**WISCONSIN.**

ASHLAND—Security Savings Bank.

---

NEW COUNTERFEIT \$5 SILVER CERTIFICATE.—Series, 1899; check letter D; plate number undecipherable, either 209 or 289; J. W. Lyons, Register of the Treasury; Ellis H. Roberts, Treasurer of the United States; number 51762496.

This counterfeit is probably printed from zinc-etched plates of poor workmanship, on fair quality of paper, in which there have been distributed a few red silk threads. The lines of the engraving are broken and blotchy. The lathe work and small lettering are particularly poor. A rubber stamp has been used in printing the Treasury number.

The note should not deceive the ordinarily careful handler of money.

---

GOVERNMENT DEPOSITS TO HIGHEST BIDDERS.—Representative Williams (Dem., Miss.) recently introduced a bill providing that on and after the first days of July, October, January and April the Secretary of the Treasury shall receive and open sealed bids from National and State banks applying to receive deposits (on call) of surplus moneys in the United States Treasury and award such deposits to bankers making the offer of the highest rate of interest in sums not less than \$25,000.

As the deposits under this plan would go to the highest bidders, the banks would in turn have to lend the money thus received to those who would offer the highest rates of interest, which would be a novel banking principle at least.

---

BANK CLERKS' CONVENTION.—The second annual convention of the American Institute of Bank Clerks will be held at St. Louis, Mo., August 25, 26 and 27. It is expected that the interest manifested in the work of the institute, and the Exposition as an additional attraction, will serve to draw a large attendance.

# MONEY, TRADE AND INVESTMENTS.

## A REVIEW OF THE FINANCIAL SITUATION.

---

NEW YORK, March 2, 1904.

THE BALTIMORE FIRE AND THE BREAKING OUT OF WAR BETWEEN RUSSIA AND JAPAN were the most conspicuous events of the month of February. News of both was received nearly simultaneously and the effect in financial circles was very unfavorable. The Baltimore fire began on Sunday, February 7, in the center of the financial section of the city. It raged all the following day and when subdued had consumed property valued at probably something less than \$100,000,000.

The conflagration in Baltimore was not as disastrous as the Chicago fire in 1871, when the loss was nearly \$200,000,000, nor perhaps as serious as the Boston fire which a year later, in 1872, resulted in a loss of \$80,000,000 or more. Fire underwriters, at all events, have been better able to sustain the losses resulting from the Baltimore fire than they were to meet the enormous claims which deluged them in 1871 and 1872. Only a few companies have retired as the result of the Baltimore disaster, and most of them were local companies.

When the news of the fire first reached Wall Street there was considerable apprehension that the insurance companies would have to sell large quantities of securities to obtain the means of paying losses. The stock market suffered some decline in consequence, but the fears were not warranted by the subsequent facts. While the Baltimore fire is a disaster to be lamented, the earliest news regarding it was the worst, and later estimates of the loss have considerably reduced the figures first given, which went above \$200,000,000. Later, a large fire in Rochester destroyed \$4,000,000 or \$5,000,000 of property.

The war between Japan and Russia has rather tended to check speculation in the stock market here, than to exert any other influence. All wars are uncertain, particularly when they begin, and Wall Street is apt to move slowly until it gets its bearings.

Outside of these two events there has been little of a startling character to invite comment or influence conditions. There was a break in cotton early in the month, which for a while tended to demoralize the security market. But the cotton "corner" for some time had been considered a menace, and its collapse was urgently desired.

One factor which for sometime past has exerted an unfavorable influence has been the severe weather. Not in many years has such a winter, as the one now coming to an end, been experienced. It has interfered with the progress of all out-of-door industries. The building trade has suffered from it, while transportation interests have not only lost revenue, but have been put to increased expense. Heavy falls of snow and extreme cold weather have been almost constantly present since last Christmas.

As far as the traffic and earnings of the railroads are concerned, the weather has been only one unfavorable influence. There have been other checks to the continued prosperity of the railroads, although they may to some extent be considered as only temporary.

The depression in the iron and steel trade has of course affected the railroads, but there is now evidence of an improvement in that direction. Labor troubles,

particularly in Colorado among the miners, have caused a falling off in the earnings of some of the roads. There has also been a smaller movement of grain. Then the railroads are paying out a larger proportion of their earnings for operating expenses.

The estimated gross and net earnings in December of the railroads reporting for that month as compiled by the "Financial Chronicle" are not of a satisfactory character. While the gross earnings, amounting to \$106,978,224, show an increase of \$4,049,234 compared with the previous year, the net earnings are only \$33,726,576, or \$473,209 less than were reported for December, 1902.

But now a decrease in gross earnings is being reported, and for this the extreme cold is undoubtedly largely responsible. "The Chronicle" reports gross earnings in January of 66 roads, representing 79,629 miles, as compared with 77,749 miles a year ago, aggregating \$46,258,053, as against \$48,085,470 in January, 1903. This is a decrease of \$1,827,417, or about 4 per cent. on an increased mileage of about 2 per cent. It is the first time that any month has shown a decrease in gross earnings since February, 1899, and it is the first time that January has shown a decrease since 1897. The largest decreases are reported by the New York Central, the Grand Trunk, the Canadian Pacific, the Illinois Central, the Denver and Rio Grande, the Great Northern, and the Missouri Pacific. It is not difficult to appreciate the effect of a severe winter upon the earnings of most of the roads.

Two important railroads have issued annual reports covering their operations in the calendar year 1903—the Pennsylvania Railroad and the Delaware, Lackawanna and Western Railroad. A summary of the income account of the Pennsylvania Railroad, covering the entire system, for the last three years makes the following exhibit:

|                                       | 1901.         | 1902.         | 1903.         |
|---------------------------------------|---------------|---------------|---------------|
| Mileage.....                          | 10,485        | 10,784        | 10,914        |
| Gross earnings.....                   | \$106,626,876 | \$220,079,230 | \$242,517,757 |
| Operating expenses.....               | 138,713,386   | 152,539,718   | 175,379,437   |
| Net earnings.....                     | 64,913,492    | 67,539,511    | 67,138,320    |
| Other income.....                     | 14,072,029    | 16,354,710    | 18,795,336    |
| Gross income.....                     | 78,985,521    | 83,794,221    | 85,933,656    |
| Charges, rentals, dividends, etc..... | 75,791,140    | 80,900,370    | 82,866,409    |
| Balance, surplus.....                 | 3,194,381     | 2,893,851     | 3,067,247     |

The president of the road accounts for the large increase in expenditures by the overtaxing of the facilities of the system, because of excessive business, and by the advance in the rates of wages and the prices of fuel and materials.

The report of the Delaware, Lackawanna and Western Railroad makes the following comparison:

|                                      | 1901.        | 1902.        | 1903.        |
|--------------------------------------|--------------|--------------|--------------|
| Gross earnings.....                  | \$23,507,634 | \$21,306,764 | \$20,180,968 |
| Expenses.....                        | 14,386,418   | 14,477,422   | 16,043,408   |
| Net earnings.....                    | 9,122,216    | 6,829,342    | 13,137,560   |
| Total income.....                    | 11,302,248   | 8,115,338    | 16,638,496   |
| Interest, rents, dividends, etc..... | 10,006,193   | 10,295,989   | 12,837,258   |
| Balance, surplus.....                | 1,196,054    | *2,180,652   | 4,251,238    |

\* Deficit.

The Lackawanna statement is exceptionally favorable, for not only was the dividend, seven per cent., amounting to \$1,834,000, the same as in the previous year, but \$4,319,166 was expended for renewals and betterments, an increase of \$1,260,000 over 1902, and there was a surplus of \$4,251,000 left, as against a deficit of \$2,180,000 the year before. The coal department showed a profit last year of \$3,036,194, against only \$792,477 in 1902 and \$1,633,643 in 1901.

There has been a decided improvement in the iron trade, which is only partially shown in the latest statistics of production available at the present time. In Janu-

ary 30 blast furnaces owned by the United States Steel Corporation were blown in and to this cause is largely due an increase in the weekly capacity of the furnaces in blast from 185,636 tons on January 1 to 278,819 tons on February 1. The January output of pig iron was 922,746 tons, as against 846,695 tons in December. While these figures are very favorable, yet it is the opinion of authorities in the iron trade that the situation is not yet entirely free from complications.

Since the American Iron and Steel Association has published the figures of production of pig iron in 1903, and the Bureau of Statistics the figures of imports and exports of iron and steel, the "Iron Age" has entered upon an investigation of the home consumption of iron. By taking into account the changes in the stock of pig iron and the net export and import movement, the fluctuations in consumption are less pronounced than the figures of production alone would indicate. We give the "Iron Age" figures, the first column showing the actual production of pig iron, the second column the consumption after making allowance for change in stocks and the last column the consumption after adding imports and deducting exports:

| YEAR.     | Production. | Home consumption. | Net imports. | Net exports. | Estimated consumption of iron. |
|-----------|-------------|-------------------|--------------|--------------|--------------------------------|
|           | Gross tons. | Gross tons.       | Gross tons.  | Gross tons.  | Gross tons.                    |

While the production was largest in 1903, the actual consumption was largest in 1902. Between 1897 and 1902 the consumption was more than doubled.

Recently the Erie Railroad declared a second semi-annual dividend of 2 per cent. on the first preferred stock, which permitted the release of the road from the voting trust which had been in existence since January 1, 1896. Last month the Reading Company declared the regular semi-annual dividend of 2 per cent. on the first preferred stock. This is the third consecutive dividend and should the fourth be declared next August, the voting trust in that company may also be dissolved.

Early last month the announcement was made that the Pennsylvania Company had sold to a banking firm \$50,000,000 of the 4½ per cent. notes to run eighteen months from April 1, 1904. The proceeds, it was stated, would be used largely upon the company's Western lines.

On February 16 a call of 25 per cent. was made by J. P. Morgan & Co. upon the syndicate underwriting the first \$10,000,000 issue of the \$50,000,000 4 per cent. convertible bonds authorized a year ago by the Erie Railroad. The bonds, it is understood, were not taken by the shareholders very freely although offered to them at 87½. Only \$800,000 were so taken. After April 1, 1905, the bonds may be converted into Erie common stock on the basis of \$2 of stock for \$1 of bonds.

An interesting event in the investment world was the subscription for the \$35,000,000 5 per cent. 40 year Cuban bonds. The bonds were largely over-subscribed.

The United States Senate finally, on February 23, ratified the Panama Canal Treaty by a vote of 66 to 14. The Secretary of the Treasury had previously announced that he would call upon the National bank depositaries to surrender 20 per cent. of their public deposits to provide for the payment of \$50,000,000 on account of the canal purchase. Action, however, has been delayed as a stockholder of the Panama Canal Company has begun a suit in the French courts to prevent the

sale of the canal to the United States. How long the call will be deferred is uncertain, but the banks have generally prepared themselves to pay over the money.

The export trade of the United States continues of extraordinary magnitude, the value of merchandise exported in January being nearly \$141,700,000 or more than \$7,500,000 in excess of the exports in January, 1903. Large as the total is, however, it falls short of the total recorded in December last, when the exports were \$174,819,000. Since December there have been some important changes in the volume of exports, the most notable being in the cotton movement, which declined from 532,000,000 pounds in December to 336,000,000 pounds in January. The exports of cotton in January this year were about 117,000,000 pounds less than the exports in January last year, but as the average export price was 5 cents a pound higher than it was a year ago, the value of cotton exports in January, 1904, shows an increase of \$6,700,000 compared with the previous year.

The export movement of cotton and the average export price monthly since September 1 in the last two years are shown in the following table:

|                | 1902-3.       |               |                      | 1903-4.       |               |                      |
|----------------|---------------|---------------|----------------------|---------------|---------------|----------------------|
|                | Pounds.       | Value.        | Average price—cents. | Pounds.       | Value.        | Average price—cents. |
| September..... | 347,596,100   | \$29,960,815  | 8.6                  | 195,505,094   | \$21,179,900  | 10.8                 |
| October.....   | 500,922,342   | 42,133,141    | 8.4                  | 594,367,373   | 60,265,902    | 10.1                 |
| November.....  | 427,677,775   | 35,329,024    | 8.3                  | 627,363,396   | 67,932,284    | 10.8                 |
| December.....  | 558,431,411   | 46,715,462    | 8.4                  | 582,922,302   | 72,375,921    | 12.4                 |
| January.....   | 453,681,962   | 39,607,922    | 8.8                  | 396,796,190   | 46,890,955    | 13.8                 |
| 5 months.....  | 2,288,299,610 | \$198,716,364 | 8.5                  | 2,386,975,444 | \$268,184,962 | 11.5                 |

Since the movement of the new crop began the price of cotton has ruled at from about 2 cents to 5 cents per pound higher than it did in the previous year, and while the exports this year show an increase of less than 50,000,000 pounds in the five months since September 1, the export value increased \$74,000,000. It will be observed that the exports in January were only about one-half in quantity of those in November, but the average price was just 3 cents higher.

In January there was a decrease, compared with the December preceding, in various classes of exports. While cotton decreased in value \$26,000,000, breadstuffs decreased \$3,000,000, provisions \$700,000 and mineral oils \$1,500,000. The exports of domestic products were only about \$84,000,000, a decrease of nearly \$31,000,000. All other exports decreased \$2,000,000.

In the following table is shown the export movement monthly in the first seven months of the year ending June 30, 1904, and the totals for the corresponding seven months in each of the previous five fiscal years:

|                     | Total exports. | Cotton exports. | Other domestic products. | Other exports. |
|---------------------|----------------|-----------------|--------------------------|----------------|
| July.....           | \$91,813,495   | \$5,037,068     | \$33,731,809             | \$53,044,618   |
| August.....         | 89,446,457     | 1,963,096       | 34,227,290               | 53,236,071     |
| September.....      | 110,364,540    | 21,179,900      | 33,563,994               | 50,630,946     |
| October.....        | 160,388,508    | 60,265,902      | 42,951,526               | 57,171,080     |

| December.....       | 174,819,566    | 72,375,921      | 42,491,521               | 59,952,124     |
| January.....        | 141,668,483    | 46,380,355      | 37,700,646               | 57,587,962     |
| 7 months, 1904..... | \$923,764,887  | \$275,205,026   | \$267,506,804            | \$386,051,057  |
| 7 months, 1903..... | \$856,482,039  | \$206,006,556   | \$278,912,396            | \$371,563,585  |
| " 1902.....         | 872,668,418    | 206,756,582     | 315,756,513              | 350,155,373    |
| " 1901.....         | 902,237,970    | 215,139,128     | 317,840,249              | 369,258,593    |
| " 1900.....         | 800,046,496    | 183,944,377     | 314,391,868              | 351,710,241    |
| " 1899.....         | 749,596,115    | 154,327,562     | 311,178,742              | 284,089,791    |

The exports of domestic products other than cotton during the seven months of the current fiscal year were smaller than in either of the previous five years, but the additional exports show a substantial increase. Measured by values cotton furnished nearly 30 per cent. of the total exports this year as compared with about 24 per cent. in each of the years 1901, 1902 and 1903, less than 17 per cent. in 1900 and 20½ per cent. in 1899.

The Bureau of Statistics have prepared an interesting comparison showing the growth of our export of wheat flour. In the calendar year 1903 nearly 20,000,000 barrels of flour were exported, the largest quantity ever exported. The value was \$75,188,050 the largest of any year excepting 1892 and 1893. Prior to 1861 our exports of flour were always larger than our exports of wheat, but from 1861 to 1890 wheat exports exceeded flour exports, now flour exports are in excess again. The following table shows the exports of wheat and flour and their values at quinquennial years from 1820 to 1900 and in 1903. The figures are for calendar years subsequent to 1865 while those of 1865 and earlier dates are for fiscal years. Prior to 1880 a barrel of flour is figured at 5 bushels of wheat and since that date at 4½ bushels.

| YEAR.     | Exports of wheat. | Exports of wheat flour. | Wheat exports —bushels. | Flour exports —bushels. | Per cent. of total exported as flour. |
|-----------|-------------------|-------------------------|-------------------------|-------------------------|---------------------------------------|
| 1820..... | \$16,608          | \$5,296,664             | 22,137                  | 5,885,180               | 90.6                                  |
| 1825..... | 18,570            | 4,212,127               | 17,990                  | 4,069,580               | 99.5                                  |

**THE MONEY MARKET.**—The local money market has been quiet and rates for call money have ranged between 1½ and 2 per cent. The demand for time money is light and the supply of commercial paper limited. At the close of the month call money ruled at 1¾ @ 2 per cent., the average rate being about 2 per cent. Banks and trust companies loaned at 1¾ per cent. as the minimum rate. Time money

on Stock Exchange collateral is quoted at 8 per cent. for 60 days, 3¼ per cent. for 90 days, 3¾ per cent. for 4 months, 4 @ 4¼ per cent. for 5 to 6 months and 4½ per cent. for remainder of the year on good mixed collateral. For commercial paper the rates are 4¾ @ 5 per cent. for 60 to 90 days' endorsed bills receivable, 4¾ @ 5¼ per cent. for first-class 4 to 6 months' single names, and 5½ @ 6 per cent. for good paper having the same length of time to run.

NEW YORK CITY BANKS.—New records were made by the banks in the New York Clearing-House Association last month. The deposits reached \$1,028,000,000 on February 20, the largest total ever reported. Loans almost reached \$1,000,000,000 on February 18, the exact figures being \$999,569,900, and exceeded all previous records. In the last two weeks of the month there was a reduction of more than \$9,000,000. Loans are, however, \$40,000,000 more than they were a year ago, and deposits \$71,000,000 larger. At the close of the month the banks held larger cash reserves than at any previous time, the total being \$289,000,000, of which \$217,000,000 consisted of specie. The surplus reserve now exceeds \$32,000,000 and is larger than at any previous time in more than three years.

FOREIGN EXCHANGE.—The foreign exchange market has been firm during the greater part of the month, influenced by the continued ease in the money market here. Early in the month exchange declined some on remittances of foreign insurance companies on account of the Baltimore fire. This influence was offset later by the expected payments on account of the Panama Canal purchase, which is delayed.

of last year. They were, however, nearly \$5,000,000 more than in December last, and in fact were greater than in any other month since April, 1903. The net exports for the month were \$59,000,000, or \$10,000,000 more than in January, 1903. For the seven months of the current fiscal year the total exports were nearly \$929,000,000—the largest ever reported for a similar period, while the imports were \$565,000,000, leaving a balance of \$363,000,000 of net exports. The net imports of gold in January were \$7,633,941 and for the seven months \$45,914,990. Silver exports in January were \$2,008,755 and in seven months \$11,145,544.

GOVERNMENT REVENUES AND DISBURSEMENTS.—January receipts of the Government were \$45,895,406 and expenses \$42,654,772, leaving a surplus of \$3,240,634, which with the the surplus resulting in the first six months of the fiscal year, makes a surplus for the seven months since July 1, 1903, of \$4,882,814. In the previous year the surplus for the corresponding period exceeded \$33,000,000. A comparison with the previous year shows a decrease in receipts for the seven months of \$12,000,000 and an increase in expenditures of \$16,000,000.

ing debt. They matured February 2 and have all been paid except \$1,965,200, which are included in the "debt on which interest has ceased since maturity." The interest-bearing debt now amounts to \$395,000,000, of which \$156,000,000 will mature in 1907 and \$77,000,000 in 1908. The remainder of the debt will not be redeemable until 1925 and 1930. The total debt, less cash in the Treasury, is \$918,000,000, an increase for the month of about \$3,000,000. The cash balance in the Treasury was reduced nearly \$5,700,000.

**MONEY IN THE UNITED STATES TREASURY.**—The total amount of money in the United States Treasury was reduced \$900,000 in February, but the net amount, after deducting certificates and Treasury notes outstanding, increased about \$750,000. The net amount of gold increased nearly \$7,000,000.

## BANKERS' OBITUARY RECORD.

**Armistead.**—John Armistead, President of the Mercantile Bank, Memphis, Tenn., died February 26.

**Borg.**—Simon Borg, founder of the banking firm of Simon Borg & Co., New York city, died February 10. He was born in Prussia in 1840, coming to this country at the age of sixteen. For a time he was engaged in banking in the South, and in 1865 came to New York, where he soon established the firm of Simon Borg & Co.

**Brown.**—Hon. Orange S. Brown, President of the Salmon Falls (N. H.) Bank, died January 29. He was born at Tiverton, R. I., February 27, 1837. Besides his banking interests, he was for many years prominently associated with cotton manufacturing.

**Brown.**—Rufus H. Brown, President of the Warren Five Cents Savings Bank, Peabody, Mass., and a director of the Warren National Bank, died February 8, aged seventy-nine years. He had been a trustee of the Savings bank since its incorporation in 1854 and President since 1875.

**Burrell.**—John T. Burrell, Assistant Cashier of the Massasoit-Pocasset National Bank, Fall River, Mass., died February 1. He was born at Fall River in 1857. After graduating, he was for a time a clerk in the Union Bank, and afterwards bookkeeper of a mercantile firm. He subsequently was engaged with the Pocasset and Union banks, becoming Cashier of the latter, which position he held until the consolidation of the Massasoit and Pocasset banks, when he became Assistant Cashier, and held this office until his death.

**Carr.**—John S. Carr, Assistant Cashier of the American Exchange National Bank, New York city, and connected with that institution for nearly half a century, died recently. He was born at Newport, R. I., in 1829.

**Hanna.**—Hon. Marcus A. Hanna, United States Senator from Ohio, President of the Union National Bank, Cleveland, and one of the best-known men in the country, died February 15. He was born at New Lisbon, Ohio, September 24, 1837. His business interests were extensive and he was eminently successful, leaving a fortune of over \$7,000,000. He was President of the National Civic Federation at the time of his death and was deeply interested in wise and well-directed efforts for settling labor controversies.

**Logan.**—William Logan, Cashier of the Hanover National Bank, New York city, died February 28. Mr. Logan was born in Brooklyn, N. Y., thirty-nine years ago. He was educated in the public schools, and in 1881 entered the Hanover National Bank as a junior clerk. He won his way to the position which he held at the time of his death. He was a director in the Greenwich Bank, the North American Trust Company, and the Bankers' Trust Company.

**Lulkart.**—G. A. Lulkart, President of the Citizens' National Bank, Norfolk, Neb., and prominently connected with other banks in Nebraska and elsewhere, died February 6. He was born in Germany in 1852, and came to this country in 1870. He had been a member of the Nebraska Legislature, and was a successful business man.

**Miller.**—Henry W. Miller, President of the Morris County Savings Bank, Morristown, N. J., died January 30, aged sixty-seven years. He was a retired Lieutenant of the U. S. Navy, and from 1871 to 1875 was Recorder of Morristown and Mayor from 1880 to 1882.

**Trowbridge.**—Edwin D. Trowbridge, for many years a partner in the house of Vermilye & Co., New York city, died February 25, aged fifty-five years. He retired from active business about two years since.

**Van Syckel.**—Joseph Van Syckel, President of the Clinton (N. J.) National Bank, died February 19, aged eighty-five years. He was one of the incorporators of the bank in 1856, had always been a director, and had been President since 1875. The bank has been notably successful, and this has been due, in large part, to Mr. Van Syckel's financial judgment, his energy and the high character which marked his career.

---

THE RATIFICATION OF THE PANAMA CANAL TREATY brings the preliminary payments and their probable effect upon the money markets of the United States into prominence. Ten millions of dollars to Panama and \$40,000,000 to the French company constitute a large sum, especially if it is to be sent out of the country at once. Of course fifty millions do not seem a large proportion of the sum of money in the country. It must be remembered, however, that the regularity of the circulation of cash is easily disturbed. A comparatively small sum drawn from the reserves upon which the banks are dependent for meeting the immense check and draft transactions going on from day to day, may have a disturbing influence on the money markets. The experience with the locking up of a few millions of surplus reserve in causing monetary stringency shows how easily the balance of the monetary transactions of the country can be unfavorably affected. The Treasury has frequently stemmed the tide of a crisis by pouring out a few millions in interest on the markets; and this all goes to show how slight withdrawals and replacements at the great money center of the country may be seriously felt throughout the entire country.

As a matter of fact so large a sum as fifty millions has never in the history of the country been drawn out of the general circulation reserves and sent to another country. The Spanish payment was only twenty millions. The Louisiana purchase payment was about twelve millions and was made in long-time bonds. Even if the ten millions to Panama which may possibly be invested in the United States is counted out, the forty millions to the French company is alone double the payment to Spain. This payment to France must be made virtually in gold. Of course it probably will not be taken from the banks or the Treasury and shipped bodily to France. But whether our bankers can create exchange by borrowing or selling

securities abroad, sooner or later the gold will be drawn from here to make good the borrowing, or as the securities are sent back for sale. The question is, Can these operations be distributed over a sufficient space of time so that the balance can be struck with the help of surplus exports of products or merchandise? France as a nation generally has the advantage in an exchange of productions with the United States. Our exports to other European countries, to Great Britain and to Germany, may give a fund there to draw on, which can be transferred to help the French payment. The war between Japan and Russia has visibly affected the French money market so that their financiers will be anxious to have the forty millions in a shape to strengthen their home reserves. They will probably want gold as quickly as possible. The money withdrawn from the banks by the Secretary is not gold, but will be used to procure either the gold or the exchange which represents the gold. But the movement of the money from the banks will compel them to call in loans and thus affect to some extent the business communities dependent upon them.

The successful transfer of the sum due to the French company, successful in the sense of being accomplished with the least disturbance of normal conditions here, depends on many contingencies. Even if exchange is procurable and the payment seems at first to have been successfully accomplished, some months may pass before the full results on the financial situation here can be fully known. If drawn against actual funds belonging to this country, held abroad, the proceeds of our exports, the transaction would be complete, but if this exchange be drawn against securities sent abroad, or against borrowed funds there, the real draft on the gold reserves here would come later.

The revenues and expenditures of the Government are now coming very close to each other. There seems to be every probability that the small surplus will tend to disappear under the enlarged expenditures for pensions and under other appropriations by Congress. However skillfully the payment of the amount due the French company is arranged, the resources of the Treasury will be reduced by that much. It is a payment unlike the ordinary expenditures within the country which only add to the resources of the people what is taken out of the Treasury; but there is little prospect that any of this sum sent to France will come back. It is paid out for something that cannot, in the nature of things, bring any return for years to come.

It may be admitted that the country is rich enough to undertake this great public work, and that when accomplished it will prove worth all it cost. Nevertheless, the magnitude of the undertaking

should not be lost sight of, and the strains which the payments of the money required will put upon our home markets should be carefully calculated. Of all the probable strain on the financial machinery of the country this first payment to France will probably be the greatest. The money for the construction of the canal itself will be provided by bond issues, and the money produced thereby will be largely expended in the country.

---

TRUSTS SEEM TO BE of two kinds—those which were built up gradually and carefully with economy and skill with a capitalization approximate to the real value of their resources and possessions, which pay dividends and have power to crush competitors, and those which are the creations of the promoter whose capital, obtained from the guileless public, has been dissipated in the process of consolidating decadent corporations and their plants.

The successful consolidation and concentration of great industries relating to special natural productions, such as oil or sugar, gave rise to a host of imitations, where the subject-matter of the industry was not fitted to be monopolized. Many of these masterpieces of the promoter are now said to be in a critical condition. With this process of decay going on in the vitals of these erstwhile objects of terror, will grow up a more sensible public opinion as to the real natural laws which govern combinations for monopolizing trade or industry. The benefits as well as the dangers which beset attempts to control particular products and manufactures will gradually become a subject of common knowledge. The public will learn that the road to wealth does not always proceed along the lines of big combinations. There is nothing very new in the ardor with which some portions of the investing public rush to the call of the trust promoter; there is nothing new in the outcry of wrath and hatred excited in another part of the public against these institutions. Every new development in business brings about the same phenomena.

It is not believed that the downfall of many of these dreaded monsters will be any loss in the country's aggregate wealth. The transactions which accompanied their rise, decline and fall, point more to a redistribution of wealth rather than to a destruction of it. This redistribution will be extremely painful to those who bought the inflated stocks, but will afford a compensating joy to those who received the proceeds. The wealth such as actually existed will migrate into other investments.

One unfortunate feature of the formation of these industrial trusts, and this too was in some measure the cause of the outcry against them, was the large number of employees of various ranks thrown

out of accustomed positions and deprived of usual income. From these arose the bitterest attacks on the trusts, and from these, too, will come those who will start up destroying competition against them.

The cessation of the attack on trusts, which has furnished so much political capital, will be due not only to the apprehension that the trusts are not in all cases so powerful and invincible as they once seemed, but also to the fact that the great mass of those who were shaken out of their old positions have established themselves in other employments. The trusts also, in many cases, served a useful purpose at least for a time. After the panic of 1893 when the country was glutted with goods which could not be sold at home, in many cases the trusts furnished the means of disposing of them in foreign markets. No doubt much of this foreign business was done at a loss, but it served at least as an advertisement, and the loss was less than would perhaps have been the case had not a combination been made among manufacturers.

Perhaps, after the experience of the last decade, both the use and the abuse of the trust will relegate it to its proper place as a piece of financial machinery.

---

FURTHER PROTECTION OF BANK DEPOSITORS is sought to be attained by a bill introduced in Congress for providing more severe penalties for those managers of banks who, knowing their institution to be insolvent or on the verge of insolvency, accept new deposits.

It is certainly in some cases very difficult for a bank officer to refuse a deposit when it may be the very sum that is needed to pass over a temporary embarrassment. A run may have been made on a bank for no sufficient reason, and its available cash may be so drawn down that without assistance suspension at least if not failure is almost inevitable. The bank officers must know this, and they are also aware that failure to pay on demand constitutes an act of insolvency. Just at the critical point, however, the tide turns and deposits are offered. Are the officers to refuse these, and reject the opportunity which seems about to restore the bank to its normal standing?

If the severe penalties of the proposed measure become law, a great risk has to be run. If the deposits accepted enable the panic to be overcome and the business resumes its natural flow, the directors will of course have been justified. But if the returning deposits are merely added to the general wreck, the officers have made themselves criminally liable.

It seems that a general law of this kind is against public policy. Undoubtedly there have been of late numerous cases where there

could be little doubt of intended fraud, but there is no need of so sweeping a law to punish such. Each case should stand on its own merits, and the act should be judged as fraudulent, not because of its coincidence with a technical insolvency, but from the circumstances from which fraud would be deduced without this special statute. Insolvency is usually the result of violations of banking laws already in operation. The National banking laws contain provisions relating to every possible conduct of banking affairs which is attended with danger. From actual stealing to carelessness and negligence, all methods likely to wreck a bank have been pointed out and guarded against in the law. The penalties inflicted are undoubtedly sufficient, and they are generally enforced. There are, and always will be, cases where the punishment inflicted on those who have caused loss to depositors does not satisfy the feelings of vengeance which naturally arise in the minds of those who lose money either by careless or fraudulent management of banks. We cannot suppose that the loser cares much whether the culpable bank officer meant to defraud him or not, the result to him is the same, and to measure out punishment merely in consideration of the feelings of the loser is recognized at once by unprejudiced common sense as unjust. The object of penalties is not so much for vengeance or even compensation as it is to warn those who as yet have made no missteps. The feeling of disgrace and chagrin of those responsible for bank failure is in itself a severe punishment acting automatically. It is very seldom that the individual so affected can ever regain his former status. It is necessary, however, that a public mark of disapproval should be set on the guilty. The mere fact of conviction and sentence, without regard to the severity of the punishment in length of years, is sufficient to fix the criminal brand. But the bad policy of an act which inflicts punishment of a criminal nature, and makes an ordinary act a crime because it happened to be coincident with the occurrence of an event of such a nature as insolvency, consists in the fact that it will tend to keep many honest and conscientious persons from going into business in which they may very easily expose themselves inadvertently to criminal charges.

The bill seems to be analogous to a measure which has often been proposed, but dropped as unwise and impracticable, to prevent officers and directors from borrowing legitimately from their own banks. Just as such a prohibition in the case of officers and directors would prevent good men who are the most desirable for those positions from accepting them, and tend in time to lower the personal character of bank officers and directors as a class, so does this proposed measure severely penalizing an act of which the criminality cannot be really known until after the event, tend to warn all but men reckless of their

reputations from becoming bank officials. The acts which might be justly punished under the measure are already subject to penalties under existing law. For many acts which might technically come under the proposed law, the punishment imposed is severe and unjust. Whenever bank failures attract public attention there at once arises a demand for extraordinary penalties for those who seem to be responsible. In response to such demands bills are introduced often for mere political effect. After sufficient time for consideration they are seen to be unjust and impracticable as well as unnecessary.

---

COMPETITION AMONG BANKS can be viewed from two distinct standpoints—that of the banks themselves and that of the general public. The banker sees in the competition of his fellows a continual tendency to the reduction of his profits. The outside public look upon this competition among bankers as an advantage to themselves. Congress, in making or amending legislation affecting banks, has as a rule looked more to the interests of the public than it has to those of the banks. Whenever the National banks have secured any advantage to themselves from legislation they have given full measure of service in return. From the day the National system was rendered possible by forcing the notes of State banks out of circulation by the pressure of the ten per cent. tax, Congress has apparently looked upon them as public servants to be dealt with solely from the standpoint of the public good. The original banking law contained all the restrictions and limitations that its framers could discover in the State banking laws then extant. Later legislation has not been in the direction of greater liberality, but rather the contrary. The concession of a larger percentage of circulation in 1900 on bonds deposited has been almost the only instance in which the National banks could be said to have received a favor. This was granted not so much out of kindness to the banks as from a desire to secure their services in refunding the national debt at two per cent.

The inherent adaptation of the system to the needs of the country is shown by the growth of the system under all the restrictions imposed by law upon the banks composing it. The system has grown because it has inspired confidence in the business public. The safety of the National banks as depositories has nearly kept pace with their safety as issuers of circulating notes. But they have had to encounter competition not only from each other but from State and private banks, from Savings banks and trust companies. In this competition the comparison of the proportionate number of failures in each class of institutions shows that they have more than held their own. All the banks in the United States to-day are working under general

laws. The history of banking in this country shows that free banking, as it was called, was early demanded by the people of the different States.

The first banks were granted exclusive privileges and powers by special legislative charters modeled on the charters granted to banks by European governments. The charter freely granted to all who would conform to certain conditions recognized as necessary in undertaking the banking business, is notably an institution of this country. The Government, State or National, lays down certain broad rules, and all else is left to the banks themselves. The rules laid down are similar for the same kind of bank under the State and National governments. They vary somewhat in the ground covered by restrictions.

It is this freedom of banking that causes much of the competition which worries the banker, and secures so many advantages to the man who deposits with or borrows from the banks. Probably in no country in the world do the public receive as good service from the banks in the safe-keeping and transmission of money and in the business of exchange of checks and drafts as in the United States. And notwithstanding the services thus rendered without apparent and immediate return, the banks seem to prosper.

Perhaps the attitude of the banker who bewails competition because it inflicts upon him unprofitable accounts and compels him to collect checks and drafts at par, is not one of discontent that his profits are small, but he grieves because he knows that on account of competition he cannot use so many ways of making them larger.

That all the banks of the country manage to eke out a fairly profitable existence indicates that there is business enough for them all. In a country where banking capital freely competes for business, as it does in the United States, the bankers are not likely to become hidebound with sloth. They have to be wide awake and seize all chances of using money consistent with safety. The banker who has a virtual monopoly can draw his own lines and keep continually in his own rut. Business has to contract itself to his ideas; enterprise is sadly cooled by his attitude. The banker who competes for business finds safe profits in fields which would remain barren were it not for him. As the banker is more active and open to new ideas, the enterprise of the people around him increases, and wealth accumulates more rapidly. The very privileges and services granted freely by our competing bankers bring rewards later in increased business. The bankers of the United States depend upon themselves and not on the Government or on special privileges, and this independent attitude has made them more alert to increase the business enterprise in the communities around them, and brings more grist to

their mills. They have no real reason to envy the banker whom competition spared to grow into a drag on the prosperity of his locality.

---

IT IS SAID THAT NATIONAL BANKS on the Pacific coast are now taking out circulation, and sending the notes to the Philippine Islands, and it is also said that the Hawaiian banks are sending their notes to this country. There is nothing new under the sun, and given the same opportunities the same things will occur in banking. In the day of State banking before the Civil War, when the time of transport between different States and sections of the country was greater than it now is between almost any part of the United States and the Philippines, and when there were no telegraphs or telephones, the banks used to get the largest possible profit out of their notes by sending them for circulation as far from home as possible, so that their return for redemption might also be delayed as long as possible. Since the limitations put on bank notes by the banking laws have been in operation, there has been no very great motive for this practice, at least within the United States. The National banks have little difficulty in keeping out their notes. They are obliged to keep a redemption fund of fixed amount with the United States Treasurer, replenishing this fund as it becomes reduced by redemptions. The redemptions of National bank notes have never been very active, and the percentage of gain from the loss and destruction of notes has been very slight. The Philippines present an opportunity to the banks to place their notes in a locality where their convenience will be appreciated and their credit, like that of all American bills, high. The chances are that they will to a great extent supersede the silver coinage, being more convenient for all purposes.

So far it is only the Pacific coast banks which are said to have sent bills, but there is no reason why, if there proves to be a profit in the business, National banks anywhere in the United States might not follow their example. There are many banks which do not appear to require at home the full amount of notes they could issue. Nevertheless, it is hardly possible that the requirement of the Philippines for National bank notes from the United States will be very great or will seriously deplete the aggregate of bank note circulation here. The greater danger is indicated in the fact that Hawaiian banks are sending their notes to the United States. Soon National banks may be organized in the Philippines and may do the same thing. In so far as they are National banks, the exchange of notes can result in nothing very serious, except some slight loss to the pub-

lic from the usual wear and tear resulting from the prolonged circulation, but there are banks in the Philippines established under Spanish charters, which have to a greater or less extent the right to issue a credit note circulation. It is possible that some of these may be seen in this country ere long, although the ten per cent. tax law may prevent any greater currency than is now the case with Canadian bank notes.

The results of the circulation in this country of bank notes of the colonial possessions, and *vice versa*, may not be of any great moment, but the fact that there will probably be some interchange, not only of bank notes but of the coin, is an argument for uniformity of coinage and of bank regulations of the islands and the continental United States. The establishment of a different plan of silver coinage in the Philippines may prove as inconvenient as did the coinage of trade dollars in the seventies. The reason given on behalf of the banks which have sent their notes to the Philippines is that the war in the East has caused a dearth of Mexican dollars in the islands and that the notes, as far as their denominations, not less than five dollars, will permit, supply the deficiency. Evidently there is truth in this statement; for whatever advantage there might be in sending notes to a place from which returns for redemption would be slow, the notes could not be circulated there at all unless there was room for them. This room for circulation may be due partly to the fact that the notes are more convenient than Mexican dollars, and would take their place in large payments, and partly because of the exportation of Mexican dollars on account of war demands. If, however, any inconvenience were experienced from the circulation of bank notes from the United States in the island possessions, either from a plethora of money there or from contraction at home, the matter might be equalized by a law requiring a bank whose notes circulated abroad to redeem at a branch of the Treasury redemption agency established in the islands.

In one respect these beginnings point out many possibilities. China is practically without a currency, and once established in the Philippines the bank notes of the United States may find their way to other eastern countries and prove a means of regulating and simplifying trade there. The distance, considering modern means of communication is not greater than that which GEO. SMITH'S bank in the wilds of Wisconsin overcame when it almost furnished a bank currency for the United States as it then was.

The number of banks in the Philippine Islands appears from the last report of the Comptroller of the Currency to have been ten in 1903. Three are American banks established since the islands came into the possession of the United States. The other seven are

agencies of foreign banks in Hong Kong, Shanghai, India and Australia and Spanish banks previously in business. Some of these banks issue circulating notes, and the total amount of their notes current in 1903 was \$1,176,396, showing a slight increase over the amount outstanding the previous year. These notes are issued on the general credit of the banks. The money of the Philippine Islands, as is well known, has always consisted principally of Mexican dollars. By a law enacted over a year ago Congress provided for coins of a special form, of silver, which are kept equal to gold at their nominal value by being redeemable by the Treasury of the islands. The amount is limited, and is probably not sufficient to supply the place of the Mexican dollars, which it is expected will gradually be used less and less until they disappear from circulation. The outbreak of the Eastern war seems likely, if reliance can be placed on reports received, to hasten the export of the Mexican dollars.

The islands, like China and other parts of the East, have been without any regular standard of money recognized and fixed by the Government until the United States came into possession. Mexican dollars were taken at their bullion value, and all business afforded great chances to those who deal in money and exchange. As is inevitable under such conditions, it was the poorer classes who suffered and who still suffer the most by the lack of a standard of value and exchange. The efforts of Congress to establish a gold standard and furnish a stable subsidiary coinage will, when they have full effect, prove of the greatest benefit to the people of the Philippines. It seems rather anomalous that some of the banks there, from the rights carried over from the old regime, exercise the privilege of issuing bank notes in a manner not permitted in the United States. The foreign bank agencies seem to stand on a somewhat different footing than the banks which received their charters from the Spanish authorities. But however this may be, Congress can if it choose deprive them of any exercise of such right as they may have to issue circulation, in the same manner as the State banks now find similar rights under their charters unavailable, viz., by taxation. Whether there is any policy or object in doing this, is another question. In regard to this it may be said that there has been no complaint of the manner in which these left-over banks have used their privilege. If, however, they continue to exercise it they afford an example which may influence all future banking on the islands. As American institutions gain ground there they will necessarily be accompanied by the American principle of a free banking law, and self-interest will readily make a strong party in favor of retaining the advantages to the banks of note issues on general credit. It will be hard to combat the granting of the free-issue privilege to future banks when

there are existing banks already exercising it. But to permit note issues of this kind in so undeveloped a country would be worse than it proved in the days of wildcat banking in the United States.

If it is advisable to establish National banks after the home pattern in the Philippines, the process will be the more difficult in competition with existing banks. As evidenced by bank notes already sent from the Pacific States to the islands, there is a demand for more currency, either caused by the disappearance of Mexican dollars or by the greater demands of increasing business.

Congress should regulate banking methods in the Philippines so that there shall not be too great a contrast to those in the United States. Some differences it may be necessary to allow in deference to the old customs of the islands, but they should not be so great as to hamper exchange and thus indirectly render trade with the islands more difficult.

---

SCIENTIFIC PERSONS and boards of health have, since the germ theory of the propagation of disease has been generally accepted, interested themselves in investigating whether money, circulating as it does from hand to hand among all classes of people, is not a vehicle through which germs are distributed. Before the rise into prominence of the germ theory, there were rumors that some injuries to health could be traced to the handling of money.

Inquiries were made at the Treasury Department at Washington to learn if any of the constituents or materials employed in making the paper on which the notes are printed are of a nature likely to be deleterious or poisonous. There was certainly enough paper money handled by the counters and sorters in the department to afford a sufficient basis for a fairly accurate test. From the brand-new sheets of bills to the dirtiest and raggedest notes sent in for redemption, in filthy bundles, every stage in the use and wear and tear of the notes was represented. Anyone with a keen sense of smell could trace the gradual change from the sickly chemical odor pervading the newly-printed sheets, to the concentrated essence of old clothes given forth by the dingy bundles of mutilated notes in the redemption bureau. All of these notes, in their various stages from issue to decay, were, and still are, minutely handled by employees, male and female, in rooms not by any means too well ventilated. It would be supposed that if disease were conveyed by paper money, some evidence of this fact might be obtained among these employees who were in continual contact with the notes, and who daily breathed an air permeated with their effluvia. But so far as could be discovered there was nothing peculiar in the health of the employees who handled

the money; nothing that distinguished them from other classes of individuals who lived under analogous conditions of a sedentary life. If there was danger in the handling of money it was of the kind to which the drinkers of coffee are alleged to expose themselves, very slow in its deleterious operation. In other lines of business, of an acknowledged dangerous character, like working in lead or copper, or in match factories, or in grinding tools, the effects soon show themselves on those engaged.

Not only the employees of the Treasury but those who find employment in the banks are exposed especially to the dangers of handling money, and their average immunity from disease seems to disprove that there is any special danger in it. To go a step further, it is traditional that misers taking delight in retiring to unhealthy places of privacy to count and gloat over their wealth were notoriously long lived. In fact, although logically money, especially paper money, seems to fulfill all the conditions of a successful germ-breeder and distributor, nevertheless the handling of money seems to be a healthful occupation, rather than otherwise. The Board of Health, of New York city, has recently been making some experiments with the minor coins, likely to pass through the hands of the poor and diseased. Pennies and nickels taken from sick children were found to retain some germs of disease. There was, however, a distinctly antiseptic quality to the coins, as might have been expected, which destroyed these germs within a short period. Silver coins had less of this quality, and presumably gold would have still less. Copper is known as a great destroyer of germs and fungi. The experiments of the board of health seemed to show that the danger in handling coins of copper, nickel or silver was slight, although a bare possibility of contagion from them might exist. The board is still pursuing the experiment with paper money. As it is in this form that greater dangers would appear to exist, some interest is felt in the results of the investigations.

---

THE PROSPERITY OF THE UNITED STATES is treated at length in a fifty-two page supplement to the London "Statist's" issue of February 27. While the railroads receive more attention than anything else, the review also treats of production, commerce and banking. "The Statist," referring to the recent slackening of trade, says that there has been no serious blow to credit, and that the difficulties in our money market have been due to the employment of too much capital in purchasing our securities held abroad. There is, also, it is pointed out, no distrust of our currency amongst foreign investors, as was the case some years ago.

## THE NORTHERN SECURITIES DECISION.

---

The decision in the merger cases has been in favor of the Government's contention that the Northern Securities Company, organized for the purpose of holding and voting the stocks of the Great Northern and Northern Pacific Railroads, was in contravention of the Sherman anti-trust law.

This company was formed in 1901, under a New Jersey charter, with a capital of \$400,000,000. Of this capital \$365,000,000 was issued in return for ninety-nine per cent. of the Northern Pacific and seventy-five per cent. of the Great Northern stock. In 1902 the Attorney-General was instructed to bring suit on behalf of the Government against the company. Previously the company had been sued on behalf of the State of Minnesota. An injunction was also sought from the Supreme Court of the United States on behalf of Minnesota. The injunction suit was dismissed by the court for want of jurisdiction. The main suit of the State was, in September, 1903, decided by Judge Lochren against the State, declaring the company not in violation of law. The Attorney-General brought suit directly in the circuit court, which was authorized by Congress to hear the suit without its first passing through the district court. In April, 1903, the circuit court unanimously declared the company a combination in restraint of trade as forbidden under the Sherman law. The appeals from this decision and from the decision of Judge Lochren were heard by the Supreme Court in December and January respectively. The decision just handed down affirms the decree of the circuit court in every particular, and also by consequence disposes of the appeal from the Lochren decision. The circuit court decision, which has been affirmed, declared the acts leading to the formation of the Securities Company illegal, enjoined any further acquirement of the stocks of the railroads involved, enjoined the voting of the stock already acquired or the payment of dividends on it, but pointed out a way by which the illegal acts might be remedied by providing that the stock of the roads acquired by the securities company might be returned to its original holders on their surrendering the stock of the company received in exchange therefor. During the period of appeal the decree of the court was in abeyance, but since the affirmation of that decree by the highest court it is in full force.

This litigation has excited great interest throughout the country, ranking with the great legal-tender cases, and with the case of the income tax. The great mass of the people, who have little or nothing at stake in the outcome of the case in an immediate pecuniary sense, recognized in it a contest between the powers of great corporations and those of the Government. There has been a growing sentiment for years that the ordinary laws could not be enforced against powerful corporations, and the Northern Securities was recognized as one of the most powerful yet created. It really made little difference whether these great combinations were called trusts or corporations, the public saw in the Northern Securities an example of how financial combinations, if proved to be beyond the restraint of law, might practically

go on without limit. On the other hand, it is highly probable that the feeling against the securities combination was not one of any great hostility in the ordinary sense. The intelligent public, unbiased by personal or political reasons, could perceive that the objects of the combination were not without merit; that it was, in a sense, whatever the immediate designs of the financiers who devised it, an instrument capable of curing many of the evils which the public suffered as investors in railroad stocks, and also was calculated to secure uniformity in railroad rates and do away with the discrimination made against different classes of shippers by unrestricted railroad competition. Even if the public were charged somewhat higher rates through the destruction of competition effected by the combination, if uniformity to all classes of shippers, great and small, were secured, it would be a lesser evil than lower ostensible rates under which some shippers were favored more than others.

The main motive of the suit against the company was undoubtedly political, not in any narrow sense perhaps, but as an emphatic test of the powers of the Government when tried against the gigantic development of the corporate principle. This view conduced to the general popularity of the suits brought by the State of Minnesota and by the Attorney-General in behalf of the United States. But in addition to this reason for making this judicial attack there was undoubtedly the fear of a large number of shippers who use the railroads who have benefited and are still benefiting by a competition that fosters discrimination. The formation of railroad pools or combinations on a great scale and the consequent establishment of uniform rates to all, is not what the great shippers who have been favored in their business by this competition desired. They would be deprived of their power to play off one line against another and secure exceptional advantages for themselves. The inter-State commerce law is designed to so control the inter-State railroad lines of the country that they will treat one shipper exactly as they do another. It is probable that the railroads as a rule desire to conform to the spirit of this law. That they have not been able or willing to do so is because of their practical powerlessness in the face of the competition of other lines, and the pressure brought to bear on them by shippers struggling for advantages over each other. The competition among railroads has done more than anything else to stifle and destroy competition in other lines of business. There is hardly one of the so-called industrial trusts which has not attained its pre-eminence and crushed its competitors, to a very great degree, by availing itself of cheap transportation accorded by competing railroads.

The Sherman anti-trust law having now been decided to apply to corporate devices for interfering with competition between railroads, seems to be in some respects antagonistic to the inter-State commerce law, the spirit of which is to prevent the railroads from discriminating in the rates charged shippers. If the purpose of the Northern Securities Company, admitted to be to destroy railroad competition within the territory covered by the Great Northern and Northern Pacific Railways, could have been carried out without interference, the result could very easily have been uniformity of all rates throughout the whole belt covered. It would no doubt have given the opportunity to raise rates, but a uniform rate charged to all shippers, with no rebates, would have been a greater benefit to the general public, and, as

far as transportation is concerned, would have insured a fairer competition than existed when the two roads were competing with each other. Undoubtedly, in the light of the merger decision, new legislation is necessary which should be based on a wider and more philosophical study of the subject than that which resulted in the present laws. No fault can be found with the decision in that it enforces the present law. The close division of the court shows that the arguments in equity were very evenly balanced. The majority were no doubt right that the statute had been violated. Justice Brewer's divergence from the reasons of the other majority judges seems to leave a wide field for making future distinctions between reasonable and unreasonable efforts to control competition.

The subject of competition under modern conditions needs careful study. Corporations for purposes of transportation, inasmuch as they affect all other kinds of business, seem to be a class by themselves, to which laws suitable enough to control other corporations cannot always be applicable. It is this peculiarity of railroad corporations that gives some basis of reason to the socialistic demand that railroads and other forms of transportation should be directly managed by the Government. One management of all the great lines of transportation might possibly bring about a condition in which competition in other lines of business would be on a fairer footing. It would not be so easy for combinations in other lines of business to crush out competitors and become virtual monopolies, if they could be prevented from using the transportation facilities as a weapon.

Although the decision of the Supreme Court seems in some respects inconsistent with the views of those who would foster a reasonable competition in every line of business, in that by checking an attempt which would have a tendency to render transportation rates uniform and fair to all, the decision seems to encourage the suppression of competition by the unfair use of transportation facilities in all other lines of business, yet it was probably the only conclusion that could fairly be reached by the court under the special statute involved. It will stimulate a wider research into the subject. Some temporary method will doubtless be adopted to prevent injury to the roads involved. The values are really very little affected by the decision. The power of the Government having been asserted, such inconveniences as may arise will tend to inspire care and study in regard to future legislation. Justice Brewer's slight dissent from his four associates will make it manifest to the general public that there is much to be said in favor of a reasonable effort to repress competition, and that all competition is not alike in kind.

---

**SAVINGS BANK DECISION.**—The New York Court of Appeals recently decided that the State Controller, in imposing a one per cent. tax on the surplus and undivided profits of Savings banks under the so-called Odell law of 1901, must assess at the market value of the securities constituting the surplus when the same is quoted on the market below their par value.

The opinion of the court is written by Judge Haight, and is rendered in the case of the Bank for Savings of the City of New York. The court reverses the decision of the court below, and orders that the sum of \$296,500 be deducted from the value of the surplus and undivided earnings of this bank. The State will lose a large amount of money in consequence of this decision upon assessments already made by the Controller.

## THE GROWTH OF TRUST COMPANIES.

---

The great gain in the number of trust companies since 1892, in all parts of the country, is no doubt principally due to the increase of wealth and to the facilities which the trust principle affords for its conservation and increase.

The trust company in its most recent development seems to include the functions of a bank, a Savings bank, a surety company, and to some extent those of a legal adviser and advocate in financial matters. The commercial banks have for a long time complained that trust companies infringed on their field of profit, but perhaps they have no greater right to complain than will the Savings banks and the surety companies, if not now in the near future. The companies attract deposits already in rivalry with the Savings banks, and their custody and care of certain kinds of property would seem to have the effect of lessening the demand for certain kinds of insurance, among others of life insurance.

While this complaint of invaded business territory has some foundation, yet it is no doubt exaggerated. During the period of the growth of trust companies there has been a corresponding increase in the number and financial strength of the banks. A fair view of the matter seems to lead to the conclusion that the trust companies have grown in response to the opening of a new field for financial operations, which the banks with their limited powers and traditions of business were not calculated to fill, and perhaps never would have filled. The growth of the trust companies is analogous to the growth of the great private banking firms, which has not excited the same opposition from the other banks. The trust companies, by cultivating and developing this new field, have probably, if all the facts were fairly marshalled, really added to the business of the banks rather than taken from it.

As before remarked, the growth of trust companies has probably been chiefly due to the great increase in the wealth of the country, rendering the old methods for the conservation of estates, by agents, lawyers, executors, administrators, etc., inadequate. This field was always a very large one, and the trust companies are gradually filling and enlarging it as circumstances require.

Another cause of the growth of trust companies, however, is similar to that leading to the growth of Savings banks. As in the case of Savings banks, which although going under that name do not strictly adhere to the Savings bank principle, so trust companies, so-called, do not always adhere to the trust principle. In many of the States where the laws governing the formation of financial institutions are not well defined, it has been found easy to organize Savings banks which to all intents and purposes are commercial banks, with the added advantage of such protection from sudden demand which the Savings bank privilege of notice before payment gives them in emergencies. In the same way many who if they had not the example of the legitimate trust companies before them, would have become ordinary bankers, have seen the advantage of organizing as trust companies, seeing

that thereby they could really do a banking business with enlarged powers and fewer restrictions. The competition of these institutions, both Savings banks and trust companies, with banks previously organized was no more than would have been the case had they started simply as banks, except that they had certain superior advantages in establishing themselves. These composite organizations no doubt like the regular trust companies add something to the business of the plain commercial banks, though not to the same extent as the trust companies pure and simple. The trust companies, however, unlike the banking Savings banks, are more apt to decrease the proportion of their banking business as their trust business proper increases, until the banking business arrives at the limit which should properly be maintained by a trust company in connection with and as an aid to carrying on its trust business.

That many banks regard trust companies as aids to their own business would appear to be indicated by the fact that they affiliate with them, or are expressly interested in their organization for the purposes of affiliation.

The criticism made of the comparatively small reserves carried by the trust companies and the attempt to compel them by law to hold a certain definite percentage is not founded on a correct view of the nature of their business. No doubt some of them do such a banking business as for safety requires a cash reserve somewhat in proportion to that required to be held by country banks. Many of them, however, do not. Any hard-and-fast rule for all trust companies would not be equally just for all. Where such companies are under the supervision of a State official the fixing of reserves should be discretionary with him after an examination of their business. The attitude of the clearing-house banks of New York city towards the companies in this respect has probably had a good effect, as it has called attention to this point. The results have shown that there is a wide difference between the companies in the valuation they place on that part of their business in which they compete with the banks. It seems to bear out the inference that as a company secures sufficient trust business, the banking business is only carried on to the extent necessary to facilitate and strengthen its trust operations. If the growth of trust companies continues as rapidly as it has in the last six or seven years, it is highly probable that competition among them may lead to the exercise of greater public investigations and more State control than is now insisted on in many States.

---

**NEW COUNTERFEIT \$20 SILVER CERTIFICATE.**—Series of 1891; check letter, A; J. Fount Tillman, Register of the Treasury; D. N. Morgan, Treasurer of the United States; portrait of Daniel Manning.

A very poor zinc etching, printed on good quality paper. A few coarse blue ink lines are used to imitate the silk fiber of the genuine. The back of the note in hand is printed upside down. The work on this counterfeit is so crude that a more detailed description of the note is deemed unnecessary.

---

**UNDISMAYED BY MICROBES.**—A Health Board expert has found 135,000 bacteria upon a single banknote. At that rate a "large roll of the long green" must contain an appalling aggregate of germs. It is to be doubted, however, if many people will decline to take it, when they get a chance, on that account.—*N. Y. Tribune.*

# TRUST COMPANIES—THEIR ORGANIZATION, GROWTH AND MANAGEMENT.

## CHAPTER IV.

### THE FUNCTIONS OF TRUST COMPANIES.

The trust company of to-day performs a great variety of functions, some of which are peculiar to itself, while others are undertaken by other financial institutions. The most distinctive function of the trust company is undoubtedly that of acting as trustee for various purposes. Historically, this was the first kind of business, aside from insurance, that trust companies were authorized to undertake, and the legislation of those States that have laws on the subject indicates that the lawmakers had in mind such business as affording the essential reason for the chartering of these companies. With hardly an exception, the granting of other powers seems to have been intended by the framers of the laws as merely incidental to or helpful in the carrying out of duties as trustee.

The same intention is evident in the name "trust company"—*i. e.*, a company organized to accept and execute trusts. Webster defines a trust as "something committed to a person's care for use or management, and for which an account must be rendered." Blackstone defines it as meaning, in law, "An estate devised or granted in confidence that the devisee or grantee shall convey it, or dispose of the profits, at the will of or for the benefit of another; an estate held for the use of another." A trustee is a person or corporation to whom a trust is committed. With this in mind, it is not difficult to understand the theory of the trust company—simply a corporation empowered to undertake those special trusts of a business nature that men are apt to commit to others. This is the original and essential mission of the trust company.

Experience has demonstrated, however, that for the proper execution of such trusts the company is under the necessity of carrying on other lines of business which increase its usefulness as a trustee. Thus one function after another has been added, until to-day the trust company undertakes a great number and variety of duties which justify the descriptive name that has been applied to it of "the department store of finance."

Because of this diversity of functions, trust companies usually carry on their work in departments, the most common division being a threefold one—into banking, trust and safe-deposit departments. Often the banking department is subdivided into the savings and the commercial banking departments, and the trust department into two parts, of which one is devoted to trust business for corporations, and the other to trust business for individuals. The largest companies frequently have other departments than these, sometimes because the volume of business makes a further division advantageous, and sometimes because other lines of business are included. Among the other departments sometimes found are the bond (or investment) department;

the mortgage department; the transfer (or registration) department; the real-estate department; the reorganization department; the title-insurance and the fidelity insurance departments. Most companies make some special provisions for women, and some have a special woman's department.

If the word trustee be taken in its widest meaning, the greater part of the functions of the trust company might be included in a description of its duties as trustee. There are certain forms of trustee work, however, which occur so frequently that they have come to be referred to by special names, and it will be convenient to consider the various functions in the following groups:

- Business as trustee or agent for individuals, under private agreement.
- Probate business.
- Investment business.
- Real estate business.
- Insolvency business.
- Business as trustee or agent for corporations.
- Business as transfer agent and registrar for corporations.
- Corporation reorganization and financing.
- Safe-deposit business.
- Fidelity insurance and title insurance.
- Savings and banking business.
- Miscellaneous.

#### NATURE AND VARIETY OF INDIVIDUAL TRUSTS.

The number and variety of trusts undertaken for individuals under private agreement is very great, and new forms of such trusts are being constantly created. They come from many different classes of people—from active business men who have some special matters that they do not care to handle for themselves; from teachers, artists, doctors, clergymen, women and others who feel that their inexperience or lack of time makes it wise to shift financial affairs to other shoulders; from persons whose poor health requires that they live in other climates and leave their business cares behind; from absentee property owners: from the aged, either too feeble to attend to active business or willing to take a well-earned rest; from persons planning to spend some time in travel and who must have a responsible agent to look after their affairs while away; and from others who, either from choice or from necessity, wish to avoid the care of their property either temporarily or permanently.

In such cases the trust company takes entire charge of the property, whether real or personal, or both, just as an individual acting in like capacity would do. It collects interest, coupons, dividends, annuities, pensions, and any other form of income, notes, accounts, bonds, mortgages, land contracts, etc.; if part of the property be real estate, it looks after repairs and improvements, sees that the property is kept rented, keeps up insurance, pays taxes, collects rents; it acts as attorney in fact, executes contracts, leases, deeds, etc. It remits or accumulates the income, reinvests the principal, as per the terms of the contract.

Married women place their separate estates in the hands of the company, either giving it the sole management or retaining such degree of control as they see fit.

It often happens that men wish to provide for wife or children or other dependents a fund which shall be beyond the reach of their creditors and safe from any unforeseen calamities that might befall the donor's estate, so that the beneficiaries may be assured of an income in any event. For such purposes they convey sufficient property to the trust company as trustee, with a definite contract as to the disposition to be made of the principal and income of same.

Similar trusts may be created in favor of benevolent or educational institutions or others to whom the donor wishes to give the income only of an endowment, without placing the latter under the control of the beneficiary. The trust company receives such funds, invests or reinvests the same from time to time as it becomes necessary, and applies the income as directed in the deed of trust.

Trusts may be created for the benefit of the one making the trust, either subject to his revocation at any time, or beyond his control. The young or inexperienced sometimes inherit estates, and suddenly find themselves in situations needing experience and wisdom beyond that which they possess. Occasionally persons in active business life find themselves disqualified through accident, sickness or other cause from caring for their business, and turn it over to the trust company.

Persons whose incomes are received at long intervals or at uncertain times may arrange with the trust company to have the incomes paid to them in equal monthly installments. If the security is ample, the company will sometimes make temporary advances if necessary.

Trust companies are sometimes called upon to act as agents for the payment of such regularly recurring items as premiums on insurance, taxes, etc. In some instances they have undertaken to care for burial lots and graves.

Persons who are to be away for a considerable time appoint the company custodian of valuable papers and securities. This function is of much greater importance than mere safe-keeping. While the owner is away, it may be of the greatest importance to get at the papers. Bonds may be called for redemption, the owner may wish to place the securities as collateral for a loan, coupons may become due, and the owner need the money for them.

Some trust companies do a considerable business in the handling of escrows. They act as temporary trustees of papers, money or other property placed in their hands by one party to be given to a second party upon the performance of a contract, the payment of a certain sum in money or the fulfillment of some other provision determined by the parties to the agreement.

Sometimes estates which have been improvidently managed are placed in the hands of trust companies in the hope that they may be freed from incumbrances and put upon an income-producing basis. In some notable cases the superior facilities of trust companies have enabled them to preserve and make valuable estates that would have been worthless in the hands of the owners.

A new field of business is now being taken up by the trust companies, in the form of trust agreements relating to life insurance. The policies are made payable, or assigned, to the trust company as trustee, and at the death of the assured the company collects the proceeds of the policies, of which it has meantime been the custodian, and applies such proceeds according to the

trust agreement. Many insurance companies do not write policies allowing stated payments to beneficiaries, and this plan therefore furnishes the opportunity not otherwise open for the insured to have such disposition made of the proceeds of his insurance.

Trust agreements are also made by which beneficiaries may be paid stated annuities out of the proceeds of life-insurance policies. This arrangement is specially valuable where a man is not able to carry an amount of insurance such that the income alone will support the family. The trust company can so invest the proceeds that a small portion of the principal may be used each year while the balance is kept profitably invested. The fund may thus be made to provide a sufficient income during the probable life of the widow or during the minority of the children. One of the leading companies of the central States advertises that by this plan it is possible to pay an annuity of \$500 for forty years out of \$10,000 insurance, of \$1,000 for forty years out of \$20,000 insurance, etc.

It is customary in appointing the trust company trustee to have the fees of the company made a part of the contract, and it may thus be known in advance just how much the expense will be.

While the trust company is a corporation, it has usually succeeded on account of its wide powers and the character of the men in control in maintaining a degree of *personality* which adds to its attractiveness to customers. The confidential nature of many of its duties brings it into close touch with those whose affairs it handles.

It is customary for trust companies to keep all trust funds entirely separate from their general assets; and, indeed, this is required by law in many States. This means that in case of the failure of the company the funds belonging to a particular trust cannot be mingled with the general assets of the company nor levied upon in any way by the creditors of the company. In addition to this, the trust becomes, in case its funds are not intact, a creditor of the company, protected as are its other creditors by its general assets. Trust funds are thus doubly safeguarded.

Securities and other property held in trust stand in the name of the company as trustee (etc.) for So-and-so, and thus show on their face that they are not the property of the company.

#### PROBATE BUSINESS.

The statutes of many States give to trust companies the power to accept and execute duties entrusted to it by will or by appointment of court as administrator, etc. In such capacities the company has the same powers and duties that an individual would have if acting in the same capacity. The manifest advantages which the trust company has over an individual for the performance of such trusts are steadily drawing to it a large portion of this business; and it is safe to prophesy that it will ultimately become the usual practice to entrust the execution of wills and the administration of the estates of the dead to trust companies rather than to individuals.

Business of this kind includes services as executor, administrator, trustee, guardian, committee, conservator.

An executor is a person appointed by the testator in his will to take charge of his estate and dispose of it as directed in the will.

An administrator is an officer appointed by the court having such juris-

diction in the several States to take charge of the estate of one who dies without leaving a will, and to dispose of the same in accordance with the inheritance laws of the State.

An administrator-with-the-will-annexed is appointed by the court to take charge of the estate of a deceased person when no executor has been named in the will, or when the executor named refuses to act or dies.

Acting in any one of these capacities, the trust company assumes entire charge of the estate, subject to the supervision of the court, and after a period varying in the several States, but usually eighteen or twenty-four months, makes a final distribution according to the terms of the will or the laws of inheritance, as the case may be, and files with the proper public official an itemized statement of all receipts and expenditures under the trust.

In winding up the affairs of an estate, the executor or administrator frequently finds it necessary to turn a portion of it over to a trustee appointed to manage it for the beneficiaries or to a guardian appointed to look after the estate (and in some States the person) of heirs who are minors, or to a committee or conservator appointed to have charge of an estate for heirs who are insane, idiots, habitual drunkards, spendthrifts or incapable for any reason of looking after their own affairs. In any of these capacities the trust company may act, and it often happens that a given company acting as executor turns over a part of the estate to itself as trustee, guardian, etc., thus gaining for the estate the advantage of continuous management by the same trustee. It may also receive such trusts from other executors or administrators, whether individuals or trust companies.

In any of these capacities the trust company may, and often does, act in conjunction with individuals appointed to share the responsibility with it.

In probate business of all kinds the company is accountable to the court for the faithful performance of its duties, and must render complete statements, which become part of the public records. The fees charged do not exceed those of individuals acting in similar capacities, and often are much less. The laws of the several States specify the fees allowed to executors, administrators, etc.

It is a common practice among trust companies to tender the services of its officers for the drawing of wills, and to act as custodian of wills until the death of the testator, when it files the will with the proper court; all these services being performed without charge in cases where the company is appointed executor.

Testamentary trusts may be created for any lawful purpose. In acting as trustee under appointment by will, the duties of trust companies do not differ materially from their duties when acting in the same capacity under appointment by private agreement. In any probate capacity it may be necessary to make advances of money in order to save the estate, and this the trust company will do if the circumstances justify it.

Trust companies are generally legal depositories for others acting as executors, administrators, guardians, etc., and for court funds.

The officer making such deposits with a trust company is, in most States, relieved from any responsibility in case of the loss of the funds through the failure of the trust company. He usually cannot escape this responsibility in case the funds are in his own keeping or deposited with an ordinary bank.

By the appointment of a trust company as agent or trustee during one's

life, and its selection as executor and trustee under will, the trustee work of a family may be kept in the same hands from generation to generation.

#### INVESTMENT BUSINESS.

In the performance of its other trust work of various kinds, the trust company is often called upon to invest or reinvest trust funds in securities that are safe and that yield as great returns as are consistent with safety. In addition to such demands, and to its needs for the investment of its own funds, many companies find so great a field for dealings in high-grade securities as to justify the establishment of a bond or investment department to handle such business. The operations of this department aside from its use for the customers of the other departments, do not as a rule differ greatly from those of a first-class bond house that deals exclusively in high-grade securities.

The business of this department touches that of the trust department at many points. Trust funds must be invested as soon as possible after being received. Reinvestments must be made from time to time, for mortgages become due and are paid, bonds mature or are called in for redemption, and the funds thus set free must not be allowed to remain as mere deposits too long, although interest at regular savings rates are allowed on such funds during the interim. The large trust company has excellent facilities for this service. The amount of securities that it must purchase for various interests is so great that it can buy on the best terms, and its opportunities for accurate and immediate knowledge of the securities market are of the best. Often one of its trust estates needs to dispose of securities at the same time that another needs to buy. A large mortgage is often divided among several estates.

Special forms of investment are provided by some companies, the most common form being in the way of bonds secured by real estate mortgages. The company loans on mortgages, sometimes exclusively on property located in its own city, sometimes on property in several carefully-selected cities. The amount loaned varies from forty to sixty per cent. of the appraised value of the property. The protection of title insurance and fire insurance policies is added. The company then issues a series of bonds secured by these mortgages, deposits the latter in trust with some other company, and replaces each mortgage as it matures or is paid by another mortgage for like amount, keeping the total of live mortgages always equal to or greater than the total of the series of bonds. The bonds usually bear four per cent. interest.

Instead of issuing bonds, some companies simply sell the mortgages, giving the purchaser the benefit of the company's experience and judgment in the selection of the mortgages, but assuming no responsibility for the payment of same. Such companies sometimes have allied institutions which will guarantee the payment of the mortgages for a small fee.

Some companies handle investments for customers under investment deposit agreements. The aggregate of the deposits received for such purpose is invested in securities selected by the company's trust committee, and these are held in trust for the depositors, each owning an interest in same determined by the ratio that his deposit bears to the total sum so invested. The income is collected by the company, and the net amount after deducting its fees is remitted pro rata to the depositors at stated intervals.

Customers may purchase securities outright, as they would of any dealer. Or they may appoint the company agent for the investment of moneys, and for the care of securities and the collection of income on same. Savings depositors whose savings have accumulated to a sufficient amount frequently take advantage of the opportunity thus afforded to increase the earnings on their money.

Investments may stand in the name of the company as trustee, thus securing a privacy to their investments which many customers consider an advantage.

#### REAL-ESTATE BUSINESS.

Reference has already been made to the services that trust companies render in the care of real estate committed to their charge by private agreement or by will or by appointment of court. The equipment which the company has to maintain in order to do such work satisfactorily often places it in an advantageous position for undertaking a general real-estate agency business. It engages in the purchase and sale and renting of real estate, improved or unimproved, on commission. Like other departments of its work, this business is frequently of great use to its trust department. Many trust estates have rentable property for which the company must find tenants. Sometimes trust agreements provide that a portion of the funds of the trust must be invested in real estate.

The company is often of assistance to prospective buyers who wish to borrow money in order to complete a purchase of real estate. Its experience and reliability cause it to be called upon to act as appraiser of real property.

CLAY HERRICK.

(To be continued.)

---

### AMERICAN BANKERS' ASSOCIATION.

#### MEETING OF THE EXECUTIVE COUNCIL.

A meeting of the Executive Council of the American Bankers' Association will be held in New York city, Wednesday, April 27 and Thursday, April 28.

It is expected that in addition to hearing reports from committees, the question of bank money orders will be considered at this meeting. The council will also designate the place and time for holding the next annual convention.

---

**STRIKING FACTS ABOUT AMERICAN RAILROADS.**—There are 204 000 miles of railroad in the United States owned by companies having a total capitalization of more than \$12,000,000,000, par value, affording livelihood to 5,000,000 of persons (employees and their families) and distributing \$15,685,950 in dividends to owners and \$610,718,701 in wages. These railroads are nominally controlled by 2,000 corporations, of which about 1,015 are operating companies.—*The World's Work*.

---

**THE FIRST GREAT FINANCIER.**—According to Geo. H. Daniels, General Passenger Agent of the New York Central Railway, Noah was the greatest financier that ever lived, having floated the largest amount of stock ever heard of at a time when the world was threatened with universal liquidation.

CHARLES N. CHADWICK, A.M.

# THE RELATIONS OF LABOR AND CAPITAL.

---

[In the opinion of many bankers and others the present relations between labor and capital are a menace to the continued prosperity of the country. Believing that a full discussion of the subject will tend to a right settlement of existing difficulties, THE BANKERS' MAGAZINE has secured a number of special articles from representatives of both sides of the controversy. The first article, published in the November issue of the MAGAZINE, was contributed by David M. Parry, President of the National Association of Manufacturers; also President of the Citizens' Industrial Association of America, recently organized. In the December issue the views of Samuel Gompers, President of the American Federation of Labor, were presented. Ralph M. Easley, Chairman of the Executive Council of the National Civic Federation, contributed a paper to the February number. Charles N. Chadwick, Chairman of the Committee on Labor and Capital, of the Manufacturers' Association of New York, continues the discussion in an interesting way in this number.]

---

## THE CAPITAL AND LABOR PROBLEM.

---

[By CHARLES N. CHADWICK, M. A., Chairman Committee on Capital and Labor, Manufacturers' Association, of New York.]

The terms capital and labor must be understood to mean combinations of capital and combinations of labor in their restraint of trade. In other words, they relate to the industrial situation of the country; and the question must be viewed as a whole, not from the standpoint of capital alone, nor from the standpoint of labor, but from the standpoint of the body politic.

Capital and labor, as such, are instruments in the development of the industrial resources of the country; good and proper instruments and capable of doing good work, if handled understandingly, wisely and well; but destructive instruments when used by an ignorant, careless and indifferent hand.

### COMBINATION OF CAPITAL.

The history of the combination of capital is of interest and may be stated in a few words. The trust first came into existence about 1882. At that time there were a number of petroleum refining corporations that were in active competition, and the profits accruing to such were infinitesimal. In order to adjust their differences and be in a position to make money, they adopted the plan which has since come into existence; that is, that the majority of the stock of the competitive corporations should be given to a trust, and that trust, by reason of the fact of controlling the stock of individual combinations, was then in a position to control all the corporations, from which came the Standard Oil Trust with the control of the petroleum of the country; then came the Sugar Trust, the Beef Trust, the Salt Trust, the Steel Trust, and all the trusts we have based upon this plan of organization.

In order to secure control of the market, different plans have been adopted by these trusts, methods of underselling, reducing prices, refusing to sell to a merchant because he was using the goods of a competitor, and so on. The

object was to secure the control of the market, and the result is that practically the market has been so controlled.

The tendency to consolidation and centralization of power is marked and rapid. From the trust, or combination of individual firms, through various stages of consolidation, pooling and lease, we now have what is known as the holding corporation, organized to acquire and hold stock. It does not deal in stocks, it holds them, and is an effective method of controlling several corporations. It can perpetuate control of corporations through the minimum expenditure of capital for maximum control. In other words, it controls the company which controls the corporation, and the flower of this plant is the controlling director, as destructive a force to the industrial world as the walking delegate of the trades union.

#### MONOPOLY CONTRARY TO PUBLIC POLICY.

This monopoly or centralization of business in the hands of a few is against the public policy of the State, of the statutes and of the judicial decisions.

The particular evil flowing from this rapid, evasive and changeable form of combination of capital from corporations through trusts into holding corporations is the tendency to the destruction of free institutions, and is repugnant to the instincts of a free people, and contrary to the whole scope and spirit of the Federal Constitution. It is doubtful if free government can exist in a country where such enormous amounts of money are allowed to be accumulated, to be held and to be used by the few against the interests of the many. It is destructive to the fundamental rights of the individual and to that free competition which is the life of business.

"The rights and liberties of Englishmen," says Blackstone, "consist primarily in the free enjoyment of personal security, of personal liberty and of private property. So long as these remain inviolate, the individual is perfectly free. To preserve these from violation, it is necessary that the law be supported in its full vigor. Ignorance and neglect of the points whereon they are founded lead to faction and licentiousness on the one hand, or a pusillanimous indifference and criminal submission on the other." And Chief Justice Waite said: "that civil rights were not created by the Constitution; that instrument assumes their existence." Civil rights are the inherent birthright of humanity.

The Constitution of the United States provides that Congress shall have power to regulate affairs with foreign nations and among the several States, and that no person shall be deprived of life, liberty or property without due process of law, nor shall private property be taken without just compensation.

Under the provisions of this enactment, the Inter-State Commerce Act, or the Sherman Act, was made law to protect trade and commerce against unlawful restraints and monopolies; and that trade and commerce (between the States and with foreign countries) within the jurisdiction of the Federal Government should be absolutely free, and no contract or combinations will be tolerated which impede or restrict their natural flow and volume.

The decisions of the courts have interpreted this act to mean not only the transportation of freight between the States, as well as persons and property, but also the processes and instrumentalities involved, and contracts and

agreements made, not only by combinations of capital, but also by combinations of labor in restraint of trade—to be in violation of the Constitution of the United States, thereby furnishing the means whereby commerce may be controlled. Hundreds of decisions of the courts during the last few years have crystallized this principle into law. No device of the trust for the purpose of circumventing the law can be made effectual. The power of the State to make, ordain and establish all manner of wholesome and reasonable laws, statutes and ordinances, is adequate, and wild-cat corporating, like wild-cat banking during the early history of our country, can be domesticated under Federal supervision and control. Quasi-public corporations can be made to be rid of the water in their stock and to be put on a sound financial footing, and the public thereby be protected, not only in the investment of stock, but also be benefited by the proper operation of public franchises, and the evils of B. R. T.-ism be eliminated.

The shortsightedness flowing from the greed and avarice of capitalistic monopolies has, on the other hand, encouraged labor organizations of various kinds throughout the country to come into existence and adopt various methods of organization, some responsible and some irresponsible, in the attempt to create another great monopoly to secure the control of that monopoly which has already been brought into existence through and by means of capital.

Combinations of capital have sought to secure their ends through finesse, evasion of the law and intellectual acumen, while combinations of labor, on the other hand, are seeking to secure their ends through physical violence and the application of brute force.

#### METHODS OF THE LABOR UNIONS.

Unionism claims the right to dictate to the employer regarding the matter of employees. It declares that non-unionism shall have no place in the field of labor. It asserts that the non-unionist secures the benefits of all that is accomplished by organization, but pays nothing and contributes nothing for the welfare of the union. Therefore the non-union man should be deprived of the right to earn his living.

The Anthracite Coal Strike Commission declared that no person should be refused employment or be in any way discriminated against on account of membership or non-membership in any labor organization.

Under date of September 30, 1903, the executive council of the American Federation of Labor, Samuel Gompers, President, in an address to the Organized Labor Union of America, states: "That the right of the non-unionist to work when, where and how he pleases carries with it the logical right of the unionist to work or refuse to work when, where, for what he pleases and when he pleases." Will this claim of the Anthracite Commission and the admission of the American Federation of Labor stand against the order of the walking delegate?

It is not necessary to go into the evils growing out of the misuse of power by labor organizations. The daily newspaper records the daily history of outbreaks, violence and disorder.

If the labor union is to solve within itself the problem of labor, it must take into consideration two facts: first, that it has become a destructive force in the industrial world; and, second, that it might be a constructive force.

Intended through organization to secure amelioration in the conditions of the laboring class by means of higher wages and better hours, it has degenerated, except in some notable instances, into a great machine governed by a bureaucracy dominated and controlled by the walking delegate.

As a unit, it has found that it can control legislation, and, conscious of its power, it crushes obstacles with brute force. Unreasoning and unreasonable, it requires an immediate acquiescence to its demands. Incapable of sanity of judgment, it cannot view the problem as a whole, but sees in part and demands all.

The socialism of Germany, the anarchism of Russia, now being interpreted by the Southern European mind that does not understand the institutions of our country, is slowly but surely dominating the labor situation.

No longer the Puritan and Cavalier who founded this country and established its institutions upon settled convictions, are in control; no longer the sober common sense of the American character, at the front so long, is dominating. The new element that has come to us during the last twenty years seeks to substitute a socialistic labor organization for our civil government.

Strikes, direct or sympathetic, boycotts, unfair lists, picketings, bullying and blackmail are tools of force; while inferior, careless and indifferent work are the results of a standard whose measurement is the labor of the slave, and not the capacity of the free man. Greed and avarice of the grasping monopolist are elements of destruction; while a seared and weakened conscience is a fruitful cause of decay in business integrity.

These causes, added to an inordinate desire for wealth and power, now hold the American character in solution.

Is it not, then, high time with the passing of the walking delegate, to leave to him all things that work for destruction, and to turn the power of the labor union toward the construction of the industrial life of our great commonwealth? The thinking minds of the labor union, the men of courage and conviction, must come to the front and take upon themselves the burden of responsibility.

#### IMMIGRATION AND EDUCATION.

Two phases of the situation demand immediate consideration; they are the question of immigration and of education. New races are coming into our country, exceedingly difficult to assimilate and to educate; and, until that which is here is assimilated and educated, a check should be placed upon further immigration. The Congress must understand that a serious mistake was made when the educational clause was eliminated from the immigration bill. The annual report of Commissioner Sargent shows that 920,000 immigrants came into this country during the last fiscal year, of whom 230,000 were Italians and 206,000 were from Austria-Hungary. Of these, 185,667 could neither read nor write. Congress should prepare and pass an immigration bill with a provision for an educational test, and a provision should be further added to the existing law for a medical examination of all would-be emigrants at the point of their emigration.

#### WHAT THE LABOR UNIONS SHOULD DO.

In the matter of education, the labor union should draw into its ranks the youth of the country. It should throw down the barriers and open the doors to all who desire to learn trades and become artisans. It should de-

vote its surplus funds to the establishment of training schools for these young men and women. It should insist upon it that boards of education should establish technical schools, so that the young women may be trained into a knowledge of the theory and practice of the trade that they have elected to pursue. No longer the guilds of the Middle Ages, with the apprentice, the journeyman and the master, can solve the problem of hand work. Machinery has changed the industrial condition of the country. The man who enters the shop to-day becomes attached to and is part of the machine, learning to do one thing well, but with no opportunity for learning the business as a whole. Therefore, he must obtain a knowledge of his trade beforehand in a school established for that purpose, and the certificate or diploma granted by such school should be sufficient to guarantee to him the right to practice his trade without fear of molestation. The diploma of the lawyer or of the doctor, with the license to practice his profession, is sufficient to insure to him the undisturbed practice of his profession, and no combination of professional unions of lawyers or doctors would be for a moment tolerated which insists that unless he joins this or that particular organization he cannot practice his profession. This same liberty should hold good for the carpenter, the engineer or the artisan, whatever his trade.

And particularly the labor union should take into consideration in its educational work the necessity for practical training schools in the technique of trades and arts. To-day, in almost all trades, specialization begins at once, and the result is a one-sided man incompetent except in that one thing in which he has been taught. Piece or section work makes this unavoidable, and, unless he has mastered the theory and practice of his trade before entering the shop, he never will. Hence the necessity for the all-around training of the artisan school. Will the labor union eliminate the walking delegate and turn its attention from the destruction of the industrial resources of the country to their upbuilding and reconstruction?

#### RESPONSIBILITIES OF ORGANIZED LABOR.

There must be a constitutional solution of the industrial problem. The fact that labor unions are not incorporated does not necessarily prevent a jury from holding them responsible for injuries to a third party, when the injuries complained of are the result of the act for which the union is responsible, for the law will assume that where responsibility exists compensation be made, as stated in a recent decision of the United States Circuit Court of Indiana.

Already one labor organization is suing another for damage, attempting to apply on this side of the Atlantic the principle of the pecuniary responsibility of labor organizations for illegal acts done by their agents or officers, which was established in England in the Taff Vale case.

This brings up the question of the incorporation of labor as a means of protection to the employer as well as to the employee in the performance of contracts entered into. It would appear from the recent decision of the courts, in actions being brought, such as that of the Hodcarriers' Union of Munice, Ind., against the Building-trades Council of that city for loss from a sympathetic strike, and that of the Anti-boycott Association to recover damages from individual members of labor organizations for acts of agents, that the principle of individual responsibility, whether acting through the

individual or through the association incorporated or not incorporated, exists, and therefore there is no legal necessity for incorporation.

#### STRIKES AND THEIR SETTLEMENT.

In seven years, it is stated that there have been 25,000 strikes reported to the Federation of Labor, involving something like 2,000,000 of members, superinduced by industrial and capitalistic corruption, with the public always the loser from the suspended production, interrupted trade and advanced prices.

Undoubtedly there are two methods which suggest themselves in the solution of the strike question.

One is by arbitration; not that form of compulsory arbitration which has been made a law in New Zealand and which some people have advocated in this country; but a voluntary arbitration arising from an open mind and an intellectual willingness to do the right thing when that shall be determined, together with a reasonable certainty of the acceptance of the judgment of the arbitrator, not only from the employer, but from the employee, or his representative, the unions, when the decision is against them.

The other is the preemptory enforcement of the law as it exists, holding the individual responsible for his own act or the act of his agent. When it is understood that the civic, State and national authorities are prepared to stand for the enforcement of law, arbitration or agreement with the individual, or organized bodies of individuals, will be made easy and possible; but it must be understood and enforced upon the minds of the people of this country that lawlessness is controllable; that responsibility exists somewhere with some one for every act done, and that the law must and will be enforced. Undoubtedly the tendency of the age is towards centralization and combination, whether of capital or of labor. The great danger of this tendency is the absorption of individualism into communism whose product is socialism, leading to decay and destruction of the body politic.

It must be recognized, however, on the other hand, that the census of 1900 shows, out of 29,000,000 wage-earners, only one-quarter of them, or 7,250,000, are engaged in what is known as organizable industries, of which one-fifth are in labor unions, or only about 2,000,000, practically one-fourteenth of the total wage-earners of the country. Their power, however, lies in organization, and it is because of this organization of employees and the evil which is done in their name that the employers and citizens of this country have been compelled to organize themselves into the Citizens' Industrial Association of America. This association is national in scope, but it is catholic as regards the interests represented. It admits employees as well as employers, and its fundamental purpose is to establish harmony between capital and labor. There is no injustice intended to employees by this association, which was organized with no other intent than to put down tumult and disorder, and uphold the constitutional right of every American citizen to work when, where and at what wage he chooses.

#### LAWS MUST BE ENFORCED.

Therefore, in the solution of the problem of capital and labor it is first necessary to enforce law and order. The country must be in a state of tranquillity and peace, the individual must be safe and in full possession of all

the rights which the Constitution gives him. Until this is assured, there can be no solution of the problem which is disrupting the industrial forces of this country through the misuse of the instruments of capital and labor. This done, the question of the cause of these evils may be taken up and solved.

The commerce clause of the Constitution points to the solution of the evils of combination of capital, and the liberty and public welfare clause of the Constitution points to the solution of the evils of combinations of labor.

#### SUMMARY OF PROPOSED REMEDIES.

The following suggestions are made :

First: That trades unions and concentration of capital are the natural product of a century of industrial evolution, and that they have accomplished much good.

Second: There should be no war of extermination upon trades unions because of abuses, any more than that there should be a war of extermination against joint-stock corporations and trusts because of abuses.

Third: There must be control, enforcement of laws and protection of life and property. The walking delegate, the monopolist and the subservient politician must be disposed of in regular order.

Fourth: The elimination of wild-cat corporating under State control and the substitution of Federal supervision and control. In the words of Judge Grosscup, of the United States Circuit Court, "It means that we must take our corporate policy from its five and forty masters and make of it a national policy; not a New York policy, not a New Jersey policy, not an Illinois policy, but an American policy."

Fifth: There must be publicity of corporate management.

Sixth: That combinations of capital, combinations of labor, or combinations of capital and labor in restraint of trade are alike reprehensible.

Seventh: Limiting the hours of labor, whether of brains or of the hand, is a matter for mutual agreement and of public sentiment, not a subject for arbitrary legislative enactment.

Eighth: The better regulation and control of immigration.

Ninth: The development of artisan schools, with a certificate or diploma as the right to practice a trade.

And lastly: Through study and discussion the American people will be led into a simple, healthy and normal life under the influence of brotherly love and kindness, and that therein is the hope for the Republic; but the right of franchise must be first appreciated and exercised and conscience awakened.

---

DEMAND FOR UNITED STATES MONEY IN COLOMBIA.—For many months past there has been a great demand for United States money in Colombia, but since the new law establishing the gold peso, of the same value as the United States gold dollar, as the monetary unit of Colombia went into effect (December 27), this demand for United States currency has become still greater, and to-day a large amount of pennies, nickels, dimes, quarters and dollars are a necessity. Considerable gold is in circulation, but more is needed. At the present time nearly all business transactions are based upon United States currency.—*Clair A. Orr, Consul, Barranquilla, Colombia.*

### *USURIOUS INTEREST PAID TO NATIONAL BANK—SECURITY TAKEN IN NAME OF PRESIDENT—FEDERAL AND STATE LAWS.*

Supreme Court of the United States, December 7, 1903.

SCHUYLER NATIONAL BANK, ET AL. VS. JAMES GADSDEN, ET AL.

Where usurious interest is paid to a National bank, the transaction is governed by the laws of the United States, though the security is taken in the name of the President of the bank in his individual name.

---

In error to the Supreme Court of the State of Nebraska to review a judgment which affirmed a judgment of the district court of Dodge county of that State, allowing a recovery by way of set-off of usurious interest paid to a National bank.

This was an action brought in the district court of Nebraska to foreclose a mortgage. On August 8, 1890, George Thrush, being indebted to the Schuyler National Bank, for money then and theretofore lent, executed a note to the bank for the sum of \$5,000, payable six months after date. As collateral security for the payment of this note, Thrush and his wife executed a note and mortgage for \$5,000 to one Sumner, who was at that time the President of the bank. The collateral note and mortgage were delivered to the bank and by it retained. The note made to the bank was renewed by the bank from time to time, and various payments of interest and on account of the principal were made to the bank, the principal sum thereby being reduced in March, 1894, to \$3,000. In that month and year a new note was executed to the bank for the principal sum then due and interest, in all, \$3,229. No money dealings were had at any time between either Thrush and his wife and Sumner individually. Thrush and his wife in their answers pleaded many payments of usurious interest to the bank during a period of five years, and prayed that the amount of such payment might be deducted from the principal sum claimed by the bank to be due. The district court decided that as the transaction was one with a National bank it was governed by the laws of the United States, and, therefore, recovery by way of set-off of the usurious interest alleged to have been paid was refused. Recovery of the interest embraced in the claim of the bank was, however, denied, and judgment was entered only for the principal sum found to be due and owing to the bank. On appeal, the Supreme Court of Nebraska reversed the judgment of the district court in the particular just noticed, and remanded the cause with directions "to ascertain the amount of money advanced to Thrush

by the Schuyler National Bank, deduct therefrom all payments, whether of principal or interest, and award foreclosure for the remainder, if any."

Mr. JUSTICE WHITE: The question for decision is, Did the Supreme Court of Nebraska rightly decide that the controversy concerning usurious interest paid was to be governed by the statutes of Nebraska on that subject, and not by the laws of the United States on the same subject, as expressed in § 5198 of the Revised Statutes (U. S. Comp. Stat. 1901, p. 3493) ?

We say this is the sole question, because it is undoubted that if the rights of the parties are to be determined by the laws of the United States, the ruling below was wrong. This results from the prior adjudications of this court, holding that where usurious interest has been paid to a National bank, the remedy afforded by § 5198 of the Revised Statutes (U. S. Comp. Stat. 1901, p. 3493), is exclusive, and is confined to an independent action to recover such usurious payments. (*Haseltine vs. Central Nat. Bank*, 183 U. S. 132, and cases cited.)

If, on the other hand, the controversy is governed by the local law of Nebraska, then the construction and application of that law made by the court of last resort of the State is binding.

In fact, this is not controverted and could not be since the Supreme Court of Nebraska conceded that if the contention as to usurious interest ought to be determined by the laws of the United States, the conclusion which the court reached was erroneous. That court, however, held that the rights of the parties were to be measured by the law of the State instead of the law of the United States, because the collateral mortgage was not made, *eo nomine*, to the bank, but to an individual. This view was deemed to be fortified by the suggestion that, as the collateral note was secured by mortgage on real estate, it could not, under the laws of the United States, have been lawfully made in favor of a National bank. The collateral note and mortgage, it was, therefore, intimated, must be assumed to have been executed to an individual to avoid the effect of the laws of the United States, and the consequent knowledge which would have been conveyed to the proper officers of the United States that the bank was violating the law.

The reasoning by which the judgment of the Supreme Court of Nebraska was controlled is, in our opinion, erroneous. The court did not hold that, because the collateral mortgage was taken in the name of an individual, it could not be enforced by the bank under the law of Nebraska, but simply held that, although it was enforceable by the bank, the remedy as to the usurious interest was governed exclusively by the State law, upon the theory that the transaction was not with the bank. But the usurious interest had all been paid, not to the individual upon the collateral note, but to the bank, upon the principal obligation held by it. It was this interest so paid to the bank on the principal note held by it which was in effect imputed so as to fix the amount due. The result of this was to treat the transaction as an individual one in order thereby to exclude the law of the United States, and then at once to treat it as a bank transaction for the purpose of ascertaining and imputing the sums of usurious interest which had been paid. This was to administer the rights of the parties upon distinct and wholly inconsistent theories. Either it was an individual transaction or it was not. It could not in reason have been at one and the same time both the transaction of the bank excluding the individual and a dealing between individuals excluding the

bank. As the usurious interest for which a remedy was afforded had been paid to the bank in dealings by the bank with its debtor, and as the necessary effect of the judgment below was to reduce the debt due to the bank by allowing the imputation of the sum of the usurious interest, we are of opinion that the controversy was governed by the laws of the United States, and not by the law of the State of Nebraska.

Nor do we think the suggestions made in the opinion of the court below respecting the power of a National bank under the laws of the United States to accept real estate security operate in any way to modify the conclusion we have just expressed. It is not contended that under the law of Nebraska an agent, acting in his own name, may not take security for the benefit of a principal, or that there is or could be any valid statute of the State of Nebraska discriminating against National banks, and depriving them of the benefit of transactions so consummated. This being true it follows that the taking of real estate security by the President of the bank in his individual name, for the benefit of the bank, was in legal effect but the taking of security by the bank itself.

Now, it is no longer open to controversy that the provisions of the statutes of the United States forbidding the taking of real estate security by a National bank for debt coincidentally contracted do not operate to make the security void, and thus enable the individual who has contracted with the bank to defeat recovery, but simply subjects the bank to be called to account by the Government for exceeding its powers.

