THE

BANKERS' MAGAZINE

RHODES' JOURNAL OF BANKING and THE BANKERS' MAGAZINE Consolidated.

FIFTY-EIGHTH YEAR.

JANUARY, 1904.

VOLUME LXVIII, No. 1.

THE BANKERS' MAGAZINE FOR 1904.

With the present number **THE BANKERS' MAGAZINE** begins the fifty-eighth year of its continuous existence. In entering upon the new year we do not feel called on to make any lavish promises, but rather invite attention to what has been done in the past as an assurance for the future, and at the same time to ask a careful examination of the contents of this number of the **MAGAZINE**. The publishers are quite willing that this publication shall be judged on its record—what it has been and now is—rather than by any glowing phrases descriptive of future excellence. Improvements will be made, however, as time and experience may suggest.

The first number of the **MAGAZINE** for the new year is in itself a storehouse of valuable information for the banker and monetary student. First in importance are the annual reports of the Secretary of the Treasury and Comptroller of the Currency. The latter report is published more fully in **THE BANKERS' MAGAZINE** than elsewhere, and it contains much statistical and other matter of permanent value for reference. Then there is a special article by Hon. **ELLIS H. ROBERTS**, Treasurer of the United States, on "Denominations of Our Currency," in which the great demand for notes of small denomination is clearly illustrated. Portraits of Secretary **SHAW**, Comptroller **RIDGELY** and Treasurer **ROBERTS** are also presented.

Mr. **CLAY HERRICK**, of Cleveland, contributes the first of a series of papers on "Trust Companies—Their Organization, Growth and Management." These papers will be, we feel sure, a noteworthy contribution to financial literature, and will be read with interest and profit by bankers as well as trust company officers.

Practical banking matters also occupy considerable space in this issue. A Philadelphia bank accountant furnishes an improved system of bookkeeping that appears to possess substantial merit; an-

other contribution handles, in a thorough manner, the collection department of a modern bank. Both these papers are illustrated with numerous facsimiles of the books and blanks used in the transactions described.

Besides the special papers mentioned, there are the several features which are regularly maintained in each issue.

Among the special articles to appear in the February number will be the following:

RALPH M. EASLEY, Chairman of the Executive Council of the National Civic Federation, contributes an interesting article in the series of papers on the Relations of Labor and Capital, continuing the discussion begun by Mr. PARRY in the November issue and sustained by Mr. GOMPERS in the December number.

Mr. CHARLES A. CONANT, the well-known economist and monetary expert, writes on "The Elements of Credit," showing particularly the relation of credit to banking operations.

Never before in the long history of THE BANKERS' MAGAZINE has it had so large a circulation or such extensive advertising patronage as now. The MAGAZINE is not only maintaining the position it has long held as the leading monetary and banking periodical of the world, but its power and popularity are constantly growing. It will be the continuous aim of the publishers to keep the publication up to the highest possible standard—to make it a worthy representative of the vast banking and financial interests of the country.

AVERSION TO COMBINATIONS, whether in the form of corporations or so-called trusts, is easily aroused. The dread of monopoly of any kind is strong upon the average man. The day of exclusive privilege in trade, supported by sovereign power, has passed by. Even in countries where the form of government is still more or less autocratic, the wisdom of equal rights in trade and commerce is recognized. Under the free institutions fostered by the republican governments of the United States and of the several States, all citizens are entitled to equal business privileges. Although monopoly in the strictest sense is deprived of all legal support, yet experience proves that there will always be, even with the freest competition, room for the existence and growth of the same evils which accompanied legalized monopoly. The inequalities of wealth, greater means and resources of one citizen compared with those of another, make the richer man appear to the poorer in the light of a monopolist. He can, by this greater command of means, absorb business and shut out his poorer compatriot. Even if there were no corporations or trusts, if partnerships were forbidden, and all business were done by the individual as

distinguished from the firm or corporation, the richer business men would be exposed to having the stigma of monopoly placed upon them by less fortunate or skillful competitors.

Corporations, large and small, are necessary to modern civilization; common sense must admit this. It may be further predicated that corporate combinations of capital for manufacturing and commercial purposes, including transportation with the latter, conduce to a more equal distribution of wealth, although this proposition may not be so generally admitted. The greater wealth and resources of corporate bodies give them necessarily a monopoly of the business they undertake as against individuals. The stronger corporation also monopolizes the business it undertakes as against a weaker corporation, in the same manner as the rich individual can prevent the poorer individual from competing. Competition implies for success equality or something like equality of means. No competitor who is unsuccessful has reason to love or admire the concern, whether individual or corporate, with which through lack of means or skill he has been unable to keep step.

There is no more guaranty that a corporation may not fail than there is in the case of an individual business man. The consequences to creditors and others affiliated with the business as customers or employees is the same in each case. The corporation or trust is merely more conspicuous from its size and the amount of resources controlled. The prejudice against them is in large measure unfounded, or at least is based on unwise exploitation of the principle of incorporation of capital.

Many of the trusts which are said to dominate the land may possibly be the malign monsters which they are represented to be by demagogues and those who are envious of their wealth and power; but none of these assertions and representations have been proved very conclusively against any one of them. The Standard Oil Company has perhaps been as bitterly attacked as any of the so-called monopolistic trusts, and perhaps the rise and growth of no other of these trusts has been so thoroughly ventilated. The commencement, the growth, the various steps by which it has acquired its firm grasp on the production, manufacture and distribution of oil products, have been deemed worthy of a carefully-prepared history in one of the popular magazines. The impression made on the mind of any fair reader is not by any means unfavorable to the great company or to the man who is alleged to be its main originator and present chief. All through this history awful revelations are promised; the reader is at every step told to prepare his mind for some unlawful and tyrannous move. But the revelations really made are nothing more than the gradual steps by which capital and business skill were used to

better the business and secure fair markets for the products. Economies were devised which have made possible the use of numberless by-products that under less concentrated management would have been wasted. Temporary depressions in the oil business, ascribed to the movement of the Standard Oil Company, turn out to have been the natural consequences of blind competition and the wasteful management that flowed therefrom, rather than from the endeavors of the company to control. The talk of the crushing of rivals dwindles down to the taking of these rivals into fair partnership; and where such partnership was refused there seems to be more evidence that disaster came from a pig-headed pride and miscalculation of means on the part of the alleged rivals of the company, than from any deliberate desire to oppress.

In fact, if it were not for the apparently hostile comment which is injected here and there into Miss *TARBELL'S* history, it would almost seem as if the whole account were devised as a means of glorifying the Standard Oil Company and extolling the high executive and business skill of Mr. *ROCKEFELLER*. For anything that has yet been brought to light, it would appear that the oil resources of the United States have been conserved and carefully applied by this company, and that these resources, if left to the exploitation of blind competition, would have been wasted to an appalling extent. The cost to the consumer has been reduced over a long period of time by the careful conservation and utilization of all oil products rendered possible by the farsighted and skillful management of the Standard Oil Company. If the lumber and timber resources of the country had been brought under a similarly powerful and farsighted control, there would probably be less room for complaint that the forests of the United States are in danger of exhaustion in the near future.

In the strict sense of the term the Standard Oil Company is not a monopoly. It has not been assisted to secure the control of the oil business by special legislation or Governmental grant. The conditions under which it has consolidated its power have been the same as those which any citizens or corporations might have availed themselves of. And the same may be said of the other alleged oppressive trusts. In the largeness of these combinations which merely concern the utilization of some natural product, there should be no reason for popular or political apprehension. It is not necessary to recite the arguments which prove that these combinations of capital were the outgrowths of natural laws. Every one must know that they are a necessity in the collection and distribution of products in a nation possessing so great a territory and such diversities of soil and climate. To undertake to stop the growth of corporate bodies,

by means of oppressive laws, is to increase the monopolistic power of those already in existence. The natural check on the abuse of power by a great corporation is the fear of competition by other combinations of capital. Unwise Government interference, by making it more difficult for new corporations to enter the field, really strengthens the position and tends to foster the arrogance of the corporate bodies which are already well established.

THE DEPOSIT OF PUBLIC FUNDS IN THE BANKS will probably be made the subject of some attempted financial legislation in the near future. Senator ALDRICH, who has heretofore been favorable to a measure that would place more Government funds with the banks, may introduce a measure enabling customs receipts as well as those from internal revenue to be so deposited, and extending somewhat the line of securities which may be received for Government deposits.

The Government has now no surplus of income, and the danger of money being locked up in the Treasury is thereby greatly reduced. No one can tell, however, how long this condition may continue; a surplus may at any time reappear, and it will not be unwise to provide for such an occurrence. Moreover, even if there is no surplus of receipts over expenditures during the fiscal year, and even if there should be a deficit, this fact does not preclude the possibility of temporary excess of receipts. The revenues of the Government may accumulate considerably from month to month until the time for expenditure arrives, and if even temporarily locked up in the Treasury may have serious effects on the business situation.

It would be better in the long run, whether there was a surplus or deficit in the annual revenues, to have the funds of the Government remain in the banks exactly like the funds of the general public. Other commercial nations deem this the height of financial wisdom. Senator ALDRICH could not do better than to perfect a measure which would gradually eliminate the independent Treasury as an important factor in the monetary affairs of the country.

The growing scarcity of Government bonds obtainable for use as security for United States deposits will make the temptation very strong to open the door to securities of other kinds. This is a very important matter. There are undoubtedly many State and municipal securities that in the qualities essential for safety to Government funds are on a par with Government bonds. The only difference is that in holding its own bonds the Government can never under any possibility experience a loss, because if the bonds can not be sold they can be cancelled, and the debt of the bank offset against the debt of the Government. In other words, United States bonds

will in equity never be worth less than par to the Government that issues them, although they may not bring par in the open market. State and municipal bonds, if it became necessary to sell them to make good public funds deposited with an insolvent bank, might at the time be below par, and if they had been received as security at par, there is the possibility of a loss. State and municipal bonds, therefore, should never be accepted at par as security. That is, while the Government can always safely deposit with a bank funds to the extent of one hundred per cent. of par value of Government bond security, a lower limit should be fixed for State and municipal bonds, whatever their market value may be when they are received. If State and municipal bonds be included in the security which the Secretary of the Treasury may legally take for public funds, a limit of, say, ninety per cent. of the par value should be fixed for the deposit for such funds. Above this limit, at whatever per cent. the law fixes, the Secretary should not be permitted to go, and it should be left to his discretion to deposit less.

Railroad bonds are on a still different footing. Here the distinction must be made between public and private indebtedness. The revenues of private enterprises depend upon their earnings; those of States and municipalities on taxes. Although cases of default seemingly irremediable can easily be cited with regard to both public and private securities, yet the public securities resting on taxation are in most cases less liable to default either in the payment of interest or principal. No doubt the securities of some railroads are safer investments than those of some municipalities, but nevertheless the general rule holds good.

If no security at all were taken from the class of banks which now take Government funds and deposit United States bonds, it is believed that the percentage of loss would be very small. But it is very certain that if Government funds could be obtained by banks on the same terms as private deposits, it would become impossible for the Secretary to refuse them to many banks which were not fitted to be depositories, either by their resources or the character of their business. The requirement of security enables the Secretary to make to a very large extent a selection of the banks most fitted for his purpose. Others, as a rule, would see no profit under the required conditions. While it may be advisable to admit some public securities other than United States bonds on the list which may be accepted by the Secretary as security for public funds, it is believed that the line should be drawn at this point, and that no railroad bonds or other private securities should be permitted. Under the present law, as now construed, the discretion of the Secretary of the Treasury is very wide, and Congress should take steps to narrow it.

That this discretion in regard to the use of public funds has not been abused is no argument for placing a power that may be abused in the hands of any official, especially when the end in view can be accomplished without so doing.

Before there were so many varieties of good public securities, was often necessary to take personal bonds before placing public funds in the banks. Some one had to pass on these bonds, and the power to do this was entrusted to the Secretary of the Treasury. The provision in the National banking laws which virtually continues this discretion was a survival from the old laws on the subject. The most probable conjecture for its being retained is that the framers of the act thought that under it the Secretary of the Treasury might reinforce United States bonds with other security, because at that time the credit of the Government was not as high as it has since become. But if a bill be passed extending the security which the Secretary may receive, a provision depriving him of his discretionary power ought not to meet with objection.

THE EXTENSION OF THE USE OF THE BANK CHECK as a means of payment by the general public during the last fifty years, has been something to wonder at. Nowhere in the world has this use been developed on a larger scale than in the United States.

The increase in the number of clearing-houses and the continual augmentation of the exchange business of these clearing-houses is an index of the great amount of property that changes hands through the use of checks.

The strict laws which repress and control the issue of bank promissory notes have in a way forced the employment of checks. But this method of transferring bank accounts would never have become so universally employed if it had not been that the means of transportation and communication between different parts of the country have been so improved that to-day San Francisco is for all practical purposes as near to New York as New York was sixty years ago to Philadelphia or Boston. Sixty years ago the business men who could or would make remittances by personal checks on local banks were few indeed. Now the practice has become almost universal. To effect exchanges and payments equal to those now effected by means of checks, how large an issue of bank notes would be required? Every banker knows well that even if the business now safely and quietly completed by the use of checks could be done with bank notes, the cost of printing and keeping such notes in fair condition would largely exceed all that it now costs banks to collect outside checks at par for their customers.

The check is the safest and cheapest method of transferring bank accounts that has yet been devised. For the bank depositor it is the most convenient, and its convenience increases as the personal check of the depositor approaches closer to being a form of universal domestic exchange. Through the use of checks the deposits and loans and the general banking power of the banks of the country have increased to such an extent that there is probably no country in the world where all forms of wealth can be so readily liquidated and exchanged as in the United States.

In regard to the collection of country checks at par, bankers seem as yet to disagree. The general opinion tends to be in favor of such collection without charge to customers. There is not, however, any advantage in extended discussion of this point. Each bank must decide it for itself according to the circumstances in which it finds itself placed. It is a matter which will be favorably solved by the logic of events. No one in 1840 could have anticipated the extensive use of bank checks prevailing to day. In the same manner the question of the collection of checks at par will be settled as time goes on and our present system of banking continues. Instead of discouraging the use of checks, the banks for their own best interests should develop it in every possible way.

THE WORLD'S CHIEF GOLD MARKETS are New York, London, Paris and Berlin. Each of these markets adds to its stock from other sources as opportunity may serve from time to time. The production of the mines and gold from other countries come to these main markets, but when there is a sudden demand for gold in any of these principal financial centres some one of the other three is looked to for a supply. New York and London afford the greatest facilities for obtaining gold. The chief part of the Treasury stock of gold coin and bullion is held in the United States Sub-Treasury in New York, and gold can be obtained there in the form of United States gold coin by presenting legal-tender notes or gold certificates for redemption. The Treasury also gives gold bars in exchange for legal-tender notes at a slight charge above gold coin. Exporters of gold prefer the bars, because they are assured of full weight, the bars unlike the coin not being subject to the abrasion of circulation.

In London British gold coin, sovereigns, can be obtained from the Bank of England by presenting notes of the bank, but when bar gold or foreign gold coin is demanded the bank charges a slight premium. Gold coin circulates more in Great Britain than in the United States, and, therefore, sovereigns taken in quantities are less likely to hold out full weight than American gold coin. They are

therefore less likely to be taken for importation to the United States than American gold coin or bars. Moreover, before sovereigns could be used for circulation in this country they would have to be recoined at the mint, and although no charge is made for coinage, the transportation to the mint and back would entail additional expense.

A large part of the gold which passes from one country to another is kept in the form of bars, which are kept in this form for this purpose. The Bank of France will furnish gold in exchange for its notes, but it has the option to redeem the notes either in gold or silver five-franc pieces; so by exercising the option to redeem in silver the bank has it in its power to control or check the flow of gold from its coffers. In Berlin the Imperial Bank of Germany often throws obstacles in the way of those who seek to obtain gold for its notes, and as it is supported in this by public opinion, those who seek gold for export are less apt to apply in this market except as a last resort.

JOHN LAW'S SPECULATIONS in France in 1720 and the late industrial speculation in this country have been compared with each other by several recent writers. JOHN LAW, to some extent, seems to have had more excuse than our modern speculators, as he was the pioneer in a very fascinating field of which the pitfalls and final abyss were as yet unknown. LAW had undoubtedly many excellent ideas as to the benefits to be derived from the use of credit, and was much less of a charlatan than might be supposed from the direful results of the operations he initiated. His first idea which he put in practical operation, with the assistance of the Regent, was to use the gold and silver coin then current, which was of a heterogeneous character, as a basis for a bank which should issue notes based on a metallic reserve. This plan was similar to that which had been successfully adopted in the foundation of the celebrated banks of Venice and Amsterdam. However, LAW's bank, which with the consent of the Regent was started as a private institution, was very successful. Specie from all over France was deposited with it and was recoined in a manner to secure uniformity of denomination and weight. This coin was held as a reserve on the notes which were not at first issued in excessive quantity. In fact, the notes were at par and specie could be obtained for them whenever desired. The Regent, however, finding the bank so profitable, bought out LAW and turned the bank into a national affair, enlarging its scope and its issues of notes. Even then the bank was prosperous. The abundance of money made every one feel rich, and when LAW started his great Company of the West, founded on French territory in America, every one was ready to invest in the shares. As the value of the shares increased, the demand for money

also increased, and there was no way to supply it except by additional issues of bank notes. There was no way as yet invented for clearing the extravagant transactions of the speculators. All balances were paid in bank notes, and the greater the rise in the price of shares the greater the amount of bank notes required to enable speculators to realize their profits. The quantity of notes in circulation became so great that when those who held them began to seek for permanent investment for their paper wealth, they soon found that there was not enough genuine property of any kind in which the notes could be invested at nominal value. When specie began to be demanded the bank stopped payment, and all the arbitrary forces of a despotic government were exerted to hold up the value of the notes. Of course the crash came and the bank's money faded into nothingness, leaving a host of deluded and ruined dupes who had only their own greed to thank for the condition in which they found themselves. LAW himself was a ruined man.

The great difference between this French boom and the recent industrial speculation in the United States, was in the money. The bank notes issued by LAW degenerated into what is commonly known as wildcat currency. The money of the United States, on the other hand, was sound and incapable of depreciation, neither could it be increased in amount to meet the demands of speculators.

The late speculations in this country, even taking the highest estimates of the amount of water injected into the capitalization of the properties involved, bore but a comparatively small proportion to the real wealth of the United States. The speculative stocks issued by LAW and his supporters exceeded the wealth of all France at that time. But in neither case was there any serious destruction or reduction of real wealth. After the catastrophe in each case there were still the same elements of value as there had been before. But in each case there was a destruction of confidence and a redistribution of property in different hands.

The only important point to be remarked is that these fevers of speculation, followed by such disastrous consequences to such large numbers, do not seem to produce any deterrent effect on people generally. These speculative crazes recur with wonderful regularity and probably will not cease to recur as long as the desire to become rich without labor is a characteristic of humanity.

The example of LAW and his disastrous fall did not prevent the South Sea bubble in England within a few years afterwards, nor any of the thousand and one speculations of a similar nature which have since been exploited. Nor will the effect of this last industrial speculation be borne very long in mind.

THE CONSOLIDATION OF BANKING INSTITUTIONS in Great Britain is exciting great interest there. Some apprehensions are expressed that if the final result of this tendency shall be the concentration of the banking interests of England in not more than a dozen great institutions, and if one of these great institutions happens to meet with misfortune, the consequent disaster would be something unexampled.

The banks of England consist of the Bank of England, the joint-stock banks, and private bankers. The tendency recently has been for the private banks outside of London to consolidate with some of the great London institutions, and it is said that if certain rumored negotiations now under way are brought to a successful conclusion that the result will be an institution which in the amount of its deposits will overshadow the Bank of England itself.

The objections made to consolidations in the United States have not expressed fears that weakness would result, but merely that the concentration of the banking business in the hands of a few banks would destroy competition. Consolidations here are hampered by the inability of the banks under the National Banking Law to establish branches. Banks under State banking laws cannot establish branches outside of State lines. In England, however, the outside banks taken into a consolidation can become the branches of the central bank. Even under all the disadvantages imposed by the banking laws of the United States, one or two very large institutions have been formed by consolidation in New York city. There is no reason to doubt that this process could be continued with even more magnificent results did the real wants of business call for it.

The large banks formed in New York under the National Banking Law are under the restrictions of the reserve provisions of that law, and whatever economy in banking operations is the outcome of the concentration of banking power, there can be no economizing on reserves. In England, however, there is no restriction or requirement in regard to reserve except such as are imposed by the common opinion and custom of the banks themselves. The cash reserves kept by the joint-stock and other banks are usually much smaller than the reserves kept by the banks of the United States.

In England the Bank of England seems to hold the main reserves of the joint-stock banks in a manner similar to that in which the reserves of trust companies are held by our banks. The danger of consolidations in England, therefore, seems to be that the resulting institution will keep less cash reserve than was held by the separate banks out of which it was formed. Ever since the BARING failure there have been complaints periodically made of the small cash reserves carried by the joint-stock banks, and efforts have been made

to secure a change of banking custom in favor of holding greater cash reserves. It is not strange then that apprehensions arise that consolidation may aggravate the weakness of what is already regarded by some as a weak point in English banking. It may, however, be recognized that the general environment of the Bank of England enables business to be safely done with much less cash reserve than would be considered safe in the United States. The contracted territory and the custom of supporting each other in times of emergency, as well as the further support of the Bank of England, an institution which from its connection with the Government and its own great reserves can in such times always count on having its advice followed—as well as a greater use of checks in proportion to all payments—all these tend to make a smaller cash reserve safe. Nevertheless the concentration of banking business would, were there no restriction imposed as to the cash reserves required to be kept, have a tendency to reduce those reserves. The temptation to keep the earning power of all the bank reserves is sufficient to encourage this tendency.

Another weakening effect on the English system might result from the reduction of the preponderance of the Bank of England. After the process of consolidation has produced the anticipated result, the Bank of England will only be one large bank among a number of equals, and may not be able to exert its present preponderating influence, which has had such a conservative effect on English banking.

Although it is not difficult to see that some danger might possibly attend upon new conditions resulting from consolidation, yet it is believed that the apprehensions are probably without any other real foundation than that the movement is something of a novelty, and novelty in so conservative a business as banking always has something unpleasant about it. The enlargement of the cash reserves would appear to be a wise step to counterbalance the fears that seem to arise in consequence of the concentration in bank management.

THE EXPORT OF COMMODITIES for the month of November, 1903, according to the Report of the Bureau of Statistics, established a new record. The excess of exports over imports for November was also greater than for any previous month, except October, 1900. This excess of exports is the more remarkable, as imports, both free and dutiable, have not fallen off to any very great extent, although it is probable that a decline in importations may have begun.

The excess of exports for the year 1903 is some \$60,000,000 greater than for 1902, although it is \$180,000,000 less than the excess of ex-

ports for 1900, and \$140,000,000 less than that of the year 1901. The total exports for 1903, however, come within twenty-two and eighteen millions respectively of the boom years 1900 and 1901. The imports have been rising since 1900, and the imports for 1903 exceed those of 1900 by nearly \$160,000,000.

While, therefore, there will not be so great an amount put to the credit of the balance of trade this year, yet the amount in favor of the country is large enough to warrant a belief that there will be a strong reaction in the near future from the shock of the speculative disasters of the summer season. It must not be lost sight of, however, that a very large part of the excess of exports for the month is due to cotton shipments, and that the influence of these has probably nearly exhausted itself. The report of the month of December will be awaited with great interest. It is expected that the falling off in cotton shipments will be made up to some extent if not entirely by exports of iron and steel. The fall in the price of the latter has been followed by greater activity in finding foreign markets.

The report of the foreign trade for November was much better than was expected and undoubtedly brightens the outlook for the business of the coming year. Handicapped as the season of 1904 will necessarily be by the Presidential canvass and election, it does not savor of overconfidence to aver that the country will enter on the coming Presidential year at least in as good condition as it entered on that of 1900. In fact, to those who look upon the course of our foreign commerce as a criterion of the future, the indications this year are a great improvement on those of 1902. If we look upon the great decrease in the excess of exports during the year 1902 as a premonition of the collapse of the stock market during the summer of 1903, in the increase in the export balance of 1903 great encouragement for business in 1904 should be felt.

In all future development of enterprise, greater caution will no doubt be manifested. The setback of 1903 is not likely to be forgotten. The ground will be thoroughly tested before the public will again invest its surplus.

THE REPORT OF THE SECRETARY OF THE TREASURY shows a surplus of \$54,297,667 for the fiscal year 1903. For the fiscal year 1904 a surplus of \$14,000,000 is estimated, and for 1905 a deficiency of over \$23,000,000. These estimates indicate the gradual disappearance of the surplus which has bothered the Treasury for so many years. Nevertheless there is nothing so difficult as to predict what will happen either to the revenues or expenditures of a great and growing nation like the United States, even for two years ahead. New conditions arise with such unexpectedness.

But notwithstanding the fact that these estimates may or may not be relied on, the report shows the finances of the Government to be in an excellent condition. The currency is in a sound state, and there are no fears that the expenditures will not be met with the same ease as heretofore.

The Secretary makes no very important recommendations. He refers to the want of elasticity in the National bank currency and thinks it should be given this quality if possible, but warns Congress that no element should be injected that will weaken its present stability. All our money, he says, is now as good as gold, and no act should be passed authorizing the issuance of anything less safe and secure.

There is nothing very comforting in this to those who have been advocating the issue of a credit currency by the banks, and it seems to voice the general public feeling of contentment with present conditions. Although the Secretary refers to the lack of elasticity in the National bank notes, he does not say anything about the law which now prevents the retirement of over three millions of bank notes in any one month.

On the whole the report is a very conservative one, and differs very little from that of the previous year.

There has been nothing to call for any great display of financial ability during the period since the last report. The finances of the Government have been running smoothly, and the Secretary has had adequate legal sanction to enable him to meet every necessary demand upon the Treasury.

The part of the report relating to the finances is published elsewhere in this issue of the *MAGAZINE*.

FROM THE ATTITUDE OF CONGRESS during the present session the prediction seems warranted that there will be very little monetary legislation. But it is the unexpected that often happens, and there seems to be enough explosive material in sight which the slightest cause may arouse to activity. The rumors of contention for their separate rights between the House and the Senate, the attitude of the Administration to the new Panama Republic, the canal treaty with that republic, the possible difficulties with Colombia, the desire to make political capital on the eve of the Presidential election, all point to the possibility of an exciting session.

The deliberation manifested so far shows that there is a desire to carefully examine every phase of the situation so that if possible no political mistakes may be made. The treaty with Panama and its bearing upon the construction of the interoceanic canal will, until

the canal question is finally settled, have considerable effect upon the money market. If the treaty should be rejected it would be equal to a virtual repudiation of the recognition of the new republic by the Administration. It seems probable if Congress should fail to ratify the broad construction of the rights and duties of the United States Government on the isthmus, and should confine the exercise of our naval and military powers to merely keeping the railroad open, that Colombia would very soon recover her power over the territory now covered by the new republic. Then negotiations would have to be reopened with Colombia, and there would be a more or less protracted postponement of the canal project.

As a mere political proposition it is difficult to see how a Republican Senate can now refuse to sustain the action of the Republican Administration, even if that action is open to criticism as having violated precedents hitherto regarded as binding. Even if an error in judgment has been made in recognizing the Republic of Panama, the matter has advanced so far that it would be more difficult to retrace the steps taken than to keep on in the way selected. The construction of the canal is not a party question, or at least has not yet become one. If, however, through failure to sustain the recognition of the Panama Republic, and the treaty by which the canal may be assured, the opportunity to build the canal be lost or very much postponed, then it might become a party question of considerable importance. If injustice has been done to Colombia, there is no doubt but it is of a character for which compensation can be made. Although this may increase the cost of the canal, yet it seems the best way to avoid the implication that the Government of the United States purposely used its superior power to violate the rights of a weaker nation which by the MONROE doctrine was supposed to be under its peculiar protection.

THE REPORT OF THE COMPTROLLER OF THE CURRENCY for the fortieth year since the organization of the National banking system shows a total of 7,029 National banks organized, and the number in active operation at the end of the year was 5,147. The difference between these figures represents the banks that have gone out of business through failure, liquidation, or merger with other banks.

The effect of the law of March 14, 1900, on the organization of National banks is very marked, as the number of banks organized since this legislation was enacted is one-quarter of the whole number organized in forty years. The total number which appear to have been so stimulated into existence was 1,765, of which 1,148 had a capital of less than \$50,000, and 617 had \$50,000 or more. The

provisions of the act allowing a capital of less than \$50,000 and permitting the issue of circulating notes to the full par value of the bonds deposited, as well as the provision permitting the issue of bonds bearing two per cent. interest for other classes of bonds held by the public, the difference in present value being paid to the holders, are responsible for this increase. The lower rate of tax on the circulation issued on the two per cent. bonds made them favorites with the banks, and stimulated the issue of circulation.

The business of the National banks has been increasing throughout the year, and although there has been a tendency to trench very closely on the legal limit of reserve, the general condition of the banks is all that can be desired. With the increase of the premium on the two per cent. and other bonds the circulation outstanding has been reduced, but now shows a tendency to increase.

It is a common remark that the National bank currency has no elasticity except that it may gain from fluctuations in the bond market. It is very true that the increase in the premiums of Government bonds has always made the banks desirous of realizing the premiums, and to do this they retire their circulation. But it has long ago been pointed out that if the bonds of the United States could be issued on such terms that their market price did not fluctuate far from par, that this effect would not be so pronounced. In the present two per cent. bonds this ideal condition is closely approached. With circulation issued to the par value of the bonds, and the lowering of the tax on circulation, it is highly probable that the National bank currency will be affected less and less by the bond market and more by the real business demand for notes.

Although this opinion may seem to be contrary to the experience of the past, it is believed that with little or no Government surplus, a circulation based on Government bonds which did not from their low rate of interest attract any investors but the banks, would show a response to business requirements. The present two per cent. bonds approach very nearly to this desideratum.

THE SECRETARY OF THE TREASURY, in his Annual Report, in commenting on the large amount of silver stored in the Treasury vaults, says that this mass of silver is worth in bullion less than half its coining value, "but is all redeemable at the discretion of the Secretary of the Treasury, in gold." By the act of March 14, 1900, it was made the duty of the Secretary to preserve the parity of all forms of money coined or issued; but whether all the silver is redeemable in gold at the Secretary's discretion is exceedingly doubtful, unless such redemption should be necessary to preserve the parity.

INTERNATIONAL MOVEMENT OF SECURITIES.

A French economist, M. Alfred Neymarck, has endeavored to make an estimate of the value of what are usually called securities in France, and also an estimate of the increase in this form of wealth between 1789 and 1889. While it is no doubt very desirable to form some definite idea of the proportion of securities to other forms of wealth, it is of still greater importance to understand what effect is produced upon the trade and commerce of nations by the modern use of securities as an investment. For one thing it is becoming more evident that exchange between nations is to-day more influenced by the securities that pass from one country to another than by the ordinary products which once were the only basis of international trade.

A study of the rise and progress of securities is a very necessary part of the study of modern civilization. These securities are made up of stocks and bonds representing national and municipal debts; of stocks and bonds representing transportation and manufacturing plants; of stocks and shares in all manner of undertakings and enterprises. These securities are the capitalization, in a form readily transferred, of the accumulated wealth of the several countries.

It is the tendency of modern civilization to transmute all kinds of wealth into forms of universal acceptance. Houses, lands, manufacturing plants, railroads, mines, oil wells, cannot be loaded into ships and sent from one continent to the other. But by the medium of securities they are to-day as easily passed from hand to hand, from one end of the world to the other, as are the ordinary commodities of trade. A nation need no longer be dismayed by the temporary failure of its ordinary products. It can throw its lands, its mines, its industries, its future revenues, into the world's markets as pledges and easily tide over many evil days.

The whole tendency of the age is toward the easy liquidation of all forms of property. This has been brought about by the decadence of that narrow patriotism that would confine all individual energy within international lines, consequent upon the improvement of transportation and means of communication throughout all parts of the world, and especially between the nations which are the great leaders of commercial activity. Cosmopolitanism is steadily increasing. But perhaps the main factor in the easy liquidation of wealth has been the growth of banking.

The substitution of paper representatives for immovable or intangible property is not a new device, but it is the assistance of the banks that has given mobility to these paper representatives, and is continually devising ways of increasing the mobility of this form of property.

But whatever effects the increase of securities may have on international trade, they have added a new and important element in the calculation of the actual gains and losses of international commerce. When the business between foreign countries was chiefly the exportation and importation of

the annual production of staples, raw materials or manufactures, it was not difficult to perceive that if a given country exported more than it imported and was entitled to a balance, such country was probably gaining wealth. But the situation becomes more difficult to understand correctly when deficiencies in ordinary products exported can be made good by the further export of the securities representing the immovables of the country. Moreover, with regard to the ordinary articles of commerce, the duties imposed and the regulations of custom houses, of chambers of commerce and produce exchanges, provide for more or less complete statistics. Securities either of this or other countries, however, can be sent out and brought back again into the United States and no one may be the wiser. The present way of judging of the gain or loss of national wealth in the commercial correspondence of nations is still to watch carefully the movement of the precious metals; or rather since gold has so nearly become the universal standard of value, of the precious metal. But the conclusions drawn from this movement in connection with the movement of ordinary commodities are different from those that would have been drawn fifty years ago. Gold importations in excess would appear to indicate that exportations of commodities had exceeded importation, but facts may not bear this out, and the aberration is explained by the movement of securities which have been sent out as the basis of loans or have been sold outright.

There being no way of obtaining accurate or even approximately accurate statistics of the outward and inward flow of the securities used in international financial operations as there is in the case of manufactures, cereals and cotton, the estimate of what the upshot of the trade in securities must be can only be obtained by the study of the movement of commodities and the movement of gold. This estimate may be moderately accurate, but it gives no real idea of the magnitude of the trade or the number of transactions. Balances between nations to-day are paid as often in securities as in gold, and the payment of trade balances is no longer the first or most important motive for the transportation of the metal from one boundary to another.

As has been intimated, the advance in banking enterprise is the prime reason for this successful mobilization of forms of wealth once styled fixed or immovable, and as the banks have undertaken this interchange of international properties they have more and more to be careful of their reserves. Bank reserve is a matter of precedent and custom. Certain lines have been drawn almost arbitrarily, and these lines in the minds of the financial world have marked the limits of the safety of the bank reserves. The tendency of the time among bankers is to strengthen these reserves, or at least to go beyond rather than fall under the recognized safety limit. Therefore when conditions arise requiring replenishment of reserves, the movement of gold begins. It is no longer an excess of trade balance that determines an import of gold. The trade balance may be excessive, but if the bank reserves are already flush, it is not likely gold will be imported. The balance will be paid in securities or may be loaned on securities. On the other hand, when bank reserves tend towards a minimum and require replenishment, gold will be imported, notwithstanding an unfavorable trade balance. Although the maintenance of bank reserves seems the most important factor in modern gold movements, yet it must not be imagined that a favorable trade balance is of

any less importance as an element of prosperity than it ever was. It is the annual net income that fixes the value of the capital behind it. A commercial nation whose real trade balances constantly and continually run behind, would necessarily be in a state of decadence. But of course the value of all importations may exceed the value of all exports, and yet the real trade balance may not be unfavorable. A wealthy nation with large investments in foreign countries, receiving the income on such investments in foreign goods, may show a great excess of imports. But when the portion of imports derived from its own investments is deducted, the balance of the new and current trade may be largely in the nation's favor.

The use of securities in international trade, fostered as it is by the science of international banking, is such an important element in determining the real condition of the country, that more information should be accessible as to the details of the imports and exports of these representatives of wealth. Many mysterious fluctuations of the stock markets might seem less occult, if more was known about this trade in securities by which accounts between nations are settled.

A YOUTHFUL BANK OFFICER.

Ernest R. McDuffie, whose portrait is presented herewith, is probably one of the youngest bank officers in the country, being only fifteen years old.

He is Assistant Cashier of the Bank of Lawton, at Lawton, Oklahoma Territory. He is a native of Texas, and for a time held a clerkship with a real estate firm at Austin. On going to Lawton he became a collector for the bank, and some six or eight months ago was made Assistant Cashier. At the recent convention of the Oklahoma Bankers' Association, which he attended, considerable attention was bestowed on him owing to his youth and position.

VALUE OF AUDITING TO BUSINESS MEN.—The services to be rendered by the public accountant are not confined to the correction of errors and abuses. His training and independent position enable him to suggest improvements in most accounting systems, which would not occur to those in charge of the banks. Where his visits are made periodically they are apt to correct that tendency to get into a rut, which is the bookkeeper's most common failing. Ignorance and not fraud is the frequent cause for the failure of firms and corporations, errors which at the beginning would be readily rectified being allowed to cumulate until their effect is disastrous. Of late years accounting as a profession has materially advanced in proficiency and public esteem. It mainly depends on the business man how rapid the progress is to be in the future and to what extent he is to be benefited both in his personal affairs and in his responsibilities as a corporation director.—Herbert Beck in "Annals of American Academy."

INDUSTRIAL STOCKS AS INVESTMENTS.

Most all of the preferred stocks of industrial enterprises carry what are known as cumulative dividends. That is, if the promised per cent. on the preferred stock is not paid at the regular dividend period, the portion not paid becomes a charge on the earnings before any dividends can be paid on the common stock. The overcapitalization of many of these enterprises has been proved by their failure, not only to pay dividends on the common stock, but by their being in arrears in the dividends on the preferred stock. Of course, the arrears which form a charge on the earnings postpone the prospect of dividends on the common stock, and the price of the latter depreciates in consequence. When a company becomes very much in arrears on the preferred stock, it is a good indication that the normal earnings are not meeting the calculations on which the promoters of the company based the issue of stock and the promise of dividends. These calculations may have been made in good faith biased by a spirit of optimism or they may have been colored with dishonesty. But this does not alter the situation as far as the stockholders or the managers of the company are concerned. Whatever the promises and calculations on which the launching of the enterprise depended, the earnings as proved by experience are the criterion by which the real value of the capital, in whatever form, whether preferred or common stock, it may be held. This seems to have been recognized by the powers in control in many cases and readjustment of the status of the preferred and common stock has been attempted.

It is probable, from the indications, that during the next two or three years the public will witness a readjustment of capitalization to the real earning powers. This is not so easy an undertaking as might be imagined, as almost all of these industrial projects depend on processes of production and manufacture that are subject to continual change, owing to new discoveries in chemical processes, and new inventions, and new applications of old principles—not to say anything of new forms of competition and changes in the demands of the public. A company has, in order to keep itself up to date, to be prepared with means to make such betterments in its processes as become indispensable. It is not possible to predicate that the earnings realized at any given time, even if its plants are in perfect condition and provided with the latest and most modern improvements, will obviate the necessity of making provision for unexpected changes and additions which may at any time become necessary. In other words, provision should be made for a sinking fund to take care of necessary betterments and also to return the capital invested in case the progress of the world should outmarch and leave behind as debris the products of the company.

When one invests in mining stock it is understood by the wise investor that he must look to his dividends to reimburse not only interest but capital. It is to a certain extent the same with industrial enterprises. This is what has been overlooked to a great extent both by promoters and investors. After the first excitement of the formation of a combination for controlling

the output of some important material like iron or steel for instance, the managers who become responsible for carrying out the promises of the promoters, find themselves handicapped by the necessities of continued betterments, and discover, even though the earning power may be all that was expected, that the earnings cannot be applied as promised. The last few months have witnessed the spectacle of enterprises with enormous nominal capital brought to a standstill because they could not obtain comparatively insignificant sums of ready money. Every one knows that in many cases, and to some extent in all, this nominal capital was made up of extravagant estimates of the value of plants coming into the possession of the combination, which in reality were deteriorated and in many cases antiquated. The separate elements on which these inflated values were based were so numerous and diversified that it has now become almost impossible to prove that promoters were guilty of anything more than gross ignorance of a situation in which they were assumed to be experts. In the light of experience, the scene of the grand exploitations of 1900 and 1901 recalls the place described by Tenyson, "where blind and naked ignorance delivers brawling judgments, unashamed, on all things, all day long."

There is, however, a lesson to be gained from this experience; not a lesson that will prevent future outbursts of speculative greed, but one which may possibly instruct both promoters and the public in the art of making companies for manufacturing and production on a large scale paying investments.

Many corporations, whether formed for purely financial purposes, for improving transportation or for agriculture, for mining or for manufactures, have been used with sinister effect in compassing the ruin both of the promoters and the contributing public. Banks, railroads, mining companies, have in their turn been abused as the foundation of speculative crazes. Every new form of progressive action is liable to be so used. Whatever its real merit may be, the new enterprise is easily misrepresented. After experience has been gained, with more or less disaster, the enterprise finally becomes known on its true basis, and can no longer be so easily made the means of deception. The solid status as an investment of each new venture becomes known, and is built up on a foundation of previous failures.

The industrial corporations which have been introduced to the investing public in many cases with such unfortunate results will have to repeat the experience of the railroads. They will have to be reorganized and managed on the sole basis of their earning power. This process has already begun. Probably in this process of reorganization there will occur many of the same struggles for control as were conspicuous in the history of railway financing. But the process is now better understood and the investing public will not be so easily victimized. There is every reason to believe that the majority of the industrial corporations are in a condition that will render the process of reorganization far from a difficult one, and that those who are able to retain their stock will not be eventual losers. Perhaps some of the companies may have to be taken in hand by the courts in order that holders of stock may have suitable recognition of their holdings on the basis of the actual money paid for the stock. Stock issued as a mere bonus, or the issue of which is tainted with a color of bribery, should be placed on a different footing from that issued to those who paid in money. Another year should determine the real value of much of the common stock now looked upon with suspicion.

DENOMINATIONS OF OUR CURRENCY.

By ELLIS H. ROBERTS, Treasurer of the United States.

In the wide and varied discussions about the currency little or nothing has been said about the denominations into which the paper in our circulating medium is divided. The matter is of vital consequence, especially in the season of the movement of the crops. It may be worth while to consider the policy which prevailed in this respect in the States before the Civil War, and the division of our paper currency in more recent years.

IN THE STATES.

The records of the banks in the first half of the last century are fragmentary and leave much to be surmised. The currency was all the while in an unsettled condition and at times sank into a maze of paper, part of it issued by banks, much of it put out by associations and individuals without legal authority.

Continental currency and the disasters connected with it have passed into history. Conspicuous periods of demoralization in paper currency followed the War of 1812, and came after the wild issues of notes which were a factor in the panic of 1837; the situation was especially grave also in 1841. Specie went almost entirely out of use, and banks found rivals in many States which rushed into circulation currency in denominations often in fractions of a dollar and in unrestricted volume, as no method for redemption was established. Such a monetary chaos was harmful in the highest degree, and could not long be tolerated. Several of the Commonwealths sought to provide through the banks a circulating medium safe and adapted to the needs of business. The struggle was keen on the part of the banks to put out small notes, while there was strong opposition in influential quarters to any denominations below \$5, on the plea that only specie should circulate in the lower field. This contest went on all over the country. In Indiana, as early as 1817, a branch bank was putting out bills as low as six and a quarter cents, but the whole system failed within four years. When the State Bank of Indiana was organized, in 1834, the precaution was taken to forbid it to issue bills under \$5. In Ohio, in 1838, banks were permitted to issue notes less than \$5, but not less than \$1. The Bank of Tennessee, regularly chartered, has the distinction of uttering notes as low as five cents. Two States in which the records are in best shape may be cited for further illustration.

IN MASSACHUSETTS.

In Massachusetts, in 1784, a bank bearing the name of the State was chartered by the Legislature, without provision about notes; but the institution issued bills of the denomination of \$1.50, \$2.50, \$3.50, and \$4.50, and of \$6, \$7, \$8, \$9, \$15, \$25, \$30, \$35, and \$40. According to the report of the Bank Commissioners in 1860, a bank was incorporated in 1792 and allowed to issue bills of \$5 and upwards, and two more started in 1795, authorized to issue bills

HON. ELLIS H. ROBERTS

Treasurer of the United States

of \$2 and upwards, while in 1799 all banks in the State were prohibited from putting out denominations less than \$5, and the payment of smaller bills issued elsewhere was forbidden. The notes of the Nantucket Bank, curiously enough, were excepted from this prohibition. In 1805, by general law, banks were permitted to issue bills for \$1, \$2, and \$3, to the amount of five per cent. of their capital, and before 1860 the limit was raised to twenty-five per cent. In the last-mentioned year the 178 banks in the State had outstanding circulation in notes of \$5 and upwards to the amount of \$20,042,749, and in denominations less than \$5, of \$4,970,002. So that the small bills were in face value one-fifth of the paper circulation.

IN NEW YORK.

The State of New York early in the nineteenth century suffered severely from irredeemable paper currency. The laws forbade associations from engaging in banking, but left the door open to corporations and individuals, and all sorts of such institutions and persons put out notes for denominations of six cents, of twelve cents, of twenty-five, fifty and seventy-five cents, and for larger sums. The restraining act of 1818 put a stop to all such unauthorized emissions of paper in the State.

In 1835 the circulation of the safety-fund banks was \$14,464,023, of which it was estimated that \$4,000,000 was in bills less than \$5. This was over twenty-seven per cent., and was deemed to be excessive. So in March of that year a law was enacted prohibiting the circulation of bills under \$2 after the approaching September, under \$3 after March, 1836, and under \$5, after September, 1836. But popular sentiment rebelled, and the provision was modified, tolerating \$1 bills until February, 1840, \$2 bills until July, 1840, and \$3 and \$4 bills until January, 1841. (HISTORY OF BANKING IN THE UNITED STATES, by John Jay Knox, p. 407.)

December 29, 1860, according to the Report of the Superintendent of the Banking Department, the banks of the State of New York had outstanding circulation amounting to \$28,239,950. This amount is not classified by denominations nor does the Banking Department in Albany possess such details. The report, however, presents a statement by denominations of the mutilated notes returned and cancelled during the year ending September

DENOMINATION.	AMOUNT CANCELLED.			Outstanding, estimated.
	Free banks.	Incorporated banks.	All banks.	
\$1	\$726,884	\$134,961	\$862,845	\$1,589,525
\$2	794,986	148,718	942,654	1,888,501
\$3	460,283	173,643	633,876	1,526,020
\$5	1,621,865	589,685	2,211,550	6,414,582
\$10	791,530	404,960	1,196,490	4,964,975
\$20	368,140	121,460	519,600	3,180,205
\$25	700	700
\$50	354,500	129,060	483,550	2,793,800
\$100	565,100	237,800	802,900	4,977,400
\$200	900	300	1,200
\$400	400	400
\$500	33,500	108,500	142,000	907,800
\$1,000	51,000	22,000	73,000	728,000
Unregistered notes.....	1,444	1,444
Total.....	\$5,800,288	\$2,072,921	\$7,873,209	\$29,000,868

30, and it is edifying. The whole amount so handled was \$7,873,209, or 27.8 per cent. of the outstanding. If it is fair to assume that the ratio of the notes cancelled to the total in circulation, as shown by experience in 1903 with Government currency, may be taken for comparison, the \$1 bills in use were about \$1,589,525, the \$2 bills about \$1,888,501, the \$3's about \$1,526,020, and the \$5's about \$6,414,582. So that the bills below \$5 were over seventeen per cent. of the total circulation, and including \$5's and below, forty-four per cent. The table on the preceding page will illustrate the situation.

POSTAL CURRENCY AND FRACTIONAL CURRENCY.

Coins of all kinds disappeared early in the Civil War. Bank notes were of \$1, or its multiples. For fragments of the dollar, all, whether of American or foreign mintage, that had been used went into hiding or was sent out of the country. The petty transactions of retail trade and the little services of all sorts called for some device to fill the gap. Postage stamps were the natural suggestion, because at hand at once, and at the same time resort was had until prohibited by statute to the unauthorized fractional notes which had been put out in previous emergencies. The resources of the Post Office Department were strained to supply the demand. Notes bearing *facsimiles* of postage stamps were printed and paid out, first in 1862, for five cents, ten, twenty-five and fifty cents respectively, to the total amount finally of \$20,215,635. This "postal currency" was followed by the fractional currency authorized by the act of March 3, 1863, in denominations of three cents, five cents, ten cents, twenty-five cents and fifty cents. The statute fixed the limit of issue at \$50,000,000, but that amount was never reached. Although by reissues \$368,720,079.51 was put out, the maximum outstanding at any time was \$49,566,760.27 on March 23, 1874.

In 1876 Congress directed that subsidiary silver be substituted for this paper. The wastefulness to the people of such fractional notes is proved by the fact that now, more than a quarter of a century later, \$15,247,174 has not been presented for payment. Yet within very recent years urgent efforts have been made for the restoration of this mosquito money, with the addition of the offensive device of rendering it payable to order, for remittance by mail.

UNITED STATES NOTES.

Notes payable on demand were put out only in 1862 and were for \$5, \$10 and \$20 to the amount of nearly \$70,000,000; they soon passed out of active circulation. In the same year, with the demand notes falling off steadily, but leaving outstanding \$53,847 in 1903, began the issue of the currency styled legal tender or greenbacks, and latterly United States notes. They were at first for \$5, \$10, \$20, \$50, \$100, \$500 and \$1,000. In the reports for 1863, \$1's and \$2's appear. Notes for \$5,000 and \$10,000 were issued in 1879, but none after 1883, nor were any for \$1,000 put out after 1889. The issue of \$1's and \$2's of this class ceased in 1885. The notes for \$1 outstanding were at their maximum in 1876 at \$28,007,505, and those for \$2 in 1874, at \$28,117,438. The largest sum in \$5's ever outstanding in this class was \$95,445,925 in 1866. Since 1900 every denomination of United States notes has steadily decreased, except \$10, into which all others are gradually merged.

NATIONAL BANK NOTES.

The continued need of the Government for money for war purposes soon after the rebellion broke out, prompted devices to facilitate the sale of bonds, and among them was the National bank system requiring United States securities as a basis of circulation. At the same time a substitute was sought for the multifarious currency under State laws. National banks began to put out notes December 21, 1863, and they were in denominations of \$5, \$10, \$20, \$50, \$100, \$500 and \$1,000. In the report for the year ended October 31, 1865, notes for \$1 and \$2 appear. The maximum issue of \$1's was reached in 1879, at \$23,169,677, for the report year, and of \$2's the same year at \$15,405,038. The highest amount of \$1's outstanding was \$8,690,157 in 1869, and of \$2's, \$5,819,240 in 1870. From those sums a decrease nearly constant has taken place in those denominations, as the law of June 3, 1864, forbade their further issue. Of \$5's, the maximum ever outstanding at the end of any report year was \$131,007,655 in 1874.

SILVER CERTIFICATES.

When silver certificates were, in the fiscal year 1878, first issued, their denominations were \$10, \$20, \$50, \$100, \$500, \$1,000. Certificates for \$1, \$2 and \$5 first appear in the report for 1887. The maximum of the smaller denominations was reached December 1, 1903.

TREASURY NOTES OF 1890.

The denominations of Treasury notes of 1890 are \$1, \$2, \$5, \$10, \$20, \$100 and \$1,000. The highest sum of \$1's outstanding at the close of any fiscal year was \$15,900,848 in 1898, of \$2's was \$12,359,654 in 1893, and of \$5's, \$42,629,855 in 1896. By the operation of the gold standard act all of the Treasury notes are withdrawn from circulation and destroyed, as they reach the Treasury, and they will in due course finally disappear.

CHANGES IN DENOMINATIONS.

The movement in silver certificates is to change them, and Treasury notes through them, into \$1's, \$2's and \$5's. United States notes, as has been shown, are settling into \$10's. These modifications are brought about by the demand for the smallest denominations which exhausts the entire volume of silver certificates redeemed, while the United States notes, as limited by statute, are not adequate to supply the \$10's called for by the business community. This is true, although the coin dollars in circulation are \$80,799,960, and the subsidiary silver \$97,130,806. These items are the largest of their class ever reported. Gold coin of the denominations of \$2.50 and \$5 also enter into the problem, but no accurate statement of their volume in actual circulation can be given.

All the denominations of Government paper from \$20 upwards are passing steadily into gold certificates; and if United States notes are placed on the same basis, where they really belong, all Government currency of \$10 and above is becoming the direct representative of gold, while silver stands for \$5 and all below.

CLASSES OF THE CURRENCY BY DENOMINATIONS.

The report of the Treasurer of the United States of the denominations of all paper currency outstanding at the beginning of December, 1903, is presented to show the concentration of certain sizes in the several classes:

DENOMINATION.	United States notes.	Treasury notes of 1890.	National bank notes.	Gold certificates.	Silver certificates.	Total.
\$1.....	\$1,936,354	\$701,466	\$345,686	\$80,505,481	\$83,488,987
\$2.....	1,489,244	546,834	165,708	46,281,796	48,483,582
\$5.....	15,240,715	4,077,750	61,509,770	280,440,332	361,268,567
\$10.....	245,615,831	7,071,360	178,947,897	39,464,661	469,099,742
\$20.....	36,300,622	2,917,360	180,968,380	\$177,487,864	20,674,450	398,319,306
\$50.....	5,802,650	52,900	16,528,100	31,518,305	3,821,060	60,722,915
\$100.....	10,867,200	565,700	34,513,800	47,301,700	1,673,220	94,321,620
\$500.....	7,217,500	96,100	12,584,500	56,000	19,954,000
\$1,000.....	23,191,000	494,000	25,000	50,102,500	24,000	73,936,500
\$5,000.....	10,000	33,715,000	33,725,000
\$10,000.....	10,000	86,030,000	86,040,000
Fractional parts.....	36,645	36,645
Total.....	\$347,681,016	\$16,428,000	\$421,106,979	\$441,739,869	\$473,041,000	\$1,689,996,864
Unknown, destroyed.....	1,000,000	1,000,000
Net.....	\$346,681,016	\$16,428,000	\$421,106,979	\$441,739,869	\$473,041,000	\$1,688,996,864

SOME COMPARISONS.

The Bank of England puts out no notes less than £5, or about \$25. The notes of the Bank of France range from five francs, or \$1, to five thousand francs, or \$1,000; but only very few are issued other than fifty francs, 100 francs, 500 francs and 1,000 francs. Conditions in those countries are very different from our own, and no comparisons in denominations can fairly be instituted. With Massachusetts in 1860 having a fifth of its paper currency in bills less than \$5, and with New York in the same year having seventeen per cent. in bills below \$5, and forty-four per cent. in denominations of \$5 and smaller, we cannot wonder at the urgency with which small notes are now called for. For the present percentage of all paper currency in our country is only 7.7 per cent. in bills below \$5, and twenty-nine per cent. in \$5's and less.

GROWTH OF SMALL DENOMINATIONS.

The growth of the smaller denominations of paper currency has been with a few exceptions continuous and large. The volume of United States notes fell from its maximum in 1874, and the reduction took effect in good part in \$1's and \$2's. In the same period the National banks withdrew many of their notes of the like size. Thus between 1875 and 1880, in these classes, \$1's were carried down over \$15,000,000, and \$2's by nearly \$13,000,000. The advance, however, has been general and in amounts so marked as to prompt inquiry

FISCAL YEAR.	One dollar.	Two dollars.	Five dollars.	Ten dollars.	Twenty dollars.
1862.....	\$38,940,000	\$35,470,000	\$33,240,000
1865.....	\$19,781,421	\$20,914,512	181,725,699	162,788,613	114,282,785
1870.....	26,153,772	32,422,360	171,999,361	162,972,432	117,140,654
1875.....	31,372,914	29,191,584	155,521,935	171,199,690	132,886,402
1880.....	23,019,354	22,238,773	106,010,823	190,645,131	149,107,627
1885.....	25,407,419	25,546,045	157,170,120	211,238,403	195,208,066
1890.....	34,798,323	25,615,949	217,871,811	261,425,896	195,237,530
1895.....	41,832,224	28,131,232	247,375,499	285,461,362	227,964,114
1896.....	44,537,256	29,083,566	265,461,184	299,691,016	210,567,890
1897.....	46,273,924	30,071,400	267,479,752	299,083,827	207,488,216
1898.....	49,640,862	31,851,260	275,698,617	308,450,397	216,440,186

relative to future needs. This may be studied in the foregoing table in which figures are given for fiscal years, except that National bank notes are reported for October 31, in 1865, 1870 and 1875.

Let it be noted that United States notes above \$10 are only \$83,398,872, and that the total of that denomination since July 1, 1902, has been increased by \$52,156,510 to December 1, 1903, or over \$3,000,000 a month. At that rate in a little over two years this resource for creating \$10 notes will be used up. Observe again that silver certificates above \$10 are only \$26,348,730, and above \$5 are \$65,813,391. The additions to \$1's and \$2's since July 1, 1901, have been \$27,689,903, or more than a million dollars above the excess of the silver certificates larger than \$10. The additions to such certificates of \$5's in the same period were \$56,060,733. The calculation is easy that if all silver certificates shall be applied to that purpose, and be offered for redemption, so as to become available, on this basis denominations of \$5's and less can be secured for only twenty-five months.

In the holiday season and in the months when the crops are moved, the small notes available are never in recent years adequate to the demand. Such notes are called for in even increased amounts year by year. They can be issued by the Treasury, it may be necessary to repeat, only to the amount of redemptions of United States notes and silver certificates respectively. As the population increases and business activity is kept up, this deficiency will be aggravated, and the exhaustion of the fountain from which this supply is now furnished is only two years off.

National banks are now restricted in the issue of \$5 notes to a third of their circulation. As a consequence that denomination outstanding was \$61,509,770 on the first of December, 1903, although such notes ran as high as \$100,480,080 in 1881. Yet now the total notes of National banks are \$421,106,979, while in 1881 they were only \$358,924,902. Obviously if this restriction were repealed, and the banks would take advantage of the freedom granted, their \$5 notes against bonds pledged could be more than doubled, and the supply would for several years suffice for the public needs. With the clamor for \$5's thus appeased, a larger share of the silver certificates could go into \$1's and \$2's and the famine in that field could be to that extent prevented.

Of the three or four score million dollars in gold annually added to our circulating medium, little of it passes into the hands of the people for current use, except upon the Pacific slope. The bulk takes the form of gold certificates, and the law does not authorize these below \$20. Immediate relief would be afforded during the most stringent periods, if Congress were to permit the issue of gold certificates for \$10. This provision would open the door to the issue of United States notes for \$5's as well as for \$10's, and so again leave silver certificates in larger measure for \$1's and \$2's.

In parts of the year some banks receive small notes fit for use to an embarrassing excess. It would seem a burden incident to their trade that they should hold them in reserve until the demand again shall create an equilibrium. That will be no more than proper preparation for recurring seasons, and will tend to reduce the strain now so severe for the crops and the holidays.

The panacea, which has no harmful ingredients, can be provided only by Congress.

FINANCIAL INSTITUTIONS OF PORTO RICO.

Shortly subsequent to the occupation of the Island of Porto Rico by the American forces the Attorney-General of the United States decided the National Banking Act to be operative in Porto Rico. It was not until January, 1903, however, that a National bank was organized in the island. This bank, the First National Bank, of Porto Rico, under charter No. 6484, has a paid-in capital stock of \$100,000, and issues bank notes in that amount. Up to the present time it has experienced difficulty in placing its funds, owing to the class of paper offered and the restrictions placed upon it by the National Banking Act, but it is probable that within the near future loans aggregating a considerable sum will be made, and the prospects for its rapid growth and development are most encouraging. This institution has already been designated by the Treasurer of Porto Rico as one of depositories of insular funds.

The reluctance to incorporate in the National system is explained by the same cause which accounts for the relatively restricted use of bank checks, the acute demand for a paper currency of some description, and the other distinctive peculiarities of banking in Porto Rico; the predominant importance of agriculture among the industries of the island, and the consequent necessity of lending and borrowing money on long terms and upon real-estate security—a class of business which is prohibited to National banks. Until the recent issuance of notes by the First National Bank, of Porto Rico, the Banco Espanol de Puerto Rico was the only institution in the island authorized to put out a circulating medium in that form. These notes are floated by Spanish royal decree dated May 5, 1888, but are not accepted in payment of dues to the Federal Government. The Banco Espanol is authorized under said royal decree to issue bank notes in denominations of five, ten, twenty, fifty and one hundred dollars to three times the amount of its paid-in capital. Its charter runs until May 5, 1913. The executive head, the Governor of the Bank, is appointed by the Governor of Porto Rico, and the Insular Government ratifies all changes in the bank's by-laws. The bank maintains no special reserve for the redemption of its notes, but all its side obligations must be protected by a metallic reserve of one-third, with preferred securities at 120 days for the remaining two-thirds. This bank has its main office at San Juan, and conducts a branch establishment at Mayaguez.

The Banco Territorial y Agrícola, of Porto Rico, was incorporated in the year 1894 for a period of seventy-five years with a cash capital of \$600,000, but by the terms of its charter it is permitted to issue its capital stock to the extent of \$2,400,000. The charter authorizes the bank to receive moneys on deposit, discount notes and to do a general exchange and banking business. The chief purpose of the bank, however, is to loan moneys on plantations and other real estate on the island secured by first mortgages thereon on the general plan adopted by the *Credit Foncier* of France. The bank issues its bonds in the sum of one hundred dollars each to the aggregate amount of the mortgages held by it and guarantees their payment, both as to principal and in-

terest, the bonds and mortgages being payable within twenty years, together with interest at the rate of seven per cent. per annum, payable semi-annually.

The *Credito y Ahorro Ponceno* was organized on February 8, 1895, for a period of twenty-five years, and does a general banking business, conducting also a savings department, loaning upon mortgages and issuing certificates of deposit bearing annual interest at one half per cent., payable to bearer on demand.

The American Colonial Bank and De Ford & Company act as depositories for the custody of funds of the Insular Government, and both of these institutions have established agencies in the internal revenue collection districts of Porto Rico for the receipt of insular funds. The American Colonial Bank was incorporated under the laws of the State of West Virginia on April 4, 1899, with a paid-in capital stock of \$400,000. It is also the depository of the funds of the United States kept in Porto Rico. De Ford & Co. is a private institution and a branch of the Boston bank of the same name.

The J. T. Silva Banking and Commercial Company, incorporated for a term of twenty-five years upon the first day of January, 1901, is typical of a large class of bankers in Porto Rico who join with banking an ordinary commercial business. This bank has no depositors and maintains branches at Aguadilla, Porto Rico, and Paris, France.

Banks of issue and discount in Porto Rico required under the old Spanish law, which is still in force in the island, no special charter. The general regulations of the Code of Commerce govern their incorporation and transactions of business. Prior to January 31, 1901, at which time the Revenue Law of Porto Rico was passed by the first session of the Legislative Assembly of Porto Rico, legal provision for the examination and inspection of financial institutions did not exist. This resulted in a diversity of methods and institutions, and private banks flourished. Several continue to-day in connection with commercial enterprises.

Immediately upon the passage of the revenue law, in which the Treasurer of Porto Rico was charged with the duties of making examination into the condition of banking and financial institutions doing business in Porto Rico, a system was adopted requiring each bank to make monthly reports of its condition to the Treasurer of Porto Rico. The Treasurer of Porto Rico appointed Louis D. Harry, Chief of Bureau of Accounts of the Treasury Department of Porto Rico, bank examiner of Porto Rico, and upon the establishment of the First National Bank the Comptroller of the Currency at Washington, in compliance with the provisions of the National Banking Law, designated Mr. Harry as National bank examiner for Porto Rico.

The preceding exhibit is a consolidated report of the financial condition of banking institutions doing business in Porto Rico at the close of business on October 31, 1903.

New Counterfeit \$1 Silver Certificate.—Series 1899; check letter D; J. W. Lyons, Register; Ellis H. Roberts, Treasurer; Treasury number B53091423. This counterfeit is printed on thin bond paper, being one-fourth inch shorter and one-sixteenth inch narrower than the genuine. Red and blue ink marks have been placed all over the back of the note, and also a number of them on face. The lathe work on face of note is very scratchy. The portraits of Lincoln and Grant are very crude. The Treasury number is very irregular and out of alignment. The figures look as if they were put on with an ordinary numbering machine, and are a blue-black color. The figure "1" and the seal are of a darker shade of blue than the genuine. The back of the note is very poorly executed, no attempt having been made to imitate the lathe work. The green color is pale and faded. The penalty center of back is so blurred that it can not be read.

TRUST COMPANIES—THEIR ORGANIZATION, GROWTH AND MANAGEMENT.

CHAPTER I.

THE HISTORY OF THE TRUST COMPANY MOVEMENT IN THE UNITED STATES.

The term "trust company" has not in the past been one whose meaning was clearly defined; nor is it at the present day so used as to admit of a definition that is both brief and accurate. This doubtless results, in part, from the fact that the trust company is an institution whose characteristics have gradually developed in accordance with the needs of the time and of the community; and in part because concerns doing widely different kinds of business have found it of advantage to adopt the name "trust company," and to incorporate under the laws governing such companies. Even salary-loan concerns and pawnbrokers have made use of the name, and numerous abuses have led several of the States to pass laws prohibiting the use of the word "trust" in titles, except by direct authority.*

DIVERSITY OF TRUST COMPANY FUNCTIONS.

Among the thousand-odd trust companies now existing in the United States, a careful analysis of the business actually done would show that the term is applied to corporations whose functions vary greatly. Some are simply banks of deposit and discount; many are Savings banks; some are safe-deposit companies; some are title-insurance or fidelity-insurance companies; some serve chiefly as fiscal agents for corporations, and as registrars, transfer agents, intermediaries in reorganizations, promoters, etc.; some devote themselves to the care of estates and to services as executors, administrators, guardians, trustees, etc. Most companies combine two or more of these classes of functions, while a few undertake nearly all of them. In early years the life insurance and trust business were intimately associated.

Thus it is evident that in tracing the development of trust companies we shall find ourselves treating of institutions which, under the same general name, have performed functions of various kinds. Statistics of any sort regarding trust companies are difficult to obtain, and none can be had which distinguish between the different classes of companies using that name. There is no available means of knowing just how many of the trust companies are doing a trust business properly so called, as distinguished from ordinary savings or commercial banking. It is also to be observed that some of the functions which are coming to be recognized as distinctively those of the trust company have always been carried on to some extent by banks.

What has been said refers to the use of the term by those who are to some degree, at least, conversant with its true or usual meaning. The general public is still curiously ignorant of the signification of the name; and incred-

* This was done in New York in 1800.

ible as it may seem, many intelligent people even confuse the trust company with the "trust."

A ludicrous instance of this was reported at the meeting of the American Bankers' Association in 1897. "In response to a request addressed to the Secretary of State for each State, for a certified copy of the laws relating to trust companies, about half a dozen secretaries transmitted copies of the laws regulating, restricting or prohibiting pools, trusts, unlawful combinations and conspiracies in restraint of trade. The copies of these laws were returned with an explanation that it was the statutes relating to trust companies which act as trustee, executor, etc., which were desired. In one case, the Attorney-General, to whom the letter was referred, replied that he regretted misreading the first letter on the subject, but after a thorough search, he was convinced that there were no statutes of his State relating to trust companies, and that, as far as he could learn, there were no trust companies doing business in his State, except the Standard Oil Co." *

Education on the subject has evidently been going on, for the writer has had no trouble in getting satisfactory replies from officials of all the States.

In the following pages the writer has aimed to keep in mind, whenever possible, the distinction between the trust company proper and the ordinary bank doing business under the name "trust company," but the reader is reminded that, in the statistics particularly, it is not possible to follow out the distinction. The reader will also observe that in our day the trust company has, in most States, so far entered into the field of the ordinary bank, that a proper definition would assign to it both banking and trust functions.

Both the name trust company and the idea of its typical functions have been known since early in the nineteenth century. It was not supposed, however, that these functions were of sufficient importance to establish a distinct class of companies for their performance, nor did the trust company as an institution attract general attention until well along in the last quarter of the century.

THE FIRST GRANT OF TRUST COMPANY POWERS.

The earliest instance of a company chartered with power to perform trust business was that of the Farmers' Fire Insurance and Loan Company, which was incorporated by the Legislature of New York, February 28, 1822.† The act states that certain persons "Associated as a company under the name of the Farmers' Fire Insurance and Loan Company, as well for the purpose of accommodating the citizens of the State residing in the country with loans on the security of their property (which cannot now be obtained without great difficulty) as to insure their buildings and effects, and those of other persons, by loss from fire, and also for such other useful purposes as are hereafter specified, have prayed the Legislature for a charter of incorporation, to be located in the City of New York, which it is reasonable to grant." The company had an authorized capital of \$1,500,000, but was permitted to begin with

* Paper by Ralph Stone on "Statutes of the Several States Relating to Trust Companies." Proceedings American Bankers' Association, 1897, p. 158.

† For the facts stated regarding the early history of this company, see Cator; "Trust Companies in the United States," pp. 67-72; and Proc. Amer. Bankers' Assn., 1899, pp. 252-3, paper by Francis S. Bangs. That the company performed trust functions almost from the beginning is also attested by a letter from the Secretary of the company.

\$500,000. It was empowered to loan upon farms, houses, factories or real estate; but mortgaged property taken on foreclosure could not be held longer than five years, on penalty of being forfeited to the people of the State. The company was authorized to grant annuities; to insure all kinds of property against loss or damage by fire; to purchase and hold any stock or foreign debt, or the stock of any corporation. It was especially provided that nothing in the act should be so construed as to authorize the said corporation to receive any deposit or deposits, or to discount any promissory note, bond, due-bill, draft or bill of exchange, "nor shall it be so construed as to allow any banking privileges or business whatever."

Two months later—April 17, 1822—the same Legislature passed another act providing "That the said corporation shall also have authority to receive and take by deed or devise any effects and property, both real and personal, which may be left or conveyed to them in trust; and to assume, perform and execute any trust which has been or which may be created or declared by any deed or devise as aforesaid; and the said corporation are authorized to receive, take, possess, and stand seized of, and to execute any and all such trust or trusts in their corporate capacity and name, in the same manner and to the same extent as trustee or trustees might or could lawfully do, and no further."

There appears no reason to question the statement of the company that this was the earliest bestowal of such powers upon any corporation in the United States. It will be noticed that the powers granted are quite as broad as those now usually given to cover trustee work, though the language is more concise and less explicit than that contained in most modern charters. That the growth of this part of the company's business was rapid is shown by the fact that the life-insurance business, which was looked upon at first as its chief field of operations, soon began to be neglected in favor of the trust business. This line of work, once established, grew steadily, and it was finally found advisable to give up the insurance business altogether. In 1836 the name was changed to the Farmers' Loan and Trust Company.

Eight years later—in 1830—another company was established in New York city with practically the same powers. This was the New York Life Insurance and Trust Company, whose capital was one million dollars, and which was empowered to write insurance on lives, and to execute trusts of every description. For many years after its incorporation, life insurance was the most important branch of its business, and it still (1903) makes a feature of annuities. This company "has never had accounts such as are carried by commercial or Savings banks, its deposits in trust being largely moneys of executors, trustees, associations, etc."* It declines all corporation business, and administers only private trusts.

It was not long before the trust business took root and vigorously developed in New York's old rival, Philadelphia. Strangely enough, however, the suggestion of taking up the new line of business came not from New York, but from the far East. This fact would seem to establish that, however successful the experiment may have seemed to the Farmers' Fire Insurance and Loan Company, it attracted comparatively little attention among other concerns in New York, and almost none ninety miles away, in Philadelphia.

* Letter from the President of the company.

Gathered in the Merchants' Coffee House in Philadelphia—which took the place of the business men's club of our day—as early as December, 1809, a group of prominent philanthropists and financiers of the Quaker City had determined upon the incorporation of a company for the insurance of lives and the granting of annuities. Three years later, on March 10, 1812, the Governor approved the charter, which had been granted by the Legislature only after much opposition, and later in the same month the company began business with an authorized capital of half million dollars. It prospered sufficiently to declare its first dividend of four per cent. on the capital paid in, on July 3, 1815. Its business during these early years, and up to 1836, was correctly described by the title of the company—a title which it still retains—the Pennsylvania Company for Insurance on Lives and Granting Annuities. In 1829 the attention of the officers of the company was attracted to a new line of business. “The great success of what in India at this time were called agency houses was irresistibly drawing the attention of financiers toward them. These were concerns organized to transact business for trustees or individuals, to receive moneys on deposit and to administer estates, and the advancement of the Pennsylvania Company in its chosen work induced its officers to desire an expansion in this new direction.”* On February 4, 1830, the directors appointed a committee to report on the advisability of entering on “the receipt of money from persons, and, in consideration thereof, carrying out or executing such trusts as the persons giving the money should designate.” The committee reported in favor of the project, the attorneys to whom was referred the legality of the undertaking gave their approval, and in January, 1831, the officers were empowered to go ahead with the performance of the new line of work. But for some unexplained reason the work was not taken up, and the efforts of those who wished to push the matter were not successful until February 25, 1836, when the Legislature granted and the Governor approved a supplement to the charter, authorizing the company to enter into the business of executing trusts.

The powers granted were: To accept and execute trusts of every description; to be appointed trustee, assignee, guardian, committee or receiver; to receive moneys or other property, real or personal, in trust or on deposit, to accumulate the interest thereon, or to allow and pay the same.

As trustee, assignee, etc., the company was not required to give bond, the company's capital and assets being taken as the security required by law. The charter contained a provision that any court which appointed the company to any trust position might appoint a suitable person to investigate the affairs and management of the company; said person to report “The manner in which its investments are made, his opinion of the ability and integrity with which the affairs of the company are conducted; of the prudence and safety of its investments and the security afforded to those by whom its engagements are held; the expense of every investigation so made shall be defrayed by the said company.” The provision was also made that the company should pay a reasonable rate of interest upon any sums not less than one hundred dollars collected in its capacity as trustee, assignee, guardian, committee or receiver, and that it should accumulate the surplus income of any minor's estate by adding interest annually on the whole as a new princi-

* “Sketch of the Pennsylvania Co. for Insurance on Lives and Granting Annuities,” p. 32.

pal. The power to act as executor and administrator was not given until seventeen years later—in 1853.

Upon the new field of business thus opened to it, the company entered with vigor, the six years of delay in obtaining the necessary authority seeming to have prepared the way for a rapid accumulation of trust business. "In the course of a few years the trust transactions became one of the most profitable as well as most important features of the institution, and this feature forms to day its chief business. The rise of the trust department followed the gradual decline of the life-insurance branch. The practical relinquishment of this business became an advisable policy of the company when the field was occupied by the numerous organizations which, in order to meet rising and acute competition, adopted methods that could not commend themselves to a corporation having charge of so large a number of trust estates."*

During the next month of the same year (March 17, 1836) a charter granting the same trust powers was given to the Girard Life Insurance, Annuity and Trust Company. This company also began at once the accumulation of trust business, which increased at a satisfactory rate;† although it seems not to have made this business its main feature at first, as did the Pennsylvania Company from this time on.

The year 1836, then, saw in active pursuance of the trust business in the United States four companies, two in New York city and two in Philadelphia. During the years that immediately followed and down to the present time, their business in the trust department, as well as in other lines, has steadily grown, and they are among the leading companies of to-day. The Pennsylvania Company had, in 1863, accumulated a surplus of profits equal to its original capital of \$500,000, and thereupon increased its capital to \$1,000,000, distributing a stock dividend of 100 per cent. to its shareholders. In 1869 its business was divided into departments—the trust department, the department of insurance on lives and granting annuities, and the banking department. But no life insurance policies have been written since 1872, nor any annuities or endowments since 1873. The safe-deposit department was added in 1872, in which year it also increased its capital to \$2,000,000.‡ In 1895 the company controlled one hundred and thirty-six millions of securities held in trust, taken at their par value, and received during the year more than a million dollars for rentals.§ In 1903 it reported a capital of \$2,000,000, surplus and profits over \$3,000,000, and deposits of nearly \$16,000,000 in its banking department.

The Girard Company, which on June 22, 1899, changed its name to the Girard Trust Company, reported on May 29, 1903, trust funds amounting to \$60,581,457.82, aside from trusts of securities amounting to \$144,013,000 and other trusts not capable of being expressed in figures. Its deposits were nearly \$22,000,000, its capital \$2,500,000, and its surplus and profits \$8,706,356.62.¶

The Farmers' Loan and Trust Company, of New York, had, by January 1, 1880, accumulated deposits of over \$6,000,000. This increased to \$24,000,000

in 1890, and to \$41,500,000 in 1900.* On June 30, 1903, its total resources amounted to nearly \$59,000,000; its deposits in trust being nearly \$46,000,000, other deposits nearly four and one-half millions, its capital \$1,000,000, undivided profits a little over \$7,000,000.†

The New York Life Insurance and Trust Company had, on June 30, 1903, resources of about \$35,000,000, capital of \$1,000,000, surplus and profits of nearly \$4,000,000, and deposits in trust of nearly \$27,000,000.‡ This company, as already stated, has no deposits other than trust deposits.

Of all the trust companies now in existence, these four were the only ones which began business prior to the year 1853. There were, however, a few other companies incorporated in these early years which have long since gone out of business, and which bore the name of trust companies.

The Ohio Life Insurance and Trust Company, of Cincinnati, was incorporated February 24, 1834, and began business in January of the following year.§ It had a trust department and a banking department. Its powers included the issuance of circulating notes, and the leading object of its incorporation seems to have been the supplying of capital for the business of the community. For many years the company did a large business, though, on account of losses, its dividends were not so great as had been hoped. For the first seventeen years they averaged not quite six and one-quarter per cent. per annum. Early in 1852 the trust department had assets of \$2,750,000. In addition the banking department had assets of over \$1,345,000. The last years of this company were filled with troubles over the State tax question, the company being called upon for taxes of about \$100,000 per year. The failure, which occurred August 24, 1857, and which precipitated the panic of that year, was attributed by the President of the company to "loans to parties unable to respond at this time."¶

The passage of the Free Banking Law in New York, in 1838, was followed very soon (in July, 1838,) by the incorporation of the North American Trust and Banking Company, of New York city.‡ Under the law, the company could discount bills and notes and other evidences of debt, and loan money on any kind of security, real or personal. The company had a brief but strenuous existence. Its capital "in cash, bonds and mortgages was between two and three millions of dollars, and upon this the directors and managers contracted debts and loans to the amount of \$18,000,000."*** In January, 1839, the company purchased \$1,200,000 bonds of the State of Indiana, giving its notes in payment. It also bought Ohio State stocks, giving negotiable time certificates of deposit. For many years after the failure of the company the courts were occupied with litigation regarding the legality of these transactions and the creditors included many anxious investors on the other side of the Atlantic.

Another concern that passed like a comet through the financial sky of these days was the Kentucky Trust Company, which failed in 1854, after a very brief career. It had been chartered with an unlimited capital.

In 1853 there entered into business another company in New York—the

United States Trust Company, which "was organized for the purpose of doing a trust business, and transacted such business from the beginning of its existence."* In 1857 the Merchants' Loan and Trust Company, of Chicago, the oldest existing bank in the State of Illinois, was granted a special charter by the Legislature of that State. Under this charter the company was authorized to do a general trust as well as banking business; but it did no trust business until about 1880, and has not made a specialty of such business until the last four or five years. Its trust department was not organized until 1901.† There were some other companies with the word "trust" in their titles incorporated in Illinois at this time and a little later, but they were essentially State banks with a different name. Among these were the Chicago Loan and Trust Company, chartered in 1857, and the Real Estate Loan and Trust Company. Neither is now in existence.‡

It is thus evident that down to the time of the Civil War the number of companies having the word "trust" in their titles was very small, and the number that actually undertook the trust business probably did not exceed half a dozen. That there were not more trust companies organized during this period seems at first thought somewhat remarkable in view of the success of the four companies first mentioned, and in view of the fact that this period was prolific in the formation of State banks. President Jackson's successful fight against the second Bank of the United States, followed by the removal of the public deposits to "pet banks," and the downfall of the Government bank, opened the field for new financial institutions. That field was, however, almost wholly for concerns that issued circulating notes, and this function was evidently not a part of the business of insurance companies, which were at that time, as we have seen, the only corporations engaged in the trust business. As several recent writers have pointed out, the business of handling deposits, which is now so important to most trust companies, was then of slight consequence as compared with that of note issue.

RELATIVE PROGRESS OF TRUST COMPANIES AND SAVINGS BANKS.

Another point of interest in this connection is the relative progress of the Savings bank and the trust company movements. Each had its origin in semi-philanthropic effort (as did also the insurance business), though doubtless the Savings bank movement partook more especially of this characteristic. The two classes of institutions were established at about the same time, the first Savings banks in the United States having begun business in 1816—one in Philadelphia and one in Boston. The growth of the Savings banks, after the first few years of experiment, was rapid, and they became an object of public interest almost from the start. There were thirty-six Savings banks in the country in 1830, with deposits of nearly \$7,000,000; in 1835, fifty-two banks, with deposits of over \$10,500,000; in 1850, 108 banks, with deposits of over \$43,000,000. In 1885—about the time that the trust company movement began in some earnest—there were 646 Savings banks, with deposits of \$1,095,000,000.§ Trust companies, on the other hand, were established half a century before they began to attract general attention, and were known at all in the early years the trust business was looked upon as only one of the

* Letter from Secretary of the company.

