as it is not probable that more than five per cent. of the whole issue is now in active circulation. It would be simply exchanging one security held as an investment for another.

The national banks alone, as shown by their reports, held on the first of October last \$193,094,365 in legal-tender notes, or \$22,772,462 more than the whole amount of their national bank circulation at that time; they also held in notes of other banks \$16,247,241, and of their own notes not in circulation \$19,526,152, making a total of unemployed circulation in the hands of national banks \$228,966,758, which is several millions more than the entire paper circulation of the country on the first of Janaary, 1861, or at any previous period.

In view of the urgent demand that will undoubtedly be made for an increase of the national bank circulation, and as a gentle mode of further reducing the volume of legal-tender notes, it is suggested that the national currency act be so amended as to allow an increase of the limit to four hundred millions of dollars, on conditions only, that all the banks be required to redeem their notes in New York, Boston, or Philadelphia; and also that an issue of six per cent. 5-20 bonds be authorized to the amount that it will require to secure the additional circulation under the provisions of the act, which bonds the banks, when organized, shall purchase as each may require of the Secretary of the Treasury at such fair rate as he may from time to time prescribe, but not less than their par value, and pay for the same in the United States legal-tender notes, and all notes so received shall be cancelled and destroyed. The bonds so issued would not affect the price or demand for other bonds, as they would be held as security for the circulation, and only offered in market in the event of the failure or closing of a bank.

With the requirement to redeem at the central and accessible points mentioned, there would be but little danger of bank issues exceeding the limits prescribed by the demands of legitimate business.

Under the action indicated, it is believed that the balance of trade with other nations would within a reasonable time be again turned in favor of this country; whenever that point is reached, with the perfect confidence which would ensue in the convertibility of legal-tender notes and the stability of sound bank circulation, the return to and maintenance of specie payments would be rendered comparatively easy, and the demand for gold be confined to the healthful and legitimate adjustment of balances with foreign countries.

Although of comparitively recent origin, and yet in the infancy of its development, the national banking system has become thoroughly interwoven with all the business and interests of the country. Not only the stockholders in the national banks, but every member of the community has an immediate interest in the stability of a currency which forms the medium of exchange and value, not in isolated sections of the country between particular classes, but throughout the length and breadth of the land, and by every citizen of the republic. And this system, so ramified and so essential to the prosperity of all classes, is based upon the national faith and credit as its chief corner-stone, and can only exist as that credit is maintained intact.

Nobly have our citizens battled for the preservation of our institutions; freely have they poured out their blood and treasures to sustain the government in its contest with ruthless treason, and now that success has crowned their exertions and sacrifices, the maintenance of the national honor, through an unsullied public credit, becomes a no less imperative and solemn duty; nor can it be doubted that all just measures calculated to sustain the faith and integrity of the government will find a ready response from the patriotic masses.

The resources of the country are great beyond enumeration, the development of wealth rapid beyond precedent, and it requires only a judicious application of means to the end proposed to enable the government not only to meet all its pecuniary obligations with entire promptitude, but without imposing exactions that shall be unduly burdensome or give just cause of complaint to the people.

It is believed that from a few sources a revenue can be raised sufficient to meet the interest on the public debt, pay the ordinary expenses of government, and contribute thirty millions of dollars annually to a sinking fund that will pay the national debt in thirty-two years and a half.

¹ The tariff can be so adjusted as to produce one hundred and twenty millions of dollars; one hundred millions can be raised on whiskey, malt liquors, and domestic wines; fifteen millions on tobacco; one hundred and twenty-five millions on cotton; fifteen millions from stamps; from licenses twenty millions, and from the premium on the surplus of gold, after paying interest on bonds, ten millions, making, in the aggregate, four hundred and five millions of dollars, a sum probably one hundred millions in excess of the amount that will be required under an economical administration of the government, leaving a large margin on the above estimate for reduction. The estimates, however, of the revenue derivable from the several sources indicated are not the result of loose conjecture, but each is founded upon a careful inquiry in reference to past productions and revenue under the existing law.

It is estimated that the cotton crop the next year will amount to between two and a half and three millions of bales; a tax of ten cents per pound on two and a half millions will produce one hundred and twenty-five millions of dollars. It is reasonable to suppose that the annual crop of cotton, after two or three years, will equal in amount the average of the crop for a few years previous to 1861, which was about four and a half millions of bales. A tax of eight cents per pound on that quantity would produce one hundred and eighty millions of dollars, a sum more than sufficient to pay the interest on the public debt after the entire amount is funded. The license and stamp duties could be dispensed with after the next fiscal year, and it is to be hoped that after that period no more income will be derived from premium on gold.

Three-fourths of the crops of cotton and tobacco are exported; that proportion therefore of the tax on those articles would be paid by foreign countries, and to that extent contribute to the liquidation of the public debt and relief of our own people.

A tax on cotton of eight or ten cents per pound would neither diminish the domestic production or foreign demand for that staple. Our means of production, natural and applied, are such as to enable us to furnish the article at a less price, including the tax proposed, than any other country. Even at half the price which this product now commands in New York and Liverpool it can be grown and sold at a large profit, including the proposed tax, in its cost. Nor would the imposition of a tax on the staple production of the southern States prove injurious to that section of the Union. It will of necessity be a large purchaser of northern manufactures, and if by the proposed measure the north and south be relieved almost entirely from other taxation for government purposes, as they would be if cotton is taxed to the extent proposed, their purchases would be made at a correspondingly less price, and both north and south derive a benefit from the operation.

By thus restricting the subject of revenue to a few articles of general production the cost of collection would be greatly reduced by the discharge of a whole army of assessors, collectors, &c., to the manifest advantage of the public treasury; nor would the least of the benefits to result from this action be found in the fact that such an adjustment of the system of taxation would leave no ground for public complaint, and consequently preclude *dishonest and disloyal politicians* from uniting with the *enemies of the Union* in assailing the public credit and repudiating the national obligations.

There is no question which more vitally concerns the national banking system than the power of the States to tax the government securities which form the invested capital of the banks organized under that system. Not only have their investments been made upon the solemn pledge of the national faith, held out to corporations and individuals, that their stocks should be "free from taxation by or under State authority;" but the option of refraining from such investment was denied to the national banks, as it was by law made a fundamental condition to their existence that one-third of their capital should at all times be held in the form of national securities by the Treasurer of the United States; and, in addition, every dollar of their circulating notes must be secured by a like deposit. Hence, while individuals might have refrained at their pleasure from placing confidence in the good faith of the government, these institutions were deprived of such liberty of action; and now, while the right of individuals to immunity from taxation on government stocks is generally conceded, the like privilege is sought to be withdrawn from the national banks by their taxation for State, municipal, and local expenses. The constitutional ægis, which the Supreme Court of the United States has hitherto extended over the national securities, no matter by whom or for what purpose held, is now sought to be wrested from its hands upon the theory of State jurisdiction; a flagrant violation of the contract entered into with the public creditors under the clearest enactments of law, and the most binding obligations of public faith. It is conceded for the most part by the advocates of State taxation, that the United States stocks in the hands of individuals cannot be assessed for State and municipal purposes. But a discrimination against the stocks held by banks is sought to be established, on the ground that a tax imposed upon the shares in a bank is not a tax upon the securities represented by those shares. That the position assumed by those who favor this hypothesis will be found, upon critical examination, to be fallacious can scarcely admit of a doubt; that the discrimination in favor of one class of creditors and against another, both having complied with the same conditions, is grossly unjust, must be obvious to all. That. exemption from State taxation was intended to apply to the stock issued, no matter in whose hands it might be found, cannot be questioned. No exception was made in favor of individuals; no discrimination was attempted against banks. If the shares of a bank whose capital is invested in United States stocks be taxable, to whose benefit does the exemption from taxation guaranteed to those stocks inure? Does the principle of immunity pledged by Congress become inoperative because an association has loaned to the government the money for which it holds those obligations? Surely, the exemption belongs to some person, and to whom can it be assigned but to the respective stockholders, whose scrip simply represents the proportionate share which each has contributed to the purchase of the government securities. Upon the theory propounded, an individual who purchases one hundred thousand dollars of government stock for a specific purpose, may plead, and receive, the exemption from State taxation which the act of Congress pledges; but if four persons purchase the like amount for a similar purpose, and each receives a certificate of the amount he has paid towards the gross investment, they lose all benefit of the immunity attached to the securities in hand. The injustice, if not the absurdity, of such discrimination must be sufficiently obvious.

Nor will the impropriety of the proposed taxation of national banks be less apparent, when it is borne in mind that they are already taxed by the general government to a greater extent than any other corporations or class of business. The law of their creation requires them to perform certain duties, and authorizes them to exercise certain privileges, yet for this they must pay a license. It imposes, also, a tax of one half of one per cent. on their deposits, one per cent. on their circulation, one per cent on their capital beyond the amount invested in government securities, and five per cent. on their income or earnings. All this is paid from the ordinary earnings of a bank, and reduces its profits to the extent of the taxes paid, whereas all other corporations, manufacturers, &c., are permitted to increase their rates and charges to a sum more than adequate to cover the amount of taxes paid, thus preserving their profits intact, and catsing their burdens upon the public, in the capacity of consumers, travellers, &c.

It is not through palpable injustice to vested interests, and by a disgraceful violation of public faith, that the subject of State taxation should be reached If public policy demands a contribution to State and local expenses at the hands of these institutions, there is a mode of attainment not distant which can be reached without a breach of national honor. Nearly three-fourths of the public debt is either not funded, or matures at the option of the government, within a short period, and almost the whole amount within the next eight years. It is within the power of the government at such time, without violence to its engagements, to try the experiment of issuing bonds subject to State taxation, or of borrowing at a less rate of interest than is now paid, thus extinguishing its present obligations to its creditors. But every dictate of expediency and justice, its character and credit at home and abroad, demand that Congress and the highest judicial tribunal of the nation shall frown upon all attempts to override the constitutional functions indispensable to the preservation of the credit and stability of the government.

But as neither public policy nor constitutional right can at present allow the taxation of national banks for State and local purposes, it would be equitable that these institutions should pay, say one per cent., on their capital, (irrespective of the amount invested in public stocks,) in lieu of all present taxation for revenue purposes, and one-half of one per cent. on their circulation as an indemnity to the government for the expense incurred in furnishing the banks with circulating notes, and meeting the expenditures incidental to the administration of this bureau. Perhaps a preferable method in relation to the expenses thus incurred for circulation and supervision would be found in waiving the tax on circulation, and meeting the expenditures required by such direct assessment on the banks as should be equitable.

There are some amendments to the national currency act suggested by the experience of its practical workings, which, if adopted, would prove of great utility, the most important of which has already been alluded to—requiring banks to redeem their issues at par in either of the cities of New York, Boston, or Philadelphia, as the only certain method of securing for national bank notes a uniform par value in every section of the country, and prevent an excess of issues beyond the legitimate demands of business.

A penalty should be imposed upon banks for issuing notes with the engraved and printed signatures of the officers. The greatest protection against counterfeiting is found in the written signatures of those through whom the bills are uttered. The fact that they are written and not printed renders it incumbent on the counterfeiter to attempt an imitation through the same instrumentality on each note. He may make a fac simile of the signature once, but in the very next attempt make such a variation as to disclose the spurious character of the note. But a printed signature being once correctly imitated, the same result is produced at each revolution of the press with mechanical accuracy. Just as safely might the merchant send his notes to an engraver to have his signature and those of his indorsers stamped thereon, as for banks to have their notes executed through this process. Unless all possible guards which ingenuity can devise be thrown around the currency, it will soon be difficult to distinguish the spurious from the genuine issue, and banks will be as likely to redeem the former as those of their own promulgation.

By the first section of the national currency act, the bureau under which its operations were to be carried into effect, is made an adjunct of the Treasury Department, and of course located at Washington. During the incipiency of the measure there were many reasons rendering contiguity to the treasury desirable and proper; but now that the system has become operative, and what was theory at the first has been reduced to practice, there are many reasons which render it expedient that the operations of the currency bureau should be transferred to the great financial and business emporium of the country, the city of New York. Not only would the convenience of those concerned in the business of banking be promoted by the change of location, but a great saving in expense would thus be effected. Nearly two hundred thousand dollars per annum in express charges alone would be saved to the government and the banks by the change of location proposed; while the risk, loss of time, and personal expenses, which would thus be obviated, are large in the extreme. When the circulation now in use by the banks shall have become worn, and require renewal by exchange of old for new, the inconvenience, loss of interest, and expense, will be increased to a manifold extent.

The government already owns the buildings in New York which a transfer of the office would require for its accommodation, that are now rented for aboutthe sum the Treasury Department is paying for an equal amount of room outside of the treasury building that would be vacated by the removal of the bureau. I am satisfied, therefore, that both the interests of the government, the public and the banks would be subserved by a transfer of the bureau to New York at an early day.

With a system of redemption properly enforced, the banks located out of the cities named as redeeming points, should be relieved from the obligation to keep a reserve equal to fifteen per cent. of their circulation and deposits constantly on hand. It would be a hardship to require banks to be prepared to redeem both at home and at one of the points indicated, and in addition to keep an idle reserve of fifteen per cent. against contingencies.

There is no real strength or safety derived from the provision as it exists. When a bank fails, neither money nor reserve in any shape would be found on hand, and the sooner those that are improperly conducted or are organized for other than a legitimate banking business are closed up, the better will it be for the system and the public.

By the 32d section of the act it is provided "that every association formed or existing under the provisions of this act shall take and receive at par, for any debt or liability to said association, any and all notes or bills issued by any association existing under and by virtue of this act."

The provision is anomalous in its character. To compel a bank to respond to the demands of its creditors in *lawful money*, and yet compel it to receive from its debtors such currency as they may choose to offer, does not seem to be warranted by equity or sound policy. It is even questioned whether a national bank is compelled to redeem its circulation at all, in lawful money, if presented by an association organized under the same act, as any "debt or liability" may be discharged by its *own notes* or notes of other national banks, when that "debt or liability belongs to any other association" existing under and by virtue of "the national currency act." The intention and scope of the statute is evidently against such a construction of its provisions, but all ambiguity in reference to it should be removed. All the banks should be required to redeem their notes and pay their balances in lawful money, as well to each other as to the public.

Whatever hostilities the national banking system may have encountered in its first inception, it is no longer denied that it has entrenched itself strongly in the feelings as it has commended itself to the convenience and interests of the whole people. Coming into conflict with local prejudices, and assumed to run counter to private interests, it was natural that its practical operations should have been regarded with jealous suspicions. It is not among the least of the triumphs of the system, that in a period of war, amid monetary disturbances, caused by the gigantic requirements of the government, it has stood the test of practical experiment in the most satisfactory manner, vindicating the partialities of its friends, and overcoming by its beneficial effects the hostilities of its most determined enemies.

In a country already celebrated for its commercial, manufacturing, and agricultural activity, no want could be more sensibly felt than that of a homogeneous currency, of equal value at the circumference, as well as at the commercial centres of our extended country. This could not be obtained under the restricted operations of State laws, nor could it be furnished by institutions necessarily circumscribed in their fields of operation, diverse in the extent and character of their liabilities to the public, and without a recognized basis of credit adequate to insure the public confidence in sections remote from the locality where such liabilities were payable It is not denied that the State banks have been of great, if not indispensable service in the development of the resources of the country; it is not designed to underrate their usefulness, to question their patriotism, or assail the integrity of the banking institutions of the States; but as in all enlightened communities there will be progress and improvement it cannot be regarded as invidious to claim for the national banking system a superiority over the more limited system of State institutions, inasmuch as it furnishes a safe and convenient paper circulation, based upon the national credit, and which thus far has been, and with a slight amendment to the act may continue to be, of uniform value throughout the length and breadth of the Not only are the regulations by which the national banks are governed land. of equal applicability; not only are they based upon actual capital and individual responsibility, carefully enforced; but underlying these safeguards there is a foundation of unparalleled security in the government bonds which they are required to hold. A system thus anchored, in which the whole community has a common interest, cannot fail to subserve the highest object of its creation, nor cease to be regarded with favor by an intelligent people.

While, in conclusion, it is allowed me to congratulate Congress and the country on the popularity which the national banking system has achieved, I would add the hope that these institutions may never become subject to the schemes and caprices of political parties, but that in them and through them the public faith and credit may be upheld, and the prosperity of the country greatly promoted.

FREEMAN CLARKE,

Comptroller of the Currency.

Statement of the number of National Banks organized in the several States, with capital stock paid in, bonds deposited by, and circulation issued to, on the 1st of October, 1865.

REPORT OF THE COMMISSIONER OF INTERNAL REVENUE,

TREASURY DEPARTMENT, OFFICE OF INTERNAL REVENUE, Washington, November 30, 1865.

Hon. Joseph J. Lewis having resigned the office of Commissioner, July 1, 1865, and his successor, Hon. William Orton, so lately as November 1, instant, the duty of preparing the annual report of the office unexpectedly devolved upon me at so late a period as, of itself, to preclude the expectation of a voluminous report from me at this time, while the laborious service of the "Revenue Commission," with powers and duties defined in the 19th section of the act of March last, makes it inappropriate that I should present my views upon such subjects as may have come within its consideration before it shall have prepared the report contemplated by the statute. At its request, however, I will at that time, if desired by the Secretary of the 'Treasury', submit what experience in this office shall have taught me in relation to the several changes it may propose in the law.

In the course of the present report, however, I shall offer a few recommendations affecting mainly the administration of the law, and only those parts of it to which I understand it is not the purpose of the commission to give special attention.

It is a matter of sincere congratulation that, thus far, the people of this country have so patiently borne the burden which has been put upon them, and have so freely contributed of their substance to fill the national treasury. With few exceptions the demand of the tax collector has been met promptly and wil-And when it is recollected that the present generation only know by lingly. tradition, or by reference to obsolete statutes, that taxes have ever been imposed in this country upon articles of their own manufacture, and the objects of internal traffic, or upon the various crafts or professions in which they are employed; and when, too, it is considered that the revenue thus collected for the single year ending June 30, 1865, amounts to a sum nearly or quite equal to all the receipts of this government from whatever sources, except loans and treasury notes, from its organization to the war of 1812; and when it is further considered that this amount was contributed at a time when the commercial marine of the country had been nearly destroyed, and more than a million of hardy men were withdrawn from the productive pursuits of life, we may not only be justly proud that the material strength has been fully equal to the burden imposed, but that it has been borne so quietly and so willingly.

The law requires "that separate accounts shall be kept at the treasury of all moneys received from internal duties or taxes in each of the respective States, Territories and collection districts, and that separate accounts shall be kept of the amount of each species of duty or tax that shall accrue, so as to exhibit, as far as may be, the amount collected from each source of revenue, with the moneys paid as compensation and for allowances to the collectors and deputy collectors, assessors and assistant assessors, inspectors and other officers employed in each of the respective States, Territories and collection districts, an abstract, in tabular form, of which accounts it shall be the duty of the Secretary of the Treasury annually, in the month of December, to lay before Congress."

Tabular statements more specific and comprehensive even than required by statute have been prepared in this office, and are herewith respectfully transmitted. They comprise:

Table A, showing the receipts by collectors from each specific source of revenue, and the amounts refunded in each collection district, State and Territory of the United States, for the fiscal year ending June 30, 1865.

Table B, collections from banks, insurance, railroad, canal, and turnpike companies.

Table C, monthly receipts of internal revenue tax on salaries.

Table D, number and value of internal revenue stamps procured monthly by the Commissioner; and monthly receipts from purchasers of internal revenue stamps, the commissions allowed on the same, and the receipts from agents for the sale of stamps.

Table E, recapitulation of receipts of internal revenue from all sources for the year ending June 30, 1865.

Table F, comparative table showing the territorial distribution of internal revenue, population, and wealth in the United States.

Table G, the gross amounts collected and paid into the treasury, and the amounts expended in the several collection districts, States and Territories, during the year.

Table H, the ratio of the receipts from specific sources to the aggregate of all collections.

AGGREGATE RECEIPTS.

The aggregate receipts of internal revenue for the fiscal y	
*1863 were	\$41,003,19293
1864 were	
1865 were	211, 129, 529 17

These amounts are exclusive of the direct tax, or tax of twenty millions of dollars upon the lands of the country, which has been partially paid in various ways, and the duty upon the circulation and deposits of National Banks, which in 1863 was paid to the Comptroller of the Currency, and has since been paid to the Treasurer, but are inclusive of drawback and sums refunded, which in the several years were as follows:

	Drawback.	Amount refunded.
1863	\$677,106 40	\$57,605 71
1864	687,431 99	237, 470 37
1865	698, 655-36°	422,734 36

RECEIPTS FROM SPECIAL SOURCES.

It may not be unprofitable to present in juxtaposition the amounts received from several of the most important sources of revenue, with brief suggestions in relation to their differences; it should be borne in mind, however, that the law was in operation but ten months for the year ending June 30, 1863.

BANKS, TRUST COMPANIES, AND SAVINGS INSTITUTIONS.

	1863.	1864.	1865.
Dividends and additions to			
surplus			
Circulation	• • • • • • • • • •	2,056,996 30	1,993,341 89
Deposits		780,723 52	2,040,933 26
Capital			902, 835-18

The tax upon dividends was three per cent. until June 30, 1864, after which it was five per cent.

*NOTE.—The act of July, 1862, took effect September 1st, and the receipts for the fiscal year 1863 are for but ten months.

A discrepancy exists between these amounts and those from the office of the Secretary of the Treasury. The same receipts are not always reported and entered upon the books of the two offices on the same day. The difference is only one of account.

Other discrepancies of like character may be observed arising from the same source.

"Circulation" and "deposits" were not taxed until October, 1863.

"Capital" was first charged under the act of June 30, 1864, when the duty upon "circulation" was increased.

By the act of March 3, 1865, the tax upon deposits was extended to savings banks having no capital stock.

The taxes upon the "capital," "circulation," and "deposits" of national banks are not received at this office, nor included in the above.

RAILROADS.

	1863.	1864.	1865
Dividends	\$338, 533 49	\$927,393 38	\$2, 470, 816 89
Interest on bonds	253,998 72	596,859 09	847,683 61

The duty was three per cent. until July 1, 1864; afterwards five per cent. The same tax was then imposed upon all profits carried to the account of any fund, or used in construction. The amount received from this source is included in the dividends for 1865.

INSURANCE COMPANIES.

Dividends and additions to sur-	1863.	1864.	1865.
plus	\$225, 485 44	\$445, 366, 17	\$764,658 38
Premiums and assessments	321,001 69	523, 582 42	961, 502 99

Tax upon dividends same as upon dividends of banks.

That upon the gross receipts of premiums and assessments was one per centum until July, 1864, payable quarterly to the Commissioner; after that, one and onehalf per cent., payable monthly to the collectors.

SALARIES OF PERSONS EMPLOYED BY THE UNITED STATES GOVERNMENT.

1863	\$696, 181 71
1864	
1865	2,826,333 37

This tax is received only from those whose compensation exceeds the rate of \$600 per year, and was at the rate of three per cent. until July 1, 1864, and afterwards five per cent.

PASSPORTS.

1863	 .	 	\$8,406 00
1864	 	 	11,001 00
1865	 	 · · · · · · · · · · · · · · · · · · ·	27, 408 29

Tax three dollars each until July 1, 1864; five dollars since. These amounts were mainly paid through the Department of State. A small sum each year was received from collectors.

REVENUE STAMPS.

1863	 \$4, 140, 175 29
1864	 5, 894, 945 14
1865	 11, 162, 392 14

These amounts include the receipts from stamps, required by schedule C as well as schedule B; upon proprietary articles, matches, photographs, and cards, as well as upon written instruments. The law in respect to these duties has been repeatedly and variously modified, sometimes adding, and sometimes subtracting from the receipts. The large increase of revenue is due in no small degree to the growing observance of the law. After September 1, 1864, stamps

were required upon matches, and the receipts from that source for the remaining portion of the fiscal year was probably not less than one million[®] dollars.

ARTICLES IN SCHEDULE A.

1863	 . 		\$365,630	93
		•••••••••••••		
1865	 		779, 901	79

The taxes here are specific upon carriages, yachts, billiard tables, and gold and silver plate kept for use. In 1864 the schedule was increased by the addition of gold watches and piano-fortes, but the change was made after the annual lists, in which the taxes are included, were in the hands of the collectors, and the receipts reported are mainly from the operation of the statute of 1862.

LICENSES.

1863	. \$6, 824, 178 42
1864	7, 145, 388 71
1865	12, 598, 681 25

The receipts from licenses, like those from income and schedule A, are almost entirely in the report of the year subsequent to their assessment. The reassessment under the act of June, 1864, furnishes the principal exception to this rule. The returns are received in May, but the lists upon which they are entered by the assessors, do not ordinarily reach the collectors until after the 30th of June, or the beginning of another fiscal year. The increase in 1864 accrued, in part, from the addition by the act of March, 1863, to the list of persons subject to duty and the increased charge for several descriptions of license; and that of 1865 from the same source, as well as from a like addition under the act of June 30, 1864, and the increased tax upon wholesale dealers, which, by special provision of the statute, was immediately assessed as additional to that assessed under the prior law.

INCOME.

1863			 	 		 \$455, 741	26
1864			 	 		 14, 919, 279	58
1865	••••	•	 	 	• • • • • • • •	 20, 567, 350	26

This, with licenses, and schedule A, makes up the annual list.

For the reasons just given above, the tax upon the income of 1862, assessed in 1863, is mainly included in the receipts of the fiscal year 1864; less than half a million dollars having been collected in 1863; and the receipts for 1865 consist almost entirely of the tax assessed in 1864 upon the income of 1863.

Most of the tax upon the income of 1864 has been collected since the commencement of the current fiscal year 1866, and will appear in the next annual report from this office. A small part of it is found in the receipts of 1865.

Of the amounts collected in 1863, \$279,333 76 were returned at five per cent. upon incomes above ten thousand dollars; \$172,770 35 at three per cent. upon incomes of less than ten thousand dollars; and \$3,637 15 upon incomes from United States securities. Of that collected in 1864, \$6,913,834 88 were returned at five per cent.; \$7,930,070 77 at three per cent.; and \$75,373 93 at one and one-half per cent. Of that collected in 1865, \$801,941 99 were returned at ten per cent.; \$9,934,758 55 at five per cent.; \$9,697,246 96 at three per cent.; and \$133,402 76 at one and one-half per cent.

The receipts from the ten per cent tax were all from taxes upon the income of 1864. It cannot easily be determined precisely how much of the receipts at five per cent. are due to that year.

The special tax of five per cent. upon all incomes above six hundred dollars, as well from banks, railroads, and salaries, as from other sources, brought into the treasury \$28,929,312 02.

IRON AND STEEL IN THE VARIOUS FORMS SPECIFICALLY NAMED.

1863	· · · · · · · · · · · · · · · · · · ·	 \$1,862,826 36
1864		 3,694,168 49
1865		 9, 218, 808-63

These are the varieties named and described in the seventy-fifth section of the act of July, 1862, amended and somewhat increased by the act of March 3, 1863; still further enlarged with increased rates under the act of June 30, 1864, and twenty per cent. additional to those rates after April 1, 1865. Pig-iron was taxed two dollars per ton by the act of 1864, and during eleven months ending June 30th last, added nearly one and a half million dollars to the public revenue. The additional twenty per cent. to the rate, taking effect April 1, did not increase the receipts until May. Several causes have contributed to secure the tax upon these articles, and it is believed that it has almost universally been paid.

REFINED PETROLEUM AND COAL OIL.

1863		\$649,962 09
1864		
1865	•••••	3,047,212 77

The tax upon petroleum was ten cents per gallon, and upon oil distilled from coal exclusively eight cents until June 30, 1864, after which the rates were twenty and fifteen cents respectively. The increased receipts in 1864, over those of 1863, were owing largely to increased consumption, and to the withdrawal from bond to escape the increased duty. This somewhat overstocked the market, and during the following year checked refining for home consumption.

CIGARS AND CHEROOTS.

1863	\$476,589	29
1864	1, 255, 424	79
1865	3,072,476	56

Specific taxes, graduated by the different values of the cigars, were imposed by the act of July, 1862. These were largely increased in 1864, but under the act of March 3, 1865, the duty was made uniform at ten dollars per thousand. The anticipation of additional tax largely increased the manufacture in 1864, and the supply at that time has hardly yet been consumed.

TOBACCO-CHEWING AND SMOKING.

1863			 \$2, 576, 888 67
1864			 7,086,684 74
1865	• • • • • • • • • • • • • • • • • • •	. 	 8,017,020 63

Plug and fine-cut tobacco were mainly taxed fifteen cents per pound until June 30, 1864, when the rate was increased to thirty-five cents, and in March, 1865, it was still further increased to forty cents.

The tax upon smoking tobacco was at first five cents, increased to twentyfive cents in 1864, and to thirty-five cents in 1865. Smoking-tobacco made exclusively of stems was taxed at two cents until March, 1863, when it was raised to five cents. In 1864 it was increased to fifteen cents, where it still remains.

The regularity of the manufacture has been largely disturbed by expectation of additional duty, as in the case of cigars.

The tax collected in 1863 represents 23,680,056 pounds; that of 1864 63,372,426 pounds, and that of 1865 only 36,639,020 pounds.

Of the amount charged in 1865, 10,061.163 pounds were manufactured and returned in June, 1864, in anticipation of the increased rates, and the duty paid in the following year. The amounts for the first and the last years were less than the ordinary annual consumption, while the amount for 1864 was greatly in excess. This excess was brought into consumption during the last year at rates with which the regular manufacturers could not compete, except with their old stocks, and the production was, of necessity, largely obstructed. It has also been unfavorably affected by the arrival of large quantities of southern tobacco in northern markets.

The average annual taxable production of the different kinds of manufactured tobacco from September 1, 1862 to June 30, 1865 was 42,809,168 pounds, which at present rates would have produced \$15,736,795 65.

FERMENTED LIQUORS.

1863	\$1,558,083	41
1864	2,223,719	73
1865	3,657,181	06

From September 1, 1862, to March 3, 1863, the tax was one dollar per barrel, of not more than thirty-one gallons; from that date to April 1, 1864, sixty cents, and since that time one dollar.

The number of barrels upon which tax was received, as nearly as can be ascertained, was 1,765,827 in 1863, 3,459,119 in 1864, and 3,657,181 in 1865.

DISTILLED SPIRITS.

1863	· · · · · · · · · · · · · · · · · · ·	 	\$3, 229, 990	79
1864		 	28, 431, 797	83
1865		 	15, 995, 701	66

During the fiscal year 1863 the tax was uniformly twenty cents per gallon. For the fiscal year 1864 the tax was twenty cents until March 7, after which it was sixty cents. From July 1, 1864, until January 1, 1865, it was \$1 50 per gallon, and afterwards \$2.

Of the amount reported in the year 1865, however, \$3,862.820 66, or nearly one-fourth the whole amount, was at twenty or sixty cents per gallon. This resulted mainly from the fact that large quantities of spirits were sold by the distillers within the last ten days of June, 1864, thus escaping the increased duty, while the taxes thereon did not fall due until the following month of July, being the first of the next fiscal year. Considerable quantities were removed from the distilleries, too, under transportation bonds, or under bills of lading, prior to the 1st day of July, under conditions which produced a similar result. Even with this explanation, it may occasion no little surprise that the increase of duty was followed by a decrease of receipts. But I regard the receipts of the past year from distilled spirits as no criterion, if, indeed, even an indication of what would have been received had the tax fallen upon the ordinary, natural consumption of the country. This was checked in some measure, undoubtedly, by the tax, but the distillations in the winter and spring of 1863-'64 were everywhere in advance of consumption, anticipating the increased duty, glutting the market, and thoroughly deranging the customary laws of demand and supply. For a long time the consumption has not been of spirits which have paid the duty current at its date, but always of those taxed, if liable at all, at a previous and lower rate. The increase has never been of advantage to the government, but has swelled the income of manufacturers and speculators. For several months of the past year, when holders were disposing of their adventures, the market price of distilled spirits, even in the Atlantic cities, remote from the place of production, was but little, if any, in advance of the tax. It is no wonder, then, that many distilleries were idle and the revenue small.

The receipts from distilled spirits in

1863 (10 months) were from	16, 149, 954	gallons.
1864 were from		
1865 were from	16, 936, 778	" "

Average taxable production per year, from September 1, 1862, to June 30, 1865, 40,537,371 gallons.

From the fact that several of the elements involved are so uncertain and fluctuating, it is very difficult, of course, to determine with confidence how much the consumption is reduced by the present tax, and what will certainly be realized from this source of revenue. The Revenue Commission has given much attention to this subject, and its report, I have no doubt, will be full and ex-It may not be amiss for me to state, however, that I apprehend there haustive. is a prevalent overestimate of this reduction; and in this belief I am strengthened by the recent "report of the Commissioners of her Majesty's inland revenue," from which it appears that the consumption of distilled spirits in the United Kingdom of Great Britain and Ireland during the year ending March 31, 1852, exclusive of the amount used in the arts and manufactures, was 29,866,260 gallons, while the increase of the excise duty in 1860 to the uniform rate of 10s., or \$2 50 per gallon, throughout the kingdom, (at which rate it still remains,) only reduced the consumption during the last year to 26,516,531 gallons. This amount was in addition to 933,649 gallons more employed in manufactures and the arts, methylated and exempt from duty.

In 1852 the tax in England was 7s. 10d.; in Scotland, 3s. 8d.; and in Ireland, 2s. 8d.

The population of the United Kingdom in 1852 was 27,500,000, and in 1864, . 29,657,000.

For some years prior to 1860 the rate of duty was uniform throughout the United Kingdom at 8s., or 8s. 1d. per gallon, and in that year it was raised to From the report of the commissioners for the following year it appears 10s.that the domestic production fell off heavily-some nineteen per cent.-immediately after the change in the rate, from 24,985,192 gallons in 1860 to 20,147,824 gallons in 1861, while it will be noticed that the advance in the duty was but slight when compared with that which was imposed under our laws at the commencement of the last fiscal year. The commissioners in the report of 1861, say:

"These figures immediately suggest the question whether the whole of this large decrease is attributable to diminished consumption produced by the addition to the rate of duty. We think that this is not the case. Considerable diminution, indeed, was expected and has doubtless occurred, but various other causes have contributed to the unexpected deficiency above recorded.

"In the first place, we know that unusually large stocks of spirits had been accumulated in February, 1860, in anticipation of an addition to the duty; and, on the other hand, that since the duty was raised to 10s. the stocks have been uniformly kept as low as possible, and the operations of all persons concerned in the spirit trade restricted to the absolute wants of the moment. Rectifiers, for instance, take ten puncheons at a time, instead of twenty or thirty, as they formerly did, and many of the large retailers who used to replenish their stores with one hundred gallons at a time, are now careful to limit their purchases to ten or twenty gallons. This is the consequence of the increased cost of the spirits, and may be expected permanently to alter the habits of the trade; operating in combination with the excessive stocks of the year 1859-'60, it has had considerable effect on the relative quantities charged with duty in that and the succeeding year.

"Yet, after making allowance for all this, there still remains a large deficiency, which can only be accounted for by diminished consumption; not, however, wholly produced by the increase of price in spirits, and therefore not necessarily a cause of permanent falling off in revenue.

'We feel justified in assigning to the bad harvest of last year a large share in restricting

"On the whole, therefore, we should infer, from a review of the occurrences of the year, 'that, although the quantity of spirits brought to charge would in future not reach the same level as in 1859-'60—nearly the highest on record—we should be entitled to reckon with

certainty upon charging at the least twenty million gallons in the present year, and might fairly expect, if the country continues in a prosperous state, an addition to that amount of 1,000,000 or 1,500,000 gallons."

By the subsequent reports of the same commissioners it appears that their estimates were fully confirmed.

Upon such experience we can now reasonably base our expectations. Our circumstances are not dissimilar. Our markets are now exhausted of spirits distilled before taxation, or subjected only to the earlier rates. The supplies for consumption must now pay the existing duty, and the receipts for the current year will, I am confident, far exceed the aggregate of all receipts from the same source prior thereto.

It is certain that immense frauds have been perpetrated, for such have been discovered and prosecuted to judgment or to compromise; but the increasing experience and vigilance of our officers, and the appointment of others for special duty at distilleries, will prevent large loss to the government. The Revenue Commission will, I hope, suggest additional checks to be authorized by further legislation; but so long as avarice and falsity are a part of humanity, revenue laws, however thoroughly administered, will be sometimes evaded.

The number of illicit distillations detected in the United Kingdom in 1864 was 2,757, and in 1865 3,457; showing that, with all the thoroughness consequent upon careful legislation, long experience, and a more compact population than ours, it was quite impossible to prevent occasional and, undoubtedly, sometimes enormous fraud. It must be the aim and the effort of all persons connected with our revenue laws to insist everywhere and always upon the rights of the government, and, in so doing, the protection of taxpayers who faithfully discharge their duties.

COST OF COLLECTING THE REVENUE.

The cost of collecting the public revenues is naturally a matter of no little solicitude to the Secretary of the Treasury, as it is one of vast importance to the country.

A people heavily subjected to taxation will carefully scrutinize the expenditures of the government, especially so far as they relate to the collection of the revenue they are taxed to produce.

It may not be unsatisfactory to submit, in this connexion, a tabular statement of the costs, from time to time, of collecting the revenues of Great Britain and Ireland, taken largely from the work of J. R. McCulloch, esq., upon "Taxation and Funding."

The percentage cost of collecting inland revenue, after deduction of drawbacks, in the following years, was, (in the $\pounds 100$:)

1840–'41	$\pounds 5$	5s.	1d.	upon	$\pounds 26,231.172$
1850–'51	4	3	4월	upon	32,018,825
4860–'61	3	13	$7\overline{\frac{1}{2}}$	upon	42,019,133
The percentage cost of collecting of	ustor	ns, ac	cordi	ing to the sa	ame authority,
before deduction of drawbacks, &c., in	the fo	ollowi	ng y	ears, was :	-

In 1840–'41	£5 8s.	$8\frac{3}{4}d.$ upon	£26,341,813
In 1850–'51	$5 \ 15$	8 <u>1</u> upon	22,019,784
In 1860–'61	4 6	3 upon	23, 278, 250

The actual annual costs to our own government for the collection of its customs for several years cannot be determined with accuracy, because the expenses of revenue cutters, performing the duties of vessels-of-war, have been paid from the appropriations for customs, as have other charges connected with commercial intercourse and abandoned property in insurrectionary districts. They will, however, it is believed, not fall short of three and one-half per centum of the receipts—a percentage not above the average for many years past in this country, and, as it will be observed, much below the costs in the United Kingdom for either of the years above given.

I have caused the costs of assessing and collecting the internal revenue of the fiscal year 1865 to be carefully ascertained, including the salaries and authorized expenses of revenue agents, special agents, and inspectors of revenue, the contingent expenses of this office, including its pay-roll, and the costs of revenue stamps, but exclusive of its printing at the office of the public printer, not yet ascertained, and find that the percentage, after deducting drawback and sums refunded as erroneously collected, will not exceed two and seventy-five one-hundredths, $(2\frac{75}{100})$

This ratio of costs to collections cannot be relied upon for the current year, as the percentage will be greater in the sparsely settled districts of the south. It will not, however, I believe, exceed three and one half $(3\frac{1}{2})$ per centum of the receipts of the whole country.

ESTIMATE OF RECEIPTS FOR CURRENT YEAR.

As bearing upon the probable amount of revenue for the current fiscal year 1866, I present herewith a statement of the receipts of which certificates of deposit reached this office during July, August, and September, of 1863, 1864, and 1865, respectively:

	1863.	1864.	1865.
July August September		\$16, 570, 548 39 15, 712, 066 84 15, 819, 770 72	\$21, 693, 470 75 34, 087, 539 09 37, 939, 415 82
Total	17,039,373 96	48, 102, 385 95	93, 720, 425 66

I present also the comparative receipts from several large sources of revenue during the first quarter of the fiscal year 1865, and the first quarter of 1866, ending September 30 last:

	1865.	1866.
Fermented liquors	$\begin{array}{c} 302,41163\\ 2,560,50985\\ 471,86307\\ 228,85160\\ 526,84091\\ 316,62177\\ 13,510,49298\\ 2,233,926\mu6\end{array}$	1, 230, 353 69 810, 056 09 3, 010, 135 37 1, 206, 878 59 204, 917 76 600, 116 88 981, 547 14 41, 766, 016 63 2, 078, 974 95 1, 085, 031 20
Total	24, 565, 841 93	52, 974, 028 30

Reports due from several collectors have not been received, although their receipts have been regularly deposited, and the above amounts for 1866 will, in some instances, be considerably increased. The receipts from distilled spirits for the months here reported exhibit no evidence of the amounts consumed, nor of the comparative productiveness of the several rates of duty, as \$2,702,257 72

of that reported in 1865 (July, August, and September, 1864) accrued from the imposition of twenty or sixty cents per gallon. The same is true of tobacco, as \$1,766,616 79, or more than three-quarters of the whole amount reported in 1865, was derived from the low rates of duty prior to the statute of June 30, 1864.

It will be observed that the increased receipts are largely from the annual list, and especially from income. Not far from sixty per centum of the latter tax was from income in excess of five thousand dollars, and taxable at ten per cent.

At the date of this writing the revenue from the annual list is almost fully collected, and the receipts for the remaining portion of the fiscal year must be mainly from other sources.

The fluctuation in the value of merchandise will, of course, affect the proceeds from whatever bears an *ad valorem* duty. The revenue from the southern States is altogether problematical. From the most reliable data, however, in my possession, with the present law unchanged, I confidently expect that the receipts of this office for the current fiscal year will not be less than \$272,000,000.

APPOINTMENT OF ASSISTANT ASSESSORS.

By the amendatory act of March last it was provided that assistant assessors, before that time appointed by the Secretary of the Treasury, should, in case of vacancy, be appointed by the assessors of the several districts, subject to the approval of the Commissioner.

The Attorney General of the United States, to whom the question involved in this change was referred, has given to the Secretary of the Treasury his opinion, that under the second section of article second of the Constitution such appointments can be made only by the President of the United States or the head of a department.

The language of that section is that the President "shall nominate, and by and with the advice and consent of the Senate shall appoint, * * * * all other officers of the United States whose appointments are not herein otherwise provided for, and which shall be established by law. But the Congress may by law vest the appointment of such inferior officers, as they think proper, in the President alone, * * * or in the heads of departments."