In *Logan County Nat. Bank vs. Townsend*, 139 U. S. 67, the rule on this subject, as settled by the previous authorities, was thus stated by the court, speaking through Mr. Justice Harlan :

"In *Union Nat. Bank vs. Matthews*, 98 U. S. 621, it appeared that a National bank loaned money upon the security of a note and a deed of trust of lands, both of which were assigned to it. The statute declared that a National banking association could loan money 'on personal security,' and could purchase, hold, and convey real estate for certain named purposes, 'and for no others,' among which was not included the securing of a present loan of money by a deed of trust or mortgage on real property. The court while assuming that the statute, by clear implication forbade the bank from making a loan on real estate, refused to restrain the bank from enforcing the deed of trust. The decision went upon these grounds: That the bank parted with its money in good faith; that the question as to the violation of its charter by taking title to real estate for purposes unauthorized by law could be raised only by the Government in a direct proceeding for that purpose; and that it was not open to the plaintiff in that suit, who had contracted with the bank, to raise any such question in order to defeat the collection of the amount loaned. If any doubt existed as to the scope of the decision in that case it was removed by (*National Bank vs. Whitney*, 103 U. S. 99) where it was held that the right of a National bank to enforce a mortgage of real estate taken by it to secure indebtedness then existing, as well as future advances, could not be questioned by the debtor, and that a disregard by the bank of the provisions of the act of Congress upon that subject only laid the association open to proceedings by the Government for exercising powers not conferred by law."

It follows from the foregoing reasons that the Supreme Court of Nebraska

erroneously determined the rights of the parties by the rule of the State law, when it should have applied the law of the United States.

The judgment of the Supreme Court of Nebraska is reversed, and the cause is remanded for further proceedings not inconsistent with this opinion.

Mr. Justice Brown and Justice Brewer dissented.

COMMERCIAL PAPER TAKEN AS COLLATERAL SECURITY FOR ANTECEDENT DEBT.

Supreme Court of Kansas, January 9, 1904.

BIRKET vs. ELWARD.

An indorsee of a negotiable note taken as collateral security for a pre-existing debt, there being no extension of time of payment or other new consideration, except such as may be deemed to arise from the acceptance of the paper, is a holder for value and in due course of business, and, in the absence of any circumstances charging him with notice, is protected against a claim of payment made to the original payee.

---

This was an action upon a promissory note, made by John H. Elward and William A. R. Elward to the order of one Gilliam. Upon the trial plaintiff testified that he acquired the note April 28, 1896, at the time of making a loan of \$2,000 to Gilliam, as collateral security for such loan.

The evidence of defendants showed that on May 25, 1896, the Elwards executed a new note and mortgage to Gilliam in consideration of the satisfaction of the old debt and an additional loan of \$500; that the old papers were surrendered to John H. Elward, who placed them in a box, which he left in the custody of Gilliam; that on June 25, 1896, a release of the first mortgage, executed and acknowledged by Gilliam, was filed for record with the register of deeds. The amount due plaintiff from Gilliam was shown to be \$814. The court instructed the jury that the only question for their determination was the date at which plaintiff acquired the note; that if he acquired it before June 25, 1896 (the date of the record of the satisfaction of the mortgage), he should recover; that otherwise the verdict should be for the defendants. The jury found specially that plaintiff acquired the note after that date, and judgment followed for the defendants.

MASON, J.: It is obvious that plaintiff could only recover on the theory that he was an innocent purchaser, and the sole question here involved, therefore, is whether one who takes commercial paper as collateral security for an existing debt, without an agreement for an extension of time or other new consideration, is ever entitled to protection as a *bona fide* holder. If so, the judgment must be reversed; otherwise it must be affirmed.

The rule in the Federal courts, as well as in those of England and Canada, is that the holder of a negotiable note taken as collateral security for a pre-existing debt is a holder for value in due course of business, and as such is protected against all latent equities of third parties. The State courts that have passed upon the question are in irreconcilable conflict. The cases are collected in 4 A. and E. Encycl. of L. (2d. Ed.) 290-293, and in 7 Cyc. 932-935. The lists there given indicate with substantial but not absolute correctness the line of cleavage. It is to be noted that in each of them Kansas is wrongly placed among the States that are committed to the rule stated, upon the strength, respectively, of the cases of *Bank vs. Dakin*, 54 Kan. 656, and

Best vs. Crall, 23 Kan. 482. While these cases have a tendency in that direction, they do not go the full length indicated.

In *Bank vs. Dakin* the note involved was transferred as collateral security for a debt created at the time of, and in reliance upon, such transfer, which was therefore supported by a new consideration, sufficient upon any theory of the law. In the opinion a number of cases are cited as supporting the proposition that even a pre-existing debt would afford a sufficient consideration for the purpose, and among them was included *Best vs. Crall*. In that case the collateral note was in fact transferred as security for a debt that already existed, but this was done pursuant to a promise made when such original debt was created, so that the effect was the same as though the transfer had actually been made at that time.

A careful examination of the cases cited in the lists referred to discloses that in the following States the rule of the Federal court has been adopted: California, Colorado, Connecticut, Georgia, Illinois, Indiana, Louisiana, Maryland, Massachusetts, Minnesota, Nevada, New Jersey, Rhode Island, South Carolina, Texas, Vermont and West Virginia. In California and Nevada the matter is affected by statutory provisions that the acceptance of the security forfeits a right to attach. Nebraska is also now committed to this doctrine. (*Lashmett vs. Prall*, 96 N. W. 152.) Such citations further show that in the following States the rule has been denied: Alabama, Arkansas, Iowa, Kentucky, Maine, Michigan, Mississippi, Missouri, New Hampshire, New York, North Dakota, Ohio, Pennsylvania, Tennessee, Virginia, Wisconsin. North Carolina also should now be placed in this list, but there, as well as in Tennessee and Virginia, the Legislature has lately changed the rule by statute. (See *Brooks vs. Sullivan* [N. C.] 39 S. E. 822; *Bank of Charleston vs. Johnson* [Tenn.] 59 S. W. 131; *Norfolk Co. vs. Cox* [Va.] 36 S. E. 380.)

In New York, in 1897, in a revision of the law of negotiable instruments, it was enacted that "value is any consideration sufficient to support a simple contract. An antecedent or pre-existing debt constitutes value." It was held in *Brewster vs. Shrader* (Sup.) 57 N. Y. Supp. 606, that this statute changed the law as formerly administered in that State, and that under it "an indorsee of a note taken as collateral to a pre-existing indebtedness is a holder for value, unaffected by equities between the original parties." But in *Sutherland vs. Mead* (Sup.) 80 N. Y. Supp. 504, this was denied, and it was said that the new statute was purely declaratory. We do not discover that the New York Court of Appeals has passed upon the effect of this legislation.

What may fairly be called the minority doctrine originated in New York in *Bay vs. Coddington*, 5 Johns. Ch. 54, the opinion being written by Chancellor Kent. The leading case in this country on the majority side is *Swift vs. Tyson*, 16 Pet. 1, the opinion being written by Justice Story. It was there declared that one who took negotiable paper in payment of or as security for a pre-existing debt was a holder for value and in due course of business, and the argument was made in support of that express proposition. But the reference to paper taken as security was not required by the facts of the case, and Justice Catron dissented on this ground.

In *Railroad Co. vs. National Bank*, 102 U. S. 14, the same reasoning was adopted and applied in a case where the transfer was made merely to secure an antecedent debt. The note there involved had several indorsers, and the obligation assumed by the last holder to give them notice of nonpayment

was treated as a part of the consideration of the transfer, but the decision did not turn upon this treatment. And in *American File Co. vs. Garrett*, 110 U. S. 288, the principle was applied where there were no prior indorsers. In the opinion in *Railroad Co. vs. National Bank* it was noted (citing 3 Kent's Commentaries, p. 81, note "b") that Chancellor Kent, after the decision in *Swift vs. Tyson*, indicated that he was inclined to concur in it, as the plainer and better doctrine. The *Bay-Coddington Case* and the *Swift-Tyson Case* are cited in almost every opinion in which the merits of the question under consideration are discussed, and the State courts have ordinarily taken sides upon the matter as the arguments of the one decision or the other have appealed to them with the greater force.

In the former case it is said: "It is the credit given to the paper, and the consideration *bona fide* paid on receiving it, that entitles the holder, on grounds of commercial policy, to such extraordinary protection, even in cases of the most palpable fraud. It is an exception to the general rule of law, and ought not to be carried beyond the necessity that created it." In the latter case it is said: "Receiving it [a negotiable instrument] in payment of or as security for a pre-existing debt is according to the known usual course of trade and business. And why, upon principle, should not a pre-existing debt be deemed such a valuable consideration? It is for the benefit and convenience of the commercial world to give as wide an extent as practicable to the credit and circulation of negotiable paper, that it may pass not only as security for new purchases and advances, made upon the transfer thereof, but also in payment of, and as security for, pre-existing debts. The creditor is thereby enabled to realize or to secure his debt, and thus may safely give a prolonged credit, or forbear from taking any legal steps to enforce his rights. The debtor also has the advantage of making his negotiable securities of equivalent value to cash. But establish the opposite conclusion, that negotiable paper cannot be applied in payment of or as security for pre-existing debts, without letting in all the equities between the original and antecedent parties, and the value and circulation of such securities must be essentially diminished, and the debtor driven to the embarrassment of making a sale thereof, often at a ruinous discount, to some third person, and then by circuitry to apply the proceeds to the payment of his debts."

Among other arguments advanced in behalf of the majority view are that the question is really one of the law merchant—the custom of merchants—and that a "transfer by a debtor to his creditor of a negotiable instrument, to pay or only to secure a prior debt, makes the creditor a holder for value, by the custom" (*Bigelow on Bills, Notes & Cheques*, 247); that the creditor, in accepting a negotiable note, whether or not there are parties to be charged by notice, does undertake to exercise some degree of diligence (2 *Randolph on Commercial Paper*, § 804), thereby affording a new consideration, or at all events that he "is naturally lulled into security and inactivity by crediting the face of the note, and he should not be made to suffer by the maker for confidence which his own promise created" (1 *Daniel on Neg. Inst.* § 831a); that the true consideration for the transfer is the debt due from the indorser to the indorsee, and the obligation to pay or secure said debt; that such transfer is a sufficient consideration, because "security for the payment of a debt actually owing is a good consideration, and sufficient to support a transfer of property" (separate opinion of Justice Bradley in *Railroad Co. vs.*

Nat. Bank, *supra*). That the policy of the law is to facilitate the transfer of negotiable paper free of equities is illustrated by the fact that it is almost universally held that one who acquires it in payment of an antecedent debt is a *bona fide* holder (*Draper vs. Cowles*, 27 Kan. 484; 4 A. & E. Encycl. of L. [2d Ed.] 285), whereas the ordinary rule in reference to protection under recording acts is that one who accepts property in satisfaction of an existing debt is not an innocent purchaser (4 A. & E. Encycl. of L. [2d Ed.] 490; *Dolan vs. Van Demark*, 35 Kan. 304; *Henderson vs. Gibbs*, 39 Kan. 680.)

Even where the New York doctrine is accepted, an exception is made against the plea of lack of consideration when made by an accommodation party to the paper transferred as security. (*Grocers' Bank vs. Penfield*, 69 N. Y. 502; *Maitland vs. Citizens' Bank*, 40 Md. 540; *Smith vs. Wachob* [Pa.] 36 Atl. 221.)

If the question were a new one, to be determined upon consideration of equitable principles, there would be strong reasons for holding that he who takes a note merely as security for an existing debt acquires no greater right than his debtor had. The reasons given in *Mann vs. National Bank*, 30 Kan. 412, for applying this rule to a bank that receives a note from a depositor, and adds the amount to his account, which is not overdrawn, would seem to apply to the case of one who receives the paper as collateral for an indebtedness already existing. He parts with nothing, and is in no worse situation than he was before. It requires no variation of usual procedure to save him from loss. But, on the other hand, the same arguments would reach the case of him who takes commercial paper in payment of an existing unsecured debt. He likewise is in no way placed in any worse situation than he was before, since, while the original debt may be regarded as technically canceled, he at all events has his remedy upon the collateral against the person from whom he received it, whatever defense might be available to the maker. He still has a valid claim against his original debtor, and that is all he had in the first place. (See *Randolph on Commercial Paper*, §§ 461-465.) Yet, as has just been said, one acquiring commercial paper under such circumstances is held to be protected as an innocent purchaser.

But the question before us is peculiarly one in which great weight should be given to the authorities, and especially to the decisions of the courts of the national government, which do not recognize any local law in such matters. (*Oates vs. National Bank*, 100 U. S. 239.) The question is one likely to arise frequently in transactions between inhabitants of different States. It is important that the law should be uniform in the different jurisdictions. It was doubtless in recognition of this consideration that the Legislatures of North Carolina, Tennessee, Virginia, and possibly New York, as already noted, have lately by statute brought their local law on the subject into harmony with the general law as administered by the Federal and by the greater number of the State courts. We prefer to hold, in accordance with the weight of authority, that an indorsee of negotiable paper taken as security for a pre-existing debt is a holder for value and in due course of business, and therefore, in the absence of any circumstances charging him with notice, is protected against a claim of payment made to the original payee.

It is to be noted that the petition in this case alleges that the note in question was indorsed by Gilliam to plaintiff. This statement was not denied

under oath, and was therefore not put in issue. The record shows that the note, with all indorsements, was offered in evidence as a part of plaintiff's deposition, but the purported copy does not show any indorsement. In the state of the pleadings, this is not material; but, of course, if the note was not actually indorsed by Gilliam, plaintiff was not in fact a *bona fide* holder.

The judgment is reversed, and the cause remanded for a new trial. All the Justices concurring.

*PROMISSORY NOTE DISCOUNTED BY BANK—WHEN BANK HOLDER IN DUE COURSE—PAYMENT OF PART OF PROCEEDS BEFORE NOTICE OF INFIRMITY.*

New York Supreme Court, Appellate Division, Third Department, March, 1904.

ALBANY COUNTY BANK vs. PEOPLE'S CO-OPERATIVE ICE COMPANY.

A bank is not the holder of a note in due course as defined by the Negotiable Instruments Law when the proceeds thereof are simply credited to the person from whom it was purchased and not paid out until the bank had notice of an infirmity in the instrument or defect in the title of the person from whom it was purchased.

A bank which purchases in due course of business a promissory note of the payee before maturity, placing the price thereof to his credit, and retains the same until after knowledge that there is an entire failure of consideration as between the maker and the payee, cannot subsequently give to the payee the proceeds of the note and retain the right to insist that it is a holder for value and protected from any defense existing between the maker and payee.

This action was brought on a promissory note of which the following is a copy:

"NEW YORK, May 20, 1902.

\$1000. Five months after date we promise to pay to the order of Edward McCabe one thousand dollars at Union Square Bank, N. Y., with interest, value received.

THE PEOPLE'S CO-OPERATIVE ICE CO.  
S. MEHRBACH, Pres't.  
S. C. BLAKE, Treas."

There was no dispute about the execution of the note and its delivery to the payee. Edward McCabe, the payee, had been a regular customer of the plaintiff for eight or ten years. He kept an account at the bank and always had a balance to his credit. On October 16, four days before the note became due, McCabe, at plaintiff's bank, presented the note to the Cashier and asked him to discount it, and the note was accepted without further conversation and McCabe's account was credited with the amount of the note less sixty-eight cents discount.

When the note became due it was duly presented for payment at the Union Square Bank, N. Y., and payment demanded, which was refused, whereupon the note was duly protested for non-payment. On November 17 McCabe again called at the bank and produced another note exactly the same in every respect as the one previously discounted, except that it was payable six months after its date instead of five months after its date, and asked the Cashier to discount it, and such note was accepted without further conversation, and McCabe's account was credited with the amount less fifty-two cents discount.

On October 16, at the time the note was first discounted, McCabe had to his credit with the plaintiff \$1,580.14. The amount placed to his credit on discounting said note was \$1,024.32, making the amount to his credit with the plaintiff on that day \$2,604.46. That amount remained without further

deposits and without any checks being paid therefrom until the day the second note was discounted. When the second note was discounted the amount placed to the credit of McCabe as the proceeds of such note was \$1,029.48. On that day, whether before or after the credit of the second note does not appear, one check of \$15 was paid by plaintiff. McCabe then had a balance of \$3,618.94 to his credit. On October 29, 1902, the plaintiff sued the defendant-appellant and said McCabe on said first note.

The complaint alleged the making and delivery of the note, its presentation for payment, and that payment was refused. McCabe did not answer or appear in the action, but the defendant-appellant appeared in the action November 13, and served its answer December 11, 1902, and the answer of defendant-appellant admits the making and delivery of said note, and denies the other allegations of the complaint, and as a separate and distinct defense alleges in detail the making of an agreement in writing between the defendant-appellant and said Edward McCabe, and the giving by said defendant-appellant to said McCabe of seven notes of like date and form, payable one each month, commencing August 20, 1902, and ending February 20, 1903, and it further alleged with some detail the facts by which it claims that the consideration for the giving of said notes wholly failed. The note in suit is one of the seven notes so given. The deposit to the credit of McCabe in the plaintiff's bank of \$3,618.94 remained therein without change on November 21, 1902. On December 30, 1902, McCabe had a balance to his credit with the plaintiff of \$4,403.93. At the time of the trial McCabe did not have any money on deposit with the plaintiff, but when the same was drawn from the bank does not appear, and it does not appear whether McCabe drew any money from his account with the plaintiff between November 21, 1902, and December 30, 1902. At the time the note was discounted McCabe was not in any way indebted to the bank.

On the trial, it was conceded by defendant that it had no further testimony that it desired to produce relating to plaintiff's knowledge of the maker's defense to the note. At the time plaintiff discounted the note, the court refused to allow the defendant to produce testimony relating to its defense, and directed the jury to find a verdict in favor of the plaintiff for the amount of the note, with interest, and a verdict was found accordingly.

CHASE, J.: The question is presented by this appeal whether a bank which purchases in due course of business a promissory note of the payee therein named before maturity and places the purchase price thereof to the credit of such payee and retains the same until after knowledge that there is an entire failure of consideration for the note as between the maker and the payee thereof, can subsequently give to the payee the proceeds of the note and retain the right to insist that it is a holder for value and protected from any defense existing between said maker and payee.

The question is here free from any complication that may arise where such payee's account is an active one and the balance is materially changing from day to day. The evidence is undisputed that the proceeds of the note were deposited to the payee's account, and such proceeds of the note (excepting, perhaps, \$15 thereof), and also a much larger amount remained on deposit with the plaintiff, not only until the note was dishonored, but until long after the plaintiff brought this action, and, so far as appears, until long after defendant's answer was served.

The Negotiable Instruments Law (chapter 612, Laws of 1897) provides:

“Section 96. A holder in due course holds the instrument free from any defect of title of prior parties and free from defenses available to prior parties among themselves, and may enforce payment of the instrument for the full amount thereof against all parties liable thereon.

Section 91. A holder in due course is a holder who has taken the instrument under the following conditions:

1. That it is complete and regular upon its face.
2. That he became the holder of it before it was overdue and without notice that it had been previously dishonored, if such was the fact.
3. That he took it in good faith and for value.
4. That at the time it was negotiated to him he had no notice of any infirmity in the instrument or defect in the title of the person negotiating it.

Section 51. Value is any consideration sufficient to support a simple contract.

Section 93. Where the transferee receives notice of any infirmity in the instrument or defect in the title of the person negotiating the same before he has paid the full amount agreed to be paid therefor, he will be deemed a holder in due course only to the extent of the amount theretofore paid by him.”

A deposit by a bank of the proceeds of a note to the account of a customer is not of itself payment for the note. It is simply a promise by the bank to pay such proceeds to the customer by honoring his checks or drafts in the ordinary way pursued by banking institutions. The bank does not by such transaction transfer the title to any particular money to its customer. The bank becomes a debtor to the customer to the amount of such credit.

It is said by the Supreme Court of the United States in the New York County National Bank vs. Massey (U. S. N. Y. Law Journal, January 14, 1904):

“It cannot be denied that, except under special circumstances, or where there is a statute to the contrary, a deposit of money upon general account with a bank creates the relation of debtor and creditor. The money deposited becomes a part of the general fund of the bank, to be dealt with by it as other moneys, to be lent to customers and parted with at the will of the bank, and the right of the depositor is to have this debt repaid in whole or in part by honoring checks drawn against the deposit. It creates an ordinary debt, not a privilege or right of fiduciary character (Bank of the Republic vs. Millard, 10 Wall. 152).” Or, as is defined by Mr. Justice White in the case of Davis vs. Elmira Savings Bank (161 U. S. 288): “The deposit of money by a customer with his banker is one of loan, with the superadded obligation that the money is to be paid, when demanded by a check” (Stanley vs. Kimball's Assignee, 92 U. S. 369).

The Court of Appeals, in *Ætna National Bank vs. Fourth National Bank* (46 N. Y. 82), say: “The relation of banker and customer in respect to deposits is that of debtor and creditor. When deposits are received they belong to the bank as part of its general funds, and the banker becomes the debtor to the depositor and agrees to discharge the indebtedness by paying the checks of the depositor, his creditor. The contract between the parties is purely legal, and has no element of a trust in it.”

The rights of parties where a note has been discounted by a bank and the

proceeds credited on the books of the bank to the person from whom it was purchased have been repeatedly stated by text writers and by the court, from some of whom we quote as follows: Daniel on Negotiable Instruments, 5th ed., at section 779 b, says: "The apparent purchase must have been a purchase in fact, and not a mere bookkeeping entry. Mere discount and credit do not, of themselves, constitute a *bona fide* purchaser for value. To occupy that position the holder must actually have parted with something of value for the note. Thus, where a bank discounted a note for a company and credited it with the amount, the credit, on account of other deposits, subsequently increasing so that at the time of suit on the note the bank had actually paid nothing for it, it was held not a purchaser for value, and that its remedy was to tender the note back to the company, and cancel the credit."

In Eaton and Gilbert on Commercial Paper (p. 306) it is said: "A bank by merely discounting a bill or note and placing the proceeds to the credit of the payee does not become a holder for value, but when the bank on the strength of such credit has relinquished securities in its possession or made advances to, or paid the checks of, the payee, it becomes a holder for value."

In Cyclopaedia of Law and Procedure (vol. 7, 929) it is said: "While the authorities are not entirely uniform upon the subject, it is fairly well settled that a bank, by discounting negotiable paper, placing the same to the credit of the depositor, and honoring his checks or drafts, surrendering to him securities, or in some other manner making advances and extending its credit on the faith of such deposit, thereby becomes a holder for value. But the mere discounting and crediting of the amount on the depositor's account without making payment or incurring any increased obligation or liabilities is not sufficient."

In American and English Ency. of Law (vol. 4, 208) it is said: "Where a bank discounts paper for a depositor who is not in its debt and gives him credit upon its book for the proceeds of such paper, it is not a *bona fide* holder for value, so as to be protected against infirmities in the paper, unless in addition to the mere fact of crediting the depositor with the proceeds of the paper some other and valuable consideration passes. Such transaction simply creates the relation of debtor and creditor between the bank and the depositor; and so long as that relation continues and the deposit is not drawn out the bank is held subject to the equities of prior parties even though the paper has been taken before maturity and without notice."

In Thompson vs. Sioux Falls National Bank (150 U. S. 23) it is said: "The mere credit of a check upon the books of a bank which may be canceled at any time does not make the bank a *bona fide* purchaser for value. If after such credit and before payment for value upon the faith thereof the holder received notice of the invalidity of the check he cannot become a *bona fide* holder by subsequent payment."

In Central National Bank vs. Valentine (18 Hun, 419) the court say: "The plaintiff by its President discounted the notes and gave the makers credit on the books of the bank for the amount, no money was actually paid, or thing of value parted with by the plaintiff, upon the strength of the indorsement or the discount. Under such circumstances the plaintiff cannot be regarded the *bona fide* holder of said notes for value as we understand the law as settled by the adjudications upon that question. The mere giving of credit by entering the amount on the books, and not actually parting with a dollar

upon the strength of the indorsement, cannot be regarded parting with value in the sense which the law contemplates. The parties in whose favor the credit was given might never draw or appropriate any portion of the funds."

In *Dykman vs. Northbridge* (80 Hun, 258) the court cited *Central National Bank vs. Valentine* (supra), and, referring to the facts in the case before it, said: "The bank could not become a holder for value of the note by crediting its amount to the Cashier. Unless he received the money as an individual and not as Cashier the bank parted with nothing as a consideration for the note."

In *the Sixth National Bank of New York vs. Lorillard Brick Works Co.* (46 N. Y. St. Report, 235) the court, referring to a note that had been discounted and the proceeds credited to the payee on the books of the bank, say: "The plaintiff must have actually paid out and parted with the proceeds of the discount before it could acquire an indisputable title thereto."

In *Clarke National Bank vs. Bank of Albion* (52 Barb. 592) the court, referring to a check purchased by plaintiff of Ward & Bro., say: "The credit of the avails of the check to Ward & Bro. on the books of the bank was in no sense a paying over. The sum agreed upon as the price of the check was not by that act parted with and placed beyond the control of the plaintiff. \* \* \* The plaintiff upon receiving notice of dishonor had an undoubted right to erase the credit as it did, and restore it only at the special instance of Ward & Bro. No argument can prove that the bank had prior to notice of dishonor parted with value for this check."

From the authorities quoted it will be seen that a bank is not a holder of a note in due course, as defined by the Negotiable Instruments Law, when the proceeds of the note are simply credited to the person from whom it was purchased, and not paid out until the bank had notice of an infirmity in the instrument or defect in the title of the person from whom the note was purchased. Section 93 of the Negotiable Instruments Law seems to be declaratory of the law as uniformly stated in the decisions of this and other States. If it is conceded that the plaintiff had notice of an infirmity in the instrument in suit, or of defect in the title of McCabe thereto, before it paid out the full amount agreed to be paid therefor, the defendant-appellant was entitled to give evidence of its defense by the express terms of the statute.

The effect of notice of dishonor of a note is stated in *Daniel on Negotiable Instruments* (5th ed., sec. 782), as follows: "If it were not paid at maturity it is then considered as dishonored; and, although still transferable in like manner and form as before, yet the fact of its dishonor, which is apparent from its face, is equivalent to notice to the holder that he takes it subject to its infirmities, and can acquire no better title than his transferer. The doctrine applicable to this subject has been admirably stated by Chief Justice Shaw, who says: 'Where a negotiable note is found in circulation after it is due it carries suspicion on the face of it. The question instantly arises, why is it in circulation? Why is it not paid? Here is something wrong. Therefore, although it does not give the indorsee notice of any specific matter of defense, such as set-off, payment, or fraudulent accusation, yet it puts him on inquiry; he takes only such title as the indorser himself has, and subject to any defense which might be made if the suit were brought by the indorser.'"

Whether notice of dishonor of a note is alone sufficient in all cases to con-

stitute notice of an infirmity in the instrument, or defect in title of the person negotiating the same, is not necessary now to determine. The facts before the court when it refused to allow the defendant-appellant to produce evidence relating to its defense were such that the evidence should have been received.

The judgment should be reversed and a new trial granted, with costs to the appellant to abide the event.

All concur.

---

*NATIONAL BANKS—ASSESSMENT TO RESTORE IMPAIRED CAPITAL—BY WHOM TO BE MADE.*

Supreme Court of the United States, January 18, 1904.

COMMERCIAL NATIONAL BANK OF PORTLAND vs. WEINHARD.  
COMMERCIAL NATIONAL BANK OF PORTLAND vs. WILLIAMS.

The directors of a National bank have no power to levy an assessment upon the stock for the purpose of restoring impaired capital, but such assessment must be made by the stockholders.

---

In error to the Supreme Court of Oregon.

These actions were brought by Henry Weinhard and George H. Williams against the Commercial National Bank, of Portland, Oregon, to recover the value of certain shares of the stock of such bank owned by them and sold by the bank for failure of the holders to pay an assessment thereon.

The capital stock of the bank having become impaired, the Comptroller of the Currency directed that an assessment of \$250,000 be made upon the stock, or that the bank go into liquidation. After the receipt of this notice the directors of the bank made an assessment of \$50 per share, and notice thereof was served upon the stockholders. Weinhard and Williams failed to pay the assessment of the stock owned by them, and it was sold for the amount of the assessment. Their contention, which was sustained by the State courts, was that the directors in thus assessing and selling the stock exceeded their powers.

Mr. Justice DAY delivered the opinion of the court:

This case requires the construction of § 5205 of the Revised Statutes of the United States as amended (U. S. Comp. Stat. 1901, p. 3495). The section is as follows:

“Every association which shall have failed to pay up its capital stock, as required by law, and every association whose capital stock shall have become impaired by losses or otherwise, shall within three months after receiving notice thereof from the Comptroller of the Currency, pay the deficiency in the capital stock, by assessment upon the shareholders *pro rata* for the amount of capital stock held by each; and the Treasurer of the United States shall withhold the interest upon all bonds held by him in trust for any such association, upon notification from the Comptroller of the Currency, until otherwise notified by him. If any such association shall fail to pay up its capital stock, and shall refuse to go into liquidation, as provided by law, for three months after receiving notice from the Comptroller, a Receiver may be appointed to close up the business of the association, according to the provisions of section fifty-two hundred and thirty-four (U. S. Comp. Stat. 1901, p. 3507). [And provided, That if any shareholder or shareholders of such bank shall neglect or refuse, after three months' notice, to pay the assessment, as

provided in this section, it shall be the duty of the board of directors to cause a sufficient amount of the capital stock of such shareholder or shareholders to be sold at public auction (after thirty days' notice shall be given by posting such notice of sale in the office of the bank, and by publishing such notice in a newspaper of the city or town in which the bank is located, or in a newspaper published nearest thereto) to make good the deficiency, and the balance, if any, shall be returned to such delinquent shareholder or shareholders.]”

The assessment in this case was made by the board of directors without any action of the stockholders of the association, and the defendants in error having failed to pay the same upon notice, their stock was sold as directed in the statute. It is claimed that an assessment by the directors without action of the stockholders was without authority of law, and amounted to a conversion of the stock. This view was sustained in the Supreme Court of Oregon. The assessment ordered by the Comptroller was for the purpose of restoring the capital of the bank and thus enabling it to continue its business. Ample power is conferred upon the Comptroller for this purpose. His action is in aid of other sections of the law preventing a withdrawal of the capital, or the making of dividends when losses have been sustained equal to the undivided profits. (Sections 5202-5204, Rev. Stat. U. S. Comp. Stat. 1901, pp. 3494-3495.) When the notice is received from the Comptroller by the bank under § 5205, the association has no authority to review or gainsay the necessity thereof. That question is concluded by the action of the Comptroller. The money to be raised for the continuance of the business may or may not be used in the liquidation of debts. The assessment is entirely different from that provided for in § 5151 (U. S. Comp. Stat. 1901, p. 3465) calling upon the individual responsibility of shareholders for the payment of debts. Under the last-named section the stockholder is required to pay such assessments as may be made, to meet the outstanding obligations of the bank, within the limit of an amount equal to the par value of the stock in addition to the amount invested therein. He has no election of payment, but is required to meet this liability, created by law for the benefit of creditors. Under § 5205 the amount paid is subject to the control of the board of directors in the continued operations of the bank. If the stockholders are to have a voice in making or declining to make the assessment, they may well hesitate to intrust more capital to the control of a board under whose management it has already been impaired. Certain powers are conferred by law upon the directors.

Section 5136 (U. S. Comp. Stat. 1901, p. 3455) provides that the association shall have power—

“Sixth. To prescribe, by its board of directors, by-laws not inconsistent with law, regulating the manner in which its stock shall be transferred, its directors elected or appointed, its officers appointed, its property transferred, its general business conducted, and the privileges granted to it by law exercised and enjoyed.

Seventh. To exercise, by its board of directors, or duly authorized officers or agents, subject to law, all such incidental powers as shall be necessary to carry on the business of banking; by discounting and negotiating promissory notes, drafts, bills of exchange, and other evidences of debt; by receiving deposits; by buying and selling exchange, coin and bullion; by

loaning money on personal security; and by obtaining, issuing, and circulating notes according to the provisions of this title."

And, again, by § 5145 (U. S. Comp. Stat. 1901, p. 3463) it is declared that the "affairs" of the corporation "shall be managed by not less than five directors."

Thus the directors are given authority to transact the usual and ordinary business of National banks. Obviously, the power conferred may be exercised in all usual transactions through the executive officers of the bank, without consultation with the stockholders. In the present case the question to be dealt with is vital to the continuance of the life of the association, as only by complying with the requirement of the Comptroller in assessing a sum sufficient to make up the impaired capital of the bank can its business be continued. The shareholders, by their contracts of subscription, have agreed to pay in the amount of capital stock subscribed, and to discharge the additional liability imposed by the statute. They have not contracted to meet assessments at the will of the directors to perpetuate the business of a possibly losing concern. It would be going far beyond the usual powers conferred upon directors to permit them to thus control the corporation. Corporate powers conferred upon a board of directors usually refer to the ordinary business transactions of the corporation. (*Chicago City R. Co. vs. Allerton*, 18 Wall. 233, 21 L. ed. 902.) The assessment is required by the Comptroller, not by the directors. The association is to receive notice thereof, and action must be taken by the association to meet the requirements of the Comptroller under the statute. It is provided that if the association fail to pay up its capital stock, and refuse to go into liquidation, as provided by law, for three months after receiving notice from the Comptroller, a Receiver may be appointed to close up the business of the association according to the provisions of § 5234. This important provision is entitled to much weight in determining the proper construction of the statute. The assessment may be avoided, and the amount required is not payable, if the association decides to go into liquidation. Provision for voluntary liquidation is made in § 5220 (U. S. Comp. Stat. 1901, p. 3503), wherein authority is given to liquidate upon a vote of shareholders owning two-thirds of the stock. Such liquidation does not prevent the assessment of stockholders under § 5151 for the benefit of creditors, and the enforcement of the liability of the shareholders in an action by a Receiver or directly by the creditors. (Rev. Stat. § 5234, U. S. Comp. Stat. 1901, p. 3507; § 2, act of June 30, 1876, 19 Stat. at L. 63, chap. 156), as amended, U. S. Comp. Stat. 1901, p. 3509.) The section referred to (5234) directs the appointment of a Receiver to take possession of the books, records, and assets of the association, to collect the debts and claims belonging to it, and among other things, if necessary, to pay the debts of the association, to enforce the individual liability of the shareholders.

We are of opinion that § 5205 is intended to and does confer upon the association the privilege of declining to make the assessment to make good the deficiency to the capital, and to elect instead to wind up the business of the bank under § 5220, which provides for voluntary liquidation by a vote of two-thirds of the shareholders. The question is, Who shall exercise this privilege, and determine the future of the association,—is it the directors or the shareholders who have this right of decision? The origin and continua-

tion of the association would seem to be matters in which the owners, and not the managers, of the bank are primarily interested. If these are privileges of the shareholders, and only exercisable by them, this case presents a total lack of the exertion of the power by those upon whom it is legally conferred, as no action of the shareholders was had in the present case in making the assessment. Action upon the Comptroller's order involves extraordinary action of the association, and determines its future operations or liquidation, and is not found within the powers conferred upon the directors for the management of the business of the bank. If this were not so, then the decision of a question of such vital importance is left to the directors, who may or may not be large holders of stock. As it is a matter foreign to the powers of such boards, and not conferred by statute or required for the transaction of the business of the bank, we think it was intended to be vested in the shareholders. Whether a given power is to be exercised by the directors or the shareholders depends upon its nature and the terms of the enabling act. In certain instances the law specifically requires the action of the association to be taken by its incorporators or shareholders. (Sections 5133, 5134, 5136, 5143, Rev. Stat. U. S. Comp. Stat. 1901, pp. 3454, 3455, 3463.) These sections regulate matters not pertaining to the ordinary business of the bank intrusted to the directors. They deal with the exercise of those powers which concern the organization of the corporation, the amount of its capital stock, and kindred matters.

In § 5205 the requirement of the Comptroller is that the association make the assessment. It is the "association" which is required to pay up the stock or go into liquidation. The payment of the assessments must come from the shareholders, and we are of the opinion that the statute contemplates action upon the alternatives presented in the statute by the association composed of its shareholders.

It is true, as suggested by the learned counsel for the plaintiff in error, that it requires a two-thirds vote of the stockholders to put the bank into liquidation under § 5220; but if the assessment is not carried, and the shareholders have not a two-thirds vote favoring liquidation, the bank is put in liquidation, and the shareholders' liability is the statutory one for the benefit of creditors, and not a venture of more capital in the enterprise, with a possible stockholders' liability upon the liquidation of the bank if it shall ultimately fail. Again, if the determination of this matter is entirely left to the directors, they may, by declining to make the assessment, force a liquidation of the bank, although the shareholders—the real owners of the property—be willing to make good the impaired capital, and continue the business.

On the other hand, if the the directors may assess to make good impaired capital, the shareholder must pay the assessment or submit to the sale of his stock. Such extraordinary powers are far beyond those required in the management of the bank's affairs or conferred in the sections of the law defining those conferred upon the directors. In *Delano vs. Butler*, 118 U. S. 634, 653, 30 L. ed. 260, 265, 7 Sup. Ct. Rep. 39, 46, while the question was not directly involved, in speaking of assessments under the act, Mr. Justice Matthews, delivering the opinion of the court, said:

"The assessment imposed upon the stockholders by their own vote, for the purpose of restoring their lost capital, as a consideration for the privilege of continuing business, and to avoid liquidation under § 5205 of the Revised

Statutes, is not the assessment contemplated by § 5151, by which the shareholders of every National banking association may be compelled to discharge their individual responsibility for the contracts, debts, and engagements of the association. The assessment as made under § 5205 is voluntary, made by the stockholders themselves, paid into the general funds of the bank as a further investment in the capital stock, and disposed of by its officers in the ordinary course of its business. It may or may not be applied by them to the payment of creditors, and, in the ordinary course of business, certainly would not be applied, as in cases of liquidation, to the payment of creditors ratably; whereas, under § 5151, the individual liability does not arise, except in case of liquidation, and for the purpose of winding up the affairs of the bank. The assessment under that section is made by authority of the Comptroller of the Currency, is not voluntary, and can be applied only to the satisfaction of the creditors equally and ratably."

We concur in this reasoning. The assessment under § 5205 provides for a sum to continue the operations of the bank, and if unpaid subjects the stock of the shareholders to sale to make good the deficiency in its collection. Shareholders are given the right to go into liquidation, subjecting themselves, if it is true, to the liability of the assessment for the benefit of creditors under § 5151 to an amount equal to the par value of their stock, if needed to make good the indebtedness of the bank, but risking no further investment of new capital in the continued business of the bank. The choice of methods is with the shareholders, and to them is addressed the decision of the question and the making of the assessment if that course is determined upon. (*Hulitt vs. Bell*, 85 Fed. 98.) In the present case the assessment was made by the directors without action by the shareholders, and, not being within the statute, was void. It follows that the Supreme Court of Oregon properly affirmed the judgment of the lower court in which the value of the stock sold was recovered.

Judgment affirmed.

---

*CERTIFICATION—EFFECTS OF.*

Supreme Court of Pennsylvania, July 9, 1903.

CENTRAL GUARANTEE TRUST AND SAFE DEPOSIT CO. vs. WHITE.

When a check is certified, it becomes an obligation of the bank to the payee or holder, and the amount is withdrawn from the depositor's account as effectually as if paid over to him.

---

This was an action by the Central Guarantee Trust and Safe Deposit Company against William S. White and another, administrators of William White, deceased, to recover on a check alleged to have been drawn by the deceased for the sum of \$1,500 in favor of the son, shortly before the death of the father. The defense was that the check had been obtained by fraud and imposition, the drawer being mentally incompetent.

MITCHELL, *J.* (omitting part of the opinion): A check by a depositor on his account, certified by the bank, becomes an obligation of the bank to the payee or holder, and in the absence of fraud or similar exceptionable circumstances the amount is as much withdrawn from the depositor's account as if the money had been paid over the counter. The check in controversy was certified in the regular course of business during the lifetime of the drawer. All questions of consideration, etc., raised by the appellants are irrelevant.

## NOTES OF CANADIAN CASES AFFECTING BANKERS.

[Edited by John Jennings, B. A., LL. B., Barrister, Toronto.]

*PROMISSORY NOTE—ENDORSEMENT—EVIDENCE TO VARY WRITTEN CONTRACT—BILLS OF EXCHANGE ACT, SEC. 55, SUB. SEC. 2.*

EMMERSON vs. ERWIN (British Columbia Law Reports, Vol. 10, p. 101).

**STATEMENT OF FACTS:** This was an action to recover the amount of a promissory note made by the Great Northwest Canning Company payable to the defendant Erwin. Erwin and the other defendant endorsed the promissory note and delivered it to the plaintiff, by whom it was accepted as part payment for a piano. In the action Erwin pleaded and endeavored to show by evidence that at the time the note was given to the plaintiff the latter had agreed that Erwin should not be liable on the note. It was objected that evidence of this nature could not be given to vary a written contract, and that a promissory note was a written contract within the meaning of this rule.

**JUDGMENT (DRAKE, J.):** Parol evidence will not be received to show that a person who endorses a promissory note for another for valuable consideration stipulated at the time that he was not to be liable by reason of such endorsement. While sub. sec. 2 of sec. 61 of the Bills of Exchange Act provides that the rights of a holder of a promissory note may be renounced as against any party to it, such renunciation must be in writing.

*PROMISSORY NOTE—ILLEGAL CONSIDERATION—CONTRACT IN RESTRAINT OF MARRIAGE—INSANITY.*

CROWDER vs. SULLIVAN (Ontario Law Reports, Vol. 8, p. 708).

**STATEMENT OF FACTS:** This was an action brought on a promissory note for \$1,500, made in September, 1900, by Albert Rose, payable three years after date to the plaintiff with interest at five per cent. The plaintiff is an unmarried woman who for some years prior to the date of the note had been living in the service of Rose, now deceased, as his cook and housekeeper. In 1893 a farmer named Levere, who lived in the neighborhood, became engaged to be married to the plaintiff. Rose endeavored to induce her to break off the engagement and remain in his service, and promised her a note for \$1,500 if she would do so. This agreement was come to and the note sued on was given. A few months after giving the note Rose became suddenly insane and died shortly afterwards.

The defences were:

1. That there was no consideration for the note.
2. That if there was any consideration it was illegal.

**JUDGMENT (STREET, J.):** It appears, therefore, that the only consideration for the giving of the note was the agreement made in 1897. Put shortly, that agreement was that if she, the plaintiff, would not marry Levere or any other man so long as the deceased lived, but would remain with him during his life, he would do one or other of the three things above mentioned; and the plaintiff claims that having kept her promise, there was a good consideration for the note. It is plain that this is not a matter of mere wages, but a bonus to

the plaintiff for abandoning her prospect of marrying during the life of the deceased, and instead remaining in the service of the deceased.

The deceased at the time of the promise was about sixty years of age and apparently in excellent health. The plaintiff at the time was a young woman of the age, I think, of twenty-eight or thirty.

I think this was a contract in restraint of marriage for an unreasonable period, and that the consideration for the note was therefore an illegal one, and that no recovery can be had upon it.

Upon this ground, however, the action must be dismissed with costs, except those of the issue found in the plaintiff's favor; those costs are to be set off by the defendant.

*CHOSE IN ACTION—ASSIGNMENT OF MONEY PAYABLE "IN RESPECT OF THE CONTRACT"—DAMAGES FOR INTERFERENCE WITH THE WORK—ATTACHMENT OF DEBTS.*

GRAHAM vs. BOURQUE (Six Ontario Law Reports, page 700).

**STATEMENT OF FACTS:** The facts of this case were stated in the report given at page 361 of Vol. 68 of THE BANKERS' MAGAZINE. A further appeal was taken on behalf of Graham, the judgment creditor, to the divisional court against the decision which had previously been given in favor of the Bank of Ottawa. Judgment of the divisional court was delivered by McMahan, J.

**JUDGMENT:** It was contended by counsel for the appellant that an assignment of "all and every sum or sums of money \* \* \* to become due and payable \* \* \* in respect of a certain contract \* \* \* for the construction of section 3 of the main drain in the city of Ottawa" would not include the damages awarded to the plaintiff against the city of Ottawa, as these damages must be regarded as something dehors the contract, and therefore not included in the assignment.

This case, in some of its features, is not unlike that of *Bush vs. Trustees of Whitehaven* (1888) only reported in 52 J. P. 392 and *Hudson on Building Contracts*, 2nd ed., vol. 2, p. 121, and is governed by the principles enunciated in that case.

In that case *Bush* contracted with the defendants on June 23 to lay a certain conduit pipe, and the defendants agreed to be ready at all times to give *Bush* possession of the sites to enable him to proceed with the construction of the works. The plaintiff began work on July 12, but the whole of the land was not available until October 6. In consequence of this delay, the work was thrown into the winter months, and the contractor was put to heavy extra expense, for which he sued the defendants.

The conditions upon which the works were performed and binding on the contractor were very stringent, section eleven providing, inter alia, that "the non-delivery in the manner aforesaid of the use of any such site, or any part thereof, shall not vitiate or affect the contract, nor any provision therein or in this specification contained, nor entitle the contractor to any increased allowance in respect of money, time, or otherwise, unless the engineer may grant him any extension of time, and then only to that extent under the provisions for that purpose hereinafter contained."

Section 22: "The contractor shall complete and deliver up to the trustees

the whole of the works within a period of, etc. \* \* \* Provided always, that if by reason of the non-possession of the site required for the purposes of the work, or by reason of any additions to the work (which additions the engineer is hereby authorized to make), or in consequence of strikes or other unavoidable circumstances, the contractor shall, in the opinion of the engineer, have been unduly delayed, it shall be lawful for the engineer, if he shall so think fit, to extend the time, without thereby prejudicing or any way affecting the validity of the contract or the sufficiency of the tender, or the adequacy of the sums or prices therein mentioned."

The case was tried before Cave, J., and a special jury. The learned trial judge submitted a number of questions to the jury, the fifth of which was: "Were the conditions of the contract so completely changed, in consequence of the defendants' inability to hand over the sites of the work as required, as to make the special provisions of the contract inapplicable?" The answer was "yes" (Hudson, p. 122). The damages suffered by reason of the inability of the defendants to hand over the sites required for the purposes of the work were £600 over and above the contract price (Hudson, p. 122); and judgment was entered for the plaintiff for £893, the aggregate amount that was found to be due from the defendants (52 J. P., p. 394).

Notwithstanding the rigorous conditions contained in the eleventh and twenty-second clause of the contract, which showed that the parties had in their minds the contingency of delay, it was held that a summer contract having by implication been in the contemplation of the parties when the contract was made, Bush was entitled to a *quantum meruit*, or damages in respect of the increased expenditure which he was thereby compelled to incur.

Lord Chief Justice Coleridge in his judgment at pp. 126-127 of the report in Hudson, said: "It was therefore, in the first place, a contract to be completed within four months from July 12, what may be called, in the popular language which has been used, both from the bench and at the bar, a 'summer contract.' It was turned into a winter contract—into a contract when wages were different, probably, or may have been—when days were short instead of long; when weather was bad instead of good; when rivers which had to be dealt with, and had to be crossed by the pipes, were full or empty; and when, in fact, I will not say every circumstance, but a great many most important circumstances, under which the contract was to be executed, had wholly changed from those which it is reasonable to suppose were in the contemplation of both parties when the contract was entered into. The contract, nevertheless, was carried on and was completed. It was carried on and was completed of course with the knowledge of the contractor, and equally, of course, with the knowledge of the defendants. The defendants knew as well as the contractor that the work was being carried on under totally different circumstances to those contemplated in the contract. They knew that perfectly well, and although the plaintiff possibly or probably might at the expiration of the four months have thrown the contract up and refused to proceed, he had also a perfect right, if he had thought fit, with the knowledge and assent of the defendants, which in this case is to be presumed, and, indeed, was proved, to go on with the contract and to complete it under the altered conditions, or I will not say to complete the contract, but to complete the work under the totally altered conditions that had arisen."

The case was carried to the Court of Appeal, and Lord Esher, M. R., in his judgment, p. 128, said : " Now the answer to the fifth question (if you take it to be a binding finding of the jury), in my opinion comes to this, that the condition of things had so been altered after the making of the original contract (they had been so greatly altered) that it was not reasonable, or right, or fair, or just to hold that the original contract was made with regard to those circumstances. In other words, you may put it thus, that the condition of things was so altered that if they had been supposed to be the things with regard to which the first contract was made, neither party, acting as (I must use my favorite phrase) 'reasonable men of business,' could have made the original contract in the terms it was with regard to that state of circumstances. The result of that, if it is true, is this, that the original contract is made with regard to a different subject-matter from the subject-matter which was dealt with by the parties. If that finding stands, then the condition of things with which the parties dealt ultimately was so very different from the condition of things with regard to which the original contract was made, that the circumstances with regard to which the original contract is made have ceased to exist. The contract made with regard to those circumstances ceases to exist because those circumstances ceases to exist. Then the contract is at an end, and there is no further application of it at all.

Then with regard to the new circumstances, the parties are in the same position as if no contract at all had been made with reference to them. Now, what is the result ? Why, that with regard to the new circumstances, neither party is called upon to do anything. Either party or both parties may leave those circumstances alone. If they do not leave them alone, and undertake to deal with them, and do deal with them, the law applicable to what they then do with regard to those new circumstances is the law which would be applicable to those circumstances even though there had never been the former contract at all, which was made with regard to other circumstances.

Now, what is that ? In that case, as I say, both parties might have left the thing alone, but they do not. The one party goes on to deal with the new state of circumstances and does work with regard to those. The other party knows that that party is dealing with that new state of circumstances and allows him to do so. Therefore, the one does work which he intends to be for the other. The other person allows him to do that work, knowing that it is intended to be done for him. It is work which he knows that the one party is doing upon the terms of being paid for it somehow. What does that give rise to ? It gives rise to a claim for a fair remuneration for that work done. That fair remuneration is called in legal language a payment according to a *quantum meruit*. If the first contract was gone, if the state of circumstances with regard to which it was made were really no longer in existence as between the parties, if the one did work for the other upon the new state of circumstances which the other accepted, knowing that it was being done on the terms of being paid for, that gives rise to a *quantum meruit*.

Apparently neither Bourque nor the corporation of the city of Ottawa contemplated that these parallel sewers which were encountered during the progress of the work would require to be displaced in order to complete the work Bourque had contracted to do. The existence of these sewers in the places where they were encountered entirely changed the condition of the

contract. Being impeded by the act of the city corporation in discharging through these sewers the sewage matters which they carried on to his work, he might (to quote the language of Lord Chief Justice Coleridge in the *Bush* case, at p. 127) have thrown the contract up and refused to proceed, and he had also a perfect right, if he had thought fit, with the knowledge and assent of the defendants, which in this case is to be presumed \* \* \* to go on with the contract and to complete it under the altered conditions, or I will not say to complete the contract, but to complete the work under the totally altered conditions that had arisen.

As Bourque could not have completed the contract or become entitled to the moneys payable thereunder without doing the additional work caused by the discharge of the sewage into the trenches dug by him, owing to a breach of duty on the part of the corporation of Ottawa, it appears to me that the additional expense so caused was to enable him to complete the work, under the altered conditions which had arisen, and was, therefore, 'in respect' of the contract. The amount recovered in the judgment of Bourque vs. City of Ottawa is, therefore, covered by the assignment to the bank to the extent of the balance due the bank on the advances made to Bourque in connection with his contract.

The appeal must be dismissed with costs.

## REPLIES TO LAW AND BANKING QUESTIONS.

---

Questions in Banking Law—submitted by subscribers—which may be of sufficient general interest to warrant publication will be answered in this department.

*Editor Bankers' Magazine:*

PHILADELPHIA, Pa., March 26, 1904.

SIR: A check drawn on this bank is presented by the holder on a Saturday. Please advise if it is lawful to protest check on a Saturday before 12 o'clock noon.

*Answer.*—By the Negotiable Instruments Law it is provided that "instruments payable on demand may, at the option of the holder, be presented for payment before twelve o'clock noon on Saturday, when that entire day is not a holiday." (Laws Pennsylvania, 1901, ch. 162, sec. 85). This applies to a check (sec. 185). And by sec. 102 of the act, it is provided that "notice may be given as soon as the instrument is dishonored." But there is no reason why protest should be made before twelve o'clock. If presentment is made before that hour, the protest may be made at any time during the day (sec. 155).

*Editor Bankers' Magazine:*

MERIDIAN, Miss., March 5, 1904.

SIR: A merchant deposits with us as cash a check of his customer drawn on a bank in the neighboring city of C. We send it for collection to our correspondent at B, who in turn sends it to a bank at C. Now, in case the check is lost in the mails, or in transit, and duplicate cannot be obtained, or in case the drawer should become insolvent in the meantime, the original check being good, on whom would the loss fall? M.

*Answer.*—The check having been received as cash, we think that as between your bank and the depositor the loss must fall upon the bank; for even if the bank had the right to cancel the credit in the event that the check was not paid, the burden would be upon it to show that the check had been duly presented and dishonored, and mere proof that the instrument

had been lost would not be sufficient for this purpose. So, if the bank at B gave your bank credit for the item when it was received, we do not think the check could be charged back to your bank unless it is returned to you. In such case, therefore, the bank that last had possession of the paper would be responsible for the same. But that bank need not lose the amount of the check, for it may make demand upon a copy, tendering the payee a proper indemnity. (Daniel on Negotiable Instruments, sections 1464-1465.)

*Editor Bankers' Magazine:*

CARTHAGE, Ill., March 11, 1904.

SIR: Will you kindly answer through your MAGAZINE and advise whether in your opinion an irregular indorsement, such as Wilson Grocery Company per L. H. G., should be guaranteed by the bank or banks through whose hands it passes or not? It very frequently happens that local merchants give checks to travelling salesmen, payable to the order of the firm or corporation that they represent, and that the travelling salesmen get these checks cashed at a neighboring town, indorsing the corporation or firm name, and that the check passes through the hands of several banks before reaching the bank on which it is drawn. Do you regard the ordinary indorsement used by banks as a sufficient guaranty of the genuineness of such indorsement as above referred to, and, in the case of an indorsement made by the salesman or agent, of his authority for making such indorsement? In your opinion is a drawee bank protected in paying a check with such irregular indorsement, without a subsequent indorsement specifically guaranteeing the same? S. H. FERRIS, Cashier.

*Answer.*—It is a fundamental principle that every indorser warrants by his indorsement that he has a good title to the instrument and that all prior indorsements are genuine. (Daniel on Negotiable Instruments, sec. 677.) When, therefore, an indorsement purports to have been made by an agent, a subsequent indorser necessarily warrants that the agent had authority to indorse; for if the agent had no such authority, the subsequent indorser acquired no title. We think, therefore, that in the case stated in the inquiry, an indorsement in the ordinary form is sufficient.

*Editor Bankers' Magazine:*

LANCASTER, Pa., March 1, 1904.

SIR: (1) Is the following judgment note a negotiable instrument under the new law? If not, please note the points which are in conflict with the law.

\$100.

Lancaster, Pa., January 17, 1904.

One month after date I promise to pay to the order of E. Jones One Hundred Dollars, without defalcation, for value received. Hereby waiving inquisition, stay of execution, and all benefit of the §300 exemption law. And I further empower any attorney of any Court of Record within the United States to appear for me and confess judgment against me for the above sum, with above waivers, cost of suit, release of errors, and five per cent. attorney's commission. Wm. Brown. (Seal)

(2) Saturday being a half holiday, is it lawful and necessary to protest a check or demand note if presented before 12 M. (3) In case of a bank not observing the afternoon of Saturday as a holiday, but does business all day as on other days, would a check or demand note presented in the afternoon of that day be subject to protest? CASHIER.

*Answer.*—(1) By the terms of the Negotiable Instruments Law, the negotiable character of an instrument is not affected by the fact that it "bears a seal" (Sec. 6), or is made payable "with costs of collection or an attorney's fee in case payment shall not be made at maturity" (Sec. 2), or contains a provision which "authorizes a confession of judgment if the instrument be not paid at maturity," or "waives the benefit of any law intended for the advantage or protection of the obligor" (Sec. 5). These provisions appear to cover all the conditions contained in the note mentioned in the inquiry, and such note is, therefore, negotiable. (2) If the instrument is presented before noon on Saturday, it may be protested on that day, though this is not required. It is sufficient if notice of dishonor be given on Monday. (3) No. The statute makes a presentment after twelve o'clock noon on Saturday ineffectual, and no custom of a bank can change the force of a legislative enactment.

## SYSTEMS FOR BANK WORK.

[A Card System for Signatures and Stop-payment Orders, with hints for installing it.  
By CHARLES W. REIHL, Philadelphia.]

In the various improvements made in recent years in the different departments of bank work none have been so great a convenience to depositors as the card systems for signatures. The depositors, however, have not had a monopoly of the convenience, for it is also a great convenience to the banker and teller.

With the use of the old signature-book the depositor had to come to the bank to give his signature, or else write his name on a slip of paper and have the banker paste it in the book. The former was sometimes very inconvenient and the latter was often unsatisfactory, besides making the book look unsightly. But with the card system a card can be taken or sent to the party whose signature is wanted and he can sign it under natural conditions, and then return it; or if he wishes he can come to the bank to sign it.

In using the book the signatures are sometimes placed on the wrong page, and then when wanted cannot be found without getting a mental search-warrant and instituting a careful search; this always means waste of time and test of temper. No such troubles are likely to occur with the card system, for each card, after it is properly signed and filled up, is filed in its proper place in the filing-drawer, back of the guide-card. For example, if it is the card of the Pope Manufacturing Co., it is filed after the guide-card marked "Po," and if by mistake it should be placed in the wrong subdivision it can easily be placed where it should be, but you could not make this change with the entry in the signature-book.

The book carries on the same page the names of those having active accounts with the bank and those whose accounts have been closed for months or years. This is not true of the card system, for as soon as an account is closed the card is taken from its place, a proper memorandum made on it and then filed in place reserved in the cabinet for cards of closed accounts.

There is really only one system that can be used in the signature-book—that is the alphabetic arrangement of the pages. Some banks have their rulings arranged better than others, but the best is not comparable with a good card system. For simplicity, convenience, correctness, clearness of record and ease of finding the right signature when wanted, the card system is far superior to any signature-book.

But there are good cards and poor cards used even in card-signature systems. I do not mean good and poor in the stock used for the card, although this too is sometimes true. I refer now to the arrangement of the spaces on the card and the size of it.

I shall now examine a series of cards prepared especially for use in banks located in cities having clearing-houses; then give a few suggestions for signature-card system for country banks, and also a few hints that will be found useful in placing the card system in banks where it is desired to use it.

Many bankers who have adopted a card system use only two forms: one for banks and the other for firms, corporations and individuals. This will answer to a limited extent, but separate cards for each class would answer to an unlimited extent.

The system here given was prepared after much study and examination of other systems, and it has been highly commended by those qualified to pass judgment on it, and it has been copied. It is especially intended for the paying teller's depart-

front. To know who is authorized in each bank to sign and countersign due bills, and to certify checks and endorse items presented for payment, is often necessary for properly transacting certain matters.

The names given on all the cards here illustrated are fictitious, for it would not be proper to take cards from the cabinet and use them in this way. The names are given on them simply to show how the cards look when filled up, and the nature and amount of information they give.

The card for the out-of-town banks is Figure 3. The wording of the two printed lines on this card, and on all the others, beginning "The signatures below," etc., is a little different from that generally used. It is clearer and more to the point, giving special instructions which become effective when the signature is placed below.

FIG. 7.

Although seven forms are here given, there are only four different kinds of cards. The two for banks are the same on the face, but some had the form printed on the back for use with banks in the same city.

There is really only one objection to these cards, and that is their size. They are too deep to be enclosed in an ordinary business envelope. They are four by six inches and so require a special envelope when sent through the mail. If they were three and one-half by six inches they could be enclosed in an ordinary business envelope and would not be so liable to be broken or torn in the mail. They could very easily be made this size.

STOP-PAYMENT ORDER CARD.

Another important matter with the paying teller's department is the stop-payment orders. These orders are usually written on a slip of paper, or letter from the party who issued the check or note and then desired, for some reason, not to have it paid; and when the item has been returned or the order cancelled the slip or letter is torn up and that ends the record. Some keep the record by entries in a book kept for that purpose—and this method has its disadvantages. But with the card signature system a card like Figure 8 can be used to great advantage. When the order is given to stop payment the card is filled out, as here shown—except the two lower lines—and the card is filed in its place. Memorandum can be given to the book-keeper so he can stop the check if it should pass through the paying teller's department unnoticed.

If the order is cancelled for any reason, the two lower lines are filled up and the card filed back of those still in force. If the check comes in and is returned, mention of the fact, with date, should be made on the card and then the card filed as if the order had been cancelled.

For these cards a four-drawer cabinet is used. First drawer for A to K cards, second for L to Z cards, third for local and out-of town banks, fourth for stop-payment orders and cards of accounts that have been closed. If the bank has more than two ledgers for individual, firm and corporation accounts, more drawers can be provided for the cards.

When an account is closed the signature-card should be taken from its place,

marked "account closed," with date and reason—if reason is known—and then filed away in alphabetic order in the fourth drawer. The advantage of filing these and the stop-payment cards in this drawer is in having them handy if wanted.

## SUGGESTIONS FOR COUNTRY BANKS.

The cards given above are, as stated, especially intended for banks in cities having clearing-houses. But as most of the banks in the United States are outside of clearing-house centers, a few suggestions will be given for a card-signature system for their use. The same principles apply in both places.

In towns having one, two, three or four banks it would be almost a useless expense to have cards like those on Figures 1, 2 and 3—the cards for banks. But in the larger towns the cards shown on Figures 4, 5 and 6 could be used advantageously.

In the majority of banks that are commonly known as country banks, a card similar to the individual card, Figure 4, would do for all purposes. One change should be made on the card. The sentence reading, "The signature below is the one, and only one, you are to recognize in the payment of funds or transaction of other business on my account," should be printed to read, "None but the signature or signatures given below to be used for the withdrawal of funds or the transaction of other business for this account." Some banks simply have "authorized signature of," or "signature of," printed on their cards. Either of these could be made to answer in most cases, and no occasion might arise to question its sufficiency or insufficiency. But for those who prefer more definite instructions from depositors the above wording is suggested.

The same size card as suggested above, three and one half by five inches, will be found best; for it will allow those who write a large hand to give their signatures without cramping them. Its appearance is much better too than the smaller card.

A one or two-drawer cabinet might be sufficient for your present needs and allow room for new accounts. It is better to have room to spare in your cabinet than to have it crowded.

## HINTS FOR INSTALLING THE SIGNATURE CARDS.

Those who are considering the matter of adopting the cards might be glad to have a few suggestions.

In the first place, decide on the form and size of card you want. Then count

your accounts—how many bank accounts, how many corporations, how many firms, how many individuals; or if only one card is used, how many accounts altogether. If one thousand, do not order only a thousand cards, but order enough for changes in names of present accounts and for new accounts. Two thousand would not be too many to order—they will keep and are good until used.

Next decide the style of case, or cabinet, you want to use. Always allow room to grow. Having decided on these things, ask estimates and samples of stock for the cards from three or four card-system houses; not to get the cheapest, but the best; for the best is always the cheapest in the end. Being satisfied with what you get is worth considerable.

While your cards are being prepared you can get ready to send them out. Make a list of your depositors with their addresses. Have your envelopes addressed. Be sure to have a stamped envelope addressed to yourself to enclose with the card for its return trip.

If you want to have your depositors interested in the bank and have a way for them to easily manifest their interest, use an introduction card similar to the one shown on Figure 9. The typographical work might be better than this one, but the

who will open an account with the MANUFACTURERS' NATIONAL BANK. We know this will secure the account every service allowable in safe and prudent banking.

Date 7/10/04 John M. Kellogg,

If it is not convenient for the party introduced to call at the bank send this by mail and it will receive immediate attention.

FIG. 9.

idea is a good one to copy. I know of one enterprising bank officer who had three or four introduction cards printed on one card, like coupons on a railroad ticket, so they could be easily torn apart and used.

Head each card with the depositor's name before sending for the signature, then when you send the cards send them with an addressed letter. The following form is a good one:

DEAR SIR: Having adopted the card system for signatures of depositors, we are now revising our records in this line, and so desire to have new signatures of all the depositors in this bank.

We herewith enclose a signature-card and request that you write or have written on it the proper signature or signatures that we are to recognize in the payment of funds or the transaction of other business on your account. Also give your business address and nature of business. Then kindly return the card to us in the enclosed envelope. If you change your address at any time please notify us at once.

Your kindness in complying with this will assist us in the work and will be much appreciated by us.

We also enclose an introduction-card which we would be pleased to have you use in introducing some individual, firm or corporation to us to open an account with the bank. We will give the account careful attention and promise it shall have every service allowable in safe and prudent banking.

Thanking you in advance for the expected favors, we are,  
 Yours very truly,

These letters could be printed either in ordinary type or type-writing style; or they could be run off on some duplicating machine.

Keep your list of depositors, and tick on the list the name on each card as they are returned. In this way you will know whether you get them all back or not, and those not returned in reasonable time you can write for or inquire about.

## \*THE PRACTICAL WORK OF A BANK.

### THE COLLECTION DEPARTMENT.

#### IV.

The patience of Job is truly exemplified in the bank collector. His position has more responsibility attached to it than most people suppose, hence not every one can fill it satisfactorily. It requires a young man with at least a common school education, and sound in body and mind. Courtesy, good morals, patience, carefulness, and unquestionable integrity are the qualifications of a good bank collector.

Courtesy at the telephone is especially desirable and should also be extended to all with whom he comes in contact, regardless of station. His morals must be above reproach, as the general reputation of the bank is quite frequently judged by his actions. The business world sees more of him than any other man connected with the bank. This may seem unreasonable, yet it is true. A very large number of business men seldom go to their bank, their business being transacted by clerks. To illustrate: a business man, one of the bank's best customers, had not been in the bank for three or four months, yet the collector called on him almost every day. His patience is tested each day and sometimes very severely, by inconsiderate business men to whom he presents collections. He must wait, regardless of how far behind he is, or how large and voluminous the day's business, until the payor hunts up the invoices through a stack of unfiled papers, checks them over, and then takes his leisure to write a check. Another very disagreeable feature is being subject to the instructions and directions of the different officers and clerks of the institution and quite frequently being told to do several things at the same time.

He must possess an indefatigable desire for work, with the interests of the bank at heart if he seeks promotion, as almost daily opportunities are presented where the bank's profit depends upon his judgment and actions. He should be thoroughly posted regarding protesting papers, and the liabilities of all parties to acceptances, notes, drafts, etc.; and as his work progresses and his mind develops he should acquire an insight into commercial law bearing on all forms of business paper, which can best be accomplished by a careful perusal of some good banking journal. Promptness is indispensable. The bank is no place for the laggard. The collector must be present at the usual time and ready to start out with his collections at the opening hour. "Keep your eyes and ears open and your mouth closed," is an excellent rule, but very difficult to observe. It can be followed to a great extent, however, by one who possesses the utmost determination to act according to the dictates of a conservative judgment. Opportunities of assistance to superiors and to fill higher positions should never be neglected, for therein lies the secret of advancement. Good, legible penmanship is very essential and can be acquired by proper cultivation and constant attention.

#### DETAILS OF COLLECTION WORK.

All items should be arranged in a good wallet in consecutive order of the calls to be made. Refusals should be carefully endorsed and promptly returned and record of same made on the letter; though with notes it is preferable to give reasons in the return letter. The wallet should never be conspicuous on the streets nor swung in

---

\* A series of articles to be published in competition for prizes aggregating \$1,050, offered by THE BANKERS' MAGAZINE. Publication of these articles was begun in the July, 1901, number, page 18.

the fingers as many pride themselves in doing. He should never be delayed by waiting for an absent party, as much valuable time is lost and nothing gained, for nine times in ten he must wait longer than expected. He must exercise the greatest care in receiving cash items in payment of drafts and notes, and if any doubt exists as to their genuineness, immediate certification should be obtained by telephone, and most especially so, if a bill of lading has been surrendered.

#### HANDLING THE MAIL.

When the mail is brought from the post office in a leather satchel and opened by an officer, it is distributed among the proper departments. The collection clerk checks the items from the letters, writes the name of payors on the letters, notes protest instructions on items, computes all charges, and gives draft to the messenger. Time paper is retained and entered on registers, and then placed in a large collection wallet in consecutive maturities; as they mature, they are handed to the messenger by the collection clerk. Immediately after completing his rounds the messenger places the funds received for each item upon the letter containing it, and passes them to the teller, who checks up the money and hands the letter to the exchange clerk, with totals to be remitted on each. Drafts are then drawn and with the original letters handed back to the collection clerk, who writes the remitting letters and detects any errors made in drawing drafts, additions, etc. The exchange clerk knows whether or not charges have been paid from notations made by messenger on letters.

All records are made from original letters and received with item, thus doing away entirely with registers for cash items and short-time collections. This saves an enormous amount of time, labor and stationary, and reduces the liability to err to the minimum. A bank receiving remittances desires only to know its collection number, amount, date of its letter, and name of payor; though the last two are fast becoming obsolete. The letters are carefully filed away as a record of the items contained and instructions. All protest collections are indicated by the use of arbitrary signs upon the lower right-hand corners of the items, and any other special instructions are so noted. It requires only a second or so, and renders invaluable service to all who handle the items.

This method is becoming more general, especially among banks doing a large collection business, and one bank adopting this method in preference to registering all items, has come under my personal observation.

#### FOLLOWING INSTRUCTIONS OF TRANSMITTING BANK.

The first and most imperative rule is to follow instructions, regardless of circumstances. Exceptions to this are exceedingly rare. A collecting bank should follow the instructions of the bank from which it receives the collection and not from any intermediary bank, firm, or person, as many business men are inclined to believe, and greatly desire on some occasions. An instance of practical verification comes to mind where a collecting bank held a protest draft which was claimed to have been remitted by an influential and responsible merchant who produced his check-book stub in evidence; still, upon his refusal to pay, the bank protested and returned the item.

Letter instructions invariably govern the handling of all items, and when received from a bank without instructions, items are always protested under the Supreme Court rulings in this State, regardless of anything to the contrary written on, or attached to them. I have experienced, time and again, the exceedingly unpleasant and responsible handling of protest items with "no protest" written or stamped across their face. This abominable practice is a source of serious trouble between a collecting bank and perhaps its best customer, and should be discouraged and suppressed in some way by the State Bankers' Association or the American Bankers' Association, and is a topic worthy of their careful consideration.

Documents attached to notes and drafts should be surrendered only on payment, with all charges, and never left at an office unless otherwise instructed.

The earnings of the collection department are certainly insignificant considering the enormous responsibilities. The profits are increased by promptness, accuracy, courtesy, reasonable rates and following instructions. The profits generally depend upon the custom, locality, and competition. The first and most paramount method of increasing collection profits is promptness. No banks, firms or private parties desire to entrust their collection and proper handling of valuable paper to negligent banks. Some collecting banks receive drafts, present for acceptance, hold for maturity, and remit without having made any prior acknowledgment. Such negligence can only result in a loss of collection business and profits.

Accuracy should not be overlooked, as banks dislike very much indeed to be eternally correcting errors and making apologies for their collecting agents, also avoiding great risk of loss. Courtesy, especially to firms from whom a great many drafts are collected, helps profits, as they would instruct firms from whom they buy to send all drafts through this bank, and since the large firms in cities send out their drafts themselves, this is seen to be no small item. This eventually leads to securing the entire collection business of these firms in your vicinity.

All charges should show a reasonable profit, and under no circumstances should the charges exceed express or post-office charges for similar service, even though there is only one bank in the town.

In conclusion, it may not be amiss, to avoid too serious criticism, to quote the language of Portia: "If to do were as easy as to know what were good to do, chapels had been churches and poor men's cottages princes' palaces. It is a good divine that follows his own instructions. I can easier teach twenty what were good to be done, than be one of the twenty to follow mine own teaching."

| Date of Item | Time | Maturity | Number | Formaker received | Address | maker | Pages | amt. | Int. | When paid | Remarks |
|--------------|------|----------|--------|-------------------|---------|-------|-------|------|------|-----------|---------|
|              |      |          |        |                   |         |       |       |      |      |           |         |

**DOMESTIC REGISTER.**—On the domestic register should be entered all time paper received for collection maturing ten days or more after receipt and remittances or credits made from the register.

Acct. No.... Page No....

| Date of receipt | Date of item | Number | maker | Maker Name | amt | Total | When payable | When drawn | First endorsement | Last endorsement | When Collected |
|-----------------|--------------|--------|-------|------------|-----|-------|--------------|------------|-------------------|------------------|----------------|
|                 |              |        |       |            |     |       |              |            |                   |                  |                |

**REMITTANCE REGISTER.**—On the remittance register should be entered the full description of all cash items payable on demand, elsewhere than in the city and sent protest.

| Date of Item | Number | Owner | Int. amt. | amt | Pages | Address | When sent | When paid | Remarks |
|--------------|--------|-------|-----------|-----|-------|---------|-----------|-----------|---------|
|              |        |       |           |     |       |         |           |           |         |

**FOREIGN REGISTER.**—On the foreign register should be entered all items received from customers for collection.

The forms are compiled with the intention of recording full descriptions of all items in the most concise manner; in the shortest time, by not making the same record in two places, and with the smallest possible expense, by having two registers, each serving its own special function.

**EDWIN S. SCHENCK**  
President Citizens' Central National Bank, New York

## THE CITIZENS' CENTRAL NATIONAL BANK, OF NEW YORK.

---

On the morning of March 14 the Citizens' Central National Bank—formed by a union of the Central National and the National Citizens'—opened for business at 320 Broadway, in the building formerly occupied by the Central National Bank. By the merger of these two banks an institution has been formed that will be admirably adapted to care for the business interests centering around the bank—the dry goods trade, which is one of the most important branches of the city's commerce. While devoting a large part of its attention to the needs of this trade, the bank is well equipped to transact all lines of banking.

The capital of the Citizens' Central National is \$2,550,000 and the deposits \$20,000,000, thus placing it among the large commercial banks of the city.

The National Citizens' Bank was established in 1851, and was operated successfully as a State institution. About the time of the imposition of a tax on the circulation of State banks it entered the National system.

In December, 1901, the National Citizens' Bank absorbed the business of the Ninth National Bank, and soon after William Halls, Jr., of the Hanover National Bank, and James Stillman, of the National City, became directors.

The National Citizens', the Ninth National and the Central National were

all competitors in the dry goods district, and in view of the great growth of business in this territory neither of the banks was in a position to extend all the facilities required. By the merger, which thus practically combines the three banks into one institution, effective provision is made for adequate banking service. The interests thus united are representative of some of the wealthiest and best-known men in New York. Included in the list of directors are: James Stillman, President National City Bank; Wm. Halls, Jr., Vice-President Hanover National Bank; John A. McCall, President, and Henry Tuck, Vice-President New York Life Insurance Co.; Henry B. Stokes, President Manhattan Life Insurance Co.; and Elkan Naumburg, of E. Naumburg & Co., bankers. The mercantile interests are also well represented in the board, the membership including: Ewald Fleitmann, of Fleitmann & Co.; Louis F. Dommerich, of Oelbermann, Dommerich & Co.; Woodbury Langdon, of Joy, Langdon & Co.; Francis M. Bacon, Jr., of Bacon & Co.; Augustus F.

HENRY DIMSE, Cashier.

Libby, of H. J. Libby & Co.; Ralph L. Cutter, of Smith, Hogg & Co.; Robert B. Hirsch, of Wm. Openhym & Sons; Jacques Huber, of Schwarzenbach, Huber & Co.; Arthur L. Leshner, of Leshner, Whitman & Co., and Henry Sampson, of Alden, Sampson & Sons.

It will thus be seen that the bank is remarkably strong both in its financial and commercial connections. The officers, too, are men of wide experience in banking and thoroughly posted in mercantile credits. Edwin S. Schenck, President, was President of the National Citizens' prior to the consolidation. His official relation with banking dates from 1892, when he became Assistant Cashier of the Hamilton Bank, of New York. He advanced

NELSON A. REYNOLDS, Asst. Cashier.

ALBION K. CHAPMAN, Asst. Cashier.

to the office of President, and while holding this position, he was, in February, 1901, chosen Vice-President of the National Citizens' Bank, and in the following year elected President. During Mr. Schenck's official connection with this bank its business has grown remarkably, both in the ordinary course and by the absorption of the Ninth and Central.

Mr. Schenck was formerly Secretary of the New York State Bankers' Association, and is a member of the Union League Club and other prominent social organizations. He is a brother of Frederick B. Schenck, President of the Mercantile National Bank, of New York.

Ewald Fleitmann, Vice-President of the Citizens' Central National Bank, has long been prominently associated with the bank, being President of the National Citizens' before it absorbed the Ninth, when he resigned and accepted the Vice-Presidency. His wide experience in the dry goods trade renders him an especially good judge of the credit of firms engaged in the trade.

Henry Dimse, the Cashier, has held the same position in the National Citizens' since the beginning of 1901, prior to which time he was Vice-President of the Twelfth Ward Bank. He has had fifteen years' experience in banking and is thoroughly familiar with all the details of the business.

Nelson A. Reynolds, Assistant Cashier, was connected with the Hanover National Bank for twenty-five years, filling various positions, and finally being promoted to be city manager—a position of great responsibility. When the Hanover interests acquired control of the Ninth National, Mr. Reynolds became Cashier, and when this bank was merged with the National Citizens' he became Assistant Cashier, holding this office until he was chosen first Assistant Cashier of the Citizens' Central National.

Albion K. Chapman, also Assistant Cashier, has held the same office with the National Citizens' since 1901.

Following are the official statements of the two institutions as rendered to the Comptroller of the Currency, January 22, 1904:

|                                            | <i>National Citizens'.</i> | <i>Central National.</i> |
|--------------------------------------------|----------------------------|--------------------------|
| Capital.....                               | \$1,550,000                | \$1,000,000              |
| Surplus.....                               | 500,000                    | 400,000                  |
| Undivided profits.....                     | 167,868                    | 173,296                  |
| Due National banks.....                    | 1,510,138                  | 2,326,100                |
| Due State banks.....                       | 424,972                    | 1,963,614                |
| Due Savings banks and trust companies..... | 952,730                    | 579,015                  |
| Individual deposits.....                   | 6,165,063                  | 8,007,008                |
| United States deposits.....                | 499,878                    | 880,000                  |
| Demand certificates.....                   | 404,498                    | 4,446                    |

It is usual in cases of consolidations for the deposits to gain considerably by the prestige obtained by the merger, and there is no doubt that the total will soon much exceed \$20,000,000.

The Citizens' Central National Bank begins business under the most favorable auspices, and its success is already assured. There is no doubt that the merger will result in greater profits to shareholders and more efficient service to the public.

POPULATION OF CHINA.—United States Commercial Agent R. T. Greener, of Vladivostock, Siberia, under date of December 18, 1903, reports that a Russian paper, quoting from a Chinese paper, says:

According to the last census taken in China by imperial order, in view of re-assessing taxes, the total number of inhabitants amounted to 426,447,825 souls. The 18 Chinese Provinces proper had 407,737,305; Manchuria, 8,500,000; Mongolia, 3,354,000; Tibet, 6,430,000; and Chinese Turkestan, 426,000 inhabitants.

CAUSES OF PANICS.—“It is not the observance of the law or its enforcement that creates panics or distress. It is willful violations of its wholesome provisions or defiance of the laws of economic health.”—*Argument of Attorney-General Knox in Northern Securities Case.*

READY TO RELIEVE HIM.—“It is a generous and helpful world,” said the multi-millionaire.

“Indeed?”

“Yes; when it was announced that I desired to die a comparatively poor man there was a general movement to assist me in the enterprise.”—*Washington Star.*

## TRUST COMPANY RESERVES.

[Argument submitted to the Committee on Banks, Hon. John T. Smith, chairman, Assembly Chamber, Albany, New York, March 1, 1904, by Theodore Gilman, New York.]

MR. CHAIRMAN AND GENTLEMEN: Bill No. 538, to amend the banking law in relation to the lawful money reserves of trust companies, which is now before your committee for consideration, has a wider scope than its application to trust companies, in that it re-enacts the law of 1892 or thereabouts, which fixes the reserves for all the banks and bankers of the State of New York.

Prior to 1892 there appears to have been no law regulating reserves on the statute books of this State. In this respect our laws followed the precedents established in England and France, where no specified percentage of legal reserves is required. The theory seems to have been that the maintenance of reserves was a matter which should be left to the discretion, good judgment and prudence of each separate bank, and was not a province into which the lawmaking power could with propriety enter. It was a detail of the bank's business which was to be strictly kept private. The Louisiana banking law of 1842 was among the first in which is to be found a stipulation as to percentage of reserves. As usual with prototypes, the model was a good one. The reserve to be maintained by all banks was fixed at 33 $\frac{1}{3}$  per cent., which conservative percentage no doubt had much to do in establishing Louisiana banking upon a sound basis in those early years. There was no penalty, however, attached to the impairment of this reserve and its maintenance depended on the good management of each bank and the supervision of the State officials.

In the National Bank Act of 1864 there is to be found the provision for a specified percentage of reserve, and added to it the penalties for impairment, which were twofold—first, a stoppage of loaning and discounting, and second, a liability to a charge of insolvency. It was not until about 1892 that a section was added to the New York banking laws in reference to reserves. This section was taken without change from the National Bank Act. The section, however, only applied to banks and individual bankers. Now, in 1904, a bill is introduced to extend the application of this section so as to include trust companies also.

The consideration of this bill by your committee affords an opportunity to discuss the principles on which the section is based and to take counsel of the experience which has been gained in the past forty years while this provision has been part of the National Bank Act. It is a question whether this opportunity will recur in the near future, and if anything is to be said on the subject, it must be said now.

### IMPORTANCE OF BANK RESERVES.

Reserves are the most important part of the credit system. The credit system, to work smoothly, must be based on adequate reserves. The credit system began with the establishment of the Bank of England, and its projectors were so infatuated with the theory of credit that they thought that a reputation for wealth based on a knowledge of actual solvency was all-sufficient to maintain obligations on a par with gold. They therefore attempted to do business with a cash reserve of two per cent., and relied on their well-known credit to maintain the solvency of the remaining ninety-eight per cent. of their obligations. The enemies of the bank easily gathered together more than two per cent. of its demand obligations, presented them in one block, and thus forced the suspension of specie payments by the bank. During the period of suspension the managers of the bank had time for reflection and were

converted to the opinion that two per cent. of reserves could not maintain solvency, and in due time twenty-five per cent. became the recognized minimum.

Subsequent experience proves that monetary disturbances do not occur when reserves are high and always occur when reserves reach a point of threatened exhaustion. As reserves are idle capital, it is evident that more money can be made for a bank with small reserves than with large. Consequently, the banks of England and the United States always endeavor to carry as small reserves as convenience or the law will permit. Whenever a disturbance occurs, then the storm-center is the condition of the bank reserves. After the Baring crisis, Mr. Goschen, then Chancellor of the British Exchequer, delivered a most instructive address, the principal subject of which was the smallness of English banking reserves as the cause of the troubles through which that country had just passed. English banking statistics are incomplete compared with those of our country, but Mr. Goschen shows that their reserves were not over ten per cent. of their total deposits, and he instances a large bank with \$45,000,000 of deposits which carried but six per cent. His chief object was to devise a method by which English banks could accumulate and maintain a larger cash reserve "by which," he said, "we may give greater help in emergencies, and by which we hope that some of those fearful catastrophes which have sometimes threatened the commerce of this country (England) may be avoided." All his efforts, however, resulted in nothing, so great is the difficulty in reforming established customs even when they are acknowledged to be defective.

The best means of maintaining bank reserves has been said to be "the chief theme of discussion in banking circles" in England for many years. While such discussions are going on in the greatest commercial country of the world, it is not surprising that we have at home similar difficulties to deal with.

#### SMALL RESERVES OF THE TRUST COMPANIES.

The banking statistics of New York State show that our trust companies are carrying but about three per cent. of cash on the amount of their obligations. It may be said in extenuation that much of these deposits are sluggish, midway between commercial and Savings bank deposits and do not require as large reserves as the former of these two classes. This might require a division of trust company deposits into two or more classes, to correspond with their character. But if the deposits are subject to check without notice, they evidently are similar to deposits in commercial banks, and as such should be protected by similar cash reserves. Also, it is claimed that the trust companies carry large deposits with clearing house banks which may be considered to be as good as cash and thus act as reserves. There is a broad distinction between lawful money on hand and a balance with a clearing-house bank. One is cash or real money, the other is a credit which may be turned into money under favorable circumstances, but which is subject to various contingencies which may prevent its becoming cash. Bank credits, carried by trust companies are like call loans of the best character.

Mr. Goschen said, in his speech above referred to:

"Cash on call is no reserve in the general sense so far as the community is concerned, because it means when you call in your money on call you are unbalancing another person while you may be relieving yourself. Let the public understand this. \* \* \* There is no reserve to a bank having money on call in the sense in which I am discussing reserve. It is a valuable asset, but it is not an asset which consists in a reserve useful to the general interests of the community at large."

Mr. Goschen's large experience and prominent position make his remarks on this subject of the highest authority. As the banks of London in the end concentrate their demands on the Bank of England, so our trust companies rely upon clearing-house banks for their reserves. Instead of being an alleviation of the general com-

munity, this arrangement aggravates the situation in any time when the public stands in need of relief.

There is no escape from the conclusion that the safety of the business world demands that we shall not drift into the condition from which England now finds it so difficult to extricate herself, but that all demand deposits held by corporations authorized by the State to do a banking business shall be safeguarded by an adequate percentage on hand in lawful money. While it seems almost impossible for England to control this matter, it is comparatively easy for our Legislature to pass a law to accomplish the object intended.

#### DEFECTS IN PRESENT RESERVE LAWS.

These preliminary remarks seem to be necessary to reach the particular point I desire to lay before you. Assuming it to be agreed that, following the lessons of experience and the best authorities, an adequate percentage of deposits is to be fixed which trust companies as well as banks shall hold on hand at all times in the lawful money of the United States, the question next to be disposed of is how that reserve is to be maintained and what penalties are to be imposed in any case of failure to maintain it.

The contention brought before you now is that the severity of the provision contained in the bill under consideration should be and can safely be ameliorated in the interest of the business public. This is not a matter of such great importance to banks, bankers and trust companies as it is to the public, and as your committee, Mr. Chairman, and the entire Legislature, represent the public, there can be no doubt that you will give this aspect of the question all the consideration it deserves.

The bill as drawn follows the National Bank Act and says that when the lawful money on hand shall be less than the specified reserve, the company "shall not increase its liabilities by making new loans or discounts otherwise than by purchasing bills of exchange payable at sight, nor make any dividends of its profits until the required proportion between the aggregate amount of its deposits and its lawful money of the United States has been restored. The Superintendent of Banks may notify any company whose reserve shall be deficient to make it good, and if it shall fail for thirty days thereafter to make good such reserve it may be proceeded against as insolvent."

These provisions are primarily directed against the company, but it is evident that it is only the business community that is inconvenienced thereby. Merchants and others make their arrangements for money beforehand, expecting that the facilities of the banks will be open to them. If this restriction should go into operation suddenly and a merchant should be met with a refusal of discounts, it might work great derangement of his business. The ground of refusal would be that the reserve of the bank was under the amount required by law and it was prevented by the law from making any loans or discounts until it was restored by collections and payments. On that point Mr. Goschen said, "a customer looks to the bank for facilities when the pinch comes, and if when the pinch comes the bank itself is obliged to draw in its resources, call in money, it disturbs the whole of the mercantile arrangements and the bank is not really assisting the country, but is thwarting the best interests of the banking and trading communities." If any number of companies are in the same condition and all refuse discounts, a feeling of anxiety and alarm is created among borrowers, which often quickly communicates itself to the general public, and a disturbance is needlessly created while the financial situation may be entirely sound. This state of affairs aggravates itself, and the drain of lawful money might keep pace with collections, so that the conditions of impaired reserves to a greater or less degree might continue for weeks or months, resulting in widespread distress.

This summary shutting down on the business public and peremptory discontinu-

ance of loaning and discounting are a shock to commerce and trade which should be prevented by all legal means. It is evident that the bank, banker or trust company is not inconvenienced. Their duty is prescribed by the law and is simple and plain. They must stop loaning and collect in enough of their debts to restore the reserve. The whole burden is thrown on the public. Borrowers must hurry and skurry to find money to pay bank debts, irrespective of the inconvenience and loss it may occasion them to do so. The public are squeezed for the benefit of the bank. Surely, it must be evident that the law sacrifices the public for the sake of a theory.

It results from this state of affairs that reserves cannot be legally used even in case of greatest need. They are only to be looked at. If reserve troops of an army were forbidden to be brought into action, they might as well not be present at the battle. A general could hardly excuse a defeat by saying that he had kept his reserves safely out of the conflict and they were undiminished in number after the disaster. The answer would be that perhaps if he had not kept them out of the struggle, they might have turned the defeat into a victory.

#### PROPOSAL TO TAX IMPAIRMENT OF RESERVES.

How to allow the use of reserves with entire safety, is the question. "The true use of reserves of cash," writes George H. Pownall in the "Economic Journal" (London), "is to meet emergencies."

The method submitted for your consideration is that of imposing a tax on the impairment of reserves equal to a rate of interest high enough to make it unprofitable for a bank to allow the impairment to continue unless the market rate for money was excessive. If a tax at the rate of six per cent. per annum were imposed on the deficiency in reserves, it is evident that no company would allow the impairment to continue unless the rate for money was above six per cent. This would produce a far different condition from that produced by a stoppage of discounting and loaning. Many a railroad train has been wrecked by stopping too suddenly. The law as it stands puts a rock in the way of the regular course of business. The object seems to be to make the process of stopping to be as quick and sharp as it can be made.

If the occurrence of a deficiency in reserves were an indication of rotteness, there would be some reason in this summary method. But this is not the case, for it sometimes happens for weeks together that from fifteen to thirty banks in the New York Clearing-House will be below the required reserve and no such suspicion regarding the condition of the delinquent banks will exist. These banks are often known to be sound through and through and among the best managed of our New York banks. The laws of the United States and of the different States allow banks to be conducted on the credit principle, that is to maintain their solvency by a specified percentage of cash. A part of this cash, sufficient to bring their reserve below legal requirements, may be withdrawn at any time in the natural course of business without the previous knowledge of the bank. It is impossible for the bank to anticipate such withdrawals, and the law only requires the bank to keep a specified percentage of cash to meet such unusual demands. The bank might be complying with the law and all its assets be "sound" and good and yet it might, with the law as it now stands, be brought under a threat of insolvency, which its condition would not justify or warrant.

Impairment of reserve is treated in the law as if it was an impairment of capital. The two are not necessarily alike, though they may be. The present law makes no distinction between them. The banking laws of the State of New York prior to 1892 had but one cause for insolvency, that was impairment of capital. To protect the public the law provided for examinations in his discretion, by the Superintendent or his agent, and for quarterly reports by the banks. If the Superintendent of Banking has reason to believe that the capital of a bank is impaired, he has power to require the impairment to be made good. If this requisition is neglected the

bank may be proceeded against as insolvent. These two methods—examinations by the Superintendent of Banking or his agent and quarterly reports by banks—are proper, sufficient and logical ways to determine the question of solvency. A report made under oath by proper bank officials containing a true statement of the condition of the bank was not originally assented to by banks without great opposition. It was claimed that such a report gave information to competitors which a prosperous bank should not be asked to divulge. It was a great step in the direction of safeguarding the public when such reports were required by law, and it is to be noted that even now such reports are not required by law in England where they rely on the audit of public accountants. Supervision by a governmental official is perhaps a more valuable method of protection to the public in ascertaining whether or no a bank is solvent.

In 1892 or thereabouts a further test of solvency was incorporated in the law of this State, and that was the impairment of reserves. It must be evident, from what has been said heretofore, that impairment of reserves is no certain test of solvency. A bank might have all its assets in Government bonds and other good securities and yet, by a sudden prevalence of loss of confidence, have its cash depleted below the required reserve and by reason of withdrawals and hoardings have no means of increasing its reserve except by squeezing debtors, which not only aggravates the situation but damages its own business. The impaired reserve in such a case does not imply in any sense or to any degree an impairment of capital. No offense has been committed by the bank that should put it in peril of a charge of insolvency, no change in its condition has occurred which in fact has made it less solvent than it was before the impairment occurred. In such a case the assets of the bank would be just as good, sound and solid as they were before impairment. Therefore it is claimed that it is not justified in reason and it should not be asserted in the law that an impairment of reserve should be classed as a ground for suspicion of a state of insolvency. The whole question of insolvency should be determined by the well-established methods of governmental supervision and sworn reports.

To guard against cases where a bank might refuse to bear its proper share of the burden of maintaining the cash reserves at the legal minimum, it is well to give the Superintendent of Banking the power to require a delinquent bank to make good its cash reserve, and if it fails for thirty days to make it good, to proceed against such bank as an insolvent moneyed corporation.

Thus by striking out the method of restoring reserves by a stoppage of business and inserting in its place a tax on deficiencies, and coupling with this the power of declaring a delinquent to be insolvent after thirty days' refusal to restore reserves, there would be a combination of elasticity with rigidity which would greatly promote the peace and quiet of the business public.

Elasticity is a small matter in the mechanism of currency as in all other machinery to which it is applied. The "give" in a buffer platform of a Pullman car is small compared with the length of the car. The car is rigid in its construction. The elastic spring needed to make the car stop and start noiselessly is a small matter. The oil used in the machinery is trifling in weight, and the thickness of a coating on piston rods is almost infinitesimal, and yet it is all-sufficient to prevent friction and secure easy working. While a more important provision than a tax on deficiency of reserves in place of a stoppage of business may be required to prevent panics, as I have argued elsewhere, still this amelioration of a harsh law would act in many instances like oil to prevent financial friction.

In addition to these considerations, your attention is asked to a question of equity between banks which would be adjusted by a tax on deficiency in reserves. Mr. Goschen in the speech already referred to, says of London banks, "You have this remarkable fact that the soundest and strongest banks may be making the smallest

dividends, while the more imprudent banks who invest the depositors' money, leaving a small reserve, are able to show much larger dividends to their shareholders. Why are the latter able to take this course? Because they may have the conviction that the failure of any one of these big banks would be such a disaster to the whole community that the other banks would be compelled to come to their assistance and to rescue the offending banks from the consequences of their offences by themselves undertaking a part of their liabilities. The more imprudent banks will say, 'There is no imprudence. We shall never be allowed to fail, our fellow bankers must come to our assistance, and if not our fellow bankers then the Bank of England, and if not the Bank of England, then the Government.' I say that gives us a *locus standi*, and in the same way the Government has a *locus standi* with regard to shipping and has said that excessive cargoes shall not be carried because they are dangerous to the safety of the public, the question may arise whether the public might have the right to say no excessive cargo shall be carried by a bank receiving public money—that business shall be conducted in a manner which shall be considered safe by the community at large?" This criticism of Mr. Goschen's may find a lodgment elsewhere than in London. Does he not touch a tender spot near home? If some of our banks systematically run below their legal requirement, they weaken the financial situation to that extent. In case of trouble they will get assistance from the stronger banks. It is only just between banks that banks which run short of reserves should pay a tax on their deficiency so that they would not be making money at the expense of their neighbors. There would then be some compensation to the banks which are managed most prudently and who carry the largest reserves.

The change now proposed in bill No. 538 under consideration by your committee has to do with the sentence on the second page of the printed copy of the bill beginning at the eighth line, which in its present shape reads as follows: "If the lawful money reserve of any bank, individual banker or trust company shall be less than the amount required by this section, such bank, individual banker or trust company shall not increase its liability by making any new loans or discount otherwise than by discounting bills of exchange payable on sight, or making any dividends of profits, until the full amount of its lawful money reserve has been restored." As proposed to be changed it would read as follows:

"If the lawful money reserve of any bank, individual banker or trust company shall be less than the amount required by this section, such bank, individual banker or trust company shall be liable to pay and shall pay, into the treasury of this State, to be applied to the current expenses of the banking department, a tax in amount equal to six per centum per annum on the aggregate amount of such deficiency or deficiencies in the reserve below the legal requirement for such bank, individual banker or trust company and said tax shall be paid annually on or before the first day of February in each year for the deficiency or deficiencies during the year ending the preceding thirty-first day of December."