† Letter from the Secretary of the company.

‡ Cator, p. 19.

§ Report of Comptroller of the Currency, 1902, p. 420.

less important functions of insurance companies. For this marked difference in the early history of the two classes of institutions, one explanation suggests itself which is quite sufficient to account for the difference. It is that the Savings bank movement began when the country had reached a condition wherein its need was felt, while the trust company was established in advance of any recognized need. Indeed, as we shall see, the conditions which make possible that part of the trust company's business which has to do with large enterprises of a corporate nature have not existed until within the last decade or two.

It will be interesting to get an idea of the way in which the trust business was regarded in New York about the middle of the last century. In *THE BANKERS' MAGAZINE* for November, 1854,* there appeared an article on "The Trust Companies of New York." These are given under three heads, *viz.* :

1. The New York Life Insurance and Trust Company.
2. The United States Trust Company, of New York.
3. Life Insurance Companies.

The Farmers' Loan and Trust Company is included with regular life insurance companies under the third head. Of the United States Trust Company, it is remarked that it does no life insurance business—only "receiving moneys on deposit, and executing trusts." The figures are given for the two companies above named, among the items for the New York Life Insurance and Trust Company, being "deposits in trust, trust accumulation, life insurance, annuity granted, and receivership account." After a description of the two companies, the article proceeds: "There are other companies in the city which, if not strictly termed trust companies, are yet so in fact, as they are the depositories of funds that will not be demanded for a long series of years, and on the solvency and stability of whose affairs much depends. We allude to the life insurance companies."

ORGANIZATION OF TRUST COMPANIES AFTER THE CIVIL WAR.

The last year of the Civil War and the years immediately following saw a very distinct movement toward the formation of trust companies, and marked its spread into new territory. Of the companies now in existence forty-two began business during the years 1864–1875.† In the eight years following 1865 about thirty-seven new charters were granted in Pennsylvania; very few of them, however, were used.‡ Many of these companies were in their early years not trust companies, but ordinary banks. The States represented were Pennsylvania, New York, New Jersey, Maryland, all the New England States except Maine, Illinois, Iowa and Georgia.

The Union Trust Company, of New York, was chartered in 1864 and began its work in 1865, transacting a trust business from the beginning.§ The Trust and Deposit Company of Onondaga, at Syracuse, N. Y., began business in 1866, undertaking from the first such trust business as was committed to it.¶ The year 1867 saw the beginning of the Safe Deposit and Trust Com-

¶ Letter from the Secretary of the company.

pany, at Pittsburg, Pa., and of the Rhode Island Hospital Trust Company, of Providence, R. I. One of the leading objects of the organization of the latter was to serve as a pecuniary helper to the Rhode Island Hospital, then in its infancy. This company, which was modeled in part after the United States Trust Company of New York, was given a threefold character by its charter: "First, a bank, with all banking powers except that of issuing a currency; second, a Savings institution; third, an incorporated executor, administrator and trustee of the estates of decedents and of the living who might desire to avail of its services."*

In 1868 were chartered the Brooklyn (N. Y.) Trust Company, which commenced a trust business at once; the Worcester Safe Deposit and Trust Company, of Worcester, Mass., which, however, did not accept any trust until 1881; and the Hartford (Conn.) Trust Company, which did not enter into a trust business until 1899.†

Among other companies chartered in New York during the sixties were the New York Guaranty and Indemnity Company, 1864; the National Trust Company, 1867, and the New York Mercantile and Trust Company, 1868.‡ All three have passed out of existence.

Boston now became interested in the movement, and in 1871 the New England Trust Company, which had been chartered in 1869, began business, receiving its first trust in May of that year.§ The Massachusetts Trust Company, of Boston, chartered in 1870, also began business in 1871, but did not engage actively in the trust business until 1887.¶ By 1875, besides other companies in New York, Pennsylvania, Connecticut and Massachusetts, there had begun the Camden Safe Deposit and Trust Company, of Camden, N. J., which exercised at once its powers to act as executor, administrator, guardian, agent, etc.; ¶ and the Illinois Trust and Savings Bank, of Chicago, which, though authorized by its charter to accept and execute trusts, did not use such authority until 1888.**

Meantime during the sixties there had come into being a class of institutions whose business is now being taken up very generally by trust companies—namely, the safe-deposit companies. The Safe Deposit and Trust Company, of Baltimore, Md., was organized in 1864 as a safe-deposit company only, its trust business being taken on in 1876.†† The Fidelity Trust Company, of Philadelphia, was established in 1866 as the Fidelity Insurance, Trust and Safe Deposit Company. While this company undertook the other lines of business indicated in its title, it made a specialty of the safe-deposit business, and claims to be the pioneer company in the country in this business.‡‡ THE BANKERS' MAGAZINE for October, 1866, §§ mentions the recent organization of the Safe Deposit Company, of New York, which by its charter was restricted to the safe-keeping of valuables. The renter of the safe exclusively held the key. Rents for the safes were \$20, \$30, \$35, \$40 and \$45 per annum. The article says: "A similar company has been formed at Philadelphia and

Cincinnati, and others are proposed in large cities." The same *MAGAZINE* in September, 1871, stated that there were many such companies in New York, Boston, Philadelphia, Hartford, Chicago "and other cities." The other cities must have included Baltimore and Cincinnati. It mentions the Chicago Fidelity Safe Depository, just established, with which was to be associated the Guarantee and Investment Association. The latter had a fiduciary and an executive department, and handled the "management of estates and executory trusts."* The company had scarcely been well started when the great Chicago fire occurred. Its vaults were unharmed, and there was "not a paper scorched, or wax melted."† In a list of five concerns doing this business in New York city are included the National Park Bank vaults, and the firm of Ball, Black & Co., jewelers. The arrangements of one of the Philadelphia companies are described, and they show that this business was conducted in most particulars as it is now, but with more red tape. Accommodations were made for ladies, in some of these companies. Doubtless the organization of safe-deposit companies afforded great relief to the banks, which (as is the case still in some communities) did a great deal of safe-deposit work gratuitously. In 1873 *THE BANKERS' MAGAZINE* referred to the "habit of leaving bonds, etc., for safe-keeping in the vaults of banks," and added that "a bank is never paid" for such services.‡ This is not the only function of the modern trust company that the old-time bank used to perform without charge, and also without legal responsibility. §

FREEDMAN'S SAVINGS AND TRUST COMPANY.

An account of the companies doing business during this period would be incomplete without reference to the Freedman's Savings and Trust Company, although this was a Savings bank rather than a trust company. This institution was established through the efforts of Charles Sumner and others, in 1865, as a measure of philanthropy to aid the negroes in accumulating property for support in their newly-gained state of freedom. For some years its business prospered greatly, and thirty branches were established in the Southern States. In 1870 its charter was amended so as to loosen the restrictions on its investments; and this action, together with the panic of 1873, proved disastrous. The company became insolvent in July, 1874, and its failure was the source of great distress among the poor negroes who had trusted the institution fathered by the Government. The depositors numbered 72,000, scattered over thirteen States. The liabilities at the time of failure were \$3,037,560; the amount paid creditors, after a delay of several years, finally amounted to sixty-two per cent. of their claims.¶

COMPTROLLER KNOX'S CRITICISM OF SOME OF THE TRUST COMPANIES.

Among other companies that suspended during the panic of 1873 were the Brooklyn Trust Company, the Union Trust Company, the National Trust

Company, and the Warehouse Security Company, of New York.* The loose methods pursued by many financial institutions, and the craze for speculation and money-getting, which were largely responsible for the panic, called the attention of the Comptroller of the Currency to the different kinds of banking organizations. Among these the trust companies did not escape his attention. In his report for 1873-74 the Comptroller (Hon. John J. Knox) says: † "Trust and loan companies are usually organized, by special State statutes, in the large cities. Their capitals, deposits and business are quite large in amount. Reports are not required, and inadequate when given. For instance, one of the largest of these institutions has published but one report in the year, and that report contains only a statement of its assets, without any mention of the amount due to its depositors, or of any of its liabilities. The Bank Superintendent of New York, in reply to an inquiry in reference to these institutions says (under the date of July 31, 1873): 'The Trust Companies of New York are peculiarly situated. Some are under the control of the Comptroller of the State; but the great majority of them are under no sort of supervision. * * * This class of corporations has multiplied rapidly during the last few years. * * * I am not able to furnish a copy of the charter of any of these companies.'" The Comptroller adds that he had received some reports from trust companies, but not enough to publish without making the report "delusive." He had better fortune the following year, and statistics of trust companies are found in the Reports from 1875 on. In his report of 1875-76, the Comptroller says that the reports from Philadelphia were furnished cheerfully by the officers of the companies, "although they expressed doubt whether they could properly be classed as banking institutions." ‡ If they are living now their doubts are probably removed. The Comptroller also says: "Several of the companies state that they hold very large values, amounting to many millions, in trust, which are not the property of the companies, and are not, therefore, returned by them as deposits proper." The same thing is true to-day, and for this reason statistics of trust companies do not convey a correct idea of the amount of property actually under their control.

PROPOSED PUBLIC SUPERVISION OF THE COMPANIES.

Agitation to bring the trust companies under some sort of supervision was going on at this time in several States. The Bank Commissioners of Connecticut, in their report for 1872, recommended that instead of the annual returns to the Commissioners then required, there be quarterly reports, and that same be published in the newspapers.§ Such a law was enacted in 1872. ¶ Connecticut had five trust companies at the beginning of that year.

The Superintendent of Banking of New York, in his report of December, 1873, recommended that the trust companies be brought under stricter State supervision. At this time some of them were under no supervision at all, while some reported either to the State Comptroller, the Superintendent, or to a Judge of the Supreme Court. ¶ The Superintendent's recommendation

was adopted, and the companies were brought under his supervision in 1874.*

COMPETITION BETWEEN TRUST COMPANIES AND BANKS.

Evidences that trust companies were now beginning to attract some attention from the general public, and considerable uneasiness among other classes of bankers, is found also in the increasing number of comments upon them in the financial papers as well as in the Reports of the Comptroller of the Currency. In *THE BANKERS' MAGAZINE* for January, 1874, † is found this statement regarding "Trust and Loan Companies": "They were intended as repositories for trust funds, for the accumulation of deposits to be loaned on mortgage, and for investments in Government loans, in other words as Savings banks on a large scale. Recently they have been converted into stock-jobbing concerns, apparently for the benefit of stock operators, and in large sums." The article refers to the remarks of the Comptroller of the Currency in his Report for 1873, already quoted (p. XLIII). Two years later (April, 1876), the same magazine has this to say: ‡ "Recent events have led to some solicitude in regard to trust companies in this State, and the reports of these institutions have been scrutinized with unusual interest." On January 20, 1883, the "Commercial and Financial Chronicle" said: § "An important feature in our financial situation is the rapid extent during late years of the business of the trust companies of this State. Not very long ago, their position was what their name implies, that is, institutions for safely keeping and managing trust funds. More recently they have been running into a general banking business, and now hold a position not very unlike the joint-stock banks of London, which take deposits on interest, loan them out as best they can, while leaving to the Bank of England the burden of carrying the reserve. In a similar manner the trust companies are dependent upon the reserve of the associated banks, while becoming active competitors for general deposits, very large lenders of funds on collateral securities and the leading buyers of paper in the market. * * * If the future growth of these trust companies is to be measured by the past growth, it will not be long before they will carry deposits one-half or two-thirds as large as the banks." Two years later | the same periodical, referring to the Report of the New York Superintendent of Banking, remarked: "He says the number of trust companies has increased beyond the wants of the State, and a general law will be a benefit, by helping to check their multiplication." In all this the Superintendent only gives expression of the prevailing opinion. "Trust companies are needful, but only for certain well-defined purposes; they are misnamed and in some cases misleading when, in the garb of a trust organization, they exercise the powers of a bank."

STEADY DEVELOPMENT OF THE TRUST COMPANIES.

Notwithstanding many such complaints as these, the trust company movement went steadily forward, and encroached more and more upon the field

* The tendency to the passage of general laws was not confined to trust companies, however, but extended to other State banking institutions. See "State Banking in the United States," by George E. Barnett, p. 22 and passim.

of the regular banks. To do this they had to overcome not only the hostile criticisms of the financial press, but the force of State legislation as well. In Pennsylvania, for example, the amendment to the Corporation Act in 1881,* forbids trust companies to do a banking business. For many years the question was under discussion, whether Pennsylvania trust companies might legally receive demand deposits. As late as 1898, the Law Editor of THE BANKERS' MAGAZINE expressed the opinion that it was not legal for then to do so.† The companies actually did receive such deposits, however; and in 1900 their right to do so was established by decision of the United States Circuit Court of Pennsylvania.‡ It is still illegal for Pennsylvania trust companies to discount commercial paper, but they may buy it!

Another instance of encroachment upon the functions of banks in spite of questioned legality is furnished by the Missouri trust companies. In 1894 the Supreme Court of Missouri decided that trust companies are *not banks*, and may not receive deposits as banks.§ This failed to settle the matter, however. Four years later the same court passed upon the question again, and concluded that trust companies may not receive demand deposits, *unless they pay interest.*¶ Hence the receiving of demand deposits by trust companies in that State now has legal sanction. No rate being specified by the court, the payment of merely nominal interest would suffice, so far as the law is concerned. There is a law of competition, however, which is another thing.

The examples just related illustrate how the trust company, unlike the National bank, has developed according to natural rather than artificial laws. The law and its interpretation have been moulded to suit the ascertained needs of the business, instead of the business being moulded to conform to the law. There are those who believe that this process has evolved a more scientific system of banking than that of the banks themselves.

GENERAL STATUTES REGULATING TO TRUST COMPANIES.

During the decade of the eighties the growing attention to the trust company as an institution was further evidenced in some of the States by the passage ¶ of general laws regarding this class of institutions. New York passed such a law in 1887, since which time companies have usually been incorporated under the general law, although some have been organized under special acts.** We have already referred to the Corporation Act of 1881 in Pennsylvania, which dealt with trust companies. It was further amended in 1885.†† Illinois passed a trust company law in 1887.‡‡ Several States passed laws during this period for the purpose of regulating or restricting the business of trust companies. This subject will be discussed more at length in a subsequent chapter.

BANKING LAW DEPARTMENT.

IMPORTANT LEGAL DECISIONS OF INTEREST TO BANKERS.

All the latest decisions affecting bankers rendered by the United States Courts and State Courts of last resort will be found in the MAGAZINE'S Law Department as early as obtainable.

Attention is also directed to the "Replies to Law and Banking Questions," included in this Department.

PROMISSORY NOTE—AUTHORITY TO FILL BLANKS—DIVERSION OF NOTE.

Court of Errors and Appeals of New Jersey, October 9, 1903.

MECHANICS' BANK vs. CHARDAVOYNE.

One who indorses a promissory note in blank, and intrusts it to another to fill it up and have it discounted, is liable thereon to a *bona fide* holder for value, notwithstanding that the person to whom it was intrusted filled it up and used it for an unauthorized purpose.*

One who takes a promissory note in payment of an antecedent debt is a holder for value.

This suit was brought against William S. Chardavoyné and Annie N., his wife, upon a promissory note made by him to her order, and indorsed by her. The note was dated Newark, July 28, 1899, and was payable at the Mechanics' Bank, Brooklyn, N. Y. The case was tried by the court without a jury, by consent of the parties.

The following are the pertinent facts found by the trial court: Mrs. Chardavoyné, about ten days or two weeks before July 28, 1899, intrusted her husband with a blank form of promissory note, indorsed by her, to be filled up and signed by him, and used at the German National Bank of Newark to obtain a loan for Mrs. Chardavoyné. The German National Bank refused to discount the note, and its refusal was reported to her. She never authorized her husband to use the note for any other purpose. Notwithstanding this fact, he, on the 28th day of July, took the blank note to the banking house of the plaintiff company, in Brooklyn, New York; and the body of the instrument was then filled up by the plaintiff's President, at the request of Mr. Chardavoyné, for a sum equal to the amount of an indebtedness due from Mr. Chardavoyné to the plaintiff. The next day the note was discounted by the plaintiff, and the proceeds placed to Mr. Chardavoyné's credit. The

* The court appears to have overlooked the fact that this case was governed by the New York statute (Negotiable Instruments Law, Sec. 33). But the rule of the statute is the same as that declared by the court. The language of the section is as follows: "Where the instrument is wanting in any particular, the person in possession thereof has a *prima facie* authority to complete it by filling up the blanks therein. And a signature on the blank paper delivered by the person making the signature in order that the paper may be converted into a negotiable instrument operates as a *prima facie* authority to fill it up as such for any amount. In order, however, that any such instrument, when completed, may be enforced against any person who became a party thereto prior to its completion, it must be filled up strictly in accordance with the authority given and within a reasonable time. But if any such instrument, after completion, is negotiated to a holder in due course, it is valid and effectual for all purposes in his hands, and he may enforce it as if it had been filled up strictly in accordance with the authority given and within a reasonable time."

President of the bank, when he filled up the note, was ignorant of the fact that it had been indorsed in blank by Mrs. Chardavoyne; and the plaintiff took it in the regular course of business, in good faith, without notice of any infirmity in it, and in payment of the indebtedness then due to it from Mr. Chardavoyne. On this finding of facts, judgment was entered for the plaintiff against both the maker and indorser of the note.

GUMMERE, C. J.: The principal ground upon which we are asked to reverse this judgment is that, upon the facts found, no liability on the part of Mrs. Chardavoyne can be predicated. The contention is that her husband had no authority to fill up the note, except for the purpose of having it discounted at the German National Bank for her benefit; that, when this purpose failed, her husband's agency ceased, and her indorsement became a nullity, and that his subsequent fraudulent act in having the blanks in the note filled up, and then appropriating it to the payment of his own indebtedness, did not render her responsible thereon as indorser. An examination of the authorities, however, will disclose that this contention is untenable. The question to be determined in a case like the present is not what is the actual limit of authority conferred by the indorser of a blank note upon the person into whose hand she delivers it, but, rather, what authority such an indorser, by her conduct, holds out that person as possessing, to one who takes the note in good faith, for value, and without notice that the actual authority conferred is a limited one only, and therefore, as is stated by Mr. Parsons in his treatise on Notes and Bills (volume 1, p. 110), "it is no defense against a *bona fide* holder for value to prove either that the person to whom the instrument was intrusted in blank had no authority at all to fill the blank, or that his authority was limited to a certain sum, which he had exceeded, or that he was only authorized to use the paper for a particular purpose, and had fraudulently converted it to a different purpose, or that he was only authorized to fill the blank upon a certain condition, which had not happened, or that the authority was limited in point of time, and that the time had expired."

Practically the same statement appears in 1 Daniel on Neg. Instru. § 143, where it is said that "the authority implied by a signature in blank, and the credit granted, are so extensive that the party so signing will be bound, though the holder was only authorized to use it for one purpose, and has perverted it to another, and though the authority was limited to a time which has expired, or was only to be exercised upon a condition which has not happened."

The decided cases fully support the rule laid down by these authors. As early as 1780, Lord Mansfield, in *Russel vs. Langstaffe*, Doug. 514, declared that "the indorsement on a blank note is a letter of credit for an indefinite amount. By it the indorser says, 'Trust G.' (the person who received the note from the indorser) 'to any amount, and I will be his security.' It does not lie in his mouth to say that the indorsement is not regular." In *Gerrard vs. Lewis*, L. R. 10 Q. B. Div. 30, it was held that "a man who gives his acceptance [to a bill of exchange] in blank holds out the person to whom it is intrusted as clothed with ostensible authority to fill in the bill as he pleases."

In *Bank of Pittsburg vs. Neal*, 22 How. 96, 16 L. Ed. 323, it was held that "where a party to a negotiable instrument intrusts it to the custody of another, with blanks not filled up, whether it be for the purpose to accommo-

date the person to whom it was intrusted, or to be used for his own benefit, such negotiable instrument carries on its face an implied authority to fill up the blanks and perfect the instrument," and that "a *bona fide* holder of such an instrument, for valuable consideration, without notice of the facts which impeach its validity between the antecedent parties, if he takes it before the same becomes due, holds the title unaffected by these facts, and may recover thereon."

In *Michigan Bank vs. Eldred*, 9 Wall. 544, it is declared to be "well-settled law that where a party to a negotiable bill of exchange or promissory note containing blanks intrusts it to the custody of another, whether it be for the purpose of accommodating the person to whom it was intrusted, or to be used to raise money for his own benefit, such bill or note, especially if it be indorsed in blank, carries on its face an implied authority in the person to whom it is so intrusted to fill up the blanks in his discretion; and as between such party to the bill or note, and innocent third parties holding the bill or note as transferees for value, in the usual course of business, the person to whom it is so intrusted must be deemed to be the agent of the party who committed such bill or note to his custody, and the legal conclusion is that he acted under the authority of that party, and with his approbation and consent."

In *Van Duzer vs. Howe*, 21 N. Y. 531, it was decided that "a party who intrusts another with his acceptance in blank is responsible to a *bona fide* holder, although the blank is filled with a sum exceeding that fixed as a limit by the acceptor."

In *Redlich vs. Doll*, 54 N. Y. 235, the rule is stated to be that "if a note be obtained from a maker by fraud; if it be made for one purpose, and used by the holder for another; if it be delivered in blank, with an agreement that the blank shall be filled in one way, and it be filled in another—in all these cases the maker is liable to a *bona fide* holder for value. The maker, rather than the innocent holder, must suffer for his negligence or misplaced confidence."

In *Putnam vs. Sullivan*, 4 Mass. 45, it was held that "where a merchant intrusts his clerk with his blank indorsements, and one by false pretense obtains and uses them [by writing and signing promissory notes upon the face of the blanks], such fraudulent use of them will not discharge the indorser, against an innocent indorsee."

In *Greenfield Bank vs. Stowell*, 123 Mass. 196, the rule is laid down that "if a man indorses a blank form of note, and delivers it with the intention that the blank should be filled, he thereby makes the person to whom he delivers it his agent, and is responsible for whatever date, sum, or time of payment he may insert to a *bona fide* indorsee." In *Breckenridge vs. Lewis*, 84 Me. 349, it was decided that "one who intrusts his signature to another for commercial use (that is, to have some business obligation written over it) becomes holden upon a negotiable promissory note fraudulently so written by the person so intrusted with it, and negotiated to an innocent holder."

It is unnecessary to multiply authorities. Enough have been cited to make it clear that one who indorses a promissory note in blank, and intrusts it to another to fill it up and have it discounted for his (the indorser's) benefit, is liable upon it to a *bona fide* holder for value, who receives it before maturity, in the usual course of business, from the person to whom it was

intrusted, notwithstanding that the latter has filled it up for, and fraudulently converted it to, a purpose entirely different from that for which he was authorized to use it. Commercial paper is a part of the mercantile currency of the country, and, in order that its free circulation may not be impeded, it is the settled policy of the law that innocent holders thereof for value should have a right to enforce payment of such paper against those who, by signing or indorsing it, either in blank or otherwise, have caused it to become a part of such currency.

It is further contended on behalf of the plaintiff in error that, if it be considered that the indorser of a blank promissory note is liable to a *bona fide* holder for value under the circumstances existing in the present case, still the plaintiff bank is not entitled to recover against her, because it does not occupy that position. The fact is established by the finding of the trial court, as has been already stated, that the plaintiff bank took the note "in the regular course of business, in good faith, without notice of any infirmity in it." It is therefore a *bona fide* holder. The trial court further found that the bank took the note "in payment of an indebtedness then due" to it. So far as this State is concerned, the rule is entirely settled that a party taking a promissory note in payment of an antecedent debt is a holder of such note for a valuable consideration, and entitled to protection as such. (*Allaire vs. Hartshorne*, 21 N. J. Law, 673; *Duncan, Sherman & Co. vs. Gilbert*, 29 N. J. Law, 527.)

But as the transaction out of which the plaintiff's right sprang took place in New York, the question to be determined is whether, by the law of that jurisdiction, one who so takes a promissory note is a holder for value. The plaintiff in error insists that the rule established in that State is that, where the holder has received the paper as payment for an antecedent debt, he is not such a holder, and refers us to a declaration to that effect contained in the opinion of this court in *Duncan, Sherman & Co. vs. Gilbert*, 29 N. J. Law, 528. No authority for this statement is cited in the opinion referred to, and an examination of the New York cases does not justify it. On the contrary, the New York decisions on this subject, so far as we have been able to ascertain by an examination of the published reports of such decisions, are in entire harmony with our own.

In 1840, more than twenty years prior to the decision in *Duncan, Sherman & Co. vs. Gilbert*, the Supreme Court of New York, in the case of *Bank of St. Albans vs. Gilliland*, 23 Wend. 311, held that "receiving a note for a precedent debt is receiving it for value, within the law merchant, if it be taken in satisfaction of such precedent debt, and the indebtedness be cancelled."

To the same effect is the decision of the Court of Appeals in *Brown, Ex'r, vs. Leavitt*, 31 N. Y. 113, and in the later cases of *Phoenix Ins. Co. vs. Church*, 81 N. Y. 218, and *Mayer vs. Heidelbach*, 123 N. Y. 332.

It is further urged on behalf of the plaintiff in error that, as she received nothing for her indorsement, she is, at most, an accommodation indorser, and that section 5 of our married women's act (2 Gen. St. p. 2017, § 26) exempts her from liability on such a contract.

In disposing of this contention, it is enough to say that it has already been decided by this court that where a note upon which a married woman puts her name, in this State, first comes into legal existence in the State of

New York, as was the present case, the statutory provision appealed to affords her no protection. (Thompson vs. Taylor, 66 N. J. Law, 253.)

The only other ground upon which the validity of the judgment below is attacked is based upon the claim set up by the plaintiff in error at the trial of the cause that, at the time of the transaction between her husband and the bank, the former was insane, the contention being that the court erred in its holding with regard to the measure of liability upon contracts made by insane persons.

It is quite immaterial, however, whether such error occurred or not. The trial court found as a fact that the husband of the plaintiff in error was not insane at the time when he delivered the note in suit to the plaintiff, and, as the testimony produced on the subject of Chardavoyne's sanity was amply sufficient to support this finding, it must be accepted by this court. Consequently the question of the measure of liability, under the conditions mentioned, is not involved in the decision of the case.

The judgment under review should be affirmed.

Dixon, Garrison, Fort, and Green, *J.J.* dissent.

AUTHORITY OF CASHIER—EMPLOYING AGENT TO SELL REAL ESTATE.

Court of Civil Appeals of Texas, October 21, 1903.

FIRST NATIONAL BANK OF FLATONIA vs. RATLIFF.

The Cashier is the collecting officer of the bank, and by virtue of his authority as such, has power to enter into a contract looking towards the collection of debts due the bank, and may obligate the bank to pay reasonable fees or commission for such collections.

This was an action by Thomas Ratliff, as assignee of A. E. Noel, to recover from the First National Bank of Flatonia, Texas, the sum of \$265. It was alleged in the petition that on or about July 12, 1901, Noel made an agreement with the bank, acting by and through its Cashier, to sell certain land for the bank, and that the bank was to pay him for his services, a commission of five per cent. on the amount for which the land should be sold, and that the bank was not the owner of the land, but held a mortgage on the same and was interested in having the land sold so as to pay off the mortgage to it. The bank, among other defenses, denied the authority of the Cashier as agent of the bank, to make such contract.

FISHER, *C. J.* (omitting part of the opinion): The only question to be considered is whether the Cashier of the appellant's bank had the authority to make the contract sued upon.

Although it is not necessary to a decision of this case, it may be determined, as contended for by the appellant, that a Cashier has no authority, without the consent of the board of directors, to enter into a binding contract for the sale of lands belonging to the bank; but such is not the question here, for the bank did not own these lands, but simply had a mortgage interest in them to the extent of the amount of the debt secured.

The Cashier is the collecting officer of the bank, and, by virtue of his authority, he has the power to enter into a contract looking towards the collection of debts due the bank, and can, if the occasion becomes necessary, obligate his principal to pay reasonable collection fees or commissions in furthering the interest of the bank in collecting the sums due it.

The facts, as stated, show that the object of the bank was to collect its

debt, and the foreclosure of the mortgage or the sale of the land under the mortgage was the means by which this purpose would be accomplished; and, in the furtherance of this object, we are clearly of the opinion that the Cashier had the authority to enter into a contract to pay a commission for the services and assistance of Noel in furthering the collection.

We find no error in the record, and the judgment is affirmed. Affirmed.

*FORGED SIGNATURE—RATIFICATION—FORGED NOTE IN RENEWAL—
RIGHT TO RECOVER ON ORIGINAL NOTE.*

Supreme Judicial Court of Massachusetts, October 22, 1903.

CENTRAL NATIONAL BANK vs. COPP.

Where a forged signature is ratified by the person whose signature it purports to be, he becomes liable as if his name had been originally placed upon the instrument by his authority.

Where forged notes are delivered to and received by a bank as renewals, and the original notes cancelled and delivered up by the bank, such renewals may be treated as a nullity, and the bank may recover upon the originals.

HAMMOND, J. : The judge found that the name of the defendant on the notes declared on is forged, but that in January, 1899, she called at the bank and acknowledged in some form of words that the three notes then held by the bank "were her notes," and he found for the plaintiff upon them upon the ground of ratification. The defendant has argued that the finding of ratification is not warranted by the evidence, but we think otherwise.

The President testified that after some conversation with the defendant as to "a line of discount notes signed by her and her husband jointly," in which he cautioned her as to the practice of signing notes for her husband, he took the three notes then held by the bank and handed them to the defendant and said, "These three notes amount to \$6600. Are these all right?" and that she said, "Yes, they are all right."

It is true that the defendant, in her testimony, denied that she said the notes were all right, and testified that the President said to her, "This is your signature, isn't it?" and that she replied, "That is my name." She further testified that the thought of forgery came to her mind, and she stopped.

It might, perhaps, be argued that, under the circumstances, ratification could fairly be found upon the defendant's own testimony; but, whether that is so or not, there can be no doubt that, if the President's version of the interview is correct, the judge was amply justified in finding that, with full knowledge of the circumstances, she, for the purpose of shielding her husband, ratified her signature. By reason of this ratification she became liable as though her name had been originally placed upon the notes by her authority, even although there was forgery, and the question whether there was a liability by estoppel became immaterial. (*Greenfield Bank vs. Crafts*, 4 Allen, 454; *Wellington vs. Jackson*, 121 Mass. 157.)

It is further argued that the three notes have been paid. There is no doubt that the bank went through all the forms usual in cases of payment. Upon maturity the notes were charged against the account kept by the husband in the bank, canceled by perforation, marked "paid," and, with checks

and other things that were properly charged to his account, were handed to him with his bankbook whenever it was balanced. The defendant contends that in this way each note was paid as it matured, and that the taking by the bank of subsequent notes for the same respective amounts constituted in each case a new transaction. The judge, however, has found that "when the notes became due they were surrendered to the husband upon the substitution of other similar forged notes," and that the "method of renewal was this: The notes were charged to Copp's deposit account in the bank, and the new notes were at the same time credited to the same account;" and he rules that "the surrender of the notes by the bank upon the substitution of forged notes does not extinguish the bank's right of recovery."

The evidence justifies this finding. According to the testimony of the plaintiff's President, these notes constituted a "line of discount," and there is nothing to show that either the bank or Copp supposed that any note was paid in any other way than is quite usual in such cases, namely, by the substitution of a new note by the way of renewal. The plaintiff never intended to release the defendant from her obligation on these three notes, and to look to the husband alone; and, having received the renewal notes upon the faith that they were valid as to the defendant, the renewals may be treated as a nullity, and the plaintiff may recover upon the original notes. (*Leonard vs. First Congregational Society in Taunton*, 2 Cus.h. 462; *Almy vs. Reed*, 10 Cus.h. 421.)

Lastly, the defendant argues that there was such negligence on the part of the plaintiff and its officers as should preclude a recovery, and the fourth and fifth requests relate to that branch of the defense. It is plain, however, from the report, that these were among the requests regarded by the judge as inapplicable to the facts found by him. He finds that the plaintiff accepted without question and without suspicion the defendant's statement as to the validity of her signature to the three notes in question, and that the bank was not informed of the forgery until after the husband's death. It does not appear that the real signature of the defendant was ever known to the officers, or that they had any reason to suspect forgery.

LOST CERTIFICATES OF DEPOSIT—CANCELLATION—NEW YORK STATUTE.

Supreme Court of New York, Appellate Division, Third Department, September, 1903.

IN THE MATTER OF THE APPLICATION OF JACOB C. COOK, AS ADMINISTRATOR OF THE ESTATE OF CLARISSA COOK, DECEASED.

A certificate of deposit, payable on demand on the order of the payee, and bearing interest provided the amount deposited was left in the bank six months, does not mature, so as to start the statute of limitations running against the holder's right to recover thereon until presentation for payment.

Laws 1899, p. 923, c. 451, as amended by Laws 1901, p. 1243, c. 503, providing that in case of lost certificates of deposit the person to whom it was issued, his executors, administrators or assigns, may apply to the Supreme Court for an order directing payment and canceling the same, and after such order no claim can be made by any person having such certificate in his possession against the bank, but that the bank shall thereafter be entirely relieved from any liability by reason of having issued such certificate, or for the money due thereon, in so far as it affected lost certificates issued before the act took effect, is unconstitutional as impairing the obligation of contracts.

This proceeding was taken by Jacob C. Cook, as administrator of the estate of Clarissa Cook, deceased, under chapter 451, of the Laws of 1899, as

amended by chapter 503, page 1243, of the Laws of 1901. Upon the 10th day of October, 1885, the National Spraker Bank, of Canajoharie, N. Y., issued, for value received, to Clarissa Cook a certificate of deposit, dated on that day, for the sum of \$5,400. Thereafter the certificate was lost or destroyed, and Clarissa Cook was declared a lunatic, and Jacob Cook, the petitioner, was appointed the committee of her person and estate. As such committee, Jacob Cook demanded the payment of the certificate, and together with one Josiah Snell and one Alfred W. Shull, executed and delivered a bond of indemnity, conditioned to save the bank harmless against all loss from the certificate. Thereupon the bank paid the amount of the certificate of deposit to Jacob C. Cook, as the committee of Clarissa Cook. Thereafter, in 1894, Clarissa Cook died, and the petitioner was appointed as administrator of her estate. In January, 1900, Josiah Snell died, and executors were appointed of his will, who were made parties to this proceeding. The prayer of the petitioner was for an order declaring the certificate null and void, and for the release of the bond of indemnity and of the obligors thereof.

SMITH, J.: The right of the appellant to question this order upon appeal seems apparent. The statute requires the bank to be made a party to the proceedings, and by the order entered the security held by the bank has been discharged. Against such an order the bank has a material interest to defend.

Nor need we consider whether this statute was intended to affect past transactions. It will hardly be questioned that it would have such effect, unless it took away vested rights. The sole question, therefore, for our consideration is upon the appellant's challenge of the statute as an unauthorized exercise of legislative power.

There is a practical agreement between counsel as to the general rules by which the validity of a statute is to be determined. That the obligation of contracts cannot be impaired is the plain direction of the constitution. On the other hand, that a statute of limitations may be prescribed when none before existed, or that an existing statute of limitations may be modified by an act reducing the time within which an action may be brought, is not questioned, provided only that a reasonable time be left after the passage of the act within which an action may be brought. The respondent's claim is to the effect that this statute is, in its nature, a statute of limitations, while the contention of the appellant is that the statute goes further, and impairs the obligation of its contract.

By the certificate of deposit in question the appellant agreed to pay to the order of Clarissa Cook \$5,400, with interest, if left six months. It is not claimed that this makes a demand note which is due at once, or within a reasonable time, so that the statute of limitations runs. It has been held, and it must be conceded, that, apart from the statute in question, this paper might well be held for such a length of time as the holder might choose, during which time it would bear interest, and until the presentation of the same the obligation does not become due, and the statute of limitations does not begin to run. (See *Payne vs. Gardner*, 29 N. Y. 146; *Cottle vs. Marine Bank*, 166 N. Y. 58.)

In the case last cited, Landon, J., in writing for the court, speaking of a certificate of deposit, says:

"But in this case the paper requires demand upon a specified condition,

namely, 'to his (the depositor's) order hereon,' and the demand must correspond with the obligation of payment, and that requires presentation of the certificate to the bank, properly indorsed, unless the bank should waive the indorsement."

If a statute were passed making the bank liable upon such a paper without demand, its effect as a material modification of the contract would hardly be questioned. To add to the contract, as has been attempted by this statute, a requirement that under certain conditions the holder of the paper must present his paper to the bank under penalty of a forfeiture of his contract, seems to me no less a modification of the contract made by the parties; and I am unable to see any principle of law upon which the Legislature can be claimed to hold this power to alter a contract made.

This statute has in it no element of a statute of limitations. Upon the publication of the notice as required by the statute, the holder of the certificate is bound to present his certificate to the bank. If he does so present the certificate, he is not required to receive payment thereon, nor is it declared that it shall become due, from which time the statute of limitations begins to run. He is simply required to hold up his hand and say, "I have this certificate," and for failure to do this, although he has had no actual notice of the order made, his contract is rescinded, and he has no claim under a contract for which he has paid a full consideration. Nor should the court hesitate to declare this statute void by reason of a single hardship in a particular case. Thousands of certificates are held by women, to whom the notice contemplated by the statute would never come, but whose property might be confiscated by unscrupulous assignors, who might swear that the certificate had been lost, and get from the bank the money that in truth belonged to the real holder of the certificate. The assignee of a certificate might go to Europe for a four-months' trip, and come home to find his property confiscated.

The only case cited by the respondents immediately bearing upon the question here argued is the case of *Vance vs. Vance* (108 U. S. 514). It had been provided by the Civil Code of Louisiana that the property of a tutor (guardian) was tacitly mortgaged in favor of a minor as security for his administration. The Constitution of Louisiana, adopted in 1868, provided as follows:

"No mortgage or privilege shall hereafter affect third parties unless recorded in the parish where the property to be affected is situated. All tacit mortgages and privileges now existing in this State shall cease to have effect against third persons after January 1, 1870, unless duly recorded. The General Assembly shall provide by law for the registration of all mortgages and privileges."

On March 8, 1869, the Legislature of Louisiana enacted the necessary legislation to carry out the provision of the State constitution. This provision of the constitution was thereafter challenged by a minor who had become of age on the ground that it took from him a security, thereby impairing the obligation of his contract with his tutor. The Supreme Court there held that it in no way destroyed the contract between the minor and the tutor; that it was simply a recording act, making the secret lien void as against those who dealt with the tutor without knowledge thereof; and the court there followed prior authorities in the same court which authorized the

enactment of recording acts affecting existing contracts for the protection of *bona fide* purchasers dealing with a party without knowledge of the secret lien. The act in question, however, is not for the protection of *bona fide* purchasers. The reasoning upon which the constitutional provision in the case cited was justified by the court is in no way applicable to the case at bar. A party has lost the evidence of his right to recover. The penalty to the loser is no greater than if the money itself had been lost. I can find no justification in public necessity for the act in question.

It may be argued that the statute provides for the recovery upon lost paper by the requirement that a bond may be given, and that the statute in question is no more an impairment of the obligation of a contract than the statute providing for the recovery upon a lost note. But the right to recover upon a lost instrument upon the giving of indemnity does not rest upon the statute. The right has always existed in a court of equity to provide for the saving of the rights of the owner of a lost instrument by the giving of indemnity. In *Rowley vs. Ball* (3 Cow. 303), the right was recognized in a court of equity, but was denied to a court of law, and the statute was enacted for the sole purpose of giving to a court of law the same power to allow a recovery as existed without the statute in a court of equity. (See 2 Rev. St. 1st Ed. p. 406, pt. 3, chap. 7, tit. 3, secs. 75, 76, and note of the revisors found in volume 3 of the Second Edition of the Revised Statutes, p. 738. See also Throop's Code, sec. 1917, and his note.) The statute in question offers no indemnity to the party whose rights are abrogated. It attempts to divest the owner of such a certificate of his property upon a condition not named in the contract, in clear contravention, as I think, of the rights guaranteed by the State and Federal constitutions. The question here arises upon a certificate issued before the passage of the statute herein discussed. An entirely different question might arise upon a certificate issued after its passage, upon which it is unnecessary here to express an opinion.

The order should therefore be reversed.

Final order reversed, with costs. All concur, except Chester, J., who dissents, and Kellogg, J., not voting.

RIGHT TO APPLY DEPOSIT—PROCEEDS OF PROPERTY CONVERTED TO THE DEPOSITOR'S USE.

Court of Appeals at Kansas City, Mo., June 8, 1903.

FIRST NATIONAL BANK OF SHARON vs. CITY NATIONAL BANK OF KANSAS CITY.

Where a customer of a bank deposits money to his account generally, without special direction, the bank may apply the same to his indebtedness to it, though the money deposited is the proceeds of property of a third person, wrongfully converted by the depositor.

George W. Shinn gave to the Missouri Live Stock Commission Company a negotiable note secured by a mortgage on certain cattle. In a few days thereafter, the Commission Company sold and endorsed the note to the plaintiff. About a month thereafter Shinn sold the cattle and deposited \$4,000 of the proceeds with the defendant bank in the name of the Commission Company. That company did its banking with the defendant, and its account was overdrawn to near the amount of Shinn's deposit. The company was

insolvent and the defendant appropriated the sum deposited by Shinn to the payment of this overdraft. There was a dispute as to whether or not the bank had notice at the time of the deposit that it was intended to pay the note. The court held that the evidence was insufficient to establish this claim.

ELLISON, *J.* (omitting part of the opinion): The money thus deposited, having arisen from the sale of the mortgaged property, may be assumed to be, properly, the money of plaintiff as holder of the note secured by the mortgage. What, then, is the law as applied to the facts thus stated? The authorities are not in full harmony, yet, if viewed from the standpoint of principle, the question is not difficult of solution. When Shinn sold the cattle, his act constituted a conversion to his own use. The money he received for them was a commodity which passes, and may be received, from hand to hand without inquiry as to anybody's claim thereto by all who have no notice of its origin. Shinn could have used it in any way he saw fit, as, for instance, in the payment of any debts he may have owed. No one would for a moment suppose that any creditor of his, thus receiving such money in payment of his claim without notice, could be made to surrender it up to the one from whom it had been converted. (*Stephens vs. Board of Education*, 79 N. Y. 183.)

He deposited this money with the defendant bank to the credit of the Commission Company, and that company was immediately notified of the deposit and made no objection or protest. It thus, unquestionably, accepted the deposit. It then became subject to the law governing the relation between the bank and its depositor. The law fixes that relation to be that of debtor and creditor. (1 *Morse on Banking*, § 289; *State vs. Reid*, 125 Mo. 51; *McKeen vs. Bank*, 74 Mo. App. 281.)

If the depositor is indebted to the bank, the latter has a lien on the deposit for the debt, and may appropriate the deposit to the payment of such debt. (*Park Bank vs. Schneidermeyer*, 62 Mo. App. 179; *Muench vs. Bank*, 11 Mo. App. 144; *National Bank vs. Ins. Co.* 104 U. S. 54-71; 2 *Morse on Banking*, § 559.)

Necessarily, this right of the bank to appropriate the deposit does not depend upon the depositor's consent; for the depositor, without the bank's consent, has no right to draw out more than the balance which may be in his favor. And so it is said in *Bank vs. Hughes*, 17 Wend. 101, that "between two persons mutually indebted the balance is the debt."

In Massachusetts the principles we have stated have been applied in cases we consider to be directly in point in the case at bar. The owner of a negotiable promissory note indorsed it in blank, and handed it to his attorney for collection. The attorney deposited it in bank for collection, without stating for whose account. The bank collected and credited the attorney with it, and then applied it in part payment of an indebtedness the attorney owed it. When the owner of the note learned it had been collected he sued the bank for the amount, and it was held he could not recover. (*Wood vs. Bank*, 139 Mass. 358.)

Again, it was held that where a trustee deposited trust funds in bank on his private account, he thereby converted them to his own use, so that the bank, not having notice, may apply them to his indebtedness. (*School Dist. vs. Bank*, 102 Mass. 174.) The court said that: "When Tyler deposited in bank the money which he held as treasurer of the school district, and caused

it to be credited to his private account, without giving any notice that it was not his private property, or making any special agreement in respect to it, he thereby converted it to his own use. The specific money became the property of the bank, which it might apply to the payment of any money that he then owed it on account, and for the balance of which it would be his debtor."

The cases of *Hatch vs. Bank*, 147 N. Y. 184, 41 N. E. 403, and *Hutchinson vs. Manhattan Co.* 150 N. Y. 250, 44 N. E. 775, are likewise authorities in point. The court in those cases gave some prominence to the fact that the depositors had an agreement with the banks giving them some more extended rights over their deposits than might have followed from force of law without any agreement; as, for instance, that funds held of them, by deposit or otherwise, might be applied to their indebtedness, whether due or not. But these agreements were a mere incident of fact peculiar to those cases. An agreement to allow a bank to do what the law without the agreement permits it to do does not affect the force of the rule in a case which only calls for an exercise of rights given by the law without the aid of an agreement.

The case of *Smith vs. Bank*, 107 Iowa, 620, 78 N. W. 238, is another case we regard as in point in support of the view we have announced, though in that case there was an act of consent by the debtor that the bank might appropriate the deposit. We have, however, already shown that it is not at all necessary to have the depositor's consent. The law confers the right on the bank.

It has been sometimes suggested that if the claim for the payment of which the deposit is appropriated is an antecedent debt, there is no consideration to support the appropriation; but the authorities foregoing repudiate that idea, and hold that the rule in respect to antecedent debts not being a consideration for an after transaction has no application. The case last cited quotes with approval the following from *Pomeroy's Eq. Juris.* § 1048: "If a trustee or other fiduciary person, in violation of his duty, uses trust money to pay an antecedent debt of his own to a creditor, who has no notice of the breach of trust, or that the money is subject to the trust, in such manner that the money is received as a general payment, and not as a distinct and separate fund, then the money becomes free from the trust, and cannot be followed by the beneficiary into the hands of the creditor, although, in general, an antecedent debt does not constitute a valuable consideration." And this is the view of the Supreme Court of New York. (*Justh vs. Bank*, 56 N. Y. 478; *Stephens vs. Board of Education*, 79 N. Y. 183.)

Many of the cases referred to in plaintiff's brief are based upon the fact that the bank in such cases had notice of the claim or interest of the true owner. But authority has been cited which treats the question of the bank having notice as of no importance, and which holds that, though without notice of the ownership or equities of others, it has no right to appropriate the deposit.

The principal of these are the cases of *Burnett vs. Bank*, 38 Mich. 630, and *Cady vs. Bank*, 46 Neb. 756. In the first case the appropriation of the deposit was made by the bank without the order or participation of the depositor, and the court regards that circumstance as affecting its conclusion,

saying that if the depositor had consented to the appropriation there might have been room for other considerations. We cannot understand how the depositor's assent that the deposit may be applied on his indebtedness can affect the question in the least. The right in the bank, as before stated, comes through the law, and is wholly independent of the depositor's consent. The only action a depositor takes is that of making the deposit. He knows, or will be presumed to know, that his deposit goes to reduce the balance against him if the indebtedness is an overdraft, or, if in some other form, that it may be applied to its payment.

The result of the foregoing calls for a reversal of the judgment, and it is so ordered. All concur.

CERTIFICATION—EFFECT OF—KNOWLEDGE WHICH BANK IS PRESUMED TO HAVE.

Supreme Court of New York, Appellate Division, First Department, November, 1903.

MAX MEUER vs. THE PHENIX NATIONAL BANK.

Where a bank at the request of a holder certifies a check which has not been indorsed by the payee, it cannot be compelled to pay such check without proof that the payee had transferred it for value.

This was an appeal from an order denying an application of the defendant for leave to amend its answer.

The action was brought on a check drawn on the defendant bank, to the order of one Edla M. Muir, and thereafter, at the request of the plaintiff, certified by the defendant. The complaint alleged that on the 12th day of December, 1901, one Arthur Johns made his check directed to the defendant, requiring it to pay to the order of one Edla M. Muir the sum of \$1,303.65, and delivered the same to said Edla M. Muir; that on or about the 29th day of December, 1901, said Muir for value transferred the check by delivery to the plaintiff; that thereafter, and on the 15th day of January, 1902, at the request of the plaintiff, who then and there was the owner and holder of said check, presented the same to the defendant for certification, and the defendant in writing certified the same payable through the New York Clearing-House; that thereafter and prior to the commencement of the action the check was presented to the defendant for payment through the clearing-house and to the defendant direct, but no part thereof had been paid. To this complaint the defendant interposed an answer which denies "that it has information sufficient to form a belief as to each and every the allegations in paragraphs second, third, fourth and fifth of the complaint contained." Upon this answer the plaintiff moved for judgment, whereupon the defendant upon affidavit and a proposed amended answer obtained an order to show cause why the defendant should not have leave to serve an amended answer. Annexed to these papers was an affidavit of the Cashier of the bank and of one of the bank's attorneys stating that the words "any knowledge or" were omitted from the answer through inadvertence. In answer to that application to amend there was submitted an affidavit of the plaintiff's attorney, which stated that the defendant bank and its Cashier knew all the facts connected with these proceedings, "because deponent, prior to instituting this suit, called upon said Cashier and showed him said check with the certification of the defendant bank, and the defendant bank has a record of said check in its certification book."

INGRAM, *J.* (omitting part of the opinion): It is conceded that the answer as interposed was frivolous, and the only question upon this appeal is as to whether the defendant bank should be allowed to interpose an amended answer sufficient to put at issue the allegation of the complaint. Section 323 of the Negotiable Instruments Law (Laws of 1897, chap 612 as amd. by Laws of 1898, chap. 336) provides: "Where a check is certified by the bank on which it is drawn the certification is equivalent to an acceptance."

Section 79 of the Negotiable Instruments Law provides that "where the holder of an instrument payable to his order transfers it for value without indorsing it, the transfer vests in the transferee such title as the transferer had therein." This defendant bank must have had knowledge as to whether or not they certified this check, whether it was presented to them for payment and whether they refused such payment, but it cannot be charged with knowledge that the payee of the check had transferred it to the plaintiff for value. The defendant was entitled to have that fact proved before being compelled to pay a check not indorsed by the payee.

Order reversed.

PASS BOOK—RETURN OF TO CUSTOMER WITH VOUCHERS—EFFECT OF.

Supreme Court of Minnesota, November 20, 1903.

SCANLAN-GIPSON LUMBER CO. vs. GERMANIA BANK.

The object of a pass book is to inform the depositor from time to time of the condition of his account as shown by the books of the bank, and when such a book is sent to the bank to be written up and returned with cancelled vouchers, it is, in effect, a demand on the part of the depositor to know what the bank claims to be a statement of his account, and a return of the book with the vouchers is an answer to that demand.

It is the duty of the depositor within a reasonable time after the balancing of the book and the return of the vouchers, to examine the same, and report any errors to the bank.

If through the neglect of the depositor to perform this duty the bank is misled to its injury he cannot recover of the bank.

This action was brought to recover for money which had been paid without authority to one Cross, an employee of the plaintiff, and charged to the plaintiff's account.

COLLINS, *J.* (omitting part of the opinion): Referring now to money taken when part of the amount represented by a check was deposited and the balance received in cash, it can be said that this was within the apparent authority conferred upon Cross, if the jury believed him truthful concerning the transaction of April 20. If he was authorized by Mr. Gipson to draw out \$100 in cash, and to deposit the balance of the \$500 check (and the jury found that he was), the bank was justified in thereafter permitting him to draw part of the money represented by checks, for apparently he was clothed with authority to do exactly that thing. The authority would be more clearly apparent when, after the bank had posted and balanced the deposit book, it returned the identical check on which the \$100 was drawn. No complaint was made as to any transaction of this character subsequent to the return of the book with the paid and canceled checks, and the jury was justified in finding that there was culpable neglect on the part of the plaintiff, and, further, that from its acts the bank might readily infer that actual authority had been conferred.

It was the duty of the plaintiff within a reasonable time after the balan-

cing of the book and the return of the checks to see that the vouchers and the book comported with its accounts. In other words, the plaintiff owed the duty to the bank of verifying all returned checks, and it could not lull its officers into the belief that Cross's method of doing business was approved by the plaintiff by disregarding a plain duty, and then escape the natural consequences of its neglect. (*Critten vs. Chemical Nat. Bank*, 171 N. Y. 219.)

It is within common knowledge that the object of a pass book is to inform the depositor from time to time of the condition of his account as it appears upon the books of the bank. It not only enables him to discover errors to his prejudice, but supplies evidence in his favor in the event of litigation or dispute with the bank. In this way it operates to protect him against the carelessness or fraud of the bank. The sending of his pass book to be written up and returned with the vouchers is therefore, in effect, a demand to know what the bank claims to be stated as his account. And the return of the book with the vouchers is the answer to that demand, and, in effect, imports a request by the bank that the depositor will, in proper time, examine the account so rendered, and either sanction or repudiate it. * * * Other principles come into operation where a party to a stated account, who is under a duty, from the usages of business or otherwise, to examine it within a reasonable time after having an opportunity to do so, and give timely notice of his objections thereto, neglects altogether to make such examination himself, or to have it made, in good faith, by another for him; by reason of which negligence the other party, relying upon the account as having been acquiesced in or approved, had failed to take steps for his protection which he could and would have taken had such notice been given.

In other words, parties to a stated account may be estopped by their conduct from questioning its conclusiveness. (*Bank vs. Morgan*, 117 U. S. 96 ; *Dana vs. Bank*, 132 Mass. 156.) We must assume that the plaintiff, a large corporation, with capable and experienced officers, knew of the prevailing custom among banks to balance pass books of their depositors usually once a month, and to return their checks, in order that errors may be discovered to the depositor's prejudice, of which, if there are any, prompt notice should be given. It stands undisputed that Cross was to keep the plaintiff's balance good at the bank, and that when he required money for this purpose he informed the proper officer of the corporation, and was then given a check for the amount he represented to be needed, without any further investigation, either of the accounts kept by himself or of the bank book, which was usually in plaintiff's office, or of the returned vouchers. It was also undisputed that at frequent intervals during the time in which criminal appropriations subsequent to the first were being made the book was taken to the bank by Cross, there balanced, and, with the paid checks, returned to Cross, who, as before stated, was the only person representing plaintiff at the bank. It is also undisputed that at no time during this period did any officer or other person connected with the corporation investigate or pay the slightest attention to his accounts, or even casually inspect the bank book. It is hardly necessary to say that a very slight examination of either accounts or book would have disclosed the fact that Cross was appropriating to his own use money belonging to the plaintiff. It seems almost incredible that a concern transacting the amount of business that this plaintiff did should have permitted an employee to conduct its financial affairs without the slightest oversight. Its methods

were a continual inducement to wrongdoing, and actually invited Cross to the commission of unlawful acts. That he yielded to the temptation and became a criminal is not very surprising.

CHECK—DEFENSE—FAILURE OF CONSIDERATION.

Supreme Court of Minnesota, October 23, 1903.

BROWN, *et al.* vs. ROBERTS, *et al.*

A partial want or a partial failure of consideration can be shown, if properly pleaded, as a defense *pro tanto* to a negotiable instrument in the hands of the original payee, or of a party standing in his shoes.*

This was an action upon a check.

STOUT, *C. J.* (omitting part of the opinion): The defendants here claim that their answer alleged a partial want of consideration for the check, to the extent of \$35; that this was a good defense; and that the trial court ignored this defense, and refused to make any findings thereon, although evidence was offered in support of the defense on the trial. If this claim is supported by the record, the action of the trial court was reversible error. Whatever doubt there may have been at one time as to the question, it must now be held, in view of later decisions of this court, that a partial want or a partial failure of consideration can be shown, if properly pleaded, as a defense *pro tanto* to a negotiable instrument in the hands of the original payee, or of a party standing in his shoes. (*Stevens vs. Johnson*, 28 Minn. 172, 9 N. W. 677; *Torinus vs. Buckham*, 29 Minn. 128, 12 N. W. 348.)

While a distinction has sometimes been made between a partial failure of consideration and a partial want of consideration, it has been quite uniformly held that the latter is always a defense *pro tanto* as between the original parties to the instrument. (4 Enc. of Law, § 195; 1 Daniel, Neg. Instruments, § 201.)

NOTES OF CANADIAN CASES AFFECTING BANKERS.

[Edited by John Jennings, B. A., LL. B., Barrister, Toronto.]

CIVIL ASSOCIATION—PROMISSORY NOTE—LIABILITY OF INDIVIDUAL FOR
WHOLE AMOUNT—ART. 1854 CIVIL CODE—BILLS OF EXCHANGE ACT
SEC. 23, 84.

DROUIN vs. GAUTHIER (Quebec Reports, 12 King's Bench, page 442).

STATEMENT OF CLAIM: This was an appeal from the judgment of Langelier, *J.*, holding the defendants, Messrs. Drouin & Drouin, individually liable for the whole amount of a promissory note signed by them in the partnership name. Messrs. Drouin & Drouin were advocates carrying on the practice of law in the province of Quebec, and had given the note for a partnership debt.

Under the Civil Code of Quebec (Art. 1854) partners are not jointly and severally liable for the whole amount of a note signed in the partnership name, but each partner is liable to creditors for a half, third or fourth part

* The Negotiable Instruments Law provides; "Absence or failure of consideration is matter of defense as against any person not a holder in due course; and partial failure of consideration is a defense *pro tanto*, whether the failure is an ascertained and liquidated amount or otherwise." (Section 54, New York act.)

of the whole amount, according to the number of partners, notwithstanding his interest in the partnership may be greater or less than an equal share. But this provision does not apply to commercial partnerships. The defendants' contention was that as they were not a commercial partnership, but a civil association, their liability individually was governed by Art. 1854. Langelier, *J.*, held that the making of a negotiable note constituted a commercial contract, and was governed by the commercial law with respect to contracts, no matter what was the nature of the partnership of those signing it, and held each member of the legal firm liable for the whole amount. It was from this judgment that the appeal was taken.

JUDGMENT (Sir Alexandre La Coste, *C.J.*; Bosse, Blanchet, Wurtele, and Ouimet, *J.J.*): The partnership which exists between the appellants is admitted to be a civil association, and the individual members are liable only to the extent provided by Art. 1854. It is the partnership which has signed and which is responsible; even though one should consider the making of a promissory note to be a commercial act, sec. 84 of the Bills of Exchange Act provides that where a note is signed by two or more makers the liability may be joint or joint and several according to its tenor; and sec. 23 provides that the signature of the name of a firm is equivalent to the signature by the person so signing of the names of all persons liable as partners in that firm; that is to say, each member of the firm is charged with the liability which he would have according to law had he personally signed the note. Under the Quebec law where there are two or more makers of a note, each is not jointly and severally liable for the whole amount, but the liability of each is only for a proportionate share; and that is the liability, "according to its tenor" imposed by sec. 84.

We are therefore of the opinion that the appeal should be allowed with costs, and the defendants should each be held liable only for half the amount of the note sued upon.

*NEGLIGENCE—MATERIAL ALTERATION IN NOTE—LIABILITY OF MANAGER
OF BRANCH BANK—DISOBEYING INSTRUCTIONS.*

LA BANQUE PROVINCIALE vs. CHARBONNEAU (6 Ontario Law Reports, page 302).

STATEMENT OF CLAIM: This was an appeal to the court of appeal from the judgment of Chief Justice Meredith at the trial, dismissing the plaintiffs' action. The action was one to recover damages from the plaintiffs' former Manager at Ottawa, on the ground of the material alteration of a note held by the bank, and on the ground of negligence in the discharge of his duties. The circumstances were as follows:

The defendant was the salaried Manager of the Ottawa branch of the plaintiffs' B and A partnership firm styled the Citizens' Exchange and Loan Agency applied to him for a loan or credit of \$5000 which, after some correspondence with the bank's head office, the defendant was authorized to grant on its being collaterally secured by the joint and several promissory note of certain-named persons. A note signed by these persons was handed to the defendant by a member of the firm and a note of the firm at a shorter date was discounted, and the money advanced to them thereon.

By some oversight on the defendants' part the collateral note accepted by him, instead of being the joint and several note of the makers in accordance with his express instructions, was their joint note only. Shortly after-

wards the defendant became aware of his error and sent for two of the makers, one of whom was a member of the firm, and pointed out the mistake. A discussion took place as to what should be done to rectify it. The defendant said that either a new note should be obtained or the erroneous one corrected.

According to the evidence at the trial these two makers "seemed to be satisfied" to adopt the latter course, and he thereupon wrote in the words "jointly and severally," the "understanding" being that "we were to go round to the makers and get them to 'initial'" the alteration, that is "to get them to consent to it." Then Arnoldi said that he did not care about writing these people, *i. e.*, the other makers, again, and the defendant inferred from the course of the conversation that they might refuse to initial the alteration, and that it would be better for the bank that the note should remain as it was. Arnoldi said: "If you will keep the note like that I will make sure that the next note (the renewal) will be a joint and several one; better hold the note like that till it comes due, and I will give you a note made properly."

The defendant in consequence made no attempt to get the alteration initialed, and shortly afterwards took it to his solicitor, told him the facts, and asked what he should do. The latter advised him not to erase the added words, but to pass a line through them with his pen, which he accordingly did.

When the time came to renew the note, a renewal was brought in the required form, which the defendant accepted without noticing that it had not been signed, by one of the substantial parties, one King Arnoldi, and his signature never was, in fact, obtained to it. The bank was advised that the omission did not affect the liability of the other makers. An action was brought against all the makers of the first note, including King Arnoldi, and against those who were parties to the second note. By this time the alteration of the original note had been discovered by the sureties, and the result of the action, so far as that note was concerned, was that they were held to have been discharged by the alteration. The action also failed as to those sureties who had actually signed the second note, on the ground that the bank had omitted to secure King Arnoldi as a party to it, and on the further ground that having been made in ignorance of the alteration of the first one, in consequence of which the sureties had been discharged, there was no consideration to them for making the second one.

JUDGMENT: The question is whether, under these circumstances, the plaintiffs have any ground of action against the defendant founded upon his negligence in respect of any of these transactions.

The first act of negligence was that of taking the original note in the form of a joint note only, contrary to the plaintiffs' express instructions to accept only the joint and several note of the proposed makers. It is evident from the correspondence between the defendant and his superior that the latter, for some reason, attached great importance to this point and it cannot be denied that in taking the security in the form in which he had been told not to take it, there was a negligent breach of his instructions.

No loss or damage, however, was directly sustained by the plaintiffs in consequence of this.

The joint note of the makers was, for aught that has been shown, quite as

useful a security as one on which they were liable jointly and severally, and I, therefore, agree with the learned Chief Justice at the trial that, inasmuch as the damage the plaintiffs complain of did not flow from this act of negligence, nominal damages only are recoverable by them in respect of it.

The question is, did the defendant exercise such a reasonable degree of skill, care and diligence as was required of him under the circumstances, or did he show such a want of capacity or want of attention to the plaintiffs' interests as to render him responsible for the loss which occurred? And that is a question to be determined upon the circumstances of the case, taking into consideration the plaintiffs' knowledge of the defendant's capacity and fitness for the position; their subsequent knowledge of what had been done, and their attitude with regard to it before the loss had actually occurred.

The defendant was, of course, bound to exercise reasonable care and diligence in looking after and protecting the plaintiffs' property in his possession or under his control, including, of course, the promissory note which he had received for the plaintiffs upon the transaction in question. But the plaintiffs cannot expect their Managers or Cashiers to be infallible, or that they may never fall into an error of judgment save at the peril of having to make good any loss occasioned by the mistake. Nothing higher could be required of the defendant in his position than reasonable skill and ordinary diligence, by which is understood such skill as is ordinarily exercised by persons of average capacity engaged in similar pursuits. A loss caused by an act or step which a banker of experience acting in similar circumstances might be liable to do or take, is not a loss for which the bank can look for indemnity from the person whose error caused the difficulty.

In the present case the evidence shows that the defendant wrote the words "jointly and severally" into the note with the idea of making it conform to the intention of the parties, and under the belief that all the parties to it would assent to the change and ratify it by their initials. Two of the parties to the note by their words and conduct led him to that conclusion, and it was not until after the words had been written that doubts were raised and he was led to think that he had acted prematurely. Upon that he hesitated as to whether he should present the altered note to the other makers and was led to conclude not to do so. His next proceeding was what any prudent person would adopt. He consulted the bank's solicitor and was advised by him that under the circumstances the validity of the note was not affected. This advice would, of course, tend to strengthen his conclusion not to endeavor to get the initials of the other makers to the alteration. The defendant afterwards informed the General Manager of what had taken place. That officer did not take the position that the note was rendered invalid, and the only suggestion or direction he gave to the defendant was to see that the next note was in proper form. The opinions of the General Manager and of the solicitor appeared to coincide that no harm had been done by the writing on the note, and seemed to render it unnecessary for the defendant to take immediate action.

The evidence as a whole seems to me to relieve the defendant from the charge of gross negligence which it was incumbent upon the plaintiffs to establish. He cannot be said to have been guilty of negligence in the sense that he acted in a manner in which no person in his position exercising ordinary care and judgment would have acted. Under the circumstances he had

reasonable grounds for supposing that what he was doing would be implemented by the parties to the note, and his action after the difficulty arose was under the advice and with the cognizance of the plaintiffs' officials. That in the result his judgment proved to be wrong and his act prejudicial to the plaintiffs, is not enough, in my opinion, to render him liable.

It was also argued that the plaintiffs' loss was due to actual disobedience of instructions in taking a joint note instead of one which was joint and several. It is of course quite true that if that mistake had not been made there would have been no occasion to make the alteration, and so the disregard of instructions was the cause of the loss. But it is equally true that but for the alteration there would have been no loss, the liability on the joint note being quite as complete as upon a joint and several one. I think the judgment right on this point also, and that the appeal should be dismissed.

REPLIES TO LAW AND BANKING QUESTIONS.

Editor Bankers' Magazine:

PHILADELPHIA, Pa., December 2, 1908.

SIR: A number of bonds are obtained by false pretences from a banking house, and at later period the coupons on some of these bonds are presented to a bank and cashed by the teller, these coupons being payable to bearer. When the coupons were presented at the office of the railroad company that issued them, payment was refused, and the banking house from whom the bonds were fraudulently obtained brought suit to recover the coupons. Now, what we desire to know is this, can they recover the coupons without payment, or can the railroad company refuse to pay the money to the bank that cashed them? CASHIER.

Answer.—If the coupons were negotiable in form, the question of liability would seem to turn upon whether or not they were past due when they were cashed by the teller; for the rule as to negotiable coupons is the same as that which applies to any other kind of negotiable paper, that if purchased after maturity, the purchaser acquires no better title than that of the transferrer. (*Hinckley vs. Merchants' National Bank*, 131 Mass. 147; *Evertson vs. National Bank*, 66 N. Y. 14; *McKim vs. King*, 58 Md. 502; *Arents vs. Commonwealth*, 18 Gratt [Va.] 773.) *Hinckley vs. Merchants' National Bank* was an action of replevin for interest coupons payable to bearer. It appeared that the bonds to which the coupons were then attached were before maturity stolen from the plaintiff; that after maturity they were bought by a person in good faith, and passed through the hands of several persons, until they came into the possession of the defendant; and that all these persons were purchasers in good faith and for value. It was held that there was no presumption that the thief had negotiated the coupons before maturity, and that the plaintiff was entitled to judgment. If then, in the case stated by you, the coupons were overdue, the bank got no better title than the person from whom it received them. But if the coupons had not at that time matured, it became a holder in due course, and entitled to retain them as against the banking house from which they were obtained, and to enforce them against the railroad company. (*Negotiable Instruments Law*, Laws Pa., 1901, Ch. 162, Sec. 52, 57.)

Editor Bankers' Magazine:

LA GRANDE, Oregon, December 27, 1908.

SIR: When a bank issuing a draft notifies the drawee bank to stop payment on the same, that the original is said to have been lost or destroyed, and that a duplicate has been issued, what liability, if any, attaches to the drawee bank if, in the future, they should pay the original draft? If the drawee bank is liable, what necessity is there for the taking of an indemnifying bond by the issuing bank?

F. L. MEYERS, *Asst. Cashier.*

Answer.—The Negotiable Instruments Law provides that a bank "is not liable to the holder unless and until it accepts or certifies the check" (Oregon statute, sec. 189), and as it is under no obligation to the holder, it has only to comply with the directions of its customer, and when he countermands payment of an outstanding check, the bank is without authority to pay the same. When a duplicate check is issued by the drawer, and payment of the original stopped, the bank has no longer any authority to pay such original, and if it does so, it cannot charge the amount against the account of the drawer. It is not necessary for the drawee bank to take an indemnity bond; but as the drawer would be liable upon the instrument to a holder in due course, he should be indemnified by the payee before issuing a duplicate. But if the check or draft has been certified, then, as the drawee bank is liable to a holder in due course, it should have indemnity before refusing payment.

Editor Bankers' Magazine:

CLEVELAND, Ohio, December 30, 1908.

SIR: A, a broker and real estate dealer, came into our banking-house and stated that B wished to secure a loan of \$1,000. The President of the bank, through whom the loan was made, asked the broker what security he could furnish. The broker stated that B would give his brother for security, his name making the paper good. The broker conveyed the news to B that he could have the money if his brother would sign the note with him. The broker furnished the note form, writing the amount in the body of the note and delivered it to B for his signature and the security of that of his brother. In a few days the broker brought to the bank a note for \$1,000 signed by B and his brother, the broker's name not appearing on the note. The President paid to the broker the amount called for in the note and he turned it over to B, less his commission. It turns out that the supposed security to this note was forged by B. Can the bank recover from the broker?

PRESIDENT.

Answer.—We do not think that the broker can be held liable, unless it can be shown that he knew, or had reason to believe, that the signature which purported to be that of B's brother was a forgery. He did not dispose of the note as his own, but disclosed his agency, and hence there was no warranty on his part that the signatures were genuine. (National Park Bank vs. Seaboard National Bank, 114 N. Y. 28; Meriden National Bank vs. Gallaudet, 120 N. Y. 298; Negotiable Instruments Law, Sec. 119, New York Act.) Being an agent merely, his liability to return the money ceased when he paid the same over to his principal B. (See cases above cited.) Knowledge on his part, however, would make him a participant in the fraud, and for this he would be liable.

Some Antique Laws.—From the University of Chicago Press have been received some specimen translations from the Code of Hammurabi, King of Babylonia about 2250 B.C. Here are two regulations showing that deposit banking is far from being a modern invention:

"If a man gives to another silver, gold or anything else on deposit, whatever he gives he shall show to witnesses and he shall arrange the contracts and then he shall make the deposit."

"If a man gives on deposit without witnesses or contracts and at the place of deposit they dispute with him, that case has no penalty."

Here is another, which has no application to banking, but illustrates the ancient origin of the desire of a man to get his money's worth:

"If a wineseller does not receive grain as the price of drink, but receives money by the great stone, or if she makes the measure for drink smaller than the measure for corn, they shall call that wineseller to account, and they shall throw her into the water."

THE "R" SYSTEM.

FOR USE IN BANKS DOING A COMMERCIAL BANKING BUSINESS.

[By CHARLES W. REIHL, Philadelphia, Pa. Compiler and publisher of the "United States and Canada Bankers' Reference Chart" and the "Bankers' and Merchants' Informer."]

In all lines of business where the aim of the manager is to have the business conducted in a way that will give the best result, with the least "red tape" and labor, they are instituting systems that are scientific. System is simply a method of doing a certain work. There are good systems, indifferent systems, bad systems, and scientific systems. To be scientific they need not—and they must not—have terms and ways that cannot be readily understood.

There is a way to keep records of credits and debits in banks that is safe and simple, and withal scientific. This way I here set forth. Some of the ideas given are now in use, either in part or whole, in some of the progressive banks. The writer having visited a number of banks to study their systems, and corresponded with others concerning their methods of work, he has been able to get a suggestion here and there to assist in perfecting the system. Besides this he has been and now is a student of and worker for good systems in all lines of business, but having been connected with a bank for some years his efforts have naturally gone in the way of improvement in bank work.

This system centers in an auditing department, and the plan here given is especially for the auditing, collection, discount and ledger departments, and for doing away with the deposit or pass book.

In addition to the forms here shown there will be needed a set of check file drawers for the auditing department in which all credit and debit slips are to be filed according to the names of the depositors, and both filed in the same section—credit slips in front, debit slips in back. These are to be kept by the auditor until the account is settled.

For the collection department two check file drawers will be needed in which to file slips of items sent away, according to place sent—if sent to Chicago file in section named Chicago; and in the other to file slips of items not sent, according to date due. A separate drawer, or a separate section in same drawer, if the drawer is large enough, should be used for city collection slips. Large wallets will do for this if the volume of work is not too heavy. Also a drawer or other place in which to file debit slips of returned items. The bank is supposed to have wallets or drawers for holding items coming due or returned unpaid and not delivered to owners, so they are not included in the needs.

The discount department requires one or two drawers for discounter's and payer's record cards. In these the cards are to be filed in alphabetic order. A place will also be needed to keep bills discount debit slips.

The individual ledger work is acknowledged to be the most easily tampered with to the bank's loss; it should therefore be safeguarded in every way possible for the sake of the depositors, stockholders, the officers and the clerks. This system safeguards the ledger work in an easy and sure way. There are various forms of ledgers. Some use the large double-entry book, some the Boston or New York ledgers—two or three columns—some the card ledger system and others the loose-leaf. Any

method that gives daily balances can be used with this system. For an active commercial bank the loose-leaf ledger has certain advantages. These ledgers are very well advertised, and bankers are somewhat familiar with their forms, claims and advantages. The double-entry ledgers, the Boston or New York ledger, are also well known. But the card ledger as it is used in commercial banking is not so well known; I therefore give an illustration of one (Fig. A) that has been used in a large National bank. It is not being used at present; it having been, for certain reasons, replaced by the loose-leaf system.

FIG. A.—CARD LEDGER.

In other departments of the bank, not mentioned above, the ordinary methods can be used. Or they can be changed by applying the same principles as applied in the parts here shown.

THE COLLECTION DEPARTMENT.

This may not be considered the proper place to begin an explanation of bank work, but as all spokes lead to the hub—and the auditing department is the hub in this case—I will begin here.

Fig. 1 is the foreign collection credit slip, and for this white paper is used. When a note or draft payable outside of the city or town where bank is located is received, make a record of it on this slip.

FIG. 1.—FOREIGN COLLECTION CREDIT SLIP.

The foreign collection debit slip (Fig. 2) is made out at the same time by the use of a carbon sheet. The credit and debit slips are to be put up in pads in consecutive order. The debit slips are to be printed on pink paper to show at a glance which it is and to prevent them being mixed in sorting.

PAID NOV 16

FIG. 2.—FOREIGN COLLECTION DEBIT SLIP.

If the note is not sent away on the day received, do not fill in the "sent to" line and the "date — sent" line, but file the two slips away together under the date due until the item is sent away, then fill in the two lines and forward the note.

If the note or draft is sent away the day received, complete the entries on slips at first writing and file them away under place sent. In this case, Fig. 1, file them away under Chicago, First National. If the item is protestable, cross out the word "no" before "protest," and the record is complete. When filing slips away always place the last ones sent at the back of the section so that the dates on which sent are in consecutive order.

When the item is reported paid, stamp both slips "paid Nov. 12," or the correct date, under "paid or returned," as shown on both slips (Figs. 1 and 2). Then separate the slips, placing the credit slips together and the debit slips together; sort them according to the order of the parties to be credited or debited. After this enter

PAID, NOV 25

FIG. 3.—CITY COLLECTION CREDIT SLIP.

the amounts credited and debited in the proper columns on the daily record settlement sheet (Fig. 6). Then take the credit slips and make out the advice of credit cards (Fig. 4). The slip has now served its purpose in the collection department, and the work can be done in less time than it took to tell about it. It is next passed

to the ledger for crediting the proper account, and from there to the auditor's department to be credited there on the settlement sheet (Fig. 14).

The debit slips are to be passed to the bank, or general ledger, to be used in charging to the account of the bank to whom the items were sent. From there the slips go to the auditing department, to be charged on the proper settlement sheet (Fig. 14).

If the item has been returned unpaid, destroy the credit slip, and stamp on debit slip under "paid or returned," "returned Nov. 12," or whatever date it is returned. Then file the slip away under name of place sent in place, pigeon hole or sectional drawer, provided for slips of returned items. In this way the complete record of every item is preserved.

City collection credit slips (Fig. 3) are to be used in the same way as the foreign credit slips, and after being made out from the item are to be filed away under date due until date due or payable, then if the item is paid the slip is marked "paid," with the proper date, and entry made on daily record settlement sheet (Fig. 6). After this it follows the same course the foreign collection credit slip goes through. If the item is returned the slip is so marked and filed in place provided for it, either under date due or name of party from whom received. There are no city debit slips in this department, because the items are not sent away.

After the word "posting" the bookkeepers are to tick when proper posting has been made, and a second tick is made when proper entry has been made in the auditor's department.

The number line is to be used for banks who number their items.

Following the word "remarks" can be made record of bill of lading or other papers attached to the item. If the item is recalled that should be made note of here, or if traced the date of tracer.

The advice card (Fig. 4) is for the purpose of advising credits of all collection items each day to banks and firms alike, whether local or out-of-town. This method gives prompt advice to depositors and saves the time of the collection clerk in looking up item when inquiry is made by the depositor, besides saving the time of the

FIG. 6.—COLLECTION DESK DAILY RECORD SETTLEMENT.

The first column is to list city items due on that day, and, if desired, the settlement of discount items due and paid that day can be made on same sheet in connection with collection items. Collections should be listed with black ink and discounts with green or red ink. This sheet can be made as large as needed.

This system does away with all books in this department, unless the daily record settlement sheets are made in book form, and this can be done with enough sheets for six months or a year, or still better, in loose-leaf system. The one record made on credit slip, with the carbon copy on debit slip, answers the same purpose of entries made in three or four books, as is done by some methods now in use.

Next in order is

THE DISCOUNT DEPARTMENT.

Use the ordinary discount register for record of discounting the various bills. After proper record has been made in the register, fill out the discount debit slip

(Fig. 7). It is to be used in the same way as the debit slip in the collection department, and when made out is to be filed away according to date due. For foreign, or out-of-town items a duplicate should be made with a carbon sheet. Both slips

should be kept together until the item is sent away, then the original should be filed under place sent in the collection department. When item is reported paid it is treated the same as collection debit slip, as described, ending its work with the auditor. Before these slips start on their journey through the departments the duplicate debit slip should be marked paid and from this the proper records made on discounter and payer cards (Fig. 11 and 12). Slips of returned items to be filed away with slips of returned collection items, but before filing them away record should be made stating how the bank was paid for the item returned, usually, of course, by the discounter. This can be done by stamping "paid" and date under "returned" and date stamp, with remarks, if any.

If single or collateral paper, a tick following either name will show at a glance which it is. If neither is ticked it will show it to be double-named paper.

These slips should be printed on green paper to easily distinguish them from collection slips, and to be put up in pads same as collection slips.

The discount credit slip (Fig. 8) is to be used to give credit of total amount of discounts for each party in ledger and on settlement sheet in the auditor's department, and then filed the same as the collection credit slips.

50	9 42 50	1 00 50	1 00	7 25 90	2 00

FIG. 10.—DISCOUNT TICKLER.

This is to be used in proving bills discount, as well as to tell at a glance the amounts of items and the totals of items coming due each day. If further information is wanted reference can be made to debit slip or discount register.

In addition to the above for this department I now give a simple plan for keeping records of discounter's and payer's dealings with the bank.

Fig. 11 shows the discounter's card; on it is to be kept a record of all items discounted for the person or firm. When the item is discounted record is placed on card and when paid amount and dates are entered in proper columns. Totals carried with entries will show at a glance the amount standing out, or still discounted. (See Fig. 11.)

The "line" space is for the highest amount of discounts allowed to discounter by the board of directors. It is the duty of the discount clerk to see that this line is never passed. The "date" above "line" is for date when decision was made by the board concerning limit of allowance. The "number" is for numbering the cards used for each party in consecutive order.

FIG. 12.—BILLS DISCOUNT (PAYER).

These cards are to be five by eight inches and to be kept in cabinet drawer. They are to be ruled and printed on both sides, with twenty lines on each side. The discounter's card is to be white and the payer's blue, so there will be no danger of mixing them, or posting on the wrong card.

Another card the same size as the two above, but printed on yellow stock, is for the payer's rating (Fig. 18). This is to be filed with the payer's card so it can be referred to at any time. The advantage of this is easily seen.