It would seem, therefore, that if no other provision of law is made for the appointment of assistant assessors than that which now exists, an undesirable as well as an unintended burden is imposed upon the President and the Senate.

The purpose of the law would seem to be answered as well and more conveniently by giving the power of such appointments immediately to the Secretary of the Treasury, as authorized by the above section of the Constitution; and I respectfully suggest that a modification of the law may be made to that effect.

APPEALS UNNECESSARY.

From the almost universal experience of assessors it seems that the holding of formal appeals from erroneous assessments in the annual list, as required in the unneteenth section, is entirely unnecessary. The public always have access to the assessor at his office, and rarely have actual notice of the advertised time of hearing at any other locality. The result is that in many districts none have ever attended the appeals, which have hence proved of advantage neither to the government nor the taxpayer, while they have been a charge both to the local officers and to the public treasury. Between the assessment and collection there is always opportunity for a hearing if desired, either in person or by correspondence, and after collection this office is always open to the complaints of aggrieved taxpayers.

The system of holding appeals in the several counties is borrowed from the direct tax law, under which a certain amount was apportioned to each county, and the increase or decrease of a single assessment affected every landholder. There was need, therefore, of comparison, and often of personal view. Under the revenue law every assessment is independent, and the machinery referred to seems valueless.

LACK OF UNIFORMITY IN RETURNS.

The singular lack of uniformity in the time when the various returns are due the assessors from different classes of taxpayers is often productive of neglect and irregularities, which the necessary amendments to the law would avoid. There seems to be no reason why the monthly returns, at least, should not all be receivable on the same day and payable at the same time thereafter. The more the statutes are simplified and systematized in their details the less will be the friction engendered in their operation, and the more certain their results.

What I have said of the returns is applicable in its spirit to the penalties of the law. They differ largely in amount for the same grade of offence, while the manner of their recovery is as various, almost, as the forms of proceeding known to the courts. The tax upon slaughtered sheep and lambs is five cents each, and the penalty in case of fraud or evasion is ten dollars, or two thousand per centum, recoverable only by suit, while the penalty for neglect, or refusal to make return and payment of tax upon the gross receipts of certain persons, companies, and corporations, is ten per cent. additional to the duty as estimated by the assistant assessor, to be included in the assessment, and for fraudulent evasion one thousand dollars, without regard to the amount of indebtedness, to be sued for in the courts; and no special penalty whatever is provided for neglect to make return of a succession until after notice from the assistant assessor.

These instances are cited simply for illustration of the variety referred to, and could be made as numerous, almost, as the sources of revenue.

In this connexion I may add that section fourteen, from peculiarities in some parts of its language, is of questionable application to many of the returns required later in the law, which it appears from other parts it was intended to cover, and that the forty-ninth section is so involved in its construction as, thus far, to have been of little practical utility.

INCREASED ALLOWANCE TO ASSESSORS FOR RENT, AND ADDITIONAL COMPEN-SATION TO ASSESSORS AND ASSISTANT ASSESSORS IN CERTAIN CASES.

Under section 22 the allowance made to assessors for office rent can in no case exceed the rate of \$500 per annum. This limit is still much more than sufficient in most districts of the country; but in several of the most populous cities the increase of prices since the passage of the law compels our officers to seek rooms insufficient for themselves and incommodious to the public, or make payment in part therefor out of receipts designed by Congress as compensation for their personal services. It seems but just to them that this limitation be enlarged, and they be allowed sums actually and necessarily expended, subject to the approval now required.

The last proviso of section 22 authorizes the Secretary of the Treasury to fix such additional rates of compensation to assessors and assistant assessors in cases where a collection district embraces more than a single congressional district, and to assessors and assistant assessors, revenue agents and inspectors, in Louisiana, North Carolina, Mississippi, Tennessee, Missouri, California, Oregon and the Territories, as may appear to him to be just and equitable, in consequence of the greater cost of living and travelling in those States and Terri-

tories, and as may, in his judgment, be necessary to secure the services of , competent officers. The suppression of armed hostility in the insurrectionary districts has brought within the active operation of the revenue law other States neighboring to several of those above named, and in which the cost of living and travelling is nearly the same. To the compensation of revenue officers in those States I respectfully suggest that the authority of the Secretary of the Treasury should likewise be extended.

FRANKING PRIVILEGE.

Assessors and collectors are allowed for postage actually paid on letters and documents received or sent by them relating exclusively to official business. Their communication with this office through the mails is free, and I respectfully suggest that if they were allowed the franking privilege upon official business between their respective offices it would be liable to little abuse, and be a saving of cost to the government.

SAFES.

My predecessors in their reports to the Secretary of the Treasury alike recommended that the purchase of fire-proof safes be authorized for the use of collectors and assessors. In this recommendation I cheerfully concur. Private enterprise of the amount covered by the books and papers of the most unimportant district of the country is seldom left by prudent managers to the dangers to which our offices are now subject. The loss accruing to the government from a single conflagration might almost equal the expenditure necessary for the protection everywhere required.

SALES OF REAL ESTATE FOR TAXES.

Section 30 relates to the seizure and sale at public auction of real estate by the collector when goods and chattels cannot be found sufficient to satisfy the duties imposed.

It provides, among other things, that if no person offers for the estate the amount of the tax to be collected, together with the penalties and charges, the officer shall purchase the same at that sum for the United States, and shall deposit his deed thereof with the district attorney. Although the tax may be large and the realty of disproportionate value, no collection can be made without a full discharge of the duty.

This section is largely copied from the 36th section of the direct tax law of August 5, 1861. The tax to be collected under that law was only that assessed upon the land offered for sale, and the requirement now considered was appropriate. Under the revenue law the land is not assessed, and the requirement is oftentimes embarrassing. I respectfully recommend that the law be so amended that the land may be sold to the highest bidder, and that the United States, through the collector, may be the purchaser.

COMMISSIONER'S CERTIFICATE TO BE REQUIRED IN CERTAIN CASES.

There has been a very general compliance on the part of revenue officers with the requirements of the law and the regulations of this office in preparing and forwarding their various reports. Whenever negligence does occur, however, this office is embarrassed in its operations, and not unfrequently the local officers, who have promptly discharged their duty in this particular, share in the general inconvenience. Sometimes positive damage may result to the government when a person who has neglected to make the returns retires from office. After careful consideration I have concluded to recommend that it be provided by law that no payment shall be made to assessors or collectors on account of salaries or commissions without the certificate of the commissioner that all reports required by law or regulation have been received, or a satisfactory explanation rendered him of the cause of the delay.

REFUNDING TAXES ERRONEOUSLY PAID.

Taxes erroneously or illegally assessed and collected, which, under the 44th section of the act of June 30, 1864, the Commissioner is authorized to refund, subject to the regulations of the Secretary of the Treasury, were, prior to the 30th of June last, by the provisions of the same section; paid by draft drawn on collectors of internal revenue. The 3d section of the act of March last prescribed that after the 30th of June the gross amount of all duties, taxes, and revenues received or collected should be paid, by the officers, collectors or agents receiving or collecting the same, into the treasury of the United States, without any abatement or deduction on account of "salary, compensation, fees, costs, charges, expenses or claims of any description whatever, anything in the law to the contrary notwithstanding."

Such payment, of course, does not allow collectors to honor drafts of the Commissioner, and no little embarrassment has arisen, both to the department, and the public, from the want of a clearly authorized method of refunding such taxes. This trouble did not suggest itself during the pendency of the amendatory act, and it is only necessary, I apprehend, to call the attention of Congress to the subject to secure the appropriate legislation.

TAXES IN THE INSURRECTIONARY DISTRICTS.

By circular bearing date June 21, 1865, the Secretary of the Treasury announced that, "without waiving in any degree the rights of the government in respect to taxes which had before that time accrued in the States or Territories in insurrection, or assuming to exonerate the tâx-payer from his legal responsibility for such taxes, the department did not deem it advisable to insist at present on their payment, so far as they were payable prior to the establishment of a collection district embracing the territory in which the taxpayer resided."

This office, in pursuance of that circular, commenced and continued the collection of such taxes only as accrued in the several collection districts subsequent to their establishment by the order of the President.

I would respectfully suggest whether or not section 46 of the act of June 30, 1864, which relates to the collection of taxes in States at that time insurrectionary, and referred to in this circular, does not require the careful attention of Congress.

All the instruments enumerated in schedule B of the revenue law, and subject to stamp duty, which were issued for nearly three years in that portion of the United States above referred to, were unstamped and invalid. Immense monetary interests are covered by these instruments, and although much wrong has not yet been suffered by their invalidity, the subject deserves, and will of course receive, special consideration.

PEDDLERS AND SUBSTITUTE BROKERS.

The apparent necessity for two provisions in the act of March last, amendatory of the 79th section of the act of June prior, has passed away with the rebellion. One of them denies license as peddlers to all who are not regularly enrolled for military duty, or physically disabled from service; the other imposes a tax of one hundred dollars upon substitute brokers. Both of them are now useless, while the former, from the discharge of enrolling officers, is liable to produce hardship. 'They should be repealed.

DEMANDS FOR PAYMENT OF TAXES.

Many complaints have arisen from manufacturers, and no little embarrassment to those charged with the administration of the law, by reason of the amendment to the S3d section, repealing the requirement of demand in writing before the imposition of ten per cent. penalty for non-payment of tax. The purpose of the change was, undoubtedly, to secure punctuality of payment, but neglect is often the result of forgetfulness only, and I believe it but just that written demand notices should be served upon all tax-payers, except when payment accompanies their returns.

DEDUCTIONS BY MANUFACTURERS UNDER SECTION S6.

I would suggest the propriety of amending the 86th section, relative to manufacturers' returns, by striking out so much thereof as relates to deductions.

The law now authorizes the deduction of freight from the place of manufacture to the place of delivery, commission not exceeding three per centum, (except where sales are made at the place of manufacture,) and other expenses of sale *bona fide* paid.

There are so many peculiarities in the method of manufacture and sale of different classes of merchandise in different parts of the country that it has been found impossible to define by any precise and specific rules the deductions allowable as "other expenses of sale *bona fide* paid," while general rules, however carefully drawn, are liable to such a variety of construction that too much diversity of practice has prevailed where it is but just to the honest manufacturer that there should be perfect uniformity. Much time is spent by assessors and assistant assessors in adjusting claims for deductions, and unfortunate differences of opinion often arise between them and the manufacturers, which should be avoided. This diversity of practice has furnished opportunity for numberless short returns, and a large proportion of the manufacturers who have been detected in fraud have urged "expenses of sale" either in extenuation or defence.

It is apparently reasonable to allow for freight, as some manufactories are more remote from the markets than others; but their disadvantage in this respect is, perhaps, fully compensated by the reduced cost of fuel, labor, rents, and motive power. The deductions are allowed only where the tax is *ad xalorem*.

The duties upon iron, salt, sugar, molasses, petroleum, and other articles, the freight of which to market is no inconsiderable part of their value, are all specific and without deduction. The amendment proposed would, of itself alone, enhance the burden upon manufacturing; but I believe that a tax of five per centum upon the gross sales of the manufactures in question is preferable to the present rate, with the allowances.

TAX UPON GROSS RECEIPTS OR TONNAGE OF VESSELS.

By section 103 of the act of June 30, 1864, a tax of two and a half per centum is imposed upon the gross receipts of steamboats, ships, barges, canalboats, or other vessels, employed in the business of transporting passengers or property for hire. The fourth section of the amendatory tariff act of March last relieves vessels paying tonnage duty from the taxation of their receipts. The tonnage duty upon the vessels relieved is but an annual one of thirty cents per ton, and it is respectfully suggested that the amended law imposes unequal burdens upon persons employed in like pursuits.

SECTION ONE HUNDRED AND FIFTY UNNECESSARY.

The peculiar language of section 150 of the act of June 30, 1864, would seem to indicate a purpose at one time of, in some way, collecting the duties upon successions in the insurrectionary districts through the direct tax commissioners. However this may be, there is now certainly no necessity of the section, and I respectfully recommend its repeal.

STAMP DUTIES.

That part of the law which relates to "stamp duties" is not only susceptible of improvement in its details, but is worthy of attention in respect to its general scope, and the objects of taxation.

While the results of its administration are, perhaps, more satisfactory than those of most other parts of the law, yet evasions' and violations are frequent, and, though the amount lost to the revenue may be small in the individual instance, it is large in the aggregate. Without asserting that greater vigilance than that heretofore exercised may not secure a more perfect enforcement of the statute, it is yet safe to say that the risk of detection and punishment under the existing system, with the precise phraseology of the law, in respect to violation and punishment, as it is, must always remain so small as to afford toomuch inducement for its evasion.

Were it not for the inconvenience the change might inflict upon thinly settled districts, it would be wise, it seems to me, to dispense entirely with adhesive stamps, as has been done elsewhere, and substitute stamped parchment or paper, the use of which is its cancellation. Frauds would diminish, but I fear the advantage to the revenue would hardly justify the burden upon the public. Penalty is provided for issuing unstamped instruments only when there is intent to evade the provisions of the law. The instrument itself may be invalid, but there is no punishment of the party who makes or issues it.

Some of the courts have held the government to the proof of fraudulent. intention, and thus practically stayed proceedings for neglect to affix or cancel the requisite stamps.

Sufficient time should, undoubtedly, be given the public, whose attention is not specially directed to its obligation in this particular; but as the law has been so long in operation, it is a question worthy of consideration whether or not a reasonable penalty for simple neglect would be oppressive, as it certainly seems necessary.

Every person who sells unstamped articles named in schedule C is subject to penalty; small for fieglect alone, larger when there is purpose to evade the law. Similar provisions in relation to unstamped instruments would, I believe, be both just and salutary.

The invalidity of unstamped instruments in the hands of their receiver must always prevent their issue more effectually than the liability of those who sign them to penalty. A more general compliance with the law could therefore be secured, if only those instruments which are of value in the hands of their holder were subjected to stamp duty. The small loss to the revenue from the necessary amendments would, it is believed, be more than compensated by the convenience of the public and the more general observance of the law. It is wise, too, it seems to me, to have few statutes which can easily be violated with impunity. Familiarity with their infringement in their minor details makes it easier for one to forget his obligations when larger sums are in question between himself and the government. Moral as well as bodily diseases are contagious.

A question has frequently arisen concerning the proper rule to be adopted in the case of official papers issuing from the executive departments of the several States, as well as from county and municipal offices. While there is in such cases no express exemption from stamp duty, such as is provided in regard to official documents made or issued by officers of the general government, yet the law has always been most liberally construed in their behalf. It has, however, not always been easy to define the proper limits of such exemption, nor to determine the particular cases to which the rule should apply. It seems, therefore, desirable that legislation should regulate with its special provisions a matter like this of large and growing importance, and which, it must be confessed, now rests mainly upon the basis of "liberal construction."

In this connexion, it is proper to call attention to the fact that there has arisen in some quarters an attempt, sustained by the judicial decisions of certain State courts, to evade the stamp duty imposed upon "writs or other original process by which any suit is commenced in any court of record."

Neither my predecessors nor myself have been convinced by the arguments upon which those decisions are founded, and this office has not altered nor modified the directions heretofore given requiring such duty to be paid. It has not been deemed advisable, however, to take any steps to bring the question involved before the appellate court for final decision, or to induce others to do so. It is undoubtedly desirable that in such a case an authoritative decision should be reached; but, as in other like cases, it seemed proper that the suit for that purpose should be prosecuted, if at all, by individuals, and in the ordinary way.

The power given to collectors by section 163 of the act of June 30, 1864, to affix exemption stamps, and to determine the rate of stamp duty in certain cases, is one of importance to the revenue, and sometimes of embarrassment to this office in its administration of the law. Without derogating from the intelligence and integrity of those charged with this important duty, it is my conviction that their decisions, under the pressure of other duties, and generally without reference to those made in other districts, must commonly be given with less consideration than if made by those who have larger opportunities for investigation, and whose decisions would produce greater uniformity of practice. The inconvenience of referring such matters directly to this office might in some localities seem, at first, to be an objection to the change; but, if desirable, copies might be forwarded, instead of original papers, and decisions made thereon, in pursuance of which the requisite instructions could be given. Indeed, from a large part of the country inquiries are, even now, constantly presented for consideration, accompanied by documents, or copies, under the impression that the final decision in such cases rests here. It is deemed the duty of this office to give answers to such inquiries; but such answers may encounter or be followed by decisions of subordinate officers based upon opinions directly at variance with those held here, and which are made final by law. It is apparent that such an incongruity in the administration of the law should not exist. Whether the correction should be made in the manner I have suggested, is for the superior wisdom of Congress to determine. As the attention of that body will no doubt be called to the details of the stamp schedules, as well as to other points of the law, it is not necessary that I should refer to all the particulars in which amendments may seem advisable. I would suggest, however, that the difference in the terms applied in different localities to the same kind of instrument, and the various forms of process and modes of proceeding in the several States, have rendered it difficult many times to make a satisfactory application of the provisions of schedule B, as it now exists, to all the cases which are presented for decision. Material advantage, too, might be derived from a more careful and enlarged specification, as in the case of different kinds of conveyance, and from a more definite requirement in the statement of the amount or character of the consideration in cases of conveyance, corresponding in that respect to the approved practice abroad. But these and other amendments can be more particularly pointed out at another time, if desired.

OTHER CHANGES IN THE LAW NOT DEFINITELY STATED, DEEMED NECESSARY.

I purposely omit the consideration of several important changes in the provisions of the law relative to successions and legacies, as well as to tobacco, snuff, cigars, and distilled spirits, which appear to be necessary for the preven-

tion of fraud, the protection of honest taxpayers, and the more uniform and certain collection of the revenue. The patience of the people, burdened as they have been by taxation, is an argument sufficient for their relief from its most annoying and oppressive exactions, so far as is consistent with the public necessities. Unskilled labor contributes in some instances disproportionately to its means, and several requirements of the law are more irritating and burdensome than productive. All these things are, however, being subjected to the thorough scrutiny of the Revenue Commission, and I defer further reference to them for the present.

OPERATIONS UNDER THE DIRECT TAX LAWS.

No appointment of "Commissioner of taxes," authorized by the 56th section of the direct tax law of August 5, 1861, has ever been made; but after the assumption by the loyal States of their apportionment of the twenty millions of dollars thereby imposed, the general superintendence of the collection of the tax in the insurrectionary districts was assigned to the office of internal revenue. For this collection, "a board of tax commissioners" in each of the States in which the insurrection existed was provided by the fifth section of the amendatory act of June 7, 1862. They were appointed, and during the last fiscal year they have been engaged in South Carolina, Virginia, Florida, Tennessee, North Carolina, Louisiana, and, for a portion of the year, in Arkansas.

Since its close they have also been appointed for the States of Georgia, Mississippi, Texas, and Alabama, and have commenced the discharge of their duties.

I herewith submit a statement of the amounts collected by the several commissions prior to June 30, 1865, the amounts received by them from sales of lands, from collections, and other sources, and the quantity or assessed value, or the number of lots purchased by them for the United States, so far as reported to this office, together with their salaries and expenditures:

Districts.	From sales.	Collections.	Other sources, including rents and leases.	No. of acres, assessed value, and number of lots bid in.	Salaries and
Florida	\$40, 414 81	\$4,000 00		2, 337 lots and 28 blocks.	\$27,900 16
South Carolina Virginia	170, 878 01 131, 608 38	99, 990 03 119, 308 00		*39, 703 acres. 8, 701 acres, as- sessed value,	41, 412 22 23, 816 29
Tennessee Louisiana	$112,366\ 00$ $108,203\ 72$	187,634 00		\$104,645 75 \$1,586,882 00	23,637 18 8,447 10
North Carolina Arkansas	35,986 10 33,537 00	9,729 67	•••••	\$76,000 00	9, 175 31 4, 763 08

* This amount is exclusive of lands resold under section 11 of the act of June 7, 1862.

It will be seen that there has been great lack of uniformity in the operations of the several commissions, dependent largely as they were upon the amount of territory protected by the national forces. The quantity of real estate abandoned by disloyal owners, and forfeited to the government, differs in different States, as do the sales of such property, and the amounts of taxes collected.

Of the property purchased for the government at the sales for taxes, leases under section 9 of the act of June 7, 1862, have been made only by the South Carolina commission. In South Carolina, too, and not elsewhere, resales of lands bid in at the sales for taxes have been made by the commission, under section 11 of the same statute. This section provides that purchasers at the sale who shall have faithfully served for the term of three months as an officer, musician, or private soldier, or sailor, in the army or navy or marine service of the United States, as a regular or volunteer, and who shall pay onefourth part of the purchase money, shall receive a certificate, and shall have the term of three years in which to pay the remainder. The amount which will become due in 1867 and 1868 upon army and navy certificates, issued as above, is \$206,994 30. In this State, also, a board of selection, appointed by the President of the United States for that purpose, and comprised in part of the tax commissioners, under his instructions of September 16, 1863, selected and reserved for military, naval, charitable, educational, and police purposes, eightyone plantations, situated on the several Sea islands of that State.

Under the same instructions the commission made sale of homesteads of ten and twenty acres each to heads of families of African descent.

Since December 10, 1863, there have been 617 certificates of homesteads of this character issued by the commission, most of which were during the last fiscal year.

It is evident from what I have stated that when the duties of the commissioners under the present laws shall be completed, the burdens imposed by it will have fallen unequally upon the people of the districts lately in insurrection. Some will have paid little in addition to their original distributive share of the twenty millions of dollars, while others will have lost their entire estates.

⁸ Some States, too, will have paid only the amount apportioned them under the act of August 7, 1861, while others, for the reasons before given, will, through the collections and sales, have contributed largely in excess of such apportionment.

After all the taxes shall have been collected, too, there will remain in several of the States large tracts of land belonging to the general government, bid in at the sales. When the offices of the commissioners shall be vacated there will be no person whose special duty it will be to take charge of these lands, or at least such part of them as shall be subject to redemption, and which, under the opinion of the Attorney General of the United States, referred by the Secretary of the Treasury to this office, the tax commissioners are not bound to turn over to the Bureau of Freedmen Refugees, nor has the Commissioner of the Freedmen's Bureau authority to set them or any portion of them apart for the uses mentioned in the statute of March 3, 1865, or sell them under the same statute.

The direct authority of the commissioners under section 9 of the act of June 7, 1862, to lease lands in any State, extends only until the said rebellion and insurrection in said State shall be put down and the authority of the United States established, and until the people of said State shall elect a legislature and State officers who shall take an oath to support the Constitution of the United States, to be announced by the proclamation of the President, and until the first day of March next thereafter.

Under the law and the proclamation of the President, each and every parcel of land in the States and parts of States lately in insurrection is charged with the payment of so much of the whole tax laid and apportioned upon the State where the same is situated, as shall bear the same direct proportion to the whole amount of the direct tax apportioned to such State as the value of such tract bears to the whole valuation of the real estate of such State, and in addition thereto a penalty of fifty per centum thereon. This charge is a lien upon all lands subject to it from and after the proclamation of the President, on the 1st day of July, 1862. The statutory remedy in default of payment of taxes determined by the commissioners is the sale at public auction of the lands upon which they are a charge.

After the cessation of hostilities, and on the 17th day of May last, the several commissions were directed by this office, in pursuance of the instructious of

the Secretary of the Treasury, to suspend all sales of lands for taxes in districts before that time in insurrection until otherwise ordered. Collections, however, have been made in several of the States, because of improved opportunities, with greater success than before, and since the close of the heated term all the boards are at their places of duty.

I submit that the disposition of the lands purchased and now held by the United States, as well as the whole subject of the collection of taxes above referred to, requires the careful consideration of the Secretary of the Treasury and of Congress.

ORGANIZATION OF THE BUREAU.

The Secretary of the Treasury, under the amendment to the first section of the act of June 30, 1864, is authorized only until the 1st day of July, 1866, to assign to this office such number of clerks as he may deem necessary, or the exigencies of the public service may require. Legislative action is therefore indispensably necessary that the requisite clerical force may be provided after June next. And here—were I not aware that all that can be said is already within the knowledge of the Secretary—I would urge the importance of increased compensation, by positive enactments, to a portion, at least, of the officers and employés of this office.

It needs no facts or argument to prove that, in a bureau where the details are so numerous and complicated, the value of one's services increases with experience, almost as much as in the studio or laboratory. Private enterprise is everywhere offering superior inducements to those who are willing to sacrifice their days and nights in its service, and it is not strange that a proper regard for themselves and families compels many of the most deserving to retire from public employment. An organization of this office, somewhat like that of the Treasurer's, was approved and referred to the last Congress by the late Secretary, and I respectfully submit that the necessity of one even more liberal in its provisions was never greater than now.

The correspondence of this bureau is voluminous, and the ladies engaged in its copying, and the discharge of other clerical services assigned them, should be remembered in this organization, and receive compensation more commensurate with their services. There is no reason why they should not be recognized and classed as clerks.

I cannot forbear cheerfully testifying to the punctuality and industry of the persons employed with me in this office, and their compliance with its regulations. Several of those charged with the most important duties, disregarding the customary hours of service, have almost uniformly been at their desks for several hours at night.

The same faithfulness has generally characterized the subordinate officers in the several districts of the country, and I am happy in the belief that at no period since the passage of the revenue law in 1862 have the taxes been more uniformly and thoroughly assessed and collected.

With great respect, your obedient servant,

E. A. ROLLINS, Commissioner.

Hon. HUGH MCCULLOCH,

Secretary of the Treasury.

REPORT OF THE TREASURER.

TREASURY OF THE UNITED STATES, Washington, October 25, 1865.

SIR: In compliance with provisions of statutory law and departmental regulations, the following statements in regard to the moneyed transactions of the treasury of the United States, and of the office in Washington city, and of the necessary business and labor connected with said transactions, during the fiscal year ending with June 30, 1865, are most respectfully submitted.

The books of the various offices of the department, including this office, have been closed as follows:

Cash I	R.	
Balance from June 30, 1864	\$96,739,905 73	
Repayments		
Trust funds		
Receip	rs.	
Loans	, 475, 579, 740 85	
Internal revenue	209, 464, 215 25

From War Department	3,602,431 42
From Navy Department	8, 504, 205 49

^{1, 848, 029, 185 82}

The receipts on account of the War Department consist, mainly, in repayments into the treasury by disbursing officers, and proceeds of confiscation.

The receipts on account of the Navy Department were, mainly, repayments into the treasury by disbursing officers, and from captures.

The following tables exhibit the movement of the treasury for the five years comprised, in whole or in part, in the period of time between the breaking out and the suppression of the rebellion :

Receipts for the preceding year to June 30.

1861	\$88, 694, 572 03

Total securities held for national banks, \$268, 697, 200.

To facilitate payments at the points where the disbursements must necessarily be made, 5,141 transfer orders have been issued, by which there has been moved from one depository to another, \$1,103,736,403 53. being nearly three times as much as was so moved two years ago, and about fifty per cent. more than last year.

There have been issued during the fiscal year upon the offices of New York, Philadelphia, Boston, and San Francisco, 68,138 transfer checks, by which there has been paid at those points \$277,371,468 53, of which amount \$6,364,922 40 was paid in coin.

There are at the office in Washington 274 open accounts of disbursing officers. There have been received, during the fiscal year, one hundred and five thousand and sixty four official letters. All of them have received attention; most of them, it is true, by the filling up of printed circulars. But notwithstanding these labor-saving devices, nine thousand eight hundred and seventy-three manuscript letters have been written. This is an increase of more than two thousand over last year, and more than double the number written the year before.

By the tables, wherein are compared the movements of the office for the last five years, it will be seen that the business, labor, and money transactions of the office have again been enormously increased. The tables would not be unaptly represented by a truncated pyramid. It is, however, hoped that the tables representing the business of the office, so far at least as the expenditures are con-

7 F

cerned, for the next five years, will be represented by such a pyramid with its base turned upward.

There is still great difficulty in obtaining, and in retaining when obtained, the services of persons of the talent and proved probity of character required for the safe transaction of the business of the treasury, at the rates of compensation now allowed by law. The assistant receiving teller, three clerks of the fourth class, six of the third class, five of the second class, and quite a number of the best clerks of the first class, have resigned their positions in this office, and have taken employment elsewhere, where their services were better appreciated and rewarded.

The cashier, the assistant cashier, and the chief of the division of national banks, and others, have remained at their places from motives and considerations other than and above mere pecuniary ones. It is, however, doubtful whether, now that the war is over, these patriotic considerations will continue to influence the conduct of this class of officers and clerks.

It is submitted, therefore, that the public interest requires that the pay of most of the employés in this office should be increased, or at least a percentage on their present salaries allowed them, during the continuance of the present high rates of living, and while their services would command better pay elsewhere.

It is also suggested that the female clerks, who in this office incur great responsibilities, should, like the other clerks, be classified, with salaries according to class, ranging from six to nine hundred dollars per annum.

It is again a subject of gratulation that notwithstanding the difficulty of retaining proper persons for want of adequate pay, the immense money transactions of this office have been satisfactorily accomplished without the loss of one cent to the people of the United States.

I have the honor to be, very respectfully, your obedient servant,

F. E. SPINNER,

Treasurer United States.

Hon. HUGH McCulloch,

Secretary of the Treasury, Washington, D. C.

REPORT OF THE REGISTER OF THE TREASURY.

TREASURY DEPARTMENT,

Register's Office, November, 1865.

SIR: I submit the following report of transactions in this office during the year ending June 30, 1865.

RECEIPTS AND EXPENDITURES.

The business of this division for the last fiscal year has been greater than in any previous year.

The number of warrants issued for the civil, diplomatic, miscellaneous,	
and public debt expenditures was	15.627
In the previous year	12, 645
An increase of over twenty per cent	2,982

100

101

e i	1
The number of warrants for receipts from customs, sales of public lands, internal revenue, and miscellaneous for the year	3,764
In the previous year.	2,870
An increase of over thirty per cent	894
The number of pay and repay warrants issued during the year in the	
War, Navy, and Interior (Indian and Pension) Departments was In the previous year	$14,019\ 12,600$
	12,000
An increase of over twelve per cent	1, 419
The number of journal pages filled with entries of accounts and war- rants relating to civil, diplomatic, miscellaneous, and public debt receipts and expenditures for the year was—	-
Treasury proper	1,153
Diplomatic	549
Interior, civil, &c	379
Customs	586
	2, 667
A slight increase over last year.	
	-

The number of drafts registered was 33,257.

The number of certificates given for the settlement of accounts was 6,200.

From the First and Fifth Auditor's Offices and the General Land Office there were received 14,047 accounts, an increase over last year of over ten per cent. A majority of these accounts were copied for warrants to issue; all of them were registered, and one-half or more journalized, and posted in the several ledgers. Considerable progress has been made during the year in balancing the ledgers of previous years, and the work is being rapidly brought up to the present time.

There are kept in the division nine ledgers containing personal accounts, and eight appropriation ledgers, an increase of one, arising from the increase in the public debt. It being found impracticable to keep this class of accounts in the civil appropriation ledger, they were transferred to one specially for them. The annual report in detail of the receipts and expenditures has become a work of considerable magnitude, and constantly employs two clerks, and sometimes more. There is much of the work of the division of which account cannot be given that requires time and care.

The care of filing records, copying accounts for suits, preparing the quarterly statement of the receipts and expenditures for the settlement of the Treasurer's accounts, and the copying of warrants, involves much labor, and, to the credit of those whose duty it has been, it has been done with care and celerity.

NOTES AND COUPONS.

This division was organized about the 30th June, 1864, commencing with ten clerks, and has continued under the efficient charge of Mr. Day to the present time. The work devolving upon the division has been constantly increasing, so that on the 30th June, 1865, there were thirty three (twelve male and twentyone female) clerks employed. At the present date there are eighty-five (twentythree male and sixty-two female) clerks in the division.

During the year embraced in this report, the first series of seven-thirty treasury notes, under acts of June 30, 1864, and March 3, 1865, was issued. There were received from the Currency Bureau 1,293,185 notes, each note having five coupons attached, making 6,465,925 coupons. Every note and coupon was examined and counted previous to issue. Of these notes there were registered and delivered on subscription to the loan branch of the Secretary's bureau 1,256,808 notes, amounting to \$301,693,350. The registering of these notes covered 2,515 pages. It is a matter of congratulation that this entire issue was effected without the occurrence of a mistake involving a loss to the government of a single dollar.

Of treasury notes (upper halves) there have been assorted, counted, and registered—

Two-years five per cent. coupon treasury notes, act of March	
3, 1863, 294,811 notes, amounting to	\$100, 445, 150
Two-years five per cent. treasury notes, act of March 3, 1863, 117,409 notes, amounting to	8, 411, 500
One-year five per cent. treasury notes, act of March 3, 1863,	
512,662 notes, amounting to	14, 787, 330
Making a total of 924,882 notes, amounting to	123, 643, 980
making a total of 524,002 notes, amounting to	

Of three-years six per cent. compound interest notes, (upper halves,) acts March 3, 1863, and June 30, 1864, there have been assorted, counted, and registered 54,820 notes, amounting to \$1,596,300. All of the above notes, after careful examination and comparison, were burned.

Of "seven-thirty" treasury notes, act of July 17, 1861, there have been examined, assorted, counted, and registered 156,836 notes, amounting to \$44,437,500. These notes, after examining the registering of redemption, are packed away in iron closets in the files room for future destruction.

The assorting, arranging, counting, and registering of redeemed and mutilated coupons now employs the larger part of the clerical force of the division. The number of redeemed coupons assorted, arranged, and counted during the year is 2,583,117. The number of coupons registered during the year is 1,591,135, all of which have to be examined after they are registered.

A large amount of miscellaneous work has been performed, incident upon the commencement of a new division, which cannot be estimated by figures. The work of examining, arranging, counting, and registering redeemed coupons is one of great magnitude, and must necessarily require a large clerical force for many years to come. In this connexion I desire to add my conviction that a very large share of the work in this division is successfully accomplished by female clerks; and it is within my observation that there are very many of these in this bureau receiving a salary of only sixty dollars per month, who are as capable every way as male clerks who receive \$1,200 per annum. It is not easy to justify this discrimination. The just expenses of ladies are as great as those of single men. Their sacrifices for the country have gone beyond all recompense. I therefore believe it to be due from Congress to authorize by law a classification of female clerks into three or four classes, with salaries graded from \$600 to \$1,000 per year.

REDEEMED CURRENCY COUNTED AND DESTROYED.

Of redeemed United States legal-tender notes there have been	
counted and destroyed in amount	\$4, 152, 134
Demand notes	
Postal currency	4,688,588
Fractional currency	6, 418, 722

There has also been counted and destroyed a large amount of surplus bonds, notes, and fractional currency, never issued by the department, most of which having been done since the 30th June last, will be more properly stated in my next report.

COMMERCE AND NAVIGATION.

It is a pleasure to be able to report the work of this division in better progress than for several years past. The statements for the report for the last fiscal year will be in readiness for the printer within the time required by law. This gratifying condition of the work of the division is due to the energetic efforts of the gentlemen employed in it to bring their division to its proper position in the bureau. The statements required for the financial report for 1865 require great *additions*, calling for increased labor beyond any that have It embraces summary statements of the imports and exports of preceded it. foreign merchandise, exports of domestic products, statements of entrances and clearances of vessels in the foreign trade by countries and by districts, statements of the registered, enrolled, and licensed vessels belonging to the United States, by districts, under the new and old admeasurement, in addition to those hereto-. fore required. The work has been resumed upon "imposts," and is now pushed as rapidly as consistent with perfect accuracy in results. Statements are in course of compilation, and will be ready for the report on commerce and navigation for 1865.

The system of book-keeping used in this division, and the successful results effected by the accomplished experts in its application, will justify me in placing on record the fact that the clerks perform the highest character of clerical duty, and deserve the highest clerical compensation.

Since my last report, the annual commerce and navigation report for 1863, as well as that for 1864—both, for causes set forth by my predecessor, considerably delayed—have been issued.

Attached to the former volumes is a series of comparative tables, exhibiting for a period of four years the trade to and from each distinguishable division of every foreign country. The preparation of these tables has been attended with severe labor, and has been the cause of inconvenient delay in the issue of the annual publications from this division. In the succeeding volumes, those for 1864 and 1865, these tables have been, in pursuance of your order, discontinued. For practical use it is quite certain that a comparative exhibit of the leading articles only for a period of four or five years may be all that will be required.

LOANS.

During the last fiscal year the issues of United States stock have been as follows:

······	·		<u></u>

In addition to the work attending the issue of stock, is that of preparing, semi-annually, schedules of the interest payable on all registered stock, which are sent to each of the United States depositaries.

These schedules contain the names of the creditors, the amount of stock held by each, the rate, date of the commencement, and amount of interest.

The schedules are made out in duplicate, one copy being retained in the office, and one sent to the Treasurer, assistant treasurer, or depositary, who pays the interest.

The number of accounts open for the different loans is, at this date, 18,925. I present herewith a resumé of the number and amount of bonds issued from this office under the different loans since and including the year 1841.

Statement showing the number and amount of bonds of the following loans issued in the office of the Register of the Treasury to June 30, 1865. This vast amount of highly responsible labor, examining, counting, filling up, signing, entering, and transmitting these masses of bonds, representative of money, with all its temptation to the weak, has been accomplished, I am happy to say, without the loss, in this office, to the government or to any individual, of one dollar. For this success great credit is due to the systematic order of business which has matured under the veteran leading clerks in charge, so many years, of the division and its important subdivisions.

This report would be incomplete without a brief reference to the "filesroom." Here is kept the infallible "guide book" to all the accounts coming from various sources through the offices of the First Comptroller and Commissioner of Customs. The perfect system of arranging papers, with exact references of record to each one, has proved adequate to the great increase of vouchers concentrated here by the war. In an office where confusion would be so easy to occur, and yet so intolerable, it is gratifying to feel always sure of order, accuracy, and promptness. It is superfluous to add, what has been for years the impression in your department, that very great credit belongs to Messrs. Smith and Wannall, clerks in charge of the office.

Having reference to your circular of the 1st instant, advising replies to all letters addressed or referred to heads of bureaus to be made on the same day, I am able to say that it has been the invariable custom of this office to reply by next mail to all communications sent to this office requiring answer; and I have no doubt that the general satisfaction of the public with the prompt attention received here is due largely to the observance of this just and salutary rule.

I have the honor to remain, very respectfully, your obedient servant,

S. B. COLBY, Register.

Hon. HUGH MCCULLOCH,

Secretary of the Treasury.

REPORT OF THE SOLICITOR OF THE TREASURY.

TREASURY DEPARTMENT, SOLICITOR'S OFFICE, November 8, 1865.

SIR: I have the honor herewith to transmit eight tabular statements, showing, in part, the operations in charge of this office for the fiscal year ending June 30, 1865. They are as follows:

1. A statement of suits on transcripts of accounts of defaulting public officers, contractors, &c., adjusted by the accounting officers of the Treasury Department.

2. Statement of suits for the recovery of fines, penalties, and forfeitures, under the customs revenue laws.

3. Statement of prize cases.

4. Statement of libels filed under the confiscation act of July 17, 1862, and the non-intercourse act of July 13, 1861.

5. Statement of fines, penalties, and forfeitures, under the internal revenue laws.

6. Statement of suits in which the United States were interested, not embraced in any of the other tables.

7. Statement of warehouses and transportation bonds reported for suit by collectors of customs.

8. A general summary or abstract of the foregoing tables.

This summary shows that the whole number of suits, of all descriptions, brought during the year was 2,348, of which 12 were of class 1, for the recovery of \$45,392 57; 345 of class 2, for the recovery of \$1,232,725 89; 201 of class 3; 988 of class 4; 476 of class 5, for the recovery of \$586,379 20; 254 of class 6, for the recovery of \$205,628 99; and 72 of class 7, for the recovery of \$129,400 70. Of these suits 755 were disposed of during the year, in the following manner, viz: 5 were decided against the United States, 658 for the United States, 57 were settled and dismissed, and 35 were remitted by the Secretary of the Treasury, leaving 1,593 still pending.

Of the suits pending at the beginning of the year, 302 were disposed of in the following manner, viz: 254 were decided for the United States, 13 were decided against the United States, and 35 were settled and dismissed.

The total number of suits, of all descriptions, decided or otherwise disposed of during the year was 1,057. The gross amount for which judgments were obtained, exclusive of judgments *in rem.*, was \$583,039 42, and the whole amount collected from all sources was \$9,558,521 42.

The following table presents, in a compendious form, the results of the litigation of the last year, and also of the year next preceding:

	reported	SUITS BROUGHT DURING THE FISCAL YEAR.									
Year.	Total amount rep sued for.	Total amount of judgments for United istates.	Total amount re- ported collected.	Decided for United States.	Decided against United States.	Settled and dis- missed.	Remitted.	Pending.	Total number of suits brought.

Whole number of ments in favor of L	Whole amount of ments in favor of U States during the year.	Whole amount coll from all sources d the fiscal year.
1864	\$37, 172 00	340	24	85	\$3, 717, 588 26	1, 186	1, 004	\$67, 842 82	\$7, 985, 532 `91
1865	343, 991 44	254	13'	35	3,800,023 51	l, 057	912	583, 039 42	9, 558, 521 42

A glance at this table, and a comparison of it with similar ones embraced in former reports, will show a large and constant increase in the business of the office. It will also show that the gratifying improvement noted by me in my last annual report in the proportion of suits decided for and against the United States, respectively, has been sustained during the last year. In the year ending June 30, 1863, of the suits pending at the beginning thereof, there were two hundred and forty decided against the United States, sixty-four settled and dismissed, and only ninety-six decided for the United States; while during the last year, as has been shown, of three hundred and two such suits, two hundred and fifty-four were decided for the United States, thirty-five settled and dismissed, and only thirteen decided against the United States. Similar though not so great improvement is observable in the results of suits brought and determined within the year.

This gratifying result has, in my judgment, been owing to the increased encouragement given to district attorneys by the act of March 3, 1863, and to the efforts put forth by this office, with the sanction of the Secretary of the Treasury, to secure, in all cases, a strenuous prosecution or defence of suits in which the United States has had an interest. The result has been, in my opinion, a saving of hundreds of thousands of dollars directly, and much more indirectly, to the treasury.