There is no place in the Union where the alleviation coming from this reform would be felt more than right here in New York. Any ease in New York is felt throughout the whole country. The plea is not in behalf of the banks but of the public. It is right and proper for New York to take the lead in a reform of this kind. New York in 1838 passed the general banking law which has moulded the banking system of this country, and some of its principles were incorporated in the present charter of the Bank of England in 1844. The National Bank Act was modeled on the New York law, but the section containing penalties for impaired reserves seems to have originated in Washington.

Reforms are slow, but those which tend to ameliorate the severity of old laws are more popular under a republican form of government than under any other. This is but natural, for the penal laws have been made by the rich and imposed on the public. Under a government controlled by the people, their representatives see to it that there shall be no privileged classes and no oppressive legislation. From the very foundation of our Government the movement for the amelioration of laws has made steady progress. There is, however, always to be met an inertia of public sentiment which must be overcome. Sometimes it takes a revolution or other great upheaval to do it. We read in the Declaration of Independence as follows: "All experience hath shown that mankind are more disposed to suffer, while evils are sufferable, than to right themselves by abolishing the forms to which they are accustomed." This conservatism should not control in any case where the reform is based on right principles and equities, and such it is claimed is the present case.

## A QUARTER OF A CENTURY OF GOLD PAYMENTS.

---

January 1, 1904, completed the operation of a quarter of a century of one of the most important fiscal laws ever placed on the national statute book. This was the law signed by President Grant on January 14, 1875, which went into effect on January 1, 1879, which brought the entire volume of the country's circulation up to the gold level on the latter date, and which has held it up to that line ever since. Like most of the other great enactments of Congress, there was much partisan politics in the movement which led to the passage of the resumption law, as there was also in the conditions which made that statute necessary. These conditions began with the Civil War, which necessitated the use of a much larger volume of money, bank notes and specie, than was in the country at the time. It was estimated that at the beginning of the war there was about \$250,000,000 of gold and silver and \$200,000,000 of bank notes in the country, a fourth of which was in the States in insurrection. The suspension of specie payments by the banks on December 30, 1861, and by the Government a day later, rendered the adoption of additional circulation necessary, and this brought out the legal-tender notes, or greenbacks. Taxation, it was believed, would not furnish all the money which was needed.

On February 25, 1862, President Lincoln signed an act to "authorize the issue of United States notes, and for the redemption or funding thereof, and for funding the floating debt of the United States." Under this act \$150,000,000 of legal-tender notes, afterward popularly known as greenbacks, was emitted. This amount was deemed to be inadequate, as the expenses of the Government in creating and supporting armies and navies at that time was in the neighborhood of \$2,000,000 a day, which expense was, of course, greatly increased by the issue of this irredeemable paper, which immediately went to a discount in terms of gold and silver. These metals, to a large extent, went out of the country or went into hiding in it, and the bank notes and the greenbacks became practically the sole circulation of the country. The greenbacks were legal tender for all dues, public and private, except customs duties and interest on the public debt, both of which were made payable in coin. Another \$150,000,000 of the notes was issued on July 11, 1862, and still another for the same amount was put out on March 3, 1863. Before the last-named date, or on February 25, 1863, the National banking system was established, which added something to the circulation, the National bank notes eventually displacing the State bank issues, which were taxed out of existence just after the war. The largest amount of the greenbacks outstanding at any one time was \$449,000,000, on January 3, 1864.

The Republican party being in control of the Government at the time, it was responsible for the greenback legislation. Not all the Republicans, however, favored it. Justin S. Morrill, Roscoe Conkling, Owen Lovejoy and others opposed it at its first adoption and with them were most of the Democrats. Clement L. Vallandigham and George H. Pendleton taking a conspicuous part against this legislation. On the score of necessity as a war measure this legislation was put through Congress, the bulk of the Republicans voting for it. The intention at the time evidently was to retire the greenbacks as soon as practicable after the drain on the Government for the prosecution of the war should cease. The first and second of the acts provided for the exchange of the legal tenders into bonds on July 1, 1863, but the third of the acts, that of March 3, 1863, took away this option. Of course, this was

not only a violation of the Government's contract with the holder of the notes, but it immediately lowered their value in the markets, sent up the prices of all commodities in terms of this currency, immensely increased the cost of the war and delayed for years the work of resuming gold payments by the Government.

Shortly after the war ended the purpose of most of the Republicans, who were largely in the preponderance in both branches of Congress, to retire the greenbacks began to assert itself, and by an act signed by Johnson on March 12, 1866, a beginning was made in the work of contraction. By this time, however, the pressure of the hard times due to the increase of the supply of most commodities after the disbandment of the armies and the decrease in the demand, created a sentiment which favored the expansion of this currency. Most of the Democrats who had opposed the issue of the greenbacks at the outset as a war measure now championed their retention as a permanent element of the circulation and favored the increase in their volume. Among the Democratic leaders who made this change of base were Pendleton and Vallandigham. The clamor against the reduction of the volume of the notes stopped their retirement temporarily in 1867, and by alternate slight expansions and contractions afterward the amount was reduced to \$346,681,016 on May 31, 1878, when an act was passed stopping all further contraction.

The attitude of each of the great parties as a National organization on the finance question was brought out in 1868 for the first time. In their convention at Chicago in May of that year, in which Grant was nominated the first time, the Republicans declared: "We denounce all forms of repudiation as a National crime; and the National honor requires the payment of the public indebtedness in the uttermost good faith to all creditors, at home and abroad, not only according to the letter, but the spirit of the law under which it was contracted." The Democratic convention, which met in New York on July 4, and which nominated Seymour, demanded that "where the obligations of the Government do not expressly state upon their face, or the law under which they were issued does not provide, that they shall be paid in coin, they ought, in right and in justice, to be paid in the lawful money of the United States." This was the Democratic party's answer to the Republican's challenge of six weeks earlier. Seymour, however, who stood upon that platform, was opposed to that pronouncement. It was the Pendleton element of the party which put that deliverance into the platform, and Pendleton led in the convention as a Presidential aspirant for many ballots. One of the first bills signed by President Grant, which he approved on March 18, 1869, two weeks after he entered office, pledged the faith of the Government to the payment, in coin or its equivalent, of the greenbacks and bonds; to pay the interest of the latter in coin, except where the laws authorizing their issue provided for their payment in other forms of money; and stipulated that the greenbacks should be redeemed in coin at the earliest practicable period. This measure was well named an "act to strengthen the public credit." It sent the value of the Government bonds up, and it diminished the gap between gold and greenbacks.

It was in Grant's second term, however, that the final part of the work of restoring gold and silver to the circulation was accomplished. In April, 1874, a bill was passed which would have increased the volume of the greenbacks, and, of course, to this extent, delay the work of raising them to the gold level. This bill was favored by the West and opposed by the East, most of the Republicans between the Alleghenies and the Pacific siding with the Democrats in favor of it, and many of the Eastern States joining the Republicans in opposition. Great excitement was caused throughout the country at the time, on account of the report that Grant intended to sign the bill. He was a Western man, and many of his party friends in that section were enthusiastically in favor of the measure. The newspapers of the country gave more space to the question than they had done to any other financial issue

which appeared along to that date. Public meetings were held in New York, Boston, Philadelphia, and other towns on the Atlantic seaboard, to urge Grant to veto the bill. All the great financial interests of the United States joined in the propaganda against the measure. Grant vetoed the bill on April 22, 1874, in one of the strongest messages ever emanating from an occupant of the White House.

Grant followed his inflation bill veto of 1874 by some effective work in the same direction. Orally and by letter he urged Conkling, Edmunds, Sherman, Morrill, Jones of Nevada and the other Republican leaders to take immediate steps to bring the currency back to the specie basis, from which it had been separated since the beginning of 1862. Moreover, in his efforts he got some very powerful aid from the Democratic party, which was opposed to his policy. In November, 1874, the Democrats carried the country for the House of Representatives for the first time since Buchanan's election in 1856, and all the Republicans knew that whatever was to be done at all in favor of resumption had to be done in the short session of the existing Congress. Some work was done immediately after Congress met in December, which showed that both the upper and the lower branch can act promptly when the spirit wills it. John Sherman, from the committee on finance, reported a resumption bill to the Senate on December 21, 1874, two weeks after Congress met. It passed that body a day later by a vote of 32 (31 Republicans and 1 Liberal Republican), and it went through the House on January 7, 1875, by 186 (all Republicans) to 98 (78 Democrats and 20 Republicans). It was signed by President Grant on January 14, and went into operation four years later, January 1, 1879.

In the light of after events, it was seen that the enactment of the specie resumption law at that particular moment was providential. A year or two earlier there was a chance that such a measure could not get enough Republican votes to carry it over the combined opposition of the hostile element of the Republicans and the solid body of the Democrats. A few months later the passage would have been impossible, for the Democratic House which entered power then would block the way. The control of the House, which the Democrats secured seven weeks after Grant placed his signature on the resumption law, lasted until Garfield entered office, six years later, in 1881. Democratic hostility to resumption continued to the time it went into operation, in the second half of Hayes' term. In their platform of 1875 the Democrats declared that "We denounce the resumption clause of the act of 1875 and demand its repeal." Tilden, however, the candidate of 1876, was favorable to the general line of legislation represented by the resumption law, and might have vetoed a repeal bill had he been elected. Several attempts were made by the Democrats, who were in control in the House, to repeal the law in 1877 and 1878, but, of course, with the President against them in those years, the effort was vain.

Through a rare piece of good fortune, the man who took the leading part in Congress, John Sherman, in pushing the resumption bill, was the man who, as head of the Treasury, put it in operation. Sherman, immediately on entering office, in March, 1877, in the Hayes cabinet, began his preparation for resumption, and by the time that January 1, 1879, was reached he had gathered \$133,000,000 in gold in the Treasury, \$96,000,000 of which was the proceeds of bond sales under the resumption act, and the remainder was obtained in the revenues. Gold went to a premium, as expressed in the paper currency of the time, immediately after the suspension of specie payments by the Treasury on the last day of December, 1861. The gap between it and currency broadened as the war went on, fluctuating with the vicissitudes of the fortunes of the Union. After a Union defeat, the gap widened, which means that currency went down, as expressed in terms of gold, and gold went up. The highest point reached by gold was on July 11, 1864, when it would have taken \$2.85 in greenbacks or other currency to buy \$1 of the metal. After Appomattox there was a drop in gold, and, with some variations, the gulf between the paper and the metal

gradually narrowed for several years. The public credit act of 1869, as before mentioned, sent greenbacks up a few points and gold down. The resumption law immediately on its enactment in 1875 greatly improved the Government's credit, the average value of \$1 in currency for January, 1875, being 88 cents in gold. The entire gap between the two disappeared by January 1, 1879, and the country's currency, for the first time in eighteen years, went to the gold line without a jar.

The resumption act's salutary effects did not end with the restoration of the currency to the gold line in 1879. The silver inflation was still to appear and present as great a peril as did the greenback inflation. The first of the silver acts, the Bland-Allison law, was passed over the veto of President Hayes on February 28, 1878, ten months before the resumption act went into effect. At that date the value of the pure silver in the dollar was about 90 cents in gold. With some fluctuations this figure declined until the passage of the Sherman bullion deposit law in 1890, when the price of the metal went up for a few weeks, after which the drop came again. At the time when President Cleveland called Congress in extra session in the summer of 1893 to deal with the financial convulsion which was precipitated in that year, the price of the silver in the dollar had dropped to 60 cents. After a hard struggle the purchase clause of the Sherman law was repealed on November 1, 1893, and silver buying by the Government ceased. The decline continued, and the metal has been down below the 40-cent mark recently.

It was after the stoppage of silver purchases, however, that the resumption act resumed its beneficent work. The provision which authorized the Secretary of the Treasury to sell bonds to maintain gold payments (the word coin being interpreted to mean gold) was utilized by Mr. Cleveland to preserve the redemption fund when the silver dilution of the currency and the fear of tariff changes brought on the distrust which depleted the Treasury. Between February 1, 1894, and the same month in 1896, \$262,000,000 of bonds were sold, under which the redemption fund was replenished and the Government's finances kept reasonably safe. One clause of the Sherman law of 1890 recited that it was the "established policy of the United States to maintain the two metals on a parity with each other upon the present legal ratio, or such ratio as may be provided by law." That part of the act of 1890 was not touched by the repeal of the purchase provision in 1893. The principle thus laid down was carried out by President Cleveland in the crisis of 1894-96 by aid of the bond-sale provision of the resumption act, and thus the law which went into operation on January 1, 1879, saved the country's credit in two crises.—CHARLES M. HARVEY, in *St. Louis Globe-Democrat*.

---

A LAND OF NO MONEY.—"I have just returned from eastern Kentucky, where I went to inspect some timber," said L. A. Hotchkins of Norfolk. "My principal operations were in Leslie county, and I was surprised to discover a community in the United States where money is unknown, or practically so. The entire business of this community is done on the barter system. The country storekeepers exchange merchandise for anything and everything the natives have to sell, and ship this motley array of products down to Catlettsburg, where the merchant has it placed in bank to his credit, when he orders more goods, paying for them with check. These merchants usually keep a small amount of money in case it should be required, but the natives, as a rule, do not handle a cent of cash from one year's end to the other. They barter among themselves and with the merchants, and when I bought lands the most of those who sold to me would not accept my money until the merchants assured them that it was genuine. Leslie county is in the heart of the Kentucky mountains, and is very sparsely populated, which accounts for its primitive condition, but it is probably the only section of the United States remaining where the people do not know what money is."—*Lexington Herald*.

## NEW NATIONAL BANKS THAT HAVE RETIRED.

It is four years since the National Banking Act was amended so as to permit National banks to be organized with less than \$50,000 capital, the minimum being reduced to \$25,000. Since March 14, 1900, the date the amended law went into effect, down to March 19, 1904, there have been 1,914 National banks organized, of which 213 were conversions of State banks, 615 reorganizations of State or private banks, and 1,086 primary organizations. The National banks organized since March 14, 1900, classified according to capital, were as follows:

|                              | <i>Number of banks.</i> | <i>Aggregate capital.</i> |
|------------------------------|-------------------------|---------------------------|
| Less than \$50,000 each..... | 1,252                   | \$32,608,000              |
| \$50,000 or over.....        | 662                     | 78,785,000                |
| Total.....                   | 1,914                   | \$111,393,000             |

Of the small banks organized 718 were of primary organization, having had no previous existence. At the time the reduction in the minimum capital was under discussion, the question was raised whether it would not result in the creation of banks for which there was no absolute need, and which would soon succumb to the lack of support.

So far it must be confessed the results have not been such as to justify this apprehension. The failures among these new banks have been few, while the number that have gone into voluntary liquidation bears a very small ratio to the number organized. Only nine new banks went into Receivers' hands and of these only five were banks having less than \$50,000 capital. Forty banks went into voluntary liquidation, and of these eighteen were banks with less than \$50,000 capital each and twenty-two with \$50,000 or more capital. The following table shows the number and capital of the banks organized since March 14, 1900, which have closed up, either through failure or voluntary liquidation:

| <i>CAPITAL OF \$50,000 OR OVER.</i> |                      |                           | <i>CAPITAL LESS THAN \$50,000.</i> |                      |                           |
|-------------------------------------|----------------------|---------------------------|------------------------------------|----------------------|---------------------------|
| <i>Banks.</i>                       | <i>Capital each.</i> | <i>Aggregate capital.</i> | <i>Banks.</i>                      | <i>Capital each.</i> | <i>Aggregate capital.</i> |
| 14.....                             | \$50,000             | \$700,000                 | 17.....                            | \$25,000             | \$425,000                 |
| 1.....                              | 60,000               | 60,000                    | 4.....                             | 30,000               | 120,000                   |
| 2.....                              | 100,000              | 200,000                   | 1.....                             | 35,000               | 35,000                    |
| 4.....                              | 200,000              | 800,000                   | 1.....                             | 40,000               | 40,000                    |
| 1.....                              | 250,000              | 250,000                   |                                    |                      |                           |
| 3.....                              | 500,000              | 1,500,000                 |                                    |                      |                           |
| 1.....                              | 1,500,000            | 1,500,000                 |                                    |                      |                           |
| 26.....                             |                      | \$5,010,000               | 23.....                            |                      | \$620,000                 |

Of the forty-nine banks with an aggregate capital of \$5,630,000 which closed there were twenty-six with a capital of \$50,000 or more each, their aggregate capital being \$5,010,000, and only twenty-three of the smaller banks with an aggregate capital of \$620,000. About one out of fifty-four of the small banks closed, as against one out of twenty-eight of the larger banks.

An investigation of the individual history of these institutions which have retired from business disclosed the interesting fact that the fatalities among the small banks are usually early in their career. The length of existence of the closed banks ranged from twenty days to three years and ten months. The bank which died the quickest was an Ohio bank with a capital of \$200,000, while the bank which survived the

longest was a bank in New York State, and it also had a capital of \$200,000. More than one-half of the small banks which expired lived less than one year and only one bank with \$25,000 capital closed after being in operation three years.

The following table shows the relative longevity of the small and large banks which are under consideration :

| SURVIVED.                             | CAPITAL LESS THAN \$50,000 EACH. |                    | CAPITAL \$50,000 OR OVER. |                    |
|---------------------------------------|----------------------------------|--------------------|---------------------------|--------------------|
|                                       | Banks.                           | Aggregate capital. | Banks.                    | Aggregate capital. |
| Less than six months.....             | 7                                | \$180,000          | 3                         | \$300,000          |
| "    "    one year.....               | 5                                | 185,000            | 1                         | 60,000             |
| "    "    one and a half years.....   | 4                                | 110,000            | 3                         | 600,000            |
| "    "    two years.....              | 2                                | 55,000             | 6                         | 2,500,000          |
| "    "    two and a half years.....   | 3                                | 90,000             | 8                         | 500,000            |

Eliminating the banks which expired during the first year of their existence, the casualties among the small banks during the past four years have been very much less than might reasonably have been expected. It must be admitted that four years is too short a period to measure the stability of a banking institution, and when it is considered that very many of the new banks have been organized a much shorter time than four years, some of them not even four weeks, it will be apparent that the question of the ability of the small National banks to sustain their existence is not yet settled by experience.

In the organization of small banks Texas leads with 149 of which six have closed. Minnesota is second with 120 new small banks and not a single one closed. In Pennsylvania 100 small banks have been organized, two of which have closed. The record for some of the other States and Territories as regards the organization of small banks is as follows: Oklahoma, seventy-six organized four closed; Illinois, seventy four organized one closed; Iowa, seventy-three organized one closed; Indian Territory, seventy two organized one closed; Ohio, sixty-three organized one closed; North Dakota, fifty-six organized none closed; Indiana, forty organized two closed; Nebraska, forty organized none closed; Kansas, thirty-eight organized none closed; South Dakota, thirty-three organized none closed. The only other States in which newly-organized National banks with less than \$50,000 capital have closed are: Virginia, Arkansas, Tennessee, Oregon and Idaho, each one bank.

A CRITICISM OF ORGANIZED LABOR.—We have had somewhat overmuch of the organization of labor. It has long been preached to us as a panacea for tyrannies and iniquities of all sorts; and now we have got it, and it bids fair to be the most galling tyranny and the biggest iniquity of all. Organization of labor means the submission of the many workers to the leadership of the few. It means, to be sure, the rule of majorities, but often of majorities that cannot think and are controlled and driven by a few energetic spirits. No doubt its legitimate ends are worthy and its legitimate uses vastly important. No doubt it has come to stay; but it has not come to override law, flout justice, and put shackles on arms that should be free. We seem to have been so prosperous that we could better afford to bribe than to resist. Our time has been so valuable that we could not spare enough of it to enforce the laws, and especially those laws which should protect every man in earning his bread in any honest way that suits him.—*Scribner's Magazine*.

## MONEY AND BANKING IN CHINA.

[From U. S. Monthly Summary of Commerce and Finance.]

The money of China is uncertain as to quantity and quality. No accurate estimate has been made of the amount of money in circulation in the Empire, while no accurate statement can be made to-day of what its value will be to-morrow. Based upon silver, its value fluctuates with the changes in the market price of silver. The copper "cash," valued at about one-tenth of a cent, is the actual circulating medium, while the tael is the nominal standard for larger sums, it being merely a given weight of silver and not a coin. Actual silver circulates in two forms, the "dollar" and the "sycee." The dollar was originally the Mexican dollar, and became a popular and generally accepted form of currency wherever obtained. So convenient was it that large quantities were imported for use as currency. More recently, however, mints for the coinage of "dollars" purporting to be of weight and fineness equal to Mexican coin have been established, not by the central Government, but by the authorities of the various provinces, and the result is that the rivalry between these provincial mints has reduced the weight and fineness of the "dollars" which they issue until the provincial silver "dollars" are looked upon with distrust. Additional mints, however, are being established, the machinery for them being from the United States. Some half dozen of the cities of China have now their mints for the coinage of "dollars," and work is in progress upon local mints in other cities; so that by the end of the present year, according to a recent issue of the "North China Daily News," at least ten different kinds of silver coins purporting to be "dollars" will be upon the market. In addition to this uncertainty, may be pointed out the fact that the "tael" differs in various cities and provinces, the weight of silver recognized as a tael being greater at some points than at others. The consequence is that while the haikwan (or customs) tael was worth on January 1, 1904, 69.8 cents (gold), the Amoy tael was worth but 68.6 cents, the Canton tael 68.4 cents, the Chinkiang tael 67 cents, the Ningpo tael 66 cents, the Chefoo tael 65.6 cents, the Hankow tael 64.2 cents, the Foochow tael 63.5 cents, and the Shanghai tael 62.7 cents. Even the "sycee," which is an actual quantity of silver cast in the form of a shoe with the weight written upon it in Chinese characters, is somewhat uncertain as to its value, both by reason of the constant fluctuation in the price of the silver which it contains and the uncertainty as to the fineness of the silver utilized.

All efforts to learn the exact fineness of the standard silver used in the sycee have been unsuccessful, though the estimates put the rate at ninety-seven one-hundredths, which is considerably in excess of the American coin, which is ninety one-hundredths fine. The sycee is merely an indefinite quantity of silver cast in the form of a woman's shoe, its actual weight being determined by agents or officers appointed by the merchants to weigh the sycees, accuracy and integrity on their part being insured by actual physical decapitation of those who are found dishonest. Even the "cash," a copper and zinc coin about the size of our 25-cent piece, having a square hole in the center for convenience in stringing quantities of them together, varies greatly both in fineness and weight, in some cases 1,000 of them being equal to a "dollar," while others nearly 2,000 are required to equal a "dollar." Gold coin is practically unknown in China, no coins of this metal being made at the mints, and gold coins of other countries have seldom, if ever, circulated, though the value of the metal is fully recognized, and gold, whether in coin or bulk, proves a medium of exchange upon determination of its weight and fineness when occasion requires.

The uncertainty as to the quality and quantity of the metals contained in the various coins and measures of weight makes an attempt to indicate the relative value of the monetary units difficult and somewhat uncertain, though a recent official (consular) statement puts the relative values as follows:

|                  |                                      |
|------------------|--------------------------------------|
| 10 cash .....    | = 1 conderin.                        |
| 10 conderin..... | = 1 mace.                            |
| 10 mace .....    | = 1 tael.                            |
| 1 tael.....      | = 1½ ounces (avoirdupois) of silver. |

(Value of haikwan tael on January 1, 1904, 69.8 cents.)

Mexican dollars and local dollars thus equal about three-fourths of one haikwan tael in value, though no official relationship exists, save in the weight and fineness of metal in the dollars compared with the standard tael.

All customs duties are collected in what is known as the "halkwan tael," which has a somewhat higher value than the tael standard accepted in the respective cities.

The paper money is under even less regulation than the metallic. There are few banks of issue in China, and those mainly located at Peking. These issue notes as low as ten cents in value, but these have usually only a local circulation. Paper money was issued in China more than two thousand years ago, and its use continued in a greater or less degree until about 1450, when it was suspended and has been but recently resumed, and that in but small quantities.

Chinese banks, especially those at Peking and the discount banks in the cities of the provinces, are under governmental supervision by reason of the fact that they perform the functions of a treasury for the Government, and therefore have a high standing with the business public. Foreign interests in the banking line are represented in nearly all cities where foreigners reside or visit, agents representing a number of great banking establishments being found in all cities of this class. The Hongkong and Shanghai Banking Corporation, incorporated in 1864, has a capital of \$10,000,000 and has its representatives in nearly all the treaty ports and some of the other important cities of China, while the Imperial Bank of China, the Mercantile National Bank of India, the Russian Bank of Foreign Trade, the Bank of China, and Japan, the Deutsch-Asiatische Bank, and the Central Bank of India, Australia, and China also have agents and in some cases regularly established banking houses in many of the more important cities. Exchange quotations are published daily by bankers and brokers, and business transactions between any of the treaty ports and the great financial circles of America or Europe are thus rendered practicable. Business between the various treaty ports may thus readily be carried on through the bankers' agents, and transactions between these points, in small sums, are facilitated by a postal money-order system which was put in operation by the Government about a year since, by which sums from \$1 upward may be transmitted on payment of a fee at the rate of about two cents per dollar, each remittance being limited to \$10, but there is no limit as to the number of remittances issuable to the same applicant.

---

**PERMITS NATIONAL BANKS TO INVEST IN REAL ESTATE.**—The full text of the Lewis' bill reported by the Banking and Currency Committee reads: "That the seventh sub-division of section fifty-one hundred and thirty-six, revised statutes of the United States be, and the same is hereby, amended to read as follows:

Seventh—To exercise by its board of directors or duly authorized officers or agents, subject to law, all such incidental powers as shall be necessary to carry on the business of banking; by discounting and negotiating promissory notes, drafts, bills of exchange, and other evidences of debt; by receiving deposits, by buying and selling exchange, coin and bullion; by loaning money on personal security; by loaning money upon notes, bonds, or other evidences of debt secured by mortgages, or other instruments of security, on unincumbered real estate situated in the State, Territory or district, where such association is located, worth exclusive of buildings, on conservative market valuation, double the amount of the loan thereon; provided, however, that not more than twenty-five per centum of the capital of such association shall at any time be invested in such real estate securities; and by obtaining, issuing and circulating notes according to the provisions of this title; but no association shall transact any business except such as is incidental and necessarily preliminary to its organization until it has been authorized by the Comptroller of the Currency to commence the business of banking."

---

**A USEFUL LIBRARY.**—W. T. Jackman, of the University of Vermont, Burlington, Vt., writes as follows under date of March 22:

"I send you herewith money order in renewal of my subscription to **THE BANKERS' MAGAZINE**, so that I may not miss any of the numbers. To have these bound in good form and kept for permanent reference is to have a library of useful material which could not be obtained in any other way. I trust you will accept this tribute of praise for your excellent publication, each number of which is replete with full information and suggestions which are put in a very interesting way. I use the **MAGAZINE** constantly in my classes here, and so highly do I value it that I could hardly get along without it. With best wishes for your success, I am,

Yours very truly,  
W. T. JACKMAN."

## BANKING AND FINANCIAL NEWS.

This Department includes a complete list of NEW NATIONAL BANKS (furnished by the Comptroller of the Currency), STATE AND PRIVATE BANKS, CHANGES IN OFFICERS, DISSOLUTIONS AND FAILURES, etc., under their proper State heads for easy reference.

### NEW YORK CITY.

—Messrs. Hallgarten & Co. will move shortly from their present offices at 74 Broadway to the Hanover Bank Building, at Pine and Nassau streets, where they have taken a long lease of the entire third floor.

—The Bank of New York, whose constitution was drawn by Alexander Hamilton, celebrated its 120th anniversary on March 15.

—A movement is under way to organize a new National bank in this city to be known as the McKinley National Bank, with a capital of \$200,000 and a surplus of \$100,000. Among those interested are Willis S. Paine, Robert J. Hoguet, William Hanhart, Howard P. Townsley and Eugene S. Schaick.

—Stockholders of the Mechanics' National Bank and the Leather Manufacturers' National Bank have been informed of the detailed plans for the merger which has been under consideration for some time.

In brief the plan is that the Mechanics' Bank is to absorb the business of the Leather Manufacturers' Bank, the latter to go into liquidation. The capital of the Mechanics' Bank is to be increased from \$2,000,000 to \$3,000,000 for the purpose of effecting the consolidation. With this increase of \$1,000,000 the \$600,000 capital stock of the Leather Manufacturers' National is to be acquired, and of the balance of \$400,000 new stock \$90,000 is available for subscription by stockholders of the Leather Manufacturers' National Bank and the balance for subscription by stockholders of the Mechanics' National, to the extent of fifteen per cent. of holdings.

It has been generally understood that Gates W. McGarrah will become the President of the enlarged bank. Mr. McGarrah is now President of the Leather Manufacturers' Bank. The board of directors of the Leather Manufacturers' Bank will go over as a body into the directorate of the Mechanics' National when the merger takes effect. It is also likely that the present office of the Mechanics' Bank will be utilized.

—The Italian-American Trust Co. is in process of organization with \$500,000 capital and \$50,000 paid-in surplus. Emanuel Gerli, silk importer, 52 Greene street, is mentioned for President of the new institution.

—The Mechanics' Bank, of Brooklyn, will build a ten-story addition to its present building, making it one of the largest and finest bank and office buildings in Brooklyn. The new building will have 140 feet front on both Court and Fulton streets.

—It is reported that the committee of depositors which has been considering propositions to replace the Bank of Staten Island has decided in favor of the offer of J. W. Place & Co., who will finance a new National bank, taking the capital stock not subscribed for locally. The people having accounts with the Bank of Staten Island will be dealt with so that they can realize a part of their claims, and those owing the bank will be enabled to adjust matters. The new bank will be known as the Richmond Borough National Bank, and will be capitalized at \$100,000. It will probably occupy the building owned by the Bank of Staten Island, and eventually will purchase the property.

—The New York Produce Exchange Bank, at present located in the Produce Exchange Building, some time ago acquired the property at 10 Broadway and more recently bought No. 12 also and will tear down both buildings and erect on the site a modern office building, the bank occupying the main floor.

—Oscar L. Gubelman, third Vice-President of the Commercial Trust Co. of New Jersey, Jersey City, recently resigned that position to become third Vice-President of the Guaranty Trust Co., of this city. Mr. Gubelman had been connected with the Commercial Trust Co. since its organization, having been at first Secretary and Treasurer.

—John C. Van Cleef, Assistant Cashier of the National Park Bank, has been elected Vice-President of the Mutual Bank, in place of A. H. Wiggin, who recently resigned as Vice-President of the National Park Bank to become Vice-President of the Chase National Bank. Mr. Van Cleef has long been in charge of the credit department of the National Park Bank, and is well known for his work in that connection.

—Control of the Federal Bank was recently acquired by William M. Woods, formerly Vice-President of the Central National Bank, and Robert Doolittle, who was for many years connected with the Importers and Traders' National Bank. Mr. Woods has been elected President of the Federal Bank and Mr. Doolittle, Cashier, all the directors and officers having resigned, except Assistant Cashier Geo. F. Frost, whose services will be retained by the new management.

—Negotiations have just been completed whereby New York Chapter of the American Institute of Bank Clerks will hereafter conduct its meetings and maintain its headquarters in the building of the University of the City of New York, at University Square. Early in the season the chapter established rooms for itself at 196 Fifth avenue, and, through the generosity of the bank officers of New York city, representing some of the most prominent bankers in the United States, succeeded in furnishing them not only in a manner which would be of practical service to the members, but in a way which might truthfully be termed as luxurious. The experiment proved highly successful, as the rooms have been maintained to the entire satisfaction of the members, and have helped to make the chapter a popular organization among the bank clerks of the city. They enabled the organization to work out the lines which the governors have had in mind for some time in respect to the establishment of a financial library accessible to the students of banking, and many valuable works have been added to the shelves since the rooms were opened.

The success with which the first venture was met is what suggested the arrangements just made with the University of the City of New York, and the chapter feels that it is exceedingly fortunate in having the assistance of such a valuable institution in the conduct of its work.

The rooms of the New York University will be fitted up with a library and reading room, special committee rooms, and a large lecture room, and with the furniture and fixtures which the chapter now possesses, in addition to that which they anticipate procuring, these rooms will be completely furnished and equipped. In addition to the natural advantages which the rooms will offer, the chapter has made a special arrangement with the University whereby its members, by presenting their membership cards showing that they are in good standing, may secure very material reductions in the tuition fees of the University School of Commerce, Accounts and Finance. The members will in addition be afforded the use of its extensive library, maintained in the building, on the subjects of Commerce, Accounts and Finance, as well as the use of the Law Library upon special application.

These valuable opportunities, it is believed, will be eagerly sought after by the ambitious bank clerks of the city, and will result in adding materially to the membership of the chapter. It has been the ambition of New York Chapter to conduct its work along strictly practical lines, and this new move is but one of the evidences of the successful carrying out of this policy. Members from out-of-town chapters visiting New York will be afforded the use of the new rooms as their headquarters, and all institute members are cordially invited to make use of them whenever they are in the city.

It is not the intention of the governing body of the chapter to allow their past success to interfere with the further promotion of ideas which may come up from time to time for the furthering of institute work, but as all active men in the work are enthusiastic and progressive, the desire is manifest to promote every new idea that has for its object the benefiting of the bank clerks in their locality, and the upbuilding of the American Institute of Bank Clerks.

—Mention was made in the March issue of the *MAGAZINE* of the merger of the Continental Trust Co. with the New York Security and Trust Co., the last-named being the succeeding institution. The complete list of officers and trustees follows:

President, Otto T. Bannard; first Vice-President, Osborn W. Bright; second Vice-President, Willard V. King; third Vice-President, Alexander S. Webb, Jr.; Secretary, Henry E. Ahern; Treasurer, Mortimer N. Buckner; Assistant Secretary, Frederick J. Horne; second Assistant Secretary, Herbert W. Morse.

Trustees: Otto T. Bannard, S. Reading Bertron, James A. Blair, Osborn W. Bright, Robert W. de Forest, John B. Dennis, Charles S. Fairchild, Marshall Field, Charles W. Harkness, James J. Hill, F. N. Hoffstot, Frederic B. Jennings, Walter Jennings, Willard V. King, Woodbury Langdon, John A. McCall, Gordon Macdonald, John J. Mitchell, Charles Parsons, John S. Phipps, Geo. W. Perkins, E. Parmelee Prentice, Edmund D. Randolph, Norman B. Ream, B. Aymar Sands, John W. Sterling, James Stillman, Myles Tierney, P. A. Valentine, Alexander S. Webb, Jr.

## NEW ENGLAND STATES.

**Boston.**—Lucius W. Conant, who has been connected with the Merchants' National Bank for some time, was recently appointed Assistant Cashier of that institution.

**New Hampshire Bank Commissioner.**—Col. Richard M. Scammon has been appointed a Bank Commissioner, to fill out the term of John Hatch, deceased,

## MIDDLE STATES.

**Baltimore.**—The Federal Savings Bank has been absorbed by the Hopkins Savings Bank, the business of the two institutions being continued under the title of the latter.

—Although the building of the United States Fidelity and Casualty Company was destroyed by the late fire, the financial position of the company was not in the least affected. Its securities were in safe-deposit vaults and were uninjured, while the building and contents were covered by insurance.

The company has remodelled a three-story building at 16 West Saratoga street, and there was practically no interruption of business.

—The Comptroller of the Currency has appointed Downie D. Muir National bank examiner for Maryland, in place of Walter A. Mason, elected President of the Commercial and Farmers' National Bank.

Mr. Mason is thirty-two years old and is the youngest National bank President in Baltimore. His selection was influenced by his work in the rehabilitation of the bank.

**Philadelphia**—Henry C. Stroup, who had been connected with the Farmers and Mechanics' National Bank for fifty years, recently retired from the office of President, and was succeeded by Howard W. Lewis, who was formerly Vice-President and Cashier. Mr. Stroup entered the bank in March, 1854, beginning as a general assistant. He became President in 1892, having previously served as Cashier for many years.

—Large mercantile interests are reported to be organizing a new State bank with \$200,000 capital and \$50,000 paid-in surplus. Isaac Blum, president of the Blum Co., importers, is one of the prime movers in the enterprise.

**Trust Company Reserves**—A bill is pending in the New York Legislature, introduced by T. F. Mathews, providing that trust companies shall keep the same reserve as banks and individual bankers—fifteen per cent. in New York and ten per cent. elsewhere in the State.

## SOUTHERN STATES.

**New Orleans.**—The Commercial National Bank is now doing business in the new Commercial Bank Building, corner of Carondelet and Common streets.

**Birmingham, Ala.**—The Citizens' Savings Bank and Trust Company opened for business here March 1 with \$50,000 capital. It will do a Savings and trust business, not soliciting commercial accounts. The company will also act as broker and agent in placing high-class commercial paper, stocks, bonds and mortgage loans. Officers are: H. H. Mayberry, President; B. F. Roden, Vice-President; J. B. Cobbs, Treasurer; C. G. Davidson, Secretary.

**West Virginia Bankers' Association.**—The eleventh annual convention of the West Virginia Bankers' Association will be held at Huntington, West Va., June 8 and 9.

**Galveston, Tex.**—Messrs. A. A. Finck & Co. have issued a booklet entitled "Galveston in a Nutshell," which gives a concise yet complete description of the city's varied attractions and its commercial and industrial establishments. Among the many illustrations are several views of the seawall now being built to protect the city from the possibility of an inundation such as occurred in September, 1900. This wall is over three miles long, is sixteen feet wide at the base and five feet wide at the top.

**Greenwood, Miss.**—On May 9 the Bank of Greenwood will enter the National banking system as the First National Bank of Greenwood with \$250,000 capital and \$30,000 surplus. E. R. McShane will be President, A. W. McKimbrough, Vice-President, W. T. Loggins, Cashier and A. R. Bew, Assistant Cashier.

## WESTERN STATES.

**Cincinnati.**—The Third National Bank has issued a handsome booklet showing both exterior and interior views of its new building, which was occupied for the first time on October 28, last, and is used exclusively by the bank. Both in point of construction and equipment, the new building is a model of taste, solidity and convenience.

—At a meeting of the board of directors of the National Lafayette Bank on March 10, Vice-President Stephen R. Burton was elected President to succeed the late W. A. Goodman. Mr. Burton has practically had the management of the bank for several years, and is a banker of recognized ability.

**Akron, Ohio.**—The Second National Bank and the Citizens' National Bank were consolidated on March 1, the succeeding bank being known as the Second National Bank, which is one of the oldest here. Its capital is \$350,000. George T. Perkins, formerly President of the Second National Bank, retired and was succeeded by Henry Robinson, who was President of the Citizens' National Bank.

**National Bank Resumes.**—The Third National Bank, of Dundee, Ill., which was placed in charge of a Receiver on November 23, 1903, was authorized on February 29 to resume business.

**Cleveland, Ohio.**—The Cleveland Trust Co., which has been doing some clever advertising lately showing the possibilities of the "pennies that Jack saved," has issued an illustrated booklet showing the company's principal offices, also a number of branches. The company has a capital and surplus of nearly \$3,000,000, assets amounting to \$21,000,000, and over 38,000 depositors.

—It is announced that an agreement has been reached whereby the Citizens' Savings and Trust Co. will absorb the Prudential Trust Co., capitalized at \$600,000 and having \$1,800,000 deposits. The consolidation will give the Citizens' Savings and Trust Co. deposits amounting to \$30,500,000, exclusive of \$7,000,000 in the trust department.

#### PACIFIC SLOPE.

**Los Angeles, Cal.**—At the regular meeting of the board of directors of the Southwestern National Bank, held March 16, H. B. Kay and E. D. Elliott were appointed Assistant Cashiers.

Mr. Kay has been connected with the bank ever since its organization, and Mr. Elliott had been receiving teller of the Citizens' National Bank, of Los Angeles, for the past three years. Both are young men and well known in local business circles.

---

#### Failures and Suspensions.

**Maryland.**—On March 21 Receivers were appointed for the Miners and Merchants' Savings Bank of Lonaconing, which had \$300,000 on deposit. The failure was consequent on that of the City Trust and Banking Co., of Baltimore, which organized the Lonaconing institution.

**Massachusetts.**—The Union Trust Co., of Boston, was closed by the Savings Bank Commissioners March 31. It had \$100,000 capital and about \$1,338,000 deposits. There having been heavy withdrawals of late and inability to realize on securities fast enough to meet these, the suspension resulted. The company was organized in 1888.

**Ohio.**—The Federal Trust Co., of Cleveland, made an assignment March 31 to the Guardian Trust Co., which, it is said, will pay the depositors of the failed institution. The assets of the Federal Trust Co. are reported at approximately \$3,000,000, and deposits about \$1,000,000. An officer of the company was reported short in his accounts about \$20,000, and this hastened the suspension.

---

**LAWS RELATING TO COMMERCIAL PAPER.**—David H. G. Penny, Assistant Cashier of the New York National Exchange Bank, has compiled the laws of the various States relating to interest rates, holidays and maturity of commercial paper. This information is printed on a card, and maps of the States are given, showing the maturity laws at a glance, and the other information is also condensed in a form easy for reference. It is a useful compilation for banks and dealers in commercial paper.

---

**PANAMA GOLD STANDARD.**—According to a decree of the convention published March 14, the monetary unit of the republic after December 31 next will be the gold dollar of the same dimensions and weight, by law, as the United States dollar. The silver currency now in circulation will be exchanged at the rate of \$100 in gold for \$225 in silver.

---

**AN OPTIMISTIC VIEW.**—The lesson which I have learned in life, which is impressed upon me daily, and more deeply as I grow old, is the lesson of good will and good hope. I believe that to-day is better than yesterday, and that to-morrow will be better than to-day. I believe that in spite of so many errors and wrongs, and even crimes, my countrymen of all classes desire what is good, and not what is evil. —"Autobiography of Seventy Years," *Geo. F. Hour.*

## NEW BANKS, CHANGES IN OFFICERS, ETC.

### NEW NATIONAL BANKS.

The Comptroller of the Currency furnishes the following statement of new National banks organized since our last report.

#### APPLICATIONS TO ORGANIZE NATIONAL BANKS APPROVED.

The following notices of intention to organize National banks have been approved by the Comptroller of the Currency since last advice:

- First National Bank, Amesville, Ohio; by S. L. Angle, et al.  
First National Bank, Manchester, Conn.; by J. W. Hale, et al.  
First National Bank, Iredell, Texas; by J. W. Rudasill, et al.  
First National Bank, Somerset, Ohio; by John C. Saner, et al.  
First National Bank, Mansfield, Texas; by W. G. Turner, et al.  
First National Bank, Leetsdale, Pa.; by Isaac Jackson, et al.  
Farmers and Merchants' National Bank, Grandview, Tex.; by O. L. Wilkison, et al.  
Fredonia National Bank, Fredonia, Kans.; by C. A. Long, et al.  
First National Bank, Fairchild, Wis.; by Wm. F. Hood, et al.  
Storm Lake National Bank, Storm Lake, Iowa; by A. H. Keller, et al.  
Danvers National Bank, Danvers, Mass.; by Gilbert A. Tapley, et al.  
First National Bank, Elgin, Minn.; by Theodore Wold, et al.  
First National Bank, Dunn, N. C.; by Will H. McDonald, et al.  
Imperial National Bank, Imperial, Cal.; by A. W. Wohlford, et al.  
First National Bank, Englishtown, N. J.; by T. P. Burttt, et al.  
First National Bank, Bellwood, Pa.; by C. A. Patterson, et al.  
Swarthmore National Bank, Swarthmore, Pa.; by Arthur H. Tomlinson, et al.

---

**NEW CORPORATIONS FORMED IN GERMANY IN 1903.**—During the past year the number of new corporations formed in Germany has again decreased, showing a steady decrease since the year 1899, when 364 corporations were formed. In 1900, there were 261; in 1901, 158; in 1902, 87; and in 1903, but 84.—*Walter Schumann, Consul, Mainz, Germany.*

**A FORGETFUL PAIR.**—Bookkeeper—I had to confess to the boss to-day that I had forgotten to post my books.

Clerk—Phew! I'll bet he jumped all over you.

Bookkeeper—No; as soon as I told him he said: "Gee whizz! That reminds me. I forgot to post the letters my wife gave me yesterday." So he forgot all about me.—*Philadelphia Press.*

# MONEY, TRADE AND INVESTMENTS.

## A REVIEW OF THE FINANCIAL SITUATION.

---

NEW YORK, April 2, 1904.

THE DECISION IN THE NORTHERN SECURITIES CASE by the United States Supreme Court, rendered on March 14, was the event around which revolved the most important influences affecting financial affairs last month. The Northern Securities Company was formed as a "holding company" in November, 1901, for the purpose of taking control of the stock of the Northern Pacific and the Great Northern Railroad companies, which had jointly purchased the Chicago, Burlington and Quincy Railroad. The avowed object of the organizers of the Northern Securities Company was to prevent ruinous competition between the two rival trans-continental lines and to prevent control of the properties falling into the hands of inimical interests.

The Government took the ground that the organization of a company for such a purpose was in violation of the Sherman Anti-Trust Act, which declares that any combination in restraint of trade or commerce among the several States or with foreign countries is illegal. The decision of the United States Supreme Court sustains this contention. The decision, however, is a divided one, five of the judges, Harlan, Brewer, Brown, McKenna and Day, deciding in favor of the Government, and four: Chief Justice Fuller and Judges White, Peckham and Holmes, dissenting.

While the decision calls for the dissolution of the Northern Securities Company, and steps have already been taken to comply with the requirement, a reading of the various opinions of the justices leads to the conclusion that the Court will place no limitation upon the right of individuals to purchase stock of competing railroads. The popular view as to the scope of the decision may be inferred from the substantial advance in the prices of railroad securities since the decision was rendered. Prior to the announcement of the decision the stock market had fallen into the very depths of stagnation. On March 10 only 74,000 shares of stock were traded in, the smallest day's sales recorded in a number of years. On March 22 and 23 the daily sales exceeded 1,000,000 shares. Prices also advanced late in the month although not reaching the point touched earlier in the year.

Another event which was accepted as portending the removal of an unfavorable influence in the stock market, was the collapse in the cotton "corner." With it came the failure of Daniel J. Sully & Co. on March 18, that firm having been for a long time the leading promoters of the speculative advance in the price of cotton. The influence of such a speculation as has been witnessed in that staple is usually of an unfavorable character, and its elimination in this instance it is believed will tend to the development of greater confidence in financial circles. That there was a legitimate basis for at least a portion of the advance in cotton in the past year was made evident by the final report of the Census Bureau issued last month, which makes the total yield 10,014,454 bales, a considerable decline from previous years. But even this is much larger than the estimates made by those who were manipulating the price of cotton.

The report of the Bureau of Statistics for February shows that the export movement of cotton has fallen off. Only 209,494,145 pounds were exported in February as compared with 336,796,190 pounds in January and 627,863,986 pounds in November last. The larger price obtained for cotton, however, has made the decrease in

value much less than that in quantity. The average export price in February was 14.6 cents per pound, comparing with 13.8 cents in January, 12.4 cents in December, 10.8 cents in November, 10.1 cents in October and 9.3 cents in February, 1903. But the total value of cotton exports in February last was nearly \$16,000,000 less than in January and \$42,000,000 less than in December last.

The decline in the movement of cotton, which of course is to be expected at this season of the year, although last year the volume of exports continued large until April 1, is largely responsible for the heavy falling off shown in the total export trade. The exports of merchandise in February were valued at \$118,877,762 as compared with \$174,819,566 in December, a decrease of nearly \$56,000,000. Of this loss cotton contributed about \$42,000,000, breadstuffs, \$5,000,000, and provisions, \$2,000,000.

While exports have fallen off, imports of merchandise show an increase, the total for February being \$98,788,721. This is the largest total ever recorded for that month, and has never been exceeded in any month excepting April, 1897, when the imports owing to pending tariff legislation reached \$101,000,000, December, 1902, when they were \$94,000,000, and March, 1903, when they were \$96,000,000. Although the imports are large there is still a large excess of exports, \$30,000,000, which is quite close to the average monthly excess for the eight months of the current fiscal year.

As regards the future of our export trade it may be assumed that cotton and grain will not for some time to come play a very important part. The cotton season is about at an end, while from the Government crop report recently issued it is evident that the supply of wheat is not large. The estimated amount of wheat in farmers' hands on March 1 is 132,600,000 bushels, a decrease of 81,447,000 bushels compared with a year ago, and the smallest since 1898 excepting 1901. Only 20.8 per cent. of last years' crop is in farmers' hands compared with 24.5 per cent. of the crop of 1902 held on March 1, 1903.

The corn in farmers' hands is estimated at 839,000,000 bushels or 37.4 per cent. of last year's crop. A year ago there were 1,050,652,000 bushels or 41.6 per cent. of the previous year's crop. Of oats there are 273,700,000 bushels or 34.9 per cent. held as compared with 365,000,000 bushels or 36.9 per cent. in 1903.

The exports of wheat and corn have been very small recently and considering the present amount still held by farmers are not likely to increase. In the following table the supply of wheat and corn on March 1 and the exports for the eight months ended March 1 yearly since 1897 are shown :

| YEAR.     | WHEAT.                                |                                                 | CORN.                                 |                                                 |
|-----------|---------------------------------------|-------------------------------------------------|---------------------------------------|-------------------------------------------------|
|           | <i>In farmers' hands<br/>March 1.</i> | <i>Exports.<br/>8 months ended<br/>March 1.</i> | <i>In farmers' hands<br/>March 1.</i> | <i>Exports.<br/>8 months ended<br/>March 1.</i> |
|           | Bushels.                              | Bushels.                                        | Bushels.                              | Bushels.                                        |
| 1897..... | 88,149,000                            | 64,806,079                                      | 1,164,000,000                         | 110,446,968                                     |

| 1899..... | 196,056,000                           | 106,807,800                                     | 800,500,000                           | 111,683,166                                     |
| 1900..... | 158,700,000                           | 69,796,950                                      | 773,730,000                           | 145,040,484                                     |
| 1901..... | 128,100,000                           | 77,471,577                                      | 776,200,000                           | 131,600,602                                     |
| 1902..... | 173,703,000                           | 117,511,121                                     | 448,457,000                           | 22,918,875                                      |
| 1903..... | 164,047,000                           | 88,064,735                                      | 1,050,652,000                         | 36,745,324                                      |
| 1904..... | 132,600,000                           | 40,673,275                                      | 839,000,000                           | 41,501,587                                      |

The publication last month of the annual report of the United States Steel Corporation for the calendar year 1903 gave conclusive evidence of the necessity which caused that corporation to pass its dividend on the common stock last year. The net earnings were \$83,675,787 against \$108,534,374 in 1902, a decrease of \$29,511,034 or

more than 35 per cent. After deducting interest and sinking-fund appropriations the balance of profits was \$60,795,490 against \$90,306,524 in 1902, a decrease of \$29,511,034 or nearly 50 per cent. The corporation last year charged off for depreciation in inventory valuations and for the adjustment of sundry accounts \$5,378,838 which left as surplus applicable to dividends \$55,416,652. After paying 7 per cent. on the preferred stock and 2½ per cent. on the common stock the surplus for the year was \$12,304,916 as compared with \$34,253,657 in the previous year, a decrease of \$21,948,741.

While a surplus of \$12,304,916 is thus shown for the year, the surplus at the close of the year is more than \$11,000,000 less than was reported a year ago. The decrease is accounted for as follows:

|                                                                      |            |              |
|----------------------------------------------------------------------|------------|--------------|
| Surplus December 31, 1902.....                                       |            | \$77,874,597 |
| Surplus earned in 1903.....                                          |            | 12,304,916   |
| Total .....                                                          |            | \$90,179,513 |
| Less-adjustments in sundry accounts.....                             | \$48,703   |              |
| Expense, conversion preferred stock and sale of bonds...             | 6,800,000  |              |
| Charged-off for construction and payment of capital liabilities..... | 17,234,128 | 24,082,831   |
| Surplus December 31, 1903.....                                       |            | \$66,096,682 |

The surplus is now \$66,096,682 as against \$77,874,597 a year ago. The statement reflects the unfortunate change which occurred in the iron and steel industry last year but from which it is now rapidly recovering. The decrease in the profits of the United States Steel Corporation, as shown by the quarterly statements, was of a striking character particularly in the last three months of 1903. The profits for each quarter since the corporation began operations were:

| QUARTER ENDING    | 1901.        | 1902.        | 1903.        |
|-------------------|--------------|--------------|--------------|
| March 31.....     |              | \$16,700,221 | \$14,591,989 |
| June 30.....      | \$19,907,277 | 26,742,278   | 23,987,960   |
| September 30..... | 20,063,626   | 25,849,818   | 19,684,774   |
| December 31.....  | 20,629,206   | 21,014,208   | 2,230,776    |

A drop from nearly \$24,000,000 profits in the second quarter of 1903 to only about \$2,000,000 in the last quarter would seem to be an exceptional experience rarely to be encountered. From what is known of the general improvement which has since occurred in the iron trade, more favorable results may be expected in future statements of the corporation.

As to the iron trade there has been a very great change in conditions, and that for the better. In February the United States Steel Corporation's plants produced 756,230 tons as compared with 502,994 tons in January and 406,730 tons in December. The maximum product was 1,037,325 tons in May, 1903. The weekly production of pig iron is again increasing rapidly. On March 1 it was 318,223 tons as against 194,558 tons two months ago. On June 1, when the output was largest, the weekly production was 398,189 tons. There has also been an advance in prices for iron products which seems to be significant of a material improvement.

General conditions in the business world are taking on a better tone, and while conservatism still rules investors are undoubtedly regaining confidence. Stock Exchange transactions in March were considerably larger than in February, although not equal to those of March last year. The sales of stocks aggregated about 11,500,000 shares, an increase compared with February of 3,000,000 shares. Transactions in bonds amounted to nearly \$47,000,000, an increase of \$11,000,000.

One fact of some significance is an increase in the authorized capitalization of new companies in the Eastern States. It is estimated that this new capital was \$88,000,000 in March, an increase of nearly \$30,000,000 over the amount reported in

February. Part of the new capital represents new consolidations and the issue of new securities by existing corporations, but the increase is taken to bear out the reports of an improving condition in some of the leading industries.

It is not probable that there will for some time to come be any of the extravagant rushing into new ventures which made the years 1901 and 1902 memorable. Most of the madness that then prevailed has abated or burnt itself out.

The railroads are still showing in their reports of earnings the effect of the severe weather which has prevailed almost continuously for the last three months. The gross earnings in February, however, were generally more favorable than those in January. The earnings of 67 roads with a mileage of 82,882 miles in February were \$142,000 less than a year ago, while those in January, on a mileage not much less, decreased \$1,800,000.

The net earnings make a less favorable showing than the gross earnings, as has been the case for some time past. The Financial Chronicle's compilation for January makes the gross earnings of 103 roads in January show a decrease of \$4,847,915, or 4.54 per cent., compared with January, 1903, while the net earnings decreased \$8,095,639, or 25.19 per cent. So far as the returns for March have been received, the gross earnings approximate closely those of a year ago.

From the same authority we obtain the following comparative statement of earnings of railroads which have made reports for the calendar year 1903:

|                          | 1903.           | 1902.           | Increase      |           |
|--------------------------|-----------------|-----------------|---------------|-----------|
|                          |                 |                 | Amount.       | Per cent. |
| Miles .....              | 162,497         | 159,174         | 3,323         | 2.09      |
| Gross earnings .....     | \$1,733,784,055 | \$1,547,759,417 | \$186,024,638 | 12.02     |
| Operating expenses ..... | 1,181,523,458   | 1,044,202,373   | 137,321,085   | 13.15     |
| Net earnings .....       | \$552,260,597   | \$503,557,044   | \$48,703,553  | 9.67      |

While the gross earnings increased \$186,000,000 or 12.02 per cent., the net earnings increased less than \$49,000,000 or 9.67 per cent. Nor is the actual showing as favorable as the above figures indicate. The earnings of the anthracite coal roads are included, and as they were seriously affected by the strike in 1902, they were able to report large gains in 1903: \$35,674,581 gross, and \$24,579,611 net. Deducting the gains of the anthracite coal roads the increase in gross earnings of the other roads would be \$150,000,000, and in net earnings only \$24,000,000. The increased cost of labor and materials which affected railroad earnings in 1902 also lessened the profits of the railroads in 1903.

Perhaps the conservatism now existing regarding the investment of capital in new ventures is not better indicated than in the falling off in construction operations of the railroads. The estimated new mileage now under construction by the railroads in the United States is 6,900 miles, as compared with 8,500 miles a year ago. Not all the mileage projected is likely to be built during the present year, and it is possible that the year's total will be less than in either of the last three years if not less than in any year since 1898.

The money situation is one of exceptional ease. Call money in New York has been below two per cent. during most of the month, and even as low as one and one-half per cent. Gold exports have appeared imminent, sterling exchange getting close to the gold-exporting point. Still no gold was shipped during the month except \$4,250,000 to the Argentine Republic. Early in the month the Secretary of the Treasury gave notice to the depositary banks to surrender twenty per cent. of their public deposits, the money to be transferred to certain specified banks in New York. The transfer was ordered to be made by March 25, and the order has been generally complied with. The purpose of the transfer was to prepare for the payment on account of the Panama Canal, but that has been further delayed by a suit begun in the Supreme Court to restrain the payment.

During the past month the New York Clearing-House banks have made new records in the matter of loans, deposits and reserves. The loans for the first time went above \$1,000,000,000 on March 26 and a week later reached \$1,022,707,100. Deposits now amount to \$1,069,869,400 the largest ever reported, while the cash reserves are \$295,097,400 also a record amount. Loans have increased \$32,000,000 in the past month, deposits \$42,000,000 and reserves \$6,000,000.

THE MONEY MARKET.—There was an easy money market throughout the month rates for both call and time money ruling low. At the close of the month call money ruled at  $1\frac{1}{2}$  @  $1\frac{3}{4}$  per cent., the average rate being about  $1\frac{1}{2}$  per cent. Banks and trust companies loaned at  $1\frac{3}{4}$  per cent. as the minimum rate. Time money on Stock Exchange collateral is quoted at  $2\frac{1}{2}$  @ 3 per cent. for 60 days, 3 per cent. for 90 days,  $3\frac{1}{4}$  per cent. for 4 to 5 months,  $3\frac{3}{4}$  @ 4 per cent. for 6 to 7 months and  $4\frac{1}{2}$  per cent. for 8 to 10 months on good mixed collateral. For commercial paper the rates are  $4\frac{1}{4}$  @  $4\frac{1}{2}$  per cent. for 60 to 90 days' endorsed bills receivable,  $4\frac{1}{2}$  @ 5 per cent. for first-class 4 to 6 months' single names, and 5 @  $5\frac{1}{2}$  per cent. for good paper having the same length of time to run.

NEW YORK CITY BANKS.—The past month witnessed some important changes in the condition of the local banks, the deposits increasing more than \$41,000,000, making the total \$1,069,000,000, the highest ever recorded. The previous high record was made February 20 last and that is now exceeded by \$41,000,000. Loans increased during the month \$32,500,000 and are now larger than ever before reached, exceeding \$1,022,700,000. The banks gained in specie \$6,000,000 while legal tenders are about the same as a month ago. The surplus reserve is \$27,755,050, a decrease for the month of about \$4,400,000. Compared with a year ago loans have increased \$118,000,000, deposits \$180,000,000, specie \$65,000,000, legal tenders \$5,500,000 and surplus reserve \$25,600,000.

FOREIGN EXCHANGE.—The sterling exchange market was strong during the entire month and rates were at a point where gold exports seemed imminent although no gold was exported to Europe. Late in the month drafts against foreign purchases of American securities came upon the market but were promptly absorbed without causing a decline in foreign exchange.

NATIONAL BANK CIRCULATION.—The circulation of the National banks continues to increase, the gain in March being \$4,585,632, making the total nearly \$435,000,000 or an increase in twelve months of more than \$52,000,000. Of the total circulation \$395,600,000 is based upon \$398,000,000 Government bonds, nearly \$392,000,000 of which are the two per cent. issue.

## NATIONAL BANK CIRCULATION.

|                                         | Dec. 31, 1903. | Jan. 31, 1904. | Feb. 29, 1904. | Mar. 31, 1904. |

| U. S. bonds to secure circulation:      |                |                |                |                |
| Funded loan of 1907, 4 per cent.....    | 2,425,200      | 2,432,950      | 2,389,200      | 2,704,250      |
| Five per cents. of 1894.....            | 856,150        | 44,750         |                |                |
| Four per cents. of 1895.....            | 1,245,100      | 1,247,600      | 1,280,100      | 1,540,100      |
| Three per cents. of 1896.....           | 1,717,590      | 1,708,100      | 1,744,500      | 1,799,400      |
| Two per cents. of 1900.....             | 383,591,650    | 384,798,300    | 387,277,750    | 391,990,900    |
| Total.....                              | \$889,335,680  | \$890,231,600  | \$902,671,550  | \$908,034,650  |

The National banks have also on deposit the following bonds to secure public deposits; 4 per cents. of 1907, \$5,804,050; 5 per cents. of 1894, \$100,000; 4 per cents. of 1895, \$11,025,050; 3 per cents. of 1896, \$7,095,040; 2 per cents. of 1890, \$100,945,500; District of Columbia 3.65's, 1924, \$2,009,000; State and city bonds, \$22,639,123; Philippine Island certificates, \$4,948,000; Hawaiian Islands bonds, \$1,081,000, Railroad bonds, \$17,549,000, Philippine loan, \$1,657,000, a total of \$175,652,768.

UNITED STATES PUBLIC DEBT.—The interest-bearing debt of the Government is now in such a position that no important change in it is to be expected. None of it matures earlier than 1907, while the great bulk of it has more than twenty years to run. As the surplus revenues are now very small, the purchase of bonds by the Government is not likely to occur except under very strenuous circumstances. The bonded debt is now \$395,000,000, while the net debt, less cash in the Treasury, is \$915,000,000. While therefore the Government reports an aggregate debt of \$2,245,000,000, the cash reserves are sufficient to provide for all of it except the bonded debt and about \$20,000,000 beside.

GOVERNMENT REVENUES AND DISBURSEMENTS.—The receipts of the Treasury in March exceeded the expenditures by \$3,000,000, which was a surprising showing considering that in March last year the surplus was less than \$500,000. The receipts were \$374,000 less than a year ago but the expenditures were \$3,283,000 less. For the nine months of the current fiscal year there is a surplus of \$7,939,000 which compares with a surplus of \$33,829,000 last year.

UNITED STATES FOREIGN TRADE.—February exports of merchandise while \$23,000,000 less than the exports in the previous month, and \$6,500,000 less than in February, 1903, were larger than in the corresponding month of either 1901 or 1902. The total value was nearly \$119,000,000, while the imports which are now very large were nearly \$89,000,000. This leaves a balance for the month of \$30,000,000, and for the eight months of the current fiscal year of nearly \$394,000,000. The latter balance is the largest recorded since 1901. More than \$4,000,000 of gold, net, was imported and this makes the net imports of gold so far this fiscal year \$50,000,000, which is very much in excess of any previous year since 1899, when the balance for the eight months was nearly \$65,000,000.

**MONEY IN CIRCULATION IN THE UNITED STATES.**—More than \$12,000,000 was added to the volume of money in circulation last month making an increase since January 1 of \$50,000,000. About \$12,000,000 of gold coin was substituted for gold certificates in circulation, other forms of money contributing the increase in total circulation.

**NOTICES OF NEW BOOKS.**

**THE TRUTH ABOUT THE TRUSTS**—A Description and Analysis of the American Trust Movement. By JOHN MOODY. New York: Moody Publishing Co.

The really surprising thing about the trusts is their excessive modesty in regard to capitalization. "There are 440 large industrial, franchise and transportation trusts of an important and active character, with a total floating capital of \$20,379,162,511."

Mr. Moody has produced a work of value to all who wish to learn the facts about the great combinations. Little attention is paid to theories and opinions, but a full detailed history and statement of the capitalization and composition of the principal combinations are given. The statistical information is especially complete, showing not only the capitalization, but in many cases the market values at different dates.

As a compilation of facts it will doubtless be consulted by all who wish to be thoroughly informed regarding the great industrial and other corporations.

## ACTIVE STOCKS, COMPARATIVE PRICES AND QUOTATIONS.

The following table shows the highest, lowest and closing prices of the most active stocks at the New York Stock Exchange in the month of March, and the highest and lowest during the year 1904, by dates, and also, for comparison, the range of prices in 1903:

## BANKERS' OBITUARY RECORD.

**Beard.**—D. A. Beard, Jr., President of the Ouachita National Bank, Monroe, La., died March 10 at El Paso, Texas.

**Brooks.**—Dr. John G. Brooks, ex-mayor of Belfast, Me., and President of the Belfast National Bank, died March 23. He was born at York, Me., February 16, 1821. He graduated from Dartmouth in 1848 and from the Jefferson Medical College in 1851. In 1858 he assisted in organizing the Belfast Savings Bank, and was for many years a trustee. In 1879 he was elected President of the Belfast National Bank. Dr. Brooks was twice chosen mayor of Belfast and had served in both houses of the State Legislature.

**Burke.**—James E. Burke, Cashier of the Princeton (N. J.) Savings Bank, died February 23, aged fifty years.

**Canby.**—Wm. M. Canby, President of the Savings Fund Society, Wilmington, Del., since 1880, and a director of the Union National Bank, died March 10 at North Augusta, Ga., where he had gone in search of health. He was born in Philadelphia, in 1831, and early in life was a farmer, but soon entered upon a business career, in which he was very successful.

**Carter.**—Joseph A. Carter, aged sixty-eight years, senior member of the mercantile firm of Carter & Spaulding, Chicopee, Mass., and President of the First National Bank, of Chicopee, died March 20.

**Dissinger.**—Aaron Dissinger, President of the Elizabethtown (Pa.) National Bank, died March 3, aged seventy-two years.

**Duncan.**—Joseph M. Duncan, President of the Silver Springs (N. Y.) National Bank, died February 23.

**Flinn.**—L. Flinn, President of the First National Bank, Albany, Ore., and ex-mayor of Albany, and formerly county judge, died March 11. He was born in Ireland in 1837 and came to this country while a boy. In 1864 he went to San Francisco and later went to Oregon, at first teaching school and afterwards practicing law. In 1888 he purchased an interest in the First National Bank, of Albany, and became President.

**Gearhart.**—Bonham R. Gearhart, President of the First National Bank, Danville, Pa., died March 22. He became teller of the bank in 1865, and shortly afterwards Cashier, and in 1892 he was chosen President.

**Grace.**—Wm. R. Grace, head of the well-known shipping and mercantile firm of W. R. Grace & Co., New York, former mayor of the city, and a man of large wealth, died March 21. He was a director of the Lincoln National Bank, the Lincoln Safe Deposit Co. and the City Trust Company, of New York.

**Grant.**—Adam Grant, President of the Donohoe-Kelly Banking Co., San Francisco, and a director of the Bank of California, died March 21, aged seventy-seven years. He was a Scotchman by birth, and in the early days of San Francisco formed a partnership with Eugene Kelly for the purpose of engaging in the dry-goods trade.

**Hartman.**—Hon. Joseph Hartman, President of the Butler County National Bank, Butler, Pa., died February 29. He was born in Armstrong county, Pa., October 18, 1827. In 1862 he enlisted in the 160th Pennsylvania Volunteers, and served nine months in the Civil War. In 1885 he was a member of the State Assembly, and in 1891 was elected President of the Butler County National Bank.

**McMichael.**—Morton McMichael, President of the First National Bank, Philadelphia, and formerly President of the American Bankers' Association, died March 23. He was one of the oldest bank officers in the country in point of continuous service, and had been with the First National Bank since its organization in 1863. He had been Cashier, Vice-President, and lately was chosen President.

**Ricker.**—Henry F. J. Ricker, President of the Ricker National Bank, Quincy, Ill., died March 4, aged seventy-eight years. In 1884 he was the Democratic nominee for State Treasurer of Illinois. He left an estate estimated at \$2,000,000.

**Schuyler.**—George Schuyler, junior member of the banking firm of Schuyler & Son, Pana, Ill., died February 23, aged thirty-three years.

**Smith.**—Col. Thomas Jefferson Smith, President of the Citizens' National Bank, Bowling Green, Ky., and Colonel of the Third Kentucky Regiment, died March 21. Col. Smith was in Cuba with his regiment in the Spanish-American War.

**Stone.**—Henry D. Stone, Vice-President of the Commercial Bank, Rochester, N. Y., and one of the well-known business men of that city, died February 21.

**Watt.**—Henry O. Watt, President of the First National Bank, Salamanca, N. Y., died February 27.

**White.**—Harry S. White, President of the First National Bank, North Platte, Neb., and former mayor of North Platte, died February 25. He was born at Elberon, Ill., March 24, 1841, and at the age of 12 years enlisted in the Union Army and served through the Civil War. At the close of the war he returned to Illinois, and in 1879 went to Wyoming. In 1885 he removed to Nebraska, and in 1891 he was elected treasurer of Dawson county and was re-elected two years later. In 1895 he bought a controlling interest in the First National Bank of North Platte, becoming Vice-President and later President.

**WANTED.**—I desire to purchase a controlling interest in a bank in a prosperous section of the West or South; will invest \$100,000 or less. Address "BANKER," care The Bankers Publishing Co., 87 Maiden Lane, New York.

**JOHN W. CASTLES**

**T**HE CURRENCY BILL at length reported from the Banking and Currency Committee is a very good measure and represents the conclusions which seem to be generally acquiesced in by experts, after the protracted discussions of banking and financial reform which have been so prominent in banking and financial circles during the last ten or more years.

The history of this discussion shows that the subject of an asset-currency to be issued by the banks has been pretty thoroughly threshed out. It seems to have been generally agreed that to change from a system of bank notes so perfectly secured as those now issued under the National banking laws, to bank notes resting on the security of the general assets of the bank, would be a change full of risks impossible entirely to foresee.

Theoretically, the issue of asset notes may seem to be perfectly safe and to have advantages in the way of elasticity not possessed by the present bank-note circulation. The practical examples of a free currency issued by banks in Canada and other countries at first impressed many with a confidence that it would be advantageous to permit similar issues by the banks of the United States. It is perhaps just as well that Congress did not act when the current of opinion was in favor of a change in the form of security underlying bank notes. Longer study of the subject has forced the conclusion that the defects in the present National bank-note system, which formed the strongest argument in favor of a change, are not so inherent and radical as has been assumed. The want of elasticity with which the present system seems to be justly charged under the conditions of the bonded debt of the United States, it is beginning to be recognized, may be removed in part, if not altogether, if the United States bonds which form the security for the bank notes can be maintained at a price near par, and if the restrictions on the free retirement and reissue of notes were removed. The importance of the three million limitation of retire-

ment of circulating notes in any one month has gradually forced itself on people's minds. It is probable that apart from the obvious effect of this provision in preventing contraction in parts of the country where the demand for bank notes was decreasing, and a reissue where such demand was increasing, there was another serious indirect effect in keeping the amount of bonds offered in the markets to a minimum and thus tending abnormally to increase premiums.

The degree of contraction and expansion of a bank currency, in a country so extensive as the United States, is not manifested simply by the increase and decrease in aggregate amount. Even if the aggregate continued the same, there might be very lively contraction in some sections, counteracted and balanced by equally lively expansion in other sections. A real elasticity of a currency means active movement and change caused by the necessity of meeting local needs. The bill of the Banking and Currency Committee removes this three million limit, and leaves the banks free to retire their circulation and throw their bonds on the market as best suits their ideas of profit. This provision is the only one in the bill which directly affects bank currency. There is no reason to doubt that if passed it would do much to restore elasticity to the currency of the National banks. At all events, it is an experiment that is perfectly safe from every point of view and should be tried before resorting to the extreme measures advocated by the asset currency supporters. The bill also repeals the provision which forbids the deposit of customs receipts with the banks, thus removing the danger of the so-called Government surplus. The committee in its report forcibly calls attention to the havoc which might be wrought with the financial interests of the country, if the State and municipal governments throughout the United States should imitate the example of the Federal Government, and keep each its own strong box in which to lock up its reserves of cash. This presentation of the subject, although not new in principle, is a very striking way of calling attention to the defects of the independent Treasury system.

A third provision of the bill is the substitution of subsidiary silver coins for paper money of denominations less than five dollars. This is brought about by the repeal of the limit now fixed on subsidiary silver coinage, and providing for the use of silver dollars in coining the additional subsidiary coin. The bill as a whole is one of repeals, showing that the fact is recognized that too stringent restrictions are the chief cause of the imperfect working of the currency system. At the time of writing, it was not thought that this bill would become a law at present. Notwithstanding its moderation it was believed that it would excite a discussion for which a Congress already impatient of adjournment would not have patience.

THE SENATE FINANCE COMMITTEE has introduced a bill to give the two per cent. bonds, authorized previously by law to be issued for the construction of the Panama Canal, the same privileges as the twos of 1930 for purposes of National bank circulation. The act authorizing the Panama twos, while permitting them to be used as a basis for bank circulation, omitted to reduce the tax on the circulation based on them to one-half of one per cent. per annum, the rate which banks now pay on circulation based on the twos of 1930. The action of the Senate Finance Committee is intended to correct what must have been an oversight at the time the Panama bonds were authorized.

With the privileges and exemptions of the bonds thus made equal to those of the other twos, they ought to sell at the same market price. No one can have any idea that the United States could market this loan at two per cent. if it were not that the bonds were available for bank-note circulation. It is this ambition to place the national bonds on a credit basis higher than any other nation, that has done more than any other cause to uphold the present system of secured National bank circulation. The falling off in the prices of British consols and French rentes, and in fact of all government securities bearing low rates of interest, is probably due to the great increase of other securities, almost if not quite as safe and bringing in a better income, which has been characteristic of the last quarter century. That there has not been a similar decline in United States bonds is due to the fact that they have been specially vested with the function of sustaining our bank circulation, and their use as security for public moneys deposited with the National banks. While the bonds possess these functions there seems to be no grounds for the apprehensions which have been of late expressed in some quarters, that the Panama Canal bonds will not sell at par, as is insisted on in the act authorizing them.

While the employment of the bonds for banking purposes is of great use in sustaining the credit of the national loans, it is believed that it would be better for the elasticity of bank circulation if the rates of interest of United States bonds were so adjusted that the price would not vary greatly from par at any time; even if the bonds occasionally fell below it would be no detriment, except perhaps in a sentimental sense.

From the earliest history of the Government it has been a tradition never to issue a loan below par, and there have undoubtedly been times when the Government has been forced to pay greater interest because of adherence to this rule. The consequence has been, at least since the establishment of the National banking system, that as the Government credit has improved all classes of United States bonds have stood above par with a tendency to increase in premium. This

increase in premium has tempted the banks to retire and issue circulation more in accordance with the fluctuations of the bond market than in accordance with the needs of business. Comptrollers of the Currency have pointed out that if the bonds on which circulation was based could be so regulated as to interest that their market price would remain practically fixed at about par, that this motive for the fluctuations of bank currency would be reduced to a minimum, and that the issue and retirement of National bank notes would be more in accordance with the wants of business.

The desire to realize premiums has not, however, been the only reason for the retirement of National bank currency in the past. The issue of silver dollars and silver certificates, beginning in 1878, was an important factor in dwarfing the bank issues for a number of years. Since the silver certificates and silver dollars have ceased to increase, the increase of bank notes will now be encouraged by any causes leading to a demand for more currency. The increase in the stock of gold and the use of gold certificates have no doubt had an effect to render the increase of bank notes slower than it would otherwise have been, but if for any cause gold goes out of the country, or if the new supplies of gold should prove inadequate to currency demands, it will probably be found that the country can depend upon the banks to supply what may be needed in the form of bank notes.

It is likely that the issue of the Panama bonds from time to time as they are needed will cause just the additions to the circulating medium that the increase in the wealth and business of the country will demand for the period required in the construction of the canal. During the month ending April 1 gold certificates showed a reduction of about \$13,000,000. National bank notes, silver certificates and United States notes showed an increase of about the same amount, of which increase the bank notes amounted to about \$5,000,000. With the issue of the Panama bonds, the National bank notes, probably, will take the lead in future increases.

---

THE TREASURY REVENUES continue to hold their own, and it is believed that the surplus of \$14,000,000 for the fiscal year estimated by Secretary SHAW will be realized if not exceeded. The Secretary estimated there would be a drop in customs revenue of \$30,000,000, but it is highly probable that it will not be two-thirds of that sum. This is encouraging in view of certain unexpected increases in expenditures that have arisen since the estimate was made, such as the increase in pensions and the appropriation for the St. Louis Exposition.

The activity of business is something that tends to make all estimates somewhat uncertain, but Secretary SHAW'S forecast seems to

be in process of being substantially verified by the actual results of the year. In fact, the time yet to elapse before the close of the fiscal year is likely to show still greater increase in the revenues than has yet been shown; at least there will probably be no falling off.

It is extremely difficult to make forecasts of the revenue in this country. Reduction in taxation has very seldom been followed by the anticipated falling off in receipts. The removal of taxes acts, to a certain extent, as a stimulus to business, and the increase in business brings greater returns from the taxes that still remain operative. It is only in those countries where, in order to meet the demands of the Government, taxation has to be pressed to the utmost limit of endurance, that the falling off of revenue in proportion to the reduction of taxation can be calculated in advance with tolerable certainty.

The verification of Secretary SHAW'S estimate of a surplus of fourteen millions for the current fiscal year will be due as much to what he did not foresee as to what he did. If it had not been for unexpected expenditures, such as the increase of pensions and the appropriation for the St. Louis Exposition, the surplus would have been much larger. It is a satisfactory reflection that, compared with other countries, National taxation in the United States is borne with such elasticity. It is the margin of untouched possibilities for raising revenues which accounts for the superior credit of our Government.

---

THE LEWIS BILL, permitting National banks to make real estate loans, has been favorably reported by the Banking and Currency Committee. It provides for loans by National banks on notes, bonds and other evidences of debt, secured by mortgages or other instruments of security, on unencumbered real estate situated within the State, Territory or district where the bank is located, worth, exclusive of buildings, on conservative market valuation, double the amount of the loan thereon. The limit of real estate loans is fixed at twenty-five per cent. of a bank's capital.

If this amendment to the powers of National banks should become a law, it will place these banks more on an equality with the State and private banks in their localities which have the privilege of loaning on real estate security. These competitors of the National banks will, however, still have the advantage, as many of them are not restricted by any limit placed either on the amount they shall loan on any given piece of real estate or on the proportion of their capital they may employ in the real estate business, other than by their own judgment.

The measure may prove of some advantage to National banks in enabling them to obtain further security, when personal security in

any given case weakens, sooner than they could before. As it is now, they can take real estate security to save loss on a pre-existing debt, but there is often doubt at what point the actual danger of loss is determined. Where good real estate is offered there can be no doubt as to its security, though realization may not always be had as readily as the bank may desire. But the holders of this class of real estate never have, and never will have, any difficulty in obtaining loans upon it from State and private banks or from Savings banks, trust companies or individuals.

Whether the National banks are not exposed to a new danger by such legislation as this, is a question. In some localities they will undoubtedly have to resist the forcing on them of undesirable and over-valued real estate. In the minds of the public the National banks are often regarded as creatures of the Government, put in operation to benefit needy citizens. There is danger that such legislation may be popularly regarded as a command to the National banks to loan to citizens on real estate which no one else would accept as security. Of course, this is foolish; but when it is found that National banks are even more careful, as they must be, under this law than State banks now are in regard to real estate loans, it will not add to their popularity, if that is worth anything to them.

The advantages of this measure to the National banks are largely offset by the disadvantages.

---

THE RELATIONS OF LABOR AND CAPITAL have been discussed in a number of papers appearing in the MAGAZINE for several months past. Despite the tendency of some of the authors of these papers to take an exaggerated view of existing difficulties between employers and employees, the trend of the discussion has been, upon the whole, remarkably free from prejudice and vituperation.

That injustice and oppression have prevailed, to some extent, on both sides is evident to anyone who has carefully observed the industrial situation of the country. If the labor unions have been guilty of tyranny and violence, some of the great corporations are not blameless. That the acts of the labor unions, so much complained of, have been entirely without provocation, is an unreasonable supposition. But there is a better way to remedy controversies of this kind than by resorting to violence. It is to be found in an aroused and educated public opinion that will compel the enforcement of law in such a manner as to preserve an equitable balance in the relations of capital and labor. The only real danger lies in the subserviency of those charged with making and enforcing the laws. If the timid politician can be made to understand that there are interests paramount

to the powers of either great masses of money or "the labor vote," the public welfare will be assured.

The paper presented in this number, by Prof. JOHN BURTON PHILLIPS, fully recognizes that this is by no means a one-sided question. Intelligent discussion, proceeding upon this basis, is bound to have a good influence in correcting whatever inequalities may exist.

---

THE SUBSIDIARY SILVER, now limited by law to \$100,000,000, is believed by many to be insufficient to meet the requirements of the country's retail business. The Secretary of the Treasury, in his last annual report, recommended to Congress that authority be given to add to the subsidiary silver coinage as the public demand may seem to warrant, and to use as bullion for this purpose the silver dollars in the Treasury owned by the Government. The Treasury still has on hand some \$5,000,000 of silver bullion purchased under the Act of 1890.

The public demand for subsidiary silver is capable of being very much increased by the withdrawal from circulation of silver certificates and legal-tender notes of denominations less than five dollars. The subsidiary silver coinage is maintained at par by being redeemable in gold when presented in sums of twenty dollars. In this respect it enjoys a credit superior to that of the silver dollars and silver certificates, which are not directly so redeemable. The Secretary's recommendations have been acted upon in the House, as they are fully embodied in the bill reported from the Banking and Currency Committee. This bill contains other provisions relating to the currency. In the Senate an amendment was reported to the sundry civil appropriation bill, which simply removes the limit now restricting the subsidiary silver coinage to \$100,000,000. Inasmuch as the coinage law of 1873 provides that when it is necessary to add to the subsidiary silver coinage silver bullion shall be purchased, the removal of the limit would, after bullion on hand is exhausted, force the Treasury to begin silver purchases. As before remarked, no one can tell to what extent they might be carried, if the Treasury should again be administered by an executive favorable to silver. The plan of Secretary SHAW contemplated the use of such silver dollars as might gradually come into the possession of the United States as bullion. In time a large part of the silver dollars might be so used.

The mere removal of the \$100,000,000 limit on subsidiary silver would open the door for the purchase of an unknown quantity of new silver bullion. It is conceivable that through this entrance the country might again be threatened with the same danger from which it narrowly escaped by the repeal of the silver-purchase act in 1893.

The alleged crime of 1873 consisted in the demonetization of the silver dollar without debate in a surreptitious manner. It has again and again been proved that the mint act of 1873 abolishing the coinage of the silver dollar was fully debated in both Houses of Congress. To restore the purchase of silver by means of a clause inserted at the last moment in an appropriation bill would expose its authors justly to all the obloquy that was attempted to be unjustly cast upon the men who enacted the mint law of 1873. It is to be hoped that the people who favor the maintenance of a sound financial standard will not permit this attempt to destroy the foundations of the present system to succeed. The country might as well be flooded with silver dollars as to have the same experiment made with half-dollars. An excess of subsidiary silver coins would in fact be a greater strain on the gold reserve than an excess of silver dollars, because they are redeemable in gold and could be used as readily as legal-tender notes to deplete the gold reserves. No doubt there has been an increasing demand for subsidiary silver coinage, not only on account of the growth of the country at home, but also from the growing demand for it in the foreign possessions now belonging to or protected by the United States. If this demand is taken advantage of in the manner suggested by the Secretary of the Treasury, it will strengthen the financial system of the country by disposing of the superfluous silver dollars; but if it is to be made a pretext for again reopening the troublesome and dangerous silver question, it will prove a source of serious danger. The banks of the country should not be indifferent to this move towards the reopening of the silver question. They should exert all their influence against it, by appealing to their members of Congress. Though the Senate amendment referred to failed to pass at the recent session of Congress, similar proposals are likely to be made in the future.

---

THE EXPORT OF GOLD is something that would naturally be expected, in view of the payments to France for the rights of the French Panama Canal Company. The calling in from the depositary banks of the public moneys to be used in this payment accumulated large sums with the New York banks and lowered the rates in that central market. If there were no other reason, this would lead to an outflow to the foreign markets where rates were better. This tendency created a condition favorable to placing funds abroad against which exchange could be drawn to meet the Panama payment. Unless our bankers can borrow in foreign markets, or have already amounts due them there, the only way in which funds can be transferred is by sending gold. Borrowing only delays the final settle-

ment, which may be more conveniently made in the future by possible exports of products of this country, and if the balance of trade should be against us, by a future export of gold.

The method of making the remittance in a way which will have the least unfavorable effect on the home money markets has been a problem for the bankers and financiers. The conditions in the United States are to-day much more favorable to sending out gold without serious difficulty than they ever were before. The stock of gold in the Treasury, in the banks, and in the hands of the people, is large. The annual production of gold by our mines is greater than ever. At the same time, the country is evidently furnishing large quantities of supplies of various kinds to the combatants in the East, especially it would seem to Japan. Japanese gold is coming freely into San Francisco, where it is recoined. The operations of the San Francisco mint during the last two months have been exceptionally large. As gold has been exported from New York, it has been resupplied from San Francisco. The gold for export is drawn from the banks, and the banks supply themselves from the Treasury, the latter making good its stock from that sent into the mints and assay offices.

It would not, however, be disadvantageous to have it brought forcibly to the minds of the people of the United States that such transactions as the purchase on a cash basis of property to the extent of \$40,000,000, which property cannot be made available for years to come, is considerable of a strain on the finances of any country, even on those of one so rich as the United States.

If the payment through the ingenuity of our financiers taking advantage of fortunate circumstances shall be made without visible effect on our money markets, it might too much encourage a confidence in the powers of the United States Treasury, that is perhaps already too great. It will probably be better if this payment should have some effect on the markets, at least enough to show that the transmission of such large sums is not lightly to be undertaken—outside of regular business lines. It is hardly conceivable that circumstances of trade will prove so favorable as to prevent some pressure from being felt before the whole payment is made to the French company. While the export of gold may be stopped by a change in the exchange market, it is impossible to say how long this might continue.

It is evident that the business of international banking has arrived at such a development that the bankers of the different countries stand together whenever possible to prevent serious inconvenience arising in any one market, from the transmission of gold for international settlement. In making the payment to the French company the transmission of the gold, or so much of the forty millions as cannot be settled by the trade balance, will probably be made in compar-

atively small amounts, distributed over considerable time, the time necessary being obtained by temporary loans as the markets involved are favorable. Though in all probability the payment will be thus made with little or no strain on our home markets, nevertheless if some shock should be felt, the effect might not prove altogether unwholesome.

---

THE ADDRESS OF COMPTROLLER RIDGELY at the eighth annual meeting of the American Academy of Political and Social Science, recently held in Philadelphia, was on the subject of Government Control of Banks and Trust Companies. The Comptroller emphasized the advantage of Government supervision as shown by the reduced per cent. of failures of National banks as compared with the failures of banks of all other classes during the period between 1863 and 1896. Whether all of the superiority in this respect is due to the system of examinations and reports carried into effect by the Government, after the banks have commenced business, or whether part, and perhaps the greater part, is not due to the care taken to insure the actual payment of capital before a National bank is allowed to commence business, may be a question.

If the State banks, trust companies and private banks and all financial institutions that come into this comparison with the National banks, were as carefully supervised as to the capital with which they commence business, there is reason to believe that, even without subsequent examinations, the comparison would be more favorable to the banks outside of the National system. When the organizers of a bank or trust company put their actual capital into it they are more apt to insist upon careful management. But be this as it may, it does not detract from the general advantage of some Government control of all institutions of a financial nature that invite public confidence and depend for their prosperity on the wise management of the money of the public entrusted to them. The only important question is to what extent Government control should be exercised. It certainly should not be pushed to an extent that interferes with a free growth of the banking business. That under certain conditions this may be done may be inferred from the further fact to which attention is drawn by the Comptroller, that notwithstanding the greater apparent safety of the National banks, and the greater immunity from loss by their failures when failures occur, the proportion of banking capital invested in National banks and the proportion of deposits held by them have steadily decreased since 1882. This is as much as to say that both as stockholders and as depositors the public seem to prefer, notwithstanding that there seems to be a somewhat greater risk of loss, the banks which are the more independent of Government control.

As to stockholders, this is not so remarkable, but it is certainly paradoxical that depositors should prefer banks where experience, or at least statistics, prove their money to be somewhat less safe. It may be taken as indicating that in public estimation there is no ground for giving preference to the National banks on the score of their alleged superiority in the matter of public supervision.

Greater freedom of management when business conditions are so subject to change as they are in the United States undoubtedly tends to greater profits. The stockholders thus obtain greater dividends and the management is able to attract greater lines of deposits by offering larger interest. The rigid methods of Government control to which the National banks have been subjected have tended to crystallize the forms of their business, and they shape themselves less easily to the changes in the form of banking facilities demanded by the public. It seems certain that the Government control of National banks, exercised not only when they commence business, but also during the whole period they continue in business, handicaps them to a certain extent in competition with institutions that are under less rigid restrictions.

While the general proposition, that the public is protected by Government supervision, is true, yet those who marshal the statistics and speak most enthusiastically in its favor are the Government officials to whom the work is entrusted. There is very little of this enthusiasm in its favor among bankers themselves. National bankers sometimes argue for Government supervision, but probably the larger portion of these are not very much in love with it. As long as they are obliged to submit to examinations and have to make reports, they would doubtless be pleased could the same system be extended to all other banks that are their competitors.

It will be noticed that whenever Government control of existing banks is adopted, there at once spring up outside of the institutions so controlled a new class of banks which are not reached by it. Soon after the establishment of the National banking system, after the United States taxed out of existence the circulating notes of the State banks then in operation, most all of these State institutions entered the National system, and there were but very few State banks doing business as such. But new State banks began to be organized and their number has increased with great rapidity until they rival the National banks in number and importance.

The State banks in those States where the laws require Government control, although not usually so strictly watched as the National banks, soon began to meet competition from banking institutions which masqueraded as Savings banks or trust companies, or which simply did business as private banks. The Government supervision,

compelling attention at all times to requirements which tend to diminish the power of seizing opportunities for profit, affords a margin which is seized upon by competitors who work outside of such control.

It is difficult to see how the only effectual remedy for this discriminating effect of Government supervision can be applied in the United States. The States cannot apparently be brought into line so as to secure uniform legislation insuring the universal supervision of State banks. Even if they could be induced to adopt uniform laws of this kind, independent bankers, operating under various guises which exempted them from Government control, would start up and continue to place the examined banks at a disadvantage.

The genius of our American institutions calls for the utmost freedom in all forms of business, including banking. The history of banking in the United States shows how all forms of special charters have gone down before the popular demand for the right of anyone who has capital or talent to enter the banking business. It would seem almost impossible to-day to secure laws which will fix a character of uniformity on all institutions doing a banking business, and subject them all alike to Government control. And yet this appears to be the only way in which all banks could be placed on an equal competitive footing.

---

THE POLITICAL CAMPAIGN into which the country is shortly to be plunged presents in its preliminary aspects some peculiar phases. In 1900 Mr. BRYAN, the Democratic candidate for President, thundered vociferously against the trusts, with "the money power" and "imperialism" as subsidiary objects of his wrath. But in attacking the trusts, President ROOSEVELT has appropriated one of Mr. BRYAN'S most important stage properties, and the decision of the United States Supreme Court in the Northern Securities case indicates a cleavage on political lines, the Democratic members of the court favoring the combination. The doctrine of States rights, as applied to the control of trusts, is also advocated in the New York Democratic platform, and it is charged by the Republicans that Judge PARKER, the prospective Democratic candidate, is acceptable to the trust magnates.

If the so-called conservative element in the Democratic party should prevail at St. Louis, and President ROOSEVELT keeps hammering away at the trusts, the supposed attitude of the two parties bids fair to be reversed.

With the money issue and the tariff disposed of for the time being, about the only difference between the parties is as to which one shall get the offices. This being true, whichever party wins there is not likely to be any serious disturbance of the business of the country.

## NATIONAL BANK CIRCULATION.

---

### *HISTORY OF THE THREE-MILLION DOLLAR LIMIT ON MONTHLY RETIREMENT OF NOTES.*

---

The provision forbidding the National banks from depositing over \$3,000,000 of lawful money for the withdrawal of their circulating notes in any one month was inserted in the Act of July 12, 1882, which had for its chief object the extension of the charters of the National banking associations. The most prominent person in securing the insertion of this provision was Senator Beck, of Kentucky. The Democrats had control of the House of Representatives all through the Administration of President Hayes, and many attacks were made upon the National banking system, which for several years had been an object of political dislike.

This restriction on free retirement of circulation had for its immediate excuse the fact that some 141 banks had in 1881 deposited nearly nineteen millions of legal-tender notes for the purpose of retiring an equal amount of circulation, in order to get control of the bonds held in trust by the United States Treasurer to secure that circulation. This retirement was made in less than a month, and the enemies of the National banks declared that the banks had entered into a conspiracy to contract the currency in order to obtain greater profits through the consequent scarcity of money.

Prior to 1874 the banks could recover their bonds only by gathering up and returning to the Treasurer the circulating notes issued thereon. The notes being scattered in all parts of the country, it was a very difficult operation for a bank desiring to recover its bonds to get this circulation together for return to the Treasury. They often had to pay a premium on their notes to have them brought in. The Act of June 20, 1874, was enacted to give greater freedom of movement to the bank currency. This act established a redemption bureau in the Treasury, and allowed any bank wishing to retire its notes and get its bonds to deposit with the Treasurer lawful money equal to the bank notes outstanding. The bank thus relieved itself from responsibility for its notes, and the Treasury having the lawful money undertook to redeem them when presented. This act worked well, and not only enabled the banks to withdraw their bonds, but greatly facilitated the refunding operations of the Government. The opponents of the National banks always pretended to believe that the banks were enabled, by the freedom of retiring their notes given by this act, to combine to expand and contract the currency and thus affect prices favorably for speculators, while they secured higher interest rates for themselves. These opponents of the National banking system received support from James Gilfillan, then Treasurer of the United States, who in his report for 1880 had criticised the operation of the Act of June 20, 1874, and recommended its repeal. He gave support to many of the campaign stories which were circulated as to conspiracies among the National banks to contract the currency, by arguing before the Finance Committee

of the Senate that it was possible, and even probable, that the banks might retire all their circulation in one day by preconcerted action. They could do this, he said, very easily under the Act of 1874 by the deposit of legal-tender notes, and if this act were repealed they could still accomplish the same thing, but with more difficulty, by gathering up their own notes. Senator Morrill, at that time chairman of the Finance Committee, then asked Mr. Gilfillan, "If there is any sort of danger or apprehension in any quarter that they (the banks) will ever do that for the simple purpose of contracting the currency." Mr. Gilfillan did not squarely answer this, but evaded by saying practically that if they did it would be detrimental to public interests.