Nothing has been provided here for keeping record of the discounter's condition, because that is supposed to be in the care of the officers or on file in the credit department.

certain reasons it is advisable to give the depositor a receipt. This is especially so where the depositor does not make his deposit in person but sends a clerk or messenger boy, because deposits have been tampered with and without the receipt the depositor would not know it until he received his settlement from the bank. For this reason I have planned the ticket with a detachable receipt. When the depositor makes out his ticket, if he wants the receipt returned, he fills out the receipt with the name, amount and date. The receiving teller sees that these agree with the ticket, stamps the receipt with a rubber stamp giving name of bank and date, detaches the receipt and hands it to the party making the deposit. It is advisable in stamping the receipt to allow a small portion of the stamp to extend above the dotted line, as shown on Fig. 15, so if any question arises as to the receipt belonging to the ticket it could be determined at once if the two parts joined properly or not.

The use of this ticket with receipt attached is an advantage in banking by mail, for the receipt can be detached and returned to the depositor. It also makes the out-of-town depositor's record of deposit the same as that of the local depositor, for depositors from out-of-town seldom have a pass book in which to have their deposits entered.

The deposit slips after leaving the receiving teller are to take the same course as credit slips take after leaving the collection department, and then filed away with other credit slips in the auditor's department.

I have now given you my scientific system for handling debits and credits in banks. It may be that, as you looked at the forms and read the explanations, objections to one part or another arose in your mind; or different points commended themselves to you as being good, simple and safe. If so now glance at it again as a whole and see if it does not commend itself to you as a good way in which to keep the same records and departments in the bank with which you are connected. I do not claim perfection for the system, but it is nearer perfection than any system I have seen.

Some may object to the system because it does away with the pass book, for such we have other forms for the collection and auditing departments—but "that is another story."

GALVESTON'S ENERGY AND ENTERPRISE.—The work of raising the grade of Galveston, just awarded to New York contractors, is one of the two large undertakings which the board of engineers reported last winter as necessary to protect the city from the severest storms known in the Gulf. The other safeguard will be a solid masonry sea wall, three and a half miles long, seventeen feet above mean low tide, rising above the highest waters of the storm of 1900 and surrounding the city on three sides. This improvement is now far advanced.

Galveston has risen from her ruins and resumed her sway among the leading export cities of the country. Grit and energy were never more strikingly shown than in the indomitable determination of the people to rise superior to the calamity in which 8,000 persons perished and \$30,000,000 worth of property was destroyed. The wisdom of rebuilding on the old site was questioned, but before any body of engineers could have reached a professional conclusion the people settled the matter. As soon as the weather cleared, all the industrial life of Galveston was in motion to re-establish and maintain the city and its avenues of commerce. The faith of the people in their position, with the best harbor on the Gulf, outweighed their fears for the future; and the improvements now in progress assure their future safety.—*New York Sun.*

*THE PRACTICAL WORK OF A BANK.

THE COLLECTION DEPARTMENT.

I.

The collection department of a bank is one of its most important ones, through the channels of which are passing papers which require the utmost accuracy and dispatch. The equipment of this department then should be such as to enable the proper handling of such papers, and the man who is at the head of it should be thoroughly acquainted with all matters connected with this department; and, furthermore, should be fully awake to the interest of the institution, also its customers. Two words can almost express the first duties of the collection clerk—think, act. But let me broaden that somewhat and say, think correctly, act rapidly. We

FIG. 1.

then have the fundamental rules governing this as well as all departments of a banking institution.

Beginning with the morning mail we will follow the work of this desk.

First.—The following are the books needed by the collection department, and we will divide this department into two—the local and foreign.

For the local we need: A draft register, for ordinary drafts. Local collection register, for accepted drafts and time paper. Local collection tickler.

For the foreign: A register of foreign collections for regular correspondents. Register of foreign collections—miscellaneous. Bill register and tickler.

The collection clerk upon his arrival in the morning first sorts the mail into three separate stacks, viz., foreign, local and bills.

Drafts on local parties are given to the head runner, who enters them in the draft register (Fig. 1) and then gives them to the runners for presentation in person, by

* A series of articles to be published in competition for prizes aggregating \$1,050, offered by THE BANKERS' MAGAZINE. Publication of these articles was begun in the July, 1901, number, page 18.

mail, or by telephone, as the case may require. When a draft is accepted by telephone it should be stamped across its face—the stamp reading like this :

Accepted by.....
Date.....
Phoned by.....

And a notice sent by mail (Fig. 2).

When payment is refused the messenger should, if possible, obtain reason for non-payment.

When the drawee of a draft is absent, and there is no one at his place of business who can, with authority, accept or decline it, the messenger should leave a notice (Fig. 3) but when a draft is accepted a notice of acceptance (Fig. 2) must be left.

No.