In my last annual report I called the attention of the Secretary, at some length, to the measures which had been adopted, in pursuance of the act to which I have just alluded, looking to the prevention or detection of frauds upon the revenue. I do not deem it necessary to enter into a detailed statement of what has since been done in the same direction, but will say, generally, that all the developments which have been since made have served to confirm the views I then expressed, and to demonstrate the wisdom and efficiency of the act in question. A large number of cases of fraud have been discovered by means of the instrumentalities provided by that act, and, as a consequence, penalties and forfeitures to the amount of several hundred thousand dollars have been enforced. The effect cannot but be of the most salutary nature in deterring unconscientious importers from future violations of the law.

Among the measures alluded to was the seizure of a large quantity of Champagne wines, both in the city of New York and in San Francisco; proceedings for the condemnation of which were pending at the time of making my last report, as those instituted in New York still are. In San Francisco sixteen or seventeen cases have been tried, and have resulted uniformly in favor of the government, and I am informed that most of the suits instituted there were made, by agreement, to depend upon the result of those tried. The suits pending in New York involve substantially the same questions as those thus decided. They will be brought to trial at the earliest practicable moment.

It is not improbable that some of the questions involved in these cases may be taken by those interested to the Supreme Court of the United States, but I entertain no doubt of the correctness of the general grounds assumed by the government in regard to them, and I therefore cannot but anticipate a favorable result in their final determination.

The regulations contemplated by the act of 3d March, 1865, in relation to the verification of invoices have not yet been issued by the Secretary of State, owing to causes which it is not necessary here to explain, and our consuls have not generally thought it proper for them, in the absence thereof, to require the evidence contemplated by said act, of the correctness of invoices presented to them for verification; but these regulations will, doubtless, be issued at an early day, and I anticipate from them the most salutary results. This anticipation is fortified by the experience of our consul at Lyons, where for a considerable period it has been usual to demand samples of merchandise, the invoices of which are presented for verification, and, as the consul asserts, with the most signal advantage.

In the administration of the fund appropriated for the suppression of counterfeiting, I have endeavored to accomplish, as far as, practicable, the end contemplated in its creation; and the measures which have been adopted have resulted in the arrest and conviction of a large number of offenders, and the seizure of several presses, dies, plates, &c., together with considerable counterfeit money, and a large quantity of paper, ink, and other material for counterfeiting. There was expended, during the year, in the prosecution of these measures the sum of thirty thousand eight hundred and sixty-six dollars and ninety cents.

The special attention which the supervision of these measures has compelled me to bestow upon the statutes relating to counterfeiting the securities of the United States, has revealed to me the fact that the existing laws upon the subject are defective in several particulars, and that for some acts highly prejudicial to the government and the public, no punishment is provided. I therefore respectfully recommend that the department cause a careful revision of these laws to be made by some competent person, and that Congress be asked to remedy such defects as may be found to exist.

I have the honor to be, very respectfully,

EDWARD JORDAN, Solicitor of the Treasury.

Hon. H. MCCULLOCH,

Secretary of the Treasury.

Statistical summary of business arising from suits in which the United States is a party or has an interest, under charge of the Solicitor of the Treasury, during the fiscal year ending June 30, 1865.

REPORT OF THE COMPTROLLER.

TREASURY DEPARTMENT,

Comptroller's Office, November 13, 1865.

SIR: The following report, exhibiting in detail the business of this office for the fiscal year ending on the 30th June, 1865, is respectfully submitted.

Warrants of the Secretary of the Treasury have been examined, countersigned, entered in blotters, and posted as follows : Diplomatic warrants..... 2,241Stock warrants..... 3,406 Treasury proper warrants 2,014 Quarterly salary warrants..... 1,042 Treasury Interior warrants..... 1.785Treasury customs warrants..... 2,243 Treasury internal revenue warrants..... 2,692 War pay warrants..... 8,100 War repay warrants..... 446 Navy pay warrants..... 3,445 Navy repay warrants..... 549Interior pay warrants..... 1,108 Interior repay warrants..... 78 Treasury appropriation warrants..... 21Treasury Interior appropriation warrants..... 8 Interior appropriation warrants..... 61 War appropriation warrants..... 17 Navy appropriation warrants..... 42 325Customs covering warrants 638 Internal tax warrants..... 167 Miscellaneous warrants..... 545

30,973

The following described accounts reported to this office from the First Auditor, the Fifth Auditor, and the Commissioner of the General Land Office, have undergone revision, and the balances, as then found, reported to the Register of the Treasury.

I. From the First Auditor :

Judiciary.-Embracing the accounts of marshals for expenses of the United States courts; of United States district attomeys; of clerks of the United States circuit and district courts; and of the United States commissioners for per diems and fees..... 849 Public debt.-Embracing accounts for redemption of United States stock and notes; the interest on the public debt; the United States Treasurer's accounts; United States assistant treasurers' accounts; temporary loans, and all matters in relation thereto..... 3, 276 Mint and branches — Embracing accounts of gold and silver bullion; of expenses, repairs, salary of employés, &c..... 64 Territorial.-Embracing accounts of governors of the Territories for contingent expenses; of the secretaries of the Territories for the legislative and contingent expenses; for the pay of territorial offi-• • • • • • • • • 220Salaries .- Embracing accounts of salaries of United State's and territorial judges; of officers of the executive departments; attorneys, marshals, &c.... 583

Letters written upon business of the office	$5,181 \\ 3,422$
Letters received, filed, and indexed	10, 819
Internal revenue tax receipts registered, posted, and filed	3,516

All requisitions made for advances of money to United States disbursing officers of every description have been examined, entered and duly reported upon; and the emolument returns required by law to be semi-annually made by all the United States marshals, district attorneys, and the clerks of the United States courts, have been examined, entered, and properly filed.

The gentlemen connected with the office have, during the year, continued to discharge their respective duties with punctuality and fidelity.

R. W. TAYLER, Comptroller.

Hon. HUGH McCulloch, Secretary of the Treasury.

REPORT OF THE SECOND COMPTROLLER,

TREASURY DEPARTMENT,

281

Second Comptroller's Office, October 19, 1865.

SIR: I have the honor to submit the following report of the operations of this office for the fiscal year ending June 30, 1865.

For the purpose of making a comparative exhibit of the amount of labor done during this and the preceding year, the work done during the latter period is reproduced from my last annual report.

The aggregate number of accounts of disbursing officers and agents received from the Second, Third, and Fourth Auditors, and finally adjusted in this office, is as follows:

For the year ending June 30, 1864 For the year ending June 30, 1865		7,605 8, 755
Thus:	1004	1005
From the Second Auditor.	1864.	1865. 4. 769
From the Third Auditor	2,339	$\frac{4}{3}, \frac{769}{497}$
From the Fourth Auditor	400	489
· · · ·	7,605	8, 755

The aggregate number of certificate accounts received from the Second, Third, and Fourth Auditors, and examined and acted upon in this office, is as follows:

For the year ending June 30, 1864 For the year ending June 30, 1865		91,436 99,568
Thus:	1864.	1865.
	79, 496 10, 320 1, 620	80, 830 14, 747 3, 991
	91, 436	99, 568°

And the number of accounts of discharged and deceased sailors, from the Fourth Auditor, is-

For the year ending June 30, 1865.....

Their examination 'employs several clerks necessarily of much experience, and most of them having to be despatched at once, a large share of the time of the Comptroller is occupied in their immediate decision.

A further edition of $\hat{2}$,000 of the Digest of Decisions of Second Comptroller's Office has been issued during the year, and has been much in demand with disbursing and accounting officers of the several departments of the government.

The employment of female clerks in this office has been approved, after proper trial, and is continued not only as a matter of economy, but as opening a field of respectable employment from which women have heretofore been excluded, and as establishing a precedent of great public benefit. A number of the ladies employed, of mature age and considerable experience, have been found fully competent to examine accounts and settle claims of the heirs of deceased officers and soldiers. They report as large a number of accounts adjusted as their male co-laborers engaged on the same class of work, and they have been found, almost without exception, assiduous in the discharge of their several duties, and uniformly observant of the rules and regulations of the department. The increase in the number of those employed will sufficiently measure the increase in the business of the office.

The number of persons employed in 1860 was 18; now the number of persons engaged is 100, and the business of the office requires a still additional force. This will not appear remarkable, however, when it is considered that there are in the Second Auditor's office 131 clerks; in the Third Auditor's office 275 clerks; in the Fourth Auditor's office 105 clerks; in the Pension Office 136 clerks; in the Indian Office 32 clerks; making a total of 679 clerks, whose work is revised in this office; and this condition must necessarily continue, as the accounts which have accrued during the war, and the claims growing out of it will require some years for their final and complete 'settlement. Many important questions arise in the business of the office, to decide which properly requires time and investigation. To enable the Comptroller to discharge his duties satisfactorily, he should be relieved of some portion of the routine labor of the office, in which so much of his time is' now necessarily occupied. The remedy is not easily suggested.

The practice of allowing extended leaves of absence does not prevail as formerly. By this is not meant the ordinary leave given to every employé at least once a year on application, but the reprehensible custom of allowing a substitute to discharge the duties of a desk for long periods of time, while the regular occupant is absent—perhaps engaged in other pursuits. The public business always suffers under such a system, which has no compensating advantages, for the duties of the absentce are rarely capably discharged by his irresponsible substitute. If the ordinary period of absence be exceeded, it would seem to be but justice to require the absentee to submit to a reduction of his pay, or, what perhaps would be better, to the entire loss of it, for the period of his absence beyond the time fixed as the maximum of leave.

Although it is not the intention to give in this report a detail of the decisions of this office, or even any general statement of their import, yet there are two which, in view of the magnitude of the claims affected by them, it is my duty to bring specially to your notice. The first of these is in regard to the pay, allowed to officers for their servants, and my own views of the subject will be best understood from the decision itself, which grew out of a law passed on the 20th of June, 1864, increasing the pay of private soldiers to \$16 per month.

The question at once arose whether the allowance to officers on account of servants would be increased by the passage of this law; and on the 5th of July, 1864, the Paymaster General submitted the question to this office.

In answer to this, the decision of which I speak was made in a communication addressed to the Paymaster General, as follows:

0

"Second Comptroller's Office, "July 9, 1864.

"SIR: In answer to your question, submitted on the 5th instant, as to the effect of the recent increase in the pay of soldiers (by act No. 122, June 20, 1864, sections 1 and 12) upon the allowance to officers on account of servants, I am of the opinion it has necessarily no effect on such allowances.

"By law of April 24, 1816, officers are allowed for each private servant actually kept in service, not exceeding the number authorized by regulations, 'the pay, rations, and clothing of a private soldier, or money in lieu thereof, on a certificate setting forth the name and description of the servant or servants in the pay account.'

"On the 6th of August, 1861, the pay of privates was raised by law to \$13 per month; and on the 17th of July, 1862, it was enacted that the act of 1861, raising the pay of privates, should not be so construed "as to increase the emoluments of the commissioned officers of the army."

"On the 20th of June, 1864, the pay of privates was raised by law to \$16 per month. It is contended that the mere change in the pay of soldiers, by the act of June 20, 1864, operated as a repeal of the restriction in the act of July 17, 1862, which applied only to the pay of privates under the 1st section of the act of August 6, 1861. I do not so regard it. It repealed only what was inconsistent with it, and left untouched, in other respects, both the laws of 1861 and 1862, Congress legislating, not on allowances to officers, but solely in regard to the pay of soldiers; and if we are to imply a repeal of the restriction by force of the act of 1864, we adopt the illogical inference that when the pay of a private was raised from \$11 to \$13, Congress prohibited a corresponding increase in the allowances for officers' servants because it was *too much*, but intended to repeal the prohibition when the pay of privates was raised to \$16.

"So far as any explicit expression of the legislative will can be invoked, it is given in the act of 1862, and is certainly against the allowance; and as to the act of 1864, it is the rule in the interpretation of statutes that, "when general words are used which import more than seems to have been within the purview of the law, and those expressions can be restrained to others used in the same law, or in any other on the same subject, they ought to be so restrained." (Smith's Comm. § 659)

"I do not think there is any inconsistency or conflict between the laws of July 17, 1862, and June 20, 1864; but if there is, it is the settled rule that the law which permits must give way to the law which forbids, and that even when an absolute injunctive law cannot be obeyed without violating a prohibitory one the former is powerless.

"The acts of August 6, 1861, July 17, 1862, and June 20, 1864, are all *in pari materia*, and must be construed with reference to each other. In this view, the act of 1864 merely amended the act of 1861, by giving the soldier \$16 per month instead of \$13, and left in full vigor the restrictive clause in the act of 1862.

"In general, the repeal of a statute cannot be made by implication, if that implication can be avoided. It is very far from being inevitable in this case, and cannot, in fact, be assumed without doing violence to the intent of the legislature, as declared in the only statute expressing the legislative will upon this subject.

"There are some other considerations which may fairly be taken into account in the decision of the question, though they would be of slight avail as an argument against a clear provision of law.

"The increase of pay to soldiers is nearly balanced by the decrease of their

rations, and is not therefore objectionable on the ground of a great addition to the public expenditures.

"The state of the public treasury demands all possible economy; and a construction involving the disbursement of millions should not be applied to a statute unless it clearly appears that such was the intent of Congress.

"In making this decision it is a matter of regret to me that it is adverse to the interests of a most meritorious body of men—the officers of our gallant army who, with comparatively few exceptions, merit both gratitude and a liberal pecuniary recompense from their countrymen.

"The allowance they now receive for servants is manifestly less than they have to pay, except where several officers employ the same servant or servants. But Congress will again convene in a few months, and will doubtless correct any misinterpretation, if such there be, on the part of the accounting officers, by which injustice may be done to officers, and will by positive enactment authorize adequate pay, wherever any augmentation is necessary or proper.

"The Second Auditor, who has primary jurisdiction in the settlement of officers' accounts, has expressed his concurrence with me in the foregoing opinion.

"Your obedient servant,

"J. M. BRODHEAD.

"PAYMASTER GENERAL."

This decision was made July 9, 1864. On the 3d of March, 1865, it was enacted by Congress, "that the measure of allowance for pay for an officer's servant is the pay of a private soldier, as fixed by law at the time." The Senate proceedings when this act was under discussion, and finally passed, show that the House bill was amended for the express purpose of preventing any retroactive construction, thus precluding any increased allowance to officers on account of servants previous to the date of the law; yet, within a fortnight past, a simultaneous and, apparently, organized rush has been made from all quarters; and printed forms of application for difference between \$11 and \$16 per month, each, for officers' servants, going back to the law of 1862, have been presented in large numbers.

No allowance of any such retrospective claim has been made or will be made by the accounting officers while the laws remain as they are; but the agents who are interested in these claims count upon legislation to effect their object, although any congressional enactment serving their purpose will authorize the distribution of more than a million of dollars.

The other decision to which I have alluded was on the question of bounties to deserters, and, as a fair statement of the question can scarcely be made by abridging my letter on the subject, I transcribe at length the following communication to Judge Advocate General Holt:

"Second Comptroller's Office, May 17, 1865.

"SIR: I beg leave to call your attention to the subject of bounties claimed by deserters, about which I conversed with you some days ago, and which is becoming a matter of great pecuniary importance.

"If I understood you aright, you are inclined to the opinion that the bounty provided by the law of July 22, 1861, is due to a soldier who has been a deserter, if he serves, after his conviction or return to duty, a sufficient time to make up his term of service before desertion the full period of two years.

"I further understand you to hold that when the bounty is payable by instalments, as under General Orders of the War Department Nos. 190 and 191, series of 1863, and the law of July 4, 1864, a soldier sentenced for desertion to a forfeiture of all pay and allowances due or to become due is entitled to the instalments of bounty falling due subsequently to the sentence, unless there be some specific law or order authorizing the bounty which excepts the case of an enlisted man so sentenced, or that of a deserter generally.

"As the construction of the law on this subject may gravely affect the treasury, the accounting officers would respectfully say that they have heretofore arrived at a different conclusion, and would be much gratified if you would review the case, as you intimated your willingness to do in the interview to which'I have referred.

"We have held that by the regulations of the army, having the force of law, a desertion, ipso facto, forfeits all pay, &c., due the deserter, and vests the money in the United States; and that even a pardon cannot give him what he has, by his own act, virtually placed in the treasury; that he can claim nothing under the contract of enlistment he violated; that under the act of July 22, 1861, a soldier could have a title to the bounty only on honorable discharge after two years' service, or for wounds received, &c.; that the document itself not saying whether the discharge was honorable or dishonorable, the fact must be determined by proof; that when it fully appeared by the papers in the case that during the time for which he was enlisted he had been guilty of the most dishonorable crime a soldier can commit, viz: desertion, it was not an honorable discharge, and bounty could not be paid; that the bounties paid by instalments are subject to the same general conditions as bounty due under the law of 1861, and instalments remaining unpaid at desertion are forfeited and cannot be earned by subsequent return and service; and that even if there be doubt upon the subject, the benefit of the doubt ought not to be given to the man who deserted his flag and the cause of his country in her hour of need.

"The war is now over, and a wretch who three years ago enlisted for three years, deserted a year, returned, and served another year, is now put on an equal footing as to bounty, if this ruling governs, with his comrade who has served faithfully his three years.

"It appears to me that giving to a deserter for *two* years' service the same bounty that is given to a faithful soldier for *three* years' service cannot be sanctioned by justice or sound policy, but is rather a premium upon perfidy, and, relatively, a fine upon fidelity.

"I have written this letter in the utmost haste, for the case is made pressing by the great number of discharges now taking place; and I desire to harmonize with the War Department in the final decision of this important question.

"J. M. BRODHEAD, Comptroller.

" General J. HOLT, "Judge Advocate General."

These decisions have governed the Pay department and the accounting officers in the settlement of all accounts to which they are applicable.

They have, however, been controverted. Before they were announced, opinions had been given on these subjects by officers of great ability and integrity, which were so much at variance with my own that the difference to the treasury may be counted by millions.

The sum is so large that great efforts will doubtless be made to influence both executive officers and Congress to make a construction of the present law, or to pass a new one, which will be more clearly in favor of claim agents and deserters.

I am, very respectfully, your obedient servant,

J. M. BRODHEAD,

Second Comptroller.

Hon. HUGH MCCULLOCH,

Secretary of the Treasury.

REPORT OF THE FIRST'AUDITOR.

TREASURY DEPARTMENT,

First Auditor's Office, October 16, 1865.

Sin: I have the honor to submit the following report of the operations of this office for the fiscal year ending June 30, 1865.

In addition to the above, various statements and reports have been prepared and transmitted from the office, as follows:

Annual statement of disbursements in the department of Indian affairs for the fiscal year ending June 30, 1864, prepared for Congress.

Statement of the account of the United States with the Chippewa Indians of Lake Superior, from the 23d of February, 1863, to the 1st of January, 1865, under the treaty of 1854, together with a list of the names of persons paid out of the \$90,000 provided to pay the debts found due by the above-named tribes, per article 4 of said treaty, with the amount paid to each person, transmitted to the Commissioner of Indian Affairs.

Statement of the account of the United States with the Miami Indians of Kansas, under the treaty of June 5, 1854, from the date of the treaty to June 30, 1864, ten years, transmitted to the Cmmissioner of Indian Affairs.

Annual statement of the recruiting fund, prepared for the Adjutant General of the army.

Annual statement of the contingencies of the army, prepared in duplicate for the Secretary of War.

Annual statement of the contingent expenses of this office, transmitted to the Secretary of the Treasury.

Annual report of balances on the books of this office remaining unaccounted for more than one year, transmitted to the First Comptroller.

Annual report of balances on the books of this office remaining unaccounted for more than three years, transmitted to the First Comptroller.

Annual statement of the clerks and other persons employed in the office during the year 1864, or any part thereof, showing the amount paid to each on account of salary, with the place of residence, &c., in pursuance of the 11th section of the act of August 26, 1842, and resolution of the House of Representatives of the 13th January, 1846, transmitted to the Secretary of the Treasury.

Monthly reports of the clerks in this office, submitted each month to the Secretary of the Treasury, in compliance with his instructions of the 17th of August and 11th of September, 1861, together with a tabular statement showing the amount of business transacted in the office during the month, and the number of accounts remaining unsettled at the close of the month.

Statement containing the names of the permanent and additional clerks attached to this office, with the rates of compensation, transmitted to the Secretary of the Treasury.

Statement showing the name, place of birth, residence, when appointed, and annual salary of each person employed in this office on the 30th of September, 1865, transmitted to the Register of the Treasury.

Estimate of the expenses of this office for the fiscal year ending June 30, 1865, transmitted to the Register of the Treasury.

All the ledger accounts confirmed by the Second Comptroller have been regularly journalized and posted.

The payments made to officers by paymasters of the army have been entered in the officers' and company pay-books of both the regular and volunteer service.

In addition to the above, a register of attorneys who have presented evidence of being licensed to practice in the departments as claim agents has been kept, and numerous letters, estimated at 200,000 at least, have been written, acknowledging the receipt of claims and embracing correspondence generally with claimants and their agents in relation to claims.

Notwithstanding the very large operations of this office, as shown in part by the foregoing statistics, there has been a heavier accumulation of claims than in any previous year. Those on account of soldiers who were killed or who died in the service are being rapidly disposed of, and in the course of a few months will all be settled, but their place is more than filled by the claims of soldiers who have been mustered out of the service, who believe they have not received all , that they were entitled to under existing laws. Thousands of such are received every month that are groundless, yet they must be briefed, filed and examined as well as those of a meritorious character.

One very great embarrassment of the office during the past four years has been the want of room to accommodate its files and a force of clerks large enough to perform the current work. It was never felt more severely than at the present time, and I earnestly ask that some action may be taken to remedy the evil.

The early settlement of paymasters' accounts is of the highest interest to the government. To aid the Paymaster General in making prompt payment to the thousands of our brave soldiers who have been confined in rebel prisons, it has been found necessary to withdraw several of the clerks employed in the settlement of paymasters' accounts, to make the necessary examination of the rolls in this office and report the condition of such soldiers' accounts. This change of work has diminished the expected aggregate of settlements upon this branch from thirty to fifty millions of dollars.

On the 21st of February of the present year a report was made to the then Secretary of the Treasury, at his request, showing the condition of the business in this office on the 31st day of December, 1864, with such recommendations as were deemed to be necessary to secure its proper efficiency and the most speedy disposal of accumulated accounts. As no congressional action was had upon the subject, and as, by the course of events since, the necessity for such action is greater even now than at that time, I have deemed it advisable to make that communication a part of this annual report:

TREASURY DEPARTMENT,

Second Auditor's Office, February 21, 1865.

SIR: In compliance with your request I have the honor to submit herewith the following statement showing the condition of the work in this office on the 31st day of December, 1864, together with the number and classification of clerks necessary to transact the current business and to bring up arrears.

		1	_	
Description of accounts.	Accounts settled in 1864.	Accounts on hand insettled January 1, 1865.	Clerks employed Dec. 31, 1864.	Clerks required to bring up arrears in 12 months.
Paymasters' Indian. Ordnance, medical, and disbursing Arrears of pay and bounty Recruiting service, enrolment and draft, &c Property, (ordnance and quartermaster and ordnance in charge) Total	636 906 19, 443 84, 058 2, 279 73, 036 180, 358	3, 366 377 1, 431 76, 516 1, 821 107, 798 191, 309	23 3 9 134 7 59 235	$ \begin{array}{r} 140 \\ 3 \\ 10 \\ 170 \\ 8 \\ 100 \\ 431 \end{array} $

Besides the 235 clerks above named, there are 69 employed on other work, as registering and briefing letters, recording and mailing letters, registering and posting requisitions, making examinations of rolls and certificates of such examinations, in answer to inquiries of paymasters, the Paymaster General, and the Commissioner of Pensions, book-keeping, &c., making the aggregate number of clerks employed on the 31st December, 1864, 304. It is proper to mention, however, that this number comprises about 50 clerks appointed in December, leaving the number employed during eleven months of the year about 256.

It will be observed that the number of paymasters' accounts settled is much smaller in proportion to the number of clerks employed thereon than those of any of the other divisions. This difference is attributable to the nature of these accounts, they being very heavy and voluminous, the settlement of a single one frequently occupying the time of a clerk for months.

In the annual report of this bureau for the fiscal year ending June 30, 1864, attention was called to the condition of the business and the wants of this branch. and reference is now respectfully made to that report. The interests of the government as well as of paymasters require that this class of accounts shall be settled as speedily as possible. The preceding table shows that there were 3,366 unsettled accounts of paymasters on hand January 1, 1865, and the monthly statement for the last month shows that there were on hand on the first of the present month 3,482, making an increase above the number settled of 116. With the present force employed, it will require five years to settle the accounts now in the office. To settle them in one year, an additional force of one hundred and seventeen clerks will be required, allowing each clerk to settle the usual average of a fraction more than two accounts each month. The accounts on hand cover disbursements amounting to over \$400,000,000, and each account contains vouchers for many thousands of payments, which require careful scrutiny, as well in regard to their admissibility and the correctness of the payments, under the various laws and regulations, as to the accuracy of computation. The best class of clerical ability is required to examine and adjust Mere penmanship, which is so generally supposed to be all that is necesthem. sary to fit a man for clerical duty, is of minor importance, and very few who can be obtained for the pay of a first-class clerkship can be useful upon this branch until after a long apprenticeship. Having no doubt that it would be cheaper in the end and more for the interest of the government to secure the services of such experienced, intelligent accountants as cannot be obtained for less than \$1,600 per annum than to attempt the settlement of these accounts by gentlemen who are willing to work for \$1,200, I respectfully recommend that Congress be requested to authorize the employment of one hundred and seventcen temporary clerks of the third class to be employed in this division, as soon as a suitable building can be procured for the accommodation of the bureau. The difference in expense between settling these accounts in five years with the present force, and settling the same in the manner proposed, is sixty-four thou-It is a large sum, but is only about one sixth of one per cent sand dollars. on the disbursements to be examined and settled, and is small compared with the probable loss of the government through long-delayed settlement, or the employment of inexperienced or incompetent clerks.

The foregoing table, together with the following statement for the month of January, exhibits the business of this bureau for the first seven months of the present fiscal year, and shows a very large increase over the corresponding months of last year.

Description of accounts.	On hand January 1.	Received in January.	Settled in January.	Unsettled February 1.	No. clerks employed.
Paymasters' Indian agents' Ordnance, medical, and miscellancous Bounty, arrears of pay, &c. Recruiting service, enrolment, and draft Property—ordnance and quartermaster's departments Property—ordnance in charge Property—Indian agents' Deserters' money refunded	68 1, 431 76, 516 1, 612 106, 171 1, 627 309 209	191 24 2, 110 8, 570 311 15, 639 317 29 75	171 22, 052 150 9 25	1,794 329 259	47 2 9 135 6 59 3 1 1
Total					263 7 15 1 1 4 14 5 3
Total number of clerks employed				••••••	312

· By the assignment of the building on the corner of New York avenue and Seventeenth street for the use of the division of this bureau having in charge the examination and adjustment of officers' property accounts, fifty-nine clerks are temporarily employed and the business is now in a more satisfactory condition, but forty more clerks should be employed upon this branch. To accommodate them and the rapidly accumulating files, if that building is retained, another story is required as soon as the weather will permit it to be added. All the room at present assigned to this bureau is now occupied to its utmost capacity, and if the necessary means and facilities for a prompt transaction of the business are to be supplied, more room is the first thing required. The present location of the office is unfavorable for the constant necessary communication required with the offices of the Surgeon General and Paymaster General, with which its business is intimately connected, and with the Second Comptroller, by whom all money settlements made in this bureau are revised. The necessary travel at present required between these offices involves the loss of a large amount of time and labor by clerks and messengers, but even this is preferable to risking accounts and vouchers covering seven or eight hundred millions of dollars in buildings separate from each other, or in a building subject to be destroyed by fire.

The proposed increase of clerical force in this office is based upon the presumption that some suitable building will be provided for its accommodation. In the event of such increase, it will be necessary to subdivide the branch in charge of paymasters' accounts and to place one of the most competent of the clerks now employed at the head of each subdivision.

In view of the cares and responsibilities resting upon the chief clerk and heads of divisions, and their necessary increase, if the proposed enlargement of the bureau is carried out, it is respectfully recommended that a temporary increase of the salary shall be made to twenty-five hundred dollars; that a temporary assistant chief clerk shall be authorized, who, with the heads of the divisions,

127

shall receive a temporary increase of salary to twenty-three hundred dollars, and that the heads of subdivisions shall, in like manner, receive eighteen hundred dollars, until it shall be expedient to diminish the force.

With such an organization as is here proposed, the clerical force would consist of---

One chief clerk, at \$2,500	\$2,500
Seven clerks, at \$2,300	16,100
Twenty-seven, at \$1,800	48,600
One hundred and seventy-one, at \$1,600	273,600
One hundred and nine, at \$1,400	
One hundred and eighty-six, at \$1,200	223, 200

The additions that have been made to the clerical force of this office during the past ten months have mainly been from officers and soldiers who have been wounded and discharged from the military service, and it affords me great pleasure to bear testimony to their general capacity and faithfulness, and further to say that all the gentlemen in this office, with few exceptions, have conscien tionsly endeavored to perform their duty.

I have the honor to be, very respectfully,

E. B. FRENCH, Auditor.

The SECRETARY OF THE TREASURY.

REPORT OF THE THIRD AUDITOR.

TREASURY DEPARTMENT,

Third Auditor's Office, October 20, 1865.

SIR: I have the honor to make the following report of the business and operations of this office for the fiscal year ending June 30, 1865, to wit:

The requisitions drawn on the Secretary of the Treasury in favor of sundry persons for the fiscal year ending	
June 30, 1865, amounted to	\$607, 769, 067 74
From which is to be deducted the amount of requisitions and drafts returned unpaid and cancelled	1, 435, 575 00
Total amount of requisitions paid	606, 333, 492 74
SETTLEMENTS.	
Amount of accounts settled of disbursing officers, agents, and States, for advances made	\$237, 935, 303 03
Amount of claims settled and paid	3, 223, 577 50

Total amount of settlements	241, 158, 880 53

REGISTRY DIVISION.

During the year there have been received, indorsed, acknowledged, registered, and transmitted to the proper administrative bureaus of the War Department 27,148 money accounts, viz: 12,113 quartermasters'; 11,896 commissaries'; 1,729 engineer; 427 pension agents'; 65 provost marshals'; 33 signalofficers'; 27 contraband fund; 19 secret service; 12 confiscation; 2 contraband farms'; 2 hospital tax fund; 2 special scout; 2 rental; 1 sequestration; 1 confederate money; 817 miscellaneous.

128

And 5,244 officers have been reported to the Second Comptroller as delinquent, in not rendering their accounts in the time required by law. Many of these delinquencies were caused by officers being in the field, remote from the possibility of sending their accounts, and by other causes satisfactorily accounting for the delay.

QUARTERMASTERS' ACCOUNTS.

Money accounts.

On hand June 30, 18653, 638 accounts, amounting On hand June 30, 18642, 977 accounts, amounting		$$249,900\ 182,381$

There were settled during the year 351 accounts, involving \$1,763,532 83.

STATE WAR CLAIMS.

On hand June 30, 1865, amounting to	\$5,656,930 28
On hand June 30, 1864, amounting to	14, 596, 656 04
Decrease	8, 939, 725 76

Claims of this class were settled during the year amounting to \$9,579,683 73.

MISCELLANEOUS CLAIMS.

	, 326, amounting to	\$1,741,44375 413,44404
Increase	435, amounting to	1, 327, 999 71

Of this class of claims, 826 were settled and otherwise disposed of during the year, involving \$2,934,775 50. In 436 of those on hand no specific amounts are stated, the sum named above, \$1,741,443 75, indicating only the aggregate claimed in those wherein specified amounts are stated, the number of which is 890.

OREGON WAR CLAIMS.

'The number of claims of this kind received during the year was 220, in 112 of which the aggregate amount claimed was \$30,807 68, and in the remainder no sums were stated. 175 awards were made, amounting to \$36,281 56.

STEAMBOAT CLAIMS.

The number of this class of claims received during the year was 97; aggregate amount claimed, \$1,583,023 18. The number disposed of during the same time was 89. Awards were made in favor of 69 of these claims, allowing them \$708,878 22, instead of \$820,022 81, the amount claimed, being a disallowance of \$111,144 59. The other 20 cases were rejected, the amount claimed being \$329.065 75.

The number of these cases unsettled on the 30th of June, 1865, was 77. Amount involved, \$739,473; in one claim, however, no amount is stated.

CLAIMS FOR VALUE OF LOST HORSES.

On hand June 30, 1865 On hand June 30, 1864	5, 542 claims, amounting to3, 836 claims, amounting to	\$898, 028 97 625, 000 00
Increase	1, 706 claims, amounting to	273, 028 97

During the year 1,344 of these claims were disposed of, to wit: 761 allowed, the awards amounting to \$125,768 71; and 583 rejected, the amount thus disallowed being \$100,387 36.

Accounts on hand, received, and settled at dates mentioned.

Number of accounts received and referred to military bureaus for administrative examination in quarter ending September 30, 1865, 5,681.

Requisitions drawn in quarter, 624, amounting to \$22,988,884 93.

COLLECTION BRANCH.

During the year the operations of this division have been, the writing and recording of 211 letters; 237 letters have been received, entered, indorsed, and filed away; 817 special orders from the War Department, notifying the resignation, &c., of officers have been received, examined, registered, indorsed, and filed.

The books have been examined for charges against the officers named in those orders, numbering 1,639 cases. Notices of bonds filed have been received, entered, registered, indorsed, and filed in 615 cases. But one case has been reported for suit, and the necessary papers prepared to accompany said report. The aggregate amount of balances charged against the several parties, in which the above examinations were made, and accruing from June 30, 1864, to June 30, 1865, is \$53,396,911 78.

It is probable that in many of these cases the sums which go to make up this aggregate will be largely reduced by the official statements which are to be prepared and sent to the Second Comptroller.

By the act of July 27, 1861, "the Secretary of the Treasury is directed, out of any money in the treasury not otherwise appropriated, to pay to the governor of any State, or his duly authorized agent, the costs, charges, and expenses, properly incurred by such State, for enrolling, subsisting, clothing, supplying, arming, equipping, paying, and transporting its troops employed in aiding to suppress the present insurrection against the United States; to be settled upon proper vouchers, to be filed and passed upon by the proper accounting officers of the treasury."

It will be perceived that the objects for which the "costs, charges, and expenses" were incurred by the State are specifically set forth in the act; and for none others than those thus specified can payment be made. The law also requires that for those costs, charges, and expenses, "proper vouchers" shall be presented.

In the examination of these accounts many suspensions have been made for want of these "proper vouchers;" but quite a number of disallowances have been made because the law, as it now stands, makes no provision for the charges. Among these are:

1. Expenditures made by the several States on account of their troops, *after* they were mustered into the United States service. In all such cases government made full provision for the troops, and expenditures by the States were gratuitous, and cannot be allowed.

2. Expenditures on account of troops not mustered into the United States service. These, of course, could not be refunded.

3. Expenditures on account of officers and employés of the civil departments of the States, and of the military organizations of the States.

4. Expenditures on account of the States solely, and not for raising troops for United States service.

5. Expenditures for damages done to property.

6. Payments made to officers prior to the dates of their commissions and muster into State service.

7. Payments made to troops prior to their acceptance, as companies, into the State service.

8. Personal expenses of commissioned officers in recruiting their companies.

9. Expenditures of States in collecting, transporting, and repairing arms and accoutrements belonging to the several States.

10. Excessive charges for subsisting troops.

11. Payments for drill-masters employed by the States to drill their troops. Officers of companies and regiments are paid to perform that service.

12. Payments for clothing, equipment, and horses furnished commissioned officers. The army regulations require that commissioned officers should furnish themselves with these articles.

13. Expenses for cooking for field officers: not allowed by army regulations.

14. Excessive charges for articles purchased, and services rendered; being higher than is allowed by army regulations.

15. Payments for articles which do not belong to the regular and necessary supply of the army, and are not provided for by the regulations.

16. Double payments; which cannot be allowed.

17. Exchange and interest paid by States in borrowing money, and advertising State bonds for same purpose. Disallowed, not being embraced by the law.

18. Bounties and premiums paid by States to induce men to volunteer. The United States paid bounties to all who enlisted; and those paid by the States were to enable them to raise their quotas, and thus escape the draft. Of course, these expenses were disallowed.

The causes of disallowances in these cases are thus given in detail, that it may be seen that they are radical, and can only be relieved by legislation, if it be the pleasure of Congress to do so. The suspensions are being removed as fast as the agents of the States furnish the necessary evidence for that purpose

When I took charge of this office, in November last, but little had been done

towards settling these State war claims. Measures were at once adopted to close them as speedily as possible, and I am happy to say that they are now being rapidly and finally settled.

It is respectfully suggested that the act of July 17, 1862, "to provide for the more prompt settlement of the accounts of disbursing officers," requiring all accounts of disbursing officers to be sent direct to the Treasury Department, might be so modified as to be more effective, and less onerous on this office, if it be determined to perpetuate the present system unchanged.

Instead of sending those accounts to this office, they might be transmitted to the department of bureau under whose authority or direction they originated, where they could have administrative examination, and the balances admitted by the officers regularly entered up. This would give the department to which these officers are directly responsible the balances on hand, as admitted by the officers, and enable them to determine the policy of issuing requisitions on estimates presented.

In the claims' branch of this office many just and equitable claims for the loss of horses while in the military service of the government are rejected, because they are not embraced in any one of the classes specified in the act of March 3, 1849. For instance, an aid on the field of battle, in hurrying from point to point, with orders from the commanding general, has his horse fall dead under him from excessive fatigue. Such would be a most meritorious case, and there are many of them; and yet they cannot be paid for under the law as it now stands.

Again, there is but little doubt that many of these claims are fraudulent, and yet it seems almost impossible to detect those frauds. The agents who present these cases obtain a share of the profits, and should bear their share of responsibilities.

To remedy the former defect, I would suggest that all horses that are killed a or die in the military service, without negligence or carelessness on the part of the owner, be paid for, excepting such as die of diseases not consequent on the failure of the government officers to furnish sufficient forage. And, as far as practicable, to guard against frauds, I would suggest that all persons presenting or prosecuting fraudulent claims be held equally guilty, and be made subject to the same punishment as the principals.

In connexion with this subject, \hat{I} beg leave to call your attention to the incongruity of having in this office a division for the examination and settlement of claims. The duties of that division are onerous and complicated, exceeding eight millions in amount for the past year, and numbering nearly seven thousand cases.

These cases involve almost every question of statute and common law, including marine and insurance decisions, and require for their proper adjudication and decision a high order of talent, and the most incorruptible integrity.

As the law now stands, there is no appeal from these decisions, except to Congress; a matter frequently complained of by claimants when they think injustice has been done. This principle is evidently wrong in itself, for no one person should be clothed with such power, which may be used dishonestly or with prejudice.

In organizing the court of ultimate jurisdiction, (the Supreme Court of the United States.) the framers of the Constitution were particularly careful that not only the services of the most learned jurists should be secured, but that they should be selected from different sections; so that, as a body, they would not be affected by local or personal-influences. And yet claims are finally adjudicated by this office ranging from hundreds to hundreds of thousands of dollars.

To remedy this incongruity, and provide proper appellate jurisdiction, I would respectfully recommend that the claims division of this office be separated from it, and organized into an independent bureau, to be called the Bureau of Claims, with commissioner and assistants at proper salaries; and that provision be made that an appeal may be taken to the Court of Claims in all cases involving over two hundred dollars, and that said court be authorized to adjudicate all cases on which action may be refused by the bureau.

This would seem to be eminently proper and necessary at this time, when the claims growing out of the recent rebellion are being pressed on the government for settlement, involving, as they do, immense sums of money, and almost every variety of legal and equitable questions.

Should you deem it expedient to recommend this division, and the establishment of this new bureau, it will afford me pleasure, if you wish it, to submit a programme of its officers, the compensation that should be paid them, and the general provisions of law for organizing it.

The duties of this office, independent of this division, are exceedingly onerous and complicated, and are fully sufficient in themselves to require the constant attention and the exercise of all the abilities of the Third Auditor. By the statements at the beginning of this report it will be perceived that requisitions for over \$600,000,000 have been entered at and passed through this office, and that over \$300,000,000 of accounts have been settled. These accounts are from the quartermasters', commissaries', pensions, and State war claims divisions; consist of cart-loads of vouchers—every one of which, and each item of which, has to be carefully examined with reference to contracts, laws and regulations; the calculations all revised; suspensions and disallowances carefully noted and entered up, and full statements prepared for the action of the Comptroller. This service requires a thorough knowledge of the general principles of accounts; of the laws, rules, and regulations bearing on them, and the most perfect integrity for the protection and preservation of the public interest. And this service, as a general rule, has been ably, promptly, and efficiently rendered.

For this service, thus rendered, the compensation paid is entirely inadequate, and far short of that in other offices of no higher grade of service. In this office, experience, combined with ability, is of the utmost importance; and yet, so low are the salaries, even of the principal officers, that it is almost impossible to retain their services, as individuals and corporations are constantly striving, by offers of higher pay, to induce them to enter their employ.

As a matter, then, of strict justice, I respectfully recommend the following classification of the clerks in this office, in lieu of all other provisions of law on that subject, to wit:

One chief clerk, at a salary of	\$2,700	per annum.
Two clerks, chief of quartermasters' and claims divisions,	· · ·	•
each	2,500	"
Three clerks, chief of commissaries', pensions, and law or		÷
collection divisions, each		"
Three clerks, heads of subdivisions, &c., each		"
Twenty clerks of fourth class, each	1,800	"
Forty clerks of third class, each	1,600	"
One hundred clerks of second class, each	1,400	" 1
One hundred and twelve clerks of first class, including		1A*
copyists, each	1, 200	

This arrangement provides for the chief of division of claims, but, in my opinion, the separation previously suggested is far preferable.

Notwithstanding the vast amount of labor performed in this office, the arrears are very heavy, and will require two or three years' incessant and hard work to bring the accounts up to date. This delay is of serious disadvantage, if not loss, to the government and the disbursing officers, and should never be permitted under any circumstances. Under the system now in force, however, and in view of the sudden and vast increase in the business of the office, this accumulation could not be prevented. The system, therefore, should be changed, not only with reference to the prompt discharge of the duties of the office, but for the safety of the government funds. By the present system large amounts of public money are placed in the hands of disbursing officers, with very inadequate or no security, and the consequence is the long list of defaulters, involving millions of dollars, is constantly increasing. In the following suggestions I do not wish to be considered as recommending a change in the operations of the treasury, as originally devised and arranged by the master mind that originated the plan of it, but rather to bring the business back to the true intent and meaning of the original system.