The Treasurer's report attacking the Act of June 20, 1874, was dated 1880, and went to Congress in December of that year. At that session a bill was introduced entitled "An Act to Facilitate the Refunding of the Public Debt." It provided for bonds running not less than five nor more than ten years, bearing three per cent. interest, in which other outstanding bonds were to be funded. John Sherman, then Secretary of the Treasury, told the Finance Committee of the Senate that United States bonds already in the market realized more than three per cent. to the investor; that no nation at that time had ever been able to market three per cent. bonds at par, and that he did not believe the bonds provided in the bill could be negotiated for par, as the bill provided. He produced tables to prove his assertions. The act further provided that these proposed three per cents should, after the first day of May, 1881, be the only bonds receivable from National banks as security for circulation or public moneys, thus compelling the banks to take the bonds at par, whether they were worth par or not.

But these bonds might be called for redemption after five years, and the act contained a further provision that when the Secretary called the bonds for redemption and declared that interest on them had ceased, the bank holding them must surrender the bonds within thirty day after the cessation of interest or be placed in the hands of a Receiver. To surrender the bonds as required, after having been first compelled to take them, a bank must either substitute other bonds for them or retire its circulation. There would have been no difficulty in retiring circulation if the Act of June 20, 1874, allowing the deposit of lawful money had been left as it stood; but as if to drive the banks into a corner, the act further repealed this privilege of depositing lawful money and left to the banks only the slow process of gathering up their notes. Experience had shown that no bank could do this within thirty days, and the bank compelled to take three per cents might after five years find it impossible to avoid being placed in the hands of a Receiver, unless it could procure other bonds to put in place of the three per cents, or could gather up its circulation within the period of thirty days.

The fact is that if the bill had become a law it would have driven the National banks out of the circulation business. The danger of taking three per cent. bonds was too great. The banks justly feared the passage of the bill; they did not know whether it would be vetoed or not. The bonds they held commanded a premium. The banks foresaw that if this measure became law, the circulation feature of the system was doomed, and that the bonds held by all the banks would within a year or two be thrown on the market. Before the bill became a law they could still deposit legal-tender notes and get their bonds. There was no collusion; there was no need of any. Each

bank could see for itself that its best policy was to get its bonds out and sell them as soon as possible. The rush to deposit legal-tender notes would have been still greater if it had not been believed by many banks that President Hayes would veto the bill. Therefore, in the very short period that intervened between the time the provisions of the bill became public and its veto by the President, nearly \$19,000,000 in lawful money was placed with the Treasurer for the retirement of circulation.

This action of the banks, to which they were absolutely driven by the danger of the situation, raised an outcry among their opponents. It was called a deliberate conspiracy, and held to confirm all the campaign assertions of the dire and malign influence of the banks in contracting currency to oppress the honest producer. The bill was vetoed by the President, and a large part of the bonds were returned to the Treasury and circulation again taken out. But all through the summer and fall of 1881 the air resounded with the awful accounts of the action of the banks in retiring this \$19,000,000 of circulation. When Congress met again, and the bill for the recharter of the banks was taken up, Senator Beck inserted the provision that the aggregate deposit of lawful money for the retirement of National bank circulation in any one month should not exceed \$3,000,000. This, he thought, would scotch the monster that could subject the public to such frightful contractions of the currency.

The retirement of \$19,000,000 was no such terrible matter after all, but it was the only instance of anything of the kind happening during the long history of the National banks. Of course, since 1882, they have been prevented from retiring over three millions of dollars per month by the deposit of legal-tender notes, but they could to-day, if there were any real foundation for the fears similar to those affected by Mr. Gilfillan and others in 1881, combine and retire all their currency within a few days. No one could ever give any intelligent reason why they should pursue such a course, which could only injure them.

The \$3,000,000 per month limit was a ridiculous remedy for an alleged evil having no real existence. The only wonder is that it has remained so long on the statute book, crippling as it does the free ebb and flow of the National bank currency.

---

A DEFENSE OF HOLDING COMPANIES.—The system of the security-holding company permits far sighted men, for instance, who are willing to postpone present dividends to future wealth, to study the needs of a growing community, and to promote its growth by building traction lines in advance of the public demand instead of waiting for such a demand to become imperative. It enables the managers of a great trunk line to put an end to transfers of passengers at State boundaries and local terminals, and to run the palatial trains across the continent upon harmoniously adjusted schedules which, far from being "in restraint of trade," have done more to promote it than all the laws for preventing combination or all the suits begun in pursuance thereof. The system of the holding company undoubtedly increases the power of the big financiers, but it enables them in many cases to go forward with far-sighted plans for meeting the certain expansion of local traffic in our imperial city, or of international traffic between the grainfields of Minnesota and the markets of Asia, which would be difficult or impossible under the old system of petty competing organizations governed by the restricted vision of some neighborhood magnate.—"*Wall Street and the Country*," by Charles A. Conant, in "*Atlantic Monthly*."

## TRUST COMPANIES—THEIR ORGANIZATION, GROWTH AND MANAGEMENT.\*

### FUNCTIONS OF TRUST COMPANIES.—*Continued.*

#### INSOLVENCY BUSINESS.

Under the head of insolvency business are included the duties of assignee, trustee in bankruptcy and receiver. Trust companies are, in many States, authorized to act in these capacities.

The enactment of the last National Bankruptcy Law in 1898 largely suspended the operation of the State insolvent laws, with the result that assignments have become less frequent than formerly. The duties of an assignee and of a trustee in bankruptcy are similar, and consist in securing a just distribution of the assets of an insolvent person, firm or corporation among the creditors. For this purpose the trust company assuming such duties takes charge of the property of whatever kind, if necessary converts it into cash, pays preferred claims, and distributes the remainder *pro rata* among the creditors, acting all the time under the direction and authority of the court having jurisdiction in the case.

The duties of a receiver may be of quite a different character. A receiver is a person or corporation appointed by a court of equity to take charge of property in dispute. Such appointment does not necessarily imply insolvency. It may be made necessary on account of dissatisfaction on the part of stockholders with the management of the company, on account of any dispute which the partners of a firm or the stockholders of a corporation cannot settle between them, on account of a serious tangle or temporary embarrassment in the affairs of the concern, as well as on account of actual insolvency. It frequently happens that the affairs of concerns become temporarily embarrassed, or that there is such friction between the managers that it becomes necessary to have a receiver to adjust matters. For such duties, as well as for those of assignee or trustee, the trust company is specially fitted, and this class of work has been the field of some of the most successful operations of these companies. The duties require experience, good credit and large financial responsibility. Acting under the authority of the court the receiver is often required for the time being to carry on a mercantile, manufacturing or transportation business. The receivership may be cancelled if the enterprise is put upon a satisfactory basis, and the property be handed over again to its owners. Or it may be necessary to effect a sale of the property, settle the debts, and pay the balance to the owners. Sometimes, when the circumstances warrant, large advances of money are made, thereby tiding the concern over its difficulties and re-establishing it as a profitable enterprise, or saving the assets for creditors or stockholders. Often the circumstances make advisable a readjustment of corporate indebtedness, and the trust company is peculiarly

\* Publication of this series of articles was begun in the January, 1904, issue of the *MAGAZINE*, page 31.

adapted to the work of formulating plans, recalling outstanding stocks or bonds and issuing new securities.

#### SUNDRY BUSINESS AS TRUSTEE OR AGENT FOR CORPORATIONS.

It is not too much to say that the affairs of the great corporations of the present day, as well as those of the smaller ones under existing conditions, could be carried on only with the greatest difficulty, if at all, without the aid of some such financial concerns as the trust companies.

Probably the most common function of this kind is that of acting as trustee under a trust deed or mortgage securing an issue of bonds. In such capacity the company examines the proceedings of the company which is to issue the bonds, to see that all acts and papers connected therewith are legal and such as to make good the lien of the bondholders. In signing the trustee's certificate on the bonds, it certifies to the regularity of the issue, and to the genuineness of the document. When necessary it sees to the refilling of the instrument, although the mortgage often specifically relieves the trustee of this responsibility. It does not guarantee the value or the payment of the bond, although the public often seems to think that it does. As a matter of fact, while the form of certification varies somewhat, it never covers more than the regularity of the issue and the genuineness of the document. Most trust companies do, however, make it a point not to authenticate bonds without having reason to believe that the undertaking represented is presumably safe. Unquestionably the best companies do, and ought to, exercise the greatest care in this matter.

In its capacity of trustee under a trust deed, the trust company is charged with the duty of acting as agent and protector of the bondholders. In case of default of the company issuing the bonds, it usually has the duty of foreclosing on the property in the interests of the holders of the securities, and of exercising numerous incidental duties connected therewith.

It is often charged with the custody and management of a sinking fund, either in connection with its duties as trustee under a trust deed, or as a separate undertaking.

It acts as fiscal or financial agent for corporations of all kinds—States, municipalities, railroads, industrial concerns. It pays bonds, coupons, interest. It may take entire charge of the disbursement of dividends and interest, attending to the publication and mailing of notices, etc.

For syndicate managers, voting trusts, etc., it issues and collects calls for installment payments, and computes and distributes to the proper parties the amounts of their participations in the profits or proceeds.

It acts as depository of cash and securities, under varying conditions. Underwriting syndicates appoint it depository and trustee.

It is made agent to receive subscriptions to stocks and bonds, and to deliver the same when issued.

It may receive and execute for corporations any of the trusts that have already been mentioned as undertaken for individuals under private agreement.

#### BUSINESS AS TRANSFER AGENT AND REGISTRAR.

Trust companies are very generally used as transfer agent for stocks, and as registrar for stocks and bonds. In the older financial communities the

value of such services has come to be so generally recognized that securities not registered by a responsible agent are looked upon with suspicion. The historical reason usually given for the adoption of the custom of having a registrar not connected with the concern issuing the stock, was the discovery some years ago in New York that a prominent railroad president had fraudulently overissued the stock of his company many hundreds of shares. The employment of a responsible registrar makes such a fraud impossible, for the essential function of the registrar is to see that not more than the authorized amount of stock is issued.

The transfer agent assumes the entire work of transferring the stock of a corporation—a duty requiring thorough knowledge of the laws governing such matters, and great care and accuracy in the performance of the details. The cancellation of a single certificate of stock and the issuance of a new certificate often involve the change in ownership of thousands of dollars' worth of property; yet it may be done by a few strokes of the pen.

It is often desirable to register bonds, either as to principal or as to interest, or both. Usually the trust company that acts as trustee under the bond issue also acts as registrar of the bonds.

In some communities the same company is often appointed both transfer agent and registrar of the same stock. This is illogical, since the function of the registrar is to operate as a check upon any error or irregularity on the part of the transfer agent.

#### CORPORATION REORGANIZATION AND FINANCING.

Some trust companies handle a large amount of business in the reorganization or financing of corporate enterprises of different kinds. This field is one concerning which a wide difference of opinion exists among managers of trust companies as well as among the general public. There are companies which devote themselves to this business very largely, while others abstain from it absolutely, believing it not a proper field for companies which handle funds in trust.

In the consideration of the problem much depends upon the character of the financing that is undertaken. No well-informed person will deny that there is a field for services in this line whose legitimacy is beyond question, and whose performance involves no risk. It is likewise evident that there is a class of operations so risky that no corporation which handles the funds of others ought to undertake them. The temptation to step from the one class of operations into the other is sometimes great; and this fact doubtless accounts for the prejudice that exists in some quarters against trust companies undertaking corporation financing of any kind.

When it becomes necessary for any reason to reorganize a corporation having outstanding securities, the trust company offers exceptional facilities for the work. The plan of reorganization must first be determined. If new securities are to be issued the old ones must be called in and temporary receipts given. When the new securities are ready they must be distributed among the receipt-holders in the proper proportions—the determination of which may require careful computation. At the same time an assessment may have to be collected, or a cash or stock dividend be distributed. Fractional shares or bonds may need to be purchased or sold.

When a new corporate enterprise is proposed in any community some one

in whom the public has confidence must investigate and report, or else each prospective investor must make investigation for himself. Some one must see that the new corporation actually owns the property which it claims to have; that its title is good; that the securities which it offers to the public are correctly prepared, and that they give the purchaser a real lien upon the property; in short, that the whole proposition is legitimate and made in good faith. The services here outlined appear to be perfectly legitimate, and to involve no risk to the trust company undertaking them other than the risk assumed in accepting any responsible trust.

These services, however, constitute only the preliminary steps in the financing of enterprises. The securities are ready for sale; they must now be sold. It is at this point that the most serious differences of opinion arise regarding the attitude of the trust company. In placing the securities upon the market, the trust company may act, if it acts at all, as a mere agent for the sale and delivery of same; or it may set the stamp of its approval upon them to the extent of recommending them for purchase to its group of customers, or to the extent of purchasing same, in its capacity of trustee, for some of its trust accounts; or it may purchase a portion of the issue for its own account. Here the trust company is clearly treading upon ground which may or may not be dangerous, according to circumstances, but which in any event requires the highest degree of honor and integrity and business judgment of the finest type.

#### FIDELITY INSURANCE AND TITLE INSURANCE.

Some of the States empower trust companies to undertake the business of fidelity insurance and of title insurance, but comparatively few trust companies undertake these duties. As a rule, where they do undertake them, they make such work a specialty, and confine themselves mainly to the specialty. The larger part of fidelity insurance business is done by independent bond or surety companies.

Fidelity insurance consists in becoming surety for or guaranteeing the honesty and fidelity of employees, officers and other persons holding positions of trust and responsibility. Bonds for this purpose were formerly signed by friends of the person holding such position, but the practice is rapidly growing of having such bonds executed by companies who make it their business. Beyond any question the new plan is better than the old, whether from the standpoint of the person bonded, the one signing the bond, or the security afforded the beneficiary named in the bond. The person who is required to give bond feels, or ought to feel, a delicacy about asking his friends to go on his bond. If he does ask a friend to do so, that friend must, if he complies with the request, assume for himself and his heirs a responsibility whose degree is not determinable, which may last for a number of years, and which may involve himself and family in ruin. To the beneficiary under the bond, the individual is not satisfactory as a surety, because, among other reasons, his financial ability is not always determinable with accuracy, and it may be ample to-day and nothing to-morrow. On the other hand, the company which makes a business of fidelity insurance receives compensation of a reasonable annual premium for its services, assumes the risk as a business proposition on the same general principles as the life or fire insurance company, and protects the beneficiary by a capital and financial responsibility that is

known. Fidelity insurance companies are often called upon to sign bonds guaranteeing the financial responsibility of individuals, partnerships and corporations.

A title insurance policy is "an agreement under which the company agrees to defend, at its own expense, all litigation directed against the title insured by it, and if attacked successfully, it will pay the parties guaranteed the amount of the loss up to the full sum insured for." In short, it is an ordinary abstract of title, with insurance of the title added. This is a comparatively new business, the oldest companies having existed only about twenty years, but it is one which is growing rapidly. For its successful performance, a special and elaborate equipment is necessary.

#### SAFE-DEPOSIT BUSINESS.

As already noted, trust companies very generally conduct safe-deposit departments. For this purpose the best companies have specially-constructed vaults in the preparation of which the greatest care is used to insure that they shall be absolutely proof against fire, burglars, mobs and water. In addition guards are on duty twenty-four hours a day, and there are usually automatic alarms to give notice of any trouble. For the keeping of money and valuable papers individual boxes within the main vault are rented, access to which may be had only by the renter or his authorized deputy in company with the vault attendant. For the storage of larger articles of value, vaults are provided in which space is rented by the cubic foot or yard. Many companies maintain delivery wagons, and call for or deliver valuables entrusted to their care. Coupon rooms are provided, where each customer may cut his coupons or examine his papers in absolute privacy. The large companies also provide other conveniences, such as toilet-rooms, reading-rooms, parlors, committee-rooms, etc.

This department is a valuable, if not a necessary part of the equipment of a good trust company. An increasing number of depositors feel the need of such accommodations, and much prefer to have them under the same roof as their bank or trust company. While the expense of equipping the best vaults is great, it is not all chargeable to the safe-deposit department, since trust companies need large and impregnable vaults for the safe-keeping of the securities and other valuables entrusted to them in the other departments of their business.

#### SUPERIORITY OF TRUST COMPANIES OVER INDIVIDUALS ACTING IN TRUST CAPACITIES.

The advantages which the trust company has over individuals for the performance of the various trust duties outlined in the preceding pages are many. The following are among the most conspicuous of these advantages:

The life of the trust company is perpetual—it will live long enough to execute the trusts that are committed to it. On the other hand, an individual to whom a trust is committed may die on the very day that he undertakes the trust. To install another individual trustee will then involve delay and additional expense—perhaps serious loss. And when it is done, there is no guarantee that he will not die, making another change necessary. Even if the individual lives, he may for various reasons resign the trust, or may become incapacitated through sickness or other cause.

The trust company has an established office and can always be found when needed. The individual is sometimes difficult to locate.

The trust company is always at its place of business every business day of the year. It does not take vacations, does not go away on business trips, does not get sick.

The trust company is organized especially for carrying on such work, which is therefore not secondary to its own business, but is a part of its business. If an individual is competent to carry on such work it is because he has had a successful training in looking after his own affairs, and his success is usually due to the fact that he has given his business his undivided attention. If he undertakes the trust it must be as a thing secondary to his own business, or else he must neglect the latter. Finding that he has not the necessary time to look after details, he may turn them over to an incompetent employee.

Being organized for the work, the trust company has all the necessary equipment—officers and clerks trained for the service, conversant with laws and forms and methods of procedure, vaults for the safe-keeping of valuables, correct forms for the keeping of accounts, books to keep track of due-dates of securities and times for the payment of taxes, insurance, premiums, etc. It does not forget.

It is the trust company's business to understand the work. It does not make mistakes due to ignorance, and would be responsible if it did. It has the benefit of a large experience in the work it is undertaking. Very often individual trustees or executors, however honest and faithful, make mistakes that are costly or entirely disastrous.

For the making of investments in the name of the trust, the trust company has advantages which few if any individuals have. The matter is determined by a committee of men trained in such work, and with every facility at their command for keeping in touch with conditions and knowing something of intrinsic values. The extent of the company's operations also enables it to buy on better terms than the individual can.

The trust company gives to the trust, without extra cost in ordinary matters, the benefit of the best legal advice. It unites the advantages of the advice of a number of experienced counselors with the promptness in action of a competent individual.

The trust company is, in most States, subject to examination by State authorities. Its books are always open to inspection by the proper persons. They are intelligible and kept up to date. The individual trustee under private appointment is not usually subject to examination; and when he is, his books are often in a tangle.

The superior facilities of trust companies often enable them to administer trusts with far greater economy than is possible to the individual trustee. Expenses are often much less, while the company is usually in position to secure a greater income for the trust than could the individual. The latter must give a bond, the cost of which must be borne by the estate; while the trust company's assets and special deposit with the State protect the trust without extra cost.

Frequently the interests of the estate—perhaps its very preservation—depend upon temporary advances of money. The trust company is in position to make such advances, few individuals are.

Individuals are often subject to personal prejudices, sympathies or influences which lead them into unwise uses of the property. The trust company is not subject to these things.

The most important consideration of all is that of safety—the absolute security of the property. Here the advantages offered by the trust company as compared with the individual are unquestioned. Besides the State supervision just referred to, the trust company protects its customers by a large capital and surplus, and in most States by a large deposit made with the State officials to guarantee the faithful performance of its trust duties. These things amply insure against loss due to possible dishonesty on the part of the company's officers or employees. The company as an institution cannot possibly be dishonest or unfaithful. It has nothing to gain and everything to lose by such a course. It is to continue in business for a long term of years or perpetually. Its success depends upon its reputation for integrity and faithfulness. At a recent meeting of the Trust Company Section of the American Bankers' Association, it was stated that there had never been a trust fund impaired by a failure of a trust company having control of the fund. Instances of loss to depositors in the banking department there have been, though not many; but the trust funds are so safeguarded that loss to them is well-nigh impossible. There may be loss to the ordinary creditor of a trust company without in the slightest degree impairing its trust funds, which are kept separate and are not a part of its assets.

On the other hand, losses through individual trustees, executors and administrators have been numerous. How often have the papers told of instances where individuals serving in such capacities have proved unfaithful or fatally incompetent! Men of reputation for unquestioned integrity have been led through speculation or embarrassment in their own affairs to borrow the funds entrusted to them with the full intention of repaying the loan in a few weeks or months, only to find that such restitution is impossible, that they are defaulters, and that the widow and orphan are left penniless through their unfaithfulness. Others, wilfully dishonest, have squandered the funds entrusted to them until every cent was gone and the beneficiaries of the trust left in dire need. Bonds furnished by these men have often proved worthless; and where ultimately found good, great expense of litigation has been incurred, and the property has been tied up for years pending settlement of suits.

CLAY HERRICK.

(To be continued.)

---

**SOMETHING ABOUT SAFES.**—The United States Fidelity and Guaranty Co., of Baltimore, has issued, through its "Burglary Department," a book giving a detailed description of the prominent makes of safes and vaults, and also showing how the ingenuity of the burglar often brings the skill of the safe-manufacturer to naught. Illustrations are given of many kinds of safes, also of some of them after they have been operated on by burglars or in tests by rival manufacturers.

As is well-known, there is no safe made that affords absolute protection under all conditions, though all are more or less valuable.

The compilation of information made by the United States Fidelity and Guaranty Co. will be found useful to banks desiring to avail themselves of the best safeguards for their funds and securities.

## THE LOUISIANA PURCHASE.

---

In view of the recent opening of the St. Louis Exposition, in celebration of the Louisiana Purchase, it will be interesting to recall the manner in which the purchase of this vast territory was brought about and how it was financed.

The territory included in the purchase was ceded to the United States by Napoleon I, April 30, 1803. According to the construction of the Government of the United States, the territory ceded covered all now included in the States of Louisiana, Arkansas, Missouri, Iowa, Minnesota, Oregon, Nebraska, Kansas, North and South Dakota, Montana, Idaho, Washington and the Indian Territory, parts of Colorado and Wyoming and those parts of Alabama and Mississippi lying south of the thirty-first parallel.

The determination of Napoleon, then First Consul, to sell Louisiana to the United States was taken immediately on his resolve to break the peace of Amiens with England. On March 13, 1803, he had at the reception of the diplomatic body at the Tuileries, violently addressed Lord Whitworth, the English ambassador, making a scene famous in history, and had shown his determination of breaking with Great Britain.

The historian Thiers gives the following account of the reasons for making the concession and sale, and the manner in which it was consummated on the French side. The question was, what, in view of a war with so powerful a maritime power as Great Britain, was to be done with the rich province of Louisiana, lying unprotected at so great a distance?

"There was no reason," writes Thiers, "to be uneasy respecting our other colonies. St. Domingo was full of troops, and the soldiers who were disposed in the colonial depots were hastily put on board transports ready to sail. Guadaloupe, Martinique and the Isle of France were likewise provided with strong garrisons, and immense expeditions would have been required to dispute them with the French. But Louisiana contained not a single soldier. It was an extensive province which four thousand men were not sufficient to occupy in time of war. The inhabitants, though of French origin, had so frequently changed masters during the last century that they were attached to nothing but their independence. The Americans were by no means pleased to see us in possession of the mouths of the Mississippi, their principal outlet to the Gulf of Mexico. They had even applied to France to grant them advantageous conditions of transit in the port of New Orleans. If we were determined to keep Louisiana we might therefore reckon on the greatest efforts on the part of the English against us, on perfect indifference on the part of the inhabitants, and on positive ill-will on the part of the Americans. The latter, in fact, wished to have none but Spanish for neighbors. All the colonial dreams of the First Consul were dispelled at once by the appearance of the warlike message of King George III to Parliament, and his resolution was immediately formed. 'I will not keep,' he said to one of his ministers, 'a possession which would not be safe in our hands, which would perhaps embroil me with the Americans or produce a coldness between us. I will

make use of it, on the contrary, to attach them to me and embroil them with the English and raise up against the latter enemies who will some day avenge us, if we should not succeed in avenging ourselves. My resolution is taken. I will give Louisiana to the United States. But as they have no territory to cede to us in return, I will demand a sum of money towards defraying the expenses of the extraordinary armament I am projecting against Great Britain.' He sent for M. Marbois, Minister of the Treasury, formerly employed in America and for M. Decrès, Minister of Marine, and wished, though decided himself, to hear what they had to say. The First Consul listened to them very attentively, without appearing to be the least touched by the arguments of either; he listened to them, as he often did when he had made up his mind, to satisfy himself that he was not mistaken on any important point of the questions submitted to his judgment. Confirmed rather than shaken in his resolution by what he heard, he directed M. Marbois without losing a moment to send for Mr. Livingston, the American minister, and to enter into negotiation with him about Louisiana. Mr. Monroe had recently arrived in Europe to settle with the English the question of maritime rights and with the French the question respecting transit on the Mississippi. On his arrival in Paris he was met by the unexpected proposal of the French cabinet. He was offered not certain facilities of transit through Louisiana, but the annexation of the country to the United States. Not embarrassed for a moment by the want of powers, he immediately concluded a treaty subject to the ratification of his Government. M. Marbois demanded eighty millions of francs, twenty millions out of that sum being to indemnify American commerce for captures illegally made by the French during the late war, and sixty millions for the French Treasury. The twenty millions were expected to secure us the hearty good will of the merchants of the United States. As for the sixty millions destined for France, it was agreed that the cabinet at Washington should create annuities and that they should be negotiated to Dutch houses at an advantageous rate not far from par. The treaty was therefore concluded on these bases and sent to Washington to be ratified."

The foregoing is the account given by Thiers. It is, however, seen that to a certain extent the initiative was taken by the United States, and that although Monroe may have been surprised by the sudden offer of the sale of the whole of Louisiana, he was not by any means unprepared to consider it.

Previously to the retrocession of Louisiana to France by Spain, on October 1, 1800, there had been a good understanding between the United States and Spain as to the navigation of the Mississippi and the use of New Orleans as a free port. This understanding had been reached by treaty on October 27, 1795. The intentions of Bonaparte and France with regard to Louisiana were justly viewed by the United States with distrust. April 18, 1802, President Jefferson wrote to Mr. Livingston, then minister of the United States to France:

"The cession of Louisiana and the Floridas by Spain to France works most sorely upon the United States. It completely reverses all the political relations of the United States and will form a new epoch in our political course. There is on the globe one single spot, the possessor of which is our natural and habitual enemy. It is New Orleans through which the produce of three-eighths of our territory must pass to market. France places herself in that door and assumes to us the attitude of defiance \* \* \* and seals the

union of the two nations who in conjunction can maintain exclusive possession of the ocean. From this moment we must wed ourselves to the British fleet and nation and make the first cannon which shall be fired in Europe the signal for tearing up any settlement she (France) may have made."

It is not beyond the bounds of possibility that Napoleon may have been aware of the contents of Jefferson's letter. At St. Helena he told what means he took of opening dispatches and letters directed to ambassadors and foreign ministers. There was a great ferment in the West, because the Spanish, when they ceded Louisiana back to the French, withdrew the commercial rights previously granted to the United States under the treaty of 1795. In Congress James Ross, Senator from Pennsylvania, introduced a resolution authorizing the President to call out fifty thousand militia and take possession of New Orleans. Instead of this Congress appropriated \$2,000,000 for the purchase of New Orleans and the President, January 10, 1803, sent James Monroe as minister extraordinary, with discretionary powers to co-operate with Livingston in the proposed purchase. They were invited by Napoleon to make an offer for the whole of Louisiana.

The outbreak between France and England was an important factor in the successful acquisition of Louisiana. Napoleon saw the situation as clearly as Jefferson, and there seems to have been almost a perfect coincidence in their views of the situation.

There is good authority going to show that the first proposition of the French minister, Marbois, required a payment of 100,000,000 francs and in addition the assumption by the United States of all damages for French spoliations on American commerce. It was the firmness of Monroe and Livingston and the anxiety of the French to get something for a territory they knew to be irrevocably lost in the event of a war with England, already resolved on by Napoleon, that caused the reduction of the amount over one-third. From a demand amounting practically to one hundred and twenty millions of francs the French minister fell to seventy-five millions, twenty of the seventy-five being reserved by the United States to meet the spoliation claims.

It appears at this day that the United States might have come into the possession of the port of New Orleans by the mere logic of events without paying a cent. At all events Napoleon, as he foresaw, was sure to lose it.

Monroe and Livingston then arranged to pay \$15,000,000 for Louisiana, of which \$11,250,000 was to be paid to France in United States bonds payable in fifteen years and bearing six per cent. interest. The remainder of the \$15,000,000, amounting to \$3,750,000, was to be reserved to reimburse American citizens for their losses from illegal seizure of ships and cargoes by the French.

The treaty was confirmed by the Senate, but the House had an extended debate over the act to issue the necessary stock in payment according to the terms of the treaty. The act to issue the stock was not approved until November 10, 1803. It provided that for the purpose of carrying into effect the convention of April 30, 1803, the Secretary of the Treasury should issue in favor of the French Republic, or its assignees, certificates of stock for the sum of \$11,250,000 bearing an interest of six per cent. per annum from the time at which the possession of Louisiana might be obtained in conformity with the treaty, the certificates to be delivered by the President to the Gov-

ernment of France, or to such persons as should be authorized to receive them, within three months after Louisiana should be taken possession of in the name of the Government of the United States. The faith of the United States was pledged for the payment of the interest and the reimbursement of the principal in conformity with the provisions of the convention with France. This provided that the interest should be payable half-yearly in London, Amsterdam, or Paris, and that the principal should be paid in annual installments of not less than three millions each, the first payment to commence fifteen years after the date of the exchange of ratification. The act provided that the Secretary of the Treasury might consent to discharge the stock in four equal annual installments and also to shorten time of the first payment of principal. The annual interest payable in Europe was to be paid at the rate of four shillings and sixpence sterling for each dollar payable in London, and of two and one-half guilders for each dollar payable in Amsterdam; sufficient money to pay interest for the first year was appropriated by the Act. An annual sum of \$100,000 (in addition to the annual sinking fund of \$7,300,000), payable out of duties on merchandise and tonnage, was to continue appropriated until the whole debt of the United States, including the Louisiana stock, was paid. The redemption began in 1812, and was completed in 1823. Much of the stock was purchased for the sinking fund at prices ranging from 96½ to par.

#### NOTICES OF NEW BOOKS.

POOR'S READY REFERENCE BOND LIST, edition of January, 1904. New York: H. V. & H. W. Poor.

This is a supplement to the well-known Manual of Railroads, and contains all important facts required by investors, bond experts and others relative to the bonded indebtedness, interest charges, etc., of the leading railroad systems of the United States. The information comprises the following facts in regard to these securities: Name of company and description of bonds; date of issue; date of maturity; amount of bonds outstanding on or about December 1, 1903; annual charge; interest rate—when and where payable; property covered; miles of railroad; amount of bonds outstanding per mile of railroad; names of trustees.

This information is presented in a condensed form, easy for reference, and will be found useful and valuable to investors and bankers.

---

LECTURES ON COMMERCE; delivered before the College of Commerce and Administration of the University of Chicago; edited by HENRY RAND HATFIELD. Chicago: The University of Chicago Press (12 mo., pp. 379; price, \$1.50).

The topics included in these lectures are: Railways, Trade and Industry, Banking and Insurance. There is also an introductory lecture by Prof. J. Laurence Laughlin on "Higher Commercial Education." The lectures on banking include, "The Comptroller of the Currency," by James H. Eckels, former Comptroller, and now President of the Commercial National Bank, Chicago; "The Methods of Banking," also by Mr. Eckels; "Investments," by D. R. Forgan, Vice-President First National Bank, Chicago; "Foreign Exchange," H. K. Brooks, Manager Financial Department American Express Co.

## REPUDIATED STATE BONDS.

---

### RECOVERY FROM NORTH CAROLINA BY SOUTH DAKOTA.

---

The Supreme Court, divided into five Justices for the opinion and four dissenting, handed down, during March, a decision which recalls the whole subject of repudiated State bonds, but which does not, as some newspapers have interpreted it, go the whole length of forming a precedent by means of which all the holders of such bonds can now collect their money. Rather, a close reading of Justice Brewer's opinion in the case of the State of South Dakota vs. the State of North Carolina indicates that the scope of that decision is closely restricted to a limited class of State bonds, and that the analogy by which the newspapers have reasoned that other classes of State bonds can now be collected, is far too loose to be legal. Nevertheless, the decision marks a new and rather long step in constitutional interpretation. It revives a picturesque episode in American history, and it is of profound interest to the holders of all repudiated bonds, which now amount, with the accrued unpaid interest, in the aggregate, as nearly as can be estimated, to about seven hundred million dollars.

Omitting, for the present, any reference to the historic aspect of repudiation, the story of this lawsuit between two States may be taken up at the first step, at least the first step of which the public and the court have cognizance. This consisted in the passage, by the Legislature of South Dakota, in the session of 1901, of an act entitled, "An Act to Require the Acceptance and Collection of Grants, Devises, Bequests, Donations and Assignments to the State of South Dakota."

This act read as follows:

"Be it enacted by the Legislature of South Dakota:

Sec. 1. That whenever any grant, devise, bequest, donation, or gift or assignment of money, bonds, or choses in action, or of any property, real or personal, shall be made to this State, the Governor is hereby directed to receive and accept the same, so that the right and title to the same shall pass to this State; and all such bonds, notes, or choses in action, or the proceeds thereof when collected, and all other property or thing of value, so received by the State as aforesaid, shall be reported by the Governor to the Legislature, to the end that the same may be covered into the public treasury or appropriated to the State University or to the public schools, or to State charities, as may hereafter be directed by law.

Sec. 2. Whenever it shall be necessary to protect or assert the right or title of the State to any property so received or derived as aforesaid, or to collect or to reduce into possession any bond, note, bill, or chose in action, the Attorney-General is directed to take the necessary and proper proceedings and to bring suit in the name of the State in any court of competent jurisdiction, State or Federal, and to prosecute all such suits, and is authorized to employ counsel to be associated with him in such suits or actions, who, with him, shall fully represent the State, and shall be entitled to reasonable compensation out of the recoveries and collections in such suits and actions."

It must have been clear enough at the time that there was something back of this bit of legislation. It is doubtful if a similar act can be found on any

State statute book. States are not commonly made, like schools and hospitals, the beneficiaries of gifts, and few States are prepared with the legislation, like the above, necessary to take advantage of such gifts. This act was clearly anticipatory of the events that followed.

Some months later, a letter addressed to an official of South Dakota, from Simon Schafer, a broker at 35 Wall St., New York, explained quite fully the purpose of the previous legislation. That letter read as follows:

NEW YORK, September 10, 1901.

DEAR SIR: The undersigned, one of the members of the firm of Schafer Bros., has decided, after consultation with the other holders of the second-mortgage bonds issued by the State of North Carolina, to donate ten of these bonds to the State of South Dakota.

The holders of these bonds have waited for some thirty years in the hope that the State of North Carolina would realize the justice of their claims for the payment of these bonds.

The bonds are all now about due, besides, of course, the coupons, which amount to some 170 per cent. of the face of the bond.

The holders of these bonds have been advised that they cannot maintain a suit against the State of North Carolina on these bonds, but that such a suit can be maintained by a foreign State or by one of the United States.

The owners of these bonds are mostly, if not entirely, persons who liberally give charity to the needy, the deserving, and the unfortunate.

These bonds can be used to great advantage by States or foreign governments, and the majority owners would prefer to use them in this way rather than take the trifle which is offered by the debtor.

If your State should succeed in collecting these bonds it would be the inclination of the owners of a majority of the total issue now outstanding to make additional donations to such Governments as may be able to collect from the repudiating State rather than accept the small pittance offered in settlement.

The donors of these ten bonds would be pleased if the Legislature of South Dakota should apply the proceeds of these bonds to the State University or to some of its asylums or other charities.

Very respectfully,

SIMON SCHAFER.

Every lawyer will be quick to see the point of this letter—perhaps also such laymen as, being owners of repudiated bonds, have become familiar with the constitutional barrier against suing a State. When Mr. Schafer says that South Dakota can sue on these bonds, but that he himself cannot, he has in mind, of course, two clauses in the Constitution of the United States: the first, “the judicial power (of the United States) shall extend \* \* \* to controversies between two or more States”—it is this, of course, that enables South Dakota to sue; and the second, “the judicial power of the United States shall not be construed to extend to any suit in law or equity, commenced or prosecuted against one of the United States by citizens of another State”—it is this, of course, that prevented Mr. Schafer from bringing suit himself and rendered him powerless when North Carolina refused to pay.

In accordance with its statute, South Dakota accepted the gift and brought the suit. North Carolina defended and the issue was heard by the Supreme Court in October. That it was a difficult one to decide is indicated by the six months taken for advisement and the dissent of four of the Justices—White, Fuller, McKenna and Day.

Before commenting on Justice Brewer's opinion in favor of South Dakota, some inquiry may be made into the exact nature of the bonds in question, for on this, the writer believes, hangs the misconception into which the newspapers have slipped in discussing the effect of this decision on the whole body of repudiated bonds.

The bonds were issued by North Carolina in 1867 for the purpose of borrowing money to build a railroad. The railroad was built by a private corporation, but the State subscribed for a large block of the stock. To pay for the stock these bonds were issued, and —this is the important point—the stock which the State had subscribed for, and which was in the treasury of the State, was mortgaged to secure these bonds. Each of the bonds in question bore an endorsement, signed by the State Treasurer, which said: “ten shares of the stock in the North Carolina Railroad Company, originally subscribed for by the State, are hereby mortgaged as collateral security for the payment of this bond.”

Bearing in mind this fact, that the bonds were secured by a mortgage of specific property of the State, Justice Brewer's opinion may be examined.

The important point in the case was, of course, whether the Supreme Court could take jurisdiction of the suit as a “controversy between two States,” and the decision of this obviously depended on whether South Dakota was the *bona fide* owner of the bonds. As to this, Justice Brewer says squarely, among the opening sentences of his opinion, “neither can there be any question respecting the title of South Dakota to these bonds. They are not held by the State as representatives of individual owners, \* \* \* for they were given outright and absolutely to the State.”

Yet the Justice was by no means blind to the motive behind the gift. “Probably,” he says, “the donor made the gift under a not unreasonable expectation that South Dakota would bring an action against North Carolina to enforce these bonds, and that such action might enure to his benefit as the owner of other like bonds.” But he adds “the motive with which a gift is made, whether good or bad, does not affect its validity or the question of jurisdiction.” South Dakota's *bona fide* title to the bonds being thus admitted, it was a logical *sequitur* that judgment be given to that State against North Carolina, and this was done in the following language :

“A decree will, therefore, be entered, which, after finding the amount due on the bonds and coupons in suit to be twenty-seven thousand four hundred dollars (\$27,400), (no interest being recoverable), and that the same are secured by 100 shares of the stock of the North Carolina Railroad Company, belonging to the State of North Carolina, shall order that the said State of North Carolina pay said amount with costs of suit to the State of South Dakota on or before the first Monday of January, 1905, and that in default of such payment an order of sale be issued to the marshal of this court, directing him to sell at public auction all the interest of the State of North Carolina in and to one hundred shares of the capital stock of the North Carolina Railroad Company, such sale to be made at the east front door of the Capitol building in this city, public notice to be given of such sale by advertisements once a week for six weeks in some daily paper published in the city of Raleigh, North Carolina, and also in some daily paper published in the city of Washington.”

At this point the question may well be considered whether the same decision would have been given had these been the ordinary State bonds, had the feature of a mortgage on specific property been lacking. The writer believes that in such case the decision would have been different. This belief hangs on two propositions:

First: To satisfy a judgment against a State, there must be, available for seizure, some property that may be regarded as private assets, some property other than the State house and the like, because, as the Court says in this case, “the public property held by any State is exempt from seizure because it is held by the State, not as a part of its private assets, but as a trustee for

public purposes." In the present case, there was, in the shape of the mortgaged railroad stock, just that sort of private assets which must be found in order to get an execution against a State. This feature of these North Carolina bonds distinguishes them from a host of other State bonds which rely merely upon the general credit of the State that issued them; and this feature, in the belief of the writer, accounts for the decision favorable to the owner of the bonds in the present case.

The second proposition to support the belief that Justice Brewer's decision would have been different but for the attachment to the bonds of a mortgage on the railroad stock is this: no court will render a judgment against a State which is, in the nature of things, nugatory, which cannot be enforced by execution. In other words, where there are no private assets of a State, upon which to levy execution, the court will decline to give judgment against the State. As Justice Taney says in *Gordon vs. United States*, "execution is an essential part of judgment, and where it is obvious that execution cannot be had, there the court will decline to render judgment at all."

To sum up, what the present decision stands for is this: when the bonds of a State are secured by a mortgage of specific property in the hands of the State, and when those bonds become the *bona fide* property of another State, the Supreme Court will, in a suit, render judgment against the State that issued the bonds and direct the sale of the mortgaged property. Hence, the holders of repudiated State bonds who desire to see whether they can secure the collection of their bonds by the device which Mr. Schafer adopted, should examine the exact terms of their bonds and see whether they are secured, as these North Carolina bonds are, by a mortgage of specific property in the possession of the State.

The holders of these bonds will be interested in one more question. Would the decision have been the same if the transfer of the bonds to South Dakota had been by sale instead of by gift? In the present case, Mr. Schafer gets nothing out of his bonds. He has only the satisfaction of the angry creditor who says to his lawyer, "collect this claim and keep what you get," South Dakota taking the place of the lawyer. What other holders of repudiated bonds will wish to know, who hope in some way to take advantage of this decision, is whether it is possible to sell their bonds to some speculatively-minded State, who may then collect as South Dakota has. As to this question, it can only be said that there is nothing in the present decision to hint that the court would make any distinction between a sale and a gift. All that seems to be required is that the transfer shall be *bona fide*. The only line that seems to be drawn by the court is between *bona fide* ownership by the State, and ownership that is merely colorable, merely given for the purpose of evading the constitutional barrier against an individual suing a State, ownership in which the former individual owner of the bonds remains the real party in interest.

Such a colorable transfer was the one in the case of *New Hampshire vs. Louisiana*, heard in the Supreme Court some twenty years ago. That represented the first effort of the individual bondholders, when they found that they themselves could not sue to recover by means of a State. That effort failed because the transfer was not *bona fide*, just as the present effort has succeeded because the transfer was *bona fide*. In the *New Hampshire* case the State passed a statute entitled, "An act to protect the rights of citizens of this

State holding claims against other States." This act provided that any citizen of New Hampshire who owned a repudiated bond might "assign" it to the State, and should "deposit with the Attorney-General such sum as the said Attorney-General shall deem necessary for the recovery of the money." It was thus clearly stipulated that the owner of the bond, not the State, was to pay the expenses of the suit. To make this thoroughly understood, a later clause of the act said that "nothing in this act shall authorize the expenditure of any money belonging to this State, but the expenses of said proceedings shall be paid by the assignor" of the bond. The act then provided that the Attorney-General should prosecute the suit on the bond and should pay whatever money he might recover, to the assignor, the real owner of the bond.

There could be no doubt whatever that this was a mere device to get around the letter of the constitution. As Chief Justice Waite said, in dismissing the case from the Court: "No one can look at the pleadings and testimony in this case without being satisfied, beyond all doubt, that they were, in legal effect, commenced and prosecuted solely by the owners of the bonds. \* \* \* The State is nothing more nor less than a mere collecting agent for the owners of the bonds."

The loss of this suit in 1882 ended, for the time being, the efforts of the holders of repudiated bonds to make the repudiating States pay back the money they had borrowed. Since then the bonds have been regarded as of little value. They have laid in dusty pigeon-holes, with their big sheets of uncut coupons, regarded as of little worth except as historical curiosities. The investors who own them have long ago exhausted the vocabulary of reproach concerning the immorality of repudiation. The excuses offered by the repudiating States—that the enforced abolition of slavery wiped away the property which might have gone to the payment of these bonds, that the bonds were issued recklessly by the carpet-bag governments of the reconstruction period which did not really represent the people of the State, that there was fraud in the issue of the bonds and that the State never really received the money for them—all these have been matters of history until the present suit.

This decision, even with all the limitations that have been pointed out, makes repudiation once more a live issue. Discount the direct results of the suit as conservatively as you may, and much still remains. Besides, there are very possible indirect results. The Southern States are more prosperous now than they were when they repudiated, and the moral effect of the present decision may suggest to them the desirability of compromise.

As to the total amount of these bonds, it is doubtful if the States themselves could compile accurate figures. Some twenty years ago, about the time of the futile New Hampshire suit, a broker estimated the amounts as follows:

|                |              |                     |               |
|----------------|--------------|---------------------|---------------|
| Alabama.....   | \$38,812,000 | Mississippi.....    | \$23,600,000  |
| Arkansas.....  | 20,807,000   | North Carolina..... | 48,350,000    |
| Florida.....   | 5,280,000    | South Carolina..... | 19,500,000    |
| Georgia.....   | 13,580,000   | Tennessee.....      | 29,850,000    |
| Louisiana..... | 32,115,000   | Virginia.....       | 72,220,000    |
| Total.....     |              |                     | \$303,114,000 |

Since then the accrued interest must have at least doubled the amount. But Virginia has since then compromised with her bondholders on a basis of the percentage of the face value and accrued interest. Minnesota, also, at one time had some millions of bonds which were not acknowledged for some years, but were later compromised on a basis which gave the bondholders about fifty per cent. of the face value of their securities.

MARK SULLIVAN.

# THE RELATIONS OF LABOR AND CAPITAL.

---

[In the opinion of many bankers and others the present relations between labor and capital are a menace to the continued prosperity of the country. Believing that a full discussion of the subject will tend to a right settlement of existing difficulties, **THE BANKERS' MAGAZINE** has secured a number of special articles from representatives of both sides of the controversy. The first article, published in the November issue of the **MAGAZINE**, was contributed by David M. Parry, President of the National Association of Manufacturers; also President of the Citizens' Industrial Association of America, recently organized. In the December issue the views of Samuel Gompers, President of the American Federation of Labor, were presented. Ralph M. Easley, Chairman of the Executive Council of the National Civic Federation, contributed a paper to the February number. Charles N. Chadwick, Chairman of the Committee on Labor and Capital, of the Manufacturers' Association of New York, had an article in the April number. John Burton Phillips, Professor of Economics and Sociology, University of Colorado, Boulder, Colo., continues the discussion.]

---

## ORGANIZATION OF EMPLOYERS AND EMPLOYEES.

---

*BY JOHN BURTON PHILLIPS, PROFESSOR OF ECONOMICS AND SOCIOLOGY,  
UNIVERSITY OF COLORADO, BOULDER, COLO.*

The strength of organization is in the fact that in this way the influence of a class may make itself felt. Public opinion is influenced by class feeling. The distribution of wealth among the various classes of the population is in considerable measure fixed according to public opinion. The true philosophy of the organization of the laboring class is that they realize that the wage scale is in part set in this way. Wages are in considerable part the result of public opinion as to the standard of living and the amount of income necessary to maintain the degree of comfort which it is thought desirable should be maintained by the various classes of the population. For example, the salaries of Government officers are in part fixed at a rate that it is thought will enable them to entertain, as this is considered by their constituents a necessity in their positions. There does not appear to be any great necessity for a Government officer to spend large sums in entertaining, but the public think it is necessary and they attempt to fix the salary accordingly. They are dissatisfied if he does not live up to a certain style of life which common consent has fixed upon as proper for such as he.

Just as the public is displeased with the Government officer if he does not spend his income in keeping up a certain style of living, so it may be displeased with the wages that different classes of the population receive. There is a feeling that after a man has spent a certain amount of time and money in the preparation for a line of work he should not be paid less than a certain fixed wage or fee. This is fixed by public opinion at such an amount as is thought to be necessary for him to supply the larger needs that are supposed to have resulted from his superior training. This is clearly seen in the amounts that it is believed are proper for a physician to charge for his services. These fees are not fixed by the law of demand and supply; neither are they fixed by charging what the traffic will bear. They are in all probability

**JOHN BURTON PHILLIPS**

**Professor of Economics and Sociology, University of Colorado, Boulder, Colo.**

fixed by the opinion of the public as to how much such a man should be paid. Public opinion is thus a great factor in determining what a fair wage shall be.

While this is true of certain classes of the population, it is the case with but a small number of the entire laboring class. It is therefore to the interest of all classes to make their influence felt to as great an extent as possible in the formation of public opinion. If this can be done they will be able to rely on public sentiment to assist them in determining in the distribution of products what their share shall be. This is the principle of social philosophy that is behind the organization of the wage-earning class. They, least of all classes, have as yet had the assistance of public opinion in fixing the amount of wages they shall receive. They know that organization will further the growth of this class feeling which will make itself felt. When a definite public opinion has settled upon what a wage-worker should receive, the number of strikes will very likely tend to diminish. The workers will then be content to take the wage that the public have determined is fair and just, as is the case with the doctors, or they will go into some other employment where the prospect of higher wages is better.

#### MOVEMENT FOR THE ORGANIZATION OF EMPLOYERS.

Recent success in the efforts of the unionists in increasing their numbers, and still more in their disturbance of industry by strikes, has led to the formation of organizations of employers in various parts of the United States. These organizations have been formed largely as a means of self-defense, and also in part, perhaps, to convince the public that in many lines of industry the limit of high wages has almost been reached. At least this is the contention of the employers. Experience has also taught the employers that standing alone one employer is hardly equal to the task of keeping up a winning fight against the odds that the unions are able to wage against him. It was seen that the weaker firms were being crowded to the wall. The result has been a union of employers so that their combined strength may serve as a bulwark to withstand the attacks of the labor unions. The movement for the organization of employers is new. The idea is said to have been originated by Mr. D. M. Parry, of Indianapolis, and was first pushed by the manufacturers' association of that city. The movement has spread quite rapidly from State to State. All these organizations are combined in a grand national association which is to include, as the "New York Commercial" says, "all the great manufacturers of the country, the railroads, great retail interests, and the majority of banking institutions. Nearly all the existing organizations, local in scope but with the same object in view, will be affiliated with the national body." The competitive interests of the employers are forgotten in their effort to utilize their united strength against what they regard as their common enemy—the unions. They are clear and definite as to their programme. "There is to be no single-handed warfare against labor unions, but a concentrated effort. It will be a war in which the employers will stand united." This was the remark of a member of the railroad association. A representative of the manufacturers' association said: "Every time a sympathetic strike is used as a weapon against the employers, the employers will strike back with a sympathetic lockout. Arbitration is a farce. It simply means splitting the difference." The employers have organized into a national association, and their platform demands:

Freedom of contract. No discrimination against non-union labor.  
 No sympathetic strikes to be tolerated.  
 Enforcement of law.

#### DEMAND FOR GOVERNMENT INTERVENTION.

In addition to the idea of fighting the unions in such matters as strikes, there is another and somewhat newer feature in the movement. This is the growth of the feeling that some power of the Government should interfere in the settlement of strikes. The power of organized labor is beginning to make itself felt in legislation. This was seen in the recent agitation in favor of the anti-injunction and eight-hour bills. The coal strike of 1902 was a strong influence in favor of public ownership of the coal mines. There is no question but that the general effect of that strike was to influence public opinion in favor of the workers as opposed to the capitalists. Recent legislation shows the influence of the laboring class, and it is to counteract this influence in legislation, as well as to resist the demands of the union for higher wages, that the employers have organized. That this is the true situation is evident from the remarks of Mr. Parry. "There is no safe dependence to be placed in the action of the legislators whose political life is dependent in some degree on the labor vote. Even the constitution of the country does not appear to be a sufficient bulwark for our liberties, and while the majority of the judiciary is in the main standing firm, yet our judges are being subjected to such attacks that even they may yield." \*

It is not at all unlikely that the organization of capital for the purpose of fighting the labor unions will be productive of considerable good. When all employers are perfectly organized, the odds against the workmen will be so great that it will be futile for the men to attempt to carry on a fight. It will be a losing game from the start. This will tend to check the hasty calling of strikes. It is very likely that it will make the unions more ready to submit their disputes to a board of arbitration. In this way the organization of employers is to be looked upon as a good omen. Germany keeps out of war with France and Russia by keeping a large reserve of fighting power. So it may be that the employers by organizing into a fighting power will not need to use this power against the workmen. The knowledge that the sympathetic strike will be followed by the sympathetic lockout will be apt to make the bravest of the walking delegates more thoughtful before he calls a strike. However, the good we hope may come from this organization of employers is not unmixed. It is tempered by the fear of a combination between employers and laborers which is fraught with danger to the public, illustrations of which appear below.

#### HOSTILE FEELINGS BETWEEN CAPITAL AND LABOR.

Perhaps a word should be said on the effect that these combinations are likely to have on the hostile class feeling between laborers and capitalists. It is true that there is a good deal of this feeling now in the country. It is almost certain that anything that tends to separate the working class into a group on one side and the employers into another and opposing group is very certain to intensify any class feeling that may exist. Whenever a man joins

---

\* Quoted in "Wiltshire's Magazine," September, 1903.

a labor union and thereby proclaims that he is a manual laborer, he identifies himself with a certain class and the more that class exerts itself so as to make its influence felt, the more the stratification of society tends to become clearly defined. As class lines become more definite the more difficult it becomes for one to escape from the class in which he is to the higher class where each one desires to be. The strife between the two groups in the case we have been discussing is a cause that is operating to make our society like that in European countries and separate it more and more into classes. There seems to be little escape from this at the present time.

#### INDIVIDUALISM GIVING WAY TO ORGANIZATION.

When all employers are organized into one association and the rules prescribed by which they shall carry on their business, on what terms they shall hire and discharge their men, what shall be the hours of work, what material they shall use and of whom they shall buy it, what prices they shall charge and for whom they shall work, there is almost if not quite an entire loss of that peculiar mark of personality which has often been expressed by the owner and proprietor when conducting his business.

In many ways it is possible for a man to express his individuality in the management of industry. This possibility is tending to disappear. The more closely the business interests of the community are organized, the smaller is the chance of expressing any individual idea, especially if the idea is a little out of the usual line. All business must then be carried on according to set rules. The chance for originality in the treatment of employees, for experimenting with shorter hours, or fixing a different rate of wages, or putting into operation the original and ingenious ideas of individual employers, such as has been characteristic of industrial methods in the past, will be greatly curtailed.

Under the new system, when all employers are thoroughly organized, the method of conducting industrial affairs will be similar to the methods by which ordinary corporate business is now carried on. In the corporate industries the owners or stockholders are far removed from the scene of the actual business. Their responsibility is at a minimum. There is none of their individuality in the conduct of the business, or at most but a very infinitesimal part. In fact, there is very little of anybody's individuality in the management of the business. Some Wall Street individual may make his influence felt in the price of the stocks of the concern, but the business methods are not those of any stockholder. They are the methods of an artificial person—the corporation, and this person has but one sentiment, viz., to make money. The directors select a manager to carry on the business. He is hired to make the business pay; in other words, to earn dividends for the stockholders. This he knows and feels. He dares not undertake any venture that tends in the slightest degree to imperil the earning capacity of the organization that employs him. Under the old system, when the owner was his own manager, it has often happened that he has done things in business that have injured his profits, but he has done these things knowing exactly what the result would be but doing so for the sake of principle. It has seemed to him a duty he owed to society to imperil his profits for the sake of reforms in which he believed.

Here is a good illustration of the case. In the year 1900 Gustavus Meyers

wrote a history of Tammany Hall. In this book he exposed, as much as the evidence warranted, the corruption that had been practiced in the long history of this powerful political organization. The book is written with a good deal of care and the statements are verified by references to the testimony of witnesses in the investigations that have been made by the State of New York to inquire into the workings of this society. The book is a real contribution to political literature, and is proving a good seller. The curious thing about it was the difficulty of its publication. He submitted the manuscript to nine different publishing corporations, but it was declined by the manager in each case. It was not rejected because it was an inferior work or one that would not sell, but as several of these firms replied, it was considered inadvisable to publish such a work. One firm whose readers recommended the book said that they did not consider themselves warranted in locking horns with Tammany Hall. The work was finally published by private subscription. It is now on sale at the author's home.

It seems strange that in a great city no publishing house could be found to publish a work of so great interest and one whose statements were not contradicted. But a little reflection will enable us to see that in the city of New York there is a great demand for school text-books and it may be that the publishing houses which are nearly all in the educational book trade feared that in some way the adoption and use of their books in the schools of the city of New York might be interfered with by their activity in publishing such a work.

This was a case where there was a very good chance for a publisher of strong character to assert his individuality in his business. He might have undertaken the publication of the work for the sake of principle even though he knew it would endanger his profits somewhat. Here was a chance for a person of strong will to deal a blow at what he considered a huge mechanism of corruption. It seems that many a man in managing his own private business would not have hesitated to avail himself of this opportunity. There are some men who will seize the opportunity to do what they think right without thinking of the loss it may cause in their business. But the manager of an organized concern cannot do this. As has been stated, his position depends on the size of the dividends he can make the stock in his corporation earn. He is therefore not going to undertake anything that will jeopardize the earning capacity of his company. When business is carried on in this way, the only object is the making of money. The chance of striking a blow for moral progress by the way in which business is managed is very nearly lost. The only thought of the manager is the increasing of the dividends, and little attention is paid to the moral effect of the conduct of the business.

Now, there cannot be much question that the organization of employers is tending to reduce business management more and more to set rules. It tends constantly to the elimination of the individual element in the management of the business. The responsibility for any questionable methods is scattered among the various members of the organization and lost, just as is the case with the stockholders of corporations. Stockholders seem to feel that they are entirely relieved of responsibility for anything. The manager shifts the responsibility to the directors; the directors shift it to the manager. As a result it is knocked back and forth like a tennis ball and has become exceedingly hard to locate.

Now, the men who will organize as an employers' association are the managers of these corporations. It is part of their business to earn more dividends, and if it can be done by a national federation of the employing class, they will of course resort to that. When such an organization is once formed, it will be managed just as the corporations are now managed, and if there is anything to be gained by the use of unscrupulous methods in the management of the federation, there will be a temptation to use them.

The same might be said of the unions. Their officers hold their positions by virtue of the skill they show in securing higher wages for their members. The very conditions in which they must work are such that they cannot be expected to discriminate nicely over the ethical aspects of their action in calling a strike at a time when it is most unfair not only to the employer but to the consuming population as in the case of a strike of the milk-drivers in a large city.

#### GAIN THE SOLE OBJECT OF ORGANIZED LABOR AND ORGANIZED CAPITAL.

The managers of corporations think of nothing but how to earn for their companies the highest dividends. The officers of labor unions think of nothing but how to get the highest wages for their members. The stockholders of the corporations and the members of the labor unions think of nothing but what they will receive. Both are considerably removed from the scene of the actual bargaining. The result is that there is a chance for the more unscrupulous manager or officer to do a great deal of work in ways which the members alone would not feel that they could approve. In any case the members of the union or the stockholders of the corporation do not hesitate to receive their share of the profits be they legitimately or otherwise obtained. It has been shown that the members of the New York unions knew that the methods of Sam Parks were not such as to bear the light of day, yet they would say, "Look at the wages! They were \$2.50, now they are \$4.50! What if he does take out something for himself? He deserves it!"

The members of the trades unions want results, and they want them in the form of higher wages. The stockholders of corporations want results, and they want them in the form of higher dividends. Neither the unionists nor the stockholders are going to ask too closely of the manager or the walking delegate concerning the methods he has employed to secure the returns. It is the size of the return that interests them. This it is and this alone.

This condition of things is very much like that which prevailed before the State had enacted any factory legislation. When the employment of children might be carried on without restriction, the employer who did not hesitate to employ them was able to drive his more scrupulous competitor to the wall. At the present time the corporation manager and the walking delegate are tempted to use unscrupulous methods. It has been said that in certain lines of industry the corporation manager who does not hesitate to bribe the city aldermen nor to make a bargain with the walking delegate to call strikes in all jobs except his own, is frequently able to earn large dividends for his stockholders. It has been shown that the managers of some of the construction companies in the city of New York have not hesitated to use all the means of corruption known to the modern lobbyist, in order to secure contracts for the erection of public buildings at a larger sum than was just. In this way the returns to the stockholders have been increased. Such a con-

dition of industry is one which tends to put a premium on the worst traits in the business world.

The same conditions confront the walking delegate. It has been said that as at present managed the union is a thing that makes it possible for the worst of walking delegates to rule and make large sums in a dishonest way. Recent magazine articles claim that it has been customary for some of these delegates to ascertain what contractors are under bonds to complete their work within a certain time and find out if they are in any way behind, and then for some trifling excuse call out their men. In a case of this kind the strike is likely to be a success. It is also said that some of the most successful strikes have been ordered by the worst of walking delegates. This has been illustrated by the career of the notorious Sam Parks in New York.

It is quite clear that, left entirely alone, the organized conditions of modern industry are such that they tend to prevent the managers of corporations and the leaders of the labor unions from considering the ethical effects of the methods they are tempted to employ. This constant tendency to organize is creating an opportunity which unless carefully guarded will enable corrupt men to get control of industry and conduct it so as to put a premium on corrupt methods.

#### ORGANIZATION NOT VICIOUS IN ITSELF.

It is the same with industrial organizations as it is with political parties. There is nothing wrong in either workmen or employers organizing; any organization is apt to fall into the hands of designing men. Organized employers as well as organized workmen are a power that may be corruptly used. The point is that organizations, both political and industrial, must be jealously watched by a patriotic and public-spirited people in order that they may not be used against the public weal.

When two industrial organizations are so well situated that they are able to control by a monopoly the conditions of labor, and though they are antagonistic bodies, it is quite likely that they will follow the methods of other monopolies and form a combination to advance the interests of each. This has been the industrial experience of the large concerns of the United States. It is not likely that any organization will long keep up a fight when it can do better by making peace with its adversary. This is the rule of progress in all directions. It always follows the line of least resistance. In 1870 the railroads found they were wasting their strength in a useless competition, and they hit upon a scheme to combine. By this method they saved the energy they had been wasting in strife with each other and greatly increased their profits. It seems clear that labor and capital will pass out of the fighting stage in which they now are as soon as they learn that it is only necessary for them to combine in order to charge and obtain the monopoly prices they desire.

#### CAPITAL AND LABOR UNITING TO THE INJURY OF THE PUBLIC.

In the last bulletin of the Department of Labor published by the Massachusetts bureau are the agreements in twelve cities between the unions and the employers' associations. The officials of the bureau state that these agreements are fast becoming a most important factor in the industrial life of the present time. In none of these agreements is there evidence of an

exclusive contract by which both parties seem to have united for the purpose of getting more than they otherwise could out of the pockets of the public. They are very largely agreements as to the conditions of work, hours, wages, holidays, etc. There is no provision to hire only unionists, nor is there an arrangement by which the unionists agree to work only for the members of the employers' associations. This is all that is lacking to make the monopoly perfect on both sides.

The conditions in Chicago are such as to show that in certain lines of work the fighting stage in the relations of labor and capital is well-nigh over. The result is not so good as the public has hoped for from the union of labor and capital. The success of the combination of labor and capital in Chicago will prove an inducement to organization in other quarters, and the result is likely to be a repetition of the extortion that prevails in that city.

In Chicago everything is unionized, both employers and laborers. Here are some of the results of the employers and laborers getting together.\* Five years ago a struggle began. It was the Coal-Teamsters' Union fighting for an increase of wages. Finally the Coal-Team-Owners' Association and the Coal-Teamsters' Union entered into an agreement regarding hours, wages, etc. They also made a secret agreement the terms of which are as follows:

"Party of the first part (the Coal-Team-Owners' Association) agrees to employ none but members of the Coal-Teamsters' Union, local number 4, in good standing and carrying the card of the organization."

"We (the Coal-Teamsters' Union) further agree that we will not work for any firm that does not belong to the Coal-Team-Owners' Association."

The agreement was signed May 21, 1902. For fear of prosecution it was slightly changed. The men agreed that they would use their best endeavors to have all employers of coal teamsters become members of the Coal-Team-Owners' Association. This is the same thing. This agreement means that the Coal-Team-Owners agree to employ only union men. The scab is driven out and competition is killed on the side of labor. The men will work only for the association and the independent employer is crushed. The result is an absolute monopoly of industry.

What were the fruits of this combination? The teamsters put up their wages from eleven to fifteen per cent. No teamster can be hired without first notifying the union. He must pay his dues, \$15 to join and one dollar a month. Some teamsters earn \$25 a week. The union has \$25,000 in the treasury. *Dealers raised the price of coal forty per cent. No citizen can draw his own coal to his own cellar in his own wagon.* The salvation army had to get special permission from the association to haul a few loads for the poor.

Not content with a monopoly of their own industry, the combination decided to use their power to kill another and competing industry. The natural-gas industry was the one selected for destruction. Marshall Field, the Fair and the Auditorium Hotel used gas to some extent, but had to have coal in the colder weather. The drivers refused to deliver coal in the winter unless they would cease to use natural gas at all. They compelled them to remove all the gas-fixtures. The users of gas were at the mercy of the combination, and they were obliged to surrender. Field & Company were the last to yield. For a long time they kept up a vigorous fight, and only

\* This account of conditions in Chicago is taken from Ray Stannard Baker in "McClure's Magazine," September, 1903.

yielded when there was not coal enough in their furnaces to run for more than two hours longer. Thomas A. Hall, the manager of a set of apartment buildings would not surrender. His janitors struck. The teamsters struck in sympathy. He was forced to yield. The union has further changes in the industry projected. They intend to stop delivering coal in bags. Then the public will be obliged to hire hustlers to carry the coal from the walk to the cellar. In this way room will be made for the employment of another set of manual laborers.

Perhaps the worst feature of this new form of union between labor and capital is the agreement as to the number of milk deliveries a day in the city. The utter ruthlessness of this extortionate method of organized industry is well exemplified by the decision of the Milk Dealers' Association and the Milk-Wagon Drivers' Union to make but one milk delivery a day in the city. Two deliveries a day had been made for years in most districts. Dr. Reynolds, of the board of health, wrote a letter to the associations and protested in behalf of the suffering babies. They paid no attention to his protest. The cry of the children was as nothing to them. The bulletin of the board of health soon showed the effects. The infant death rate began to increase at once and in a few weeks had increased forty per cent.

The monopoly combination between labor and capital when once adopted tends to strengthen each of the separate organizations. The public will not have an avenue of escape from these conditions till a new legal code is developed and adopted. In some way there is apt to be a means of escape from conditions like these. However, there is no reason to think that it will come about easily and of itself. Such an opinion is nothing but the most blind and unreasoning optimism. None of the great benefits of civilization have come without a severe struggle, and so it will be with the destruction of the new extortion in the shape of these monopoly combinations.

When all trades are well organized, in fact so well organized that they are able to keep up the prices of their services to a point beyond what the community are willing or able to pay for them, it becomes a serious matter as to how the problem may be solved. It is true that in some industries this may be left to the ordinary economic laws, but in many lines of work this is not the case. In the case of the coal-handlers of Chicago, it is not a matter that can be left to competition and the laws of political economy. It is true that new inventions would in that case as in others ultimately secure for us some other means of heating our houses and supplying the power we need in other ways, but we cannot afford to wait, for before we could secure the benefits of the new invention we should probably all be dead.

With the growth of civilization many things with which the public had formerly nothing to do have now become things in which the public has an interest of infinite value as it determines whether the population shall live or die. Before the era of great modern cities it was of no consequence to the public as to how milk was delivered. Most men kept their own cow and in this way were protected from the trouble in Chicago that has already been mentioned. The same may be said of the delivery of coal. It was not then a matter of life or death to vast numbers of the population. When it was first discovered that certain industries were in their nature what have been called quasi-public, it was thought that only a few industries were of this type. These were such as the railroad, water supply, gas-works and a few

others of like nature; industries that all could see that their stoppage resulted in great loss to the whole country. With the course of time the number of these industries is tending constantly to increase. It seems that it may be likely that the list will be so extended as to include all businesses that are concerned with providing for the more necessary wants of modern society. It is becoming quite clear that the delivery of coal in a great city is one of the legitimate functions for the interference of the Government. So it is with the case of milk. These are things on which the lives and welfare of the population depend. Any Government is justified in interfering in any case where the lives of the people are in danger. This is simply the doctrine of common sense.

In these industries that are becoming more and more quasi-public, the duty of the Government to guarantee their operation becomes apparent. There seems to be no reason why the city should not operate its milk supply. It is almost as important as that it should furnish a supply of pure and wholesome drinking water. We are told by medical men that typhoid fever is very often conveyed in milk as well as water. In Glasgow two hundred cases of typhoid fever were traced to a dairy whose cows had been drinking polluted water. It is probable that aside from water the healthfulness of the population is as dependent on the milk supply as on any other one thing. This is especially important in the case of infants. The death rate of infants is much greater than it would be if it were possible for the parents to procure a supply of pure milk for their babies. Many cities attempt to inspect the milk supply, but affairs in Chicago seem to indicate that the delivery also should be guaranteed by the city government.

Bound up with the checking of the infant death rate is a more subtle problem. It has been shown that the death rate of infants, where it is excessive, is a strong factor in causing poverty. The high death rate of infants in the poorer districts tends to keep the people poor. Charles Booth has shown by his studies of the poor in London that the death rate of infants is abnormally high in the poorer sections and that it acts as a cause to keep the population there in a continual state of poverty. He says that the death of one baby is almost invariably followed by the birth of another in a few months thereafter. This continuous succession of births and deaths tends to lay on the population there a heavy burden and greatly interferes with its industrial efficiency. This same truth is very well illustrated in other parts of the world and has, in fact, become a generally accepted truth in the science of biology. Such being the case, it is not difficult for any one to realize the importance of supplying pure milk to the children of the city and thus reducing the death rate in this class, thereby preventing in some measure the evils that are so intimately connected with the poverty of great centers of population.

What is true of milk is also true of coal. It is now known that coal is an article that the modern world must have. Every one became convinced of this fact during the coal strike of 1902. Modern life is so tied up with the coal industry that in many quarters a strong demand arose for the public ownership and operation of the coal mines. While this may not be needed, it is safe to say that such an arrangement as has been shown to exist in the city of Chicago in regard to the delivery of coal to the consumers there is a problem that calls for governmental solution. There is no doctrine but the doctrine of robbery that will advocate the standing idly by and allowing the population to be plundered so unscrupulously. In such a case no one will hesitate to call in the aid of the Government. No one will halt at Government operation. It may be that desirable results can be attained by the interference of the Government in some other way than by direct ownership and operation. Perhaps some sort of supervisory control may achieve the desired result, but in this country the results of attempts at such supervisory control have been anything but gratifying. The ordinary citizen is beginning to look more and more to the Government to help him out of these most serious difficulties.

# BANKING LAW DEPARTMENT.

## IMPORTANT LEGAL DECISIONS OF INTEREST TO BANKERS.

---

All the latest decisions affecting bankers rendered by the United States Courts and State Courts of last resort will be found in the MAGAZINE'S Law Department as early as obtainable.

Attention is also directed to the "Replies to Law and Banking Questions," included in this Department.

---

### *AUTHORITY OF CASHIER—PAYMENT OF CASHIER'S DEBT BY CREDITS WITH BANK.*

Supreme Court of Kansas, January 9, 1904.

HIER vs. MILLER.

The Cashier of a bank has no implied authority to pay his individual debts by entering the amount of them as a credit upon the passbook of his creditor, who keeps an account with the bank, and permitting the creditor to exhaust such account by checks which are paid, the bank having received nothing of value in the transaction.

If the Cashier of a bank, without actual authority so to do, should undertake to pay his individual debts in the manner stated, the bank may recover of his creditor the amount of money it may put out upon checks drawn upon the faith of the unauthorized passbook entries.

The fact that the Cashier is personally interested in a transaction of the character described is sufficient to put his creditor upon inquiry as to the actual extent of the Cashier's power.

---

The Cashier of a bank organized under the laws of Kansas, was allowed the sole charge and conduct of its affairs by its board of directors. He was indebted individually to a depositor of the bank, and upon different occasions pretended to make payments upon such indebtedness by giving the depositor credit upon her passbook. Such credits were not shown upon any other memoranda of the bank's business, and were not entered upon its books. The last transaction of this character occurred upon November 30, 1900. A final settlement was then had between the depositor and the Cashier, resulting in the surrender to him of his last unpaid note, and entry upon her passbook as before. She then demanded her balance in the bank. The Cashier balanced her passbook, she drew a check for the amount shown by the passbook to be due her, and he gave her therefor a Cashier's draft upon a bank in St. Joseph, Mo., which was afterwards duly paid and returned. No officer of the bank had actual knowledge of the true character of these transactions except the Cashier. The depositor herself acted in good faith. On January 16, 1901, the death of the Cashier occurred. The bank was then found to be insolvent, was immediately taken in charge by the Bank Commissioner, and in due time a Receiver for it was appointed. Because the books of the bank did not disclose the personal transactions of the Cashier with the depositor, her account appeared to be overdrawn when the Receiver assumed control. The amount of the overdraft following the affair of November 30, 1900, was somewhat reduced by deposits subsequently made by third parties to the depositor's credit, and the Receiver sued for the balance appearing to be due when he took charge. From the facts found the district court concluded that

the Cashier had no authority to pay his individual debts to the depositor by giving her credit in the bank and permitting her to draw checks upon it without its having received anything of value therefor; that the entries of credit upon the depositor's passbook were acts beyond the scope of the Cashier's power; and that, because nothing appeared upon the books of the bank to give notice of the facts, the bank was not bound. Judgment was rendered for the Receiver.

BURCH, *J.*: The defendant received no money in payment of her debtor's notes, and made no deposit in the bank of anything derived from them. Her debtor made no deposit for her, and procured no transfer of funds to her account as an equivalent. Therefore the books of the bank spoke true, and any obligation of the bank to pay the defendant's checks arose from the entries upon her passbook made by bank's Cashier. Those entries were made in payment of the Cashier's private debt, and, if of any effect at all, amounted to an appropriation of the money of the bank to the discharge of his personal obligations. The Cashier had a right to dispose of the funds of the bank for purposes contemplated by its charter. For this his office is a warrant of authority. But he could not absorb the funds of the bank in the satisfaction of his private debts without an express and especial authorization. The office of Cashier does not import such power. Whether or not such authority actually did exist the defendant was bound to inquire. It has been well understood from of old that no man can serve two masters. He will hold either to one or to the other. For a like reason the Cashier could not serve both himself and the bank in a single transaction, and because he was attempting such a perilous thing the defendant was put upon guard as to the extent of his power. "It is against the general law of reason that an agent should be intrusted with power to act for his principal and for himself at the same time." (*Bank of N. Y. N. B. Ass'n vs. A. D. and T. Co.* 143 N. Y. 559, 564.)

"It is not pretended that Collins had any express authority to apply the funds of the bank to the payment of his own note. He had no implied authority to do so. There are no presumptions in his favor of such a delegation of power. He who assumes to rely upon the authority of an agent to bind his principal to the discharge of the agent's own obligation must prove actual authority if contest arises. No principle of law of agency is better settled than that no person can act as the agent of another in making a contract for himself." (*Chrystie vs. Foster*, 61 Fed. 551, 553, 9 C. C. A. 606.)

The case of *Williams vs. Dorrier*, 135 Pa. 445, is directly in point. The syllabus reads: "The Cashier of an unincorporated bank, himself a partner, being indebted individually on a note he made to a depositor, wrote to the latter that he had placed to his credit \$1,000 as a payment on the note. A credit for this amount was placed to the depositor's account upon the books of the bank. Afterward the Cashier wrote to the depositor that he had again placed \$1,000 to his credit as a second payment, but no credit for this amount was placed to the account. The depositor checked out, from time to time, both amounts, when the Receiver of the bank sued to recover the same from the depositor. (1) In such case the bank was estopped from setting up want of authority in the Cashier, so far as related to the credit of the first \$1,000, but was not estopped by the act of the Cashier as to the second \$1,000, though the Cashier had placed them both upon the depositor's passbook; and the bank could recover the latter as an overdraft."

The entry of credits in the defendant's passbook in payment of the Cashier's private debt is quite analogous in principle to the payment of a bank officer's personal obligations by drafts drawn by him in favor of his creditor upon the funds of the bank. In such a case it is the duty of the recipient of the instruments to inquire of those who alone could confer it if the officer possessed the requisite power to execute them. "Brokers who receive drafts drawn in their favor by the President of a bank upon its funds in settlement of his transactions upon the board of trade are bound to communicate that fact to the bank directors, and to inquire as to his authority to execute the paper." (Lamson vs. Beard, 94 Fed. 30, 36 C. C. A. 56.)

In the case just cited Judge Woods discusses the direction and scope of such an inquiry in the following manner: "The inquiry, therefore, which these plaintiffs in error should have made, was whether Cassatt had authority to draw drafts of the bank upon funds of the bank in possession of its correspondents for use in his individual transactions. Such an inquiry involved no difficulty beyond communicating to the directors of the bank other than Cassatt the fact that such a draft or drafts had been tendered in discharge of liabilities incurred in dealings upon the board of trade in Chicago, and asking whether the execution of the paper had been authorized. There can be little doubt what would have been the result of such an inquiry, accompanied with a frank and full statement of the facts as they were known to the payees of any of the drafts in suit at the time of execution. It would not have needed a discovery of Cassatt's fraudulent bookkeeping to enable the directors to say whether the execution of such paper had been theretofore authorized, or then had their approval. As contended, it was clearly no duty of the plaintiffs in error to undertake an examination of the books, which, once they commenced inquiry into the management of the bank, they would have learned had been wholly in the keeping of Cassatt and of clerks who could not be expected to testify against him. Inquiry of Cassatt, too, it is to be presumed, would have been useless, and therefore, if made, would not have met the requirements of the law. The one thing necessary to be known was whether Cassatt had authority to make the proposed use of the bank's paper. The authority could have come only from the directors by direct resolution or by acquiescence or implied assent, and the plain, unmistakable course was to push the inquiry, wherever begun, to the source of authority. \* \* \*

"Ordinarily, the Cashier, being the ostensible executive officer of a bank, is presumed to have, in the absence of positive restrictions, all the power necessary for such an officer in the transaction of the legitimate business of banking. Thus he is generally understood to have authority to indorse the commercial paper of his bank, and bind the bank by the indorsement. So, too, in the absence of restrictions, if he has procured a *bona fide* rediscount of the paper of the bank, his acts will be binding, because of his implied power to transact such business; but certainly he is not presumed to have power, by reason of his official position, to bind his bank as an accommodation indorser of his own promissory note. Such a transaction would not be within the scope of his general powers, and one who accepts an indorsement of that character, if a contest arises, must prove actual authority before he can recover. There are no presumptions in favor of such a delegation of power." (West St. L. Sav. Bk. vs. Shawnee, etc., Bank, 95 U. S. 557, 559.)

“In the absence of special authority from the directors of a bank, the President cannot authorize the Cashier to pay the checks of a person who holds a claim against the President, but has no deposit in the bank. The amount of the checks cashed can be recovered by the bank from the drawer of the checks in an action for money paid out.” (Dowd vs. Stephenson [N. C.] 10 S. E. 1101.)

“A general authority to the President of a bank to certify checks drawn upon it does not extend to checks drawn by himself. The face of the check showing the President's attempt to use his official character for his private benefit, every one to whom it comes is put upon inquiry; and when the certificate is false no one can recover against the bank as a *bona fide* holder.” (Clafin vs. Farmers and Citizens' Bank, 25 N. Y. 293.)

In the case of *Campbell vs. Manufacturers' National Bank*, 67 N. J. Law, 301, the Receiver of a bank brought an action to recover money obtained by the defendant upon a draft drawn upon the bank funds by its Cashier in payment of his individual debt. In sustaining a recovery the court said: “There is no reason, which is founded on principle, that can be given for not applying the same rule of agency to a Cashier as to other persons occupying fiduciary relations. No person can act as an agent in a transaction in which he has an interest, or to which he is a party, on the side opposite to his principal. This must be so where the person dealing with the agent has knowledge of the facts. A person cannot deal with a Cashier of a bank as an individual in securing a draft, and claim, after the draft is delivered, it has become the transaction of the bank. To make the acts of the Cashier valid, the transaction in which the draft is delivered must be a bank transaction, made by the Cashier, within his express or implied authority, in the conduct of the business of the bank. So long as a person deals with the Cashier in a matter wherein, as between himself and the Cashier, he is dealing with, or has a right to believe he is dealing with, the bank, the transaction is obligatory upon the bank. The Cashier is presumed to have all the authority he exercises in dealing with executive functions legally within the powers of the bank itself, or which are usually or customarily done, or held out to be done, by such an officer. But the test of the transaction is whether it is with the bank and its business, or with the Cashier personally and in his business. (Clafin vs. Farmers' Bank, 25 N. Y. 293; *Moore vs. Citizens' National Bank*, 111 U. S. 156.) As to the former, all presumptions are in favor of its regularity and binding force. In the latter no such presumption arises. In fact, upon proof that it was known to the claimant to be an individual transaction, and not one for the bank, the burthen is cast upon the claimant to establish by proof that the act of the Cashier thus done for his own individual benefit was authorized or ratified. These are fundamental principles applicable to principal and agent in every transaction arising out of that relation.”

\* \* \* \* \*

It is said that the act of the Cashier in entering up deposits on the defendant's pass-book was an assurance from him that, if he was using the bank's funds, he was acting within his authority. The reply is that, because he was paying his own debt his assurance was merely that of himself as an individual for his own ends, and not that of the bank through him, as its agent, for its benefit.

It is said that when a bank places an officer at the window, where he

transacts its business with the public, it in effect tells the world that he is trustworthy and reliable, and that he will act within the scope of his authority. It does nothing of the kind. Such a declaration would protect a recipient in the enjoyment of a Christmas gift of the entire body of corporate assets. By placing an officer at the window to do its business a bank publishes to the world that he is there to do its business, and not his business; that he has no power or authority to do any act outside the legitimate prosecution of the corporate enterprise; and that it will not be bound by any perversion of the corporate funds to his personal use. "The Cashier is the executive of the financial department of the bank, and whatever is to be done, either to receive or pass away the funds of the bank for banking purposes, is done by him or under his direction. He therefore directs and represents the bank in the reception and emission of money for banking objects. (*United States vs. Bank*, 21 How. 356; *Merchants' Bank vs. State Bank*, 10 Wall. 604; *Conn. Bank vs. Norton*, 1 Hill [N. Y.] 501.) But neither the President nor the Cashier can impose by his own action, on the bank, any liability not already imposed by law or usage." (*Asher vs. Sutton*, 31 Kan. 286, 289.)

In an effort to avoid the effect of these conclusions and to establish ratification or estoppel on the part of the bank, the defendant strives to magnify the importance of many minor details of her relations with the bank and its Cashier, in which the voluminous findings of fact abound. It may be doubted if the act of the Cashier was capable of ratification by the board of directors, because it was not within the power of the board to grant him such authority in the first instance.

\* \* \* \* \*

But conceding the transaction to be one which the board of directors could have authorized, a careful consideration of the findings of fact discloses no substantial ground for denying the right of the Receiver to recover the money of the bank which the defendant obtained. To state fully the reasons for this conclusion would require a discussion of the facts far beyond the proper limits of a written opinion. It may be said in passing, however, that the defendant stands upon precarious ground in invoking the rule of equitable estoppel against the representative of the bank. When the Cashier made an entry in the defendant's pass-book of the receipt of money by the bank, she knew the recital was false, for she had delivered to the bank nothing of value at all. She knew that something more must be done before she could rightfully demand the payment of her checks. She knew very well that the money was yet to be supplied, and that, unless funds actually were furnished, there was nothing which she could have any right to withdraw. No obligation rested upon the bank, or upon any of its officials as such, to deposit or to transfer funds to the credit of her account. She was required to do that herself, or to see that it was done. If she depended upon her debtor to act for her, it was incumbent upon her to see that he did whatever was required. It did not devolve upon the bank to see that her debtor discharged any duty to her, and when he failed to supply her account with necessary funds the bank was not bound to make good his default. She had no right to ask the bank to return to her money which she never deposited, and which it never in fact received from any source; and when it paid her checks without any money belonging to her in its possession to meet them it was entitled to be reimbursed.

Other propositions presented by counsel need not be discussed at length. None of them are sufficiently grave to require a reversal of the judgment of the district court. It is therefore affirmed. All the justices concurring.

*BANKRUPTCY OF DEPOSITOR—RIGHTS OF BANK.*

Supreme Court of the United States, January 4, 1904.

NEW YORK COUNTY NATIONAL BANK vs. MASSEY, TRUSTEE.

A deposit of money with a bank upon an open account subject to check may be set off in bankruptcy against a claim of the bank against the depositor, allowing the bank to prove for the balance.

Such deposit, though made within four months of adjudication of bankruptcy, does not constitute a preference which must be surrendered before the bank may prove its debt.

Mr. Justice DAY delivered the opinion of the court.

This is an appeal from the judgment of the circuit court of appeals for the second circuit, reversing the order of the district court affirming the order of the referee in bankruptcy, allowing a claim against the estate of Stege & Brother. This claim was allowed against the contention of the trustee of the bankrupt that it could not be proved until the bank should surrender a certain alleged preference given to them in contravention of the Bankrupt Act. The circuit court of appeals reversed the order of the district court, holding that the bank must first surrender the preference before it could be allowed to prove its claim (116 Fed. Rep. 342). The circuit court of appeals made the following findings of fact:

“For a number of years past the bankrupts, George H. Stege and Frederick H. Stege, were engaged, in the city and county of New York, in the business of dealing in butter, eggs, etc., at wholesale, under the firm name and style of Stege & Brother. On January 27, 1900, they filed a voluntary petition of bankruptcy, in the district court, with liabilities of \$67,232.49 and assets of \$20,729.66, and upon the same day were duly adjudicated bankrupts. Among their liabilities there was an indebtedness of \$40,000 to the New York County National Bank, for money loaned upon four promissory notes for \$10,000 each. The money was loaned to the bankrupts, and the notes were originally given as follows: April 26, 1899, \$10,000, six months, due October 26, 1899; April 26, 1899, \$10,000, seven months, due November 26, 1899; June 26, 1899, \$10,000, four months, due October 26, 1899; August 2, 1899, \$10,000, four months, due December 2, 1899. None of these notes were paid when they fell due, but were all renewed as follows: October 26, 1899, \$10,000, three months, due January 26, 1900; November 26, 1899, \$10,000, seventy-five days, due February 9, 1900; October 26, 1899, \$10,000, three months, due January 26, 1900; December 2, 1899, \$10,000, sixty-nine days, due February 9, 1900.

On January 23, 1900, in the morning, the bankrupts went to the New York County National Bank and asked the officers to have the two notes of \$10,000 each, which fell due on January 26, extended. The bankrupts at that time informed the bank officers that they were unable to pay the notes then about to fall due. In the afternoon of the same day, January 23, 1900, the bankrupts again called upon the bank officers, and at that time they delivered to them a statement of their assets and liabilities, which statement was not delivered until after the deposit of \$3,884.47 had been made on that day.

This statement, as of January 22, 1900, showed their assets to be \$19,095.67 and their liabilities \$65,864.61.

The bankrupts kept their bank account in the New York County National Bank since May 6, 1899. On January 22, 1900, their balance in the bank was \$218.50. On the same day they deposited in that account \$536.83; on January 23, 1900, \$3,384.47; on January 25, 1900, \$1,803.95, making a total of \$6,225.25 deposited in the three days mentioned. Of this amount there was left in the bank account on the day of the adjudication in bankruptcy, January 27, 1900, the sum of \$6,209.25, the bank having honored a check of Stege Brothers after the date of all these deposits.

At the first meeting of creditors, February 9, 1900, the New York County National Bank filed its claim for \$33,790.25.

In its proof of claim the bank credited upon one of the notes which became due January 26, 1900, the deposit of \$6,209.25. The claim was allowed by the referee in the sum of \$33,750.25, being \$40,000 less the amount on deposit in bank (\$6,209.25), and a small rebate of interest on the unmaturing notes. Some of the creditors at this meeting reserved the right to move to reconsider the claim of the New York County National Bank. The referee granted this request. Afterwards the trustee, as the representative of the creditors, moved before the referee to disallow and to expunge from his list of claims the claim of the New York County National Bank unless it surrendered the amount of the deposit, namely, \$6,209.25, which had been credited by the bank upon one of the notes. The referee denied that motion, and an appropriate order was made and entered. The trustee thereupon duly filed his petition to have the question certified to the district judge. The district judge on November 25, 1901, made an order affirming the order of the referee. From that order an appeal was duly taken by the trustee to the circuit court of appeals. The deposits were made in the usual course of business. At the time they were made Stege Brothers were insolvent."

As a conclusion of law the court of appeals held that the deposit would amount to a transfer enabling the bank to obtain a greater percentage of the debt due to it than other creditors of the same class, and that allowance of the claim should be refused unless the preference was surrendered. This case requires an examination of certain provisions of the Bankrupt Law. Section 68 of that law provides:

"Section 68. Set-offs and counterclaims:

(a) In all cases of mutual debts or mutual credits between the estate of a bankrupt and a creditor, the account shall be stated, and one debt shall be set off against the other and the balance only shall be allowed or paid.

(b) A set-off or counterclaim shall not be allowed in favor of any debtor of the bankrupt which (1) is not provable against the estate, or (2) was purchased by or transferred to him after the filing of the petition or within four months before such filing, with a view to such use and with the knowledge or notice that such bankrupt was insolvent or had committed an act of bankruptcy."

Section 60 provides (prior to the amendment of February 5, 1903):

"Section 60. Preferred creditors: a. A person shall be deemed to have given a preference if being insolvent he has \* \* \* made a transfer of any of his property, and the effect of the \* \* \* transfer will be to enable any one of his creditors to obtain a greater percentage of his debt than any other such creditors of the same class."

Section 57g provides (prior to amendment of February 5, 1903):

“Claims of creditors who have received preferences shall not be allowed unless such creditors shall surrender the preferences.”

Considering, for the moment, section 68, apart from the other sections, subdivision (a) contemplates a set-off of mutual debts or credits between the estate of the bankrupt and the creditor, with an account to be stated and the balance only to be allowed and paid. Subdivision (b) makes certain specific exceptions to this allowance of set-off, and provides that it shall not be allowed in favor of the debtor of the bankrupt upon an unproved claim or one transferred to the debtor after the filing of the petition in bankruptcy, or within four months before the filing thereof, with a view to its use for the purpose of set-off, with knowledge or notice that the bankrupt was insolvent or had permitted an act of bankruptcy. Obviously, the present case does not come within the exceptions to the general rule made by subdivision (b). It cannot be doubted that, except under special circumstances, or where there is a statute to the contrary, a deposit of money upon general account with a bank creates the relation of debtor and creditor. The money deposited becomes a part of the general fund of the bank, to be dealt with by it as other moneys, to be lent to customers, and parted with at the will of the bank, and the right of the depositor is to have this debt repaid in whole or in part by honoring checks drawn against the deposits. It creates an ordinary debt, not a privilege or right of a fiduciary character (*Bank of the Republic vs. Millard*, 10 Wall. 152). Or, as defined by Mr. Justice White in the case of *Davis vs. Elmira Savings Bank* (161 U. S. 288):

“The deposit of money by a customer with his banker is one of loan, with the superadded obligation that the money is to be paid, when demanded, by a check” (*Stanley vs. Kimball's Assignee*, 92 U. S. 369).

It is true that the findings of fact in this case establish that at the time these deposits were made the assets of the depositors were considerably less than their liability, and that they were insolvent, but there is nothing in the findings to show that the deposit created other than the ordinary relation between the bank and its depositor. The check of the depositor was honored after this deposit was made, and for aught that appears *Stege Brothers* might have required the amount of the entire account without objection from the bank, notwithstanding their financial condition.

We are to interpret statutes, not to make them. Unless other sections of the law are controlling or in order to give a harmonious construction to the whole act a different interpretation is required, it would seem clear that the parties stood in the relation defined in section 68a with the right to set off mutual debts, the creditor being allowed to prove but the balance of the debt.

Section 68a of the Bankruptcy Act of 1898 is almost a literal reproduction of section 20 of the Act of 1867. So far as we have been able to discover the holdings were uniform under that act that set-off should be allowed as between a bank and a depositor becoming bankrupt. (*In re Petrie*, 7 N. B. R. Fed. Cases, No. 11040; *Blair vs. Allen*, 3 Dill. 101, Fed. Cases, No. 1483; *Scammon vs. Kimball*, 92 U. S. 362). In *Traders' Bank vs. Campbell* (14 Wall. 87) the right of set-off was not relied upon, but a deposit was seized on a judgment which was a preference.

But, it is urged that, under section 60a, this transaction amounts to giving a preference to the bank, by enabling it to receive a greater percentage of

its debts than other creditors of the same class. A transfer is defined in section 1 (25) of the act to include the sale and every other and different method of disposing of, or parting with, property, or the possession of property, absolutely or conditionally, as a payment, pledge, mortgage, gift or security. While these sections are not to be narrowly construed so as to defeat their purpose, no more can they be enlarged by judicial construction to include transactions not within the scope and purpose of the act. This section 1 (25), read with sections 60a and 57g, requires the surrender of preferences having the effect of transfers of property "as payment, pledge, mortgage, gift or security, which operate to diminish the estate of the bankrupt and prefer one creditor over another."

The law requires the surrender of such preferences given to the creditor within the time limited in the act before he can prove his claim. These transfers of property, amounting to preferences, contemplate the parting with the bankrupt's property for the benefit of the creditor, and the consequent diminution of the bankrupt's estate. It is such transactions, operating to defeat the purposes of the act, which, under its terms, are preferences.

As we have seen, a deposit of money to one's credit in a bank does not operate to diminish the estate of the depositor, for when he parts with the money he creates at the same time, on the part of the bank, an obligation to pay the amount of the deposit as soon as the depositor may see fit to draw a check against it. It is not a transfer of property as a payment, pledge, mortgage, gift or security. It is true that it creates a debt, which, if the creditor may set it off under section 68, amounts to permitting a creditor of that class to obtain more from the bankrupt's estate than creditors who are not in the same situation, and do not hold any debts of the bankrupt subject to set-off. But this does not, in our opinion, operate to enlarge the scope of the statute defining preferences so as to prevent set-off in cases coming within the terms of section 68a. If this argument were to prevail, it would in cases of insolvency defeat the right of set-off recognized and enforced in the law, as every creditor of the bankrupt holding a claim against the estate subject to reduction to the full amount of a debt due the bankrupt receives a preference in the fact that to the extent of the set-off he is paid in full.

It is insisted that this court, in the case of *Pirie vs. Chicago Title and Trust Co.* (182 U. S. 438), held a payment of money to be a transfer of property within the terms of the Bankrupt Act, and when made by an insolvent within four months of the filing of the petition in bankruptcy, to amount to a preference, and that case is claimed to be decisive of this. In the *Pirie* case the turning question was whether the payment of money was a transfer within the meaning of the law, and it was held that it was. There the payment of the money within the time named in the Bankrupt Law was a parting with so much of the bankrupt's estate, for which he received no obligation of the debtor, but a credit for the amount on his debt. This was held to be a transfer of property within the meaning of the law. It is not necessary to depart from the ruling made in that case, that such payment was within the operation of the law, while a deposit of money upon an open account subject to check, not amounting to a payment, but creating an obligation upon the part of the bank to repay upon the order of the depositor, would not be. Of the case of *Pirie vs. Chicago Title and Trust Co.*, it was said in *Jaquith vs. Alden* (189 U. S. 78, 82):

“ The judgment below was affirmed by this court, and it was held that a payment of money was a transfer of property, and when made on an antecedent debt by an insolvent was a preference within section 60a, although the creditor was ignorant of the insolvency and had no reasonable cause to believe that a preference was intended. The estate of the insolvent, as it existed at the date of the insolvency, was diminished by the payment, and the creditor who received it was enabled to obtain a greater percentage of his debt than any other of the creditors of the same class.”