DUE AT

Checks on Other Banks Not Taken After 12:30 P. M.

~~~~~

PLEASE BRING THIS NOTICE WITH YOU.

FIG. 2.

It is customary with banks to present in person only those drafts drawn on parties whose place of business is within a certain distance of the bank—so many blocks north, east, south and west ; others are, as before stated, given notice of by mail or by telephone.

Louisville National Banking Company.

Louisville, Ky., ..... 1901.

Starts from 9 a. m. to 3 p. m., solar time.

FIG. 3.

adding dignity to himself as well as giving, if but in a small way, a high tone to his employers.

THE FOREIGN COLLECTION DEPARTMENT.

We will now follow the drift of all collections drawn on outside points passing through this department.

In another part of this article is given a list of the books required in this department. When checking out items received from the bank's correspondents the collection clerk must carefully carry out the instructions accompanying each and so mark them.

With a few deviations I will give the method used in the bank where I am employed, in the handling of collection items on outside points.

All collections, foreign, received through the mail are separated and listed alphabetically according to the endorsement, the correspondent endorsement of course being meant. They are then stamped on the back—that endorsement being :

*Pay to the order of*  
 .....  
*Cashier.*  
 LOUISVILLE NATIONAL BANKING CO.  
 JOHN H. LEATHERS, *Cashier.*  
 No. ....

when forwarded to the bank's regular correspondent ; but where such items are forwarded to other banks than those just mentioned a stamp like this is used :

*Pay to the order of*  
 .....  
*Cashier.*  
 For collection and returns to  
 LOUISVILLE NATIONAL BANKING CO.  
 JOHN H. LEATHERS, *Cashier.*  
 No. ....

The last-mentioned items, drafts only, are entered in the register of foreign collections, a specimen page of which is given in Fig. 6. This is the right-hand page

|                           |               |          |             |      |     |               |             | <i>5</i> |                    |             |
|                           |               |          |             |      |     |               |             | <i>6</i> |                    |             |
|                           |               |          |             |      |     |               |             | <i>7</i> |                    |             |
|                           |               |          |             |      |     |               |             | <i>8</i> |                    |             |
|                           |               |          |             |      |     |               |             | <i>9</i> |                    |             |

FIG. 12.

sponsible for the conduct of its collection agents." (Patten's Practical Banking, p. 97.)

It is not unwise for the bank to offset such responsibility as much as possible by forwarding with the receipt of out-of-town items the following notice :

"This bank receives paper for collection as agents only, and does not hold itself liable for any damage or loss which may accrue through the default of any bank or banks to which said paper may be sent for collection."

JACK MURRELL.

# ANNUAL REPORT OF THE SECRETARY OF THE TREASURY.

TREASURY DEPARTMENT,  
WASHINGTON, D. C., December 8, 1908.

SIR: I have the honor to submit the following report:

## RECEIPTS AND EXPENDITURES—FISCAL YEAR 1908.

The revenues of the Government from all sources (by warrants) for the fiscal year ended June 30, 1908, were:

|                                                                    |                  |
|--------------------------------------------------------------------|------------------|
| From customs.....                                                  | \$284,479,581.81 |
| From internal revenue.....                                         | 230,810,124.17   |
| From sales of public lands.....                                    | 8,928,811.22     |
| From profits on coinage, bullion deposits, etc.....                | 8,254,739.88     |
| From revenues of the District of Columbia.....                     | 5,168,088.56     |
| From fees—consular, letters patent, and lands.....                 | 4,048,833.22     |
| From sales of Indian lands, proceeds of Indian labor, etc.....     | 2,893,268.83     |
| From navy pension, navy hospital, clothing, and deposit funds..... | 2,300,501.17     |
| From tax on circulation of National banks.....                     | 1,647,429.28     |
| From immigrant fund.....                                           | 1,356,158.83     |
| From trust funds, Department of State.....                         | 1,203,092.07     |
| From payment of interest by Pacific railways.....                  | 997,197.79       |
| From customs fees, fines, penalties, etc.....                      | 878,254.78       |
| From miscellaneous.....                                            | 748,059.83       |
| From Soldiers' Home permanent fund.....                            | 743,189.39       |
| From sale of Government property.....                              | 434,296.21       |
| From judicial fees, fines, penalties, etc.....                     | 368,757.46       |
| From deposits for surveying public lands.....                      | 305,701.88       |
| From sale of lands, buildings, etc.....                            | 289,730.82       |
| From tax on sealskins.....                                         | 286,133.40       |
| From depredations on public lands.....                             | 231,144.26       |
| From sale of naval vessels and army transports.....                | 174,517.10       |
| From sale of ordnance material.....                                | 173,188.16       |
| From license fees, Territory of Alaska.....                        | 83,625.22        |
| From Spanish indemnity.....                                        | 28,500.00        |
| From part payment Central Pacific Railroad indebtedness.....       | 4,666,849.56     |
|                                                                    | \$560,396,674.40 |
| From postal revenues.....                                          | 134,224,443.24   |
| Total receipts.....                                                | \$694,621,117.64 |

The expenditures for the same period were:

|                                                                                                                                                                                              |                  |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------|
| For the civil establishment, including foreign intercourse, public buildings, collecting the revenues, District of Columbia, and other miscellaneous expenses.....                           | \$122,175,370.54 |
| For the military establishment, including rivers and harbors, forts, arsenals, seacoast defenses, and expenses of the war with Spain and in the Philippines.....                             | 118,619,520.15   |
| For the naval establishment including construction of new vessels, machinery, armament, equipment, improvement at navy yards, and expenses of the war with Spain and in the Philippines..... | 82,618,034.18    |
| For Indian service.....                                                                                                                                                                      | 12,935,168.08    |
| For pensions.....                                                                                                                                                                            | 138,425,646.07   |
| For interest on the public debt.....                                                                                                                                                         | 28,556,348.82    |
| For deficiency in postal revenues.....                                                                                                                                                       | 2,768,919.20     |
|                                                                                                                                                                                              | \$506,099,007.04 |
| For postal service.....                                                                                                                                                                      | 134,224,443.24   |
| Total expenditures.....                                                                                                                                                                      | \$640,323,450.28 |
| Showing a surplus of.....                                                                                                                                                                    | 54,297,667.36    |

In addition to the revenues collected during the year and the amounts received on the indebtedness of Pacific railroads, the cash in the Treasury was increased \$760 by the issue of four per cent. bonds in liquidation of interest accrued on refunding certificates converted during the year.

The securities redeemed on account of the sinking fund were as follows :

|                                                         |               |                 |  |
|---------------------------------------------------------|---------------|-----------------|--|
| Fractional currency .....                               |               | \$2,088.00      |  |
| Treasury notes of 1861.....                             |               | 50.00           |  |
| One-year notes of 1863.....                             |               | 250.00          |  |
| Two-year notes of 1863.....                             |               | 50.00           |  |
| Compound-interest notes.....                            |               | 520.00          |  |
| Refunding certificates.....                             |               | 90.00           |  |
| Funded loan of 1881, continued at 3½ per cent.....      |               | 500.00          |  |
| Funded loan of 1891, called.....                        |               | 6,400.00        |  |
| Funded loan of 1891, continued at two per cent.....     |               | 63,500.00       |  |
| Bonds purchased—                                        |               |                 |  |
| Loan of 1904.....                                       | \$25,300.00   |                 |  |
| Loan of 1925.....                                       | 16,504,900.00 |                 |  |
|                                                         |               | 16,529,600.00   |  |
| Premium on bonds purchased—                             |               |                 |  |
| Loan of 1904.....                                       | 1,022.51      |                 |  |
| Loan of 1925.....                                       | 6,201,025.41  |                 |  |
|                                                         |               | 6,202,047.92    |  |
| Premium on bonds exchanged--                            |               |                 |  |
| Funded loan of 1907.....                                | 4,170,962.47  |                 |  |
| Loan of 1906-1918.....                                  | 534,189.48    |                 |  |
|                                                         |               | 4,705,151.95    |  |
| National bank notes redeemed in excess of deposits..... |               | 2,001,181.00    |  |
| Total.....                                              |               | \$29,511,323.82 |  |

Compared with the fiscal year 1902, the receipts for 1903 increased \$10,394,837.17. There was an increase of \$47,284,545.38 in expenditures.

#### FISCAL YEAR 1904.

The revenues of the Government for the current fiscal year are thus estimated upon the basis of existing laws :

|                                 |               |
|---------------------------------|---------------|
| From customs.....               | \$250,000,000 |
| From internal revenue.....      | 225,000,000   |
| From miscellaneous sources..... | 45,000,000    |
| From postal revenues.....       | 144,767,864   |
| Total estimated revenues.....   | \$664,767,864 |

The expenditures for the same period are estimated as follows :

|                                      |               |
|--------------------------------------|---------------|
| For the civil establishment.....     | \$131,000,000 |
| For the military establishment.....  | 115,000,000   |
| For the naval establishment.....     | 96,000,000    |
| For the Indian service.....          | 11,000,000    |
| For pensions.....                    | 129,000,000   |
| For interest on the public debt..... | 24,000,000    |
| For postal service.....              | 144,767,864   |
| Total estimated expenditures.....    | \$660,767,864 |
| Or a surplus of.....                 | 14,000,000    |

#### FISCAL YEAR 1905.

It is estimated that upon the basis of existing laws the revenues of the Government for the fiscal year 1905 will be \$704,472,060.72.

The estimates of appropriations required for the same period, as submitted by the several executive departments and offices, exclusive of sinking fund, \$727,474,206.79 ; or an estimated deficit of \$23,002,146.07.

#### OPERATIONS OF THE TREASURY.

The most noticeable features in the condition of the Treasury are the increased available cash balance and the increased holdings of gold. Since 1890, the available

cash balance, including the reserve, has more than doubled, rising from \$179,259,-837.18 to \$388,686,114. The cash in the general fund increased during the year by \$30,103,869, and the liabilities increased \$3,605,116. Thus, the available cash balances at the end of 1903 exceeded that of 1902 by \$26,498,753.

Increased receipts from customs, sales of lands, and from miscellaneous sources nearly equaled the diminution in receipts from internal revenue. The increase of expenditures for the fiscal year 1903 over those of 1902 resulted in a reduction of the surplus revenue for the year of \$36,989,708.

For the first quarter of the fiscal year 1904 the receipts were \$6,788,297 greater than the expenditures.

The trust funds held for the redemption of the notes and certificates for which they are pledged increased to \$593,068,869, an increase for the year of \$62,459,780.

Transactions in public-debt items, other than those related to the trust funds, caused a net decrease of \$18,625,444 in the public debt and reduced the annual interest charge to the extent of \$2,001,372.

The foreign holdings of United States bonds are principally confined to the registered class, and are diminishing. In 1899 the amount was \$24,339,020. At the end of 1903 it was reduced to \$16,866,950.

During the year 1903, National bank notes to the amount of \$196,429,621 were presented for redemption, an increase over the previous year of \$24,560,363. The expenses incurred were \$174,477, which have been assessed upon the banks at the rate of \$0.90262 per \$1,000 of their notes redeemed.

There is a continuous growth in the ratio of public money of denominations of \$10 and below to the total public money in circulation, but the increase in small bills hardly keeps pace with the demand. The process of changing denominations under the act of March 14, 1900, will reach its limit in about two years, and the question of further provision for small notes requires early attention. The Treasurer suggests that gold certificates of the denominations of \$10 be authorized, and that the restriction on the issue of \$5 notes by National banks be removed.

Gold continues to accumulate in the Treasury. The total holdings of gold on July 1, 1903, were \$631,420,789.43, an increase for the year of \$71,220,489. On October 1, 1903, the total holdings of gold in the Treasury amounted to \$654,811,716. Unrestricted use of gold coin and certificates in all branches of business and the freedom with which they are paid into and out of the Treasury have been marked features of the Treasury operations during the past year.

Transfers of currency by telegraph against deposits in New York, to cover what is called money to move the crops, continue. Depositors find it convenient to offer gold certificates for the exchange, and as small denominations are almost always wanted for local use in the crop-moving districts, the Treasury pays out United States notes of the denomination of \$10 and silver certificates of \$5 and below.

United States paper currency issued in the fiscal year 1903 amounted to \$551,-038,000, and the number of pieces was twenty-one per cent. greater than in 1902. Redemptions amounted to \$488,558,220 and the number of pieces was 22.1 per cent. greater than in 1902.

A new record was made in the receipt of all kinds of money for redemption and exchange during the year. The amount paid for was \$364,503,561, an increase of \$141,228,315 over the preceding year.

The sum of \$35,504,050 was sent to the Philippines from May, 1898, to August 16, 1903.

The standard silver dollars in circulation July 1, 1902, were \$68,747,349, and the amount in circulation July 1, 1903, was \$72,891,240. The amount distributed at the expense of the Government during the past fiscal year was \$41,182,154.

Subsidiary silver coin amounting to \$24,112,445 was distributed during the year

to depositors therefor, but the amount in circulation shows an increase for the year of only \$7,005,486. The rate for transportation on shipments of silver coin during the year was \$2.03 per \$1,000.

#### LOANS AND CURRENCY.

The amount of the interest-bearing debt outstanding July 1, 1902, was \$981,070,-340. The amount July 1, 1908, was \$914,541,410, a reduction of \$16,528,980, obtained as follows:

|                                                                                                                                 |              |
|---------------------------------------------------------------------------------------------------------------------------------|--------------|
| Five per cent. bonds, loan of 1904, purchased under Circular No. 117 of September 26, 1902.....                                 | \$25,300     |
| Four per cent. bonds, loan of 1925, purchased under Circular No. 128 of October 17, 1902.....                                   | 16,504,300   |
| Redemption of refunding certificates in cash.....                                                                               | 90           |
| Total.....                                                                                                                      | \$16,529,690 |
| Issue of four per cent. bonds, funded loan of 1907, on account of conversion of accrued interest on refunding certificates..... | 760          |
| Net reduction.....                                                                                                              | \$16,528,980 |

There was a change in the form of the debt owing to the refunding of three per cent. bonds of 1908 and four per cent. bonds of 1907 into two per cent. consols of 1980, as authorized by the act of March 14, 1900. This refunding was undertaken in pursuance of the circular of March 26, 1908. On that day the market values of the bonds were as follows:

|                                    |      |
|------------------------------------|------|
| Three per cent. bonds of 1908..... | 108  |
| Four per cent. bonds of 1907.....  | 110  |
| Two per cent. consols of 1980..... | 107¾ |

The prices fixed by the Government Actuary for the threes and fours as equivalent on April 1, 1908, to their present worth to realize an income of two and one-quarter per cent., were 104.2572 for the threes and 107.974 for the fours. If the Government had paid these premiums on account of the exchange of the bonds, there would have been considerable profit to the owners of the outstanding bonds. It seemed not unreasonable that the Secretary of the Treasury should obtain a part of this profit for the United States, leaving at the same time some inducement to bondholders to make the exchange. This was accomplished by charging a premium of two per cent. for the new bonds.

Refunding under the circular of March 26, 1908, was discontinued July 31, at which time there had been received \$16,042,700 three per cent. bonds and \$85,099,900 four per cent. bonds of 1907, in exchange for which there had been issued \$81,142,-600 in two per cent. consols of 1980. The results of this operation are shown in the following table:

|                                                                | <i>Loan<br/>of 1908.*</i> | <i>Funded loan<br/>of 1907.</i> | <i>Total.</i>   |
|----------------------------------------------------------------|---------------------------|---------------------------------|-----------------|
| Amount refunded.....                                           | \$16,042,700.00           | \$85,099,900.00                 | \$81,142,600.00 |
| Interest saved on old bonds to maturity.....                   | 2,514,998.00              | 10,842,912.00                   | 13,357,905.00   |
| Interest to be paid on new bonds to maturity of old bonds..... | 1,878,662.00              | 5,421,456.00                    | 7,098,118.00    |
| Premium paid for old bonds.....                                | 592,352.43                | 4,522,217.51                    | 5,114,569.94    |
| Premium received for new bonds....                             | 320,854.00                | 1,301,998.00                    | 1,622,852.00    |
| Net profit.....                                                | 566,882.57                | 2,201,236.49                    | 2,768,069.06    |

\* Here treated as maturing August 1, 1908.

Refunding operations were resumed September 23, 1908, in pursuance of a circular published that day, the terms of the exchange of bonds being the same as under the circular of March 26. To November 1 there were exchanged, under the resumed operations, \$3,364,000 three per cent. bonds and \$4,578,400 four per cent.

bonds of 1907, a total amount of \$7,987,400, for which there have been issued equal amounts of the two per cent. consols of 1930.

Under circular of September 28, 1903, inviting surrender of five per cent. bonds of 1904 for redemption with interest to February 1, 1904, there had been presented, to November 1, \$9,264,700.

The interest-bearing debt of the United States outstanding November 1, 1903, was \$905,277,060, and the annual interest charge thereon was \$24,830,781.30. There were \$521,340,600 bonds held by the Treasurer of the United States in trust for National banks as security for circulating notes and deposits, leaving \$383,936,460 in the hands of other investors.

#### OUR MONETARY SYSTEM.

Our currency system has been subjected during the year to some very severe tests. Unprecedented prosperity encouraged the natural optimism of our people to such an extent that property of all kinds found ready and eager buyers at figures phenomenally high. A condition, therefore, existed which of necessity could not last. Within a year the market value of stocks and bonds, the proper and legitimate holdings of the people, has depreciated in an amount estimated far in excess of the cost of four years' devastating civil war. Yet notwithstanding this enormous and inconceivable shrinkage, it has not affected in noticeable degree other classes of property. Banking institutions have exhibited no suggestion of weakness, few business failures have occurred, there has been but a slight curtailment in commercial enterprises, very little apparent hardship, and absolutely no fear of any depreciation in any form of currency. To all appearances the crisis is passed. There now exists scant reason for apprehension—certainly no occasion for alarm.

By the provisions of a very wise act of Congress approved March 14, 1900, it was made the duty of the Secretary of the Treasury to redeem United States notes and Treasury notes in gold on demand, and to maintain all forms of money issued or coined by the Government at a parity of value. Evidently the people have understood, as they are justified in doing, that this statute authorizes the redemption of silver and silver certificates in gold whenever necessary for the maintenance of parity. Nothing short of this assurance would have carried us through the period to which I have referred.

One well-recognized weakness, however, has been strongly emphasized—our currency system is nonelastic. It does not respond to the varying needs of seasons, or of localities, or of changing conditions of business. This admitted defect should be remedied. But in remedying it no measure should be considered that will in anywise weaken that which is now stable, and no element should be injected that will cause distrust or doubt. Fortunately, at the present time no recipient of any of our several forms of money stops to examine its character. It is all known to be as good as gold, for the credit of the Government is pledged to maintain its parity with gold. No act should be passed authorizing the issuance of anything less safe and secure.

#### NATIONAL BANK CIRCULATION.

During the fiscal year ended June 30, 1903, National bank circulation increased, in round numbers, fifty-seven millions, only twelve millions of which was due to new organizations. Manifestly this rate of increase can not be continued unless additional United States bonds are provided, or some other plan is devised.

In my last annual report I called attention to the fact that the act of June 28, 1902, which authorized the Secretary of the Treasury to borrow 130 millions for the construction of the proposed Isthmian Canal, does not permit the use of these bonds as security for National bank circulation at a less rate of taxation than one per cent. per annum. I repeat my recommendation then made that these proposed bonds be

made available as the basis of circulation on the same terms as the consols authorized by act of March 14, 1900.

#### SUBSIDIARY COINAGE.

There is now available for coinage into subsidiary coin less than 5,000,000 ounces of silver. This will be exhausted approximately at the close of the current fiscal year. Authority should be given to recoin existing silver dollars into subsidiary coin, or to purchase additional silver with which to supply the ever-increasing needs of the country. The present volume of silver stored in the vaults of the Treasury is equivalent to nearly 500 carloads of thirty tons each. It would cost \$100,000 to recount it. This enormous amount is worth in bullion less than half of its coinage value, but it is all redeemable, at the discretion of the Secretary of the Treasury, in gold. Manifestly it must always be stored or other uses provided. Whether it be wiser to continue this burden and purchase additional bullion for subsidiary coinage, or to authorize the conversion of a portion of these dollars into more available forms of money, is for the Congress to determine. In any event, some provision should be made for an increase of subsidiary coin.

#### BANK NOTES OF SMALL DENOMINATIONS.

There is also a scarcity of paper currency of small denominations. That this demand may be supplied, I recommend that National banks be permitted to issue a larger proportion of their authorized circulation in denominations of five dollars.

LESLIE M. SHAW, *Secretary.*

TO THE SPEAKER OF THE HOUSE OF REPRESENTATIVES.

#### NOTICES OF NEW BOOKS.

[All books mentioned in the following notices will be supplied at the publishers' lowest rates on application to THE BANKERS PUBLISHING CO., 87 Maiden Lane, New York.]

INTERNATIONAL EXCHANGE. By ANTHONY W. MARGRAFF. Chicago: Fergus Printing Co. (communications to be addressed "International Exchange," 1138 National Life Building, Chicago); 8 vo. pp. 299; price, \$5.

With the great growth of our foreign trade in recent years, bankers have shown an increasing interest in foreign exchange, and the publication of a book upon this subject comes at an opportune time. Heretofore the works upon this branch of banking operations have been chiefly foreign and hardly suited to the requirements of American bankers.

Mr. Margraff is the manager of the foreign department of the National Bank of the Republic, Chicago, and has had an experience that thoroughly qualifies him to prepare a lucid exposition of foreign exchange operations.

The book is to be commended for its practical character, for although there is a sufficient statement of theoretical considerations to enable one to grasp the principles involved, by far the greater attention is given to a minute description of the details of exchange operations with different countries. These explanations are supplemented by many specimens of the various documents used in exchange transactions. The author seems to have covered the subject as fully as possible within a volume of reasonable compass, and indeed it is questionable if a more exhaustive treatment would not have impaired the practical usefulness of the book.

There was need of a work of this kind, and Mr. Margraff has supplied the need in a manner that reflects credit on his skill and industry. The book will be found of great benefit to all banks dealing in foreign exchange.

**WILLIAM B. RIDGELY**  
Comptroller of the Currency

# REPORT OF THE COMPTROLLER OF THE CURRENCY.

TREASURY DEPARTMENT,  
OFFICE OF THE COMPTROLLER OF THE CURRENCY,  
WASHINGTON, December 7, 1903.

SIR—In compliance with the requirements of section 833 of the Revised Statutes of the United States, the fortieth annual report of the operations of the Currency Bureau for the year ended October 31, 1903, is submitted herewith.

By comparison of returns made on September 9, 1903, with those of September 15, 1902, it is observed that there has been an increase in number of reporting associations of 441 and a net increase of \$196,501,053 in aggregate resources. The increases of the principal items of resources are as follows: Loans and discounts, \$201,319,291; United States bonds, \$65,799,650; specie, \$31,320,047; legal tenders, \$14,992,241.

During this period the loanable funds were augmented as follows: Capital stock to the extent of \$48,187,241; surplus and other profits, \$60,760,984; Government deposits, \$25,871,197.

The net increase in aggregate resources was 3.2 per cent., but in loans and discounts 6.1 per cent. The banks in every geographical division, exclusive of the New England States, participated in the increase in loans, varying from 4.1 per cent. in the Eastern States to 37.1 per cent. in the Pacific States. The increase in the Middle Western States was 6.6 per cent., in the Western States, 10.7 per cent., and in the Southern States, 17.5 per cent. The decrease in the volume of loans of banks in the New England States was \$16,400,000 or 8.9 per cent.

Notwithstanding the increase in loanable funds and the volume of loans and discounts, there was a net decrease from September 15, 1902, to September 9, 1903, in individual deposits of \$52,940,394. This item reached the maximum during the year, and also during the existence of the National banking system, on June 9, 1903, namely, \$3,200,993,509. This was an increase of \$32,719,248 over April 9, 1903. From this high-water mark of \$3,200,993,509 there was a decline on September 9 to \$3,158,333,499, or \$44,660,010.

The capital stock and surplus funds of the associations gradually increased from \$714,616,353 and \$385,763,780, respectively, on November 25, 1902, to \$753,722,658 and \$370,390,684, respectively, on September 9, 1903. National bank circulation outstanding varied but slightly from November 25, 1902, to April 9, 1903, but decreased between those dates from \$336,505,993 to \$335,093,791. On June 9, 1903, however, the issues reached \$359,261,109, and there was a further increase on September 9, 1903, to \$375,087,815.

The deposits of the United States with the National banks have shown but slight variations during the year, the amount to the credit of the Government on November 25, 1902, being \$138,464,809, and at the close of the year \$140,411,999. Bills payable and rediscounts were at their minimum on February 6, 1903, and at that time amounted to \$22,921,887, and were at their maximum, \$47,066,372, on September 9, 1903.

United States bonds on deposit to secure circulation increased from \$341,328,820 on November 25, 1902, to \$343,119,320 on April 9, 1903; to \$368,941,370 on June 9, and to \$381,568,980 on September 9. United States bonds on deposit to secure public deposits increased during the year from \$181,376,700 on November 25, 1902, to

\$136,940,020 on September 9, 1903. Bonds other than United States securities, deposited to secure public deposits, amounted on November 25, 1902, to \$19,705,749, and steadily decreased to \$16,748,055 on June 9, 1903. On September 9, 1903, however, securities of this character were on deposit to the amount of \$22,000,134.

The specie holdings with the banks varied from a minimum of \$388,616,377 on June 9, 1903, to a maximum of \$417,572,146 on February 6 of that year. The amount of gold in the banks on the date last mentioned was \$105,288,729; gold Treasury certificates, \$118,765,050; gold Treasury certificates, payable to order, \$42,215,000, and gold clearing-house certificates, \$72,435,000; total gold and gold certificates, \$388,708,779. Of the holdings of silver \$11,160,021 was in dollars; \$58,161,298 in certificates, and \$9,547,048 in fractional coin; total silver, \$78,868,867. On September 9, 1903, the specie held amounted to \$397,556,168, classified as follows: Gold coin, \$105,569,894; gold Treasury certificates, \$119,367,220; gold Treasury certificates, payable to order, \$27,180,000; gold clearing-house certificates, \$63,307,000; total gold and gold certificates, \$315,424,114; silver certificates, \$62,791,768; silver dollars, \$10,336,148, and fractional silver coin, \$9,004,148; total silver, \$82,132,054.

#### AMOUNT AND PER CENT. OF RESERVE HELD.

The deposit liabilities of National banks on which reserve is required amounted on November 25, 1902, to \$3,705,217,132, against which was held in cash, in funds credited by reserve agents, and in the five per cent. redemption fund, \$987,074,218, or 26.64 per cent. The legal reserve, however, amounted to \$617,981,481, or 22.08 per cent. The deposit liabilities increased on February 6, 1903, to \$3,851,394,205; declined to \$3,823,441,585 on April 9, and to \$3,817,035,031 on June 9. At date of report made on September 9, 1903, the deposit liabilities had increased to \$3,863,512,112, on which legal reserve was held of \$350,762,184, or 22.02 per cent. The percentage of all available funds to deposit liabilities ranged from a minimum of 26.25 on April 9 to a maximum of 27.70 on February 6, and percentage of legal reserve was the lowest and highest on the same dates, being 21.68 and 22.48, respectively. The average rate per cent. of legal reserve maintained by the National banks of the city of New York exceeded the requirement at date of each report during the year, and varied from a maximum of 28.41 on November 25, 1902, to a minimum of 26.96 on April 9, 1903.

The aggregate reserves of Chicago banks were deficient at date of each report except on June 9, 1903, when the average was 25.30. The same comment applies to the St. Louis banks, although their reserve on June 9 was 25.79. The average rate of reserve maintained by banks in other reserve cities exceeded the requirement on each date except on November 25, 1902, namely, 24.77, and April 9, 1903, the average rate being 24.52. The uniformity of the percentage of reserve maintained by country banks is notable, as it fluctuated from a minimum of 17.50 on November 25, 1902, to a maximum of 17.66 on April 9, 1903. An examination of the reserve statements shows that approximately two-thirds of the legal reserve held is represented by specie and legal tenders carried in the vaults of the banks.

#### CLASSIFICATION OF LOANS AND DISCOUNTS OF NATIONAL BANKS ON SEPTEMBER 9, 1903.

The loans and discounts of National banks reached their maximum in the history of the system on September 9, 1903, when they aggregated \$3,481,446,772. Of these loans \$283,108,946 was demand paper with one or more individual or firm names; \$717,258,621 on demand secured by stocks, bonds, etc.; \$1,267,524,336 on time, on two or more individual or firm names; \$558,115,739 on time, single-name paper, and \$655,489,130 time paper secured by stocks, bonds, etc.

The loans of the banks located in the central reserve cities—New York, Chicago

and St. Louis—amounting to \$902,294,038, represented over one-fourth of the entire amount of loans and discounts carried by the National banks of the country, and over one-sixth of the aggregate volume was made by the New York city banks, the exact figures being \$631,565,824. The demand paper secured by stocks, etc., held by the New York banks, aggregated \$281,438,758; the demand paper with one or more individual firm names \$10 311,371; two or more name paper, on time, \$136,021,466; single-name paper on time, \$98,384,112; and time loans secured by stocks, bonds, etc., \$110,410,117. The loans and discounts made by the 351 associations located in the central and other reserve cities aggregated \$1,802,659,666, against \$1,678,787,106 by the 4,691 associations located elsewhere.

#### CLEARING-HOUSE EXCHANGES.

Through the courtesy of the Manager of the New York Clearing-House this office has been placed in receipt of statements relating to the transactions of the clearing-houses of the country for the years ended September 30, 1902 and 1903. The volume of business, as indicated by the exchanges, reached \$115,892,198,634 in 1902, but declined to \$114,068,837,569 in 1903, the decrease being \$1,823,361,065. The gross increase aggregated \$2,353,386,263, and the decrease \$4,176,747,328, in the latter being included the decrease in exchanges of the New York Clearing-House, amounting to \$3,919,533,496. For the current year exchanges of the New York Clearing-House aggregated \$70,833,655,940, approximately sixty-two per cent. of the volume of the exchanges of the clearing houses of the country. Second in magnitude is Chicago, with \$8,627,554,264, followed by Boston, with \$6,837,767,833; Philadelphia, with \$5,968,775,423; St. Louis, with \$2,465,057,926; and Pittsburg, with \$2,381,454,231. The only other clearing-houses with exchanges exceeding a billion dollars are San Francisco, Baltimore, Cincinnati and Kansas City.

The New York Clearing-House is represented by fifty-seven banks, a less number than at any time since 1865, except in 1878, when the number was the same as at present, although the capital, \$118,072,700, is greater than at any date since the establishment of the clearing-house in 1854. Clearings of the New York association for the year 1903, amounting to \$70,833,655,940, were settled by the use of \$3,315,516,487 in lawful money, or 4.68 per cent. of the clearings. In 1896 but 0.01 per cent. of the balances was paid in gold, whereas in 1903 the percentage was 99.99. The average daily clearings during the year were \$233,005,447, and the average daily balances paid in money \$10,906,304. From the comparative statement of transactions of the New York Clearing-House from 1854 to 1903, inclusive, it is shown that the aggregate clearings have been \$1,505,995,524,933.

The transactions of the Assistant Treasurer of the United States at New York with the clearing-house for the year ended September 30, 1903, amounted to \$433,873,163.44 and the amount of balances paid to the clearing-house by the Assistant Treasurer \$217,985,693.67.

#### EARNINGS, DIVIDENDS AND SHAREHOLDERS OF NATIONAL BANKS.

The number of banks reporting during the year ended March 1, 1903, was 4,451, with capital stock and surplus of \$688,817,835 and \$324,462,477, respectively. The net earnings amounted to \$102,743,721 and the dividends \$60,123,622, the latter being 8.7 per cent. on the capital and 5.9 on capital and surplus. The banks paid dividends at the rate of 9.8 per cent. on capital and at the rate of 6.8 per cent. on capital and surplus in the year ended March 1, 1902. The table in question covers a period of thirty-four years and shows that the average rate per cent. of dividends to capital was 8.25 and to capital and surplus 6.23. The net earnings of the banks from March 1, 1869, to March 1, 1903, are shown to have been \$1,973,062,738, and the dividends \$1,555,244,710.

Section 5210 of the Revised Statutes requires every National banking association to keep a correct list of names and residences of all shareholders, subject to inspection by stockholders, creditors of the association, and officers authorized to assess taxes under State authority, and to file with the Comptroller of the Currency a copy of the list as of the first Monday of July of each year. An examination of the lists filed in July last by the National banks shows the distribution of stock among 314,967 shareholders, the number of shares being 8,617,517, and the average holding twenty-seven shares, approximately. Were it not for the fact that quite a number of associations in existence were conversions of State banks, with shares of stock less or more than \$100, the number of shares of all National banks could readily be determined from the capital stock, as the National Bank Act provides that the stock of banks of primary organization shall be divided into shares of \$100 each.

#### ORGANIZATION OF NATIONAL BANKS.

On February 25, 1903, the National banking system had been in operation for a period of forty years, and from June 20, 1863, the date of issue of the first certificate authorizing a National bank to begin business, to October 31, 1903, there have been chartered 7,029 National banking associations, with capital at date of organization of \$860,931,182, of which 1,126, with capital of \$293,148,628, were conversions of State banks effected in conformity with the provisions of section 5154 of the Revised Statutes, and the remaining 5,903, with capital of \$567,782,554, banks of primary organization.

The impetus given to the formation of National banking associations by the act of March 14, 1900, under authority of which banks are organized with minimum capital of \$25,000, circulating notes issuable to the par value of bonds deposited, and semi-annual duty on circulation reduced, 1,765 associations, with authorized capital of \$104,493,000, have been added to the system. The organizations during this period represent approximately one-fourth of the total organizations effected during the existence of the National banking system.

Notwithstanding authority conferred for the issue of circulation to the par value of bonds deposited, bonds to the amount of \$25,174,850 only were deposited as security for circulation on the capital of \$104,493,000—less than one-fourth of the amount which might have been deposited and circulating notes issued thereon.

During the year ended October 31, 1903, there were organized 553 associations with aggregate capital of \$34,333,500, of which 348 with capital of \$3,848,500 were with individual capital of less than \$50,000 and 210 with capital of \$25,485,000 with individual capital of \$50,000 or over. A further division shows that there were 306 associations of primary organization with capital of \$16,425,000; forty-nine with capital of \$2,438,500, conversions, and 198 with capital of \$15,470,000, reorganizations of State or private banks.

In addition to the augmentation of capital resulting from the organization of National banks during the year there was an increase in the capital stock of previously existing associations to the amount of \$52,412,900, banks to the number of 187 increasing their capital stock in conformity with the provisions of the act of May 1, 1886. In a number of instances increases of capital were effected for the purpose of absorbing the business of other associations placed in voluntary liquidation, and to provide, in a measure, for the shareholders of the closed institutions. As reports of proceedings relating to increase of capital do not show what disposition is made of the additional stock issued, the extent to which shareholders of banks closed by liquidation participated in the increase of capital of the absorbing banks can not be stated.

The reduction of capital stock under the provisions of section 5143, United States Revised Statutes, amounted to only \$2,095,000, and but 21 associations were concerned in these changes.

The most notable change effected during the past year was the increase of the capital stock of the National Bank of Commerce in New York from \$10,000,000 to \$25,000,000, and the consolidation with that association of the Western National Bank of the United States in New York, which, prior to its liquidation, was capitalized for \$12,500,000. The National Bank of Commerce and the City National Bank, of New York, are the only National banking associations in existence with capital of \$25,000,000. There are also in operation in the city of New York one National banking association with capital of \$10,000,000 and one with \$5,000,000. The only other National banks in the country with capital of \$5,000,000 or more are the First National Bank of Chicago, \$8,000,000, and the National Bank of Commerce of St. Louis, with \$7,000,000 capital. National banks to the number of 117, with capital of \$1,000,000 and over, but less than \$5,000,000, are in operation in the principal cities of the country.

#### VOLUNTARY LIQUIDATIONS AND FAILURES.

Under the provisions of section 5220 of the Revised Statutes—that is, by the action of representatives of the required number of shares of stock—1,337 National banking associations have been placed in voluntary liquidation and the corporate existence of 146 banks, organized under the acts of 1863 and 1864, have expired by limitation, thus making the total number voluntarily closed 1,483, the aggregate capital at date of closing amounting to \$260,239,550.

From the date of the first failure in 1865 to October 31, 1903, Receivers have been appointed for 418 National banks, their capital aggregating \$71,167,420. Of these banks, however, 19, with capital of \$3,725,000, were placed in solvent condition and authorized to resume business, resulting in a net loss to the system by insolvency of 399 banks, with capital at date of failure of \$67,442,420. The affairs of 330 of these trusts have been finally settled and the receiverships terminated. The capital of these associations at date of failure was \$51,795,920, and their outstanding circulation \$16,396,788. The total amount of assets (par value) coming into possession of Receivers was \$188,925,911, from which there was collected \$38,074,670, and settled by offsets \$14,672,927. The losses on assets, compounded or sold under order of court, aggregated \$75,929,065, the nominal value of the remaining assets being \$10,249,249. Stockholders were assessed to the amount of \$30,826,020, from which was realized \$14,469,575. On claims proved, amounting to \$101,724,870, dividends were paid to the amount of \$72,542,142, or 71.31 per cent. Including, however, offsets allowed, loans paid, etc., creditors received, on an average, 78.55 per cent. on their claims.

The cost of the liquidation of insolvent banks—that is, Receivers' salaries, legal and other expenses, based on the total amount collected from assets and from assessment on shareholders—was 8.3 per cent.

The list of liquidations includes 49 associations closed voluntarily by vote of shareholders and 23 by expiration of charters. Six of the associations placed in voluntary liquidation were succeeded by new associations with different titles; 20 were absorbed by other National banks, and 18 by State or private banks, leaving five closed presumably for the purpose of discontinuing business. Thirteen of the banks whose charters expired by limitation were organizations effected under the act of 1863, and 10 under the act of 1864. Fourteen of the banks whose corporate existence terminated by expiration of charter were succeeded by associations with different titles, organized, in the main, by shareholders of the closed banks.

The affairs of 17 National banks which failed in the New England States were settled with an average loss to creditors of only 6.89 per cent. The liabilities represented by claims proved, offsets allowed, and loans paid, aggregate \$23,956,626.

The results of the liquidation of the affairs of 61 insolvent National banks which

were located in the States of New York, New Jersey, Pennsylvania, and the District of Columbia evidenced the settlement of claims aggregating \$37,225,748, with an average loss of 24.07 per cent.

The settlement of receiverships terminated in the Southern States, numbering 61, was effected by payment to creditors on claims, etc., aggregating \$19,505,680, of an average 67.62 per cent., the loss being 32.38 per cent.

The returns relative to banks closed in the Middle States—namely, Ohio, Indiana, Illinois, Michigan, Wisconsin, Minnesota, Iowa and Missouri—include 73 cases, the liabilities of the banks aggregating \$28,027,358, which were settled with an average loss of 15.85 per cent.

Banks to the number of 85, which failed in the Dakotas, Nebraska, Kansas, Minnesota, Wyoming, Colorado, New Mexico, and Oklahoma, have been finally liquidated, creditors receiving an average of 72.47 per cent. on claims aggregating \$18,814,047, the average loss being 27.53 per cent.

Thirty-three insolvent banks which were liquidated in the Pacific States, viz., Washington, Oregon, California, Idaho, Utah, and Nevada. The liabilities of these trusts aggregate \$8,526,102, and were settled with an average loss of 30.85 per cent.

Including with claims proved the amount of offsets allowed and settled and loans paid, aggregating \$136,055,511, of the 330 trusts finally liquidated, creditors sustained an average loss thereon of 21.45 per cent.

Classifying these closed trusts according to capital stock—those with capital of less than \$100,000, with \$100,000 and less than \$200,000, and those with \$200,000 and over—it is shown that banks in the first class paid dividends on claims proved at the average rate of 63 per cent., and that the assessment on stockholdings produced but 36 per cent. of the amount of the assessment. The banks of the second class paid 67 per cent. on dividends and 41 per cent. on stock assessments, whereas banks with capital of \$200,000 and over paid creditors 74 per cent. on their claims, and the stockholders paid 51 per cent. on the stock assessment. These figures evidence the fact that the larger the bank's capital the larger the percentage realized from assets and from assessments on stockholders in case of insolvency.

The capital of each class of banks, together with the amount of claims proved, dividends paid, assessment and collection from shareholders, and percentage of dividends, assessment, collection from assessment, and amount collected to the aggregate capital, are shown in the accompanying table :

| Class                                    | No. | Aggregate capital. | Claims proved. | Dividends paid. |                     | Assessment on shareholders. |                      | Collected on assessment. |                         |                            |
|------------------------------------------|-----|--------------------|----------------|-----------------|---------------------|-----------------------------|----------------------|--------------------------|-------------------------|----------------------------|
|                                          |     |                    |                | Amount.         | Per cent of claims. | Amount.                     | Per cent of capital. | Amount.                  | Per cent of assessment. | Per cent of total capital. |
| Capital less than \$100,000 . . . . .    | 138 | \$7,329,000        | \$10,464,704   | \$6,610,698     | 63                  | \$4,098,250                 | 56                   | \$1,524,591              | 37                      | 20.8                       |
| \$100,000, less than \$200,000 . . . . . | 102 | 11,205,620         | 17,496,091     | 11,691,142      | 67                  | 6,325,720                   | 56                   | 2,612,042                | 41                      | 28.3                       |
| \$200,000 and over . . . . .             | 90  | 33,261,300         | 73,774,075     | 54,240,307      | 74                  | 20,402,050                  | 61                   | 10,332,942               | 51                      | 31.0                       |

The capital, circulation outstanding, and the relation of the latter to capital and to maximum amount of circulation issuable, respectively, as indicated, are shown in the following table.

#### DISTRIBUTION OF NATIONAL BANK CIRCULATION IN RESERVE CITIES, STATES, TERRITORIES, AND GEOGRAPHICAL DIVISIONS IN RELATION TO CAPITAL STOCK.

The reports of condition, made to this office by National banking associations in conformity with periodical calls, show in general the amount of National bank notes

Percentage of Circulation to Capital.

| 1877 | 486.7                 | 315.9                  | 64.90        |                        | 1898 | 624.6                 | 239.5                  | 42.61       |  |
| 1878 | 473.9                 | 319.6                  | 67.44        |                        | 1899 | 608.5                 | 243.0                  | 44.37       |  |
| 1879 | 462.4                 | 335.1                  | 72.47        |                        | 1900 | 632.5                 | 331.6                  | 52.42       |  |
| 1880 | 466.6                 | 342.0                  | 73.30        |                        | 1901 | 663.2                 | 359.8                  | 54.25       |  |
| 1881 | 466.3                 | 358.9                  | 76.96        |                        | 1902 | 713.4                 | 380.5                  | 53.32       |  |
| 1882 | 491.6                 | 361.0                  | 81.60        |                        | 1903 | 766.3                 | 419.6                  | 54.77       |  |
| 1883 | 516.6                 | 330.8                  | 75.48        |                        |      |                       |                        |             |  |

<sup>a</sup> Paid-in capital stock October 1, 1863, to 1874; authorized capital October 31, 1875, to 1903.  
<sup>b</sup> Percentage of circulation to capital stock 1863 to 1881; to 90 per cent of capital 1882 to 1899, and to capital 1900 to 1903.

in circulation in the principal political subdivisions of the country, but do not contain the information essential to a knowledge of the extent to which circulating notes are issued by banks of various classes in proportion to capital. From the records of this office on July 18, 1903, a table has been compiled showing the number and capital of National banks issuing circulating notes to the maximum—that is, the paid-in capital stock—to the extent of seventy-five per cent. and less than 100 per cent. of capital; fifty per cent. and less than seventy-five per cent.; twenty-five per cent. and less than fifty per cent., and less than twenty-five per cent. The number of associations in existence on that date is shown to have been 5,020, with capital of \$755,764,165 and circulation \$373,014,185. Banks to the number of 1,492, with capital of \$177,850,850, had outstanding the maximum amount of notes—that is, an equivalent of capital paid in—245 banks with capital of \$66,681,810, circulation to the amount of \$55,487,710, the issues in each case being seventy-five per cent. or more, but less than 100 per cent., of the maximum issuable; 715 banks, with capital of \$110,478,400, were of the class issuing notes to the extent of fifty per cent. or more, but less than seventy-five per cent. of their capital, the issues amounting to \$62,190,000. Associations to the greatest number and with the largest amount of capital stock are in the class issuing notes to the extent of twenty-five per cent. and over, but less than fifty per cent. of their capital. Banks of this class numbered 2,335, with capital of \$199,491,045, and circulation of \$58,066,475. There were 243 associations, with capital of \$201,287,060, whose issues aggregated \$24,419,100, in each instance the issues amounting to less than twenty-five per cent. of the paid-in capital stock. Included in this latter class are eight banks, with capital of \$5,110,000, which have no circulating notes outstanding.

The outstanding circulation of the National banks located in the city of New York was \$45,296,500, and their capital stock \$100,200,000. The Chicago banks, with capital of \$25,600,000, issued notes to the amount of \$3,736,000, and St. Louis banks issued circulation to the amount of \$11,845,640 on capital stock of \$15,600,000. The aggregate capital and circulation of the banks in the three central reserve cities was \$141,400,000 and \$60,378,140, respectively. The capital of the banks in the other reserve cities aggregated \$178,180,260, and their circulation \$74,756,700. The banks located elsewhere than in reserve cities issue a larger proportion of circulation

to capital stock than the other associations. The capital of the 4,676 country banks was \$486,188,905, and their circulation \$242,879,295, or about 55 per cent. of the maximum, as against 42 per cent. by the reserve city banks. Only seventy-three of the 354 reserve city banks have issued circulation to the maximum, whereas 1,419 of the 4,676 country banks are in that class.

#### NATIONAL BANK NOTES PRESENTED FOR REDEMPTION.

The average amount of circulation in the year 1901 was \$386,200,000. During that year notes to the amount of \$147,400,000, or 48.8 per cent. of the total issues, were presented for redemption. Under the provisions of section 3 of the act of June 20, 1874, when notes in good condition are redeemed by the Treasurer and the latter has been reimbursed, they are forwarded to the respective associations by which they were issued. Notes of this character to the amount of \$57,600,000 were received by the Treasurer, representing 39.1 per cent. of the total amount presented and 17.1 per cent. of the total issues. Notes unfit for circulation were received, redeemed, and destroyed, for which new notes were issued to the amount of \$71,400,000, which is 48.4 per cent. of the total amount presented and 21.2 per cent. of the total issues. The redemptions without reissue aggregated \$18,600,000, or 12.6 per cent. of the amount presented and 5.5 per cent. of the total issues.

In 1902 notes were presented for redemption to the amount of \$171,800,000, or 48 per cent. of the aggregate issues, namely, \$357,900,000, of which 38.8 per cent., or \$57,800,000, being in good condition, were redeemed and returned to the banks of issue. The redemptions and destructions for reissue amounted to \$89,600,000, or 52.1 per cent. of the amount presented and 25 per cent. of the total issues. The redemptions during the year for which there were no reissues aggregated \$20,000,000, which was 11.6 per cent. of the amount presented and 5.6 per cent. of the total issues.

The average amount of notes in circulation during the fiscal year 1903 was \$378,400,000, and of the amount there was presented for redemption \$196,400,000, or 51.9 per cent. Notes returned to the bank as fit for circulation amounted to \$62,500,000, or 31.8 per cent. of the amount presented for redemption and 16.5 per cent. of the total issues. The redemptions and destructions of unfit notes for reissue aggregated \$104,600,000, 53.2 per cent. of the amount presented and 27.6 per cent. of the total issues. The percentage of notes redeemed and destroyed without reissue was 6.9, the amount being \$26,200,000.

In 1886 the average life of notes of all denominations was calculated to be 4.9 years and in 1898 4.4 years. Confining the comparison to redemptions for reissue, it is shown that a trifle in excess of one-fifth of the issues of active banks were received for redemption, destruction, and reissue in 1901; in 1902, one-fourth, and in 1903, a trifle in excess of one-fourth, namely, 27.6 per cent. In other words, the life of notes of this character in 1901 was 4.7 years; in 1902, four years, and in 1903, 3.6 years, or an average for the three years of 4.1 years.

During the year ended October 31, 1903, National bank notes to the amount of \$220,283,487 were presented at the Treasury Department for redemption, of which about \$74,000,000, being in "fit" condition for circulation, were redeemed and returned to the banks of issue, and the balance, approximately \$148,000,000, redeemed and destroyed. Eighty per cent. of the receipts for redemption came from the cities of New York, Boston, Chicago, Philadelphia and St. Louis. The amount received from New York was \$115,000,000, or about 50 per cent. of the total receipts; \$21,000,000 was received from Boston, \$20,000,000 from Chicago, \$15,000,000 from Philadelphia, and \$10,000,000 from St. Louis. The aggregate cost of redemption of the notes presented for that purpose during the year amounted to \$174,477.62, or an average of \$0.90262 per \$1,000.

In addition to the expense for the redemption of their circulating notes the banks paid in semi-annual duty on notes during the year ended June 30, 1903, the sum of \$1,708,819.92; in fees for the examination of banks \$324,598.97, and for plates for printing of circulation for new banks and those extending their charters, \$94,800.

PROFIT ON NATIONAL BANK CIRCULATION.

The question of profit on National bank circulation is frequently submitted to this office in connection with the organization of National banks and the increase of circulation of existing associations. The Comptroller has had computed by the Actuary of the Treasury Department the profit on \$100,000 of circulation based on the security of two per cent. consols of 1930 at the average net price monthly for the year ended October 31, 1903. In the computation money is assumed to be worth six per cent., in consequence of which the gross receipts are uniform—\$2,000 interest on the bonds and \$8,000 on the circulation. Deductions are made covering the tax on notes at the rate of one-fourth of one per cent. semi-annually, cost of redemptions, plates, agents' fees, and the sinking fund. From the net receipts is deducted the interest on the cost of the bonds at six per cent., to show both the amount and rate per cent. of profit monthly in excess of six per cent. during the year. The frequent fluctuations in the market price of these securities cause the variations in the percentage of profit, which range from a minimum of 0.689 in January to a maximum of 0.935 in May.

*Profit on \$100,000 National Bank Circulation Based on a Deposit of a Like Amount of United States Consols of 1930 at the Average Net Price, Monthly, of Bonds during the Year ended October 31, 1903.*

| Date.          | Cost of bonds. | Net receipts from interest on bonds at 2 per cent. and on circulation at 6 per cent. | Interest on cost of bonds at 6 per cent. | Profit on circulation in excess of 6 per cent on the investment |          |
|----------------|----------------|--------------------------------------------------------------------------------------|------------------------------------------|-----------------------------------------------------------------|----------|
|                |                |                                                                                      |                                          | Amount                                                          | Per cent |

| October        | 107,186        | 7,324.70                                                                             | 6,431.16                                 | 893.54                                                          | 833      |

COMPARISON OF CIRCULATION WITH CAPITAL AND RESOURCES OF NATIONAL BANKS, AND ALSO WITH THE COUNTRY'S STOCK OF MONEY.

The relation of circulation to aggregate assets of National banking associations varied from 20 per cent., approximately, during the first ten years of the existence of the National banking system to a minimum of four per cent. in 1890. The highest rate since that time was 6.4 in October, 1896, and since that year has varied from a minimum of 4.2 to a maximum of 5.9.

The stock of specie and other currency of the country on June 30, 1863, was \$674,800,000; in 1878, \$774,400,000; in 1883, \$1,472,400,000; in 1893, \$1,738,800,000, and in 1903, \$2,638,100,000. The percentage of National bank circulation to money in the country ranged from 35.5 in 1866, when the outstanding circulation had nearly reached the legal limit, to a maximum of 43.7 in 1873; declined to 37.2 in 1876; rose

to 38 in 1877, and thereafter steadily decreased to 7.3 in 1891. In 1892 the rate was 8.1; rose to 11 in 1896; declined to 9.1 in 1899; again increased to 12.8 in 1901; dropped to 12.1 in 1902, but rose to 12.9 at the close of June, 1903, the highest rate since 1886, but less than at that date by 2.8 per cent.

#### MONEY IN THE BANKS OF THE COUNTRY.

Efforts to ascertain, in detail, information with respect to the amount and character of the money held by banks other than national have not been attended with entirely satisfactory results. In the report for 1902, in order to show as nearly as possible the amount of gold and silver in banks, the cash holdings of banks other than national, located in States not reporting the exact amount in detail, were estimated upon the basis of specie, etc., held by the National banks in such States. In the present compilation the cash holdings are classified exactly as reported to this office and necessarily show a reduction in the items gold and silver and a corresponding increase in unclassified cash. A summary of the returns is incorporated in the following table:

*Gold, etc., Held by National Banks on June 9, 1903, and by Other Banks and Bankers Reporting to this Office on or about the Same Date.*

| Classification.                                    | National banks<br>(4,939). | All other banks<br>(8,745). | Total all banks<br>(13,684). |
|----------------------------------------------------|----------------------------|-----------------------------|------------------------------|
| Gold coin.....                                     | \$107,539,988              | \$31,387,320                | \$138,927,258                |

| Legal tenders.....                                 | 163,592,829                | 72,422,740                  | 236,015,569                  |
| National-bank notes.....                           | 27,625,685                 | 10,952,717                  | 38,578,402                   |
| Fractional currency.....                           | 1,611,235                  |                             | 1,611,235                    |
| Specie, not classified.....                        |                            | 1,424,290                   | 1,424,290                    |
| Cash, not classified.....                          |                            | 104,495,941                 | 104,495,941                  |
| Total.....                                         | 581,446,127                | 275,813,526                 | 857,259,653                  |

<sup>a</sup> Includes \$11,520,447 gold clearing-house certificates in State banks of New York.

#### DISTRIBUTION OF MONEY IN THE COUNTRY.

In the following table is shown in millions of dollars the amount of coin and other currency in the United States at the close of the fiscal year ended June 30, 1892 to 1903, inclusive; coin, etc., in Treasury as assets, amount in circulation and the latter divided, to show the amount in banks and elsewhere, with the percentage for

| Year      | Coin and other money in the United States. |           | Coin, etc., in Treasury as assets. |                    | Money in reporting banks. |           | Money not in Treasury or banks. |           |             | In circulation, exclusive of coin, etc., in Treasury as assets. |             |
|-----------|--------------------------------------------|-----------|------------------------------------|--------------------|---------------------------|-----------|---------------------------------|-----------|-------------|-----------------------------------------------------------------|-------------|
|           | Amount.                                    | Per cent. | Amount.                            | Per cent.          | Amount.                   | Per cent. | Amount.                         | Per cent. | Per capita. | Amount.                                                         | Per capita. |
| 1892..    | \$1,752.2                                  | \$150.9   | 8.60                               | \$586.4            | 33.48                     | \$1,014.9 | 57.92                           | \$15.50   | \$1,601.3   | \$24.44                                                         |             |

<sup>a</sup>\$12,567,265, <sup>b</sup>\$10,125,909, and <sup>c</sup>\$9,240,801 in banks of island possessions not included in these returns.

each year in the Treasury, in banks, and in circulation; the per capita in circulation, exclusive of the amount held in the Treasury, and the amount in circulation, exclusive of the amount in Treasury and in the banks.

Conditions existing in 1896, as will be seen by reference to the foregoing table, resulted in a loss of cash in banks of nearly \$100,000,000 as compared with the holdings in 1895. In 1897, however, the amount held, \$628,200,000, very nearly equaled the volume in banks in 1895. By 1902 there had been a gain over 1897 of nearly \$210,000,000, and in 1903 a further gain of \$10,000,000. The fluctuations in amount and per cent. of money held by the banks, geographically considered, in the years 1896, 1897, 1902, and 1903 are interesting.

The following statement shows the amount and *pro rata* distribution of money in the banks of the country, by geographical divisions, for the years indicated :

| Divisions.                | 1896.              |           | 1897.              |           | 1902.              |           | 1903.              |           |

STOCK OF MONEY OF THE WORLD.

The stock of money of the world, as shown by statistics compiled by the Mint Bureau, as of January 1, 1903, was \$11,996,400,000, classified as follows: Gold, \$5,382,600,000; silver, \$3,680,300,000; uncovered paper currency, \$2,933,500,000. The stock of the United States approximates one fifth of the aggregate, amounting to \$2,377,400,000, represented by \$1,248,000,000 gold, \$673,300,000 silver, and \$456,100,000 uncovered paper currency. The per capita of gold in the world is \$4 19, silver \$2.86, and paper \$2.28, and the aggregate per capita \$9.33. The United States per capita of gold is \$15.64, silver \$3.44, paper \$5.71, aggregate \$29.79. With the exception of France, the Straits Settlements, and the South American States (excluding Bolivia and Colombia), the per capita of money in the United States exceeds all other countries, and its per capita of gold is the greatest with the following exceptions: France, \$24.36; South African Republic, \$24.33, and Australasia, \$23.36.

<sup>a</sup> Statement of imports and exports includes bullion and specie prior to 1830; merchandise only since 1830.

<sup>b</sup> Estimated by Bureau of Statistics.

The Straits Settlements lead in the per capita of silver, namely, \$47.45; France follows with \$10.79, the Netherlands \$10.68, Spain \$9.84, and the United States, with \$8.44. The per capita of uncovered paper currency is the greatest, \$27.90, in the South American States; second in order is Greece, \$20.29, followed by Belgium, \$16.16; Portugal, \$11.67; Canada, \$10.54, the per capita in the United States being \$5.71.

In connection with the foregoing the preceding table is of interest, relating to the growth by decades from 1800 to 1900 of population, money in the United States, the per capita in circulation, and the imports and exports, together with the wealth of the country from 1850 to 1900, and clearings for 1890, 1900, and 1903.

#### FOREIGN BANKS OF ISSUE, ETC.

In foreign publications containing data relating to banks of issue, and banks not issuing circulating notes, the principal items of resources and liabilities only are given. The consolidated statements appearing in the Bulletin de Statistique and L'Economiste Européen relate exclusively to specie holdings, circulation outstanding, deposits and advances, or loans and discounts.

The following table is a combination of returns relating to the principal foreign banks of issue with other foreign banks, and is presumed to be comprehensive and accurate, so far as it relates to the items indicated:

*Capital, Specie, Circulation, etc., of the Principal Foreign Banks of Issue on or about June 30, 1903.*

[Expressed in millions of dollars.]

| Country.                                 | Period    | Number of depositors. | Total deposits. | Average deposit account. | Average deposit per inhabitant. | Rate of interest. | Population   |

<sup>f</sup> Census Feb. 10, 1901.

<sup>g</sup> Post-office and Government savings banks only.

<sup>h</sup> Data for post-office savings banks only.

#### SAVINGS BANKS OF THE WORLD.

Through the aid of the Bureau of Statistics of the Department of Commerce and Labor information has been obtained with respect to the number of depositors and total deposits in foreign Savings banks, both trustee and postal. In the table following will be found statistics covering the number of depositors and deposits, together

with the average deposit account, average deposit per inhabitant, and rates of interest allowed on savings accounts in countries relative to which returns of that character have been received.

To the statistics relating to foreign Savings banks have been added the number of depositors and deposits in the Savings banks of the United States, resulting in a total of savings depositors of 76,314,423 and in savings deposits of \$9,900,749,029. The average per capita deposit in foreign Savings banks is \$100.54 and the deposit per inhabitant \$10.43. The average account in the Savings banks of the United States is \$417.21 and the average per inhabitant \$36.52.

*Number of Depositors, Amount of Deposits, Average Deposit Account, Average Deposit per Inhabitant at the end of the Years Mentioned, and Rates of Interest on Deposits Paid by Postal and other Savings Banks of the World.*

a Data relating to the "Caisse Nationale d'épargne."

## THE BANKING POWER OF THE WORLD.

The capital, surplus profits, deposits and circulation of banks of the United States, characterized as the "banking power," aggregate \$13,310,405,650, in which is included that of National banks amounting to \$4,993,046,686; reporting State banks and bankers, \$7,662,433,013, and non-reporting banks, estimated, \$654,925,951.

The banking power of foreign countries, based upon the most reliable data, is stated to be \$18,088,000,000 and the aggregate power of the world \$31,398,000,000. Comparing this estimate with Mulhall's of 1890, it is shown that the banking power of the United States has increased since that date \$8,160,000,000, or 158.4 per cent., the banking power of foreign countries \$7,253,000,000, or 66.9 per cent., and the combined banking power of the world from \$15,985,000,000 to \$31,398,000,000, a total increase of \$15,413,000,000, or 96.4 per cent. The subjoined tables give in detail the banking power of the United States, of foreign countries, and of the world, the latter being a comparative statement of conditions in 1890 and 1903:

## BANKING POWER OF THE UNITED STATES.

|                         | Number. | Capital.      | Surplus, etc. | Deposits.       | Circulation.  | Total.          |

STATE, SAVINGS, PRIVATE BANKS, LOAN AND TRUST COMPANIES.

Circular letters from this Bureau requesting reports of condition as of June 30, 1903, were mailed early in June last to approximately 3,300 private banks and bankers in the various States and to 700 incorporated banks located in States where the laws do not require the submission or publication of reports. In response to these requests about 900 private banks and bankers sent reports of condition more or less complete, making, with the reports received from official sources, 83½ per cent. of the private banks in existence, as shown by the most reliable data obtainable. Summarizing the returns, information has been obtained relative to the conditions of 8,745 incorporated and private banks and bankers, of which 5,962 are State banks, 531 loan and trust companies, 1,078 mutual and stock Savings banks, and 1,174 private banks and bankers.

For purposes of comparison there is given herewith a table showing the principal items of resources and liabilities of banks other than National in the years 1898 to 1903, inclusive :

*Consolidated Returns from State, Savings, Private Banks and Trust Companies, 1898 to 1903, inclusive.*

| Items.                                  | 1898.              | 1899.              | 1900.              | 1901.              | 1902.              | 1903.              |
|-----------------------------------------|--------------------|--------------------|--------------------|--------------------|--------------------|--------------------|
| Loans . . . . .                         | \$2, 480, 874, 360 | \$2, 659, 940, 630 | \$3, 013, 449, 827 | \$3, 444, 377, 672 | \$3, 942, 592, 907 | \$4, 296, 675, 586 |
| Bonds . . . . .                         | 1, 304, 890, 322   | 1, 527, 595, 160   | 1, 723, 830, 351   | 1, 935, 625, 964   | 2, 094, 496, 729   | 2, 334, 329, 907   |
| Cash . . . . .                          | 194, 913, 450      | 210, 884, 047      | 220, 667, 109      | 240, 145, 951      | 250, 815, 787      | 275, 813, 526      |
| Capital . . . . .                       | 370, 073, 788      | 368, 746, 648      | 403, 192, 214      | 430, 401, 557      | 499, 621, 208      | 578, 418, 944      |
| Surplus and undivided profits . . . . . | 399, 706, 497      | 418, 798, 087      | 490, 654, 957      | 538, 866, 278      | 614, 509, 805      | 731, 314, 014      |
| Deposits . . . . .                      | 3, 664, 797, 296   | 4, 246, 500, 852   | 4, 780, 893, 692   | 5, 518, 804, 859   | 6, 035, 847, 214   | 6, 352, 700, 055   |
| Resources . . . . .                     | 4, 681, 328, 357   | 5, 196, 177, 381   | 5, 841, 658, 820   | 6, 681, 567, 334   | 7, 355, 110, 843   | 8, 016, 181, 848   |

From an examination of the returns submitted with respect to the rate of interest paid on the savings accounts, it will be noted that the maximum rate of interest is 4 per cent. and the minimum rate 2.8 per cent.. The estimated average rate is 3½ per cent., a slight decrease from the estimated average interest rate in 1902.

In 1866 the number of depositors in Savings banks reached 1,000,000 and the deposits \$282,455,794, the average account being \$264.70. In 1870 the number of depositors had increased to 1,630,846, the amount of deposits to \$549,874,358, and the average account \$337.17. By 1880 the deposits reached \$819,106,973 and the number of depositors 2,335,532, and average account \$350.71. The amount of the credit of savings deposits in 1890 was \$1,524,844,506, the number of depositors 4,258,893, and the average deposit account \$358.03. The number of depositors in 1900 was 6,107,083, the average deposit \$401.10, and the total amount to the credit of depositors \$2,449,547,885. The amount to the credit of Savings bank depositors in 1903 was greater than the entire stock of money in the country, amounting to \$2,935,204,845, to the credit of 7,035,228 depositors. The average account was \$417.21, and the average per capita to population of the country \$36.52.

From the most reliable records at command it appears that there are in existence

*Number of Savings Depositors, Aggregate Savings Deposits, and Average Amount Due to Depositors in Savings Banks in each State in 1901-2 and 1902-3.*

α Estimated.

b Partially estimated.

c Savings deposits in State institutions having savings departments; abstract of reports included with State banks.

in the country about 18,000 banks and banking institutions, including private bankers. In addition to returns from National banking associations reports have been received from 8,745 State and private banks, making the total number reporting 13,684. The aggregate capital of reporting banks is shown to be \$1,321,924,992; deposits, \$9,700,796,047, and aggregate resources, \$14,303,116,954.

The principal items of resources and liabilities of National banks on June 9, and of all other banks and banking institutions on or about June 30, 1903, are incorporated in the following table:

|                          | 4,939 National banks. | 8745 other banks. | 13,684 banks.   |

Inquiries addressed to State officials requesting reports of resources and liabilities of the banks called also for information as to the number and capital of banks of various character organized in each State during the year ended June 30, 1903. While the returns do not cover the total number of organizations in every State, they are complete and official with respect to the States from which information was received. A summary of the returns shows the organization of 754 banks, with

capital stock of \$35,073,517, of which 611, with capital of \$19,844,898, were incorporated commercial banks; 110, with capital of \$14,912,504, loan and trust companies; seven, with capital of \$172,000, Savings institutions, and twenty-six private banks, with capital of \$144,115.

Reports covering the amount and average rate per cent. of dividends paid by State and private banks and by loan and trust companies, submitting information of that character, for the year ended on or about June 30, 1903, were received from 2,894 State banks, with capital of \$140,412,289, showing the payment of dividends to the amount of \$12,526,819, or an average of 8.95 per cent.; from 395 loan and trust companies, with capital of \$174,240,937, which paid dividends to the amount of \$17,045,214, or 9.78 per cent.; and from 400 private banks and bankers, with capital of \$8,620,494, reporting dividends paid to the amount of \$1,084,274, an average rate of 12.57 per cent. The average dividend paid by State banks remains practically the same as reported in 1902, while that paid by loan and trust companies shows an increase of nearly one per cent.

GROWTH OF BANKING IN THE UNITED STATES.

In 1882 there were in operation 2,289 National banking associations, with capital of \$477,200,000 and deposits of \$1,131,700,000; and also, as shown by reports to this office, 5,063 incorporated State and private banks, with capital and deposits of \$234,900,000 and \$1,718,700,000, respectively, or an aggregate of 7,302 banks and banking institutions, with capital of \$712,100,000 and deposits of \$2,850,400,000.

From returns made to this office on or about June 30, 1903, it is shown that the number of National banks has increased since 1882 to 4,939, with capital of \$743,506,048 and deposits of \$3,348,095,992. The number of State and private banks in existence in 1903 was 13,291, with capital of \$780,822,464 and deposits of \$6,855,222,486. The total number of National, State and private banks is shown to be 18,230, the capital \$1,474,328,512, and the deposits \$10,203,318,478.

As will be observed from the accompanying table, the increase in number of National banks from 1882 to 1903 was over 120 per cent., and that of banks other than national over 162 per cent. In 1882 National bank capital represented 67.01 per cent. and the deposits 39.7 per cent. of the aggregate capital and deposits of all reporting banks and banking institutions. The percentage of both capital and deposits of National banks shows a gradual reduction from that date to 1903 to 50.43 per

cent. and 82.81 per cent., respectively. Within the period in question the capital of National, State and private banks was practically doubled and the deposits nearly quadrupled.

Comparing the number of banks, capital and deposits with the population of the United States, it appears that in 1882 there was one bank for every 7,190 inhabitants, the capital amounting to \$18.60 per inhabitant and the deposits \$54.80. In 1892 there was one bank for every 7,016 inhabitants, the per capita of capital and deposits being \$16.40 and \$71.40, respectively. The greater increase in number of banks as compared with population in 1902 resulted in one bank for every 4,897 of population, the per capita of capital and deposits having increased to \$16.90 and \$122.70, respectively. In 1903 there was in active operation, as shown by reports filed in this office, one bank for every 4,410 of population, the per capita of capital being \$18.30 and of deposits \$126.90.

In the foregoing table is incorporated the number of reporting banks, together with capital, deposits and percentage of capital and deposits for the years indicated.

#### FAILURES OF STATE BANKS.

The managing editor of "Bradstreet's" has courteously furnished information obtained by the Bradstreet Agency relating to incorporated and private banks which failed during the year 1903, accompanied by a statement of the total liabilities and assets. The number of failures was 26; the assets of the banks being \$3,166,852, and the liabilities \$4,005,643. Included in the number of failures were 6 State banks, 1 Savings bank, 2 trust companies, and 17 private banks.

In 1896, through the instrumentality of the corps of National bank examiners and from receivers, assignees, and court officials, information was obtained with respect to the number of insolvent banks other than National, with their assets and liabilities at date of failure and also dividends paid on claims. The inquiry covered the period beginning with 1866 and terminating in 1896. A compilation of the returns shows that there were 1,234 failures of banks with aggregate capital of \$53,632,259; nominal assets at date of failure, \$214,312,190.58; and liabilities of \$220,629,998.27, on which dividends were paid to the amount of \$100,088,726.95, an average rate of about 45 per cent.

#### BANKING IN THE ISLAND POSSESSIONS.

Through the courtesy of the treasurers of Porto Rico and the Philippine Archipelago, and from private sources in the Hawaiian Islands, sufficient data have been obtained to indicate in what proportion the island possessions have contributed to the figures representing the banking resources of the country.

A consolidation of the reports of colonial and National banks received shows the aggregate resources of banks in these possessions on or about June 30, 1903, to have been \$43,912,873. The loans, including overdrafts, aggregate \$22,569,615; bonds and other securities, \$1,922,663; cash in bank, \$9,240,801; capital stock, \$5,188,770; surplus and undivided profits, \$1,688,066; individual deposits, \$23,264,815.

#### THE PHILIPPINES.

Summaries of the returns of the 10 banks in the Philippines as of dates March 31 and June 30, 1903, have been received, together with individual statements as made to the Treasurer of the Philippine Archipelago on the latter date. The principal items of resources and liabilities of these banks on June 30, 1903, are loans, including overdrafts, \$13,189,137; stocks, securities, etc., \$312,316; cash in bank, including gold and silver bullion and foreign currency, \$8,800,201; capital stock, \$1,388,265; surplus and undivided profits, \$1,525,919; notes in circulation, \$1,176,396; individual deposits, \$9,525,236; public deposits (insular), \$5,180,117. Com-

pared with the summary of reports for June 30, 1902, loans have increased in the sum of \$1,442,046; stocks, etc., \$9,630; cash in bank, \$335,068; notes in circulation, \$127,856. Individual deposits have increased \$1,019,642, while public deposits, which include deposits of the Insular Treasury and of funds of disbursing officers, have decreased from \$9,617,272 in 1902 to \$5,180,117 for the present year, a decrease of \$4,437,155 in this class of deposits. The aggregate resources show a net loss of about \$2,000,000. The banks from which reports were received are the Manila agency and the Iloilo subagency of the Hongkong and Shanghai Banking Corporation, the Manila agency and Cebu subagency of the Chartered Bank of India, Australia and China, the Banco Espanol-Filipino at Manila and its Iloilo subagency, the Monte de Piedad y Caja de Ahorras of Manila, the American Bank at Manila, the Guaranty Trust Company of New York, and the International Banking Corporation of New York, making in all 10 institutions against 11 which reported last year, one bank, the North American and Philippine Loan and Trust Company, having discontinued business in the islands.

While the net reduction in the aggregate resources of these institutions since June 30, 1902, amounts, as stated, to approximately \$2,000,000, all the banks named, with the exception of the two English banks and branches and one American bank, appear to have gained in their volume of assets. The withdrawal of a large portion of the insular treasury and disbursing officers' deposits from the English banks, and the transfer of a large part of such deposits to the American institutions, account for the shrinkage in the aggregate resources of the former banks and increased assets of the latter. Reports of June 30, 1903, indicate that the two principal American banks at Manila have increased their assets during the year by a sum approximating \$5,500,000.

In the summary of the Philippine bank reports it will be noted that overdrafts materially exceed the loans and discounts. This item represents, in fact, mortgage loans, as it is the custom to grant the privilege of an overdraft up to a certain amount to a customer who has previously executed a mortgage on either real estate or chattels.

#### HAWAII.

Consolidating the returns received from the banking institutions of the Territory of Hawaii, namely, two National and four territorial and private banks, the aggregate resources amount to \$7,400,954, against \$8,755,641 as reported for 1902. The apparent decrease, as shown by these figures, is owing to the fact that only four of the banks responded to the Comptroller's request for a statement of condition as of June 30, 1903, one of the nonreporting banks being a large incorporated institution. The principal items of resources and liabilities of all reporting banks of the Territory are: Loans, etc., \$4,957,730; bonds and stocks, \$306,197; cash in bank, \$1,147,203; capital, \$3,213,500; surplus, etc., \$127,421; deposits, \$4,743,838.

#### PORTO RICO.

Reports have been received from 8 banks in Porto Rico, operating under Territorial laws, and one National banking institution. The consolidation of these returns shows loans aggregating \$2,733,184; bonds, securities, etc., \$1,003,057; cash in bank, \$355,400; capital stock, \$1,537,004; surplus, \$273,207; deposits, \$2,763,210, and aggregate resources, \$6,199,903. Compared with returns for 1902, these figures indicate gains, except in respect to loans and cash in bank. The loans appear to have decreased in the sum of \$186,641, and cash, \$46,042. The aggregate resources have increased in the sum of \$340,813 over the previous year. A recent statement furnished by the acting treasurer of the Territory relating to cash holdings of, and dividends paid by, banks of the island shows the following classification of money in bank: Fractional silver, \$5,491; silver dollars, \$149,721; gold coin, \$215,927, and

legal-tender notes, \$451,491. From the amount of dividends reported paid during the year by the various banks, it appears that two banks, namely, the Banco Espanol de Porto Rico and the American Colonial Bank, paid 5 per cent.; the Credito y Ahorro Ponceno,  $8\frac{1}{4}$  per cent., and the Banco Popular 4 per cent.

#### RECOMMENDATIONS.

The Comptroller again renews the recommendations contained in his report for 1902 for legislation in regard to liquidation and consolidation of National banks and extension of corporate existence. The matter of consolidation of banks was apparently very little considered at the time of the passage of the National Bank Act. The necessary method of effecting a consolidation under the law as it now exists is inconvenient and cumbersome both to the banks and to the Comptroller's office, and in the interest of better and more efficient administration the Comptroller recommends such an amendment of the law as was advised in his last report.

The National Bank Act does not sufficiently protect the rights of minority stockholders on the question of extension of expiring charters, as explained in detail in the report for 1902, and the Comptroller wishes to again call attention of the Congress to this, and respectfully urge that action be taken on this important matter for the better protection of minority or dissenting shareholders.

In the preparation of this report more than usual attention has been given to gathering information in regard to bank-note circulation, the classification of banks by geographical divisions, and also by the proportions of maximum circulation they have issued. Some useful and interesting figures and statistics in regard to the presentation of bank notes for redemption are also given.

The most notable fact in regard to the National bank circulation is the great increase in its volume, which reached \$421,222,489 on September 5, 1903, the largest amount which has ever been in circulation. It is 55.43 per cent. of the maximum possible circulation, which is higher than this percentage has been since 1886. This increase in the volume of circulation has been largely due to special efforts on the part of the Treasury Department. It has been feared during the past few months that when the demand came for currency to move the crops this year it might produce more than the usual disturbance in the money market. That this demand has been met with less disturbance and less advance in rates of interest than for several years past is doubtless due largely, among other causes, to this increase in bank-note circulation. It is further of interest to note that just as the circulation was reaching its maximum and the demand for bonds had advanced their price, the deposit of lawful money to retire circulation, which for some months had been light, suddenly increased, and during the latter half of September applications were received taking up the maximum of \$3,000,000 per month for the months of September, October, November and December.

This still further emphasizes the most serious defect in our system, that the variation in the volume of our currency, instead of responding to the demand for currency, depends on the market price of bonds. Until our bank-note circulation is made automatically to respond to demand for currency for daily cash transactions without reference to the price of bonds, it will never be entirely satisfactory or efficient.

In the Comptroller's report for 1902 a recommendation was made that the National banks be allowed to issue a portion of their notes uncovered by the deposit of bonds. This seems the most simple and practical, as well as the safest way, to introduce some elasticity into our bank note circulation, and the same recommendation is renewed.

During the past year or more our banks have successfully stood the very severe strain due to a great decline in the market prices of all classes of securities and the natural reaction following a period of great business activity and very general spec-

ulation, not only in stocks and securities, but in many commodities and products. There have been, considering all the circumstances, fewer bank failures than might have been expected. Those which have occurred have been due to special or local causes or gross mismanagement, and, in some cases, most flagrant dishonesty on the part of the bank officials.

As a rule the reports of the bank examiners show the National banks to own very few stocks, and almost none of a very speculative character. The bank reports show total loans by all the banks of \$1,872,697,751 on collateral security. These loans are mostly on good classes of stocks and bonds well margined, and as far as they are concerned, there is less cause for concern than there has been at any time for several years. The loans are readjusted on a lower basis of prices than before, and are, as a whole, as amply or more amply margined than they were on the higher prices. It is due to the banks to say that the way they have handled their business and met this decline is an evidence of strength and careful management.

That there has not been more trouble with the banks and disturbance of business generally during this period of declining prices is also a great evidence of the confidence of our people in all our money and currency. If there had been the slightest doubt as to our monetary standard or as to any of our currency in circulation we might have had a most severe and far reaching crisis. That we have not only escaped this, but that there has not been greater disturbance of general business shows what progress and improvement there has been in all our banking, financial, and monetary affairs since they were last subjected to serious strain of this kind.

In concluding this report the Comptroller desires to testify to the efficiency and zeal of the Deputy Comptroller, the chiefs of division, and the employees of this office. The work of the office has rapidly and greatly increased in the last year, and that it has been handled even more promptly than before is due to the hearty co-operation of all connected with the work, and especially to the capacity for organization and executive ability of the Deputy Comptroller, Mr. T. P. Kane. Special credit is also due to Mr. W. J. Fowler, chief of the organization division, for his work in gathering and arranging figures and statistics and their analysis for this report.

WM. B. RIDGELY, *Comptroller of the Currency.*

THE SPEAKER OF THE HOUSE OF REPRESENTATIVES.

---

NEW COUNTERFEIT \$10 NATIONAL BANK NOTE.—On the Millers River National Bank of Athol, Mass.; check letter, B; series of 1882; B. K. Bruce, Register of the Treasury; A. U. Wyman, Treasurer of the United States; charter No. 706; bank No. 8988; Treasury No. U9058. This counterfeit is a photographic production printed on two pieces of thin paper between which silk threads have been distributed. The bank and Treasury numbers have been colored maroon instead of carmine. The seal is a yellowish brown instead of chocolate. The back of note is several shades darker than the genuine.

---

NEW COUNTERFEIT \$10 NATIONAL BANK NOTE.—On the Eliot National Bank, of Boston, Mass.; series of 1882; check letter, C; B. K. Bruce, Register; A. U. Wyman, Treasurer; charter number, 536; bank number, 4235; Treasury number, W48930. This is a photographic production on good quality paper with ink lines to imitate the silk fiber of the genuine. The makers and passers of this entire series of counterfeits were arrested December 17 and 18 in Boston, Mass., by agents of the Secret Service.

## THE PRESIDENT'S MESSAGE.

### RECOMMENDATIONS RELATING TO CORPORATIONS AND FINANCE.

The annual message of President Roosevelt, transmitted to Congress December 7, contained the following in reference to corporations and finance :

*To the Senate and House of Representatives :*

The country is to be congratulated on the amount of substantial achievement which has marked the past year both as regards our foreign and as regards our domestic policy.

#### GOVERNMENT SUPERVISION OF CORPORATIONS.

With a nation as with a man, the most important things are those of the household, and therefore the country is especially to be congratulated on what has been accomplished in the direction of providing for the exercise of supervision over the great corporations and combinations of corporations engaged in inter-State commerce. The Congress has created the Department of Commerce and Labor, including the Bureau of Corporations, with for the first time authority to secure proper publicity of such proceedings of these great corporations as the public has the right to know. It has provided for the expediting of suits for the enforcement of the Federal anti-trust law, and by another law it has secured equal treatment to all producers in the transportation, of their goods, thus taking a long stride forward in making effective the work of the Inter-State Commerce Commission.

The establishment of the Department of Commerce and Labor, with the Bureau of Corporations thereunder, marks a real advance in the direction of doing all that is possible for the solution of the questions vitally affecting capitalists and wage-workers. The act creating the department was approved on February 14, 1903, and two days later the head of the department was nominated and confirmed by the Senate. Since then the work of organization has been pushed as rapidly as the initial appropriations permitted, and with due regard to thoroughness and the broad purposes which the department is designed to serve. After the transfer of the various bureaus and branches to the department at the beginning of the current fiscal year, as provided for in the act, the personnel comprised 1,289 employees in Washington and 8,836 in the country at large. The scope of the department's duty and authority embraces the commercial and industrial interests of the nation. It is not designed to restrict or control the fullest liberty of legitimate business action, but to secure exact and authentic information which will aid the executive in enforcing existing laws, and which will enable the Congress to enact additional legislation, if any should be found necessary, in order to prevent the few from obtaining privileges at the expense of diminished opportunities for the many.

The preliminary work of the Bureau of Corporations in the department has shown the wisdom of its creation. Publicity in corporate affairs will tend to do away with ignorance, and will afford facts upon which intelligent action may be taken. Systematic, intelligent investigation is already developing facts the knowledge of which is essential to a right understanding of the needs and duties of the business world. The corporation which is honestly and fairly organized, whose managers in the conduct of its business recognize their obligation to deal squarely with their stockholders, their competitors, and the public, has nothing to fear from such supervision. The purpose of this bureau is not to embarrass or assail legitimate business ; but to aid in bringing about a better industrial condition—a condition under which there shall be obedience to law and recognition of public obligation, by all corporations, great or small. The Department of Commerce and Labor will be not only the clearing-house for information regarding the business transactions of the nation, but the executive arm of the Government to aid in strengthening our domestic and foreign markets, in perfecting our transportation facilities, in building up our merchant marine, in preventing the entrance of undesirable immigrants, in improving commercial and industrial conditions, and in bringing together on common ground those necessary partners in industrial progress—capital and labor. Commerce between the nations is steadily growing in volume, and the tendency of the times is toward closer trade relations. Constant watchfulness is needed to secure to Americans the chance to participate to the best advantage in foreign trade; and we may confidently expect that the new department will justify the expectation of its creators by the exercise of this watchfulness, as well as by the businesslike administration of such laws relating to our internal affairs as are intrusted to its care.

In enacting the laws above enumerated the Congress proceeded on sane and conservative lines. Nothing revolutionary was attempted ; but a common-sense and successful effort was

made in the direction of seeing that corporations are so handled as to subserve the public good. The legislation was moderate. It was characterized throughout by the idea that we were not attacking corporations, but endeavoring to provide for doing away with any evil in them; that we drew the line against misconduct, not against wealth; gladly recognizing the great good done by the capitalist who alone, or in conjunction with his fellows, does his work along proper and legitimate lines. The purpose of the legislation, which purpose will undoubtedly be fulfilled, was to favor such a man when he does well, and to supervise his action only to prevent him from doing ill. Publicity can do no harm to the honest corporation. The only corporation that has cause to dread it is the corporation which shrinks from the light, and about the welfare of such corporations we need not be over-sensitive. The work of the Department of Commerce and Labor has been conditioned upon this theory, of securing fair treatment alike for labor and for capital.

#### RELATIONS OF CAPITAL AND LABOR.

The consistent policy of the National Government, so far as it has the power, is to hold in check the unscrupulous man, whether employer or employee; but to refuse to weaken individual initiative or to hamper or cramp the industrial development of the country. We recognize that this is an era of federation and combination, in which great capitalistic corporations and labor unions have become factors of tremendous importance in all industrial centers. Harsh recognition is given the far-reaching, beneficent work which has been accomplished through both corporations and unions, and the line as between different corporations, as between different unions, is drawn as it is between different individuals; that is, it is drawn on conduct, the effort being to treat both organized capital and organized labor alike; asking nothing save that the interest of each shall be brought into harmony with the interest of the general public, and that the conduct of each shall conform to the fundamental rules of obedience to law, of individual freedom, and of justice and fair dealing toward all. Whenever either corporation, labor union or individual disregards the law or acts in a spirit of arbitrary and tyrannous interference with the rights of others, whether corporations or individuals, then where the Federal Government has jurisdiction it will see to it that the misconduct is stopped, paying not the slightest heed to the position or power of the corporation, the union or the individual, but only to one vital fact—that is, the question whether or not the conduct of the individual or aggregate of individuals is in accordance with the law of the land. Every man must be guaranteed his liberty and his right to do as he likes with his property or his labor, so long as he does not infringe the rights of others. No man is above the law and no man is below it; nor do we ask any man's permission when we require him to obey it. Obedience to the law is demanded as a right; not asked as a favor.

We have cause as a nation to be thankful for the steps that have been so successfully taken to put these principles into effect. The progress has been by evolution, not by revolution. Nothing radical has been done; the action has been both moderate and resolute. Therefore the work will stand. There shall be no backward step. If in the working of the laws it proves desirable that they shall at any time be expanded or amplified, the amendment can be made as its desirability is shown. Meanwhile they are being administered with judgment, but with insistence upon obedience to them; and their need has been emphasized in signal fashion by the events of the past year.

#### GOVERNMENT RECEIPTS AND EXPENDITURES.

From all sources, exclusive of the postal service, the receipts of the Government for the last fiscal year aggregated \$560,396,674. The expenditures for the same period were \$506,099,007, the surplus for the fiscal year being \$54,297,667. The indications are that the surplus for the present fiscal year will be very small, if indeed there be any surplus. From July to November the receipts from customs were, approximately, nine million dollars less than the receipts from the same source for a corresponding portion of last year. Should this decrease continue at the same ratio throughout the fiscal year, the surplus would be reduced by, approximately, thirty million dollars. Should the revenue from customs suffer much further decrease during the fiscal year, the surplus would vanish. A large surplus is certainly undesirable. Two years ago the war taxes were taken off with the express intention of equalizing the governmental receipts and expenditures, and though the first year thereafter still showed a surplus, it now seems likely that a substantial equality of revenue and expenditure will be attained. Such being the case, it is of great moment both to exercise care and economy in appropriations, and to scan sharply any change in our fiscal revenue system which may reduce our income. The need of strict economy in our expenditures is emphasized by the fact that we can not afford to be parsimonious in providing for what is essential to our national well-being. Careful economy wherever possible will alone prevent our income from falling below the point required in order to meet our genuine needs.

#### NEEDS OF THE FINANCIAL SITUATION.

The integrity of our currency is beyond question, and under present conditions it would be unwise and unnecessary to attempt a reconstruction of our entire monetary system. The same liberty should be granted the Secretary of the Treasury to deposit customs receipts as is granted him in the deposit of receipts from other sources. In my message of December 2, 1902, I called attention to certain needs of the financial situation, and I again ask the consideration of the Congress for these questions.

#### CONFERENCE BETWEEN GOLD STANDARD AND SILVER STANDARD COUNTRIES.

During the last session of the Congress, at the suggestion of a joint note from the Republic of Mexico and the Imperial Government of China, and in harmony with an act of the Congress appropriating \$25,000 to pay the expenses thereof, a commission was appointed to confer with the principal European countries, in the hope that some plan might be devised whereby a fixed rate of exchange could be assured between the gold standard countries and the silver standard countries. This commission has filed its preliminary report, which has been made public. I deem it important that the commission be continued and that a sum of money be appropriated sufficient to pay the expenses of its further labors.

THEODORE ROOSEVELT.

## CONDITION OF THE NATIONAL BANKS.

Abstract of reports of condition of National banks in the United States on June 9, September 9 and November 17, 1903. Total number of banks: June 9, 1903, 4,939; September 9, 1903, 5,042; November 17, 1903, 5,118.

| RESOURCES.                                      | June 9, 1903.          | Sept. 9, 1903.         | Nov. 17, 1903.         |

**J. H. FULTON**

**Manager Commercial National Bank, New Orleans**

## PROSPERITY IN NEW ORLEANS, THE CRESCENT CITY.

### *SOMETHING OF A THRIFTY SOUTHERN INSTITUTION AND ITS MANAGEMENT.*

Few of the greater centers of finance and commerce have lately excited larger measure of remark than New Orleans—the "Crescent City," so called—and this not alone through its speculative, not to say also, spectacular, cotton "corner" of the season closed, but because of the general and genuine prosperity prevailing, a prosperity of which the Commercial National Bank and its auxiliary the Commercial Trust and Savings Bank are shining examples.

A most favorable showing certainly is that of the Commercial National in its June, 1908, statement, closing its first eighteen months' business, namely: Capital, \$300,000, paid in; surplus and undivided profits, \$106,041; loans, etc., \$1,437,052; deposits, etc., \$2,144,717; total resources, \$2,590,758. The Commercial Trust showed at the same time a capital of \$500,000; surplus of \$62,500, and deposits over \$1,000,000.

COMMERCIAL NATIONAL BANK BUILDING, NEW ORLEANS.

Local capital, it may be said, is largely represented in both these institutions. The Commercial National has established correspondence not only with the National banks of Louisiana, but with those of Mississippi and Texas; also with banks North, East and West, and the solid Canadian Bank of Commerce, of Canada, with agencies in New York, San Francisco and London, among them.

But the success and permanent character of these allied institutions are best evinced in the new building they have erected and are jointly to occupy, situated on the corner of Carondelet and Common streets, in the midst of the sky-scraper district of tall, modern hotels, office buildings, etc., which have risen of late years in the Creole capital. This building, of white marble and terra cotta, contrasts not unfavorably in its simple classic dignity and proportions with its towering neighbors on either hand. As to its fittings and furnishings and interior generally, these certainly bear out the promise externally made. Its features are a ladies' reception room, the safety-deposit department equipped with 5,000 boxes, and vaults and safeguards of thoroughly modern pattern.

The management of these banks is practically identical. Wm. Mason Smith, of Mason Smith & Co., cotton, is President of both; I. M. Lichtenstein, of H. Lichtenstein & Son, cotton also, is Vice-President; J. H. Fulton, a banker by training, formerly of the Canadian Bank of Commerce at New York, is Manager of the Commercial National, and General Manager of the Trust Company. Mr. Fulton came to New Orleans to organize these banks, and has been a principal in them from the beginning. In New Orleans, where his work is known, he is credited with very much of their good fortune. His portrait, as that of a successful New Orleans banker, is presented herewith; also an illustration of the new bank building.

## BANKING AND FINANCIAL NEWS.

This Department includes a complete list of NEW NATIONAL BANKS (furnished by the Comptroller of the Currency), STATE AND PRIVATE BANKS, CHANGES IN OFFICERS, DISSOLUTIONS AND FAILURES, etc., under their proper State heads for easy reference.

### NEW YORK CITY.

—The annual dinner of Group VIII, New York State Bankers' Association, was held at the Waldorf-Astoria on the evening of December 17. William A. Nash, President of the Corn Exchange Bank, and chairman of the group, was unable to be present, and Gen. Thomas L. James, President of the Lincoln National Bank, acted as toastmaster.

At the chairman's table were the following guests:

George F. Baker, member clearing-house committee; Hon. James M. Beck, Dr. James H. Canfield, Major-General Henry C. Corbin, U. S. A., commanding Department of the East; J. H. DeRidder, president New York State Bankers' Association; Hon. John J. Esch, Alexander Gilbert, member clearing-house committee; E. R. L. Gould, Chamberlain of the city of New York; Edward M. Grout, Comptroller of the city of New York; Job E. Hedges, Frederick D. Kilburn, Superintendent Banking Department of the State of New York; Right Rev. Henry C. Potter, D.D., LL.D., Bishop of New York; William B. Ridgely, Comptroller of the Currency; Rear-Admiral Frederick Rodgers, U. S. N., Commandant New York Navy Yard and station; William Sherer, Manager New York Clearing-House Association; J. Edward Simmons, member clearing-house committee; James Stillman, President New York Clearing-House Association, and the Rev. Ernest M. Stires, D.D.

The speakers included former Assistant Attorney-General James M. Beck, Dr. James H. Canfield, Hon. John J. Esch, Rev. Ernest M. Stires, and Job Hedges.

—Walter G. Oakman, President of the Guaranty Trust Co., has notified the board of directors that he will not be a candidate for re-election next April, and asked that a first Vice-President be chosen. The board of directors selected J. W. Castles for this position. Mr. Castles comes from New Orleans, where he was President of the Hibernia Bank and Trust Co.

—John Mollenhauer, who has been connected with the Dime Savings Bank of Williamsburg for twenty years, and President for the past six years, resigned recently on account of ill-health. Wm. P. Sturgis, the Vice-President, has been elected President to succeed Mr. Mollenhauer.

—Negotiations are reported as being in progress for the merger of the McVickar Realty Trust Co. and the Empire State Trust Co.

—At a recent meeting of the Board of Trustees of the Equitable Trust Co. a semi-annual dividend of five per cent. was declared—an advance of two per cent. per annum upon previous dividends. The company recently moved into the building formerly occupied by the Western National Bank, at Nassau and Pine streets.

—At the annual meeting of Group VII of the New York State Bankers' Association, at the Clarendon Hotel, Brooklyn, on the evening of December 16, a committee was appointed to consider the establishment of a clearing-house for Brooklyn and Long Island.

—The bank money order committee of the American Bankers' Association was recently in session at the office of the New York National Exchange Bank. The meeting was a very successful one—every member of the committee being present and thoroughly enthusiastic on the subject of bank money orders.

The following points were unanimously agreed upon:

First.—That there should be a uniform bank money order which can be used by any member of the American Bankers' Association when drawn on its regular correspondent, involving absolutely no extra labor or entries over the present methods of selling exchange.

Second.—That no order will be issued for more than \$100.

Third.—That each member of the American Bankers' Association be requested to honor these orders at par.

Fourth.—That each order issued is to be guaranteed absolutely by one of our strongest and best guarantee companies.

Fifth.—That if any order should not be paid for any reason by its correspondent, the said guarantee company will redeem them at once.

Sixth.—That there shall be a uniform rate for the issuing of said orders.

The members of the bank money order committee were unanimously of the opinion that the problem of issuing bank money orders has been solved at last, and that if their plan is adopted by the executive council at its meeting next April, a magnificent money order system will be in operation at once.

The bank money order committee is composed of the following-named gentlemen:

Lewis E. Pierson, Chairman, Vice-President New York National Exchange Bank, New York; Joseph Chapman, Jr., Cashier Northwestern National Bank, Minneapolis, Minnesota; L. P. Hillyer, Cashier American National Bank, Macon, Georgia; Percival Kuhne, Knauth, Nachod & Kuhne, Bankers, New York; M. N. Willits, Jr., Assistant Cashier Corn Exchange National Bank, Philadelphia.

### NEW ENGLAND STATES.

**New Haven, Ct.**—Robert Foote, recently resigned as Cashier of the National Tradesmen's Bank, after a continuous service of twenty-seven years in that capacity. His resignation was accepted with regret by the directors of the bank. Mr. Foote expects to leave for California shortly, to remain for some time.

**Springfield, Mass.**—Edmund D. Chapin, President of the John Hancock National Bank, celebrated his ninetieth birthday December 9, receiving the congratulations of many local and other friends. Mr. Chapin has been with the bank over fifty-three years as Cashier or President, and is still in active daily service.

### MIDDLE STATES.

**Baltimore, Md.**—On November 19 negotiations were concluded for the merger of the Manufacturers' National Bank with the First National Bank. It is understood that the First National paid \$810,000 for the Manufacturers' National, or at the rate of \$122 a share—the capital of the latter institution being \$500,000.

The business of the two banks will be merged shortly, and the interests heretofore directing the Manufacturers' National will co-operate fully with the First National Bank.

In addition to the capital stock of \$500,000, the Manufacturers' National had \$105,818 surplus and undivided profits, and its deposits at the close of business on November 11 amounted to \$1,103,861. The bank was organized in 1882 by William T. Dickey and Charles W. Dorsey. Mr. Dickey was President up to the time of his death in 1893, when he was succeeded by Mr. Dorsey. Harry M. Mason is Cashier.

Several years ago interests in the Equitable National Bank acquired control of the First National Bank, and as a result of the deal the capital of the First National was increased and the business of the Equitable absorbed by it. Then James T. Woodward, President of the Hanover National Bank, of New York; James H. Eckels, ex-Comptroller of the Currency and now President of the Commercial National Bank, Chicago; Charles R. Spence and A. H. S. Post, second and third Vice-Presidents of the Mercantile Trust and Deposit Co., became directors of the First National.

The statement of the First National made at the close of business September 9 showed total resources of \$6,427,621.27; capital stock paid in, \$1,000,000; surplus and undivided profits, \$402,703.40, and individual deposits aggregating \$2,283,771.99.

The present officers and directors of the bank are: President, J. D. Ferguson; Vice-President, Theodore Hooper; Cashier, H. B. Wilcox; Assistant Cashier, Wm. S. Hammond. Directors: J. D. Ferguson, Blanchard Randall, Joseph R. Foard, Wm. C. Rouse, Louis Muller, John W. Hall, Theodore Hooper, James T. Woodward, James H. Eckels, Geo. A. Blake, Jas. A. Smyser, Joseph Friedenwald, Alexander T. Leftwich, N. W. James, Hugh Sisson, Jr., A. H. S. Post, Chas. R. Spence.

—On December 11 Charles E. Rieman was elected President of the Commercial and Farmers' National Bank, succeeding Lawrence B. Kemp, resigned. It is stated that the bank has experienced a considerable loss on its loans, which will not only wipe out the surplus and profits but will necessitate an assessment of the shareholders to make good the impaired capital.

—The Union Trust Co., which was placed in charge of a Receiver October 19, resumed business December 23.

**Buffalo, N. Y.**—At a meeting of the board of directors of the People's Bank, December 16, Edward J. Newell, Assistant Cashier, was appointed Cashier to fill the vacancy caused by the death of C. W. Hammond.

**Pittsburg.**—The Federal National Bank, which was placed in the hands of a Receiver October 21, resumed business December 14. Col. Hugh Young, for twenty-five years National bank examiner here, becomes President of the bank; Harry M. Landis, who was formerly Cashier of the Tradesmen's National and the Columbia National and who is now Assist-

ant Cashier of the Farmers Deposit National Bank, becomes Cashier of the Federal National; John W. Haines remains as Assistant Cashier.

—It is announced that the Prudential Trust Co. has been purchased by the Beneficial Trust Co. and that the two institutions will be consolidated.

—An investigation made by the "Pittsburg Banker" shows that the banks of Allegheny county furnish about \$21,655,206 monthly for pay-roll requirements—or \$250,000,000 a year. This is exclusive of salaries paid by check.

### SOUTHERN STATES.

**New Orleans.**—John J. Gannon, formerly of Houston, Texas, has been elected President of the Hibernia Bank and Trust Co., succeeding J. W. Castles, who resigned to become Vice-President of the Guaranty Trust Co., of New York.

**Dallas, Texas.**—The Texas National Bank, recently organized here with a capital of \$250,000, will begin business under the most favorable circumstances. Its list of shareholders is the largest of any bank in Dallas, and its directors include some of the wealthiest and most successful business men in the city. J. W. Blake, the Vice-President and Cashier, has long been identified with banking in Texas, and was formerly President of the Texas Bankers' Association. He is also interested in several large and successful business enterprises, and has a wide acquaintance throughout the State.

The correspondents of the Texas National are: New York, National Bank of Commerce and Consolidated National; Chicago, First National; St. Louis, Third National and Mechanics' National.

—The City National Bank recently took possession of its new building, which is described as one of the handsomest and most substantial in the State. All the equipment combines every requirement of beauty, safety and convenience. As further indicating the prosperity of the bank, its capital is \$200,000; surplus, \$230,000 and deposits \$2,838,000.