Now the different departments in which liabilities originate send forward requisitions for greater or less amounts to be transmitted to disbursing officers, according to the estimates of those officers, without having the means of knowing the balances those officers may have in hand; and those amounts must be transmitted, or the Treasury Department take the responsibility of stopping them, without knowing the particular circumstances that may require such remittances. Thus the public interests may suffer on the one hand by too heavy remittances, and on the other by withholding them. Official courtesy requires that these requisitions be complied with where it can be done consistently with law, and a refusal to do so would naturally cause unpleasant feelings in the department making the requisitions. This substantially makes the Treasury Department the mere fiscal agent of the other departments, instead of the controlling power of the public treasure, as designed by its originator. To obviate this and restore to the treasury its original functions, and at the same time to prevent defalcations and for the more prompt discharge of the public business, I beg leave to recommend as follows, to wit:

That provision be made by law, in all cases of purchases by quartermasters and commissaries, that the original contract or order, approved by the War Department, be sent to this office as a basis for the examination of the accounts that may arise under such contract or order, duplicates of the same to be retained by the War Department, and that those accounts be forwarded to the War Department by the person furnishing the supplies, for administrative examination. When that administrative examination has been made, those accounts to be transmitted to this office, carefully audited, and sent to the Second Comptroller for final action. When that action has been had, the accounts, as at present, to be returned to this office for filing, with a duplicate, however, of the Comptroller's finding, and on that duplicate the Auditor, or some person in his office designated for that purpose, to check on the Treasurer for the amount of the account, with the request that it be sent to the person entitled to receive it, and accompanying that request with the Comptroller's duplicate finding as the authority of the Auditor to draw such check. The Treasurer would be debited with the amounts remitted, and credited with the amounts of the Comptroller's findings. The Comptroller would certify monthly or quarterly to the amount of his findings to the Auditor, and the Auditor would be debited with the amount of his checks and credited with the amount of the Comptroller's findings. Thus there would be a complete check, the First Auditor revising the accounts so far as the aggregates are concerned, which would be a brief and simple labor. This would effectually prevent the possibility of the accumulation of public money in the hands of quartermasters and commissaries, and of course there could be no defalcation on their part; and if this system is adopted, there need be no fear of delay in settling the accounts, as each of them can be readily and finally disposed of and the money remitted within twenty-four hours after the accounts are received in this office.

In relation to the pension accounts, a law might provide that all pensions, as now, shall be paid twice in each year, fractions of times before those periods to be paid up to the first period next after the pension is established; a remit tance to be made to each pension agent, on his estimate, of sufficient to pay six

months' pensions of his agency; said agent to render his account, charging himself with the amount remitted, and crediting himself with the pensions paid, and a statement also of the pensioners not paid—a general account of the whole, in addition to his monthly accounts, to be sent to this office at least sixty days previous to the next period of payment, with an estimate of the amount required for that next payment. The next remittance would, of course, be only for such an amount as would enable such agent, with the balance he had in hand, to make the next payment. This, of course, would prevent the accumulation of money in the hands of these officers, and would leave it in the treasury till it was absolutely needed. And as security for such remittances, each agent should give bond, with good and sufficient security, owners of real estate, in double the amount of his semi-annual payments, to be increased by the order of the Secretary of the Treasury whenever, in his judgment, the public interests require it; such bond to act as a lien on all the property possessed by the agent or his bondsmen at the time the bond was executed, and on all they might thereafter acquire. And it should be made by law the duty of the Auditor or Comptroller to see that such bonds are duly and properly executed, certified, and filed before signing requisitions or warrants for any money to be sent to any such agents. This branch of business is now heavy, and rapidly increasing; and hence the necessity for this system and these safeguards to be promptly ap-This new system might go into force on the first day of July next, a plied. sufficient force of able and effective men to be detailed to keep it constantly up to date, while the rest of the force could be employed in bringing up the old business.

I have limited these suggestions to the operations of this office, my only object being to secure the prompt discharge of the public business and the safety of the public funds, and I believe, if this system was faithfully carried out, it would secure both these objects. How far it will apply to other bureaus, the able officers in charge of those bureaus can best determine. It proposes, substantially, to pay all debts directly from the treasury to the parties furnishing supplies, so far as that can be established; and where funds must be placed in the hands of disbursing officers, to do so only when and to the amount absolutely needed, and to require the most perfect security for the faithful disbursement of those funds.

All which is respectfully submitted by your obedient servant,

JOHN WILSON, Auditor.

Hon. H. MCCULLOCH, Secretary of the Treasury.

REPORT OF THE FOURTH AUDITOR.

TREASURY DEPARTMENT,

Fourth Auditor's Office, October 14, 1865.

SIR: I have the honor again to comply with your request to furnish the usual annual statement of the transactions of this bureau, and now submit to your consideration a report of the business of the office for the fiscal year ending June 30, 1865. It will be seen, on comparison with previous years, that the operations exceed those of any year since the bureau has been organized.

The number of requisitions drawn on the treasury was three thousand three hundred and forty-six, (3,346,) amounting in the aggregate to \$122,670,677 48. The refunding requisitions were three hundred and seventeen, (317,) covering an amount of \$1,095,844 91.

There has been paid over to the Secretary of the Navy, as trustee of the naval hospital fund, during this period, the sum of \$57,959 96, obtained through the

settlements of the accounts of the paymasters of the navy and marine corps, navy agents, and other miscellaneous sources.

To the Commissioner of Internal Revenue has likewise been paid the aggregate sum of \$113,488 71, obtained through the same sources as the naval hospital fund.

As these statistics are obtained from the records of the book-keeper of this office, I am reminded to call your attention to another fact which comes from the same source: the accounts of those disbursing officers of the navy now out of service who are delinquent and in some cases really defaulters to the government. Of the latter class there are several who at the commencement of the rebellion chose to cast their aid and sympathy against that government which had bestowed upon them lucrative and important offices, and who "seceded" with large balances against them. If the bondsmen of these men, who are in most instances living south, are men who have available property, the suppression of the rebellion and the restoration of law and order will place them within reach of suits for the benefit of the United States.

The total number of accounts adjusted and settled in this office during the last fiscal year was thirty-two thousand three hundred and sixty-nine, (32,369,) involving no less an amount than \$\$0,367,182 33. The amount of labor, also, involved in the settlement and adjustment of these accounts cannot be adequately estimated by any one not acquainted with the intricacy and difficulty of much the larger number of them. Yet the whole work has been done by a force of seventy-five (75) clerks and thirteen (13) ladies, a portion of whom have, from time to time, been absent more or less from sickness and other necessities. These accounts include those of naval agents, naval storekeepers, agents for the payment of pensions, and the entire body of the numerous disbursing officers of the navy and marine corps.

The correspondence of the office affords a good index to the amount of business transacted by it, and its great and constant increase. The number of letters received during the fiscal year amounts to sixty-six thousand eight hundred and twenty-two, (66,822,) being twenty-one thousand five hundred and sixty-seven (21,567) more than were received the previous fiscal year. The number of letters written and sent during the year ending June 30, 1865, was sixty-six thousand three hundred and twenty-one, (66,321,) being seventeen thousand nine hundred and seventy-two (17,972) more than were written and sent the year preceding. The following tabular statement gives a view of the letters received, written, and recorded under the heads of the successive months in which the work was done:

CORRESPONDENCE OF THE FOURTH AUDITOR'S OFFICE.

Date.	Letters received.	Letters written.	Letters recorded.
1864—July	3,988 4,709	4,072 4,523	4, 623 2, 792
August. September October.	4,447	4, 525 4, 932 5, 075	4,153
November December	5,200 5,475 6,260	5,260 5,809	4,588
1865—January February	5,154 5,100	5,852 5,745	5,658
March	6,262 5,236	$6,440 \\ 5,048$	5,30 4,690
MayJune	7,110 7,795		5,62 5,24
Total	66, 822	66, 321	57,640

Statement for the fiscal year ending June 30, 1865.

I have continued to have every effort made to distribute the prize money promptly and correctly to the brave sailors and officers who have so daringly earned it, and whose valor, prowess, and efficiency were increased during every year of the war, demonstrating the incalculable naval power of our country as respects stalwart and unconquerable seamen. During the past fiscal year twenty-seven thousand six hundred and ninety-one (27,691) prize claims were received, and twenty-three thousand and seventy-three (23,073) were settled, being nearly eight-ninths of the number received; an instance of prompt adjustment and payment, which I am confident no branch of the public service has exceeded. The amount of money so disbursed was \$4,759,596 19. When the great variety of amounts paid to so many persons is considered, and the vast number of localities and vessels to which certificates had to be sent, it is surprising and gratifying to find how very few errors have occurred. The following table sets forth the details of the distribution of prize-money, as it took place from month to month :

Statement of prize	money disbursed by	y the Fourth	h Auditor	from July 1,	1864,
· ·		y 1, 1865.			

Date.	Claims received.	Claims settled.	Amount of claims settled.

June	2, 308 27, 691	2,008 23,073	360, 678 50 4, 759, 596 19

The operations of the office in regard to the marine corps, navy pensions, and navy agents, and naval storekeepers residing in foreign countries, is as follows: The total number of accounts settled is 296, embracing 3,693 minor accounts,

and involving disbursements to the amount of \$5,192,844 95, viz:

MARINE CORPS.

Accounts of the paymaster, first quarter 1864	\$105, 304 32
Accounts of the paymaster, second quarter 1864	90, 205 56
Accounts of the quartermaster, first quarter 1864	92,699 14
Accounts of the quartermaster, second quarter 1864	67,889 83
Accounts of the quartermaster, third quarter 1864	132, 195 35
Accounts of the assistant quartermaster, third quarter 1864	7,068 50
Accounts of the assistant quartermaster, fourth quarter 1864	12,758 85
78 accounts (individual) for arrears of pay, bounty, &c	,10,880 OG

NAVY PENSION ACCOUNTS.

148 accounts of navy pension agents	\$215, 776 63
24 individual accounts for arrears of pension and unclaimed pen-	
sions, under the acts of April 6, 1838, and August 23, 1848	2,970 10

The number of requisitions registered is 101, viz:

Requisitions drawn by the Secretary of the Interior for advances to pen-	
sion agents	57
Requisitions issued in payment of unclaimed pensions	24
Requisitions, refunding and transfer	20

NAVY AGENTS AND NAVAL STOREKEEPERS RESIDING IN FOREIGN COUNTRIES.

Accounts of Baring Brothers & Co., from January 1, 1861 to

Accounts of same, half year ending June 30, 1864	471,686 44
Accounts of same, half year ending December 31, 1864	516, 504 44
Accounts of same, supplemental	157,030 72
Accounts of naval storekéepers, (10)	45, 357 24

The number of letters written in relation to business in this division is 894. The property accounts of the assistant quartermaster of the marine corps for the 1st, 2d, 3d, and 4th quarters of 1864 have been examined.

The number of pensioners whose names were added to the pension list during the year is 896.

The payment of allotments—the means by which sailors and officers make monthly provisons for their families and creditors, and which is therefore of such great importance, necessity and convenience—has received the most careful attention during the past year, and no effort has been neglected to make it efficient and timely. I annex a tabular statement of the transactions of the office connected with allotments.

Date.	Letters	Letters	Allotments	Allotments

June	54	23	2, 107, 919 83	37
Total	421	276	23,779,498 43	3,71

Total number of accounts received and settled in the paymasters' department from July 1, 1864, to June 30, 1865, with the amount of cash disbursed in those settled, and the number of letters written in relation to the same.

A comparison of the foregoing table with that of the previous year shows that one hundred and twenty-nine (129) more accounts were received, and ninetytwo more settled, and that the amount involved was \$8,146,206 72 more than last year. From the large number of vessels going out of commission it is proper to estimate that for some months to come the receipt of accounts will largely exceed those received for the same period in the past, so that even when the navy is reduced to its permanent footing there will remain quite a large number of accounts to be settled over and above those now on hand, to say nothing of the supplementary settlements to be made in nearly every case of those already and to be settled, growing out of unadjusted allotments at the time of the first settlement. In reference to the number of settled accounts, I would say that the cash disbursements, by which a judgment is usually made concerning accounts, very often do not afford a criterion to estimate their magnitude, as even the smaller accounts are frequently so exceedingly complicated as to require the labor of an experienced clerk for three or four months; others, however, are less difficult and are settled in a much shorter time.

The sudden and rapid increase of the navy within the last few years has rendered necessary a corresponding increase in the clerical force of this office; but the clerks who have been added to it, almost without exception, had no previous acquaintance with paymasters' accounts, and the progress, in the great majority of such cases, has inevitably been slow. Yet, when a view is taken of the labors of the year in this division of the office, and a regard is had to the embarrassments which have been surmounted, there is shown a very satisfactory progress.

During the year ending June 30, 1865, the work performed in the settlement of navy agents' accounts was as follows: Number of accounts settled, 31; amount of expenditures involved, \$45,891,499 58; number of vouchers examined, 182,000; average number of clerks employed, 6.

An idea of the amount of labor and care necessary to the proper settlement of these accounts can be obtained by referring to the fact that every one of the above vouchers was critically examined, and that the statement of differences of one of the accounts alone fills a book of 147 pages of foolscap paper. I am gratified to be able to say that there is not now in any of these reconciling state-

142

ments, which cover such a vast number of entries and are so complicated in their nature, an item of difference between this office and the agents that is not susceptible of full explanation.

It now remains to speak of another very important division of the office, that of general claims. As the arteries permeate the entire structure of the human body, so is the work of this division connected with every individual belonging to the navy, as it adjusts and settles the pay of every person in it, from the gallant Vice-Admiral Farragut down to the obscurest ship-boy, besides including all compensations, bounties, and emoluments of every description except prize-money.

The following table gives an exhibit of the work during the last fiscal year :

Claims.	No.	Claims adjusted in—	No.	Aggregate amount.
On hand July 1, 1864 Received in July, 1864 "August, 1864 "September, 1864 "October, 1864 "October, 1864 "October, 1864 "December, 1864 "Jannary, 1865 "Rebruary, 1865 "March, 1865 "May, 1865 June, 1865	942; 319 362 274 265 407 533 701 453 658 614 919 726 7, 173	July, 1864 August, 1864 September, 1864 October, 1864 November, 1864 December, 1864 January, 1865 February, 1865 March, 1865 May, 1865 June, 1865	263 195 260 216 346 466 490 579 557 431 704 789 5,296	\$33,682 92 21,709 31 35,162 99 32,686 83 62,055 96 82,032 08 50,244 12 51,563 92 62,393 11 100,986 76 127,708 84 83,516 34 743,743 18

Annual report of the general claim division for the fiscal year ending June 30. 1865.

Balance remaining on hand June 30, 1865, 1,877.

Of the claims remaining unsettled, there were received in-

January, 1863 February, 1863 March, 1863 April, 1863 May, 1863 June, 1863 June, 1863 August, 1863 September, 1863 October, 1863 November, 1863 December, 1863	5148362929142427256711	February, 1865	14 0 7 34 65 34 0 27 52 168 61 105
October, 1863	-	February, 1865	61
December, 1863 January, 1864	11 19	March, 1865	137
February, 1864 March, 1864	$\begin{array}{c} 24 \\ 3 \end{array}$	May, 1865 June, 1865	

Reports have been made upon twenty-two applications for admission to naval asylums, one bounty land, and four pension cases, and sixteen thousand and eighty-six letters written. A reference to my statement for the previous year will show that more than three times the number of claims were received and adjusted than during the corresponding period of the previous year. A very large number of these claims were for balances due our brave officers and seamen, who had been languishing in rebel prisons, and their accounts were allowed to take precedence of all others. Of claims still remaining on hand unadjusted, many are imperfect in themselves and require corroborative proof from the returns of paymasters, which has not yet been received, although repeatedly applied for. I desire to call particular attention to this evil, as by it many poor and deserving men, or their widows and children, are deprived of the support they so much need, and which they so nobly earned in defending their country in its hour of peril. I allude to this fact thus strongly because the delay thus produced brings blame and censure upon this office which it does not merit. I venture to say that in these cases it will be found, almost without exception, the delay is not chargeable here.

In my last annual report I spoke of the complex nature of these claims, and of the very careful investigation which their adjustment requires, that neither the government nor its creditors may suffer. To the labor heretofore existing has been especially added, within the past year, the adjustment of bounties, a matter abounding with difficulties; to the following, among the many, of which I deem it my duty to call your attention:

The 7th section of the act approved February 24, 1864, provides that "any person now in the military service of the United States who shall furnish satisfactory proof that he is a mariner by vocation, or an able or ordinary seaman, may enlist into the navy under such rules and regulations as may be prescribed by the President of the United States: *Provided*, That such enlistment shall not be for less than the unexpired term of his military service, nor for less than one year. And the bounty-money which any mariner or seaman enlisting from the army into the navy may have received from the United States, or from the State in which he enlisted in the army, shall be deducted from the prizemoney to which he may become entitled during the time required to complete his military service."

It will be observed that, by this enactment, the accounting officers are required, in adjusting these cases, to deduct from his prize-money the bounty which the recruit may have received from the State, as well as that paid by the United States. Now, I submit that, in the first place, it is almost if not utterly impracticable to properly determine what amount of bounty was paid by the respective States to each recruit, as the sums were so various. This fact, too, would seem to cause an unjust discrimination, as A, who enlisted in New York, and B, who enlisted in Pennsylvania, may each be entitled to an equal amount of prize-money; but the one may have entered the service under the inducement of a large bounty to save his State from draft, and thus loses a large proportion of what he earned by equal risk with the one not receiving such inducements.

Again: it would seem that this matter of State bounty is one with which the general government cannot properly interfere, as it evidently does by this provision. It thus derives a benefit indirectly from the citizens of such States who are, or have been, taxed to meet the outlays of the State in the payment of large bounties, while it receives the same advantage from those who may not have been so taxed, and thus imposes a discrimination in the expenditures for the support of the war, unless, indeed, it is the intent of the law to refund such amounts deducted from prize-money to the States paying the bounty. In that case much additional labor would be involved in the settlement of these accounts.

One item of additional labor, consequent upon the close of the rebellion, which has devolved upon this office, is that of answering the constant appeals for information in regard to missing relatives and friends who were attached to the naval service. It would seem scarcely just to neglect these appeals, and yet attention thereto absorbs much time. It frequently happens that an industrious and competent clerk may be constantly engaged for hours in determining a proper answer, for which, from those unacquainted with his work, he would receive only the credit of having written a short letter.

I have more than once, in this report, adverted to the vast and constantly increasing transactions of this office. So many seamen are and have recently been discharged, both from vessels still in commission and from those going out of commission—so many men, transferred from the army, are besieging the office for a settlement of their accounts-so many paymasters have closed their connexion with the navy and desire an immediate adjustment of their business, that these, ~ and many others, make a torrent of labor. This, with all the accumulations heretofore growing out of the war, rendered it altogether impossible for me, with my regularly appointed force of clerks, to despatch current requirements as fast as the public good and individual necessities imperatively demanded. I therefore informed you of these facts, and requested twenty-five temporary clerks to be assigned to this office. The larger portion of that number have been sent, but as business must increase for some time to come, and as it is very important' that paymasters' and navy agents' accounts should be settled as soon as possible, in order to detect defaulters, collect balances due the government, commence suits against bondsmen while they can be found, and meet other exigencies connected with these accounts, I trust such force will be granted as will enable me to meet the emergency with all the promptitude which is practicable.

During the past year many new methods of expediting business have been adopted, and a thorough revision given to the various instruments and forms heretofore used, so as to insure economy of time and correctness in result. I have endeavored to carry out your excellent "Rules and Regulations of the Treasury Department," and have considered them to mean *literally* what they say. I do not think this strict interpretation is considered objectionable by any good and desirable clerk. It is my decided opinion that the "Rules" should be enforced, and that employés should be aware that their infraction constituted an offence which surely subjected them to dismissal.

It gives me great pleasure to bear emphatic testimony to the competency, faithfulness, and industry of the clerical force of this office, *taken as a whole*. To their industry and ability the office is indebted for its efficiency, and the amount of work which they have performed during the past year is wonderful, and not exceeded by the same number of clerks anywhere.

The extent of *shirking* in the office, I am happy to believé, is small; but a certain percentage does exist, and when flagrant will be reported to you. In contrast with this disagreeable fact, I repeat my commendation of the diligence and competency of the very great portion of those under my supervision, and such clerks: deserve and will secure the good will of the department and bureau. In improving business details, in introducing emendations, in insuring promptitude, and in making the office proceed with despatch and accuracy, I have had the co-operation of the various chiefs of divisions, and especially the constant vigilance, active oversight, and judicious assistance of W. A. Cromwell, esq., my chief clerk, whose attention to his duties has been faithful and untiring.

I spoke in my previous annual report of the ladies who have been detailed to do clerical duty in this office. I can truly repeat what I then said, that they have discharged the duties assigned to them with intelligence, industry, and commendable zeal. Their employment tends to break down that barrier which has so long debarred woman from occupations for which she was as well fitted as man, and from which she was excluded by an unjust prejudice. I can certainly say that those ladies who have been under my supervision have performed their work in the most satisfactory manner. In my judgment, the employment

10 f

of females is advantageous to the government in the way of economy, besides setting a good example in giving occupation to whatever persons are capable of doing the work required. It should, however, be understood by ladies who enter any bureau as clerks, that as sex was disregarded in their employment, so it should not be pleaded for any relaxation or abatement of the customary rules and regulations, and they should take a pride in showing that the department did not misjudge in considering them competent, both physically and mentally, to make efficient and acceptable clerks.

During the past year I have issued a new digest of the "Rules in regard to the transaction of business at the office of the Fourth Auditor of the Treasury." This important work was executed by Mr. A. H. Mechlin, the law clerk of the office, and was performed in an admirable manner. It was essentially a new work, newly arranged and thoroughly indexed, making, when issued, a complete manual of its various subjects.

The increase of the business coming to this bureau, which I have set forth, must inevitably continue for some time; but even when the more immediate influence of the rebellion no longer operates, there will be a great and permanent enlargement in its operations from the extent of the country, the development of new resources, the much larger number of vessels which will always be kept in commission, and those other causes which affect likewise every department of the government. For these reasons I beg leave especially to recommend that the number of clerks now composing the office, in accordance with the "act to supply deficiencies," &c., approved March 14, 1864, be made a permanent organization.

I have the honor to be, very respectfully, your obedient servant, STEPHEN J. W. TABOR, Auditor.

Hon. HUGH MCCULLOCH, Secretary of the Treasury.

REPORT OF THE FIFTH AUDITOR.

TREASURY DEPARTMENT, FIFTH AUDITOR'S OFFICE,

October 20, 1865.

SIR: During the fiscal year ending June 30, 1865, there have been adjusted in this office six thousand two hundred and forty-five (6, 245) accounts, in the settlement of which one hundred and fifty thousand seven hundred and forty-five (150, 745) vouchers were examined, involving an amount of two hundred and thirty-six million one hundred and fifty-nine thousand two hundred and forty-two dollars and eighty-four cents (\$236, 159,242 84;) and six thousand nine hundred and twenty-three letters were written.

I take pleasure in saying that the gentlemen employed in the office have discharged their public duties with intelligence, promptness, and fidelity.

The following schedules are respectfully submitted.

I have the honor to be, respectfully, your obedient servant,

C. M. WALKER, Auditor.

Hon. H. MCCULLOCH, Sccretary of the Treasury. A.—Statement of expenses of all missions abroad for salaries, contingent expenses, and loss by exchange, from July 1, 1864, to June 30, 1865, as shown by accounts adjusted in this office.

G.-Statement showing the amounts paid to assessors of internal revenue, &c.-Continued.

* No returns of names from these districts for 1865, and the numbers given are for year ending June 30, 1864. NOTE.—In some of the districts the salary and commissions exceed the limit of \$4,000 prescribed by law, the excess being commissions accrued in previous years, and not paid in the adjustment of previous years.

Assessors' bills for stationery paid by collectors are included in the table, so far as they have come to the knowledge of the office.

REPORT OF THE SIXTH AUDITOR.

OFFICE OF THE AUDITOR OF THE TREASURY FOR THE POST OFFICE DEPARTMENT,

October 19, 1865.

SIR: In accordance with the uniform custom of this office, I respectfully submit the subjoined statement of the clerical labors performed in this bureau during the past fiscal year.

The forthcoming annual report of this bureau to the Postmaster General will exhibit in detail all that pertains to the financial transactions of the Post Office Department.

SUMMARY OF PRINCIPAL LABORS, VIZ:

The postal accounts between the United States and foreign governments have been promptly and satisfactorily adjusted up to the latest period. Thirtyfive thousand three hundred and seventy-four corrected quarterly accounts of postmasters have been re-examined, copied, restated, and mailed; one hundred and three thousand four hundred and twenty-seven letters were received, indorsed, and properly disposed of; eighty-five thousand one hundred and fiftytwo letters were answered, recorded, and mailed; fourteen thousand five hundred and ten drafts issued to pay mail contractors; three thousand and six warrants to pay mail contractors. The number of folio-post pages of correspondence recorded, viz: Two thousand six hundred and seventy-two pages in collection book; one hundred and ninety-eight pages in report book; two hundred and forty-three pages in suit book; six hundred and seventy-five pages in miscellaneous book. Forty-nine miscellaneous accounts were reported for payment; one hundred and twelve accounts for advertising were reported and paid; two hundred and fifty-one accounts of special agents were adjusted and paid; two thousand four hundred and seventy letter-carriers' accounts were settled; four hundred and ninety-three thousand four hundred and eight dollars and sixty-four cents was paid to letter-carriers; three thousand two hundred and thirty-seven dollars and eight cents was paid to attorneys, marshals, clerks of the United States courts, &c.

MONEY ORDER DIVISION.

Seven hundred and twenty-four letters were written and mailed; two hundred and ninety-eight of this number were recorded in letter-press book; four hundred and twenty-six of this number were not recorded. The transactions of this branch of the public business involved the amount of two million five hundred and five thousand dollars.

PAY DIVISION.

Sixteen thousand and forty-six accounts of mail contractors were adjusted and reported for payment; fifty-three thousand nine hundred and six collection orders were transmitted to mail contractors; seventy-six thousand three hundred and forty-two postmasters' accounts were examined, adjusted, and registered; two hundred and seventy six thousand two hundred and fifty-three dollars and sixty-nine cents collected from special and mail messenger offices; two million one hundred and forty-two thousand and ninety-three dollars and five cents aggregate amount of drafts issued to pay mail contractors; two million three hundred and twenty-eight thousand six hundred and one dollars and forty-eight cents received of postmasters by mail contractors on collection orders; two million four hundred and thirty-three thousand three hundred and eighty-six dollars and one cent aggregate amount of warrants issued to pay mail contractors; seventy thousand four hundred and sixteen dollars and eleven cents paid for advertising; fifty-three suits were instituted for the recovery of balances due the United States, amounting to the sum of sixty-four thousand and seventy dollars; sixty-four judgments were obtained in favor of the United States; twenty-five thousand one hundred and ninety dollars and seventy-two cents were collected by suit from late postmasters; forty-one accounts of attorneys, marshals, and clerks of United States courts were reported for payment; sixteen thousand three hundred and six accounts of special mail carriers, mail messengers, and local mail agents were adjusted.

COLLECTING DIVISION.

The collecting division has had charge of the following number of accounts, viz: Twenty-two thousand and fourteen accounts of present postmasters; twenty-eight thousand accounts of late postmasters whose terms of office expired; five thousand eight hundred and ninety-four accounts of postmasters who became late.

The balances ascertained to be due the United States from late	
postmasters amounted to	\$1, 222, 320 27
Of this amount there has been collected \$289, 239 21	
Credited on vouchers	
Charged to suspense account 107 71	
	295, 719-75
Amount remaining for collection	926,600 5 2
-	

Five thousand four hundred and forty-eight accounts of route agents were settled and reported for payment; seventy-five thousand four hundred and sixteen dollars and ninety-eight cents collected from mail contractors by "collection drafts" for over-collections made by them from postmasters; seven thousand nine hundred and eighty-three accounts of late postmasters having balances due to them in the southern States, and those having credit balances amounting to five dollars and under in the other States, have been closed by suspense, amounting to fifty-five thousand four hundred and one dollars and fifty-one cents; one thousand and fifty-one accounts of late postmasters having balances due to them have been audited and reported to the Postmaster General for payment, amounting to thirty-three thousand nine hundred and thirty-six dollars and seventy-six cents.

The compilation of that portion of the Biennial Register which is prepared in this office, and which has heretofore constituted nearly three-fourths of that document, is now nearly completed, and will be ready for delivery to the public printer on the 31st instant. The preparation of this volume, and the annual report to the Postmaster General at the same time, has imposed great additional labor on this bureau, requiring the services of many of its clerks during extra hours. In addition, many duties of an important character have been discharged requiring much time and labor, which it would not be practicable to particularize in this report.

I have the honor to be, sir, very respectfully,

J. M. McGREW, Acting Auditor.

Hon. HUGH McCulloch,

Secretary of the Treasury.

REPORT OF THE COMMISSIONER OF CUSTOMS.

TREASURY DEPARTMENT,

Office of Commissioner of Customs, October, 1865.

SIR: In obedience to your letter of the 10th instant, addressed to me, I have the honor to present my annual report.

The business of this office has been greatly increased during the past year, and especially since the occurrence of the great events brought about by our victorious armies, culminating in the breaking up of the rebellion, the extension of the national laws and authority over the rebellious States, and the reopening of the ports of those States, the appointment of officers of the customs, and the resumption of national commerce. The ports of Norfolk, Richmond, Charleston, Savannah, Mobile, Pensacola, Appalachicola, Galveston and others in Texas, Wilmington, Newbern, Plymouth, and others in North Carolina, were opened soon after the restoration of peace, and officers of customs duly appointed But upon taking possession of the custom-houses at each of these and other ports, it was found that few or none of the records, books, furniture, or property of any kind formerly belonging thereto remained; everything had been carried away or destroyed. Considerable expense has been incurred in replacing some of this property, though no more has been purchased or supplied than could not be dispensed with.

The appointing of entirely new officers at these several ports, scarcely one of whom had everhad any knowledge derived from experience of the duties of the position he assumed, and which are intricate and perplexing even to one who has had much experience and practical knowledge of them, has thrown much extra care and labor upon this office, and put in requisition no small amount of patience to get these custom-houses into regular, systematic, working order, and to aid the officers to acquire such a knowledge of their duties and of the revenue laws as will enable them to administer the latter with tolerable correctness: perseverance and patience are still required to bring about such a state of things as should exist.

With the restoration of the unity of the nation, and the opening of the southern ports to the commerce of the world, comes the necessity of guarding the whole southern coast against illicit trade, for which our high rates of duties upon foreign goods hold out a very strong temptation, and for which the numerous bayous and inlets of an extensive coast sparsely settled afford such facilities.

Notwithstanding the efforts which have been made to prevent smuggling on the northeastern coast and the northern and northwestern frontier, it has been carried on to a considerable extent, and to that extent lessened the receipts from imports. Several special agents have been employed by the sanction of the department to stop or check this nefarious trade, who, together with most of the collectors on that frontier, as well as on the northeastern coast, have been commendably vigilant, active, energetic, and faithful in their efforts to ferret out, arrest, and punish those thus engaged in defrauding the government. Considerable quantities of smuggled goods have been seized, forfeited, and sold, and the proceeds divided between the government and the officers of customs entitled to shares ; and several persons engaged in this unlawful and demoralizing business have been arrested, tried, convicted, and sentenced to fine and imprisonment under the act of 1842. This act authorizes courts, upon conviction of any one of smuggling, to impose a fine of not over five thousand dollars, or sentence him to imprisonment for a term not exceeding two years, or both.

The impression among those who engage in this reprehensible business has been, that the possible loss of the goods attempted to be smuggled was the only loss or penalty they would incur in case they were detected; and this was little regarded, since, like blockade-runners, they could well afford to lose two or three ventures out of five, provided they succeeded in running in the other two or three. Under this idea, I blush to record the fact that many, nay, I fear, a majority, of the people living very near the frontier line between this nation and the British Provinces have apparently been disposed not only to give countenance, aid, and assistance to the smuggler, and to conceal him and his goods from the United States officers, but to become partners in the frauds thus practiced against their own government. It may be thought an evidence of superior skill and merit in a community of bandits for one of their number to rob a fellow-being, and evade the clutches of the officers of justice ; and so he who can successfully cheat the government out of a few hundred or a few thousand dollars by evading the revenue laws and those whose duty it is to enforce them, may be looked upon with admiration by those who think it not only no harm, but really an act of merit, to rob the public treasury; an honest man, however, would not willingly cast his lot in the midst of such a community.

It is vain to think of stopping smuggling by merely seizing and forfeiting the goods smuggled. In the first place, not more than one-tenth, and possibly not more than one-twentieth of the goods attempted to be smuggled are seized, as the facilities of running them in and escaping detection are so great that even with the keenest vigilance and the utmost activity the contrabandist has greatly the advantage of the officer. Something more is necessary, then, to prevent this illicit traffic. The act of 1842, as I have said, imposes a fine or imprisonment, or both; but while the law fixes the maximum of each, to wit, five thousand dollars and two years' imprisonment, it leaves it discretionary with the courts to impose a merely nominal fine, and to dispense altogether with imprisonment. I would respectfully recommend that the law be so altered as to impose a fine of not less than one hundred dollars, or imprisonment for not less than two months; the maximum of fine to remain as at present, and the maximum imprisonment to be left at two years. Also, to authorize any officer of customs to arrest, and take before some proper officer, any person found in the act of smuggling, or in possession of smuggled goods, or where there is probable cause to believe such person to be engaged in smuggling. With such a law, and with the strenuous co-operation of the courts, smuggling might be made a very hazardous as well as unprofitable business. Some of the courts on the northern frontier have shown a just appreciation of the importance of arresting this illicit traffic, and of teaching wholesome lessons to the smuggler, while others have let him off with a very insignificant fine.

Considerable extra expense has necessarily been incurred in preventing this contraband trade along the northern frontier during the past year, but this has been largely counterbalanced by moneys paid into the treasury arising from the sales of goods seized and condemned on account of being smuggled; the receipts being about five dollars to one of expenses, exclusive of the amount distributed to officers of the customs as their shares of the forfeitures.

In regard to the Atlantic coast I am unable to speak so accurately. Along that coast smuggling is carried on, if at all, more in vessels arriving from foreign ports, or by means of our own coasters which go out to sea, or to some out ofthe-way island, where foreign goods are transferred from vessels from the British provinces or other foreign ports, and by these coasters taken into port, not being subject to the same restrictions on entering as vessels coming from foreign ports. To check and stop this evasion of the revenue laws the department depends, to a considerable extent, upon the efficiency and vigilance of the revenue cutters; but having no control over these, I am not well informed of their operations or success in the preventive service.

Having reason to believe that a more rigid examination of the baggage of passengers and immigrants arriving on steamers and other vessels from Europe, Havana, and other places, than had prevailed, would result in discovering considerable quantities of dutiable goods among, and intended to be passed as, baggage, I took measures, a few months ago, to have this done. The result has shown that I was not mistaken, the duties at a neighboring port collected upon such goods having risen, under this close inspection, from less than one to about six thousand dollars per month. I may be permitted here to remark, that one great stumbling-block in the way of a strict enforcement of the revenue laws is the want of earnestness and conscientiousness in the discharge of their duties by many officers of the customs. They do not feel that the interests of the government are their own, or the obligation of being faithful and vigilant. I do not know whether this is the general rule or the exception; but I am happy to know that there are some the reverse of this, being in every respect zealous and efficient, and ever-watchful of the public interests. It is cause of regret that political conflicts should ever cause the removal of such men from the public service, to be succeeded, it may be, by others of an opposite. character. It is my firm conviction that if the most competent, trustworthy, sober, and faithful officers could be retained in the public service, on account of their fidelity and competency, and the incompetent, idle, and worthless discharged, from time to time, on account of their incompetency and worthlessness, the public customs-revenue service would be infinitely better conducted than it has been for forty years past, and at a greatly reduced expense.

The expenses of collecting the revenue have for many years exceeded, and of late years more than doubled, the amount fixed by law in 1849. It may be asked, why has this been allowed? The answer is, because the business of the country has greatly increased, and because various acts of Congress passed since the one above mentioned have thrown large additional burdens upon those expenses. Prices of labor and materials have also been much enhanced, requiring a corresponding increase of compensation; and an increase in the number of inspectors, &c., at the various ports has become necessary by an increase of the duties to be performed. Formerly the contingent expenses of collectors, surveyors, &c., and their clerk-hire, salaries of deputies, &c., were paid out of the emoluments of their offices—these emoluments arising mainly from fees. But these fees were established when one dollar would purchase more than two will now. The fees have remained stationary, while labor and materials to be paid for out of them have advanced. The consequence is, that there is now a deficit where there was formerly a surplus, and this deficit has to be made up by other moneys, which are charged to and go to swell the expenses of collecting the revenue. I respectfully recommend that Congress be asked to increase the fees at least fifty per cent. I beg leave to call your attention to the fact that there are now two classes of

I beg leave to call your attention to the fact that there are now two classes of revenue officers whose services could, in my judgment, be dispensed with without detriment to the public interests. These are the naval officers and surveyors, both of whom receive large salaries and emoluments, without performing adequate services, or incurring much responsibility. The naval officer (so called from the fact that similar duties to his were performed under George III, in the colonies, by an officer of the navy designated for that purpose for the time being) was intended to be a check upon the collector; but practically he is no check whatever. His salary at the seven designated ports is five thousand dollars a year, besides his share of fines and forfeitures, which may or may not amount to a large additional sum. He has many clerks, besides a deputy, and the work they perform is but a duplication of that performed in the collector's, office. I have not been able to perceive that there is any less accuracy in the accounts of collectors at ports where there are no naval officers, than where there are; and have, therefore, been unable to perceive that it is of the least utility to the government.

The surveyor is next in rank and emolument to the naval officer, his salary being but five hundred dollars a year less, and he sharing with the collector and naval officer a portion of all fines and forfeitures, though his responsibility is very light, and he is wholly subordinate to the collector. The duties performed by this officer could, I think, be quite as well performed by some one to be designated by the collector, and for a very much less compensation than is now allowed to surveyors. No naval officer or surveyor has ever been allowed at any of the ports on the northern frontier, nor has it ever been perceived that their services were needed there. I feel it my duty, looking upon these offices as unnecessary, and only a burden upon the country, to recommend that Congress be asked to dispense with the first entirely, and with the latter at all ports except, perhaps, New York.

In making this recommendation I must disclaim having any unfriendly feeling towards the present incumbents of these offices, for several of whom I have great personal regard; but viewing the offices in the light I do, I am not at liberty to withhold an expression of my opinion. It is well known to those familiar with custom-house business, and many others, that there have been those who held these offices for many years who were seldom seen in the customhouse, and whose duties were mostly, if not entirely, performed by deputy.

It may be a very antiquated notion that official duties and responsibilities should bear a just proportion to official emoluments; but I cannot but think such a rule is in accordance with the spirit of republican government.

There are a great number of old accounts on the books of this office unclosed, and showing balances for and against collectors and other officers of the customs. Many of these show equal balances for and against the individuals under different heads : for instance, there may be a balance standing against A in his disbursement account, while a balance of precisely the same amount stands in his favor in his emolument account; and thus, while he owes nothing to the government, his accounts cannot be closed, there being no power under the law, as it now stands, to offset the one against the other, and thus close the accounts on the books. It therefore frequently appears that individuals are defaulters to the government when they are not. I recommend that Congress be asked to pass a law to meet the case.

But there are many balances also standing on the books which are due from former officers; some of them have been, by my direction, looked after and are in a fair way to be collected; the others will be attended to as speedily as possible. Since the date of my last annual report, the labors of the division of "commercial intercourse" and "captured and abandoned property," of this office, have been prosecuted with unremitted attention. To attempt a full exhibit of the work performed, or an enumeration of the difficulties with which the division has had to contend, would require a transcript of the records of the division in detail. It is, however, due to the clerks therein employed, that I should say that, notwithstanding the many, and in many instances insurmountable difficulties, they have faithfully performed their duties, and in a manner, I hope, to meet your commendation, as the statements herewith transmitted will in part show.³ If these statements are not as complete and satisfactory as could be desired, the cause may be attributed to circumstances not within the control of this office, but, in some degree, to the frequent changes of instructions to the agents of the government, which were deemed necessary; the fact that these agents were scattered over a wide space of country; that they found it difficult to understand their instructions, and to carry them out; and the great difficulty there was in communicating with the department, and the department with them.

⁷ There has not been for a great number of years any uniformity in keeping the various accounts required to be kept by collectors of customs. The modes of keeping these are, consequently, almost as numerous as the collectors, each port having books peculiar to itself. As there should be a uniform system at all the ports, I am having prepared such a system, and also forms for various uses, which I shall have the honor to submit for your approval. When such a system and such forms shall be established, I respectfully recommend as a measure of economy, as well as uniformity, that books for these various accounts, and all blanks, be provided by the department for the use of such officers of customs as may require them, to be paid for as they are now paid for, out of the emoluments of the offices to which they are sent. I am quite sure that a very considerable saving might be made by adopting this plan.

The amount of duties refunded since my last report, the papers for which pass through my hands, is two hundred and fifty-five thousand six hundred and ninety-eight dollars and fifty cents, (\$255,698 50,) namely: to satisfy judgments recovered against collectors for excess of duties exacted in accordance with instructions from the department, two hundred and thirty-seven thousand and seventy-six dollars and one cent, (\$237,076 01;) to satisfy claims in cases where no suits were commenced, eighteen thousand six hundred and twenty-two dollars and forty-nine cents, (\$18,622 49.)

I respectfully call youwattention to the complexity of the laws relating to revenue from customs. The acts passed by Congress in 1799, relating to this subject, were, it is understood, drawn up with much care by some one or more, fully conversant with the subject, and were, for the circumstances of the country and the condition of our commerce and navigation, as perfect a system as could be devised. But a long period of time has elapsed since then, and most remarkable changes have come over the country, demanding from time to time 'changes' and amendments, which have again and again, perhaps, been changed and amended, until what was once a complete and admirable system, working most harmoniously, has become such a piece of complex and mended machinery as to make it very difficult to comprehend its various parts, and much more to reconcile their incongruities.