In other words, the Pirie case, under the facts stated, shows a transfer of property to be applied upon the debt, made at the time of insolvency of the debtor, creating a preference under the terms of the Bankrupt Law. That case turned upon entirely different facts, and is not decisive of the one now before us. It is true, as we have seen, that in a sense the bank is permitted to obtain a greater percentage of its claims against the bankrupt than other creditors of the same class, but this indirect result is not brought about by the transfer of property within the meaning of the law. There is nothing in the findings to show fraud or collusion between the bankrupt and the bank with a view to create a preferential transfer of the bankrupt's property to the bank, and in the absence of such showing we cannot regard the deposit as having other effect than to create a debt to the bankrupt and not a diminution of his estate.

In our opinion, the referee and the district court were right in holding that the amount of the deposit could be set off against the claim of the bank allowing it to prove for the balance, and the circuit court of appeals in holding that this deposit amounted to a preference to be surrendered before proving the debt, committed error.

Judgment of the circuit court of appeals reversed, and that of the district court affirmed; cause remanded to latter court.

Mr. Justice McKenna dissents.

*FORGED INDORSEMENT—WARRANTIES OF INDORSER—LIABILITIES OF  
ACCOMMODATION INDORSER.*

New York Supreme Court, Appellate Division, Fourth Department, November, 1903.

PACKARD vs. WENDHOLZ.

An indorser upon a promissory note guarantees the genuineness of the signature of each prior indorser, and that the note is a valid subsisting obligation.

A person who indorses a note for the accommodation of the maker, with knowledge that the note is to be used for the benefit of the maker, is not relieved from liability to a person to whom the maker negotiates the note for value.

---

Adolph Truman made his promissory note, dated July 31, 1902, to the order of C. D. Eaton, and due in three months from its date. The maker forged the indorsement of Eaton, who was his father-in-law, to the note and then procured the defendant to indorse the same. The note, with these two indorsements appearing upon it, was presented to the plaintiffs, who were note brokers, to be by them negotiated for the benefit of Truman. The plaintiffs obtained one Packelnisky to indorse it, and, after indorsing it themselves, sold it to the New York State Banking Company and turned over the avails to the maker. The defendant and those subsequent to him believed the indorsement of Eaton was genuine, and the plaintiffs learned

that he was responsible. The banking company soon after suspended business, and before the maturity of the note it was taken up by the plaintiffs.

The maker also presented to the plaintiffs a note of \$120 bearing the apparent indorsement of Eaton and the genuine signature of the defendant on its back, and this was put in circulation for the benefit of Truman and purchased by the plaintiffs before maturity, the same as the note above described. The latter note, when indorsed by the defendant, was \$20, and was fraudulently raised to \$120 before it was presented to the plaintiffs. The notes were duly protested for non-payment, and due notice thereof given to the defendant.

SPRING, J.: The defendant, by his contract of indorsement, guaranteed the genuineness of the signature of Eaton, the prior indorser on each note, and that the note was a "valid and subsisting" obligation. (Neg. Inst. Law [Laws of 1897, chap. 612], sec. 116; Lennon vs. Grauer, 159 N. Y. 433; Erwin vs. Downs, 15 id. 575.)

The defendant expected that the note was to be negotiated for the benefit of the maker. He indorsed it at his request, and the note was put in circulation not only within the legal contemplation of the contract of indorsement entered into by the defendant, but as he, in fact, intended. To be sure, the plaintiffs knew the note was to be used for the benefit of the maker, and that the defendant indorsed for his accommodation. These circumstances do not relieve the indorser from the effect of his contract. (Neg. Inst. Law, secs. 50, 55, as amd. by Laws of 1898, chap. 336.) One cannot enter into this contract knowing that he is indorsing solely for the benefit of another and then shield himself from the enforcement of the agreement because the purchaser is apprised that the indorsement is without actual consideration. Such a construction of the contract of indorsement would impair materially the transfer of commercial paper and nullify the effect of the contract.

The plaintiffs negotiated the notes without any knowledge or suspicion of any infirmity in them. They then purchased them before maturity from a *bona fide* holder still without any information as to any vice in them. They are holders in good faith. (Neg. Inst. Law, secs. 91, 95-98.)

The judgment should be affirmed, with costs.

---

*INDORSER'S RIGHT TO HAVE NOTE PAID OUT OF DEPOSIT—DEPOSIT OF TRUST FUNDS.*

Supreme Court of Michigan, January 26, 1904.

STATE BANK OF ST. JOHNS vs. McCABE.

Even if a bank holding the note of a customer is required for the protection of an indorser to charge it to the account of the depositor when he has funds sufficient for that purpose, yet such rule would apply only to the time when the note fell due; for deposits made prior to maturity could not be held for the purpose, and deposits made after maturity do not affect the liability of the indorser.

Where a bank deals with a depositor as a trustee, and recognizes the funds as trust funds, it cannot appropriate them to the payment of the depositor's individual indebtedness.

---

This was an action brought upon a promissory note, payable on demand, for \$700, dated December 30, 1898, made by J. H. Fedewa to the order of defendant, and indorsed by him.

GRANT, J. (omitting part of the opinion): It was developed upon the trial that plaintiff had a deposit account standing in the name of "John H.

Fedewa, Trustee," during the period of the existence of this note. The claim of the defendant is that the bank had a lien upon this deposit; that it was its duty to consider the note in the nature of a check, and appropriate enough of the deposit funds to pay it; that, failing to do this, the indorser is discharged. Whether it would have been the duty of the bank to apply the personal deposits of Mr. Fedewa, when it became due, we need not consider. The authorities seem to agree that deposits made prior to maturity cannot be held to meet the note when it matures, and also that deposits made after maturity do not affect the liability of the indorser. Only when the maker of the note has funds on deposit at the date of maturity may the bank treat the fact that the note is made payable at its bank in the nature of a check, and charge it up against the maker's deposits. Mr. Fedewa had no account standing in his individual name.

The authorities are not agreed as to the legal duty of the bank in cases of individual deposits. (Eaton & Gilbert, Com. Paper, sec. 106.) Granting that plaintiff was, in law, obligated to apply individual deposits of Mr. Fedewa to the payment of the note, was it obligated to assume the responsibility of determining at its peril that the deposits in the name of Mr. Fedewa as trustee were his own? If the bank knew that these were trust funds, and that they belonged to others, clearly it could not appropriate these funds in payment of a debt due to it. No authority cited in behalf of defendant so holds. Among the cases cited by the learned counsel to support their contention are *Fox vs. Citizens' Bank & Trust Co.* (Tenn.) 37 S. W. 1102, 35; *Metcalf vs. Williams*, 104 U. S. 93; *Keidan vs. Winegar*, 95 Mich. 430; *Thomas vs. Exchange Bank of Angus* (Iowa), 68 N. W. 780; *Laubach vs. Liebert*, 87 Pa. 55; *McLain vs. Wallace*, 103 Ind. 562.

In *Fox vs. Citizens' Bank & Trust Co.*, the suit was between the beneficiary of the notes, signed by one Anderson as trustee, and the transferee of Anderson. It was held that "the fact that the notes appeared on their face to be payable to him as trustee would put the transferee on notice, and the claim of the beneficiaries would be superior."

In *Metcalf vs. Williams* it is held that the addition to the signature of the word "agent," "trustee," "treasurer," etc., does not release the agent from personal liability where the principal is not disclosed; the appendix being regarded merely as *descriptio personæ*. The Court says: "But if he be in fact a mere agent, trustee, or officer of some principal, and is in the habit of expressing in that way his representative character in his dealings with a particular party, who recognizes him in that character, it would be contrary to justice and truth to construe the documents thus made and used as his personal obligations, contrary to the intent of the parties." Under the principle of this case, if the plaintiff dealt with Mr. Fedewa in the capacity of a trustee, and recognized the funds as trust funds, and knew that they were trust funds, certainly it could not appropriate them to the payment of Mr. Fedewa's indebtedness to the bank. Under this claim on behalf of defendant, the bank must, at its risk, assume that its depositor is falsifying when he makes a deposit in his name as trustee, agent, treasurer, or county treasurer, etc., and assume that the property so deposited belongs to the depositor, instead of to the *cestui que trust* or principals. This cannot be the law.

In *Keidan & Winegar* the maker of the note, who affixed the word "agent" to his signature, was sued upon the note. It was held that he might show in

defense that the note was that of his principal, the real party to the transaction, and that the payee had knowledge thereof. None of the other cases cited are stronger than these three. In none of them did the question here involved arise. If the defendant could show that these funds in fact belonged to Mr. Fedewa, and that the bank knew it, then the question would arise as to whether the failure to so apply the funds operated as a discharge of the indorsers, and whether he waived notice and demand with knowledge of that fact.

Judgment reversed and new trial ordered. The other justices concurred.

---

*INTERNAL REVENUE TAX ON NATIONAL BANKS—UNDIVIDED PROFITS.*

United States Circuit Court of Appeals, Second Circuit, January, 1904.

LEATHER MANUFACTURERS' NATIONAL BANK vs. TREAT.

Under the war revenue law, "undivided profits" of a National bank are taxable as "capital."

---

Before Wallace, Townsend and Coxe, JJ.

WALLACE, *Circuit Judge*: The plaintiff in error was the plaintiff in the court below, and brings this writ of error to review a judgment for the defendant entered upon sustaining a demurrer to the complaint. It appears by the complaint that in February, 1902, the defendant, in assessing the plaintiff the amount of a tax upon its capital, included as part of its capital the sum of \$77,796, which according to the complaint was standing on the books of the plaintiff under the profit and loss account, and "represented the undivided profits of the plaintiff as the same existed at the end of the preceding fiscal year."

The complaint stated the facts with reference to the sum in question as follows: "Instead of paying out to the holders of the capital stock of the plaintiff all the profits from year to year and at the expiration of each fiscal year, the plaintiff reserved a portion thereof and passed the same to the credit of 'profit and loss,' holding the amount so reserved subject to the application of the same in payment of any dividends which might be declared from the said profits whenever the business condition of the plaintiff warranted, and as a protection against losses which might arise, thereby diminishing and depreciating the surplus fund already reserved and carried on the books of the plaintiff. The said sum of \$77,796, so reserved, constituted in part the profits reserved and accumulated for a period of years terminating with said June 30, 1901; premiums on bonds, and other increments of value, as the same appeared on June 30, 1901;" and it further alleges such sum to have been "held in no other way and for no other purpose except as a protection against losses and as a guard and protection to its surplus and capital." Upon the facts thus stated in the complaint the court below held that the sum in controversy was properly assessed by the defendant.

The case thus presents the question whether the profits of a banking corporation which accrue from its earnings after deducting all expenses and dividends, and which are thereafter carried on its books as a distinct fund, sometimes called "profit and loss," but usually "undivided profits," are liable to taxation under section 2 of the act of Congress of June 19, 1898. That section reads as follows:

"Section 2. That from and after July first, eighteen hundred and ninety-

eight, special taxes shall be, and hereby are, imposed annually as follows, that is to say:

One. Bankers using or employing a capital not exceeding the sum of twenty-five thousand dollars, shall pay fifty dollars; when using or employing a capital exceeding twenty-five thousand dollars, for every additional thousand dollars, in excess of \$25,000, two dollars, and in estimating capital, surplus shall be included. The amount of such annual tax shall in all cases be computed on the basis of the capital and surplus of the preceding fiscal year. Every person, firm or company, and every incorporated or other bank, having a place of business where credits are opened by the deposit or collection of money or currency, subject to be paid or remitted upon draft, check or order, or where money is advanced or loaned on stocks, bonds, bullion, bills of exchange or promissory notes, or where stocks, bonds, bullion, bills of exchange or promissory notes are received for discount or sale, shall be a banker under this act" (War Revenue Law of 1898, 30 U. S. Stat. at Large, chap. 448, sec. 2, p. 448).

The argument at the bar has been largely directed to the question whether the undivided profits are "surplus" within the meaning of the statute. The provision for including "surplus in estimating capital" was probably inserted to remove the doubt created by a decision of Mr. Justice Nelson in construing a former statute which imposed a tax upon capital as taxing only the share capital of a banking corporation' (Bank vs. Townsend, 5 Blatch, 315).

The provision would seem to have been unnecessary, as without it, when a statute, as this does, levies a tax upon the capital used or employed by bankers generally, firms and individuals, as well as corporations, the meaning is to tax all the money and assets invested in the business as the basis of profits (Bailey vs. Clark, 21 Wall. 284), not only the original investment, but also the additions and accretions (Mut. Ins. Co. vs. Supervisors of Erie, 4 N. Y. 442; People vs. N. Y. 23 N. Y. 219; Wetherby vs. Baker, 35 N. J. Eq. 501; Tradesman's Pub. Co. vs. Car Wheel Co. 95 Tenn. 654; Hannibal R. Co. vs. Shacklett, 30 Mo. 558; Martin vs. Zellerbach, 38 Cal. 300; Security Co. vs. Hartford, 61 Conn. 89).

The term "surplus" as used in the nomenclature of bankers does not include undivided profits such as are now in controversy. Such profits may be surplus in the sense that they are a constituent of capital, but they are not surplus in the commonly-accepted sense. It is quite usual upon the organization of financial corporations for the stockholders to contribute, besides the share capital, a fund which is known as surplus. It is also quite usual for the directors or managers of these institutions to set apart and add to this fund from time to time some part of the accumulated profits of the business in excess of dividend requirements. The fund produced in either of these ways is what is known as surplus. The term is not used to designate the accumulated profits of ordinary banking firms or individual bankers; and where the statute uses it it does so with reference to the particular class of bankers to which alone it is applicable, and means the fund created by corporate or *quasi* public institutions as an addition to or reinforcement of the share capital. Undivided profits do not become a part of this fund until they have been assigned to it by some formal act of the institution; and it is for the directors and not for the taxing officers of the Government to determine when this should be done. It does not follow, however, because undivided

profits are not surplus within the correct definition of that term or its statutory meaning, that they are not taxable under the present statute. If they have become capital by reason of the manner in which they have been appropriated and invested, the statute reaches them just as it would reach surplus without any other enumeration.

In subjecting all classes of bankers to taxation upon their capital the statute does not discriminate in favor of any class, and the term "capital" should be read as meaning the same thing in respect to a corporation that it does in respect to an individual banker. In other words, whatever comprises capital in the business of an individual banker likewise comprises capital in the business of a banking corporation for the purposes of the statute. Beyond question the profits left and used in the banker's business for a period of years, with the purpose of so leaving and using them indefinitely, become capital; the part derived from accumulated profits—that is, from profits not withdrawn or intended to be withdrawn for income, equally with the part originally invested, constitutes his capital.

The undivided profits of a banking corporation are understood to be profits which remain after the payment of the current dividends. They do not necessarily become capital because they are not immediately distributed to the stockholders, as where they are carried over after the dividend period for temporary purposes and not with a purpose of indefinite use in the business of the corporation. But the longer they are carried without any distribution and used in common with the other funds of the corporation, the stronger the presumption becomes that they have been mingled with those funds permanently. Presumably, when a dividend is declared the amount represents the profits made by the corporation during the past dividend period after reserving a sufficient fund to cover all off-sets or deductions likely to arise subsequently growing out of the transactions of that period. Unless this is so the dividend has not been earned. The reserved fund is not profits, but is merely earnings. The dividend, therefore, represents actual profits. If they have been earned the surplus or undivided profits are ordinarily used by the corporation as supplementary capital, unless they are distributed to the stockholders. When they are not distributed at the next dividend period a fair presumption is created that they are not retained for distribution, but are retained to feed the resources of the corporation.

When it appears, as it does in the present case, that the undivided profits have been carried over many dividend periods and have been accumulated "during a period of years," and have in the meantime been used in the business like the other assets of the corporation, the inference is irresistible that they have become an accretion to the capital. When this appears they are taxable, just as the accumulated profits of an individual are taxable when they have been merged with his capital. This, we think, is the meaning of the statute.

The argument for the plaintiff in error, if carried to its logical conclusion, would enable a banking corporation to escape the tax at its own volition merely by refraining from making any distinct appropriation of the undivided profits. The tax reaches whatever has become substantially a part of the capital of the corporation without regard to bookkeeping.

Upon the facts set forth in the complaint there is nothing to distinguish the undivided profits in controversy from the fund which many banking

associations carry for years under that name, and which, though not technically surplus or theoretically capital, are actually a part of the capital of the bank. There is nothing in the circumstance that they were considered by the bank as a fund applicable to extra dividends and to unexpected losses and to depreciation of assets, to distinguish such accumulations from the technical surplus fund of the bank. Extra dividends are not infrequently declared by banking corporations out of that fund, and that fund is, of course, applicable to the payment of losses; and so far as it serves to off-set depreciation of assets, it replaces diminished capital.

The judgment is affirmed, with costs. All concur.

#### NOTES OF CANADIAN CASES AFFECTING BANKERS.

[Edited by John Jennings, B. A., LL. B., Barrister, Toronto.]

##### *MUNICIPAL CORPORATIONS—DEBENTURE—DEFECTIVE BY-LAW—REMEDIAL ENACTMENT.\**

STANDARD LIFE ASSURANCE COMPANY vs. THE VILLAGE OF TWEED (Ontario Law Reports, Vol. 6, p. 653).

**STATEMENT OF FACTS:** This was an appeal upon a stated case, the facts being agreed upon by counsel. The facts agreed on were as follows:

By-law No. 15 was passed by the council of the Village of Tweed in April, 1892, for the purpose of issuing debentures to raise the sum of \$5,000. The debentures issued under this by-law were purchased by the plaintiffs in January, 1893. All interest was paid on the said debentures as it fell due. The debentures were presented for payment on March 25, 1902, but payment was refused.

This action was commenced on July 20, 1903. The only question now raised was whether the debentures so issued were valid and binding on the corporation. Counsel for the Village of Tweed contended that as the by-law had not provided a fund for payment of principal, though it had provided a fund for payment of interest, there was no other method provided by statute for paying principal, and when it fell due the municipality had no legal way of paying it; and that the amendment contained in the act of 1903 could not validate debentures which had matured a year and a half before this act was passed, for it could not be construed retroactively.

**JUDGMENT:** (BOYD, C., and MACMAHON and TEETZEL, JJ.): The judgment of the court was delivered by Boyd, C. The Village of Tweed raised \$5,000 to assist a local enterprise, and secured it by five debentures for \$1,000 each, issued on August 9, 1892, and payable at the end of ten years with interest meanwhile half-yearly. All the interest has been punctually paid and the time has elapsed for the payment of the principal which fell due on March 25, 1902. The by-law makes no provision for the payment of the principal of these debentures, and unless the transaction has been validated by the Legislature, there exists no legal right to sue for the principal money on these debentures, which have no higher binding force than the imperfect by-law.

\* The effect of the remedial statute 3 Edw. VII. Ch. 18, Sec. 93, is to make one payment of interest validate the debenture in respect of which it is paid, and one payment of principal validate the series in respect to which it is paid, and that accordingly the debentures in question were validated.

The statute, 44 Vict. ch. 24, sec. 27 (O), which was carried into the Consolidated Municipal Act of 1883, 46 Vict. ch. 18 (O) as sec. 409, provides for validating any debenture theretofore issued under any by-law where the interest on such debentures and the principal of such thereof, "if any," as shall heretofore have fallen due, has been heretofore paid for the period of two years and more.

In the revision of 1887 this provision was (apparently improvidently) limited to debentures issued prior to February, 1883 (R. S. O. 1887, ch. 184, sec. 408), and the like limitation was carried forward into the next decennial revision R. S. O. 1897, ch. 223, sec. 432. On June 27, 1903, this section was repealed and a new provision substituted in these words: "Where in the case of any by-law heretofore or hereafter passed by a municipal council, the interest for one year or more on the debentures issued under such by-law and the principal of the matured debentures, 'if any,' has or shall have been paid by the municipality, the by-law and the debentures issued thereunder remaining unpaid shall be valid and binding. \* \* \* (3 Edw. VII, ch. 18, sec. 93 [O], and *Ib.* ch. 19, sec. 432.)" It is to be borne in mind that municipal debentures are broadly of two classes: (1) in which the principal money is to be paid at the end of the fixed period with interest payable in the interval, and (2) in which the principal is payable by annual installments with proportionate interest. (Municipal Act, 1897, R. S. O. ch. 223, secs. 384, 386.)

The principle enunciated in the curative enactment appears to be that one payment of interest will validate the debenture in respect of which it is paid, and one payment of principal will validate the series in respect of which it is paid. It cannot be said that the original section of 1881 is happily or even lucidly expressed, and it has not been made plainer in the course of subsequent legislation. Yet I think the present section yields the net result I have endeavored to indicate, and with such sufficient clearness as may justify the court in so expounding it.

These debentures, therefore, come within the scope of this remedial enactment, and the order directing judgment for the amount should be affirmed with costs.

---

*CONTRACT FOR CONSTRUCTION OF WORKS—DEDUCTIONS FOR PORTIONS OMITTED—PARTIAL CANCELLATION OF CONTRACT—ARTS. 1065, 1691, C. C.—APPEAL ON SPECIAL QUESTIONS—DEFERRED PAYMENT—COMPUTATION OF INTEREST—PAYMENTS IN ADVANCE—REBATES—POWERS OF APPELLATE COURT.*

LA VILLE DE MAISONNEUVE vs. LA BANQUE PROVINCIALE DU CANADA (Supreme Court Reports, Vol. 33, p. 418).

All the facts and circumstances of the case will be found in the judgment of Mr. Justice ARMOUR, given below.

JUDGMENT: The defendant contracted with the firm of U. Pauze & Fils to construct certain drains and do certain grading for the defendant, and it was the agreement that December 15, 1899, should be taken to be the date of the completion of the works, and that the price fixed for the works should be paid for by the promissory note of the defendant payable in two years from that date. The price fixed for constructing the drains was \$118,479.97, and for doing the grading \$21,375. These sums did not represent the true cost of the works, but the true cost of the works with interest at six per cent. per

annum, compounded for the two years of the currency of the promissory note added to such true cost, and it was agreed that the defendant should be at liberty to pay at any time any part of the said note before the expiration of the two years, and should thereby become entitled to a rebate of such compound interest. The contractors completed the works, except a portion thereof, which they were directed by the defendant not to do, and they claimed in addition to the fixed price the sum of \$2,708.94 for extra work, and the defendant claimed the sum of \$2,442.50 as a deduction from the fixed price for the work which the contractors refrained from doing by direction of the defendant. Considerable sums of money were paid by the defendants in respect of the contract, as will be shown hereafter. In October, 1900, the contractors assigned their claims against the defendant to the plaintiff, who thereupon brought this action, demanding a promissory note dated December 15, 1899, payable in two years, for the balance due in respect of the contract, or in the alternative, demanding payment of such balance. The defendant pleaded that, after the commencement of the action, it offered the plaintiff a promissory note dated December 15, 1899, payable in two years for the sum of \$22,819.56, and offered the attorneys of the plaintiff the sum of \$58.75 for their costs, and it delivered to the prothonotary of the court the said promissory note.

The cause was tried in the superior court by ARCHIBALD, J., who disallowed the claim of the defendant for the sum of \$2,442.50 as a deduction for work not done, and found the offer of the defendant insufficient, that the balance due was \$26,539.37, for which sum he ordered the defendant to deliver to the plaintiff its promissory note dated December 15, 1899, payable in two years, and in default he ordered the defendant to pay the said sum with interest at six per cent. per annum from December 15, 1901, and to pay the costs of the suit. The defendant thereupon appealed to the Court of King's Bench against the said judgment, on the ground of the disallowance of the claim for the deduction of \$2,442.50, which court maintained the appeal with costs in favor of the appellant against the respondent, set aside and annulled the judgment which should have been rendered, declared that the sum due on the claim was \$25,838.19, on account of which the respondent had received the promissory note of the appellant for \$22,819.56 payable on December 15, 1901, leaving a balance of \$3,018.63, and condemned the appellant to pay this balance of \$3,018.63 to the respondent with interest from December 15, 1901, at the rate of six per cent. per annum, and costs of suit in the superior court; the whole with the reservation of all rights which the respondent might have under and in virtue of the promissory note for \$22,819.56 against the appellant.

The defendant thereupon appealed to this court against the judgment of the Court of King's Bench so far as it found the balance due to be \$25,838.19, and the plaintiff cross-appealed against the allowance of the deduction of \$2,442.50.

The defendant contended that the Court of King's Bench should not have interfered with the computation made by the superior court of the balance due by the defendant, for it only appealed to that court by reason of the disallowance of the sum of \$2,442.50, but they appealed against the judgment and having done so it was in the power of that court to give the judgment which the superior court ought to have given. Besides the allowance by the

Court of King's Bench of the deduction of \$2,442.50 rendered a new computation necessary in order to ascertain the balance due by the defendant.

I am of the opinion that the allowance by the Court of King's Bench of the deduction of the sum of \$2,442.50 was erroneous. The contract between the contractors and the defendant was for fixed sums for the entire works, and the contractors refrained from doing that portion of the works contracted for represented by the said sum, by the orders of the defendant, and the defendant was consequently not entitled to any deduction for the work so omitted to be done.

The law relied upon by the defendant and maintained by the Court of King's Bench as authority for allowing the deduction was article 1691 of the Civil Code:

"The owner may cancel the contract for the construction of a building or other works, at a fixed price, although the works have been begun, on indemnifying the workman for all his actual expenses and labor, and paying damages according to the circumstances of the case."

But this article clearly did not apply to this case, for there was no cancellation of the contract within the meaning of that article, which plainly means an entire cancellation of the whole contract. It does not give the owner power to cancel the contract as to one part of the work contracted for, and to maintain it as to another he must either cancel it in toto or not at all. The power is given to cancel the contract, but no power is given to cancel a part of it. No authority was cited for the construction put upon this article by the Court of King's Bench, and the opinion of the commentators upon it seem to me to be opposed to such a construction.

The judgment here sets out a detailed statement of the account and concludes:

The above statement shows the amount payable by the defendant on December 15, 1901, to be the sum of \$27,417.66, from which time the plaintiff will be entitled to simple interest thereon until paid.

## REPLIES TO LAW AND BANKING QUESTIONS.

---

Questions in Banking Law—submitted by subscribers—which may be of sufficient general interest to warrant publication will be answered in this department.

A reasonable charge is made for Special Replies asked for by correspondents—to be promptly sent by mail.

*Editor Bankers' Magazine:*

CLIFTON, Arizona, April 22, 1904.

SIR: On September 15, 1903, a mining company, gave an employee, A, a check drawn on G bank, and a couple of days later A reports to the mining company that he has lost the check, and asks that they have payment stopped, which they do on September 21, but in the meantime the check has been presented to a merchant in the town, who pays same and deposits with F bank, who clears the item with G on September 18, they not having at this time received order to stop payment. G returns the check at the end of the month with other cancelled vouchers to the company. Six months later, the mining company returns check to G, claiming forged endorsement, G goes to F, and they in turn to their customer, who refuses to make good on the grounds of negligence on the part of G, in not seeing that the check was paid when stop payment was ordered, and also negligence on the part of the company in not reporting the forged endorsement earlier, and thus giving them a chance to have recovered from party from whom they received check. You will understand that the company's account is verified each month with G, and that six months have elapsed since the check was cashed by G, and nearly that time since it was returned to the company as a cancelled voucher.

SUBSCRIBER.

*Answer.*—We infer that when the check was deposited in bank F it bore the indorsement of the depositor, and this indorsement amounted to a warranty that the prior indorsement was genuine. (Negotiable Instruments Law, Laws Arizona, secs. 65, 66.) The liability upon such warranty is absolute, and no negligence upon the part of any subsequent holder in taking the instrument will relieve the indorser. He is, therefore, liable to bank F, upon his indorsement, and as the position of that bank has not been changed to its injury by the delay, it cannot refuse to refund to bank G the amount received on the check. (*Canal Bank vs. Bank of Albany*, 1 Hill, 287.) And so, as bank G has suffered no injury by the delay of the mining company, the latter is not estopped to dispute the validity of the first indorsement, and demand that the amount so improperly charged against its account be cancelled. As to the stop-order, that was a matter merely between the mining company and bank G, and is not available to the merchant when claim is made upon him for the breach of his warranty.

*Editor Banker's Magazine:*

CHICAGO, Ill, April 26, 1904.

SIR: If a National bank makes loans on real estate and sells them without recourse to it to outside investors, acting in the capacity of a broker, is there any possibility of the validity of the mortgage being attacked by the maker of the loan, because of the fact that the National Banking Law prohibits the banks making loans on real estate?

Local counsel takes the stand that the only one who can raise any objection to this method of doing business would be the Comptroller of the Currency, and so far as the borrower is concerned, he having had value received, could raise no doubt or question as to the validity of the mortgage given by him.

BANKER.

*Answer.*—The law is well settled by the decisions of the Supreme Court of the United States, that while a National bank is forbidden to make loans upon real estate security, this point cannot be raised against the bank when it seeks to foreclose a mortgage or otherwise satisfy the debt out of the property. No one but the Government can be heard to complain that the bank has exceeded its powers, and the only penalty which it incurs is a liability to forfeiture of its franchise. (*National Bank vs. Matthews*, 98 U. S. 621; *Reynolds vs. Crawfordsville Bank*, 112 U. S. 405.) As the borrower could not set up such a defense against the bank itself, then clearly he could not do so as against the bank's assignee. We believe, therefore, that in the case stated by you, there would be no legal difficulty in enforcing the mortgage.

But we think that if the bank should engage in such business to any extent the Comptroller of the Currency would order it to discontinue the practice, for it has always been the custom of the Comptroller's office to enforce compliance with the inhibition against real estate transactions.

*Editor Bankers' Magazine:*

TUSCALOOSA, Ala., April 12, 1904.

SIR: (1) Is a bank justified in paying a check that is dated ahead? (2) In extending a promissory note that has two or more makers, does the receiving of the interest from one of the parties before the extension is agreed to by the other parties, or signed by them, operate to release the other makers of the note?

ALABAMA.

*Answer.*—(1) The bank has no authority to pay such a check until the day of its date. A post-dated check is payable on demand on or after the day on which it purports to bear date. (*Mohawk Bank vs. Broderick*, 10 Wend. 304, 307; *Gough vs. Staats*, 13 Wend. 549.) In *Salter vs. Burt* (20 Wend. 205), a check drawn on August 9, but dated on the 21st of that month,

was presented for payment on the 20th, the 21st being Sunday. The court held that the presentment was made before the instrument became payable.

(2) If the makers are all principal debtors, such receipt of interest by the holder would not affect their liability, even though it be received in payment of future interest; for each being obligated absolutely to pay the entire sum, cannot be injured thereby. But if any of the makers are merely sureties for the other, then an agreement by the holder to extend the time of payment, and the actual payment of interest in advance, would discharge such of them as are sureties and do not assent. (*Wakefield Bank vs. Truesdell*, 55 Barb. [N. Y.] 602; *Hollingsworth vs. Tomlinson*, 108 N. C. 245; *Grayson's Appeal*, 108 Pa. St. 581; *Scott vs. Saffold*, 37 Ga. 384; *Dunham vs. Downer*, 31 Vt. 249.)

*Editor Bankers' Magazine:*

NUNDA, Ill., April 29, 1904.

SIR: Mr. Grantor has sold a piece of real estate for the sum of \$1,000. The deal is to be consummated on or before June 1 next at any time Mr. Grantee may pay over the purchase price named. Mr. Grantor is in poor health and wishes to execute a deed to the premises in question and leave same with us with instructions to deliver same to Mr. Grantee if he shall make the payment agreed upon so that in the event of the death of Mr. Grantor before June 1 the deal could be consummated without any delay or bother by our receiving the money and delivering the deed.

Will you kindly advise us whether we would have the right to deliver the deed after Grantor's death. Would it make any difference if Grantor and Grantee both gave us instructions in the matter? Is the death of either of the parties a bar to the delivery of a deed in escrow? CASHIER.

*Answer.*—"It is a well-settled rule with respect to an escrow, that if either of the parties dies before the condition is performed, and afterwards the condition is performed, the deed is good and will take effect from the first delivery." (*Ruggles vs. Lawson*, 13 Johnson [N. Y.] 285.) In *Periman's Case* (5 Coke, 84) Lord Coke said: "If a man deliver a writing as an escrow, to be his deed upon certain conditions performed, and afterwards the obligor or obligee dieth, and afterwards the condition is performed, the deed is good, for there was *traditio, inchoata* in the life of the parties *sed postea consummata existens* by the performance of the condition taketh his effect by force of the first delivery, without any new delivery." In *Webster vs. Kings County Trust Co.* (145 N. Y. 275) a deed was tendered upon the trial which was executed by one Agar and others, but while the case was pending upon appeal Agar died. The Court of Appeals of New York said: "The deed tendered on the trial and placed under the control of the court in the hands of the clerk, duly executed and acknowledged by Agar and the other plaintiffs, was a good delivery in escrow, which was not defeated by his subsequent death." In *Bostwick vs. McEvoy* (62 Cal. 496) the Supreme Court of California stated the rule thus: "But when the condition on which an original delivery made in the lifetime of a party transpires, the conditional delivery becomes absolute, and the absolute delivery takes effect against the contracting parties from the date of the delivery of the contracts as escrows, notwithstanding the death of one of the contractors before the happening of the condition." In the case stated in the inquiry, therefore, the bank would act properly in delivering the deed to the grantee, notwithstanding the death of the grantor.

## \* JOHN W. CASTLES.

---

### *THE NEWLY-ELECTED PRESIDENT OF THE GUARANTY TRUST COMPANY OF NEW YORK.*

---

After having served several months as First Vice-President of the Guaranty Trust Company, of New York, Mr. John W. Castles was, on April 18, unanimously elected President of the company to succeed Walter G. Oakman, resigned.

Prior to his coming to New York to become Vice-President of the Guaranty Trust Company, about the first of the present year, Mr. Castles was President of the Hibernia Bank and Trust Company, of New Orleans. He began his business life in Texas as a drug clerk, and worked his way up until he became a member of the firm of Cameron, Castles & Story, of Waco, Texas. In 1890 he went to New Orleans, La., as managing partner of the wholesale grocery firm of Cameron & Castles, out of which his first banking connection developed.

When Mr. Castles was elected President of the Hibernia National Bank, of New Orleans, some ten or twelve years since, it had only moderate patronage and resources, but under his direction the business of the bank grew rapidly. In 1902, having absorbed the old Union National Bank, and the Southern Trust and Banking Company, the Hibernia National surrendered its national charter and reorganized under the Louisiana State Banking Law as the Hibernia Bank and Trust Company. Thus reorganized, its progress under the management of Mr. Castles was striking. It now has capital and surplus aggregating \$3,102,500; deposits, \$14,000,000 and total resources in excess of \$17,000,000. The company is not only the largest institution of its kind in New Orleans, but in the South as well. A new building, the tallest in the Crescent City, was recently erected for the company at a cost of about \$1,000,000. There is a considerable New York interest represented in the Hibernia Bank and Trust Company, and the record of successful management made by Mr. Castles naturally attracted attention.

The wisdom of drawing to the city men who have shown exceptional financial capacity in managing banks or trust companies in other parts of the country is being recognized more and more. New York has large business relations with all sections of the United States, and with the South especially. As the South is now progressing more rapidly and substantially than ever before, those relations are bound to grow in importance.

The Guaranty Trust Company is already one of the large and successful trust companies of the city, having \$2,000,000 capital, \$5,000,000 surplus, and \$43,000,000 deposits. The company was designated as the depository of the civil government of the Philippine Islands, and has acted in that capacity for some time.

The Guaranty Trust Company is one of the oldest and strongest trust companies in New York. It is owned and controlled by the Mutual Life Insurance Company, which is the oldest insurance company in America, and also the largest financial institution in this part of the country and probably in the world, its assets aggregating over \$401,000,000.

The officers and executive committee of the Guaranty Trust Company are as follows:

---

\* A portrait of Mr. Castles is presented as a frontispiece in this number of the *MAGAZINE*.

Officers: John W. Castles, President; Geo. R. Turnbull, Vice-President; Oscar L. Gubelman, Vice-President; John Gault, Manager Foreign Dept.; W. C. Edwards, Treasurer; E. C. Hebbard, Secretary; F. C. Harriman, Assistant Treasurer; R. C. Newton, Trust Officer.

Executive Committee: Richard A. McCurdy, Walter G. Oakman, Frederic Cromwell, G. G. Haven, R. Somers Hayes, Adrian Iselin, Jr., James N. Jarvie, Augustus D. Juilliard, John W. Castles.

The success which Mr. Castles has already won as a bank and trust company officer justifies the prediction that his management will result in the continued growth and prosperity of the company to whose chief executive office he has just been called.

---

### NOTICES OF NEW BOOKS.

#### WAREHOUSE LAWS AND DECISIONS.

Under this title there has been lately issued from the press of the Banks Law Publishing Company of New York a 950 page volume containing the warehouse laws of all the States and Territories and a complete digest of the decisions of all State and Federal courts affecting the value of the warehouseman's receipts, both negotiable and non-negotiable, and his legal relationship to the business world.

The work appears to have been compiled with great care and at considerable expense, for the American Warehousemen's Association by Mr. Barry Mohun, of the District of Columbia bar. It shows evidence of a thorough knowledge of the subject and an exhaustive use of the material to be found in the great law libraries of the National Capital.

The volume, while primarily brought into existence for the use and benefit of the warehousemen of the country, ought to be of equal importance to the legal fraternity and to those banking institutions that make, or contemplate making, a business of loaning money upon receipts for warehouse goods, or that take silver-plate and valuables upon deposit for their customers, as it not only furnishes them the laws, in handy form, under which they operate, but also, and what is more important, a full digest of court decisions that sets forth authoritatively the rights and responsibilities of the banker, the warehouseman and the owner of the goods under the warehouse receipt in the first case, and the responsibilities of the banker to the owner in the second.

It is understood that the American Warehousemen's Association has had this book issued as a first step toward the formulation of uniform warehouse laws for presentation to the various Legislatures to replace the illy-constructed and conflicting statutes now extant. This is certainly a commendable undertaking, pointing the way to a higher civic usefulness of commercial associations, that will, if generally adhered to, give our nation a system of legal procedure consistent throughout the States and Territories.

From the fact that it is the only publication treating specifically upon the subject, the volume should be of great value to all that have to do, either directly or indirectly, with the business of warehousing. The book has a full and complete index, and is in matter of presswork, binding and general make-up, creditable to all concerned in its publication.

---

INDIANA BANKERS' ASSOCIATION.—Through the courtesy of Secretary Andrew Smith, THE BANKERS' MAGAZINE has received a copy of the Proceedings of the Seventh Annual Convention of the Indiana Bankers' Association. It is an exceptionally attractive publication in point of typography, paper and illustrations. The addresses, reports, etc., are also of a high order of merit, and indicate the live and progressive character of the Indiana Bankers' Association.

# THE BANK OF NEW YORK NATIONAL BANKING ASSOCIATION.

ONE HUNDRED AND TWENTIETH ANNIVERSARY OF THE FOUNDING OF  
THE INSTITUTION.

On March 15 the Bank of New York reached the 120th anniversary of its organization, and though the occasion was not marked by any special ceremony, such a unique distinction certainly calls for more than a passing mention. It is to be

## BANK OF NEW-YORK,

*The following RULES observed at the Bank are published.*

THE Bank will be open every Day in the Year except Sunday, Christmas Day, New-Years Day, Good Friday, the Fourth Day of July, and general Holydays appointed by legal Authority

The Hours of Business with the Bank from Ten to One o'Clock in the Forenoon, and from Three to Five o'Clock in the Afternoon.

Discounts will be done on Tuesday and Thursday in every Week, and Bills or Notes brought for Discount, must be left at the Bank on the preceding Days. The Rate of Discount is fixed at Seven per Cent. per annum, but no Discount will be made for a longer Term than one Month: Three Days of Grace being allowed upon all Bills or Notes, the Discount will be taken for the same.

Money lodged at the Bank may be re-drawn at pleasure, free of any Expence, but no Draft will be paid beyond the Balance of Account in any Case whatever.

Bills or Notes left with the Bank for Collection, will be presented for Acceptance, and the Money collected free of Expence: In case of Non-payment and Protest, the Charge of Protest must be borne by the Person lodging the Bill.

Payments made at the Bank must be examined at the Time, as no Deficiency suggested afterwards will be admitted.

Gold and Silver Coin is received and paid at the Rates established by Congress.

*Bank of New-York, May 12, 1791.*

RULES OF THE BANK OF NEW YORK IN 1791 FOR PARTIES TRANSACTING BUSINESS WITH THE BANK.

enterprise for the shareholders, and has rendered the highest service to business interests as well as to the Government at critical times. It will be impossible to trace in detail the long history of the bank, but the following outline of its career will be found interesting.

The Bank of New York was organized March 15, 1784, and is the oldest bank in New York State, and with one exception the oldest in the country. The constitution of the bank was written by Alexander Hamilton, who took an active part in the organization of the bank, and was one of the first board of directors. General Andrew McDougall was the first President, and William Seton the first Cashier.

The currency of the country was very unsettled at the close of the Revolutionary War, and banking facilities were entirely lacking, so that there was a great demand for the establishment of a bank on a properly managed basis.

While the dollar was used as a unit of value, there was no such coin in existence. The circulating medium consisted of the coins of foreign countries. In 1786 the Legislature of the State of New York authorized the issue of a small amount of paper money, and to accommodate this currency a special set of books was started by the Bank of New York in June, 1787, for the use of clients wishing to deposit and draw that form of money. The books of

THE WALTON HOUSE, LOCATED IN FRANKLIN SQUARE, PEARL STREET, IN WHICH THE BANK OF NEW YORK COMMENCED BUSINESS JUNE 9, 1784.

account for this form of issue, strangely enough, were kept in sterling, and were in use for several years. This paper money was issued on the basis of eight shillings to the dollar, and the "York Shilling" of twelve and one-half cents thus became well known as a measure of value.

The Federal Constitution, which was adopted in 1787, prohibited the States from issuing money, so that this currency was the last issued by the State of New York.

The Bank of New York started under the most favorable auspices, and its success was pronounced from the beginning.

The question of politics entered into the matter of obtaining a charter, and it was not until March 21, 1791, that the charter of the bank was signed by the Governor of the State. Meanwhile, the bank, having commenced business on June 9, 1784, had developed a large and profitable business.

UNITED STATES TREASURY DRAFT ON THE BANK OF NEW YORK, SIGNED BY ALEXANDER HAMILTON, SECRETARY OF THE TREASURY.

In 1794 the bank of New York loaned the United States Government \$200,000, being the first Government loan ever negotiated by the United States.

The bank has made very few changes of location. Originally at No. 67 St. George's Square—afterwards Franklin Square—it was moved three years later to No. 11 Hanover Square.

In 1797 a building was begun on the present location—corner of Wall and William streets—which was opened for business April 23, 1798. Owing to the prevalence of yellow fever in the lower part of New York city, the bank moved, temporarily, on September 23, 1799, to a building in Greenwich Village, where it remained until the following November.

In August, 1822, a recurrence of the epidemic caused another removal to Greenwich Village, where the bank remained for a short time.

The Bank of New York was active in receiving subscriptions for Government loans for the expenses incurred by the War of 1812.

In the fall of 1860, when it became evident that a financial crisis was near at hand, the first of the loan committees of the associated banks of New York was formed. The Vice-President of the Bank of New York was custodian of the securities entrusted to the committee. This committee and its successor continued until May 1, 1862, and were of great service to the Government in the financial arrangements necessary at the commencement of the Civil War. In June, 1864, the Bank of New York owned upwards of \$3,000,000 of United States bonds, State and city securities.

In the same year, at the request of many merchants, the Bank of New York opened accounts in gold for the convenience of importers having gold payments to make to the Government, and was the first bank to open such accounts.

In 1865 the Bank of New York took out a National bank charter, under the extension of which it is working at present. At that time

it was thought that the National banks would be designated numerically in their various cities, but it was found that the old banks were reluctant to surrender their distinctive titles. The Bank of New York finally settled the matter for itself by

THE BANK OF NEW YORK, 1834, 48 WALL STREET.

THE BANK OF NEW YORK, 1857, 48 WALL STREET.

taking the official title of "The Bank of New York National Banking Association," thus preserving its old title, and at the same time indicating the fact that it was operating under the National Bank Act.

The present building was erected in 1857 and was enlarged in 1879.

Since the Bank of New York N. B. A. began business in 1784, it has but once passed its semi-annual dividend, and that was in 1837, when all banks were compelled to do so by a State law, owing to the financial crisis which was prevailing at the time. The next dividend was for double the usual amount, thus preventing any loss to the stockholders.

The total dividends paid, up to January 1, 1904, amounted to \$18,991,694.75, being 1,109½ per cent. of the capital stock.

Not only, however, has the Bank of New York had a very long and honorable history, but it is to-day one of the strong and progressive banks of the country. Its capital is \$2,000,000; net profits, \$2,536,000, and deposits about \$18,000,000.

Following is a list of the officers and directors of the bank:

Officers: President, Herbert L. Griggs; Vice-President, John L. Riker; Cashier, Charles Olney; Assistant Cashiers, Geo. P. Hall and Joseph Andrews.

Directors: Gustav Amsinck (G. Amsinck & Co.), merchant; John Crosby Brown (Brown Bros. & Co.), banker; Daniel A. Davis (formerly

THE BANK OF NEW YORK, N. B. A., 1879, 48 WALL STREET. PRESENT BUILDING.

of Deering, Milliken & Co.), merchant; Herbert L. Griggs, President; Anson W. Hard (Hard & Rand), merchant; Charles D. Leverich (C. D. Leverich & Bro.), broker; John G. McCullough, Governor of Vermont; Gordon Macdonald (Speyer & Co.), banker; W. J. Matheson (W. J. Matheson & Co., Ltd.), dye stuffs; D. O. Mills, capitalist; William A. Read (Vermilye & Co.), banker; John L. Riker (J. L. & D. S. Riker); merchant; Geo. L. Rives (Olin & Rives), lawyer; Henry C. Swords (President Real Estate Trust Co.), banker; J. Kennedy Tod (J. Kennedy Tod & Co.) banker.

As a part of the New York State exhibit in the Educational Building at the Louisiana Purchase Exposition at St. Louis, the Bank of New York National Banking Association shows the following:

Ledger of the Bank of New York in 1784, Aaron Burr's account; water color of the Bank of New York Building in 1797 at 48 Wall street, the present location; certificate of stock of the Bank of New York, dated May 31, 1792; facsimile page of checks of Aaron Burr, Gulian Verplanck, Marquis de Talleyrand; old checks—Saml. Deloplainé dated May 8, 1794, Capt. Thos. Smith dated July 11, 1797, Isaac Bronner dated April 23, 1797; two facsimile pages old Bank of New York notes; old Bank of New York note, 1818; form used in 1795 to notify parties when their note was due; rules of the Bank of New York in 1791 for parties transacting business with the bank; United States Treasury draft on the Bank of New York signed by Alex. Hamilton, Sec. of Treasury, dated Sept. 13, 1789; letters of Alexander Hamilton; copy of act to incorporate the Bank of New York in 1791; form for outside of folding cabinet.

## A STUDY OF DEPOSIT SLIPS.

[By CHARLES W. REIHL, Philadelphia, Pa.]

The one thing in bank work that is usually supposed to be about the same everywhere is the deposit ticket, as it is sometimes called. But the supposition is not correct, for as in many lines of bank work there is quite a difference in different parts of the country, so it is in this, and there are some interesting varieties.

I did not imagine this to be the case until I was studying the various methods of bank work for the completion of the system that was explained in the January issue of the *MAGAZINE*. When the idea of the deposit ticket with the receipt attached was perfected it was with the thought that all deposit tickets were about the same in form and arrangement. Not satisfied with the thought that they were the same everywhere, I determined to confirm or disprove the thought. So I sent to quite a number of the prominent banks in the larger cities throughout the country for copies of their deposit slips for comparison. The result was that my impression that they were all about the same was not confirmed, but was disproved. But I did not get any deposit slips to which the idea of the receipt form attachment could not be added, if desired.

This collection of deposit slips has been interesting to those who have seen it, and no doubt would be to all bankers. I have therefore selected for this study some from the collection that show the greatest variety in ruling and general make-up. Some of them are very much alike, but they are shown to give an idea of the kind of slips used in the different cities.

Some of the banks whose slips are shown here have done away with the deposit book, except for the purpose of receipt—when the depositor desires it for that purpose—but the book is not settled. The settlement sheet, as shown in the January article, makes the deposit or pass book practically useless, except for those who desire it for their receipt.

The receipt form printed on the deposit slips would be a better receipt than the entry in the pass book. Besides being better it would be cheaper, but the deposit books do not cost so much as to make this a good reason to stop using them. The good reason for doing away with the use of the book is that the settlement sheet, with the deposit ticket with the receipt form attached, is so much better.

There is not much to be said about the different slips, for they will speak for themselves to the banker. In the arrangement of the order in which they are here presented we start with New York and work our way westward until we reach San Francisco.

It is not the purpose of this article to make any suggestions as to which is the best slip to use. Local conditions, methods of bank work, the artistic taste of the officers and the requirements of the depositors, must control such matters. But something here presented might suggest an improvement for or addition to the form of slips now in use in some banks.

Some depositors object to banks that require too much listing on the deposit slips. Some of the slips here shown have place for amounts only—no place to write name of bank, town, city or State, nor whether foreign or domestic item is deposited. Some of the slips have place for local checks, New York checks, and items on other points, and in these columns only the amounts are to be placed.

In some banks where depositors have few or many checks of the same amount, regardless of place where payable, they allow their depositors to list them on the slips as so many at so much. For example, if they have ten checks at \$5 each, two

payable in New York, two in Chicago, one in Cleveland, one in Indianapolis, two in St. Louis, one in Denver and one in Los Angeles, they would list them on the slip as ten at \$5 equals \$50, without writing name of bank, city or State. This is a great convenience to concerns that have many checks of the same amount.

Every year depositors are growing more and more to consider checks and drafts as cash, the same as National bank currency is cash, and as they list the currency on the deposit slips so they, or many of them, will want to list the checks.

The deposit slip with the receipt attached being new to many and appropriate to reproduce here for comparison, it will be found at the end of the tickets illustrated. Including it there are twenty copies of deposit tickets shown. Some of the tickets—or slips—are small, but in all cases the banks furnish them in two or three lengths of the same kind, or a different kind large enough to meet the needs of those having many items to deposit. Of course the tickets vary greatly in size, and to save space it has been found necessary to present them in reduced form.

WM. B. JOYCE  
President National Surety Co., New York

## WILLIAM B. JOYCE.

---

*PRESIDENT OF THE NATIONAL SURETY COMPANY, OF NEW YORK.*

---

Mr. Joyce belongs to that class of Western young men—already large, and constantly growing in number—who have won conspicuous success in the East as managing officers of banks and other financial institutions. His experience, preceding his recent election as President of the National Surety Company, of New York, had been for twelve years as manager of the company's Northwestern branch, with headquarters at Chicago and St. Paul. His capacity for surety work was shown by the record of small losses made under his management in this territory. Not only did he show exceptional ability in confining the risks to the safer lines, but by his energy, intelligence and experience he added a large amount of valuable business to the company's books. Naturally, the capabilities thus displayed attracted the attention of the large financial interests backing the National Surety Company, and, when opportunity offered, secured deserved recognition.

Mr. Joyce is interested in several Western banks and trust companies, and is a heavy stockholder in the National Surety Company. It may be mentioned that prior to his election as President of this company, the stock had sold at eighty-five and that it has since brought 125.

The position of the company is strong as is shown by a late report of the Chief Examiner of the Insurance Department of the State of New York, which has official supervision of the surety companies. The examination referred to showed assets of \$1,627,901.51, liabilities of \$923,431.30, and a surplus as regards policy holders of \$704,470.21. The Examiner stated in his report that no credit had been given for reinsurance amounting to \$35,000 and that 250 shares of stock scheduled in the assets have a market value of \$15,000 greater than allowed, so that there should really be an addition of \$50,000 to the surplus as regards policy holders.

As a further exhibition of the company's prosperity, the premium income last year exceeded \$840,000, while its loss payments were less than \$260,000.

By his large experience in the field Mr. Joyce has gained a thorough knowledge of the surety business, realizing fully the obstacles to be overcome. His own success, and the characteristic energy he has displayed are examples that will prove inspiring to his official associates and the agents of the company.

The business of the National Surety Company has been very largely increased thus far in 1904 over 1903.

---

## BALLARD McCALL,

*SECRETARY NATIONAL SURETY COMPANY, OF NEW YORK.*

Mr. McCall is a native of New York, and is twenty-seven years of age. He is a graduate of Phillips Exeter Academy. In May, 1897, at the time of the organization of the National Surety Company, of New York, he was elected Assistant Secretary, and in the following December he was elected Secretary of the company, which position he has continued to hold until the present time.

**BALLARD McCALL**  
Secretary National Surety Co., New York

## CANADIAN BRANCH BANKS AND AGRICULTURAL DEVELOPMENT.

---

Very rarely now-a-days is argument heard in Canada on the subject, "Should the banks be allowed to lend on farm mortgages?" That question was long ago laid to rest, and no sensible man, familiar with the relations existing between the banks and the Canadian farmers, would venture now to raise it into discussion.

Like most other countries Canada has had experience of the evil results that follow when banks accept from their depositors large sums repayable at call or at a few days' notice, and then proceed to invest that money in mortgages having a currency of anywhere from two to ten years.

Nearly every one who has studied financial affairs closely and intelligently knows quite well that at certain times good mortgages, even on farm property, assume a character for liquidity and ready convertibility not so very far behind a certain class of bonds and stocks. When money is plentiful, when deposits are pressed upon the banks, it is easy to sell mortgages—perhaps at a day's notice. Mortgage and trust companies, insurance companies and a host of individuals are in the market bidding for just such investments. But when circumstances change, when the financial centres are dominated by stringency and high rates, a remarkable diminution takes place in this army of bidders; capital then can be turned over again and again much more profitably than if put into a bond or a mortgage. And if some great commercial or financial breakdown unexpectedly happens, destroying at a blow the credit of prominent, highly-reputed firms or corporations, most people with capital will either be too affrighted to move or they will desire to hold their funds for the unusual bargains universally expected on such occasions.

Under circumstances like these the land mortgage loses much of that liquid character which it assumes in prosperous or normal times; it is not by any means so easy to sell, and if perchance it matures, perhaps the only way to effect liquidation will be through foreclosure sale of the property represented. But this is exactly the time when the banker's safety may depend on the ready convertibility of his mortgages and securities; this is the time when his creditors are calling peremptorily, and when his thoughts are concentrated, not on profits or losses, but on getting cash. It avails him nothing that a year ago, six months ago, mortgages could be easily sold; what he wants is to sell them now. Failing in his efforts to convert them into money, it may be that he must close up promising industries dependent on his loans, or publicly confess his inability to meet his debts—perhaps he must do both.

The advocates in the United States of a policy that would permit banks to lend on farm mortgages argue that no harm would come if these investments were limited strictly to a certain percentage of the capital stock, and they assert that the practice of making these loans already prevails under different disguises, and that so far it works smoothly and safely. The answer to this argument is that a bank, carrying on the bulk of its business on its depositors' money, has absolutely nothing to spare for an investment of this nature. There are lock-ups, of varying degrees of permanence, connected with the ordinary banking business, which scarcely any bank can hope to avoid, and which usually absorb so large a proportion of bank funds as to leave nothing over for taking chances in such things as mortgages and real estate. For instance, there are bank house and furniture, the bad debts openly acknowl-

edged, and the other dead wood that tends to accumulate in spite of frequent applications from profits. Then there are always to be found among the commercial loans debts, not bad, perhaps, but doubtful, which are more or less fixed in their nature, and which must be nursed and squeezed carefully, a little at a time. These certainly are not available for paying off deposits; in a period of depression or in a crisis they are apt to become bad. After this class come the sound, healthy, ordinary loans and discounts, which rise and fall with the different seasons in the commercial year, increasing so much in the autumn as to draw into service a large part of the cash and balances held available for emergencies, and declining again a little while afterwards so as to permit those reserves to be fully replenished.

Now, it is notorious that if a bank is under pressure from depositors and seeks relief by liquidating its ordinary loans, by calling on its prosperous and wealthy customers to pay up out of season, the drain of deposits takes on an increased intensity; the remedy applied aggravates the disorder. There remains, of course, outside assistance; but the prudent, high-spirited banker will not lean too heavily on that. He will ask it, in the regular way, and accept it perhaps, if offered, but he will not make it his life-boat. No, he will keep himself strong in cash, bank balances, New York call loans and bonds readily convertible, whatever the state of the markets. In the day of prosperity, when a fresh deposit is received, he will keep in his mind the day when that deposit will be demanded of him, and he will use care never to place himself in such position as to be dependent for existence on the leniency either of his creditors or of other bankers.

Obviously, the banker with large deposits has little or nothing to spare for experimenting or playing with mortgages on real estate. It does not follow that he is therefore debarred from giving powerful assistance to agricultural developments, from enabling the farmers to plough, seed, harvest, raise cattle, hogs, sheep, etc., to the utmost extent of their reasonable wishes; wherever in fact a profit can be clearly discerned.

It is well known that the system of banking prevailing in Scotland has had a great deal to do with that country's remarkable agricultural development. Although Scotland is a poor, barren country compared with England, the deposits of the Scotch banks per head of the population are much greater than the deposits of the English banks. This is generally ascribed to the close relations which have long existed between the Scotch banks and the Scotch farmers. Among the banking systems prevailing in the different countries of the world none bears a closer resemblance to the Scotch system than the Canadian; and among the leading bankers of the Dominion, Scotchmen are numerous. The Canadian banks, even the very greatest of them, cultivate assiduously the accounts of farmers; banks possessing assets of forty, fifty, a hundred million dollars, are not above opening branch offices in veritable hamlets containing sometimes less than four hundred inhabitants, and they place at the disposal of the people in those districts practically all the capital their industries will absorb. At the end of 1908 there were in the Dominion 1,020 branch bank offices, an increase during the year of 150. It is fair to assume that a very great deal of the wonderful agricultural progress made by the country was due to the increased banking facilities.

In the hope that the recital will prove interesting to readers of *THE BANKERS' MAGAZINE* a short description of how one of these country branches transacts its business, particularly with the farmers, will be given.

Bank money is not borrowed nearly so freely for agricultural purposes in the older Eastern provinces as it is in Manitoba and the West. This is not because the banks are reluctant in the one place and eager in the other, nor because they place restrictions in one place and abolish them in the other; but simply because in Ontario and Quebec their capital is not required by the farmers, and it is nearly impos-

sible to put out large sums except to farmers extraordinarily ambitious and enterprising, or else to those only in the second or third grade of credit. A large number have capital of their own, sufficient not only to work their farms, but also to lend to their neighbors at a lower rate than the banks could quote, and to keep a respectable deposit in the banks besides. The functions of the country branch in the East, in its relations with the tillers of the soil, are confined chiefly to receiving and holding deposits both at interest and at call, collection of sale notes, transferring money, and the making of some few loans, scattered in nature and unimportant in amount. Clearly, banking operations here are not so interesting as those by which a new country is developed. In the Western town, where the best and wealthiest farmers are heavy borrowers, where the bank notes rush in a furious stream to the wheat-fields and give the impetus to that flood of grain which overwhelms with its immensity both carriers by rail and carriers by water, more business and excitement are crowded into the four months between September 1 and New Year's Day than a larger town in Ontario will handle in a full year.

In the latter part of the winter, before the roads break up, the farmers in the West are busy hauling to market the grain held over from the previous fall. No matter what the condition of the world's grain trade, there is always a large number who think wheat will go up by spring. Those who can do so carry it in their own granaries. In April, just as soon as the frost is out of the ground, the spring plowing is rushed, to get ready for seeding in May. At this time there is a scattered demand for accommodation at the local branch; it is not pronounced, because the seed is always kept from last year's crop, and because notes till fall are usually given for implements and horses purchased. Some few, habitual close-figurers, borrow from the bank and pay cash for these things. After seeding is finished the farmer sets to work breaking new land, and summer following he does not trouble the bank very much during June and July. When August comes there is twine to get and men to hire, perhaps some heavy implements, such as binders, to buy. The expenses of the crop begin to amount up, and the amount owing on notes and accounts gets bigger and bigger.

But it is not till his wheat is harvested and threshed, not till his granaries are bursting with two thousand, five thousand, or fifteen thousand bushels, that the Northwestern farmer begins to finance in earnest. If he wishes to carry his wheat, to speculate on a rise in price, he must go to the local bank to make arrangements for the necessary credit. There are the summer's accounts to pay, for groceries and supplies of different kinds, the thresher's commission, men's wages, the notes given for implements and horses, perhaps a deferred payment on some of his land, and it may be that he will at this time complete the purchase of a near-by quarter or half-section upon which he has cast covetous eyes for some little while. If he is a big farmer, owning a couple of sections (640 acres to a section) and holding 15,000 bushels of wheat, he may want to borrow four or five thousand dollars to clean up everything at the bank and outside. He is a wealthy man, his land worth \$25,000, unencumbered save with the remnants of a mortgage put upon it some years ago, and which will run off entirely in a few years more; he has livestock and equipment worth another five thousand, which will be clear from debt just as soon as he secures the loan at the bank or sells his wheat.

When he enters the bank on his errand the Manager raises at once the question of security. The bank has its rules; everybody who borrows must give collateral of some kind. Although our farmer is rich, he has not, apart from his wheat, anything that might be called bankable security. He cannot deposit bonds or stocks as the broker does or the capitalist; he has no notes, no bills to lodge, as the manufacturers, the wholesalers, the retailers have. There is his wheat, to be sure, and the Manager suggests, "Will you haul your grain and give us the elevator tickets?"

"And pay storage, half-a-cent a month? No, sir," replies the farmer.

"Well, then, will you give us an endorser? You are rich. Any one of your neighbors would be glad to go on your paper."

"I'll never ask any man to endorse for me," the customer rejoins. "If I ask Jones to back my note he'll want me to back his, and that's a thing I'd never do."

The problem admits of no compromise. The banker does not say, "I'm sorry, but we can't do it;" he says nothing. The farmer also says nothing. He knows and the banker knows that if the deal does not go through here the opposition bank a few doors down the street will gladly take it up. Although the Manager gets no commission, no perquisite in such transactions, he is playing for head-office approval. Head-office wants the branch business, both deposits and loans, to increase; it wants good profits returned on quarter-day. But head-office will turn the most unforgiving ear when the branch Manager comes forward with explanations for bad loans or losses. If the branch business develops steadily, if the profits increase, and if no losses are made, Managers of country offices may expect rapid increase in salary, and promotion to more important offices in the larger cities and towns.

So the upshot of the business is that the loan is made, and although it does not conform to the rules, being granted on a single name and without a shred of collateral, the Manager regards it complacently; he knows it to be infinitely safer than many of his advances which conform to the strict letter of the law. Such a loan as this, made to support a speculation, deserves no credit, it is true, for aiding agricultural development; it is cited merely as an example to show how readily the banks accede to the wishes and demands of their farming customers. Agricultural progress is stimulated and guided by means of assistance given by the banks directly to farmers through loans enabling them to meet all the expenses of cultivation as they arise, and not less effectually through loans made to local implement dealers, horse-dealers, retailers and merchants, on the security of farmers' notes and accounts, making it possible for these business men to supply goods and to extend credit to the tiller of the soil during the time in which he has no money to pay.

It is only the best farmers, of course, who can borrow in this manner. Their neighbors, who are not so strong, must give endorsers or elevator tickets as security for bank loans. But almost all over Canada the farmer is treated with great favor; wherever it is possible the rules are relaxed on his behalf, assistance is given him in every reasonable way. It is open to question if he is not given too much assistance sometimes.

The most experienced bankers, in their dealings with farmers, are resolute on one point; they insist that the farmer clean up everything he owes them at least once a year. In the interest both of themselves and of their borrower they will not allow a loan to become fixed like a mortgage. They say the farmer should not borrow from a bank or an institution trading on depositors' money more than he can easily repay with one crop or in one season. If he wishes a longer term loan he must get it from a different kind of institution, from the mortgage company whose loans are made by means of its capital and debenture bonds, from the life insurance company which can calculate how much per year it will likely have to repay its policyholders or from the private individual with his own capital to invest; not from the bank which does not know perhaps within a million dollars how much of its resources will have to be surrendered a week or month hence.

This banking policy, liberality tempered with firmness, has worked well both for the banks and the farmers. Beyond all question the harmonious relationship existing between the Canadian farmer and the Canadian bank has had much to do with the Dominion's rapid development in the last few years. Aided by the free disposition of banking facilities and banking capital, the farmers have made the earth yield of its abundance as it never did in Canada before; with the capital supplied by the farmers in turn to the banks in the shape of growing deposits, all kinds of industries in the East and in the West have been supported and stimulated.

H. M. P. ECKARDT.

# THE HIBERNIA BANK AND TRUST COMPANY, OF NEW ORLEANS.

*ITS NEW BUILDING, ITS PRESIDENT AND OFFICIALS. AND ITS BUSINESS.*

The imposing building shown in the illustration accompanying this matter is that of the Hibernia Bank and Trust Company, New Orleans, which is rated very generally, in point of capital, resources and business, the foremost financial institution of

**HIBERNIA BANK AND TRUST COMPANY.**

the South. This building was only recently completed. It is the largest and finest office building in New Orleans, and the first real type of the sky scraper raised there. It is situated at the corner of Gravier and Carondelet streets, opposite the Cotton Exchange, at the heart of the business quarter of the city, and at the core of its

financial district ; is 100 by 140 feet ground plan, 180 feet and fourteen stories high, and is appointed throughout in the most modern style. It cost, exclusive of site, \$700,000. Before it was finished even, offices in it were in great demand. They have been taken by such concerns as the Equitable Life Agency, the Maritime Exchange of the city and the Grain Pit of the New Orleans Board of Trade.

The bank took possession of its own sumptuous quarters in this fine structure on Saturday, March 26, last. These quarters embrace one floor at the corner of the two streets, a "mezzo" floor and a half floor additional above that. Few banks, even in New York, it is safe to say, are as commodiously and spaciously accommodated.

The fittings throughout are costly but simple. They are of marble, mahogany and oxydized iron chiefly. Outwardly, all there is to distinguish the location of the bank, is a simple brass tablet. From the main entrance to the building and bank, on the Carondelet street front, three general divisions are disclosed, namely—(1st), the general banking department with its busy staff of clerks, tellers and accountants behind the grille ; (2nd), the trust department : and (3rd), the offices of the officials.

To the left of the entrance are the vaults, all constructed after the latest and most massive fashion. They rest upon a special foundation of piling and concrete. Their outer door alone weighs eleven tons. In it there are ten layers of inch-thick specially hardened steel. The twenty-four locking-bolts are three inches diameter each. The vault is equipped with three automatic time locks. It has been calculated that the force of any explosive sufficient to reduce this great safe would just about wreck the town.

On this main floor also is the savings department of the bank to which is attached a ladies' reception room panelled wholly in mahogany ; a general safe deposit of 1,500 boxes ; a special safe deposit for the treasure and valuables of the bank itself ; nine coupon booths and the directors' room, which in the solidity it illustrates is really a study in itself.

A spiral staircase leads from the bank proper to the mezzanine floor and to the "trunk room" for the storage of silver plate, heirlooms, etc. Nor should there be forgotten the center-piece, a magnificent marble-faced clock over the principal entrance.

Upstairs, on the second floor of the building, is the luxurious private office of the President. It is fitted and furnished very becomingly in age-black Flemish oak, and is complete in every detail even to the paraphernalia of a folding bath let into the wall.

The workmanship of these fittings throughout is of finished character. The vault and the fittings generally were designed by the architects of the building, D. H. Burnham & Co., Chicago. Vault and safety boxes were furnished and put in by the Mosler Safe Co., Cincinnati ; woodwork by the Wilmarth Co., Chicago ; heavy iron work by the Ornamental Iron Works, of the same city ; art metal work by the Jamestown Metal Works, New York ; furniture and furnishings by the Robert Mitchell Co., Cincinnati. All in all this work is the finest ever put up in the South, and few banks anywhere are more grandly housed.

The story of this bank is one of progress, more particularly so its later story. Its development happily illustrates that new spirit of advancement with which the ancient Creole city seems at length to be imbued. *Pari passu*, the story of this bank is the story of the city of late. At the same time the Hibernia is no new creation, no mushroom growth. It was organized in 1870, originally as a State bank. In 1873 it was nationalized. Its present growth really began, it may be said, with the advent of J. W. Castles (now at the head of the Guaranty Trust Co., New York) and his associates in the early nineties. In 1902 it was consolidated with the Southern Trust Company soon after that institution had acquired the old Union National Bank. This consolidation was effected under a State charter as a trust company,

**JOHN J. GANNON**  
President Hibernia Bank and Trust Co., New Orleans

the bank surrendering for that purpose its own charter as a National bank. This course was suggested and encouraged by Louisiana legislation more favorable to banking interests than was formerly the case.

By its statement of December 31, 1903, the condition of this bank then was :

| RESOURCES.                       |                        | LIABILITIES.                     |                        |
|----------------------------------|------------------------|----------------------------------|------------------------|
| Loans and discounts.....         | \$10,621,486.21        | Capital.....                     | \$1,000,000.00         |
| Cash on hand and with banks...   | 5,056,190.31           | Surplus and profits.....         | 2,102,432.55           |
| Bonds and stocks.....            | 436,767.91             | Semi-annual dividend 10 per ct.. | 100,000.00             |
| Building and other real estate.. | 1,025,119.08           | Deposits.....                    | 13,937,471.06          |
|                                  | <u>\$17,139,903.61</u> |                                  | <u>\$17,139,903.61</u> |

The management of this bank is in competent hands. The President is Mr. John J. Gannon, who, beginning in the banking business in Chicago, made himself a name as a National bank examiner in Texas, and a record as head of the Merchants' National Bank, Houston, Texas, therein commending himself as the man for his present place. The Vice-Presidents are: G. R. Westfeldt, importer of coffee, and J. W. Castles. The Cashier is Chas. Palfrey, who has been with this bank for twenty-two years. George Ferrier and P. L. Girault are Assistant Cashiers; L. M. Pool, Assistant Cashier and Manager of the savings department, and W. H. Ingram, Jr., Trust Officer.

This trust department of the Hibernia is a feature of the company's business, and its bond and investment department does a business which is also of note.

Among the directors of this institution are the most prominent business men of New Orleans, those having business relations with New York and even farther afield. Following is the complete list of them :

John J. Gannon, President; J. W. Castles, Guaranty Trust Co., New York; Gage E. Tarbell, Equitable Life Assurance Society, New York; Frank B. Hayne, cotton; E. Steinhardt, Steinhardt & Co., exporters; O. L. Putnam, Putnam & King, Ltd., cotton; C. E. Allgeyer, Allgeyer & Co., cotton; Thos. McDermott, sugar; E. Overbeck, cotton exporter; W. P. Brown, W. P. Brown & Co., cotton; A. Brittin, A. Brittin & Co., President New Orleans Cotton Exchange; John T. Gibbons, commission merchant; G. R. Westfeldt, Westfeldt Bros., coffee; Isidore Hechinger, S. Gumbel & Co., Ltd., cotton; H. M. Preston, Prestou & Stauffer, wholesale grocers; R. W. Wilmot, W. G. Wilmot & Co., coal; Sam Hyman, Hyman, Hiller & Co., cotton; F. Lapeyre, cotton exporter; L. H. Fairchild, Fairchild & Hobson, cotton; Hugh McCloskey, McCloskey Bros., provisions; W. H. Byrnes, Hibernia Insurance Co., New Orleans; Jno. N. Stewart, Stewart Bros. & Co., cotton; M. N. Wisdom, agent Equitable Life Assurance Society, New York; W. G. Tebault, furniture.

---

ORIGIN OF "POUNDS STERLING."—How many folk who work every day in the year who use the phrase "pounds sterling" are aware of its origin? Probably not one in a thousand. Yet the adjective "sterling," which apart from its commercial sense has come to indicate worth and genuineness, has a curious historical significance, and is a distinct survival of the times when England did not weigh so heavily in the balance of power as she does now. In the fourteenth century the trade of the known world was, almost without exception, in the hands of the Hanseatic League. Within this league there were many towns, most of which coined money, some using better metal than others. Lubec, a Baltic city, made the best money, and the English merchants, who even then knew a good thing when they saw it, used to contract for payment in the "moneys of the Easterlings"—Easterlings being their name for the Baltic merchants. Shortened for convenience, the word still obtains, and has all its original force.—*Liverpool (Eng.) Post.*

## AN AUTOMATIC COIN-COUNTING AND COIN-WRAPPING MACHINE.

---

It is a necessary matter for banks to have coin put up in wrapped rolls of a pre-determined amount so that the paying teller can pass it out to his customers for either change or the pay-rolls. It has been the custom for the banks in the past to insist that depositors of coin should wrap their money before depositing. This was started years ago, when the coin was scattered amongst all classes of business, but since the advent of the trolley companies, telephones and the slot-machines, the coin of the community has centered so in these lines that if they did not deposit daily the above corporations would have all the change of the community, thus robbing merchants and manufacturers who need coin in their business. Foreseeing all this, the inventor, having invented many of the automatic slot-machines of from ten to fifteen years ago, determined that he would invent a machine that would count and wrap this coin or count and bag it in such a rapid way that it would become and be classed with other inventions that have helped the commercial world, such as typewriters, cash-registers and the adding-machine.

It is the belief of the people who formed The National Coincounting Machine Company to take over these inventions that these machines would revolutionize and establish a perfect system of organization in which the coin of the community could be handled successfully with one-tenth of the cost that it is now being done by hand. They will attempt to introduce the coin-counting, coin-registering and coin-bagging machine to such organizations as trolley companies, telephone companies, automatic slot companies, breweries, bakeries, confectioneries, etc., and all people who collect coin and are compelled to deposit it. In large cities it does not make any difference whether this coin is deposited in their banks or whether immediately sent to the sub-Treasury.

The machine is absolutely accurate and it is impossible for it to make a mistake in the count. The mutilated currency is prevented from entering the machine except that of a coin with a hole in it or a counterfeit. The coin thus counted and gleaned by this rejection will make the recount at the sub Treasury a matter of great satisfaction.

The coin-counting, coin-registering and coin-wrapping portion of this machine will be used probably exclusively by the banks. They will take one penny machine, that will count and wrap pennies, another for nickels, another for dimes, another for quarters and another for half-dollars, besides that portion of the machine that will count all coins and bag it so as to use or ship coin in bulk. They will establish a room in the basement or upper floor of the bank, called a coin room, in which these machines will be installed with an operator. The banks will request their customers in future to deposit all coin in bags with their name and the amount on a ticket attached to the bag. The large depositors of this coin will of course take this to the coin room and receive credit for it. If it is presented to the receiving teller, it is also entered on the pass book and then charged to the coin room. The receiving teller will not count a single coin from one year to the other, thus taking away his past troubles in the way of counting coin. The paying teller will only keep such change in his cage as he needs, knowing that in the coin room, coin is put up in such shape that upon his request he can get all he desires. It will be thus seen

that the work of the receiving teller and the paying teller's cages will be greatly reduced. Some banks believe that it will save as high as 33 $\frac{1}{3}$  per cent.

Furthermore, this machine being so absolutely accurate in its count, the packages will pass between the banks and the public as being the amount printed on the wrapper, on the outside of the roll. It is an absolutely sealed package and impossible to extract a coin without destroying the wrapper.

To the large collectors of coin, such as trolley companies, etc., the cost will be reduced ninety per cent. of their present way of preparing coin for deposit and if by their adoption, from the above fact, they will destroy the supply of wrapped coin, it will then be for the banks themselves to wrap the coin for their own accommodation, and if this is to be the fact that these machines will produce, then one set of machines in the banks, with a girl, can do the work of ten experienced men, as it is a recognized fact in the Treasury at Washington that girls are more adept in selecting counterfeit coins than men are. As between the counting and wrapping by hand in the banks, this machine will save the banks a very large amount, and they could hardly with reason reject the offer of these machines. Furthermore, the banks will have this part of their business in a thorough organization, and as this is the spirit of the age it does not hardly seem possible but that they will be exceedingly happy in adopting it.

The exhibit at the World's Fair at St. Louis by The National Coincounting Machine Company, of New York, will be very extensive and complete. The contract has been settled with the World's Fair people that they will establish a separate building just within the main entrance of the Liberal Arts Building to show the general public the counting of the World's Fair receipts by this machine.

The inventor of this machine is Charles S. Batdorf. He was born at Dayton, Ohio, in 1858, and has been for many years engaged in newspaper work, having invented the coin-counting machine while with the "Exporters and Importers' Journal." The machine which he designed and perfected works with almost human intelligence, and it will no doubt prove of great practical utility.

---

OLD OHIO BANK BILL TO BE REDEEMED.—Auditor Noble has received from Auckland, New Zealand, a ten-dollar bank note issued fifty years ago by the Mahoning County Bank, long since out of existence. The executor of an estate writes that the bill was found in the effects of a former Ohioan, and asks that it be converted into current coin. Auditor Noble will present the bill to the Auditor of the State's office. The report of Auditor Guilbert shows that W. S. Parmalee and others have on deposit in the State Treasury a bond for \$10,000 to guarantee the outstanding circulation of the Mahoning Bank. It is expected that the redemption will be made easily. Other old banks, the officers of which have deposited with the State Treasurer securities in trust for the unredeemed circulation, are: Commercial Bank of Cincinnati, Dayton Bank, Franklin Bank of Zanesville; Sandusky City Bank, and the Western Reserve Bank. Their bank notes are seldom presented for payment.—*Columbus (Ohio) State Journal*.

LIMITATIONS OF MERE WEALTH.—Mere wealth has, after all, a very limited reputation compared with that of intellect. An English novelist comes here, and every town hall is open to him; a Swedish peasant girl comes to sing to us, and we pay any price to hear. Bring forward your art and your genius, the community seems to say, and we will provide the money. Let an ordinary millionaire land at the wharf, on the other hand, and no more attention is paid to him than if he were an ex-governor.—*Thos. Wentworth Higginson, in "Atlantic Monthly."*

## A PROMINENT SOUTHWESTERN BANKER.

---

The development and growth of the Southwest in recent years—and of the State of Texas in particular—have hardly been surpassed in the history of this country. Texas is not only the largest of the United States, but its resources are extensive and varied, and the increase in population and wealth in the past ten years has been remarkable. The development of the material wealth of the State has been greatly facilitated by progressive banking institutions, under wise management.

Among the bankers who have won an enviable reputation in this regard is Mr. A. V. Lane, Vice-President of the National Exchange Bank, Dallas, Texas. Mr. Lane is not only one of the leading bankers of his State, but he is well known to the bankers of the country.

He is a native of New Orleans, and was graduated from Vanderbilt University in 1882, receiving the degree of Ph.D. He taught mathematics and engineering at Vanderbilt University and in the State Universities of Arkansas and Texas until 1888, at which time he became Vice-President of the Dallas Savings Bank and Safe Deposit, afterwards the Mercantile National Bank, of Dallas. In 1897 this institution was consolidated with the National Exchange Bank, of Dallas, Mr. Lane becoming Cashier of the latter. He continued to serve in this capacity until January, 1903, when he was elected one of the Vice-Presidents of the bank, a position he now holds. His prominence in the banking affairs of the State was recognized by his fellow bankers, and he is now President of the Texas Bankers' Association and a member of the executive council of the American Bankers' Association.

Besides being a banker of wide and successful experience and of demonstrated capacity, Mr. Lane is noted for his courteous disposition and this has been an important factor in his official promotion.

The National Exchange Bank, of Dallas, Texas, was established in 1875, under a State charter, as the Exchange Bank, and Nationalized under its present name in 1887. In 1897 it absorbed the Mercantile National Bank, and in 1900 the National Bank of Dallas. On account of the increase in its business, the capital was increased in 1902 to \$500,000, with a surplus fund of the same amount, which, with undivided

A. V. LANE,  
Vice-President National Exchange Bank, Dallas,  
Texas.

profits account, now amounts to \$1,150,000, the deposits being \$5,500,000. It hardly need be said that these figures indicate an exceedingly well-managed bank.

The officers of the bank are: President, Royal A. Ferris; Vice-President, E. M. Reardon; Vice-President, A. V. Lane; Cashier, Nathan Adams; Assistant Cashiers, Howard Claiborne, L. B. Torrey, Geo. H. Pittman.

The bank has a strong board of directors, composed principally of Dallas business men, and its Eastern shareholders include, among others, the following well-known names: Samuel G. Bayne, President Seaboard National Bank, New York; T. Wistar Brown, Vice-President Provident Life and Trust Co., Philadelphia; Daniel O'Day, General Manager National Transit Co., New York; S. G. Nelson, Vice President Seaboard National Bank, New York; Mrs. Hetty H. R. Green, New York; Edgar L. Marston, of Blair & Co., New York; J. F. Thompson, Vice-President Bankers' Trust Co., New York.

---

HIGHER EDUCATION FOR BANKERS.—A preparation for banking should not be a drill in technical bookkeeping, or teaching a messenger how to carry a bag of gold in safety from one institution to another. The essential purpose of education leading up to such a profession would be a training in the principles affecting the problems which necessarily arise in local, national and international banking. There are principles of money and credit underlying these phenomena often not understood even by many bank officials. The man who has been taught how to approach such problems, to work out solutions, to apply power and grasp of large and important subjects, must, in the end, prove an infinitely better head of the bank than he who has come slowly forward from the window of an accountant or teller, and whose professional education has consisted of the chance events brought to his attention in the round of daily business. Men of this latter description will become accurate, steady and useful to the institution in minor positions; but if promoted to high posts they will be found to know really nothing beyond the dry husks of their professional experience or a personal acquaintance with their constituency. The recruiting of high officials in this fashion accounts for the prevalence of so much lagging conservatism and ignorant timidity in regard to burning monetary questions of the day.—*Prof. J. Laurence Laughlin in "Lectures on Commerce."*

We should like to see bankers and others get all the education they can assimilate; but what Professor Laughlin rather contemptuously refers to as "the dry husks of their professional experience or a personal acquaintance with their constituency," are mighty valuable things in banking. Primarily, also, the banker is not a monetary reformer. While the banker of broad education, such as Professor Laughlin has in mind, will doubtless do greater things than those who came up by way of the teller's cage, still the acquirements of the latter are not to be despised. "Loanin' the money and gittin' it back," as David Harum said, is the principal business of a great majority of bankers and will probably continue to be so for a long time.

LABOR CANNOT WIN BY FORCE.—In a recent newspaper interview, President Gompers, of the American Federation of Labor, is reported to have said:

"Force and violence would be the doom of union labor—union labor cannot win by force. It must be a campaign of education and business methods must be used in dealing with business men. Violence will not bring about the right result. It is not the true American spirit to go in and demand that a wrong be made right at the point of a gun or by a display of force."

Mr. Gompers declared that crime and tyranny were the causes of Chicago's labor evils and that many of the labor outrages there were committed by non-union men.

## NEW YORK BANKS UNITE.

---

### MERGER OF THE LEATHER MANUFACTURERS' NATIONAL BANK WITH THE MECHANICS' NATIONAL BANK.

---

On April 11 the merger of the Leather Manufacturers' National Bank with the Mechanics' National Bank became effective, having been unanimously ratified by the 6,000 shares of the Leather Manufacturers' National and 78,000 of the 80,000 shares of the Mechanics' National. This practically unanimous vote on both sides indicates the harmonious feeling between the interests represented in both banks. It is somewhat exceptional where consolidations take place to find such a substantial unanimity of opinion, and it is to be regarded as a favorable omen for the succeeding institution, which will be the Mechanics' National Bank. It has \$3,000,000 capital, \$3,000,000 surplus, \$262,000 undivided profits, and net deposits amounting to \$18,000,000.

The officers are as follows: President, Gates W. McGarrah; First Vice-President, Alexander E. Orr; Second Vice-President, Nicholas F. Palmer; Third Vice-President, Andrew A. Knowles; Cashier, Frank O. Roe; Assistant Cashier, Robert U. Graff.

Gates W. McGarrah, the new President of the Mechanics' National Bank, entered the banking business in 1882, and ten years later was made Assistant Cashier of the New York Produce Exchange Bank. In 1898 he was appointed Cashier of the Leather Manufacturers' National Bank, and was elected to the office of Vice-President in 1899, and in 1902 was elected President. He is the present Secretary of the New York Clearing House Association, and is a director and a member of the executive committee of the Bankers' Trust Co. and Chairman of Group VIII of the New York State Bankers' Association. He is a member of the Metropolitan and the Union League Clubs.

Both of the banks concerned in this merger are old institutions; the Leather Manufacturers' National Bank was organized in 1832 as a State bank, while the Mechanics' National Bank is the fourth oldest in the city, having been founded in 1810. Increased prosperity and greater usefulness to the business community may be expected by the union just effected.

---

**FORGED INDORSEMENTS—LIMIT OF LIABILITY.**—The following bill was recently passed by the New York Legislature:

Section 1. Article seventeen of chapter six hundred and twelve of the laws of eighteen hundred and ninety-seven entitled "An act in relation to negotiable instruments, constituting chapter fifty of the general laws," is hereby amended by adding at the end thereof a new section to be known as section three hundred and twenty-six, and to read as follows:

Section 826. Recovery of forged check.—No bank shall be liable to a depositor for the payment by it of a forged or raised check, unless within one year after the return to the depositor of the voucher of such payment, such depositor shall notify the bank that the check so paid was forged or raised.

Section 2. This act shall take effect September first, nineteen hundred and four.

# THE BANKERS' DIRECTORY.

---

## HOW THE IMPROVED FORM IS REGARDED BY BANKERS.

---

In putting into effect the plans for improving THE BANKERS' DIRECTORY issued by The Bankers Publishing Co., the publishers counselled with a number of the leading bankers in New York and other cities and towns, aiming especially to prepare a directory that would give everything the banker desires to know in consulting such a book, and at the same time keep the volume within limits as to size that would not make it too bulky.

It is believed that THE BANKERS' DIRECTORY issued by The Bankers Publishing Company now fully meets the requirements of bankers desiring a complete and handy volume of this character. The information contained includes an alphabetical list of all National, State, Savings and private banks and bankers and trust companies. The character of the bank—whether National, State or private—is clearly indicated; the year established is given—often an important point; the President, Vice President, Cashier and Assistant Cashier are given, as well as Secretaries and Treasurers of Trust Companies and Savings banks; the capital, surplus and profits, and total deposits are reported, together with the principal correspondents. The towns are listed alphabetically, the population of each town being given, and the county in which it is located is also shown.

Of course, the book contains many other valuable features—such as a list of directors, classified list of Cashiers and Assistants, places accessible to banking towns, commercial laws, useful tables for bankers, etc.

It has been the aim of the publishers to omit nothing that would make the book useful, and at the same time to include nothing that was of no value. That this aim has been realized may be inferred from the following comments on the January issue of the DIRECTORY, selected from a very large number received by the publishers :

*From the State National Bank, Boston.*

“A fine-looking book; convenient for reference. Its size is good.”

*From J. T. Woodhull, Vice-President Frost National Bank, San Antonio, Texas.*

“The January DIRECTORY is received. It is very nice, and much improved.”

*From the Banco Nacional de Cuba, Havana.*

“We take note of the improved style in which you have issued this last DIRECTORY, which is very satisfactory.”

*From the Yokohama Specie Bank, San Francisco, Cal.*

“We acknowledge receipt of the January edition of THE BANKERS' DIRECTORY, and notice and appreciate the many improvements.”

*From James R. Branch, Secretary American Bankers' Association.*

“I beg to acknowledge receipt of the January edition of THE BANKERS' DIRECTORY. I desire to congratulate you on the handsome manner in which the book is gotten up.”

*From the Bank of J. L. Purdy, Gagetown, Mich.*

“Am well satisfied with the book.”

*From J. P. Barclay, President National Bank of Commerce, San Antonio, Tex.*

"Your DIRECTORY presents a very handsome appearance."

*From Carl M. Keck, Vice-President Citizens' National Bank, Washington, Iowa.*

"We appreciate very much the changes that have been made in the present DIRECTORY, it being superior in every respect to those formerly put out by you, and should be rewarded by a largely increased number of subscribers."

*From A. V. Lane, Vice-President National Exchange Bank, Dallas, Texas.*

"We are pleased to note you have made quite an improvement in your book, making it a very handsome, and, we have no doubt, complete directory."

*From J. L. Kamrar, Esq., Attorney-at-Law, Webster City, Iowa.*

"The new DIRECTORY is just received. It is a handsome book."

*From the Central National Bank, Battle Creek, Mich.*

"We note and admire your fine publication."

*From Charles G. Goodrich, Cashier Georgia Railroad Bank, Augusta, Ga.*

"The book is very handsome in appearance, and we find it very useful."

*From F. A. Overton, Cashier Patchogue Bank, Patchogue, N. Y.*

"The book is very nice."

*From Henry Reis, Vice-President and Cashier The Old National Bank, Evansville, Ind.*

"We congratulate you upon the new DIRECTORY, which is very beautiful."

*From the Millikin National Bank, Decatur, Ill.*

"The improvement is very fine."

*From G. S. Newberry, Cashier First National Bank, Carrington North Dakota.*

"Enclosed please find our draft for \$4 in payment for copy of January DIRECTORY, which has been received, and which is certainly a very neat edition."

The July issue of THE BANKERS' DIRECTORY, in addition to the improvements already enumerated, will contain new maps of every State and Territory, especially engraved for this edition by one of the best map-engravers in the United States. These maps are much superior to any heretofore published, and will still further enhance the value of the DIRECTORY.

The January edition is now on sale at \$4 per copy, and orders for the July edition, at the same price, should be sent in at once by those who desire to secure the most complete and handiest BANKERS' DIRECTORY published.

---

POLITICAL AND BUSINESS CORRUPTION.—The corruption of our American politics is our American corruption, political, but financial and industrial too. Miss Tarbell is showing it in the trust, Mr. Baker in the labor union, and my gropings into the misgovernment of cities have drawn me everywhere, but, always, always out of politics into business, and out of the cities into the State. Business started the corruption of politics in Pittsburg; upholds it in Philadelphia; boomed with it in Chicago and withered with its reform; and in New York, business financed the return of Tammany Hall. Here, then, is our guide out of the labyrinth. Not the political ring, but big business—that is the crux of the situation.—*Lincoln Steffens, in "McClure's Magazine."*

## BANKING AND FINANCIAL NEWS.

This Department includes a complete list of NEW NATIONAL BANKS (furnished by the Comptroller of the Currency), STATE AND PRIVATE BANKS, CHANGES IN OFFICERS, DISSOLUTIONS AND FAILURES, etc., under their proper State heads for easy reference.

### NEW YORK CITY.

—The annual meeting of Group VIII, New York State Bankers' Association, was held on April 23 at the clearing-house. The following officers were chosen for the ensuing year:

Chairman, President Gates W. McGarrah, of the Mechanics' National Bank; secretary and treasurer, C. C. Thompson, Cashier Seaboard National Bank; additional members of the executive committee, President W. H. Porter, of the Chemical National Bank; President Herbert L. Griggs, of the Bank of the New York National Banking Association; Vice-President Gilbert G. Thorne, of the National Park Bank; Vice-President G. S. Whitson, of the National City Bank; and Charles Elliot Warren, Cashier of the Lincoln National Bank.

R. Ross Appleton, President of the Fourteenth Street Bank, introduced a resolution favoring the passage of a law requiring trust companies to make and publish reports every three months, and to be subject to calls for report without previous notice. The resolution was adopted.

—Leon H. McCall, who has been Assistant Secretary of the Bankers' Trust Co. since its organization, has been elected Assistant Cashier of the Citizens' Central National Bank.

—The National Surety Company has taken steps to have its charter amended so as to permit it to transact all forms of casualty insurance, including personal accident, burglary and plate-glass indemnity.

—Charles Baker, Jr., has been elected Secretary of the Metropolitan Trust Co., to succeed Benjamin Strong, Jr., resigned. Bertram Cruger was made Treasurer, and James F. McNamara, Assistant Secretary and Jacob C. Klinck, Assistant Treasurer.

—The Thirty-Fourth Street National Bank moved into its new building, 41 West Thirty-fourth street, April 23. At the same time it was announced that at the last meeting of the board of directors Bradford Rhodes had tendered his resignation as President, and that he would be succeeded by Dr. E. R. L. Gould, former city chamberlain and president of the City and Suburban Homes Co.

Mr. Rhodes was one of the prime movers in organizing the bank, and under his management the deposits increased from the opening on October 6, 1902, to over \$600,000 at the present time. Being President of two other successful banks—the First National Bank, of Mamaroneck, and the Union Savings Bank, of Westchester County—and having other extensive interests, Mr. Rhodes found it impossible to give the Thirty-Fourth Street National his undivided attention. He continues as a director of the bank and a member of the executive committee.

—Frederick Worth, for thirty-three years paying teller of the National Park Bank, was recently elected Vice-President of the New York National Exchange Bank.

—Harry Boxer, who has been connected with the National Park Bank for about thirty-three years, and for some time assistant paying teller, was recently promoted to the position of paying teller, succeeding Frederick Worth, who resigned to become Vice-President of the New York National Exchange Bank.

—Application has been made to the New York Stock Exchange to list the \$1,000,000 additional capital stock of the Citizens' Central National Bank.

—John C. McKeon and John C. Van Cleaf were recently elected Vice-Presidents of the National Park Bank, making four Vice-Presidents for the bank under the present arrangements. The others are Stuyvesant Fish and Gilbert Thorne. Mr. McKeon was formerly Vice-President of the Commercial National Bank of Chicago, of which ex-Comptroller Eckels is President, and Mr. Van Cleaf has been head of the audit department of the National Park Bank.

—The new Coal and Iron National Bank, which it is said will absorb the Varick Bank, opened for business April 9 in the Central Building at Liberty and West streets. The capital

is \$300,000 and paid-in surplus, \$200,000. Officers are: President, John T. Sproull; Vice-President, A. A. Lisman; second Vice-President, David Taylor; Cashier, Addison H. Day. Mr. Sproull and Mr. Day were respectively President and Cashier of the Varick Bank.

—The National City Bank has addressed a circular to its clerks offering, in addition to the usual two-weeks' vacation this summer, a two-weeks' trip to the St. Louis Exposition, with all expenses paid, to the clerk who makes between now and June 1 the best suggestions for facilitating the work of the bank, improving existing methods, or for increasing the bank's business. The suggestions must be made in written form and handed to some officer of the bank before the date specified.

—David Banks, who was Vice-President of the East River National Bank, was recently elected President, to succeed Raymond Jenkins, deceased.

—At a recent meeting of the directors of the Bankers' Trust Company, Gilbert G. Thorne, Vice-President of the National Park Bank, was elected a director in place of Granville W. Garth, deceased. Thomas W. Lamont, formerly Secretary and Treasurer of the Company, was made second Vice-President; Daniel E. Pomeroy, Assistant Treasurer, was made Treasurer, and Benjamin Strong, Jr., was elected Secretary.

—A. B. Wheeler, a prominent New Orleans banker, was a recent visitor in New York. Mr. Wheeler is a leading citizen of New Orleans, and was once King of the Carnival. He is a member of the firm of Moore, Hyams & Wheeler, private bankers, President of the United States Safe Deposit and Savings Bank, principal owner of the St. Charles Hotel, and a director of the New Orleans Street Railway Co., and interested in other large enterprises.

#### NEW ENGLAND STATES.

**Boston.**—It is announced that the Colonial National Bank will be absorbed by the newly-organized Commonwealth Trust Co., David J. Lord, President of the bank, heading the trust company, which is to have \$1,000,000 capital and \$500,000 surplus.

—E. F. Philbrick, heretofore the Boston attorney for the American Surety Company, has been appointed the company's Manager for this city.