### WESTERN STATES.

**Indianapolis, Ind.**—At the regular annual meeting of the shareholders of the Capital National Bank, Medford B. Wilson will retire as President of the bank and will be succeeded by Wm. F. Churchman, who has been Cashier for about ten years. Mr. Wilson has sold to Mr. Churchman nearly \$100,000 of his stock, the price paid being \$150 per share. H. W. Moore, who has been Cashier of the First National Bank, of Lafayette, Ind., since the reorganization of that bank in 1882, will succeed Mr. Churchman as Cashier of the Capital National Bank. It is also announced that the dividend rate of the Capital National will be increased from five per cent. to six per cent. annually. As the surplus is now over \$150,000, or more than half the capital, this advance in the dividend rate is fully warranted.

**St. Louis.**—The Hamilton Trust Co., which was organized about a year ago with a capital of \$500,000, has been absorbed by the Commonwealth Trust Co. Edward Hidden, formerly President of the Hamilton Trust Co., and A. N. Edwards, Vice-President, have been elected Vice-Presidents of the Commonwealth Trust Co.

**Chicago.**—The First National Bank recently moved into its new building. An illustration of the new structure was presented in the *MAGAZINE* several months ago.

**Cleveland, Ohio.**—An agreement has been reached for the consolidation of the Prudential Trust Co. and the Caxton Savings and Banking Co., the merger to date from January 12. The capital of the succeeding bank will be \$600,000 and the surplus \$150,000. Both a commercial banking and Savings business will be transacted. A name for the consolidated institution had not been decided on at the time of the announcement of the merger.

—The Cleveland Trust Company has bought outright the good-will and business of the Central Trust Company of this city. The capital of the Central Trust Company is \$1,000,000. The terms of the sale are private.

—The Union National Bank, of which Senator Hanna is President, it is reported, will unite with the Colonial National Bank. The merger will make the united institution one of the strongest National banks in the Middle West.

**Des Moines, Iowa.**—The Des Moines Savings Bank, which is the oldest bank here, will increase its capital from \$400,000 to \$500,000. This will enable the bank under the law to make a loan of as much as \$50,000 to one customer, and will thus aid in extending the bank's business among corporations, firms and individuals doing an extensive business.

**Dayton, Ohio.**—Frederick A. Funkhouser was recently appointed Cashier of the Winters National Bank, to succeed J. C. Reber, resigned. Mr. Funkhouser's promotion was due to meritorious service. He entered the bank ten years ago as a messenger and has worked his way up to his present position.

## NEW BANKS, CHANGES IN OFFICERS, ETC.

**TOTTENHAM**—G. P. Hughes.

**NEW BRUNSWICK.**

**ST. JOHN**—Blair & Co.

**NEW VICE-PRESIDENT OF THE GUARANTY TRUST CO., NEW YORK.**

Walter G. Oakman, President of the Guaranty Trust Co., of New York city, recently announced that he would not be a candidate for re election in April next, and in the meantime asked that the directors appoint a first Vice-President who should be active in the management of the company's affairs. Thereupon the board named for this position J. W. Castles, of New Orleans. Mr. Castles has accepted the place, and will enter upon his duties this month. At the April meeting of the board he will, it is expected, be elected President.

Mr. Castles was for many years President of the Hibernia National Bank, of New Orleans, and when in 1902 this bank and the Southern Trust and Banking Co. were merged into the Hibernia Bank and Trust Co., he was elected President of the latter company. Under his management the Hibernia Bank and Trust Co. soon took rank as the largest bank in New Orleans, and one of the largest in the entire South. The company lately erected an imposing modern building, which will be occupied for banking and office purposes. The Guaranty Trust Company not only does a very large and important trust business in the city, but has established a branch at Manila which has been selected as a depository for insular funds. Mr. Castles, through his long experience, wide acquaintance and proved capacity as a bank and trust company officer, will be a valuable acquisition to the management of the company.

J. W. CASTLES,  
 First Vice-Pres. Guaranty Trust Co., N. Y.

## NATIONAL BANK RETURNS—RESERVE CITIES.

By the courtesy of the Comptroller of the Currency at Washington, the **BANKERS' MAGAZINE** has been favored with the complete returns of the National banks in all the reserve cities, at the date of the call on November 17, 1903. These are published below in conjunction with the preceding statement of September 9, 1903. In this form the figures become much more valuable by reason of the comparison. The complete returns of National banks in the reserve cities are published in the **BANKERS' MAGAZINE** exclusively.

## A REVIEW OF THE FINANCIAL SITUATION.

---

NEW YORK, January 4, 1904.

AN EXTRAORDINARY ADVANCE IN THE PRICE OF COTTON was one of the important and serious incidents of the last month of the year just closed. Speculation carried the price for middling uplands in New York to 14.10 cents on December 23, the highest price recorded in many years. A year ago the price was 8½. The Government estimate of the crop was slightly less than 10,000,000 bales, or about 700,000 bales less than the previous year's crop.

The export movement of cotton has been very large since September and the price has averaged more than 2 cents per pound higher than it did in 1902. In September the average export price was 10.8 cents against 8.6 cents in September, 1902. In October it was 10.8 cents against 8.5 cents in 1902 and in November it was 10.5 cents against 8.4 cents. In the three months ended November 30 we exported 1,417,000,000 pounds of cotton at a value of \$149,000,000 as compared with 1,276,000,000 pounds valued at \$107,000,000 for the same period last year. Of the \$42,000,000 increase in value \$30,000,000 is represented in the increased price. So far at any rate the advance in price has apparently been productive of good results, but disaster usually follows in the wake of excessive speculation.

To the large exports in cotton is due in great part the extraordinary increase which has taken place in our exports of merchandise. In November the exports were more than \$160,000,000 while the imports were only \$77,000,000. The month shows therefore the extraordinary balance of \$83,000,000, a total rarely exceeded and not since October, 1900, when the total exports were \$168,000,000 and the net exports nearly \$93,000,000.

The recent increase in exports has brought the total for the eleven months of 1903 to within \$16,000,000 of the high record made in 1901. As the December exports in that year were about \$137,000,000 the total for December, 1903, would have to exceed \$153,000,000 to make the year's record equal that of 1901.

It was somewhat of an unusual experience for the stock market to advance in the face of a rampant speculation in cotton, but such was the experience in December. Prices of both stocks and bonds made a substantial advance, but of course the final prices of 1903 are considerably below those of 1902. That the year closed without any break in the market during the final weeks was an agreeable surprise to many apprehensive operators.

The year closed without any serious stringency in the money market. The highest rate call money commanded was 9 per cent. on the last day of the year, while even on that date the rate was down to 6 per cent. It is generally believed that the future of the money market is one of assured ease. While the increase in the supply of money continues at the present rate there is little fear of stringency in the absence of a wilder speculation in securities than now exists.

Statistically money is very plentiful. The amount in circulation on January 1 is estimated at more than \$2,446,000,000, an increase of \$117,000,000 in a year. Since June 30, 1900, more than \$400,000,000 has been added to the circulating medium of the country. The character of our circulation has also vastly improved. At the present time nearly \$1,050,000,000 of the money in circulation is gold. In 1896 there

was less than \$500,000,000. The large exports of merchandise have enabled us to retain our domestic production of gold, and last month we were able also to draw gold from abroad. Any activity in our money market looking towards higher rates for loans would stimulate gold imports.

The position of the New York clearing-house banks at the end of 1903 is somewhat stronger as to reserves than it was two years ago, but the surplus reserve is not quite as large as it was last year. The following comparison of the principal items contained in the statements issued at the beginning of each of the past four years, and the statement of January 2 this year, may be found of interest :

|                      | 1900.         | 1901.         | 1902.         | 1903.         | 1904.         |
|----------------------|---------------|---------------|---------------|---------------|---------------|
| Loans.....           | \$677,797,000 | \$803,989,800 | \$869,546,800 | \$875,352,100 | \$908,570,500 |
| Deposits.....        | 743,953,100   | 870,950,100   | 929,204,100   | 873,115,000   | 886,178,900   |
| Specie.....          | 144,001,700   | 164,827,800   | 164,808,800   | 154,928,700   | 160,675,800   |
| Legal tenders.....   | 54,994,300    | 67,069,800    | 74,257,800    | 73,473,900    | 70,410,800    |
| Surplus reserve..... | 11,767,725    | 14,150,075    | 7,515,575     | 10,193,850    | 9,541,875     |
| Circulation.....     | 16,234,100    | 30,982,500    | 31,874,200    | 45,706,300    | 44,926,400    |

The loans are larger than they ever were before at this time of year but deposits are less than they were two years ago. Compared with four years ago loans show an increase of \$231,000,000 and deposits of \$137,000,000. Surplus reserves have not varied to any great extent while circulation has increased since 1900 although a reduction occurred in 1903.

While the money supply, the Government finances and the banking situation generally present favorable features, there are trade and industrial conditions which invite conservatism. Labor troubles have been more or less prominent in the last month of the year as well as during the year. They reached an exaggerated shape in Chicago where funeral rites were denied to people without the pale of unionism. In Colorado and other parts of the country labor difficulties have made trouble. Here in New York the building and other trades are suffering from the effects of past and pending strikes.

That industrial enterprise has suffered a check is apparent in the decline in the production of iron and steel. On December 1 the pig iron furnaces in blast had a capacity of only 251,181 tons per week. This represents a decrease in one month of 31,000 tons a week and in six months of 147,000 tons, or about thirty-five per cent. Last August the furnaces turned out 1,614,121 tons of pig iron, and in November only 1,073,840 tons.

Since last May the production of steel by United States Steel Corporation plants has also declined almost continually. In that month the output was 1,037,265 tons, in August it was 993,564 tons, in October 829,215 tons and in November only 553,067 tons, or only about one-half of what it was in May last. These facts indicate to what extent there has been curtailment of activity in certain lines of industry.

Some figures suggestive of the prosperity of the American farmer have come from the Chief of the Bureau of Statistics of the Department of Agriculture during the past month. The farm values of last year's crops calculated on the basis of prices ruling on December 1, are less than for the crops of 1902; nevertheless they are very satisfactory, for 1902 was an exceptional year. The value of the corn crop of last year is about \$953,000,000, of wheat \$443,000,000, of oats \$287,000,000, of barley \$60,000,000, of rye \$16,000,000, of buckwheat \$9,000,000, of flaxseed \$22,000,000, of potatoes \$152,000,000, of hay \$556,000,000 and of tobacco \$55,000,000, a total of \$2,534,000,000. This is about \$83,000,000 less than the estimated value of the crops of 1902, but very much larger than the values reported in previous years.

During the month there have been many rumors of war as imminent between Russia and Japan. To what extent such a conflict would affect conditions here

there is a wide variance of opinion. But hopeful views as to the immediate future generally prevail.

**THE MONEY MARKET.**—The usual advance in rates for money at the close of the year occurred in the last few days of the month. The rate for call money, however, went no higher than nine per cent., which rate was recorded in November. At the close of the month call money ruled at 6 @ 9 per cent., the average rate being 7 per cent. Banks and trust companies loaned at 6 per cent. as the minimum rate. Time money on Stock Exchange collateral is quoted at 5½ per cent. for 30 days, 5¼ @ 5½ per cent. for 60 days, and 4½ @ 5 per cent. for 3 to 6 months on good mixed collateral. For commercial paper the rates are 5½ @ 5¾ per cent. for 60 to 90 days' endorsed bills receivable, 5¼ @ 6 per cent. for first-class 4 to 6 months' single names, and 6 @ 6½ per cent. for good paper having the same length of time to run.

Deposits reached the highest amount, \$1,019,474,200 on Feb. 21, 1901, loans, \$950,208,700 on February 21, 1903, and the surplus reserve \$111,623,000 on Feb. 3, 1894.

weeks deposits increased \$43,000,000, and in two weeks loans about \$30,000,000. Loans at the close of the year were \$33,000,000 larger than they were a year ago, while deposits show an increase of \$13,000,000. The surplus reserve is \$3,400,000 larger than at the close of November but is \$650,000 less than a year ago.

| Total.....                               | \$381,484,830   | \$382,726,830  | \$384,625,930  | \$389,335,680  |

The National banks have also on deposit the following bonds to secure public deposits: 4 per cents. of 1907, \$4,658,200; 5 per cents. of 1894, \$661,300; 4 per cents. of 1895, \$11,813,550; 3 per cents. of 1896, \$7,692,220; 2 per cents. of 1890, \$112,493,900; District of Columbia 3.65's, 1924, \$1,809,000; State and city bonds, \$23,204,170; Philippine Island certificates, \$3,000,000; Hawaiian Islands bonds, \$1,045,000, a total of \$169,379,940.

UNITED STATES PUBLIC DEBT.—There were \$4,600,000 of 2 per cent. bonds issued in December, largely in exchange for the 4 per cents of 1907. Of the 5 per

cents of 1904, \$1,100,000 were redeemed, leaving about \$6,600,000 of these bonds yet to be retired. The aggregate debt was increased \$2,600,000. The net debt less cash in the Treasury shows a reduction for the month of \$11,600,000 and for the year of \$38,000,000. The net cash balance including the \$150,000,000 gold reserve is \$379,000,000.

GOVERNMENT REVENUES AND DISBURSEMENTS. — The Government reports a surplus of nearly \$10,500,000 for the month of December, which wipes out the previous deficits and makes a surplus for the first half of the current fiscal year of \$8,425,000. The surplus in the six months ended December, 1902, was nearly \$25,000,000. The receipts this year have fallen off \$11,000,000 and expenses have increased \$5,500,000.

UNITED STATES FOREIGN TRADE.—The large export movement in cotton made the total exports in November exceed in value \$160,000,000, the largest total ever recorded for that month. The increase over November, 1902, is \$85,000,000 and nearly \$83,000,000 of this gain was in cotton exports. Imports of merchandise fell off in November and were the smallest for any month since June, 1902. The total value was \$77,000,000, making the net exports exceed \$83,000,000.

**CURRENCY REFORM FOR MEXICO.**—A plan for reforming the currency has been prepared by the Fifth Sub-Committee of the National Monetary Commission. The committee advises that in order to obtain stability or fixity of international exchange the Government should be advised by a monetary commission to adopt a monetary system based on the gold standard. The committee does not recommend immediate adoption of the gold standard, but rather creating a system very similar to that which the United States Government has put in operation in the Philippines. The broad features of the plans are as follows :

"New dollars are to be coined and introduced into circulation without impairing the practical maintenance of their parity with gold with a ratio that may be adopted. The Government is to close the mints to the free coinage of silver dollars, and reimportation of the present pesos is to be prohibited. It is recommended that the ratio of the new dollar to gold shall be established on the basis of the average gold price of the Mexican pesos in the foreign markets during the last ten years, with an increase not exceeding ten per cent.

Gold coinage to be suspended until such time as the silver dollars shall have attained a parity with gold, and when the circulation of gold coins will not, in the opinion of the Government, impair the maintenance of that parity. The new dollars for a specified time are to be exchanged for pesos at par.

A reserve fund in either gold or silver is to be created and maintained either in the republic or abroad. If the gold price of silver in foreign markets shall rise so that silver dollars shall come to possess a value equal or greater than ascribed to them by the legal ratio adopted, steps will be taken to demonetize the silver dollars and to introduce a gold standard with free coinage and the use of the yellow metal as the medium of circulation."

**CURRENCY SYSTEM FOR CHINA.**—The monetary committee appointed by the Government of Japan to consider the proposals of the American committee for a uniform system, based upon the gold exchange standard for China, has made a report cordially approving the position taken by the American commission. The conclusions of the Japanese committee are as follows :

"Whereas the chaotic condition of the currency such as now exists in China, namely, a condition under which there is no currency in the strict sense of the term, is highly disadvantageous, not to China alone, but also to those countries that have commercial relations with her, it is the earnest desire of the committee that a definite and uniform currency system be speedily instituted and actually put into operation throughout the whole Empire of China, or, at all events, in such parts of it as are of commercial importance.

If possible it is desirable that the currency system mentioned above should be on a single gold standard. But in view of the present condition of China it is too much to expect that the currency reform can be started at once on a perfect system, and as it is considered highly disadvantageous to delay the said reform on that account, it is advisable to adopt the suggestions of the American committee as a matter of expediency. But it must be admitted that utmost skill and care are needed to overcome the great difficulties which necessarily accompany the operation of the system.

It is considered desirable that the ratio of 32 to 1 between gold and the silver coins should be adopted for other silver-using countries that may hereafter adopt the gold standard."

## ACTIVE STOCKS, COMPARATIVE PRICES AND QUOTATIONS.

The following table shows the highest, lowest and closing prices of the most active stocks at the New York Stock Exchange in the month of December, and the highest and lowest during the year 1902, and also, for comparison, the range of prices in 1902:

|                                 | YEAR 1902. |      | HIGHEST AND LOWEST IN 1903. |               | DECEMBER, 1903. |       |          |

## BANKERS' OBITUARY RECORD.

---

**Adee.**—Ernest R. Adee, Secretary of the Mercantile Trust Co., New York city, died December 18, aged forty years.

**Bowman.**—George M. Bowman, President of the First National Bank, San Jose, Cal., died November 27. He was born at Dubuque, Iowa, in 1844. In 1887 he became one of the incorporators of the Garden City National Bank, of San Jose, and in the following year was elected Vice-President, continuing to hold this office when the bank was succeeded by the Garden City Bank and Trust Co. He resigned this office to become President of the First National Bank, of San Jose.

**Bushnell.**—Asa C. Bushnell, Cashier of the Yale National Bank, New Haven, Ct., died December 15, aged forty-seven years.

**Drake.**—Charles F. Drake, President of the Bank of Fort Scott, Kan., died December 19, aged seventy-one years. He went to Kansas in 1858, on foot, and practically penniless, but became one of the wealthiest men in the part of the State where he resided. In 1863 he was a member of the Legislature.

**Eavey.**—Henry S. Eavey, who has been engaged in banking at Hagerstown, Md., since 1873, died December 23, in his eighty-fourth year. At the time of his death he was senior member of the well-known banking firm of Eavey, Lane & Co.

**Garth.**—Granville W. Garth, President of the Mechanics' National Bank, New York city, died December 25, aged forty years.

**Gorham.**—Geo. A. Gorham, President of the Farmers' National Bank, Houlton, Me., since its establishment in 1890, died November 30, aged fifty-eight years.

**Hassinger.**—Jacob Hassinger, President of the Germania Savings Bank and Trust Co., New Orleans, died December 8, aged seventy-five years.

**Pabst.**—Capt. Frederick Pabst, President of the Wisconsin National Bank, Milwaukee, Wis., and head of the Pabst Brewing Co., died January 1, aged sixty-seven years. He was a director in a number of corporations and was a man of great wealth.

**Pigot.**—Joseph B. Pigot, director and Cashier of the Wallabout Bank, Brooklyn, died December 8, in his fifty-sixth year.

**Plunkett.**—William R. Plunkett, Vice-President of the Agricultural National Bank, Pittsfield, Mass., died December 7, aged seventy-two years. He was a director and officer in a number of important corporations, and was for several years a member of the State Legislature.

**Tower.**—Augustus C. Tower, senior member of the Stock Exchange firm of Tower & Sherwood, New York city, died December 23. He was born at Cambridge, Mass., in 1853. In 1877 he graduated from Harvard and in 1879 became a member of the Stock Exchange, of which he was for some time a member of the governing committee. The firm of Tower & Sherwood was formed about seven years ago.

**Tyler.**—Captain Warren Tyler, Cashier of the Polk County National Bank, Bartow, Fla., and President of the State Bank, Lakeland, Fla., died December 21, aged forty years.

**Wainwright.**—E. Z. Wainwright, President of the Arsenal Bank, Pittsburg, and largely interested in important business enterprises in that city, died December 20, aged forty-four years.

**Wells.**—Albert P. Wells, formerly President of the Fifth Avenue Bank, Brooklyn, N. Y., died December 11. He was born in Brooklyn sixty-five years ago and had always resided there. He established the firm of A. P. Wells & Co., cotton brokers, and when the Fifth Avenue Bank was started, in 1887, he became President. Later the bank was absorbed by the Mechanics' Bank and operated as a branch, Mr. Wells becoming a director of the Mechanics' Bank.

**Wilcox.**—George S. Wilcox, President of the Dime Savings Bank, Cromwell, Ct., died December 4, aged sixty-nine years.

---

FIFTY-EIGHTH YEAR.

FEBRUARY, 1904.

VOLUME LXVIII, No. 2.

---

**T**HE CONDITION OF THE EXPORT TRADE of the United States at the close of 1903, owing chiefly to the high price for cotton, was even more favorable than at the close of the year 1900, when it was claimed that a fund of between two and three hundred millions of dollars stood to the credit of our bankers in European markets. The effect of this experience during the following years was to start the great prosperity boom which led to the speculative excesses that culminated last summer. The foreign balance in 1900 was not to any great extent paid in gold, though some gold was purchased, but it was largely invested in European securities and ships and in importations of goods.

The present balance anticipated from the great exportations of last year undoubtedly places the country in as good a position abroad as it was at the close of 1900. But there is another side to the story. The railroads of the United States have borrowed largely abroad during the past summer, and there may be the Panama forty millions to pay if the canal matter is ever settled on its present basis.

There is a reason why the country should not draw gold for settling the balance even if it had no other use for the money. The unsettlement of foreign money markets, which would undoubtedly result from inordinately reducing the reserves of European banks, might have an injurious effect on foreign money markets, and in the present era of international trade it becomes necessary for the bankers of one country to avoid crippling those of another, just as it is necessary for the banks in any one money market to support each other. In fact, moneyed capital in all parts of the civilized world has become so interdependent that its earning power can only be sustained by carefully nursing every market. If our bankers have a large balance to their credit abroad which is in a situation to earn interest for them, it would be unwise to order it home unless there was some opportunity to use it with equal or greater profit and security

at home. This country has all the money it can use at the present time to advantage, and more gold could only swell the reserves and perhaps induce dangerous speculation.

In the years following 1900 the great credit our bankers built up abroad, and the obligations they had placed foreign bankers under by refraining from pressing for immediate remittance, enabled our bankers to borrow immense sums of foreign capital to use in the various railroad and trust combination enterprises which gradually sprang up. The results of the free hand they had were not altogether happy. The stream of wealth which they seemed to have the control of to some extent turned their heads, and the collapse of some of the great security deals was the consequence, and much wealth was sacrificed when the foreign borrowings had to be paid back.

It is to be hoped, now that Providence has given our financiers another chance, that they will be influenced by so recent a lesson, and use this new opportunity to make good the losses incurred by the extravagance of the last two years.

It is a great advantage to a country when there is a lack of investment opportunity at home, to be able to place its moneyed capital securely and profitably in foreign markets, not directly by investment in foreign securities but through foreign banks who act as their agents. Our financiers thus have in addition to such securities as are given for the loans the indorsement of the foreign banker. When the state of our home markets warrants the return of this capital from abroad, it is to be wished that its influence here will not be to cause a *resume* of such operations as led up to the catastrophe of the summer of 1903. It would be almost inconceivable that the general public could again within so short a time show a willingness to be led into a second investment in undigested securities.

If, however, the successes of the last months of the present year are to repair the disasters of the era of speculation, the result will be that large sums of money will come into the possession of the general public, just as was the case when the proceeds of the exports of 1900 were finally realized by the real beneficiaries. The profits of the exports of 1900 went largely to the North and West. Those of the last year, being derived chiefly from cotton, will go more to the South. Whether the general prosperity of the country will be enhanced, depends on a number of considerations. It largely depends on the actual profit there has been to those who have produced the commodities and manufactures exported. It may be that raw material needed at home has been sent abroad, and the effect might be to depress some of our own industries. But it is almost impossible to conceive that so great a business has been carried on without returns to some, probably the greater part of those concerned in it.

THE LACK OF ELASTICITY of the National bank note, based as it now is on the security of Government bonds, is deplored by the Secretary of the Treasury and the Comptroller of the Currency. Neither of them suggests any remedy, and perhaps no remedy can be suggested which will be free from the danger of lessening the safety of the bank-note paper.

It may be admitted that the experience of the past forty years during which the National banking system has been in operation has proved that the aggregate bank currency has varied in volume with the fluctuations in the price of bonds. But does this positively prove that this want of elasticity or inability to respond to the needs of business by expanding when the rates for money were high and diminishing when they were low, is inherent in a currency secured and made safe by the deposit of a special security in the hands of the Government? Are there not other conditions which have aided in bringing about the rigidity of the bank currency during the last forty years? In other words, has the principle of a secured bank note been at fault so much as the way that principle has been applied?

The Government bonds used as the basis of bank circulation have had an upward tendency in the markets as the credit of the Government has improved, which has not been as yet fully counteracted by repeated refundings and exchanges at lower rates of interest. The bonds have continually been subject to the competitions of the banks and the outside public. For nearly the whole of this forty years the National bank note has had to compete with issues of Government notes, of silver dollars and silver certificates, by which the aggregate of the currency has been kept at such a high point that there was no real business motive for increasing or diminishing National bank notes. Until 1900 the proportion of circulation issued on bonds was ninety per cent. only and in many parts of the United States circulation was unprofitable. The surplus revenues of the Government, and the inducement to the banks to use bonds as security for deposits of public moneys, introduced another element into the competition for bonds and tended to raise their prices.

If the bonds had borne a rate of interest which would have kept them near par in the market, and if the amounts of Government notes and certificates had been fixed, and the Government surplus had been small or non-existent, and if circulation had been issued to the par value of the bonds, and if there had been no restriction on the retirement of notes by the banks, it is believed that the issues of the banks would have been measurably responsive to the wants of business.

These conditions have been very nearly realized at the present time. There can now be no increase in Treasury notes or in silver

certificates or no coinage of additional silver dollars. Circulating notes are issued to the par value of the bonds deposited. The two per cent. bonds now bear such a low rate that the ordinary investor would not care to hold them. The market price they bring is entirely responsive to the bank demand. If this bank demand were solely for circulation purposes, the bonds would command even a less premium than they now do. But if the Government ceases to have a surplus, as is now predicted by the Secretary of the Treasury, the demand for bonds to be used as security for public moneys will grow less, and the bonds now used in this way will be released for circulation purposes.

There still exists one very unfavorable factor, and that is the law which prevents banks from retiring more than three millions of dollars of notes in any one month. If this law were modified or repealed, and other conditions remain as they now are, for the coming year it is believed that the National bank-note currency would begin to manifest a degree of movement which would show that the principle of special security does not necessarily prevent elasticity. Probably this movement would not show itself simply in a change of aggregate amount. It would show itself also in a constant redistribution of currency, retirements in one section being reissued in another. The fluctuations in the price of bonds would be slight and only such as were caused by the pressure of business on the banks

The retirement of National bank notes during the last summer and the increase during the fall months are, it is believed, indications of the possibility of elasticity in a secured currency under favorable conditions. If this is so, the attention of Congress should be turned to making the present conditions still more favorable by removing or enlarging the limit now imposed on the retirement of notes. If fears of too rapid contraction should prevent the entire repeal of the law, the limit of retirement might at first be enlarged to \$10,000,000 per month.

---

THE HIGH PRICE OF COTTON, combined with the fact that the crop, while not so large as the average, was yet a very large production, has given rise to speculation whether the demand for cotton has not reached a point which will insure much higher prices for the future than have usually prevailed. Some insist that the demand has now outrun the possible supply; that the United States cannot be counted on to produce more than an annual average of ten million bales.

It is possible that the exhaustion of land and the ravages of the boll weevil may for some years to come reduce the crop in this coun-

try, which as yet is the main dependence of the world. It is also possible, however, that these drawbacks have been overestimated.

In raising any agricultural product there are always periods when the demand seems to outrun the supply. Any staple is liable at times to be raised in such quantities that the price falls below that affording profit to the producer. The latter becomes in a way discouraged and through the circumstances in which he finds himself, his land being adapted and fitted for nothing else, he keeps on in a listless and perfunctory manner, using less and less capital, and producing less, until the general effect is to diminish the supply. The demand, however, is enhanced by low prices, and at last a point is reached when the supply is insufficient and the price rises. Now the tide begins to turn and the producer receives something to compensate for his lean years. Encouragement ensues, and newer land and better methods of production enhance the quantity of the staple. It has been so with wheat, and it will probably be so with cotton. Those who produce other crops of less general importance are well aware of these vicissitudes. The period of high prices depends upon the time that it takes to prepare or renovate the ground and that required by the growth of the plant. To take an extreme case: An apple orchard takes fifteen years to come into bearing. If high prices for this fruit prevail because of neglect of or dying out of orchards, the man whose trees have just come into bearing may reasonably count on at least a decade of fair prices before competitors can enter into competition with him.

While the land now cultivated in cotton in the South may be to some extent exhausted, yet there are still tracts which can be brought into cultivation. Better methods of cultivation also will be induced by fair prices. In fact, it is as yet hardly fair to assume that the maximum crop has been reached until the effect of better prices on the cultivation of cotton has had time to show itself.

THE SURPLUS RESERVES of the New York city banks are naturally regarded as the measure of monetary conditions, not only in New York city but throughout the country. A good bank statement shows an increase and a bad bank statement a decrease of the surplus cash reserve.

The National Banking Law recognizes money centers, and has always recognized New York city as the great money center. This is a recognition of a fact that could not be disputed. Some would-be economists, in and out of Congress, have from time to time thought that this tendency of the cash reserves to accumulate at certain centers was the result of the reserve law, and have suggested modifica-

tions of the law in order to counteract this tendency. The only result of this phase of opinion has been to apply the law to Chicago and St. Louis, the natural money centers of the West, in the same manner as it was applied to New York. In so far as these cities were actually points to which the cash circulation tended, they have perhaps benefited by the law, but where the law has artificially caused larger cash reserves to be kept in those cities than were naturally demanded there, it must have caused some loss of profits to the banks. The circulation of money throughout the country naturally follows the course of trade, and although law may modify and obstruct this circulation to some extent, yet its effect is comparatively slight.

The cash reserves of New York city, therefore, remain the barometer of monetary conditions notwithstanding the rivalry of the two Western money centers.

The experience of the last half century has shown invariably that after a financial crisis, during the period of recovery from a shock to credit, the cash reserves gradually increase, rates for money fall, and the banks find difficulty in profitably using the money that flows towards them. After the crisis of 1873 before the resumption of specie payments the dead load of surplus reserve carried by the banks, and particularly by the New York banks, was especially noticeable. There was then no way of changing the paper money into gold and silver coin which could be used in foreign money markets. Since the resumption of specie payments the banks could avail themselves of foreign markets, and although the tendency of money to accumulate in the banks at the money centers was as strong after the financial crises which have occurred since the resumption of specie payments, yet the banks have by degrees learned how to prevent their surplus reserves from remaining stagnant.

As long as there existed uncertainty as to the maintenance of the gold standard, the demand for gold for export resulted in an aggravation of the situation, by tending to lower the credit of the paper currency and retarding the revival of credit and enterprise at home. Since the enactment of the law of 1900, which recognized definitely the gold standard, and the enormous increase in the gold reserve of the country which has ensued, the use of money abroad when the market at home is dull no longer arouses any fear that the paper currency will be in danger of depreciation. The gold certificates alone, representing the stock of gold held outside the Treasury, form an immense margin of protection to the gold reserve held by the Treasury, against the legal tenders directly and indirectly against the silver certificates. No one therefore feels any apprehension that the transfer of such cash as is not required at home to foreign markets will give rise to any lack of confidence in the paper currency of the

country. The profits which may arise from the use of our idle money abroad will to some extent make good the losses from depression of business at home.

The growth of the reserves at the money centers, and especially in New York city, can now be regarded with more complacency than they were looked upon during the years when the agitation over silver tended to cast doubt on the soundness of our paper currency. The increase of surplus reserves, where it is not accompanied by an increase of loans, would be a symptom that business depression was still dominating the markets, but accompanied by a healthy increase of loans at the money centers such an increase shows that while there may be some depression in perhaps numerous lines of business, there is a process of redistribution going on that will result in new activities.

The winter has so far been an exceptionally hard one, and the enterprises requiring outdoor labor are at a standstill. For this reason alone it might be expected that the funds required throughout the country would be less than usual. The general condition of the money markets appears to be encouraging rather than otherwise.

---

THE ACTION OF SECRETARY SHAW last summer in accepting State and city bonds as security for public deposits seems to have opened the door for the introduction in Congress of legislation which, if finally enacted as law, would give a great impetus to the contraction of municipal debt.

Representative PRINCE, of Illinois, has elaborated a plan for disposing of the surplus revenue of the Government, by its investment in State and municipal securities. The effect of the measure he proposes would be to secure interest for the funds which now lie idle either in the independent Treasury or the designated bank depositaries.

It is a very plausible and taking idea, that the Government should enter the investment field, in the same manner as a private individual, and by availing itself of its surplus capital increase the public revenues for the benefit of the public. In behalf of such a measure it is argued that the Government bonds now outstanding, with the periods of their redemption fixed, do not afford a suitable outlet for the surplus, which it is assumed will usually exist under the present laws. The evils of withdrawing this surplus from the channels of business circulation are well known by sad experience. The remedy for these evils—deposit with National banks—is criticised as affording opportunity for favoritism and perhaps corruption, although so far no charges of this kind have been seriously made in regard to the use of

National bank depositaries during the long period of forty years since the inauguration of the National banking system. Undoubtedly there has been some rivalry and jealousy among the banks.

The State banks naturally do not take kindly to a privilege exclusively enjoyed by the National institutions, and National banks designated as depositaries of public money excite the envy of those that are not; but apparent favoritism can generally be explained by the circumstances which render necessary the designation of depositaries. The Secretary must designate such banks as are the most conveniently situated for the reception and transfer of funds and which comply with the law as to the furnishing of security.

It is hardly to be apprehended that there will ever be any great danger of abuses arising as long as the Government requires its own bonds as security. As has been pointed out heretofore, the modification of the rule as to security, by receiving State and city bonds, might prove an entering wedge for favoritism in the allotment of public moneys to depositary banks.

But even if there were graver objections than have yet been put forward to placing surplus with the banks, it is difficult to see how such a measure as that introduced by Mr. PRINCE would prove a safe substitute for the present method of returning the surplus to the channels of circulation. If the Government enters the market as a purchaser of municipal and State bonds, it is obvious that there would be a rise of price in these securities whenever the purchase was made. When the Government needed its money, it would have to throw the bonds on the market, and prices would tend to fall. The Treasury could not, to the same extent as a private investor, sell only when the price seemed favorable. If the surplus was large it might happen that the amount of these securities held by the Government would be such a share of the whole amount outstanding as to practically deluge the market and force prices down.

There is already an object lesson in the stock of silver now owned by the Treasury. No one can doubt that the Government would seriously depress the price of silver, if it attempted to make sales of any of the stock it now holds.

No private individual or corporation could for a moment compete with the Government, if the latter should undertake any kind of business. The proposition is virtually socialistic.

The dangers to be apprehended from the Government becoming an investor, for the sake of obtaining interest on its idle money, are much greater than those to be apprehended from the use of banks as depositaries, even if the banks were not required to deposit security. The occasional losses that might be incurred from bank failures would cut no figure in comparison with the losses both to the Government

and the people from undue speculation in State and municipal securities that would surely follow if the Government should be placed in the position contemplated by the PRINCE bill. There is, however, little danger that this measure will become a law. The radical departure from the former precedents of Treasury management would preclude its adoption even if the danger of future surplus was greater than it now is. But as the threat of the surplus becomes less, Congress will regard extraordinary projects for taking care of it with less favor.

---

THE PRICE OF BRITISH CONSOLS continues low, and financial experts are at a loss to account for the failure of these securities to recover from the decline incident to the Boer war. After the close of the war it was expected that this standard security would rise and maintain itself at par, but in fact consols have remained at a level lower than the average while the war was still in progress. Various explanations have been offered, some of which are no doubt extremely reasonable. While the war lasted the price was maintained because it was believed that when the war ended the price would rise and so make them a good speculation. The war loan was taken by syndicates which furnished the money by borrowing from the banks, placing the consols as security and expecting the public to take them at the rise at the close of the war. Apparently the public has not done so, and the banks calling their loans have forced too large quantities on the market. But consols are not undigested securities. They are on the contrary considered the best permanent investment in the world; that is, if one is contented with their income rate. Moreover, the Transvaal loan since the war is virtually guaranteed by the British Government, and may be a factor in adding to the bulk of Government loans now offered to the public. But all this does not really explain why these securities, of such indubitable solvency, are not in sufficient demand to raise their market price at least to par.

It is not a question of particular interest in this country except for the reason that it may involve phenomena in the financial world which will have an effect on all Government securities not only in Great Britain but in the United States and elsewhere. During the last half century there seems to have been a constant rivalry between governments to reduce the rate of interest on their public debts to the lowest possible point. The lower the rate at which a government could borrow, of course the greater the credit. The last half century has witnessed some remarkable feats of financial statesmen in refunding masses of debt at lower and lower rates. In view of these successful performances, there have been many speculations

as to what might be the limit of government credit as thus indicated. Could it be possible that a time might arrive when the public might entrust funds to the Government simply for safe keeping, that is, enable public loans to be made without any interest at all? This is not inconceivable were private investments to become so uncertain or deficient, while government credit was maintained. The capitalist afraid or unable to avail himself of private investments might possibly entrust his funds in this manner to the government.

Instead, however, of there being any tendency to the deterioration of private investments, there has been a trend in exactly the contrary direction. During the time when governments were successfully lowering the rate on their public debts, there was not the same confidence felt in the securities offered by railroads, States and municipalities and the numerous industrial enterprises, that is now felt. These securities were still in an experimental stage, and it may truthfully be said that many of them still remain in an experimental stage. But enough of these securities, outside of national debts, have been tried and tested and found so reliable that they are now serious competitors with government loans. They bring a higher income rate as a rule, and while theoretically they may not be as secure as the national debts, they are practically as safe.

The citizen is now relieved of the care and management of such securities and protected by the great trust companies. Formerly, when an investor held bonds of railroads and other corporations, if anything went wrong, he had to make his fight as an individual. Now the trust companies stand in the breach and are enabled to force the fulfillment of contracts by great corporated bodies with a force equal to their own. The trust company exerts the power of combination in behalf of the individual. The investor looks to his income. No one can expect that he will invest in governments at a low rate, simply because they are secure, when he can get a higher rate on other securities, which are now practically as secure as governments.

The upshot of all this is that where twenty or twenty-five years ago government securities had few competitors in the investment market, they have many to-day. Moreover, these competitors are not confined to the home market of any particular country. A British investor can find safe and income-paying securities in the United States, in France, or in many other countries, and vice versa. There is a solidarity of finance in an international sense not dreamed of a century ago. The protection of private property in war has gone so far that securities at least would never be repudiated because of national hostilities.

The high price of the bonds of the United States appears to be an exception at the present time. The income rate on them is very low, or at least appears so at first sight. But the main reason of this is that their apparent rate of income is supplemented by their use in banking. Another reason is perhaps the small amount of the national debt. Nevertheless, were these bonds deprived of their function of security for bank notes and deposits of public money, it may be believed that our two per cent. bonds would fall below par, and show the same tendency to remain there as do British consols.

While the competition of other better-paying investments lasts, it is probable that governments will have to pay market rates for loans. They can no doubt please themselves by fixing the nominal rate as low as they feel authorized by custom and precedent to do, but the price at which they can sell such bonds will be fixed by the average income-paying power of the securities offered which are practically in the same class with governments. Of course the special reasons which affect the prices of government evidences of debt will vary in each country. Nevertheless, the general rule will be the same. Governments will no longer have the same advantage they once had of offering the only security that was generally regarded as absolutely safe. They may still offer something that theoretically may be admitted to be the best form of security, but it is not now under ordinary circumstances enough better to compensate for taking a lower rate of interest.

It is this new condition of the investment markets of the world which has become prominent within the last ten years which, we think, helps to explain the low price of consols. The same influences will no doubt by degrees more or less affect the prices and rates of all government securities.

---

CONGRESS IS SO ENGAGED with the Panama matter, and with trying to make political capital for the presidential election, that any financial legislation except by indirection, that is except what may grow out of the future evolution of affairs on the isthmus, seems to be further away than ever. The general attitude at the present time in the financial world seems to be one of waiting for something to turn up. The outbreak of war in the East, which is always imminent and yet deferred, the beginning of the construction of the inter-oceanic canal, either one or the other or both, would give an impulse which might break up this period of inactivity.

Probably the absence of any general signs of activity in business is now an excellent thing for the country. The lull may be that which is said to precede the storm, and is natural enough at this sea-

son of the year, and may also masque solid preparation for the coming spring and summer.

If the negotiations between Russia and Japan are brought to a favorable conclusion, and the inter-oceanic canal scheme is postponed indefinitely to meet political exigencies, the business of 1904 will have to run its allotted course without the aid it might receive from extraneous stimulation. There is every reason to believe that there will be a much closer contest than that of 1900 between the two great parties, and that political excitement will run very high. Presidential years as a rule are not regarded as good business years, although with good crops the real or supposed detrimental effect of politics is easier endured. Throughout the whole country there seems to be a prospect of great unrest in political circles, though there is a lack of clean-cut political issues. Party lines are not very distinctly marked either on the monetary or tariff question. The main question at this time, when there seems to be no plain policy marked out by either party, seems to be one of administration. Although the faults of the party in power in this respect may not have been important, yet they afford a handle which their opponents can use to their own advantage. When the voters see no distinct and important issues which draw them to the one side or the other, there is apt to be a very large number who are influenced by the simple desire of seeing a change. The duller business turns out to be, the greater the influence of this feeling.

---

THE MONEY MARKET has been agitating itself over the expected decision in the Northern Securities merger case. The results of the decision are very vital to the railroad interests of the country. It is of great importance to know what the highest court will say as to the right of controlling railroad management by corporate power. Doubtless the suit and the decision so far made have given a check to railroad enterprise in this direction, and this check has been perhaps very far reaching. All those who are in control or who purpose to obtain control of roads have paused and are marking time until they know the result. But the mere rendering of the decision will not probably have any serious effect on the value of railroad securities. If the Northern Securities Company is declared to be a corporation formed to carry on a business in contravention of law, the only effect will be to put things back where they were before the corporation was formed. The railroads will not be destroyed or their earning capacity lessened. If on the other hand the decision affirms the right of the company to exert its powers, then other companies of like nature will be formed unless Congress shall pass a law preventing it.

## THE PRESIDENTIAL CAMPAIGN AND ITS EFFECT ON BUSINESS.

---

Does the presidential election affect the trade of the year in which it occurs, or is this belief only a fallacy founded on coincidence or accident? If, for instance, 1903 had been the year of the presidential election it probably would have been asserted without doubt and with all candor that the summer crisis was the result of the uncertainty and excitement attendant on the political struggle.

The prospect of a possible change of party as the resultant of the struggle and the inauguration of a different policy which might affect trade unfavorably, or the choice of men in either party as candidates whose records and reputations might lead the country to expect novelty of action, are reasonable causes why business men might become timid and irresolute. Some presidential years have been years of depressed business no doubt, and perhaps enough to give some ground to the generally-received belief that the presidential election has an unsettling effect on general prosperity.

It can be believed that the psychological effect on the popular mind after this tradition is fairly established might be observable. It becomes somewhat like the belief in lucky and unlucky days. The prophecy often tends to bring about its own fulfillment, and the mental effect of a universal belief, though unfounded in essential fact, is always great.

There are no essential facts on which to base any faith in the proposition that the presidential year is a bad one for business, or for that reason any worse than any other year. In the last forty years bad years for business have often recurred, but they were as often non-presidential as otherwise. When a bad year comes, however, any prominent event taking place therein is likely to be made the excuse and the scapegoat for the disaster. The panic years of 1873, of 1893, and others of almost equal fame, were not presidential years. Each of them followed the year of a presidential election and it might with some plausibility be urged that the evil effects of the elections of 1872 and 1892 were carried over and culminated in 1873 and 1893. But with the same reason it might be urged that anything bad taking place within the presidential term should be ascribed to the evils of the election year.

This unfounded fear of the effects of election excitement on business ought to be laughed down. Excitement and animation of the popular mind for any other reason are not considered bad for business. While there may be some temporary diversion of attention to political matters, such as is usual on the part of the ordinary voter, this does not as a rule draw him more from his ordinary occupation than do his customary amusements in other years. The political excitement of the year in most cases takes the place of other relaxation. Then again, in a presidential year a great deal of money is spent, and the free circulation of money has never been considered as bad for business.

In those years when financial crises did happen, there is no way of tracing them to the influence of political excitement. The panic of 1884, as an

instance, was the result of the Grant & Ward failure and of the involvement of the Metropolitan National Bank in the railroad schemes of George I. Seney. There was nothing political in it.

This ban on presidential years is of a piece with the philosophy which ascribes prosperity and hard times to the influence of political parties, and would give Mr. McKinley credit for the boom crops of 1898 and blame Mr. Cleveland for the panic of 1893. The great events of the presidential year are the great nominating conventions. These do not occur usually until June or July, after all the spring trade is over and the summer vacations have commenced. Here is already a good six months' business done, and no sensible business man, circumstances otherwise favoring him, is going to lie down and refuse to seize opportunities because this or that candidate is to be nominated in June or July.

On the other hand, the man who is not prepared to do business or who for some reason or other does not wish to do business, will perhaps urge the political excitement as a reason for his inaction. It would be the same with him in any year, but he would have a different excuse ready. There are always a large number of citizens who through fault or misfortune are constantly obliged to find excuses for themselves, and this is less difficult in the presidential year than at other times. If a banker wishes to refuse to make a doubtful loan, or a capitalist desires to evade the pressing promoter, the presidential year furnishes a plausible and graceful excuse.

As to the possible effects on business of changes in policy which seem to be in the air, the currency, the tariff or what not, there have been too many of them in the history of every business man to have an additional one dismay him very much if a new undertaking commends itself to him. Change, threatened or realized, has been the order of the day in the United States, and there are no people in the world more accustomed to discount anticipated trouble and go right on with business than the business men of this country.

There is no reason to think that 1904 will be a bad business year because it is the year of the presidential election any more than because it is leap year. It may be bad for business or good for business, but not either way because of political agitation. But as this belief in the malign influence of presidential elections seems to have gained some foothold, it might be well for some of our scientific observers to examine into the real facts, scrutinizing the past and keeping tab on future events as they occur. Perhaps thus the question may be set at rest.

---

FINANCIAL BILLS REPORTED.—A sub-committee of the House Committee on Banking and Currency on January 13 voted to report to the full committee the Prince bill, requiring the Secretary of the Treasury, under certain conditions, to invest not exceeding \$100,000,000 of the Treasury surplus in gilt edged State and municipal bonds and to sell them at auction if the surplus becomes low.

A favorable report to the committee was ordered on a resolution calling on the Secretary of the Treasury to furnish the House with the names of all National banks which are Government depositories, together with the amounts of the deposits; also on a bill to allow National banks to loan money on real estate, limiting such loans to forty per cent. of the value of the land and twenty-five per cent. of the capital of the banks.

# THE RELATIONS OF LABOR AND CAPITAL.

---

[In the opinion of many bankers and others the present relations between labor and capital are a menace to the continued prosperity of the country. Believing that a full discussion of the subject will tend to a right settlement of existing difficulties, THE BANKERS' MAGAZINE has secured a number of special articles from representatives of both sides of the controversy. The first article, published in the November issue of the MAGAZINE, was contributed by David M. Parry, President of the National Association of Manufacturers; also President of the Citizens' Industrial Association of America, recently organized. In the December issue the views of Samuel Gompers, President of the American Federation of Labor, were presented. Ralph M. Easley, Chairman of the Executive Council of the National Civic Federation, continues the discussion in an interesting way in this number.]

---

## RECONCILING THE CONFLICT BETWEEN EMPLOYERS AND EMPLOYEES.

---

By RALPH M. EASLEY, Chairman Executive Council National Civic Federation.

One of the assets, if it may be so expressed, of the great anthracite coal strike has been the general awakening of interest in the industrial question. The "empty coal-bin" carried it home to practically every citizen. Prior to that strike, the view of the labor problem taken by the public was more or less academic and generally colored by local conditions. The rapid development of industry during the past fifty years has so revolutionized methods of production and distribution that innumerable and most intricate problems have arisen which only some such tremendous jolt would bring to public view. The great coal strike turned the inquiring mind of the public toward the questions lying back of industrial disturbances, such as "fair wages," "shorter hours," "the open shop," "boycotts," "black lists," "piecework," "restriction of output," "opposition to machinery," "minimum wage," "apprentices," "sympathetic strikes," "recognition of the union," "integrity of contracts," "jurisdictional quarrels between unions," etc. These it found to be not only burning practical questions with every employer and employee, but also interesting from a general sociological and scientific point of view.

### THE PIECEWORK SYSTEM.

Take the simple question of piecework, which has caused so many strikes, and which nearly led to the tying up of two large railway systems recently. The public hardly knew what the question meant. A most scholarly and eminent citizen wrote it "peace-work." But in the manufacturing world they would never think of spelling it that way! The Machinists' and Boiler Workers' Unions oppose piecework, while the Hatters' and Glove Makers' Unions will fight for it. The International Association of Machinists is so pronounced in its hostility to piecework that at its annual convention last year it voted to refuse to work by that system after July 1 of this year, and to go to the extreme of calling a general strike, if necessary. The Industrial Commission gives a list of twenty-eight national labor organizations that pre-

fer piecework and twenty-two that forbid it. In England there have been more strikes to secure piecework than to prevent it. The same difference of opinion exists among employers, some being willing to order a lockout, if necessary, to force piecework in their establishments, while others insist upon day labor, believing that system to yield a better quality of work. Back of each of these positions there is an apparently good reason. The bitter hostility of the unions to the piecework system springs from the fact that after fixing a scale of prices for work by the piece, employers, when not checked by a union, often arbitrarily reduce the scale of prices for work upon finding that some of the men are making what they consider too high wages. Here the union comes in and says in effect to the swiftest workers, "You must slacken your speed. By employing all your energy you do not help yourself, for you are reduced at once by your employer, while you are forcing those less speedy to a starvation basis or to over-exertion that destroys their health."

This tendency of the employer thus arbitrarily and selfishly to reduce the scale of wages is so pronounced and recognized by employers themselves that a new plan is being introduced by some manufacturers called the "premium system," which undertakes to remove all cause for the fears of the working-man, and at the same time secure to the employer the benefits held out by the piecework system.

#### THE OPEN SHOP.

The open versus the closed shop is another question that has especially come into prominence the past year; and from the fiery speeches made by the leaders of the opposing sides, one would judge that there is no way out short of the utter annihilation of the unions, if the open shop should prevail, or the extinction of the non-union man, if the closed shop should be adopted. As both Mr. Gompers and Mr. Parry state the matter, there seems to be an "irrepressible conflict;" but, while theoretically the open or closed shop problem seems to be impossible of solution, practically it is being worked out every day. There are closed shops which are working satisfactorily and they are not criminal conspiracies against the public; and there are open shops operating successfully, and the unions accepting such have not gone to pieces, but are stronger to-day than they ever were.

Is there not a great deal of fustian put out on both sides of this question? We are told with great, ponderous eloquence that it is "unconstitutional," "un-American" and "infamous" for an employer to agree to employ only union men. We are told on the other side that an employer who should discriminate against union men would be violating every principle of justice and equity, and in some States the penal code. Is it not possible that both are overdoing the matter just a little? For instance, many employers insist on emphasizing vigorously the liberty and rights of the non-union man, and those rights should be fully protected; but are there not also some rights, and some liberty of action, due the employer? For example, if he wanted a hundred men to perform a certain piece of work, and thought he could secure better service by employing only non-union men, or only union men, only Germans, only Irish, only Catholics, or only Methodists, would it not be his right to so discriminate? And would it be anybody's else business? This, of course, does not apply to labor employed by the Government—City, State or National—but to an individual employer.

Is there not a great deal of human nature in this open shop question? When a union leader goes to an employer and says, "If you don't discharge that 'scab' in an hour, we will tie you up," or "If you employ any non-union men, we will call a strike and put you out of business," the old Adam at once arises in Mr. Employer and he frequently responds by kicking Mr. Agent out of the office. But suppose this same agent should go in and say: "Mr. Employer, we want to make a contract with you to do your work. You want your work performed in a good workmanlike manner, under such conditions and at such rates as we may mutually agree upon. Now, we don't object to working with non-union men, but if you will make an exclusive contract with us, it will put us in a position to discipline and control our men so that we can enforce our contracts, and we can guarantee you better and altogether more satisfactory work." In other words, does not that place the proposal on a business basis? What freedom of contract, or what liberty of action, would be violated by such an agreement? What essential difference is there between that proposition and the common everyday agreement made in the mercantile world between manufacturers and dealers wherein the manufacturer says to the dealer, "If you will handle our goods exclusively, we will make you a discount;" or, as testified to by a manufacturer in a case recently, "If you will make the statement every ninety days that you have sold no goods made by our competitors, we will allow you a discount of ten per cent?"

When Smith lets a contract for a house, the contractor, of course, hires all the men. Smith may never see them, nor does he know whether they are all Catholics, Protestants, Germans, Irish, union or non union men; and in fact he has nothing to do with it, and cares nothing about it. In the case of the Longshoremen and the great lake carrying companies, the union contracts with the employer in just about this manner.

A good illustration of the human nature that crops out in this question came under my notice recently when a conciliation committee, which had worked for a week to settle a strike involving several thousand men, finally secured an agreement upon everything except the disposition of five non-union men. They had been taken in during the strike. The employer said that under no circumstances would he discharge those men at the command of the union. The union emphatically said it would not go back to work until the "scabs" were discharged. Consultation developed the fact that these particular five men were incompetent and undesirable in every respect, but the employer stood on the principle involved and rightly refused to "throw them down," as he put it. The committee prevailed upon the union to give up its contention and go back to work with these men. When the union finally yielded, the leader called up the manufacturer and said, "Well, we will go back to work to-morrow morning." The answer, delivered in a tone as snarling and bitter as it could be made, was: "Well, you will have to work with those non-union men if you do." "All right," was the leader's reply, in his best "Sunday voice," "there won't be any trouble about that." On reaching the shops the next morning they found that the employer had discharged every non-union man.

When an employer makes a demand for an open shop on the public pretense of securing liberty for the non-union man, but privately announces that with the open shop he will "smash" the union, it can hardly be expected that the union will submit. If, as some employers claim, the open

shop means the death of the union, one certainly cannot blame the union for fighting for its life. On the other hand, if a closed shop means the absolute control of all the business of the shop by the union, leaving the employer only to pay the bills Saturday night, then the employer cannot be blamed for wanting to "smash" the union. However, these extreme positions, I believe, are both unnecessary evils, which patience, tact and forbearance will remove in time.

While I believe the employer has the absolute right to make an exclusive contract with the union, I have just as strong a conviction as to the legal rights of the non-union man to determine for himself, without coercion, whether he shall belong to a union, or not, and to work without molestation wherever employed. There is no legal conflict between these two rights.

The bitter feeling toward the non-union man in this country is marveled at by the trades union leaders of England. In many of their contracts there is a clause stipulating that they work with non-union men; but this state of affairs did not always exist. The English unions passed through the bitter stage several generations ago, and doubtless the broader spirit will eventually control in our unions. It is hard to believe when one now sees the tolerance and fraternizing of the various religious denominations, that at one time they were burning one another at the stake on account of differing views.

#### THE RESTRICTION OF OUTPUT.

The question of "restriction of output" is one that has called forth great denunciations of unions and has been the cause of much friction. Many of the union leaders indignantly deny the charge, but they speak from their own craft experience only. There are unions that deliberately place a limitation on work and do it openly in their by-laws, and, generally speaking, all the union rules and methods, whether governing membership, apprenticeships, working with non-unionists, the minimum wage, piecework, machinery or output, are in some form a restriction upon the employer, and have come into vogue to protect the members at some point where they feel that competition will be destructive. But this natural desire to prevent destructive competition is so universal that it is not fair to stop the inquiry with the labor union. It is common to capitalists, farmers, the professional classes, and merchants as well.

The merchant who cuts prices is just as reprehensible in the eyes of the other merchants as is the non-unionist who cuts wages in the eyes of the unionist. The tactics employed in the mercantile and in the labor worlds to deal with the common enemy, the price or wage cutter, are almost identical. Purchasers of holiday books will doubtless remember finding a printed slip in each one containing the following:

"In accordance with the agreement of the American Publishers' Association, which went into effect May 1, 1901, this book must be sold at retail at the published price without discount."

Now, back of that simple little statement there is a history of a combination between ninety-five per cent. of the publishers of all kinds of books and magazines in the United States, and about ninety per cent. of the wholesale and retail booksellers. The publishers made an iron-clad agreement among themselves that they would refuse to sell books to any booksellers who cut prices. This combination between the publishers and the booksellers was so

advantageous that the sellers helped to compel the independent publishers (the "scabs") to join the publishers' organization. As these organizations have existed only three years and include practically all the old-established publishing houses in the United States, I will quote verbatim from the official circulars recently produced in court:

"By special arrangement entered into with the organization committee of the American Publishers' Association, the members of our association are bound not to buy, not to put in stock, nor to offer for sale the books of any publisher who shall finally decline to co-operate with us in the maintenance of the net price system by joining the American Publishers' Association and issuing books under the net price system. Inasmuch as the publishers have carried out their part of the agreement upon which our contract was conditioned, it now becomes necessary for us to preserve our part of the agreement. We had sincerely hoped that you would be pleased to join the American Publishers' Association and co-operate with us through it in the maintenance of the net price system; and if you will take the matter into consideration at the present time, we are confident that you will now join the Publishers' Association and not compel us to take final action in this matter. We inclose a copy of the last issue of the Booksellers' Bulletin. By referring to page 6 of the Bulletin you will see that one publisher has already been cut off by the members of our association. We sincerely hope it will not be necessary to extend the list. Very truly yours,  
AMERICAN BOOKSELLERS' ASSOCIATION."

The resolution on which the above notice was based is as follows, adopted by the American Booksellers' Association June 17, 1902:

"Whereas, All publishers of trade books still remaining outside of the Publishers' Association have been repeatedly invited by us to join the organization and through it co-operate with us in the maintenance of the net price system; and,

Whereas, Such publishers of general trade books as still remain outside of the Publishers' Association are continuing to sell their publications to the few persistent price-cutters, and thus encouraging them to continue their opposition to the net price system; therefore,

*Be it Resolved*, That we, the American Booksellers' Association in convention assembled, do hereby instruct our secretary to give final notice to such publishers that it is our intention to apply Reform Resolution No. 1 unless they immediately join the American Publishers' Association and co-operate through it with us in the maintenance of the net price system; and therefore,

*Be it Resolved*, That should any such publisher on receiving such notice decline to co-operate with us by failing to make application to the American Publishers' Association after receiving final notice, the secretary shall promptly issue notice to all members that Reform Resolution No. 1 is thereafter to be applied to such publisher, and all members shall discontinue handling the books of such publisher as provided by Reform Resolution No. 1 until further notice."

As a further illustration of the methods adopted and the success with which they were carried out, the following extracts are given from a circular letter sent out by one of the publishers:

"Several things have already been demonstrated of interest to the entire trade in connection with the 'no cut rate' movement.

1. The substantial loyalty to the association of all dealers. In only one case (up to date of this letter) has there been any cutting of price—one large department store in New York city.

2. The vigor and promptness of the association to punish those who violate its regulations. The association immediately took steps to assure itself that the cut in price was deliberate and intentional. The entire wholesale publishing trade was at once notified not to sell a book of any kind published by the members of the American Publishers' Association to the offending concern. There is every indication that this order will be loyally carried out by all publishers and wholesalers."

The two organizations above referred to claim they took the only course open to prevent the "demoralization of the trade" by department stores, "home library" and "mail order" agencies, but the methods are strikingly similar to those of the labor unions.

Everyone is familiar with the bitter warfare that has gone on for years between the "cut price" drug stores and the wholesale dealers and manufacturers of proprietary remedies. In fact, the whole commercial world is honeycombed with definite organized efforts to prevent what each trade would term destructive competition, and, in conducting the various fights on these propositions, the boycott, spies, and, in some cases, physical attacks, have been employed. Even the recent disgraceful conduct of the livery drivers in Chicago, where burial of the dead was interfered with, finds its parallel but not justification in the conduct of the "coffin combination," which in many cities has carried its fights against the independent coffin companies to the same disgraceful limit. In one western city, the fight became so bitter that attachments were taken out for the corpses by the rival companies, and, in another, because a man had had an undertaker who handled independent coffins, he could not secure a hearse nor a public conveyance and had to take the remains to the cemetery in a grocery wagon.

While the limitations and restrictions by unions have caused wholesale condemnation, little or no attention is paid to the regular meetings of manufacturers and dealers at which they openly discuss and agree upon prices and limitations of output. The "New York Commercial" of January 2 contained the following statement, which is certainly to the point:

"The power of the Steel Corporation has been demonstrated by its ability to maintain high prices for its finished material in the face of a falling off of something like sixty per cent. in the demand for steel, and reductions ranging from forty to fifty per cent. in the price of pig iron. This has been accomplished through the various pools which have been formed for the purpose of regulating prices and output. Practically all the pools met last December and decided to maintain the 1903 schedule. The iron and steel industry is now controlled by various associations, among them the billet manufacturers, steel rail manufacturers, structural manufacturers, steel plate manufacturers, tin manufacturers, and pig iron manufacturers.

In fact, when one strikes the iron and hardware world, it is difficult to find anything that is not in a pool or combination of some description, where prices are arbitrarily fixed and in some instances output prorated. I do not claim that these pools and combinations are not necessary to maintain stability in the market and, therefore, stability in employment; but I simply desire to call attention to the fact that what is accepted as an every-day matter of necessity on one side ought not to be too harshly condemned on the other. When a union man observes how readily the public acquiesces in the demand of all railroad corporations that their "fixed charges" be provided for beyond any peradventure, he wonders why the union man's "fixed charges," that is his cost of living, should not be as surely provided for by the employer. Thus the "minimum wage" demand is nothing more nor less than what the unionists claim to be their "fixed charges."

Limited space forbids reference, even by name, to the hundreds of combinations one may find upon investigation that restrict prices or limit output. In fact, it can be said that there is scarcely an industry that is entirely free from combinations of capital or combinations of labor in some form. There is an infinite variety in the methods of these different combinations, but there

is a general similarity in their efforts to regulate competition and bring pressure to bear on persistent "competitors," "price cutters" and "non-unionists." It may well be asked, in view of the universality of this effort, What is to be the outcome? and, What should be the policy of the general public toward combinations? We may ask, Shall all combinations be suppressed and all industries be compelled to submit to the unregulated competition of individualism? Or, shall these combinations continue to grow and competition be entirely eliminated in the "ideal state" of socialism? If neither of these extremes should be followed, what shall be the middle ground where competition may continue without being destructive and where the public shall not be exploited by monopoly of capital or monopoly of labor? Shall these combinations be left to work out their purposes, or shall the courts and Legislatures be called upon to deal with them?

Whatever the destructive forces that are finally brought to bear on this phase of the situation, there are some constructive forces whose great potentiality gives us hope that progress is being made, not the least being the "collective bargaining" idea, generally known as the joint trade agreement. While here and there these joint trade agreements between small bodies of employers and employees in a given craft have resulted in conspiracies against the public, now being dealt with by the courts, the great majority of them have proven of immense value in preserving the stability of industry. Such employers' organizations exist in over one hundred different industries like the Stove Manufacturers' Association, the National Founders' Association, the American Publishers' Association and the Bituminous Coal Operators' Association, which meet annually in joint conference with the Iron Molders' Union of North America, International Typographical Union, and the United Mine Workers, respectively, and consider in a businesslike way the conditions of the trade, conditions of labor, and all matters pertaining to the special industry as well as the position of the general public.

The elevating effect of the joint trade agreement system upon the intelligence and character of the union leaders is clearly shown in a statement by Mr. Francis L. Robbins, President of the Pittsburg Coal Company, referring to the sixth annual joint convention of the operators and mine workers of the inter-State bituminous field, held at Indianapolis, in February, 1903. He says:

"Looking back over the recent convention, and comparing it with the conventions held at the inception of the movement, one is struck by the change in the *personnel* of the miners' delegates. Instead of seeing flannel shirts, hob-nail shoes, no vests and often no coats, you meet a body of men as well dressed as any body of men gathered from the middle class in any Eastern city. There has been a corresponding change in the intelligence, as shown in the faces of the delegates, and particularly perceptible to those who have argued scale questions before these meetings for the past fifteen years. It is a critical audience of practical workmen, who are quick to detect sophistry or misleading statements."

Mr. Robbins did not so state, but it is equally true that the tone and breadth of view of the operators who met these men correspondingly improved. Page after page of testimony could be recited showing that the educational side of these joint conferences is important. It was only two months ago that the Amalgamated Association of Iron, Steel and Tin Workers, the organization which deals with all the large iron and steel companies, met in special conference with the employers to consider abandoning certain artificial restrictions which had grown up in the trade and had become

"vested rights." After a week's discussion the union leaders recommended that the restrictions be abolished; a referendum vote was taken by the organization, and the recommendation was accepted. At the same time, the organization of its own volition, in consideration of the trade conditions, offered a cut of ten per cent. in the wages of its men notwithstanding the fact that the organization had a contract which does not expire until May.

#### EMPLOYERS WHO DESIRE TO DESTROY THE UNIONS.

But there is another class of employers, which, under the banner of "law and order," "free labor," "individual liberty," etc., is organized primarily to "smash the unions." These employers refuse to consider the history, purpose and benefits of trades unions and see only the coercive, brutal and lawless methods which have too frequently been indulged in by the newer and cruder unions. Some of these same employers' associations had no sooner become organized than they adopted identical methods of warfare. It is openly boasted by one organization of employers in a city of something over one hundred thousand inhabitants that they compelled every employer to become a member; and that where they found any employer reluctant, they got the banks to shut off his credit and the wholesale houses to refuse supplies.

The attitude of this extreme class of employers and employers' associations is quite similar to that of the extreme wing of the labor movement—the socialists. Socialists denounce the unions and the leaders of the unions for entering into agreements with employers, just as extremists among employers denounce all movements looking toward dealing with unions. The socialists affirm that the class struggle is irrepressible, and that the working-men must fight their employers to the bitter end and make no compromise. There are also a few labor organizations controlled by the socialists which take similar ground respecting employers. The community of sentiment between the socialists and this class of employers' associations appears plainly in an editorial in the socialists' "Daily People" (New York, April 7, 1903), commenting upon the annual address of the president of the National Manufacturers' Association. The socialist editor says that the president is correct in holding that an "equitable arrangement" cannot be effected by the "artificial" method of conciliation or arbitration. An "equitable arrangement," he says, "can only be effected by allowing the class struggle full scope; and as a means to this end nothing is so much to be welcomed as the straight-out tactics" of that association. "Socialism," the editor concludes, "will triumph as a result."

If these two extreme wings of irreconcilables had their way, the outcome would be either arbitrary control by labor or arbitrary control by capital. If all employers stood for intolerance and bigotry, or if all unions stood for tyrannical and unreasonable methods, the end would necessarily be a revolution. But the American people, as a whole, are not willing to enter upon such a permanent warfare of "capital" and "labor." They have enough practical sense to recognize conditions as they exist, and they have the courage and patience to deal with them.

I believe that rightful relations between employers and employees will eventually be worked out in this country in spite of the socialists in the wage-earners' camp and the anarchists in the employers' camp.

## CROP ESTIMATES.

---

The staple crops of this and other countries are, as is well known, under constant inspection from the time of the preparation of the land for seeding until they are received in the market. This inspection is conducted not only by the Government, but by private estimators, who seek this information for the benefit of all who deal in the staples concerned, whether as speculators or as transporters or as dealers or consumers.

The problem attacked seems to be simple enough in theory, but the almost infinite practical detail which it is necessary to watch in order to reach results even approximating accuracy, renders it in fact almost impossible of satisfactory solution. Any one who has watched the course of the estimation of the wheat crop, for instance, is much oftener surprised when such estimates prove to be accurate than otherwise. The Government as well as private estimators seek to have agents in all the places where wheat is grown, who send in continuing reports. But these localities are so numerous, and some of them of so little importance taken singly, that it is almost impossible to secure reliable agents who really observe comprehensively. Even an agent in every township does not necessarily secure a report from the whole country that can be relied upon. The Government, which is more able to afford the expense of a sufficiently distributed corps of crop reporters, does not secure the best service. Blanks are sent out to the agents, and are often filled up and returned in a perfunctory manner, more or less by guess than on a basis of accurate and careful observation. Even when the agent really examines as carefully as he can, spending time and energy, there is great room for error in judgment.

A conscientious man, seeking to report accurately at any given time on the crops in a township, would find it an extremely difficult task to visit every field in which the crop is growing, or even to learn of the existence of many acres under cultivation. Many crops are grown far from the roads, and to visit them would imply a constant round of investigation on foot that might consume weeks of time. Information obtained from the farmers is very unsatisfactory. They often do not know the condition of their crops at a given time. One crop is sown or planted and left very much to itself until harvested and threshed or obtained in a salable condition. In the meantime the farmer turns to other things. He may know generally, or thinks he knows, that things are progressing or perhaps retrograding, and when he comes to harvest be as surprised as any one, at the result, favorable or unfavorable.

But most agents do not take the necessary pains. For instance, the township assessors are required to report on the crops of the previous year. This, one would think, would be easy. There is no motive on the part of the agriculturist to give inaccurate reports, but when he fills in the blanks in answer to the assessor's questions, his recollection on many points is very poor and the returns made of these past matters, which ought to be fixed, are little better than guesswork.

The difficulty being so great with past events, how much greater the difficulty with matters yet in an inchoate condition, as are those connected with the growing crops. The private collectors of crop information cannot go to the expense that the Government can in obtaining reports from local agents, and although they may be better served than the Government by the agents they do employ, yet they must find it impossible to cover the entire field with any great accuracy. All of these things must be well understood by any one who takes the pains to observe what is going on around him in the agricultural districts. But, as Napoleon remarked, a clear and definite and positive statement, even if it be far from the truth, finds acceptance with the bulk of mankind. The Government crop reports and those by other estimators are definite and positive in that they give results in figures, and speculators and traders, having nothing better to judge by, are in a sense compelled to rely on them and guide their action accordingly.

In making these reports, knowing them to be based on data that cannot be implicitly relied on, the estimator is at a loss whether it is wisest to be conservative or optimistic. Optimistic crop reports are more apt to be made than the contrary, because an element of patriotism seems to nurture a bias to make it appear as far as possible that everything is prosperous. The Government reports are more apt to be affected by this bias than those of private estimators, because the statistical department is a part of the Administration and it is better for the Administration in power to have things look well.

Thus Government crop reports are indirectly affected by politics. Private estimators, while not so much exposed to this disturbing influence as those employed by the Government, and while as competitors they correct and check to some extent the Government estimates, are apt to be influenced by motives from which the Government estimators might be supposed to be more free. The private estimator must make his business pay, and is therefore susceptible to being influenced by speculators or traders who may desire reports colored to suit them. But supposing all those, whether estimating for the Government or on their own private account, to be thoroughly conscientious, knowing the faults and shortcomings of the data on which they work, they must also be aware that, whether they overestimate optimistically or underestimate conservatively, they will do equal damage. Speculators and traders are prone to deceive themselves and accept and act upon statements which they accept as accurate because they chime with their wishes. The mistakes made in that portion of crop estimates relative to available stock are usually laid to the difficulty of knowing how much of the crop is still in the hands of farmers. But while no doubt this difficulty is one cause, yet it is believed there are also great errors made as to what is called the visible supply or in transportation. The amount of wheat, for instance, in the elevators and in the hands of millers is probably never accurately known. Even after a year has passed and all the wheat grown that year could theoretically be reckoned up and measured, such estimates as are made have often proved inconsistent with other facts. This has been shown often enough by the disastrous failure of those who have attempted to corner wheat. Grounding their operations on what were supposed to be irrefragable information, the supply has been such as to upset all their calculations.

On the other hand, some corners have succeeded because the result

showed that the estimates of stocks on hand were too large. The fact that more corners have proved disastrous to their manipulators than the contrary, goes to prove that the error in estimate of the stock of wheat in the country is more apt to be under than over the true amount which can be made available if the price rules sufficiently high. As before stated, the concealed wheat is chiefly that in the hands of the producers. The reason that this does not immediately appear, or often remains concealed after prices have been offered which it would seem ought to bring it out, is due to defect in transportation facilities—either failure of the railroads or bad conditions of other roads. The effect of this is to make such a variation of prices between the localities where the wheat may be concealed and the price at the central market, that the latter has little or no effect on the holder of the grain. The prices offered by local dealers, millers and elevator men, who deal directly with the farmers, are usually much below the central price quotation. There is often much discount on account of the quality of the grain not being up to standard. The farmer is often at the mercy of middlemen, and more particularly those farmers who hold small lots of grain, which really form a large aggregate if they could be brought together. The man who raises a small quantity is always at a disadvantage in marketing, and this disadvantage causes him to hang back more or less.

All these considerations lead to the conclusion that the apprehensions expressed as to the wheat and also as to the cotton crop of 1903 are perhaps to some extent unfounded. The same conditions that prevent accurate estimates of the wheat raised in any year apply also to cotton. It is believed that both crops, as time advances, will be found to have been somewhat underestimated rather than the contrary.

The question naturally arises, is there then no hope for any improvement in the forecasting and final estimation of the quantities of staple crops raised? There seems to be no hope in the direction of some new invention for obtaining information. Perhaps something more might be done by making the agents who collect the data exercise more care and be more accurate in their returns. No doubt this is what both the Government and private collectors of crop information are striving for. But when the matter is one of such almost infinite detail, it can hardly be expected that all the sources of error can be eradicated. Nor is it altogether desirable that perfect accuracy in this kind of knowledge should be obtained. It is conceivable that perfect and absolute knowledge of the condition of a growing crop at every stage, after every shower or storm, with the same knowledge as to the quantity on hand at any time, would give the speculator and trader inordinate advantage over the producer. It is the element of chance, not to be removed by the utmost human skill and foresight, that distributes advantages and disadvantages like rain—alike upon the just and the unjust. No one wants to be placed at the mercy of the superior calculator who, gaining enough as it is by his higher degree of faculty, would become omnipotent if aided by absolutely accurate information.

On the whole, however, the crop reports, if properly used, in spite of their necessary inaccuracies and shortcomings, are of greater benefit than otherwise. The only thing is that they be generally understood for what they really are. The shrewd ones already know how to take advantage of the faith which a large number of men place in these reports.

## THE ELEMENTS OF CREDIT.

---

One of the most important factors in the mechanism of modern finance is the use of credit. Credit has so greatly economized the use of money that it has led in some quarters to the belief that it was capable of superseding money entirely. The use of credit in one form or another has become so nearly universal that money, if it did not retain the important function of the standard of value, would be to a great extent reduced to the subordinate role of settling retail transactions. The greater part of the commerce of the world is carried on by a refined system of barter, in which banking credits of one sort or another are the chief factors; but sound banking involves the promise to pay metallic money, and, therefore, is based upon such money.

Credit consists in placing capital at the command of another to be repaid at some future time. One of the simplest definitions of credit is that of Professor Devas, "Agreed postponement of payments in currency."\* Every exchange involves the delivery of an equivalent; but where credit enters into a transaction the person who surrenders to another goods or services receives as his equivalent only a right to demand something in the future. If the equivalent is a promissory note, as is customary in commercial transactions, it becomes the property of the one who receives it to do with it as he will. He may keep it until maturity and then collect from the maker of the note the money which it promises, or he may sell it at once to a bank and thus get the immediate command of the amount for which it calls, less a charge called "discount," for the early use of the money. According to the definition of Professor Perry, therefore:†

"A present equivalent is always rendered by both parties in every commercial transaction; but the present equivalent in the case of a credit transaction is the right to demand something of somebody some time in the future."

The equivalent rendered on one side might conceivably be a merely oral promise; but it is usually a written instrument, and it is only such instruments in proper form with which the profession of banking has to deal. Credit may consist simply of accommodation extended to producers, manufacturers and retail dealers in merchandise among themselves. It is their operations in producing goods which form the substantial basis of commercial credit. Before the division of labor had resulted in the organization of the modern machinery of exchange, credit was often of a personal character, and did not bear the same relation as at present to the mechanism of trade and industry. The older writers divided loans into loans for consumption, and loans for aiding production. The former were not only non-commercial in character, but were usually more precarious and uncertain of payment. Commercial credit is intended for productive purposes. Capital thus borrowed becomes for the time being the exclusive property of the

\* "Political Economy," p. 351.

† "Principles of Political Economy," p. 273.

borrower, and, in the language of Professor Gide, "It is necessary that he take great care to employ this wealth in a productive manner."\*

The basis of commercial credit, as an outgrowth of industrial relations, is well set forth by Coquelin in the following passage:†

"In all countries the greatest number of acts of credit is consummated within the circle of industrial relations—that is, from worker to worker, and from merchant to merchant. The producer of the raw material advances it to the manufacturer who is to work it up, and accepts from him an obligation payable on time. The latter, after having performed the process belonging to him, in his turn hands over this material thus advanced on the same terms to some other manufacturer who is to subject it to a new process. Credit thus extends from one to another up to the consumer. The wholesale merchant makes advances of goods to the retail merchant, after having received them from the manufacturer or the commission merchant. Each borrows with one hand and lends with the other—sometimes money, but more often products."

Consideration of this chain of credit will show, however, that the parties who have delivered goods without immediate payment in currency have in their hands only a promise of its payment in the future. They have parted with their products without receiving money or other capital in return. In doing this they would be compelled to suspend further production until the credit matured and the money was paid, unless they had a sufficient fund of capital for both purposes. It is at this point that the bank intervenes to entrust to them an amount of capital equivalent, or nearly equivalent, to the postponed payment. This is done by the purchase by the banker of the paper promise of the postponed payment. The bank is enabled to deliver capital in the form of gold in exchange for this promise. The bank derives this capital from its own resources, or those which have been entrusted to it. It is able for a compensation in the form of discount to await the maturity of the promise to pay the original obligation. The bank may deliver its own or other promises instead of delivering gold, but it usually delivers something that is exchangeable without delay for capital. The manufacturer or wholesale merchant who sells goods on credit, accepting in payment documents which he can convert into money only at a certain cost, usually takes this charge for credit into account in fixing his prices. Dr. Pierson even goes so far as to say: ‡

"A credit sale is a transaction of a composite character; it is not an ordinary sale, but a sale involving a credit operation. And in this operation interest is reckoned, the interest being concealed in the price. It may safely be said that the profits made by wholesale dealers consist almost entirely of interest on capital advanced, but they always have the appearance of differences in price."

A bank does not create capital by making a loan or issuing its notes. It must derive actual capital from the deposit with it of gold or titles to gold, or it must place its printed obligations to pay gold in the hands of the person from whom it takes the original obligation. These notes enable the person who receives them to obtain in exchange for them the capital of others, because others believe that the notes can in their turn be converted into gold on presentation to the bank. The process may be made even more round-about by the willingness of the person who receives a bank note to remit to another the demand for gold from the bank, since this last party is willing to accept the note in exchange for capital.

## CONFUSION OF IDEAS REGARDING CAPITAL AND CREDIT.

The many refinements which have been introduced into the use of credit and the extent to which promises to pay gold can be substituted for the actual delivery of the metal, taken with the enormous extension and power of credit in modern commerce, have led to much confusion of thought on the subject. It has been contended by more than one writer that the creation of credit is the creation of a new capital, adding greatly to the capital in land, labor, and their products which would be available for the purposes of production if credit was not employed. Professor Macleod has made this proposition the leading theme of his economic works. He has endeavored to convict earlier economists of having acknowledged that credit is purchasing power, that purchasing power is wealth, and that, therefore, credit is wealth, independently of the resources of a country in land, labor, and material things. He declares "that the only true definition of wealth is—everything whose value can be measured in money, or which can be bought and sold—*everything* which has *purchasing power*." As "personal credit can be valued in money," and is purchasing power, it follows, in his opinion, that personal credit is wealth.

The contention that personal credit is wealth turns largely upon the use of terms. There is no doubt of the value of the personal qualities—the training, intellectual acquirements and character—which enable a man to obtain credit. They are a form of wealth to him and to the community. But the contention of Professor Macleod goes beyond this, and insists that the credit itself is wealth, independently of both material things and the personal qualities which command credit. After defining the character of abstract legal rights to money in the form of credit, he declares that "by the fundamental laws of natural philosophy these *abstract rights* are all *wealth*."\* This is true, so far as it relates to the position of the individual. The possession by him of titles to wealth gives him substantial ownership of wealth under the legal rules of civilized nations. But the question is different when this wealth is considered in its relations to the wealth of the community. The creation of a mass of abstract rights does not add to the wealth of the community, unless they are rights to property in other communities.

Looked at from the personal and the legal point of view, the possession of credit is in many cases equivalent to the possession of capital. From the economic point of view, however, the question should be regarded from the standpoint of the aggregate physical capital of the community. This capital consists of buildings, machinery and the materials of production. Credit may facilitate their use, but the granting of credits does not increase their quantity. This is the cardinal fact to be kept in view in following the tortuous course of credit through its manifold forms—that physical capital cannot be increased by issuing documents against it or by exchanging these documents one against another. If this could be done, as Professor Gide points out, it would be only necessary for the people of France to exchange with each other titles to their existing wealth to raise the total wealth of the country at a stroke from 200,000,000,000 francs to 400,000,000,000 francs.†

\* "The Theory of Credit," I, p. 22.

† "Principles d'Economie Politique," p. 329. Mr. Macleod insists that credit claims represent at least future wealth; to which Professor Gide replies, "Precisely; but it is precisely because they are future that one should not count them now."

Credit does much to facilitate the transfer of capital, but it is not in itself capital, and the creation of credit is not the creation of capital. As Garnier correctly declares, "Instruments of credit are only representative signs, giving a right to money, but they are not capital apart from such money." \*

Credit consists in the ability to command money. Commodities are more or less efficient means of credit according as they approximate the universal quality of money, that they can be readily exchanged for other things. The usual forms of banking credit are promises and orders to deliver gold. Where there is no doubt of the solvency of the parties, so that there is no doubt that the gold will be delivered for the full amount specified in the order, such instruments acquire much of the character of money. They can be transferred from one person to another without any deduction for lack of exchangeability. This is true of bank notes, certified checks, and some forms of drafts.

The articles which come next in order in degree of exchangeability among instruments of credit are those which can be sold most readily and without loss. Inevitably the articles which rank first in this class are those for which there are wide and well-known markets, like domestic and foreign bills of exchange, commercial paper of well-established houses, and negotiable securities. These articles under ordinary conditions have a high degree of acceptability as the basis of credit, because they can be turned into money without material loss. If they are accepted at a slight discount, it is because they lack a little the quality of universal and immediate exchangeability, but such a discount can be calculated with reasonable certainty in accepting them in financial operations.

Articles which are not money, but which have a market, are more negotiable than those which have a narrow market. This is true of cotton and wheat, which can be sold in standard grades on the produce and cotton exchanges. Of a somewhat similar character are orders for silver bullion. Silver has ceased to be standard money in most commercial countries. It has become a commodity, like wheat and cotton, whose value is measured in gold. Orders for the delivery of silver bullion therefore have ceased to have a fixed value, and have only a fluctuating value in gold, like other commodities which are sold at gold prices. Silver bullion is sold in organized markets, but they are narrow markets, and it can be used as a substitute for money only in the sense that it can be pledged for credit, like wheat and other commodities which are dealt in in organized markets.

These articles which are sold in organized markets, like wheat and cotton and silver bullion, are valuable as security for credit to the extent that they can be turned into money without loss. That is, they are available for credit up to the limit of the minimum price at which the owners of money believe that they can be sold in organized markets. Hence it comes that bankers, who deal in promises to deliver gold, will exchange such promises for other articles which can be readily turned into money at some ascertainable price. In order to guard against loss, they will deliver money and orders for money in exchange for these articles only to the minimum sum at which they believe they could be turned into money by an immediate sale. Hence come the margins between market value and the amount loaned by bankers

---

on securities, warrants for cotton and wheat, bills of exchange and silver bullion.

#### CONVERTIBILITY OF BANKING CREDITS INTO MONEY.

The banker's loan on a commercial bill is a title to the present use of the capital of others, in the expectation of repayment by the maker of the bill from the products of the capital acquired from the person in whose favor the bill is drawn. If the capital of the maker of the bill is convertible into money value sufficient for the bill, he is solvent and will pay the bill in capital or titles to capital when it matures. Thus in a certain sense credit rests upon commodities; but is subject always to the test of the money value of the commodities as available security. It often happens in practice that an unsuccessful operation in the production and exchange of goods fails to result in loss to the bank which has advanced money upon the documents growing out of such transactions, because the parties who are responsible for the documents have other resources, which they prefer to utilize in meeting their banking obligations rather than confess insolvency. In a broad sense, however, credit rests upon the money value of the commodities. The value of gold in exchange for goods is the test which is instinctively and automatically applied by the banker to the security offered by the borrower. He measures the value of the security by its exchangeability for money. As Bonnet correctly declares: \*

"Metallic money is the basis upon which all transactions rest, the pivot around which they revolve. By skillful combinations and the methods of credit one may extend the field of such transactions, but one cannot do away with the base nor sensibly impair it without great injury to the community."

It is this close connection between banking credits and their convertibility into money which discredits such theories as those of Professor Laughlin, that to get credit "is to obtain a transfer to one's self of commodities under an obligation (variously expressed, according to different habits and circumstances) to return an equivalent amount at a fixed date in the future."† An obligation of this sort would not be attractive to the banker, because it would throw upon him the risk of the fluctuations in the prices of commodities. The intelligent banker does not deal in obligations to return equivalent amounts of commodities; he deals in obligations to pay standard money. When he departs from this rule and exchanges his own promises to pay standard money for promises to pay commodities (without the certainty that he can convert these commodities instantly without loss into money) he invites insolvency. In the opinion of most students of monetary problems, the commodity theory of credit has too often broken down in practice to be any longer considered tenable. Prof. Joseph French Johnson admirably punctures this loose reasoning by his clear-cut definition: ‡

"Credit is an executory contract to deliver money, and is accepted as a means of payment because the acceptor believes the maker will be able and willing to deliver the money if called on to do so."

While the normal and earliest form of deposit involved the surrender of money to the banker, the multiplication of credit operations has introduced

\* "*Etudes sur la Monnaie*, p. 5."

† "The Principles of Money," p. 73.

‡ "Political Science Quarterly," (September, 1908) XVIII, p. 424.

a complication into the deposit system which may be to the beginner a little puzzling. This is the fact that when a bank increases its loans to borrowers, its deposits may advance *pari passu* with the volume of its loans. This comes about in the first instance because the borrower does not take away from the bank the money loaned, but transfers it to his own deposit account, to be drawn upon from time to time. Hence the seeming paradox that without receiving any new money, but by lending what it had, the bank has increased its deposits. The solution lies in the increase which the bank has made in its assets by acquiring the written promise of the borrower to repay the loan in money at some future date. Thus the titles to money which it holds have been increased by the amount of the titles which it has issued against itself by addition to its deposit obligations. "Yet there is a difference," as Mr. Horace White declares, "between the two kinds of deposits, the one being of money and the other a bank credit."\* It does not matter whether the former class of deposits as made by depositors are actually in standard money or checks upon other banks directing the payment of money. In the latter case, such checks can be collected and their proceeds in money added to the cash resources of the bank, or they can be offset against similar claims for money against the bank and its cash resources will be kept unimpaired by a corresponding amount.

Hence in times of pressure, when a bank is subjected to heavy demands for money, it protects its reserves by refusing to increase its loans. This reacts upon the deposits by preventing the increase of those of the class which grow out of lending by the bank; and as loans which mature are paid in money or in titles to money, the stock of money on hand increases. Thus the proper equilibrium is brought about between the bank's outstanding obligations and the money available for paying them. The curtailment of loans under such circumstances brings to a halt the undue extension of credit and is evidence of returning strength on the part of the banks.† The anxiety with which this relationship is constantly scrutinized by bankers and the sensitiveness shown to its changes by rates of discount and foreign exchange is another evidence of the incorrectness of the views of Professor Laughlin, and of the fundamental soundness of the view of Professor Nicholson, that the vast superstructure of banking credit "must rest on a metallic basis," and if this basis is cut away the whole structure would fall."‡

#### CREDIT MECHANISM NOT A MODERN INVENTION.

The mechanism of banking credit is not a modern creation. It has obtained in recent years an extension and variety of forms hardly dreamed of in more ancient times, but in its simpler machinery of banking loans upon notes of merchants and certificates of property it is as old as authentic history. Bucher points out: §

"Credit in its first stage is purely credit for consumption; it is obtained only by the putting in pledge of the person and all the goods of the debtor. At the second stage,

\* "Money and Banking," p. 219.

† Thus the weekly statement of the New York associated banks for November 7, 1903, is thus referred to in "The New York Tribune" the following day: "The most encouraging feature of the exhibit was a decrease in loans of \$11,418,000, this reduction, with the loss in cash of \$9,272,900, accounting for the decline of \$17,571,900 in deposits."

‡ "Money and Monetary Problems," p. 74.

§ "Etudes d'Histoire et de l'Economie Politique," p. 110.

credit is still personal, but servitude for debts gives way to imprisonment. By the side of credit for consumption appears a species of credit for acquiring land, which is clothed in the form of a purchase, and which may be considered pre-eminently as the standard form of credit in town economy. The special form of credit of the modern period, investment credit (*Geschäftskredit*) or productive credit, appears at first in commerce and extends thence to every branch of economic activity."

Credit bearing much of the characteristic stamp of the modern commercial type had already acquired a firm footing in those rich States of Central Asia whose history now survives chiefly in their monuments. Instruments of commercial credit were in use in Assyria, even while the precious metals passed by weight, before the employment of official coinage. Traces of credit by compensation and by transfer orders are found in Assyria, Phoenicia and Egypt before the system attained full development in Greece and Rome. The books of the old Sanskrit lawgiver, Manu, are full of regulations governing credit. He speaks of judicial proceedings, in which credit instruments were called for, of the interests on loans, of bankers, usurers, and even of the renewal of commercial paper.\* In Babylonia contracts were drawn up, in the presence of some priestly or legal official, on clay tablets. The original was placed for safety in either the temple or the record chamber of the city, enclosed in a clay envelope or case, while copies went to one or both of the contracting parties. Many of these documents, preserved in the British Museum, are records of deeds and the partition of real estate, but a few involve loans of silver at interest, and these become more numerous in the reigns of Nebuchadnezzar and Nabopolassar (625-604 B. C.). Loans secured by mortgage on land and guaranty bonds are among the curious commercial documents of these early times.†

The mechanism of credit at Rome was in some respects less advanced than in the ancient civilizations of Asia.‡ Instruments of credit are recognized in the earlier imperial laws and in the Justinian Code, but the night of barbarism, which obscured letters and the arts in the western world during the Middle Ages, destroyed for a time the security of commercial transactions and the system of credit depending upon such security. It was at Lyons, the entrepot of Italy in the Middle Ages, that bills of exchange first became common in modern times, and it was there also at the fairs that the settlement of debts by compensation was accomplished while legal safeguards were too slender to justify extensive credit transactions. The operation is described by Professor Macleod as follows:§

"Merchants in France and other countries did not make their bills payable at their own houses, where they must have kept large sums in specie to meet them, but they made them payable only at these great fairs. In the meantime their bills circulated throughout the whole country, and performed all the functions of money. On a fixed day of the fair the merchants met together and exchanged their acceptances against each other. By the principle of *compensation*, which will be more fully described in a future chapter, these acceptances exchanged, reciprocally paid, discharged, and extinguished each other. Boisguillebert, the morning star of French economics, says, that at the fair at Lyons, eighty millions of bills paid and discharged each other without the use of a single coin."