To amend these would seem to be but putting patch upon patch without improving them. The task of adapting them to the present condition of the country by amendments is a hopeless one; the whole should be recast in a new code, and this could only be properly done by men who have had much experience in administering these laws, and who have had opportunities to observe and most sensibly to feel their defects, and who have the ability, natural and acquired, to perform the task in a manner creditable and beneficial to a nation second to none in commercial importance and the extent of its navigation. If not thus performed, they had better remain as they are, much as they need codifying.

At the time these laws were chiefly enacted the channels of commerce were confined to bodies or streams of water, and ports were established where vessels arrived; now, commerce breaks away from these channels and sweeps over plains, mountains, and valleys, wherever it listeth; centres of trade and commerce spring up far from water-courses, and it now becomes necessary to establish ports of entry upon those overland commercial highways, and to provide for inspecting foreign goods imported in cars, and treating these in the same manner that we treat foreign vessels laden with merchandise.

I have no occasion to ask for more clerks, but a re-classification of those I have would add much to their efficiency. I have more of the first class and less of the fourth than should be assigned to this office.

The following statement will exhibit, in the briefest space, the amount of work performed in this office during the past year:

Tabular statement of accounts received and passed in the office of the Commissioner of Customs during the financial year 1864-'65.

Period.	Accounts rec'd.	Accounts passed	Letters written.	Letters recorded.	Letters received.	Requisitions.	Amount.	Returns received and examined.	Clerks.

I have the honor to be, very respectfully, your obedient servant,

N. SARGENT, Commissioner.

Hon. H. McCulloch, Secretary of the Treasury.

P. S.—I herewith transmit a table showing the general results of the receipts and disposal of merchandise within the United States for the year ending the 30th of June, 1865, and a table showing the value of imports and exports in the various collection districts of the nation for the same period.

N. SARGENT, Commissioner

Statement exhibiting the transactions in relation to internal and coastwise commercial intercourse during the fiscal year ending June 30, 1865.

OFFICE OF COMMISSIONER OF CUSTOMS, Treasury Department.

N. SARGENT, Commissioner of Customs.

٠,

REPORT ON THE FÍNANCES.

REPORT OF SUPERVISING ARCHITECT.

TREASURY DEPARTMENT,

Office of Supervising Architect, November 11, 1865.

SIR: The operations during the year ending September 30, 1865, on the various public buildings under the direction of the Treasury Department, and committed to the charge of this office, have been limited, and, with some few exceptions, mostly confined to repairs and alterations. No new buildings were commenced, and, in consequence of the failure of appropriations asked for from the last Congress, works had to be stopped; as, for instance, the work of alterations of the Cincinnati, Ohio, Philadelphia, Pennsylvania, custom-houses, and the completion of the Dubuque custom-house.

The following works were completed during the year: the United States courthouse at Baltimore, Maryland, the work on the government warehouses and wharves on Staten island, New York, and the new roof of the Windsor, Vermont, court-house.

Proposals were invited for the construction of a new custom-house at Portland, Maine, for which an appropriation of \$50,000 had been made, and for the alterations of the Louisville custom-house; but the offers received in both cases exceeded the available means so much that no action was taken.

As stated in the last report of the supervising architect, the marine hospital at Chicago, Illinois, was sold for the sum of \$132,000. Many efforts were made to procure another suitable site, and a variety of plans for a new hospital were prepared in this office; but as the negotiations for the purchase of another site have hitherto failed, nothing was done towards the erection of a new hospital.

The various galvanized iron roofs, and the heating apparatus of many of these buildings, have been a source of much serious complaint, perhaps more than ever before. It is to be hoped that the next Congress will grant such means as to gradually remedy these evils.

On the 1st of October, 1864, the aggregate balance of appropriations not withdrawn from the treasury amounted to \$1,697,624 04. The appropriations becoming available during the year amounted to \$31,911 53; and from proceeds of sale of old Chicago marine hospital, \$132,000, making an available amount under the control of this office of \$1,861,535 57 for the year ending September 30, 1865. The expenditures during the year amounted to \$742,316 16, leaving a balance on the 30th of September, 1865, of \$1,119,219 41.

Treasury extension.-In consequence of the failure to provide suitable accommodations for the State Department, no progress was made in the continuation of the north wing of the Treasury extension. A large amount of materials, however, was received in anticipation of the work, and will be on hand, ready, whenever the old State Department may be removed, and Congress provides further means for the prosecution of the same. On account of the pressure for room, an additional attic over the old building was constructed; the old basement rooms remodelled and made available for office purposes; an additional story built on the building on the corner of Seventeenth street and New York avenue; and the building on the corner of Fifteenth and G streets remodelled for the accommodation of the Internal Revenue office. The expenditures for the above work, together with those for furniture, repairs and alterations of the Treasury building generally, were large, and have not as yet been refunded. The temporary diversion of funds from the purposes for which they were appropriated may be justified by the exigencies of the times, but it is to be desired that the same may not occur again. The clerical force of the department is still increasing, and the Treasury building, large as it is at present, does not afford proper accommodations for the whole force; and the early completion of the north wing is not only a desideratum, but a matter of necessity. The construction of that

section, with a vast amount of materials, and all the necessary tools and appliances for the work on hand, could be completed in a comparatively short period; and I think that an additional appropriation of \$500,000 would be sufficient for the purpose. It is also thought that temporary accommodations for the State Department may be had more readily now than during last winter. The urgent requirements of the department for more room, and the advantages to the work that will result from its early resumption and completion, commend the same to special and favorable consideration.

Buffalo custom-house.—A new hot-water heating apparatus, at a cost of \$11,473 75, was put in this building, and completed during last winter. It was tested during several months of the severest winter weather of last year, and proved to be fully and generally satisfactory.

Cincinnati custom house.—'The operations on the work of alterations of this building had to be suspended (as already stated) on account of the appropriation being exhausted. Subsequently an arrangement was made with the former superintendent of the work for completing certain parts of the same, the payment to be deferred and to be dependent on the appropriations that Congress may make for the purpose. This office is not well advised of the present condition of the building, and I am unable to make a detailed statement of the liabilities and requirements of it. I am informed by the late surveyor of Cincinnati that \$20,000 will be required to liquidate debts and complete the alterations.

Dubuque custom-house.—For the same reasons as in the foregoing case, the work on this building was suspended. An expenditure of \$2,090 from the fund for preservation of public buildings was authorized to complete the first and second stories of this building and render them habitable; by this means a rent of about one thousand dollars for the accommodation of the post office and custom-house will be saved. This work has been carried on well and economically, though it is thought that the business of the place did not require such a large structure as the one erected. No agent of this office having recently visited and inspected the building, I am unadvised of its precise condition at present. The amount required for completing the building, grading, and enclosing the grounds will not exceed \$15,000.

Louisville custom-house.—Nothing was done during the past year towards the alteration of this building, for which an appropriation of \$15,000 had been made. Proposals for the work were invited, but those received largely exceeded the amount of the appropriation. A new set of plans for remodelling the building was recently submitted by the assistant architect, A. B. Mullett, esq., and approved by the Secretary, and it is confidently expected that its cost will come within the amount of the appropriation, at the same time disposing of the available space of the structure more judiciously and satisfactorily than was done by the former plans.

Philadelphia custom-house.—The alterations of this building have been vigorously prosecuted, and were carried so near to completion that the rooms assigned to the assistant treasurer have been occupied by him. Considerable liabilities were incurred exceeding the appropriation made for the purpose. It will require \$30,000 for the payment of the above debts, and for the completion of the building.

Baltimore court-house.—This building has been finally completed and furnished, and proves to be a conspicuous ornament to the city of Baltimore. The work was, throughout, performed faithfully and well. It was begun in the fall of 1860 and suspended in May, 1861, and resumed, by order of the department, in 1862; since then it has been impossible to prosecute it vigorously, partly on account of invasions of the State of Maryland by rebels, partly on account of the scarcity of laborers, and partly on account of the great difficulty of procuring materials. The building was thus constructed during a period when the prices of labor and materials were far higher than at the time when the contract was made—in many instances more than double; and, as both the suspension and resumption of the work were made by order of the government, the Secretary considered that the contractor was entitled to an equitable adjustment of his losses, but as yet has not taken any definite action in the matter.

Windsor court-house.—The new slate roof of this building has been completed, and the building otherwise repaired, at a cost within the amount of the appropriation made for the purpose.

Staten Island.-The work of repairs of the United States government warehouses and wharves has been completed during the current year, and was accepted by the late chief of this bureau, I. Rogers, esq. In consequence of a diversity of opinion as to the character and value of the work furnished by the contractors, different from and adverse to that of the late supervising architect, the Light house Board refused to pay the amount which they were to transfer in favor of the above work for the cession and improvement of a portion of the revenue depot grounds to the light-house establishment. They contend that the work of improvement on their ground, as well as on all the rest, was not in accordance with the requirements of contracts and stipulations. The examination of the same was submitted to a commission of experts, who reported unfavorably to the opinions of Mr. Rogers, and payment (amounting to $$26,599 \ 12$) has ever since been withheld from the contractors. I am personally unacquainted with the work, but am confident that the same has been condemned with more severity than the case required. The controversy about the work is mainly due to a neglect in properly recording the changes and deviations from the original contract and specifications, which were found to be necessary. The work has, however, had a severe practical test during the past summer, and, as far as I am aware, has answered the purpose very well.

Appended will be found a table showing the amounts available for each work on the 30th of September, 1864; the additional appropriations made and becoming available; the disbursements made during the year ending September 30, 1865; and the additional appropriations required.

The assistant supervising architect, A. B. Mullett, esq., is at present on a tour of inspection of the southern custom houses, &c. Until his return it will be impossible to state with accuracy their condition or the amount of repairs required.

All of which is respectfully submitted.

I have the honor to be, very respectfully, your obedient servant,

B. OERTLY,

Acting Assistant Supervising Architect.

Hon. HUGH McCulloch, Secretary of the Treasury. Tabular statement of custom-houses, marine hospitals, court-houses, post offices, and miscellaneous buildings, showing the amount available for each work September 30, 1864; the additional appropriations made by the 38th Congress, 2d session; the amount available September 30, 1865; and the disbursements made from September 30, 1864, to September 30, 1865.

REPORT ON THE FINANCES.

je Lei

REPORT OF THE LIGHT-HOUSE BOARD.

TREASURY DEPARTMENT,

Office of Light-house Board, Washington City, Oct. 26, 1865.

SIR: I have the honor respectfully to submit a report of the operations and condition of the light-house establishment for the fiscal year ending 30th June, 1865.

In the first light-house district, embracing all lights, &c., from the northeastern boundary of Maine to Hampton harbor, New Hampshire, repairs more or less extensive have been made at the following named stations: Wood island, Goat island, Saddleback Ledge, Deer Island Thoroughfare, Edgemoggin, Mount Desert, Libby island, Little river; and works of needed renovation are in progress at Seguin, Hendrick's Head, Burnt island, Manheigin, Negro island, and Dice Head; and it is the opinion of the board that the present condition is such as to warrant the belief that but few large works of repair or renovation need be undertaken in this district during the coming year. There yet remains to be done much that is desirable, but little that is indispensable.

The measures for facilitating the entrance into Portland harbor, viz., increasing the height of the light at Portland Head and substituting a large secondorder lens for the fourth-order there in use, thereby greatly augmenting the range of the light, have been completed during the year and have been found to accomplish the desired object. It is believed now that the entrance to this harbor is so completely lighted that navigation in and out is attended with little or no danger. The keeper's dwelling at this station has been thoroughly repaired. In order still further to identify the two lights at Cape Elizabeth as day marks, four broad horizontal red stripes have been painted on the easterly tower, and on the westerly tower one vertical stripe.

The buoyage of the district has been maintained in an efficient condition, a service requiring, in this region of rapid currents and high tides, constant vigilance. The attention of the board having been called to the necessity of additional buoys to mark the dangerous ledges, Grindstone, Sheep Island, and Inner Bay Ledges, in Penobscot bay, the required examinations were made, resulting in the determination of their usefulness, and suitable buoys have accordingly been placed.

The necessity of supplying some more efficient system of fog-signals than at present employed, to aid the navigation of this rock-bound coast, has been seriously impressed upon the board, and careful investigation of the subject has been made. The result has been deemed sufficient to warrant the board in estimating for a sum to cover the expense of substituting the apparatus which may prove to be most effective.

Beacons consisting of casks on masts have been placed on Fiddler's Ledge, Harbor Ledge, and Portersfield Ledge, and spar beacons have been set at Winslow's Rocks and Ames's Ledge.

A steam budy-tender has been provided for this district in place of the two sailing-vessels heretofore employed, and which were reported to require extensive and costly repairs.

The second light-house district embraces the coasts from Hampton harbor, New Hampshire, to Gooseberry inlet, Massachusetts. The light-house service in this district has received especial attention, and is now in a satisfactory condition. Repairs and renovations have been made at Cape Cod, (Highlands,) Long Point, Billingsgate island, Nansett, Mayo's beach, Monomoy Point, Bass river, Bishop and Clerks, Great Point, Brant Point, Nobsque, Dumpling Rock, Clark's Point, Hyannis, Sandy Neck, Chatham, Cape Ann, Marblehead, Ten Pound island, Bird island, and other stations.

The structures standing at the discontinued light-house station at Point Gam-

mon, being found to be in a rapid course of demolition from lawless persons, fishermen and others, it was deemed prudent to have them taken down and removed to a place of greater security. Some of the materials, lumber, &c., have been used in the erection of buildings needed at other light-stations.

Repairs are now in progress at Gay Head, Race Point, Sankaty Head, and other stations, which, when completed, will leave the district, in respect to the structures, in a condition requiring but little attention during the next year.

A new spar-beacon, forty-five feet long; bearing a conspicuous day-mark, has been erected at Hardy's Rock, in place of the former structure, carried away by storms.

Extensive repairs have been made to the stone beacon at Great Fawn bar, which the action of ice and storms had rendered insecure.

The various fog-signals in the district have received careful attention, and are now in as good condition as their character will permit.

The last remaining old-style lantern in the district, that at Clark's Point, has been removed and an efficient and modern structure put up, and new and improved lamps have been introduced throughout the district.

The buoyage of the district has been well attended to and kept at all times, so far as circumstances would permit, in an efficient condition.

An inspection has been made of the light-house in the exposed position of Minot's Ledge, and its condition found to be perfectly satisfactory.

A steam-tender has been provided for this district, which is expected to do the work heretofore performed by two sailing-vessels, better, more promptly, and at less expense.

The inspector reports that the light-vessel service of the district during the past year has not been attended with a single casualty requiring the removal of any one of them from its station.

In the third light-house district, embracing the coasts from Gooseberry Point, Massachusetts, to Squam inlet, New Jersey, and including Lake Champlain and Hudson river, much has been done during the past year in the way of repairs and rebuilding, but as many of the structures, which are old, have not been planned on correct principles, much remains still to be done. The extensive commerce, foreign and domestic, traversing this district, demands that the system of lighting and buoyage should be as nearly perfect as possible.

Repairs and renovations, more or less extensive, have been made at the following stations: Newport harbor, New London, New Haven, Esopus Meadows, Saugerties, Stuyvesant, New Baltimore, Schodack channel, Van Wies Point, Block island, Princess bay, Elm Tree, Sandy Hook, West beacon, Fire island, Stratford River beacon, Bridgeport beacon, and Black Rock beacon.

At Rondout and Coxsackie, the light-houses require repairs and the sea-walls to be rebuilt. Special estimates of the cost have therefore been submitted to Congress. Other and less expensive works are required at Beavertail, Four-mile Point, Bergen Point, Passaic river, Black Rock, and Sandy Hook; and it is expected that the current appropriation for repairs and incidental expenses will meet the cost.

Special estimates are submitted to meet the cost of rebuilding the beacons for Norwalk island, Southport and Elbow beacon, which have been destroyed by the action of ice.

The failure of Congress at its last session to act upon the estimates submitted for operations at Warwick, Sands Point, and Nayat Point, in common with all other estimates for the light-house establishment, rendered it necessary to suspend the proposed works, and the estimates are again commended to the attention of Congress.

The beaconage and buoyage of the district have received careful attention, and all damages and losses incurred during the year have been repaired as far and as promptly as practicable.

13 F

The fog-signals of the district have received due attention, and the board, aware of the importance of rendering them as distinctive as possible, have set on foot a series of experiments, in order that the most effective appliances for warning the navigator in thick weather may be adopted.

A steam vessel has been provided for the district to take the place of the two sailing light-house and buoy-tenders now employed, which it is expected will perform the service more effectively, with greater despatch, and at less cost.

The arrangement entered into by which a designated part of the lot of land on Staten island ceded to the United States by the State of New York was to be transferred to the Light-house Board, has not been yet completed. The acting engineer in the service of this board, in a recent report, says: "The grounds are still occupied by the cotton agent. * * * There is a prospect of the premises soon being in our hands again." There is much to be done to these premises to place them in the condition contemplated by the Secretary of the Treasury, and by this board, at the time the arrangement was made. The facilities which the use of this depot will afford the board in its operations; when it shall be placed in the condition contemplated, are much needed, and it is respectfully requested that directions to complete the work may not be delayed longer than is absolutely necessary. (See appendix.)

Congress having made an appropriation of \$1,000, approved June 30, 1860, for "a survey to determine the proper site of a light-house at or near the Sow and Pigs, Buzzard bay," the coast survey was requested to do the work. A survey had been made in 1853, and careful measurements show that no change has taken place since. The board has not yet decided that the light-house at Cuttyhunk does not, in conjunction with the system of buoys on the reef itself, subserve all the requirements of commerce.

The fourth light-house district embraces the coasts from Squam inlet, New Jersey, to Metomkin inlet, Virginia, including Delaware bay and tributaries. In this district every essential repair and renovation has been made that the funds at the disposal of the board would allow. The deficiencies and wants of the district have been brought to the attention of Congress, and special appropriations asked for to meet cases which cannot be put off without incurring greater ultimate expense. Among these cases, that of Cohansey light-house is especially urgent. The necessity for providing an effectual protection to the work against the steady encroachment of the water, which has been several times urged upon Congress, is now more pressing than ever. A special estimate is therefore submitted to cover the cost of suitably banking in the site.

The measurements of the beach at Absecum light-house to determine the reported encroachment of the sea at that place have been continued semi-monthly during the past year. The changes in the ordinary high-water line so far have been so slight as not to justify any apprehension of immediate danger to the light-house. The observations, however, will be continued, and all necessary measures which may be required for the protection of the structure will be promptly taken.

Small but essential repairs have been made at Barnegat, Absecum, Cape May, Brandywine, Ready Island, Bombay Hook, and Fenwick's Island light stations.

Under authority of act of Congress a new beacon-light required at Cape Henlopen, in place of the old structure, in consequence of change of shore-line, has been erected. The new beacon-light is a screw-pile structure, built near the point of the cape. The old beacon was taken down, and some of the materials have been used to protect the site of the new structure. The remainder has been sold at public auction.

The increasing dilapidation of the present tower of Assateague has obliged the board to take measures for building a new one, as authorized by act of Congress. The execution of this work has been postponed, however, on account of more pressing wants in other branches of the service. It is now believed that there should be no further delay, and measures are in progress to build a new first class tower for this important sea-coast station. It is found, however, that the sum available for this purpose is insufficient, on account of the rise in the price of materials and labor, and an estimate to cover the additional cost is submitted.

The buoyage and beaconage of the district is in a satisfactory condition.

The fifth light-house district embraces the coasts from Metomkin inlet, Virginia, to New River inlet, North Carolina, including Chesapeake bay and tributaries, and Albemarle and Pamlico sounds.

It was only late in the year that the greater portion of the southern part of this district was brought permanently under the control of the government.

In the northern part the service of the district has been well attended to, and the various aids to navigation maintained in an efficient condition.

In James river the screw-pile light-houses at White shoals, Point of Shoals, and Deep Water shoals, which had been but slightly injured by the enemy, were temporarily put in order, and provided with new fog-bells and illuminating apparatus. The light-house at Jordon's Point, near City Point, was thoroughly repaired and re-established, sundry requisites being provided.

The light has been restored at Stingray Point, after making certain needful repairs to the screw-pile structure, which, though plundered of all movable articles, was but slightly injured. At New Point Comfort light-station the required repairs were much more extensive, and involved much time and expense. A new lens has been provided, and the light re-established.

Owing to the failure of the appropriation for light-house purposes during the last session of Congress, it becomes necessary again to represent the urgent necessity of building a new light-house for Sharp's island, Chesapeake bay. The unusual absence of storm-tides and heavy northwest gales during the past year accounts for the unexpected preservation of the present structure. The sea, however, is gradually but surely undermining the bluff, and has already reached one corner of the building, leaving no doubt as to the result. The estimate of last year for this work is therefore repeated.

The tram-road used in the construction of the new light-house at Cape Charles, being of no further service at that place, has been taken up and the material shipped to Baltimore.

Such slight repairs and renovations as were required in the district have been made, and the disposition of beacons and buoys there met every requirement of commerce.

In the waters of North Carolina the various aids to navigation which, at the date of the last report of the board, were in condition to receive its attention have been put in effective operation.

Immediately upon the close of the rebellion an experienced engineer was sent to those waters to take charge of the work of re-establishing such lights, &c., as the interests of commerce might be found to demand. A large quantity of illuminating apparatus, and other light-house material, which had been abstracted by the enemy, was recovered, and such portions as could be at once made use of were so applied, and the rest sent north for repairs and refitment.

Temporary lights for the accommodation of army transports and navy vessels were, upon the fall of Fort Fisher, established at the entrance to Cape Fear river and at Beaufort, but when the necessity under which they were placed ceased to exist the lights were discontinued.

In view of the fact that commerce has not as yet been re-established as it existed in 1860, the channels in many parts of the coast having, since that time, undergone material changes, it is proposed only to restore such aids to navigation on the southern coast as shall be deemed essential to the trade developed to those ports. It is, moreover, not at all improbable that commerce may seek new channels, involving the necessity of an entirely new arrangement and new kinds of aids.

The work of re-establishing lights of undoubted utility will be pressed forward as soon as the means are supplied, an estimate of which is submitted.

The excavation of iron ore at Lazaretto Point, near Baltimore, has progressed during the year, but not so rapidly as had been desired, the scarcity of labor having caused the delay. Up to this time some 1,291 tons have been excavated and sold, the net proceeds, \$2,013 96, having been deposited in the treasury of the United States. With the present abundance of labor, it is expected that much greater results will be attained during the next year.

An appropriation was made June 20, 1860, for a light-house at the mouth of North river, Albemarle sound, North Carolina, but because that region was open to raids by the enemy it was not deemed prudent to take any steps towards building the structure, and the appropriation was suffered to lapse into the treasury. The necessity for a light-house at that point having been again strongly urged upon the board, an estimate to cover the cost is submitted.

The sixth light-house district embraces the coasts from New River inlet, North Carolina, to Cape Canaveral light-house, Florida, and within its limits the few aids to navigation which had been left unharmed by the enemy have been maintained during the year in useful operation. Measures of renovation have been necessarily confined to such temporary works as would serve the requirements of a recently developed commerce.

The approaches to Charleston were thus' lighted immediately after the occupation of that place by the United States forces, but it was found, upon examination, that an almost total change had taken place, leaving no channel in the harbor as it was in 1860, and opening new ones. Under this altered state of things it became necessary to establish lights temporarily at such places as would be useful guides through existing channels, and to omit all others.

The light-vessel formerly placed off Rattlesnake shoal has been moored at the entrance to Charleston bar, and it is recommended that this position be made permanent, as the vessel will thus answer the double purpose of warning vessels from Rattlesnake shoal, and at the same time form a channel range over Main Ship bar. She will also serve as a guide for vessels approaching from the southward to clear Stono breakers.

A light-vessel equipped from materials collected from Charleston and Port Royal has been placed at the wreck of the monitor Weehawken, which lies directly in the channel way, and a temporary beacon-light has been established on a house on Sullivan's island. These two lights now mark the entrance over the bar and the channel up to the Weehawken. It is recommended that this temporary beacon-light be made permanent, and a suitable structure erected for it.

Temporary structures with steamer lenses occupy the sites (nearly) of the former lights upon Fort Sumter and Castle Pinckney, and answer a good purpose.

The gas-light at White Point Garden (battery) was left by the rebels in tolerably good order, and has been re-established.

The range-lights for Port Royal entrance have been continued. The Bay Point beacon-light (part of this range) is built on a large barrack erected by the rebels in 1861, slightly built, and already beginning to show signs of decay. This important harbor requires a light of the second or third order, and a special appropriation to cover the expense of the establishment of such a light is submitted.

Typee beacon has been relighted, and temporary beacon-lights established to aid the navigation of Savannah river. The re-establishment of lights at the important stations of Georgetown, Cape Romain, Typee, St. Augustine and Cape Canaveral, has occupied the consideration of the board, and preliminary steps to this end have been taken. The construction of the iron tower for Cape Canaveral was suspended at the breaking out of the war, in the contractor's hands, with the understanding that the work should be resumed on notice being given by the board. Notice has been given accordingly, and the contractor has signified his intention to finish the tower as soon as possible.

The entrances to the following places have been buoyed: Winyah bay and Georgetown, (Battle Channel,) Bull's bay, Charleston, Stono river, North and South Edisto, St. Helena sound, Port Royal, Tybee and Calibogue sound, Warsaw sound and Wilmington river, Ossibaw sound and Ogeechee river, Sapelo sound, Doboy sound, St. Simon's sound, Fernandina and St. Mary's, St. John's river, St. Augustine.

In the seventh light-house district, which embraces the coast of Florida, from St. Augustine to Egmont key, the service has been carefully attended, and the lights and other aids to navigation which had been undisturbed by the enemy have been maintained in an efficient condition. Those which had been injured will be re-established as soon as practicable, energetic efforts to this end being in progress.

The important light stations, Cape Florida and Jupiter inlet, have received the especial attention of the board, and an experienced agent has been sent to that district with instructions to use every exertion to re-light those points, and the board has reason to hope that by next spring both of these lights will be again in operation.

The buoyage of the district has been kept up to the standard of efficiency so far as the limited means at the disposal of the board would permit.

In the eighth and ninth districts, embracing the Gulf coast from Egmont to Rio Grande, Texas, the work of re-establishing lights and other aids to navigation discontinued by the enemy has been kept prominently in view, and no effort has been spared to accomplish, so far as the means at the disposal of the board would permit, this desirable result.

The lights, &c., reported last year as having been restored to operation, have been maintained in an efficient manner, but at great cost, in consequence of the peculiar state of the markets in that region, the scarcity of skilled labor and the high price of materials forcing upon the service in these districts an expense entirely disproportioned to that of other districts.

The following stations have been repaired and refitted during the year, and are now in operation: Ship shoal, Shell keys, Southwest reef, St. Joseph's, Round island, (Miss.,) Sand island, Bolivar Point and Padre island; and others are in course of refitting, and it is expected that in a few months most of those unlighted will be in full course of useful operation.

• The buoyage of the district has received careful attention, and the board has great reason to congratulate itself upon having under such difficulties accomplished so much towards a restoration of needed facilities to the commerce of the Gulf.

In the tenth and eleventh districts, which embrace all lights from Lakes Erie and Ontario, and rivers St. Lawrence and Niagara, the various aids to navigation have been kept generally in good order, and the disposition of buoys and beacons leaves but little to be desired. No complaints in this respect have been received. The inspector bears testimony to the general attention to duty displayed by the keepers and assistants.

The work of rebuilding the light-house at Green island (destroyed by fire 1st January, 1864) has been pressed forward, notwithstanding the failure of Congress to provide the funds specially requested for the work, and a light was exhibited from the new structure on the 1st July, 1865. In the erection of this light-house a new and more suitable site was adopted. The expenses of this construction were very heavy; yet, as the work was of imperative necessity, the general fund for repairs was drawn upon to meet the bills. A special estimate of this work is submitted, out of which it is proposed to reimburse the general fund for the amounts drawn from it.

The erection of the range-lights authorized by act of Congress for Maumee bay has not advanced during the year to the extent hoped for by the board. The delay has been occasioned partly by the difficult and complicated questions involved, but mainly on account of the impossibility of procuring the necessary land at private sale at prices warranted by the circumstances of the case. Resort was necessarily had to a tedious suit at law, which has just resulted in securing the requisite land to the government at reasonable rates. The work will be pressed forward to completion.

Upon an examination of the light-house at Mamajuda, it was found necessary to rebuild it, the present structures not being thought worthy of the repairs required to make them habitable. Temporary measures of protection have been adopted, and a special estimate to cover the cost of rebuilding is submitted.

The dilapidated condition of the light-houses at Galloo island and Turtle island has been heretofore reported, and special estimates to cover the cost of necessary repairs are again submitted. These stations are very important, and it is desirable that the necessary funds should be provided as soon as possible.

The light-house tower at Presque Isle having been reported to require immediate attention to preserve it from falling, a special examination was made. It was found to have settled very considerably; the masonry, moreover, being cracked, with a tendency to further insecurity. It is recommended that this tower be taken down upon the close of navigation this season, and rebuilt upon a proper and more suitable site. A special estimate to cover the cost is submitted.

The temporary range-lights at Cedar Point, Sandusky bay, referred to in the last annual report as having been established, have been continued, and the importance of rendering these aids permanent is such as to warrant the board in submitting a special estimate designed to cover the cost of suitable structures.

Many other works of repair in this district of less extent than the foregoing require attention. It is proposed to complete them as time and opportunity permit.

The eleventh light-house district embraces Lakes St. Clair, Huron, Michigan, and Superior, and Green bay and tributaries.

The lights and other aids to navigation within its limits have been maintained in an efficient condition. Various extensive works of renovation have been in hand during the past year, some of which have been completed. Others are still in progress; while many, from the large expense involved, must necessarily await congressional action.

The buoys, likewise, have been well attended.

The works of repair at Windmill Point light station, in contemplation at the date of the last annual report, have been completed, and a new distinctive illuminating apparatus will be put in operation on the opening of the next season of navigation.

The necessary timber for rebuilding the beacon and pier at Kenosha, Wisconsin, has finally been procured after much delay, and the work will be prosecuted to insure, if possible, the completion of the structures during the present season of navigation.

The requisite materials, timber and ballast stone, for the authorized structures at Racine, have been delivered, and the work is being vigorously pushed in order to secure it before the fall gales set in.

The extensive works reported last year as being in progress at Milwaukie have well advanced during the year, and it is expected that the light-house will be nearly completed by the close of navigation.

The light-house at Point Peninsula, between Big and Little Bay de Noquet,

Michigan, for which an appropriation was made by Congress July 2, 1864, has been completed and lighted.

Efforts have been made to establish a light at Sand Point, as authorized by act of Congress of July 2, 1864. A suitable sight was selected, but up to this time the holders of the land have been unable to convey a valid title to the United States. This being, under the law, a pre-requisite, nothing could be done in the matter beyond the preparation of plans and estimates for the work.

A system of range-lights for entering Copper harbor, authorized by act of Congress of June 20, 1860, has been completed and the lights exhibited. The necessary land at Fort Wilkins for the purposes of these range-lights, together with the valuable buildings which occupy it, were, by the courtesy of the War Department, transferred to the Light-house Board.

In the last report reference was made to works then in progress for securing the foundation of the light-house at La Pointe, Michigan. It has been found that the movement of the sand was not arrested by the measures then adopted, and instructions have been given to have the entire surface of the ground covered with broken stone.

The light-house at Minnesota Point having been found to require considerable repairs, prompt measures to this end were accordingly taken.

The special estimates submitted last year for necessary protective works for the light-house at Waugoshance shoal, Straits of Mackinac, having failed to receive the sanction of Congress, nothing could be done toward arresting the increasing dilapidation and decay at this station, which, in point of importance to the interests of navigation, is second to none in the lake region. The pier surrounding the light-house, and designed for its protection, is in course of rapid destruction, and when once destroyed, the light-house must give way. Because of the exposed position, the works required at this point are of a very expensive character, and after a careful study of the whole subject, the board is of opinion that, to carry out the work in a substantial and satisfactory manner, the sum of \$200,000 will be required, but has thought it expedient to estimate for only a part of this amount, (\$90,000,) to be expended during the year ending June 30, 1866.

A fog-signal is more needed at this point than at any other on the lakes, being the turning point of all vessels passing through the Straits of Mackinac. A special estimate for its establishment is submitted.

The necessity for establishing a system of range-lights at St. Clair Flats has been brought to the attention of the board, and has received careful consideration. Deeming these ranges of manifest usefulness, a special estimate is submitted.

The importance of substituting new and efficient fog-signals at various stations in this district, in place of the bells now in use, has been developed, and a special appropriation is asked to cover the expense.

A light-house at or near old Fort Mackinac is much needed to enable vessels to pass through the straits at night, and McGulpin's Point, about two miles distant, is designated by the engineer of the district as the most suitable location. A special estimate is accordingly submitted.

The most salient point on the eastern shore of Lake Michigan, between Point Betsey and Muskegon, is known as Grand Pointe au Sable, and is unmarked by night. It is a principal landmark for day navigation, and it would seem that the interests of commerce demand that it be suitably lighted. A special estimate is submitted.

The extension of the pier at Chicago during the past summer for a distance of 450 feet into the lake renders it necessary to build a small beacon-light at the end of the pier to mark it.

The light-house tower at Kenosha is found to need extensive repairs. The inner wall is literally crumbling to pieces, and the outer wall also shows several cracks, caused by the action of frost, as in the case of the tower at Presque Isle, Pennsylvania. A special estimate of the cost of these repairs is submitted.

A light-house at Eagle Bluff, on the east coast of Green bay, is much needed to enable steamers plying between lake ports and the port of Green Bay, which use the east channel almost exclusively, to pass between the Little Sister island and the Frying Pan shoals. It is the most prominent bluff on the western shore of Green bay. For the erection of this light a special appropriation is recommended.

The Grand Island light-house was found, upon examination, to be in a wretched condition, on account of the inferior materials employed in its original construction. This structure, which is difficult of access, should be rebuilt in the most substantial manner, so that no further repairs will be required for many years to come.

The existing appropriation of \$6,000 for lights at the two entrances of Grand. Island harbor, Lake Superior, having been found insufficient to carry on the work, an additional appropriation is respectfully recommended.

A special estimate is also submitted to cover the cost of expensive repairs and renovations found to be necessary at Marquette light-house station.

The Huron islands, Lake Superior, lying as they do in the track of vessels bound to the Portage, are a constant source of anxiety to the navigators, wrecks having frequently occurred at this point. The large and rapidly increasing commerce passing this point warrant the establishment of a suitable light and fogsignal, for which an appropriation is accordingly recommended.

A pier having been built at the mouth of Portage river, and the channel straightened and deepened, a small light is needed to mark the entrance.

A special appropriation is likewise recommended for the establishment of a light-house to mark the channel between Keweenaw Point and Manitou island, Lake Superior, a dangerous passage, at present unmarked by a light, which is deemed very necessary.

Estimates of expense of certain essential works of rebuilding at Copper Harbor and Ontonagon light-stations are submitted.

A special committee of the board was sent to the northwest lakes to ascertain the wants of commerce in that locality. The examination was particularly directed to Green bay and surroundings, and a special estimate to cover the cost of certain necessary aids to navigation, which will comprise a third class lighthouse on Mahnomah or Chambers island, range-lights at entrance to Fox river, a beacon on Peshtego shoal, &c., is submitted.

The twelfth light-house district embraces the entire Pacific coast of the United States. The various lights and buoys have been kept in an efficient condition, and no complaints on this score have been received.

The failure of Congress to provide at the last session for certain new works for which special estimates had been submitted has confined the engineering work of the district to ordinary repairs and renovations, and preparations for the new works when the necessary special appropriations shall be available.

The buoyage of the district has been well attended to.

The new light-house at Ediz Hook has been completed and lighted.

Having thus given a detailed account of the operations and condition of the light-house establishment in the several districts, there remain but a few matters of general importance to notice.

In anticipation of the ultimate overthrow of the rebellion, and the consequent necessity of providing as promptly as possible for a sudden revival of trade to southern ports, the board took measures to provide ready for use when required, a number of lanterns of the various classes, the lenses having previously been provided as heretofore reported. These, having been constructed, were, after careful inspection, received and stored.

The board has had good reason to congratulate itself on having taken this

timely precaution, being thus enabled to hasten materially the re-establishment of lights at many stations where the lanterns had been destroyed by the enemy.

In like manner the board provided for a supply of iron buoys of the several classes and sizes, being thus prepared, on the restoration of trade to any particular port, to re-establish the necessary buoys. These buoys are now in course of construction by contract, at favorable rates to the government.

Upon the close of the war, instructions were given to the acting light-house engineers in the southern districts to inquire for, and recover if possible, the light-house property, comprising illuminating apparatus and other material which had been scattered during the hostilities. This work has been, in a great measure, successfully accomplished, and mainly by the action of the War Department, through which much valuable material has been reclaimed. The apparatus recovered has been forwarded to New York for repairs, being in most instances considerably damaged. That which was fit for immediate use has been either so applied or stored until the towers were in a condition to receive it.

Under sanction obtained from the department an arrangement was made with the Navy Department for the transfer to this board of some small steamers which had been advertised for sale, to be used as light-house and buoy tenders. These steamers, six in number, are to take the place of a larger number of small and inefficient sailing vessels. This arrangement, though attended with some immediate additional expense, will ultimately prove beneficial and economical.

The board has, during the year, given its earnest consideration to the use of lard oil. A large quantity was purchased under contract and distributed to the lights which are fitted with lamps adapted to its use, and the board has yet to record the first case of well-grounded complaint on the part of keepers of the lights so produced, or on the part of mariners. The board is therefore much encouraged in its hope of introducing a cheaper and more certain article of illumination than sperm oil, which has now reached a price far beyond the reach of ordinary appropriations, while the continuance of the supply is a matter of great uncertainty. It is true that lard oil is at present unusually scarce, yet this is only a temporary condition, which, in consideration of the abounding means of supply, cannot long exist.

Very respectfully,

W. B. SHUBRICK,

Rear-Admiral, Chairman.

ANDW. A. HARWOOD, O. M. POE, Secretaries.

APPENDIX.

LIGHT-HOUSE OFFICE, 3D DISTRICT, New York, October 25, 1865.

SIR: In compliance with your instructions of October 3, I have the honor, in connexion with the acting light-house engineer of this district, to make the following report of the condition of the light-house premises, sea-wall, &c., at Staten Island.

The grounds are still occupied by the cotton agent. The closing sales, however, have taken place, and there is prospect of the premises soon being in our hands again.

Referring to my annual report of this year, you will perceive that the boundary fence, dividing the light-house grounds from those of the revenue depot, is about one-half completed, and stands as the contractors left it—thirty feet six inches within the line assigned as the southern boundary of the light-house grounds by order of the Treasury Department, and encroaches to that extent upon our premises, viz., taking away a strip of land 630 feet in length by thirty feet six inches wide.

The only approach to the light-house grounds, except by courtesy, is by water. On the south is the revenue depot; on the north and west are the State lands. Access to the public street can be obtained on the north by the purchase of the strip of land which lies between the light-house grounds and South street, Tompkinsville, twenty-nine feet and one-half inch wide. Negotiations for the purchase of this strip of land have been entered into, and, as the board are aware, the land commissioners of the State have placed it at the disposal of the United States for the sum of \$6,000.

The sea-wall, which was intended to protect the whole water front on the east and north, is, and was received, in a very defective condition from the hands of the contractors. It is not high enough by two feet. This wall was thrown down during the first gale after its completion, and rebuilt in the same manner as at first, and is now in a falling condition; the stones are not laid in regular courses as required, nor are they of a suitable size, or well bedded. The wall is entirely unfit to keep the filling from washing out; large quantities of earth have gone through and filled the basin in front, so that the buoy tender cannot enter or leave except at high tide.

The sea-wall bounding the water front on the north, through some error in establishing the boundary, is placed thirty-three feet too far to the south of the true boundary line. This wall, if removed to its proper position, will leave a space to be protected on the east for thirty-three feet by a continuation of the sea-wall on that water front.

The grading of the grounds has not been completed in accordance with the contract. The new filling has not been gravelled, and that portion which has sifted through the walls has not been replaced. The grounds in front of the storehouse need filling in with two feet of earth to bring them to the proper level of the sea-wall when raised.

The stone pyramids supporting the landing wharf were left without repairs by the contractors; some have entirely disappeared—others are in a falling condition, so that it has become a necessity to drive piles to support the wharf. Unless soon repaired the other stone pyramids will likewise fall into decay.

The roadway connecting the landing wharf with the shore is one foot nine. inches lower than the former, and an inclined plane is necessary on this account. The roadway, although constructed in accordance with the contract, (excepting the piles which support it, which are from one to three inches less in diameter than called for,) is too lightly built for the heavy buoy service, and not strong enough to withstand the action of the sea and floating ice in winter. No fenderposts have been provided by the contractors, but were supplied by the cotton agency in part, and by the acting engineer.

No boat-house has been built for the service of the light-house establishment, though one was promised by the supervising architect of the Treasury Department in his letter to Professor Joseph Henry, dated June 24, 1863.

Plans and estimates for meeting the requirements resulting from the present condition of the light-house premises, as stated herein, have been made by the acting engineer, and forwarded to the Light-house Board with my approval; and very full reports relating to the above have been sent to the Light-house Board from time to time by the acting engineer and myself, as well as a report of the special commission appointed by the Treasury Department.

I respectfully submit this report of the present condition of the light-house premises, sea-wall, &c.

Very respectfully, your obedient servant,

L. M. POWELL,

Light-house Inspector, 3d district.

Rear-Admiral W. B. SHUBRICK,

Chairman Light-house Board, Washington, D. C.

REPORT ON THE FINANCES.

REPORT OF THE SUPERINTENDENT OF THE COAST SURVEY.

UNITED STATES COAST SURVEY OFFICE, Washington, October 10, 1865.

SIR: The estimates for the deficiency in appropriations for the survey of the coast for the fiscal year 1865-'66, together with those for the fiscal year 1866-'67, are herewith respectfully submitted; and I have the honor to request that, if approved, they be included in your estimates for appropriations.