—It was announced on April 25 that the First National Bank will absorb the National Bank of Redemption and that Daniel G. Wing, President of the First National, will serve as President of the merged institutions. The plan of combination calls for the liquidation of the Redemption Bank. The consolidation will represent an institution with \$2,000,000 capital, \$2,000,000 surplus and deposits aggregating about \$35,000,000. The stockholders of the Bank of Redemption will be asked to ratify the proposition on May 31.

Under the terms of the proposed merger, the stockholders of the National Bank of Redemption will receive \$100 per share in cash, or one-half share of First National stock with a bonus of \$60. The First National will take over all the assets of the Bank of Redemption, assume all its liabilities and pay \$3,200,000 cash for the transfer. The First National will issue \$2,000,000 in case the stockholders of the Bank of Redemption prefer to take stock rather than cash.

Mr. Curtis, of the First National, will continue as Cashier of the new bank, and Vice-President E. A. Presbrey and Cashier Geo. G. McCausland, of the Redemption, will be Vice-Presidents. All of the directors of the Redemption will become directors in the consolidated bank, which will be known as the First National.

#### MIDDLE STATES.

**Pittsburg.**—Clay Herrick, formerly Assistant Secretary and Treasurer of the City Trust Company, Cleveland, Ohio, has accepted the position of Secretary and Treasurer of the Franklin Savings and Trust Company, of this city, and entered upon his new duties April 21. Mr. Herrick has many friends among the bank clerks of the country who will be pleased to learn of his advancement.

**Baltimore.**—The United States Fidelity and Guaranty Co., whose building was destroyed in the recent fire, announces that it will rebuild a larger and more ornate structure with greater fire-resisting qualities.

**Philadelphia.**—J. Tatnall Lea was, on April 22, unanimously elected President of the First National Bank, succeeding the late Morton McMichael. Mr. Lea is a well-known steel merchant, is prominently connected with several important business enterprises, and in point of service is the oldest director of the First National Bank.

**Elmira, N. Y.**—The Chemung Canal Trust Company recently moved into its reconstructed building, which is described in the "Elmira Advertiser" of April 5 as a model of solidity, taste and convenience. There has been an entire remodelling of the interior, and much greater space has been secured for the company's use. Modern vault equipment, furniture, etc., also give greater safety and additional facilities to customers. Some historic interest attaches to the building, as it has been occupied as a bank since 1833, the first institution being char-

tered as the Safety Fund Bank, but was known as the Chemung Canal Bank, the term National being later inserted for a time. Afterwards it became a private bank, and in 1905 again incorporated under the State laws, so remaining until recently when it was reorganized as the Chemung Canal Trust Company. It is an exceedingly strong company, having \$600,000 capital, \$475,000 surplus and profits and about \$5,000,000 deposits. M. H. Arnot is President; A. Lee Smith, Ray Tompkins and James B. Rathbone, Vice-Presidents; Edward J. Dunn, Treasurer; E. W. Geckler, Secretary, and W. S. Carr, Cashier.

#### SOUTHERN STATES.

**Raleigh, N. C.**—On April 5 the banks of this city organized the Raleigh Clearing-House Association, with the following officers: President, Joseph G. Brown, President Citizens' National Bank; Vice-President, Chas. E. Johnson, Vice-President National Bank of Raleigh; Secretary, H. W. Jackson, Assistant Cashier Commercial and Farmers' Bank; Treasurer, Jas. O. Litchford, Cashier Raleigh Savings Bank.

**National Bank Resumes.**—The Traders' National Bank, of Clarksburg, W. Va., which was placed in charge of a Receiver February 2, 1904, was authorized by the Comptroller to resume business on April 18. There has been a reorganization of the board of directors and an increase in the capital to \$200,000.

**Louisiana Bankers' Association.**—The annual convention of this association will be held at Baton Rouge, May 25 and 26.

**Georgia Bankers' Association.**—Secretary L. P. Hillyer favors the *MAGAZINE* with the following information: "The executive council of the Georgia Bankers' Association has found it necessary to change the date of the meeting of the association at Lookout Inn, Lookout Mountain, Chattanooga, Tenn., from June 28 and 29 to July 12 and 13. The special train of Pullman sleeping cars, via the N. C. & St. L. and Illinois Central Railway, will leave Chattanooga on the morning of July 14, arriving in St. Louis on the morning of July 15. A large attendance of bankers from all over the State is expected. An interesting programme for the meeting will be forwarded in a few weeks to all the bankers in Georgia."

**Louisiana State Banks.**—L. E. Thomas, State Examiner, has recently issued advance sheets of his Biennial Report for 1902 and 1903. In the period covered by the report there have been organized thirty-eight new State banks and trust companies, with a banking capital of \$3,554,775, and eighteen banks have increased their capital \$663,150, making a total increase of \$4,417,925, besides many banks had a large paid-in surplus at time of organization.

No banks have failed in the last two years, which is not very surprising, considering that the Louisiana banks have a reputation for stability that is historic.

In December, 1901, there were seventy-two State banks, with resources aggregating \$31,361,940, and in December, 1903, the number of banks had increased to 110 and their resources to \$64,887,536—a gain of over 100 per cent.

Fifteen new State banks have been organized since the first of January.

**Hampton, Va.**—By an error in the compilation of the January issue of the *THE BANKERS' DIRECTORY*, the capital and surplus of the Bank of Hampton were incorrectly reported at \$50,000 and \$51,000 respectively.

The capital of the Bank of Hampton is \$100,000, the surplus and profits \$65,000 and deposits \$970,000, and these items should have been so reported in the January *DIRECTORY*.

**Mobile, Ala.**—Plans have been drawn for a modern six-story bank and office building for the City Bank and Trust Company.

#### WESTERN STATES.

**Chicago.**—Henry R. Kent succeeds Nelson N. Lampert as Cashier of the Fort Dearborn National Bank, Mr. Lampert having been elected Vice-President.

Mr. Kent has been connected with Chicago banking interests for twenty years, having held positions with the Illinois National Bank and the National Bank of the Republic. For the last sixteen months he had been connected with a bank at Lincoln, Neb., resigning to become Cashier of the Fort Dearborn National.

**Peoria, Ill.**—The Dime Savings Bank, the Title and Trust Co., and the Anthony Loan and Trust Co. have merged their interests.

**Davenport, Iowa.**—Julius C. Hasler was recently elected Cashier of the Farmers and Mechanics' Savings Bank, succeeding J. B. Meyer, resigned. Mr. Hasler has had extensive experience with local banking institutions, having been for a number of years Assistant Cashier of the Union Savings Bank, and was also formerly connected with the Davenport National Bank. He is well known, both in this city and throughout the State.

**Cincinnati, O.**—The prosperity of this city is strikingly set forth in the recent report of President George H. Bohrer, of the Cincinnati Clearing-House Association. The report

shows that the clearings for the last five years have increased just fifty-three per cent. over the previous five years. Clearings for the fiscal year ending April 1, 1904, show an increase of \$82,000,000 over last year. The actual figures are: Clearings for 1904, \$1,149,631,500; for 1903, \$1,117,590,850.

**St. Louis.**—G. W. Garrels, President of the Franklin Bank, has been elected Vice-President of the St. Louis Clearing-House Association, succeeding Richard Hospes, deceased.

—A compilation of the reports of the banks of this city on March 28 showed that their total deposits on that date amounted to \$178,272,445.

**Ohio Bankers' Association.**—The fourteenth annual convention of this association will be held at the Hotel Victory, Put-in-Bay, Wednesday and Thursday, August 24 and 25.

**Kansas City, Mo.**—President C. S. Jobes, of the American National Bank, outbid New York and other bankers for the recent issue of \$3,000,000 of Philippine certificates. He disposed of the certificates to a New York banking firm at a good profit.

PACIFIC SLOPE.

**Seattle, Wash.**—J. V. A. Smith, Cashier of the Northwest Trust and Safe Deposit Co., has been appointed Manager and Treasurer of the Seattle Clearing-House Association, to fill the vacancy caused by the resignation of Frank Shafer.

**Los Angeles, Cal.**—At a meeting of the stockholders of the First National Bank, April 14, the capital was increased from \$400,000 to \$500,000, the new shares to be sold at \$300 each. Stoddard Jess, who has been long identified with banking at Pomona, Cal., was elected a director, and will also be made an additional Vice-President.

—The eleventh annual convention of the California Bankers' Association will be held in this city May 19, 20 and 21.

Papers will be contributed by A. Kains, of the Canadian Bank of Commerce; J. A. Graves, of the Farmers and Merchants' Bank, of Los Angeles; W. C. Patterson, of the Los Angeles National Bank; Lovell White, of the San Francisco Savings Union; Hon. Herman Silver, of the Board of Bank Commissioners, and others. A varied and interesting programme is assured. On Thursday, May 19, there will be two sessions of the convention, at 10 a. m. and 8 p. m. On Friday, one session, only, at 10 a. m. Friday afternoon there will be an excursion to Mt. Lowe, leaving Los Angeles at 2:30 p. m. and returning at 10 o'clock the same evening. Dinner will be served on the mountain, at Alpine Tavern. On Saturday there will be an excursion to Catalina Island.

**San Francisco.**—The American National Bank has appointed H. de Saint Seine as Manager of its foreign exchange department. Mr. Saint Seine was for a number of years sub-Manager of the San Francisco office of the Comptoir National d'Escompte de Paris.

—Early in 1902 the present management of the American National Bank took control, and the result of the policy inaugurated is shown in the statement of March 28 last. A comparison of statements will show the progress made:

|                          | January 22, 1902. | March 28, 1904. |
|--------------------------|-------------------|-----------------|
| Capital.....             | \$428,900         | \$1,000,000     |
| Surplus and profits..... | 147               | 231,568         |
| Deposits.....            | 468,199           | 3,574,111       |
| Total resources.....     | 896,146           | 5,355,679       |

P. E. Bowles is President of the bank; Francis Cutting and James J. Fagan, Vice-Presidents, and Geo. N. O'Brien, Assistant Cashier.

**Tacoma, Wash.**—The statement of the Fidelity Trust Co. for March 28 shows that the total resources of that institution now exceed \$2,000,000. Deposits show a steady growth, amounting to \$790,000 March 28, 1901; \$874,000 March 28, 1902; \$1,339,000 March 28, 1903; and \$1,715,000 March 28, 1904.

**Tucson, Arizona.**—The statement of the Consolidated National Bank, made to the Comptroller of the Currency March 28, showed deposits amounting to \$975,484. As an evidence of the careful management of the bank, it is to be noted that the surplus has just been further increased, making it \$50,000—the same as the capital.

---

**CONCENTRATION OF BANKING.**—The concentration of banking resources and the power which is derived from co-operation among the banks and a few resolute leaders in times of crisis are generally recognized to be one of the most potent factors in our recent industrial progress and our present financial security. If the recent decline in the price of securities had found the market depending upon a large number of banking institutions with small capital, indifferently managed, and divided by petty jealousies, it might have tumbled them over like a row of bricks, and made the declining market of 1903 a repetition of the panic experiences of 1873 and 1893. Combination has vindicated itself the world over in banking; it remains to be seen whether, after due experimentation, it will not also vindicate itself in railway management and manufacturing.—“*Wall Street and the Country*,” by Charles A. Conant, in “*Atlantic Monthly*.”

## NEW BANKS, CHANGES IN OFFICERS, ETC.

### NEW NATIONAL BANKS.

The Comptroller of the Currency furnishes the following statement of new National banks organized since our last report.

#### APPLICATIONS TO ORGANIZE NATIONAL BANKS APPROVED.

The following notices of intention to organize National banks have been approved by the Comptroller of the Currency since last advice:

- First National Bank, Chillicothe, Texas; by C. T. Herring, et al.
- National Bank of Statesboro, Statesboro, Ga.; by J. G. Blitch, et al.
- Nebraska National Bank, Norfolk, Neb.; by G. D. Butterfield, et al.
- First National Bank, Oktaha, I. T.; by J. E. Bahnsen, et al.
- First National Bank, Tonkawa, Okla.; by F. M. Butcher, et al.
- Tishomingo National Bank, Tishomingo, I. T.; by C. B. Burrows, et al.
- Farmers' National Bank, Eastland, Texas; by E. C. Edmonds, et al.
- First National Bank, Havelock, Iowa; by F. H. Helsell, et al.
- First National Bank, Osnabrock, N. D.; by John Trotter, et al.
- First National Bank, Ardmore, Pa.; by Geo. W. Wren, et al.
- First National Bank, Annona, Texas; by R. N. Boswell, et al.
- First National Bank, Waterville, Minn.; by F. H. Wellcome, et al.
- First National Bank, Monte Vista, Colo.; by H. H. Abbott, et al.
- First National Bank, Lineville, Iowa; by J. P. Jordan, et al.
- First National Bank, Scenery Hill, Pa.; by Geo. E. Renshaw, et al.
- First National Bank, Fgan, S. D.; by A. B. Larson, et al.
- People's National Bank, Lakewood, N. J.; by Charles R. Le Compte, et al.
- First National Bank, Corning, Ark.; by J. M. Hawks, et al.
- Commercial National Bank, St. Anthony, Idaho; by James E. Cosgriff, et al.
- Catawissa National Bank, Catawissa, Pa.; by C. J. Fisher, et al.
- Merchants' National Bank, Willow City, N. D.; by Geo. Sunberg, et al.
- National Bank of Commerce, Manchester, Conn.; by O. M. Nilson, et al.
- First National Bank, McComb, Miss.; by W. R. Caston, et al.
- National Bank of John A. Black, Barboursville, Ky.; by John A. Black, et al.
- First National Bank, Lafayette, Ga.; by W. S. Witham, et al.

**PONCA**—Citizens' Bank.

**Growth of the Gulf Ports.**—Messrs. Fisk & Robinson, the well-known investment bankers of 35 Cedar street, New York, have just issued a descriptive pamphlet, with an industrial map of the United States, showing the advantages of the gulf ports by reason of their favorable location with reference to the Panama Canal.

According to the "Manufacturers' Record," the exports through Southern ports amounted in 1890 to \$261,000,000; in 1890 to \$306,000,000, and in 1908 to \$508,000,000. There is no doubt that, with the completion of the Panama Canal, the growth of business of the Southern ports will be greatly accelerated.

The pamphlet and map will be found interesting and instructive to all concerned in the development of the country's trade and industry.

# MONEY, TRADE AND INVESTMENTS.

## A REVIEW OF THE FINANCIAL SITUATION.

NEW YORK, May 2, 1904.

THE PANAMA CANAL PAYMENT, GOLD EXPORTS AND CHEAP MONEY gave financial centers something to think about last month. For a year past the transfer of the Panama Canal to the United States has been in prospect and late in the month it was announced that the transfer had been made, the purchase price of \$40,000,000 being advanced by a syndicate of bankers in Paris. The payment by the Government was not completed at the close of the month. The Government will pay \$40,000,000 to the syndicate which has paid the French Canal Company about May 10. There is an additional sum of \$10,000,000 to be paid to the Panama Government. Of this \$50,000,000 the Secretary of the Treasury expected to draw \$27,000,000 from the bank depositaries and to take the remaining \$23,000,000 from the Treasury. On the last day of the month the Secretary called upon the banks to pay over to the sub-Treasury in New York ten per cent. of their public deposits, these to be used in making payments for the canal purchase.

It is not definitely determined at this time how much actual gold is to be sent abroad on account of this transaction. The exports of gold in April were large, but how much were on account of the canal deal has not been disclosed. A shipment of \$3,500,000 on April 30, made by J. P. Morgan & Co., seems to have been really the first gold exported directly on account of the canal purchase concerning which there could be no dispute. The gold export movement last month was exceptionally large, aggregating \$18,725,000. This is far from being a record movement, however, and does not represent an actual loss of any such amount of gold. In fact the Treasury estimate of gold in the country on May 1 is \$3,000,000 greater than on April 1. While we have been sending gold away Japan has been shipping gold to the United States, and exports from New York have been offset by imports at San Francisco.

In the last few years there have not been many large movements of gold from the United States. In May, 1903, we shipped net \$18,025,423. In November, 1901, we exported gross \$16,292,500, but the net exports were only \$8,860,822. The largest gross exports were \$18,084,988 in August, 1900; \$20,908,327 in June, 1899; \$19,110,985 in May, 1896; \$25,929,828 in January, 1895; \$27,406,801 in May, 1894; \$19,148,964 in April, 1893; and \$17,129,508 in June, 1892.

It is one of the remarkable features of the situation that gold exports are looked upon with favor among financial men at this time as a stimulant not only to the money market but to the stock market. How general the opinion is there is no means of ascertaining, but it has been expressed very frankly in various quarters. Money is too cheap, it is said, and there must be something done to get it out of the rut into which it has fallen. Statistically there has been a very large increase in the supply of money in the United States, not merely in one year, but for many years. The increase has been mainly in the class of money which is conceded to be best, that is gold. We have been drawing gold from abroad and keeping our home supply until our gold supply exceeds \$1,350,000,000, an increase in five years alone of \$370,000,000 and of \$930,000,000 in the last eight years. Since May 1, 1896, nearly

\$1,000,000,000 has been added to the money in actual circulation. The figures of increase are really extraordinary :

| MAY 1.    | Money in circulation. | Circulation per capita. |
|-----------|-----------------------|-------------------------|
| 1896..... | \$1,540,007,062       | \$21.65                 |
| 1897..... | 1,666,560,363         | 22.93                   |
| 1898..... | 1,806,761,442         | 24.38                   |
| 1899..... | 1,933,867,892         | 25.49                   |
| 1900..... | 2,060,525,463         | 26.58                   |
| 1901..... | 2,195,374,235         | 28.31                   |
| 1902..... | 2,260,750,242         | 28.66                   |
| 1903..... | 2,374,353,720         | 29.58                   |
| 1904..... | 2,532,645,135         | 31.02                   |

It is hardly possible that there could be such an increase in the volume of money in circulation without some effect being produced. At first it unquestionably stimulated speculation, over-stimulated it indeed. But at the present time there is a very different condition from that which prevailed in 1900 and 1901. Then people wanted stocks and couldn't buy them, the factories could not run them out fast enough to supply the demand. Now the supply is large enough while the demand is unquestionably nil. The total transactions in stocks in a Stock Exchange house on one day last month was forty shares.

And that is the one striking fact which presents itself at the present time. There is an enormous quantity of money, and money both on call and on time is very cheap, but there is a stagnant stock market. Prices of securities have not declined, in fact there was a substantial advance in bonds last month and stocks generally gained something in value before the month closed. There appears, however, to be no buying disposition on the part of investors.

In seeking the cause there have been many theories advanced, and one which receives the sanction of many well-informed men has certainly some foundation in undeniable facts. The spectacle of the most prominent railroads in the country borrowing money at a high rate of interest on their notes is not suggestive of a very hopeful condition. It is estimated that since the beginning of the year more than \$150,000,000 of temporary loans have been made by railroad companies. The notes bear a higher rate of interest than the companies which issue them are paying on their bonds, while the bankers placing the loans get a commission. Altogether it is an expensive form of borrowing and is also influencing unfavorably the investment market. Just how far the railroads are responsible for the situation which compels them to issue notes and prevents them from issuing bonds, is a mooted question. It is maintained that had the railroads been willing to issue their bonds at a reasonable discount from the 4 per cent. basis they had decided upon, they would have had no difficulty in getting the money they needed and at the same time the price of bonds would have gradually advanced. Whether that is a correct view or not the fact is obvious that there is a large new floating debt which must be funded some time in the future and the investing public knows the fact. When a railroad is forced to sell bonds it is not apt to get much of a concession as to interest.

As the railroads are borrowing money so extensively, and because they need it for various purposes of extension and improvement, attention naturally is directed to their earnings. Has the end of their present period of prosperity been about reached, is a question which will appeal to all classes of investors. If there is to be a falling off in earnings a material reduction in the profits of the railroads, what is to become of the dividends that have been increased in the last three or four years? In figuring values on the "4 per cent. basis" a 7 per cent. dividend-payer has been counted as worth 175, because \$7 interest per annum is equivalent to 4 per cent. on \$175. But if that stock was formerly paying only 5 per cent., and for a time paid no dividend, perhaps the road was in a Receiver's hands a few years, it is not easy

to work out the value of the stock "on a 4 per cent. basis" if the past history of the property is to be a factor in the calculation.

But should the conditions of prosperity which the railroads have enjoyed and benefited by in the last half dozen years cease to exist, what will become of the values built upon the 4 per cent basis?

It must be admitted that there is no gain in earnings at the present time. The severe winter will account for the decrease in net earnings which many of the roads suffered, but April gross earnings have not shown gains over those of a year ago. Increased expense ratios have been neutralizing previous gains in gross earnings and if these are no longer to increase the cause of net earnings will become of greater significance. The railroads during the period when they were overtaxed with business had to invent methods for handling it. To increase the train load was one method and that meant more powerful and expensive engines and larger cars. While traffic was at its height it was possible to secure perhaps maximum economy in operating with these large units, but as it slackened there has manifested itself evidence that these new devices are expensive both directly and collaterally. Along other lines the question how can expenses be reduced is gradually forcing itself upon the attention of railroad managers, and not the least difficult question is the one which relates to the cost of labor.

That there has been a modification of the views of investors on many important questions in the last couple of years has been evidenced in many ways. For instance, syndicates are not as popular or as dominant as they once were. The Steel Trust Syndicate is about to distribute what there is among the members and quit, although some millions of securities that were to be converted are still unconverted.

Now it looks as if "voting trusts" were going out of favor. The Erie, which has spent a good part of its life in the hands of voting trusts or Receivers, has been managed by a voting trust since January 1, 1896. The terms of the trust provided that a four per cent. dividend on the first preferred stock in any year would terminate the trust. The dividend was paid in the year ended February 29, 1904, and the stockholders were offered the opportunity to extend the voting trust until May 1, 1909. The stockholders did not seem to care to have the voting trust continued and notice has been given of its termination on May 2. Stockholders in the New York, Ontario & Western Railway are trying to have their "voting trust" discontinued or dissolved. It has been in operation some thirty years.

Congress adjourned on April 28, concluding one of the shortest sessions—of the long sessions—in the history of the national legislature. This being a Presidential year, it was natural enough that Congress should do as little as possible in the way of legislation, and this session ended with nothing done on important financial questions. The large aggregate of appropriations made by Congress has attracted attention and will serve for texts for campaign arguments. The Chairman of the House Committee on Appropriations estimated the total at \$781,574,629, which sum includes \$26,801,843 for deficits of previous years and \$56,500,000 for sinking funds. This leaves a total of \$698,272,786, while the estimated revenues for the coming year are \$704,472,062. This would leave a surplus of a trifle more than \$6,000,000.

That there has been an enormous increase in the expenditures of the Government in recent years admits of no question; whether justified or not we must leave to statesmen to dispute over. Senator Culberson presented figures in the Senate to show that the total expenditures under the present Administration were \$2,640,000,000, an increase of \$211,000,000 compared with the previous four years, and of \$888,000,000 compared with the four years ended 1896. Of the latter increase, \$160,000,000 was for the civil administration, \$281,000,000 naval, and \$284,000,000 military.

While there has been a large increase in the expenditures for the army and navy in the years since hostilities with Spain began, the cost of operating the Government has also increased considerably. We show in the following comparative table the appropriations made by Congress for the years 1874, 1884, 1894 and 1904, which do not include sinking fund and interest payments nor, since 1874, appropriations for the Post Office Department :

|                                     | 1874.         | 1884.         | 1894.         | 1904.         |
|-------------------------------------|---------------|---------------|---------------|---------------|
| Deficiencies.....                   | \$11,143,240  | \$2,832,680   | \$21,226,495  | \$19,651,968  |

| District of Columbia.....           | .....         | 3,505,495     | 5,413,224     | 8,638,067     |
| Miscellaneous.....                  | 3,342,648     | 1,806,439     | 520,666       | 3,025,695     |
| Total.....                          | \$172,290,700 | \$187,911,566 | \$319,011,846 | \$464,846,770 |

The appropriations for 1874 are given on a paper currency basis, when the "greenback" was worth less than ninety cents. The coin value of the appropriations was about \$154,000,000. In thirty years the appropriations have increased \$310,000,000, in twenty years \$377,000,000, and in ten years \$145,000,000.

**THE MONEY MARKET.**—Money rules at very low rates in all branches of the market; call loans have kept pretty close to 1 per cent. most of the month, while time money goes begging at  $2\frac{1}{2}$  @  $3\frac{1}{2}$  per cent. At the close of the month call money ruled at 1 @  $1\frac{1}{4}$  per cent., the average rate being about  $1\frac{1}{2}$  per cent. Banks and trust companies loaned at 1 @  $1\frac{1}{4}$  per cent. as the minimum rate. Time money on Stock Exchange collateral is quoted at  $2\frac{1}{4}$  per cent. for 60 days,  $2\frac{1}{2}$  per cent. for 90 days,  $2\frac{3}{4}$  per cent. for 4 months, 3 per cent. for 5 months,  $3\frac{1}{4}$  @  $3\frac{1}{2}$  per cent. for 6 to 7 months and  $3\frac{3}{4}$  @ 4 per cent. for 8 to 9 months on good mixed collateral. For commercial paper the rates are  $3\frac{3}{4}$  per cent. for 60 to 90 days' endorsed bills receivable,  $3\frac{3}{4}$  @  $4\frac{1}{4}$  per cent. for first-class 4 to 6 months' single names, and  $4\frac{1}{2}$  @ 5 per cent. for good paper having the same length of time to run.

**NEW YORK CITY BANKS.**—The month has witnessed remarkable changes in the condition of the banks. The arrangements for financing the Panama Canal purchase may be responsible in a measure for some of them, but there must be other influen-

ces at work to cause money to flow into the banks as it is doing, and loans to increase as they have with a one per cent. rate ruling for call loans. In the last four weeks of the month of April loans increased \$27,000,000, deposits \$45,000,000, specie reserve \$12,000,000, legal tenders \$5,000,000, and surplus reserve \$5,000,000. Were these banks required to pay the entire \$50,000,000 for the canal they would still have a reserve \$21,000,000 larger than at the beginning of the year.

MONEY RATES ABROAD.—On April 14 the Bank of England reduced its rate of discount from 4 per cent. to 3½ per cent. and on April 21 made a further reduction to 3 per cent. The former rate of 4 per cent. had ruled since September 3, 1903. Open market rates are lower in London than they were a month ago. Discounts of 60 to 90 day bills in London at the close of the month were 2¼ @ 2½ per cent. against 2¾ @ 2⅞ per cent. a month ago. The open market rate at Paris was 2⅝ per cent. against 2¾ per cent. a month ago, and at Berlin and Frankfort 3 per cent. against 3½ @ 3⅞ per cent. a month ago.

Fine gold bars on the first of this month were at par to ¼ per cent. premium on the Mint value. Bar silver in London, 25½d. per ounce. New York market for large commercial silver bars, 54½ @ 55¼c. Fine silver (Government assay), 54¾ @ 56¼c. The official price was 54¼c.

FOREIGN EXCHANGE.—Rates for sterling exchange advanced last month and from April 7 until April 30 there were gold shipments, the aggregate being about

\$19,000,000. Sterling declined toward the end of the month partly as the result of the heavy movement of gold.

NATIONAL BANK CIRCULATION.—The National bank notes outstanding increased \$2,170,631 last month, making an increase in twelve months of nearly \$46,000,000. The circulation is the largest ever reported and the bonds to secure the circulation now amount to nearly \$400,000,000. The bonds deposited to secure public deposits were reduced \$4,000,000 during the month, and now aggregate \$171,000,000.

The National banks have also on deposit the following bonds to secure public deposits: 4 per cents. of 1907, \$7,671,050; 5 per cents. of 1894, \$100,000; 4 per cents. of 1895, \$10,806,050; 3 per cents. of 1898, \$7,113,000; 3 per cents. of 1890, \$97,749,000; District of Columbia 3.65's, 1924, \$2,044,000; State and city bonds, \$20,717,128; Philippine Island certificates, \$4,328,000; Hawaiian Islands bonds, \$1,117,000; Railroad bonds, \$17,670,000; Philippine loan, \$1,657,000, a total of \$171,486,228.

UNITED STATES PUBLIC DEBT.—Aside from the decrease in the cash balance in the Treasury of \$3,700,000 and the increase in net debt of \$3,400,000, the only noticeable change in the items contained in the public debt statement is the increase in gold certificates issued, the total now reported being \$493,000,000, as compared with about \$467,000,000 on April 1. The Government now has outstanding nearly \$980,000,000 gold and silver certificates, including about \$14,000,000 of the old Treasury

notes of 1890, against which it holds an equal amount of gold and silver in the Treasury.

GOVERNMENT REVENUES AND DISBURSEMENTS.—A deficit of nearly \$5,500,000 in April leaves a very small margin between the revenues and expenditures of the Government for the fiscal year of which only two months remain. The surplus for the ten months is less than \$2,500,000, while in 1903 there was a surplus of \$35,000,000 for the same period, in 1902 a surplus of \$65,000,000, and in 1901 a surplus of \$27,000,000. The receipts in the ten months this year were nearly \$15,000,000 less than last year; there was a decrease in customs revenues of more than \$21,000,000, while expenditures increased \$18,000,000.

UNITED STATES FOREIGN TRADE.—The foreign trade movements in March were similar to those in February, the imports being within \$30,000,000 of the amount of exports. For the first time in twelve months, however, the imports exceeded \$90,000,000 the total being \$91,802,235, but this compares with \$96,280,457 in March last year, a decrease of nearly \$5,000,000. The exports of merchandise were \$119,813,470 as compared with \$132,093,964 last year, a decrease of \$12,000,000. The total merchandise movement in March this year is about \$10,000,000 larger than in March

three years ago, but compared with March, 1901, the imports show a gain of \$15,500,000 and exports a loss of \$4,500,000. For the nine months ended March 31 the exports increased over the previous year \$53,000,000 and imports decreased \$31,000,000, the excess of exports being \$422,000,000 as compared with \$387,000,000 in 1903. There were net imports of gold up to March 31 of \$56,000,000, the largest since 1899, but that has been reduced by the heavy exports in April.

MONEY IN CIRCULATION IN THE UNITED STATES.—The estimated amount of money in circulation on May 1 was \$2,532,645,135, an increase since April 1 of \$16,000,000. That there should be an increase of nearly \$20,000,000 in gold coin and gold certificates in spite of the large export movement will occasion surprise. There was some decrease in the other forms of money.

## BANKERS' OBITUARY RECORD.

**Anderson.**—Henry S. Anderson, Treasurer of the South Brooklyn Savings Bank, Brooklyn, N. Y., died April 7. He had been connected with the bank for forty-five years and Treasurer for thirteen years.

**Brinckle.**—Wm. R. Brinckle, Vice-President of the Security Trust and Safe Deposit Co., Wilmington, Del., died April 3, aged sixty-one years.

**Campbell.**—William J. Campbell, President of the Campbell National Bank, La Rue, Ohio, died March 27, aged fifty-seven years.

**Ekroth.**—John F. Ekroth, Cashier of the Commercial National Bank, Essex, Iowa, died March 26, aged forty-one years.

**Hammond.**—Col. J. W. Hammond, Cashier of the Oskaloosa (Iowa) Savings Bank, died April 11.

**Hospes.**—Richard Hospes, Cashier of the German Savings Institution, St. Louis, Mo., died April 13, aged sixty-six years. He entered the bank two years after it was started, and worked his way up through all the subordinate positions, becoming Cashier in 1865.

**Johnson.**—R. H. Johnson, President of the Marion County Bank, Marion, Ohio, and one of the oldest bankers in the State, died April 12, aged eighty-four years.

**McCurdy.**—Robert McCurdy, President of the First National Bank, Youngstown, Ohio, and one of the leading bankers of that State, died March 26.

**Miller.**—Sidney D. Miller, President of the Detroit (Mich.) Savings Bank since 1883, died at St. Augustine, Fla., April 2. Mr. Miller was born at Monroe, Mich., in 1830. He graduated from the University of Michigan at the age of eighteen, and became a successful lawyer. For twenty-three years (1868-1891) he was commissioner of police at Detroit.

**Needles.**—Caleb Needles, Cashier of the Charter National Bank, Media, Pa., died April 16, aged about fifty-four.

**Newton.**—M. B. Newton, senior member of the banking firm of Newton & Parish, New Haven, Ct., died April 9 in his fifty-eighth year.

**Page.**—Charles Page, Cashier of the Muscatine (Iowa) Savings Bank, died April 1 at Dallas, Tex. He had been a prominent business man at Muscatine for fifty years.

**Potter.**—Townsend J. Potter, Vice-President of the First National Bank, Fort Edward, N. Y., and a former member of the New York Assembly, died April 6, aged seventy-one years.

**Richardson.**—Robert H. Richardson, President of the Deposit Bank of Monroe County, Tompkinsville, Ky., died April 8, aged about seventy years.

**Ruggles.**—S. H. Ruggles, President of the Second National Bank, Circleville, Ohio, and one of the wealthiest men in the county, died April 18, aged eighty-four years.

**Stuckslager.**—Dr. Cyrus R. Stuckslager, President and Cashier of the People's Bank, McKeesport, Pa., died April 7. He was born in Fayette county, Pa., February 27, 1829, and in early life supported himself as a teacher. He studied medicine at the University of Nashville and in 1856 graduated from Jefferson Medical College, at Philadelphia, and for a number of years practised his profession. In 1862 he entered the Union army as a surgeon and served through the war. In 1872 he located at McKeesport, Pa., and had been Cashier of the People's Bank for thirty-one years, and for some time had also been President of the bank as well.

**Wark.**—John Wark a director of the Valparaiso (Ind.) National Bank, and Vice-President of the Thrift Trust Co., died March 28, aged seventy years.

**Wilbar.**—Joseph E. Wilbar, President of the Bristol County Savings Bank, Taunton, Mass., and a director of the Bristol County National Bank, died April 13. He was register of deeds for the Northern Bristol district, and had been a trustee of the Savings bank since 1874 and President since 1882.

**Wright.**—Joseph R. Wright, Cashier of the First National Bank, Hills, Minn., died March 28.

**Zabriskie.**—George A. Zabriskie, Assistant Cashier of the People's Bank, New York city, died April 13, at the age of fifty-five. He had been connected with the bank for thirty years.

FIFTY-EIGHTH YEAR.

JUNE, 1904.

VOLUME LXVIII, No. 6.

---

THE GOLD EXPORTS of the past few weeks are naturally the most conspicuous feature of the financial situation. Since the business revival of 1896 the country has been accumulating gold until the stock of gold held by the Treasury, the banks and the public became larger than ever before known in the history of the country. The products of our mines and the large trade balances of 1900 and the following years combined to swell the stock of gold. The unexamined prosperity, which continued after 1900, received its first check in the crisis of the spring and summer of 1903. Minimize the effect of this as much as possible, and yet it is impossible to deny that there are strong symptoms of a reaction which has not yet spent itself. Things are not altogether going our way as they did before. In the midst of the greatest good fortune there always are apprehensions as to the length to which favorable conditions will go. Financial history gives good grounds for these apprehensions. If all men were wise and provident, it would not be difficult to so manage that the era of good fortune would carry the nation through bad years. It is, however, a natural law that prosperity produces over-confidence, and this in turn is followed by depression.

The basis of the prosperity of the United States is agricultural. Good crops may make amends for the results of foolish or extravagant financial management, but bad seasons and poor crops aggravate the situation. The export of gold from a country is necessarily an indication that the ordinary resources of products and manufactures are not sufficient to meet the foreign indebtedness. The extent to which gold exports are now taking place cannot be accounted for by the Panama Canal payments of fifty millions of dollars. It is evident that without this there would have been large exports of gold. Some of the amounts sent abroad may be ascribed to the Japanese and Russian loans, but there is still a balance which can only be

accounted for on the assumption that the balance of trade is at least temporarily not in our favor. There is reason to suspect that a settlement is going on with foreign creditors, who have been holding back, until they could see better investment for their capital at home than could be had in the United States. The war in the East is probably giving an impulse to business in England and Europe. The demands for material and loans on the part both of Russia and Japan are no doubt being favorably felt by manufacturers and traders all over the Continent. The payments on account of Panama have evidently coincided with other settlements, of nearly equal importance. Possibly the knowledge that these payments were to be made outright, has made foreign capitalists think that they had better withdraw their capital so as to have it under nearer control.

That business has fallen off in this country is evidenced by the decrease in bank clearings and by the accumulation of cash reserves at the money centres. This has given American capitalists who have borrowed or otherwise owe money abroad the opportunity to make loans at home at less rates of interest. The Panama payments may be only coincident with these conditions, or the knowledge that this payment had to be made may have had a tendency to aggravate them. The calling in of deposits of public moneys from the banks, increased as it has been from time to time, has certainly had the effect of restricting business in many parts of the country, while at the same time it has caused great accumulation of reserves in the money centres, lowering rates of interest and encouraging the withdrawal of foreign capital.

On the whole it is difficult to avoid concluding that the manner in which this canal payment has been handled has been rather unfortunate than otherwise, and may render very critical a financial situation that might have been difficult to handle in any event. There has been an air of brusqueness on the part of the Treasury in regard to this payment, which would have perhaps been well enough were the country still moving on the high tide of prosperity, but now that fears of an ebb had begun to set in, might have been dispensed with. The richest and strongest nations never undertake payments to other nations which may deplete their reserves and injure their home business without the greatest circumspection. England, in paying the Geneva award, and France in paying the German indemnity, are examples where large transfers were made with no noticeable effect on home markets. It remained for the United States to act as if a matter of forty or fifty millions to be handed over in cash were a trifle. It could not of course be foreseen exactly what business and money market conditions in the United States would be when the payment became due. No one could forecast the exact time of the termination

of negotiations. Nevertheless arrangements might have been made which would have so distributed the payments of the actual cash that the home money markets would have received no shock.

The blame of any trouble which may arise from the depletion of the gold reserves and loss of business confidence throughout the country, belongs to Congress primarily. The Secretary of the Treasury had no other way but to obey orders and pay over the sum appropriated. The advices received from London and Paris are to the effect that financial experts there think that the payments will not have any serious effect on our money markets. This is, however, interested opinion. It has been asserted that men take a secret pleasure in the misfortunes of their friends, especially when profit results. It is not unlikely that some such principle might have weight with nations who are trade rivals.

---

THE HIGH RANGE OF PRICES now prevailing for grain and provisions are pleasing enough to the agricultural classes and to them indicative of continuing prosperity, but to the people in cities and elsewhere who live on salaries and wages they do not appear in the same happy light. Prior to 1900 the condition was reversed. It was the farmers who were driven by low prices for their products to the support of BRYAN, who promised to bring about a change by the sixteen to one remedy. It was the workingmen and salaried people who defeated BRYAN, because although they may not have laid much stress on the desirability of higher prices, nevertheless feared to reduce their income power by being forced to accept a cheap dollar.

In the coming campaign the chances are that the desire to keep the present advantage will induce the farmers to adhere loyally to the stand-pat policy of the Republican party, while it will be the workingmen and salary earners who will seek to better themselves by a change. But they will be mistaken in this, because the conditions which have brought high prices are extremely complex and not likely to be modified by anything that lies within the power of political parties. The truth is that the high prices are in great part due to increased consumption and decreased production. The growth of enterprises of all kinds, which followed upon the restoration of financial confidence, induced by the defeat of the cheap money party, drew large numbers of men from agricultural pursuits, and enhanced wages. The reduction of the numbers engaged in agriculture has had the effect of reducing supplies, while the class who were able to purchase them has increased. The pendulum has now swung to the other extreme, and the greater profits of agriculture, coupled with the reduced purchasing power of fixed wages, will induce many to go

back to the land. But it may take some time before the former low level of farmers' profits will again be reached. How long this may be depends upon the character of the seasons. A season which stimulated all crops and brought the highest limit of return does not occur every year. Sometimes such seasons follow each other without break. As a matter of fact the years 1902 and 1903 were below the average in this respect, and 1904 thus far seems to promise to follow in the footsteps of its two predecessors. If at the same time there comes a falling off in the demand for labor, caused by the letting down of the high range of business enterprise prevailing, it is naturally to be expected that there will gradually be formed a large class of dissatisfied people who, as is usually the case, will look for relief to some political change. There is some hope, however, when the Panama Canal construction gets under way that the great demand for machinery and material of all kinds, as well as for labor of certain kinds, will tend to supplement the normal demand and infuse more life into the situation.

Neither high prices nor low prices are in themselves signs of prosperity or the contrary. It is the general balance of supply and demand that produces the condition so much desired. When there is any dislocation of this balance, through the devotion of too great energy to one branch of industry as compared with the other lines, it brings about the condition where dissatisfaction begins to arise.

As long as men are free and uncontrolled in their choice of occupations, so long will they rush to those temporarily affording the most profit. Natural laws afford natural checks and tend under favorable conditions to maintain an average balance of occupations suitable to the wants of the whole, but departures from this are constantly occurring and though slight, as a rule, yet they are sufficient to cause the differences which are characterized as good times and bad.

---

CONGRESS ADJOURNED without taking any action on the measure which was referred to last month, reported from the Banking and Currency Committee. This is as had been anticipated. The strengthening of the gold reserve, the adoption of the definite gold standard, and the increase to par of the amount of circulation issued to National banks on Government bonds, together with the refunding of most of the bonds bearing three and four per cent. into two per cents, has so strengthened the currency system of the country that to the ordinary observer there seems but little necessity for additional legislation.

Since 1900 there has been no trouble with the currency, and during the crisis of 1903 it was apparently submitted to a very severe

test. Nevertheless, in the opinion of careful observers, it would have been well had the simple provisions of the committee's bill become law. Doubtless, if our currency had not now real elements of strength, the crisis of 1903 would have been attended with consequences similar to those of 1873 and 1893. The manner in which the banks went through the crisis of 1903 has been ascribed to the greater strength of the banks as a whole through combination and affiliation; but while this may have had something to do with it, it is believed that the soundness and abundance of the currency had more. But much of the currency strength in 1903 was then, and is now, due to the accumulation of gold in the country during the years following 1900. The proportion of gold to all forms of paper money was more than dollar for dollar. The recent outflow of gold, though of small proportions compared with the whole sum in the country, nevertheless proves how rapidly gold may leave us when the conditions for its export become favorable. There is no law or restriction of any kind that would prevent the gradual withdrawal of the whole stock in excess of the \$150,000,000 reserve, supposing the balance of trade should remain against the United States for a sufficiently long time. No one expects that a condition favorable to gold exports will ever last for so long a period, but the real strength of the paper currency would be tested by a much smaller export than that assumed. The gold certificates based on deposited gold form a very important element in the elasticity of our currency, and these certificates would be the first to show a reduction.

The only other element aiding expansion is the National bank note. The bills of the National banks are dependent for their expansion on the condition of the bond market. The three million dollar per month limit on the retirement of circulation by the banks is a restriction on the mobility of bank currency in that it prevents more than three millions of bank bonds from changing hands in any one month. There may be a greater demand than this in new localities during any month, and the effect is to keep up the price of bonds suitable for bank circulation. It prevents banks that may wish to retire circulation from doing so, and it often prevents the organization of new banks in localities where circulation might be beneficially employed. If from the loss of sufficient gold to meet the requirements for money, the country had to fall back temporarily on bank notes, it might be difficult to supply the demand.

There is no doubt that modifications in the bank currency system would enable the country to have an abundance of safe money without the necessity of holding such a large quantity of gold. When the trade of the whole world is placed on a gold basis, through the universal adoption of the gold standard, it is highly probable that

there will be more difficulty in any one country retaining such a large gold reserve as is now held by the United States. It is probable that before many years China and Mexico will conform to modern methods. No one can yet predict what commercial powers may grow up in Africa and South America. The struggle for reserves may become so severe as to compel the domestic use of representative money to a much greater extent. It will be well to place the bank currency of the United States in a position where it can be safely depended upon in emergencies.

---

THE PERIODICITY OF PANICS was adverted to in a recent address by Hon. CHARLES G. DAWES, ex-Comptroller of the Currency. Mr. DAWES is quoted as saying that financial panics are believed to have a periodicity of about eleven years. If this be accepted, the last panic having occurred in 1893, the present year is the date of the next one.

From 1893 to 1896 the effects of the financial troubles of 1893 were severely felt. After the election of President MCKINLEY the business of the country began slowly to revive, and gaining ground by degrees, culminated in the highly prosperous years 1900 to 1902. In 1903 there came the collapse of the stock market, overburdened with the masses of trust securities which the confidence gained during the four previous years from the great flow of wealth from our reviving foreign trade had enabled promoters to put upon the market. The success of early financial combinations had brought the general public to the belief that there was no limit to the success that might follow the manipulation of huge aggregations of wealth. Some of the great capitalists of the country, finding themselves with almost unlimited means of securing credit, turned their attention to securing the control of great railway systems, and this form of grand finance culminated in the attempted merger by means of the Northern Securities Company of the two most northerly Pacific trunk lines, together with the Burlington and Quincy. The suits brought by the State of Minnesota and the United States Government to test the legality of these attempted mergers caused a stop to be made. This was soon followed by the failure of the ship-building trust. Then followed the stock panic of 1903. This did not immediately affect the general business of the country; reliance was placed on the crops of the year to make good the losses from over-speculation. The season was, however, less favorable than was expected and in fact the situation was only saved and confidence again restored by the lucky rise in the price of cotton and the large foreign trade balance derived from the export of this staple, aided by exports of manufactures.

In fact, 1903, without any actual financial catastrophe of general

scope, was a panicky year, and in all respects there was a distinct falling off from the high tide of prosperity of previous years. There was not, however, the same danger from the currency that in 1893 aggravated the other unfortunate conditions, and the Government revenues did not fall off in 1903 as they did in 1893. If to the lack of confidence inspired by the reckless speculative combinations of 1903 there had been added an unsound currency and a rapid decline of Government receipts, the panic of 1903 would undoubtedly have been much worse than it was and possibly even as bad as that of the one ten years before.

The periodicity of panics is not one that is essentially wedded to any regular lapse of time. It consists in the cycle through which the mind of the trading community travels, from the deepest depression to the most wonderful overconfidence. In travelling this cycle commercial opinion may move sometimes more rapidly, and sometimes more slowly, and the time taken may be five years or ten, according to the intensity of the transactions involved. It is believed, however, that in this instance the limit of confidence was reached last year, and that for many reasons the fall to lower levels was less violent than it sometimes is, than it was in fact in 1893. The let-down was so comparatively easy that it is perhaps for that reason difficult to recognize it as an actual panic. There are signs that already the business world is beginning to recover from such shock as the disappointments of 1903 gave it. While the cycle through which the mind of the business community revolves from depression to the limit of confidence is the same, the speed of the revolution may be hastened or retarded in any part by extraneous circumstances. The bad harvest of 1902 no doubt repressed some extravagances that an addition to the trade balance of that year would have encouraged; other causes also combined to bring about an easy collapse in 1903, that if postponed a year might have given a harder shock.

---

THE WAR BETWEEN RUSSIA AND JAPAN has not yet reached a decisive state, although startling news may be expected at any moment. The advance of the season will soon make land operations easier. The preliminary success of the Japanese leaves them almost free to land their armies where they choose and the control of water transportation enables them to provide supplies and material. Their opponents also are strong on land, and both sides being supplied with modern weapons, makes many of the conditions of the contest such that no safe prediction can be made as to the result.

It is undeniable that great anxiety is felt as to the extent to which other nations may become involved in this quarrel. Whichever side

is successful, the danger that other nations may be drawn in becomes imminent when the victors seek to reap the fruits of victory. It is difficult for a nation flushed with success to show moderation. The temptation assumes pre-eminence over the mercantile destinies of the East, and will if yielded to arouse the jealousy of the commercial nations. The spirit of war, once well under way, is apt to be contagious. The world has witnessed in its history periods of irregular continuance when peace and war have alternated. There is no reason to believe that the general human character has so changed as to preclude similar experiences in the future. The great national debts are a constant reminder of past wars. For over thirty years there has been a period of peace during which no great nation has been engaged in a struggle with an equal antagonist. There have been several small wars, and what might be styled police wars have been carried on now in this distant quarter, now in that. But there has been no war like that now raging between Russia and Japan.

What would be the effect upon the invested capital which has been accumulated during this period of peace if the spirit of war should involve the great commercial nations? The first effect on the nations would be a diminution of their credit, shown by an increase in the rate of interest on government loans. A nation long at peace, no matter what its debt, soon adjusts its revenues and expenditures, and has a chance of lessening its burdens by reducing the principal and interest of its indebtedness. This increase of government credit is not advantageous to the holder of the government obligations. Incomes from such investments diminish. The greatest profits on government loans have always been made in time of war, when the lender could compensate himself for his risk by demanding greater rates. The countries that pay a fixed rate of interest find their securities taken below par. Those that sell at par only, like the United States, find themselves compelled to raise the rate of interest paid.

It is believed, if the spirit of war should involve many of the commercial nations, that governments will find it more difficult to borrow than they formerly did, notwithstanding the great confidence that has been justified by the experience of the last two centuries with public debts. There are to-day so many forms of investment other than governments, that the latter would not have the same monopoly of the investing public they once possessed.

Whatever the temptation to war, there is reason to believe that the commercial spirit, the desire to make and safely invest money which has been especially characteristic of the last century, and the wealth which has already been accumulated, have a great effect in deterring nations from wars in which their financial status will be seriously risked. Both Russia and Japan have more lately emerged

from a lower degree of civilization than most of the European nations and the United States. They are inclined to risk more than they would had they accumulated greater wealth. It is just this condition that makes them more of a threat to other nations should success give them inordinate confidence in their military power. And in this direction lies the danger that other nations may feel it necessary to combine to compel them to show moderation in success.

---

THE DECLINE IN BANK CLEARINGS throughout the country has attracted attention. For the period since January 2 of the present year there has been a greater falling off from the figures of the same period for 1903 than there was between the figures of this period for 1903 and the same time in 1902.

There is no better indication of the amount of business being done in the country than the bank clearings. Coincident with this is the cheapness of money at the money centres, showing that as well as a reduction in check transactions throughout the country there is also a lessened demand for cash. The piling up of the reserves of the money centres is the usual accompaniment of the decline in business activity in the country at large. This happening at this time may or not be an indication that a period of diminished business activity has set in. There are some unusual causes that may have an influence in bringing about present conditions. One is the calling of the deposits of public money to enable the Treasury to effectuate some extraordinary payments. This would bring some increase in the cash at the money centres. The offers of the Japanese and Russian loans may also have had some influence. Above all these, however, is perhaps the backwardness of the season and the holding back of many enterprises that require a promise of fair weather conditions. Last, and perhaps most important of all, are the high prices now quoted for most all kinds of materials and the postponement of undertakings until there is a break in this respect. The slow opening of navigation on the lakes due to weather conditions and to the contest between the Lake Carriers' Association and the union of the masters and pilots may be having some effect.

Some of these causes for reduced activity may be of only temporary effect; others are of a more permanent nature. The weather may soon make amends for its past faults. Strikes may be settled, the cash and currency will be again available when it has performed its part in making the payments and satisfying the negotiations for loans. The permanent block to many enterprises is the high range of prices.

That there has been some check to the high tide of prosperity of

the last few years must be allowed. Nevertheless there is good reason for thinking that the check is apt to prove temporary and that the rest of the year may witness a strong reaction towards prosperous conditions. Whether the present slackened pace of trade shall prove temporary or otherwise, the country will perhaps be none the worse for a period of less strenuous effort. It is just as well, if there is to be a reaction of any importance, that it should occur in the year of the presidential election, which will be an excuse or palliative that will be accepted as sufficient reason, even if it is not absolutely the true one.

Although there has been a falling off in clearings, the aggregate of business shown is still enormous; and while the diminution may be noticeable, it forms a very small per cent. of the whole. The country can get along very well with the business it is doing, although there has been some falling off from the high tide of the two previous years. There is nothing in the situation that as yet calls for any serious lamentation. The crises of 1873 and 1893 were followed by long periods of inaction during which the confidence necessary to new enterprise seemed to be entirely destroyed. One special feature of both these crises was the unsound condition of the currency. In 1873 the country was dependent upon the greenback, and the state of public opinion as to the redemption of this Government promise in coin was very much divided. Parties were almost equally balanced on the question of returning to a coin standard. The contest raged from 1874 to 1879, when the date for the enforcement of the specie resumption law was to arrive. At any time from 1875 to 1878 the fiat money advocates were not far from triumphing. All capitalists were in a state of the greatest uncertainty. But when resumption day arrived, and the question was settled, there came an immediate revival which gained all the more sudden headway because of the long previous waiting. The crisis of 1893 can be traced to the revival of the fiat heresies under the insidious disguise of the silver dollar. Whatever the business excesses and indiscretions which made a favorable environment for the development of the crisis, it was the fear of settlements in depreciated silver that was its immediate cause. The long period which was required to recover from the panic of 1893 was due to the uncertainty that still remained as to whether the forces militating against sound money and the gold standard would prevail or not. How near they came to doing so in 1896 is not even yet fully realized. It took nearly four years, even after an Administration pledged to sound money was in power, to reassure capitalists, and the full tide of prosperity did not set in until after a second defeat of BRYAN in 1900. The crisis of last year was undoubtedly deprived of its worst effects by the fact that there was no doubt about the monetary standard of the country. The business conditions preliminary

to the crisis of 1903 were undoubtedly equally as bad, if not worse, than those preceding the panic of 1893. If the condition of the currency had been the same in 1903 and 1893, there would have been no recovery from the last panic in the time which has now elapsed. That the shock of the 1903 crisis was so easily withstood is due to the good currency. But that the business of the country has suffered and has not yet fully recovered is what could not have been expected to be otherwise.

---

BOTH JAPAN AND RUSSIA have found it necessary to appeal to the money markets of the world for loans and neither of them has been denied. The Russians have been able to obtain better terms than the Japanese, notwithstanding the fact that the latter had the greater preliminary success in both naval and land operations. This success is, as yet, by no means decisive, and has, in fact, been followed by some reverses. The war being conducted in both cases at a distance from the centers of population and wealth of the respective nations, does not necessarily reduce to any great extent their producing power in an industrial sense.

The capitalists who subscribe to national loans at the present time have a greater confidence in the staying power of nations, financially, than those of former times. When national debts were new, their rapid increase was looked upon with what turned out to be, in most cases, unfounded apprehension. Again and again the debt of Great Britain was, as it gradually mounted up, the subject of pessimistic prophecies. But the wealth of the great borrowing nations has increased out of all proportion to their national debts, and the burdens alleged to be crushing in various stages of their accumulation have proved to be bearable, and by many economists are held to be even conservative of the productive energies of a people.

With the example not only of European nations and the United States, increasing in governmental credit until the interest rate has been reduced to a very low point, it is not astonishing that capitalists who study national and international financial conditions are willing to invest in the securities of countries like Japan and Russia that are still in the early stages of industrial and productive development. The national resources of both are in the incipient stage. In the case of Russia, natural resources are known to be almost incalculable. With good government and the incentive to industry and enterprise on the part of her population, there is a possibility of an increase of wealth that surpasses that of almost any part of the world. In the case of Japan the home territory is circumscribed as well as the population. But the intelligence of her people shown in the grasp of modern

methods, and their contentment, as yet to be directed by their governing powers, give them an advantage that is very obvious. In entering on this war as well as the previous war with China, Japan is in reality seeking to provide room enough for the exercise of the energies and intelligence of her population. There is no lack of possibility that by her success in holding the coasts of Manchuria and the consequent influence upon the future destinies of China, that Japan may become as powerful and capable of the production of wealth upon the eastern side of the Eastern Hemisphere as Great Britain has become upon the western.

The history of national debts proves the fact that the time for the capitalist to invest is when the nation is yet in the process of working out its destiny. The profit in loaning to governments is not by any means in the plain rate of interest. It consists in the subsequent appreciation of the principal of the loan as the nation gradually or otherwise betters its condition. Although the old notion that a national debt is a national blessing may not be true in the narrow sense, yet it is in a degree, and with proper qualification that the borrowing of money by governments for necessary wars is to be regarded as a wise investment. Such wars come under the category of internal improvements. Of course, nations like individuals often make mistakes and do not find their outlay properly remunerative.

In the case of Japan, at the present time, success in holding the seacoast of Manchuria, with the consequences which may flow from it, will give an outlet which will employ the surplus energy of her people in a very profitable way.

The superiority of the credit of Russia in placing her loan is what might have been expected from the situation. The glamour of her great strength as a military power has not yet been affected by Japanese success. It is still, undoubtedly, believed very largely that she was taken by surprise, and that in the long run she may be able to retrieve the early losses. The faith in the great land power of Russia is still strong. In many campaigns in former wars the Russians have shown the same unpreparedness, and though badly defeated at first, they have often won by the mere weight of numbers. Moreover, the great national resources of the empire can hardly be interfered with by the Japanese. If the worst should come to the worst, if the Japanese drive them from the seacoast of Manchuria and keep them away, the Russians can still go on and develop their vast territory without interference. It is difficult to believe that they will keep up perpetual war regardless of cost in order to eventually crush the Japanese. Peace will come within a reasonable time, even if it is only to give the opportunity for recuperating for a new struggle.

## CO-OPERATION AMONG BANKS.

---

The consolidation of banking interests is attracting attention at the present time, and much importance is ascribed to it, and great results are often predicted. It is noticeable, however, that taking the country as a whole the organization of new banks goes on without cessation. The consolidations are generally in the larger cities.

The great strength of the banking system of the United States is due to a variety of causes, which may be summed up in the general law of adaptation to environment. The tendency to free and independent banking is just as strong to-day as it ever was, although with the experience gained from recurring financial crises, the weakness of such a system is better understood and with this understanding the jealousies and rivalries which were so evident in earlier days are more easily laid aside, at least temporarily, to meet common dangers.

The first step towards mutual support was taken when clearing-houses were established. At first these were to be found only in the larger cities, now they are an important factor in every part of the country. As a matter of fact the function which clearing-houses now perform in encouraging mutual support was not by any means thought of when the first clearing-house was formed. It has been developed as necessity pointed the way. Nor has the spirit of mutual help stopped with the banks which belong to the clearing-houses. The good effects of standing together in emergencies, as shown by the clearing-house banks, has affected the minds of all bankers, and a spirit of mutual helpfulness has developed among all banks whether they belong to clearing-houses or not.

But there have been other causes to encourage a drawing together into a sort of community of all banking interests at times when unusual financial conditions arise. Part of these are due to legislation and a still larger part to the absence, or as some may think the deficiency, of legislation. The National Banking Law, and the organization of banks all over the land, regardless of State lines, gave an impulse toward unity of feeling that did not before exist. This bond was perhaps a sentimental one only. Be that as it may, the sentiment was strong enough first to bring about an attempt to form an association of National banks, which was unsuccessful, but which subsequently in 1875 and 1876 led to the formation of the American Bankers' Association, consisting of all classes of banks and banking firms. The work of this association has often been underestimated, and in truth it has been largely in a sphere above the ordinary interests of the individual bank. This work has to-day practical features which at once attract the attention of even the narrowest-minded banker. Originally, however, it was from necessity confined to overcoming the spirit of jealousy and inveterate competitive hostility so characteristic of early banking when bankers sought to undermine and ruin each other regardless of the common interest; when delight at the overthrow or downfall of a rival amply compensated for serious losses which might have been avoided by a friendly spirit.

The greater personal acquaintance which the association brought about by its conventions resulted in an improvement of methods of business, and a more intimate knowledge of mutual strength. This effect of the work of the American Bankers' Association was tacitly, if not openly, recognized by bankers even where there seemed on the surface hostility to it, as is evidenced by the organization in all the States of similar associations working within State lines.

The growth of this spirit of association and mutual good feeling has had a greater effect than will perhaps be admitted, in the increase in the number of clearing-houses. No doubt the use of clearing-house machinery would have increased without the assistance of the bankers' associations, but it will probably not be denied that the friendly spirit among bankers, the recognition of a fraternal bond which has gradually been fostered into strength by the work of the associations, has vastly aided in encouraging the wider use of clearing house machinery. All the country banks to-day, though belonging to no clearing-house, use methods of business among themselves analogous to those of the clearing-house, and thus transact business with a less proportion of cash than would otherwise be the case. The great use of checks which has developed in all quarters can be justly ascribed in large part to the ameliorating effect of the work of the associations upon the harsher features of a system of independent bank competition. No doubt, too, the recognition of a common and mutual interest among all banks has paved the way for consolidation where the business seemed to require it either in the interest of greater economy or larger transactions.

If the narrow prejudices apt to be encouraged by an extreme development of independent banking had been unchecked by the influences referred to, many institutions would perhaps have allowed themselves to be ruined rather than to have united with rivals.

This growth of recognition of the necessity of a mutual inter-dependence so that the united strength of all might be available in emergencies, has gone on without legislation and has perhaps been the greater because of this lack. It may be doubted whether the banks could have been forced by outside pressure into the friendly attitude they now hold toward each other in the larger phases of business. Congress might perhaps have attempted to unify the National banking system by imposing restrictions aimed at this result in exchange for greater privileges. It is problematical whether the attempt would have succeeded even with the National banks. Certainly it would have aroused the hostility of all other banking interests. This is measurably shown by the opposition which at once manifested itself to the branch bank proposition. Branch banking would no doubt have united the National banks in a very close union, but it would have broken up the good feeling which exists at present between them and other banks.

Therefore, it seems fair to conclude that the apparent apathy of legislatures, Federal and State, toward banking legislation of a special character, has allowed a more natural growth of the elements tending to mutual support in a system of independent banks. The consolidation of one or more independent banks to form one larger institution is merely an indication that without special legislation the principles which underlie the American system of free banking are sufficiently flexible to permit an adaptation to business requirements as they change or enlarge. That of late many of these consoli-

dations have taken place is, when the circumstances are examined, no serious threat that the free and independent bank, which in general has been found so efficient in developing the resources of the country, is to be replaced by a smaller number of larger institutions. The small banks increase in number faster than the consolidations. The latter are purely a new development of the independent system, required in certain localities where there is great concentration of wealth. When so many other lines of business have been driven to combination and concentration in order to maintain themselves, it is likely that the banking business would be influenced by the example, if the competition had been found as disastrous in the banking business as in other lines. Though bankers often complain of competition, yet its evils have evidently not been serious enough to incite any general action in the direction of combination. Even the consolidations which have been made cannot be said to have been caused by a desire to avoid competition primarily. There is sufficient motive for them in the desire to secure the larger capital and resources necessary to deal successfully with and furnish facilities to great business interests requiring more banking power than the ordinary run. Great business and great banks both alike attract more attention than is their due, when it is considered how small a proportion they bear to the great aggregate made up of small lines of business and small banks.

It is not likely that our small banks are to disappear in a general rush for amalgamation. Nor has the influence of such consolidation as has occurred among banks been so great in increasing the strength of our system. This growing ability to extend aid to each other in crises has been due to other causes, and will continue whether consolidation goes on or not. The independent banks of the American system are aware of their advantages as money makers; they are also becoming more and more aware of their weakness in emergencies. To counteract this they have been and are still cultivating a spirit of mutual assistance. The big institutions formed by the consolidations contribute according to their strength; but so do all the others, each according to its strength.

---

THE BRITISH SAVINGS BANKS.—There was an interesting discussion on March 15 in the British Parliament over the proposal to vote £197,677 to make good deficiencies on the income accounts of the funds for trustee Savings banks, friendly societies, and Post Office Savings banks. A select committee appointed to consider the matter had reported in favor of reducing the rate of interest on deposits from  $2\frac{1}{4}$  to  $2\frac{1}{8}$  per cent. It seems, however, that the marked decline in consols—the funds in which deposits are chiefly invested—has resulted in a modification of the views expressed by the committee, and the increased yield from consols probably renders it unnecessary to reduce the rate of interest to depositors at present.

In the course of the discussion, Sir Michael Hicks-Beach, former Chancellor of the Exchequer, said that while no doubt the majority of the depositors in Savings banks consisted of the very classes for whom the Savings banks were intended by Mr. Gladstone, and that these banks were doing a most valuable work in the promotion of thrift, these banks, and especially the trustee Savings banks, were also used as a mere means of investment by not a few persons who were perfectly capable of looking after their own affairs and of selecting the best investments, persons who had long practiced thrift.

Although several members of the House vigorously objected to taxing the public for the benefit of the Savings bank depositors, the vote on the estimate was agreed to and progress reported.

## OUR DEMOCRATIC BANKING SYSTEM AND ITS NATURAL ALLY THE CLEARING-HOUSE.

---

That our currency and banking system needs some improvements and changes is shown by the necessity which now exists of employing makeshifts from time to time to avert trouble, and if such temporary helps cannot be had, then the trouble comes. For instance, the Treasury of the United States being liable to large demands from the appropriations of Congress, at times accumulates a large surplus in coin. Such accumulations by the Government are withdrawn from the cash reserves of the banks, and as they have no credit currency to take their place or with which to protect their reserves, the banks are obliged to curtail their accommodations to business men, who therefore urge the Secretary of the Treasury to redeposit his accumulations in the banks. The temporary need is thus relieved, but the Government deposits are permanent, and when the active period of business is over and the money is returned by the public to the banks, a great plethora ensues. This induces cities, corporations and foreign States, who are watching for a favorable opportunity, to borrow in our market largely. Soon afterwards our Government happens to require money to pay for the Panama Canal and for other appropriations, greatly in excess of current income, as has occurred this May, 1904. The Secretary, therefore, is obliged to call on the banks to return his deposits. The true condition of the banks is then revealed, the surplus reserve diminishes, the plethora of money is shown to have been to some extent fictitious, credits are reduced, and the financial community finds itself overinvested. The result is a state of depression, and everyone wonders what has caused it.

This is only one of a series of similar experiences under varying circumstances.

The true solution of the difficulty is that our banks should have a sound credit currency to meet the temporary needs of business in the fall and at other times, and one which would disappear or, to use a technical word, contract, when the demand is over and money becomes easy. The Government then would have retained its cash, and been in funds to meet the Panama and other payments without disturbing the banks, and our business men would not have been deceived into making engagements beyond their ability. Thus plethoras and stringencies would be avoided.

Before making changes in an existing edifice, prudence requires us to make a survey and examination of it, so that we may be sure that any changes made shall be in harmony with the original plans, and shall rest upon the same foundations. Some general description and some reference to the historical development of our banking system are therefore necessary before making suggestions of methods by which present defects may be remedied.

### I.

The system of banking in the United States is democratic, but it did not become so without a struggle.

**THEODORE GILMAN**

The political history of our country, during the first fifty years of its existence after the adoption of the present Constitution, is a record of the contest over the banking question which terminated in the establishment of the present democratic system. The outline facts of this history, if rightly interpreted, should enable us to understand rightly our present situation, and should suggest the appropriate methods by which the situation may be improved. The word "democratic" is used, not in a political or party sense, but as describing a method of control of, by, or for the people.

The first great political controversy which agitated the newly-formed nation centered on the advisability of establishing a National bank, and the constitutional power to grant it a charter. When that question was decided in the affirmative, the character of legislation and of society in the United States was fixed on an aristocratic basis for approximately fifty years. The aristocratic element thus captured the newly-formed Government in the reaction against the anarchy of the Confederation which preceded it.

Special charters for banks became the order of the day. They were indicative of the prevailing methods of legislation and business, and the people saw with dismay that "a system of monopoly overshadowed the land and threatened to subvert the liberties of the people."\* A special charter is a favor received from the sovereign power, and is given with the intention of granting to the recipients special privileges which are not granted to the people generally. Grants of this kind are entirely inconsistent with the idea of democracy, such as was cherished by those who carried on the Revolution.

It was galling to many that, after the contest of the Revolution when the proclamation of human equality reverberated from one end of the land to the other, there should immediately be set up a Government which seemed to be actuated by precisely the opposite principles.

It is evident now, as we examine the fanciful theories which were then advocated by the anti-Federalists, that the people as a mass, by and large, were not fully qualified to assume in a conservative way the discharge of the responsibilities of self-government. R. McKinley Ormsby, in his history of the Whig Party (1860), says: "At the outset of our Government, Mr. Jefferson made many suggestions as to the measures of domestic policy, which time and experience showed to be impracticable or not profitable. In fact, he lived to acknowledge his mistakes as to many measures; but no one, on account of this, thought any the less of his wisdom or patriotism." The tutelage of the people under aristocratic masters for half a century prepared them for the assumption of the duties of electors. The spirit of republicanism and democracy was growing and a true conception of the dignity and responsibility of the franchise was forming among the people during all those years of preparation.

The kernel of republicanism was not dead; it was encased in the protecting shell of aristocratic guardianship, and when it was ready, it burst the shell which fell off and disappeared, because its work of protecting the growing life was ended. All life needs a protecting envelope at its inception. The shell is of no value when the seed begins to grow, and sends its roots down into the earth and its branches into the air.

The people did not fully take the Government of the United States into

---

\* Hon. Ely Moore, in House of Representatives, May 15, 1836.

their hands until fifty years had elapsed after the adoption of the Constitution. The end of the period of tutelage and of the dominance of aristocratic measures of Government was marked by the destruction of the greatest aristocratic establishment in the country, the Bank of the United States, and the establishment of the free banking system in the State of New York, which was the model of all our subsequent banking legislation. These two events marked the complete and final abandonment of aristocratic methods of legislation and business. Up to that year, 1838, this country was virtually an aristocracy. Since then it has been a republic and a democracy. There was a transformation at that time, and while we can say that the system of banking in the United States is now democratic, we should add, to be historically correct, that it has been so only since 1838. By the recognition of this revolutionary period in our internal affairs, we can understand and see that we have reached our present stage of development by a struggle in which the fiercest animosities were engendered, and in which were put forth some of the most brilliant forensic efforts which have ever graced legislative annals.

The eloquence and powerful influence of Webster, Clay and others, was thrown without reserve in favor of the United States Bank, but that institution, with its concentrated money power added to this great political support, was not able to muster enough votes to overbalance the assaults of the people under the lead of Jackson.

The destruction by Andrew Jackson of the aristocratic system, accomplished by the overthrow of the Bank, "called down upon him the vindictive hatred of a moneyed aristocracy." His supporters, on the other hand, hailed him as "the protector of the poor man's rights, the restorer of the true principles of the Constitution, and the preserver of the liberties of the country."\* The bank and nullification were both the objects of his opposition and the subjects of his triumph.

## II.

To make our banking system democratic, it was necessary not only to destroy the monopolistic system, but to erect in its place one truly democratic.

If we examine the record of the campaign which resulted in the enactment of the New York free banking law, we find it was a contest of the people against the large financial interests of that time. We have almost forgotten that there was a struggle over what now seems to us a self-evident proposition. We are indebted for our political liberties to those who fought in the Revolution to establish this Government; we are indebted for our united country to those who poured out blood and money freely in the Civil War to maintain it, and we are indebted for the establishment of the principle that in a democracy all laws should be general to those who, inspired by liberty, kept up a long legislative fight until the first general banking law was placed on our statute books.

The creation of our democratic banking system was orderly, in that it was the logical development of the democratic principles laid down at the beginnings of our Government. But though logic is orderly, it is also controversial, and the controversy over the banking question was long and virulent. On the one side were the people who demanded perfect freedom and equality to engage in banking under the provisions of a general law. They demanded

\* David Henshaw, 1831.

a cessation of special privileges, and the opening of banking to all citizens who should conform to the requirements of the law. On the other side there was determined opposition to free banking on the part of the banks already established who had special charters.

In the New York "Evening Post," from January to April, 1838, there is a partial record of the contest in the Legislature of New York over this question. In the issue of April 14, 1838, we read: "A general banking law is earnestly called for by a long line of business towns from New York to Buffalo. In this city (New York) it is demanded by almost the entire community. Bitter will be the mortification and deep the shame which the Democratic Party will feel if a (State) Senate, professing to be democratic, shall adjourn without doing anything to abolish the odious and mischievous distinctions which exist between the chartered bankers and the rest of the community."

In the leading editorial of April 21, 1838, three days after the passage of the law, the "Evening Post" said: "Against a return to the practice of banking by special charters, it (this law) puts up a barrier which we trust will never be removed while the republic lasts. It was framed in a Whig House of Assembly. We hail it as the introduction of a better system, more friendly to liberty, to morals, and to that state of things which affords steady, certain and equal rewards to human industry."

It took the people of the United States fifty years to arrive at the conclusion that all banking laws should be general, or rather it took the tree of liberty fifty years to bear that fruit. This great banking reform arose among the people and the specially chartered banks were its opponents.

### III.

It has been said before the Committee on Banking and Currency of the House of Representatives by two of the experts called there to testify, that the United States has the worst banking system in the world. But is it the worst, since it was established by a victory of the people over the privileged classes? Is it not the best, since it provides that the business of banking shall be free and open to all the citizens of the United States on equal terms? In what other nation can be found another free banking law? Where have the people ever won such a victory as this? We have had since 1838, by the grace of God and the votes of the people, a democratic system, and we must give all honor for this victory to those who fought out the legislative campaigns which resulted in its establishment.

With this knowledge of the controversy which resulted in giving free democratic banking to this country, it is little short of amazing that any supporters should be found to a movement to re-establish branch banking in this country. After having laboriously secured free banking over sixty years ago, it is preposterous to think that the people of the United States have so far forgotten the history of their institutions as to yield the fruits of one of their most important victories at the request of those who consider branch banking the most money-making proposition before the American business community, and who desire to avail themselves of that golden opportunity. If we should adopt that system it would involve the abandonment of our present democratic ideals and the readoption of those aristocratic methods which Jackson overthrew with the help of a majority of the people who were behind him.

The free and independent local banker is a power the extent and value of whose services to develop and foster local interests can hardly be overestimated. While we have the independent local banker, our political institutions are safe. The Anglo-Saxon initiative will be preserved, and when that is lost then we will have commenced the era of degeneracy which has been the fate of all republics that have allowed the growth of capitalistic control to sap their strength and vitality. The union of the purse and the sword is not to be avoided more than the concentration of the purse in the hands of a few.

#### IV.

The free banking system of New York was adopted in many States before 1863, and in that year, under Secretary Chase, it was applied to the nation, and thus the banking system of the United States became democratic. In this larger field of application, it again met the determined opposition of banking interests already in existence. The principle that it was within the constitutional power of Congress to charter a National bank had been established by the arguments of Alexander Hamilton, the first Secretary of the Treasury. What was an aristocratic measure under Hamilton became democratic under Chase, the constitutional argument being the same. The National Bank Act was intended not only to make a market for Government bonds, but to form a uniform system under a general law whose benefits could be participated in by all sections of the country equally. The whole trend of banking legislation by Congress has been to popularize National banking. There has been a continual tendency, ever since the inauguration of the system in 1863, to enlarge its area and to give to smaller localities its benefits. This is shown in the constant diminution of the average capital of National banks. In 1865 the average capital of the 1513 banks then in existence was approximately \$260,000, and in 1899 that of the 3602 banks was \$168,400. By the act of March 14, 1900, the limit of capital was reduced to \$25,000, and other provisions were made more liberal. This act has given a great impetus to the formation of banks of moderate capital. Since the passage of that act, and up to May 1, 1904, the report of the Comptroller of the Currency shows that 1296 small banks have been organized with an average capital of \$26,000, and 680 with an approximate average capital of \$118,870. The average capital of all National banks on September 9, 1903, being 5042 banks, was approximately \$149,400. Thus the average capital has declined from \$260,000 in 1865 to less than \$149,400 in 1903, with a constantly decreasing tendency. This is evidence of the intention of Congress to popularize National banking in response to a popular demand for the extension of the benefits of the law to a constantly increasing area.

It cannot be supposed, however, that Congress is concerned only with creating small banks. Does not the obligation necessarily follow that Congress shall protect the banks which it creates? To invite and encourage the people to form small banks, and then leave them in the hour of trial exposed to competition, at a great disadvantage, with larger institutions, and without support or defence adequate to the emergency of financial disturbances, is certainly not a full discharge of the responsibilities of Congress.

## V.

The chief argument against an independent democratic system of banking is that there is no power back of it to give it support in time of trouble and that it does not work smoothly even in ordinary periods of active business. It must be conceded that our experience with free banking in 1857, 1873 and 1893, and at other times of lesser disturbance, has shown this criticism to have an undeniable foundation in fact. This, however, is an argument not to abandon democratic banking, but to add to it whatever is necessary to meet this deficiency and remedy this defect. The criticism is that at such a time of financial trouble or business activity every individual bank must take care of itself, and this is done at the expense of other banks or of its customers. A prominent banker in the West has truly said that the rule in monetary commotions is, every bank for itself and the devil (or Receiver, which is about the same thing) take the hindmost. This is evidently a barbarous rule and should not be allowed to govern in a civilized community. It is also a foolish rule and one not worthy of men of intelligence. It is an acknowledgment that the system is not strong enough to bear the strain to which it is liable to be subjected, and when such a strain arrives it must be expected that the system will break down and then will come a time of anarchy, of fighting for life with a greater or less degree of loss and damage.

The question then arises, What can be done to make our democratic system of banking so strong that it can meet the demands of the business public at all times and stand any strain that can be put upon it? What measure can be adopted by Congress which will make it entirely safe for any one to organize a bank, small or large, under the regulations of the National Bank Act and not fear any panic if all the requirements of the law are strictly complied with? This question is put always with one proviso, that the independent democratic system of banking must not be disturbed. What has been gained at the expense of so much contention and discussion must not be lost. The free and independent bank must be preserved. That can go down only when our form of government is abandoned.

## VI.

It is evident when one examines the banking systems of the world, that that they are of two kinds—those that have a credit currency, for example, France and Germany, and those that have not, of which the most conspicuous are England and the United States. It is further to be noticed that the countries with a credit currency do not have panics or violent fluctuations of interest rates, whilst those without, are so afflicted. It is easy to conclude that it behooves us, as an intelligent people, to establish a system of credit currency as an adjunct to our banking system in order that it may be as efficient in serving the people as that of any other nation.

Our experience in the evolution of banking indicates what must be rejected as well as what must be included in any proposals for which general acceptance is desired. The credit currency should first be undoubted, and then all sections of the country and every independent local bank, whether large or small, city or country, should have access to it in case of need. The law authorizing such issues should not discriminate either in favor of or against either small or large banks. To a small locality a small bank is relatively as

large as a large bank in a large locality. It is also just as necessary to the welfare and happiness and comfort and prosperity of the inhabitants of a small place as the large bank is to the same aspirations of the citizens of a metropolis. Around the small place are the farmers and planters to whom the facilities of a bank are of first importance in the seeding, cultivating, harvesting and selling of their crops. These facilities are as essential to them as the facilities of large banks are to the enormous transactions which take place in a large financial center. In a democracy this can only be accomplished by a general law.

## VII.

We thus have the problem stated to us, and the question is, How can it be solved?

The answer is that it has already been solved for us. No experiments need be tried. It is only necessary to take as guides the methods adopted by the most experienced financiers of the world, in our country and abroad, and apply them in a democratic way to our case.

The first of these principles is that the function of issuing currency should be separated from the operations of popular banks and concentrated in as few hands as possible. This is the rule in France and Germany and in all countries with successful credit currencies.

The second is that every issue of currency should be secured by ample, approved, selected collaterals, such as banks are limited to by law, lodged in the hands of a trustee of the highest character. This is the rule established by the New York law of 1838 and followed by the National Bank Act.

The third is that every note issued shall be accepted at par by all banks for all debts due them. This is the provision in the National Bank Act regarding National bank notes and prevails in all countries with credit currencies.

If these three principles can be observed, the experience of other nations proves that a method of issuing bank currency will be established which will be safe and orderly and able to withstand any shock to credit from any source, including war, commercial disasters, and even the failure of the Government to maintain its credit.

The first two principles can be carried into effect in our country by constituting clearing-houses the agents for the issue of currency and the trustees for the custody of collateral thereto, with a five per cent. redemption fund. Thus the best talent and the most conservative judgment in the financial communities would be secured to perform this function and supervise this business.

The third proviso, that all banks should receive the currency so issued at par for all debts due them, follows as a matter of course, and is in accordance with the customs which now prevail among clearing-houses.

If these three principles were carried into effect by the enactment of a Federal law incorporating clearing-houses for that purpose,\* it would only be giving the sanction of law to the methods which have been successfully practiced by clearing-houses in our commercial centers for forty years. Is there any experiment in doing that which has been done without loss and with great though limited benefit for forty years?

\* Such a bill was introduced in the United States Senate by Hon. Thomas C. Platt, of New York, as No. 2716 of the Fifty-seventh Congress.

The adoption of these three principles, by means of a Federal law, would create a credit currency of universal acceptability. It would accomplish for our country all that the credit currencies of France and Germany realize for those nations in the prevention of panics and violent fluctuations in the rates of interest. In effect it would bring about the extension over the country of a device which has thus far been a benefit to a small part of the country and in an imperfect way. Clearing-house certificates are only a currency between banks; clearing-house currency is for circulation between the banks and the community.

### VIII.

The great overshadowing fitness of a clearing-house to be made part of a free and independent system of banks is that it is democratic in its construction and operation. As individuals combine to form a bank, so banks combine to form a clearing-house. The majority vote of the stockholders elects the directors of a bank, so the majority vote of banks, on some equitable arrangement, would elect the directors of the clearing-house. The rule of a majority constitutes a democracy. That rule is made perfect by a return of the power to the electors at stated intervals. There can be no centralizing of power longer than to the next election.

If any citizen of the country desires to avail himself of the benefits of banking and of the aid of the clearing-house, the way is open to him under a general law. No one, however rich or however poor, is excluded from these benefits, for there can be no monopoly under a general law. No bank can be antagonized or proceeded against except by due process of law. All arbitrary proceedings are therefore prevented. No jealousy can exist between a clearing-house and its members, because their functions are entirely different, separate and co-operative.

How different all this is from the state of affairs which exists between competitive individual banks! How different from the state of affairs which would exist between independent individual banks and branch banks or a governmental bank! If they were brought into existence, there would be eternal war between them and the independent banks. On the other hand, there would be co-operation and peace between clearing-houses and independent banks. Each would be interested in helping the other by advice and pecuniary assistance. The power of a clearing-house to co-operate with an independent bank would be greater than that of a central bank. It would represent all the banks of its State or district.

While there would be many clearing-houses, the number with power to issue currency should be limited. State boundaries give the most convenient and suitable divisions for this purpose, and one clearing-house of issue to a State would probably promote the development of the entire country most equitably and efficiently. The banks of a State, and to a large extent the business men also, are personally known at the respective centers where credits would be supervised and extended.

The collateral securities pledged for the payment of clearing-house issues, which are specified in the National Bank Act and the banking laws of the different States, and the five per cent. redemption fund, would be held by the respective State clearing-houses of issue. By the means of the redemption fund, a renewal of worn-out and mutilated currency could be made with

comparatively little delay and expense. Instead of one office at Washington for that purpose, there would be one in each State. The very desirable object of a sanitary currency would thereby be secured.

## IX.

When one compares the issue of unsecured currency by five thousand banks, as has been sometimes proposed, with the issue of a secured currency by forty-five or fifty clearing-houses acting as trustees for the note holders, each of which clearing-houses of issue represents the total banking capital of a State, the merits of this system are clearly seen. All the advantages of a great central bank would thereby be attained with none of its objectionable features.

THE BANKERS' MAGAZINE, of New York, in its issue of April, 1899, page 516, says of the proposed issue of currency through the clearing-houses, "as nearly as may be it seeks to impose the penalty for violation of sound banking rules upon those most immediately concerned in the offense." This remark goes to the heart of the subject. If an injudicious loan is made and the security collateral thereto is not sufficient to redeem the currency issued thereon, and the bank taking out the currency is also insolvent, the accruing loss is to be met by the banks associated in the clearing-house which made the loan. Such losses have been rarely incurred in the issue of clearing-house certificates and they should be no more frequent with clearing-house currency. But whatever the loss, the public would have no interest in it.

There would be no opening of the doors to a large issue of bank notes, because the action of the clearing houses, having a contingent interest in the loans, would be conservative in the highest degree. A currency so issued and secured, and made receivable by all clearing-house banks for all debts due them, would pass from hand to hand with the single object of facilitating business and trade and would not fly on the wings of fear to the nearest redemption office lest it might be too late. The great object in all currency would thus be obtained—absolute confidence that the Government had provided by suitable legislation that each dollar so issued would be as good as every other dollar bearing the imprint of the Government. Thus the duty of the sovereign power of the State in respect to the coinage of money would be fully met and discharged.

## X.

To sum up, it is claimed as proven that the independent bank and the clearing-house are democratic, and if they can be joined together in one system they will make the most efficient means for the development of our country in all its parts. Such a combination would remain unshaken as long as the republic endures.

The advantages coming from a strong banking system are chiefly reaped by the business community. By far the larger part of the losses in money panics falls on those who are engaged in commerce and trade and not on the banks. The capital of traders must be exhausted before the banks suffer a loss. All restrictions of credit are felt chiefly by business men. They are the ones who most dread stringencies and who would most profit by protection therefrom. Therefore these men are most interested in banking reform.

It has sometimes been said that no proposal made by bankers would be adopted by the country. This is true if the proposal is primarily in their interest for the purpose of increasing their profits, without regard to other considerations. But if the proposal is one for the benefit of commerce and trade in all sections and is equitable and fair both to banks and to the community and is not urged for private profit but for public benefit, then the bankers would do themselves credit by advocating it. They can go before the country and put themselves on record in favor of such a scheme because they appear with clean hands. By so doing they would earn and receive the gratitude and approval of the entire nation.

THEODORE GILMAN.

NEW YORK, May 18, 1904.

HON. LEVI P. MORTON

## A LONG AND HONORED CAREER.

---

Governor Morton, whose portrait we present herewith, reached his eightieth birthday on May 16. last. Mr. Morton was in Europe on that day, but many messages of congratulation went to him by cable and mail upon his continued good health, with best wishes for the future.

Levi Parsons Morton has had a career as distinguished as it has been long in both the financial and political world. Like many other successful New York men, he springs from the Pilgrim stock of New England, having been born at Shoreham, Vermont, May 16, 1824, in direct descent from George Morton, of Bawtry, Yorkshire, England. Mr. Morton was educated at the academy in Shoreham and during his early years was engaged successfully in mercantile pursuits. In 1863 he went into the banking business, establishing the well-known house of Morton, Bliss & Company. In connection with Sir John Rose, at one time financial minister of Canada, Mr. Morton also founded the house of Morton, Rose & Company in London.

Mr. Morton's firms aided the Government greatly in floating the loans for the resumption of specie payments. The London house was the fiscal agent of the United States Government from 1873 until 1884, and was reappointed in 1889. The firm of Morton, Bliss & Company was dissolved October 1, 1899, and was succeeded by the Morton Trust Company. Mr. Morton was the first President and has held the office continuously since. Mr. Morton is also President and a trustee of the Fifth Avenue Trust Company, and a director in the National Bank of Commerce, the Equitable Life Assurance Society, the Guaranty Trust Company, and many other financial institutions.

Mr. Morton was appointed by President Hayes in 1878 Honorary Commissioner of the United States to the Paris Exposition. He was elected in the autumn of the same year a member of the Forty-sixth Congress from the Eleventh District of New York and was re-elected in 1880. As a representative of the business interests of the metropolis he occupied an influential position in the House.

The nomination for Vice-President on the Republican ticket was informally tendered to Mr. Morton in 1880, but was declined. After the election of President Garfield he was given his choice of a place in the cabinet as Secretary of State or Secretary of the Navy or the French mission. He accepted the latter appointment and served for four years. His attractive personality made him one of the most acceptable representatives whom the United States has had at Paris. During his service he secured the removal of the restriction upon the importation of American pork into France, the recognition of American corporations, and many other important measures beneficial to American interests.

At the Republican National Convention of 1888 Mr. Morton was nominated for Vice-President and was elected in the autumn. As presiding officer of the Senate, his tact and skill were sorely tested by the bitter contest over the so called "Force bill" in 1890, but he won golden opinions from both sides for the impartial good sense of his rulings. Mr. Morton was elected Governor of New York by a very large majority in 1894, and made one of the most popular chief executives who has served at Albany.

Governor Morton has been twice married and by his second wife has had five children. Mr. Morton is one of the governing board of the Metropolitan Club, and a member of the Union, Union League, Lawyers' and other prominent clubs.

# TRUST COMPANIES—THEIR ORGANIZATION, GROWTH AND MANAGEMENT.\*

## FUNCTIONS OF TRUST COMPANIES.—*Continued.*

### BANKING BUSINESS.

Trust companies carry on the banking business, and in the great majority of cases this business constitutes the largest part of their duties. The banking department is usually divided into the department of commercial accounts, in which the business is similar to that of the National bank with the exception of note issue, and with the exception in many States of discounting paper; and the savings department, in which the business is identical with that of the savings department of the incorporated Savings banks of the Central States, and not materially different from that of the mutual Savings banks of the East.

In view of the statement just made, the question naturally arises, "What is the difference between the trust company and the bank?" This question has been discussed to some extent in the periodicals and in the circulars of trust companies. In these discussions are represented diametrically opposite views; namely, that there is no difference between the two institutions, and that there is a wide difference. The variety of opinion arises from the fact that different writers tell of the particular trust companies with which they are familiar, and which differ from each other; and also—and more generally—from the fact that some discuss the question from the theoretical side, while others, disregarding the theory, speak of the actual practice as they find it.

So far as concerns business other than that of the banking department, the foregoing discussion of the functions of trust companies reveals an important difference between these companies and banks. While it is true that some of these functions have been and still are carried on to some extent by some banks, the tendency is to leave this field wholly to trust companies, while many of these functions may not legally be undertaken by banks. Allowing for some exceptions, it may be said without fear of contradiction that the functions thus far described are distinctively those of trust companies.

As a matter of theory there are important differences between the business of the banking department of trust companies and that of State and National banks. In theory and in early practice the banking department of the trust company was merely incidental to its other functions, being maintained to care for the funds coming to it in trust. The trust company is a depository for the inactive and accumulating funds of the community, the bank for the active funds—the funds used in business. It follows that the natural depositor of the bank is the business man, or firm or company, whose funds are

---

\* Publication of this series of articles was begun in the January, 1904, issue of the *MAGAZINE*, page 81.

continually in use, quickly turned over, and who expect in return, not interest, but accommodation in the way of discounts. The natural depositor of the trust company, on the other hand, is the person or concern whose funds are not in active use, and who wishes a place for the safe-keeping and accumulation of same. A prominent writer on trust company subjects\* has classified trust depositors, as distinguished from bank depositors, as follows:

1. The laborer, mechanic, clerk, teacher—all those who work for wages or on salary.
2. The capitalist, the professional man, the married woman who has a separate estate.
3. The business man who wishes to separate his private income or the surplus profits of his business from his general business capital.
4. The corporation, public or private, that is accumulating a sinking fund, or any individual who is husbanding a balance to pay a debt.
5. The executor, administrator, curator, guardian, assignee, receiver, trustee under deed or will or order of court.

In short, all such who wish their daily deposits to draw interest."

A study of this list reveals a class of accounts entirely distinct from those handled by the ordinary bank, and a class of accounts, too, for which little provision is made by National banks or by the old-time State banks.

These trust depositors expect from the trust company in return for their accounts compensation of quite a different kind from that which the bank depositors expect from their banks. Their moneys are placed in the care of the company for accumulation; they want interest on their funds as well as a safe place to keep them. The ability to withdraw the funds on demand is not of pressing importance to them, and they are often willing to give notice some time in advance of intention to withdraw their deposits.

It results that the trust company is in position to invest its funds in ways quite different from the bank. The funds of the latter must be so placed that they can be quickly recovered to meet the needs of customers, being usually invested in paper that will mature in thirty, sixty or ninety days, or four months at the longest. The trust company can safely make long time loans on collateral or even on real estate. Moreover, since the trust company pays in full for the use of its depositors' money by allowing interest on such money, it has no obligation to confine its loans to depositors, but may lend to whomsoever offers the best security and the highest rate; or it may invest its money largely in bonds and stocks or in real estate. The bank remunerates its depositors by offering them a line of discounts, and hence must reserve its money mainly for loans to such depositors.

The necessity of dividing its loanable funds equitably among its depositors who desire discounts requires the bank to confine its loans to comparatively small amounts, while the trust company is in position to make large loans.

As a matter of theory, then, both as regards the classes of customers whom they serve and as regards the uses of their funds, trust companies and

---

\* Breckinridge Jones, First Vice-President and Counsel of the Mississippi Valley Trust Co., St. Louis. His paper on "The Trust Company Question" delivered before the Missouri Bankers' convention in 1892, and published in pamphlet form by his company, is a masterpiece, and has been widely copied. So far as the writer knows, it was the first published study of the question. The writer acknowledges his indebtedness to this paper for many of the points here given.

banks occupy distinct fields. They are co-ordinate institutions, each supplementing the work of the other, and both necessary factors in carrying on the financial affairs of the community. There is here not competition, but co-operation.

So much for the theory. In actual practice, the differences between the two classes of institutions are much less marked, and the tendency in many communities is steadily to lessen such differences as do exist. As a matter of fact the trust company of to-day has invaded a portion of the field of the bank, while, on the other hand, the bank is invading a portion of the field of the trust company. Most trust companies seek business accounts, payable on demand by check, offering as inducement interest on satisfactory daily balances. In cases where the law does not forbid, some companies also offer lines of discount. On the part of the banks there is a noticeable tendency in many localities to seek inactive accounts on which interest is allowed. This movement is being taken up even by National banks in the form of the maintenance of savings departments.

The result is that there are communities in which there are only slight differences between the business done by State banks and that done by the banking departments of trust companies. Both maintain commercial banking and savings departments conducted in the same ways. Their loans and investments are of practically the same character.

In other communities, where most of the banks and trust companies follow the lines of business for which each was theoretically established, there may sometimes be found individual trust companies which do a regular banking business, and individual banks which compete for the dormant accounts that naturally belong to trust companies or Savings banks.

Taking it the country over, it is safe to say that the difference between the average State bank and the banking department of the average trust company is slight, except in those States where trust companies may not discount commercial paper.\* Such differences as exist usually concern the proportions of the various kinds of business handled, business accounts as a rule forming the larger, and inactive accounts the smaller part of the bank's business, while the reverse is true of the banking department of the trust company.

Where the trust company is forbidden to discount commercial paper, there results, of course, a distinct difference in the business of the two institutions due to such prohibition. In such cases the trust company still handles a large number of business accounts, as many business men either do not need discounts, or have other means of procuring them. In many places the practice has grown of forming working agreements by which groups of banks and trust companies throw business into each others' hands. By this means a given group of financiers is able to handle financial business of any kind. This plan is a recognition at once of the need of both institutions and of essential differences in their functions.

There is considerable difference between the State laws governing trust companies and those governing State banks. As a rule, the former are much

---

\* This statement is based on a personal study of trust companies in eight of the largest cities, and upon an examination of the business advertised in the circulars of some three hundred representative trust companies located in all parts of the country.

less hampered by restrictions in the character of their business, are not required to carry as large a reserve, if any, and are not taxed as heavily. In a later chapter the laws of the different States will be discussed in detail.

It is evident that there is a close resemblance between the business of the savings department of the trust company and that of the Savings bank, especially of the incorporated Savings bank, which is the usual form of such institutions outside of the Eastern and New England States. Both are after savings accounts. With regard to the mutual Savings banks, particularly, the theory is that such institutions exist especially for the accounts of those whose savings are comparatively small, while the trust companies are supposed to exist primarily for the safe-keeping and accumulation of larger accounts. In practice, however, this distinction is not always maintained, although it is probably true that the average savings account of the trust company is larger than that of the mutual Savings bank. But trust companies usually advertise that deposits of more than five or ten thousand dollars will not be received at the regular interest rates. The minimum deposit received by either institution is usually one dollar.