At the end of the sixteenth and the beginning of the seventeenth century the Genoese attained predominance in financial matters, and the fairs of

Placenzia became the clearing-house of Europe. The representatives of fifty or sixty great houses assembled there every quarter, exchanged bills, and fixed rates on various places in Europe. Admission to the clearings required a guarantee of 2000 crowns, and paper to be settled there rested in a measure upon the combined credit of all the great exchange houses of Europe \* Money was hardly required at all in the settlements, and it was common knowledge that the bankers who conducted these great transactions had by them barely enough for the needs of a few days.

The bill of exchange was one of the earliest forms of credit, and its use was extended beyond its present purposes in order to evade the prejudices of the Middle Ages. To the Jews were ascribed the invention and perfection of the bill of exchange, as a means of evading the confiscation of their property by its prompt and secret transfer.

Several circumstances of the time contributed in the Middle Ages to throw the trade in money into the hands of the Jews. The latter began to come to the front during the reign of Justinian at Constantinople (527-565 A.D.), and they enjoyed great privileges in the Frankish Empire. They were better able than Mohammedans to trade in Christian lands and better able than Christians to trade in Mohammedan lands. † They were, therefore, afforded opportunities by the expansion of the Arabian and Ottoman Empires to ply their trade as the neutral dispensers of the one commodity which knows no race nor creed. Another circumstance which drove the Jews into the trade in money was the fact that they were shut out from all other trades. Another was the attitude of the church towards loans and interest. The acquisition of real property was prohibited to the Jews in nearly every European State. The guilds were closed to them and they were forbidden to exercise trades and manufactures. ‡ The exclusion from real property was not a hardship, if they were to be subject to constant confiscations, since money and its paper representatives were almost the only forms of property which could be readily transported and concealed. "The richest traders," says Montesquieu, "having only invisible goods, they were able to be sent everywhere and left no trace behind." §

COLOMBIA'S MONETARY LAW.—A belated report was recently received at the State Department from United States Minister Beaupre, at Bogota, upon the monetary law of Colombia, passed by the Colombian Congress at its last session.

The bill provides that the monetary unit shall be the gold dollar of the United States of America; that future issue of paper money be prohibited; that in the Departments and Provinces, where silver has hitherto been current, coinage shall keep to the gold unit, according to the price of silver in the market; that all paper money which the council shall collect be publicly burned; that the council shall fix day by day, the rate of exchange; and that the following sources of income shall be at the disposal of the council for the amortization of the paper money: The rent from the Emerald mines; from the pearl fisheries; from the exploitations of the national forests; harbor and lighthouse dues and tonnage.

# TRUST COMPANIES—THEIR ORGANIZATION, GROWTH AND MANAGEMENT.

## CHAPTER II.

### GROWTH OF THE COMPANIES IN NUMBERS AND RESOURCES.

Returning now to the consideration of the growth of trust companies in number and resources, the task is much simplified by the availability of statistics which, while incomplete, furnish the means of forming a tolerably accurate idea of the progress of these institutions.

From the year 1875 on, the reports of the Comptroller of the Currency give statistics of the trust companies reporting to that official. These reports do not include all of the trust companies in existence at their several dates, as the Comptroller had no authority to compel the sending of returns from State institutions. The number of companies reported for the year ended June 30, 1875, was thirty-five. This number is, of course, somewhat less than the number actually doing business, and it is impossible to learn the exact number. The United States Mortgage and Trust Company, of New York, has published a book entitled "Trust Companies of the United States, 1903," which gives complete returns from practically all of the trust companies in existence at that date, with the dates of their organizations. An examination of this work shows that of the companies reported, fifty had been organized during or before the year 1875. But, as the writer has ascertained by correspondence with these companies, some of them were not organized at first as trust companies. On the other hand, as already shown, a number of trust companies organized in these early years have gone into liquidation, and their names do not appear in the book above mentioned. A rough estimate, however, shows that these two considerations about offset each other, and the number of companies in existence in 1875 was probably nearer fifty than thirty-five. The former number is insignificant enough as compared with the other financial institutions at that time. As against the thirty-five trust companies, there were in 1875, according to the Report of the Comptroller of the Currency for that year, 551 State banks, 771 Savings banks and 2,087 National banks. The trust companies had deposits of \$85,000,000, while the State banks had \$166,000,000, the Savings banks \$924,000,000 and the National banks \$679,000,000.

Of the thirty-five trust companies reported, New York State had twelve, Connecticut ten, Pennsylvania seven, Massachusetts five and Rhode Island one. The incompleteness of this list is shown by the fact mentioned by the Comptroller, that while Illinois is credited with no companies in the list, the Financial Editor of the "Chicago Tribune" reported that there were in Chicago, June 30, 1875, five trust companies, with aggregate deposits of \$5,688,574.\*

\* Report of U. S. Comptroller, 1875, p. XCVII.

A general idea of the growth of trust companies from this time on will be gained most easily by reference to the charts presented herewith. Chart A is designed to show the growth in the number of trust companies year by year. The heavy line follows the number of companies in existence each year as reported by the Comptroller of the Currency. The light line follows the total number of companies organized at the close of each year, as shown by figures compiled by the writer from the work "Trust Companies of the

Chart A

Chart showing number of Trust Companies each year 1875-1903

As reported by the Comptroller of the Currency ———  
 Number organized as shown in "Trust Companies of the United States" (liquidated companies not included) ———

United States, 1903," already mentioned. The heavy line shows less than the actual number of companies in existence at any given time; because, as already stated, the reports of the Comptroller do not contain complete reports of all the trust companies in the country. It is probable, however, that this line does indicate pretty accurately the relative gain, from year to year, in the number of companies; and this is the essential thing that the chart is intended to show. It will be noticed that the general trend of the two lines is the same. The heavy line shows interruptions in the increase of the number of companies, in the years 1889, 1892, 1894, 1897 and 1898. For details of this kind, however, it is not safe to trust the chart, owing to the

incompleteness of the statistics on which it is based. The light line shows that there was no year since 1881 in which no new companies were organized. This line would show no interruptions in the increase of companies, if there

were any, because it is based on figures showing only the number of companies organized in each year, taking no account of companies which ceased to exist. Following the general trend of the lines, and averaging their courses,

it will be seen that there was no marked change in the number of companies until about 1885, when there began an increase which reached its climax about 1891. From 1891 to the beginning of 1899 the increase went on, but at a less rapid rate. From 1899 to 1902 inclusive the increase has been at a very much greater rate than in any of the preceding years. It seems probable that the considerable increases in the heavy line in 1888 and 1893 are due not to an actual increase in the number of companies existing so much as to greater success on the part of the Comptroller in getting reports from companies which had not hitherto reported.

The following table shows the number of companies at the dates given:

| YEAR.     | According to<br>Comptroller's<br>Reports. | According to<br>"Trust Companies of the<br>United States." |
|-----------|-------------------------------------------|------------------------------------------------------------|
| 1875..... | 35                                        | 50                                                         |
| 1880..... | 30                                        | 54                                                         |
| 1885..... | 40                                        | 99                                                         |
| 1890..... | 149                                       | 255                                                        |
| 1895..... | 242                                       | 364                                                        |
| 1900..... | 290                                       | 518                                                        |
| 1902..... | 417                                       | 764                                                        |
| 1903..... | 581                                       | 912                                                        |

The striking thing about the table is that according to either authority the number of companies more than doubled between the years 1890 and 1900, and the increase since 1900 has been much more rapid than during the nineties. The Comptroller's figures show an increase of eighty-three per cent. in the three years ending June, 1903; while the figures compiled from "Trust Companies of the United States" indicate a gain of seventy-six per cent. in about two and three-fourths years from 1900 to the fall of 1903.

Chart B shows the growth of individual deposits of trust companies, and also of Savings banks, State banks and National banks. Following the course of the heavy line, which shows the increase of trust company deposits, we find much the same general features as in the line showing the growth in the number of companies, save that there is a considerable gain from 1880 to 1885. Especially marked is the increase from 1898 on.

#### COMPARATIVE GROWTH OF BANKS AND TRUST COMPANIES.

An interesting thing is the coincidence in the general features of the lines showing deposits of trust companies and of State banks. It is also to be noted that from 1898 all four classes of financial institutions had increases of deposits much greater than ever before. This does not seem to corroborate the popular impression that the trust companies are making their gains by taking business from the regular banks. It rather indicates that the trust companies are sharing with the others in a general prosperity that is unprecedented.

| YEAR.     | Trust<br>companies. | State<br>banks. | Savings<br>banks. | National<br>banks. |
|-----------|---------------------|-----------------|-------------------|--------------------|
| 1875..... | \$85,000,000        | \$166,000,000   | \$924,000,000     | \$479,000,000      |
| 1880..... | 90,000,000          | 209,000,000     | 819,000,000       | 888,000,000        |
| 1885..... | 188,000,000         | 344,000,000     | 1,065,000,000     | 1,117,000,000      |
| 1890..... | 336,000,000         | 553,000,000     | 1,525,000,000     | 1,594,000,000      |
| 1895..... | 547,000,000         | 712,000,000     | 1,811,000,000     | 1,715,000,000      |
| 1900..... | 1,028,000,000       | 1,267,000,000   | 2,450,000,000     | 2,602,000,000      |
| 1902..... | 1,526,000,000       | 1,868,000,000   | 2,750,000,000     | 3,333,000,000      |
| 1903..... | 1,589,000,000       | 1,815,000,000   | 2,935,000,000     | 3,306,000,000      |

The preceding table gives the individual deposits of the same four classes of institutions for the years named.\*

The gain in deposits made by the trust companies during the ten years from 1890 to 1900 is still more striking than the gain in the number of companies. It amounts to nearly 206 per cent., from \$336,000,000 to \$1,028,000,000! During the same period the State banks gained a little over 129 per cent., the Savings banks a little less than sixty-one per cent., and the National banks a little over sixty-three per cent. The amounts of the gains were: for trust companies, \$692,000,000; for State banks, \$714,000,000; for Savings banks, \$925,000,000; and for National banks, \$1,008,000,000. The comparative showing of the trust companies for these ten years is remarkable, but that for the two years 1900 to 1902 is much more remarkable. During these two years the increases of deposits were: for trust companies, \$498,000,000, or a little over forty-eight per cent; for State banks, \$431,000,000, or thirty-four per cent.; for Savings banks, \$300,000,000 or a little over twelve per cent.; and for National banks, \$731,000,000, or a little over twenty-eight per cent. Thus, during these two years, the actual amount of deposits gained by the trust companies exceeded that of the State banks and of the Savings banks, and was exceeded only by that of the National banks; while in percentage of increase the trust companies were far ahead of all the others. And as regards a comparison between the trust companies and National banks, it is important to bear in mind that the reports of the Comptroller give the statistics for all of the National banks, while a considerable number of trust companies are not reported.† If the reports gave returns from all the trust companies of the country, the above figures for amount of gain in deposits would of course be increased. What the effect would be upon the percentage of gain is uncertain.

The growth of deposits of trust companies, as well as of the other classes of financial institutions, shows considerable abatement for the year 1903, as compared with the preceding two years. During 1903 the deposits of trust companies reported by the Comptroller increased about \$63,000,000, or a little over four per cent. The deposits of State banks increased \$117,000,000, or a little less than seven per cent. The Savings banks gained in deposits \$185,000,000, or six and seven-tenths per cent. The deposits of the National banks decreased \$27,000,000, or about eight-tenths of one per cent.

CLAY HERRICK.

(To be continued.)

\* The figures are taken from the reports of the Comptroller of the Currency.

† As an instance of this, take the report for 1897. Two hundred and fifty-one companies are reported, with total deposits of \$566,922,205. But the Comptroller calls attention to an investigation made by the New York "Financier" of returns nearest to January 1, 1897, showing 458 companies, with deposits of \$675,100,000. (See Comptroller's Report, 1897, p. XXXVIII.) This incompleteness is not the fault of the Comptroller, but is due to the fact that he has no authority to compel the making of reports.

ORIGIN OF THE DECIMAL CURRENCY.—Thomas Jefferson was advocating the use of decimal currency.

"Just think," he exclaimed, "how much easier it will be to borrow ten dollars than 'two pounds, one shilling, one penny!'"

With a joyous whoop, Congress surrendered to the argument.

## IMPORTANT LEGAL DECISIONS OF INTEREST TO BANKERS.

---

All the latest decisions affecting bankers rendered by the United States Courts and State Courts of last resort will be found in the *MAGAZINE'S* Law Department as early as obtainable.

Attention is also directed to the "Replies to Law and Banking Questions," included in this Department.

---

### TAX UPON TRUST COMPANIES—NEW YORK STATUTE.

New York Court of Appeals, December 18, 1903.

PEOPLE, *ex rel.* THE MUTUAL TRUST COMPANY OF WESTCHESTER COUNTY vs. NATHAN I. MILLER, AS COMPTROLLER OF THE STATE OF NEW YORK.

The provisions of the Tax Law imposing an annual tax on trust companies, computed at one per centum on their capital stock, surplus and undivided profits, on the 30th day of June of each year, do not contemplate that a newly-organized trust company which, as in this case, had been doing business only a few days on the 30th day of June, 1901, should be liable for the whole tax for the fiscal year; but the tax for that year should be apportioned with respect to the time the company was doing business.

---

The relator, a trust company, was organized on June 6, 1901, and began to do business on the 24th of that month. Its capital was \$300,000, its surplus, paid in with the capital, was \$60,000, and it had no undivided profits. On August 30, 1901, the Comptroller imposed a tax of \$3,600 upon its capital and surplus, amounting to \$360,000, which he declared was "for tax on franchise or business based on capital stock, surplus and undivided profits, per chap. 132, Laws 1901, as amended by chap. 535, Laws 1901, for year ending June 30, 1901." The relator, after paying the tax under protest, applied to the Comptroller for a revision and readjustment, but the application was denied. A writ of certiorari, issued for a review of such determination, resulted in an order of the Appellate Division confirming it in all respects. From that order the relator appealed to the Court of Appeals.

VANN, J.: The statute under which the Comptroller proceeded provides that "Every trust company incorporated, organized or formed under, by or pursuant to a law of this State, \* \* \* shall pay to the State annually for the privilege of exercising its corporate franchise or carrying on its business in such corporate or organized capacity, an annual tax which shall be equal to one per centum on the amount of its capital stock, surplus and undivided profits. \* \* \*" (Tax Law, sec. 187a, L. 1901, chaps. 132 and 535.)

Every company liable to pay a tax under this section is required to make a written report to the Comptroller on or before August 1 in each year "of its condition at the close of business on June 30 preceding, separately stating the amount of its capital stock, the amount of its surplus and the amount of its undivided profits, and containing such other data, information or matter as the Comptroller may require." Upon the basis of this report, or if no

report is made, or the one made is unsatisfactory, upon the facts discovered by the Comptroller through an examination which the statute authorizes, it is his duty to "order and state an account for the tax due the State," and to notify the corporation interested, which is required to pay the tax thus fixed on or before the 1st of September in each year, with a penalty of 5 per cent. for non-payment within thirty days after it becomes due and 1 per cent. for each month thereafter.

At any time within one year after notice of the imposition of the tax the Comptroller may revise his action, correct any error, and, if the tax has been paid, make the proper adjustment. The action of the Comptroller may be reviewed by certiorari, provided the amount of the tax is first deposited with the Treasurer of the State (Id. secs. 195-197).

The relator claims, among other things, that as it had carried on business but six days before the fiscal year expired, the tax should be apportioned according to the period during which it exercised its corporate franchise. The Comptroller claims that a fraction of the year cannot be considered in imposing the tax, and that the exercise by the relator of its corporate franchise for any part of the year subjects it to a tax the same in amount as if it had been engaged in business during the entire year.

The tax under consideration is not imposed upon property, but upon a privilege. It is not imposed upon the privilege of becoming a corporation, for that would be an organization tax, payable but once for the entire period of corporate existence. It is imposed "for the privilege of exercising" the corporate franchise, and is measured by the value of the investment made and used in carrying on the corporate business. It is an "annual" tax, imposed "annually," as the statute expressly provides, for the privilege of exercising, not of possessing, a corporate franchise. This privilege was used by the relator for only six days during the fiscal year in question. It could not exercise its franchise for the entire year, because the State did not bring it into existence until the year had nearly expired.

The consideration for the tax is the privilege of carrying on business, yet the relator, according to the requirement of the Comptroller, was compelled to pay for a privilege that it did not have and could not exercise during the greater part of the period for which the tax was laid. It used the privilege for only six days, but it is taxed for using it 365 days, during 359 of which it did no business and enjoyed no privilege. An annual tax is a tax reckoned by the year the same as an annual rent or annual interest. An "annual" tax, imposed "annually," means a tax that is imposed once a year, computed by the year. If a trust company does not commence business until six days before the fiscal year ends, or if it ceases to do business six days after the year begins, the tax for doing business by the year requires apportionment. While the Legislature did not so provide in express terms, it is a fair and reasonable implication from the words used that such was its intention. When by section 182 of the Tax Law it imposed an annual tax payable annually upon every corporation of a certain class, to be computed upon the basis of the amount of its capital stock "employed within the State" during the year, it did not say expressly that the assessment should be determined by the average amount of capital so employed, but we held that this was what was necessarily meant (*People ex rel. Brooklyn Rapid Transit Co. vs. Morgan*, 57 App. Div. 335, 168 N. Y. 672). Adopting the opinion below, we said: "This is not

a tax upon property, but a tax upon the business done. It is an annual tax to be measured by an annual business done, or, in other words, by the appraised value of capital employed during the entire year. The capital must have been employed or else there is no tax. It must have been employed within the State. All the data going to fix the amount of the tax must be past transactions. Time of employment and amount employed are essential data to fix the amount of an annual tax upon a business with any degree of fairness, \* \* \* .”

Section 187a does not fix the data when the capital stock, surplus and undivided profits shall be taken, although they are variable quantities of which an average can be made for the year the same as an average of the capital stock employed by the year was used in the case of the Brooklyn Rapid Transit Co., and with as much reason. In pronouncing judgment in that case we relied in part upon *People ex rel. Tiffany & Co. vs. Campbell* (144 N. Y. 166) and *People ex rel. New England Loan and Trust Co. vs. Roberts* (25 App. Div. 16, 156 N. Y. 688), and we distinguished *People, &c. vs. Spring Valley Hydraulic Gold Co.* (92 N. Y. 383), the main reliance of the learned Attorney-General in the case in hand. In the latter case, as an examination of the record shows, the question of apportionment was raised neither by the pleadings nor at the trial, but was suggested for the first time in this court, which did not consider it and could not consider it, because it was raised by no exception. That appeal was heard upon the judgment roll only, none of the evidence having been returned. The only exceptions were to the conclusions of law as found by the trial judge, and they did not suggest the question. Moreover the statute in that case differed in many important particulars from the one now before us, although the words “annual” and “annually” appeared therein. The question there was not as to the amount of the tax, but as to the constitutionality of the act, and whether the company was liable for any tax whatever. Here the question of apportionment was distinctly raised in the petition for the writ as well as, but less distinctly, before the Comptroller. It is the only debatable question in the case and the only one considered by the Appellate Division. The meaning of a statute imposing a new kind of tax is seldom settled by one adjudication, but there is a gradual growth as new questions occur to counsel in its progress through the courts, and authorities under one statute frequently fail in analogy to cases under another statute relating to a similar subject, but differing in many essential respects. We do not consider the decision in the case relied upon by the respondent as controlling in this.

Statutes should receive a reasonable construction unless the language used prevents it. Here we have an act which does not expressly provide for the case before us. It imposes annually an annual tax for doing business, but does not say whether, if business is done for only part of a year, the tax shall be fixed in accordance with the time business is done, or for the entire year, including that part when not only no business was done, but there was no right to do any. It would be unreasonable to hold that a tax on doing business covers the whole year, when business was done for only six days. A tax is presumed to be laid by the State in return for some proportionate value received by the taxpayer, and the Legislature, in imposing an annual tax for the privilege of doing business, intended, as we think, that it should be based upon the period that the privilege was extended and enjoyed.

We may assume that the question is not free from doubt, for we cannot unite in judgment upon it, but serious doubt in a case of taxation should be resolved in favor of the taxpayer. (Matter of Harbeck, 161 N. Y. 211, 217; Matter of Fayerweather, 143 N. Y. 114, 119; Powell vs. Tuttle, 3 N. Y. 396, 401.) A statute which levies a tax is to be construed most strongly against the government and in favor of the citizen. The government takes nothing except what is given by the clear import of the words used, and a well founded doubt as to the meaning of the act defeats the tax. (Sutherland on Statutory Construction, 458; Black's Interpretation of Laws, 326; Cooley on Taxation, 200.)

We think the construction adopted is fair to the government and just to the citizen, for it gives the former full payment for the the time the franchise was exercised and takes from the latter nothing but what it impliedly agreed to pay when it accepted the franchise. We, therefore, reverse the order of the Appellate Division and the determination of the Comptroller, with costs, and remit the matter to the Comptroller for adjustment in accordance with the rule laid down.

---

*NATIONAL BANK AS PARTNER—WANT OF POWER TO BECOME SUCH.*

Supreme Court of Ohio, October 27, 1903.

*MERCHANTS' NATIONAL BANK vs. WEHRMANN, et al.*

A National bank has no power to become a member of a partnership, and cannot be held liable as a partner.

---

This action was brought to enforce the liability of the different members of a partnership called the Elsmere Syndicate, which was formed for taking the title by lease, with privilege of purchase, of certain lands in Hamilton county, Ohio. The interests of the parties in such partnership were represented by certificates of equal shares, being forty in all, nine of which were held by the Merchants' National Bank, of Cincinnati.

The court found the indebtedness to different persons, in detail, and then found that there were only twenty-three solvent shareholders, and charged them, including the bank, with the payment of the whole indebtedness, and adjudged that, in case of the subsequent insolvency of any of such shareholders before payment, the deficiency thus caused should be made up by the remaining solvent shareholders. The decree against the bank was for over \$17,000.

*BURKET, C.J.:* The Merchants' National Bank, of Cincinnati, is a corporation organized under the National banking laws of the United States, and the Elsmere Syndicate was a partnership consisting of forty shares, each partner holding one or more shares, and each share evidenced by a certificate, as shown in the foregoing statement of facts, and which certificates were transferable on the books of the syndicate; and such transfers were intended to make the transferee a partner in the syndicate, instead of the transferrer, without a dissolution of the partnership.

The circuit court finds that the bank became owner by transfer of nine shares of this syndicate or partnership, which shares were taken by the bank to secure the payment of a large indebtedness owing to said bank for loans by it made to one of its customers in the usual course of business. The bank, in accepting said transfer, evidently regarded it as a collateral; but it so

treated the shares, and so transacted the business as to said shares, that the circuit court found that the bank became the owner of the shares, and there was evidence warranting such finding.

The case must therefore be determined upon the theory that the bank held the shares as owner, and not merely as collateral—the purpose of such ownership, however, being to secure the ultimate payment of said indebtedness out of the proceeds of said shares; and, to that end, it was necessary that the property of said syndicate should be put into such condition as to yield the most money, and this is what the trustees of the syndicate attempted to do; and, in so doing, debts were incurred, which the syndicate was unable to pay, and, after all its property had been consumed in paying said debts, a large debt still remained.

The restrictions contained in our banking laws are for the purpose of securing the solvency and stability of the banks, and the statutes should be so construed and the law administered as to reasonably bring about that end. The wealth and prosperity of the people depend to a large extent upon the soundness of the banks and the safety of the currency. The purpose of the Government is to foster and encourage sound banking and preserve a safe currency; and it therefore allows National banks to collect claims due them, even though a statute or a rule of law or equity may have been infringed in the incurring of the debt. The punishment for such infringement must come from the Federal authorities, in a proceeding instituted for that purpose, and not by a denial by the courts of the right of collection, as a punishment.

It is largely for the purpose of maintaining the solvency of banks that a National bank is allowed to collect loans secured by mortgage in violation of section 5137, Rev. St. U. S. [page 3460, U. S. Comp. St. 1901]. (*National Bank vs. Matthews*, 98 U. S. 621; *National Bank vs. Whitney*, 103 U. S. 99.)

It is to the same end that the solvent shareholders in a National bank cannot be compelled to stand good for the individual liability of the insolvent ones, and that the loss caused by such insolvency must be borne by the creditors of the bank. (*United States vs. Knox*, 102 U. S. 422; section 5151, Rev. St. U. S. [page 3465, U. S. Comp. St. 1901].)

Hence it is that while banks are hedged about with restrictive laws as to making loans and discounts, so as to incur no bad debts, the most liberal provisions are made for securing debts already incurred, by the taking of such collateral as may seem best in the judgment of the officers of the bank, such collateral may become the property of the bank in course of enforcing the security. And while a National bank cannot lawfully purchase and hold shares in a corporation as an investment (*California Bank vs. Kennedy*, 167 U. S. 362), it may accept the stock of a corporation as collateral security for a loan and may thereafter realizing upon the collateral, become the owner thereof, and liable for individual liability, the same as any other stockholder. (*National Bank vs. Case*, 99 U. S. 628.) This case seems to have been overruled in *Scott vs. Deweese*, 81 U. S. 218, where the court say at the close of the opinion: "Whether a National bank may not be deemed a shareholder, within the meaning of section 5151, if it holds shares of another bank as security for previous indebtedness, is a question suggested in former cases, but not decided, and upon which in this case no opinion need be expressed."

But conceding that a National bank may take shares in another bank as

collateral security for a new loan, or to secure the payment of an old one, and that it may become the owner of such shares in attempting to realize on such collateral, and that it may thereafter be liable to creditors on its individual liability as such shareholder, yet that falls far short of holding a National bank liable as a partner in a partnership, and liable as such partner for not only its own share of the debts of the firm, but also the debts of its copartners.

The individual liability of a holder of shares in a National bank is in its nature several and not joint (*United States vs. Knox*, 102 U. S. 422), while the liability of a partner for partnership debts is, as to creditors, usually held to be joint; but some cases hold it to be joint and several.

The individual liability is an inseparable incident to National bank shares, for which the lawful holder is liable; but this liability is his own debt, and attaches to a specific several article of his property—the share of stock—and is therefore limited, and cannot exceed the face value of the stock. But in the case of shares in a partnership, the liability of a partner is not for a specific amount adhering to his share as an incident, and limited to a certain amount; but the only limitation is the whole indebtedness of the firm, and which in many cases would far exceed the entire resources of the bank, and drive it into insolvency.

The purpose of allowing a National bank to take collateral security is to enhance its solvency, and not to permit it to enter into wild speculations as a partner under the pretext of enforcing its rights as a pledgee or owner. "It is settled that the United States statutes relative to National banks constitute the measure of the authority of such corporations, and that they cannot rightfully exercise any powers except those expressly granted, or which are incidental to carrying on the business for which they are established. (*Logan County Bank vs. Townsend*, 139 U. S. 67, 73; *California Bank vs. Kennedy*, 167 U. S. 362, 366.)

To become a member of a partnership in any manner or for any purpose is not incidental to carrying on the business for which National banks are established, and is certainly not expressly granted. The power, therefore, does not exist. The liabilities for which a National bank must respond are such only as are created or incurred by its officers, acting in the capacity of officers of the bank alone, and not in connection with other trustees or officers of other companies. Were it otherwise, the other trustees or officers might outnumber the officers of the bank, and impose a burden on the bank which would ruin it; and thus the bank would be controlled, not by its officers, but by outsiders. The officers of a bank cannot delegate their powers to others.

It is therefore clear that a National bank cannot be a partner in a copartnership, and cannot incur a partnership liability. The same has been held as to corporations in this State (*Geurinek vs. Alcott*, 66 Ohio St. 94). The first subdivision of the syllabus was omitted by mistake of printer, but is found in the headnote, and also in the index, and is as follows: "A corporation cannot be a member of a partnership."

But it is contended that, while a National bank cannot become a partner generally, where it becomes the owner of a share in an existing partnership, like this Elsmere Syndicate, in effect it becomes a partner, and liable as such. That begs the question. If it had the power to become a partner, such might be the case; but, not having the power, it cannot go beyond its powers, and can-

not by any act make itself a partner, and cannot incur a partnership liability. Cases are cited in which a bank has taken some specific piece of property—as a ship, for instance—to secure a debt, and has been held liable for the expenses of managing or converting such property; but such expenses were incurred by the bank, and were its individual debt, and not the debt of a partnership. With such cases we fully agree, but in those cases it does not appear that the bank was hampered by a lack of power, as is the case under our National Banking Act. (Royal Bank of India's Case, L. R. 4 Ch. App. Cas. 252.) Not having the power to enter into such partnership, it is well settled that the bank may plead such want of power to defeat an attempt to hold it as such partner. (California Bank vs. Kennedy, 167 U. S. 362.)

It is further urged that the bank partly realized on some of these shares, and held itself out as a partner, and that it is, therefore, estopped from now claiming that it was not such partner. That the realizing on stocks by receiving dividends does not create an estoppel was held in the above-cited case of Bank vs. Kennedy, 167 U. S. 371. In the case of Scott vs. Deweese, 181 U. S. 217, the court, near the close of the opinion, hold: "Of the powers of a National bank under the statutes providing for their creation, every one must take notice." Every one is therefore chargeable with knowledge that a National bank cannot be a partner, and therefore this bank could not hold itself out as being that which in law it could not be, and its acts in that behalf could deceive no one, as no one could, in law, rely upon such acts. One cannot rely upon a representation which he knows to be false or impossible. The bank having become the owner of these nine shares, and not having the power to become a partner, it became, in legal effect, a part owner of the property of the syndicate, which ownership was in its nature several; and the bank, through its trustee, having managed this several interest in connection with the trustees of the other shares as to their interests, the bank became and is liable for its said share of the expenses of purchasing, managing, handling, holding, improving, and disposing of the property. The bank is thus liable for nine fortieth parts of the debts and expenses remaining after applying the proceeds of the property upon the indebtedness. The record does not clearly furnish the data from which this amount can be ascertained by this court, and therefore the judgment against the plaintiff in error will be reversed, and the cause remanded to the circuit court, with instructions to ascertain what nine-fortieth parts of said debts and expenses amount to, and render judgment against said bank for that sum, and also for nine-fortieth parts of the costs.

POWER TO LEASE—NATIONAL BANK—STOCKHOLDER'S AGENT—JURISDICTION OF FEDERAL COURT.

United States Circuit Court of Appeals, First Circuit, October 6, 1903.

WEEKS vs. INTERNATIONAL TRUST COMPANY.

The agent of the stockholders of a National bank may be sued in a Federal court. A National bank may take a lease of banking rooms for its accommodation for a term extending beyond the period of its existing charter, even though the lease be assignable only with the consent of the lessor.

—

This was an action to recover rent under a lease by which the first floor and basement of a building in Milk street, Boston, were let to the Broadway

National Bank. The lease ran for ten years from April 1, 1899, and the bank's charter, which was issued September 29, 1884, was limited to expire October 3, 1904. On December 16, 1899, the bank became insolvent, and the Comptroller of the Currency appointed a Receiver for it; but on February 15, 1900, the Comptroller released the estate of the bank to Weeks as the stockholder's agent.

Before Colt, Circuit Judge, and Brown and Lowell, District Judges.

LOWELL, *District Judge* (omitting part of the opinion): The defendant excepted to the jurisdiction of the circuit court. The jurisdiction is based upon act August 13, 1888, c. 866, Sec. 4, 25 Stat. 436 [U. S. Comp. St. 1901, p. 514]:

"That all National banking associations established under the laws of the United States shall, for the purposes of all actions, by or against them, real, personal, or mixed, and all suits in equity, be deemed citizens of the States in which they are respectively located; and in such cases the circuit and district courts shall not have jurisdiction other than such as they would have in cases between individual citizens of the same State. The provisions of this section shall not be held to affect the jurisdiction of the courts of the United States in cases commenced by the United States or by direction of any officer thereof, or cases for winding up the affairs of any such bank."

That the Receiver of a National Bank may be sued in the circuit court, irrespective of citizenship, was decided in *Auten vs. U. S. Bank*, 174 U. S. 125. That a stockholder's agent in this respect stands like a Receiver was decided by the Circuit Court of Appeals for the Ninth Circuit in *Guarantee Co. vs. Hanway*, 104 Fed. 369, 44 C. C. A. 312. With that decision we find no reason to disagree. (See, also, *In re Chetwood*, 165 U. S. 443, 459.)

The exception is overruled.

The defendant contended that the lease in question, whose term extended beyond the expiration of the bank's charter, was *ultra vires* and void, and he excepted to the ruling that the bank could take such a lease.

In *Brown vs. Schleier*, 118 Fed. 981, 55 C. C. A. 475, the Circuit Court of Appeals for the Eighth Circuit held that a National bank can take a lease for ninety-nine years. That court said that the lease there in question "was an interest which was salable during the life of the corporation or on its dissolution." (118 Fed. 984, 55 C. C. A. 478.)

In the case at bar the bank's interest could be alienated only with the consent of the lessor. But we are not prepared to hold that the difference (if there be one) between the lease in *Brown vs. Schleier* and the lease in this case is material to the validity of the latter. Strictly speaking, the lease here in question is alienable, though alienable only upon a condition. The condition is usual, at any rate in Massachusetts. And the assignment of a lease, even where permitted unconditionally, does not free the lessee from his obligations thereunder; he remains liable on his covenants, unless the lessor expressly or by implication releases the liability. To require unrestricted assignability in those leases taken by a National bank which extend beyond its charter would hamper the bank in obtaining a lease, without relieving the bank from embarrassment at the charter's expiration. Considering that the charter of a National bank may be extended as a matter of course (Act July 12, 1882, c. 290, Sec. 1, 22 Stat. 162 [U. S. Comp. St. 1901, p. 3457]), we hold that Congress did not intend to forbid such a corporation from hiring bank-

ing rooms for a term extending beyond the period of its existing charter. When, for example, but three years of its chartered existence are left, it will be unduly hampered if it is not permitted to take a lease for more than three years.

In *McCormick vs. Market Bank*, 165 U. S. 538, at the time the lease was executed the bank had no authority to execute a lease of any sort, and the case does not assist us in determining what sorts of leases a National bank may validly enter into. What would be the effect of a lease which, in respect of length of term, or otherwise, was entered into for some purpose other than that of meeting the reasonable needs of the bank, we need not discuss at this time. This exception of the defendant is therefore overruled.

---

*MATERIAL ALTERATION—WHAT CONSTITUTES.*

Supreme Court of Nebraska, November 18, 1903.

HARNETT vs. HOLDREDGE, *et al.*

Writing the words, "For value received we hereby guarantee the payment of the within note, and waive presentment for payment, demand and notice of protest," over an indorsement in blank on the back of a promissory note, is a material alteration of the liability of the indorser, and, if done without his knowledge or consent, releases him from his obligation as such.

Writing the words, "This note to be exchanged for consolidated mortgage bonds of Nebraska and Northwestern Irrigation Company when issued at 90," across the face of a promissory note after it has been indorsed in blank, without the knowledge or consent of the indorsers, is a material change of the note, and releases such indorsers from any liability thereon.

A blank indorser of a promissory note payable to the order of the maker thereof, which is indorsed by such maker, and afterwards delivered to a third person as payee, in absence of any special agreement to the contrary, becomes liable thereon as second indorser, and will not be held to be a joint maker of the note.

---

This action was brought upon two promissory notes made by the South Fork Irrigation and Improvement Company, and indorsed by the defendants. The defendants, among other defenses, pleaded that without their consent the notes had been materially altered after they had placed their signatures on the same.

BARNES, C. (omitting part of the opinion): It appears that the following words were written upon the face of the notes after they were indorsed by the defendants, and without their knowledge or consent: "This note to be exchanged for consolidated mortgage bonds of Nebraska and Northwestern Irrigation Company when issued at 90." If these changes and alterations were material, then the defendants are, each and all of them, discharged from their liability as indorsers.

In the case of *Polo Mfg. Co. vs. Parr*, 8 Neb. 379, a note was sued on which had upon the back of it the following memorandum: "This note to be paid in wheat at ninety-five cents per bushel." It was urged that this memorandum was no part of the note or contract, and should be disregarded. After a careful consideration of the subject, this court held it was a part of the contract, and in so holding made use of the following language: "The rule results from the principle that the construction of the note is to be gathered from the whole of it, as well from the words on the back as those on the face. Therefore a memorandum on the back of the note, made by an agreement of

the parties before signing it, will bind all parties." The memorandum in that case was very similar to the one in the case at bar. While that was upon the back of the note, the one in question herein is written on the face of the instruments, and would, without explanation, be construed to be a part of the contract. It amounted to an alteration of the medium of payment. Such an alteration is material.

In *Randolph on Commercial Paper* (2d Ed.) vol. 3, sec. 1755, we find the following: "It is a material alteration of a note to add words making it payable in gold, or to erase such words even after the maturity of the note, or add any word qualifying the goods or property in which the note is made payable, or to change the fund mentioned or referred to for payment.

The same rule is announced in *Daniel on Negotiable Instruments* (4th Ed. Sec. 1386).

The words added to the notes in this case made them payable not only in money, current funds, but also made them payable in consolidated mortgage bonds of the Nebraska Northwestern Irrigation Company at the rate of one dollar of the note for ninety cents of the bonds.

Therefore it cannot be successfully claimed that this was not a material alteration. Again, there was placed over the names of the defendants on these notes, the words, "For value received we hereby guarantee the payment of the within note and waive presentment for payment, demand and notice of protest." This changed the liability assumed by them as indorsers without their knowledge or consent, and discharged them from any liability whatever. (*Belden vs. Hann*, 61 Iowa, 42.)

The writing over a blank indorsement, waiver, or protest, demand or notice, or a guaranty or an agreement to stand security until paid, discharges the indorser. (*Randolph on Commercial Paper* [2d Ed.] vol. 3, sec. 1753.)

Where a note is endorsed in blank, the insertion of the words, "Demand and notice waived," constitutes a material alteration.

In *Davis vs. Eppler*, 38 Kan. 629, the court said: "The most serious question in this case is whether the writing of the words, 'Waive notice and protest,' on the back of the note, before maturity, over the names of Farrell and Eppler, was such an alteration as to relieve the defendant Eppler of his liability as indorser. It is proven that Eppler never consented to such addition. On the other hand, it is well established by the evidence that such writing was not made with the intention of creating any greater liability on the part of Eppler. It is beyond question that the indorsement was a substantial change in the contract between Eppler and the plaintiffs. It changed his contingent liability to an absolute one." Without the words placed over the indorsement of defendants on the back of the notes in suit, they would be liable as blank indorsers only, and would be entitled to have the note protested, and receive a notice of such protest, in order to charge them with any liability; while in its present condition it would not be necessary to protest the note, or give the defendants any notice of its nonpayment.

It follows that this alteration was a material one (*Andrews vs. Simms*, 33 Ark. 771; *Farmer vs. Rand*, 16 Me. 453), and the defendants were thereby discharged from any liability as indorsers.

It is contended, however, by the plaintiff, that the defendants were all liable as joint makers of the note. Counsel argues this question at great length, and cites many authorities in support of this contention, and it must

be conceded that, where a party writes his name across the back of a note before its delivery, he is ordinarily liable thereon as a joint maker. This rule obtains where the note is made payable to some one other than the maker thereof, but does not apply, however, where a note is made payable to the maker himself. In such a case before the note creates any liability, or becomes a binding contract, it must be indorsed by the maker and delivered to the payee.

The case of the First Nat. Bank of St. Charles vs. Payne, 111 Mo. 291, was one where an attempt was made to hold the defendants, who had indorsed the note, to the liability of joint makers, as in the case at bar. The maker of the note had made himself payee, and had indorsed it. He then procured the two defendants to indorse below his indorsement. When the note was sued upon, just above the indorsement was a written "waiver of protest," which was shown to have been put there subsequent to the indorsements of the defendants, and without their knowledge and consent. It will be thus observed that the case is one directly in point. Brace, J., in delivering the opinion of the court, said: "Upon the face of the indorsements upon this note defendants were indorsers, and chargeable only as such. As we have seen, the plaintiff failed to make out a case against them as indorsers. It then sought to charge them as makers. He was both the drawer and payee of the note. Now, while in a long line of decisions in this State following Powell vs. Thomas, 7 Mo. 440, it has been consistently and persistently held that where a person indorses a negotiable note in blank, not being a payee or indorsee thereof, he is to be treated *prima facie* as the maker of the note, yet it will be found on examination that in every one of these cases the payee of the note indorsed was a third person. We have not found a case in our Reports where it has ever been applied to an indorsement of a note made payable to the order of the drawer. Such a note was an incomplete and void contract at common law, but by the custom of merchants, after it had been negotiated—that is, after the drawer, as payee, had indorsed his name upon the note, and delivered it to a third person—it was treated as a valid negotiable promissory note, payable to the bearer, and has been so held in England since the statute of 3 and 4 Anne, c. 19 (temp. 1704)."

The court also held that it would make no difference as to the indorser's liability whether he indorsed the note after or before the payee, who is also the maker, had indorsed it. His liability would still be that of an indorser only. The reasoning of the court was as follows: "When one indorses such an incomplete instrument before it is made perfect by the indorsement of the maker as payee, and delivers it to such maker, what is his contract? What can his contract be other than to authorize the maker to make it a complete and binding contract on him as an indorser by writing over his name the maker's and payee's name on the back of the note as first indorser. By indorsing a note which in itself is not complete he must be presumed to have intended to charge himself only in the manner in which his name will appear on the note when the contract is perfected by indorsement of the maker's name as payee when he will appear on the paper as indorsee, and his contract with a subsequent holder is that of an indorser, for as such only he appears on the note after it has acquired validity as a contract."

This line of reasoning is supported not alone by the Missouri cases, but by the Illinois cases. In Blatchford vs. Milliken, 35 Ill. 434—a case similar to

the one at bar—the court said: “It is the settled law of this State that a person who is not a party to a promissory note which is to become a valid obligation against the maker upon its delivery to the payee, by writing his name in blank on the back of the note is presumed to assent to the obligation of a guarantor. But where the note creates no valid obligation against the maker, and can create none until it is indorsed and transferred by the payee, the presumption is that a person writing his name in blank upon the back of the note assumes the obligation of an indorser. Inasmuch as the note can never have any validity until the name of the payee appears upon it as an indorser, the person writing his name in blank upon the note understands that when the note takes effect his name will appear upon it as a second indorser; and it is reasonable to conclude that such was the position which he intended to occupy.” This case was followed and approved in (*Kayser vs. Hall*, 85 Ill. 511.) Many of the cases cited by plaintiff's counsel are from the Supreme Court of Massachusetts, yet that court refuses to hold an indorser liable as maker under circumstances similar to those in the case at bar. In the case of *Dubois vs. Mason*, 127 Mass. 37, the facts were the same, except that the defendants signed before the maker and payee, but below where the payee finally signed, before the note was delivered to the third person.

*NOTES GIVEN FOR PATENT RIGHTS—PENNSYLVANIA STATUTE—BONA-FIDE HOLDER.*

United States Circuit Court of Appeals, Third Circuit, October 30, 1903.

BROWN, *et al.* vs. PEGRAM.

The Pennsylvania statute which provides that when the consideration for a promissory note or other negotiable instrument shall consist in whole or in part of the right to make use or vend any patented inventions, the words “Given for a patent right” shall be printed or written on the face thereof, does not invalidate a note given for such purpose and on which these words do not appear, nor affect the rights of a *bona-fide* purchaser without notice.\*

In error to the Circuit Court of the United States for the Eastern District of Pennsylvania.

This action was brought upon two promissory notes, one for \$20,000 and the other for \$30,000, signed “American Alkali Company, A. K. Brown, President, Clayton E. Pratt, Treasurer,” payable to the order of the American Alkali Company, and indorsed by Brown and Pratt. The defense interposed was that the notes were renewals of drafts which had been given in payment for certain patent rights, and that neither the drafts nor notes contained the words “given for a patent right” as required by the statute of Pennsylvania.

Before Acheson and Gray, circuit judges, and McPherson, district judge.

McPHERSON, *D. J.*: The decision of the case was put upon the point that the act of 1872 violated the Constitution of the United States, because (to use the language of the circuit judge) “the monopoly which a patent grants is a property right created by the Constitution and laws of the United States, and by those laws made assignable; and therefore a State law which prescribes that negotiable instruments in the ordinary form shall not be given

\* The same construction has been given to similar statutes in other States. (*New vs. Walker*, 108 Ind. 385; *Harmon vs. Haggerty*, 88 Tenn. 705.)

or accepted for an assignment of the patent itself is as plainly obstructive of the exercise of a right vested by the Federal law as would be the inhibition of payment in the current funds upon the sale of a patent for cash."\* We express no opinion concerning the correctness of this ruling, believing that the case may be properly decided upon another ground, namely, upon the true construction of the Pennsylvania statute.

The attack made by the plaintiff in error upon the notes in suit depends wholly upon the effect that should be given to the second section of the statute. The argument may be stated in these words: The second section declares it to be a misdemeanor, punishable by fine or imprisonment, or both, if any person, with knowledge that a negotiable instrument has been given in whole or in part for a patent right, shall take, sell, or transfer such instrument, unless the words "Given for a patent right" appear upon its face. Therefore, upon familiar principles, since it is a crime to make such an instrument, the instrument itself is void in the hands of the original payee; and, even in the hands of a *bona fide* pledgee, who is therefore a purchaser for value, it is so far invalid that it may only be enforced to recover whatever balance may be still unpaid. We are unable to assent to the soundness of this argument, and believe that further consideration of the statute and of the Pennsylvania decisions thereon will show satisfactorily that a different conclusion should be reached. The act was first considered by the Supreme Court of Pennsylvania in *Haskell vs. Jones*, 86 Pa. 173. The opinion of the court was delivered by Mr. Justice Sharswood, and is as follows:

"If the act entitled 'An act to regulate the execution and transfer of notes given for patent rights,' passed April 12, 1872 (P. L. 60), makes absolutely void all such notes in which the words 'Given for a patent right,' are not prominently and legibly written or printed on the face of such note above the signature thereto, there would be great reason for the contention that the act is unconstitutional and void. No State can so interfere with the right of a patentee, secured to him by the acts of Congress, to sell and assign his patent. But such is not the operation of the act, according to its letter and spirit. By the express provision of the statute the only effect of the insertion of such words is that 'such note or instrument in the hands of the purchaser or holder shall be subject to the same defenses as if in the hands of the original owner or holder.' By necessary implication, notes without such words inserted in them remain on the same footing as before the act. The sole object of the Legislature was to secure, so far as could be done consistently with the rights of innocent third persons, that notice of the consideration should be given to all who should take the paper. Nothing is better settled than that between the original parties to a note given for a patent right it is a good defense to show that the alleged patent is void; in other words, that it is no patent right at all, and that the consideration has therefore entirely failed. (*Bellas vs. Hays*, 5 Serg. & R. 427, 9 Am. Dec. 385; *Geiger vs. Cook*, 3 Watts & S. 266; *Holliday vs. Rheem*, 6 Harris, 465, 57 Am. Dec. 628.) All who take with notice of the consideration, take necessarily subject to the same defense. There is nothing in all this which interferes with any just right of the holder of a valid patent under the acts of Congress, nor that the maker of the note shall be permitted to show against a holder

\* See *BANKERS' MAGAZINE*, October, 1906, page 520.

with such notice that it was obtained by fraudulent misrepresentation. This very plainly distinguishes our act from the statutes of other States which have been held unconstitutional.

To secure the insertion of these words, the second section of the act makes it a misdemeanor, punishable by fine or imprisonment, or both, for any person 'knowing the consideration of a note' to be the sale of a patent right to take, sell, or transfer it without the words 'Given for a patent right' inserted, as provided by the act. It is too plain for argument that this section in no way affects the right or title of the holder of such a note who takes it, not knowing that the consideration was the sale of a patent. He commits no illegal or indictable offense. The negotiability of a note in which the required words are not inserted is in no way affected by the act. The innocent holder, who takes it before maturity for value, without knowledge or notice of the consideration, takes it as heretofore, clear of all equities between the original parties."

In *Hunter vs. Henninger*, 93 Pa. 373, the court again said:

"The act of April 12, 1872, was intended to destroy the negotiable character of notes given in whole or in part for 'the right to make, use, or vend any patent invention,' in order that the makers thereof might have the right to defend as well when said notes were passed to third parties as when in the hands of the original payees. In furtherance of this intent, the act requires the indorsement, 'Given for a patent right,' to be made across the face of such notes; and this in order that no one may ignorantly purchase paper of this kind. Without this, of course, the innocent purchaser for value would not be affected. He would hold as the indorsee of any other negotiable paper. Not so, however, as to one knowing the consideration of a note given for a patent right, for such a one is, by the act, guilty of a misdemeanor, if he receives this kind of paper without having the words above stated written upon its face."

The only other decision upon the subject is *Shires vs. Commonwealth*, 120 Pa. 368, 14 Atl. 251, which adds nothing of present value to the previous cases. The brief *per curiam* opinion is as follows:

"There is nothing in the act of April 12, 1872, which infringes the Constitution of this Commonwealth, nor do we think it conflicts with the Federal Constitution. As a police regulation the statute has proved itself to be valuable in that it has been the means of preventing gross frauds upon our citizens, to which, before its enactment, they were subjected. Under these circumstances we are not disposed to pronounce this law invalid."

As we understand these decisions, the result is that a note made in violation of the statute is not void in the hands of any holder whatever, whether he be the original payee or a subsequent innocent indorsee or pledgee. To take the position that the note is made wholly void by the statute is, we think, to overlook the necessary effect of the first section. This declares in plain language that whenever a negotiable instrument shall be given for a patent right the words "Given for a patent right," shall be put upon the face of the instrument, and that a negotiable instrument thus marked shall, in the hands of any purchaser or holder, be subject to the same defenses as in the hands of the original owner or holder. The object of the statute is thus declared, namely, to destroy the negotiable character of the instrument, and there is nothing expressed to warrant the conclusion that the Legislature in-

tended to make the instrument void altogether. Neither should such a conclusion be readily implied, for the mischief at which the act was aimed was fully remedied by preserving whatever defenses the maker might have against the original payee. If the maker had been tricked or defrauded into making the note, or if a spurious or worthless patent had been foisted upon him by a clever knave, he was fully protected (if the act was obeyed, and the paper was marked) by permitting him to prove the fraud or failure of consideration against the title of any holder whatever. But, to deal fairly with subsequent purchasers, it was necessary to put them upon notice.

Clearly, if the paper were unmarked in ordinary negotiable form, an innocent purchaser would take an indefeasible title, and therefore it was required that the paper should carry with it a plain notification to the world that unknown defenses might exist. With both reasons in mind—the protection of the maker, and notice to subsequent purchasers—the second section was added, in order that the command of the first section might have the sanction of the criminal law, and therefore be less frequently disobeyed.

To suppose that the Legislature intended to make void a negotiable instrument given for a valid patent in a perfectly fair transaction, an instrument to which no defense whatever could be interposed, simply because by mistake or ignorance or carelessness the words "Given for a patent right" do not appear upon the instrument, is a supposition not easily to be entertained. We should only be willing to accept such a construction of the statute because we could find no other, and were left no alternative by the plain direction and positive language of the Legislature.

As it seems to us, no such situation is presented. The two sections of the act are to be taken together, and when they are thus considered and read in the light of the construction adopted by the Supreme Court of the State they lead naturally and without difficulty to the conclusion already stated—that the act does not make the unmarked negotiable instrument void, and goes no further than to save the defenses of the maker in two instances: First, where the note is marked as required by the first section; and, second, where it is sued upon by any person who takes it subsequently, with knowledge that the consideration was in whole or in part the right to make, use or vend any patented invention, or invention claimed to be patented.

If this conclusion is correct, the foundation of the defense is destroyed. No defense against the original drafts is suggested other than the argument, already considered, that the second section of the act made them void, and no other defense is suggested against the renewal notes in suit. It follows that the defendant in error was entitled to the full amount of his claim, for upon a valid obligation of the maker, who was also the primary debtor, the pledgee was certainly not bound to credit the money that he had already received from another person, who was only secondarily liable, upon a separate and collateral undertaking. Whether, even if the drafts had been void in the hands of the original payee, the defendant in error would have been obliged to give credit for this money, is a question upon which we are not called upon to express an opinion.

The judgment of the court below was right, and is now affirmed, with costs to the defendant in error.

## NOTES OF CANADIAN CASES AFFECTING BANKERS.

[Edited by John Jennings, B. A., LL. B., Barrister, Toronto.]

*DRAFT—BILL OF LADING—PERISHABLE GOODS.*

IMPERIAL BANK vs. HULL. (Territories Law Reports, Vol. V, p. 313.)

STATEMENT OF FACTS: The facts of the case appear with sufficient fullness from the judgment of McGuire, C.J., given below.

JUDGMENT: The plaintiffs sued the defendant for the amount of a draft drawn upon the defendant by the Parsons Produce Co., of Winnipeg, payable to the order of the plaintiffs, but not accepted by the defendant.

The plaintiffs had for value taken the draft, and, as collateral security therefor, an assignment of a bill of lading of a quantity of poultry agreed to be supplied by the Parsons Produce Co. to the defendant for the price of which the draft had been made. On the arrival at Calgary of the car containing the poultry, the defendant's manager, Mr. Gillies, wishing to examine the goods before accepting the draft, obtained the bill of lading from the plaintiffs for the expressed purpose of enabling him to so examine. At the first partial inspection the true condition of the poultry was not apparent, but on removal to the warehouse and on opening up the crates it was found that the goods were not according to contract, and that a large portion was unfit for food. The following day, on further examination, this was confirmed, and the Parsons Produce Co. were informed by telegram, and on the 20th—two days after getting the bill of lading—the bank was informed that the draft would not be paid on account of the condition of the poultry. The defendant's manager tried to get back the bill of lading from the railway company, but was unable to do so, as the practice of that company is in such cases to retain and cancel the bill. The draft was not accepted nor was it paid.

The defendant says that he sold all the poultry that was fit for food, the rest being destroyed except a quantity shipped, at the request of John Parsons, to Vancouver; that an account was kept of all that was sold; and the value, at invoice price, was paid into court. The consignment to Vancouver never realized anything to the defendant, but as this was done without authority from the plaintiffs, the defendant on the morning of the trial paid into court a further sum which included the amount of this consignment at invoice price. The plaintiff declined to accept the money paid into court and proceeded with the trial.

The learned trial judge found that when the defendant refused to accept the draft he was guilty of a conversion in dealing with the goods, and was liable to the plaintiffs for the value of the poultry, but he also found that the sums paid into court were sufficient to satisfy the damages sustained by the plaintiffs.

The trial judge interpreted the plaintiffs' statement of the claim to be one for the amount of the unaccepted draft, and that on the pleadings as they stood the plaintiffs could not succeed. He held, however, that the facts in evidence would entitle them to succeed as for a wrongful conversion and to recover the value of the goods. He therefore ordered the statement of claim to be amended accordingly. He concluded his judgment as follows:

The plaintiffs are, therefore, entitled to receive the amount deposited in court to the credit of this cause, to wit, the sum of \$827.62 deposited with the filing of the defense, and a further sum of \$376.90, \$125.08 of which was for goods delivered to the Parsons Produce Co. without the consent of the plaintiffs, making in all the sum of \$1,254.52, for which sum the plaintiffs are entitled to judgment without costs.

The plaintiffs, on this appeal, do not contend that they are entitled to recover upon the unaccepted draft, and say that they never so claimed, and that while the language of their statement of claim may not have set out distinctly their real cause of action, it sufficiently alleged the facts, and if so they were entitled without amendment to such remedy as the facts would justify. They say the defendant was guilty of conversion and they are entitled to the value of the poultry, viz., the value of the goods to them, and that such value was the amount of the draft, because, as they contend, owing to the non-return of the bill of lading and the conversion of the goods, they were unable to return it to the Parsons Produce Co., and to demand back the amount paid by them for the draft. It is not contended that the defendant wilfully detained the bill of lading, but the plaintiffs say that he so dealt with it, by delivering it to the railway company, as to prevent him returning it to the plaintiffs. The defendant, on the other hand, says that he was entitled to inspect the goods before accepting the draft, and it was plaintiffs' duty to afford him the necessary facilities for so inspecting; that plaintiffs knew and assented to the use he was going to make of the document, and that it was not the defendant's fault that he was unable to return it to the plaintiffs.

Dealing with the plaintiffs' contention, I agree that they are entitled to damages measured by the value of the goods—and the value thereof to them—not necessarily what defendant could or did sell them for—but I cannot agree that such value was the face of the draft, nor is the reason offered a good one, viz., that by reason of defendant's acts they were unable to look to the Parsons Produce Co. Upon the dishonor of the draft they were entitled to look to the drawers, and were not obliged to give credit for the collateral security until they had actually realized thereon. (*Molsons Bank vs. Cooper.*)

They were not the purchasers of the poultry—by the Bank Act they could take the bill of lading as security, and plaintiffs admit that it was taken only as security. Had the defendant got possession of the draft itself and refused to return it, then the plaintiffs might have been entitled to claim its face value. A bill of lading, however, is not a bill of exchange, nor was it of any value to the plaintiffs except to give them a property in, and the right to the possession of the goods. Had the defendant been a total stranger to the plaintiffs, and had he wrongfully got possession of the goods and converted them to his own use, what civil remedy would plaintiffs have had to recover the value of the goods? There was no contract between the plaintiffs and the defendant, and their right to sue him is either because he wrongfully converted the goods to his own use and deprived the plaintiffs of them, or because they had acquired all the right and title of the owners and could sue for the price. The damages in either case would be the value of the goods, under the circumstances in this case. The evidence satisfied the trial judge that the defendant paid into court the invoice price of all the goods that were fit for food—the poultry that was mildewed and unfit for food and thrown

away was of no value to the plaintiffs or any one else; the defendants therefore paid into court the invoice price of (practically) all the poultry covered by the bill of lading.

I think the learned trial judge was justified in finding that the amount paid in was at least sufficient to satisfy the damages of the plaintiffs, even assuming that the measure of damages was the value, to the plaintiffs, of the poultry. It was argued that by the Bank Act, section 73, the plaintiffs had all the rights of the Parsons Produce Co. If so, what could that company, if plaintiffs, have recovered? At one time the law was that in an action for the price they would have been entitled to the amount agreed on, the defendant not being allowed to set up any breach of warranty in reduction or extinction of the price, but being left to a cross action for damages for such breach. But that is not the law now. The defendant is entitled to set up such breach of warranty in diminution or extinction of the price (sec. 51, Sales of Goods Ordinance).

A distinction was drawn between the Bills of Lading Act in England (18-19 Vic. chap. 111, sec. 1) and sec. 73 of our Bank Act, inasmuch as the former, in defining the position of an endorsee of a bill of lading uses the words, "shall have transferred to, and vested in him, all rights of suit and be subject to the same liabilities as if the contract \* \* \* had been with himself," while our act omits mention of "liabilities." Plaintiffs contended that in England the plaintiffs would, as endorsees of the bill of lading, be liable equally with the consignors—that the omission from our act of the provision as to "liabilities" indicates an intention that the endorsees (the bank) should have the rights but not the liabilities of the owners. The rights of the owners under the contract would have been a cause of action for the price of the goods, and in such an action the defendant could set up the breach of warranty in diminution or extinction of the price, and in addition he might have counter-claimed or brought a cross action for any further damage he has suffered.

The right of the defendant, in this action, if it be treated as one *ex contractu*, to set up the breach of warranty in diminution of the price, is not based on the "liability" of the owner, but by reason of its being a limitation on the measure of the owner's rights which plaintiffs claim to have vested in them. Had the defendant attempted to counterclaim against the bank for further damage suffered by him, the question of whether the bank would be liable in respect of such further damage would arise on the contention that his is a "liability" for which our act does not make the transferees of the bill of lading responsible.

But if, instead of suing on the contract, the plaintiffs are proceeding for not accepting the draft and refusing to return the bill of lading, in such an action the proper measure of damages would be, not the face of the draft but, as was decided in *Rew vs. Payne*, "the value of the cargo" with the addition under the special circumstances of that case, of an allowance of  $2\frac{1}{2}$  per cent. for the detention.

The learned judge found that the plaintiffs were entitled to the money paid into court, and, following the decisions in England of *Goutard vs. Carr*, and *Wheeler vs. United Telephone Co.*, the verdict should be for the defendant, the payment into the court being an alternative defence going to the whole root of the action. It was urged for the plaintiffs that as part of the money was paid in after joinder of issue, and on the morning of the day of

trial, the plaintiffs were entitled to their costs of the action. In *Goutard vs. Carr* it was held that money paid into court must be deemed as paid in under the rules in that behalf; for if not so paid the clerk had no authority to receive it at all. It does not appear that any objection was made by the plaintiffs to the payment made on the opening of the trial, or that any terms were imposed as the price of leave to pay in at so late a date.

Being in fact paid in, and so far as it appears without objection, I think it must be treated as if paid in with statement of defence, and if so the plaintiffs would be entitled to the money, but the verdict would be for the defendant.

As to the amendment which the trial judge thought necessary, my learned brethren are agreed that the pleadings disclosed sufficient facts to entitle the plaintiffs to succeed without any amendment, and while I entertain very serious doubts as to that, I do not feel justified in dissenting.

Concurring, then, in their view as to this point, I agree with the disposition of the costs in the court below as set out in the judgment of my brother Wetmore. I also agree as to there being no costs of appeal to either party, and for the reasons given by Mr. Justice Wetmore. Otherwise also I agree in the result as stated in this judgment.

HEALDSBURG, Cal., January 29, 1904.

SIR: We would like to have you tell us in your next issue whether or not the following is a negotiable instrument and may be discounted and purchased, the same as ordinary negotiable paper.

THE BANK OF HEALDSBURG.

No. 1.

HEALDSBURG WINERY, January 26, 1904.

Original.

Received of John Doe of Healdsburg 5,000 lbs. grapes as per weight tags taken up and forwarded this date with duplicate thereof to Healdsburg Winery, value six hundred dollars (\$600.)

|                                                   |       |
|---------------------------------------------------|-------|
| Paid cash by draft No. 1.....                     | \$200 |
| Balance payable one-half February 15, 1904.....   | 200   |
| "          "          one-half June 15, 1904..... | 200   |

Total..... \$600

HEALDSBURG WINERY,

J. HUGHES, Superintendent.

Please bring or send this statement when collecting payments.

*Answer.*—While the amount to be paid, and the time of payment are fixed, and the obligation to pay appears to be unconditional, yet the instrument is not negotiable, for the reason that it is not payable "to order or bearer" as required by Sec. 3087 of the Civil Code of California. And for this reason the instrument would not be negotiable in any State where the Negotiable Instruments Law is in force. (See New York Act, Sec. 20.)

*Editor Bankers' Magazine :*

CEDAR RAPIDS, Iowa, January 12, 1904.

SIR: In Iowa, January 1 is made a legal holiday, by statute, and section 3063 of the Code of 1887 provides that where a note falls due on a legal holiday presentation and demand should be made the next succeeding business day. Section 85 of the laws of 1902 provides that

a negotiable instrument is payable at the time fixed therein, without grace, and when date of maturity falls on Sunday or a legal holiday the instrument is payable on the next succeeding business day. So that a note falling due on January 1 should be presented for payment on January 2, and should be protested on that date. There is still another provision in the section above cited, which provides substantially as follows: "Instruments falling due on Saturday are to be presented for payment the next succeeding business day, except that instruments payable on demand, may, at the option of the holder, be presented for payment before 12 o'clock, noon, of Saturday, when that entire day is not a holiday." By these conditions, a note instead of becoming due on January 1 this year, that being a legal holiday, is not due until Saturday. Then, the statutes provide that a note falling due on Saturday is to be presented on the next succeeding business day, which would be Monday. Will you advise me on what date such a note should be presented and protested. JAMES E. HAMILTON.

*Answer.*—If the note is not payable on demand, it should be presented and protested on Monday. The statute makes Saturday *dies non* so far as presentment is concerned, except in the case of instruments payable on demand, and hence where Friday is a holiday, Monday is "the next succeeding business day."

*Editor Bankers' Magazine:*

PEIRCE CITY, Mo., January 22, 1904.

SIR: Would you kindly explain the limitations of the following endorsement, "For deposit to the credit of Jno. Blank & Co." Check was made payable to the order of John Blank and the above endorsement was all that was made at the time check was deposited which was then cleared through another bank before being presented to the bank upon which it was drawn, bank through which the check was cleared made the usual endorsement, "Pay to the order of \_\_\_\_\_ Bank or order, signed \_\_\_\_\_ Bank, \_\_\_\_\_ Cashier." We held that this was a restricted endorsement and that the bank originally receiving this check under the first endorsement did not make adequate endorsement. If you will please give your views on the matter and state just how the bank should have endorsed the check after complying with instructions in John Blank's endorsement, you will greatly oblige,

J. E. COPPOCK, *Cashier.*

*Answer.*—The first indorsement is very plainly a restrictive indorsement, and the drawee bank could very properly have required from the bank to which it made payment a guaranty of the genuineness of the prior indorsement. In cities where there are clearing-houses, this matter is usually regulated by a clearing-house rule which requires every bank depositing paper for clearance to place upon the same a stamp, which the rule declares to guarantee the validity and regularity of all prior indorsements. In the case stated in the inquiry, a sufficient indorsement would be "Indorsement guaranteed, \_\_\_\_\_ Bank, \_\_\_\_\_ Cashier."

*Editor Bankers' Magazine:*

FAYETTEVILLE, Tenn., January 22, 1904.

SIR: We had in our possession some months ago two notes on one J. M. Smith. One of these notes was past due at the death of Smith, the other fell due just a day or so afterward. Mr. Smith had in our bank almost enough to pay both of these notes. We charged to his account the full amount of the note due before his death and credited the note due after his death with the balance. The lawyer of said Smith claims we had no right to charge his account with the last-named note. We should be very grateful to you if you would answer us as to this point at your earliest convenience. I might also add that the estate of Mr. Smith is insolvent, but our notes were well secured. ERNEST REES.

*Answer.*—While the general rule appears to be that, as against the executor or administrator of a deceased depositor, the bank cannot withhold the balance due the depositor at the time of his death to apply on his notes which had not matured at that time (Jordan vs. National Shoe and Leather Bank, 74 N. Y. 467), yet where a depositor has become insolvent, the bank is allowed an equitable set-off even though the debt is not then due. (Nashville Trust Co. vs. Fourth National Bank, 91 Tenn. 336; Kentucky Flour Co's Assignee vs. Merchants' Bank, 90 Ky. 225.) Hence, as the estate of J. M. Smith is insolvent, we think the bank had the right to charge the notes to his account.

## FAMOUS AMERICAN FINANCIERS.

---

### ROBERT MORRIS, THE FINANCIER OF THE AMERICAN REVOLUTION.\*

The debt that existing generations owe to their predecessors is immeasurable. It might be asserted, with a fair degree of reasonableness, that the present age is a debtor to the past for all that it possesses. Many of our boasted inventions are but rediscoveries of what other ages have forgotten, and the ancient writer who declared that there is nothing new under the sun might repeat the observation now with

*Robert Morris*

*Mary Morris.*

equal truth. Modern civilization, with its numerous agencies for uplifting and destroying the race, had its counterpart in the civilizations of Greece and Rome, just as those civilizations were imitations of others still more ancient.

Our system of government, dedicated to liberty, was founded centuries ago on foreign shores by those who fought against tyranny and oppression and won the battles for us. Slavery was doomed when the Puritans landed on Plymouth Rock and when Jefferson and his coadjutors formulated the Declaration of Independence. It but remained for Lincoln and the men of his time to deliver the finishing blow.

Jefferson and Patrick Henry, by their impassioned oratory, spurred the Colonies on effectually to resist Great Britain; but they only cleared the way and prepared the ground for building the new national structure devoted to liberty. Neither vehe-

ment declamation nor military ardor, however, would ever have won the struggle for American independence had adequate financial support been lacking. It was the part of a Philadelphia merchant—Robert Morris—to provide the means without which the Patriots could not have achieved success. This fact was never more clearly recognized nor better stated than in the letter which Alexander Hamilton wrote to Morris when the latter was appointed Superintendent of Finance :

"I know of no other in America who unites so many advantages, and of course every impediment to your acceptance is to me a subject of chagrin. I flatter myself Congress will not preclude the public from your services by an obstinate refusal of reasonable conditions, and as one deeply interested in the event, I am happy in believing you will not easily be discouraged from undertaking an office by which you may render America and the world no less a service than the establishment of American independence. 'Tis by introducing order into our finances, by restoring public credit, not by winning battles, that we are finally to gain our object."

Robert Morris was born January 31, 1734, in Liverpool, coming to this country at the age of thirteen, his father being already a resident of Maryland, where he represented a firm of Liverpool merchants. Robert Morris soon went to Philadelphia, and early in life entered the mercantile house which two Englishmen, Charles and Thomas Willing, had established in Philadelphia about 1726. In this position he soon showed his business capacity, and on reaching his majority he was made a partner in the firm. Before long the house of Willing & Morris became one of the most prominent and stable mercantile establishments of Philadelphia. Morris took a vigorous stand in resisting the enforcement of the Stamp Act, though a few years later he advised against an untimely declaration of independence, hoping that peace might be secured. He entered the Continental Congress in 1775 and became a strong champion of the Patriot cause. On March 2, 1769, he had married Miss Mary White, a daughter of Col. Thomas White, of Maryland.

Robert Morris at once became active in securing the independence of the Colonies, and besides being a member of the Continental Congress, he was entrusted with other important work. As early as April, 1776, he was specially commissioned by Congress to provide measures for procuring money to prosecute the war. Though he opposed the declaration as being premature, he became one of the signers of that instrument. In the winter of 1776 Congress fled to Baltimore, leaving Morris at Philadelphia as the active head of the Government. He was energetic in providing for the defence of the city and in raising means to sustain the troops. He opposed the emission of inconvertible paper from the first, and also sought to have the powers of the Government taken out of the hands of committees or boards and vested in the heads of departments, thus obviating the irresponsibility of divided authority. The same view was expressed by Hamilton in a letter written in 1780, in which he suggested the appointment of Morris as the head of the department of finance—a position to which he was called by Congress February 20, 1781. His public services had been extensive already, as he had been four times elected a member of Congress and had also served in the Pennsylvania Legislature. While serving in this latter capacity in 1781 it is said : \*

"He contended almost single-handed with the whole soft-money host who still had not learned that currency need be more than printed pieces of paper. As a result of his spirited tactics, in February, 1781, the Assembly repealed the laws making the issues of January 29, 1777, and March 20, 1777, legal tender. This victory was no sooner gained, however, than the advocates of paper money, on April 6, authorized a new printing of £500,000 worth of bills. Morris and Mifflin, having exhausted their efforts to prevent its passage, aimed to have the measure reconsidered, and finally, in June, a tax was laid to assist in redeeming the notes, and some public lands were sold to establish a fund from which to provide for taking up the issue. All State laws making the Continental bills a legal tender were repealed, and all laws in sup-

\* "Robert Morris, Patriot and Financier," by Ellis Paxson Oberholtzer, Ph., D.

port of old State or Colonial emissions, except those of March 26, 1780, and April 6, 1781, were accorded the same treatment. Fines, penalties, and public salaries, which had been determined in terms of wheat, henceforth were to be reckoned in gold and silver, and Morris was rewarded for his exertions by seeing an immediate rise in the value of the State's outstanding paper money. He could now from his high place as Superintendent of Finance point to the Pennsylvania system as one worthy of the imitation of the other American States."

In informing Congress of his acceptance of the office, Morris wrote :

"A serious conviction of that duty which every citizen owes to his country, especially in times of great public calamity, will no longer permit me to hesitate about the acceptance of the office, although I must again repeat that I have the fullest sense of my own inability. I shall, however, strive to find such assistance as will enable me in some measure to answer the reasonable expectations of Congress, to whom I can promise for myself nothing more than honest industry. In accepting the office bestowed on me I sacrifice much of my interest, my ease, my domestic enjoyments, and internal tranquillity. If I know my own heart, I make these sacrifices with a disinterested view to the service of my country. I am ready to go still further, and the United States may command everything I have except my integrity, and the loss of that would effectually disable me from serving them more."

Before he would become Superintendent of Finance Morris insisted that he be given large powers in the matter of contracting for supplies for the army and in the appointment of his assistants. One critic declared that Congress had practically abdicated in favor of Morris. "Congress," he said, "gave him all, like a young man just come to the possession of a large but intricate estate, who after many virtuous and great efforts to clear and ascertain it, in some indolent, wicked or capricious moment grows tired of acting for himself. 'Here,' says he, 'take my papers and my money, but allow me a fair subsistence. Do with them what you will; I am too great a fool to do my own business.'" Another wrote that Mr. Morris having relieved Congress from all business of deliberation or executive difficulty with which money is in any respect connected, "they are now very much at leisure to read despatches, return thanks, pay and receive compliments, etc."

These sarcastic comments were not destitute of truth; Congress had shown great weakness and incapacity in dealing with the financial problems of the war, and a stronger and more competent hand was needed.

But while there were those who were envious and jealous of Morris, he did not lack appreciation from the most distinguished men of the time. Hamilton's opinion has been given. Franklin, Jay, John Hancock and all the leading Patriots approved of the appointment of Morris. On June 4, 1781, General Washington wrote :

"I felt a most sensible pleasure when I heard of your acceptance of the late appointment of Congress to regulate the finances of this country. My hand and my heart shall be with you; and as far as my assistance can go, command it. We have, I am persuaded, but one object in view, the public good, to effect which I will aid your endeavors to the extent of my abilities, and with all the powers I am vested with."

One of the first things Morris did was to secure the establishment of a bank. He had been associated with the Pennsylvania Bank, which had been instrumental in providing supplies for the army. On December 31, 1781, Congress incorporated the Bank of North America, at Philadelphia, with \$800,000 capital. The specie to found the bank was obtained chiefly from imports from France. Events soon showed the value of the bank to the Government. In less than two weeks after the bank was opened it loaned the United States \$100,000 and a few months further sums, amounting in all to \$400,000, or \$100,000 more than the bank's paid-up capital, were obtained.

When Morris assumed the duties of his new position, on June 27, 1781, the financial affairs of the country were in bad shape. Continental currency was almost worthless, and the contributions which the States were called on to make were greatly in arrears, and Congress, even after the Articles of Confederation became operative, lacked the power to enforce compliance with its demands.

Besides the aid of the bank, Morris strove to economize in expenditures and to obtain revenues sufficient to meet the expenses of the military campaigns and to defray the cost of running the Government. He found great difficulty in collecting the taxes from the States, and was compelled to resort to various expedients to obtain money. Alternately he coaxed and threatened the States and appealed to their patriotism, but often with little avail. Although the means of the struggling Patriots were scanty, he deemed this an insufficient excuse for failure to pay taxes. To the Governor of Connecticut he wrote on July 31, 1782 :

"As to the complaint made by the people of a want of money to pay their taxes, it is nothing new to me nor indeed to anybody. The complaint is, I believe, quite as old as taxation, and will last as long. That times are hard, that money is scarce, that taxes are heavy and the like, are constant themes of declamation in all countries and will be so. But the very generality of the complaint shows it to be ill founded. The fact is that men will always find use for all the money they can get hold of and more. A tax-gatherer, therefore, will always be an unwelcome guest, because his demand must necessarily interfere with some pleasurable or profitable pursuit. Hundreds who can not find money to pay taxes can find it to purchase useless gewgaws and expend much more in the gratification of vanity, luxury, drunkenness and debauchery than is necessary to establish the freedom of their country."

The activity of Morris in endeavoring to obtain money was unceasing. Prior to the advance on Yorktown, there was dissatisfaction among the troops, and the necessity of paying them was urged by General Washington. Having exhausted all other means of raising funds, Morris applied to Count Rochambeau, the commander of the French forces, for a loan of \$20,000 in silver, which was finally obtained. But the amount was insufficient, and Morris was obliged, as at other times, to use his own personal credit to get the additional money needed. The Superintendent of Finance was continually met with requests for money, with most of which he was unable to comply. He sometimes made excuses, and occasionally put off applicants for payment on account by telling them that it was his rule to make no partial payments. But he was by no means insensible to many of the appeals made to him. Of General St. Clair he wrote :

"This gentleman's distress is beyond description. Not a dollar in his possession at a time when duty calls him to camp, and a starving family to remain behind him. I must therefore supply him some way or other, but it is exceedingly hard to advance perpetually my own money to those whom the public distress by non-payment."

How hard pressed the Superintendent was is illustrated by the fact that in 1783 when eighty Continental soldiers marched to Philadelphia to collect their back pay, Morris and the Congress fled to Princeton. But by means of taxes, loans and the aid of the bank, and the employment of his great personal credit, and a judicious use of the knowledge which he had gained as a merchant, Morris was able to render the greatest service to the Patriot cause. When the war was brought to a successful termination, he wished to see the debt provided for, and Congress refusing to accept his views, he wrote a letter on January 24, 1783, resigning his office. In this letter he said :

"My attention to the public debts arose from the conviction that funding them on solid revenues was the last essential work of our glorious Revolution. The accomplishment of this necessary work is among the objects nearest my heart, and to effect it I would sacrifice time, property and domestic bliss. \* \* \* To increase our debts while the prospect of paying them diminishes, does not consist with my idea of integrity."

At the urgent request of a committee of Congress Morris continued in office until November 1, 1784. In addition to the numerous difficulties of his position, charges had been made respecting his administration of the finances. On his retirement he made a full and detailed report of all the transactions during his term.\*

\* For a statement of the accounts of Morris as Superintendent of Finance, see *BANKERS' MAGAZINE*, February, 1860, p. 577.

After withdrawing from the office of Superintendent of Finance Morris devoted himself actively to business, particularly to his large shipping interests. He was a member of the convention for framing the Constitution of the United States, and made the speech nominating Washington as chairman of the convention. When the Constitution was ratified, Morris was elected to represent Pennsylvania in the United States Senate, having declined the position of Secretary of the Treasury which Washington had tendered him. On the expiration of his term as Senator he refused to accept the office again, desiring to devote his attention to his personal affairs. These had become hopelessly involved, and heavy land and other speculations gradually brought the famous Financier to financial ruin, and finally to a debtor's prison. On the eve of his incarceration he wrote in his diary: "My money is gone; my furniture is to be sold; I am to go to prison and my family to starve. Good night."

While in prison he entertained General Washington at dinner. In the last year of his life General Washington and Mrs. Washington wrote a letter inviting Mrs. Morris and her daughter to visit Mount Vernon, the letter concluding as follows: "Be assured we ever have and still do retain the most affectionate regard for you, Mr. Morris, and the family."

Robert Morris not only enjoyed the confidence and friendship of those with whom he was in political accord, but of other eminent men. While a member of Congress in 1782 Madison wrote: "My charity, I own, cannot invent an excuse for the prepossession malice with which the character and services of this gentleman are murdered. I am persuaded that he accepted his offices from motives which were honorable and patriotic. I have seen no proof of misfeasance. I have heard of many charges which were palpably erroneous. I have known others somewhat suspicious vanish on examination. Every member in Congress must be sensible of the benefit which has accrued to the public from his administration; no intelligent man out of Congress can be altogether insensible of it." Jefferson, one of Morris's most pronounced political antagonists, also expressed appreciation of his abilities.

On April 4, 1800, Congress passed a law that on the petition of his creditors a man could be adjudged a bankrupt and be released from prison. Morris was set at liberty August 26, 1801, after having been in jail for over three and one-half years. Proof was made in court of debts amounting to \$3,000,000. He was sixty-eight years of age at the time of his release, and was, he declared, "without a cent." From Gouverneur Morris (who was a friend and business associate of Robert Morris, but not a relative) Mrs. Morris received a payment of \$1,500 annually for life. Robert Morris died May 8, 1806, and his widow survived him by twenty-one years.

From the beginning of the Revolutionary struggle to its close Robert Morris was prominent in the work of providing funds for carrying on the war. How difficult his task was, under all the circumstances, can hardly be realized now. That he was sound in his financial views, and possessed of unflagging zeal and patriotism, can not be doubted. His business experience and high credit were of the greatest value to the Patriot cause.

As the Financier of the American Revolution and one of the wealthiest merchants of his day, Robert Morris was one of the leading social figures of the time and at his house he frequently entertained the most distinguished Americans as well as many visitors from foreign shores.

The financial downfall of the great merchant and Financier furnishes an impressive warning against speculation, even when carried on by men of the greatest capacity. But neither the misfortunes of his later years, the detraction of his enemies, nor the lapse of time, can obscure the services which he rendered to the cause of American independence or dim the lustre of the name of Robert Morris.

ELMER H. YOUNGMAN.

## NATIONAL BANK OF COMMERCE, SAN ANTONIO, TEXAS.

---

The favorable prospects which marked the opening of this bank on October 8, 1903, are being realized in a manner very gratifying to the management and friends of the bank. Several factors have contributed to the rapid and steady growth of the National Bank of Commerce in public favor. In the first place, the capital of \$300,000—which exceeded the capital of any other bank in San Antonio—tended to attract attention and inspire confidence. Then the business conditions in Texas have been good, as a rule, during the life of the bank, and the institution shared in the general prosperity. Besides, the management is strongly representative of the spirit of progress which has done so much to promote the upbuilding and development of the resources of Texas in recent years. The officers and directors are a body of conservative men, each name representing marked success in banking and other business enterprises.

J. P. Barclay, President of the National Bank of Commerce, is a lifelong banker. He was for many years connected with a bank at Bowling Green, Ky., and for the past ten years he has been continuously engaged in banking at San Antonio. He is regarded as one of the leading bankers of Texas, and is held in high esteem for his personal qualities as well as for his sound business attainments.

R. L. Ball, the Vice-President, is a member of the law firm of Ball & Ingram, and is one of the leading attorneys of the city. He has resided at San Antonio for about ten years, having been formerly a resident of Colorado, Texas, where, besides practicing law, he was President of the Colorado National Bank.

John M. Bennett, Jr., Assistant Cashier, is well and favorably known, having been assistant teller of the San Antonio National Bank prior to the organization of the National Bank of Commerce.

All of the directors are residents of San Antonio, except Chas. Schreiner, of Kerrville, and Robert J. Kleberg, of Corpus Christi. Mr. Schreiner is a banker and merchant at Kerrville, and is one of the wealthy men of the State, having extensive interests in land, cattle and merchandise. Robert J. Kleberg is the manager of the Mrs. H. M. King properties, the largest and most successful ranch properties in the country, and is also President of the Corpus Christi National Bank.

The local members of the board are: John M. Bennett, Sr., President of the First National Bank, of Yoakum, Texas, and one of the wealthy men of Southwest Texas; Nat M. Washer, of Washer Bros., San Antonio and Fort Worth; Geo. R. Stumberg, W. J. Moore, of Moore & Allen, and W. W. Lipscomb, formerly in the banking business at Luling, Texas. These gentlemen represent strong and diversified business interests, and their long identification with San Antonio and Southwest Texas will contribute greatly to the solidity and growth of the National Bank of Commerce.

**J. P. BARCLAY**

**President National Bank of Commerce, San Antonio, Texas**

## THE COMMERCIAL WAREHOUSE RECEIPT—ITS USES AND DANGERS.

[Paper read before the Philadelphia Chapter American Institute of Bank Clerks by Philip Godley, member American Warehousemen's Association, and subsequently presented at the annual convention of the American Warehousemen's Association held at Washington, D. C., December 2, 3 and 4, 1908.]

The subject on which you ask me to enlighten you is a comprehensive one, with many ramifications, and possible of many complications, and yet based on a principle that would seem to be simplicity itself.

Warehousing is but a system intended to secure to commerce every possible facility to aid in the free distribution of merchandise and for the development of commercial credit, and the warehouse receipt a method for the convenient and economic transfer of title to stored goods, and turning bulky goods practically into a paper currency, and by constructive delivery to transfer property from one owner to another, without physical effort or motion and its consequent cost. Hence the warehouse receipt has come to be used also in the form of collateral, enabling the merchant to secure temporary accommodation in the way of loans, with less strain to his credit because of his giving security in pledge.

As early as 1866 in the State of Pennsylvania our law-making body enacted legislation governing warehousemen, terming them "bailees," covering also the issue of warehouse receipts, the points of which may be told under the following headings:

- (1) Warehouse receipts and bills of lading to be negotiable. Transferee to be deemed the owner of the goods. Lien of holder. When property to be delivered.
- (2) No receipt to be given except for goods actually received.
- (3) Warehouse receipts which shall have the words "not negotiable" plainly written or stamped on the face thereof, are exempt.
- (4) Duplicate receipts to be so indorsed.
- (5) Penalty for violation.
- (6) Act extended to grain in elevators or petroleum in barrels.
- (7) Warehousemen not to sell without return of receipt.
- (8) Petitioner for delivery of goods when receipt has been lost or destroyed.
- (9) Petition to execute and file a bond to be fixed by the court. Company to be fully released, but not lien of the company to be impaired.
- (10) Conditions of bond. Any person injured may institute an action of debt.
- (11) Costs of proceedings and counsel fee to respondents to be paid by petitioner.
- (12) Manner of attaching goods in the hands of a bailee. Holder of the receipt to be the garnishee.
- (13) Bailees not liable to owners if goods are taken by legal process.
- (14) Actions for property delivered by mistake.

### DIVERSITY OF STATE LAWS IN REGARD TO WAREHOUSE RECEIPTS.

Thus it would seem that in our State the statutes have fairly and quite fully provided protection (as well as penalty) for all parties interested, and the courts have rendered numerous decisions giving precedents and vitality to the legislation.

The confines of a paper such as this and the time allotted for the subject, must preclude my going beyond the limits of our own State, but the lines of trade and

commerce passing daily through the institutions which you represent necessarily go far beyond and into nearly every State in the Union, hence I must call your attention to the fact that State laws on warehouse receipts differ as widely as do divorce laws.

(For information as to this diversity, there is in the hands of the publishers, to be now soon issued, a compilation of the warehouse laws of all the States, made by a Washington attorney, under the auspices of the American Warehousemen's Association, a book that ought to be in the reference library of every bank.)

This diversity should not be so, for our people and their commerce are so interlocked, their interests through modern and rapid means of communication, by railroad, telegraph and telephone, are so nearly one, that all commercial documents should be as one, and a warehouse receipt issued in one State ought to be as well known and as good an instrument in every State of our Union as in the State of issue. I refer to this because it is probably within your knowledge that there exists an organization known as "State Boards of Commissioners," and that through the efforts of this organization there has been prepared a code of laws governing notes, checks and drafts, which have been enacted in twenty States, viz.: Arizona, Colorado, Connecticut, Florida, Iowa, Maryland, Massachusetts, New Jersey, New York, North Carolina, North Dakota, Ohio, Oregon, Pennsylvania, Rhode Island, Tennessee, Utah, Virginia, Washington and Wisconsin, and by Congress for the District of Columbia. This same Board of Commissioners, in conjunction with the American Warehousemen's Association are now bending their efforts to obtain a similar uniformity in the laws governing warehouse receipts. The mere mention of this will suffice, I think, to open to your minds the great possibilities and advantages to be obtained in the success of this undertaking, and if its importance appeals to you, I am confident you could help the good work along by such expression of approval as may seem to you proper to grant.

#### LEGAL OPINION CONCERNING WAREHOUSEMEN AND WAREHOUSE RECEIPTS.

In order to give you in as brief a manner as possible the chief points and principles as to who and what is a warehouseman and his warehouse receipts, I think I could not do better or make as disinterested a statement as by quoting you from a written opinion made by a distinguished gentleman of this city, learned in the law, to the President of the American Warehousemen's Association in 1895 in reply to a series of questions presented by that organization, as follows:

"Question: Please cite a few cases where losses have occurred through warehouse receipts, giving the points at issue.

Answer: The possession of a warehouse receipt is a symbol of the possession of the property described in it. There are certain losses that might happen to this property, as well when held through warehouse receipts, as when held through actual possession. These losses are destruction or deterioration by the elements, such as by fire, flood, etc., by insurrection, by riot, or by public enemy, and in none of these cases would the warehouseman be liable, except where the injury had occurred through his own negligence. As you will perceive, therefore, if the warehouseman has performed his duty, and there be no negligence imputable to him, the above losses are not incident to the warehouse receipt. A warehouseman is bound for the exercise of ordinary diligence, or that care which prudent persons usually take of their property. He is not like a common carrier, liable as an insurer of the goods; he is not liable for losses or injuries where he uses all the care and diligence in relation to the property, which prudent men exercise in relation to their own. (See the cases of *Knapp vs. Curtis*, 9 Wendell 60; *Platt vs. Hibbard*, 71 Cowen 497; *Steamship Co. vs. Smart*, 107 Pa. 492.)

Using due diligence, he is not responsible for goods stolen or embezzled by his

storekeeper or servant, or for losses caused by fire or by accident. (See the case of *Schmidt vs. Blood*, 9 Wendell, 268; *Claffin vs. Mayer*, 75 New York 260.)

The warehouseman may render himself liable for loss by fire by warranting his warehouse to be fireproof. (*Hickey vs. Morrell*, 102 New York, 454.)

But he is liable for the goods where they are lost or stolen through his negligence or want of due care. (See the cases of *Halyard vs. Dechelma*n, 29 Mississippi, 459; *Petty vs. Overall*, 42 Alabama, 145; *Lanb vs. The Camden and Amboy Railroad Co.* 46 New York, 271.)

The possessor of a warehouse receipt may lose the property represented thereby, by the want of fidelity of the warehouseman, who has it in his power to appropriate the property to his own use, and by his want of diligence in taking due care of it, in consequence of which it may be injured or destroyed, but in both these cases the holder of the receipt has his action for damages for the value of the goods against the warehouseman, the value of which action depends upon the pecuniary responsibility of the warehouseman. Reference to the above cited cases will make this very clear.

#### WAREHOUSE RECEIPTS AS COLLATERALS.

Question: What are the advantages and dangers of warehouse receipts as collaterals?

Answer: The advantage of a warehouse receipt is that it enables the goods described in it to be sold, or pledged for a loan of money, by the mere delivery of the warehouse receipt, thus avoiding the inconvenience of an actual removal or delivery of the property itself. In other words, the warehouse receipt is a symbol for the property described therein, and a delivery of the receipt is, in law, a delivery of the possession of the property.

The danger of a warehouse receipt as collateral may arise from an insufficient or false description of the property in the receipt, from the unfaithfulness of the warehouseman, who may misappropriate the property committed to his keeping, or from the negligence of the warehouseman in failing to take due care of it. In all of these cases the holder of the warehouse receipt might lose his claim upon the property, either in whole or in part, as the case might be, and would be relegated to the personal responsibility of the warehouseman for the reimbursement of his loss. Of course, if the warehouseman has been faithful, and guilty of no negligence, losses may arise by the elements, etc., as above stated, but such losses might equally occur whether the property were held on a warehouse receipt or be in the actual possession of the owner, and, of course, such losses could not be charged to the fact that the owner or pledgee of the property held a warehouse receipt, rather than the property itself.

Question: What danger to the holder of a warehouse receipt is likely to arise from want of good character of the warehouseman or knowledge of his business?

Answer: Good character, a competent knowledge of the business and a pecuniary responsibility are requisites of the highest importance in a warehouseman, not only in attracting business to him, but in giving his warehouse receipts a commercial credit in trade circles and among financial institutions. Persons depositing merchandise with a warehouseman are obliged to trust to his fidelity and diligence in taking due care of their property, and persons dealing in warehouse receipts are in the same position, and must also trust to the accuracy of the warehouseman in describing in the receipt the property entrusted to him. If the warehouseman misappropriates the property, or fails to take due care of it, or if he falsely or insufficiently describes it in the receipt, the holder of the receipt may lose his claim to the property, and may only have an action for damages against the warehouseman. It must, therefore, be apparent that the character, competency and pecuniary respon-

sibility of the warehouseman are all important factors in the successful prosecution of his business.

Question: What is the value of a warehouse receipt issued by a man on his own property, in his own warehouse, should he become insolvent?

Answer: A warehouse receipt issued by the owner of property in his own warehouse is but little better than an unsecured promissory note of such person. It is true that before the rights of creditors or purchasers have intervened, the holder of such receipt might recover the property from the owner by a writ of replevin, but if possession were not recovered before the warehouseman had failed, or the rights of creditors or purchasers had intervened, the title to the property on such warehouse receipt would be invalid as against such creditors or purchasers.

The case of the Union Trust Company vs. Trumble, 28 N. E. Reports, 355, is an illustration of this. The facts of the case were, that a wool merchant had leased part of his store to warehousemen, who, without going into possession (the lease probably being a fiction) issued warehouse receipts to the merchant for wool, which he stored on the premises, and of which he retained the control, the wool not being marked or set apart. It was held that such receipts were void, as against the other creditors of the merchant, upon his making a voluntary assignment. Of course, where goods are stored with a regular warehouseman, and a warehouse receipt issued against them, and that receipt has been negotiated either to a purchaser or pledgee, such purchaser or pledgee will take a good title to the property as against the party depositing the property in the warehouse, or his creditors or subsequent purchasers."

\* \* \* \* \*

It goes without saying that in making loans on merchandise as great care is to be maintained in the selection as in any other class of collateral. Marketable qualifications, invoice valuation, appraised value, season conditions, etc., and always with fire insurance policies. All the leading commodities, both in raw materials and food products, necessities of life as well as some luxuries, should be good and safe security for loans of moneys, and accompanied with the obligation of the borrower, render less probability of loss than on the average discounting of unsecured paper.

#### LOANS ON PERISHABLE COMMODITIES.

In these days, food products such as butter, cheese, eggs and poultry as carried in cold storage for preservation, are coming in favor, and deservedly so, for science, skill and experience have so developed these operations that within reasonable seasons or lengths of time, they make as good collateral as imperishable commodities. For instance, butter, cheese, eggs and apples are produced in seasons and loans are negotiated on the basis of low prices during the plethoric period of gathering. A little thought will suggest to any common-sense mind that as eggs, butter, cheese are gathered between the months of March to July, that such stocks ought not to be carried much over the following first of January. This because of market conditions and regardless of atmospheric change or question of the warehouse preservation. Again, an apple crop should be distributed before the spring fruits arrive, even the early Southern shipments.

#### LOANS ON IMPORTS IN BONDED WAREHOUSES.

A special branch, as to which some minds are skeptical, is that covering imported merchandise carried in customs bonded warehouses. Here the Federal Government is the supreme power, and whilst jealous of its prerogative, is not unmindful of the fact that the proprietor of the warehouse whose bond has been accepted has more or less equal say as to the control of the deposits, for they are declared to be in the "joint custody" of the respective parties whose locks secure the entrances. Herein

is the protection to the holder of this class of collateral, for it has been officially declared that Government officials must respect an obligation to make delivery on the part of the warehouse proprietor, because he is one party to the custody, which is joint. Yet in order to obtain complete control (the importer having the sole right to tender duties at the custom house) power should be given by means of signed withdrawals. This system seems somewhat cumbersome and awkward to the inexperienced, and it is hoped that improvement can be brought about, effort to which end is under consideration.

#### DANGERS AND ABUSES OF WAREHOUSE RECEIPTS.

Not the least interesting and important side to this whole question of warehouse receipts is, what are the dangers and what are the abuses to which the system is liable. In considering this it will probably be necessary to be more specific in treatment. As has been pointed out to you through the legal opinion above quoted, the standing of the warehouseman is of the utmost importance in the beginning. I believe it will be safe to assume that all warehousemen who have been long established appreciate that they are in the highest sense trustees. Capital and financial responsibility are essential, and yet no matter what the proportion of capital to space, a warehouseman will be entrusted as custodian of values far and away beyond the capital in his business. Hence the advantage of a realizing sense of trusteeship, for the maintenance of which the warehouseman should be entirely removed from trading and merchandising. More than one instance could be recited where firms and corporations have organized a warehousing department or storage company, whose sole business has been the handling of goods manufactured or traded in by the owners, designed in the beginning, perhaps, solely with a view to economy in having their warehouse department alongside the mill, factory or store, but stress of circumstance has led to pressure on the warehouse manager to issue receipts for goods never put in the warehouse, or caused delivery of goods on which the receipt has not been returned.

Hence a warehouse receipt issued by an owner, on his own goods in his own warehouse, may not be so good as even single-name paper.

A modern method has grown up in some sections of the country (I believe our conservative Philadelphians are not open to the charge) where large corporate warehouses have become merchants, and when their special commodities fail to flow in natural channels into their warehouses, purchasing in the open market has filled their houses with the desired commodities, and their home (or perhaps somewhat distant) banks, have aided in carrying such merchant-storage stocks.

A good rule to adopt when warehouse receipts are accepted would be to advise the warehouse of the fact that the bank is the holder. There might be damage by fire or flood, accidental or providential disaster. Periods occur when even the good and strong meet with adversity and diligent creditors seek the assistance of a legal official to "catch-as-catch can" whatever and wherever value may be found. How useful the opportunity if the warehouseman could step into his 'phone box and quickly advise the holder of any condition that would affect his interests. Whilst storage charges are seldom a serious menace to merchandise property, yet like interest, it works, diligently, nights, Sundays and holidays, never fearing overwork or nervous prostration. Hence, accumulation, either at the beginning or during the continuance of a loan; it should be borne in mind, for it is always a prior lien. A word from a bank will accomplish settlement much more promptly than any diligent collector of the warehouse.