In regard to the existence of a deficiency, it is only necessary to recall the fact that the late Congress failed to pass the general appropriation bill in which the items for the coast survey are included. No appropriation was, therefore, made for the fiscal year 1865–'66. The work has been continued out of the unexpended balances of previous appropriations, and some aid of the same nature afforded by the Treasury Department. The appropriations asked for this work had been approved by both houses during the progress of the bill, and the amounts now estimated for are intended to meet the expenditures for the remainder of the fiscal year, upon the same scale of appropriation.

The following is a brief sketch of the progress made during the past year. While the war continued, a number of parties were connected with, and rendered efficient aid in, naval and military operations, as during the preceding year.

efficient aid in, naval and military operations, as during the preceding year. Four parties were attached to the South Atlantic blockading squadron and the military department of the south, by whom a complete resurvey of the entrance to Charleston harbor was effected; a survey of the inside water passages between St. Helena and Port Royal sounds; of Broad river and Whale branch to Port Royal ferry; of Wilmington and Thunderbolt rivers, and the other communications between Savannah and Wassaw and Ossabaw sounds, besides mapping the rebel defences of Charleston and Savannah, and replacing temporary lights, beacons, and buoys, under instructions from the Light-house Board, as fast as the places were reoccupied by the national forces. The entrance to Darien was examined and buoyed, for the transportation of released Union prisoners. Four topographers of the Coast Survey accompanied Sherman's march from Savannah to Goldsboro', and rendered efficient aid in military reconnoissance.

Two parties were connected with the North Atlantic blockading squadron, one of whom, after assisting in the operations against the rebel defences of Wilmington, N. C., made a complete resurvey of both entrances to Cape Fear river, while the other re-lighted and buoyed those channels, as well as that leading into Beaufort harbor, N. C., which at one time was of great importance as a base of supplies. After the close of hostilities the survey of Cape Lookout shoals and the off-shore work on the coast of North Carolina has been continued.

A topographical survey of the north bank of the Potomac river, from the vicinity of Washington to Harper's Ferry, has been made by a party attached to the middle military department, while two others have continued the detailed surveys of approaches to Baltimore and Washington. One topographer was attached to the army operating in the valley of Virginia, and has furnished reconnoissances of the battle-fields of Fisher's Hill and Cedar Creek; another was on duty with the army in Tennessee, and has mapped Lookout mountain and its approaches.

In connexion with the Mississippi squadron. a party of Coast Survey officers, furnished with a gunboat, have made a very valuable reconnoissance map of over two hundred miles of the Tennessee river, from the Muscle Shoals to its mouth; of the lower Ohio, from Paducah to Cairo; and of some ninety miles of the Mississippi river, from Cairo up to St. Mary's. The latter work necessarily ceased when, owing to the reduction of the squadron, a vessel could no longer be assigned to the use of the party. It may be hoped, however, that the great and obvious usefulness, oin a national point of view, of a reliable map of the Mississippi river may lead Congress to make a special appropriation for the further prosecution of that work, the commencement of which involved no public expenditure that would not otherwise have been incurred.

In the regular progress of the survey in the northern sections, parties have been at work, during the summer and autumn, on Passamaquoddy, Gouldsborough, Frenchman's and Penobscot bays, on Muscongus sound, and Medomak, Damariscotta and New Meadow rivers, on the coast of Maine; on Narragansett bay and its dependencies, in Rhode Island; on the coast of New Jersey; and the connexion of the primary triangulation in sections 1 and 2 has been completed by the superintendent's party.

On the western coast, the coast triangulation between San Francisco and Monterey bays has been completed; that of Suisun bay has been continued; the topography between Point Año Nuevo and Point San Pedro, and the off shore hydrography south of San Francisco, have been continued, and the topography and hydrography of Koos bay have been completed.

An early resumption of the work in the southern sections is contemplated, and is provided for, on a moderate scale, in the estimates herewith presented

The table below gives the amounts estimated to supply the deficiency for the fiscal year 1865–'66 in parallel columns, with the estimates which were originally presented for the whole fiscal year, and were approved by both houses of the last Congress, but failed to become a law before the expiration of its session :

Object.	Estimated for fiscal year .1865-'66, but not ap- propriated.	Estimated for deficien- cy for 1865-'66.
For survey of the Atlantic and Gulf coasts of the United States, in- cluding compensation of civilians engaged in the work, per act		4 -0-0
of March 3, 1843 For continuing the survey of the western coast of the United States,	\$181,000	\$120,000
including compensation of civilians engaged in the work, per act of September 30, 1850	100,000	75,000
For continuing the survey of the reefs, shoals, keys, and coast of South Florida, including compensation of civilians engaged in the	200,000	,
work, per act of March 3, 1849	11,000	11,000

During the continuance of the rebellion the field operations of the coast survey have been unavoidably much restricted. In the southern sections they were carried on only as far as requisite and practicable in connexion with the operations of the naval forces. In most cases where officers of the Coast Survey have served with military or naval commands the working parties have been furnished from the same, and the pay and subsistence of the officers only have been paid from the coast survey appropriations. The coast survey vessels attached to the squadrons have been furnished with coal and kept in repair by the navy. Under these circumstances a corresponding reduction in the expenditures for the coast survey was made, which, from considerations of economy, was extended to the work on the western coast. The appropriations, which had amounted to over four hundred and fifty thousand dollars in 1860, were reduced, in accordance with the estimates submitted, to about three hundred thousand dollars during the war.

The estimates herewith presented for the fiscal year 1866-'67 approach more nearly to the scale of expenditure before the war. They contemplate the resumption of the work in the southern sections, which, beside being called for to aid in the development of the resources of that part of our country, will be productive of great economy, since it will, as formerly, enable the same parties to be employed in the south during the winter, that are at work in the north during the summer. Without any material increase in the salaries and office expenses the amount of field-work accomplished will be far more than proportionally augmented. Owing to the great increase in the price of labor and supplies of every kind, the appropriations asked for, although the same in amount of the two principal items as those for 1860-'61, will be far from being equivalent to the latter; they are as low as is consistent with an economical prosecution of the work in the several localities where it has been commenced.

The item providing for the continuation of the survey of the Florida reefs and keys has been diminished from forty to twenty-five thousand dollars, because that work is proportionally far advanced towards completion. The item providing for repairs of vessels, on the contrary, is unavoidably increased from ten to twenty thousand dollars on account of the great increase in the cost of such repairs, and because a larger amount of refitting is at present necessary on account of greater wear and tear during the war.

The subjoined table exhibits, in parallel columns, the appropriations made before the war, those during the war, and the estimates now submitted for the fiscal year 1866-'67:

Ohject.	Appropriated 1860-'61.	Appropriated 1864- ³ 65.	Estimated for 1866-267.

Respectfully submitted :

For A. D. BACHE, Superintendent U. S. Coast Survey, J. E. HILGARD, Assistant in charge of Office.

Hon. HUGH MCCULLOCH, Secretary of the Treasury.

REPORT OF THE SUPERVISING INSPECTOR OF STEAMBOATS.

SIR: The board of supervising inspectors of steam vessels met in its annual session, in the city of St. Louis, Missouri, pursuant to adjournment, on the 11th day of October, 1865, and having had under consideration various matters of interest arising from the operations of the steamboat laws, have the honor of presenting their thirteenth annual report.

The board, in their annual report of last year, alluded to the evil effects which the act of April 29, 1864, would produce if continued so as to interfere with or supersede the rules of the board of steamboat inspectors upon the inland waters of the United States.

The act of 1864 ignores the use of the steam-whistle, without which it is difficult to conceive how some of the inland waters of the United States can be navigated, without falling back into dangers and fearful collisions, which, before its introduction, continually shocked the public mind. To these waters, especially those of the western rivers, the simple rule that all vessels when meeting shall take the right is not satisfactory nor sufficient; rapid currents and eddies have much to do in determining the proper course of safety. As a general rule, it is proper that vessels in meeting each other should take the right; but it is not, under some circumstances, practicable, and it is in such cases that the rules of the board of inspectors provide a safe and proper remedy by the introduction of the steam-whistle. The rules will themselves best exemplify the nature of the navigation to which they relate, and they are introduced to show how intimately the signals of the whistle are interwoven with the rules of navigation on the waters referred to:

"Rule 1st. When steamers are approaching each other the signals for passing shall be one sound made by the steam-whistle to keep to the right, and two sounds made by the steam whistle to keep to the left. These signals to be first made by the ascending steamer. If the dangers of navigation, darkness of the night, narrowness of the river, or any other cause, render it necessary for the descending steamer to take the other side, she can do so by making the necessary signal, and the ascending steamer must govern herself accordingly. These signals to be observed by all steamers, whether by day or night.

"Rule 3d. When two boats are about to enter a narrow channel at the same time, the ascending boat shall be stopped below such channel until the descending boat shall have passed through it; but should two boats unavoidably meet in such channel, then it shall be the duty of the pilot of the ascending boat to make the proper signal, and when answered by the descending boat, to lie as close as possible to the side of the channel the exchange of signals may have determined as allowed by rule first, and either stop the engines, or move them so as only to give his boat steerage way, and the pilot of the descending boat shall cause his boat to be worked slowly until he has passed the ascending steamer."

The act of 1864 requires mast-head lights, where the character of the navigation does not require them, and upon vessels which have no masts abolishes stern lights, where stern lights are quite necessary. In fact, the act seems to supersede that of August 30, 1852, crushing out the beneficial provisions which have been so long and favorably practiced in the navigation of steam-vessels. The board therefore must continue to be embarrassed in the exercise of their official power in relation to signals of sounds or of lights as heretofore, unless the act of 1864 be so construed as to confine its provisions to oceanic waters, or to those on which the navigation of English, French, and Americans are more particularly and mutually concerned, and then not until some guarantee that English navigators on our northern frontier shall more particularly observe the rules they seek to impose upon us.

Remonstrances from the most influential navigators have been presented

against the application of any law which shall break up the system of American signals as heretofore established. The continued accumulation of steam-vessels in all the bays, harbors, and rivers, shows there is increasing need of them, notwithstanding the law of 1864 turns back this tide of improvement and throws into confusion the discretionary power, which for twelve years has been usefully exercised in perfecting a system for steamers which is now adopted by common consent as the best means of safety yet devised, for while it concedes the common rule requiring vessels to take the right when the wishes of pilots are not otherwise expressed, yet it also affords the use of a language by which any misunderstanding may be avoided or corrected.

The provisions of the act should therefore be modified so as to confine its operations to ocean navigation, or to exclude its application from the interior waters of the United States. On the western waters mast-head lights are impracticable, no mast being used as at sea; and head-lights upon the stem, or other low positions forward, give a false aspect to the surface of the water, so that pilots cannot well determine the channel or the snags which they are liable to encounter, nor in approaching other boats can they distinguish such lights from the numerous shore lights, which are generally on the same level and usually placed at the several landings. In this case the law should not require head-lights.

Another rule of the board of inspectors seems to be superseded by the act of 1864, by which it is determined, as in former times, that when two steamers are sailing in the same direction the boat ahead shall have the preference. The faster boat, if she would pass, may be prevented by the zigzag course of the boat ahead, and thus, as in former contentions with opposition lines provoked by such continued obstinacy, the faster boat astern drives into the stern or side of the privileged boat, to the great danger of boat and passengers. The rules of the board established a rule which allows the faster boat behind to pass by signals, rendering danger quite out of the question. The vast increase of tonnage of passenger steamers, and the numerous steamers placed under the law of 1852, by the act of Congress approved June 8, 1864, renders it imperative that more time should be devoted to the duty of inspectors than can be done by most of the local inspectors, at the rate of pay now allowed by same. No man can in these times give his whole time to this duty and support his family on the annual pay which the law allows to many districts, after deducting 5 per cent. tax, and this at the same places where common laborers receive \$1 75 to \$2 per day; and even where local inspectors receive a fair salary, so as to devote their time wholly to the work, they cannot possibly do what the interests of the department demand, so great is the pressure of duty upon some of the districts. The law requires an inspection at least once in each year. The board does not, therefore, hesitate to recommend to your notice the necessity of an act of Congress so fixing the salaries of the inspectors as to enable them to devote their entire time to this service. Underwriters and ship-owners complain that extensive combinations of pilots, especially at the west, are in existence to embarrass the operation of the steamboat law, and to force upon the inspectors their demand for the control of the licensing power, or at least to the limitation of the number of pilots on the rivers, so as to compel the owners of boats to pay exorbitant wages for their services, and they refuse to work as pilots on any boat that has an apprentice on board, and throw every obstacle to advancement in the way of young men desirous to become pilots. They object to licenses being granted except upon the recommendation of two or more of their own number. In that they do all they can to exact wages far beyond the sums paid to officers on steamers requiring equal talent, skill, and fidelity. A law of Congress seems to be called for to secure proper privileges to apprentices and others who may be desirous of becoming pilots.

Freight boats form a class of steamers which seem to have been omitted in

the act of 1864 from the list no longer to be exempt from the necessity of inspection under the act of 1852. They should with equal justice be included with tow-boats and ferry-boats. Inspectors seem to feel the importance of a more strenuous effort to sustain the dignity and responsibility of their office, and manifest great zeal in the performance of their duty; but under the increase and increasing amount of service required, the encouraging hand of Congress will be essential to the preservation of able men in the districts, and the promotion of a proper enthusiasm in the performance of official duty.

It is believed the power of the board of supervising inspectors was intended, by the act which established the organization, to have been free to carry out the provisions of the law to the fullest capabilities of the engineering profession of the country, so that it might stand on a par with other boards established for similar purposes of public usefulness upon the coasts and harbors of the United States, and that it was not intended that those rules should be filtered away by rival State or national organizations; yet it is observable that such is the tendency, to the great detriment of its influence upon the public mind.

The large number of accidents reported from some of the districts the past year may be referred to various ruling causes. *Recklessness*, induced by the war, which extends its mischievous tendencies into all branches of trade, is particularly observable among those employed in or on board some classes of steamers. A large number of boats have been used during the war as transports, tugs, and freight boats; these have been depreciated by long and continued use, purchased and put on duty without proper examination, and run without precaution or regard to safety. These will doubtless be found among the most numerous causes of these terrible calamities, which seem to be beyond the reach of official remedy.

The board, at the present session, have revised the rules and regulations according to the suggestions of experience, and have determined to require sealed or locked safety-valves, which are to be taken wholly from the control of all persons engaged in navigating steam-vessels.

The following are statements of the important occurrences which have been brought to the notice of the board during the past year:

The reports from supervising districts herewith annexed, together with the tabular statements furnished, will show in detail what statistics are upon the records of the several districts.

All of which is respectfully submitted.

P. B. STILLMAN, President.

JAMES N. MULLER, Secretary.

FIRST SUPERVISING DISTRICT-PACIFIC COAST.

During the year ending August 31, 1865, there have been inspected, in the district of San Francisco, 63 steam vessels, with an aggregate tonnage of 33,686 . tons; 50 pilots and 102 engineers have also been licensed at that port.

There have been inspected in the district of Oregon 25 steam vessels, with an aggregate tonnage of 4,438 tons, and 34 pilots and 17 engineers have been licensed. Aggregate tonnage of steamers inspected on the Pacific coast during the year, 38,124 tons.

Three accidents have occurred to passenger steamers of quite a serious charac-The first of these, the explosion of the starboard boiler of the high-prester. sure steamer Washoe, occurred on the Sacramento river, about forty miles below Sacramento, while on her regular trip from San Francisco. By this accident forty-five passengers lost their lives, also the chief engineer and five of the The Washoe was a new side-wheel steamer of 385 tons, and had four crew. cylinder boilers 32 feet long and forty inches diameter, each containing five flues; these were set on deck, in the same manner usual on the Mississippi and other western rivers. These boilers were made of iron five-sixteenths of an inch in thickness, and stamped as required by law, and were considered when inspected first-class boilers. It was found on examination after the explosion that the shell of the boiler had opened over the furnace for a length of six feet, while the flues remained uninjured. It was testified by one witness connected with the boat, that on other trips he had on three occasions seen the gauge-cocks tried without finding water-showing the most criminal negligence on the part of the engineer in charge, who it appears intrusted the keeping up the supply of water to firemen, without giving the matter sufficient personal attention. There is no evidence, however, that there was a deficiency of water at the time of the ex- $\,^\circ$ plosion, and the cause is somewhat shrouded in mystery; but the local inspectors at San Francisco are of opinion that it resulted from the negligence of the engineer, as above referred to. I must say, however, that I entertain a somewhat different opinion. That the engineer was negligent in the performance of his duties there can be no doubt, but there is another fact which cannot be lost sight of. These boilers had been in use but three months, and although the iron was considered to be of the best quality, certainly as good as it was possible to procure, yet it was found in use that several of the sheets exposed to the direct heat of the furnaces were laminated in their structure, so that they became blistered and cracked, and had to be patched or altogether removed, and new ones substituted, depending on the extent of the injury. From the position of the ruptured portion, as also the fact that the flues remained uninjured, I incline to the opinion that a crack in the sheet had occurred, probably from the boiler not having been properly cleared of scale, and the boiler, thus weakened, was burst simply by the contained pressure extending this crack longitudinally. I believe this is not an unusual cause of the explosion of boilers of this class, where the great shell of the boiler, every part of which is subjected in use to a very severe tensile strain, is directly exposed to the action of the fire; for although the boiler so arranged may withstand any reasonable hydrostatic test when cold, or at moderate temperatures,

defects may be developed by the application of extreme temperatures, or under such circumstances a local injury may occur from the adherence of scale to the iron, which will endanger the whole structure. For the reasons above stated, I consider the above class of boilers among the most objectionable now in use; and I think it is to be regretted that in the navigation of some of our rivers the character of the water seems to prevent their present abandonment.

In November, 1864, the steamer Sophie McLane exploded her port boiler while lying at her wharf at Suisun city. By this explosion the captain and four of the crew were killed. The accident occurred in the morning before the hour of starting on her voyage had arrived, and there were fortunately but few passengers on board, and none of these were injured. This was a high-pressure sidewheel steamer of 242 tons, and had two boilers in the hold of the vessel 18 feet long and 5 feet diameter, which had been in use only two months. The shell of the boiler gave way, and the boat was torn to pieces and rendered useless. The investigation showed that the explosion occurred from excessive pressure, arising from the criminal negligence and mismanagement of the engineer. He was one of the oldest engineers on the coast, and up to this time had borne an excellent reputation for attention to his duties. His license was revoked, and he immediately left the country to save himself from prosecution.

July 30, 1865, the steamship Brother Jonathan, bound from San Francisco to Portland, Oregon, was lost in a heavy sea by striking upon a sunken rock, bearing about west-northwest from Crescent City, and from eight to ten miles from land. She was a vessel of about 1,200 tons, and had on board when lost, as nearly as can be ascertained, 140 passengers and 50 other persons, being officers and crew, and about 500 tons of freight. She left San Francisco July 28, and experienced very heavy weather all the way up the coast. On the 30th, about 2 o'clock p: m., she was a little to the northward of Crescent City, and was passed at 12 m. by the steamship Sierra Nevada, bound down. The sea was at this time so rough, and the wind blowing so heavy from the northwest, that it was determined by Captain De Wolf, who was in command of the steamer, to turn back and lie at Crescent City until the storm had abated. The steamer was put about, and had run some ten or fifteen minutes to the southeast when she struck a sunken rock, and was so pierced by it that she remained lodged and could not be backed off. The wind and sea was now beating very heavily on her port quarter, and she swung round and came head to the wind. It appears the rock must have been pointed or wedge-shaped, and when she came head to the wind it was found that in swinging it had burst open the bottom of the ship, and the foremast of the vessel slipped down through the opening until the foreyard lay across the deck. There was an immediate attempt made to get the life-boats cleared from the sinking ship, and the first boat cleared and cast off got away in safety with nineteen persons on board; these were all the persons saved from the vessel, out of one hundred and ninety. Several of the other boats were got into the water and loaded with passengers, but were stove to pieces against the vessel by the force of the sea running alongside. All the boats were lowered under direction of the officers, every person behaving in the coolest manner, under the assurance of the captain that everything would be done for their safety which was possible. None of the principal officers ever left the deck of the steamer; but when the life-boats had been lost, and all means of escape cut off, they were seen, with the passengers then remaining on board, standing on the after-deck of the vessel until she sunk beneath the waves, which she did in forty-five minutes after striking the rock. During several succeeding days bodies were drifted on shore, all of which had life-preservers secured to them, and many were recognized and taken possession of by their friends, while others were buried where found by the force established to patrol the beach for more than fifty miles to the southward. It is not known with certainty whether the rock upon which the vessel struck had been previously known or

not, as it is impossible now to determine the exact position of the steamer at the time, but it is generally believed it was further to sea than any rock or reef now laid down in the charts; and in support of this view, it is hardly possible that a commander so experienced on this route, so constant in his watchfulness, and so eminently correct in all his habits, could have been run on any known danger in broad daylight, and the weather so clear that the position and bearings of the ship must have been fully known to him. The Brother Jonathan was rebuilt four years since and was a very staunch vessel, and was very fully supplied with boats and all other equipments required by law; she also had very able and experienced officers and a full crew. The public were very deeply impressed by this sad calamity, the ship and her officers having the fullest confidence of the people; there has not been heard, in the public press or elsewhere, the least complaint against either; but every one, with a sense of personal bereavement in the loss of so many valuable and well-known citizens, seemed, without murmur, to bow in profoundest sorrow to this fearful dispensation of an overruling Providence.

There is a practical lesson to be learned from this and similar disasters at sea, which should not be passed by unheeded. It will be observed that the boats of this steamer, with one exception, were dashed to pieces alongside of the vessel, after they had been loaded with passengers, before they could be got clear of the ship. Can this danger be avoided ? The difficulty arises from a want of suitable provision by which the boat may be instantly relieved at will from the tackles by which she is lowered into the water. I do not pretend to say that boats in all cases could be got clear of the ship if furnished with such means, but their adoption would, I am fully satisfied, greatly lessen the present danger of disaster from this cause; and I trust Congress will be called upon to require by enactment the application of the best form of boat-disengaging apparatus on all our ocean-going steam-vessels.

In conclusion, I feel it to be a duty to call your attention to a subject which, from long experience and observation as an executive officer under the steamboat act of 1852, I am satisfied has been more destructive to the hopes of the friends of that enactment than all the deficiencies of requirement, the correction of which this board have from time to time recommended. There is no question but the provisions of the steamboat act above referred to are of the most salutary character, and have been productive in saving to their friends and the country very many and valuable lives, and also much property. To execute this important law, Congress provided a body of officers whose special duty it was made carefully to inspect all passenger steamers at least once in each year, to see that all the provisions of the law were complied with, and that the vessel was otherwise in a condition to warrant the belief that she might be safely employed as a passenger-carrying steamer without peril to life. These officers were also required to visit such vessels arriving or departing to see that their equipment was maintained in good condition, and that they were properly managed. They were also charged with the duty of examining, classifying and licensing engineers and pilots of these vessels, and keeping watch over the conduct of these officers.

By the various salaries paid to the local inspectors (\$200 to \$2,000) it was evidently contemplated by Congress that they would generally have to give but an insignificant portion of their time to this official duty, and could, withour prejudice to the public interests, seek for support mainly, or partially, in some private occupation. In some cases this anticipation was verified, while in many others the imposed public services had been much under estimated. No one can live without support, and in cases where the salary of a local board of inspectors was fixed at too low a rate for the time which should be devoted to fully discharging the duties of the office, the public service has correspondingly suffered. I do not say that any of the official acts required by law have not been performed. I am aware that inspectors have done all that could have been done under these circumstances, but there is a great difference between simply doing an act and doing it well and effectively. The inspecting of a steamer annually is no guarantee that she is conducted properly throughout the year; and I believe this continued intermediate examination to be of such vital importance in obtaining the security contemplated, that wherever the business of the port is considerable, all the attention of the inspectors which can be spared from office duties may be given to visiting vessels arriving and departing with a marked change in the record of casualties annually reported. This can only be done by giving these officers remunerative compensation, such as to preclude the necessity of their seeking to eke out by private enterprises the scanty compensation obtained for official services. I trust the board will consider it proper to ask the honorable Secretary of the Treasury to commend this matter to the attention of Congress.

WILLIAM BURNETT, Supervising Inspector.

SECOND SUPERVISING DISTRICT.

An unusual amount of duty has been performed in this district. The local board in Philadelphia report no accidents or any material variation from usual occurrences. The following accidents are reported from the New York district:

On the night of October 18, 1864, the steamer Admiral DuPont, while on her passage from New York to New Haven, and shortly after leaving the wharf, came in collision with the tug-boat Keystone, by which the latter was sunk. An investigation was made in this case, and from the testimony given we find that the Admiral DuPont was in charge of a regular licensed pilot, who used all necessary precautions to prevent a collision, by blowing the steam-whistle, but which was not answered by the tug-boat, and by a sudden change of course by the latter, came across the bow of the Admiral DuPont. No lives lost.

On the night of January 8, 1865, the Jno. V. Melville, on her passage from New York to Port Royal, it being her second day out from port, encountered a heavy gale, was struck by a heavy sea, which stove in the starboard bow, flooded the forward cabin, and broke away the water-tight bulkhead, forward of the engine, and putting out the fires. The engineer reporting the same, a general rush was made by the passengers for the boats, filling them to such an extent as to break away the davits and light rail on the upper deck, by which a large number of persons were precipitated in the water and drowned. The steamer remained afloat about two hours, and then sunk, going down head-foremost, carrying with her all except the mate, third assistant engineer, and two passengers, who were saved. Fifty-three passengers and twenty-three of the _ crew were lost.

The ship propeller North America left New Orleans December 15, 1864, bound for New York. On the 22d, during a heavy gale of wind, sprung a leak forward, and notwithstanding all the exertions made by the officers and crew, foundered the same night. There were on board 203 sick soldiers, 12 cabin passengers, and a crew consisting of 44 men, making a total of 259 persons, of whom only 62 were saved. Loss of property, including ship, estimated at about \$300,000.

On the night of Monday, February 6, 1865, the steamer Empire State, while on her passage from New York to Newport, R. I., was run into by the ship propeller Franconia. An investigation was held, when the following facts were elicited: The vessels were nearly abreast of New Haven light, each bound a different course; the lights of each were distinctly visible for at least twenty minutes

212

before the collision. The vessels continued to steer their proper course until within a distance of about half a mile from each other, when the Franconia suddenly changed her course, bearing down upon the Empire State. The pilot of the latter vessel immediately blew two distinct whistles, but heard no answer from the other vessel. The bell was then rung to slow, stop and back, which was promptly done by the engineer. The Franconia continuing at full speed, struck the Empire State at a right angle, about twenty feet abaft the stem, cutting her through to the keelson, and the vessel was only saved from sinking by having a well-constructed water-tight bulkhead a few feet abaft the fracture. The Franconia, as near as we could find out, was in charge of a Sound pilot, but not licensed by us. No lives were lost.

The ship propeller George Washington was burned to the water's edge on the evening of the 2d of January, 1865, while in this port, having just arrived from sea. The amount of property lost was great, but the valuation was not ascertained by us. No lives were lost.

April 28, 1865, the steamship Ocean Queen, while on her passage from New York to Aspinwall, collapsed the lower flue in the forward boiler; four of the crew were scalded—two fatally, and two slightly. The vessel proceeded on her voyage with one boiler.

On the night of the 7th of June, 1865, the steamer Admiral DuPont left the port of New York for Fortress Monroe, having on board a small detachment of United States troops. On the following morning a dense fog set in. At 4.20 a. m. a sailing vessel was discovered steering nearly in an opposite direction. The engine was immediately stopped and backed, and the wheel thrown hard a starboard, but, at the rate of speed of the sailing-vessel, a collision could not be prevented by those on board of the steamer, which was struck just forward of the paddlewheel, and sunk in about three minutes. The greatest part of the passengers and crew were saved by getting on board of the ship, which proved to be the English ship Stadaconda. There were 17 persons drowned, viz: 15 soldiers, one fireman, and a colored woman.

There have been two steamers burned while lying at their respective docks, viz: the tug propeller George O'Vail, on the night of the 4th of August. and the steamboat Chicopee, on the morning of September 16, 1865—the former lying at Brooklyn, N. Y., and the latter at Newark, N. J.; the aggregate loss amounting to about \$24,000. No lives were lost.

On the 6th day of August, 1865, the steamboat Arrow, while on her passage from New York to Haverstraw, collapsed one of the lower flues of starboard boiler, scalding fatally one of the firemen no other persons were materially injured by the escaping steam. Four of the passengers were drowned by jumping overboard during the panic. The license of the engineer has been revoked for inattention to his duty and violation of Art. 15, section 9, of the law of 1852.

The Boston board report that they have had five boilers fail, under hydrostatic pressure; that no accident has happened, by which life had been lost; that one boat called the Chocoma, on Lake Winnipiseogee, on the night of 3d of July last, was entered by some malicious person, who placed a keg of powder, with a lighted slow-match, in the furnace of her boiler, where it exploded, raising the forward deck and breaking several of the deck-beams. It would no doubt have destroyed the boat and perhaps killed all the crew, who were asleep on board, if the furnace door had been securely shut; but it seems the miscreant was unable to do this, on account of the slow-match, which was laid through the furnace door, so that the principal force of the explosion came out at the door. The boiler, notwithstanding, was found to be uninjured.

On the 7th of February last, about 9 p. m., the steamers Empire State and Franconia collided. The particulars you will find above, with the exception of the loss sustained, which was about \$25,000, which was paid by the owners of the Franconia, they admitting the inefficiency of the watch on deck.

As a general thing, the owners and officers of steam vessels continue to comply with all the requirements of the law. We have had but one palpable violation of the law, in the case of the steamer Reindeer, which vessel, without inspection or any other papers, went out with passengers two trips on the 4th of July last. This, in our opinion, was a heedless or wilful violation of the statute, and the case is now pending in the district court.

The inspectors complain of the low salaries allowed, and hope that Congress will see the justice of raising their pay, for the reason that their entire time is required to perform the duties, and also set forth the fact that, when the salaries were made by Congress, in 1852, gold was at par, and the number of steamers was then about one-quarter and the engineers and pilots about onefifth of what they now are in their districts, and these are rapidly increasing, and that their present salaries of eight hundred dollars, in currency, are entirely inadequate for the services rendered.

The amount of fees received in this district by local board at Boston, in 1853, for licenses was \$240; for inspection, \$580—total, \$820. The amount of fees received for license in 1865 was \$2,610; for inspection, \$2,682 73—total, \$5,292 73.

N. B.—The amount carried out for inspection fees is a close approximation, and very near correct.

THOS. B. STILLMAN,

Supervising Inspector Second District.

THIRD SUPERVISING DISTRICT.

The war having terminated, and business opening and resuming its usual channels, a great number of steamers which were in government employ have entered the various routes upon our coast, bays, and rivers.

The local board at Baltimore have inspected one hundred and forty-two (142) steamers; given license to two hundred and forty seven (247) engineers and one hundred and eighty-six (186) pilots. Tonnage of steamers, forty-four thousand six hundred and six (44,606) tons.

Inspected at Norfolk and Old Point, Virginia, by supervisor, ten (10) steamers, whose tonnage amounts to fifteen hundred and ninety-six (1,596) tons; liceused sixty-seven (67) engineers and thirty-seven (37) pilots.

At Hilton Head, Charleston, South Carolina, and Savannah, Georgia, inspected four (4) steamers, whose tonnage is eleven hundred and twenty-two (1,122) tons; licensed twenty-three (23) engineers and twenty-six (26) pilots.

At Newbern, North Carolina, five (5) steamers, measuring eleven hundred and thirteen (1,113) tons, were inspected.

At Baltimore, Maryland, thirteen (13) steamers were inspected; tonnage, four thousand six hundred and twenty-one (4,621) tons; granted license to ninety-seven (97) engineers and eighty-seven (87) pilots.

At Norfolk, Virginia, by local board, were inspected twelve (12) steamers, whose tonnage was fifteen hundred and eighty four (1,584) tons; granted license to sixty-one (61) engineers and twenty-four (24) pilots.

At Charleston, South Carolina, three (3) steamers, measuring seven hundred and seven (707) tons, were inspected.

Total, of steamers inspected in the district, one hundred and eighty-six (186;) tonnage, fifty-four thousand six hundred and forty-two (54,642.) Pilots licensed, three hundred and seventy (370;) engineers, four hundred and eighty-six (486.) Estimated number of passengers carried were four million two hundred and forty-two thousand four hundred and ninety (4,242,490.) In the month of August, 1865, the supervisor was sent, by special order, to Charleston, South Carolina, Savannah, Georgia, and Mobile, Alabama, to cooperate with the collector of those ports and the United States district judge in the nomination of suitable persons to act as local inspectors of steam vessels for the ports herein mentioned. In consequence of the lateness of the period when they were appointed the supervisor has received no report from them, except Charleston, South Carolina.

The law has been faithfully carried out, with but few exceptions. The local boards are using energetic measures to have it fully complied with, and have determined to punish transgressors. They are attending to their duties faithfully.

There has been some effort made by pilots employed upon the Chesapeake bay, who have derived their license from the State to navigate sail vessels, and who are endeavoring to embarrass steamboat pilots, and in some cases have commenced suits at law against them because they have not procured a State license also, in order to navigate steamers upon the Chesapeake waters, notwithstanding they had a government license

October 25, 1864.—The steamer Grey Hound, in government employ, while on her way from Bermuda Hundred to Norfolk, Virginia, took fire somewhere near the boiler, by accident, and in a few minutes was in a sheet of flames⁴ Happily no lives were lost. The vessel was burnt to the water's edge and sunk.

March 25, 1865.—The government steamer General Lyon was burned while on her voyage from Hilton Head, South Carolina, to Fortress Monroe, Virginia, having on board at the time some five hundred (500) government troops, nearly all of whom perished by the flames. Vessel entirely destroyed. Reported to have originated by accident.

September 30, 1864.—The steamer Matilda burst her boiler in Hampton creek, Virginia, by which the chief engineer, Thomas Brannan, was so badly scalded that he died.

October 22—The steamer Mary Washington and schooner Missouri Young collided in the Chesapeake bay. The pilot of the steamer was found inattentive to the duties of his station, and license was suspended for thirty (30) days.

January 10, 1865.—The steamer Georgeanna and schooner John Walker collided on the bay, by which five (5) persons were drowned—one passenger and four of the crew. Upon investigation by the local board they found it purely accidental.

January 7.—The steamers Louisiana and Cambria came in collision off Point No-Point, on Chesapeake bay, but neither vessel was materially damaged. Caused by a thick fog.

April 23.—The steamers Massachusetts and Black Diamond collided on the Potomac river; the former loaded with troops, sixty (60) of whom were drowned. The investigation disclosed the fact that both pilots wholly disregarded the rules established for their government, consequently their licenses were revoked. The opinion given by the local board is, that this lamentable loss of human life has been caused by the present system of carrying signal lights.

May 11.—The tug Mohawk was refused a certificate at Alexandria for want of the equipments required by law.

July 20.—'The boiler of the United States revenue cutter Lincoln was subjected to a hydrostatic pressure of forty (40) pounds per square inch. A subsequent examination disclosed a very satisfactory condition of the several parts.

Ju'y 31.—The boiler of steamer Carroll gave way under a pressure of thirty-two (32) pounds.

July 27.—The tugs Alpha and Grace Titus collided on the Patapsco river, by which two (2) young men were drowned. The local board decided that the pilot of the Alpha, a naval steamer, was in fault. She left port immediately thereafter, and has not since returned.

August 24.—Steamers George Leary and Sea Gull collided near Cove

Point, on the Chesapeake bay, by which three persons lost their lives The George Leary was cut down to the water's edge. The pilot of the Sea Gull was proved in fault, and his license revoked.

August 30.—Steamers George Appold and Kent collided off Thomas's Point, by which the latter was sunk in a few minutes. In this case, the pilot of the Kent was found in fault, and license revoked.

September 13.—The tugs Atlantic and May Queen collided on the Patapsco river. Little damage was done. The pilot of the Atlantic was found negligent, and his license suspended for thirty (30) days.

There were thirteen steamers and tugs built at Baltimore during the past year, measuring three thousand and four hundred (3,400) tons.

All of which is respectfully submitted.

JAMES N. MULLER, SR., Supervising Inspector Third District.

FOURTH SUPERVISING DISTRICT.

There have been inspected in this district two hundred and six (206) steamers of all classes, ranging from fifty to sixteen hundred tons. The stated tonnage could not be ascertained, as a large number of steamers have not been yet measured by the proper customs officers of this district.

There have been issued in this district seven hundred and twenty (70° ilot licenses and five hundred and eighty (580) engineer licenses.

Several accidents occurred without loss of life, as will be seen by the report of the local boards and the tabular statement appended.

One occurred at Carondelet, near St. Louis, of a more serious nature. The steamer Maria, of two hundred and fifty-four (254) tons burden, exploded one of her boilers, and set the boat on fire. She was burnt and sunk; proved to be a total loss; she was carrying soldiers. The local board at St. Louis held an investigation, found that the engineers had been negligent, and had failed to state correct facts. Their licenses were revoked. The number of lives lost, if any, could not be ascertained.

The steamer Watson, sunk by a snag at the foot of Island No. 76, near the mouth of the Arkansas river. Thirty-four (34) lives were lost.

Disaster of the Sultana. This is perhaps the most frightful disaster ever recorded in the annals of steam navigation. It is stated that over fifteen hundred (1,500) lives were lost. The Sultana was built at Cincinnati, Ohio, in 1863. She was of 660 38-100 tons burden, (old measurement;) had accommodations for seventy-six (76) cabin passengers, and three hundred (300) deck. passengers. She had four high-pressure boilers, 18 feet long and 46 inches in. diameter, made of iron 17.48 of an inch in thickness ; each boiler had 24 return flues, 5 inches in diameter, made of iron one-eighth of an inch thick. The Sultana was inspected in St. Louis, on the 12th day of April, 1865, by the local board of inspectors, composed of John Maguire and John Shaffer. The boilers were subjected to a hydrostatic pressure of two hundred and ten (210) pounds to the square inch. The working steam pressure allowed was one hundred and forty-five (145) pounds to the square inch. The Sultana had two engines, with cylinders 25 inches in diameter and 8 feet stroke; had three forcing pumps, six inches stroke, and respectively 5, 6 and 7 inches in diameter ; two of them were worked by hand. The explosion occurred on the 27th day of April, 1865, at about seven miles above Memphis, Tennessee. There was no local. board at that time at Memphis. As soon as the news of the terrible occurrence reached St. Louis, by telegraph, I, as supervising inspector of this, the fourth district, considered it my duty, as prescribed by the 22d section of the act of Congress of 1852, to repair immediately to the scene of the calamity. What urged me to take immediate steps is, that on all such occasions the surviving parties leave for parts unknown as soon as they can procure the means to do so. This is especially the case with those that are supposed to be best informed of the probable cause of the accident. Arriving at Memphis, Tennessee, I found that Major General Washburn had instituted a military commission to inquire into the matter. They had made little progress, and had concluded to go to Vicksburg, where they had good ground to believe more information could be gathered. I was invited by General Washburn to join the party, and did so.

At Vicksburg, one of the first witnesses put under oath was R. G. Taylor, an experienced boiler-maker. He stated that he had, at the request of the first engineer, examined and repaired the middle larboard boiler of the Sultana, on her up trip to Memphis. He states that he found, on examination of the larboard boiler, that two sheets were badly bulged out. He was told by the captain that both sheets would be cut out at St. Louis, and he (Taylor) was to cut out only a piece 26 by 11 inches, which he did. He was not permitted to force back the bulge, as he desired, but had to fit his patch to the boiler as it The patch he riveted on was only one-quarter of an inch thick. To all was. this the first engineer consented. This was on the part of the engineer a gross violation of the law, the body of the boiler being made of iron 17-48 of one inch, and inspected, and the safety-valves regulated for iron of that thickness, and the pressure allowed was the extreme limit. Had the boiler been inspected after the repairs, the pressure allowed by law would have been 100.43 pounds of working pressure per square inch, as prescribed for boilers 46 inches in diameter, made of iron $\frac{1}{4}$ inch thick.

From Vicksburg to Memphis the Sultana travelled at her usual speed, which shows that the usual pressure of steam was used. The foregoing is sufficient to explain the cause or causes of the explosion. Boilers of a construction not adapted to the water of the Mississippi river, the flues being set in zigzag, which makes them very difficult to clean; the rapid accumulation of sediment renders them easily subject to be burned, or at least overheated; this seems to have been the case of the Sultana. The boilers were imperfectly repaired at Vicksburg, for which the engineer alone can be held responsible.

There is another feature in this disaster that deserves to be mentioned—the large amount of human beings crowded on this boat. The law limits the number of passengers that a vessel is allowed to carry. That law, like many others, has during the war been set aside formilitary necessities. Civil officers had to be silent, and large numbers of soldiers have frequently been crowded on small crafts. This war was already ended when this inhuman shipment was made, and nobody pretended that there was a necessity. The Sultana left New Orleans with about 250 passengers and crew, and in the hold about 250 hogsheads of sugar. At Vicksburg 2,000 released Union prisoners and 60 horses and mules were shipped on her, while the certificate allowed her only three hundred and seventy-six (376) passengers, all told. The Pauline Carroll, a steamer of the same size, was lying at the wharf at Vicksburg, on her way to St. Louis. The officers of the P. Carroll were anxious to get one thousand (1,000) of those passengers at the regular government rate. The agent of that boat even offered a premium, as he declared himself, but to no avail. It was decided that horse, mule and human freight must be crowded in one heap.

J. J. WITZIG,

Supervising Inspector Fourth District.

FIFTH SUPERVISING DISTRICT (GALENA ILLINOIS.)

Eighty-nine steamboats have been inspected in this district during the year ending October 1, 1865-thirty-five passenger boats, twenty-one freight boats, eighteen ferry-boats, and fifteen tow-boats-with an aggregate tonnage, so far as could be obtained; of nine thousand six hundred and eighty-seven $\frac{70}{100}$ tons. The tonnage of many of the steamers could not be obtained because of the delay in procuring the admeasurement. There have been transported by these steamers two hundred thousand passengers, without loss of life. But one accident has occurred in this district during the year. Steamer John Rumsey exploded her boiler within sight of St. Paul, on the 5th of November, 1864. She was of thirty-nine tons capacity, towing two barges loaded. Some five or six of the men were killed, and others wounded; the boat drifted on to a bar and burned up; cargo and barges saved; loss eight thousand dollars. The engineer says he had water enough in his boiler, and no more steam than he was entitled to carry. We have refused to renew his license since that time. One hundred and twenty-three engineers and one hundred and twenty-three pilots have been licensed; the tabular report will indicate the grade of the same. The local board report that in testing the boiler of the steamer Mankato, on the 9th day of June. at the port of St. Paul, her boiler failed to stand the test pressure, and ordered her to repair the same.