In this connection it is worth while to call attention to the important service that the trust company, as well as the Savings bank, is rendering in the way of adding to the available money supply of the country. Through the medium of a large number of small accounts they gather from the people of their neighborhoods large sums that would otherwise be kept in the traditional stocking or in private safes. These funds are thus placed at the disposal of the community for use in carrying on its business, and make possible enterprises that benefit the whole people, and that would otherwise fail for lack of available funds. Particularly is this the case with reference to those companies in outlying parts of large cities, or in other localities where banks would not find enough business to keep them alive. As an instance of this, the writer knows of a trust company located outside the business district of a large city which in ten years accumulated deposits of over two millions, the larger part of which came from persons who had not theretofore deposited in banks at all. Here was a large sum put into active circulation and so made productive, to the mutual benefit of the depositors, the bank and the community at large.

#### MISCELLANEOUS FUNCTIONS.

Occasionally trust companies perform functions not mentioned in the foregoing discussion. For instance, some companies, in the far Western States particularly, write fire insurance as agents. The wide powers granted by the laws of most States permit trust companies to undertake almost any kind of financial business, and the result is that companies in different localities take up special lines of business for which there happens to be a field.

It is usual for trust companies to offer to customers the services of their officers for legal and financial advice on ordinary matters that involve no complicated questions. This does not mean, of course, that the company undertakes to do the lawyer's work in such cases. But many of its customers are wholly ignorant of the most common principles and practices in business and commercial law, and as a result are greatly profited by advice in what seems to the experienced a very simple matter. Much litigation and loss, and many foolish "investments" are prevented by a little advice to such persons. The

banker sometimes performs similar services for his customer, but the usual bank customer is acquainted with business procedure, while a considerable number of trust company customers are not so acquainted.

Complaints are heard in some quarters that the trust company is encroaching upon the field of the lawyer. Undoubtedly this is true as regards the handling of estates and the performance of many duties of a fiduciary nature. On the other hand, the trust company gives employment to a large number of lawyers. Every company has its attorney or force of attorneys, and trust officers are usually chosen from the ranks of those who have had legal training. Trust companies make it a practice, when a lawyer brings them a trust, to retain him as attorney for that trust whenever special services are needed. Furthermore, the trust company is a great aid to the lawyer in many ways. He often needs to select for his clients a trustee, guardian, receiver, assignee, depository, etc. He is often called upon to make investments for his clients—a responsibility that many lawyers do not care to assume. In the practice of corporation law the lawyer finds the trust company of special use to him. Its facilities for the accurate keeping of accounts, preparing reports, caring for securities and managing assets appeal to many lawyers who have not the time or the inclination to assume other than the purely legal part of the work. To a great extent the trust company supplements and assists the lawyer of large practice.

#### SOURCES OF EARNING POWER.

It is evident that the sources of earning power of the trust company are much more numerous than those of the bank. It may do all that the bank may do, and many things besides. One writer\* has pointed out the fact that the trust company has developed all the earning power of an individual, thus adding greatly to its profits, as well as to its usefulness. To get at the possible earning power of the trust company, therefore, one must remember that it is not confined to the profits from the interest on funds under its care in the form of capital and deposits, but adds fees for its services in trust capacities of ordinary kinds and special fees for special services. The tremendous earnings of some trust companies have been due more to the skill of their officers in performing services of a more or less personal nature than to the natural earnings of their banking departments or the regular fees on trust work. It is also true that during the flush times preceding the year 1903, large sums were made by many companies through underwritings and stock investments. These means of profit were, to say the least, hazardous, and in many cases the profits of this kind of preceding years have been reduced or turned into losses since 1903. It is not out of place to remark that the great development of trust companies came during the "good times" during the later nineties, and that the depreciation of values beginning in 1903 has brought about a healthful reaction in the policy of some companies.

#### THE TRUST COMPANY STILL IN THE FORMATION PERIOD.

One thing that must strike the careful observer forcibly is that the trust company as an institution is still in the formative period. As has been already pointed out, it travels ahead of statute law, such laws usually being

\*Guy Morrison Walker, pamphlet on "Trust Companies," published by Moore, Baker & Co., Boston.

formulated to govern a business already established, rather than outlining a business to be put in operation, as was the case with the National Bank Act. As a consequence it is too early to determine the exact form into which experience will cause the trust company business to crystallize.

That there is and ought to be a growing demand for more careful regulation and examination of trust companies in many States is evident, and the interests of both the public and the trust companies themselves will be subserved by a wise response to such demand. On the other hand, it would be a misfortune if unnecessary restrictions were imposed, which would result in preventing the trust companies from developing in harmony with the changing conditions of our American life. In this power of adjustment to existing conditions lies the secret of the great success of these institutions, not only in making earnings for themselves, but as well in serving the general public. Those bankers who, feeling the competition of trust companies, wish to have the laws of various States amended so as to put the banks in better relative position, should bear this fact in mind. If changes are to be made in the laws, wisdom dictates that such changes be in the line of removing any needless restrictions on the work of the banks, if such exist, rather than imposing any needless restrictions on the work of trust companies.\*

The fact is that, allowing for some exceptions, the methods of trust companies are, on the whole, sound business methods, attended with as much safety to the public and to the companies as those of the banks. Besides this they have the great advantage of being better adapted to present needs, and of being able to adapt themselves to new needs when they present themselves.

CLAY HERRICK.

COLLEGE TRAINING AND BUSINESS.—Messrs. D. Appleton & Co., of New York, have published a series of essays on "College Training and the Business Man." These essays were prepared as a result of suggestions by President Thwing, of Western Reserve University and Adelbert College, who has combined the views thus obtained with others publicly expressed, and has commented on them from his own point of view.

Mr. A. B. Hepburn, President of the Chase National Bank, New York, after referring to the sense of undue importance which may prevent a graduate from taking hold at the bottom, and to his unfamiliarity with the kind of work he has to do, says:

"These two disadvantages overcome, the advancement of the college graduate is much more rapid. He is older, has learned to concentrate his thoughts, has a better and more efficient control over his intellectual faculties, has a broader and deeper foundation, and is bound in the end to far outstrip the high school graduate of equal ability and application. I would unhesitatingly advise any young man who contemplates a banking career to graduate from college before taking up banking, if his means and opportunities will admit of his so doing. At fifty years of age he will find himself much further advanced in the business world than he would have been without his college training. In the matter of contact with other men, either personally or by correspondence, a college education is invaluable. It opens opportunities to a man all through his business career, and, other things being equal, his superior education would give him preference in the selection of a person for official responsibility."

## THE FOREIGN EXCHANGES.

---

Foreign exchange is the system by which the traders of the different nations discharge their debts to each other. In the more technical sense the term is limited to the settlements made by means of bills of exchange.

A bill of exchange is an order by one person to another in a different place to pay money to a third. The term is sometimes used for similar transactions between different places in the same country. Such an operation in the United States is called domestic exchange and in Great Britain inland exchange. In the United States most references to exchange, without any qualifying words, refer to foreign exchange, which involves transactions between persons in different countries.\* The definition given by Mr. Goschen, the author of the first classic work on the foreign exchanges, is this:†

“That which forms the subject of exchange is a debt owing by a foreigner and payable in his own country, which is transferred by the creditor or claimant for a certain sum of money to a third person, who desired to receive money in that foreign country, probably in order to assign it over to a fourth person in the same place, to whom he in his turn may be indebted.”

Stripped of technicalities, the use of bills of exchange serves a similar purpose to the use of checks in obviating the necessity for transferring money. It is a method of charging off the obligations of persons in different nations to each other, just as banking credits are means of clearing such obligations at home, in such a manner as to reduce to a minimum the transfer of actual money. If the entire volume of exports from the United States, amounting in the fiscal year 1903 to \$1,420,000,000, had to be paid for in money, it would be necessary to send that amount of money across the ocean, while if the imports into the United States, amounting to \$1,025,000,000, were paid for in the same way, a large counter current of money would be flowing in the opposite direction. These shipments of money, moreover, would have to be made in gold coin rather than in any form of Government paper or bank notes, because gold is the only money possessing full intrinsic value and acceptable in all commercial countries.

It is obvious that these counter shipments of gold would be wasteful and unnecessary. They would absorb a great quantity of money upon which interest would be lost and they would be subject to the costs and exposed to the usual risks of transit by sea. As between one country and another, if the transactions could be brought to a common market, it would only be necessary at most that the balance should be settled in gold. But the persons who import goods from Europe are not usually the same as those who export goods to Europe, and those to whom goods are exported are not the same as those

---

\*The term “bills of exchange” is still widely used in Great Britain for inland bills. Thus Rae has a chapter on “Bills of Exchange” almost wholly devoted to this subject (“The Country Banker,” p. 238); and Easton says, “Bills are drawn on London from every quarter of the Kingdom” (“Banks and Banking,” p. 167).

†“The Theory of the Foreign Exchanges,” p. 2.

from whom they are bought. The bill of exchange, therefore, comes into use as a means of transferring titles to money without the physical delivery of it. What is required ultimately by the creditor is payment in the money of his own country. The title to such money is what the debtor buys through the processes of foreign exchange. In the words of M. Georges-Lévy, exchange is "the operation which transforms the money of one country into that of another country." \*

The simplest form of a foreign exchange transaction would be the case where a person who had become entitled to money by selling goods to a foreign purchaser should draw an order upon that purchaser for the amount due for the goods. If this order is bought by a person who owes money abroad for imported goods, the latter is able to remit the order to the person from whom he has bought. This person has then only to present the order in his own country, and usually in his own city, to the person upon whom it is drawn—the buyer of goods from the exporting country. Thus the counter obligations between the two countries are settled by charging one off against the other and transferring such claims to the persons ultimately entitled to money.

The operation of bringing together buyer and seller of bills of exchange is naturally performed through banking houses. Otherwise the person who had a bill to sell would not know where to readily find a buyer and a person who desired to buy a bill to settle an obligation abroad would not know where he could find one. Dealing in bills of exchange is, therefore, a regular profession, sometimes pursued by classes engaged in few other forms of business and sometimes as an incident to other forms of banking.

#### CONDITIONS AFFECTING THE PRICE OF BILLS.

Bills of exchange, being a substitute for money in the settlement of international balances, are subject to the condition governing other commodities—the rule of supply and demand. If such bills are plentiful, in relation to the demand for them, their price falls; if they are scarce, their price rises. An excess of bills of exchange arises fundamentally from an excess of exports from the country where they are drawn; a scarcity arises from an excess of imports. Many other elements, as we shall see, enter into the problem of the relative demand for bills, but for the sake of simplicity in illustrating the theory, it may be assumed that the demand for bills depends upon the balance of foreign trade. In the figures given above for the trade of the United States in 1903, there would be a large offering in New York of bills on London and their price in American money would fall, while in London there would be a relative scarcity of bills on New York and their price would rise.

The terms "rise" and "fall" are here used on the assumption that drafts expressed in foreign money are quoted in terms of the money of the country where they are sold. This is the case with drafts upon London sold in New York. A rise in exchange implies that it requires an increased amount of American money to buy a pound sterling; a fall in exchange implies that it requires a less amount. In London, however, this method of quoting the exchanges is not usually followed, but exchange with foreign countries is expressed in the currency of those countries. This reverses the significance of terms and makes a rising exchange favorable to London and a low exchange

\* "Mélanges Financiers," p. 102.

unfavorable; because a high exchange means that more foreign currency can be bought with an English pound sterling. It is necessary therefore, in interpreting references to the state of the exchange, to know the point of view from which they are made.

If bills of exchange were the only method of settling international balances, those who had them to sell might fix any price determined by the demand on the one hand and the supply on the other. There are, however, natural limits to the prices which can thus be obtained. These limits are established by the cost of shipping gold. If brokers should arbitrarily charge for bills of exchange a price not warranted by the conditions of the market, the option would lie with the person having a debt to settle abroad to send gold, which would be accepted by his creditor as readily as a bill. It would be necessary to obtain the gold, to have it properly boxed, to secure insurance against its loss, to pay the other proper costs of shipment, and to consider the loss of interest while the money was in transit. As these charges are nearly uniform between given points, and can be easily ascertained, they form a limit upon the cost of bills of exchange beyond which dealers in such bills cannot go in fixing their charges. An excessive supply of bills may depress the price obtained for them to such a point that a man having a debt due from abroad will prefer to pay the cost of having gold shipped to him. A deficient supply of bills after raising their price to the same amount as the cost of shipping gold, may compel the actual shipment of gold to meet the obligation. Between two gold standard countries, these limits are pretty nearly fixed by the cost of gold shipments. It is these shipments which settle the final balances of indebtedness after transactions have been as far as possible set off against each other.

#### DEFINITION OF "PAR OF EXCHANGE."

Par of exchange expresses the relations between the mint weights of the standard coin of different countries which employ the same metal for their standard money. Theoretically par of exchange would arise from an exact balance of payments, but practically such an exact balance seldom exists and could not be accurately ascertained if it did exist. Par of exchange simply constitutes the pivot around which the exchange fluctuates upwards or downwards according to the relations of demand and supply for bills.\* Par of exchange between London and New York is \$4.866. This means that \$4.866 in United States gold coin contains the same amount of gold bullion as a pound sterling in British gold coin. The par of exchange between Paris and London is 25.22 francs to the pound sterling and the par of the German exchange on London is 20.43 marks to the pound sterling. These parities depend on the legal weight of new coins and are modified in practice if a country permits its gold coinage to deteriorate by wear.

There can be no fixed par of exchange between countries having different metals for their currency standards. There is a definite par between the legal mint weights of the standard coins in gold standard countries, but there can be no such fixed par between gold and silver countries, gold and paper

\* A simple case of theoretical par exists between England and Australia, because the unit of value of each is the gold sovereign of the same weight and fineness; but this is very far from implying that £100 in one country will purchase a bill for £100 on the other, even when merchandise shipments are evenly balanced, for the loss of interest during the transmission of the bill has to be considered. *Vide* Clare, p. 17.

countries, or silver and paper countries. Their exchange necessarily fluctuates according to the relations of gold to silver or to paper currency, without any fixed limits. Thus the fluctuations of exchange between London and New York since both countries have been upon the gold standard could not be materially greater than from \$4.835 in American currency for the pound sterling to \$4.895, a difference of less than one and a quarter per cent., representing the cost of shipping gold both ways. Between New York and Mexico, however, while the latter country was on a silver basis, in 1903, the fluctuations were from 2.65 pesos to 2.18 pesos for one dollar, the difference of more than twenty per cent. between the two extremes representing the changes in the gold value of silver in addition to the mere cost of shipping money between the two cities. There being no fixed price in gold for silver bullion, there is obviously no point in the relationship between the moneys of the two countries which can be considered as an even theoretical par of exchange.

While the par of exchange is a theoretical conception, which cannot be demonstrated to depend upon exact equality of payments, there is no doubt that, other influences being the same, such a par is more nearly attained when the supply of bills offered in one country upon another about equals the supply offered on the other side, than under different conditions. When there is an excess of payments to be made by one country over the amounts due to that country, the demand for bills is likely to exceed the supply and to raise the rate of exchange. When all of the bills have been absorbed, it then becomes necessary to export gold. The point at which the cost of shipping gold is no more than the price of bills of exchange is called the "gold point." The same term is applicable to the movement in the other direction, when the price of bills falls so low that it is more profitable to accept gold. One is the export gold point; the other is the import gold point, but in practice the relation of the gold point to the price of bills, whether they are high or low, carries its significance so plainly to the expert that in ordinary discussion he does not feel the necessity of using the qualifying phrase. When the cost of bills on London and New York, for instance, rises gradually from par at \$4.866 towards \$4.895, which is about the gold export point, the exchange dealer and his customers understand that "the gold point" means that gold is likely to be exported from New York when this point is actually reached. On the other hand, when the price of bills falls from par towards \$4.835 reference to the impending "gold point" means that when it is reached gold is likely to be imported.

A large demand for bills of exchange, therefore, arises from heavy obligations to be settled abroad and a small supply of bills arises from limited obligations due abroad. The balance theoretically has to be settled by the transfer of gold. The normal bill of exchange is based upon actual business transactions. These transactions inevitably include many items besides the export and import of commodities. They include payments for freight, insurance, commissions, and other charges connected with the shipment of goods. They include also remittances of interest due by borrowers in one country upon the securities which they have sold to the lenders in another country.\*

\* Nicholson classifies a freight payment as "an invisible export" and an investment as "an import of securities from the foreigner," to be paid for in commodities.—"Bankers' Money," p. 26.

Assuming for the sake of simplicity that one country, as Great Britain, had a claim against the United States for \$80,000,000 for goods exported and that the United States had a claim against Great Britain of \$100,000,000 for goods exported, equality in exchange transactions might be reached by the fact that American merchants owed to British shipowners \$10,000,000 for freights and similar charges and owed to British capitalists \$10,000,000 for interest on their investments in American securities and dividends on direct investments in American mills. Under such a condition of the exchanges a quantity of commercial bills on London would be thrown upon the New York market which would exactly meet the demand for bills for all purposes.\* Under such conditions the price of exchange should be near par in each country.

#### BILLS DRAWN BY BANKERS.

It by no means follows, however, that absence of equality of payments causes immediate movements of gold. The bills originating in movements of merchandise are known as commercial bills. They are, in the case assumed, bills drawn against merchandise actually exported from New York to Great Britain. There is another class of bills of great importance, however, which enter into the movement of the exchanges to still further economize the transfer of gold and to diminish the successive shocks which would come to the money market if the only factors were commercial bills and gold. This additional factor is bankers' bills of exchange. These are drawn in the same manner as commercial bills. They are drawn in some cases against actual shipments of gold in order to give to the trader command over the gold which has been transferred between the banks. This operation may be thus described: †

"When gold moves between countries it is an article of merchandise, and bankers' bills are drawn against the movement in the same manner as commercial bills would be drawn against a movement of commodities, though the drafts against gold would be payable in the briefest possible interval of time to save interest charges which, under conditions calling for such an unusual movement, would be abnormally high."

Bankers' bills may be drawn also against credits extended to the bankers abroad. It is in this way that bankers help to avert the unnecessary pressure which would be felt upon the market if every temporary balance of payments had to be settled by the shipment of gold. A New York bank which deals in foreign exchange is usually able to obtain an open credit from a banking house in London or any other point with which it does business. When there is a scarcity of commercial bills on the market, the New York bank is able to meet the demand by drawing bills against its credit abroad. This serves to make the supply of bills equal to the demand. Eventually the New York banker must pay in some manner for his draft upon his foreign credit. He counts upon doing this by himself buying bills of exchange when the supply is in excess of the demand. He thus contributes by the purchase of bills as well as by their sale to temper the fluctuations of the market and keep supply and

\* "In the New York market freight charges figure chiefly on the demand side of London bills, since a large part of the ocean carrying trade is in the hands of English ship-owners, who receive their pay in London bills. The great German transportation companies also have a large New York business which influences the demand for German bills."—Scott, "Money and Banking," p. 245.

† "Foreign Exchange," "New York Financier," p. 19.

demand at a level. Since bankers' bills are usually drawn only after the supply of commercial bills has been exhausted (or shows symptoms of exhaustion) and to avoid the cost of shipping gold, they command a slightly higher price than commercial bills.\* The banker, by delaying the offer of bills for sale until there is a scarcity, is able to obtain a price approaching the gold export point; by delaying the purchase of bills until there is a manifest excess he is able to purchase at a point approaching the gold import point. If at the time he sells his bill at a high price he calculates correctly the time when he will be able to buy at a low price, he makes a profit in excess of the direct profit represented by the cost of shipping gold.

#### NUMEROUS FACTORS AFFECTING EXCHANGE.

The employment of bankers' bills is only one of many factors which complicate the operation of the simple principle of settling balances by an interchange of commercial bills. There is a great variety of transactions growing out of modern financial operations which require remittances one way or the other independent of the shipment of commodities. The payment of interest on securities is one of these factors and dealings in securities which have an international market constitute another factor. The rate of discount for money is also an important factor in determining the profit of the dealer in bills of exchange. A high rate in one centre as compared with a low rate in another will lead bankers to buy or sell or to change their charges according to the influence of the rates upon final profits. A New York banker who has an open credit in Europe will take advantage of high interest rates in New York to sell bills, other conditions being favorable, up to the limit of his credit. He will do this because the money received for the bills sold can be lent in the market at the high rate of discount which prevails there. He will have to pay for the use of this money only the rate of the discount in the market on which the bills are drawn, plus perhaps a small commission, so that there will be a profit amounting to the difference in the rates. This profit will all go to the banker who sells the bills or will be divided between him and the institution on which they are drawn, according to the nature of the contract between them.†

Down to a recent date the comparative excess of capital in Europe seeking investment over the amount of such capital in the United States has made the rate charged for the use of money lower as a rule in Europe than in America. This has made it more profitable for American bankers to sell exchange against their credits in Europe than for European bankers to sell on America. Occasionally, however, this process has been reversed. The low rates of exchange in New York in the autumn of 1903 tempted American bankers to buy bills on London and hold them for sale at later dates at higher prices. The character of such operations was thus set forth by a financial journal: ‡

\* "That a bank draft should cost more than a trade bill is (quite apart from the better standing of the drawer) only natural, for the banker, besides having to remunerate his correspondent, either by paying a trifling commission, or by keeping a balance in London free of interest, must also add on a certain percentage for the trouble of drawing and advising the bill, and providing cover."—Clare, p. 29.

† An operation of this sort in which the risks and the chances of profit are equally assumed on both sides is called a "joint account," and sale of bills by a banker at his own risk and profit, with a fixed commission paid for the privilege of drawing, is called a "free credit" or an "open account."

‡ "Wall Street Journal," Nov. 18, 1903.

‘ Investment purchases of long sterling are now a feature of the foreign exchange market for the first time in several years. The operation is the reverse of that by which sterling loans have been made so frequently during the past two years. It consists in the purchase of bankers’ sixty and ninety day bills for the purpose of holding them until they run to sight. The difference between the present rate for bankers’ long bills and the rate at which it is estimated that demand sterling can be sold when the bills mature, constitutes the profit on the investment.’

This extract brings out the highly technical character of exchange operations and the money factors which enter into them. “ Long sterling ” is the market contraction for bills drawn in pounds sterling for a long period. The antithesis of “ long ” bills is “ sight bills ” and the rates of exchange usually quoted are for “ sight ” and sixty and ninety-day paper. It is obvious that a “ long ” bill may be sent at once to the market on which it is drawn to be sold there for collection at maturity or may be held in the market where it is drawn, as in the case above cited.

A variety of factors operate upon exchange in so many conflicting ways that only those who make a careful study of the subject are capable of making all the intricate calculations required in exchange operations and judging with reasonable certainty of the future course of the market. It is not possible here to follow these operations in detail. The elements which bring complication into the problem are the arithmetical differences between the units of foreign money, the allowances to be made for interest on the bills themselves, the fluctuations in discount rates at different points, the fluctuations in the value of currencies which are not upon the gold standard, and finally the movement of the complex forces of payments of all kinds to be made on one side or the other which determine the equation of supply and demand. There are several technical terms, however, which are so frequently met with in discussions of foreign exchange markets that their definitions may properly be given as they were presented nearly a century ago in Kelly’s “ Cambist. ” \*

“ The word *valuta* or *valeur* is applied on the Continent to the prices or rates at which different kinds of moneys are reckoned in commercial transactions.

The difference of one sort of money compared with another is mostly reckoned at so much per cent. When a better sort is given for a worse, the premium or percentage is called *agio* ; but when the difference or percentage is considered with regard to the inferior sort of money, it is called *discount*. Thus, formerly, when 100 florins banco were given for 104 of currency, the *agio* on *banco* was four per cent ; but, when the same sum was given for ninety-five florins currency, then *banco* was said to be at a discount of five per cent. ”

It is by the skillful combination of these various factors for their own profit that the operations of dealers in exchange tend automatically to withdraw capital from the places where it is least needed and concentrate it in those where it is most needed. Their guide is the theoretically simple one, that they will receive the highest price for money where it is in the greatest demand. The margins upon which such transactions are made have steadily grown narrower, and the employment of bills of exchange has greatly increased with the expansion of commercial operations in recent years. A solidarity has been established between different markets which did not exist a century ago or even a generation ago. It has become possible through the use of the telegraph and ocean cable to conduct operations in exchange and

\* “ The Universal Cambist and Commercial Instructor, ” J, p. XXXIV.

especially in indirect exchange upon very small margins of profit. Such transactions are often made by bankers without direct reference to the movement of commercial bills, simply because they find by careful comparison of the rates of discount in different markets and the price of bills that a small profit may be made by promptly buying or selling. Such transactions are called arbitrage of exchange.

#### ARBITRAGE AND INDIRECT EXCHANGE.

*Arbitrage* is defined by Prof. Courcelle-Seneuil as a traffic in bills "similar to that in merchandise, which consists in buying commercial paper which is depreciated in certain places in order to sell it in other places where it is in demand."\* As the operation is explained by Pierson:†

"Just as the merchant makes his profit out of differences in the prices of goods, so the foreign banker makes his out of differences in the prices of bills, and the operations both of the merchant and the banker have the beneficial effect of reducing these differences to a minimum."

Under normal conditions exchange cannot fall below the cost of importing gold nor rise above the cost of exporting it. Special circumstances affecting the money market or the state of credit have occasionally, however, caused rates which for a short time went beyond these limits. When there is a stringent money market, even a favorable rate for bills of exchange may not tempt the owners of money to invest in bills. One of these occasions was at the outbreak of the Civil War in the United States in 1861, when the political conditions produced such a desire for money on the part of dealers in bills that they were willing to sell the bills at a sacrifice rather than wait for their maturity and payment in England. The probability of war had led to the reduction of importations into the United States, and this had brought more bills into the market than there were buyers with obligations to settle abroad. The combined effect of the large net offerings of bills and the desire for money, was to depress the price of bills momentarily below the cost of importing gold.‡ The operation of an opposite influence was felt in the United States in October, 1839. Specie was shipped to England at a loss in preference to bills at par, owing to the apprehended difficulty of getting the bills discounted under the conditions of pressure then prevailing in the London money market.§

The development of the ocean cable has made possible a method of transferring money and conducting arbitrage operations which dispenses with the direct use of bills of exchange. This method is thus described by Bolles: ]

"Within a few years the practice has arisen of transferring money by telegraph, or, as it is termed by the newspapers, 'cable transfer.' By this method a merchant who desires to ship wheat to London can complete the transaction in a few hours. He can ship the wheat, telegraph the fact to the consignee at London, obtain particulars concerning the conditions of the market, and, if he think best, have the wheat sold at once, 'to arrive,' and to remit the proceeds through a London banker. A bill does not appear at all in the transaction. The amount of business done in this manner has materially reduced the volume of bills in some places. In the Eastern trade with London, in which competition is exceedingly heavy and the margin of profit consequently small, the telegraphic transfer system

] " *Practical Banking*," p. 251.

has been in use for several years. The amount of cable transfers between this country and European countries is constantly increasing."

One of the most complicated of the operations of exchange is indirect exchange. It is an operation which may be availed of either as a convenience in settling commercial transactions or as a source of profit in arbitrage operations in bankers' bills. Indirect exchange is the employment of bills drawn on a given point to settle obligations at another point. In this way are settled many of the balances between countries whose direct trade with each other would create large favorable or adverse balances. If, for example, the United States has sold more goods to British merchants than she has bought from them, but British merchants have sold more to South American merchants than they have bought from them, it is a natural thing that the British should turn over to the American merchants the authority to collect the debts due them in South America and to retain the proceeds. It is no uncommon thing, when the current of trade is in the other direction, so that money is due by British importers to the wool growers of the Argentine Republic, for gold to be shipped from New York to Buenos Ayres to discharge the British obligation.

Such operations are carried on through brokers and bankers, who are governed by the conditions of the market in determining whether to ship gold or to buy or sell bills. They may be, and often are, carried on by bankers for the purpose of making a profit by arbitrage. In such cases the bankers study carefully the rates of exchange and the rates of interest for money at the several points which they propose to make the basis of their operations. If exchange in New York, for example, on Berlin is favorable to New York, so that a comparatively small amount in American currency will buy 1,000 marks in Berlin, while exchange in Berlin on London is also favorable, so that a comparatively small amount in marks will buy a draft for £100, then a banker in New York may find it profitable to sell drafts on London directly to his clients, but to cover them by bills on Berlin, which are to be in turn invested by his agents there in bills on London. These operations, however, involve uncertainties and require skill and accurate calculation to afford a profit.

#### THE FINANCIAL PRIMACY OF LONDON.

It might be supposed that in balancing international obligations bills for an equal amount would be drawn on both sides of the account—that is, that if there was a real equality of indebtedness, bills for the same amount would be drawn in London on New York, and in New York on London. This, however, is not the fact. London is the centre on which most bills are drawn. The exporter of goods to England, to whom money is due in London, draws a bill on London entitling him to its payment. The importer of goods from England, on the other hand, who has to pay for goods in London, usually buys a bill on London for making his payment instead of waiting the arrival of a bill drawn against him. The reason for this is the primacy which London has held during at least a century in financial transactions. This primacy is due partly to the fact that a bill on London is payable in pounds sterling, and that pounds sterling represent a definite weight of gold. There is no delay nor discount in realizing an obligation expressed in English money. This is because Great Britain adopted the gold standard in 1818, and has not departed

from it even to the extent of charging a fractional premium for gold or by throwing obstacles in the way of obtaining gold at the Bank of England. So important to the merchant and banker is this certainty of the English monetary standard that drafts upon foreign countries are sometimes expressed in English money. This is done in order to escape the risks of fluctuations in the value of the foreign moneys, especially those of paper. When the Crimean War broke out in 1854, the London "Economist" advised merchants having transactions with Russian subjects to conduct their business in their own currency instead of that of Russia, for the reason that "No matter then how low the exchange may fall in Russia, the debtor must provide whatever number of rubles is required to purchase a bill for the necessary amount expressed in the stipulated currency."\*

The large volume of business done by London bankers and bill brokers has given a reputation to bills drawn upon and accepted by them which does not belong to houses perhaps equally strong which have not been so long established at the centre of exchanges. This has resulted in making bills upon London a favorite form for short investments on the European Continent. These bills are bought by bankers and held for a shorter or long time according to the state of their own market and that of London. "London paper" often changes hands many times on the Continent before it is sent to London for collection. It forms one of the best forms of assets in the hands of continental bankers independently of the profit which they may make by arbitrage of exchange. The National Bank of Belgium keeps more than half its reserves in foreign bills, largely on London, and a Paris or Berlin banker, by following the same policy, is prepared to meet any sudden deficiency in his cash resources by selling a parcel of his foreign bills.†

#### BILLS DRAWN ON COUNTRIES HAVING AN IRREDEEMABLE PAPER CURRENCY.

Very different is the status of bills of exchange drawn on countries having an irredeemable paper currency. No one except a very venturesome speculator cares to hold such bills as an investment, because there is no definable limit to their depreciation. They cannot rise higher in value than gold, except a fraction under the influence of a special demand for currency, but they may fall in value to any proportion below gold. Bills of this character, payable in irredeemable paper, are subject to the law of supply and demand, but the supply is the subject of monopoly on the part of the issuing Government and is not subject to the regulating influence of the free movement of the precious metals which takes place between countries having a fixed metallic standard. Hence has often resulted in such cases violent speculation in bills of exchange payable in irredeemable currency. Thus, when Russia was upon a paper basis, as M. Touzé points out: ‡

"If it happened, as was often the case, that the Russians were indebted abroad and were obliged to remit English money at whatever the price might be on a given date, there was no limit to the price that might be demanded of such debtors; in other words, there was no limit to the variation of the exchanges. It seemed that the relative value of rouble-paper and cash was no longer one of the elements of the problem. Supply and demand alone

‡ "Traité Théorique et Pratique du Change," p. 35.

determined the price, and if the amount of the exportations of the country did not equal the amount of the importations (as was generally the case), and if the demand for bills necessary to pay for the importations exceeded materially the amount of the bills provided by exportation, the balance to be paid could be settled only at the cost of a great sacrifice."

A similar situation existed for several years in Spain at the close of the nineteenth century as the result of the over-issues of the Bank of Spain. The railways, which had heavy remittances to make at certain dates to Paris for interest on their bonds, found that the price of bills of exchange on such dates was forced up materially in Spanish currency. The evil was partially remedied by opening a credit at two leading French banks of 50,000,000 francs in favor of the Bank of Spain. The purchase price of bills of exchange was fixed from time to time by a syndicate committee and the different railways agreed not to bid against each other for bills at a higher price.\* This operation involved in effect the borrowing of the amount needed to meet deficiencies in the amount of bills of exchange offered, and for a few months, by careful management on the part of the Bank of Spain in gathering up local bills in different cities, exchange was kept fairly steady; but the credit in Paris was exhausted within a year and the experiment was not sufficiently successful to lead to a renewal of the syndicate.† Upon a nation which founds its monetary system on the quicksands of irredeemable paper heavy burdens are imposed in carrying on business with those nations whose system rests upon the firm foundation of the most exchangeable of the metals.

#### FOREIGN EXCHANGE AND THE MOVEMENTS OF GOLD.

In a market where the precious metals move freely, it is obvious that the greater the number of cases in which bankers are able to intervene in the market by the sale and purchase of bills, the smaller will be the number of cases in which gold will have to be exported or imported. The offerings of bills arising exclusively from commercial transactions and payable on sight would simply economize cross-shipments of money, but would require that actual net differences between the amounts due between different countries should be settled in gold. Such differences could not be considerable without reacting sharply upon the rates for the rental of money, and this reaction would in turn influence prices and the cost of production of goods and would eventually check imports of goods and stimulate exports. The introduction of bankers' bills and securities into the market contributes a modifying influence which prevents a sudden and unnecessary operation of these tendencies. If the balance of payments is only temporary, a considerable indebtedness may be allowed to stand unsettled by either commodities or gold until the balance shifts to the other side. This is coming more and more to be the case where there is a large export of national products at one season and large imports of foreign goods at other seasons.

When gold moves, however, from one country to another, it has more distinctly the character of merchandise than in trade within a country, partly because the fact of its being in the form of coin plays little or no part in its value, and partly because the shipment takes the character of a definite merchandise movement which is easier to trace, than in the interplay of demand and supply for the coined medium of exchange within a single coun-

\* *Economiste Européen*, (Jan. 23, 1906), XXIII, p. 107.

† *Vide Economiste Européen*, (Jan. 24, 1904), XXV, p. 156.

try. Gold in international trade is one of many articles of merchandise whose movement is governed by the law of reciprocal demand. There are many special causes which lead to a demand for gold, but fundamentally it acts as a sort of arbiter of the relations of other commodities to each other, in the international markets. If the cost of production of cotton goods, for example, in the United States as compared with the cost in Great Britain, is increased by means of expanding credit, a high cost of living, and a consequent successful demand by laborers for high wages, exports of cotton goods from the United States to China may decrease, while similar exports from Great Britain increase. Diminished exports from the United States will result in diminished offerings in New York of bills upon China, or more probably diminished offerings of bills on London through the process of indirect exchange. Foreign exchange in New York will tend to rise towards the gold exporting point. If gold is actually exported, it will be taken from bank reserves or obtained from the Treasury by the redemption of Government notes drawn from bank reserves. The banks finding their reserves diminished will be compelled to curtail their loans, in order to restore the proper legal relation between their obligations and their reserves, and this curtailment of loans will check speculation and invite higher bids than before for the use of circulating capital. Hence will arise the increase in the rate of bank discount for the use of money which has proved such an efficient influence in maintaining a healthy equilibrium between the value of gold and of goods in one country as compared with its value in other countries. The exchange market, with its offerings of bankers' bills and its arbitrage transactions on minute margins, tends constantly to overcome movements away from this equilibrium and to give a uniform value to gold in all markets.

Rates of foreign exchange are often said to be "favorable" when they tend to importations of gold and "unfavorable" when they tend to exportations of gold. These expressions have been criticised by some economists upon the ground that trade is an exchange of goods and that too much gold is no more to be desired than too much coal or iron.\* The expressions "favorable" and "unfavorable" might be taken as a mere elision, meaning that a given rate of exchange is "favorable" to the importation of gold or another rate "unfavorable" to its importation. These terms, however, express a deeper truth, which, if sometimes exaggerated, nevertheless represents a fundamental principle of monetary science. This is that the foreign exchanges, by indicating the movement of gold, apply the test of exchangeability to other commodities. There are many movements of gold between nations which are not obviously "favorable" or "unfavorable," but when a nation begins to lose gold which is required for maintaining a sufficient circulating medium and adequate banking reserves, this outflow is properly described as "unfavorable." Such an outflow results, in the case of a sound currency system, from a dislocation of the industries of the country and of the cost of production of the national products in relation to those of other countries. Still more "unfavorable" is such an outflow if it arises from defects in the currency system; for such defects do not usually carry their

\* Thus Prof. Bonamy Price says, "This language is profoundly unconscious that gold is a mere tool. It teaches that gold, or coin, or money is an end, a good thing for its own sake, an article worth giving one's wealth to obtain. It is saturated with the Mercantile Theory, so utterly in vain has Adam Smith written."—*Currency and Banking*, p. 33.

own cure by the "correction" of the exchanges, but prolong the condition of "unfavorable" exchange until a country has parted with all its standard money and severed its monetary system from the regulating influence of the interplay of supply and demand for gold throughout the world.

Under a properly organized monetary system, the state of the foreign exchanges is at once a test of economic conditions and of the equation of demand and supply for other commodities. Money being the most durable and most exchangeable of goods, it is sought when other goods decline in marginal value as the result of their overproduction. Prof. Bastable has well defined the operation of money under such conditions: \*

"The equation of international demand can only be maintained through the due adjustment of values in each of the countries concerned; but when money is fully established, so far as internal trade is concerned, values will be estimated in it; it follows that to alter values it is necessary to act on prices; but a change in prices is equivalent to a change in the value of money, and as the value of money is, in a great degree, determined by its quantity, it follows that where the equation of international demand is not established, the most obvious mode of remedying such a state of things is by the transmission of bullion, which will cease when that equation is attained "

CHARLES A. CONANT.

FEDERAL CONTROL OF CORPORATIONS.—In an address delivered before the Jurisprudence Section of the American Social Science Association at the meeting held in Boston on May 11, Judge Wm. J. Gaynor, of Brooklyn, in speaking on "Trusts," said that a demoralizing evil was the issuing of bonds and stock shares by corporations, and particularly trust corporations, in excess of the actual value of their capital.

"This," he said, "was publicly denounced in a speech by the Lord Chief Justice of England a few years ago as organized robbery of the community; and last year the foremost promoter of such fraudulent schemes in England was convicted and sent to prison. Certain of our newspapers thereupon set up a vulgar clamor for the passing of statutes in this country under which similar convictions could be had, not knowing that to set false values on corporate property for the purpose of selling corporate shares is as criminal here as it is in England, and that our penal statutes on the subject are just as broad as those of England. What we need is not more statutes, but such an administration by the courts of those we have as would come from a healthy moral sense in the community at large.

I see no way of removing the evil except by having substantially the same law for all corporations that we now have for banking and financial corporations, namely, requiring that every dollar of the capital stock be paid in in cash at par, instead of allowing stock shares to be issued for property, which makes over-valuation easy and inevitable.

But it is impossible to get any uniformity in the creation and control of corporations so long as all of the States can separately deal with the subject. Many are coming to the belief that the whole subject should be intrusted to the National Government."

# BANKING LAW DEPARTMENT.

## IMPORTANT LEGAL DECISIONS OF INTEREST TO BANKERS.

All the latest decisions affecting bankers rendered by the United States Courts and State Courts of last resort will be found in the MAGAZINE'S Law Department as early as obtainable.

Attention is also directed to the "Replies to Law and Banking Questions," included in this Department.

### COLLECTIONS—DEGREE OF DILIGENCE REQUIRED.

United States Circuit Court, W. D. Pennsylvania, December 19, 1903.

#### BANK OF BAY BISCAYNE vs. MONONGAHELA NATIONAL BANK.

Where drafts are sent from one bank to another for collection and remittance, the measure of duty of the collecting bank is the exercise of ordinary care and reasonable diligence. Plaintiff mailed to defendant bank for collection on July 1 two drafts, amounting to \$1,425.50, on S. Bros. & Co., who were in good credit. On July 3 three more drafts, aggregating \$1,622.41, and on July 5 other drafts amounting to \$2,757.85, were drawn on the same company. The drafts were received by defendant, respectively, on July 5, 7, and 9, with directions to collect and remit without protest. The drafts were presented on the days they were received, and the drawees on each occasion stated that they would pay the drafts as soon as they could verify the amounts from the invoices for which the drafts had been drawn, and requested that the drafts be held until such verification could be made. On July 9 plaintiff requested defendant to inform it whether the drafts had been paid, and on the same day defendant answered by telegram that one of the drafts had been paid that day, and that the other would be paid in a few days. On July 10 plaintiff telegraphed defendant to return the drafts if not paid that day, which was accordingly done. Before July 9 plaintiff had permitted the drawers to overdraw their account \$3,000, and, after receiving the telegram of July 9, permitted a further overdraft of \$2,000; and, by reason of the non-payment of the drafts, plaintiff lost by such overdraft an amount not exceeding \$2,000. *Held*, that plaintiff's loss was not chargeable to defendant's alleged negligence in failing to promptly return the drafts after presentation and non-payment.

*ACHESON, Circuit Judge:* The plaintiff, the Bank of Bay Biscayne, located at Miami, Fla., received for collection from Charles Courley & Co. nine sight drafts drawn by that firm upon Somers Bros. Company, of Pittsburg, payable to the order of plaintiff bank. The drawers were shipping fruit from Florida to Somers Bros. Company, at Pittsburg, and these drafts were drawn on account of such shipments. The plaintiff bank sent these drafts for collection to the defendant, the Monongahela National Bank, located at Pittsburg. The first two of the drafts, which together amounted to \$1,425.50, were mailed on July 1, and were received by the defendant on July 5; the next three, which together amounted to \$1,622.41, were mailed on July 3, and were received by the defendant on July 7; and the other drafts, amounting to \$2,757.85, were mailed on July 5, and were received by the defendant on July 9. The several letters from the plaintiff to the defendant transmitting these drafts stated that they were sent "for collection and remittance," with the added direction, "no protest." On July 5, the date on which the first of these drafts were received, they were presented by the defendant Somers

Bros. Company, and the drafts which were received on July 7 were presented on that day by the defendant to the drawees. On each of these occasions Somers Bros. Company stated they would pay the drafts as soon as they could verify the correctness of the amounts thereof by the invoices for the fruit, and requested that the drafts be held until that verification could be made. The drafts received on July 9 were duly presented by the defendant to the drawees. On July 9 the plaintiff sent a telegram to the defendant, inquiring whether the drafts had been paid. The defendant immediately telegraphed to the plaintiff the following answer: "Draft four forty-three paid to-day. Will pay others in a few days." This telegram was received by the plaintiff on the day it was sent, July 9. On the next day, July 10, the plaintiff telegraphed to the defendant to return the drafts if not paid that day, and accordingly this was done. Before July 9 the plaintiff bank had permitted Charles Courley & Co. to overdraw their account with that bank \$3,000, and, after the telegram from the defendant of July 9 had been received by the plaintiff bank, it permitted Charles Courley & Co. to further overdraw their account \$2,000.

This action was brought to recover damages for the loss the plaintiff had sustained in consequence of these overdrafts; the plaintiff alleging that the overdrafts were permitted because of the defendant's negligence in holding the drafts, and not communicating with the plaintiff sooner. The court submitted to the jury the question of the defendant's alleged negligence, with instructions that the measure of defendant's duty as collecting agent was ordinary care and reasonable diligence. The authorities fully sustain this instruction. (3 Amer. & Eng. Ency. of Law, 805; *National Bank vs. Merchants' Bank*, 91 U. S. 92, 104, 213.) In this latter case Mr. Justice Strong, speaking for the court, said:

"In the case in hand, the Bank of Commerce, having accepted the agency to collect, was bound only to reasonable care and diligence in the discharge of its assumed duties. (*Warren vs. Suffolk Bank*, 10 Cush. 582.) In a case of doubt, its best judgment was all the principal had a right to require. If the absence of specific instructions left it uncertain what was to be done, further than to procure acceptance of the drafts and to receive payment when they fell due, it was the fault of the principal. If the consequence was a loss, it would be most unjust to cast the loss on the agent."

In the present instance the drafts were sent "for collection and remittance," and the plaintiff gave no specific instructions, except not to protest. The drawees did not refuse to pay, but, on the contrary, stated that they would pay the drafts as soon as they could verify the correctness of the amounts by the invoices. The drawees were in good business standing. In the exercise of its best judgment, and acting as it believed for the best interest of the plaintiff, the defendant held the drafts a few days, believing that they would be paid. As the defendant was instructed not to protest, it was not thought necessary to report to the plaintiff at once. The evidence, I think, abundantly warranted the jury in acquitting the defendant of negligence.

Even if the court was technically wrong in stating that the drafts were not dishonored by what occurred on July 5 and 7, when they were presented to the drawees, the error was harmless. The defendant had no knowledge, nor any reason to suspect, that the plaintiff was permitting or would permit

Charles Courley & Co. to overdraw their account. The evidence showed that, if the defendant on the evening of July 5 had mailed to the plaintiff a letter of information, it would not have reached the plaintiff until July 9. Now, on that very day the above-mentioned telegrams passed between the two banks, and the plaintiff was fully advised as to the situation. Therefore no harm ensued for want of a letter. Moreover, before July 9 the plaintiff had permitted Charles Courley & Co. to overdraw their account \$3,000, and after it was informed of the facts the plaintiff permitted a further overdraft of \$2,000. According to my recollection of the evidence, the plaintiff's ultimate loss did not exceed \$2,000. So that the plaintiff sustained no loss that, upon any proper view of the evidence, was chargeable to the defendant.

The case of Merchants and Manufacturers' Bank vs. Stafford Bank, 44 Conn. 564, Fed. Cas. No. 9,438, is wide of the mark. There the collecting bank was specially instructed, "Return at once without protest if not paid." This direction to return at once was not observed, and, as a direct result of the failure to comply with this instruction, the plaintiff's loss occurred.

The motion for a new trial is denied.

---

*LIABILITY OF STOCKHOLDER—FAILURE TO HAVE TRANSFER NOTED ON BOOKS OF BANK.*

United States Circuit Court, E. D. Pennsylvania, January 28, 1904.

SCHOFIELD vs. TWINING.

T., who owned certain shares of stock in a National bank, sold them to his son, and the latter promised to have them transferred on the books to himself, but failed to do so. *Held*, that T. remained liable as a stockholder.

---

J. B. MCPHERSON, *District Judge*: The First National Bank of Asbury Park went into the hands of a Receiver in February, 1903, and an assessment of \$53 per share has since been levied upon the shareholders. This suit is brought to recover the assessment from the defendant, who was a registered shareholder at the time of the bank's failure, and the question to be decided is whether he has offered sufficient evidence to be submitted to a jury in support of his contention that he ought to be relieved from liability in spite of the fact that the shares, in respect of which the assessment has been levied, still stand in his name upon the books of the bank. There is no dispute about the facts. If they justify the inference that he had complied with the legal rules that govern the duty of one who sells such stock, the case should have been submitted to the jury.

On or about November 4, 1902, the defendant, who owned forty shares of stock, sold them to his son A. C. Twining, and received in payment a demand note, secured by certain collateral. At the time the sale was made, A. C. Twining, who was then a director of the bank, promised his father that he would see that the shares were properly transferred. He never fulfilled this promise, however, and the defendant himself made no attempt to have the transfer made. So far as appears, he never spoke to the Cashier or President, or any other officer of the bank, upon the subject, and never inquired whether the stock had actually been transferred. Under these circumstances, it seems to me that the authorities clearly decide that the defendant's liability continued.

It is needless to discuss the various cases in which the stockholder's double

liability has been considered. The latest decisions are *Earle vs. Carson*, 188 U. S. 42, and *Rankin vs. Fidelity Trust Co.* 189 U. S. 242, where other cases upon the subject are referred to. It seems to me to be apparent from the facts above stated that the defendant intrusted the transfer of these shares to his son as his agent, and is therefore responsible for his agent's default, or, if he did not make the son his agent, he confided in the promise that the shares would be transferred, and took the chance that it would be carried out. I do not think the fact important that the son was a director of the bank at the time. It is probably true that he was an influential personage in the councils of the board, but he was not the transfer agent of the stock, and could not himself have made the requisite entries upon the books of the bank. Merely as director, he had no authority to direct the Cashier to make the transfer. His right to give such an order, or make a request of a similar character, was based upon the fact that he had bought the shares, and was entitled, as the purchaser, to have them transferred, or upon the fact that he was the seller's agent for the specific purpose of having the transfer made upon the books. In the most favorable aspect for the defendant, he was his father's agent; and his failure to request the proper officer to transfer the shares was merely the failure of an agent to perform a duty that he had promised his principal to perform, and for such default the principal must bear the consequences.

Moreover, there is not a particle of evidence in the case to show that the bank was solvent at the time the transfer took place, or (what is much more important) to show that the defendant honestly believed it to be solvent. For all that appears, the defendant may have known that the bank was then in failing circumstances, and may have transferred the stock for the purpose of evading the double liability. In all the cases that have been decided upon this subject, so far as I know, a registered stockholder has been required to offer evidence to show his good faith at the time the sale was made. Registry makes him *prima facie* liable, and the burden of proof is upon him to show a sale in good faith, and a proper attempt to have the transfer made upon the books of the bank.

As I think, the plaintiff was entitled to the verdict which the court directed the jury to render, and the motion for a new trial is accordingly refused.

#### TAXATION OF SAVINGS BANKS—NEW YORK STATUTE.

Court of Appeals of New York, February 23, 1904.

PEOPLE, *ex rel.* BANK FOR SAVINGS IN THE CITY OF NEW YORK, vs. MILLER.  
Under the Tax Law of New York, the Comptroller, in ascertaining the value of the surplus fund and undivided earnings of a Savings bank, must appraise the bonds and securities at their market value whenever such value is less than the par value.

This was an action by the people, on the relation of the Bank for Savings in the city of New York, against Nathan L. Miller, Comptroller of the State of New York.

HAIGHT, J.: We are satisfied with the determination of the appellate division as to all the items and questions in controversy, with one exception. The Comptroller, in ascertaining the value of the relator's surplus and undivided earnings, appraised the bonds belonging to the relator at their face value, notwithstanding the fact that it appeared that the market value of

some of the bonds was less than their face value, and that the difference between such valuations amounted to the sum of \$296,500. The action of the Comptroller in so valuing the relator's securities was based upon his construction of the statute, to the effect that all of the securities of the relator were required to be assessed by him at their face value.

The Legislature, by chapter 117, p. 296, of the Laws of 1901, added a new section, known as 187b, to the tax law (Laws 1896, p. 859, c. 908), which provides as follows: "Franchise Tax on Savings Banks. Every Savings bank incorporated, organized or formed under, by or pursuant to a law of this State, shall pay to the State annually for the privilege of exercising its corporate franchise or carrying on its business in such corporate or organized capacity, an annual tax which shall be equal to one per centum on the par value of its surplus, and undivided earnings."

It will be observed that the statute contains no provision for the valuation of the securities held by the bank at their "face value," but instead thereof the provision is "the par value of its surplus and undivided earnings." The surplus may consist of property which has no face value. It may consist of real estate. Savings banks are authorized to invest the money of depositors in mortgages upon real estate, and it is a matter of common knowledge that many Savings banks throughout the State have had to bid in upon foreclosure sale many parcels of real estate upon which loans had been made. So that, while it may be conceded that the words "par value" ordinarily are to be given the same meaning as "face value," when applied to bonds and stocks having a face value, yet, when used as applying to the surplus and undivided earnings, and not limited to bonds and stocks, the meaning may be very different.

In determining the legislative intent, it becomes important to consider what was meant by "surplus and undivided earnings." By referring to the banking law (chapter 689, p. 1842, of the Laws of 1892), we find provisions authorizing the trustees of Savings banks to accumulate a surplus fund for the security of depositors—not, however, to exceed fifteen per cent. of the deposits. They are also to regulate the rate of interest or dividends—not, however, to exceed five per centum per annum upon the deposits—and, in case the surplus amounts to more than fifteen per cent. of the deposits, the trustees are required at least once in three years to divide such accumulation by an extra dividend equitably among the depositors. (Section 123.)

It will thus be seen that the surplus in Savings banks is the fifteen per cent. accumulated over and above the amount due depositors, and the undivided earnings in excess of such accumulation, and that, as to the undivided earnings, they are required to be divided among the depositors as often as once in three years. It is upon this surplus and undivided earnings that the Legislature has authorized the imposition of a franchise tax equal to one per cent. thereof, and, in ascertaining the value thereof, the statute expressly provides that "in determining the per cent. of surplus held by any Savings bank its interest-paying stocks and bonds shall not be estimated above their par value or above their market value if below par." (Section 124.)

It appears to us that these statutes are *in pari materia*; that in enacting the tax law of 1901, providing for a franchise tax upon the surplus and undivided earnings of a Savings bank, the Legislature had in mind and intended to impose the tax upon the surplus and undivided earnings provided for by

the banking law, and therefore the provisions of that law control the manner of determining the value of the surplus to be taxed. The provisions of the statute that interest-paying stocks and bonds shall not be estimated "above their market value, if below par," is just and reasonable. It may be that this bank is possessed of other bonds whose market value is above par, and that the amount thereof would equal or exceed the amount of the loss by reason of those whose value is below par.

But this fact, if such it be, cannot affect the question. The next bank assessed may be possessed of securities, none of which may have a value above par, and many of which may have a value very greatly below par. It has never been the legislative purpose to require property valued for assessment to be appraised above its actual and true value, even if it had the power to do so, and we do not think that such was the legislative intent in enacting the statute in question.

The order of the appellate division and the determination of the Comptroller should be further modified by deducting from the valuation of the surplus and undivided earnings the sum of \$296,500, and the tax should be computed upon the balance remaining, and the assessment, as so modified, should be affirmed, without costs of this appeal to either party.

---

*DUTY OF DEPOSITOR TO EXAMINE PASS BOOK—WHAT EXAMINATION SUFFICIENT—EXAMINATION BY CLERK.*

Court of Appeals at St. Louis, Mo., December 15, 1903.

KENNETH INVESTMENT COMPANY vs. NATIONAL BANK OF THE REPUBLIC OF ST. LOUIS.

To prove negligence in paying checks purporting to be drawn by plaintiff against his account with defendant bank, it is competent to show that a check merely stamped with plaintiff's name, but not signed by any one, was paid, though the money drawn by it was not converted by the forger, but used by plaintiff.

Ten days cannot be arbitrarily fixed as sufficient time, under all circumstances, for a bank depositor to examine his pass book, after it has been balanced and returned to him with canceled vouchers.

A bank depositor is not bound by the examination of its pass book, nor to be treated as though it had made none, where its clerk to whom it intrusts such duty and forged checks, which had been paid, if ordinary care was used in selecting the clerk.

---

BLAND, P. J.: This is the second appeal of this case. The opinion on the former appeal will be found in 96 Mo. App. 125, to which we refer for a statement of the controlling facts in the case. The issues on the retrial were submitted to the court without the intervention of a jury. The finding and judgment of the court were for the plaintiff. Defendant appealed. On the second trial the date and other particulars of all the checks forged by Chatard and paid by the defendant bank were brought out, and additional evidence was heard as to the character of the forgeries, and the degree of diligence exercised by defendant's paying teller to detect the forgeries at the time the checks were paid by him.

The plaintiff, for the purpose of proving negligence on the part of the teller, offered and read in evidence, over the objection of the defendant, a check for \$50 that was stamped with plaintiff's name with a rubber stamp, but was not signed by Davis or any other person. It is admitted that the money drawn by this check was not converted by Chatard, the forger, but

was used by plaintiff in its business. For the reason that the money drawn on this check was properly applied, it is contended by defendant that it was inadmissible to show negligence in the payment of the forged checks. We do not think the check was competent to show negligence generally on the part of the paying teller, but was competent as tending to prove negligence in paying checks purporting to be drawn by the plaintiff against its account with the defendant bank.

The court declared the law to be that what is a reasonable time in which a depositor in a bank should examine his pass book, after it had been balanced and returned to him with the canceled vouchers, is a question of law, but refused to declare, as a matter of law, that ten days was a reasonable time in which to make such examination. We do not think ten days should be arbitrarily fixed as the time for making the examination in every case, but that it is a reasonable time in which to make the examination when the depositor and bank reside in the same town or city, and so held when the case was here before, and also in the case of *McKeen vs. Bank*, 74 Mo. App. 281.

The defendant moved the court to declare the law to be, in effect, that while the plaintiff was not bound by any of the examinations of the pass book made by Chatard, if at the time of such examinations it contained any of his forged checks, yet it was in no better position than if it had made no examination whatever, and for that reason could not recover, but the court refused to so declare. In *Wachsman vs. Columbia Bank*, 8 Misc. Rep. 280, it is held that the depositor exercised ordinary care by intrusting the duty of examining the pass book and vouchers to the usual agent (the bookkeeper) in the ordinary course of business, although he (the bookkeeper) was a forger, and that the depositor was not estopped to assert the forgeries by mere delay in discovering them; that the delay did not make the account a stated or conclusive one, and only cast upon him the burden of impeaching it for mistake, and proving the checks were forged. In *Weisser's Adm'r's vs. Denison*, 10 N. Y. 68, checks forged by the confidential clerk of the depositor were paid by the bank, and charged to the depositor in his pass book, with the forged checks and others, and returned to the depositor; and the clerk, at the request of the principal, examined the book and reported it correct, and the principal did not discover the forgeries until several months afterwards, when he immediately notified the bank. In an action to recover the balance, it was held the bank could not retain the amount of the forged checks; that to deny a recovery would be, by a legal fiction, to charge the depositor with the tortious and even criminal acts of the servant.

In *Frank vs. Chemical National Bank*, 84 N. Y. 209, under a somewhat similar state of facts, it was held that plaintiff would not be estopped from questioning the accuracy of the account, and that defendant was liable for the balance, deducting the forged checks.

In *McKeen vs. Bank*, 74 Mo. App. 281, and *Quattrochi Bros. vs. Bank*, 89 Mo. App. 500, we held that the depositor was bound to examine his pass book, when written up and returned to him with the canceled vouchers, within a reasonable time, and to give prompt notice to the bank of any errors, frauds, or mistakes therein. It seems to us this is a reasonable requirement, and that if a forged check is returned, with the pass book, to the depositor, charged to his account, which through his negligence he fails to discover, and the bank suffers damages thereby, he, rather than the bank, should suffer

the loss. But we have never held, and do not think it sound law to hold, the depositor estopped to charge the bank with the forged checks, if he has used ordinary care in the examination of his pass book and returned checks, and failed to discover the forged checks and to give notice thereof; nor do we think he should be estopped if he fails to make any examination whatever, provided it is shown that the bank was negligent in paying the forged checks.

To hold otherwise, it seems to us, would be a serious modification, of the rule thoroughly grounded in the jurisprudence of both England and this country since the decision in 1762 of Lord Mansfield in *Price vs. Neal*, 3 Burr. 1354, which is, "If a bank pay the money of its depositor on a forged check, no matter under what circumstances of caution, or however honest in the belief in its genuineness, if the depositor himself be free of blame and has done nothing to mislead the bank, all the loss must be borne by the bank." (*U. S. Bank vs. Bank of Ga.*, 10 Wheat. 333; *National Park Bk. vs. Ninth National Bk.*, 46 N. Y. 77; *Hardy & Bros. vs. Chesapeake Bk.* 51 Md. 562; *Smith vs. Mercer*, 6 Taunt. 76; *Redington vs. Woods*, 45 Cal. 406; *Howard & Preston vs. Mississippi Valley Bk. of Vicksburg*, 28 La. Ann. 727; *Mackintosh vs. Eliot National Bk.*, 123 Mass. 393; *First National Bk. vs. State Bk.*, 22 Neb. 769; *Brown vs. Daugherty* [C. C.] 120 Fed. 526; 2 *Daniel on Negotiable Instruments* [3d Ed.] sec. 1359-1655; 2 *Morse on Banks and Banking*, 463.) A rule that would require that the examination should be made by the depositor in person, or that would charge him with the fraud of his trusted employee, should he intrust to him the examination, would be a harsh one, and at war with the relation which a bank sustains to its depositor, and very much weaken the salutary rule that "a bank, in paying money on the check of its depositor, does so at its peril, and takes the risk of the check being genuine."

There was evidence pro and con as to the character of the forged checks, and as to the degree of diligence exercised by the defendant's paying teller in cashing the checks.

The court, at the instance of plaintiff, declared the law as follows:

"(4) If the court, sitting as a jury, believes and finds from the evidence that the checks in question, aggregating \$1,093, were forgeries, then the plaintiff is entitled to recover said amount, less \$78 paid into court, with interest at six per cent. on the balance (\$1,015) from October 8, 1894, the date of the institution of this suit, unless it believes and finds from the evidence that defendant used reasonable care and skill in detecting said forgeries before paying such checks.

And unless the court further finds and believes from the evidence that the plaintiff did not within a reasonable time after June 13, 1894, when its bank book was balanced, make an examination of its returned checks, pass book, and check book, to ascertain and determine if said check for \$78 was a forgery, and notified defendant thereof, and that by reason of said failure on the part of plaintiff the defendant was especially damaged thereby.

In regard to such examination, and the duty of plaintiff to make the same, the court declares the law to be that the plaintiff was not wanting in proper care in the examination of its said accounts, if it intrusted to some competent person the duty of making that examination for it.

And the court further declares the law to be that if such person was the bookkeeper of plaintiff, and that he forged said checks, then the knowledge

of such person (in this case, one Chatard), the bookkeeper of plaintiff, gained in the commission of such forgeries, or as bookkeeper of plaintiff in handling such checks, pass book, and bank book, was not imputable to plaintiff.

And if said Chatard withheld and failed to disclose the knowledge which he had thus acquired from plaintiff, then plaintiff is not bound by the knowledge which Chatard had thus acquired.

And the court further declares the law to be that if plaintiff, in selecting its bookkeeper to have charge of its pass book, check book, and returned checks, used ordinary care (that is, the same care which a person of ordinary prudence would use under similar circumstances), then the plaintiff was not guilty of negligence in intrusting such duty to its bookkeeper. Nor was the plaintiff required, after imposing such duty upon its bookkeeper, to go further, and make a personal inspection, through its officers, of such books and checks aforesaid, but, in imposing such duty on such bookkeeper, plaintiff acted with ordinary prudence; that is, such prudence and care as a person in like circumstances would use and employ."

We think this instruction is in harmony with the former decisions of this court, and that the last paragraph is supported by the decisions of the New York courts, *supra*, and is supported by reason and the practice of merchants to intrust the examination of their pass books to a trusted employee.

The finding and judgment are supported by the law and the evidence, and the judgment is affirmed.

---

*TAXATION OF BANKS AND BANK STOCKS—STATUTE OF MISSOURI.*

Supreme Court of Missouri, Division No. 1, February 10, 1904.

STATE, *ex rel.* MILLER, COLLECTOR, vs. SHRYACK.

Under the statute of Missouri, the real estate of a bank is to be assessed against the corporation, the personal property is not to be assessed at all, and the shares of stock are to be assessed in the names of the shareholders.

This rule applies to State banks as well as to National banks.

---

This was an action under section 987, Rev. St. 1899, by the collector of Johnson county to collect from the defendant, as a stockholder, director and trustee in liquidation of the Farmers and Merchants' Bank, of Warrensburg, the sum of \$385.11, the taxes for 1899 that were assessed against the bank. After the usual and necessary averments in ordinary tax cases, the petition alleges that on April 24, 1899, the bank dissolved, leaving these taxes unpaid, and that the defendant was a director and a stockholder, owning ten shares, of the par value of \$100 each, and that he received \$1,000 as his share of the capital stock upon the dissolution, and that, as such stockholder and trustee, the sum of \$30,000 of the money of the bank passed through his hands to the stockholders, and hence, under the statute, he is liable for these taxes. The answer admits that the bank was a corporation organized under the laws of this State, and that the defendant was a director and stockholder, as charged, and then denies generally the other allegations in the petition.

MARSHALL, J. (omitting part of the opinion): The question, therefore, is whether the act of 1895 has so changed the law as to require all the property of a corporation to be assessed direct to the corporation, in the corporate name, instead of having the shares assessed to the shareholders personally, and only the real estate assessed to the corporation. At first blush, it might

seem that the act of 1895 intended to make such a change. The fact that the first sentence of the act of 1891, and of all prior laws, required the property of corporations to be assessed and taxed as the property of individuals, and that the act of 1895 struck out the words "as the property of individuals," and substituted therefor the words "as such companies or corporations in their corporate name," and that the act of 1895 struck out the provision of the act of 1891 which required the president of the corporation to furnish "the names of all persons who hold" stock therein, might, without further analysis of the act, furnish some foundation for the contention that such was the intention of the act of 1895. But in spite of those changes in the phraseology of the law, a closer scrutiny of the act of 1895 will clearly demonstrate that such was not the intention of the lawmakers, or that, if it was, they wholly failed to carry that intention into effect, or to so provide. Several conclusive reasons prove that this is so. In the first place, if the act of 1895 intended to have all corporate property assessed direct to the corporation, the lawmakers would have said so in so many words, and would have stopped with the first sentence of that act. If such had been their intention, no possible reason or sense can be discerned for enacting the balance of the act. If the property was meant to be assessed against the corporation, the provision requiring the President to furnish a list of the shares of stock, and their face value, would be perfectly useless. So, likewise, would be the provision requiring the value of the real estate to be deducted. For in such event the real estate, as well as the personal property, would be assessed against the corporation direct; and who were the stockholders, or what was the value of their shares, would be of no moment.

The fact, therefore, that these provisions were left in the act of 1895, clearly shows that the Legislature did not intend to make the change suggested. But there are other cogent reasons for believing that the Legislature did not so intend. It will be observed that prior to the act of 1891 nothing was said in the law about deducting the value of real estate, and assessing the value thereof against the corporation direct, and that the act of 1891 provided for the first time that the value of the real estate and fixtures should be so deducted, and that the act of 1895 omitted the provision as to the fixtures, and left it so that only the value of the real estate should be deducted.

There was a reason for such changes, and it was this: Section 5219, Rev. St. U. S. (U. S. Comp. St. 1901, p. 3502), under which alone a State has any power to tax National banks, provides as follows: "Nothing herein shall prevent all the shares in any association from being included in the valuation of personal property of the owner or holder of such shares, in assessing taxes imposed by authority of the State within which the association is located; but the Legislature of each State may determine and direct the manner and place of taxing all the shares of National banking associations located within the State, subject only to two restrictions, that the taxation shall not be at a greater rate than is assessed upon other moneyed capital in the banks of individual citizens of such State, and that the shares of any National banking association owned by non-residents of any State shall be taxed in the city or town where the bank is located, and not elsewhere. Nothing herein shall be construed to exempt the real property of the associations from either State, county or municipal taxes, to the same extent, according to its value, as other real property is taxed." Prior to the passage of this act, the Federal Supreme

Court had uniformly held that no State could tax any property or share of a National bank, because such banks were instruments of the national Government. The Supreme Court of the United States holds that there is property in shares of stock which is distinct from the property of the corporation. (*People vs. Tax Com'rs*, 4 Wall. 244; *Bank vs. Tennessee*, 161 U. S. 134.)

The section of the Federal laws quoted has undergone adjudication by the Supreme Court of the United States in many cases, but for the purposes of this case it is only necessary to refer to *Aberdeen Bank vs. Chehalis Co.* 166 U. S. 440; *Owensboro National Bank vs. Owensboro*, 173 U. S. 664, and *Third National Bank of Louisville vs. Stone*, 174 U. S. 432.

It is sometimes said that there is a conflict between the first and the two last cases cited, but a critical examination of those cases shows that it is not only a mistake to so construe them, but that the Supreme Court of the United States did not so regard them, for it was not even considered necessary in deciding the second case to refer to or discuss the first case, and the third case is based solely on the second. The rule announced in those cases is that "this section, then, of the Revised Statutes, is the measure of the power of a State to tax National banks, their property and franchises. By its unambiguous provisions the power is confined to a taxation of the shares of stock in the names of the shareholders, and to an assessment of the real estate of the bank. Any State tax, therefore, which is in excess of, and not in conformity to, these requirements is void." Accordingly, a tax upon the personal property of a National bank to the bank, and not upon the shares of stock in the names of the shareholders, was held to be void. That court further holds that the form, as well as the substance, of the statute must be followed, and that no equivalents are permissible.

The underlying reason of the rule is that the capital and much of the property of a National bank are exempt from taxation by the Federal laws, and the shares of stock and the real estate are not exempt, but may be taxed by the express permission of Congress. This clearly shows why the lawmakers in Missouri have always provided for taxing the shares of stock in a corporation in the names of the shareholders, instead of laying the tax direct upon the property of the corporation. This also explains why the act of 1891 provided for deducting the value of the real estate and fixtures, and assessing them against the bank. The lawmakers were trying to arrange it so as to conform to the National Banking Act. They made a mistake in assessing fixtures as well as real estate against the bank, and one of the manifest purposes of the act of 1895 was to correct the mistake, and make the State statute conform to the Federal statute, so as to tax the real estate alone to the corporation, and to lay a tax on the shares of the stockholders in the names of the stockholders, and not to tax the personal property of the bank at all. It is too clear to admit of doubt that this was the purpose and intention of the act of 1891, as well as of the act of 1895. The lawmakers were trying to arrange it so as to reach the taxes on National banks authorized by the Federal statute quoted. Any other construction placed upon this act would have the effect to exempt all real estate and shares of stock in a National bank from taxation, and clearly the Legislature had no such intention.

In spite, therefore, of the change of the language employed in the first sentence of the law the conclusion is inevitable that the true meaning of the act of 1895 is that the real estate shall be assessed against the corporation,

the personal property of the corporation shall not be assessed at all, and the shares of stock shall be assessed in the names of the shareholders. Thus the domestic corporations and the National banks are put on the same basis, there is no discrimination, and the letter and form and substance of the power conferred by the Federal statute are observed. The bank in question is a domestic bank, but the law is the same as to it that it is as to National banks. After the assessment is thus made against the shares of stock in the names of the shareholders, it is legal to make the bank pay the tax, and recover it from the stockholders. (Section 9155 Rev. St. 1899; *National Bank vs. Commonwealth*, 9 Wall. 353; *Aberdeen Bank vs. Chehalis Co.* 166 U. S. 440.)

The tax in this case was against the property of the bank of every kind, direct, and not as the statute requires. The assessment, therefore, was void.

The judgment of the circuit court is right and is affirmed. All concur; *Brace, P.J.*, in the result.

---

*LOANS TO OFFICERS OF BANK—RESOLUTION AUTHORIZING—WHEN SUFFICIENT.*

Supreme Court of Iowa, February 12, 1904.

GERMAN SAVINGS BANK OF DES MOINES vs. DES MOINES NATIONAL BANK.

The statute of Iowa which provides that all loans by a bank to its officers shall be made only by action of the directors in the absence of a party applying therefor, requires that each particular loan shall be passed upon by the board of directors, and a general resolution authorizing loans to officers and directors the same as to other persons, is not sufficient.

---

This was an action to recover money alleged to have been obtained by fraud. The ground of the alleged fraud consisted in the use of the funds of the Savings bank to pay notes of its Treasurer held by the defendant, a National bank.

LADD, J. (omitting part of the opinion): At the second meeting of the board of directors of the Savings bank, March 7, 1893, a resolution was spread upon its records "that the managers of the bank be and they are hereby authorized to make loans to the members of the board of directors, including the President and Cashier of the bank direct, and on their indorsement the same as other persons." The bank was then left in practical control of the Cashier, who, notwithstanding the prohibition of the statute, proceeded in that capacity to deal with himself, individually and as treasurer of the oatmeal company, "the same as other persons."

Under section 17 of chapter 60, p. 52, of the Acts of the Fifteenth General Assembly, "all loans made to said trustees, officers, servants and agents of the bank shall be upon the same security [as] required of others, and in strict conformity to the rules and regulations of the bank; and all such loans shall be made only by the board, and shall be acted upon in the absence of the party applying therefor."

Practically the only change from this in the present statute is the requirement that the action of the board be spread upon the records. (See section 1869 of the Code.) The manifest purpose of the law is to prohibit any loan to an officer of the bank unless that particular loan had been passed upon by the board of directors. Every such loan is to be separately considered, and the propriety of making it determined by the board, independently of any

action on the part of the applicant. He is excluded from its deliberations in order to insure freedom of inquiry and discussion. Even with these safeguards, the influence of intimate association is often more potent than business discretion. Indeed, the confidence ordinarily reposed in the managing officers of a bank both by directors and the public is such that to permit a loan of its money, or that due to depositors, to them, under any circumstances, seems of doubtful propriety. It is the most frequent cause of failure, and the occasion of great loss to patrons whose deposits many times exceed the capital stock of the bank. But it is enough now to say that any loan to an officer of the bank not passed upon by the board of directors was illegal, and a blanket resolution like that adopted will afford no protection.

Whether this would be true without the statute, see *West St. Louis Savings Bank vs. Shawnee County Bank*, 95 U. S. 557; *Zane on Banks and Banking*, sec. 107; *Clafin vs. Bank*, 25 N. Y. 293; *Lee vs. Smith*, 84 Mo. 309.

---

*RIGHT OF STOCKHOLDERS OF A NATIONAL BANK TO INSPECT ITS BOOKS.*

Supreme Court of Utah, February 9, 1904.

HARKNESS vs. GUTHRIE.

The right of a stockholder of a National bank to inspect its books is a common law right, and not dependent upon a State statute; and it is not impaired by the provisions of the National Bank Act that "no association shall be subject to any visitatorial powers other than such as are authorized by this title or are vested in the courts of justice."

---

*BASKIN, C. J.*: On the application of the plaintiff, an alternative writ of mandamus was issued, commanding the defendants to permit the plaintiff to inspect all of the books, accounts and loans of the Commercial National Bank of Ogden City, Utah, or show cause on April 25 why they had not done so. On the day mentioned the defendants appeared, and, in answer to plaintiff's affidavit and the alternative writ, alleged "(1) that this court had no jurisdiction to hear or determine any of the matters complained of by plaintiff, or any issue that could be joined thereby; (2) that the matters complained of by plaintiff do not constitute a cause of action of any kind against these defendants, or any of them; (3) that the plaintiff is not entitled to the relief prayed for in his said action, or any relief, and that the court has no jurisdiction to grant the relief which plaintiff seeks."

The material facts alleged in the affidavit of the plaintiff upon which the alternative writ was issued, and upon which at the hearing a mandatory writ was granted, are as follows: That the defendants are the officers of the bank, and that the books, accounts and notes are in possession and under the control of defendants; that the plaintiff is a stockholder in said bank, and, as such, "on or about February 1, 1903, made a demand upon said directors, and also upon said J. W. Guthrie, as President, A. R. Heywood, Vice-President and general manager of said bank, and also upon R. T. Hume, as Assistant Cashier of said bank, for permission to permit affiant to inspect all books, accounts and loans of said bank, and affiant made demand for such inspection at such time or times as would not interfere with the proper conducting and operating of said bank; that each and all of said persons refused permission to affiant to inspect the books, accounts and loans of said bank at any time or at all, and still refuses to permit such inspection; that he seeks this inspection for the purpose of ascertaining the value of his stock in said bank, and

for the purpose of ascertaining whether the business affairs of said bank have been properly conducted according to law; that loans have been made to a favored few of the patrons of said bank of more than one-tenth of the capital stock to each of said patrons, which is contrary to law; and that he believes the said directors and officers of said bank have been guilty of other irregularities, which can only be stated after an inspection of the books, accounts and loans of said bank."

The only question involved is shown by the following quotation from appellants' brief, to wit: "At the trial the only issue presented was whether a stockholder of a National bank created and controlled by acts of Congress possesses the same powers and rights of access to an inspection of the books as are possessed by the stockholders of other corporations."

The right of inspection is a common-law right, and, unless restricted by statute or the corporation's charter, will not be denied when sought by a stockholder for a proper purpose. The provision that "all books of any corporation shall at all reasonable hours be subject to the inspection of any *bona fide* stockholder," contained in section 329 of the Revised Statutes of Utah of 1898, does not restrict the common-law right, but is in harmony therewith. Therefore, unless, as claimed by appellants' counsel, inspections of the character sought in this case are prohibited by the following provisions of the National Bank Act (section 5241, Rev. St. U. S. [U. S. Comp. St. 1901, p. 3517]), viz., "no association shall be subject to any visitorial powers other than such as are authorized by this title, or are vested in courts of justice," the writ in question was properly granted.

Visitorial powers and the stockholders' right of inspection are not one and the same thing. In 7 Am. & Eng. Ency. Pl. & Pr. 855, visitation of corporations is correctly defined, and its purposes aptly stated as follows: "By 'visitation of corporations' is meant the act of examining into its affairs. The person authorized to make such examination is called the visitor. The purpose of visitation is to supervise, direct and control the management of the corporation." Numerous cases and authorities are cited which support the text. (See, also, text and cases cited in 1 Abbot's Digest of Law of Corp. 873.)

The visitorial power over private eleemosynary corporations vests in the founder or his heirs, but they may appoint others to act. In the United States visitorial power over all except private eleemosynary corporations existing under and by virtue of the laws of a State vests in the State, and, as to those formed under an act of Congress, it vests in the general Government, and is exercised through the medium of the courts, or by visitors appointed for that purpose by or in pursuance of statutes.

It is correctly stated in Merrill on Mandamus, sec. 175, that "visitors of corporations have power to keep them within the legitimate sphere of their operations, and to correct all abuses of authority, and to nullify all irregular proceedings.

In America there are very few corporations which have private visitors, and, in the absence of such, the State is the visitor of all corporations."

The common-law right of inspection by the stockholder is a personal privilege arising from his ownership of stock of the corporation, and can be exercised for any legitimate purpose beneficial to him, without any special appointment for that purpose; but he cannot, in its exercise, as the State,

through the medium of the courts, or a visitor, may do, interfere with or direct the general operations of the corporation. The difference between the visitorial powers over corporations and the stockholder's right of inspection is obvious.

We are clearly of the opinion that section 5241 of the Revised Statutes of the United States, before quoted, does not apply to, or in any way affect, the common-law right of stockholders. (*Winter vs. Baldwin*, 89 Ala. 483, 7 South. 734; *Matter of Tuttle vs. Iron Nat. Bank*, 170 N. Y. 9.)

The judgment granting the writ of mandamus is affirmed, with costs. *Bartch and McCarty, JJ.*, concur.

#### NOTES OF CANADIAN CASES AFFECTING BANKERS.

[Edited by John Jennings, B. A., LL. B., Barrister, Toronto.]

---

##### *STATUTE OF LIMITATIONS—SIMPLE CONTRACT DEBT—CONVERSION INTO SPECIALTY DEBT—PAYMENT OR ACKNOWLEDGMENT OF DEBT—EVIDENCE OF.*

*BANK OF MONTREAL vs. LINGHAM* (Ontario Law Reports, Vol. 7, page 164).

This was an appeal from the judgment of *MacMahon, J.*, dismissing the plaintiff's action. The facts sufficiently appear in the judgment of *Moss, C. J. O.*, following:

JUDGMENT (*Moss, C. J. O.*, *OSLER, MACLENNAN, GARROW and MACLAREN*): As I understand the plaintiff's claim in this action they are not seeking payment of the amount of the two promissory notes for \$35,000 and \$25,000 respectively in addition to the sum of \$58,875.52 mentioned in the deed of June 7, 1884.

The amount claimed is the sum of \$58,875.52, principal money, with interest at six per cent. per annum from June 7, 1884, to August 1, 1896, as of which day credit is given for \$6,500, leaving \$95,295.77, on which sum interest is computed from August 1, 1896, to the date of the commencement of the action.

At the date of the deed of June 7, 1884, the defendant was indebted to the plaintiffs in the sum of \$60,000 in respect of the two promissory notes, and in the further sum of \$28,875.52 upon an open account consisting of advances to the amount of \$108,906.63 upon which \$80,031.11 had been paid previously to the date of the deed. This made the whole indebtedness to the plaintiffs up to that time to be the sum of \$88,875.52, and in addition to other securities the plaintiffs held a guarantee by Job Lingham to the amount of \$30,000. The defendant was also indebted to his father, Job Lingham, in the sum of \$10,000, in security for which he held a conveyance of certain lands, the property of the defendant.

While matters stood thus, Job Lingham, the plaintiffs, and the defendant entered into the deed June 7, 1884. Under it the lands of the defendant theretofore held by Job Lingham were vested in a trustee for the plaintiffs, with power to make sale of them under certain circumstance. The lands continued to be so held until after the death of Job Lingham in 1889. In the year 1893 the plaintiffs were pressing for payment and taking the first steps toward a sale of the lands. They proposed to the defendant that in order to save expense

and trouble over sales under the terms of the deed of June 7, 1884, the defendant and his brothers and sisters, who were the heirs and next of kin of Job Lingham, should join in releasing their interests in the lands to the plaintiffs. Thereupon instruments of release were prepared by the plaintiffs and ultimately executed by the defendant and all the other heirs and next of kin of Job Lingham. The instrument executed by the defendant bears date of July 24, 1893. It recites its purpose as follows: "Whereas, by a deed made the 7th day of June, A. D. 1884, the lands and premises hereinafter mentioned were conveyed to Robert Richardson, of the city of Belleville, Manager of the Bank of Montreal, upon certain trusts in the said deed set forth; and, whereas, by the said deed it was provided that the said lands should be sold upon certain notice being given; and, whereas, in order to avoid the expense of a sale as provided by the said deed the said party of the first part (the defendant) has consented to execute these presents and to release to the party of the third part (the plaintiffs) all his interests in the said lands." Then follows a grant to the plaintiffs of the lands with covenants for the right to convey, quiet possession, further assurance, and against incumbrances and a release of all claims. And the defendant's wife joined to bar her dower in the lands.

The plaintiffs afterwards sold a part of the lands and received \$5,500 therefor, for which, together with a sum of \$1,000 alleged to be the value of the remainder of the lands, they gave credit to the defendant as of August 1, 1896.

The plaintiffs' contentions are (1) that the effect of the deed of June 7, 1884, was to create a specialty debt; (2) that if otherwise, the effect of the recitals in the deed of July 24, 1893, was to incorporate the recitals of the deed of June 7, 1884, and was an acknowledgment of the debt; (3) that the deed of July 24, 1893, operated as an assignment or transfer to the plaintiffs of the defendant's interest in the claim of his father's estate to the sum of \$10,000, the first charge upon the lands under the deed of June 7, 1884, and that this was a payment on account of the debt owing by the defendant to the plaintiffs and operated to prevent the Statute of Limitations from barring the claim; and (4) that the receipt by the plaintiffs of the sum of \$5,500 on account of a sale of lands or timber under the deed of June 7, 1884, was a payment and acknowledgment by the defendant of the indebtedness so as to take it out of the operation of the Statute of Limitations.

In my opinion all these contentions fail.

A careful consideration of the terms of the deed of June 7, 1884, in the light of the surrounding circumstances as disclosed by the evidence, leads me to the conclusion that it was not the purpose or intent of the parties to create a covenant on the defendant's part to pay the sum of \$58,875.52 therein mentioned. As before stated the defendant's whole indebtedness to the plaintiffs at that time was \$88,876.52, and in respect of this the evidence indicates that the plaintiffs held a guarantee from Job Lingham for \$30,000. Their object was to obtain a security for the remaining \$58,875.52 by charging that sum on the lands of the defendant then held by his father as security for \$10,000 owing to him by the defendant. And the deed was prepared and entered into for that purpose. As preliminary thereto it is recited that the defendant is indebted—as was the fact—to Job Lingham in the sum of \$10,000, and to the plaintiffs in the sum of \$58,875.52, but these recitals are inserted as lead-

ing to the following recital setting forth the agreement that had been arrived at as to giving security, viz., that it had been agreed that Job Lingham should convey the lands to the trustee to be held by him in trust to secure first the payment of the \$10,000 to Job Lingham and next the sum of \$58,875.52 with interest thereon at seven per cent. per annum, such payments to be made and the said trusts and powers to be such as are hereinafter specified. It is to be observed that it is not said that the payments are to be made by the defendant, but "as are hereinafter specified," and the deed shows, further on, that it is out of the proceeds of the lands that they are to be made. Then follows the grant of the lands with provisions for their sale by the trustee in the manner specified, and the proceeds are to be applied, after payment of the charges and expenses in payment of Job Lingham's claim, the balance to be handed over in payment of the plaintiffs' claim, and any residue to the defendant. It seems plain that the only payment of the debt and interest provided for by the deed is payment out of the proceeds of sales of the lands. There is no agreement by the defendant to pay the deficiency or any part of the debt or interest. There is no uncertainty as to the intention and object of the instrument, and there is nothing to indicate an intention that the defendant should give a covenant to pay the debt to the plaintiffs, any more than there is that he should give one to pay the debt to Job Lingham.

The authorities from *Courtney vs. Taylor* (1843) 6 M. & G. 851, to *Jackson vs. North Eastern R. Co.* (1877), 7 ch. D. 573, are uniform in holding that a covenant to pay is not to be inferred from a mere recital of an indebtedness unless in the case of the deed being executed with no other object but to acknowledge the debt. If the object is other than that, or if the object of the deed is not confined to that, then the recitals must be considered to be not by way of covenant for payment of the debt, but as a narrative leading up to the security and to the form in which it should be given. To my mind this case is not distinguished in its circumstances from those to which reference has been made, and to which may be added *Jackson vs. Yeomans* (1869) 19 C. P. 394. It falls within the statement of Lord Romilly, M. R., in *Saunders vs. Milsome* (1866) L. R. 2 Eq. 573, at p. 575, that "if a debtor executes a deed by which he admits the debt, and then conveys property to a trustee in trust to sell and pay the debt out of the proceeds, that does not make the debt a specialty debt."

Then as to the effect of the deed of July 24, 1893. It is obvious that the sole purpose for which this and the deeds from the defendant's brothers and sisters were given was in order to save expense by facilitating sales. The plaintiffs repudiate the suggestion that they were executed and accepted as a release of all equity or interest in the land in full satisfaction of the plaintiffs' claim. They were simply given at the plaintiffs' instance for the purpose, stated in their solicitor's letter, of enabling the plaintiffs to get the matter closed. The deed of July 24, 1893, was in itself neither an acknowledgment of the debt nor an assignment by the defendant to the plaintiffs of any share or interest in the claim (if any) of Job Lingham's personal representatives to the sum of \$10,000. And in no respect does it amount to an acknowledgment of or payment upon the debt so as to prevent the operation of the Statute of Limitations.

The receipt by the plaintiffs of the sum of \$5,500, though a receipt in respect of the indebtedness mentioned in the deed of June 7, 1884, was not a

payment made by the defendant or any one on his behalf. It was moneys received in virtue of the deed and was *pro tanto* a realization of the security, but, as said by Lindley, L. J., in the case *in re McHenry Barker's Claim*, (1894) 3 Ch. 290, at p. 295, "the realization of the security does not add to the cause of action; the cause of action accrued long before."

I would dismiss the appeal with costs.

PROMISSORY NOTE—INDENTURE—INSTRUMENT UNDER SEAL—PRESCRIPTION.

ZAMPINO vs. BLANCHERI (Quebec Judicial Reports, Vol. 34, p. 265).

A private writing, described by the parties thereto as an "indenture" and executed under seal, containing an acknowledgment of a personal debt, with hypothec on real property to secure the payment of such debt, is not a promissory note, and the prescription of five years does not apply.

STATEMENT OF FACTS: This was an appeal by the plaintiff from a judgment of the superior court in Montreal, which judgment held the instrument in question to be neither more nor less than a promissory note or a reconnaissance of debt of the same nature, and consequently prescribed by a period of five years under Article 2260 of the Civil Code.

JUDGMENT: The judgment of the court was given by Sir Melbourne M. Tait, acting Chief Justice.

This cause comes up as well upon the merits of the action as upon a petition to quash an attachment before judgment issued upon the affidavits of plaintiff's legal attorney. The whole question at issue upon the merits is whether the document upon which the action is based and which is called an "indenture," is or is not a promissory note. The court in the first instance held that it was, applied the prescription of five years, and dismissed the action with costs, and also dismissed the attachment, holding that the allegations of the petition were proved.

The instrument in question is in these terms:

"This indenture made the first day of June, 1894, between Antoine Blancheri and Isabel Blancheri of the county of Kings, State of New York, parties of the first part, and Francesco Zampino of the City and County of New York, of the second part.

Whereas, the said parties of the first part are justly indebted to the said party of the second part, in the sum of \$1,500, lawful money of the United States, secured to be paid by their personal obligation and also from the house and lot which the parties of the first part own at No. 72 Powell street in the city of Brooklyn, State of New York, which property is simply a security to the party of the second part for the payment of said sum of \$1,500 by the said parties of the first part.

The said sum of \$1,500 is to be paid as follows, to wit: on the first day of February, 1895, with interest at six per cent. per annum payable quarterly.

In witness whereof, the said parties of the first part have hereunto set their hands and seals the day and year first above mentioned.

In presence of  
[Signed] JOHN PALMIERI.

[Signed] ANTOINE BLANCHERI,  
ISABELLA BLANCHERI."

By the Bills of Exchange Act, section 82, a promissory note is defined to be "an unconditional promise in writing made by one person to another, signed by the maker, engaging to pay on demand or at a fixed or determinable future a sum certain in money to or the order of a specified person or to the bearer."

No particular form of words is required to constitute a valid note provided the instrument meets the requirements of the statute.

In this document we have an acknowledgment to owe \$1,500 and a promise to pay that sum on the first day of February, 1895, to the plaintiffs. It has, therefore, these requirements of a promissory note. Even if it is not negotiable it does not follow that it is not a promissory note. (See section 8, and also sub-section 4 of that section.)

The reference to security does not invalidate it as a note, section 32 (3). I understand that, according to the common law of England, this instrument being sealed would be regarded not as a simple contract but what is known as a specialty and must be sued upon as such. The most striking case cited on this point is that of *Wilson vs. Gage*.

By section 8 of our statute 54, 55 Vic., amending the Bills of Exchange Act 1890, it is laid down that the rules of the common law of England, including the law merchant, save in so far as they are inconsistent with the express provisions of the said act as amended, shall apply, and shall be taken to have applied from the date on which the said act came into force, to bills of exchange, promissory notes and checks.

I have come to the conclusion that this instrument should not be regarded as a promissory note. I am convinced that the parties never intended it to operate as such.

A promissory note is the act of the person or persons who are the makers of it. In the present instance the document has been signed by both parties who declare that they have set their hands and seals thereto, after declaring that what they were executing is an indenture. The language used and the form in which it was executed show that it was but an ordinary contract between two parties. If this is to be regarded as a promissory note, then it seems to me that every obligation acknowledging to owe, with an undertaking that the money shall be paid at a certain time, must be regarded as one.

In an old case of *Sibree vs. Tripp*, Baron Pollock remarks it is difficult to lay down a rule which shall be applicable to all cases; but it seemed to him that a promissory note, whether referred to in the statute of Anne or in the text books, meant something which the parties intended to be a promissory note. He says we cannot suppose that the legislature intended to prevent parties from making written contracts relating to the payment of money other than bills and notes; and that the writing in question in that case appeared to him to be merely an instrument recording the agreement of the parties in respect of a certain deposit of money, the consideration of which is stated in the memorandum itself, and to be rather an agreement than a promissory note.

The memorandum was in this form: "Mr. S. has this day deposited with me 500, on the sale of 10,300 three per cent. Spanish, to be returned on demand."

I think that the language used by Mr. Baron Pollock is applicable to the present case, and that we should decide that the original parties here before us did not intend the instrument in question to be a promissory note.

It now seems to be our settled jurisprudence that a note *en brevet* is not a promissory note and that the five years' prescription does not apply to it. It appears to me that there is even more reason for saying that this instrument issued in the form of an ordinary contract and attested by the seals of the

signatories, is not a note. My conclusion is that we ought to reverse the judgment and condemn the defendant to pay the amount claimed with costs. The court has also come to the conclusion to reverse the judgment which dismissed the attachment, and to maintain it with costs.

---

## REPLIES TO LAW AND BANKING QUESTIONS.

---

Questions in *Banking Law*—submitted by subscribers—which may be of sufficient general interest to warrant publication will be answered in this department.

A reasonable charge is made for Special Replies asked for by correspondents - to be promptly sent by mail.

*Editor Bankers' Magazine:*

NEW BRIGHTON, N. Y., May 20, 1904.

SIR: A deposits with B bank check, which is lost in course of collection. B bank writes his depositor A for a duplicate. A says he does not know man from whom he received the check or the maker's name. Is B bank justified in charging amount of check to A's account?

COLLECTIONS.

*Answer.*—A bank receiving a check on deposit becomes a holder like any other transferee, and before it can charge its depositor with the amount thereof, it must show that the check has been duly presented and dishonored. Mere proof that the check has been lost is not sufficient. Nor is presentment in such case impossible, for demand of payment may be made upon a copy. (Daniel on Negotiable Instruments, section 1464-1465.) But if the check is negotiable in form, as checks usually are, a proper indemnity must be tendered to the drawee bank.

*Editor Bankers' Magazine:*

ELKTON, Ky., May 18, 1904.

SIR: (1) A, a contractor engaged in erecting a building in our city, orders certain material from a firm in Nashville, Tenn. After the arrival of goods, the Nashville firm draws a demand draft, subject to protest, on A through a Nashville bank which comes to us for collection, and at time of the receipt of said draft, A is absent from the city, and has no personal representative here on whom demand could be made. Should we protest same, there being no demand, or must we hold until his arrival?

(2) Drafts and notes that are subject to protest and not made payable at any bank, sent to us for collection on parties resident at towns nine or more miles distant from our city, what course should we pursue in their collection? Does the law impose on us a personal demand?

ASSISTANT CASHIER.

*Answer.*—(1) There is no fixed rule as to what course a bank should pursue in such a case. Its duty is to exercise reasonable care and judgment under all the circumstances. If the drawee is known to be a man of large means and perfectly solvent, one course might be adopted, while if he is known to be in failing circumstances, a different method might be required. In the latter case, if the amount of the draft is large, it would be prudent to telegraph for instructions. But, as a general rule, the bank will fully perform its duty if it presents the paper at the residence or place of business of the drawee, or if he no longer maintains such, then at his last-known residence or place of business. (2) In order that the demand in such case may be legal, it must be made upon the drawee personally, or at his residence or place of business. But unless the bank has an arrangement with its correspondent which requires it to present paper payable in adjacent towns, it is under no obligation to accept the business; but it may return the paper to the sender. If, however, it undertakes to make presentment, it must do so in the legal mode.

*Editor Bankers' Magazine:*

— — — — —, Pa., May 18, 1904.

SIR: A check drawn on this bank payable to the order of the X Manufacturing Company was indorsed as follows:

For deposit to the credit of the  
Merchants' Bank of J.  
Deposited by X Manufacturing Co.  
Pay B. Cashier or order.  
Indorsements guaranteed,  
Merchants' Bank of J.

We refused to pay the check on account of the indorsement of the X Manufacturing Co. Were we justified in so doing? Had the notary the right to protest it, and can he collect fees on it? His certificate of protest does not state the reason why the check was refused as specified in the Negotiable Instruments Law. CASHIER.