The question of title to stored property is seldom raised, and possession sufficient to enable the holder to deposit in his own name suffices to warrant the warehouseman in issuing a warehouse receipt, and recovery against it can only be obtained by due process of law.

## BANK LOANS ON MERCHANDISE IN WAREHOUSES.

Merchandise deposited in warehouses can be used as collateral without the use of negotiable warehouse receipts, and I desire to call your especial attention to the method which I have recommended to several banks, and which is used to a considerable extent by a number of warehousemen (including myself) to the eminent satisfaction, I believe, of all who have adopted it.

I mean the transfer by the storer on the books of the warehouse to the bank or banker making a loan, and the taking of a non-negotiable receipt in the name of the bank or banker. The advantages are twofold: first and chiefly, because thereby title to the property is invested in the bank, and in case of insolvency overtaking the borrower and issue of attachments, if a county sheriff visit the warehouse, the answer is plain, nothing here for you to reach or touch. If, however, the goods stand on the books of the warehouse in the name of the storer, though the negotiable warehouse receipt be entered up against them, a truthful warehouseman can hardly deny the deposit sought by the officers of the law, and there will at least be an equity in the goods which the sheriff will attempt with earnest endeavor to reach. It is a question, too, if the served attachment might not hold, and the bank be put to the trouble and expense of replevin and possibly an action in court to defend. This is especially the case now, since at the last session of our Legislature an act was put on the statute books extending the powers of the sheriff, and authorizing service and summons in "any other person than the defendant found in possession of the goods and chattels," and dragging the warehouseman in as defendant also.

Secondly, the method of transfer simplifies the transaction where partial deliveries or releases are to be made, for instead of the necessity of sending a messenger with the receipt to the warehouse (which may be quite distant) to get endorsement before delivery, a bank officer need only sign a delivery order. When the loan is closed out, the non-negotiable receipt should be marked canceled and returned to the warehouse issuing it.

If the loan be made on a negotiable warehouse receipt, send it to the warehouse with endorsement to transfer and issue a new receipt in the name of the bank, which new receipt may just as well be of the non-negotiable class.

In all cases the receipt, whether negotiable or non-negotiable, should accurately and fully describe the merchandise by mark or number, so that identification shall be unmistakable. The negotiable warehouse receipt serves its greatest usefulness in passing possession from buyer to seller, but in my judgment the system of transfers of merchandise is greatly preferable for collateral uses, both for protection and simplicity. In all methods or systems of credit, there are necessarily dangers, some more, some less, but a note with collateral certainly is better than a note standing alone, even with another name on its back, and rare are the instances where heavy losses are met with collateral loans.

I have experienced instances suggestive that the warehouse receipt has not been understood or appreciated, and that this class of collateral is not looked after as carefully as is that of the stockbroker. Fire insurance expirations are not always watched. Failure to appreciate the responsibility and duty of the warehouseman has been exhibited. When a borrower having made release for partial delivery, I have known banks to telephone request to give Mr. So-and-So a certain number of packages, and the receipt would be sent around in the morning or when the runner comes in. I have wondered what a bank officer would say if I were to 'phone him to give my well-known clerk \$100 and I would send a check around in the morning. Field warehousing is of a class that needs watching.

A recent case in this State occasioned loss by reason of the warehouse company

issuing its receipts on a lot of pig iron, which turned out to have been on leased ground, the warehouse company being a sub tenant, without the knowledge or consent of the owner of the land, and the iron was taken under distraint for rent.

The value and importance of this system of merchandise collateral as adding to the methods of safe credit should not be underestimated, for it is one of the necessities of modern trade and commerce, and is destined to become vast in its proportions. If I were permitted to offer any suggestion, it would be to the progressive banker: prepare you a department to study and handle this branch of business in an intelligent and systematic manner, and develop it to the mutual advantage of yourself and your customers, and in closing I beg to quote you the words of President Nash, of the Corn Exchange Bank, of New York, as stated at its fiftieth anniversary banquet.

"The bank has, however, made two important contributions to American banking. President Dunham, being familiar with the grain business, introduced, immediately on taking office, the unusual practice among banks, of assisting merchants to carry large stocks of grain and merchandise in this port, by making loans on that class of collateral, when represented by warehouse receipts or bills of lading. It subjected us at the start to the stigma of being a pawnbroker's shop, and this stigma was freely applied. But eventually the principle of advances on merchandise was adopted by other banks until now it is well-nigh universal. It has always been a distinctive part of our business. Mr. Dunham used to say that wheat and cotton, wool and pork, lard and coffee were as good as gold, and he was ready to give gold to the man who was willing to pledge these commodities as security for its payment. He, however, confined his operations to the great staples named, because the quality and the price were less subject to wide variations, and was chary of general merchandise, where the differences are much more marked, and to a non-dealer somewhat deceptive. This preference for the staples has not prevented us from going into less desirable lines of business, where the solidity of the borrower has outweighed the disadvantages of his collateral, and varied and sometimes amusing lists of merchandise have been reported to our directors for their approval."

#### APPRECIATION OF THE MAGAZINE.

MADISON, Wis., January 13, 1904.

*The Bankers' Publishing Co., New York.*

DEAR SIR: Having been a continuous subscriber to THE BANKERS' MAGAZINE for the past fifty years—all now bound—we are pleased to renew the same another year however, as per inclosed blank, also verification card of classified items and published legal statement. Very truly yours,

N. B. VAN SLYKE, *President First National Bank.*

NEW YORK, January, 14, 1904.

*The Bankers' Publishing Co., New York.*

GENTLEMEN: Permit me to compliment you on the very fine appearance of THE BANKERS' MAGAZINE for January, 1904. It makes an artistic, and at the same time substantial, impression. Very truly,

EDWIN GOODALL, *Treasurer Bankers' Money Order Association.*

APPRECIATION FROM A BANK CLERK.—Harry Evers, a clerk in the Manufacturers and Traders' National Bank, Buffalo, N. Y., writes as follows under date of January 9:

"Enclosed please find New York draft and order for subscription for THE BANKERS' MAGAZINE. Through reading one of the bank's copies every month, I have appreciated your MAGAZINE for a long time, and in my preparation for the debate in which I had the honor to take part at Cleveland, it was in the files of your magazine that I found the most help."

## WILLIAM PERRY BROWN.

### PORTRAIT AND SKETCH OF THE GREAT AMERICAN COTTON KING.

---

Eminence not every man may hope to rise to. For while the sun shines on all alike, as the old adage has it, and Shakespeare has spoken truly of the "tide in the affairs of men" and all that, still, some men command fortune and leadership so early and easily, so naturally and completely and wisely, it seems their birthright.

Of this character of man, a shining exemplar is the subject of this sketch, the world-famous "bull" operator of the cotton market, and principal in last summer's glorious campaign, involving no less than 300,000 bales of the actual staple and some \$20,000,000 value, and sending prices soaring to a point from which they have not yet sensibly descended.

The successful man, the man of action and affairs, who has thus risen to the rank of a personage, is, to the public, always an interesting character. He is the more so when, as in the present instance, his business touches another as closely as it does the one this magazine specially addresses. But what particular manner of man, the reader may say, is he? Of his market achievements the knowledge is general; the papers have been full of it. Him, personally, that is the question.

Of the man then a word first, and of his performances later. Thousands have seen him, as the writer has, on 'Change, both in New York and in New Orleans, cool, calm, serene, imperturbable—like the Storm King, literally "in his element." Other thousands have met him in a business way, in his New Orleans offices, or here, may be, at the Waldorf-Astoria, upon the occasion of one of his frequent visits to the metropolis.

He looks a man of medium build, or slightly more than it; is plainly but genteelly attired in business tweed, unadorned—without ornament of any sort in fact, but one, namely, a heavy gold watch guard, with its highly-appropriate pendant, a golden bull, for charm. In his profile the distinguishing feature is the nose, a Roman nose, a nose of poise and self-reliance, energy, aggression, ascendancy. The caput is uncommonly high; it is a brain-case that would have delighted old Professor Fowler. The brows are heavy, the jaws full and firm; jaws these, assuredly, of determination, tenacity and power. The complexion, finally, rather florid, the face almost unwrinkled, the hair and moustache as yet untinged with gray—all the marks of a man still upon the sunny side of his existence.

On closer acquaintance a very approachable man; a man unspoiled by his good fortune; frank and open of manner, but positive—indeed, decidedly so; ready enough of speech when he chooses, but ordinarily, reticent. And very well able to give reasons for the faith that is in him. In New Orleans, where his home is, his office surroundings are very severely simple. The furniture and fittings are plain and old-fashioned. He sits by the door, at a little roll-top desk, looking out on the cotton sampling room of the firm, easily accessi-

**Pirie MacDonald. Phot'gr of Men, N. Y.**

**W. P. BROWN**

ble, transacting there a business of millions, with the four quarters of the globe. Evidently a man who values the substance of things more than glitter or appearances. Those who know him intimately will tell you that he is a man of family, his wife being a daughter of the late Judge Geo. H. Braun, a distinguished jurist of New Orleans; that he is building for himself the most palatial home in New Orleans; that he neither drinks nor smokes; that he loves music and the company of his friends; is a club man and member of public bodies and a liberal giver for all public purposes; but that business is his hobby, come hot or cold, rain or shine, and that he is a tireless worker, clear-headed, broad-minded and far-sighted.

So much for the man; now for something of his story. He came to New Orleans in 1890, from Columbus, Mississippi, where he had been in the cotton trade, to establish the house of W. P. Brown & Co., of which he is senior member, and which has since done a business of the very first and largest order as cotton merchants and exporters. It is interesting to learn of him that in Columbus his early aspirations were military. At one time there he had in view a West Point career. There also he raised and commanded a company which went by his name.

Even there it appears he was a leader.

From the start in New Orleans he began to carve out success, and very soon attained the recognition his energy and abilities merited. His position in the market has been that of an original and consistent bull. Beginning in 1898 when cotton was selling at 4½ cents a pound, he declared publicly that the staple was then too low for any profit to the planter; that it must inevitably rise in price; that consumption would soon outrun production; that the increasing gold output of the world meant a higher level of prices generally.

These and other cogent reasons were advanced and were acted upon by him. In 1900 he engineered a highly successful bull campaign, advancing prices in the New Orleans market to eleven cents, nearly. That same year, coming from Europe in the company of Leonard Lewinsohn, the Copper King, the late Phil Armour and others, he advanced the opinion that an unexampled prosperity awaited the South, and time has amply borne out that prediction.

Regarding the recent cotton corner, report was current that Mr. Brown and his associates took hold where the New York and New England bull clique left off. This, however, is an error. Mr. Brown has been bulling cotton steadily for several years. He started a vigorous campaign in the fall of 1902, and this was the inception of the movement which eventually culminated, in September, 1903, as the most successful corner in the history of the cotton trade. At the time the Northern syndicate were reported unloading on the Brown party, July options were selling in the New York future market at about 9½ cents and in New Orleans at ten cents; whereas, it should have been the contrary, New York being normally about twenty-five points above New Orleans. The true bull movement, then, must have been the Crescent City's. And at all events, it is now agreed, Brown and associates it must have been who carried, not only the New Orleans, but the New York movement as well, to a prosperous finale, bidding fifteen cents for cotton in New Orleans and fourteen in New York, and finding "none for sale."

Mr. Brown, however, makes no great boast of the feat, saying of it, simply, that he and his associates had established new values for the staple;

that their work has been highly beneficial to the planter and the South generally; that as regards the mills higher prices for their goods mean larger margin of profits; that anyhow the rise in fabrics comes much of it out of the foreign consumer, and that already much gold has been drawn to this country from abroad to meet the advance in the staple.

The sinews for this great campaign, we may add, were provided in part by Messrs. Brown and associates (for he had already very large means acquired in the business) and were in part obtained in Europe. Speaking of which reminds us that our subject has also financial distinction. It was he who organized the Southern Trust and Banking Company, of New Orleans, with home capital and practically at a single meeting. Later that institution (the Southern Trust and Banking Company) bought the Union National Bank, of the same city, of which Mr. Brown was a director and the largest individual stockholder. Then the Southern Trust and Banking Company was merged with the Hibernia National Bank, of New Orleans, as the Hibernia Bank and Trust Company, a bank with deposits of more than \$14,000,000 and resources of \$17,000,000 and upwards—now larger than any two banks of the South—in which Mr. Brown is not only prominent as director, but is besides the largest individual stockholder.

ANDREW MORRISON.

---

#### NOTICES OF NEW BOOKS.

[All books mentioned in the following notices will be supplied at the publishers' lowest rates on application to THE BANKERS PUBLISHING CO., 87 Maiden Lane, New York.]

POOR'S MANUAL for 1903. New York: H. V. & H. W. Poor.

The thirty-sixth annual issue of Poor's Manual has been received, which contains the usual statistical summaries of the financial affairs and operations of the railroad systems of the country. As is well known, Poor's Manual is the accepted authority on all matters pertaining to the financial affairs of American railways, and the edition of 1903 is up to the usual high standard so long maintained.

PAINE'S BANKING LAWS; revised Fifth Edition; price \$5. New York: The Lawyers' Co-operative Publishing Co.

The revised edition of this well known work contains a number of important additions, including the Negotiable Instruments Law, the recent changes in the National Banking Act, as well as amendments to the banking laws of the State of New York.

Mr. Paine was formerly Superintendent of the Banking Department of the State of New York, and was also a member of a commission appointed in 1880 to compile and revise the banking laws of the State. His labors in this capacity suggested the preparation of a volume on banking law.

Paine's Banking Laws contain the National Bank Act and cognate United States statutes, constitutional provisions, also numerous citations of cases and opinions interpreting the law. The banking laws of New York relating to all classes of banks, as well as trust companies, are also given, also the Stock Corporation Law, tax laws, etc. A historical sketch relating to banking is an interesting and valuable feature of the work.

As a book of reference Paine's Banking Laws will be found of great usefulness to those engaged in operating banks or trust companies.

## THE GOLD RESERVE OF THE BANK OF ENGLAND.

[From the London Bankers' Magazine.]

Again, we have to report that another year has passed and no distinct steps have been taken to establish a stronger specie reserve fund for the country. We have again to repeat, and with sincere regret, what we have said on several occasions before. Thirteen years have now passed since, in the autumn of 1890, the Bank of England was compelled, owing to the risk of a crisis in the money market, to borrow some three millions sterling in gold from the Bank of France, and to collect gold from other quarters to strengthen its reserve. This is now matter of ancient history, and the story is treated as ancient history usually is—as something with which we need not concern ourselves in practical life. We are well aware that the subject is under the attention of some of our ablest business men, but united action appears beyond their power. It becomes continually more difficult to draw attention to anything which is not actually part of ordinary routine. Year by year the stress of daily occupation grows and intensifies, and there seems no opportunity for considering anything else. The rapidity with which even striking and important events are forgotten is wonderful. Every year a larger proportion of the men actively engaged in business can have no personal remembrance of what occurred so recently as the time of the Baring difficulties. But when any business man reflects on the past, he must be perfectly aware that, though the arrangement made in 1890 was successfully carried through then, it would have been impossible to repeat the operation in 1903, however needful it might have been to do so. We are apt to dwell with so much satisfaction on our financial standing, that we forget the great alterations which even the twenty-eight years over which this statement extends have witnessed. Our position, so far as it depends on the reserves held, is literally weaker now than it was then.

To bring this clearly before our readers, we repeat here a comparison, which we have carried on for a considerable period, of the position of the Bank of England and of the great banks of the world at the present time and in 1876. The year 1876 is taken as being that in which this statement of the position of the banks of the country was commenced, and from which date our examination can hence be carried on with greater accuracy.

The banking institutions of the other countries of the world stand now in a totally different position from that which they occupied twenty-seven years since. The position of the Bank of England was far stronger relatively then to that of the other great banks of Europe than it is now, while, owing to the development of banking in this country in the interval, and the totally different conditions of business, the demand likely to be made on it was far smaller than may be the case at the present time. Compared with twenty-eight years since, there is no doubt that the deposits of the banks of the United Kingdom have increased something like £340,000,000 or £350,000,000, if not more, within that time, and in these figures the deposits of the Colonial and Foreign Banks having offices in London are not included. These amounts must be very large.\* In times of difficulty, these banks, as well as all the banks of the United Kingdom, would look to the Bank of England for assistance.

\* See "Colonial and Foreign Banks in England and the Banking Reserve,"—"Bankers' Magazine," March, 1900.

The Bank of France, the Imperial Bank of Germany, and the National banks of the United States, now all possess far stronger specie reserves than they did twenty-eight years since, while the position of the Bank of England is practically weaker than it was then. A comparison between the reserves held in those four centres now and at that period shows this point very clearly. The figures are as follows :

*Position of the Reserves of the Banks of England, France, Germany and of the New York Associated Banks about the Third Week in the Month of November, 1876 and 1903.*

|                                   |              |  |                                      |

| 1876.....                         | £24,500,000  |  | 1903..... b£47,000,000               |
| <b>NEW YORK ASSOCIATED BANKS.</b> |              |  |                                      |
| <i>Specie and Legal Tenders.</i>  |              |  |                                      |
| 1876 (specie).....                | £3,600,000   |  | 1903 (specie)..... £30,600,000       |
| 1876 (legal tenders).....         | 8,500,000    |  | 1903 (legal tenders)..... 12,500,000 |
| Total.....                        | £12,100,000  |  | Total..... £43,100,000               |

a The specie held by the Bank of France was not separated in the published accounts available to us till 1877. The figures of the cash reserve, December 31, 1877, were: Gold, including French gold coin, ingots and foreign gold) £47,100,000; silver, £34,600,000; total, £81,700,000. Hence it is probable that the gold at the Bank of France in 1876 was about £49,000,000.

b The specie held by the Imperial Bank of Germany is not separated in the weekly statements, but it may be assumed, according to the proportions of the gold and silver held by it on December 31, 1902, that of the amount of £47,000,000 shown above, about £33,000,000 was in gold, that is to say, a considerably larger sum than the amount of the reserve or of the gold in the issue department held at the corresponding date at the Bank of England.

Compared with 1876, the specie in the reserve of the Bank of England is but little more now than it was then, while the position of all the other banks is in all cases much stronger. A diminution in the strength of the reserve of the Bank of England may now take place almost unobserved, owing to the increased proportion of the note issue allowed to be made against securities. The Bank Act of 1844 allows the issue against securities to be increased in proportion to the diminution in the English country note circulation. The amount of securities allowed in 1844 was £14,000,000. This had been increased in 1876 to £15,000,000, and it remained at the same point till after 1879. But since that date the decrease in the English country note issue has gone on so rapidly that an addition of £3,450,000 was made to the issue against securities between 1879 and 1903. Hence, we will now carry on this comparison from the year 1879. The securities in the issue department now stand at £18,450,000, and while the amount of the notes of the Bank of England, entered as issued at the date we are writing in 1903, was slightly less than it was in 1879, it has something like £4,000,000 less in specie behind it now than it had then.

The comparison is as follows :

|                                                                       |  |             |
|-----------------------------------------------------------------------|--|-------------|
| Gold coin and bullion and silver coin held by Bank of England in both |  |             |
| departments, July 2, 1879.....                                        |  | £35,200,000 |
| Do. do. November 25, 1903.....                                        |  | 81,900,000  |
| Less in 1903.....                                                     |  | £46,700,000 |

The amount of gold coin and bullion in the issue department, and of notes issued in the returns for July 2, 1879, and November 25, 1903, compares thus :

|                                                     |             |
|-----------------------------------------------------|-------------|
| The amount of gold held was :                       |             |
| July 2, 1879.....                                   | £24,022,075 |
| November 25, 1903.....                              | 29,802,265  |
| November 25, 1903, smaller.....                     | £4,230,410  |
| The notes issued were :                             |             |
| July 2, 1879.....                                   | £49,022,075 |
| November 25, 1903.....                              | 48,252,265  |
| November 25, 1903, smaller.....                     | £770,410    |
| Then deduct the smaller amount of notes issued..... | £770,410    |
| From the smaller amount of gold held.....           | 4,230,410   |
| The amount brought out.....                         | £3,450,000  |

explains the effect of the addition of £3,450,000 since 1879 to the securities held against the note issue.

The year 1879 is taken for the basis, as the one since which the additions to the securities in the issue department have increased most rapidly.

The reserve in notes of the Bank of England on July 2, 1879, was £19,485,810 ; on November 25, 1903, it was £20,050,100 ; more in 1893, £564,290 ; but when the matter is examined into, this is accompanied by a decrease in the specie of more than £4,220,000.

This question deserves the most grave consideration. There is, after all, only one way to form a large and sufficient specie reserve, and that is to build it up by slow and gradual accumulation. But the policy which has been followed in this country is the exact reverse of this. The reserve of the Bank was thus weaker in specie in 1903 than it had been twenty-four years previously by this large sum. While the large banks in other countries have considerably increased their reserves, with us there has been a decrease, as shown above, in the gold held against the note reserve, and also in the specie held, collectively, in both departments of the Bank.

It will be convenient to our readers to have before them the entire history of what has actually occurred, as this is often not remembered.

The effect of the Bank Act of 1844 has been that the issue of Bank of England notes against securities has, since 1844, been increased by £4,450,000.

The dates at which this increase took place and the amounts added are as follows :

*Fixed Issue of the Bank of England.*

|                                                           |             |
|-----------------------------------------------------------|-------------|
| Amount authorized by the act of 1844.....                 | £14,000,000 |
| Add increase since in authorized amount: 1855, Dec. 7.... | £475,000    |
| " " " " 1861, July 10....                                 | 175,000     |
| " " " " 1866, Feb. 21....                                 | 350,000     |

The figures given above show what has followed this increase of the securities in the issue department.

## \*THE PRACTICAL WORK OF A BANK.

### THE COLLECTION DEPARTMENT.

#### II.

It has been estimated that more than nine-tenths of the enormous volume of mercantile transactions in the United States is settled by the use of credit instruments—commercial paper—the most of which pass through the collection department of the banks.

These departments therefore perform a most important function—that of actually effecting the exchanges of the country. It is a function as essential to the existence of modern commerce as is the continued use of commercial paper, which has been the greatest factor in its development to its present-day magnitude; and as its further development in the future will depend to a great extent upon their efficiency, it becomes the duty of the banks to give their collection departments their best attention and consideration.

First.—They should provide a good system for the work of the department. Collections should be handled promptly, with a minimum expenditure of time and labor, but at the same time proper safeguards against loss through carelessness or defalcation must be provided.

Second.—They should place in charge men of good executive ability, who are familiar with the nature of the various classes of commercial paper—with their differences and the varying responsibilities of their parties—and who know the laws governing their collection. And if it be a large bank, handling many collections, it should provide a force of competent assistants numerous enough to do the work of the department properly—numerous enough to attend to the work of the busiest day as carefully and readily as to that of the dullest.

#### CITY AND COUNTRY BANKS.

Each bank should examine into the merits of the different systems presented to its notice, when first organizing, and adopt that one which best answers its needs; and thereafter seek to improve upon it as occasion offers.

The small bank in the agricultural district must of necessity have a very different system from that of the large city bank. It can make the collection department in fact what its name implies it to be—that department which has full charge of the collection of the checks, drafts, notes, etc., which it receives from all sources. These can not be very numerous, and probably one clerk can give them all the attention they need and still have time for other duties. Only a few clerks are needed to do all of the work, and each of them can be kept under the constant and direct supervision of the bank's officers, so that no elaborate safeguard system against defalcation is necessary.

But in the large city bank the conditions are very different. Its thousands of depositors and correspondents pour into it collections on all parts of the world as well as on its own city, and it is usually found better to classify and distribute them to several different departments for attention, the classification and distribution

---

depending upon the bank's individual arrangement of its office detail. It is an economic maxim that division of labor and specialization of work secure the best results, and this is well shown in the case of the handling of collections in a large bank.

Such a plan is followed in a bank in a city not a thousand miles from Chicago, and the system used has met every requirement so well that it merits description.

#### DESCRIPTION OF THE COLLECTION DEPARTMENT OF A MODERN BANK.

The collection department proper is called the correspondence department, as it has charge of all the mail, incoming and outgoing. In this department, in the morning until all the mails have been received and entered, is kept what is called the daily collection book, in which each letter received with enclosures (with the exception of "returns" letters) is entered by its date, the name and address of its sender and the amount of its enclosures. With their enclosures, the credit remittance letters are then passed to the mail teller department; the letters enclosing time collections and foreign collections are given to the note and collection clerk, and the exchange teller is handed the letters bringing sight items for which remittance of proceeds must be made. Each of these must receipt for the letters, sometime during the day, by writing in the book mentioned, opposite the entry of each letter, the disposition made of its contents.

The daily collection book is ruled with columns for the bookkeepers' use, and into the column assigned to that bookkeeper who has the account on his books, the mail teller extends the amount, already entered by the correspondence department, of each credit remittance. The various extensions are then footed by a clerk from the auditing department, and the total is the amount of the mail deposits, upon which the mail teller and the bookkeepers must agree. After the extensions have been made and footed the book is given to the bookkeepers, and from it they make their cash-book entries.

The mail teller checks off the enclosures of the letters he has received and enters their amounts in his ticklers; he then passes the clearing-house checks to the receiving teller's department, to be added to the similar checks deposited by the bank's city customers, and cleared; the local drafts he charges to the exchange teller; and the foreign items are entered in ordinary form exchange registers and given back to the correspondence department to be forwarded. He also receives the enclosures of all of the "returns" letters, which he handles in the same manner; and all the foreign cash items deposited by the city customers are passed to him by the receiving teller's department, to be registered and passed along to the correspondence department.

The note and collection clerk matures the time items, and files those on the city for their due dates; and the foreign collections he enters in ordinary form collection registers, and passes back to the correspondence department, to be sent to the cities where they are payable. He also receives and registers collections deposited by the city customers, and handles them in like manner.

The exchange teller accounts to the correspondence department for the items given him by handing it the bank's own drafts for remittance of proceeds of the items he has succeeded in collecting, and by returning to it those that are unpaid. The exchange teller might also well be called the city collector, for he ultimately receives for actual collection, from the various departments of the bank, all city items other than clearing-house matter. The note and collection clerk gives him his city paper as it matures, and the receiving teller sends him all the local drafts which are deposited at his window. He has charge of the bank's messengers in so far as their duties relate to the making presentment and collection of drafts, notes, etc.

Under this arrangement is provided one of the best safeguards against loss through defalcation or carelessness that has been devised—the work of each clerk and depart-

ment is inspected by another clerk or department, so that one acts as a check on the other and any error, accidental or intentional, is most probably detected. This safeguard has been adopted in some form by the large majority of well-managed banks, and has undoubtedly been very effective. And to each department is allotted that part of the work which it is best able to perform, so that it is all executed quickly, safely and without confusion.

A few words more about this same bank to explain how it handles its foreign collections.

All items, both cash and collection, on points outside of the city are forwarded through the correspondence department, and each item is sent direct to the place of payment, as the bank is a strong advocate of direct correspondence. It has three or four correspondents to each of which several hundred cash items are sent daily, and whose accounts are charged with the totals of such items on the date they are sent. The other cash items are debited to the sight bills of exchange account.

Three different letter forms are used—one for collections, the other two for cash items, one of the latter being intended for the three or four correspondents above alluded to, the other for the items which are charged to the sight bills of exchange account. The first two forms mentioned are very similar to those in use by most banks, but the third is novel in some of its features, and a full description of it may be of interest.

At the time the form was adopted the bank was sending out a daily average of nearly six hundred collection letters; much trouble had been experienced in reconciling the sight bills of exchange account; and the form was gotten up primarily for the purpose of overcoming this difficulty. It has been in use over two years and has proven a complete success—not only has the account been reconciled daily to the cent from the first, but the form has also saved labor and expense.

The old method used was one that probably many banks still employ. It consisted in entering in the exchange registers previously referred to, opposite each item, the date of receipt of returns for it. After all the returns had been entered, the total of the items left in the registers without date entries should have given the total of the unpaid sight bills of exchange, but as a rule they did not—a date had been entered opposite the wrong item, or a correspondent had made a short remittance and it had not been noticed, or something else had or had not been done to throw the reconciliation out. Checking back the work was a long and wearisome task, and it was not always successful in locating the error.

FIG. 1.

The new form involved a complete change in method: the letter is no longer written with pen and ink, and copied in an impression book; there is no making of date entries in the registers; and the "returns" letters are not filed alphabetically according to the addresses of the remitting banks, as before. Instead, an indelible pencil is used to write the letter, and with the aid of carbon paper to make at the same time a copy of it for the office records; the registers are used merely to record description of the items, and the "returns" letters are filed numerically. The letters are numbered consecutively from 1 to 15,000, in series designated by letters of the alphabet, say 1 A to 15,000 A, 1 B to 15,000 B, etc., and their copies are given duplicate numbers. This consecutive numbering is a very important feature of the form, as will appear.

The form is really an adaptation of the manifold copy-book principle, three copies being made simultaneously by the use of a pencil and a single sheet of carbon paper. Each letter consists of three sheets (Figs. 1, 2 and 3), placed one below the other, the middle sheet (Fig. 2) being of paraffine paper.

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |  |  |  |  |

FIG. 3.

object of sending two numbered sheets to the correspondent is to obtain the sure return of one of them with the remittance, so that the corresponding office copy may be readily located by its number. Upon this depends the success of the system.

By reference to the illustrations, it will be noticed that the top sheet (Fig. 1) is worded so that it can be used by the collecting bank instead of its own remittance form, and the bank is requested to do so. It is printed in copying ink, and an indelible pencil is used in writing it, so that the correspondent bank can copy it in an ordinary impression book, if a copy be desired. The dotted line shown in illustration of the paraffine sheet (Fig. 2) is a perforation, the object of which is to make easier the folding of the letter for the envelope. The letters are blocked, on the right edge, into pads of fifty (fifty sets, one hundred and fifty sheets).

All the office copies are arranged numerically and placed in a file (a portable box), and are kept in the correspondence department until returns for them are received. When the top sheets are received back with remittances, they are immediately passed to the mail tellers department, when the enclosures are checked out. They are then returned to the correspondence department, are there arranged numerically, for the sake of convenience, and the corresponding office copies are removed from file. When this is done, there are two lots of letters, one being an exact duplicate of the other. The top sheets are again given to the mail teller department, where their total is found, which is the amount of the day's paid sight bills of exchange. In the meantime, the correspondence department is finding the total of the lot of office copies, and these two totals must agree. The footing is done on adding machines, and if there be any discrepancy, it is easily located by comparing the machine slips.

If any remittance should be short, or if a letter contained several items and one or more should not be remitted for, the amount unpaid is carried on a suspended list until it is paid. The total of the suspended list and the office copies remaining in the file is the amount of the outstanding sight bills of exchange, and should agree with the balance of that account as shown on the general ledger of the bank.

Any error made when writing a letter in the listing of an item is discovered promptly, for each day's office copies are proved the next morning by finding the total of their amounts and comparing it with the amount charged to the sight bills of exchange account. If they be not the same, the mistake is found easily by checking back with the exchange registers. In such case, the office copy is corrected and marked, and a special examination is made of the remittance sheet when received back, to ascertain if the item has been properly remitted for.

As before remarked, the system has been very satisfactory in the results accomplished and the ease of its working.

#### LAWS GOVERNING THE COLLECTION OF COMMERCIAL PAPER.

And now to touch very briefly upon the laws governing the collection of commercial paper, knowledge of which is needed to insure its proper handling. Checks, bills of exchange and promissory notes form the bulk of the matter which the collection department is called upon to handle, but certificates of deposits and of stock, corporate bonds, coupons, vouchers issued by railroad and other companies, warehouse receipts, bills of lading, letters of credit, etc., are all much in evidence in the mercantile world, and will surely find their way into the department, so that the peculiarities of each should be understood.

These peculiarities have been the cause of much litigation and legislation, and unfortunately the statute laws of the different States do not agree, and the decisions of the courts are very conflicting—practically unanimous upon general principles, they manage diametrically to disagree in their interpretation and application of apparently very simple rules. It therefore becomes necessary for the bank to follow closely its own statute law and the precedents established by its own tribunals.

Every bank, however small it may be, should have a select library of reference books for the use of its officers and clerks, including at least the statutes of its State and several good text-books on commercial paper and general banking law; and it should also subscribe to several of the leading financial publications. These latter publish promptly leading decisions in all parts of the country, and furnish most valuable reading, for they show the trend of judicial opinion and frequently offer guidance to the bank in cases which have not been passed upon by its own courts.

The courts are agreed that negotiable paper must be handled with due diligence and care, that special instructions accompanying collections must be obeyed, that money only can be accepted in payment, etc.

Due diligence requires that all paper be handled with dispatch; if payable on demand, it must be presented or forwarded before the expiration of the day after its receipt; if payable at a fixed subsequent date, it must be presented on that date; if payable so many days after sight or demand, it must be presented without unreasonable delay for acceptance, to fix the time of payment; if dishonored, the paper must be protested, unless instructions are to the contrary, and notice thereof must be given immediately to the parties who are to be held liable—if they are not so notified, they are released; if returns for foreign items are not received in due time, the various parties must likewise be notified to that effect, else recourse on them is lost.

Due care must be exercised in the selection of reliable agents for the collection of foreign items. It is held in this country that an item should not be sent to the drawee bank, as it is not considered a suitable agent for the collection of paper on itself; and if so sent and loss occur, the sending bank is held liable. The courts fail to suggest any other way to make collection of the paper when there is but one bank in the place. The express companies will not handle protest matter, and other banks and the express companies are really the only collecting media at a bank's disposal. In view of this ruling, the bank should protect itself by obtaining the consent of its customers so to forward paper whenever necessary to effect its collection.

As to the right of the bank to transmit foreign paper otherwise than direct to the place of payment, the weight of opinion seems to be that it has not such right, unless it have the permission thereto of the party whom it would desire to hold liable in event of its dishonor. The reason assigned is that commercial paper, checks in particular, is not intended for indefinite circulation as so much money, but that the parties to it have the right to require that its collection be made in the quickest way

possible, and that they be advised within a reasonable time of any default on the part of those expected to honor it; and the bank is usually held to be negligent if it does not collect in that manner, *i. e.*, if it does not send direct to the place of payment. Nevertheless, many banks, possibly a majority of the banks in the country, use the indirect or central point system of correspondence, doubtless believing that the risk they assume by so doing is more than counterbalanced by their saving in expense and the possible increase of business derived through the opening of reciprocal accounts. By availing themselves of the par lists of the banks at central points, they do undeniably effect collection of their paper at less cost for exchange, and they may secure a few new accounts. But the latter usually prove reciprocal in fact as well as in name, and the bank finds that it gives as much as it receives, if not more, so that such accounts are really not of great value. The ordinary arrangement is that the collecting bank credits the foreign item immediately upon its receipt, reserving the right to charge it back and return it subsequently if it be not paid, so that the sending bank really never knows how much of its foreign paper is outstanding. This alone constitutes a very serious objection to the central point system—serious enough to make the conservative bank willing to stand the greater cost of collecting its paper by the direct system of correspondence, for under the latter the bank knows to a penny the amount of its unpaid collections. And actual experience has shown that the direct system offers a remarkably effective advertising medium. A large bank receives from its customers items on nearly every city and town of importance in the country, so that, if it use the direct system, it has occasion to correspond with several thousand different banks, to whom its collection letters soon make it well known, thus often leading to the establishment of intimate and profitable relations.

Upon the point of obedience to instructions, it may be said that there is no dissenting opinion. The courts hold that a bank can not be forced to undertake collection of an item, if it does not desire to do so; but if it does accept the task, it must comply strictly with the accompanying instructions. Not only must it itself obey the instructions it receives, but in the case of foreign items it must transmit the instructions correctly and endeavor to the extent of its power to secure obedience thereto.

Non-obedience to positive instructions is quite common, so common indeed that it seems that many banks do not realize their liability in the matter. Especially are the instructions "not to hold collections for the convenience of parties, but to protest and return immediately if not paid" frequently disregarded. This is largely due, it must be admitted, to the sending banks themselves, for in the most cases no losses ensue in consequence of the negligence, and therefore no complaints are made, and so an unfortunate precedent in each instance is established. The delinquent correspondent's attention should be called to the matter on each occasion, and if it persist in its disregard of instructions, another agent should be chosen, or, if that be impossible, the point should be black listed—the bank's own safety demands this, for it is required, as before mentioned, to select collection agents who are, to the best of its knowledge, in every way reliable.

Unless by special agreement, the bank has no right to accept in payment of negotiable paper anything but good money, as one of the essential elements of negotiability is that the instrument call for the payment of money. The paper is therefore taken by the various parties to it in the expectation that money will be demanded and received before it is delivered to the obligee, and if the bank accept his check in lieu of money, at his request or to suit its own convenience, it does so at its own peril.

These are only a few of many points of commercial paper and the laws governing its handling which should be given careful study by every bank, and they are very inadequately treated of, but space will not permit further discussion of the subject.

Happily, the importance of uniformity in banking law is being more and more recognized, as is shown by the adoption of the Negotiable Instruments Law in a number of States, while its adoption in many others is being strongly agitated, with flattering prospects of success. This is a great step in the right direction, for it settles many heretofore-disputed points. And it is not too much to hope that, before many years have passed, the United States will have a comprehensive code of banking law which will do away with the confusion which is so apparent to-day.

BANKSCHREIBER.

# THE LAW FOR ESTABLISHING NATIONAL DEPOSITARIES.

## A BRIEF HISTORY OF THE ACT.

The outbreak of the Civil War was the beginning of a creative period in the financial history of this nation. Secretary Chase, distinguished as well in finance as in jurisprudence, proclaimed in that exigency, with profound wisdom, that it was necessary for this nation to "create a currency." Congress responded with alacrity to his recommendations. A national currency was created by the issue of United States notes, called lawful money. For those who in memory or imagination revert to that period in our history, it is difficult to comprehend the obstacles in the way of successfully conducting the affairs of the nation. The only way to do it is to endeavor to view the situation as those viewed it who triumphed over the obstacles, hanging the impenetrable veil of futurity before all events which have since occurred.

The reason why it was necessary at that time to create a national currency was that the nation was necessitated to make payments upon such a stupendous scale that all the money in the nation, that is, gold and silver, and all the bank notes and conventional substitutes for money in the nation, when added together, made an insignificant amount, utterly inadequate for the stupendous payments, which could not, by any human possibility, be made, without the creation of a new and national, a uniform and abundant currency. United States notes could not, according to sound finance, be issued in adequate amount for the purpose. Accordingly, the system of National banks was devised, with delegated authority to issue circulating notes, which supplemented the volume of lawful money.

The National Bank Act of 1864 was originally a bill reported by Mr. Hooper from the Committee of Ways and Means March 14, 1864, which became H. R. 333. Among the amendments to this bill were two in the provision relating to designated depositaries, which was in section 45 of the bill. An amendment to strike out this provision, so as "to take from the Secretary of the Treasury the power of making these institutions the depositaries of the public money," was rejected. This provision was amended by striking out "may" and inserting "shall," so as to read "the Secretary of the Treasury shall require \* \* \* satisfactory security," instead of "leaving it discretionary with him." The explanation given by Mr. Hooper for qualifying United States bonds as registered in the bill, was that it was "for the security of the bonds, they not being transferable from hand to hand by delivery. The coupon bonds, if they be stolen from the Department, pass from hand to hand and are good in the possession of any person who happens to hold them." Mr. Hooper moved to amend the bill by inserting in section 45 the words "and otherwise" so as to read "satisfactory security by the deposit of United States bonds and otherwise for the safe keeping, etc." Mr. Holman, remarking that the proposal is to insert "the words 'or otherwise' after the word 'bonds,' that is to say, the security shall either be bonds of the Government, or such other security as the Secretary of the Treasury may require," asked, "What other security does the gentleman from Massachusetts refer to?" Mr. Hooper replied, "By the present arrangement or rules of the Department, the Secretary requires a personal bond in addition to the deposit of United States stock, and it was to cover that point that I offered

the amendment." Mr. Stevens said: The words are "and otherwise" not "or otherwise." Without more discussion the amendment was agreed to. (C. G. Pt. II, 88th Cong. 1st sess. p. 1401.) This bill was defeated April 6, 1864. Subsequently, April 11, 1864, Mr. Hooper introduced another bill which became H. R. 395. He said it was the same as the former bill as amended. It was not debated nor was it amended as to the provision relating to designated depositaries. It passed the House April 20, 1864. In the Senate, the only reference to the provision relating to designated depositaries (except in the rejection of an amendment to strike out section 45, which was favored on the ground that the section was destructive of the independent-Treasury system), was the adoption of an amendment by adding the proviso at the end of the section. The conferees of the House concurred in this amendment, and the bill, H. R. 395, as reported from the conference committee, became the National Bank Act of 1864.

Mr. Hooper had charge of the bill and any reply he may have made to a criticism of an opponent of the whole measure, by way of smoothing the passage of the bill, was a part of parliamentary tactics. His utterances were interested in the performance of a public service. He is not to be judged by the moral law. His act in moving the amendment outweighed his frivolous explanation. The amendment had much more importance than any mere bond of a personal depositary. The practice of the department existing before the act of 1864 related not to National banks employed as depositaries under the imperfect banking act of 1863, but to individual depositaries, in requiring of them a personal bond. How could a National bank, designated as a depositary, being a corporation, give a personal bond? The purpose of the amendment was to do what was in fact forthwith done, and that is to accept either United States bonds or other satisfactory security, if the depositary chose to offer it instead of United States bonds. The law don't say "in addition to;" it was only Hooper who said it, to silence Holman. It is quibbling to talk about the difference between *and* and *or*. In effect Mr. Holman's criticism was, the amendment says *and* but it means *or*. What is the other security which the mover has in mind? Mr. Hooper's answer in effect was, it is the practice to require a personal bond and I was thinking of it in moving the amendment. Mr. Holman understood the amendment according to its true meaning and intent. It would be humiliating to national pride to think that Congress would pass a law that United States bonds are not good enough without a personal bond to secure them.

A discussion in the passage of a bill is neither decisive nor of any weight more than belongs to enlightened opinion, in determining the meaning of a law, which is obviously not passed by those who debated it, nor even by either house alone, but only by the Congress, with or without the approval of the President. If the rule of construction were otherwise, it might happen that the true meaning must be set aside, and the erroneous meaning adopted merely because it is in accord with what those said who happened to speak upon the bill in the course of its passage.

The provision for national depositaries is supplementary to the independent Treasury system, which is preserved by law. The depositaries are designated among the National banks, which are under the supervision and control of the Treasury Department.

FRANCIS C. NYE.

---

NEW CAPITAL APPLICATIONS IN GREAT BRITAIN.—The total of new loans offered for subscription in 1903, as reported by "The Economist" (London), are the smallest for any year since 1894, notwithstanding the aggregate for 1903 includes the Transvaal loan. The total new capital applications for the years named were as follows: 1899, £133,169,000; 1900, £165,499,000; 1901, £159,358,000; 1902, £153,812,000; 1903, £108,463,000.

# QUARTERLY REVIEW OF CANADIAN BANKING, COMMERCE AND MANUFACTURES.

## A REMARKABLE EXPANSION OF COMMERCE AND INDUSTRY.

The progress of Canadian trade and commerce during 1903 was most satisfactory, and the new year opens upon a hopeful prospect. Some remarkable developments have occurred in the commercial world during the twelve months, and the Dominion has not been free from the influences exerted by these movements. The country is in an excellent position, and at present there are many signs of continued prosperity and growth.

One of the year's favorable features has been the growth in population. In a sparsely-settled country, such as Canada, the addition of 100,000 to the number of inhabitants is an important consideration. The influx has been directed chiefly to the districts west of Lake Superior, although Ontario has absorbed a portion of it. It has been responsible for a more extensive cultivation of the land, and, incidentally, a greater demand for all classes of general merchandise. It is to this fact that the continued activity of trade in Western Canada is primarily due. The increase of population has involved a wide area of settlement, and new towns and villages have sprung up in all portions of that great country.

The improvement in trade conditions is reflected in a number of ways. The returns of foreign trade and of customs collections for the year constitute an accurate barometer of the prevailing state of affairs. The aggregate exports and imports for 1903 have been nearly \$500,000,000, showing an increase of many millions over the previous year. The increase in customs revenue has been about \$5,000,000, as compared with last year. Domestic trade shows an even greater increase, judging from the returns of the traffic on the principal railways. Increases in earnings have been reported for practically every week of the year, as compared with the same week in 1902. The comparison is the more important when it is realized that the preceding year established a number of commercial records, and that a very high standard was then set. To have surpassed these records is an achievement of which the country may well be proud, and it serves to show that the commercial development of the country has received a great stimulus.

The returns of trade failures or commercial defaults have been most satisfactory.

### PUBLIC REVENUES AND EXPENDITURES.

The financial statement of the Dominion shows that the first half of the current fiscal year closed with a surplus of \$14,222,267 over ordinary revenue, and more than \$10,000,000 over all expenditures combined. The revenue for the six months ending December 31, exceeded that for the same period of the previous year by

|                    | 1903.               | 1902.               |
|--------------------|---------------------|---------------------|
| Customs.....       | \$18,018,520        | \$20,098,480        |
| Excise.....        | 6,127,616           | 6,764,496           |
| Post office.....   | 1,905,000           | 2,140,000           |
| Public works.....  | 3,732,776           | 3,710,502           |
| Miscellaneous..... | 1,478,949           | 1,622,974           |
| <b>Total.....</b>  | <b>\$31,262,862</b> | <b>\$34,936,462</b> |

\$3,873,600. The total ordinary revenue was \$34,936,462, and the ordinary expenditure \$20,714,195. For the same period of last year the ordinary revenue was \$31,262,862, and the ordinary expenditure \$19,549,688. The capital expenditure for the last six months was \$3,848,934, as against \$4,123,975 last year.

A comparative statement is shown on the preceding page.

#### CANADIAN TRADE.

Canada's foreign trade for the six month ending December 31 amounted to \$257,960,918, as against \$239,023,476 for the same period of 1902, an increase of nearly \$10,000,000. This statement includes imports for consumption, exports of domestic and foreign products, and coin and bullion. The total exports, domestic and foreign, are about the same as for the year previous.

Domestic exports show a decrease of about \$2,000,000, but there is an increase of about \$2,000,000 in exports of the mine. Fishery exports are less by some \$800,000, and products of the forest by \$1,500,000. Exports of manufactures are better by about \$500,000. There is a decrease of about \$1,000,000 in the exports of cattle, and \$3,000,000 in wheat. As regards the two last-mentioned items, it is believed to be due to the fact that the farmers are holding their wheat and cattle for a rise in prices which in these prosperous times they can well afford to do.

The following is a comparative statement of the imports for consumption and domestic export only :

|                                     | 1902.                | 1903.                |

| Miscellaneous.....                  | 55,457               | 15,870               |
| <b>Total.....</b>                   | <b>\$125,301,466</b> | <b>\$122,983,954</b> |

#### TRADE BETWEEN CANADA AND THE UNITED STATES.

Commerce between Canada and the United States shows a rapid gain in the figures of the past year and in those of the decennial period which ends with the present year. The year's commerce with Canada, as shown by the figures of the United States Department of Commerce and Labor, through the Bureau of Statistics, will aggregate nearly \$200,000,000, as against less than \$100,000,000 in 1893. The increase occurs both in imports into the United States from Canada, and exports from the United States to Canada, which in 1893 amounted to only \$34,000,000, will in the present year reach about \$55,000,000. United States exports to Canada, which in 1893 were \$57,000,000, will in 1903 aggregate about \$130,000,000. The total commerce of the United States with Canada has thus grown from \$91,000,000 in 1893 to approximately \$185,000,000 in 1903. The total commerce of the United States in the calendar year 1903 was \$1,652,000,000. Thus the total commerce of the States from 1893 to 1903 has increased about fifty per cent. while its commerce with Canada has more than doubled. The table which follows shows the total value of the imports into the United States from Canada and the exports of the United States to Canada in each calendar year from 1893 to 1903, the month of December, 1903, being estimated :

| YEAR ENDING DECEMBER 31. | Imports from<br>Canada. | Exports to<br>Canada. |
|--------------------------|-------------------------|-----------------------|
| 1893.....                | \$84,492,882            | \$57,121,178          |
| 1894.....                | 82,148,069              | 51,294,199            |
| 1895.....                | 40,748,940              | 58,798,009            |
| 1896.....                | 37,355,906              | 62,335,308            |
| 1897.....                | 38,899,873              | 72,627,690            |
| 1898.....                | 30,500,663              | 90,888,065            |
| 1899.....                | 35,395,448              | 86,386,310            |
| 1900.....                | 40,441,820              | 102,896,697           |
| 1901.....                | 45,326,184              | 107,492,743           |
| 1902.....                | 52,524,173              | 111,153,085           |
| 1903*.....               | 55,000,000              | 131,000,000           |

\* Month of December, 1903, estimated.

#### RAIL AND WATER TRANSPORTATION.

The transportation business in Canada is in an excellent condition, Canadian railways continuing to report gross earnings which compare favorably with former exhibits.

The earnings of the two great railroads of Canada, the Canadian Pacific Railway and the Grand Trunk Railway, for 1903 ran \$8,229,000 and \$4,480,000 respectively ahead of those for 1902. The total earnings of the Intercolonial Railway for the six months ending December 31 amounted to \$3,888,219, an increase of \$105,294 over the same period of the previous year.

There has been an immense increase in the inland navigation traffic this year, as compared with other years. In 1902, 3,365 vessels passed through the Lachine Canal westbound, while this year there were 5,039, being an increase of 1,374 vessels.

The registered tonnage passing through the Lachine Canal only amounted in 1902 to 182,982 tons, while this year it reached 419,781 tons, an increase of 236,749 tons.

Freight carried through the Lachine Canal in 1902 only amounted to 436,656 tons, while this year there passed through 674,503 tons, an increase of 237,847 tons.

Grain passing through the Lachine Canal in 1902 only amounted to 16,295,602 bushels. This year the receipts were 22,438,438 bushels, an increase of 6,187,836 bushels.

Lumber in 1902 passing through the Lachine Canal only totalled 144,896,237 feet, while this year there passed through 172,485,018, an increase of 27,588,781 feet. In 1902 the miscellaneous products reached 14,077 tons. This year they totalled 22,042 tons, an increase of 7,965 tons. The amount of money collected in the canal office this year for rentals, wharf dues, etc., amounted to \$41,434.12. The amount of money earned, but not collected, on account of the canals being free, was \$114,757.64, which would have made a total of \$156,009.76. In 1902 there was collected \$97,244.79, making a difference of \$58,764.97.

The freight carried by the Canadian "Soo" for the year just closed was 778,834 tons in excess of that for 1902.

Arrangements have been made with Messrs. Allan & Co. for an improved Atlantic mail service. The Allans agree to maintain a regular weekly service between Canada and Great Britain from the opening of navigation next spring until August 1, 1906. They have under construction two turbine steamers of seventeen knots guaranteed speed, which are to be added to their existing fleet. The contractors will receive £2,000 for each voyage between Liverpool and Quebec or between Liverpool and St. John run by each seventeen-knot steamer, £1,000 for each similar round voyage run by the Bavarian or Tunisian and £500 for each round voyage by the Ionian, Sicilian or Pretorian between Liverpool and Quebec, and £750 for an all-round voyage by the latter vessel between Liverpool and St. John.

## AGRICULTURAL DEVELOPMENT.

Progress is still shown in the agricultural sections of the Dominion.

The Department of Agriculture, of Manitoba, has issued a most interesting estimate of the past year's grain crop in the province. The total production in bushels was as follows: Wheat, 40,116,878; oats, 33,035,774; barley, 8,707,252; flax, 564,440; rye, 49,900; peas, 34,154.

There has been a big increase in dairy exports the past season. Statistics of the dairy shipment from the port of Montreal show that the exports from the port during the season of navigation represent a return to Canadian dairymen of \$26,369,000, and if this is added to the stock still carried in store in Montreal, both of butter and cheese, the export business in these products during 1903 approaches close to \$30,000,000. This is an average increase of over \$2,000,000 per year during the last half decade, and illustrates the great importance of this great industry to the agricultural community of central Canada.

The cheese branch of the industry for the season of 1903 has been highly successful. Compared with the exports of 1902, during the season of navigation, there has been an increase in quantity of over thirteen and one-half per cent., while compared with five years ago the gain is over twenty-six per cent., and during the full decade over forty-two per cent. A favorable accompaniment of this satisfactory gain is the fact that it has been accomplished without any serious sacrifice in the shape of decreased price. The past year values averaged fifty cents per box higher, over \$21,500,000 worth of cheese being exported between the opening and closing of navigation on the St. Lawrence, compared with \$17,900,000 odd in 1902.

The export business in Canadian butter during the past season has been disappointing, as Canada failed to maintain its portion in the volume of imports into Britain. The shrinkage in the Canadian farmers' revenue from butter exports has been sixty five per cent., or \$3,132,000 odd. The total shipments were 33,827 boxes, worth \$4,803,535, compared with 339,845 boxes, worth \$7,236,121 last season.

The exports of bacon, hams, eggs and poultry in Canada the past year amounted to \$16,000,000. The exports of grain of all kinds, \$28,000,000. The exports of flour and meal, \$7,500,000 and the exports of livestock, \$12,500,000.

## BANKS AND BANKING.

The past year has been one of rapid expansion in the banking business in Canada, and was without exception the most prosperous year the banks have ever had.

There have been great changes in the banking position generally during the past year, and especially in the remarkable increase of discounts. The increase amounts to no less than \$65,000,000, which is an unprecedented sum.

The assets of all banks have increased to \$660,000,000 at the end of 1903, a gain of \$35,000,000 over the figures reported at the close of 1902. The most noticeable change in the business done during the past year was the largely increased amount that the banks of the Dominion have placed out on commercial loans. From \$324,000,000 at the end of 1902, these loans increased to \$382,000,000, making an increase of \$58,000,000 for the past year, which means an increase of nearly \$5,000,000 a month. Then, again, the bank-note circulation has reached a new high level at \$70,480,000.

The net earnings of the banks in many cases on increased capital show substantial gains, and enabled a number of the banks to increase dividend disbursements, make handsome additions to cash reserves, write off bank premises, provide for doubtful debts, make liberal contributions to officers, pension funds, etc.

There were no failures among the chartered banks of Canada in 1903. Only two of the banks paid no dividends, being those that were started during the year. Over

one hundred and fifty new offices of Canadian banks have been created during the year. This brings the total of bank establishments to about 1,020, as compared with about 700 in 1900.

The figures of the Monthly Government Statements of the Canadian Chartered Banks not only reflect the trade expansion of the Dominion, but show the increase in the banking business of the country.

Below, in a condensed form, are the statements of Canadian banks for September, October and November, 1908 :

| LIABILITIES.                                                  | September, 1908.     | October, 1908.       | November, 1908.      |
|---------------------------------------------------------------|----------------------|----------------------|----------------------|
| Capital authorized.....                                       | \$97,046,666         | \$97,046,666         | \$97,046,666         |
| Capital paid-up.....                                          | 78,067,190           | 78,286,682           | 78,898,783           |

| Other assets.....                                             | 6,747,406            | 7,669,665            | 6,834,900            |
| <b>Total assets.....</b>                                      | <b>\$656,704,532</b> | <b>\$660,520,201</b> | <b>\$662,277,180</b> |
| <b>Average amount of specie held during the month.....</b>    | <b>\$14,449,361</b>  | <b>\$14,541,623</b>  | <b>\$14,497,965</b>  |
| <b>Average Dominion notes held during the month.....</b>      | <b>29,264,108</b>    | <b>29,803,311</b>    | <b>29,242,649</b>    |
| <b>Greatest amount notes in circulation during month.....</b> | <b>65,089,739</b>    | <b>71,339,081</b>    | <b>71,250,776</b>    |
| <b>Loans to directors or their firms.....</b>                 | <b>11,573,494</b>    | <b>11,347,489</b>    | <b>11,316,467</b>    |

The most striking items in the statement for October are the discount and note circulation figures, which establish new high records. The circulation for October reached the sum of \$70,480,611, an increase of \$6,749,841 over September, and comparing with \$65,928,973 in October, 1902, was quite the highest total ever reached by the Canadian chartered institutions. The greatest amount of notes outstanding during October was \$71,839,081. There was also a contraction of \$921,786 in the call loan account in Canada, and \$5,942,514 elsewhere during October, while current loans in Canada increased by \$7,190,090, making the total discounts \$380,823,162, or about \$66,000,000 in excess of the same month for 1902. Call loans for October, 1903, are \$10,000,000 below the total for October, 1902, while the same account elsewhere shows a contraction approximately \$17,000,000, current loans elsewhere are \$11,000,000 less than for 1902. Deposits for October were \$394,009,696, compared with \$391,781,524 for September, and \$361,789,619 for October, 1902. Current loans elsewhere are \$11,000,000 less than for 1902.

By the November statement it will be observed that the item of "Current loans in Canada," which is a reflex of the requirements of the commercial community, shows the first decrease in many months. There is little cause for anxiety, however, as the total discounts are still many millions above the total of a year ago, the aggregate of current loans on November 30 being \$380,688,701, against \$380,823,162 on October 31, 1903, and \$317,172,228 on November 30 of last year. In the matter of call loans another decrease of \$1,618,710 is reported in Canada, the total outstanding being \$39,109,610, which compares with \$51,958,914 a year ago, or a decrease of \$12,849,301. Call loans "elsewhere" increased by nearly \$3,000,000 for November, but are still \$16,000,000 smaller than in the corresponding month of 1902. Current loans elsewhere decreased \$2,730,672 during November, and are \$13,000,000 below the figures of November, 1902. In the matter of deposits the banks are still making a remarkable showing. Demand deposits in Canada increased by \$2,028,815 during November, and are now \$120,098,903, against \$111,691,073 in November, 1902, while the sum held on notice is \$3,609,921 greater than in October, 1903, and approximately \$28,000,000 in excess of a year ago. Deposits "elsewhere" increased by about \$3,000,000 during November. Specie holdings also shows an increase, being \$1,127,796 greater than in October. Circulation decreased by \$2,959,755, and at the end of November was \$87,425,856, or \$3,000,000 in excess of a year ago. Another small increase in the reserve fund is shown, and this is doubly interesting in view of the fact that the combined rest account of the thirty-three chartered banks of Canada has at last crossed the \$50,000,000 mark on a paid-up capital of \$78,398,733.

The following statements showing abstract of bank returns will no doubt be found interesting :

| DESCRIPTION.                                    | October 31, 1903. | October 31, 1902. |

## GOVERNMENT CIRCULATION.

|                                                  |              |
|--------------------------------------------------|--------------|
| Large.....                                       | \$27,466,000 |
| Small.....                                       | 13,156,000   |
| Total .....                                      | \$40,622,000 |
| Gold held, \$28,224,000, or sixty-nine per cent. |              |

One of the most gratifying signs of the advance in business in 1903 is that of the bank clearing-house returns in the two leading Canadian cities for the year. In Toronto the total clearings are well on the way to the billion dollar mark, while in Montreal they slightly exceeded that point.

The Canadian clearings for the eleven months ending with November, 1903, amounted to \$2,416,466,942, a gain over 1902 of 5.2 per cent.

The amalgamation has taken place between the new City and County Bank of Ottawa and the Crown Bank of Canada. Neither institution had begun actual business. The head office will be in Toronto, and business will be begun there in a few months. There will be a branch in Ottawa.

## SATISFACTORY CONDITION OF MANUFACTURING.

There has been quite an extraordinary increase in the quantity of goods manufactured in Canada during the past year. A greater difficulty than ever during the year has been the securing of sufficient labor, and no apparent diminution in the buying powers of the people. The United States manufacturers still continue to establish additional plants in Canada, and in some cases are establishing manufacturing plants here in preference to their own country.

The export trade in manufactures has continued to increase, and only in iron and steel, cotton and woollen manufacturing are unusually difficult problems being faced.

Many large industrial enterprises have secured charters during the past year, and in many old lines of business extension has been made.

## THE LUMBERING INDUSTRY.

The lumber trade in Canada has continued in a prosperous condition and shows rapid development. During the past year the exports amounted to \$33,000,000. Prices still remain high, the cost of production quite keeping pace therewith. Strikes in the building trade undoubtedly affected the demand somewhat.

The cut of New Brunswick for the past year was about 130,000,000 feet.

In British Columbia the most notable feature has been the rapid development of the lumber industry.

The demand from the territories, as well as elsewhere, has been unprecedented, and a trade which a few years ago was small in proportion and most satisfactory as to profits, has now reached figures which almost creates the feeling that there may have been an overproduction.

#### MINING DEVELOPMENT.

The mining industry is now being carried on on a large scale in Canada. The output of the coal mines is steadily increasing, and prices continue to keep high enough to produce very handsome profits. In the Crow's Nest collieries the output has nearly doubled during the past year. It amounted to 652,000 tons, 116,000 tons of coke having also been manufactured during the period.

In copper and gold mining there has been a steady progress, the actual mining and smelting on a paying basis in the Boundry districts being larger than at any previous time.

---

GROWTH IN BRITISH EXPENDITURES.—According to "The Statist," of London, the imperial and municipal expenditures of Great Britain are rapidly increasing. Twenty years ago the sum expended upon governing the nation was only £85,955,000; ten years ago the amount was still only £91,308,000; but for the current year it will be £138,845,000. From 1883-84 to 1893-94, a period in which the nation was relatively economical and was saving largely, the growth in the imperial expenditure was only £5,348,000, or about six per cent. But in the ten years from 1893-94 to 1903-04 the national expenditure has risen to £148,954,000, a growth of no less than £52,651,000, or 57.6 per cent. In other words, the growth in imperial expenditure has been over nine times greater in the past decade than in the previous one. Nor does this represent the total growth in expenditure. Payments are now being made out of capital which were formerly paid for out of revenue. Including capital outlays, the total imperial expenditure in 1883-84 was £86,954,000. Ten years ago it was £92,180,000, but the total for the current fiscal year will be £149,954,000.

The most recent returns of the comprehensive income and expenditure of the local authorities is for the year 1900-01. In that year their total expenditure out of revenue and loans was £133,713,000. Ten years previously their expenditure was only £70,637,000, and in 1880-81 only £63,402,000. Thus, whereas from 1880-81 to 1890-91 their annual expenditure grew by only £7,235,000, or eleven per cent., from 1890-91 to 1900-01 their annual outlays increased £63,076,000, or by eighty-nine per cent. Since 1900-01 there has been a further growth in their expenditure, and for 1903-04 their outlays seem likely to reach to £150,000,000.

In the opinion of "The Statist," this large growth of expenditures is a factor of considerable influence on the enormous imports of the United Kingdom, and tends to add to the excess of imports over exports.

---

INCREASE OF BANKING CAPITAL IN THE UNITED KINGDOM.—The London "Bankers' Magazine" for January contains an interesting review of the Progress of Banking in Great Britain and Ireland in 1903, by R. H. Inglis Palgrave. It is shown that the increase in banking capital (including surplus or reserve) was £1,726,769, compared with £1,638,714 in 1902, £2,189,763 in 1901, £1,263,390 in 1900, £2,829,612 in 1899, and £2,076,432 in 1898. For the twenty-eight years, 1876-1903, the net increase has been £52,084,446, and in the same time deposits have increased something like £340,000,000 or \$850,000,000.

## LEWIS E. PIERSON.

*THE NEW PRESIDENT OF THE NEW YORK NATIONAL EXCHANGE BANK.*

Lewis E. Pierson was recently elected President of the New York National Exchange Bank, succeeding James Rowland, who will continue to be a director of the bank.

Mr. Pierson has had extensive banking experience, and his promotion to this important position is fully deserved. After graduating, he entered the Hanover National Bank, remaining with this institution from 1885 until 1898, at which time he became Cashier of the New York National Exchange Bank.

In 1900 he was elected Vice-President. His qualifications as a capable and successful bank officer have been clearly shown in the several responsible positions he has filled.

The New York National Exchange Bank is one of the old and reliable banks of the city. It was founded as a State bank in 1851, entered the National system in 1863 and remained under practically a continuous management until 1898, when it was reorganized by admitting into its directorate representatives of some of the strongest financial interests in New York. This resulted in a marked gain in the bank's business. The capital was increased from \$300,000 to \$1,000,000, with surplus and profits of over \$800,000, and the deposits gradually increased from \$1,647,049 to over \$6,000,000 at the present time.

The success of the bank has been due, principally, to its faithful and energetic management, and a conscientious regard for the interests of its customers. A specialty of the bank has been the handling of drafts drawn with bills of lading attached, for country banks, and having a department especially devoted to this service, and the additional advantage of long experience, a large and successful business has been built up on this line.

Mr. Pierson was for a time Acting Secretary of the New York State Bankers' Association, and at the annual convention last year he was chosen Vice-President. He is also chairman of a committee appointed by the American Bankers' Association to perfect a system of bank money orders.

LEWIS E. PIERSON,

President of the New York National Exchange Bank.

# ANNUAL REPORT OF THE SUPERINTENDENT OF BANKS OF THE STATE OF NEW YORK.

TRANSMITTED TO THE LEGISLATURE JANUARY 6, 1904.

## *To the Legislature :*

The administration of the State Banking Department of the affairs of the institution under its supervision were marked by but few incidents of particular importance during the fiscal year which closed September 30, last, though some at least of them were of a character and consequence to make special mention of them interesting and expedient.

The Cornwall Bank, a small institution, which appears to have been left almost wholly to the management of its Cashier, was looted by that officer to the extent that even an assessment of one hundred per cent. upon its stockholders was inadequate to provide sufficient funds to meet its indebtedness to depositors and other outside creditors. The stockholders, or a portion of them, contributed more than their legal liability, however, and thus satisfied all claims but their own. Possibly that course appealed to them as likely to prove cheaper in the end than to defend suits based upon the contention that a failure of directors to direct establishes a personal liability capable of being enforced.

The defalcation in question was discovered by an examiner of this department, and it could hardly have been concealed at any time during several preceding months had there been even a casual examination of the bank's business by its officers. The Cashier is serving a term in prison because of his misdoing, which it is but just to him to say the other officers and directors of the bank believe he never contemplated should resolve itself into a theft of money. One successful speculation in the stock market was succeeded by losses, and with the hope that prices would recover the Cashier employed funds of the bank to protect his commitments, confidently expecting to replace his borrowings. But the losses grew greater instead of diminishing, so that more and more money was taken from the bank, until a sum approximating the total deposits had been appropriated.

The two lessons that the affair enforces are that there is no safety for any man in diverting to his own uses the first dollar of moneys held by him in a trust capacity, and that directors who do not "diligently" administer the affairs of their corporations, or who "willingly permit" the laws applicable thereto to be violated, are guilty both of thrusting temptation before their employees and of risking the ruin of their institutions.

The story of the failure of the United States Shipbuilding Company, and of the connection of the Trust Company of the Republic with the financing of that corporation's affairs, has so filled the columns of the newspapers from time to time that some official statement of the course of the Superintendent of Banks in the matter ought perhaps to be made. Upon the first intimation that the trust company had made unusual commitments in the case a special inquiry was instituted by me to ascertain the facts, and I was amazed to find that undertakings had been entered into and liabilities incurred which not only jeopardized the solvency of the trust company, but flagrantly transgressed the law. The company had made numerous loans without collateral other than shipbuilding stock and securities, one of them

to Mr. Dresser, the President of the company, and to Mr. Nixon, for nearly a million and three-quarters of dollars. It had, besides, guaranteed loans made by other institutions to Mr. Dresser and Mr. Nixon amounting to two million dollars. I required, under the alternative that the company be referred at once to the Attorney-General for proceedings in insolvency to be instituted against it, that there be some very thorough straightening out of the trust company's affairs. The direct loan to Mr. Dresser and to Mr. Nixon was excessive under the law, regardless of Mr. Dresser's official relation to the company, and to him it was more than ten times the amount that could lawfully be loaned. Under my insistence a half million of it was soon repaid, the loans for two millions guaranteed to other institutions were taken up, and later the balance of the Dresser and Nixon note to the Trust Company of the Republic was paid in full. This seemed to me a far better procedure than to refer the company to the Attorney-General summarily, for it recovered nearly four million dollars that in the other alternative might have proved a loss. Moreover, one plan for reorganizing the shipbuilding trust would have involved a loss of six hundred thousand dollars to the trust company if carried through, which, however, was objected to, and finally abandoned.

It was impossible, however, to avert all of the consequences of the ill-judged and reckless commitments in which the company had become involved, and it preserved its solvency only by cutting its capital in two. Its losses on account of investments in the shipbuilding folly, and from loans upon shipbuilding collateral, aggregated nearly nine hundred thousand dollars, and, with other minor losses and depreciation in investments, wiped out the company's entire surplus, and necessitated the sacrifice by stockholders of one-half of their holdings. Over a million dollars was charged to profit and loss.

I note that Mr. Dresser attempted in the shipbuilding inquiry to justify or excuse his borrowings from the Trust Company of the Republic by charging that such transactions are common, or at least not uncommon, in other institutions. The information at my command regarding such alleged practices warrants absolute contradiction of Mr. Dresser on this point. Twice in each year every trust company is required to submit a verified report of its condition to this department, and one item in such reports covers the amount of loans, directly or indirectly, to directors. It is extremely unusual for these reports to disclose any unlawful loan of the character under consideration. Besides this check, every examiner of the department is under special instructions to report particularly whether he finds in an examination loans by a trust company to its directors, and, if found, the amount thereof. These examinations are far from confirming Mr. Dresser's representation; on the contrary, they refute it.

#### THE DEPARTMENT'S SYSTEM OF EXAMINATIONS.

In this connection a statement of what constitutes the system of examinations in this department, and the resultant action thereon, will doubtless be of public interest. The banking law requires that every bank, trust company, building and loan association, safe deposit company, or mortgage company, under the supervision of the department be examined as often as once a year, and Savings banks once in two years. A special examination of an institution may be made also whenever the Superintendent of Banks is of the opinion that "its condition and management is such as to render an examination of its affairs necessary and expedient." In point of fact, special examinations are usually undertaken only when some particular disclosure regarding an institution is thought to give occasion for anxiety, or when its own reports indicate irregular or unsatisfactory conditions. While they are not frequent, neither are they so exceptional as to be unusual. The regular examinations are not set for exact days, but, rather, it is usually sought to vary the dates from year to

year, so that they cannot be calculated with any certainty by the officers of the corporation to be examined. The examiners investigate not only the liabilities of an institution, but its resources, which they become singularly proficient in analyzing and classifying with correctness as "doubtful," "bad" and "good." They note also whether improper investments are held, all irregularities that are practiced, whether faults previously reported have been corrected, and indeed every matter that they find which can be fairly made the subject of criticism. Reports embodying these findings are submitted promptly to the Superintendent of Banks, who goes over them searchingly, and in due course writes to each of the institutions criticised detailing to it the examiner's criticisms, and directing that worthless assets be charged off, and that all irregular, unsafe and illegal practices be discontinued and remedied, and that report of the action taken be made promptly to this department. These letters are recorded in the department in a book by themselves, wherein the replies are also entered. A failure on the part of any institution to reply to a communication based upon a report of examination, is followed by a second letter, and, if necessary, by a third, and if the matter be of sufficient importance, by a personal visitation, either by the Superintendent or by an examiner, and in many instances by interviews between the officers and the Superintendent. In fact, the matter is followed diligently until the faults complained of are corrected as far as the circumstances in the respective cases will permit. A close touch is thus kept with the affairs of every bank and trust company, and its actual condition at the date of examination is made determinable almost at a glance.

But even with the utmost care and vigilance censurable practices will, at times, creep in, and violations of law occur. There is all of the time between examinations, or at least between reports, for managers and clerks to go wrong if they are so disposed, and no supervisory system could be effectual to prevent them altogether. The final dependence of the public and of stockholders against weakness, recklessness and dishonesty in banking corporations must be upon a board of directors who are duly vigilant, and upon executive officers of absolute probity, who will exercise a thorough and intelligent care for the interests which they hold in trust.

#### BANKS OF DEPOSIT AND DISCOUNT.

Fourteen State banks closed during the year, and fifteen were organized, making the whole number in active business on September 30 one hundred and ninety, or one more than at the corresponding date in 1902. Of the banks that closed three combined to form a new and larger institution, four were merged into other banks, two were converted to the National system, two closed to make place for trust companies controlled by the same interests, one failed, one went into voluntary liquidation upon the purchase of all of its stock by a trust company desirous of utilizing its location for a branch office, and another because its business was not profitable. Nine of the fifteen new banks are located in the city of New York. Besides these newly-organized institutions, seventeen branch offices of banks were opened in New York during the year, making the whole number of branches on the date named fifty-four. Since the facilities provided by these branches to their customers are substantially the same that independent banks would afford, the system will be seen virtually to have increased in the number of its institutions, as it has also in total assets, and apparently in prosperity. The combined capital of the banks that closed was \$1,700,000, and of those that were organized \$1,775,000, while increases in capital effected by other banks amounted during the year to \$2,125,000—making a net increase of \$2,200,000 in this item. The surplus and undivided profits as reported by the banks in August, last, were \$32,721,113, or an increase of \$2,910,095, or very close to ten per cent. over the total reported by them in the preceding September. That showing certainly suggests prosperity. It is, however, not complete, for the

banks that closed during the year had surplus and profits of about \$1,750,000, allowance for which would make the reported increase over fifteen per cent. On the other hand, some of the gain shown does not represent net earnings, but money paid in, and the statements by the banks fail in some cases to cover the depreciation which occurred during the year in stock and bond values. But the net is on the right side, and certifies better earnings and a general improvement.

The aggregate resources of the State banks at the date of their last report in the fiscal year were \$367,613,345, or \$15,897,161 more than at the corresponding date in 1902.

A comparison of the State banks with those of the National system has some features of interest. Although the latter are greater in number, and the various items reflecting their condition vastly larger, they are not, I think, more prosperous or proportionately stronger. Their percentage of surplus to capital is under 106, while that of the State banks is over 112. Their resources decreased \$76,504,192 during the year, while those of the State banks increased \$15,897,161. Though their surplus shows on the face of their reports a gain for the year of two and a half per cent. greater than the State banks claim, I doubt if that apparent advantage would prove actual if the data were at hand to establish how much of it in each case represents net earnings, and how much of it money paid in upon organization or reorganization, or in connection with increases of capital.

While there were sixteen National banks chartered in the State of New York during the year which closed September 30, and seventeen in the preceding year, only one of the thirty-three was located in the city of New York, while of the twenty-eight State banks organized in the same time fifteen are in that city. The largest capitalization of any one of the new National banks is \$250,000, while of the new State banks there are two each of which has a capital of twice that sum.

The number of National banks authorized in this State during the fiscal year was sixteen, of which two were renewals of expiring charters; the number closed, exclusive of those rechartered, was five. The whole number of this class of institutions engaged in active business in New York, September 30, was 362, with an aggregate capital of \$136,769,840, a combined surplus and undivided profits amounting to \$144,624,685, and total resources of \$1,522,208,085.

#### THE TRUST COMPANIES.

The latest reports showing the condition of the trust companies is as of the morning of the first day of July, last. Their capital has increased \$9,825,000 since the previous July, to an aggregate of \$62,550,000, their surplus and undivided profits \$26,911,055 to \$141,686,708, and their total resources \$68,158,070 to \$1,146,370,755. The gain in the latter item for six months was larger still, their resources having diminished from July, 1902, to January, 1903. Their total deposits July 1, 1903, were \$914,769,871.56, which have, however, decreased in most companies since that date. Upward of twenty-one million dollars of the increase in their surplus stands for money paid in upon the organization of new companies, or upon the sale of new stock at a premium in cases of increase of capital of companies previously in business, so that upon their own statements the companies made during the year hardly more than six millions besides the profits which they distributed in dividends. But the period covered was one during which security values shrank tremendously, and when it is considered that the trust companies held stock and bond investments amounting to two hundred and thirty million dollars, subject to a very great depreciation, it must be concluded that only by the most prudent and sagacious management could any gain at all have been expected, or, indeed, escape from actual loss have been averted. The test of strength so supplied was severe, and the companies

and the public alike are to be congratulated that, with one or two exceptions, it uncovered no danger points and left no wrecks.

The number of trust companies submitting reports on the first day of July was seventy-seven, or seven more than in the preceding July, and to this number four should now be added which had not begun business on the latter date named.

Some further details regarding the banks and trust companies located in the boroughs of Manhattan and Brooklyn may be of interest.

There are but fifty-five banks belonging to the clearing-house association, and thirty-four "non-member" banks clearing through agents, and, therefore, making reports to the clearing-house.

A comparison of the condition of these institutions with the condition of trust companies at the nearest available date (July 1, 1903), will be of interest.

The clearing-house banks, including non-members, had July 3, 1903 :

|                            |               |
|----------------------------|---------------|
| Capital.....               | \$116,864,700 |
| Surplus and profits.....   | 136,181,200   |
| Deposits.....              | 974,706,100   |
| Loans and investments..... | 938,687,000   |

The trust companies had on July 1, 1903 :

|                                                                |              |
|----------------------------------------------------------------|--------------|
| Capital.....                                                   | \$56,475,000 |
| Surplus and profits.....                                       | 136,046,491  |
| Deposits (including \$232,892,531 of "deposits in trust")..... | 828,338,354  |
| Loans and investments.....                                     | 884,807,293  |
| Cash on deposit in banks and other moneyed institutions.....   | 108,180,224  |
| Cash on hand.....                                              | 22,806,387   |

There are also seventeen State banks and seven National banks in Greater New York which are not members of the clearing-house, nor in the list of the so-called non-member banks. Add the items of capital, surplus, deposits and loans and investments, which the reports of these institutions would show, to the corresponding items above given for the trust companies, and it is probable that the aggregate would closely approximate the figures given for the clearing-house banks and banks reporting to the clearing-house. Hence, the weekly statement, as now compiled, covers only about half of what it would cover if all were included.

#### THE SAVINGS BANKS.

The number of Savings banks which reported July 1 was 127, the same as six months and one year previously. One Savings bank in New York city, however, was authorized by me in October, making the whole number authorized in the past eight years five, while four closed during the same period.

Though the depreciation in bonds alluded to had impaired the surplus of the Savings banks, as computed upon the market value of their investments, to the amount of more than seven million dollars, their July reports still showed them to have a combined surplus of more than one hundred and eight million dollars, or nearly ten per cent. above all liabilities, and to be otherwise in a thriving condition. The amount due their depositors had increased thirty-five million dollars in six months, and sixty-one million dollars in a year, so that on July 1, last, the total amount due depositors was \$1,112,418,522.36, and the number of open accounts had advanced in the twelve months from 2,229,661 to 2,327,812. It is improbable, however, that the rate of growth reported for the first half of the calendar year has continued through the second half. It seldom, if ever, does, and conditions have obtained since July which justify the expectation that withdrawals have been larger in that time, and deposits smaller, than have been the rule in recent years. Labor disturbances and investment opportunities are mainly responsible for this condition. Workmen on strike have had to draw upon their savings for support, and evidence is not wanting that many even of the smaller depositors have withdrawn funds for the purpose of

buying stocks. Others in considerable number who were using the Savings banks simply as a convenience until they could employ their moneys more advantageously otherwise, were persuaded by the low prices at which bonds were offered a few months ago to become their own investors. These latter are not properly customers of Savings banks at any time, and the closing of their accounts is rather to be welcomed than regretted. The drawing upon moneys laid by for emergency use by wage workers is, however, another matter. The emergency contemplated in such cases is not a perverse idleness, but physical or age disability. To inconvenience employers, derange business and consume savings for which bitter need may arise can be justified only when genuine grievances can be abated in no other way. Upon all other occasions it is a folly, or worse, which neither the plea of passion, nor yielding to the counsels of incapable or unscrupulous leaders, can either excuse or extenuate.

**PERSONAL LOAN ASSOCIATIONS.**

Two years ago at this date there were under the supervision of this department one hundred and ten associations for loaning money upon the pledge of personal property, which number, upon the enactment of restrictive legislation, had decreased in December, 1902, to about forty. It has since fallen to fifteen, and most of those that have closed it may fairly be said that nothing in their life became them like the leaving of it. They had been organized to loan money at extortionate rates, and when their privileges were curtailed by act of the Legislature, and their operations subjected to supervision, they proceeded to dissolve. Advertisements appearing in the newspapers from time to time, and an occasional letter of complaint received by me, indicate that individuals are now prosecuting the business formerly done by many of these companies, and are charging usurious rates on their loans. Thus borrowers may not be faring better, but the State does not now stand sponsor for the lenders, as in a sense it did before the personal loan law was amended.

**TOTAL RESOURCES.**

The total resources of the several classes of institutions which report to this department, as shown by their reports as of the dates indicated, are as follows :

|                                                                         |                        |
|-------------------------------------------------------------------------|------------------------|
| Banks of deposit and discount, August 25, 1903.....                     | \$367,613,345          |
| Savings banks, July 1, 1903.....                                        | 1,221,425,002          |
| Trust companies, July 1, 1903.....                                      | 1,146,370,755          |
| Safe deposit companies, July 1, 1903.....                               | 6,798,643              |
| Foreign mortgage companies, January 1, 1903.....                        | 4,857,485              |
| Building and loan associations, January 1, 1903.....                    | 53,952,337             |
| Domestic mortgage and security company.....                             | 1,311,850              |
| Building lot associations, January 1, 1903.....                         | 538,810                |
| Security and mortgage companies.....                                    | 4,500,142              |
| Total.....                                                              | <u>\$2,907,388,569</u> |
| The gain over the previous year is.....                                 | 135,366,685            |
| And since January, 1896, the time I became Superintendent of Banks..... | 1,232,494,873          |

NOTE.—The resources of mortgage and security companies, and of building lot association, did not appear in the like table given in report for 1902, and they are not included in the figures of increase stated above.

**BANKING LAW AMENDMENTS.**

A source of abundant abuse in building and loan association management has been the practice of making deductions from stock payments to meet running expenses. It left the door wide open for extravagance, and for discontent on the part of shareholders. Chapter 84 of the Laws of 1903 amends section 196b of the Banking Law so that that practice is now prohibited.

Section 159 of the Banking Law was amended by chapter 160 of the Laws of 1903 to permit trust companies to invest their capital in bonds and mortgages on unincumbered real property in this State to the extent of sixty per centum of the value

thereof. Formerly such investment of capital could be made only in case the real estate was worth double the amount loaned thereon.

Section 118 of the banking law was amended in two unimportant respects. Bonds of the Buffalo Creek Railroad Company were added to the list of securities in which the Savings banks could lawfully invest, and it was also made lawful for these institutions to invest in the interest-bearing obligations of villages and towns in this State. Theretofore the strict letter of the law permitted them to invest in village and town obligations only in case they were in the form of bonds.

#### ASSETS AND LIABILITIES.

The reported condition of the banks of deposit and discount on the twenty-fifth day of August, 1903, compares with the condition shown by the like reports at the corresponding date in 1902 :

| ASSETS.                                               | 1902.         | 1903.         |
|-------------------------------------------------------|---------------|---------------|
| Loans and discounts, less due from directors.....     | \$217,779,773 | \$215,183,294 |
| Liability of directors as makers.....                 | 7,903,078     | 9,199,959     |
| Overdrafts.....                                       | 172,637       | 171,961       |
| Due from trust companies, banks, bankers and brokers. | 28,723,581    | 30,208,076    |
| Real estate.....                                      | 10,624,966    | 11,985,180    |
| Mortgages owned.....                                  | 4,137,257     | 3,809,948     |
| Stocks and bonds.....                                 | 25,472,772    | 24,243,267    |
| Specie.....                                           | 25,625,191    | 28,864,470    |
| United States legal tenders and circulating notes of  |               |               |
| National banks.....                                   | 14,463,519    | 16,197,830    |
| Cash items.....                                       | 15,619,187    | 26,951,454    |
| Assets not included in any of the above heads.....    | 1,793,989     | 728,712       |
| Add for cents.....                                    | 684           | 604           |
| Total.....                                            | \$351,716,184 | \$367,613,345 |
| LIABILITIES.                                          |               |               |
| Capital.....                                          | \$26,715,700  | \$29,145,700  |
| Surplus fund.....                                     | 19,629,616    | 21,974,127    |
| Undivided profits.....                                | 10,181,402    | 10,746,986    |
| Due depositors on demand.....                         | 244,345,629   | 250,915,540   |
| Due to trust companies, banks, bankers and brokers..  | 85,535,025    | 87,583,215    |
| Due to Savings banks.....                             | 12,573,830    | 14,871,250    |
| Due to the Treasurer of the State of New York.....    | 1,732,105     | 1,616,548     |
| Amount due not included in any of the above heads...  | 1,003,069     | 809,679       |
| Add for cents.....                                    | 308           | 300           |
| Total.....                                            | \$351,716,184 | \$367,613,345 |

One hundred and ninety-four banks reported September 6, 1902.  
One hundred and ninety-three banks reported August 25, 1903.

| Brooklyn city 3 per cent. bonds.... | 220,000   |                                      |             |
| Brooklyn city 3½ per cent. bonds..  | 250,000   | Total.....                           | \$7,641,628 |

## RECOMMENDATIONS.

## EXAMINATION BY DIRECTORS.

The plundering of the Cornwall Bank by its Cashier adds force to the recommendation several times submitted by me, that the banking law be amended to require a compulsory examination of banks by their boards of directors, or by a committee, or an expert accountant, representing the directors, at least as often as every six months, and that verified reports thereof be filed in the banking department. Almost simultaneously with the Cornwall wrecking, the news dispatches reported two banks closed in other States for like cause, and as to one of them the defaulting official was quoted as having pronounced the directors almost equally culpable with himself, since, as he said, his peculations could not have escaped discovery had there been but the most perfunctory examination of the books of the bank at any time during several preceding months. The "one-man bank" is not an institution to be encouraged, and directors who accept a trust should be compelled to give some sort of attention to its obligations. The practice here recommended would serve also to make directors better informed concerning the affairs of their banks, and thus tend to prevent losses due to mistakes of judgment, or to undue leniency with debtors by administrative officers.

## INVESTMENTS BY TRUST COMPANIES.

While the instances where serious embarrassment has been experienced by trust companies have happily been extremely few, all of them, except one, have arisen from too large transactions the safety of which depended wholly upon the success of one or two, or two or three, enterprises. That was the trouble with the Holland, and the same course seems to have cost the Trust Company of the Republic a million dollars in resources, a loss of practically all of its business, and a threatened lawsuit.

Effort has been made for two years now to amend section 159 of the banking law so as to make its meaning indisputably clear, so that it shall prohibit in terms which cannot be mistaken the investment by any trust company of more than ten per cent. of its combined capital and surplus in the stock of any private corporation. At present the prohibition, as I construe it, is sufficiently plain against investments of this character in excess of ten per cent. of the capital of the investing company, but that interpretation has been challenged both as a matter of law and of reasonableness of requirement. It is fairly claimed that a company which has accumulated by careful and sagacious management a surplus of perhaps five or ten million dollars should not be held quite to the same limit as an untried company of equal capital, but having a much smaller surplus. It is not unreasonable, therefore, as it seems to me, that the limit be extended as here suggested. But, as it is contended by some of the specially chartered companies that the provisions of section 159 are not applicable to them, it is important that the restriction proposed shall be made in terms to apply to all trust companies whose charters do not expressly authorize them to invest in the stocks of private corporations in the discretion of the management.

Underwriting engagements, as they are commonly contracted, commit subscribers not merely to an agreement to take a stated amount of stock or bonds at a stipulated price, but the essence of the business often is that the subscriber undertakes virtually to stand as a promoter in the case. The success of the enterprise to be exploited is often all yet to be achieved, and is, therefore, problematical and speculative.

Trust companies should be prohibited by law from engaging in underwriting schemes. In my opinion it is sufficient for them to be allowed to invest in the securities of private corporations only after these securities have had inception and their

value tested upon the market. Those who underwrite enter into their engagements of course upon the expectation of being able to market the securities for which they subscribe at a greater price than that which they promise to pay. This is not investment; it is speculation, in which trust companies ought not to be allowed to use the money of their depositors.

The experiences in New York within a year or two where bonds thus put out have had very great depreciation, regardless of the strength of their support, have occasioned many regrets and sore memories. I hold, therefore, that it is not enough that the door be closed effectually against excessive purchases of stocks of private corporations, but that it should be shut also against a too close and dangerously large identification in any manner of the fortunes of a trust company with experimental and hazardous schemes for the financing and development of properties which, even if eventually successful, may have before them long years of uncertainty and difficulties. The public's deposits deserve to be guarded against such reckless employment, and the statute should be so changed as at least to impose a limit beyond which operations along such lines cannot be lawfully carried.

#### FOREIGN TRUST COMPANIES.

The failure of the International Bank and Trust Company of America, a Delaware corporation, in October last, was thought by the District Attorney of the county of New York to require investigation at his hands, the company having maintained an office in New York, and a communication to me from that official states that the company had been receiving deposits in New York, which it had no right to do. I had undertaken on several occasions to investigate the operations of the company in this State, and had been given the most unequivocal assurances by its officers, both orally and in writing, that it was transacting no business whatever in New York in violation of law, or to which exception could be taken. I have before me a list of twelve other foreign trust companies, so-called, which have offices in the metropolis, and for the examination of which commissions issued by me are now outstanding. How many more there may be I have no means of knowing, nor has any other State official. No other class of foreign corporations is permitted to do business in this State except upon a license properly procured, but as to foreign trust companies the laws of New York, if not altogether silent, are at least so lacking in direct expression as to leave it perhaps uncertain what the privileges of such companies may be here, if any. My own view is that, upon a consideration of all laws that I have been able to discover which have any bearing on the question, it was never intended that foreign trust companies should have the right to establish offices or do business in New York.

Section 88 of the banking law provides that no foreign corporation, other than a National bank, shall keep any office for the purpose of receiving deposits, or discounting notes or bills, or issuing any evidence of debt to be loaned or put in circulation as money within this State.

Section 19 of the General Corporation Law provides that no corporation, except a corporation formed under or subject to the banking law, shall by any implication or construction be deemed to possess the power of carrying on the business of discounting bills, notes, or other evidences of debt, of receiving deposits, or buying gold or silver bullion or foreign coins, or buying and selling bills of exchange, or shall issue bills, notes, or other evidences of debt for circulation as money.

These are the only statutes except the penal code which deal with the subject, and it will be seen that many of the powers granted to domestic trust companies are not prohibited by these provisions, and, since some are prohibited, it is argued that a foreign trust company may come into this State and do the things which are not expressly prohibited.

Section 19 of the General Corporation Law, above referred to, has been held to include in its prohibition foreign corporations, but it has also been held that it does not prohibit foreign corporations from purchasing promissory notes.

A foreign trust company should certainly not have the power to come into this State and receive deposits, or act as trustee, guardian, executor, or in any other of the several fiduciary capacities. This condition of uncertainty and lack of regulation ought not to continue longer, and it is respectfully suggested that the Legislature expressly prohibit foreign trust companies—whether vested by their charters with powers akin to those possessed by our own trust companies, or whatever their real character, provided they have the word "trust" as a part of their corporate title—from maintaining offices in this State, or else they be accorded that privilege only upon the authorization of the Superintendent of Banks, subject to his examination, and with statutory restrictions as to the kind of business they may do under such authorization.

#### BRANCH OFFICES OF TRUST COMPANIES.

I now hold that a trust company organized under the general law has no right to open a branch, except upon authority from this department, and that such authority may be given or withheld in the discretion of the Superintendent. But there is no express provision in the law to this effect, and it is only from inference that I claim such authority.

Some specially chartered trust companies, however, claim the right to open one or more branches without the consent of this department. That provision of the statute which makes it the duty of the Superintendent to ascertain from the best sources at his command whether "the public convenience and advantage will be promoted" by the establishment of a trust company, obtains with just as much force as to the establishment of a branch.

The law should be amended so as definitely to declare the rights of all trust companies and the powers of the Superintendent in this direction.

#### LEGAL RESERVE FOR TRUST COMPANIES.

In my report to the Legislature for the year ending September 30, 1901, I stated that I was not prepared to recommend the enactment of a requirement that trust companies carry a certain percentage of their deposits as a cash reserve, and reasons were given at that time for declining to make such recommendation.

Since then the New York Clearing-House, by an amendment to its constitution, has required that every non-member clearing through a member of the association shall after June 1, 1903, keep in its vaults a cash reserve equal to five per cent. of its deposits, which percentage shall be increased after eight months to seven and one-half, and after one year to not less than ten nor more than fifteen, as shall be from time to time fixed by the clearing-house committee.

At that time there were twenty-six trust companies in Greater New York clearing through the clearing house. Since the adoption of this amendment nine have ceased to clear through the clearing house, so that there are to day but seventeen companies availing themselves of this privilege, none having been admitted since June, last.

While this rule of the clearing-house has perhaps resulted in lessening the amount of strictly commercial business done by the trust companies, it certainly has not resulted in inducing them generally to keep the reserve therein required. Those companies which have withdrawn from the privileges of the clearing house, and those that never belonged, necessarily suffer more or less inconvenience because they do not enjoy the advantages of clearing-house banks, but the banks themselves suffer a greater inconvenience because of their readiness to collect as best they can checks deposited with them by trust companies drawn upon institutions in no way con-

nected with the clearing-house This they do in consideration of a goodly credit balance kept with them by the trust companies, so that, after all, the inconvenience resulting to trust companies because of not being connected with the clearing-house is not very great.

There is no question but that there is a growing sentiment in banking circles, especially in the city of New York, that trust companies should be obliged by law to keep a cash reserve. The rule of the clearing-house has been found to be inadequate for the purpose. It will hardly be disputed that the greater portion of the business of most trust companies is a general banking business, and because of that, and in view of the sentiment existing in the clearing-house association, and among bankers and business men generally, the subject of reserves by trust companies should be regulated by statute.