Also, on the 17th day of June, we applied the pressure to the steamer Viola, at La Crosse, Wisconsin, when we discovered a crack in her boiler in connexion with the steam-drum, and ordered her to repair.

On the 23d day of July we tested the steamer New Boston, at Rock island, when the starboard flue of the starboard boiler collapsed; ordered repairs by making and putting in new flues. Same day ordered steamer Jo Parsons to get new steam-pipe.

On the 8th day of September we again applied the test pressure to the steamer Mankato, at St. Paul, which started her boiler-heads. We then condemned the boilers as unfit, and ordered new ones.

Considerable dissatisfaction exists among steamboat owners as to the admeasurement of steamers under the new law; they object to any admeasurement above the main deck on our river steamers as altogether constructive, and without limit. Steamers as at present admeasured cannot carry the number of tons indicated in their register; it would sink them at the landing.

CHARLES L. STEPHENSON,

Supervising Inspector Fifth District.

SIXTH SUPERVISING DISTRICT.

There have been inspected at Louisville, Kentucky, 105 boats, the tonnage amounting to 27,911 tons.

At Nashville, Tennessee, 13 boats, tonnage 12,089, making a total amount of tonnage 40,000; this is an increase of 16,789 tons.

There have been licensed 252 pilots, and original licenses granted to 53, making 305; and to engineers renewals have been given to 260, and original to 44, making 304. Total number of licenses granted 609.

Two boilers were found defective, and two gave way under hydrostatic pressure.

The steamer Ben Levi was sent to Easton, on the Tennessee river, by the United States military authorities, with a regiment of soldiers, about 1st of March, 1865. After performing the trip to Easton in safety, on the return of the boat, when about 150 miles below Louisville, on the Ohio river, on the morning of the 19th of March, her boilers were thrown overboard and torn to pieces, the hull sunk and destroyed. This case was investigated by the local board at Louisville. Their report states that this loss was a clear case of some mischievous or combustible matter which was thrown into the furnace. I have examined the parts of the boilers, and am of the opinion that the conclusion arrived at by the local board at Louisville is correct. The boat was loaded for the trip, and at the time was using the coal that was in her deck-room. I am of the opinion that some combustible matter was mixed in the coal for the express purpose of destroying the soldiers on her trip to Easton. I append the report of the Louisville board to this for the information of the board.

The number of passengers carried in the district for the past year amounts to one million ten thousand.

The number of engineers licensed by original license at Nashville, Tennessee, was _____; number of original pilots, _____; licenses renewed to engineers, _____; licenses renewed to pilots, _____; making a total of _____.

J. V. GUTHRIE,

Supervising Inspector Sixth District.

SEVENTH SUPERVISING DISTRICT.

One hundred and fifty-one (151) steamers, measuring thirty-two thousand one hundred and sixty-four (32,164) tons, were inspected at Pittsburg, Pennsylvania; forty-seven; (47,) measuring nine thousand and ninety (9,090) tons, were inspected at Wheeling, West Virginia; and one hundred and forty-five, (145.) measuring forty-five thousand one hundred (45,100) tons, were inspected at Cincinnati, Ohio-making, in the aggregate, three hundred and forty-three (343) steamers of all classes, measuring eighty-six thousand three hundred and fifty-four (86,354) tons, being an increase of tonnage inspected over the last year of thirty-three thousand eight hundred and seventy-three (33,873) tons.

The local board at Pittsburg, Pennsylvania, have issued certificates of license to two hundred and ninety-three (293) pilots and two hundred and ninety-two (292) engineers.

The local board at Wheeling, West Virginia, have issued certificates of license to forty-nine (49) pilots and fifty-four (54) engineers.

The local board at Cincinnati, Ohio, have issued certificates of license to three hundred and forty-four (344) pilots and three hundred and fifty-one (351) engineers; making a total number of one thousand three hundred and eightythree (1,383) officers to whom licenses have been granted. Eighteen (18) applications for license as pilots have been refused, and ten (10) of engineers. The license of one (1) pilot has been revoked and two (2) suspended. The licenses of two (2) engineers have been revoked and one (1) suspended. Owing to the great demand for the use of steamers for furnishing transportation for military purposes no definite information has been obtained of the number of passengers carried, but the estimated number amounts to one million three hundred and forty thousand and one hundred (1,340,100) passengers.

February 27, 1865.—The steamer W. H. Osborne and tug-boat Collier collided near Sunfish, Ohio; no serious damage. The case was investigated by the local board of Pittsburg, Pennsylvania, and the pilot's license of the latter boat was suspended, he being in fault.

March 20, 1865.—The small steamer Oil City struck a sunken coal barge opposite Wheeling, West Virginia, and sunk to the hurricane deck; no lives lost. She was raised, and is now being repaired. Loss, five thousand (5,000) dollars.

March 22, 1865 .- The small steamer David Linch capsized in a gale at

Parkersburg, West Virginia; several passengers on board; passengers and crew all saved by means of life-boat, yawl, and floats, which the boat was amply provided with. Loss, four thousand (4,000) dollars.

March 30, 1865.—The small steamer Malta sunk at the mouth of Muskingum river by striking a sunken barge which obstructed the channel; no lives lost. She was soon raised, and is now running. Loss, three thousand (3,000) dollars.

August 19; 1865.—The steamers Gallatin and Fayette collided on the Monongahela river, twelve (12) miles above Pittsburg, Pennsylvania, causing the loss of one life and the sinking of the latter boat. The case was investigated by the local board at Pittsburg, Pennsylvania, and the license of the pilot of the latter boat revoked, he being found seriously in fault. Loss, twelve thousand (12,000) dollars.

September 9, 1865.—The steamers George Alvree and River Queen were burnt while lying at the wharf at Pittsburg, Pennsylvania. Loss, thirty-six thousand (36,000) dollars Origin of the fire unknown.

September 23, 1865.—The little steam-tug Nimrod exploded her boiler while lying at the wharf at Pittsburg, Pennsylvania, causing the death of five (5) of her crew. The case is now being investigated by the local board at Pittsburg, Pennsylvania.

RECAPITULATION.

Three hundred and forty-three (343) steamers inspected. Eighty-six thousand three hundred and fifty-four (86,354) tons. Six hundred and eighty-six (686) pilots licensed. Six hundred and ninety-seven (697) engineers licensed. Eighteen (18) applications for pilots' license have been refused, and ten (10) for engineers. Three (3) pilots' licenses have been revoked or suspended, and three (3) engineers. Two collisions, causing a loss of one life and twelve thousand (12,000) dollars' worth of property. One explosion, causing a loss of five (5) lives and four thousand (4,000) dollars' worth of property. Two steamers sunk; loss, eight thousand (8,000) dollars. Two steamers burned; loss, thirtysix thousand (36,000) dollars. One steamer lost in storm; loss, four thousand (4,000) dollars.

The local inspectors of this district have a great amount of labor to perform, requiring their entire time, owing to the increase of tonnage, particularly since the tug-boats, canal propeller, and ferry-boats came under the law of 1852. They are gentlemen fully qualified for the discharge of their duties, and are untiring in their energies in having the law fully complied with.

JNO S. DEVENNY,

Supervising Inspector Seventh District.

REPORT FROM THE EIGHTH DISTRICT.

There have been inspected in the eighth district during the year ending September 30, 1865, one hundred and ninety-nine steamers, including all classes, passenger, ferry, and tug boats. There are still remaining something over twenty uninspected, arising from the fact that for a large part of the year there was virtually no local board at the port of Chicago. The salary was so small being only five hundred dollars—that no competent person could be found who would accept the office, and consequently so much labor was thrown upon me that some of the boats are not yet inspected; but as I have now a board there, these boats will be early attended to.

A large number of steamers in this district have not yet been measured under the new law, but the aggregate tonnage will probably be about twenty-eight thousand six hundred tons; the approximate sum of what will be derived from certificates of inspection of these steamers will be eight thousand six hundred dollars.

Three hundred and twenty-four pilots and three hundred and nine engineers have been licensed during the year. For these licenses there has been collected and paid over to the proper authorities the sum of six thousand three hundred and thirty dollars, making in all, for certificates of inspection of the steamers and the licenses of engineers and pilots, somewhere close upon fourteen thousand five hundred dollars. The salaries of two local inspectors at Detroit at \$800 each, at Chicago \$500 each, the supervising inspector at \$1,500, makes \$4,100; after deducting this, together with the necessary travelling and other incidental expenses; there will still remain a very handsome sum to the credit of the government over former years and this year's expenses.

Of these inspections and licenses, the local board of Chicago have inspected fifty-two steamers of all classes, with an approximate tonnage of six thousand tons, and licensed fifty-three pilots and eighty engineers.

The local board at Detroit have inspected ninety-one steamers, with a tonnage of eighteen thousand tons, and licensed one hundred and seventy pilots and one hundred and sixty engineers.

The supervising inspector has inspected fifty-six steamers, with about four thousand two hundred tons, and has licensed one hundred and one pilots and sixty-seven engineers.

There has been but one accident to passenger steamers in this district the past year in which the lives of any passengers have been lost; this was in the propeller Pewabic, on Lake Huron. There have been four explosions of tugboats and one propeller, with a loss of ten of the officers and crew; two steamers have been totally destroyed by fire while lying at their docks; five or six have been on fire, but not seriously injured; two have been sunk, but on these no lives have been lost. There have been a few collisions, but of no serious moment, and are not reported.

The first accident that occurred after the report of the last annual meeting was in the explosion of the propeller Tonawanda, in the Chicago river, on the 24th of October, in which three persons were lost-the second engineer, who was on duty, a fireman, and another person. A very careful investigation into the causes of the explosion was made by the local board at Chicago, and re ported to be from want of sufficient water in the boiler; this was attributed partially to an improper arrangement of the pipes and valves leading the water from the forcing pump to the boiler, and also to carelessness or negligence of the engineer in charge. Believing it to be important that the fullest explanation of the causes of all accidents should be given to the public, to enable them to guard against similar ones in future, I shall in my reports be careful to give as plain explanations as possible. In this instance there were two boilers placed side by side in the hold of the vessel; these were supplied with water from one pump, through a single pipe for a little way, then joining a cross-pipe leading to either boiler, and through which it is supposed a part of the water will go to one boiler and a part to the other; upon each branch of this cross-pipe was placed a regulating valve, under which the water must pass before reaching the boiler; now, then, the operation would be, if one boiler was receiving more water than its proportion, the valve would be closed more or less, as the case may be; if both valves should be open, and one boiler was fired a little harder than the other, and even a slight degree of pressure increased in one, which would always be the case if the steam-pipe should be contracted, the effect would be to drive the water out of one into the other boiler-one boiler would be flush, and one scant of water; now, if by a little neglect only one boiler should be tried, it might be found full, while the other should be empty and already overheated; then by changing the condition, by firing harder in the other

boiler, or by closing down one of the regulating valves, the water should be driven back and an explosion be the result.

In this instance the boat was only moving from one dock to another to finish up her freight, and it was not deemed necessary to fire but one boiler. The inference of the inspectors was that the engineer thought he had effectually closed the valve leading to the cold boiler, and was deceived, or that he had forgotten it altogether, and that on discovering his mistake, or neglect, he then closed the valve and forced the cold water upon the heated boiler, and that by a sudden generation of steam beyond the safety-valve to discharge, or the boiler to withstand, an explosion followed, and the boat sunk almost immediately. Against the idea of low water, the captain swore that there was so much water that he observed the engine was working water and throwing large quantities out upon the deck. This was explained by the inspectors, that as both boilers were connected by the same steam-pipe to the engine, it was probable enough that one boiler was entirely full, and its water passed over through the engine, as the captain swore.

The inspectors hoped to find, by examining the values, a verification of their opinion, but they were so much injured that nothing could be determined. Some expected to find the body of the engineer at the value when the boat was raised, but he was found standing with the starting bar grasped in his hand. Another defective and reprehensible arrangement was found here: the pipe of the steamgauge led from the steam-pipe between the throttle-value and the engine, so that no pressure would be indicated from the boiler while the engines were not running.

It was also found, upon inquiry, that four steamers had been supplied with this arrangement of pipes and valves, and that certainly three of them had exploded in the same manner; and one of them was the ill-fated Globe, that exploded with such terrific violence in Chicago river a few years since, the fragments of which, I believe, this board visited with me soon after.

The local board recommend that no boiler hereafter be passed unless the steam-gauge be open at all times to the pressure in the boiler.

The tug-boat Success exploded her boiler in the Chicago river in May last, by which the engineer and three others lost their lives. The engineer lived to give a full and satisfactory explanation of the cause. He says the water had been getting low for some time from some obstruction to the pump or pipes, but hoping he could find and correct the difficulty before any accident should occur, he ventured to keep running instead of stopping, as he ought, until it was too late; that he knew well enough what the consequences would be if he continued. In the midst of this the bell rang to stop; he then told the captain that his water was low and he dare not stop; but as the captain only wanted to stop to hitch on to a vessel, and it would be but a moment or so, he stopped, and when he started again the explosion came, the boiler leaving the boat and falling into the river some way off. This was a regularly licensed engineer, and was supposed to be competent; but, as it proved, he, like many others, it is feared, had not the ability to say no, though he knew well enough his life was at stake. This boiler has since been taken up, and was found, contrary to the expectation of the board of local inspectors, to have given way down in the lower part of the fire-box, the farthest it could be from the fire, and where, if there had been any water in the boiler, it would have been, and in that part where it would have been overheated it had not given out, and this led the board to doubt the correctness of their former opinion, notwithstanding the statement of the engineer. My attention being called to it, I gave it as careful examination as I could, and found that all the lower part of the boiler near the place which gave way had become much weakened by rust, not being much over one-half of its original thickness, and that this being the weakest part of the boiler, it must of course yield there, without any reference to stronger parts of the boiler, whether weakened by fire or otherwise; and hence it is my opinion that the engineer told the truth, and that the explosion was occasioned from want of a sufficient supply of water until the interior portions had become overheated, and then by some means water was thrown upon the heated plates, and a sudden generation of steam followed, which the safety-valve could not relieve. I am confirmed in this still more by the testimony of the engineer, who stated that he was looking at the steam-gauge, and the hand flew rapidly over as far as it could go, and the explosion followed.

The tug-boat Fanny Stafford exploded her boiler in the Chicago river on the 19th of June. This was the most complete and destructive explosion I have Scarcely any vestige of the boat was left. The boiler left the boat, known. ascending high into the air, passing over a five-story building, across one of the public streets, and down through the roof and two floors, hanging in the third one from the roof; the boiler turned inside out and stripped to pieces in every direction. The engineer and three or four others were lost. The engineer was but a few days before refused a license for incompetency; but, regardless of the law, he still continued to run the boat and the owners to employ him. Ι had found it out full a week before the accident, and had made the proper complaint for his arrest, and had every day urged the officer to arrest him, but some way it was neglected until too late. By this neglect I have no doubt that three or four lives, and the boat, worth about twelve thousand dollars, were lost.

The tug-boat Fanny White exploded her boiler in Saginaw river, in the State of Michigan, on the 19th of June, by which one or two persons were killed. In this case the boiler had been inspected the year before; but, unknown to the inspectors, it had been materially altered and changed in its construction, and when first fired up it exploded. Supposed cause, imperfect workmanship in putting on the new dome, which blew off.

A collision occurred on the evening of the 9th of August off Thunder bay light, on Lake Huron, between the propellers Meteor and Pewabic, by which the Pewabic was sunk, and thirty-three of her passengers, with seven of the officers and crew, were drowned. This collision, occurring upon a clean, open lake, in a smooth sea, each vessel provided with proper and excellent signallights, in full view of each other—and when the lights were first made, if each had kept her proper course, would have passed full a mile away—yet approaching each other and colliding under full steam, at a speed of ten or twelve miles an hour, without ever signalling each other by whistle or otherwise, presents, apparently, a case of most aggravated wrong.

The public very properly called upon the inspectors to give it the most impartial and searching investigation, which was done by the local board of Detroit, and the licenses of Captain George P. McKay and George Cleaveland were revoked for mismanagement, and Mr. Cleaveland arrested and put in prison.

The facts, substantially, are as follows: The two steamers made each other's lights when five or six miles off, and without change of course would have passed full a mile apart; each vessel made the other's green and bright light; the Meteor very properly continued straight forward in her proper course; the Pewabic changes her course a little, but not enough to show her red light, and a little more insensibly crowding up toward the Meteor until within two lengths of her, when she suddenly put her wheel "hard a port" and showed her red light for the first time, crossing the Meteor's bows; the next instant the collision occurred. On the instant of showing the red light the captain of the Meteor gave one blast of the whistle, that he would go to the right or starboard gang to stop the starboard engine, and put his wheel "hard a-port." The time for all this did not exceed one minute, or perhaps a half. The engineers were both at their posts at the instant the engine stopped, and reversed instantly and

without embarrassment; and as soon as it was discovered that the Pewabic was sinking, the life-boats of the Meteor were lowered in good order, and lifepreservers thrown over for any who might need them, and, in fact, everything was done by the officers and crews of both vessels, after the collision, that coolness and good judgment could do, the Meteor remaining all night in rendering assistance. The conduct of Captain Wilson and all his officers and crew was highly commended by the board of inspectors, and the course he pursued throughout the whole was approved.

It may be proper to add that these boats were among the very best of their class anywhere, almost new, and supplied with everything required for the safety of passengers—life preservers, life boats, fire equipments, pumps, &c. The reason why so many were drowned was that the boat sunk so quick that many were unable to get out of the cabin. Most of those who were taken out of the water had life preservers on. One or two women were found floating in the water, but dead, showing the efficiency of the preservers—if not in these instances of saving the life, at least floating the body.

Captain McKay, of the Pewabic, whose license had been revoked for mismanagement in the case of the collision, appealed to the supervising inspector for a hearing, which was given, and it appearing satisfactorily that he was regularly and properly off watch until within one or two minutes of the collision, and that under the existing circumstances he found a collision inevitable, and that he took the best measures he could to ease off the shock, and save as far as possible his vessel, the decision of the local board was reversed.

The steamer Traveller was burned at the dock in Eagle Harbor, Lake Superior, on the 17th of August. No lives lost. Cause unknown. It was well secured from fire around the boilers.

The steamer J. P. Ward was burned at her dock in Bay City. No lives lost. No cause ascertained. License of the master revoked for not reporting.

The passenger steamer Huron, running from East Saginaw to Goderich, Canada, ran upon a rock at the mouth of Saginaw river, and is a loss, except the engines and boilers, which are being taken out. No lives lost. No report made. License ordered to be revoked for neglect.

The steamer Planet, when within two miles of Mackinaw, about 10 o'clock in the night of the 13th September, was discovered to be on fire in the hold of the vessel and around the boiler. The flames spread so rapidly that the engineer could not reach the pony-engine, which was also in the hold. The pipes conveying the water to the upper decks were put together with soft solder, and were soon melted apart, so as to be entirely useless. The mate immediately got the forward and after pumps at work, throwing water upon the fire where it could be reached. The vessel was stopped on the first alarm, so as not to fan the flames, and a sufficient number of the life-boats were safely lowered into the water, and all the ladies were sent on shore without accident. The engineer, Mr. La Fleur, then turned the steam into the hold, which enabled him to go down far enough with the water hose and direct it upon the flame, until finally it was extinguished. The passengers, in parties, were working with the utmost good will. Mr. La Fleur attributes the saving the vessel mostly to the steam thrown into the hold. He recommends that no ponyengine be placed in the hold, or that the pipe be allowed to be put together with soft solder if it can be avoided.

The steamship Detroit collided with a sail-vessel in the harbor of Milwaukie. No serious injury was done, and no lives lost or persons injured.

The propeller Governor Cusham has been ashore two or three times, and met with some injuries to her machinery; but no lives have been lost, and the injuries soon repaired.

The boiler of the F. W. Backus, on testing it in the spring, gave way under

the hydrostatic test; was ordered to be repaired. When done it stood the test, and she received her certificate.

One license has been refused for writing, or permitting some person to write, upon his license, changing its conditions.

A license was refused to Edward McGlennon by the local board of Detroit, because he was not a citizen of the United States, as required by a resolution of this board. A mandamus was issued by Judge Wilkins, of the United States district court, to the board of inspectors, to appear and show cause why they withheld a license from Edward McGlennon. They appeared in court and pleaded an order by the board of supervising inspectors prohibiting licenses to others than citizens of the United States. After a hearing of the case the judge ordered them to issue immediately the license, as requested by the said McGlennon, with which, I believe, the local board intended to comply; but by some accident McGlennon was drowned immediately after, and before any license was issued.

The propeller Dean Richmond collided with the propeller Illinois, which was reported to the local board at Detroit, and was by them referred to the inspectors at Buffalo.

The propeller Meteor, after the collision with the Pewabic, proceeded on her way to Lake Superior; when arriving at Sault St. Marie, twenty-four hours afterward, she was found to be on fire in the forward hold. Her fire-pumps were immediately set at work to extinguish the flames; but it was found impossible to do so. The hatchways were all fastened down to keep the flames from bursting out, but of no avail, and in order to save the vessel she had to be scuttled and sunk. The local board at Detroit were directed to investigate the case, but were unable to ascertain the cause. They report that she had fifty barrels of unslacked lime in her hold, but the captain, mate and engineer all swear that there was no water near the lime; but I am firmly impressed in the belief that the lime. I recommend that no lime be allowed to be carried in the hold of any steamer hereafter.

The propeller Stockman took fire at her dock and burned to the water's edge—a total, loss.

The tug-boat Emerald took fire but was extinguished. Two other tugboats have been on fire. The frequency of these fires has led some to believe that there is an organized band of boat-burners, but no evidence of it has been adduced. Several of the stcamboat owners are keeping extra watchmen on this account.

ALFRED GUTHRIE.

NINTH SUPERVISING DISTRICT.

One hundred and seventy-four steam vessels, of all classes, have been inspected by the supervising and local inspectors of this district during the year ending September 30, 1865, having an aggregate of sixty-nine thousand two hundred and ninety-two tons burden; and showing an increase of inspections in this district for the time above named over the previous year of sixty-four steamers, with an increase of thirteen thousand two hundred and forty-eight tons. In making the above-named inspections, two boilers gave way at Buffalo, New York, under the hydrostatic test; one by the breaking of staybolts, and the other by the rupturing of two of the boiler plates in the side of the furnace of same. Both of the above boilers were new, and after being repaired stood the pressure required. One boiler at Cleveland, Ohio, also gave 15 F way under the hydrostatic test, collapsing one of the main flues of the boiler, which after being repaired by a new flue, the boiler stood the required test; and one boiler also gave way under the hydrostatic test at Burlington, Vermont, which, after repairing same, stood the required pressure.

Three hundred and twenty-eight certificates of license to pilots have been issued by the supervising and local inspectors of this district during the year ending as above, seventy-three of which number were first issues, and two hundred and fifty-five were renewals.

Two hundred and seventy-eight certificates of license to engineers have also been issued as above and during the time named, of which number seventy-one were first issues, and two hundred and seven were renewals.

The licenses of two pilots, issued by the local board at Buffalo, New York, have been suspended by said board for cause; and that of one other pilot, licensed at Cleveland, has been revoked by the board at that port for like reasons.

The local inspectors at Burlington, Vermont, report that no accidents have occurred to any of the steam vessels belonging to their district or inspected by them, nor has any loss of life or injury to person occurred on board the same during the past year.

The local inspectors at Oswego, New York, report that no accidents have occurred during the year to any of the steam vessels belonging to their district or inspected by them, nor has loss of life or injury to persons occurred upon any of said steamers. The said local board also report that complaints have been made to them by masters and pilots of passenger steamers navigating Lake Ontario and the river St. Lawrence of the neglect on the part of British sail vessels, tugs, and towing-boats, to carry the signal lights at night required by the act of Congress of April 29, 1865, "fixing rules and regulations for preventing collisions on the water;" which system is identical with the English laws governing British vessels, and the non-observance of which on the part of British subjects greatly endangered life upon the said waters.

The local inspectors at Buffalo report the investigation of the collision of the steamers Dean Richmond and Illinois, which occurred on Lake Erie, near Point aux Pelee, on the night of June 28, 1865, by which the Illinois was sunk. No lives were lost. The estimated value of vessel and cargo lost, after saving a portion of the cargo, machinery, &c., is forty-five thousand dollars.

The local inspectors at Cleveland, Ohio, report four disasters that have occurred to steam vessels belonging to their district during the year ending September 30, 1865, to wit: The steam-tug Winslow, temporarily employed in the revenue service, and under command of United States revenue officers, in attempting to enter the harbor of Cleveland during a gale, in November, 1864, struck on the outer bar, thereby disabling her screw propeller and carrying away her rudder, and the vessel being unmanageable drifted against the piers and went to pieces. By this disaster six of the crew of the Winslow were drowned. The propeller Prairie State took fire while lying at the wharf at Oswego, New York, on the 21st day of June, 1865. By this accident the vessel was damaged six thousand dollars, and the cargo to the amount of fourthousand five hundred and fifty dollars. The propeller City of New York, while lying at the wharf at Milwaukie, Wisconsin, took fire, by which the vessel was damaged two thousand dollars; the damage to cargo not yet ascertained. The propeller Buckeye, bound from Ogdensburg to Toledo, struck a rock near Brockville, Canada West, on the river St. Lawrence, on the 24th of September, 1865, and sunk in seventy feet of water. By this disaster three lives of passengers were lost. The cause of the disaster has not yet been investigated.

The total number of passengers carried by steamers belonging to this district, as near as the same can be ascertained, is as follows:

REPORT 'ON THE FINANCES.

In the O	swego district		 	95,300 34,521
In the C	leveland district. e	natedstimated	 `	
	•		. 4	274, 940

The several local boards of this district report a cheerful willingness on the part of masters and owners of steam-vessels belonging to their respective districts to comply with all the requirements of the inspection laws, and they most respectfully ask that the supervising board will take such action, by its rules and regulations for the guidance of inspectors in their official duty, as will prevent the interference on the part of one local board with the official acts of another, so that harmonious action may generally exist in such boards.

The local inspectors of this district desire to renew their petition of last year that the supervising board will take into consideration the subject-matter of the large increase of labor imposed upon them by recent acts of Congress without a corresponding compensation therefor; and they request that, in view of the corresponding increase of revenue derived by the government from such increase of labor, the supervising board will recommend the passage of an act by Congress that shall equalize the salaries of said inspectors in proportion to the labor performed by them.

A. S. REMIS,

Supervising Inspector Ninth District.

TENTH SUPERVISING DISTRICT.

There have been sixty-five steamers inspected in this district, amounting in tonnage to twelve thousand nine hundred and thirty-seven tons. There have also been licenses granted to two hundred and sixty-one pilots; also to engineers, two hundred and thirty-seven; making a total of four hundred and ninety-eight. This only includes eight months, ending August 30, 1865.

This district has only been under control of the local board since January 1, 1865, and as no supervisor has yet visited it, much information in regard to it is lost.

The following is a list of accidents reported by local board :

Steamboat Gertrude upset, from being too top-heavy; about six lives lost.

Steamboat Bella Donna was run into by the steamer Continental, both boats going up stream at the time. J. Woodard, first engineer of the Bella Donna, lost his life by being knocked overboard. The pilot of the Continental was grossly negligent, and from evidence given we are of the opinion that he ran into the Bella Donna intentionally. His name is H. E. Bixly. We suspended his license for six months. The damage to the Bella Donna was nothing serious.

The steamer Joseph Pierce, a regular liner from here to Vicksburg, and a new boat almost, exploded one of her boilers while lying at a landing a few miles below Vicksburg. There were about twelve or fifteen persons killed and wounded by this disaster. The evidence showed that the second engineer, on watch at the time, J. N. C. Richardson, was to blame, and his license was revoked. The boat took fire and burned, being a total loss.

Steamer Kentucky, a very old boat, sunk in Red river. There were about fifty persons lost, mostly colored troops. No one to blame, as the vessel was leaking to an alarming extent when she left Shreveport, but military necessity said she should go. Steamers E. F. Dix, Emma, Iowa, and Bella Donna sunk also in Red river, owing to numerous obstructions and wrecks, making navigation very perilous.

Steamer Lelia was totally destroyed by fire in Red river.

Steamer Saratoga was sunk, but was raised, and is now running.

The small steamer Carlotta was sunk opposite this city by coming in collision with the New York steamship Matanza, the great weight of the latter vessel causing the Carlotta to sink to the roof in a few minutes; no lives lost.

The steamship Reindeer exploded her boiler, while on her way to this city from Mobile, by which some six or eight lives were lost. The case will be investigated by the Mobile board.

J. V. GUTHRIE,

Eupervising Inspector Sixth District.

Hon. HUGH McCulloch, Secretary of the Treasury.

REPORT OF THE DIRECTOR OF THE MINT.

MINT OF THE UNITED STATES,

Philadelphia, September 29, 1865.

SIR: I have the honor to present the following report of the operations of the mint and its branches for the fiscal year ending June 30, 1865.—The deposits and coinage of the fiscal year just closed exhibit a very satisfacfory increase over those of the previous year.

The amount of bullion in value received at the mint and branches during the fiscal year was as follows. Gold, \$31,065,349 74; silver, \$1,183,405 23; total deposits, \$32,248,754 97. From this sum a deduction must be made for redeposits or bars made at one branch of the mint and deposited at another for coinage. Making this reduction, the amount will be \$27,982,849 09.

The coinage for the same period was as follows: Gold coin, \$25,107,217 50; unparted and fine gold bars, \$5,578,482 45; silver coin, \$636,308; silver bars, \$313,910 69; cents coined, including the two and three cent pieces, bronze and nickel, \$1,183,330; total coinage, \$32,819,248 64. Number of pieces of all denominations coined, 87,323,851.

The distribution of the bullion received at the mint and branches was as follows: At Philadelphia, gold deposited, \$6,465,212 17; gold coined, \$6,436,377 50; fine gold bars, \$85,310 24; silver deposits and purchases, \$315,943 99; silver coined, \$307,508; silver bars, \$3,671 66; cents coined, one, two and three-cent pieces, \$1,183,330; total deposits of gold and silver, \$6,781,156 16; total coinage, \$8,016,197 40. Number of pieces, 85,548,735.

At the branch mint, San Francisco, the gold deposits were, \$18,808,318 49; gold coined, \$18,670,840; silver deposits and purchases, \$540,299 20; silver coined, \$328,800; silver bars, \$145,235 58; total coinage of gold and silver, \$19,144,875 58. Number of pieces, 1,775,116.

\$19,144,875 58. Number of pieces, 1,775,116. The assay office in New York received during the year in gold bullion, \$5,250,260 04; in silver, \$320,111 23; number of fine gold bars stamped at that office, 2,175; value, \$4,947,809 21; silver bars, 1,859; value, \$165,003 45; total value of gold and silver bullion, \$5,570,371 27.

Branch mint at Denver, gold deposits, \$541,559 04; silver, \$7,050 81; total deposits, \$548,609 85. Number of stamped bars, 469; value, \$545,363. The report of the superintendent of this branch represents its operations during the year as successful and encouraging. It is engaged in melting, refining, assaying and stamping gold bullion, returning the same to the depositor in the form of unparted bars, bearing the government stamp of weight and fineness.

In my last annual report in reference to this branch mint I remarked that "the efficiency and usefulness of this branch would be greatly increased if a safe and expeditious mode of transportation could be secured. An overland route of six hundred miles is a formidable obstacle in the way of commercial intercourse with our eastern cities and markets. In addition, the hostility of the Indian tribes along the route, doubtless instigated by rebel emissaries and bad white men, has increased the difficulty and dangers of inter-communication, and the transportation of bullion to the Atlantic markets. These difficulties will probably be obviated in due time, and that institution will then assume her proper position as a branch mint.

Efforts have been made to introduce a system of purchases and exchanges, by which the government will assume the risk of transporting bullion from Denver to places where it may be needed for coinage or purchase. The government, by purchasing the bullion at Denver, and paying therefor by draft in specie on the treasurers in the Atlantic States, would relieve the owners of all responsibility, and enable them to convert their bullion into eastern funds with but little expense. The act of Congress establishing a branch mint at Denver provides that "the superintendent of said branch mint at Denver be authorized, under the direction of the Secretary of the Treasury, and on terms to be prescribed by him, to issue, in payment of the gold-dust and bullion deposited for assay and coinage, or bars, drafts or certificates of deposit, payable at the treasury, or any sub-treasury of the United States, to any depositor electing to receive payment in that form."

This provision embodies the true policy of the government in relation to the deposits of bullion in branch mints or assaying offices distant from our great commercial centres. Its accomplishment would not only benefit the hardy miner and the gold regions of Colorado, but also the general commercial interests of the country and government. Renewed efforts ought to be made to introduce this system, and when the difficulties now in the way are removed, and the overland stage route to Denver is in full and successful operation, satisfactory arrangements can be made with that company and others, by which the bullion purchased by the government will be safely brought to the eastern cities and depositories.

The superintendent at Denver constantly urges the necessity for a prompt introduction of the system of purchase and exchange, as contemplated in the act of Congress, to which reference has been made; and, concurring in the necessity for such action, I most respectfully ask the early and favorable consideration of this subject by your department.

Under the efficient management of the superintendent of the branch mint at San Francisco, its operations have been well and successfully performed. The coinage of the past year has been very large. The monthly deposits of bullion are increasing, and it is confidently predicted that the yield of the mines for the current year will largely exceed that of any former period. The past has been a success; the future is full of encouragement.

In this connexion it is gratifying to know that Congress, fully appreciating the magnitude and importance of the mineral wealth of the Pacific States, has made an appropriation for the erection of a new mint-building at San Francisco. The present building is not only unsafe, but wholly inadequate for the increasing business of that branch mint. The new structure should be, in architecture, capacity, machinery, and every particular, adapted to the present and future of California and the Pacific States.

BRANCH MINTS.

The suppression of the rebellion and the anticipated early return of the recusant States to their allegiance present the question, What shall be done with the branch mints at New Orleans, Louisiana; Charlotte, North Carolina; and Dahlonega, Georgia? In my annual report of 1862 it was suggested that the branch mint at New Orleans, after the re-establishment of law and order in Louisiana, might be successfully operated, and that the branch mints at Charlotte and Dahlonega ought not to be employed again for minting purposes. My opinions on this subject are unchanged. The commercial importance of New Orleans, and the relations of that city to every portion of our country, justified the establishment there of a branch mint; and the amount coined in that institution from its organization, in 1838, to January, 1861, confirmed the propriety of its location at that place. During the period of its active operations, the total coinage was over seventy millions of dollars, as follows: \$40,381,615 in gold, and \$29,890,037 in silver. The deposits of silver at this branch have always been large; and it is worthy of consideration whether the coinage there should not, for the present, at least, be confined to silver.

The same reasons for re-opening the branches at Charlotte and Dahlonega do They are away from the commercial centres, inland, and of little not exist. commercial importance in themselves. The existence of gold mines in their respective localities may be a reason for re-opening them as assay offices, but not for minting purposes. The results of their operations from their commencement, in 1838, to February, 1861, do not sustain the policy of their original estab-The coinage of both these branches is limited, by act of Congress, to lishment. gold. At Charlotte the total coinage during the twenty-three years of the existence of this branch was only \$5,048,641 50; and at Dahlonega for the same period, \$6,121,919; an average annual coinage of about \$250,000; declining at Dahlonega, from 1857 to 1861, to an annual coinage of about \$70,000; and at Charlotte, for the same period, of less than \$150,000. These facts seem to be conclusive on the question of re-opening these branches for minting purposes, and particularly when there is no great probability of a large increase in the gold production of those localities.

To meet every commercial want of those places, and also the interests of the miners of gold, the re-opening of these branches for melting, refining, assaying, and stamping gold bullion would be amply sufficient; giving to the superintendent or treasurer of each branch authority to issue, in payment for gold-dust, bullion, or bars deposited for assay, drafts or certificates of deposit, payable in specie at the treasury, or any sub-treasury of the United States, to any depositor electing to receive payment in that form. This provision would wholly supersede the necessity of coining at these branches, or any imaginary benefits resulting therefrom.

The able and interesting report of Professor James C. Booth, appointed, at the suggestion of your department, to examine the condition, &c., of these branch mints, and which has been submitted to you, confirms the views now expressed.

On the subject of assay offices for our gold-mining regions, and the impolicy of multiplying branch mints, my sentiments were fully expressed in my last annual report, to which you are respectfully referred.

GOLD-MINING REGIONS.

The reports from the gold and silver mining portions of the United States are of the most encouraging character. The developments of the past year prove the supply of those minerals to be inexhaustible. With the restoration of the peace and unity of our country and the suppression of the Indian hostilities the production of the precious metals will be greatly increased. The recent discoveries of rich gold deposits have stimulated emigration; capital is hourly seeking investment; the energy of our people has been aroused, and every indication, individual and national, foretells a successful future to this most interesting portion of the United States.

It is not easy to obtain any other reliable statistics than those officially appended to the reports of the director of the mint, but these do not assume to give the amount of the entire production of the precious metals. The shipments to other countries must be large. For example, we are vaguely assured that the silver mines of Nevada average a shipment of one ton daily, which would equal twelve millions of dollars annually. If so, we see but little of this; a small part goes into California circulation, and a large part to China, where it makes one purchase and does no further good to the world, being practically withdrawn from circulation.

We have frequent opportunities for conversation with persons who travel or reside in the various mining regions of the United States and of contiguous provinces, and it is interesting to hear their accounts of the vast developments of wealth and prospects of profitable industry.

Thousands of square miles, made up of snowy mountains, deep cañons, and sterile plains, long supposed to be worthless, and really so for agricultural purposes, are now found to compete in value with the rich garden lands of the cultivated east. Where food cannot be produced, ores and minerals may be dug up to pay for it; if the search disappoints some, it rewards others; and the whole land, tied together politically and socially, feels, or will feel, the beneficent effects of these grand discoveries.

Yet it will be well to guard against exaggeration. It must be remembered that it is not enough to find gold and silver even in considerable quantities; there must be conveniences for living, for mining, and extracting; especially there must be a good supply of wood and water. So important is this, miners tell us that where ore prospects, say, two hundred dollars to the ton, while wood and water can scarcely be had, the mine is really of no value, or of less value than an ore of twenty dollars to the ton, with these adjuvants at hand. On this account, it is said, the silver mines of the famous Humboldt region are, at present, of little practical value. Some of the mining regions will be benefited by the approach of railroad facilities; others, perhaps, must remain forever shut out from the line of profitable labor. But we will not limit the energy or enterprize of the American people.

It is also interesting to observe the incessant efforts to improve the methods of extraction. It is one thing to find where the metals lie, another to bring them to the surface, and still another to get out a paying result, and not leave too large a share lying inextricably in the heap of tailings. Great progress has been made in mining economy within the last fifteen years, judging from the repeated assurance that an ore of gold or silver yielding only fifteen or twenty dollars to the ton, in a good locality, is worth working. In fact, the poor ores are deemed more desirable, all things considered, than the rich ores, which are apt to prove mere pockets.

The advance of the mining art will give new life to our mines at the east and south, where the advantages are so great. Indeed, an experienced capitalist in mines from Nevada, on hearing our report upon a sample of gold ore from a new mine not far from the seat of government, declared "he would rather work it than his mines in the west."

We have also an interesting statement, and one particularly so at this juncture of our national affairs, from a proprietor in the gold region of North Carolina, that "the system of paid labor is likely to show its just and natural effects in the increased return of gold."

There is a published statement that gold mining has been actively recommenced in several counties of Virginia on both sides of the James river, west of Richmond, and with encouraging success. Gold has also recently been found in Maryland, at various points, near the Potomac and Susquehanna. As regards the mines further south, the report of Prof. Booth furnishes the latest and best information.

Outside of our lines, in Canada and Nova Scotia, there are gold workings, and prospects of a most important and satisfactory character. Occasional deposits from those localities are made here and in New York. With resources illimitable, the precious metals inexhaustible, and our fields rich in the affluance of an abundant production—with a population energetic and enterprising, bold and brave, our country's future is not problematical. National repudiation, even in the presence of a national debt numbered by hundreds of millions, will find no place in the patriotic thought of a reunited and grateful people; and national bankruptcy will only be named in the whisperings of cowardice or the suggestions of treason.

BRONZE AND NICKEL COINAGE.

The coinage of the cent and two-cent piece from the bronze alloy has been very large, but not in excess of the demand. They have been distributed to almost every part of the United States, and many into States, west and south, that heretofore refused to use such coin as currency. The total amount issued during the year will be found in the tables annexed to this report.

As required by law, this bronze and nickel alloy has been regularly assayed and reported by the assayer of the mint, and the legal proportion of the constituent metals found to have been steadily maintained.

By the act of Congress passed March 3, 1865, authority was given to coin a three-cent piece of nickel and copper alloy as a substitute, to some extent, for This coin has been issued and put in circulation. the fractional paper currency. It is neat in appearance, convenient in size, and will become a popular coin. If, in addition to the already prohibited issue of three-cent notes, the five-cent notes of the fractional paper currency were withdrawn, or the circulation limited and gradually reduced, the demand for this new coin would be much increased. Its increased production and circulation would not only furnish a . more desirable currency than paper, but would become a source of large revenue . to the government. From the profits of the bronze and nickel coinage we have transferred to the treasury of the United States, during the fiscal year just closed, four hundred thousand dollars, (\$400,000,) and a few weeks after the expiration of the year the further sum of one hundred thousand dollars (\$100,000) was in like manner transferred; the fund remaining being sufficient for all the purposes of this coinage.

From this same nickel alloy a coin of the denomination of five cents, and which would be a popular substitute for the five-cent note, could easily be made. This suggestion, however, is respectfully submitted, in view of the probable withdrawal of the smaller denominations of the fractional paper currency, and as preparative and aid to its accomplishment. This to continue only until the resumption of specie payments, or for a fixed and limited period. In a country abounding in the precious metals, and with silver generally in excess of all demands for coinage, or other purposes, in time of peace, "tokens," or coins of inferior alloy, should not be permitted to take the place permanently of silver in the coinage of pieces above the denomination of three cents.