*Answer.*—As this check was drawn payable to the order of the X Manufacturing Co., it could not be negotiated without the indorsement of such payee (Negotiable Instruments Law, Pa., section 30), but an indorsement is not required to be in any particular form (section 31), and the name X Manufacturing Co., if placed on the instrument by some one duly authorized to do so, would be a good indorsement, notwithstanding the statement prefixed to the name of the payee that the instrument was "for deposit to the credit of the Merchants' Bank of J.," and was "deposited by" the payee. We think, therefore, that the indorsement might be deemed legally sufficient. But it does not necessarily follow that the drawee bank was bound to pay the check upon an indorsement in such form. The addition of the words "deposited by" (which are entirely unnecessary as a part of the indorsement) make the whole read as though it were a mere statement of fact, viz., that the check had been deposited by the X Manufacturing Co. to the credit of the Merchants' Bank of J. Such a statement, not being a part of the contract, could be placed upon the check by any one. It might thus be an indorsement, or might not. The drawee bank, before paying the paper, might properly require a less ambiguous indorsement. For its own protection, it should be entitled to have every indorsement in the chain of title so clearly import to be an indorsement, that, if not lawfully made, the person who made it could be indicted for forgery of an indorsement, while in this case, an indictment for forgery of an "indorsement" might be too narrow, and, indeed, there might be no case of forgery at all.

As to the guaranty of the correctness of the indorsements, the drawee bank was under no obligations to accept such a guaranty unless it saw fit.

We believe, therefore, that the bank was justified in protesting the check, and that the notary's fees may be recovered of the transmitting bank.

As this was not a foreign bill of exchange (Neg. Inst. Law, sec. 129) no formal protest was necessary (Id. sec. 118), and all that was required was to give the indorsers due notice of dishonor, which we presume was done by the notary; and hence any irregularity in his certificate is not important.

---

TWO KINDS OF A SHAVE.—"Now, William," said the man of business to the office boy, "I am going out to get shaved." "Please, sir," said the boy hesitating, "if any one calls and wants to know where you are, will I say you've gone to the barber's or down to Wall Street?"—*Selected.*

W. L. WILLIAMSON

## W. L. WILLIAMSON.

---

As in banking everything depends, finally, upon the management, so in the loaning of funds upon real estate safety and a fair interest yield depend chiefly upon the man who passes upon the value of the property on which the loan is made. It has been the case too often that agents of the large mortgage companies were over-solicitous of getting business and thus increasing their commissions, and have failed to scrutinize the character of the security as carefully as they should have done.

When properly made, loans on real estate are as safe as on any other form of property. This is witnessed by the very large amount of trust funds thus loaned. But safety can be assured only when the loan is made by some one having a thorough knowledge both of the character of the land offered as security and the character of its owner.

The productive farm lands of North Dakota have naturally attracted large amounts of capital seeking profitable investment, and where the loans have been made by those who knew the value of the land and were familiar with the responsibility of those seeking the loans, the results have been eminently satisfactory.

Among those who have given close personal attention to the farm-loan business in the Northwest and have made a success of it, the subject of this sketch, W. L. Williamson, of Lisbon, N. D., stands conspicuous.

He was born at Appleton, Wisconsin, in 1859, of Quaker parentage, being a lineal descendant of Daniel Williamson, who came to this country with William Penn in 1682. He was educated in the Episcopal Academy at Philadelphia, and first went to North Dakota in the fall of 1881, returning to Philadelphia for the winter, but again going to North Dakota in the spring of 1882. In this same year and the following one he did work in connection with the United States Government Survey, and then entered a general store at Milnor, N. D., as a clerk. In 1885 he took a clerkship in the Bank of Sargeant County, at Milnor, and worked his way up through various capacities until at the time of his resignation, in 1892, he was Assistant Cashier.

On resigning from the bank, Mr. Williamson went to Lisbon, N. D., and established himself in the farm-mortgage loan business, and has continued in that line ever since. He began in a modest way, entirely on his own responsibility, with no clerks, and by energy and judgment he has developed his business until he now occupies a suite of four offices, supplied with up-to-date furnishings and equipments, and employs a staff of competent assistants. He is recognized as the leading farm-mortgage man in this part of the State.

Mr. Williamson operates in a territory where he has a personal knowledge of the land and the borrowers, and this, as has been said, is the prime essential in conducting a business of this character. He sells these mortgages to net six per cent. and collects the principal and interest, remitting in New York exchange, without expense to the investor. His long residence at Lisbon and his extensive experience in the farm-mortgage business have given him an exceptional title to the confidence of investors who require absolute security. Mr. Williamson invites the most rigid inquiry concerning his methods and his personal responsibility. It is his aim to throw every possible safeguard about every loan negotiated by him.

Besides being a successful business man, Mr. Williamson is deeply interested in the welfare and progress of his town and community, and his advice, especially in respect to financial matters, is frequently sought.

## BANK SAFES AND VAULTS.

---

*FIVE-PLY WELDED CHROME STEEL FOR SAFE AND VAULT CONSTRUCTION.  
MANUFACTURED BY THE CHROME STEEL WORKS, CHROME, N. J. (FORMERLY OF BROOKLYN, N. Y.)*

---

The proper protection of money and securities is one of the most important matters with which bankers and other custodians of such funds have to deal, and they are therefore deeply interested both in the methods of vault-construction and in the materials of which their safes and vaults are made. To assure adequate safeguards against attacks by mobs or burglars, the banker or architect when letting contracts should insist that only the best materials be used. The vaults and safes may be said to represent the heart of a bank's equipment, and security here is vital to life and prosperity.

The Chrome Steel Works, of Chrome, N. J. (formerly of Brooklyn, N. Y.) have been employed in the manufacture of their five-ply welded Chrome steel burglar-proof plate for more than thirty years. This is conceded to be the most impregnable material that can be used to resist attacks by mobs or burglars, and in fact affords absolute security.

This steel, of which the Chrome Steel Works are the original and only manufacturers, may be classified as distinctly a special steel. Made by the crucible process, it resembles in some respects the higher grades of tool steel, but in addition is possessed of properties combined in no other known steel. It welds most readily to itself and to wrought iron, and is not injured in any way by excessive heating, and it will harden drill-proof against the finest tools when heated to a moderate heat and plunged into water.

The Chrome Steel Works' five-ply welded plate is composed of two layers of high-grade Chrome steel encased between one centre layer and two outside layers of extremely tough steel or iron. These five layers are welded together under rolls into one solid plate. The outside layers, being of a very tough material, will resist attacks made upon the plate by explosives, or by sledge-hammer blows, and at the same time will protect the inner layers of high-grade Chrome steel. By this process of welding together layers of steel, directly opposite in their physical properties, the best possible combination of extreme hardness and extreme toughness is obtained in the one integral plate.

As an evidence of the superiority of this steel for use in safe and vault construction, it may be mentioned that it has been used by nearly all of the important banks, trust companies and safe deposit companies in the United States and Canada in constructing their vaults. Only a few can be mentioned here, but they show the representative character of the work done:

New York: Chamber of Commerce, New York Stock Exchange Safe Deposit Vaults, New York Clearing-House Association, New York Produce Exchange and the United States Sub-Treasury, First National Bank, American Exchange National Bank, Bank of New York, Bank of the Manhattan

**CHROME STEEL WORKS, CHROME, N. J.**  
(Formerly of Brooklyn, N. Y.)

Company, Chemical National, Hanover National, National Bank of Commerce, August Belmont & Co., Blair & Co., Brown Bros. & Co., J. P. Morgan & Co., Bowery Savings Bank, Greenwich Savings Bank, American Surety Co., Guaranty Trust Co., Atlantic Trust Co., Central Trust Co., Farmers' Loan and Trust Co., Fifth Avenue Safe Deposit Co., Manhattan Trust Co., Morton Trust Co., New York Security and Trust Co., United States Trust Co., Equitable, Metropolitan, New York Life and Washington Life Insurance Companies.

National Shawmut Bank, Boston; Bank of North America and Fourth Street National, Philadelphia; Riggs National, Washington; First National, Chicago; Omaha National, Omaha; First National, Denver; Hibernian Savings and Loan Society, San Francisco; Bank of Montreal, Montreal.

At the beginning of this article may be seen a reduced view of the new steel manufacturing plant just completed by the Chrome Steel Works at Chrome, N. J., located on New York Harbor. This plant has been equipped throughout with new machinery and appliances, all of the most modern type, especially constructed for the manufacture of their Chrome steel products, and enabling them to make finished five-ply Chrome steel plates up to one hundred inches in width by two and one-half inches in thickness if required, and with a capacity of over fifty tons per day of these plates alone. They are also prepared to manufacture open-hearth Chrome steel plates, also Chrome steel forgings and castings up to 50,000 pounds each in weight. Their forge shop is equipped with one of the largest and most powerful forging presses in this country, and therefore they are prepared to furnish all the material required in the construction of safes and bank vaults in addition to their other varied industries in the Chrome steel line.

Shipping facilities are provided both by rail and a water frontage of over 1,000 feet, facing on Staten Island Sound, with ample docks, enabling the works to load or discharge the largest steamers coming into New York Harbor.

A tract of 1100 acres of land was purchased for the town site at Chrome, N. J., and already forty dwellings of brick and stone have been erected for the workmen employed in the factories of the Chrome Steel Works. Forty-one acres of space are devoted to the use of the Chrome Steel Works, of which nine acres are under roof, the balance being yard room occupied by railroad tracks, coal-trestles, coal-hoisting appliances, etc.

---

CHINESE BUSINESS USAGES.—A Russian traveller who recently made a tour through Manchuria in the interest of a scientific association gives a very interesting account of the business usages in that Province.

According to this traveller there are in a Chinese business house neither proprietors nor employees. All persons employed in a business house are partners, who share in the profits of the undertaking. During the course of the year each member receives, at certain established intervals, a kind of salary, which, however, is meted out so sparingly as to be hardly sufficient to supply the necessities of life. At the close of the year, however, the accumulated profits are divided.

Very noteworthy, according to the statements of this traveller, is the exceptional honesty of Chinese merchants, who always and most promptly fulfill the engagements they may have entered into. Thus, for instance, the ten branch offices of the Russo-Chinese Bank located in China have since their establishment no record of a single protested note.—*From United States Consul Schumann, Mainz, Germany.*

### ONE OF THE MOST CONSPICUOUS NAMES ON 'CHANGE IN THE COTTON WORLD.

---

Generalship everybody admires. The same, indeed, whether exhibited upon the chess board of war, or in politics, sports, love, or the not always prosaic and oft-times strenuous pursuits of barter and trade.

With reference more particularly to this last-named head, generalship of a high order it must have been—something near to genius for extensive affairs—that promoted and brought to such a successful issue the great cotton “corner,” so-called, of last summer and fall. There was a feat certainly making the principals in it interesting subjects. Exemplars, they, of the higher strategy of the market affecting the whole cotton world—spinners, exporters, consumers and all. And thus interesting, not alone to those whose business is with cotton or the monetary, speculative or other interests nearly or remotely allied to it, but also to the public at large.

It is all a matter of very recent and familiar history, how and with whom this great deal originated. How the parties to it took up the campaign where earlier but more timorous “bulls” left off. How they had studied it out and planned it, like military men, tactically, long before when cotton of middling grade was hardly more than six and one-half cents a pound; whereas now, largely through the impetus given it by them, it has risen to fourteen and fifteen cents, and has even been higher still, meantime. How they secured the sinews of war abroad (to the discomfiture of adverse interests here), and carried their Atlantean burden of more than 250,000 bales, involving over \$18,000,000. How they met all contract tenders, although cotton was brought from Europe and from the New England mills, like coals from Newcastle, to overwhelm them.

How the conditions, as to crop and market, turned out just exactly as they had presaged. How they closed out with profits reported unprecedented in the trade. And finally, how they were denounced for it as “bandits,” “pirates” and “manipulators” and all that, but stood for vindication and refutation on the simple ground that the Southern planter, supporter and corner-stone of the whole pyramid, fabric and structure of the trade, gets for his product just twice what he did before and is the chief beneficiary.

All this, as the phrase goes, is or has been “in everybody’s mouth.” The story is well known, but the actors, the *dramatis personæ*, so to speak, what of them? Of one of them (the one who was most largely interested in these deals) at least we may say that while not unknown before in the region of Hanover Square or Wall Street, he has leaped into a publicity and prestige not eclipsed by any in the cotton line before. This one is Frank B. Hayne, a gentleman still in his prime and heyday; one of the sort it would seem of whom very likely, as old Carlyle said of Napoleon, “we shall hear more hereafter.”

Mr. Hayne is of Vincent & Hayne, cotton merchants, as they subscribe themselves, 835 Gravier street, New Orleans, members of the New Orleans Cotton Exchange, the New York Cotton Exchange, and Liverpool Cotton Association. This house had its rise in Charleston, South Carolina. In 1883 it was established in Vicks-

**FRANK B. HAYNE**

burg, Miss., and in 1885 opened up in New Orleans. There it rose very soon into prominence in the trade as the buyer of 60,000 to 100,000 bales a season, chiefly for spinners, and maintaining for that purpose branches in Vicksburg, Jackson, Yazoo City, Greenwood and Greenville, Miss., markets of the far-famed Yazoo Delta cotton country of that State.

In the cotton deal last summer, Mr. Hayne had the entire management of Vincent & Hayne's interests in same, which interests, both in New Orleans and New York, were much larger than that of anyone else interested.

Mr. Hayne is of the celebrated Hayne family of South Carolina, of whom Robert Y. Hayne, Webster's great antagonist in the Senate some generations ago, was one. He is not a "new" man at all, as we have seen, but has figured prominently in cotton for more than twenty years. He is a director of the New Orleans Cotton Exchange, and of the Hibernia Bank in that city, one of the largest in point of business in the South. He is president, also, of the Portevent & Favre Lumber Co., of Mississippi, and president of the East Louisiana Railroad, two very successful enterprises.

He lives in style becoming his fortune in one of the fine mansions of aristocratic St. Charles avenue, in the Crescent City. He is a man of family, his wife being a Portevent, and niece of Mrs. Nicholson, the "Pearl Rivers" of Southern letters, and proprietress of the daily New Orleans "Picayune." Mrs. Hayne has been Queen of Comus, the celebrated New Orleans organization of Mardi Gras, and only lately Mr. Hayne himself was "Rex," the chief social distinction of the Southern metropolis in the carnival of the current year.

---

**SOCIAL SIDE OF BANKING.**—The investigation into the affairs of A. McCoy & Co., the Rensselaer (Ind.) banking firm that went under recently and whose liabilities are close upon a half a million, with assets not to exceed \$300,000, brings out the social phase of their business methods.

The bank made a specialty of widows. Every Thanksgiving and Christmas a wagonload of turkeys was sent out by the bankers to distribute among widows. When the crash came seventeen widows had deposits in the bank ranging from \$10 to \$6,000. The total amount which the widows of Rensselaer had in the bank when it closed was \$13,800.

One of the most elaborate entertainments ever given in Rensselaer was to the school officers and teachers; and the McCoys were the hosts. The entertainment was followed by a gradual withdrawal of deposits by teachers from the other banks and a concentration of these deposits in the McCoy institution. The school officers recognized the public spirit of the bankers by putting a part of their cash in the bank, and when it closed the teachers and officers found themselves out \$10,750.

When S. R. Nichols was elected county treasurer the McCoys furnished his bond, it having been generally understood during his campaign that he was the bank's candidate, and all the widows and school teachers having worked for him. Mr. Nichols had \$22,000 on deposit in the bank at the time of the failure, and deposits of other officers, including the county assessor and county clerk, ran the amount up to \$35,000.

The seventeen widows have been comparing notes regarding the cost of their turkeys and find that they run all the way from \$5 to \$1,500. Mrs. Lennie Grant, who had \$20 in the bank, and Mrs. Alter, who had \$6,000, each received four turkeys, and Mrs. Payton, who had but \$10 in the bank, received two.

Three teachers who did not deposit with the McCoys prior to the entertainment, reckon the cost of that function to them at \$600, \$500 and \$940.—*N. Y. Sun.*

## VIRGINIUS NEWTON.

---

Virginius Newton, President of the First National Bank and the Union Bank, Richmond, Va., and President of the Richmond Clearing-House Association, died May 28.

Mr. Newton was born in Norfolk, Va., October 27, 1844. He was of English ancestry, and his family were among the earliest colonial settlers of the Tidewater Section of Virginia. He was educated at the University of Virginia, from which he was graduated with the degree of bachelor of laws. At the age of eighteen Mr. Newton enlisted in the Confederate cause, and served through the war. He was a midshipman in the Confederate navy, and was on the Virginia during the memorable fight in Hampton Roads.

Shortly after the war Mr. Newton went to Richmond and engaged in business. He was successful from the start, and for many years before his death occupied a position in the front rank of the local world of affairs and in the social life of the city as well. He held a number of positions of trust and responsibility, and in all of them served with distinction. At the time of his death he was President of the First National Bank of Richmond, President of the Union Bank of Richmond, first vice-president of the South Atlantic Life Insurance Company, and a director of several other institutions. He also held the position of President of the

VIRGINIUS NEWTON.

Clearing-House Association of Richmond. A number of years ago Mr. Newton was married to Miss Mary Heath Davenport, a daughter of Isaac Davenport, at one time President of the First National Bank, of Richmond, and a member of the influential insurance and banking firm of Davenport & Co. His second wife was, before her marriage, Miss Barksdale, of Richmond. There are no children.

Mr. Newton's business career was marked by a large measure of success, which he attained solely through his industry, ability and integrity. In the banking circles of Richmond none stood higher. He was deeply concerned in everything tending to promote the solid banking and business interests of his city and State, and always stood for sound policies and methods. By his judgment and energy he made the First National Bank one of the largest and strongest banks in Richmond, and at his death left a record of integrity, courtesy and honor that will be an enduring legacy to his business associates and others.

Mr. Newton was a man of fine intellectual attainments, a charming conversationalist and a brilliant and forceful speaker. His personal relations were marked by a rare degree of courtesy and consideration for others. Both by his qualities and achievements he deserved and commanded the widest respect.

## TRUSTEE SAVINGS BANKS IN GREAT BRITAIN.

The report of the inspection committee of trustee Savings banks, for the year ending November 30, 1903, has been recently published. The annual return for that period has not yet been printed, but the Inspectors report a slight increase in the number and amount of deposits as compared with the corresponding figures at November 30, 1902, and this in spite of the competition by municipalities—a competition which has been felt and resented by the joint stock banks. Although now somewhat overshadowed in importance by the Post Office Savings Banks, trustee Savings banks have played an important part in the financial history of Great Britain. "Before Savings banks were established," wrote Arthur Scratchley in 1860, "there were no systematic means of encouragement to thrift, and no provision was made for its gatherings." This want was met by the establishment, from philanthropic motives, in the end of last century of the first trustee Savings banks. In a useful lecture on the subject by Mr. T. W. M. Watson, C.A., recently published, an interesting sketch of the statutory history of these institutions is given, and a table is supplied showing their growth from 1829 onwards. This growth was so rapid that in 1860 the total amount due to depositors was over forty millions, and in England and Wales one in every sixteen of the population was a depositor. It is somewhat remarkable that Scotland, in spite of her reputation for thrift, lagged behind the sister country in this advance. To quote Scratchley again, "The number of depositors (in 1860), as compared with the population, was less, and the amount of individual deposit much smaller in Scotland than in England." The last annual return, too, shows that, although Dundee shares with three English towns the honor of possessing a Savings bank which has been in existence since 1815, there are no other Scotch banks now existing which were established before 1836. In England, on the other hand, Savings banks dating from before 1820 are very numerous.

As early as 1807 the possibility of utilizing the numerous post offices throughout the kingdom for Savings bank purposes had been seen by one Whitbread, and he had brought forward a bill with that object. The proposal, however, lay dormant until 1861, when the Post Office Savings Bank was instituted. The possession of numerous offices—open daily and conveniently situated—gave it a great advantage over the trustee Savings banks, whose growth was almost entirely arrested for over thirty years in spite of the great increase in the population and wealth of the country. In all 436 of these banks have been closed, and have transferred their funds to post office Savings banks. During the last decade, however, the amount at the credit of depositors in the trustee Savings banks has increased from £42,225,801 to £52,540,000.

Mr. Watson supplies the following comparative figures as at the close of 1902 :

| BANK.                               | <i>Number of<br/>depositors.</i> | <i>Amount<br/>at credit.</i> | <i>Cost<br/>of trans-<br/>action.</i> | <i>Cost of man-<br/>agement per<br/>£100 of capital.</i> |
|-------------------------------------|----------------------------------|------------------------------|---------------------------------------|----------------------------------------------------------|
| Total Trustee Banks, 229.....       | 1,670,394                        | £52,505,081                  | 7.1d.                                 | 5s. 5d.                                                  |
| Post Office Savings Banks, 14,048.. | 9,133,161                        | 144,805,088                  | 5.8d.                                 | 7s. 3¼d.                                                 |

The cost of management of the trustee Savings banks is met from the difference between the rate of interest—2½ per cent.—allowed to them by the National Debt Commissioners, with whom their funds must be deposited, and the rate allowed by

them to depositors, which cannot be more than  $2\frac{1}{2}$  per cent. or less than  $2\frac{1}{4}$  per cent. On the average very little more than  $\frac{1}{4}$  per cent. suffices to meet this cost.

While the increase during the last forty years in the amount deposited in the trustee Savings banks throughout the United Kingdom as a whole has been slight, these banks in Scotland have grown apace. Possessing a population of less than one ninth of that of the whole kingdom, she has now more than one-fourth of the total number of trustee Savings banks, and almost one third of the total amount owing to depositors. It must not be concluded from this, however, that the Scotch are vastly more thrifty than the inhabitants of England and Ireland, for, of the total amount deposited with post office Savings banks at the end of 1902, only £5,662,188 was at the credit of depositors in Scotland. Taking both classes of banks together, it is found that the Savings bank deposits amount to £4, 14s. 10d. per head of population for the whole kingdom, and to £5, 8s. 5d. for Scotland.

While the amount at the credit of depositors with the Savings bank is undoubtedly one of the most useful *criteria* of the material wellbeing of the industrial classes, too much importance must not be attached to temporary fluctuations in this amount. Of late, for example, the withdrawals from the trustee banks have been considerably in excess of the receipts, and for the month ending March 5 last the former were £106,851 and the latter £66,490. The post office Savings banks showed a proportional shrinkage. As the "Statist" points out, this is probably due, not to hard times, but simply to the fact that the present low prices of consols and other first-class securities offer exceptional inducements to investment. — *The Accountants' Magazine (Edinburgh)*.

---

**BANKING IN ABYSSINIA.**—No banking institution exists either in Abyssinia or in the French coast colony. Remittances may be made by French money order to Djibouti, but international privileges have not yet been arranged. No facilities whatever exist for making financial exchanges, except by establishing credits with some Paris or London banking company. Gold and French bank notes may be exchanged for silver thalers in the interior at ruinous and widely varying rates, and travelers find it advantageous and almost indispensable to procure at the coast large quantities of silver thalers, anticipating their requirements until their return. The organization of a bank is unquestionably desirable for the proper development of commerce. Very little capital would be required for the present. The existence of such an institution would steady the variable rate of exchange, which now fluctuates somewhat arbitrarily and by no means always in accord with the fluctuations in the silver market. Loans could be made upon very remunerative terms, as the rate of interest at present varies in Ethiopia from ten to forty per cent. a month. A banking company organized to meet local requirements could also control the purchase of native gold, of which the production is considerable. Upon the completion of the railway there is no doubt that the business of a banking company would acquire rapidly increasing proportions, and, if established by persons possessing abundant capital and, better still, allied to some well-known financial institution in Europe or in the United States, could probably obtain very important privileges, including the right of issue. I doubt whether there is a more promising field for a financial venture in the world than this.—*U. S. Consular Reports*.

---

**NEW PANAMA BANK.**—The Republic of Panama has passed a law establishing a national real estate and mortgage bank. The capital of the bank will be \$1,000,000.

# EVERY-DAY BANK WORK.

USEFUL AND IMPORTANT LITTLE THINGS NEEDED.

During the past ten years such great strides have been made in banks and banking methods that old-time bankers, who have not kept up with the march, have cause to look in amazement at the great changes that have taken place.

Banks with deposits reaching the five million dollar mark were scarce then ; but now there are not less than one hundred and thirty such National banks, and enough State banks and trust companies in the five million class to bring the total to the neighborhood of two hundred and fifty. These are not all confined to the limits of New York and the East, but are scattered throughout the country. Still, New York claims a good portion of them.

Ten years ago banks in the National system with a capital of five million dollars were hardly thought of, and when some went so far as to raise their capital to ten

FIG. 1.

million dollars expressions were freely made that the limit had been reached in capitalization of banks. But now a capital of ten millions is not considered wonderful. We can now boast, if we want to boast, of two banks in the National system each having twenty-five million dollars capital, not only authorized but actually paid in, and each having a surplus of more than ten millions.

The deposit line in these two banks is worthy of notice, too, for in the March report to the Comptroller one bank showed a total of nearly two hundred millions and the other nearly one hundred and eighty millions, while the total resources in the one case reached more than two hundred and forty-three million dollars, and in the other more than two hundred and twenty-eight millions.

Large amounts like these in the control of one institution cause some people to fear because of the concentration of power, but there is really no cause for fear.

During the next ten years what advances will be made? We may not think it strange after another decade to have several banks with resources reaching the five hundred million dollar mark. These may come by mergers or natural growth.

Great changes have been made in the interior arrangements of banks during the

past decade, all with the purpose of giving greater safety, comforts and accommodations to depositors and friends. The reception room, the coupon room, the ladies' bank, or more properly the women's bank, and the special desks in banks for the women, and other new and useful departments, are not looked upon now as novelties.

 THE FARMERS NATIONAL BANK,  
 Rome, N. Y.

FIG. 2.

In the methods of keeping records and doing the clerical work great changes have been made, new forms of ledgers are now used almost entirely, settlement sheets are used in place of settling the accounts in the pass book, the adding machines have been installed to save the wear and tear on the clerk's brains and to do the work more rapidly. This list might be continued to quite a length.

It is safe to say that in no other line of business have such great changes taken place as have been placed in successful operation in the modern banks. It would

FIG. 3.

take a seer with unusual foresight to prophesy what changes will be made during the coming ten years in banking methods and departments. Without doubt greater changes will be made than have been made, notwithstanding that many think the limit has been reached.

While these changes have taken place in reference to the larger things in banking, the improvements in smaller things have not been overlooked entirely. It is true they have been neglected by some, but some of those who have kept up with

FIG. 4.

the march of the greater improvements have sought to keep the smaller, but nevertheless important, things marching to the same music that led the march of the greater things.

It is the purpose of this article to deal with some of these smaller things that are in every-day use in bank work.

Most of the forms given here were prepared by a bank clerk who has made it a rule of his work to improve methods and forms whenever they could be improved.

FIG. 5.

They are not the result of a passing thought, but the fruit of careful study and thoughtful planning, so that the needs would be met in the easiest and best way.

One great advantage in these slips is that they need not be attached to the items with pins, for they are gummed on the back along the left hand end with a band of pure gum about a quarter of an inch wide. They can be moistened with the tongue and attached to the item without injuring either the moistener or the item. The slips are here shown attached to the items, so they can be seen as they are used and a better idea of their size given.

The "no protest" slips are used so much now on items of all kinds, to the notary's sorrow, that they will take first place. On figures 1, 2 and 3 will be seen slips for cash items, collection items, and one for either cash or collection items. The

wording on each slip has been carefully arranged to meet the requirements of each case. They all ask one important thing—the reason for non-payment, if the item is returned unpaid. They also ask to have the slip removed from the item before it is presented for payment. These matters have been made prominent because so frequently neither one is done by the bank that has the presentation to make.

FIG. 7.

Many times the question is asked by the depositors to whom cash or collection items are being returned, "why was it not paid; what reason is given?" In too many cases no definite reason has been given by the bank that started it on its way back. It was listed on the letter under the words "returned unpaid," and the depositor is left to guess the reason. But a marked improvement is being made in this line, and bankers are realizing that whenever it is possible it is their duty to give a definite reason when returning an item unpaid.

THIS ENDORSEMENT  
CANCELLED.

FIG. 8.

Different methods are used. Some have letters printed especially for returned items giving a number of reasons on the bottom of the letter and the reason for which the item enclosed is returned is ticked. This is quite good, but it necessitates sending the letter with the item to its last endorser or its maker, or the answer must be written on the item if the letter is retained by the bank. So this method can be improved.

Some other banks have slips to pin to the items stating that the item is returned unpaid and the reason, if any, given, will be found endorsed on the back. This is

FIG. 9.

good, too, but in many instances it means double work by writing the reason and attaching the slip.

The best method is the slip on Figure 4. All this needs is to moisten the gum on the slip, attach it to the item and tick the reason. This slip was prepared to use on either cash or collection items and gives reasons most needed in returning both classes, but for a bank having many items in both departments it would be advisable to have a return slip for each class of items, giving the reasons most frequently the cause for returning items.

The slip on Figure 4 gives fifteen definite reasons—the ones most used, and when any other reason is given it should be written on the back of the item and the last

FIG. 10.

reason ticked. The fifth reason from the bottom gives two on one line—"Amt.; i. e., amount, or End.; i. e., endorsement informal." If the endorsement is informal run the pen through "Amt." and tick after "informal." Or if amount is informal run the pen through "End." Another of its good features is that the place to tick is the proper place for a right-handed person, and all reasons are ended on a line, so the tick is easily made and quickly located.

The size of this slip and its whole make-up have caused it to be appreciated by many. So much was it appreciated and its good qualities recognized by a bank supply house that they seemed to copy the idea, for very shortly after this one appeared they issued the one shown on Figure 5. It may not have been a case of

copy, but a coincidence of minds running in the same channel. Still, if it was a copy it only helps to prove that the said bank clerk struck the right idea when he produced his return slip.

Some form of slip giving reasons for the return of items being so necessary, I will show two other forms used by some banks—Figures 6 and 7. These are made

to pin on the items, and they are good. They are better than those that give about fifty reasons on a sheet that is much larger than the average item.

By all means use some method to give a definite reason for non payment when you return an item. It will cost you a little time and money, but it will make your service appreciated.

While speaking of returning items it is in order to say something about the cancellation of endorsements. No bank ought to return an item without cancelling its

FIG. 12.

endorsement. This is usually done, and some banks have a rubber stamp for the purpose. The styles of stamps for this purpose vary quite a little. The stamp shown in Figure 8 is a very good one. Its use is more effective and easier applied than cancelling with a pen or colored pencil.

It is occasionally necessary to send out a time draft for acceptance and return, because the drawer desires to use it before it becomes due. Such drafts should not be endorsed by any of the banks that handle them, but a slip like that attached to

the draft on Figure 9 should be used. This would make it unnecessary to endorse the item to secure its proper return, and it would save the time of writing a memorandum to attach to it.

It is a common occurrence to send drafts with papers of some kind attached—bills of lading, orders, bills, etc.—and some banks send them without making any mention on the item of what is attached, and without giving any instructions on the letter about the papers. The receiving bank is allowed to use its own judgment about the delivery of the papers. It ought not to be so. Then, too, if the papers should become detached—and sometimes they do—there is nothing on the item to show that any papers had been attached. Figure 10 shows a slip that is used by some banks for this purpose, and it meets the need quite fully. One more might be added to the list of “papers attached,” that is check and protest. For protested checks are quite often attached to drafts drawn on the maker of the check. In using this slip if the papers are to be delivered on the acceptance of the draft, the pen can

FIG. 13.

cross off the word payment; or if to be delivered on payment only, the word acceptance can be crossed off.

When bills of lading are attached some banks have a rubber stamp they use on the draft. It reads:

BILL OF LADING ATTACHED;  
DELIVER ONLY ON PAYMENT.

It frequently happens that a special advice of payment or non-payment is wanted on a certain item by telegraph, telephone or mail. For that purpose a slip such as is shown on Figure 11 should be used. By running the pen or pencil through the kinds of advice not wanted you could get the kind desired.

Banks sometimes take the liberty of holding drafts for the convenience of the drawers, especially when payment is promised in a day or two. This delay in many cases causes anxiety, and sometimes loss, on the part of the drawers. When special instructions are given by the depositor not to have the draft held, but returned at once if not paid, a slip like the one on Figure 12 should be attached. It ought to prevent the delay that so often occurs in handling drafts. Of course there are times

| <u>COUPON SLIP.</u>                                                                              |                                                                                        |

FIG. 14.

when the drawer would be glad to have the bank hold the draft a few days if there is any probability of it being paid.

Improvement in the way of preparing coupons to forward for collection has kept up with the advance in other matters. Although coupons are usually very little things, they are valuable and should be carefully handled. But even in this day they are sometimes sent as if they were not worthy of proper care. Sometimes they are pinned to a blank check or a scrap of paper, while some others do better by enclosing them in a plain envelope. But the bankers who have kept up with the march of improvements have a special envelope or slip for their use. Some of these envelopes are very well arranged. The best the writer has seen is shown in Figure 13. Its size is 3 by 5½ inches; it opens at the top, like an ordinary envelope. It gives place for all the information needed—a full record of the kind of coupons, the number enclosed, the amounts and total, from whom received, and when and where due. With its use the coupons of different companies are in different envelopes and it is not necessary to take the coupons out to learn anything about them.

When only a few coupons are to be sent a slip like Figure 14 can be used safely. It is the size of the average note or draft.

CHARLES W. REIHL.

**CHILI'S BANKING SYSTEM.**—You may be interested, perhaps, with a word about our banking. We have no National banking system as you have in this country. All of the banking in Chili is done by private bankers. I think my house—A. Edwards & Co.—does its share of the banking of the country. Some persons have been good enough to say that we do the largest business, but of that I am not, possibly, a good judge.

The only Government banking institution that we have is what is known as the Caja Hipotecaria. This is not, strictly speaking, a Government institution, since its management is not altogether in the hands of the Government. Its business is to loan money on farming lands, and in doing so to develop agriculture.

If a Chilean farmer wishes a loan he makes application to the Caja Hipotecaria. If the security he offers is satisfactory he receives the amount of his loan in the bonds of the institution. These bonds he sells in the open market and thereby gets cash. The bonds bear interest at seven, six or five per cent. and always sell at a premium. The borrower of the money is entitled to the premium.

The general banking business of the country is very much like the business of private bankers all over the world except in this: If a man who is known to be a serious-minded person is a person of property and one who meets his obligations promptly, we lend him so much as he needs on his own simple receipt, with no other security. This receipt is very much like an I O U. The borrower agrees to return to the banker the sum borrowed within a certain time at a certain specified rate of interest. Of all other borrowers we exact collateral for the amount of the loan.

The legal rate of interest in Chili is ten per cent. I do not mean by that that we always get ten per cent, but we are permitted to charge as high a rate as that if we can get it. Like all other commodities, the price of money in Chili is regulated largely by the law of supply and demand.

And right here I may add a word about the Caja Hipotecaria. If a borrower from that institution falls by so much as one day to meet the interest on the bonds, which is payable every six months, he is penalized at the rate of twenty-four per cent. per annum, and that he must pay in addition to the regular interest which the bond bears."—*Interview in New York Sun.*

## FORM FOR BANK COLLECTIONS.

*Editor Bankers' Magazine :*

SIR : I beg to present to you for your inspection and comments through your *MAGAZINE*, if worthy, a form for handling collections received.

While a banker of short experience, I have observed the necessity for accurate and concise methods for handling all business pertaining to banking. The form which I have gotten out has been adopted by our bank, and is giving entire satisfaction inasmuch as it meets the aforesaid demands and besides greatly economizes time.

In as few words as possible I will endeavor to show why this form is a practical method.

1st.—Economy of stationery. In our bank it puts four books out of business—collection register, collection account book, collectors' street record, letter copy book. One thousand blanks like the copy shown herewith do not cost any more than the same number of remittance blanks.

2nd.—The record is an absolute copy of the instrument received for collection, either sight draft or note, and may contain any special instructions pertaining to the same.

3rd.—Economy of time, in that the letter of advice is written when the record of instrument is being taken. This duplicate is filed in temporary binder, when draft or note is paid the record is transferred to a permanent binder.

4th.—The collection, when paid or returned unpaid accompanied with the letter of advice, gives the maker full particulars relative to the collection, thus saving him time and increases the probabilities of getting future business.

5th —It frequently happens that in writing letters of advice for drafts paid that the maker of draft No. 10 is sent the amount of draft No. 11, which is an impossibility with this plan.

6th.—The temporary binder contains only such records as drafts and notes on hand, and they can be readily checked up by the proper officer of the bank, thereby keeping in touch with the collection business.

7th.—When collections are paid into the bank there is no chance of an over-charge on account of neglect.

In making the credit slip merely detach letter of advice from draft and place same on letter-spindle.

Our bank handles some 10,000 to 11,000 collections annually, and we find that this method saves from thirty to forty-five minutes of the collector's time daily and we have not had a mistake occur since we adopted this form. Yours truly,

F. B. DIETRICK,

*Asst. Cashier First National Bank.*

WATERLOO, Iowa, May 23, 1904.

[THE BANKERS' MAGAZINE will be pleased to receive and publish opinions in regard to the merits of the form above described and shown on the next two pages.]

## BANKING AND FINANCIAL NEWS.

This Department includes a complete list of NEW NATIONAL BANKS (furnished by the Comptroller of the Currency), STATE AND PRIVATE BANKS, CHANGES IN OFFICERS, DISSOLUTIONS AND FAILURES, etc., under their proper State heads for easy reference.

### NEW YORK CITY.

—Pursuant to call representatives of a number of the trust companies of New York State met in the board-room of the Mutual Life Insurance Co., New York city, May 27, for the purpose of forming an organization of the trust companies of the State.

Over sixty out of eighty of the trust companies of the State approved the forming of such an association, and many of those who did not attend the meeting sent letters of regret and expressions of hearty approval of the formation of such an association. George W. Young, President of the United States Mortgage and Trust Co., New York, presided.

Articles of association were considered and adopted, and the following officers and executive committee elected: President, Geo. W. Young, of the United States Mortgage and Trust Co.; vice-presidents, Otto T. Bannard, of the New York Security and Trust Co.; Theodore F. Miller, of the Brooklyn Trust Company, and Grange Sard, of the United Trust Company, of Albany. Executive committee: Levi P. Morton, of the Morton Trust Company; Frederic P. Olcott, of the Central Trust Company; John E. Borne, of the Colonial Trust Company; Henry C. Demming, of the Mercantile Trust Company; George H. Southard, of the Franklin Trust Company, Brooklyn; Julian D. Fairchild, of the Kings County Trust Company; William Nottingham, of the Syracuse Trust Company; Seymour Van Sanford, of the Security Trust Company of Troy, and E. O. McNair, of the Commonwealth Trust Company of Buffalo.

It is expected that the first regular meeting of the association will be held some time in September.

—At the annual election of officers of the New York Stock Exchange, held on May 8, the following were chosen: President, H. K. Pomeroy; secretary, Wm. McClure; treasurer, F. W. Gilley.

—The withdrawal of trust companies from participation in the facilities of the New York Clearing-House Association, commenced some time ago, owing to the requirements as to reserves, to become effective June 1, has continued from time to time until now there are only two companies in the Borough of Manhattan—the Knickerbocker and the Manhattan—that have a clearing-house agent.

—A meeting of the council of administration of the New York State Bankers' Association was recently held at the clearing-house to determine on the time and place for holding the next annual convention. On motion of Stephen M. Griswold, President of the Union Bank, of Brooklyn, it was decided to hold the convention at the Champlain Hotel, Bluff Point, on Lake Champlain, Thursday and Friday, July 14 and 15.

—Trustees of the West Side Savings Bank celebrated the thirty-sixth anniversary of the institution by a dinner at the Café Martin on the evening of May 17. In the absence of President S. G. Cook, who was unable to be present owing to illness in his family, Clarence O. Bigelow presided. Papers by President Cook and others were read.

—In view of recent developments regarding irregular brokerage transactions, President L. V. F. Randolph, of the Consolidated Exchange, has issued a statement regarding the attitude of the exchange toward such practices. The following quotation illustrates this position: "The past year has been one of progress on the Consolidated Exchange. Some part of this progress has consisted in forcing out of membership some few who were unworthy to be members. In two cases members were found selling out their customers' stocks without authority, that is, going short of the stocks of which their customers had been purchasers. These members were forced out. In one or two other cases it was ascertained that by reason of overtrading members had become practically insolvent, though still endeavoring to go on with their business and accept orders. They were obliged to stop and liquidate, and were suspended as insolvent. A very few others linked together in the manufacture of fictitious quotations and transactions of such character as, if not actually creating a condition of 'bucket-shopping' on the floor, at least furnished facility for 'bucket-shops' not connected

with the exchange. They were expelled from membership in the exchange. The exchange would not tolerate even connivance at 'bucket-shopping.' The men found so conniving at it, and furnishing fictitious quotations or transactions, were expelled. Out of nearly 1,500 members the exchange has driven out of its membership nearly a dozen men during the past year. Not a single member of its Board of Governors hesitated to meet the duty and responsibility resting upon the board. Expulsions have been by unanimous vote.

The Consolidated Exchange is a strong and purposeful institution. It owns property at Nos. 58, 60 and 62 Broadway. It has a gratuity fund of \$400,000. It has struggled for many years to establish high standards. It proposes to live up to those standards. It will oppose illicit trading and illicit practices wherever it finds them. It is in a stronger and better position to-day than ever before; and its aim will be to perfect and enforce the best business methods and principles of the highest integrity."

Mr. Randolph was for a number of years President of the Atlantic Trust Co., and in this and other prominent positions he has held made a high reputation as a financial administrator.

—It was announced recently that plans for the merger of the North American Trust Co. and the Trust Company of America were approved by the directors of the latter company. The succeeding company, it is stated, will probably be the Trust Company of America, with \$1,000,000 capital and \$6,000,000 surplus, each company contributing \$3,500,000 to the capital and surplus.

—The annual meeting of the New York Savings Banks Association was held at the Chamber of Commerce May 12. An interesting feature of the meeting was the report of the executive committee in regard to the extension of permissible investments in railway securities. There were addresses by President John Harsen Rhoades, of the Greenwich Savings Bank, Gen. Stewart L. Woodford, Wm. H. S. Wood, President of the Bowery Savings Bank, and Charles A. Conant, Treasurer of the Morton Trust Co.

Officers for the ensuing year were chosen as follows:

President, Wm. B. Van Rensselaer, President Albany Savings Bank, Albany.

First vice-president, James McMahon, President Emigrant Industrial Savings Bank, New York city; second vice-president, Edward S. Dawson, President Onondaga County Savings Bank, Syracuse; third vice-president, S. E. Hannaman, President Troy Savings Bank, Troy.

Secretary, Wm. G. Conklin, Secretary Franklin Savings Bank, New York city.

Treasurer, Samuel D. Styles, President North River Savings Bank, New York city.

Executive Committee (to serve three years)—Alexander E. Orr, President South Brooklyn Savings Bank, Brooklyn; Chas. E. Sprague, President Union Dime Savings Bank, New York city; David Hoyt, Secretary Monroe County Savings Bank, Rochester.

—Members of New York Chapter American Institute of Bank Clerks held their third annual banquet at the St. Denis Hotel on the evening of May 12. The speakers and their subjects were as follows: "Business and Politics," Dr. Woodrow Wilson, president of Princeton University; "The Education of the Banker," Charles A. Conant, Treasurer Morton Trust Company; "Some Original Poems," Joseph C. Lincoln, Editor of "The Bulletin;" "The Banker of the Future," H. K. Twitchell, Assistant Cashier Chase National Bank; "A Word About Banking," Farquhar J. MacRae, president Society of Certified Public Accountants.

—At a regular meeting of the board of directors of the Hanover National Bank, May 10, Elmer E. Whittaker, Assistant Cashier, was unanimously appointed Cashier to succeed William Logan, deceased.

—The Greenwich Bank recently opened a branch in the Wool Exchange Building in the quarters formerly occupied by the Varick Bank, the latter having been merged with the new Coal and Iron National Bank.

—Owing to falling health, Wm. B. T. Keyser recently resigned as Cashier of the Merchants' National Bank. Samuel S. Campbell, for the past eight years Assistant Cashier, was elected his successor, and A. S. Cox, paying teller, was made Assistant Cashier.

—Carl G. Rasmus has been elected Treasurer of the United States Mortgage and Trust Co. to fill the vacancy caused by the resignation of Edward T. Perine. William C. Ivison has been elected Assistant Treasurer.

—Edward S. Layman, Assistant Cashier and manager of the foreign exchange department of the Illinois Trust and Savings Bank, Chicago, will take charge of a part of the work of the foreign exchange department of the National City Bank.

—At a recent meeting of the board of directors of the Thirty-Fourth Street National Bank, Dr. John P. Munn, President of the United States Life Insurance Co., was elected First Vice-President, and Clinton E. Braine, formerly of the Continental Trust Co., Second Vice-President. Walter R. B. Leaning, formerly with the Bank of the Metropolis, was elected Assistant

Cashier. W. M. Smith, President of the Bank for Savings, and Willis Terry were elected directors.

—The trust companies continuing to clear through members of the clearing-house association—two, the Manhattan and the Knickerbocker in the Borough of Manhattan, seven in Brooklyn, and one in Bayonne, N. J., on June 1 increased their cash reserves to ten per cent. of deposits as required by clearing-house regulation. It is stated, however, that at least one of the Manhattan companies will withdraw in the near future, or at any rate as soon as money becomes less a drug in the market than it is at present.

### NEW ENGLAND STATES.

**Boston.**—Governor Bates has signed the general trust company bill. Hereafter in order to obtain a trust company charter it will be necessary to appeal to the Savings Bank Commissioners rather than to the Legislature.

—The annual meeting of the Bank Officers' Association, of Boston, was held on the evening of May 18, more than 700 members being present. Vice-President Rugg presided, in the absence of President Stimpson, who was unable to be present owing to illness.

Reports presented showed a substantial gain in the current income and in the permanent fund, the latter amounting to \$49,000. The relief committee reported that about \$600 had been expended for charitable work among the members. The total membership is now 1044. Secretary E. A. Stone gave a résumé of the year's work. A feature of his report was a pleasing allusion to the eldest member, Henry B. Clapp, now in his eighty-third year.

The following officers were elected: President, Edward A. Church, of the Boylston Bank; vice-presidents, Frederick W. Rugg, of the Rockland Bank, and John A. Hunneman of the Second National Bank; directors for two years, Frederick Cate of the Provident Institution for Savings and H. D. Heathfield of the Boston Safe Deposit and Trust Company; trustee for three years, Edward A. Phippen, of the Old Colony Trust Company; Treasurer, Robert E. Hill of the Webster and Atlas National Bank; secretary, Edwin A. Stone of the Franklin Savings Bank; auditing committee, E. S. Brigham of the clearing-house, J. L. Hovey of the sub-Treasury and F. B. Lawler of the National Bank of Commerce.

Following the business session there was an entertainment given by the A. B. C. Glee Club of Arlington, assisted by the orchestra.

—At a meeting held May 31 the stockholders of the National Bank of Redemption indorsed the recommendation of the directors that the institution be consolidated with the First National Bank. The Bank of Redemption will be placed in liquidation.

—The seventeen Boston trust companies reported to the Savings Bank Commissioners, as of April 15, a combined capital of \$11,000,000, surpluses and undivided profits of \$19,365,081, deposits of \$105,151,130, and total loans and discounts other than loans on real estate of \$78,855,459.

Compared with October 31, 1903, and October 31, 1902, the showing is as follows:

| DATE.                 | Capital.     | Surplus and undivided profits. | Deposits.     | Loans.       |
|-----------------------|--------------|--------------------------------|---------------|--------------|
| April 15, 1904.....   | \$11,000,000 | \$19,365,081                   | \$105,151,130 | \$78,855,459 |
| October 31, 1903..... | 12,100,000   | 19,220,586                     | 107,885,000   | 85,729,000   |
| October 31, 1902..... | 11,000,000   | 16,033,548                     | 128,837,000   | 90,592,080   |

Since October 31, 1902, the Copley Trust Company started in business, while two companies have dropped from the list—the Union Trust Company closed by order of the Savings Bank Commissioners, and the Massachusetts Trust Company, which was absorbed by the Mercantile.

The contraction in deposits and loans amounted to over \$23,000,000 for deposits and nearly \$12,000,000 for loans since October 31, 1902.

—At a special meeting of the shareholders of the First National Bank, June 1, it was decided to increase the capital from \$1,000,000 to \$2,000,000 by the issue of 10,000 additional shares at \$200 a share. This action was a ratification of the plan for absorbing the National Bank of Redemption.

### MIDDLE STATES.

**Albany, N. Y.**—The National Commercial Bank now occupies its new building, which in point of solidity, taste, convenience and safety is equal to the best both in construction and equipment. In an illustrated article descriptive of the new building, the "Albany Sunday Press" of May 8 says:

"It may well be said that the building as a whole fittingly typifies the robust strength of the banking institution itself, which for more than three-quarters of a century has met every obligation, frequently when the financial world was in a panic, with the utmost promptness; while the rich and artistic interior typifies the invariable courtesy and consideration that has from the time of President Joseph Alexander to the present regime of President Robert C. Pruyn marked the intercourse between customers and the bank officials."

The building is constructed on classical lines, and is an imposing palace of marble and steel; while the vaults and furnishings, as well as the arrangements for heat, light and ventilation, are the best to be had.

The present officers of the National Commercial Bank are: President, Robert C. Pruyn; Vice-Presidents, Grange Sard and Charles H. Sabin; Cashier, Edward J. Husey; Assistant Cashier, Hugh N. Kirkland; Auditor, Walter W. Batchelder.

**Philadelphia.**—At a meeting of the directors of the Pennsylvania Railroad Co., May 19, Henry Tatnall, President of the Franklin National Bank, was elected sixth vice-president and treasurer of the railroad.

**New Jersey Bank Report.**—The quarterly report of State Banking and Insurance Commissioner David O. Watkins shows that the eighteen State banks have aggregate resources amounting to \$11,681,035, of which \$451,642 represents cash on hand, \$7,094,685 is loans and discounts, \$1,910,715 is stocks, securities, etc., and \$1,222,931 is due from National, State, and private banks. The surplus funds of the eighteen State banks aggregate \$841,500.

There are twenty-eight Savings banks in the State, with aggregate resources of \$83,415,774, and an aggregate surplus fund of \$5,532,890. Of the assets of the Savings banks, \$26,785,024 is bonds and mortgages, \$3,149,850 is United States bonds, \$43,965,356 other bonds and stocks, and \$5,594,980 loans on collaterals.

Commissioner Watkins' report shows that there are fifty-six trust companies in the State, with aggregate resources of \$131,922,115.

**Baltimore, Md.**—The United States Fidelity and Guaranty Co. announces that it has established an Internal Revenue Department, for furnishing bonds required by the Government in connection with transactions with the department. Hon. Robert T. Hough, for four years solicitor of internal revenue at Washington, and who has made a special study of internal revenue laws and regulations and has continuously practiced in the Internal Revenue Department, has been placed in charge of the United States Fidelity and Guaranty Co.'s new department, and patrons who pay the ordinary premiums for bonding will have the advantage of his services as counsel, without additional charge, in cases arising under their bonds.

—Plans have been filed for a new \$90,000 building at the northeast corner of Gay and Water streets for the National Marine Bank, the former occupant of the lot. The building is to be 55x165 feet, four stories in height, and constructed of brick and terra cotta. E. H. Glidden is the architect, and Messrs. D. W. and J. H. Thomas the builders.

## SOUTHERN STATES.

**Growth of Banking in Arkansas.**—At the last annual convention of the Arkansas Bankers' Association, held at Little Rock, April 22, President H. L. Rimmel, in his annual address, gave the following facts in regard to the growth of banking in Arkansas:

"In looking over the president's address of a year ago, I was impressed with the statement of the growth in the number of banks in the State in the past ten or twelve years. In 1892 there were but eighty-three banks; in 1903 there were 201 banks, and I am told this has been increased by twenty-five additional banks in the past year. In 1892 there was on deposit in all of the banks but \$3,188,283, while in 1904 the banks of the State have deposits of over \$31,000,000, over \$7,000,000 capital, and over \$3,000,000 surplus. All the people in every branch of industry or vocation are profitably employed—prosperity is universal—and Arkansas seems happy and contented upon every other subject except politics."

**Development of Southern Banking.**—In an address before the recent convention of the American Cotton Manufacturers' Association, J. W. Norwood, President of the City National Bank, Greenville, N. C., spoke of the increase of safe and profitable banking business in the South as a result of the increase in the number of cotton mills. He showed that the methods of organization and management of these mills generally made their business highly desirable to the banks, and he further said that the percentage of cotton mill failures will compare favorably with that of any other business in the United States—banks not excepted.

Mr. Norwood said that the effect of the banks in the South making loans to the cotton mills had been of great benefit to the planters and other borrowers of the banks in bringing about a reduction in the rate of interest charged. The banks, by being able to keep their funds invested throughout the year in safe loans, were not forced to charge the planters as high rates of interest as formerly when the only season in which considerable amounts of

money could be safely and profitably loaned was the time of year when the planters were seeking loans. The banks were forced to make their profits for the entire year during those months.

Mr. Norwood said that the present tendency in Southern banks was for the loans to planters to decline and the deposits of planters to increase. He attributed this not only to the higher price of cotton, but also to the fact that the establishment of manufacturing plants had given the planters convenient markets for other articles than cotton, including fruits, vegetables, poultry and dairy products, with the result that they were not so dependent as formerly upon a single crop, the income from which came in all at once, but they now had money coming in all through the year from different sources.

#### WESTERN STATES.

**Chicago.**—The Chicago Savings Bank Building is under construction at the southwest corner of State and Madison streets. It is a modern fire-proof structure, fourteen stories high, with basement and sub-basement and equipped with the latest conveniences. To meet the cost of the building an issue of \$400,000 first mortgage gold bonds has been made, and these have been almost all sold. The bonds are in denominations of \$1,000, interest payable November 1 and May 1 at the Western Trust and Savings Bank, Chicago. As the bonds mature serially, the security of the remaining issues is greatly enhanced.

The first floor and a portion of the basement are already rented for \$80,000 per annum, and the bank floor, to be occupied by the Chicago Savings Bank, has been leased to that bank for an annual rental of \$20,000.

This sum of \$20,000 is to be paid direct to the trustee (Western Trust and Savings Bank) to be applied solely and direct to the payment of interest on bonds (\$20,000 per annum). The rent of this one tenant alone provides therefor and guarantees the interest on the bonds.

The cost of the building will be \$600,000, and the leasehold is valued at \$500,000—a total valuation of \$1,100,000 against an issue of \$400,000 in bonds.

—Early in July the Jackson Trust and Savings Bank will remove from 53 Jackson Boulevard to the Railway Exchange Building. This will give the bank enlarged facilities for its banking department. Under the management of President W. H. Egan the deposits have been steadily growing.

**St. Louis, Mo.**—The Mercantile Trust Company announced on May 19 that it had acquired control of the American Central Trust Co. The combined capital stock of the two concerns is \$4,000,000, with a surplus and undivided profits of \$7,409,944.

—Nominations for executive officers of the Chicago Chapter of the American Institute of Bank Clerks, voted upon May 18, were as follows: George K. Wadsworth, renominated for president; Fred A. Crandall, vice-president; Victor E. Brown, secretary; P. E. Zimmermann and Fred E. Kell, treasurers.

Thirty-six members were nominated as delegates, eighteen of whom are to be sent to the second annual convention of the institute at St. Louis August 24. Since last September the chapter has secured sixty new members, making it, with a membership of 450, the largest of the thirty-five chapters in the United States. At the annual banquet at the Auditorium Hotel May 28 J. R. Chapman and Henry I. Osborne were the principal speakers.

**Western Banks Co-operating.**—The "Salt Lake Herald" of April 29 says:

"The opening of the Commercial National Bank of St. Anthony, Ida., next Monday, May 1, marks another step in the building up of a broad banking system which is designed to bring about closer financial relations between various parts of the inter-mountain region. The plan is being carried into execution by the Cosgriff brothers, of the Commercial National Bank, of Salt Lake City, and has as an end in view the establishing of a chain of banks through Utah, Idaho, Wyoming and the western part of Colorado that will not only support each other, but that will be advantageous in distributing money through this section of the country. This will also be beneficial to the customers, for wherever there is a demand for money a supply can be drawn from some bank in the system where it has accumulated. Salt Lake City is the center of the system, with the Commercial National the parent bank.

The banks in which J. E. Cosgriff and J. B. Cosgriff have controlling interests are the First National Bank, of Cheyenne, First National Bank, of Rawlins, Saratoga State Bank, Commercial National Bank, of St. Anthony, Murray State Bank, and Commercial National Bank, of Salt Lake City. Besides these they are in touch with several others, and it is their intention to extend this general system through the four inter-mountain States."

**Washington State Bankers' Association.**—The ninth annual convention of the Washington State Bankers' Association will be held in the City of Walla Walla, Thursday, Friday and Saturday, June 16, 17 and 18, 1904.

The convention promises to be the most successful in the history of the Association. The programme as thus far arranged will include the following addresses:

President's Address, Hon. C. J. Lord, Olympia: "Commercial Crises and Panics," A. L. Mills, President First National Bank, Portland, Oregon; "Needed Legislation," Hon. M. C. Moore, Walla Walla; "A State Protective Committee," W. D. Vincent, Cashier Old National Bank, Spokane; "International Banking," F. E. Beck, Manager International Banking Corporation, San Francisco; "Canadian Banking System and Methods," G. V. Holt, Manager Canadian Bank of Commerce, Seattle; "Requisites of a Good Loan," E. T. Coman, Cashier First National Bank, Colfax; "Banking in Alaska," N. B. Solner, Cashier Union Trust and Savings Bank, Seattle; "Credit Insurance," W. H. Preston, Manager American Credit Indemnity Co., San Francisco.

The following prominent eastern bankers have promised to be present and deliver short addresses on timely topics:

Chas. O. Austin, Vice-President National Bank of North America, Chicago; J. H. Cameron, Vice-President Hamilton National Bank, Chicago; Hon. C. A. Pugsley, Director Consolidated National Bank, New York city; Member of the Committee on Currency and Banking, House of Representatives.

The bankers of Walla Walla are arranging a very delightful social programme for the entertainment of the delegates, including a drive through the wheat fields and fruit farms adjacent to the city, and a picnic at Dudley Grove; a visit to Fort Walla Walla to witness the maneuvers of the Ninth Cavalry, U. S. Army, and a reception at the Walla Walla Club rooms.

Special entertainments will be made for the ladies who accompany the delegates, and they are cordially and urgently invited to attend.

Reduced rates will be extended by all railroad lines.

**Lewis and Clark Centennial.**—The 100th anniversary of the exploration of the Oregon Country by Capt. Meriwether Lewis and Wm. Clark of the United States Army, will be celebrated by an International Exposition to be held at Portland, Oregon, in 1906.

Lewis and Clark were commissioned by President Jefferson. Their exploration added Oregon, Washington, Idaho and parts of Montana and Wyoming to the national domain, giving the United States its first foothold on the Pacific Ocean. The Oregon Country had 13,294 population in 1850, and now its population is approximately 1,500,000. The acquisition of the Oregon Country paved the way for the subsequent annexation of California. The cities of Portland, Seattle, Tacoma and Spokane are examples of the progress of this region. Where Portland, with its 125,000 people and annual jobbing trade of \$175,000,000, stands to-day, Captain Clark in 1806 found a few miserable Indian huts. Puget Sound, which was little known for nearly forty years after Lewis and Clark returned to St. Louis, is now one of the world's great harbors.

---

## AMERICAN BANKERS' ASSOCIATION.

### THIRTIETH ANNUAL CONVENTION.

The thirtieth annual convention of the American Bankers' Association will be held in New York city, Wednesday, Thursday and Friday, September 14, 15 and 16.

**YOKOHAMA SPECIE BANK.**—At the half-yearly ordinary general meeting of the shareholders of this bank, held at the head office, Yokohama, Japan, March 10, the directors submitted the following report of operations for the half-year ending December 31, 1903: The gross profits for the past half-year, including 555,245 yen brought forward from last account, amount to 7,215,219 yen, of which 5,597,551 yen were deducted for current expenses, interest, etc., leaving a balance of 1,617,667 yen. Of this amount the directors proposed to add 110,000 yen to the reserve fund, raising it to 9,320,000 yen. From the remainder the directors recommended a dividend of twelve per cent. per annum, requiring 1 080,000 yen, the balance, 427,667 yen, to be carried forward to credit of next account.

The deposits now amount to 72,871,851 yen, and total resources 221,200,887 yen.

## NEW BANKS, CHANGES IN OFFICERS, ETC.

### NEW NATIONAL BANKS.

The Comptroller of the Currency furnishes the following statement of new National banks organized since our last report.

#### APPLICATIONS TO ORGANIZE NATIONAL BANKS APPROVED.

The following notices of intention to organize National banks have been approved by the Comptroller of the Currency since last advice:

- First National Bank, Phillips, Wis.; by G. B. Reedal, et al.  
First National Bank, Garvin, Ind. Ter.; by J. J. Cloughley, et al.  
Louisiana National Bank, Louisiana, Mo.; by J. H. Merrill, et al.  
National Citizens' Bank, Charles Town, West Va.; by Levi M. Porter, et al.  
First National Bank, Forest, Ohio; by S. M. Brown, et al.  
First National Bank, Coin, Iowa; by T. H. Read, et al.  
First National Bank, Browns Valley, Minn.; by F. H. Wellcome, et al.  
First National Bank, Economy, Pa.; by David P. Black, et al.  
First National Bank, Galeton, Pa.; by John B. Coulston, et al.  
First National Bank, Madison, Ga.; by W. P. Wallace, et al.  
Farmers' National Bank, Oberlin, Kans.; by J. R. Burrow, et al.  
Citizens' National Bank, Tell City, Ind.; by John T. Patrick, et al.  
Citizens' National Bank, Ennis, Texas; by J. Baldrige, et al.  
National Bank of Girard, Pa.; by James R. Andrews, et al.  
First National Bank, Beardsley, Minn.; by C. E. Purdy, et al.  
National Bank of Union Point, Ga.; by R. F. Bryans, et al.  
Citizens' National Bank, El Dorado, Ark.; by John C. Ritchie, et al.  
First National Bank, Mora, Minn.; by Geo. H. Newbert, et al.  
First National Bank, Branchville, N. J.; by Frank Roe, et al.  
National Bank of Norman, Norman, Okla.; by S. N. Brees, et al.  
First National Bank, Forsyth, Mont.; by J. W. Sweetser, et al.  
First National Bank, Madera, Cal.; by L. D. Scott, et al.  
Calhoun National Bank, Calhoun, Ga.; by P. M. Tate, et al.  
First National Bank, Clarksville, Ohio; by Edward A. Skillman, et al.  
First National Bank, Wagner, S. D.; by F. S. Strobbehn, et al.  
Ramona National Bank, Ramona, Ind. Ter.; by E. G. Lewis, et al.  
Home National Bank, Eureka, Kans.; by G. S. Sallyards, et al.  
First National Bank, Braham, Minn.; by N. E. Anderson, et al.  
People's National Bank, Girard, Pa.; by L. A. Burnett, et al.  
First National Bank, Chico, Cal.; by C. H. Schiveley, et al.  
Winburne National Bank, Winburne, Pa.; by James L. Sommerville, et al.  
Campbell National Bank, Campbell, Texas; by J. F. Hackler, et al.  
First National Bank, Norway, Iowa; by John T. Smith, et al.  
First National Bank, Decatur, Neb.; by T. R. Ashley, et al.  
First National Bank, Fayetteville, Ark.; by J. H. Frost, et al.  
Woods National Bank, San Antonio, Texas; by John Woods, et al.  
Pingree National Bank, Ogden, Utah; by James Pingree, et al.  
First National Bank, Berryville, Va.; by C. J. Rixey, et al.  
First National Bank, Cody, Wyo.; by John Winterling, et al.  
First National Bank, Spencer, Neb.; by F. W. Woods, et al.  
First National Bank, Bolivar, Mo.; by C. W. Viles, et al.  
First National Bank, Moline, Kans.; by Jinks Smethers, et al.  
Duncan National Bank, Duncan, Ind. Ter.; by F. W. Jarboe, et al.  
City National Bank, Purcell, Ind. Ter.; by Geo. M. Norris, et al.  
Farmers and Merchants' Bank, Sleepy Eye, Minn.; by Peter Manderfeld, et al.  
Coalgate National Bank, Coalgate, Ind. Ter.; by C. B. Burrows, et al.  
Cisco National Bank, Cisco, Texas; by Wm. Bohning, et al.

#### NATIONAL BANKS ORGANIZED.

7225 - National Bank of La Follette, Tennessee. Capital, \$50,000; Pres., R. B. Baird;

- Vice-Pres., Robert Mullins; Cas., W. S. McKamey.
- 7236—First National Bank, La Harpe, Kans. Capital, \$25,000; Pres., W. O. Lenhart; 1st Vice-Pres., C. H. Hackney; 2d Vice-Pres., J. A. Brown; Cas., D. Ruynon; Asst. Cas., C. E. Lenhart.
- 7237—First National Bank, Browerville, Minn. Capital, \$25,000; Pres., Wm. E. Lee; Vice-Pres., John D. Jones; Cas., Harry Lee; Asst. Cas., J. G. Mock.
- 7238—First National Bank, Monte Vista, Colo. Capital, \$25,000; Pres., H. H. Abbott; Vice-Pres., G. W. Gates; Cas., Wesley Staley.
- 7239—First National Bank, Saxton, Penn. Capital, \$30,000; Pres., Michael B. Breneman; Vice-Pres., W. H. Sweet; Cas., G. W. Derrick.
- 7240—Commercial National Bank, St. Anthony, Idaho. Capital, \$25,000; Pres., J. E. Cosgriff; Cas., John D. C. Kruger.
- 7241—First National Bank, Coolidge, Texas. Capital, \$25,000; Pres., J. R. Wallace; Vice-Pres., W. L. Murphy; Cas., J. E. Jenson.
- 7242—First National Bank, Mansfield, La. Capital, \$25,000; Pres., Boling Williams; Vice-Pres., W. A. Nabors; Cas., B. F. Dudley.
- 7243—First National Bank, Philmont, N. Y. Capital, \$50,000; Pres., Josiah W. Place; Vice-Pres., J. G. Curtis; Cas., C. Tracy.
- 7244—First National Bank, Osnabrock, N. D. Capital, \$25,000; Pres., John Trotter; Vice-Pres., F. S. Sargent; Cas., T. L. Tillsch.
- 7245—First National Bank, Amesville, Ohio. Capital, \$25,000; Pres., J. J. Beasley; Vice-Pres., O. M. Lovell; Cas., W. P. Smith.
- 7246—Union National Bank, Elgin, Ill. Capital, \$100,000; Pres., Richard N. Botsford; Vice-Pres., Alexander L. Metzler and Wm. W. Sherwin; Cas., John E. Whitman.
- 7247—First National Bank, Somerset, Ohio. Capital, \$25,000; Pres., D. S. Thomas; Vice-Pres., L. L. Dittoe; Cas., E. A. Montgomery.
- 7248—German National Bank, Weatherford, Okla. Capital, \$25,000; Pres., I. H. G. Huline; Vice-Pres., Walker Moore and M. C. Bennett; Cas., C. A. Galloway; Asst. Cas., J. R. Crabtree.
- 7249—National Bank of Commerce, Lincoln, Neb. (successor to Bank of Commerce). Capital, \$100,000; Pres., M. Weil; Vice-Pres., S. A. Foster; Cas., M. I. Aitken; Asst. Cas., Carl Weil.
- 7250—Merchants' National Bank, Fort Smith, Ark. (successor to Merchants' Bank). Capital, \$400,000; Pres., W. J. Echols; Vice-Pres., J. B. Williams; Cas., C. S. Smart.
- 7251—First National Bank, Loogootee, Ind. Capital, \$25,000; Pres., John N. Breen; Cas., J. M. Twitty; Asst. Cas., R. S. Patterson.
- 7252—First National Bank, Sebree, Ky. Capital, \$25,000; Pres., J. B. Ramsey; Vice-Pres., W. I. Smith; Cas., Joel Bailey.
- 7253—Stockmen's National Bank, Cotulla, Tex. Capital, \$60,000; Pres., L. A. Kerr; Vice-Pres., T. C. Frost; Cas., G. W. Heinrichson; Asst. Cas., B. Wildenthal.
- 7244—First National Bank, Lakeview, Oreg. Capital, \$50,000; Pres., W. H. Shirk; Vice-Pres., H. A. Brattain; Cas., S. O. Cressler; Asst. Cas., Lee Beall.
- 7245—First National Bank, Clifton, Tex. Capital, \$40,000; Pres., J. W. Kudasill; Vice-Pres., G. J. Gibbs; Asst. Cas., G. J. Gibbs.
- 7246—Citizens' National Bank, Pennsboro, W. Va. Capital, \$25,000; Pres., E. J. Taylor; Cas., C. H. Broadwater; Asst. Cas., C. R. Cunningham.
- 7247—First National Bank, Lafayette, Ga. Capital, \$25,000; Pres., A. R. Steele; Vice-Pres., R. N. Dickerson; Cas., S. A. Hunt, Jr.
- 7248—Farmers and Merchants' National Bank, Mount Vernon, O. Capital, \$100,000; Pres., F. V. Owen; Vice-Pres., Leander Hays; Cas., F. W. Severns; Asst. Cas., A. L. Byrns.
- 7249—Farmers' National Bank, Center, Tex. Capital, \$25,000; Pres., J. T. Norris.
- 7250—First National Bank, Salem, W. Va. Capital, \$60,000; Pres., Genius Payne; Vice-Pres., W. W. Jamieson; Cas., Oscar C. Wilt.
- 7251—First National Bank, Ramona, Ind. Ter. Capital, \$25,000; Pres., A. S. Burrows; Vice-Pres., A. D. Morton; Cas., Charles P. Davis.
- 7252—First National Bank, Egan, S. D. Capital, \$25,000; Pres., W. H. Pratt, Jr.; Vice-Pres., T. E. Spaulding; Cas., A. B. Larson.
- 7253—First National Bank, Quincy, Fla. Capital, \$50,000; Pres., John H. Carter; Vice-Pres., W. H. Davidson; Cas., W. H. Ide.
- 7254—First National Bank, Prestonsburg, Ky. Capital, \$25,000; Pres., R. E. Stanley; Vice-Pres., James Gobie; Cas., J. M. Weddington; Asst. Cas., L. P. Mayo.
- 7255—Washington County National Bank, Granville, N. Y. Capital, \$50,000; Pres., James E. Goodman; Vice-Pres., Arthur H. Morrow; Cas., John C. Thomson.
- 7256—First National Bank, Versailles, Mo. Capital, \$30,000; Pres., Joel D. Hubbard; Vice-Pres., G. W. Petty; Cas., W. W. Moore; Asst. Cas., W. T. Petty.
- 7257—First National Bank, Annona, Tex. Capital, \$25,000; Pres., R. N. Boswell; Vice-Pres., R. F. Scott; Cas., Ira C. Bryant.
- 7258—Farmers and Merchants' National Bank, Onley, Va. Capital, \$50,000; Pres., Ben T. Gunter; Vice-Pres., J. W. Rogers, Jno. S. Parsons and A. J. McMaster; Cas., W. C. Parsons; Asst. Cas., V. S. Burton.
- 7259—Redlands National Bank, Redlands, Cal. Capital, \$50,000; Pres., K. C. Wells; Vice-Pres., M. M. Phinney; Cas., H. H. Ford; Asst. Cas., C. C. Wells.
- 7260—First National Bank, Odon, Ind. Capital, \$25,000; Pres., Lowry Cooper; Vice-Pres., Harry H. Crooke; Cas., W. C. Garten.
- 7261—First National Bank, Linville, Ia. Capital, \$25,000; Pres., J. P. Jordan; Vice-Pres., Geo. Rockhold; Cas., P. A. Rockhold; Asst. Cas., H. S. Petty.

- 7262—First National Bank, Scenery Hill, Pa. Capital, \$25,000; Pres., Geo. E. Renshaw; Vice-Pres., F. I. Patterson; Cas., G. M. Mitchell; Asst. Cas., C. E. Hill.
- 7263—Old National Bank, Washington, Pa. Capital, \$150,000; Pres., C. S. Ritchie; Vice-Pres., S. M. Templeton and John W. Seaman; Cas., Robert McCarrell.
- 7264—First National Bank, Fairchild, Wis. Capital, \$25,000; Pres., N. C. Foster; Vice-

Pres., W. K. Coffin; Cas., Wm. F. Hood; Asst. Cas., Hattie M. Foss.

- 7265—First National Bank; Williamstown, N. J. Capital, \$25,000; Pres., W. H. Bodine; Vice-Pres., Luther M. Halsey; Cas., Jan van Herwerden.

- 7266—Citizens' National Bank, Meridian, Miss. Capital, \$150,000; Pres., W. A. Brown; Vice-Pres., H. M. Street and J. E. Reed; Cas., W. G. Simpson; Asst. Cas., Paul Brown.

## NEW BANKS, BANKERS, ETC.

## ALABAMA.

- BESSEMER—Bessemer State Bank; capital, \$30,000; Pres., W. W. Hollinsworth; Vice-Pres., W. H. Porter; Cas., E. A. Shelfer.
- COLLINSVILLE—Farmers and Merchants' Bank; capital, \$25,000; Pres., B. A. Nowlin; Vice-Pres., C. B. Forman; Cas., L. M. Dyke.
- ONEONTO—Oneonto Bank and Trust Co.; capital, \$20,000; Pres., F. G. Donehoo; Vice-Pres., T. H. Davidson; Cas., Albert Spencer.

## ARIZONA.

- PARADISE—A. H. Reynolds.

## ARKANSAS.

- HUNTINGTON—Bank of Huntington; capital, \$5,000; Pres., John W. McDonnell; Vice-Pres., Tom Spears; Cas., Geo. M. Talbott.

# MONEY, TRADE AND INVESTMENTS.

## A REVIEW OF THE FINANCIAL SITUATION.

NEW YORK, June 8, 1904.

THE PANAMA CANAL PAYMENT AND GOLD EXPORTS were the dominating influences of last month. That the financial operation of paying \$40,000,000 to the Canal Company at Paris, and \$10,000,000 to the Panama Republic at Panama has been completed, is a relief to Wall street, although as yet it seems to have produced no stimulating effects. But the canal franchise has been purchased and paid for and the apprehensions which have exercised many minds ever since it was settled that the Government would make the purchase no longer have any reason for existing.

There have been some peculiar features attendant upon the payment of the \$40,000,000 to the French company. The payment was made through J. P. Morgan & Co., and it is understood that all the gold actually shipped by that firm in conducting the operation was only about \$18,000,000 in amount. Nevertheless nearly \$41,500,000 of gold was shipped from New York during the month of May alone, and more than \$60,000,000 between April, and May 31. The May shipments so closely approximated the amount to be paid for the canal that it is not surprising that the opinion prevailed that all the gold shipped was for that one purpose alone. Some of the gold exported, however, was for Japan's account and represented gold imported by that country and received on the Pacific Coast. Other exports are not so easy of explanation in view of the fact that the exports of merchandise continue to be largely in excess of imports.

The gold exports last month were exceptionally large in amount. In the first week of the month they exceeded \$9,000,000, in the second week they were nearly \$14,000,000, in the third week they were more than \$15,000,000, and in the fourth week nearly \$3,000,000. One vessel alone carried \$9,020,022 in one shipment made on May 12, which not only made the record for a single shipment, but also was the largest amount of gold ever shipped on a single day. The demand for gold for export exhausted the supply of gold bars and made it necessary to delay some shipments until new bars could be manufactured.

The estimates made by the Treasury Department on the gold supply of the country show a decrease of nearly \$39,000,000 in May, which would indicate that the large exports from New York were not offset by imports at that and other ports.

Of the decrease of \$39,000,000 the Treasury lost \$14,000,000 and there was withdrawn from circulation nearly \$25,000,000. Some doubt may be raised as to these estimates by reason of the fact that while the net exports of gold in April are reported at more than \$9,000,000, the Treasury Department estimated an increase of \$3,000,000 in the total supply of gold in that month. This difference of \$12,000,000 could not be accounted for in our domestic protection of gold.

Since the completion of the payments of the purchase price of the Panama Canal attention has been attracted to the financial condition of the Government. The first fact of interest is that the expenditures of the Government were \$96,400,000 in May, while the receipts were only about \$41,700,000, leaving a deficit of \$54,700,000. The Government paid for the canal and for a loan to the St. Louis Exposition \$54,600,000, leaving a deficit of about \$100,000 as the result of the ordinary expen-

ditures of the Government. For the eleven months of the fiscal year the deficit is nearly \$52,300,000, but excluding the extraordinary disbursements of last month there would be a surplus of \$2,800,000, which compares with a surplus of \$39,000,000 in the previous year. It is evident therefore that the ordinary revenues and expenditures are barely producing a surplus at the present time, in fact a deficit seems to be impending.

As far as the actual condition of the Treasury is concerned, however, there seems to be no reason for anticipating any unfavorable development. The end of May finds the Treasury with a cash balance of \$313,287,515, with net cash in the Treasury vaults of \$376,020,872, with a net gold balance of \$217,591,391, and deposits in the National banks amounting to \$114,533,126. A comparison of the Treasury balances on May 1 and June 1 will show what changes have followed in the large disbursements of last month :

|                                 | <i>May 1, 1904.</i> | <i>June 1, 1904.</i> |
|---------------------------------|---------------------|----------------------|
| Balance in Treasury.....        | \$370,919,188       | \$313,287,515        |
| Gold reserve.....               | 150,000,000         | 150,000,000          |
| Available cash balance.....     | \$220,919,188       | \$163,287,515        |
| Net cash in Treasury.....       | \$220,919,188       | \$163,287,515        |
| Less gold reserve.....          | 150,000,000         | 150,000,000          |
| Available cash in Treasury..... | \$132,340,311       | \$128,020,872        |
| Deposits in National banks..... | 162,729,007         | 114,533,127          |
| Net gold in Treasury.....       | 81,877,060          | 67,592,391           |

The Government has more than \$67,500,000 gold on hand in excess of the \$150,000,000 gold reserve. It also has \$114,500,000 on deposit in the National banks. Deducting some \$20,000,000 demand liabilities the available balance is \$163,000,000, more than 40 per cent. of which is gold actually in the Treasury.

The Government since the first of February has been coining an extraordinary amount of gold, the total in the four months to June 1 amounting to nearly \$170,000,000. In the entire year 1903 the gold coinage was less than \$44,000,000 and in 1902 was about \$17,000,000. The new coin has evidently not been going into circulation, but is being stored in the Treasury vaults and made the basis of gold certificate issues.

The position of the New York banks during the entire period of the financing of the canal affair has been one of exceptional strength. The loans and deposits have reached the highest figures ever recorded and the surplus reserve at the close of the month had reached nearly \$36,000,000, the highest reported at this season of the year since 1899. A year ago the surplus was less than \$10,000,000.

A majority of the trust companies formerly connected with the New York Clearing-House have withdrawn owing to the reserve requirement going into effect June 1. What will be the effect upon the weekly statements of the clearing-house can only be conjectured. That these institutions have had some part in the remarkable

| DEPOSITS.          |               | LOANS.              |               |

| Dec. 11, 1897..... | 675,169,900   | Dec. 24, 1897.....  | 610,606,300   |
| Mar. 4, 1899.....  | 914,810,300   | Mar. 4, 1899.....   | 781,607,700   |
| Mar. 2, 1901.....  | 1,012,514,000 | Mar. 9, 1901.....   | 918,589,600   |
| Feb. 21, 1902..... | 1,019,474,200 | Mar. 1, 1902.....   | 938,191,200   |
| May 7, 1904.....   | 1,131,712,800 | May 14, 1904.....   | 1,078,928,600 |

growth in both deposits and loans reported by the banks admits of no question. It may be of interest to trace this growth since 1877 through the preceding record of maximum amounts recorded during the period.

The money market as reflected by the condition of the banks has shown continued ease, and the supply of money seems to be greater than the disposition to use it in investment ventures. Wall street has been particularly "blue" for some time past. The total transactions in stocks last month were very little in excess of 5,000,000 shares as compared with 12,000,000 shares in 1903 and 35,000,000 shares in 1901. The sales in May this year were the smallest recorded in any similar month since 1897. As to prices the market has been very unsatisfactory and few stocks made any gains. While prices seem low they do not advance. In May last year there was a very severe decline in the stock market and it will be remembered that the cause of the decline was supposed to be involved in some dark mystery. Few people, if any, were willing to concede that there were legitimate reasons for the decline or could be brought to believe that a prompt recovery would not follow. Yet prices last month, a year after the decline of May, 1903, were lower than the lowest recorded in that month. A comparison of the lowest prices of a few representative stocks in May, 1903, and 1904 compared with the highest prices in the year 1902 is presented in the following table:

|                                 | Highest,<br>1902. | Lowest,<br>May, 1903. | Lowest,<br>May, 1904. |                            | Highest,<br>1902. | Lowest,<br>May, 1903. | Lowest,<br>May, 1904. |
|---------------------------------|-------------------|-----------------------|-----------------------|----------------------------|-------------------|-----------------------|-----------------------|

Of the thirty stocks above named, all except two sold at lower prices last month than they bid in May, 1903. The course of three stocks in particular may be taken to indicate the general trend and condition. They are St. Paul, New York Central and Pennsylvania, and it is somewhat remarkable how nearly identical has been the movements in the prices of those securities. All reached very high figures in 1902—St. Paul 198, New York Central 168 and Pennsylvania 170. In May, 1903, each fell about sixty per cent. from the high record made in the previous year, and in May, 1904, each fell about ten per cent. or more from the lowest price of a year ago.

But throughout the general list there is the unvarying evidence that not merely temporary causes produced the decline of a year ago. If, as was claimed when prices were tumbling in May, 1902, St. Paul was really worth about 200, Louisville and Nashville 160, Missouri Pacific 125, New York Central and Pennsylvania each 170, and Union Pacific 113, then it is less easy to account for the prices now ruling than for those which were recorded in the slump of a year ago.

The subsequent drop in United States Steel stocks is impressive when the opinions expressed a year ago regarding the merits of those securities are recalled.

The common stock, considered low at 80½, in May, 1902, sold at 8½ in May, 1904, and the preferred stock, which was cheap at 80 twelve months ago, was down to 51¼ last month.

Relative to the general situation, probably the most unsatisfactory condition to be mentioned is the continued decrease in railroad earnings. In the first quarter of the year the earnings both gross and net showed a decrease, as the following figures from the "Financial Chronicle" show :

| THREE MONTHS ENDED MARCH 31. | GROSS EARNINGS. |              | NET EARNINGS. |              |
|------------------------------|-----------------|--------------|---------------|--------------|
|                              | Amount.         | Increase.    | Amount.       | Increase.    |
| 1900 .....                   | \$266,308,148   | \$28,085,796 | \$82,973,388  | \$15,163,855 |
| 1901 .....                   | 322,090,726     | 23,745,230   | 105,065,166   | 12,812,211   |
| 1902 .....                   | 313,512,310     | 16,625,689   | 95,975,444    | 3,051,948    |
| 1903 .....                   | 355,454,590     | 42,064,781   | 108,184,866   | 6,766,454    |
| 1904 .....                   | 364,827,074     | *3,160,238   | 90,083,071    | *16,262,677  |

\* Decrease.

In April gross earnings decreased five per cent. or more, and net earnings will probably show a considerable decrease also. Roads like the Pennsylvania and New York Central are discharging employees and in other ways trying to curtail expenses.

Iron production has been largely increased, but arrangements are reported in progress to curtail it materially.

The Government report on the wheat crop showed the effects of the bad weather which prevailed prior to May 1. Since that date there has been more favorable weather, but with some reverses in spots.

More labor troubles have manifested themselves, the freight-handlers' strike on the Fall River Lines being the latest development, but now apparently near an end.

There have been some important bond transactions during the last month. On May 3 subscriptions were received by the city of New York for \$32,000,000 3½ per cent. fifty year corporate stock and \$5,000,000 3½ per cent. ten year assessment bonds. Subscriptions for more than \$126,000,000 were made, and the city awarded the long-term bonds at an average price of 100.94, or on the basis of about 3.46 per cent. interest, and the short-term bonds at an average price of 100.13, making the basis of sale 3.48½ per cent.

A Japanese loan of \$50,000,000 bearing six per cent. interest was placed in London and New York last month. One-half the total amount was placed in this city and was largely over-subscribed. The loan consists of seven-year Treasury notes redeemable at the option of the Government after three years. The loan was negotiated at 93½ and soon commanded a premium. Russia has also negotiated a five per cent. five-year loan, the total issue of which will be \$160,000,000. Some of the bonds have been taken by financial institutions in this city.

The New York Central Railroad is issuing \$50,000,000 four per cent. thirty-year debenture bonds, a part of which issue has been placed with a syndicate. A part of the issue will be used to retire \$5,000,000 of notes falling due next March.

THE MONEY MARKET.—There has been a little stiffening of rates for money in the local market since the Panama payments got under way, but the market is still easy. Call money dropped to one half per cent. on May 3, the lowest recorded in nearly ten years, but later in the month touched 2¼ per cent. There was a lowering of rates in the last week. At the close of the month call money ruled at 1¼ @ 1½ per cent., the average rate being about 1¼ per cent. Banks and trust companies loaned at 1½ per cent. as the minimum rate. Time money on Stock Exchange collateral is quoted at 2¼ per cent. for 60 to 90 days, 3 per cent. for 4 months, 3 @ 3½

per cent. for 5 to 6 months, and  $3\frac{1}{2}$  @ 4 per cent. for 8 to 9 months on good mixed collateral. For commercial paper the rates are  $3\frac{3}{4}$  @  $4\frac{1}{4}$  per cent. for 60 to 90 days' endorsed bills receivable, 4 @  $4\frac{1}{2}$  per cent. for first-class 4 to 6 months' single names, and  $4\frac{1}{2}$  @ 5 per cent. for good paper having the same length of time to run.

NEW YORK CITY BANKS.—New records were made last month by the New York banks in the matter of both deposits and loans, the former reaching \$1,181,712,800 on May 7 and the latter \$1,078,928,600 on May 14. There were wide fluctuations in the bank statements issued from week to week and many of the changes were of an inexplicable character. Loans in the first two weeks of the month increased \$29,000,000 and in the last two weeks they decreased \$38,000,000. Deposits increased \$17,000,000 in the first week and decreased \$33,000,000 in the last three weeks. The reserves decreased \$23,000,000 in the first three weeks but increased \$16,000,000 in the last week. The surplus reserve is about \$29,700,000 as compared with \$35,700,000 a month ago and \$9,600,000 a year ago.

**NATIONAL BANK CIRCULATION.**—There was an increase of nearly \$9,000,000 in National bank circulation last month and of nearly \$10,800,000 in Government bonds deposited to secure bank circulation. This may be readily explained in the large decrease in public deposits in the National banks. A month ago \$171,000,000 of securities were deposited with the Government to secure these deposits, now only \$124,000,000. While all the railroad bonds over \$17,000,000 have been withdrawn and nearly \$14,000,000 State and city bonds, there were also \$12,500,000 of 2 per cent. bonds of 1930 withdrawn as security for public deposits while \$9,500,000 have been deposited to secure circulation.

| Two per cents. of 1900.....             | 387,277,750    | 391,990,900    | 393,528,350    | 403,048,350   |
| Total.....                              | \$392,671,550  | \$398,034,650  | \$399,796,140  | \$410,572,640 |

The National banks have also on deposit the following bonds to secure public deposits: 4 per cents. of 1907, \$3,899,050; 5 per cents. of 1894, \$100,000; 4 per cents. of 1895, \$10,142,050; 3 per cents. of 1896, \$3,970,530; 2 per cents. of 1893, \$85,184,750; District of Columbia 3 1/2's, 1924, \$1,934,000; State and city bonds, \$6,842,500; Philippine Island certificates, \$3,426,000; Hawaiian Islands bonds, \$1,072,000; Philippine loan, \$1,607,000, a total of \$124,177,850.

UNITED STATES PUBLIC DEBT.—Except a reduction of about \$1,000,000 in the National bank-note redemption account, there was little change in the principal of the public debt last month. The payments on account of the Panama Canal purchase, and to the St. Louis World's Fair, made heavy inroads upon the cash assets of the Government and the net balance was reduced from nearly \$871,000,000 to about \$313,000,000, while the net debt less cash in the Treasury was increased from about \$919,000,000 to \$975,000,000.

GOVERNMENT REVENUES AND DISBURSEMENTS.—The Treasurer's statement for May shows a deficit of \$54,780,413, but included in the disbursements is "\$54,600,000 paid on account of Panama Canal and loan to Louisiana Purchase Exposition Company." Making allowance for these payments, however, the ordinary expenditures were slightly in excess of the receipts. For the eleven months of the fiscal

year there is a deficit of more than \$52,000,000 as compared with a surplus of \$39,000,000 in the previous year.

UNITED STATES FOREIGN TRADE.—The merchandise export movement in April was about \$168,000 larger than in the corresponding month last year. In fact the exports in April of each of the last three years have not varied as much as one per cent. The total was almost \$110,000,000, or about \$10,000,000 less than in March, while the exports were nearly \$83,500,000, or \$3,000,000 less than in March this year and \$4,000,000 less than in April last year. The net exports reached nearly \$26,500,000, or \$4,000,000 more than in 1903, but \$7,000,000 less than in 1902 and \$17,500,000 less than in 1901. During the month nearly \$19,500,000 gold was exported but more than \$10,000,000 was imported, which leaves the net exports of gold only a little more than \$9,000,000. As this leaves a balance of imports amounting to nearly \$47,000,000 for the ten months of the current fiscal year, the supply of gold from which to draw future exports seems to be ample without drawing upon our domestic supply. For the ten months of the year the record shows net exports of merchandise of about \$449,000,000 as compared with \$359,000,000 in the previous year. The imports of gold exceeded the exports of silver by \$30,000,000, leaving the net merchandise and specie exports at \$418,000,000. Gold imports and silver exports about balanced each other in 1903 leaving the net exports of all \$359,000,000.

kinds of money was reduced only about \$29,600,000. The increase in National bank notes was \$3,900,000.

**MONEY IN CIRCULATION IN THE UNITED STATES.**—The heavy exports of gold in May are reflected only partly in the decrease in gold in circulation, which was about \$25,000,000. An increase of more than \$7,000,000 in National bank notes offset decreases in other forms of money and reduced the loss in total circulation to about \$28,000,000.

**MONEY IN CIRCULATION IN THE UNITED STATES.**

**FOREIGN BANKS.**—That the Bank of France should show a large increase in its gold holdings as the result of the export movement from the United States last month was to be expected. It gained \$60,000,000 while England lost about \$9,000,000 and Germany gained \$5,000,000. France now has about as much gold as England, Germany and Austria Hungary together.

**GOLD AND SILVER IN THE EUROPEAN BANKS.**

Earnings of Canadian Banks.

I transmit a statement compiled by the Finance and Insurance Chronicle showing the earnings on capital and on combined capital and reserve of certain Canadian banks during the year 1903. These banks have an aggregate capital of over \$90,000,000, or nearly ninety-three per cent. of the entire bank capital of the banks of the Dominion.

Earnings of Canadian Banks upon Capital and Combined Capital and Reserve during the year 1903.

OTTAWA, Canada.

JOHN G. FOSTER, Consul-General.

## BANKERS' OBITUARY RECORD.

**Bedell.**—Chauncey Bedell, Vice-President of the First National Bank, Hempstead, N. Y., died April 28, aged seventy years.

**Bennett.**—Augustus H. Bennett, President of the Homer (N. Y.) National Bank, died May 25, aged sixty-four years. Mr. Bennett was born in the vicinity of Homer, and throughout his life was identified with local interests. He was one of the founders of the Homer National Bank, in 1884, becoming Cashier, and in February of the present year he was elected President.

**Brown.**—E. P. Brown, Cashier of the First National Bank, Castle Rock, Colo., died May 5.

**Cuykendall.**—W. B. Cuykendall, Vice-President of the First National Bank, Plymouth, Ohio, died May 20, aged seventy-eight years. He had been President of the bank for many years, but retired from the more active office to the vice-presidency a short time ago.

**Duncan.**—William P. Duncan, President of the First National Bank, Phillipsburg, Pa., died May 3.

**Dyckman.**—Francis H. Dyckman, President of the Bank of Sleepy Eye, Minn., died May 9, aged about forty-five years. He was a resident of Orange, N. J., and had business interests in New York city.

**Fitch.**—Ashbel P. Fitch, President of the Trust Company of America, New York city, and prominent in politics, died May 8. He was born in Clinton county, N. Y., October 8, 1848, coming to New York city at an early age. After being educated in this country and abroad he was admitted to the bar, and served four terms in Congress. In 1893 he was elected Comptroller of New York city, and in this position made a good record for his judgment in financial matters.

**Hagar.**—Edward C. Hagar, Assistant Cashier of the Oakland (Cal.) Bank of Savings, died May 4. Mr. Hagar was born in Indiana, but had resided in California since 1877. He had been connected with the Oakland Bank of Savings for seventeen years.

**Goldsmith.**—Julius M. Goldsmith, Treasurer of the State Savings Bank, St. Paul, Minn., died May 4, aged forty-seven years.

**Lancaster.**—Robert B. Lancaster, President of the Citizens' National Bank, Lebanon, Ind., and an active business man, died May 18.

**Leitch.**—Dr. Andrew J. Leitch, President of the First National Bank, Niles, Ohio, died May 7.

**Lounsbury.**—John W. Lounsbury, Vice-President of the First National Bank, Port Chester, N. Y., died May 19, aged eighty years.

**McCormick.**—Joseph T. McCormick, President of the Second National Bank, Connellsville, Pa., died May 2.

**McNally.**—Andrew McNally, Vice-President of the Chicago National Bank, and a member of the publishing firm of Rand, McNally & Co., died recently at his winter home near Pasadena, Cal.

**Nelmann.**—Herman H. Nelmann, a member of the firm of H. H. Nelmann & Co., Pittsburg, and President of the Fifth Avenue Bank, of that city, died May 16, aged seventy-nine years.

**Perin.**—Nelson Perin, President of the Eastern Security Co., Baltimore, died May 12, aged fifty-one years.

**Peters.**—Dr. J. Elwood Peters, Vice-President of the Jenkintown (Pa.) Trust Co., died May 16, aged forty-nine years.

**Pruner.**—Col. Edmund J. Pruner, President of the Farmers and Merchants' National Bank, Tyrone, Pa., died May 14, aged sixty-eight years.

**Salisbury.**—B. W. Salisbury, Cashier of the First National Bank, Monroeville, Ohio, died April 29.

**Silliman.**—Edward S. Silliman, President of the First National Bank, Mahanoy City, Pa., and prominently otherwise associated with business interests at that place, died May 1.

**Sprague.**—Chauncey T. Sprague, Vice-President of the Freeport (N. Y.) Bank, died May 3, aged sixty-six years.

**Studebaker.**—David Studebaker, Vice-President of the Old Adams County Bank, Decatur, Ind., a director of the Bankers National Bank, of Chicago, the First National Bank, of Marion, Ind., the Fort Wayne (Ind.) Trust Co., and other financial institutions, died May 5. He was born in Mercer county, Ohio, August 17, 1827.

**Styer.**—Lewis Styer, Cashier of the People's National Bank, Norristown, Pa., died May 27, aged seventy-two years.

**Tallman.**—A. P. Tallman, for many years Cashier of the First National Bank of Bellaire, Ohio, died May 15, aged sixty years.

**Van Horn.**—Hon. George Van Horn, who was recently elected Vice-President of the Second National Bank, Cooperstown, N. Y., died May 3.