If the nickel alloy coin of five cents shall be adopted, temporarily or otherwise, provision should be made for its redemption in currency, in sums not less than one hundred dollars, and in manner to suit the convenience of the government, and prevent its becoming troublesome by capricious use. At the proper time similar provision should be made for the redemption of the three-cent piece, in sums not less than sixty dollars. This would secure confidence and circulation for this coin.

MOTTO COINS.

By the fifth section of the act of Congress of March 3, 1865, already referred to, the director of the mint, with the approval of the Secretary of the Treasury, was authorized to place upon all the gold and silver coins of the United States susceptible of such addition, thereafter to be issued, the motto "In God we

REPORT ON THE FINANCES.

trust." The direction was at once given to prepare the necessary dies; and it is confidently expected that before the close of the calendar year the gold and silver coins of the mint of the United States will have impressed upon them, by national authority, the distinct and unequivocal recognition of the sovereignty of God, and our nation's trust in Him. We have added to our nation's honor by honoring Him who is "King of kings and Lord of lords."

STATEMENT OF FOREIGN COINS.

The statement of foreign coins required by law to be made annually will be found appended to this report. We have no changes to make in these tables, as no coins differing from those named in the previous report were presented during the year for examination or assay.

The medal department of the mint is in successful operation. A large number of national and other medals have been manufactured during the year. The productions of this department are duly appreciated by the public and approved by the government.

Valuable additions have been made to the cabinet of coins and medals during the year by gift and purchase. It is a place of great resort, and multitudes from every section of our country are daily visitants. The collection of coins is large and valuable. The annual appropriation for the purchase of coins, &c., should be increased. It is now only three hundred dollars.

LIST OF TABLES IN APPENDIX.

A.—Statement of bullion deposited at the mint of the United States and branches during the fiscal year ending June 30, 1865.

B.—Statement of the coinage at the mint of the United States and branches during the fiscal year ending June 30, 1865.

C.—Statement of gold and silver of domestic production deposited at the mint of the United States and branches during the fiscal year ending June 30, 1865.

D.—Coinage of the mint and branches from their organization to the close of the fiscal year ending June 30, 1865.

E.—Gold of domestic production deposited at the mint of the United States and branches, to June 30, 1865.

F.—Statement of the amount of silver coined at the mint of the United States, and branches at San Francisco and New Orleans, under the act of February 21, 1853.

G.—Statement of the amount of silver of domestic production deposited at the mint of the United States and branches, from January, 1841, to June 30, 1865.

H.—Cents of old issue deposited at the United States mint for exchange, for the nickel cent, to April 22, 1864.

I.-Statement of the weight, fineness, and value of foreign gold coin.

J.-Statement of the weight, fineness, and value of foreign silver coin.

Very respectfully, your obedient servant,

JAMES POLLOCK, Director of the Mint.

Hon. H. McCulloch,

Secretary of the Treasury, Washington, D. C.

H.-Statement of cents of former issue deposited at the United States mint for exchange for cents of new issue, to June 30, 1864.

I.—A statement of foreign gold and silver coins, prepared by the Direc'or of the Mint, to accompany his annual report, in pursuance of the act of February 21, 1857.

EXPLANATORY REMARKS.

The first column embraces the names of the countries where the coins are issued; the second contains the names of the coin, only the principal denominations being given. The other sizes are proportional; and when this is not the ' case, the deviation is stated.

The third column expresses the weight of a single piece in fractions of the troy ounce carried to the thousandth, and in a few cases to the ten thousandth, of an ounce. The method is preferable to expressing the weight in grains for commercial purposes, and corresponds better with the terms of the mint. It may be readily transferred to weight in grains by the following rule: Remove the decimal point; from one-half deduct four per cent. of that half, and the remainder will be grains.

The fourth column expresses the fineness in thousandths, *i. c.*, the number of parts of pure gold or silver in 1,000 parts of the coin.

The fifth and sixth columns of the first table expresses the valuation of gold. In the fifth is shown the value as compared with the legal content or amount of fine gold in our coin. In the sixth is shown the value as paid at the mint after the uniform deduction of one-half of one per cent. The former is the value for any other purposes than recoinage, and especially for the purpose 'of comparison; the latter is the value in exchange for our coins at the mint.

For the silver there is no fixed legal valuation, the law providing for shifting the price according to the condition of demand and supply. The present price of standard silver is 122½ cents per ounce, at which rate the values in the fifth column of the second table are calculated. In a few cases, where the coins could not be procured, the data are *assumed* from the legal rates, and so stated.

TREASURY DEPARTMENT, Office of Commissioner of Customs.

N. SARGENT, Commissioner of Customs.

Statement showing the present liabilities of the United States to Indian tribes under stipulations of treaties, &c.

Names of tribes.	Description of annuities, stipulations, &c.	Reference to laws; Statutes at Large.	Number of instalments yet unap- propriated, explanations, re- marks, &c.	Annual amount necessary to meet stipulations, indefinite as to time, now allowed, but liable to be discontinued.	Aggregate of future appropri- ations that will be required during a limited number of years to pay limited annui- ties till they owner, an'ts incidentally necessary to effect the payment.	Amount of annual liabilities of a permanent character	Amount held in trust by the United States on which five per cent. is amnally paid; and amounts which, invested at five per cent, would produce permanentiamutikes.

No. 31.

REGULATIONS CONCERNING COMMERCIAL INTERCOURSE WITH INSUR-RECTIONARY STATES, CAPTURED AND ABANDONED PROPERTY, AND THE PURCHASE OF PRODUCTS ON GOVERNMENT ACCOUNT.

Amended regulation, series of July 29, 1864. [No. LV.]

TREASURY DEPARTMENT, December 22, 1864.

Regulation LV, concerning commercial intercourse, series of July 29, 1864 is hereby amended as follows :

LV. All existing authorities to purchase products in insurrectionary States are hereby revoked, except that products purchased in good faith under such authorities, and paid for in whole or in part, prior to the 29th day of July, 1864, may be transported to market as before the passage of the act of July 2, 1864, subject to the following limitations and conditions and included in the following classes:

1st. These which have been wholly paid for.

2d. Those upon which part payment has been made, coupled with a legal obligation to pay the residue, so that the articles purchased are at the risk of the purchaser, and such payment is in nowise dependent upon their delivery.

3d. Where part payment has been made, without such obligation as to the balance, so much of the products, alleged to have been purchased, as the amount actually advanced will pay for at the stipulated price.

The original permits must be produced in such case, and proof furnished to the satisfaction of a proper permit officer and a supervising or assistant special agent for the agency or district in which proof is to be made that the property desired to be moved comes within one of the classes named above, and that the privilege conferred by the original permit has been in no way violated or abused a certificate of which facts must be indorsed upon the permit over' their official signature, which permit, so indorsed, will then be considered as revived and in full force, to the extent specified in the indorsement, in accordance with this rule.

> W. P. FESSENDEN, Secretary of the Treasury.

Executive order.

EXECUTIVE MANSION, December 22, 1864.

I, Abraham Lincoln, President of the United States, having seen and considered the within amended regulation, numbered LV, prescribed by the Secretary of the Treasury, do hereby approve of the same; and I further declare and order that products moving in compliance with the said regulation shall be exempt from seizure and from confiscation and forfeiture to the United States. ABRAHAM LINCOLN.

Amended regulation, series of July 29, 1864.

TREASURY DEPARTMENT,

January 4, 1865.

It having been represented to this department that Regulation LV, concerning commercial intercourse, as amended December 22, 1864, is liable to misconstruction, and has been misconstrued as to its intent and meaning, it is hereby amended as follows: LV. All authorities issued prior to July 29, 1864, to purchase products in insurrectionary States are hereby revoked, except that products purchased in good faith under such authorities, and paid for in part or in whole, prior to the said 29th day of July, 1864, may be transported to market as before the passage of the act of July 2, 1864, subject to the following limitations and conditions, and included in the following classes :

1st. Those which have been wholly paid for.

2d. Those upon which part payment has been made, coupled with a legal obligation to pay the residue, so that the articles purchased are at the risk of the purchaser, and such payment is in nowise dependent upon their delivery.

3d. Where part payment has been made, without such obligation as to the balance, so much of the products alleged to have been purchased as the amount , actually advanced will pay for at the stipulated price.

The original permits must be produced in each case, and proof furnished to the satisfaction of a proper permit officer and a supervising or assistant special agent for the agency or district, in which proof is to be made that the property desired to be moved comes within one of the classes named above, and that the privilege conferred by the original permit has been in no way violated or abused; a certificate of which facts must be indorsed upon the permit over their official signature, which permit, so indorsed, will then be considered as revived and in full force, to the extent specified in the indorsement, in accordance with this rule.

W.P. FESSENDEN,

Secretary of the Treasury.

Executive order.

EXECUTIVE MANSION,

January 4, 1865.

I, Abraham Lincoln, President of the United States, having seen and considered the within amended regulation, numbered LV, prescribed by the Secretary of the Treasury, do hereby approve the same; and I further declare and order that products moving in compliance with the said regulations shall be exempt from seizure and from confiscation and forfeiture to the United States. ABRAHAM LINCOLN.

Additional regulations concerning commercial intercourse with and in States declared in insurrection, January 26, 1864.

EXECUTIVE ORDER.

EXECUTIVE MANSION,

Washington, January 26, 1864.

I, Abraham Lincoln, President of the United States, having seen and considered the additional regulations of trade prescribed by the Secretary of the Treasury, and numbered LI, LII, LIII, LIV, LV, and LVI, do hereby approve the same; and I further declare and order that all property brought in for sale in good faith, and actually sold in pursuance of said Regulations LII, LIII, LIV, LV, and LVI, after the same shall have taken effect and come in force as provided in Regulation LVI, shall be exempt from confiscation or forfeiture to the United States.

ABRAHAM LINCOLN.

Additional regulations of trade.

TREASURY DEPARTMENT, January 23, 1864.

LI. The commanding general having expressed the opinion, in reply to a letter addressed to him by the Secretary of the Treasury on the 16th instant, that restrictions on trade in the States of Missouri and Kentucky may now be safely removed, and the Secretary of War, in his letter of this day, January 23, 1864, having approved that opinion, the twenty-sixth regulation of trade established, with other regulations, on the 11th of September, 1863, is so far modified that all restrictions on trade in the States of Missouri and Kentucky are annulled and abrogated; and all products and goods may be freely taken into and transported within the said States as in time of peace: *Provided, however*, That no products or goods shall be taken from said States, or either of them, into any State declared to be in insurrection, or to any port in said State heretofore blockaded which has been or may be opened, except in compliance with the regulations of September 11, 1863.

Restrictions upon trade in, to, or from other States, and also upon the trade with States in insurrection and parts of said States, especially on the Mississippi and other navigable rivers, will be removed whenever, in the opinion of the President, such removal shall be found compatible with the military measures necessary for the suppression of the rebellion.

S. P. CHASE, Secretary of the Treasury.

ADDITIONAL REGULATIONS OF TRADE.

To take effect when promulgated under authority of the President by generals commanding departments.

TREASURY DEPARTMENT, January 26, 1864.

LII. All persons being or residing in any of the States declared to be in insurrection, whether within or beyond the lines of national military occupation, may freely bring any goods or products from within the State in which he may, reside to any place within such lines where there is a supervising special agent or assistant special agent of the Treasury Department, for sale or other disposition; and so much of any regulation heretofore established as requires the obtaining of any previous authority or permit for bringing goods and products to the place of sale is hereby rescinded,

LIII. In all cases where the owner of the goods and products so brought in for sale shall reside within the lines of national military occupation, and shall take the oath prescribed by the proclamation of the President, dated December 8, 1863, and is not excepted from the annesty granted by the said proclamation, or proved by affidavits to the satisfaction of the supervising special agent or assistant special agent to be disloyal and hostile to the United States, such owner or his agent may receive the price of his goods and products without deduction, except for dues and fees to the government under the regulations of September 11, 1863, or he may convey such goods and products, having paid said dues and fees, under proper permit, to such other place as he may choose for sale or other disposition; but whenever the owner of said goods and products shall not reside within the lines of national military occupation, such goods and products shall be sold by the supervising special agent or assistant special agent; and all such sales of such goods and products shall take place on Monday of each week at the place of receipt, and shall include all complete lots on hand at the time of sale. And the supervising special agent or the assistant special agent, as the case may be, shall pay to said owner or his agent,

330

if said owner shall have taken said oath, and is not excepted from said amnesty nor proved to be disloyal and hostile, twenty-five per cent. of the gross proceeds of said sales, and shall pay the remainder of such proceeds, after deducting necessary and proper expenses of sale and one per cent. as additional compensation, into the treasury of the United States, and shall give to the owner of each lot sold, or his agent, a receipt or certificate describing the property. But the aggregate compensation of no supervising special agent or assistant special agent shall exceed the sum of five thousand dollars per annum, or at that rate for a less period; and each supervising special agent and assistant special agent charged with the receipt and payment of any money under any regulation of the Treasury Department shall give bond to the satisfaction of the Secretary of the Treasury, in the sum of fifty thousand dollars, for the faithful performance of his duties as such supervising special agent or assistant special agent, and for the punctual payment into the treasury of the United States of all sums by him received and required by law or regulations to be so paid.

LIV. All sales, whether private or public, shall be for notes of the United States or treasury notes, exclusively, and all proceeds of goods and products paid into the treasury under the foregoing regulation shall be restored without interest to the owner of the goods and products sold, in case he shall establish, on the return of peace and the full practical restoration of the authority of the Union, his title to said goods and products, and that since the sale thereof he has conducted himself in all respects as a good and loyal citizen of the United States, and has done nothing inconsistent with the terms of the oath prescribed by the President's proclamation of amnesty.

LV. Nothing in either of the foregoing additional regulations shall authorize the conveyance of supplies beyond the lines of national military occupation, or, except under the regulations of September 11, 1863, within said lines.

LVI. The foregoing regulations, numbered LII, LIII, LIV, LV, shall take effect and be in force within the lines of the several military departments in the insurrectionary States, whenever the generals commanding said departments shall, respectively, under authority from the President, and by proper orders, promulgate the same.

S. P. CHASE, Secretary of the Treasury.

Executive order.

EXECUTIVE MANSION, Washington, February 2, 1864.

I, Abraham Lincoln, President of the United States, having seen and considered the additional regulation of trade prescribed by the Secretary of the Treasury, and numbered LVII, do hereby approve the same.

ABRAHAM LINCOLN.

Additional regulation of trade.

TREASURY DEPARTMENT, February 2, 1864.

LVII. The Secretary of War having transmitted to this department a letter of the commanding general, expressing the opinion, in reply to a letter addressed to him by the Secretary of the Treasury on the 16th ultimo, that restrictions on trade in the State of West Virginia, within the national military lines, may now be safely removed, the twenty-sixth regulation of trade, established with other regulations on the 11th of September, 1863, is so far modified that all restrictions on trade in the State of West Virginia, within said lines, are annulled and abrogated; and all products and goods may be freely taken into and transported within the above-mentioned portion of said State, as in time of peace: *Provided*, *however*, That no products or goods shall be taken from said State into any State declared to be in insurrection, or to any port in any such State heretofore blockaded, which has been or may be opened, except in compliance with the regulations of September 11, 1863.

S. P. CHASE, Secretary of the Treasury.

Amended regulation, series of July 29, 1864.

TREASURY DEPARTMENT, February 21, 1865.

Regulation XVI, concerning abandoned, captured and confiscable personal property, series of July 29, 1864, is hereby amended, as follows :

XVI. Supervising special agents, and such other persons assh all be specially. authorized by the Secretary of the Treasury to receive and sell captured, abandoned, and confiscable property, will pay or cause to be paid, out of the general fund arising from the sale of all such property received and sold by him, all expenses necessarily incurred in collecting, receiving, securing, and disposing of the same, including fees, taxes, freights, storage, charges, labor, and other ne- . cessary expenses, being careful to avoid all useless or indiscreet expenditures; and will charge each particular lot or parcel with the specific or proportionate amount of all such expenses as can be made specific or proportionate charges to each lot or parcel; and will also charge and retain out of the proceeds of each lot or parcel one and one-half per centum thereof for the payment of such expenses connected with the collection, transportation, and sale, or other disposition thereof, as cannot be made specific or proportionate charges against each lot or parcel, or are not otherwise provided for, such as rents, compensation to clerks or other employes, auctioneers, printing, and advertising, a carefully stated account of which will be kept by such agents, or other persons, showing in detail all expenses paid out of this fund arising from such charge; and unless unavoidably prevented, they will take vouchers for all expenditures made under this regulation, and transmit the same with their accounts to the Secretary of the Treasnry. Out of the balance, if any, of said one and one-half per centum remaining after defraying said expenses the several supervising special agents, or other persons selling as aforesaid, may retain as compensation for extra care and responsibility a sum not exceeding three-fourths of one per centum of the amount of such sales; and with the remainder, if any, may reward extra services in the collection and care of property, rendered by agents and others, in such manner and to such amount as may be approved or directed by the Secretary of the Treasury : *Provided*, That the amount so retained for extra care, responsibility, or services, by any agent or other person, selling as aforesaid, after the date hereof, shall not exceed two thousand dollars per annum, or at that rate for a less period; unless the Secretary shall, for special services and responsibilities, allow a larger sum.

W. P. FESSENDEN, Secretary of the Treasury.

EXECUTIVE MANSION, February 21, 1865.

A. LINCOLN.

Approved :

Additional regulations to the series of July 29, 1864.

TREASURY DEPARTMENT, March 21, 1865.

The following additional regulations are hereby prescribed by the Secretary of the Treasury, as supplementary and amendatory to the series of July 29, 1864:

I. The local rules for the first, second, and third special agencies, dated February 1, 1865, made by the general agent of the Treasury Department, for the purpose of carrying out the provisions of the act of Congress approved July 2, 1864, are hereby approved. But neither this approval, nor the local rules, nor any contracts made under them, will be regarded as affecting any right or claim of the United States arising out of the confiscation laws thereof.

II. Rule III, of said local rules, will be amended by inserting the words "loyal and" before the words "well-disposed," so that it will read, "all loyal and well-disposed persons," &c.

III. Products received under the rules relating to the registry of plantations will be disposed of by supervising special agents in the same manner and subject to the same regulations and conditions as provided by Regulation XIII, series July 29, 1864, concerning rents received for abandoned and confiscable lands.

IV. Amended Regulation XVI, concerning abandoned, captured, and confiscable personal property, dated and approved February 21, 1865, is hereby revoked, and the original regulation is restored and stands in-the same force and effect as before the amendment. But the same is hereby amended by adding thereto the following proviso, viz: *Provided*, That in special cases of large captures the Secretary of the Treasury may direct different dispositions thereof either through the officers acting under the regulations, or others specially appointed for the purpose, in which cases he will fix such conditions and terms of compensation in each case as he shall think proper.

V. In any special agency district where the duties relating to the several subjects provided for by the regulations, series July 29, 1864, can, with due regard to the public interests, be performed by one assistant special agent, but one will be assigned to duty in such district.

Supervising special agents, before making any changes required by this regulation, will submit their proposed action to the general agent for approval, who will report the action taken to the Secretary.

VI. When the office of a supervising special agent shall be located in the same place where the office of an assistant special agent of a district has heretofore been established, the duties for the district will be mcrged in the office of the supervising special agent. In such cases an assistant special agent may be assigned to duty as a deputy in the office of the supervising special agent, either by the Secretary, or subject to his approval.

H. McCULLOCH,

Secretary of the Treasury.

EXECUTIVE MANSION, March 21, 1865.

ABRAHAM LINCOLN.

Amended Regulation IV.

Approved:

TREASURY DEPARTMENT,

March 30, 1865.

Regulation IV of the "general regulations for the purchase of products of insurrectionary States on government account," dated September 24, 1864, is hereby amended as follows: IV. The price to be paid for any of the products so purchased shall not exceed the market value thereof at the place of delivery, nor exceed three-fourths of the market value thereof in the city of New York at the latest quotation known to the agent purchasing at the date of delivery of the products, after deducting from such market value: 1st. The internal revenue tax of two cents per pound; 2d, the transportation permit fee of four cents per pound; and 3d, an amount sufficient to cover all actual and estimated expenses of handling, storing, insurance, transportation, commission on sales, &c. Such estimated expenses in no case to exceed an amount for which private parties can secure the performance of the same service.

H. McCULLOCH,

Secretary of the Treasury.

EXECUTIVE MANSION.

The foregoing amended regulation having been seen and considered by me, is hereby approved.

ABRAHAM LINCOLN.

Amended general regulations.

TREASURY DEPARTMENT, April 25, 1865.

The "general regulations" made by the Secretary of the Treasury, dated July 29, 1864, for the purpose of carrying into effect the regulations of that date, and the several acts of Congress authorizing them, are hereby amended as follows, viz:

I. Two additional special agencies are hereby established, distinguished numerically, and respectively designated and described as follows:

The eighth special agency comprises the State of South Carolina and so much of the State of Georgia as lies in and east of the valley of the Ogeechee river, including the city of Savannah.

, The ninth special agency comprises the west part of Florida and so much of the State of Alabama as lies south of the Alabama and Mississippi railroad.

II. The boundaries of the fifth special agency as defined by the general regulations, series July 29, 1864, are hereby modified so that it comprises the south and east part of Florida, including Key West, and so much of the State of Georgia as lies south and west of the valley of the Ogeechee river.

III. The boundaries of the third special agency, as defined by the general regulations, series July 29, 1864, are hereby modified so that it comprises so much of the States of Louisiana and Mississippi as lies south of Grand Gulf, and including that place.

IV. In addition to the duties devolved upon the general agent of the Treasury Department by the said regulations he will hereafter be required, under the direction of the Secretary, to cause the regulations concerning the purchase of products of insurrectionary States under the eighth section of the act of Congress_approved July 2, 1864, to be properly observed and carried out.

All officers and agents appointed to purchase and sell such products will comply with the instructions of the general agent in regard thereto until otherwise directed by the Secretary of the Treasury.

HUGH McCULLOCH,

Secretary of the Treasury.

Approved April 25, 1865

ANDREW JOHNSON.

. Į

REPORT ON THE FINANCES.

Amended regulations for the purchase of products of the insurrectionary States on government account, May 9, 1865.

TREASURY DEPARTMENT, May 9, 1865.

I. Agents shall be appointed by the Secretary of the Treasury, with the approval of the President, to purchase for the United States, under special instructions from the Secretary of the Treasury, products of States declared to be in insurrection, at such places as may from time to time be designated by the Secretary of the Treasury as markets or places of purchase.

Agents heretofore appointed for the places designated under previous regulations will continue their agencies as if appointed under these regulations.

II. Before entering upon the discharge of his duty, each of the agents so appointed shall execute a bond, with sureties, in the prescribed form, in a penal sum to be fixed by the Secretary of the Treasury, conditioned for the faithful discharge of his duty, and that he shall not engage, directly or indirectly, in the purchase of products on private account, nor be, in any way, interested in the products purchased by him, or the proceeds or profits arising therefrom.

III. The operations of purchasing agents shall be confined to the single article of cotton; and they shall give public notice, at the place to which they may be assigned, that they will purchase, in accordance with these regulations, all cotton not captured or abandoned which may be brought to them.

IV. To meet the requirements of the 8th section of the act of July 2, 1864 the agents shall receive all cotton so brought, and forthwith return to the seller three-fourths thereof, which portion shall be an average grade of the whole, according to the certificate of a sworn expert or sampler.

V. All cotton purchased and resold by purchasing agents shall be exempt from all fees and all internal taxes. And the agent selling shall mark the same "FREE," and furnish to the purchaser a bill of sale clearly and accurately describing the character and quantity sold, and containing a certificate that it is exempt from taxes and fees, as above.

VI. Purchasing agents shall keep a full and accurate record of all their transactions, including the names of all persons from whom they make purchases, the date of the purchase, a description of the cotton purchased by them, and the quantity and quality thereof, also of the one-quarter retained by them. A transcript of this record will be transmitted to the Secretary of the Treasury on the first day of each month.

VII. Sales of the cotton retained by the purchasing agents under Regulation IV, as the difference between three fourths the market "price and the full price thereof in the city of New York, may be made by such agents at such places and times and in such manner as may be directed in special instructions from the Secretary of the Treasury. Where such sales are not so authorized, the agents shall, without delay, ship it to New York, on the best terms possible, consigned, until otherwise directed, to S. Draper, cotton agent and disbursing officer at that place. Bills of lading in triplicate for such shipment must be taken, one of which shall be sent to the agent at New York, one to the Secretary of the Treasury, and one rétained by the purchasing agent.

VIII. Prior to the close of each month, and in sufficient time for the necessary action, the purchasing agent shall prepare and forward to the Commissioner of Customs a full estimate of the probable expenses of his office for the month next ensuing, the amount of which, together with any sum found due from inadequacy of former estimate, or less so much as may remain unexpended from any amount previously sent, will be transmitted to said purchasing agent. Purchasing agents will require receipts in triplicate for all moneys paid by them, one of which receipts shall be forwarded to the disbursing officer, one to the First Auditor of the Treasury with his accounts, and one retained by the agent.

IX. All agents are prohibited from purchasing any product of an insurrectionary State which shall have been captured by the military or naval forces of the United States, or which shall have been abandoned by the lawful owner thereof.

X. These regulations, which are intended to revoke and annul all others on the subject heretofore made, will take effect and be in force on and after May 10, 1865.

HUGH MCCULLOCH,

Secretary of the Treasury.

EXECUTIVE CHAMBER, Washington City, May 9, 1865.

Approved.

ANDREW JOHNSON.

TREASURY DEPARTMENT, June 14, 1865.

The following proclamation of the President of the United States, dated the 13th day of June, 1865, removing the restrictions upon internal, domestic, and coastwise intercourse and trade, and upon the removal of products of States heretofore declared in insurrection, except as to articles contraband of war, viz: arms, ammunition, all articles from which ammunition is made, and gray uniforms and cloth, and with certain other exceptions and limitations therein contained, is published for the information and guidance of collectors and other officers of the customs.

H. McCULLOCH,

Secretary of the Treasury.

3

DEPARTMENT OF STATE.

By the President of the United States of America.

A PROCLAMATION.

Whereas, by my proclamation of the twenty-ninth of April, one thousand eight hundred and sixty five, all restrictions upon internal, domestic, and commercial intercourse, with certain exceptions therein specified and set forth, were removed "in such parts of the States of Tennessee, Virginia, North Carolina, South Carolina, Georgia, Florida, Alabama, Mississippi, and so much of Louisiana as lies east of the Mississippi river, as shall be embraced within the lines of national military occupation; * * * "

And whereas, by my proclamation of the twenty-second of May, one thousand eight hundred and sixty-five, for reasons therein given, it was declared that certain ports of the United States which had been previously closed against foreign commerce should, with certain specified exceptions, be reopened to such commerce on and after the first day of July next, subject to the laws of the United States and in pursuance of such regulations as might be prescribed by the Secretary of the Treasury;

And whereas I am satisfactorily informed that dangerous combinations against the laws of the United States no longer exist within the State of Tennessee; that the insurrection heretofore existing within said State has been suppressed that within the boundaries thereof the authority of the United States is undisputed; and that such officers of the United States as have been duly commissioned are in the undisturbed excreise of their official functions:

Now, therefore, be it known, that I, Andrew Johnson, President of the United States, do hereby declare that all restrictions upon internal, domestic, and coastwise intercourse and trade, and upon the removal of products of States heretofore declared in insurrection, reserving and excepting only those relating to contraband of war, as hereinafter recited, and also those which relate to the reservation of the rights of the United States to property purchased in the territory of an enemy, heretofore imposed in the territory of the United States east of the Mississippi river, are annulled, and I do hereby direct that they be forthwith removed; and that on and after the first day of July next all restrictions upon foreign commerce with said ports, with the exception and reservation aforesaid, be likewise removed; and that the commerce of such States shall be conducted under the supervision of the regularly appointed officers of the customs provided by law; and such officers of the customs shall receive any captured and abandoned property that may be turned over to them, under the law, by the military or naval forces of the United States, and dispose of such property as shall be directed by the Secretary of the Treasury. The following articles contraband of war are excepted from the effect of this proclamation : arms, ammunition, all articles from which ammunition is made, and gray uniforms and cloth.

And I hereby also proclaim and declare that the insurrection, so far as it relates to, and within the State of Tennessee, and the inhabitants of the said State of Tennessec as reorganized and constituted under their recently adopted constitution and reorganization, and accepted by them, is suppressed, and therefore, also, that all the disabilities and disqualifications attaching to said State and the inhabitants thereof consequent upon any proclamations issued by virtue of the fifth section of the act entitled "An act further to provide for the collection of duties on imports, and for other purposes," approved the thirteenth day of July, one thousand eight hundred and sixty-one, are removed.

But nothing herein contained shall be considered or construed as in anywise changing or impairing any of the penalties and forfeitures for treason heretofore incurred under the laws of the United States, or any of the provisions, restrictions, or disabilities set forth in my proclamation, bearing date the twenty-ninth day of May, one thousand eight hundred and sixty-five, or as impairing existing regulations for the suspension of the habeas corpus, and the exercise of military law in cases where it shall be necessary for the general public safety and welfare during the existing insurrection; nor shall this proclamation affect, or in any way impair, any laws heretofore passed by Congress, and duly approved by the President, or any proclamations or orders issued by him, during the aforesaid insurrection, abolishing slavery, or in any way affecting the relations of slavery, whether of persons or of property; but, on the contrary, all such laws and proclamations heretofore made or issued are expressly saved, and declared to be in full force and virtue.

In testimony whereof, I have hereunto set my hand, and caused the seal of the United States to be affixed.

Done at the city of Washington, this 13th day of June, in the year of [SEAL.] our Lord one thousand eight hundred and sixty-five, and of the independence of the United States of America the eighty-ninth.

ANDREW JOHNSON.

By the President: WILLIAM H. SEWARD,

Secretary of State.

Circular letter of instructions to officers of the Treasury Department relative to commercial intercourse, captured, abandoned, and confiscable property, freedmen, &c.

TREASURY DEPARTMENT, June 27, 1865.

The various rules and regulations heretofore prescribed by the Sècretary of the Treasury in regard to the above-named subjects having been rendered nugatory in whole or in part by the changed condition of affairs in the southern States and Executive orders and proclamations, and the War Department having assumed charge of freedmen, abandoned lands, &c., under the provisions of the act of Congress approved March 3, 1865, the following instructions as to the duties of officers of the Treasury Department in the premises are prescribed, and will be regarded as in full force and effect immediately on the receipt thereof by any officer whose action is in anywise affected thereby:

1. All restrictions on commercial intercourse in and with States and parts of States heretofore declared in insurrection, and on the purchase, transportation, and sale of the products thereof, are removed; *except* as to the transportation thereto or therein of arms, ammunition, articles from which ammunition is made, gray uniforms, and gray cloth; and *except*, *also*, those relating to property heretofore purchased by the agents or captured by or surrendered to the military forces of the United States. Nor will any fees or taxes be charged or collected, except those imposed by the customs and internal revenue laws. And the supervision necessary to prevent the shipment of the prohibited articles will be exercised only by the regular and ordinary officers of the customs, acting under the revenue laws of the United States.

2. Subordinate officers discharging duties in regard to commercial intercourse, under the regulations referred to, will consider their official connexion with this department as terminating with the 30th instant, without further notice.

3. Agents for the purchase of products of insurrectionary States on government account will close their official business east of the Mississippi with the transactions of the 13th instant, and west of it with the transactions of the 24th instant; returning to sellers all property or money received or collected since those dates respectively, and using such despatch in the premises that their connexion with the department may, if possible, terminate with the 30th instant.

4. Officers of this department charged with the duty of receiving and collecting, or having in their possession or under their control, captured, abandoned, or confiscable personal property, will dispose of the same, in accordance with regulations on the subject heretofore prescribed, at the earliest time consistent with the public interests, and will refrain from receiving such from military or naval authorities after the 30th instant. This will not be construed, however, as interfering with the operations of the agents now engaged in receiving or collecting the property recently captured by or surrendered to the forces of the United States, whether or not covered by or included in the records, &c., delivered to the United States military or treasury authorities by rebel military officers or cotton agents. Those so acting will continue to discharge the duties thus imposed until such property is all received or satisfactorily accounted for, and until the amount so secured is shipped or otherwise disposed of under the regulations on the subject heretofore prescribed. And they will use all the means at their command with the utmost vigor, to the end that all the property so collected, captured, or turned over, shall be secured to the United States with the least possible cost and delay. After the 30th instant the duty of receiving captured and abandoned property not embraced in the above exception will be discharged by the usual and regular officers of the customs at the several places where they may be located, in accordance with regulations relating

to the subject; and officers heretofore performing that duty will give them all the aid and information in their power; to enable them to carry out the same.

5. Officers of this department charged with the care or supervision of or having in their possession or under their control any abandoned or confiscable lands, houses, and tenements, will turn them over to a duly authorized officer of the bureau of refugees, freedmen, and abandoned lands, so far as they may be required or demanded by the same, together with all moneys, books, records, and papers arising from or relating to the property so turned over, taking proper receipts or vouchers therefor. This rule will also govern the action of all agents of this department connected in any way with the care of freedmen, &c., so far as it may be applicable. And all persons asking for any information in regard to the property so turned over, or for the release of the same, or for the release of any proceeds or moneys arising therefrom, will be referred to the commissioner of refugees, freedmen, and abandoned lands, at Washington, to whom communications on the subject should be addressed.

6. Officers of this department having in their possession or under their control any moneys whatever arising from fees collected under the commercial intercourse regulations, (except those collected for the benefit of freedmen, which will be disposed of under section five,) or from the sales of captured, abandoned, or confiscable personal property, will forthwith deposit the same with the nearest assistant treasurer, designated depositary, or deposit bank, (keeping the amounts from the different sources separate,) to the credit of H. A. Risley, esq., supervising special agent, &c., taking therefor receipts in quadruplicate—which receipts must show whence the sums were received—one of which will be retained by the officer so depositing, one forthwith sent to the Secretary of the Treasury, one to the Commissioner of Customs, and one to Mr. Risley, at Washington.

7. All officers above referred to, except proper officers of the customs, acting exclusively under the revenue laws, will, after they have closed their official business, as above directed, and sold at auction, to the highest bidder, the furniture and property remaining on hand, and accounted for the proceeds of the same, forthwith systematically arrange the books, records, papers, &c., of their late office, that they may easily be referred to and examined, pack them in secure and water-proof boxes, and forward the same, so marked as to indicate their contents, together with their respective resignations, addressed to the Secretary of the Treasury, Washington city.

HUGH McCULLOCH,

Secretary of the Treasury.

TREASURY DEPARTMENT, July 22, 1865.

It has come to the knowledge of this department that large contracts have been made by some of its agents with various persons for the collection of abandoned or captured or surrendered cotton, authority being generally or in many instances given to the contractors to discover and collect all such cotton within a certain district. While such contracts have been to some extent contemplated or authorized by previous regulations, such action now is not in conformity with the spirit or intention of the Executive proclamation relating to the subject; and if any contracts of that character have been made by you, operations under them should be suspended and closed up at once.

Where agents have not adequate facilities for these purposes at their own command, and the public interest would be prejudiced by delay, no objection exists to the making by them of contracts with reputable and responsible persons, on reasonable and proper terms, for the collection, putting in order and transportation to points accessible for shipment by rail or water of certain specific lots of cotton known to the agent, the locality, quantity, and description of which should be fully and accurately stated in each case; but in view of the manifest evils likely to result from such steps, no arrangement will be sanctioned which contemplates the scouring of any given portions of the country for property of the character herein referred to by persons who are not bonded officers of this department.

As stated above, any existing contract heretofore made by you not in conformity with the spirit of these instructions must be at once modified or closed , up, and your future action shaped accordingly.

Respectfully,

H. McCULLOCH,

Secretary of the Treasury.

To the SUPERVISING AND ASSISTANT SPECIAL AGENTS of the Treasury Department.

TREASURY DEPARTMENT, August 18, 1865.

The irregularities, confusion, and conflict growing out of the collection and movement of captured cotton, without an organized system of action governing the whole subject, renders an immediate reform necessary. I have, therefore, determined to establish the following rules governing the first, second, third, fourth, eighth, and ninth agencies:

1. All requirements of the regulations concerning captured and abandoned personal property—series of July 29, 1864—will be strictly observed by all agents engaged in collecting and forwarding captured cotton, except as hereinafter modified.

2. Each agent appointed by me to collect captured cotton will, as soon as practicable after receipt hereof, report in person to the supervising agent of the agency in which he is operating for assignment to duty, and will be directed by him in all his official action.

3. All instructions from this department to assistant agents will be given only through the proper supervising agents.

4. Supervising agents are hereby authorized to make provisional appointments of assistant agents to collect captured cotton in all cases where the public interests will be promoted thereby, subject to my approval.

5. Each assistant agent will make all shipments of cotton collected by him to such supervising agent as he shall be directed to forward to by the supervising agent assigning him to duty, and he will take duplicate receipts for each lot from the supervising agent to whom the same is shipped, one of which he will retain, and the other he will forward to me. Supervising agents will in all cases forward or cause to be forwarded to market all cotton collected by the most expeditious and economical route from the point of collection.

6. Supervising agents will not collect directly, nor make any contract for collecting; but will receive and forward to Simeon Draper, cotton agent, New York, until otherwise ordered, all that shall be sent to them by assistant agents, and will give duplicate receipts for each lot as above indicated.

7. Each assistant agent will be assigned to duty in a well-defined district by the proper supervising agent, and will therein make contracts, in all cases where it can be done with the planter or other person in whose custody the captured cotton shall be found, to prepare in proper packages and condition for transportation, and deliver the same at such place of shipment as shall be agreed upon. The terms of these contracts, when made with planters having custody, of the cotton, should be sufficiently liberal to insure fair compensation to them, and to encourage good feeling on their part. Each contract must be made in writing, and be for the delivery of a specific lot'at a designated place, and be made subject to the approval of the supervising agent under whom he is acting. Compensation must be made under such contracts out of the cotton delivered upon them, and must be made only by the supervising agent who receives the cotton.

8. In any case where cotton or other property is moving in the hands of private parties, which a supervising agent has satisfactory reason to believe was captured from the late so-called confederate government, and has been stolen or otherwise wrongfully taken, he will detain the same, and examine fully into the case, and if he shall be satisfied by the proofs submitted that the property was so captured, then he shall seize and forward it as captured property. But if he shall be satisfied that it was not so captured, then he will release it to the party from whom it was taken. Agents shall make a full report to this department of each case, including the testimony. An assistant agent will, in no case, make a scizure of property moving in the hands of private parties, but will inform the proper supervising agent of any facts within his knowledge to show that it has been stolen or otherwise improperly taken, and in case such information results in the seizure and detention of such property it shall be regarded as collected by the agent giving such information.

9. Agency lines will be regarded as heretofore established by the regulations, except when the same are changed by me, or as hereinafter provided, and each supervising agent will confine his action to the agency for which he is appointed, and each assistant agent will confine his action to the district to which he is assigned by the supervising agent.

10. All supervising and other agents engaged in collecting and forwarding captured cotton will be subject to the direction and control of the general agent, who is hereby authorized and directed, in cases where he shall think the public interests require it, to suspend the official action of any supervising or other agent, and temporarily to appoint another to perform his duties; to revoke any contract improperly made, or being improperly executed; to change the lines of agencies; and generally to do, pursuant to the regulations and these instructions, what he shall regard as best for the public interest in the premises, subject to the approval of the department.

It is expected, unless under special circumstances to be determined by the supervising agent, that no more territory will be embraced within a district than the assistant agent, assigned to duty in it, will be able to attend to personally without the appointment of sub-agents.

It is also expected that each supervising agent will keep moving throughout the agency under his charge, personally observing and directing the operations of the assistants by him assigned to duty therein.

It is desired that the captured cotton be secured and forwarded as expeditiously as possible, and that in doing it private interests shall be interfered with as little as possible.

All cotton so collected will, until otherwise directed, be forwarded to Simeon Draper, cotton agent, New York, and the supervising agent forwarding the same will accompany each shipment with a statement to the cotton agent, describing each lot making up such shipment, the marks thereof, and the name of the assistant agent who collected it.

All money required by the supervising agents to defray necessary expenses in collecting will be sent upon their estimates therefor made to me on the first of each month.

H. McCULLOCH,

Secretary of the Treasury.

To the SUPERVISING AND ASSISTANT SPECIAL AGENTS of the Treasury Department.

TREASURY DEPARTMENT, November 21, 1865.

For the information and government of officers of the Treasury Department connected with the collection of captured and abandoned property, the following rules are prescribed, and will be promptly and fully carried out:

1. Hereafter no cotton claimed or recorded by the late so-called Confederate States government as "tithe cotton" or taxes, and which has not been delivered to it or its agents, but remains in the hands of the person assessed, will be taken or collected as captured property.

2. In no case can the title given by or derived from the late so-called Confederate States government be regarded as valid by officers of this department; and cotton in the possession of or claimed by persons under any sale or transfer made by such government will be treated as captured property belonging to the United States.

3. In cases where cotton, formerly belonging to the so-called Confederate government, has been purchased and is held by persons alleging that the same was purchased for the purpose of delivering it to agents of this department authorized to purchase the products of insurrectionary States on government account, in pursuance of contracts made with such agents, it will be taken by agents of this department and treated as captured property.

Persons claiming such property will be advised that, upon presenting to the Secretary of the Treasury any claims they may have in the premises, contracts made by them with the purchasing agents will be respected, and parties who have acted in good faith in the execution of such contracts will be protected.

4. Hereafter, agents forwarding captured cotton will take measures to insure the same while in their possession or *in transit* from place of shipment to New York, being careful to make such insurance in reliable companies, and on the most favorable terms possible to government.

5. In cases where agents have been appointed since the 18th of August last, or shall be hereafter appointed, the commissions of such new agents shall not extend to cotton collected and stored by their predecessors.

Supervising special agents will see that these instructions are at once communicated to all persons acting under and with them, and strictly complied with.

Ð

H. McCULLOCH,

Secretary of the Treasury.

To the SUPERVISING AGENTS of the *Ireasury Department*.