The report of the trust companies located in the city of New York showed on July 1, 1908 : Due depositors, including banks and Savings banks, \$828,838,854.56 ; deposited in banks, \$108,180,224.81 ; cash on hand, \$828,806,887.83. Showing as a matter of fact, that they had in cash and on deposit fifteen and nearly nine-tenths per cent. of their deposits, of which a little more than one-fifth was in cash.

The reports of trust companies outside of the city of New York showed on July 1, 1908 : Due depositors, including banks and Savings banks, \$86,431,517 ; deposited in banks, \$12,208,402.20 ; cash on hand, \$3,402,302.18. Showing that they had in cash and on deposit fourteen per cent. of their deposits, of which not more than one-quarter was in cash.

Agitation of the subject has created to some extent at least an indefinite, and, although wholly unwarranted, yet somewhat damaging impression against trust companies, especially in the city of New York. I think, therefore, that it would be wise to set the whole matter at rest by the enactment of a law which will require the trust companies of the State to keep a reserve equal to that required of State banks, which in the city of New York are obliged under the law to-day to keep a reserve of fifteen per cent., one-half of which must be in cash, and in the balance of the State a reserve of ten per cent., one-half of which must be in cash ; with the modification, however, that trust companies located in the city of New York shall be obliged to keep but five per cent. in cash.

The statutory requirement is that the entire capital of trust companies be invested in specified securities, which in practice are so chosen by nearly every trust company that they are a class of bonds that could be immediately converted into cash if emergency should arise. This character of investment of capital by the trust companies ought to count for something in the way of offset to the requirement of the clearing-house of banks in respect to the cash reserve, and therefore my judgment is that every need in New York city, and elsewhere, would be met if the law were so amended as to require trust companies throughout the State to maintain a legal reserve of the percentages above suggested. Even this, I am confident, will be regarded as unnecessary by many trust companies, on account of the large amount of trust funds carried by them, and it may be that all reasonable requirements would be satisfied if such funds were excluded in ascertaining the amount upon which the reserve should be computed.

This and other changes or modifications can, however, be determined and adjusted during the consideration of the subject by the Legislature should it take the matter up.

In this connection it may be pertinent to make a few suggestions regarding the weekly statement issued by the clearing-house, giving the condition of the associated banks in the city of New York.

In a preceding part of this report will be found a comparative statement of resources and liabilities of the clearing-house banks and the non-member banks (those

clearing through agents) on the one side, and the trust companies on the other. From this statement it will be seen that the resources of the trust companies approximate those of the banks reporting to the clearing-house, and that the deposits of the trust companies (including "deposits in trust") are but one hundred and forty-six million dollars below the total of all of these banks.

While the weekly bank statement undoubtedly reflects truly the average condition of the clearing-house banks, and those reporting to that association, for the week, it is certainly incomplete as a statement of the entire situation, and therefore misleading. It is used as a basis for stock market manipulation, and fails to reflect the true condition of financial affairs so far as the amount of available funds for loaning purposes, and the deposits and loans of banking corporations, in New York city, are concerned.

The fact that these weekly statements are inadequate and misleading is fully appreciated by the banking fraternity of the city, but, under present conditions, there seems to be no practicable remedy.

If the Legislature should see fit to make some statutory provision regarding reserves to be held by trust companies, I suggest the propriety of also requiring an accurate weekly statement of the condition of all trust companies and State banks in the city of New York. This, together with a statement of the clearing-house banks, and the banks which now report to the clearing-house, would result in a comprehensive and substantially correct weekly report of financial conditions so far as banking institutions in the city of New York are concerned.

Respectfully submitted,

FREDERICK D. KILBURN, *Superintendent of Banks.*

**TO PROTECT DEPOSITORS.**—On January 22 Representative Russell, of Texas, introduced in the House a bill proposing to make it a felony punishable by imprisonment from two to ten years for the President, a director, Cashier or other officers of a National bank to receive or assent to the receipt of any deposit or to create or assent to the creation of any debt in consideration of which any money or valuable property is received after he has had knowledge of the fact that the bank is insolvent or is in failing circumstances.

The bill provides that the failure of the bank within thirty days after such money or property was received shall be prima facie evidence of knowledge on the part of its officers that it was insolvent or in failing circumstances when the money or property was received.

The bill was referred to the Judiciary Committee.

**HARMONY BETWEEN LABOR AND CAPITAL.**—The assumption that it is necessary to overthrow the capitalist class in order to improve the laboring class is baseless. The condition of the laboring class has improved along with the growth of the employing class. When employers were poor and small, laborers were much poorer than they are now. With the growth of the employing class, the methods of production have been improved, and the output increased. To be sure, capitalists have become richer, but laborers and the whole community are better off. Children go to school instead of going into the coal mines at six and seven years of age. Laborers live under sanitary conditions, instead of being surrounded by pestilential squalor.—"The Coming Class Struggle," by George Gunton.

**GEO. H. RICHTER**  
President Office, Bank and Library Co.

## INTERIOR BANK FITTINGS AND SYSTEMS.

---

The Office, Bank and Library Company, of Boston and New York, is perhaps the most novel institution of its kind in the world. More than twenty years ago Mr. Geo. H. Richter, who is president of the company, became interested in the study of interior bank fittings and systems. Starting in first as salesman in connection with such work in the United States, Canada and Europe, he later engaged in business for himself in Boston, manufacturing devices and fittings in a small way. The business continued to grow until a company was organized in 1898, known as the Office, Bank and Library Company.

Realizing more and more the great waste of money and the very unsatisfactory results that are obtained by the majority of banks and corporations in fitting up their banking rooms and offices, this company employed and educated specialists in its several departments, Mr. Richter devoting himself to the study of bank requirements. The best proof of the success and appreciation of this kind of work is shown by the fact that the company has served ten out of eleven banks in a single city, in their fittings and systems.

The difficulty is that when a bank is making alterations or putting up a new building it employs an architect with the expectation that he is to do a great deal of work that does not belong to him and expects him to know a great many things about its own requirements, systems, methods, etc., which he has had no means of knowing. This company is the link between the modern bank and the architect in the matter of the general requirements of the bank, and is prepared to take contracts for any amount of the work which is required for the interior, including counter work, grille work, vault fittings, filing cases, steel furniture, marble work, mosaic floors, ceilings, interior decorations, furniture, etc. Its factories are equipped, through its own printing plant, with departments even for the manufacture of card-index systems and other similar devices. It not only originates its own devices, but employs skilled mechanics for the manufacture of its own tools and dies with which to make them. To superintend the designing, building and erecting of these various lines of work several able and experienced architects have been specially educated and are employed on salaries, giving their whole time to the company.

Study and experience have shown that banks and their architects get much better protection, more satisfactory results and suffer less annoyance and inconvenience by having all their interior work done by one company and supervised by a thoroughly experienced architectural specialist, who is responsible to the bank's architect or to the bank direct, and who is thus able to save time and money and at the same time get better results than could otherwise be obtained.

In arranging a bank the architect is not equipped to do his best work until he knows what conveniences are required. The Office, Bank and Library Company has specialists who take up the question of floor plans, after studying the particular requirements in each case, and devising such systems as shall be acceptable and which are most convenient and most compact.

The following incidents are good illustrations of the value of the work done :

Very recently in a city in New York State a bank having outgrown its vault facilities and seeing no other way out of the situation, reluctantly decided to give up the larger part of its directors' room as the only thing that could be done to provide the needed space. The room had been torn up and a contract let for building an-

other vault. At this point the Office, Bank and Library Company was called in and rearranged the bank systems and the spaces at command, putting steel furniture into the old vault, and one or two fire-proof cases outside, so that space was obtained in the old vault not only for the papers on hand, but for fifteen or twenty years to come, and better than this, a modern labor-saving system throughout was afforded which the bank officers had never thought possible. The floor and wainscoting in the directors' room were replaced, the vault contract cancelled and the bank officers were very happy over the result.

In another instance a large trust company had an expensive building under way, the architect had spent more money in making and revising one plan after another than his commissions amounted to and still neither he nor the bank officers saw a satisfactory solution in view. The Office, Bank and Library Company, by providing proper systems for each department and making new floor plans, which were still possible, and making one foot of space do the work of two or three, saved the bank several thousands of dollars besides giving them accommodations that were satisfactory far beyond their expectations. Owing to lack of space all communication by stairway between the basement and the first floor, and between the first and second floors had been omitted. The removal of some structural iron work and expensive stone work which had already been placed, had been ordered, and this was saved and used to good purpose after the revised plans had been adopted. The Office, Bank and Library Company was then given a large contract for metallic fittings throughout the building, five floors of which were occupied by the bank. Immediately following this three other banks in the same city gave the company large contracts for designing and building work for them.

Similarly a Boston bank, having very poorly equipped banking accommodations, and being unable to find other suitable quarters in a desirable location, being so cramped for room that cashier, bookkeeper, receiving teller and paying teller were all within the radius of a ten-foot circle, voted at an expense of three thousand dollars to rent a directors' room in the sixth story of the building. The Office, Bank and Library Company submitted plans for remodelling the fittings and systems. The directors immediately rescinded their vote to rent the upstairs directors' room and let the contract for new fittings, which cost less than three thousand dollars. Within six months after the work was completed the deposits had grown nearly half a million dollars, a large part of this being directly due to the attractiveness and convenience for customers in the remodelled quarters. In these days people object to doing business with a bank where they have little privacy or convenience.

Where so much money is spent on buildings whose exteriors are so beautiful, it is nothing short of marvelous that so many new bank buildings are, for the practical purposes of the bank, inconvenient and unsatisfactory when they are finished, and in nearly every instance because the bank officials proceeded upon the supposition that the systems, devices and conveniences which had been in use for many years in the old building would suffice for the new. Another fact no less strange is that the majority of bank men know very little of the most modern methods and arrangements of the the best planned and methodized banking institutions. This is true because the bank Cashier and President, perhaps more than any other men, are obliged to be at their posts daily, and have all they can do without studying new methods, systems and conveniences, so that when they obtain a short vacation their first effort is to get as far away as possible from banking work in order that they may have their much-needed rest, instead of spending time visiting other banks.

The policy of this novel company is that its experts shall seek carefully to learn at least one thing from every bank they visit, no matter how many hundreds may have been seen, or how many years they have been studying these things, and then give each bank the benefit of this combined study, experience and observation.

## NEW CASHIER OF THE NATIONAL BANK OF THE REPUBLIC, CHICAGO.

At a meeting of the board of directors of the National Bank of the Republic, Chicago, held on December 31, Robert M. McKinney was elected Cashier of the bank to succeed J. H. Cameron, resigned.

Mr. McKinney has been identified with the National Bank of the Republic almost

R. M. MCKINNEY.

from the time of its organization, occupying the position of Assistant Cashier for ten years.

Before coming to Chicago he was for a number of years engaged in the banking business at his former home in Burlington, Iowa.

In a large measure the careful attention received by the depositors of the National Bank of the Republic is due to his activity in looking after their requirements.

Mr. McKinney is regarded as one of the most able bank officers and managers in Chicago, and is of a genial temperament.

The directors of the bank consider themselves fortunate in having such an efficient and experienced gentlemen to occupy the important position of Cashier.

The promotion of Mr. McKinney called for the election of an additional Cashier, and at the annual meeting O. H. Swan was elected to this office.

Mr. Swan has been identified with the banks of Chicago for the past seventeen years. His first experience was obtained in the National Bank of America in 1887. Seven years later he became identified with the National Bank of the Republic, and has successively filled all of the important positions since 1894, and his promotion to the office of Assistant Cashier is a recognition of his valuable services to the bank.

## BANKING AND FINANCIAL NEWS.

This Department includes a complete list of NEW NATIONAL BANKS (furnished by the Comptroller of the Currency), STATE AND PRIVATE BANKS, CHANGES IN OFFICERS, DISSOLUTIONS AND FAILURES, etc., under their proper State heads for easy reference.

### NEW YORK CITY.

—The stockholders of the Bankers' Trust Company have elected these directors for three years: Stephen Baker, A. Barton Hepburn, Edgar L. Marston, George W. Perkins, Daniel G. Reid, and Francis H. Skelding. The statement of the Bankers' Trust Company, issued on December 31, shows at the end of nine months' business deposits of considerably over \$10,000,000; total resources of approximately \$11,648,000, and undivided profits of \$57,064. The capital and paid-in surplus of the company are \$1,000,000 and \$500,000 respectively.

—Edwin Hawley, who recently secured control of the Merchants' Trust Company, through the purchase of the holdings of Frank J. Gould and other interests, was elected President of the company on January 20, Edwin Langdon retiring.

The vacancies in the board caused by the resignations of Mr. Gould and H. B. Henson and Guy Phillips were filled by the election of Thomas L. Feltner, Jacob L. Phillips and Jas. E. Reynolds. Frank C. Travers and Henry Sampson were re-elected. F. P. Davis was elected Secretary and Treasurer. Jacob L. Phillips was made second Vice-President.

—Negotiations are reported to be in progress for consolidating the Central National Bank and the National Citizens' Bank.

—At the recent annual meeting of the Guardian Trust Co., Ernest C. Brown, David B. King and Carroll P. Bassett resigned as trustees and were succeeded by W. D. Stratton, Bird M. Robinson, E. K. Stallo and Henry Seigel.

—William Woodward, William Duncan and William Logan have been elected additional directors of the Hanover National Bank—the number of directors being increased from eighteen to twenty-one.

—J. Pierpont Morgan recently resigned as Vice-President of the National Bank of Commerce, remaining a member of the board of directors.

—George S. Hickok resigned as Cashier of the National Park Bank at the recent annual meeting of the shareholders, and was succeeded by Edward J. Baldwin, heretofore Assistant Cashier.

Mr. Hickok, who is now seventy-five years of age, has been with the bank since it was organized, in 1856, and has been Cashier for about sixteen years. His resignation was due to age and some impairment of health. He will continue to be a director of the bank.

M. H. Ewer succeeds Mr. Baldwin as Assistant Cashier.

Mr. Baldwin's service as Assistant Cashier extended over a period of twenty-seven years, and he is thoroughly qualified for the responsible position to which he has been promoted.

—George W. Spence, who has been Cashier of the People's Bank, Brooklyn, for some time, was elected President at the annual meeting on January 12, succeeding James Gascoine, deceased.

Mr. Spence was born in Brooklyn thirty-nine years ago, and has always resided there. He has been connected with the People's Bank since 1894, coming from the Chase National Bank in New York.

—The American Surety Company, after paying claims amounting to \$513,168.43 in the past year, had \$408,137.79 of income remaining, which was apportioned as follows: dividends at eight per cent., \$200,000; to the reserve, \$142,379.77; to surplus, \$60,758.02. Net premium receipts were, \$1,304,609.63, an increase of \$143,196.63 compared with the previous year. These receipts were derived solely from premiums on surety bonds, the company transacting no other class of business.

The capital of the company is \$2,500,000, surplus \$1,000,000 and the amount reserved for unearned premiums and contingent claims \$1,099,116.05. Total resources on December 31, 1903, were \$5,661,245.97, compared with \$5,677,436.88 on December 31, 1902.

—On the evening of January 14 the New York Chapter of the American Institute of Bank Clerks held a meeting at 98 Fifth avenue. Prof. Joseph F. Johnson, Dean of the New York University School of Commerce, spoke on "Modern Economy," and Walter B. Seymour, of Brown Bros. & Co., read a paper on "Investment Securities."

—William A. Lamson, for several years National bank examiner for Philadelphia and Delaware, has resigned his position to engage in business for himself, at 10 Wall street, where he will deal in high-grade commercial paper and investment securities.

—Reports of the trust companies in the city for the six months ending with December 31 show that as compared with the statement of June 30 deposits at interest decreased \$118,339,185, and loans decreased \$117,175,977. These changes are believed to be due principally to the liquidation in securities that has been in progress for some time. As the cash which the trust companies have on deposit with other institutions increased \$4,406,485 in the period under consideration, the position of the companies is relatively stronger than in June.

—J. Edward Simmons has been elected president of the Clearing-House Building Company, to succeed the late George G. Williams, and George F. Baker has been elected a director, to take the place of Mr. Williams on the board.

### NEW ENGLAND STATES.

**Boston**—All but two of the thirty-five National banks of Boston held their annual meetings January 12. The total number of banks at present is three less than last January, because of the consolidation of the Massachusetts National with the First National, the Suffolk with the Second National and the Hamilton National with the Fourth National. The combined capital of the National banks in the city now is \$80,100,000. A year ago it was \$2,400,000 greater. The difference is due to the mergers.

—At the last session of the Legislature a commission was appointed to revise the laws relating to trust companies. This commission has submitted bills to the present Legislature, providing that hereafter trust companies shall be granted charters by executive authority instead of being incorporated by the Legislature; also that trust companies shall keep a reserve of fifteen per cent. on all deposits payable on demand or after ten days' notice.

**Marlborough, Mass.**—After twenty-five years of faithful service as Cashier of the People's National Bank, John L. Stone tendered his resignation on February 1, and was succeeded by Stillman R. Stevens, Assistant Cashier, who has been with the bank for more than twenty years.

**Holyoke, Mass.**—At a meeting of the shareholders of the Hadley Falls National Bank, January 18, Joseph A. Skinner, treasurer of the Wm. Skinner Manufacturing Co., of Holyoke, was elected President of the bank, succeeding Chas. B. Prescott.

### MIDDLE STATES.

**Philadelphia.**—Morton McMichael was recently elected President of the First National Bank, succeeding George Philier, resigned. Mr. McMichael is one of the oldest bank officers in the United States, and has been with the First National Bank since its organization in 1863, first as Cashier and afterwards Cashier and Vice-President, and later as Vice-President only. He was formerly president of the American Bankers' Association.

**A Veteran Bank Cashier Retires.**—After serving as Cashier of the Farmers' National Bank of Rome, N. Y., since 1875, the date of its organization, Samuel Wardwell, aged eighty-one, retired on January 12. He was succeeded by George G. Clarabut, who was Assistant Cashier.

**Baltimore.**—The annual statement of the United States Fidelity and Guaranty Co., rendered at the close of last year, showed total assets amounting to \$3,184,818.56. In addition to the capital of \$1,700,000, the company has surplus and reserve accumulated to the amount of \$1,298,916.30. Starting in 1897, the premiums written in that year were \$109,961.25, and the surplus and reserve \$53,012. These items have steadily increased, the premiums written in 1903 being \$1,955,267.17 and the surplus and reserve accumulated \$1,298,916.30. This surplus reserve does not represent the sale of stock at a large premium, all of it (except \$80,000) having been derived from earned profits.

During the past seven years the company has paid to its clients \$1,732,914.37 for losses incurred. The company does not receive money on deposit or pay interest on balances, deeming such practices not consistent with the business of a surety company.

John R. Bland is President of the company, and its remarkable success has been due, in great part, to his energy and financial foresight. The other officers are: first Vice-President,

J. Kemp Bartlett; second Vice-President, Edward J. Penniman; third Vice-President, Andrew Freedman; Secretary-Treasurer, George R. Callis; General Counsel, Isidor Rayner.

—On January 12 the stockholders of the Commercial and Farmers' National Bank agreed on a plan of reorganization made advisable by the carrying of overdue paper and investment of over \$250,000 in a new building. It was decided to return to the old building, in which the bank did business for fifty years.

The financial plan reduces the capital stock from \$512,560 to \$256,280, a cut of fifty per cent. This stock is surrendered for cancellation. Then the stock of the bank is increased to \$300,000, and the additional stock is to be sold to new interests.

George R. Willis and Charles W. Field were elected directors to succeed Lawrence B. Kemp, the former President, and Lloyd Jackson. Charles E. Rieman is President now, but William A. Mason, the Bank Examiner in charge, will, it is said, be tendered the Presidency under the reorganization. Mr. Mason says the bank has wiped out every questionable asset and is now down to rock-bottom on its investments.

**New Jersey Bankers' Association.**—It is announced that the annual convention of the New Jersey State Bankers' Association will be held at Atlantic City, February 26.

**Batavia, N. Y.**—Extensive improvements have been made in the interior and exterior of the First National Bank. These changes not only greatly add to the attractive appearance of the bank, but also furnish increased facilities and conveniences for the employees and customers of the bank.

**Paterson, N. J.**—The First National Bank moved into its new building January 4. The building covers a lot 60 by 100 feet and is four stories, the three upper floors being rented for offices. In its exterior appearance the building is tasteful and substantial, being built of granite and Indiana limestone, while the interior equipment contains everything essential to the safe and convenient despatch of business, and the furnishings and decorations are pleasing in design and execution.

The First National Bank was organized March 16, 1864, with \$100,000 capital. Its present capital is \$500,000 and surplus and profits \$643,399. Deposits exceed \$2,000,000.

The present officers of the First National are: Edward T. Bell, President; John Reynolds, Vice-President; Robert J. Nelden, Cashier; Whitefield W. Smith, Assistant Cashier.

**Larchmont, N. Y.**—The third annual meeting of the shareholders of the Larchmont National Bank was held at the bank at Larchmont, N. Y., January 12. With the exception of Charles H. Dale, who retired and was succeeded by Alfred Marshall, the shareholders re-elected the previous board of directors, consisting of George E. Ide, Walter B. Manny, William M. Barnum, William H. Campbell, Frank A. Moore and William Murray.

At a directors' meeting, held January 15, President George E. Ide and Cashier Samuel R. Bell were re-elected, and Charles H. Dale was succeeded by Walter B. Manny as Vice-President.

The Larchmont National Bank has purchased a site in the centre of Larchmont for its new building, which will have the latest equipment, and which the bank expects to occupy during the coming summer.

#### SOUTHERN STATES.

**Dallas, Tex.**—The new Texas National Bank opened for business January 2 with \$250,000 capital. At the close of the first day it was found that \$421,318 had been deposited. Officers of the bank are: President, W. C. Padgitt, for many years one of the leading business men of Dallas; Vice-President and Cashier, J. W. Blake, one of the best-known bankers in Texas; W. G. Scarff and D. R. Grove are also Vice-Presidents.

**Alabama Bank Examiner.**—J. Rutledge, the newly-appointed State Bank Examiner for Alabama, entered upon the duties of his office the first of the year, when the new law took effect.

#### WESTERN STATES.

**Chicago**—Fred I. Kent, formerly president of the Chicago Chapter of the American Institute of Bank Clerks, and who was permanent chairman of the first convention of chapters, has been appointed assistant manager of the foreign exchange department of the First National Bank.

—J. H. Cameron, formerly Cashier of the National Bank of the Republic, is now Vice-President of the Hamilton National Bank.

—Ralph C. Wilson was recently elected Assistant Cashier of the Bankers National Bank, succeeding Charles Ewing, resigned. Mr. Wilson has been discount clerk of the Bankers National for a number of years and has had other banking experience. He is president of the Chicago Chapter of the American Institute of Bank Clerks.

**Cleveland, Ohio.**—The proposal to merge the Colonial National with the Union National Bank, mention of which has been made heretofore, was adopted by the shareholders of these

banks at the recent annual meeting. By the terms of the merger the name of the Union National Bank is to be retained, and its capital raised to \$1,600,000.

--The merger of the Bankers' National Bank with the Euclid-Park National Bank is announced.

**St. Louis, Mo.**—The annual statement of the Mississippi Valley Trust Company, which appears elsewhere in this issue of the *MAGAZINE*, forcibly illustrates the solidity, financial resources and conservative management of the financial institutions of this city.

This report covers the operations of the calendar year 1903. A recapitulation of its leading features will prove interesting and instructive.

The resources of the company are \$25,728,922.57. The capital stock paid in, \$3,000,000, and the surplus fund, \$3,500,000, remain at the same figure as for the calendar year 1902, but the item of undivided profits has increased to \$1,745,098.72, a gain of \$270,695.53 during the year. In 1903 dividends were paid to stockholders at the rate of sixteen per cent., as compared with a twelve per cent. disbursement in 1902, the total amount thus paid being \$490,000 in 1903 as against \$300,000 in 1902. The actual cash in the company's vaults December 31, 1903, was \$1,034,804.81, while the item of cash, checks, sight drafts, and due from other trust companies and banks stands at \$5,942,480.90. The total time, savings and checking deposits amount to \$16,219,388.80.

The Mississippi Valley Trust Company now ranks among the world's great financial institutions, and the ability and conservatism of its management have gained it an enviable position and standing abroad as well as in the United States. A striking evidence of this fact was shown in its selection by the British Government as the Fiscal Agent of the Royal British Commission to the Louisiana Purchase Exposition. This is in effect a compliment of the highest nature from the most powerful and financially conservative nation of Europe.

—H. P. Hilliard, Cashier of the Mechanics' National Bank, was also made a Vice-President at the recent annual meeting, and J. S. Calfee was elected Assistant Cashier.

**Oklahoma Banks Prospering.**—Under date of January 8 Harry W. Pentecost, Assistant Commissioner of Banking for Oklahoma Territory, sends to *THE BANKERS' MAGAZINE* a statement showing the condition of the Territorial and National banks of Oklahoma—the date for the National banks being December 10 and the State banks December 8. There were eighty-seven National banks reporting with resources amounting to \$19,308,443. They had thirty per cent. reserve, or just double what the law requires. The 244 Territorial banks reported \$11,585,211 total resources and forty-seven per cent. reserve, against twenty-five per cent. required. Total deposits in all classes of banks in Oklahoma are \$22,456,510.26, or \$37 for each inhabitant, and equal to nearly one-third the entire taxable wealth. The deposits are now the largest ever reported.

**Decorah, Iowa.**—C. J. Weiser, President of the Winneshiek County State Bank, of this place, writes to the *MAGAZINE* that E. W. D. Holway, who has served the bank for a number of years in the various capacities of messenger, bookkeeper, Cashier and Vice-President, expects now to devote a portion of his time to scientific work. He has presented his botanical library of several hundred volumes to the State University of Minnesota. Mr. Holway has traveled widely in connection with his botanical work, visiting many countries on both sides of the Atlantic. He expects soon to explore New Zealand, Australia and other points in that part of the world. He retains his interests in the bank and will continue as Vice-President, devoting his time to the business as occasion demands.

Ray Alyger, who has been with the bank over eight years, succeeds Mr. Holway as Cashier.

**El Paso, Ill.**—To commemorate the first twenty years of the existence of the First National Bank here, F. B. Stitt, Cashier of the bank, has prepared a concise, interesting history of the institution, and this has been published in appropriate form, illustrated with a number of portraits of past and present officers and directors.

The bank began business in July, 1883, and has had a prosperous career. Deposits rose steadily from \$68,000 in 1884 to \$208,070 in 1891, and with the approach of the financial crisis of this period there was some falling off, the decline culminating in 1896, the year of the great silver agitation. But from this time on there was a rapid gain, and by 1899 the figures reached \$230,000, and at the close of 1903 the deposits amounted to \$345,000. Total gross earnings for twenty years have been \$254,000 on the \$50,000 capital; total surplus and profits, \$38,500.

#### PACIFIC SLOPE.

**Los Angeles, Cal.**—The Security Savings Bank recently absorbed the business of the Main Street Savings Bank. There will be no change in the officers of the Security Savings Bank, but the capital has been increased from \$200,000 to \$300,000 and the surplus and undivided profits increased to \$200,000. Deposits of the Security Savings Bank were \$5,800,000, to which about \$800,000 will be added by the consolidation, making this institution the largest of its kind in the State south of San Francisco.

## NEW BANKS, CHANGES IN OFFICERS, ETC.

### NEW NATIONAL BANKS.

The Comptroller of the Currency furnishes the following statement of new National banks organized since our last report.

#### APPLICATIONS TO ORGANIZE NATIONAL BANKS APPROVED.

**West Virginia State Banks.**

In his recent annual report, M. A. Kendall, Commissioner of Banking for West Virginia presents the following statistics in regard to the growth of State banks in West Virginia:

| YEAR.     | No. banks. | Total deposits. |
|-----------|------------|-----------------|
| 1891..... | 49         | \$3,330,806     |
| 1892..... | 50         | 9,418,518       |
| 1893..... | 55         | 9,173,210       |
| 1894..... | 56         | 9,066,980       |
| 1895..... | 58         | 9,698,068       |
| 1896..... | 60         | 10,609,880      |
| 1897..... | 68         | 11,195,954      |
| 1898..... | 74         | 13,069,268      |
| 1899..... | 76         | 16,284,386      |
| 1900..... | 89         | 21,323,927      |
| 1901..... | 102        | 26,782,556      |
| 1902..... | 115        | 32,872,669      |
| 1903..... | 148        | 38,906,768      |

# MONEY, TRADE AND INVESTMENTS.

## A REVIEW OF THE FINANCIAL SITUATION.

NEW YORK, February 3, 1904.

A LARGE FLOW OF MONEY FROM INTERIOR POINTS TO NEW YORK was a distinguishing feature of the month of January. The local banks gained more than \$50,000,000 in cash and have \$20,000,000 more than they had a year ago. The increase in deposits was extraordinary. In the first week of the month they increased \$19,000,000, in the second week \$36,000,000, in the third week \$45,000,000, and in the fourth week \$37,000,000, making a total gain in four weeks of \$137,000,000. This increase in deposits has been followed by a large expansion in loans, \$36,000,000. Both deposits and loans are now larger than ever before were reported, the former being \$92,000,000 more than a year ago, and loans \$90,000,000 more.

There seems to be reasonable assurance of easy money conditions for some time to come. There is the question of paying for the Panama Canal, in the event of the ratification of the Panama treaty, which is practically assured. The Government will have to pay \$40,000,000 to the new Panama Canal Company, which will go to France, and \$10,000,000 to Panama. The Secretary of the Treasury, it is understood, is making arrangements to meet the payment without causing any disturbance of the money market. Some of the Government deposits in the National banks will be withdrawn, a pro rata call being made on all the banks to turn back into the Treasury about \$45,000,000.

That this amount of money will be shipped from the country is improbable. It is evident that the banking institutions have been making preparations for this large expenditure and exchange has been accumulated against funds in London. The tremendous trade balance piled up recently without any corresponding gold import movement suggests a resource of gold accumulation abroad.

The stock market gave substantial evidence of improvement last month, and prices of stocks and bonds made an appreciable advance. There was nothing resembling a "boom" in the market, but rather a steady hardening which left prices at the close of the month generally very near the best prices for the month. The aggregate transactions in stocks were smaller than in either December, or in January a year ago, the decline being about twenty-five per cent. Railroad bonds were more active and show an increase of about twenty per cent. over the transactions of January, 1903.

The extraordinary speculation which began in cotton some time ago was continued throughout the month of January, and the price of that staple was advanced above the highest figures quoted in the last thirty years. On the last business day of the month the price in New York was about seventeen cents, and the tendency of the market was still upward. A break in the price may be expected any time, and some of the fluctuations that have already occurred have caused considerable uneasiness. It is understood that the banks which lend on cotton have given notice that they will not lend more than ten cents a pound in any event. This will prevent some operators from "bulling the market up." It is generally felt that the course of speculation in cotton has been considerably beyond the limits of conservatism, and that its continuance involves no little peril.

The continued increase in the volume of money in circulation is attracting attention. In February the total amount increased \$21,600,000, being \$2,487,979,801 as against \$2,466,345,897 on January 1. Probably never before was there so large a proportion of gold to the total circulation as now. Nearly \$48,500,000 of gold certificates were put into circulation last month, making the present amount \$469,578,609. This, with the \$627,905,855 gold coin estimated in use, makes \$1,197,000,000 of gold in the hands of the people—equal to more than forty-eight per cent. of the total circulation. How great has been the expansion in currency in recent years the following table will show :

| Feb. 1.   | Circulation.    | | | | | | |
|---|---|---|---|---|---|---|---|
| 1889..... | \$1,408,092,480 | 1893..... | \$1,607,958,439 | 1897..... | \$1,665,977,688 | 1901..... | \$2,190,780,218 |
| 1890..... | 1,436,764,284   | 1894..... | 1,739,783,511   | 1898..... | 1,729,991,228   | 1902..... | 2,259,961,709   |
| 1891..... | 1,525,493,080   | 1895..... | 1,613,667,515   | 1899..... | 1,918,260,557   | 1903..... | 2,355,738,894   |
| 1892..... | 1,603,856,128   | 1896..... | 1,589,720,607   | 1900..... | 2,003,149,355   | 1904..... | 2,487,979,801   |

The net increase in circulation from February, 1889, to February 1, 1896, seven years, was less than \$182,000,000, while from February 1, 1896, to February 1, 1904, eight years, the increase was \$898,000,000. In the last two years the increase was \$46,000,000 more than in the seven years prior to 1896.

While the money supply seems to be sufficient, the United States Treasury has shown symptoms of financial embarrassment. The revenues in January were nearly \$7,000,000 less than the expenditures, the first time a deficit has been shown in January since 1899. Usually the expenditures in January are greater than in other months, except July. This year not only are the expenditures larger, but the receipts are smaller. At the close of the first seven months of the current fiscal year the Government finds itself with a surplus of only about \$1,600,000, as compared with a surplus of \$28,000,000 last year and of \$50,000,000 in 1902.

The general industrial and trade situation has developed signs of improvement since the opening of the year, but as the facts concerning the past reverses become known, it is apparent that during part of last year at least there was a great falling off in activity in some lines of production.

This fact is manifest in the case of the United States Steel Corporation. On January 5 the dividend on the common stock was passed. As there is \$508,000,000 of the stock outstanding, and a year ago four per cent. per annum was being paid on it, the passing of the dividend means a loss in dividends to investors in that stock of \$20,000,000 per annum. That the passing of the dividend was at least justifiable, or even necessary, the statement of the net earnings of the company leaves beyond question. Last June the net earnings were \$12,992,780, while the estimate for December is only \$3,100,000. The following statement by quarters since the corporation was formed shows how serious has been the decrease in net earnings :

| YEAR ENDED.       | 1901.        | 1902.         | 1903.         |
|-------------------|--------------|---------------|---------------|
| March 31.....     | .....        | \$23,715,457  | \$25,068,707  |
| June 30.....      | \$26,363,840 | 37,662,058    | 36,642,308    |
| September 30..... | 23,603,843   | 36,845,489    | 32,423,955    |
| December 31.....  | 29,759,913   | 31,985,759    | 14,845,042    |
| Year.....         | .....        | \$123,308,763 | \$108,979,012 |

Not only have the net earnings fallen off, but the orders on hand December 31 were only 3,215,123 tons as compared with 5,347,253 tons a year ago. But it is not the business of this ore corporation alone which has declined. The production of both iron and steel has decreased. The steel output, which last June amounted to 1,021,839 tons, was only 406,730 tons in December last.

When the statistics of iron production are examined, it becomes plain that a very general curtailment in various lines of business, such as building, etc., must have

preceded the reduction in output of iron. The production of pig iron since 1895 is shown as follows:

| YEAR.     | First half. | Second half. | Year.      |
|-----------|-------------|--------------|------------|
|           | Tons.       | Tons.        | Tons.      |
| 1896..... | 4,978,236   | 3,646,891    | 8,625,127  |
| 1897..... | 4,408,476   | 5,249,204    | 9,657,680  |
| 1898..... | 5,869,708   | 5,904,231    | 11,773,939 |
| 1899..... | 6,289,167   | 7,381,536    | 13,670,703 |
| 1900..... | 7,642,569   | 6,146,673    | 13,789,242 |
| 1901..... | 7,674,613   | 8,208,741    | 15,883,354 |
| 1902..... | 8,808,574   | 9,012,733    | 17,821,307 |
| 1903..... | 9,707,367   | 8,301,885    | 18,009,252 |

While the production for the year 1903 is about 188,000 tons greater than in 1902, and is the largest year's output ever recorded, the output in the last half of the year was nearly 711,000 tons less than in the corresponding period of 1902. The furnaces in blast on December 31, 1903, had a weekly capacity of only 197,981 tons as compared with 353,800 tons a year ago. The present rate of production is about 8,000,000 tons a year less than the rate of a year ago. Production reached its maximum record on June 1, when it was 398,139 tons per week. Since that date it has declined 200,000 tons per week, or more than one-half. Since January 1 some furnaces have started up, and it is probable that the record of that date marks the lowest ebb of production for some time to come.

The statistics of anthracite coal shipments for the year 1903, only recently published, are of especial interest, indicating to some extent the effect of the coal miners' strikes in 1902. The total for the year was 59,362,881 tons, the largest for any year in the history of the coal trade. It is an increase of 22,000,000 tons over that of 1902 and nearly 6,000,000 tons over 1901. The total for the year 1902 and 1903, however, is 90,568,721 tons, as compared with 98,676,087 tons in 1900 and 1901, a decrease of more than 8,000,000 tons, which may be considered a permanent loss to the trade as the result of the strikes, without considering the increase which might have occurred under ordinary conditions.

In railroad affairs there seems to be a tendency towards decreased earnings both gross and net. A number of roads have reported smaller net earnings for recent periods than for similar periods a year ago. This is especially true of the anthracite coal-carrying roads. The Erie Railroad, which last month declared its second two per cent. semi annual dividend on the first preferred stock, reports a decrease of nearly \$300,000 in net earnings in December, while the gross earnings fell off \$455,000. The declaration of the dividend releases the control of the property from the voting trust created in 1895.

The completed returns of our foreign trade for the calendar year 1903 make a most remarkable showing. The exports of merchandise aggregated in value nearly \$1,485,000,000, and imports more than \$995,000,000, both amounts the largest ever known. The aggregate foreign trade movement reached the unprecedented volume

| CALENDAR YEAR.   | Imports.        | Exports.         | Total foreign trade. | Excess of exports. |
|------------------|-----------------|------------------|----------------------|--------------------|
| 1896.....        | \$981,579,556   | \$1,005,837,241  | \$1,987,416,797      | \$24,837,285       |
| 1897.....        | 742,595,229     | 1,099,709,045    | 1,842,304,274        | 357,113,816        |
| 1898.....        | 684,964,448     | 1,255,546,296    | 1,940,510,744        | 620,581,818        |
| 1899.....        | 798,867,410     | 1,275,467,971    | 2,074,335,381        | 476,500,561        |
| 1900.....        | 829,149,714     | 1,477,946,113    | 2,307,095,827        | 648,796,399        |
| 1901.....        | 880,419,910     | 1,465,375,880    | 2,345,795,790        | 584,955,950        |
| 1902.....        | 969,316,870     | 1,360,685,983    | 2,330,002,853        | 391,369,083        |
| 1903.....        | 995,473,101     | 1,484,668,127    | 2,480,141,228        | 489,195,028        |
| Eight years..... | \$6,582,466,238 | \$10,425,236,556 | \$16,967,702,794     | \$3,885,270,218    |

of \$2,480,000,000. The year just closed is the eighth of a period during which the foreign trade of the United States has developed more rapidly than in any other period in the history of the country. We show the annual movement from 1896 to 1903 inclusive.

Imports have averaged nearly \$320,000,000 a year during the entire eight years, an amount never reached in a single year prior to 1896, except in the years 1890, 1891 and 1892. Exports have averaged \$1,808,000,000 per annum, while prior to 1896 they never reached \$900,000,000 in a single year excepting in 1891 and 1892. In 1878 exports of merchandise exceeded imports by \$305,000,000, and in 1879 by \$251,000,000. With these exceptions the balance of net exports never equalled \$200,000,000 in any single year prior to 1896. In the last eight years the net exports have exceeded \$300,000,000 twice, and in three other years have exceeded or approximated \$500,000,000, while the average for the eight years was \$486,000,000.

In the following table comparison is made between periods of eight years, each extending back to January 1, 1872 :

| EIGHT YEARS ENDED DECEMBER 31. | Imports.        | Exports.        | Total foreign trade. | Excess of exports. |
|--------------------------------|-----------------|-----------------|----------------------|--------------------|
| 1879.....                      | \$4,169,490,334 | \$4,380,638,729 | \$9,000,127,063      | \$211,148,395      |
| 1887.....                      | 5,396,304,547   | 6,152,745,112   | 11,549,049,649       | 756,440,555        |
| 1895.....                      | 6,242,314,172   | 6,811,371,416   | 13,054,185,588       | 568,557,244        |
| 1903.....                      | 6,532,466,238   | 10,425,236,556  | 16,957,702,794       | 3,892,770,318      |

This comparison presents a striking picture of the extraordinary growth of our foreign trade since 1895. It is only in the last three years that imports have been exceptionally large, still the total for the eight years exceeds by about \$290,000,000 that of the previous eight years. Exports, however, increased \$3,600,000,000, and the net exports \$3,324,000,000.

In our recent exports cotton has been a very important factor. In December alone the cotton exports exceeded \$72,000,000, or more than forty per cent of the total exports of \$174,000,000. In the last three months of 1903, while the total exports were \$505,000,000, the exports of cotton exceeded \$200,000,000. While the export movement in manufactures has grown appreciably, the bulk of exports still consists of breadstuffs, provisions, cotton and mineral oils, these products making up fully sixty per cent. of the total exports. What part they have played in the large export movement of the last eight years will be disclosed by the following table :

| YEAR.            | Breadstuffs.    | Provisions.*    | Cotton.         | Mineral oils. | Total.          |
|------------------|-----------------|-----------------|-----------------|---------------|-----------------|
| 1896.....        | \$177,216,096   | \$162,217,075   | \$233,378,619   | \$62,764,278  | \$635,576,070   |
| 1897.....        | 243,808,550     | 173,226,030     | 212,523,620     | 56,067,547    | 685,610,747     |
| 1898.....        | 306,757,368     | 196,248,827     | 232,437,865     | 52,551,048    | 789,995,108     |
| 1899.....        | 259,447,471     | 197,764,310     | 191,091,916     | 64,982,249    | 713,285,946     |
| 1900.....        | 242,733,986     | 202,251,699     | 314,108,238     | 73,276,233    | 832,365,155     |
| 1901.....        | 267,325,188     | 224,427,219     | 300,417,852     | 71,490,503    | 864,260,762     |
| 1902.....        | 187,381,225     | 189,694,280     | 290,113,507     | 66,968,748    | 734,177,760     |
| 1903.....        | 192,320,266     | 199,471,395     | 378,261,055     | 70,344,834    | 840,968,050     |
| Eight years..... | \$1,880,185,097 | \$1,550,301,335 | \$2,152,327,672 | \$521,464,489 | \$6,104,278,566 |

\* Includes cattle and hogs.

Of the \$10,425,000,000 exports since 1896 the above commodities contributed \$6,104,000,000, cotton \$2,152,000,000, breadstuffs \$1,880,000,000, and provisions \$1,550,000,000. The importance of cotton as an article of export makes speculative manipulation of the price of that staple of serious consequence.

THE MONEY MARKET.—Immediately after the beginning of the year the local money market became easier and at the close of January rates both for call and time money were much lower than they were a month ago. At the close of the month call money ruled at 1½ @ 2 per cent., the bulk of the business being at 2 per cent. Banks and trust companies loaned at 2 per cent. as the minimum rate. Time money on Stock Exchange collateral is quoted at 3½ per cent. for 30 days, 3¾ per cent. for 60 days, 4 per cent. for 90 days to 4 months, 4 @ 4¼ per cent. for 5 to 6 months and 4½ per cent. for 8 months on good mixed collateral. For commercial paper the rates are 4½ @ 5 per cent. for 60 to 90 days' endorsed bills receivable, 4¾ @ 5¼ per cent. for first-class 4 to 6 months' single names, and 5½ @ 6 per cent. for good paper having the same length of time to run.

MONEY RATES IN NEW YORK CITY.

Deposits reached the highest amount, \$1,023,943,800 on Jan. 30, 1904; loans, \$994,552,100 on January 30, 1904, and the surplus reserve \$111,623,000 on Feb. 3, 1894.

changes in the condition of the banks were in many instances sensational in character. Each week there were large gains in deposits, loans and reserves, and until the last week gains in surplus reserve. Loans during the week ended January 23 reached the highest point ever recorded, and at the close of the month were \$44,000,000 greater than were reached prior to last month. On February 21, 1903, the record of \$950,208,700 was made and on January 30, 1904, the total was \$994,552,100. The increase in loans in the month was \$86,000,000. Deposits made a new high record on January 30, almost touching \$1,024,000,000, which is \$4 500,000 more than the highest previous total made on February 21, 1901. The gain in deposits for the month was nearly \$188,000,000. Specie reserves increased about \$45,000,000 and legal tenders \$5,000,000. The surplus reserve increased \$15,500,000.

cent. Discounts of 60 to 90 day bills in London at the close of the month were 3 per cent. against 3 $\frac{3}{8}$  per cent. a month ago. The open market rate at Paris was 2 $\frac{3}{4}$  per cent. against 2 $\frac{7}{8}$  per cent. a month ago, and at Berlin and Frankfurt 2 $\frac{1}{2}$  @ 2 $\frac{3}{4}$  per cent. against 3 $\frac{3}{8}$  per cent. a month ago.

FOREIGN EXCHANGE.—The market for sterling exchange during the month has been generally strong. There has been a noticeable scarcity of commercial bills, and the reason is said to be that they are being absorbed by bankers who are accumulating credits abroad in anticipation of the transfer of the Panama Canal purchase money amounting to \$40,000,000. In the last week sterling was lower.

The National banks have also on deposit the following bonds to secure public deposits: 4 per cents. of 1907, \$5,695,200; 5 per cents. of 1894, \$528,000; 4 per cents. of 1895, \$11,787,550; 3 per cents. of 1898, \$7,731,920; 3 per cents. of 1903, \$111,539,100; District of Columbia 3.66's, 1894, \$1,864,000; State and city bonds, \$23,204,170; Philippine Island certificates, \$3,000,000; Hawaiian Islands bonds, \$1,092,000, a total of \$169,441,940.

posited to secure circulation increased about \$900,000. Still the circulation based on bonds increased less than \$400,000, while the lawful money deposited to retire circulation increased \$1,300,000.

UNITED STATES FOREIGN TRADE.—The extraordinary exports of merchandise in December, nearly \$175,000,000, are without parallel in any previous month in the history of the United States. More than \$72,000,000 of the total value is represented by cotton exports, which have been not only large in quantity but at higher prices than formerly ruled. The December exports of merchandise raised the total for the year to nearly \$1,485,000,000, exceeding by \$7,000,000 the high record made in 1900. The imports of merchandise during the year reached \$995,000,000, which is also a record for that part of our foreign trade. The balance of net exports is \$489,000,000, or nearly \$100,000,000 larger than in 1902. Net gold imports reached nearly \$21,000,000.

GOVERNMENT REVENUES AND DISBURSEMENTS.—The revenues of the Government in January were \$41,588,370 and the disbursements were \$48,372,553, leaving a deficit of nearly \$6,800,000, which wipes out all the surplus for the six months except about \$1,600,000. From July 1, 1902, to Feb. 1, 1903, the surplus was in excess of \$28,000,000. The corresponding seven months of the present fiscal year shows a decrease in the surplus of \$26,500,000, caused by a decrease of \$15,200,000 in receipts and an increase of \$11,300,000 in disbursements. January disbursements this year were \$16,000,000 more than in December.

\* Excess of expenditures.

UNITED STATES PUBLIC DEBT.—There was a decrease in the bonded debt of the United States in January of \$1,200,000, represented by the retirement of an equal amount of the 5 per cent. bonds of 1904, now nearly all paid off. The cash balance in the Treasury was reduced \$600,000 and the net debt less cash in the Treasury shows an increase of \$900,000.

and of \$1,700,000 in National bank notes accounts for the increase of nearly \$14,000,000 in the total stock of money in the country last month. Gold imports have contributed to the large increase in the gold supply in the last few months.

**MONEY IN CIRCULATION IN THE UNITED STATES.**—There was an increase of nearly \$22,000,000 in the amount of money in circulation last month. As there was an increase of \$48,000,000 in gold certificates alone, decreases in other forms of money were heavy; silver certificates decreased \$10,000,000, silver dollars \$3,500,000, fractional silver \$2,000,000, United States notes \$5,500,000 and National bank notes \$5,000,000.

**EASTERN TOWNSHIPS BANK—ANNUAL MEETING.**—The forty-fifth annual meeting of the shareholders of the Eastern Townships Bank was held in the board room of the bank, at Sherbrooke, Quebec, at 2 o'clock, on Wednesday, December 2. There were present a good number of shareholders. The President took the chair and the General Manager acted as secretary. C. W. Cate and Wm. Morris were appointed scrutineers of votes.

The minutes of the last annual meeting having been read, President William Farwell, on behalf of the directors, read the following report :

“In consequence of the change of date of holding the annual meeting from the month of June, as heretofore, to December, the statements submitted herewith cover the operations of the bank for six months only.

As foreshadowed in the last annual report, your directors have decided to apply \$65,000 of the amount brought forward in May last in reduction of values.

The result of the business for the half year has been most satisfactory, showing a balance of profit after providing for current expenses, interest on deposits and all current losses, of \$144,359.75. Out of this amount a dividend at the rate of eight per cent. per annum has been declared, payable on January 2, next, and sufficient with the balance of premium on new stock has been transferred to reserve fund to bring that account up to \$1,450,000 leaving a balance to carry forward of \$27,647.57. All the offices have giving satisfactory returns.

The crops, contrary to indications in the early part of the season, turned out satisfactorily, and prices for produce, both dairy and field, are fully equal to those of previous years. The lumber business, however, owing to the severe drought which prevailed and prevented bringing logs to the mills, has been very bad, what small stocks were on hand have realized better prices, but it really means in most cases the loss of one year's business, if not more, by loss of logs as well.

The large addition to the head office building is nearly completed, and we have now a fine and commodious office enabling the management to handle the increasing business much more satisfactorily. New buildings are under construction at Richmond and Huntingdon and will be ready for occupation it is hoped early in the year. Plans for Coaticook and Rock Island are prepared and work on them will be commenced early in the spring; plans are also being prepared for the Montreal building.

In conclusion, your directors have much pleasure in recording their satisfaction with the zeal and attention shown by the General Manager, the inspector, the managers, and all other officers of the bank in their close attention to the interests committed to their charge.”

## ACTIVE STOCKS, COMPARATIVE PRICES AND QUOTATIONS.

The following table shows the highest, lowest and closing prices of the most active stocks at the New York Stock Exchange in the month of January, and the highest and lowest during the year 1904, by dates, and also, for comparison, the range of prices in 1903:

|                                 | YEAR 1903.        |                   | HIGHEST AND LOWEST IN 1904. |                           |                   |                   | JANUARY, 1904.    |  |  |

## BANKERS' OBITUARY RECORD.

**Bainbridge.**—Henry Bainbridge, for forty years an employee of the National Bank of North America, New York city, died January 21. He was born in New York city in 1825 and was a grandnephew of Commodore Bainbridge of the American Navy. Mr. Bainbridge went to California in 1849, and remained there until 1855. He entered the service of the National Bank of North America in 1864, and for many years had held the position of discount and coupon clerk.

**Bell.**—Horace S. Bell, a director of the First National Bank, Albany, N. Y., and Vice-President of the Albany City Savings Institution, died January 4. He was born in Columbia county, N. Y., February 8, 1845, and went to Albany in 1868, where he went into the grocery business, and continued to be actively engaged in that line up to his death.

**Coutts.**—J. H. Coutts, President of the City National Bank, Tipton, Iowa, died January 8, aged fifty-five years.

**Finley.**—R. E. Finley, President of the Citizens' Banking and Trust Co., Coshocton, Ohio, and a wealthy capitalist, died January 2.

**Foster.**—Hon. Charles Foster, formerly in the banking business at Fostoria, Ohio, died January 9. He was born in Seneca county, Ohio, in 1828. Mr. Foster was for many years a prominent figure in Ohio politics, having been a member of Congress and twice Governor of the State. In 1891 he was appointed Secretary of the Treasury.

**Fowler.**—Denton Fowler, President of the People's Bank, Haverstraw, N. Y., died January 12. He was born near Newburgh, December 6, 1835.

**Green.**—Charles O. Green, Vice-President of the Northborough (Mass.) National Bank, died January 5. He was born at Shrewsbury, Mass., in 1841, and had always resided there.

**Kurtz.**—J. L. Kurtz, Vice-President of the Centre County Banking Co., Bellefonte, Pa., died January 19.

**McCatchen.**—E. H. McCatchen, head of the banking firm of E. H. McCatchen & Co., Holstein, Iowa, and a prominent business man and politician, died January 8, aged fifty-five years.

**Miller.**—Charles A. Miller, Trust Officer of the Williamsburg Trust Co., Brooklyn, N. Y., died January 28. He was born in New York fifty-one years ago. For a time he was employed in a bank at Waterbury, Ct., and was for many years with the First National Bank, of Brooklyn.

**Milligan.**—William G. Milligan, of Little Falls, N. Y., died January 8, aged nearly eighty-seven years. In 1850 he entered the Herkimer County Bank as a bookkeeper, became Cashier in 1867, and in 1888 was elected President. He retired a few years ago after an active service of fifty years.

**Moffitt.**—Gen. Stephen Moffitt, President of the Plattsburg (N. Y.) National Bank, died January 3. At the breaking out of the Civil War he enlisted in the Union Army as a private, and won promotion to the rank of brevet Brigadier General. He was twice collector of customs for the Champlain district, was a member of the Assembly in 1880, and had held several other offices at different times.

**O'Neal.**—W. C. O'Neal, President of the American National Bank, Pensacola, Fla., and also President of the Enterprise (Ala.) Banking Company, died January 11.

**Richardson.**—Oscar F. Richardson, a broker in commercial paper, doing business in New York city, died January 23. He was born at Three Rivers, Mass., about sixty-three years ago. Early in life he came to New York and entered a bank as a clerk, and later was with a trust company. For a time he was a State bank examiner. He was one of the organizers of the Nassau Trust Co., of Brooklyn, and was Secretary for a number of years.

**Rosenfeld.**—Joseph Rosenfeld, President of the People's National Bank, Rock Island, Ill., died January 3 at Los Angeles, Cal.

**White.**—Joseph B. White, second Vice-President of the Hamilton Trust Co., Brooklyn, N. Y., died January 14, aged forty-nine years. He was educated at Yale University. When the Kings County Trust Company was organized in Brooklyn, he became Secretary, resigning this office in 1891 to take a similar position with the Hamilton Trust Company, later becoming Vice-President.

FIFTY-EIGHTH YEAR.

MARCH, 1904.

VOLUME LXVIII, No. 3.

---

**T**HE TRAGICAL ENDING OF THE CAREER OF WHITAKER WRIGHT, after his conviction of fraud and sentence to seven years of penal servitude by the high court of justice of Great Britain, may have the effect of creating an unwholesome sympathy for the man. The nature of the transactions which resulted in his punishment were similar to those which the history of financial promotion shows to have repeatedly been carried on by other Napoleons of finance with comparative immunity from the penalties of the law.

The surprise evidenced, both in the United States and in Great Britain, at the successful prosecution of WRIGHT, indicates that to some extent the public sense of right and wrong has been deadened by the amazement caused by the magnitude of the fraudulent operations. Men who take advantage of the credulity or confidence of their fellow men to aggrandize themselves on a large scale, whether in Government or finance, always run great risks. Even if they escape the legal machinery which grinds out the punishment of lesser criminals, who can deny that they are punished in the collapse of their schemes?

Perhaps it is a belief that men like WHITAKER WRIGHT are sure sooner or later to fall crushed under the ruins of their schemes, that makes the public rather indifferent to ordinary forms of punishment. For a man who has deceived and ruined thousands, who has caused men like LORD DUFFERIN to die of shame and chagrin because they have been his stool-pigeons, any human punishment that could be inflicted seems entirely inadequate.

Notwithstanding the natural indifference which such a reflection occasions, it is still necessary that society, for its own protection, should set its mark in some way on those who avail themselves of the weakness of humanity. The object is not so much vengeance on the sinners, but to open the eyes of the public to a clear apprehension of right and wrong. The public conscience has to be roused.

In all of the class of men who have exploited the public by taking advantage of their love of gain to build up great speculations, there is perhaps a certain amount of sincerity. Many of them deceive themselves, and think they intend to confer real benefits. They believe themselves to be philanthropists. They probably experience no great pleasure in issuing deceptive prospectuses or in publishing false balance sheets. They do evil that good may come.

From all accounts, WHITAKER WRIGHT had apparently a greater belief in the ultimate solidity of his schemes than many of those who have been concerned in similar transactions. It does not appear that he was as cynical and shameless in his confession of his purposes as has appeared to be the case with men who have been prominently connected with analogous financial transactions in this country. The revelations which were made in the court proceedings relative to the ship-building trust show an attitude of mind toward the trusting public which in cynicism and conscious intent to victimize surpasses anything that has been related about WRIGHT. Even if the latter were at heart no better, he seems to have had the decency to have preserved at least the appearance of respectable intentions. It is not unusual to hear green-goods and petty confidence men and card gamblers talk about the public as suckers or as sheep to be sheared, and to assume a certain superiority over the average man, because the latter still retains beliefs in the good intentions and honesty of his fellow creatures; but it is rather unusual for men standing high in positions of financial trust to confess to holding almost similar beliefs. They almost seem to excuse their attitude in leading the investing public to throw away their means on worthless securities, by assuming that love of gain is a crime and confidence in others a form of idiocy. They appear to pose as providential forces, created for the wise purpose of curing the mass of mankind of their foolishness and greediness. WHITAKER WRIGHT does not appear to have been so openly cynical.

In the United States there is undoubtedly a smaller regard for the forms of respectability than in Great Britain. There is less inclination to what is called hypocrisy. But as philosophers define hypocrisy as the homage which vice pays to virtue, the decline of hypocrisy is perhaps an indication that vice is slowly gaining the ascendant. An unblushing rascal is perhaps worse than a hypocritical rascal. At least, a lower state of public morals is shown where rascality succeeds with a smaller pretext of disguising itself. The sheep are becoming stupid or crazy when the wolf hardly takes pains to pull the sheepskin around him.

It is this decline of ability on the part of the public to distinguish that renders it necessary to inflict conspicuous legal punishment on

such men as WRIGHT. The growing tendency in the public mind to feel contempt for those who have been so soft and destitute of wisdom as to become the dupes of swindlers and sharpers, is accompanied by an increasing admiration for the cool, sharp and cynical gambler or confidence man who preys on their innocence. The American sense of humor permits the ridiculous attitude of the gull to obscure the sense of justice that should lead to the punishment of the man who cheats and robs his fellows. If the petty gambler and confidence man thus win sympathy, how much more does the man whose financial reputation and superior wealth are used on a large scale for purposes analogous to those of the common sharper.

It has been said that such a man as WHITAKER WRIGHT could not be prosecuted in the United States; that there is something peculiarly favorable to obtaining justice and punishing fraud in British courts. It must be remembered, however, that there was much hesitancy in undertaking WRIGHT'S prosecution. The Government, when appealed to, refused. It was done finally on private initiative. No doubt the same thing against a man guilty of like frauds could be accomplished in the United States were any one aggressive enough to try, and determined and public-spirited enough to push the matter on, even if offered compensation for losses.

The fate of WHITAKER WRIGHT, successfully called to account for frauds on the largest scale, should do something toward causing a more healthy public opinion in financial circles, not only in England but also in this country.

---

THE OUTBREAK OF WAR BETWEEN RUSSIA AND JAPAN, it had long been foreseen, could not have been averted. It was too much to expect that Japan would long put up with the tactics for delay that characterized the negotiations on the part of Russia. It is a struggle of populations rather than of rulers, and a decisive clean-cut settlement of the struggle cannot be expected. The efforts of diplomats and governments to arrange questions of this kind can never be final. The results of such wars and negotiations are temporary adjustments, modes of existing as it were, until living becomes again unbearable and a new struggle must begin.

Japan, apparently, has obtained the control of the sea, and the ease with which this has been accomplished points to natural facility in naval matters superior to that of the Russians. There have already been many indications that both parties will seek to obtain supplies from the United States. It is evident that with the best weather conditions the Siberian railroad cannot furnish the transportation required to supply the Russian armies with food even if it can carry

the men and equipments to the point of contest. At present the winter renders the line still more ineffective. Even if the armies of the two combatants were now face to face, it is difficult to see how an effective campaign can be carried on under the present climatic conditions. Russia, without ships, cannot very well get at Japan, while the latter, controlling the sea, can attack at any point she deems advisable.

Notwithstanding the disposition of other powers to do so, it will be very difficult to keep China out of the contest. Her hatred of Russia is greater than her aversion to the Japanese, and continued success by Japan will greatly tempt China to join in the fight against Russia.

---

THE GREAT FIRE IN BALTIMORE in the center of the business and financial district has caused a sensation only equalled in the United States by the great fires in Chicago and Boston. Much has been said about the vulnerability of fire-proof structures shown by the Baltimore fire, but one thing has been proved—that the vaults and safes of the financial institutions do afford a safeguard to their contents. It is a matter of congratulation that after a fire which seemed to set at nought the strongest buildings, most of the banks and trust companies found their papers and valuables unharmed to any serious degree, and were ready to resume business as soon as new office room could be obtained. The losses of the fire cannot yet be correctly estimated. It is to be hoped that the very large figures at first announced will be cut down. The amounts to be paid by the insurance companies have already been reduced from something over \$100,000,000 to about \$40,000,000. But of course the loss of the insurance companies do not begin to represent the total loss in buildings and other property. It is safe to say that the exact amount of this, as in the case of the great fire in Chicago in 1871, and the great fire in Boston in 1872, will never be given in exact figures.

A great fire wipes out just so much property. The fact that a loss of this kind is insured only shifts the burden. Nor does the insurance company alone bear the loss. It is felt directly in the securities which have to be thrown on the market to raise cash to pay losses. The insurance companies also seek to recoup themselves and throw the burden on the general public as far as they can by raising rates.

There is, in fact, beyond the loss of material property which must be replaced, a very large redistribution of wealth in paying insurance and in the various financial processes by which the burnt-up property is replaced. All the buildings and contents have to be put in something approaching their former condition. Generally, in fact, the burnt out portions are rebuilt on a more expensive scale than before.

Opportunity is taken to remedy old defects in construction, and arrangement of streets. The reconstructed Chicago and Boston are finer than they were before and perhaps less liable to a similar catastrophe. So it may be with Baltimore, whose narrow streets were no doubt in part responsible for the wide sway of the fire.

While there is no doubt of the misfortune and loss consequent on a catastrophe of this kind, yet the old adage about an ill-wind that blows nobody any good applies to some extent at least. The rebuilding of a city must bring out an amount of energy and effort that might not otherwise have been employed. The waste of the fire is in a measure compensated by the utilization of an amount of business energy and intellect that might otherwise have lain dormant and never have been employed or perhaps had scope for employment.

This calling out of new efforts is effected by a redistribution of wealth. Providence has set a task which will disturb the ease and well-earned rest of many, and will give many others remunerative employment. The replacement of property destroyed by wars or disasters has invariably been attended by an activity of physical and mental energies which has in the end produced results that made it difficult to deny that what at first appeared to be unalloyed evil was in some measure the cause of good. As long as the world contains so many undeveloped resources, that still afford a field for the exercise of human energy, no one can advocate the ideas said to have been entertained by the communists of Paris in 1870—that the visible products of human energy and mind ought periodically to be destroyed so that existing mind and energy should have full scope for its exercise. There is, however, a modicum of truth in the most erroneous doctrines, else they would never find lodgment in the minds of the most ignorant disciples. It requires no soothsayer to predict that Baltimore, like the fabled Phoenix, will rise more resplendent than ever from its ashes. We already have the valid precedents of Chicago and Boston.

---

IN FINANCING THE WAR both Russia and Japan seem to some extent to be resorting to analogous methods. Russia has a large reserve of gold. As shown last month the Imperial Bank of Russia had a reserve of \$430,250,000. The Government is now issuing Treasury notes to the extent of \$50,000,000. Against the gold in the bank there are \$289,000,000 bank notes outstanding. If notes are issued on the gold in the Russian bank to the same percentage that the United States legal-tender notes bear to the \$150,000,000 gold reserve, the total amount would be about one billion of dollars. The gold accumulated for the resumption of specie payments and the

establishment of the gold standard thus furnishes Russia with a vast resource for carrying on the war if she should choose to use it to the fullest extent. There have also been rumors of negotiations for loans in France and elsewhere from which nothing appears as yet to have materialized. But the present resources afforded by the gold reserve enable Russia to wait for a favorable opportunity for a loan.

Japan has already called for a loan of twenty-five millions from her own citizens and it will probably be successfully placed. But in addition to this the Emperor has ordered that all the old coins and specie be gathered from all parts of the Empire to strengthen the bank reserves. Presumably this is to provide for issues of notes.

These preparations go to show that each country is providing for what may be a long and tedious struggle. Neither nation can, since Japan appears to have control of the sea, strike each other in a vital part so as to make either willing to ask for a cessation of hostilities. Eventual weakness must proceed from the extremities to the heart.

Although modern wars are truly said to depend on the length of the purse, and both Russia and Japan are regarded as financially less strong than other great nations, yet the extent to which a nation can find resources to continue war, while its own home territory is not seriously invaded, has never been fully proved. The animus between Russia and Japan is bitter enough to insure the most desperate efforts on both sides.

The effect which this struggle will have on the money markets of the rest of the world depends on the success with which the neutrality of other nations is preserved. If a disposition to meddle is shown it is impossible to guess what the results may be; but financiers will naturally hesitate to take any definite action until the chief nations have had a chance to show they are sincere in their wish to maintain neutrality. Whatever the result of Mr. HAY's note, it may serve to draw out the real intention of the governments addressed.

---

WHEN THE SECRETARY OF THE TREASURY accepted State and municipal bonds as security for public deposits he virtually established a new precedent. Although the provisions of the National banking laws may be so construed as to warrant such action, yet as a matter of fact they had not been so construed by any Secretary previously. Bonds of the United States were the only securities accepted, except perhaps in the case of deposits by the Post Office Department.

Even if it be claimed that this enlargement of the security basis for public money was allowed on account of an emergency existing at the time, and which there was no other satisfactory way of meet-

ing, yet this would not prevent similar future action whenever conditions might seem to require it. An emergency is a peculiarly indefinite quantity, and there is no competent authority to decide as to exactly what conditions constitute one.

The fact remains that until Congress shall either forbid or enact some law to regulate the use of securities other than United States bonds as security for the deposit of public moneys with the banks, the Secretary of the Treasury will be likely to be importuned to again exercise his discretion in the same manner as Mr. SHAW has done. Although political opponents may allege that the Secretary overstepped his powers, and although there is even a plausible color for this allegation, yet every fair-minded examiner of the law must conclude that, whatever previous practice in accepting United States bonds as security for deposits, previous Secretaries could, if they had deemed it advisable, have accepted other security in the same manner, without violating the spirit of the law. When a National bank is designated by the Secretary of the Treasury as a depository of public moneys, the law reads that he shall require of such associations "satisfactory security, by the deposit of United States bonds and otherwise, for the safe-keeping and prompt payment of the public moneys deposited with them, and for the faithful performance of their duties as financial agents of the Government." The words "and otherwise" would seem to give the Secretary some discretion. This is the view taken by Secretary SHAW.

The evident design of the law was to give the Government power to demand services of the banks to which it had granted charters, whenever such services were required. The law does not seem to be founded on the supposition that being designated as a depository of public money is a service rendered by the Government to the bank, but just the contrary; that a bank, however great the inconvenience to itself, must when called on render service to the Government.

The surplus revenues have served to conceal and obscure the evident contemplation of the law, that public deposits might as often prove an inconvenience as a convenience to a bank. When there is no surplus the deposits of the Government might as a rule prove less desirable as a source of profit than the ordinary run of deposits. The designated depositories would under such conditions usually be no more than conduits through which the collectors of internal revenue could transmit funds to the independent Treasury, and disbursing officers distribute funds to creditors of the Government. But the excess of revenues which from time to time piles up a surplus, has altered the point of view entirely. When the amounts pouring into the banks from revenue collections are drawn down and locked up

in the independent Treasury, the sinister effect on the money markets forced the Government to leave large balances with the banks, and these large balances could be profitably used by them.

To be a designated depositary of public moneys has therefore more often been a distinct advantage to a National bank than otherwise. To the ordinary convenience of having depositaries at all convenient points for the collection and disbursement of money, has been added the further convenience that through them the Government could aid the money market and prevent to some extent the damage to the general public from locking up surplus revenues in the independent Treasury.

It can easily be seen that a Secretary of the Treasury might justly exercise a discretion as to the security required, according to the average balance of the depositary. If the public moneys paid into a bank one day were drawn out the next so that the ordinary balance was little or nothing, he might justly consider the ordinary strength of the bank on which its ordinary customers rely, would be sufficient security for the Government without the deposit of specific bonds of any kind. When the balance became larger or was left for indefinite periods, further requirements as to security might be in order. In fact, the law seems to have been intended to give a wider discretion as to security required than has yet been exercised.

In accepting other bonds than those of the United States the Secretary cannot justly be accused of exceeding the discretion granted by law in dealing with the designated depositaries. He has not in fact gone as far as he might have gone. He has, however, furnished a precedent for exercising a wider discretion than was exercised by any of his predecessors. The only criticism that can be made is that he has broken through a narrow construction of the law relative to security required of the depositaries of public moneys, which had been acted on so long as to almost acquire the force of law. But sometime or other, with the reduction of the national debt, if the banks continue to be used as depositaries and financial agents of the Government, there would have to be a change in the custom. Something else would have to be required and accepted when United States bonds could no longer be had. On the whole the Secretary took a common-sense view of the discretion vested in him and has perhaps rendered a service to the banks and the public in showing that the law was of wider scope than the limits previous operations under it seemed to impose. It would be time to modify and improve the law if there had ever been any manifestations of reckless use of the discretion intrusted to the Secretary. But this action of Secretary SHAW and his predecessors shows that only the greatest pressure would induce a Secretary of the Treasury to exercise the full discretion the law evi-

dently allows them. The tendency is toward confining the securities accepted to the very safest limits. Any attempt to change the law would work detriment rather than improvement.

---

THE MONEY IN CIRCULATION, as shown by the Treasury reports, continues to increase. From January 1st to February 1st there was an addition of \$22,000,000. The remarkable feature, however, is that the whole increase was in gold certificates, all other kinds, silver certificates, silver dollars, legal-tender notes, Treasury notes and National bank notes, showed a falling off. The gold certificates increased \$48,000,000, the difference between this sum and the \$22,000,000, being the actual diminution in the other items.

The gold certificates outstanding have now become the largest item of the money in circulation, having at last passed the silver certificates. It is evident that the elasticity of the money of the country is now in very great measure dependent upon the gold supply. Gold coin itself has never entered very largely into the general circulation. Only in California is gold coin seen in any large amounts in ordinary transactions. In the Treasury reports of the money in circulation in the country, a large amount of gold coin is set down. On February 1, this was \$627,905,855. On January 1, it was \$627,970,533. It is very difficult to arrive at the exact amount of the gold held by the banks at any given date. The report of the Comptroller of the Currency gives a statement showing that in June, 1903, something over 13,000 banks held about \$138,000,000 of gold. This leaves nearly \$500,000,000 of gold somewhere in the country in the hands of the people. It is surprising that more of this is not visible in ordinary payments between the people, or that more of it does not pass through the banks. It is still more surprising that there is not some tendency to bring this gold and receive gold certificates for it. The increase in gold certificates issued by the Treasury during the month of January was \$40,774,068. The gold deposited for these certificates came mainly from free gold previously in the Treasury. Only \$12,243,777 came from outside sources, and only \$70,000 came from the fund of 600 and odd millions that is held by the people and the banks.

It is probable that the mystery which surrounds this \$500,000,000 of gold, which all estimators seem to agree must be somewhere in the United States, although it is not in the banks, and no one ever sees it passing in trade, will not be easily dissipated. It is possible that if gold certificates were issued in smaller denominations, say of five dollars, that some of it would reappear. The sum thus mysteriously concealed amounts to about six dollars of the per capita of \$30, said

to be in circulation among the people and the banks. If it is really in existence it is largely laid away or hidden, and any plan by which it could be drawn into real circulation would add to the general monetary resources of the country. If in reality \$500,000,000 of gold, known from mining statistics and from statistics of imports and exports to have come into the country, and not to have been seen to go out, cannot now be found, it is a sign that there is something wrong with statistics underlying the calculation. Of recent years gold does not disappear so readily. This fact alone goes to disprove any belief that there is a class of people who like to hide gold away. If there were such they would make inroads on the present supplies.

The great growth of banking, the general knowledge among the people that they can get interest on savings, the growth of Savings banks, all militate against the idea that anything like \$500,000,000 in gold or gold coin could be in the hands of the people and not come to the banks. An investigation was made some years since by Mr. MUHLEMAN at the instance of the Treasury Department, but without much result. It might be worth while to try what can be done by offering gold certificates in small denominations. If it can not be made visible by this or any other means, there is reason to think that the estimated gold in the country is placed at too great a sum. The payments, in cash in and out of the banks, show sums of silver certificates, of legal-tender notes, of National bank notes, etc., fairly proportionate to the amounts of each of these kinds of notes said to be in the hands of the people. But it is not so with the gold coin said to be similarly held.

---

THE OPPORTUNITIES FOR THE INVESTMENT OF MONEY in local enterprises have been increasing within the last two years, and this is one reason why there has been less tendency to send money to the East than formerly. It has been repeatedly noticed that the reserves of the interior banks have been larger than formerly. There is not the same eagerness to pile up balances with their correspondents. The reason is, broadly, that these banks find ample use for their money nearer home. This condition will no doubt continue under opportunities for development which the tide of agricultural prosperity has encouraged for the past four or five years. The farmer by his success has inspired a confidence on the part of banks and other money lenders that is far in advance of anything known before. But this does not mean that the old money centers have lost their power. When the capital of the West becomes greater than can be used at home, the surplus will as before seek eastern markets. The banks in great commercial cities of the eastern coast will always find uses for

money when it cannot be profitably employed elsewhere. But with the construction of the Panama Canal and the trade to the Asiatic nations that will probably grow beyond all precedent after the struggle now progressing between Russia and Japan has terminated, the cities of the western coast of the United States will become greater commercial rivals of those on the eastern coast, and the surplus capital of the interior will move in both directions instead of exclusively to the East. The construction of the canal will probably affect the course of commercial enterprise much more than any one has as yet cared to prophesy. The cities on the Gulf of Mexico will very likely rival those of both the Atlantic and the Pacific. The aid to the advance in civilization which an interoceanic canal can hardly fail to be will open to enterprise great territories which have hitherto been inaccessible. These territories are rich in resources of all kinds. The capital for their development will come largely from the interior of the United States through the outlet of the Mississippi Valley.

The greater resources of the Western banks are as yet a result not of any change of conditions in the ebb and flow of money along the old lines, but of the greater wealth of the whole country. What future changes may result from new outlets and new markets, can yet only be surmised.

---

THE SAVINGS DEPOSITS OF THE WORLD are shown in the report of the Comptroller of the Currency for 1903. The table shows not only the Savings bank deposits of the world, but also the number of the depositors, with the average amount of deposit and the total deposits, the population, and the per capita deposit, for each of the important countries of the world. It is an impressive showing of the benefit which has been conferred on the human race by the instrumentality of Savings institutions.

The countries represented in the table are chiefly European or the colonies of European countries. In India Savings banks have been started under British auspices. Japan is the only Asiatic nation which has of its own motion started Savings banks. The United States shows the greatest aggregate of savings deposits, and Germany comes next. In the number of depositors the United States stands in the fifth rank, Germany takes the lead, with France and the United Kingdom following in order. The United States, however, leads in the average size of the deposit account. This would seem to indicate that the Savings banks of the United States do not attract very small savings, or that, as has often been asserted, they are used to some extent as a means of investment by comparatively

wealthy classes who do not perhaps patronize the Savings banks of other countries.

While the table is interesting as it stands, and is also one that must have been difficult to compile, it is easy to see that comparisons and deductions from the figures given must be made with circumspection. In some of the countries given the figures are confessedly incomplete, as they do not include all the Savings institutions of the country named. In many cases the figures include government and postal Savings banks of which there are not any in some of the other countries, notably the United States. With different kinds of Savings banks and with interest rates omitted, it is impossible to compare very accurately the saving habits of the different nations. Postal and government Savings banks may attract people to thrift when other Savings banks might not. The government alone can afford to conduct such institutions without profit or even at a loss. It depends also on the necessity the government is under of borrowing.

The table is very suggestive and makes it regrettable that it has been found impossible to compile all classes of Savings institutions in each country with the interest rates, so that they might be compared by classes. This would perhaps give a basis for a better understanding of the value of postal and government Savings banks. As it stands, the table gives a vivid idea of the power of thrift which in small sums has here accumulated a fund of nearly \$10,000,000,000.

---

A FEDERAL CORPORATION LAW is proposed in a resolution recently introduced in the House of Representatives by Hon. ALLAN L. McDERMOTT, of New Jersey. The resolution provides for an amendment to the Constitution of the United States to restrain the formation of inter-State corporations under State authority, and conferring this power upon the Federal Government. In an article published elsewhere in this issue of the MAGAZINE Mr. McDERMOTT gives some reasons why he believes such a measure desirable.

That great abuses have arisen under the lax corporation laws of most of the States, is clearly apparent; but it is not so apparent that the best way to remedy these abuses is by proposing to amend the Federal Constitution. Such a proposal virtually comes to nothing, for there is not the slightest probability of this instrument being amended in accordance with the terms of this resolution or any one like it. But nevertheless Mr. McDERMOTT's discussion of this matter is not only interesting, but it will direct attention to the evils that exist. The speediest way to remedy these evils is by arousing public opinion so that there will be a more rigid enforcement of existing laws and additional and more stringent State regulations where necessary.

## THE ENDLESS PURSUIT OF WEALTH.

---

In the United States leaders in every line of activity, in politics and business, have been conspicuously prone to die, as it is said, in harness. The death of Mark Hanna is a case in point. But the list of those distinguished for their successful attainment of wealth and fame, who have continued their activities long after the advance of age and the diminution of physical strength must have warned them of the approaching end, is a very long one.

In the barbarous ages the man who sought and attained prominent position, paid the penalty of his ambition by discovering that he could not abdicate without danger. Philosophers, who were debarred from the paths of ambition, have always vaunted their superiority on account of the greater freedom of those who kept aloof and refused to strive for the prizes of the market-place and the arena. It is probably the remaining conditions of barbarism which have not yet been eliminated from modern civilization, that still, to an extraordinary degree, forbid the man who attains eminence from ever remitting his efforts or retiring to a leisure he has earned. The leader of men thus remains, like the leader of the animal herd, ready to meet any and all rivals until he dies or is overthrown by superior strength. As civilization progresses it is to be hoped that the struggle for the prizes of life may become less onerous in this respect.

In the older countries of Europe, on whose civilizations that of the United States is founded, it seems easier for men who have more or less successfully attained the object they aimed at to retire and enjoy freely the prizes they have gained, although even there the old barbaric struggle is in many cases kept up to the end. Public opinion there, too, is more tolerant of those who lay off the harness before being compelled to do so by the decree of fate. In this country, however, there seems to exist in the mind of the ordinary man a certain contempt for those who give up the strenuous paths of labor and ambition before their strength has wasted away. The successful men of the United States who have sprung from the masses are imbued with this opinion. Until within the last twenty five years the idea of retiring from active life and settling down to a life in which personal tastes and proclivities could be followed, was regarded as at least eccentric. The acquisition of great wealth, or any degree of wealth down to a competency, was thought to be merely a means of acquiring more wealth. Toward the end of the last century, the vanity of having no object in life except to pile up dollars, and to exercise the power thus gained to pile up more dollars, seems to have been gradually forcing itself on the perceptions of our wealthy men.

There have always been two necessary steps to be taken before retirement from active life could with safety be accomplished; one was the acquirement of wealth, and the other provision for its safe-keeping. As civilization progresses the second and more important step can be more easily managed. The individual no longer has to depend upon his own efforts to guard the store set aside for his future support. The power of corporations, originally

directed simply to the accumulation of wealth, is now to a very great extent applied to its conservation. A rich man need not feel to-day, as he once did, that it is necessary for him to remain continually on duty, because no other can conserve his fortune so well as he. Individual energy and sagacity are as necessary as ever to attain wealth, but once obtained it can now be more safely entrusted to the organized sagacity and energy of corporations.

The management of fortunes through the agency of others is of course no new thing, but it has never before been so protected and systematized as it is at the present time.

In Great Britain there has always been a wealthy leisure class, and naturally there has been a systematization of the manners and customs consequent on such an association of wealth and leisure. Public opinion is more tolerant of a man who wishes to do what he likes with his own than it has yet become in the United States. In this country there is yet a tendency to make public property of any individual who becomes conspicuous in even the most innocent way. Public opinion as yet tolerates manifestations of curiosity and interest in the doings of others that has a tendency to become oppressive to those who desire privacy of life. When the example of Mr. Carnegie, and other rich men who seek retirement is, as it probably will be, followed by all those who have attained to the degree of wealth they think adequate, when the continued strife for more wealth after sufficient has been gained comes to be regarded as foolish, conditions in the United States will gradually assimilate with those of older countries, and our retired men of fortune will perhaps not deem it necessary to expatriate themselves in order to enjoy freedom from the publicity which their earlier careers excited.

The existence of a leisure class, able and willing to enjoy their lives rationally and intelligently, is a check on the wilder exhibitions of leisure on the part of suddenly-acquired wealth. It also holds out something beyond mere money-getting as the goal of a successful life. It encourages retirement after reasonable fortune has been gained, and discourages to some extent the piling up of exaggerated redundancy. The effect of a more philosophical view of life on the part of our business men will tend to a more even distribution of wealth, and a levelling of the inequalities now so frequently pointed out.

---

PRUSSIAN SAVINGS BANKS.—According to the preliminary reports of the Statistical Correspondence, the figures covering all the Prussian Saving banks for the fiscal year 1902-3 were as follows: New deposits, \$423,240,000; interest credits, \$45,110,000; withdrawals, \$349,260,000.

This shows an increase of deposits over the previous year of \$119,090,000, the largest increase on record. For the previous year the increase amounted to \$116,560,000, the highest known up to then. It is expected that the number of Savings-bank books will reach 10,000,000 within two or three years. In the years enumerated there were: 1874, 2,060,000; 1885, 4,210,000; 1893, 6,260,000; 1898, 8,050,000; 1902, 9,370,000. The population of Prussia on December 1, 1900, was 34,472,509.

THE BE GOOD TRUST.—Mother: Now, Bobby, if you're good for ten minutes, I'll give you a penny. Bobby: Can't do it, mother. Our Boys' Be Good Union has fixed the amalgamated scale at a penny for three minutes.—*Selected.*

## FEDERAL CONTROL OF CORPORATIONS ENGAGED IN INTERSTATE BUSINESS.

[By HOD. ALLAN L. McDERMOTT, Member U. S. House of Representatives.]

On August 17, 1797, James Madison submitted to the convention called to frame a Federal Constitution a resolution that certain powers should be given to Congress. Among his propositions was one "to grant charters of corporations in cases where the public good may require them, and the authority of a single State may be incompetent." On the fourteenth of the next month he moved that power be given to the Federal Government "to grant charters of incorporation where the interest of the United States might require, and the legislative provisions of States may be incompetent." The motion was supported by the delegates from Pennsylvania, Virginia and North and South Carolina, and opposed by those from New Hampshire, Massachusetts, New Jersey, Maryland and Georgia, Connecticut casting one vote each way. Rufus King was afraid that the people would view the proposition as referring to the establishment of banks and the creation of monopolies. Wilson, of Pennsylvania, thought that the fears of Mr. King were groundless, and took the stand that "mercantile monopolies were already included in the power to regulate trade," a view opposed by Mason, of Virginia, who declared that he was "afraid of monopolies of every sort, which he did not think were by any means already implied by the Constitution, as supposed by Mr. Wilson."

From the debates held by the grand men of that convention, who, in most regards, "built better than they knew," it can be seen what an imperfect idea they entertained of the possibilities of the future, Madison himself declaring that the prime object of his motion was to prevent individual States from obstructing the construction of canals necessary for inter-State commerce. Their idea of a monopoly was a government-given right to A to dig here and to B to sell there, each to the exclusion of all other diggers and sellers. There were in sight but few calls for corporate powers, and the future of trade and commerce would, they thought, be worked out by individual effort. If a delegate had read, as a possibility of the next century, the prospectus of the United States Steel Corporation he would, in all probability, have been considered a fit subject for a commission *de lunatico inquirendo*. If, however, the delegates could have foreseen that many of the States would, some day, invite the formation of corporations to control billions of capital, and to obtain, control and suppress particular branches of commerce and manufacture from the Atlantic to the Pacific, can it be doubted that the right to create artificial persons for such purposes would have been emphatically denied to the States by the delegates, each of whose immediate constituents were alert in their jealousies of the people and progress of all other States?

For nearly a century the possibilities of corporate life remained dormant. Forty years ago, when people talked about corporations, they generally had

in mind railroad or canal or steamship companies, or banks or statutory persons whose real needs of incorporation were long life and the power to act by a seal; but even in the limits of corporate action as found in the early seventies, there were discovered so many grounds of complaint that remedial steps were called for, and protests against the granting of privileges by special laws led, in one State after another, to constitutional inhibition of the formation of corporations except under general statutes. Such general legislation being thus invoked, the Legislatures enacted that "any three (or some other number) of persons" could form a corporation. At first there was a tendency to restrict each corporation to a particular branch of business, to put safeguards around the issuing of stock, the creation of funded debt, etc., etc. But these bars were soon taken down.

#### EVILS OF THE PRESENT CORPORATION LAWS.

The necessity of lobbying charters through Legislatures being done away with, nearly every "three or more persons" have concluded that natural life is a failure if they are not incorporated, with limited personal liability, a board of directors and a corporate seal, and, perhaps above all other things, with power to issue stock—common, preferred and deferred, not to mention founders' shares.

That the desire for corporate charters could be made a source of great revenue for the State granting them was soon perceived, and competition has proceeded at a lively pace. At first stock issued for property was stamped "issued for property purchased," but laws requiring this were soon repealed. The stamp gave rise to bothersome questions. Limitations of capital were decided to be absurd, and are retained in but a few States, toward which no outsider ever wanders for a charter. Any amount not under minimums varying from \$500 to \$2,000, and not exceeding the limits of imagination, is now the rule. Of course the stock is never to be issued for less than its par value, but this par value may be found in cash, property purchased or services, paid for with certificates of preferred and common stock. New Jersey and Delaware—vigilant rivals in the keeping of shops where charters may be bought, altered, transferred, reduced, enlarged or consolidated at most reasonable rates—provide that the judgment of the directors shall, in the "absence of actual fraud," be conclusive. The stock may be issued for "plants" and "good will," without much danger of tracks to prove "actual fraud." Who can tell what is the true value, including "nuisance value," of a plant that is about to be consolidated with other plants for the purpose of forming a single plant to absorb all other plants? It is to be observed, however, that the possibility of a day of reckoning makes it generally considered safer to have the stock issued, in the first instance, by those who are wholly irresponsible and who do not expect to have any interest in subsequent proceedings.

"Omnibus charters" are the latest fashion. The "three or more persons" may have in immediate contemplation only the formation of a manufacturing or mining company, but who can tell when they will think it wise to branch out in other directions? Prudence insists that the power shall be obtained, no matter how limited the presently intended operations, to do any and every kind of business not prohibited by law. Under a single State charter, a corporation may engage in mining in Mexico, in manufacturing in

Maine and in wheat-raising in California, and may also obtain stockholding control of any number of other corporations. The evils of this procedure, wholly uncontrolled as it is by governmental supervision, are too many to be enumerated in a magazine article.

The amount of capital stock of "industrial corporations" now issued and outstanding may be fairly estimated at \$6,000,000,000. The amount of gold and silver bullion and coin, and legal-tender and National bank notes now in the United States is about \$2,700,000,000. Which is the "money of the country"? Let a hand be raised to debase the coin of the country and the good people are called upon to avert impending disaster, Wall Street swelling the volume of the call by using megaphones. Let us see. The amount of gold coin in the country is to-day less than the par value of the stock authorized to be issued by a single industrial corporation organized under the laws of New Jersey, and the amount of National bank notes now outstanding is less than the amount of depreciation, in open market value, of the stock of that corporation since the first day of January, 1903.

Is it not evident that laws authorizing and encouraging the issuing of securities that do not represent true value are a menace to national prosperity? Is it not evident that each period of prosperity will, in the absence of remedial legislation, find its grave in the cemetery provided for stock "issued for property purchased"? Of what use is a statutory direction that the directors must use "honest judgment," when we find that, on the day of issue, millions of shares of stock, issued under the authority of a sovereign State, are worth, in the cold judgment of the world, only fifty, forty or ten per cent. of their par value?

#### PUBLICITY NOT AN EFFECTUAL REMEDY.

Crash after crash has called for a remedy. One is supposed to be findable in "publicity," but I venture to say that this panacea is almost wholly without healing virtue. Of what is "publicity" to be had? Is it to be of the true value of "real and personal property"? Surely this was determined when the directors, each far removed from the taint of "actual fraud," issued the stock. Would it not be positively cruel to ask them to change their estimates? Is it of gross or net earnings, or the bills receivable, or the value of stock on hand, or is it of the amount properly chargeable to depreciation and construction accounts? Is it of the value of stocks owned in other corporations or the true value of debts due from them? Is it of anything that a few clerks—at least two of whom should be duly credited "expert accountants"—cannot present any picture desired, with the clouds of insolvency or the light of dazzling prosperity in the background?

The lawyer who cannot drive a team of elephants through any statute conceivable for the enforcement of "publicity" should devote the balance of his life to the study of ancient history.

What is needed is not a statute to expose accomplished fraud, but laws to make fraud impossible. We do not need statutes demanding confession; we do need statutes demanding, in letter and spirit, avoidance of fraud. No State will pass the necessary laws unless every other State does the same. The Legislature of New Jersey will never be moved to remedial steps by what New Jersey corporations do in Delaware, and it cannot be hoped that

Delaware will hasten to inflict punishment for what her incorporated and fee-paying children do in other States.

We started in error, and, in my judgment, must retrace our steps before an efficient remedy is found. Congress has power to "establish a uniform rule of naturalization," but mere citizens are as pigmies when sized with never-dying corporations, clothed with powers to carry on inter-State commerce.

Corporate life, when given power to move beyond the borders of a single State, should be the creation of a central power, one that can withdraw the granted existence whenever it is misused in any part of the Union—a power that can and will enforce the right and punish the wrong, whether that wrong be perpetrated in Vermont or Oregon.

To-day a corporation may, almost with impunity, become a highwayman—or, if occasion demands it, a vagrant—when operating outside of the State granting its charter. In the course of several years of litigation, it may be penalized in the Federal courts, but it cannot be electrocuted. The artificial person should have its birth in necessity. It should be the result of public demand. Its securities should be issued only for true value, and it should have its motion within lines prescribed by general laws that can be invoked in any State. It should be well-born, well-bred and, throughout its life, be well-behaved. Otherwise it will very easily become a nuisance that should be abated. The revenue-seeking State will seldom examine pedigree or conduct, and it is in the hope that a restraining and correcting, and, when necessary, an annihilating arm may be found that I introduced the following resolution to amend the Constitution of the United States:

*Resolved by the Senate and House of Representatives of the United States of America in Congress assembled (two thirds of each House concurring therein), That the following article be proposed to the Legislatures of the several States as an amendment to the Constitution of the United States, which, when ratified by three-fourths of said Legislatures, shall be valid as part of the Constitution, namely :*

" ARTICLE XVI.

SECTION 1. That no State shall create or authorize the creation or existence of any corporation or incorporated association engaged, or to engage, outside the territorial jurisdiction of such State, for profit, in trade, commerce, manufacture, or other business, except banking and insurance. Congress shall pass general laws under which such corporations may be organized to engage, for profit, in trade, commerce, manufacture, or other business in two or more States or in any State or States and any foreign country or countries, and under which all corporate powers conferred may be regulated, controlled, and forfeited. Provision shall be made by Congress for the reorganization, in accordance with such laws, of all corporations now existing under the laws of any State or States, and authorized to carry on, for profit, beyond the territorial jurisdiction of a single State, trade, commerce, manufacture, or other business, and for the continuance, for a period not exceeding one year, of all powers heretofore granted by any State or States to such corporations. Congress shall pass general laws for the government and regulation of corporations organized in any foreign country and carrying on business within the United States. Congress shall have power to enforce this article by appropriate legislation."

---

MOODY'S COUPON AND DIVIDEND REGISTER (NEW YORK: MOODY PUBLISHING CO.).—This publication contains an alphabetically arranged directory of the places of payment of coupons and dividends of all classes of securities, as well as addresses of transfer offices. It also gives rates of dividends, date of payments, and dates of maturity of securities. The book is divided into two parts, the first devoted to coupons and the second to dividends. Banks, trusts companies, brokers and private bankers will find this a useful and handy compilation of information of direct practical value.

## BANK LOANS ON REAL ESTATE.

---

A bill has been introduced in Congress by Senator Nelson, of Minnesota, amending the National Banking Law so as to permit National banks to loan upon improved occupied and cultivated farm lands. The present law forbids, as is well known, the National banks from taking real estate security or holding real estate, with certain exceptions.

This bill, or at least some measure enlarging the power of the National banks relative to real estate security is said to be approved by the Comptroller of the Currency. This enlargement of the power of the banks has frequently been advocated, but the apprehension of the dangerous abuses which might arise from an unwise use of the privilege has always prevented any favorable action. The framers of the National banking laws, in placing such radical restrictions on real-estate loans, had in view the great abuses which were common under the State bank regime, before the Civil War. In the early history of banking in the United States, land was often made a basis for banking operations, and the results were extremely unsatisfactory. Capital, apart from land, was very deficient. Land was a drug. The proportion of unimproved land was immense. The prices of unimproved lands fluctuated under speculation, so that the bankers who accepted land as security might at any moment be left helpless.

While conditions in regard to real estate have altogether changed, and this form of capital in most of the States has attained to the degree of permanent value, secured by the increase of population, yet there are many localities where the old conditions still exist. There are undoubtedly vast quantities of real estate which are as secure as the basis for loans as any known form of security, and included in this are city, town, and farm property. The truth is, however, that the holders of such real estate never have any difficulty in obtaining loans upon it. In fact, there is always plenty of money seeking investment on good real estate mortgages. Trust companies, Savings banks, insurance companies, and private capitalists, as well as State and private banks, are on the lookout for such investments. Even in the case of a National bank, the owner of real estate of known value has little difficulty in obtaining a loan, although not in form directly upon his real estate. The holder of real estate of known value out of regard for his own interests does not as a rule go to a bank, and obtain money under the usual commercial conditions. He can get better terms in time and interest rates from the institutions that make a special business of such loans.

The National banks are organized to do a commercial business, and thereby encourage the trade and commerce of the country. They have probably been more efficient in this peculiar line, because they have been forbidden to tie up their funds in real-estate loans. If this prohibition be removed, it is not difficult to foresee that they may become less efficient promoters of the general prosperity of the public than they have hitherto been.

It seems apparent that the chief demand for this amendment of the

National Banking Law comes from those sections of the country where the values of real estate are liable to the greatest fluctuations. There seems to be no great demand from sections where real-estate values have attained a reasonable stability. Those who favor such an enlargement of the powers of the National banks may imagine that the value of farm lands will be enhanced by an increased facility in obtaining loans upon them. This expectation is analogous to the belief that the mere establishment of a bank tends to build up a locality irrespective of its natural resources and the enterprise of its population. Banking is a result of the previous accumulation of wealth, and facility in obtaining loans on real estate depends on the previous increase in permanent values of the real estate involved. It is a fact which it does not require any great sagacity to perceive that as fast as real estate acquires genuine market value, facilities for obtaining loans on it at once develop. Nevertheless, if Mr. Nelson's bill should become a law, although of this there is no real necessity, or perhaps probability, it is not believed that it would answer the expectations of those who look to it for relief. The National banks would not grant loans unless the security were such as would be accepted by any capitalist, and the holders of undesirable real estate would find it as difficult to raise money on it as before.

For forty years National banks have been forbidden to make real-estate loans, and this law has in reality been a protection to them. Every one knows how bitterly they were attacked through many political campaigns, because of their circulation privilege. The reason of these attacks has been because they did not issue notes to an extent that would make money cheap enough to meet the wants of paper-money fanatics. If the banks are now given the privilege of loaning on real estate, they will be liable to renewed attacks, because they will not accede to the importunities of the possessors of undesirable real estate. They cannot, as now, when called upon to loan on land which is undesirable, plead the law as an excuse. Their proper refusal would excite every land-poor man to arraign them as haughty and monopolistic.

Although National banks cannot now make real estate loans directly, yet whenever there is real estate of stable value it will be noticed that Savings and State and private banks have gone into business which with private capitalists give all the facilities for real-estate loans required. It is better to leave this business to the institutions that now conduct it and preserve the National banks as purely commercial banking institutions. To extend the privilege to National banks would no doubt more than double the work of the office of the Comptroller of the Currency in making examinations. The great majority of the National banks do not probably desire the privilege. The only way in which the views of many landowners could be met would be to make the law mandatory and compel the National banks to loan to any one who possessed real estate at its assessed value for taxation.

---

**New Counterfeit #5 National Bank Note.**—On the National City Bank of New York, series of 1882; check letter U; W. S. Rosecrans, Register of the Treasury; C. S. Jordan, Treasurer of the United States; Treasury number E514412; Bank number 20080; Charter number 1461. This counterfeit is a photograph of the original, and the only attempt to color the note is the application of green ink to the panel containing the charter number on the back of the note. The Treasury and bank numbers are brown instead of blue. The paper is of fair quality. A few pieces of coarse blue silk have been pasted on the back of the note. This counterfeit should not deceive ordinarily careful handlers of money.

# TRUST COMPANIES—THEIR ORGANIZATION, GROWTH AND MANAGEMENT.

## FAILURES OF DIFFERENT CLASSES OF FINANCIAL INSTITUTIONS.

Statistics regarding failures of trust companies are not obtainable previous to the year 1893, that being the year in which such reports were begun by the Bradstreet Company. The evidence is, however, that the number of such failures was not large, and that the majority of them were among companies whose business was along other lines than the trust business proper.

The following table furnished to the writer through the courtesy of Frank Greene, Managing Editor of "Bradstreet's," shows the statistics of failures of trust companies and other financial institutions for the ten years 1893 to 1902, inclusive:

*Financial Failures for Ten Years.*

|                               | 1893.      | 1894.     | 1895.      | 1896.      | 1897.      | 1898.     | 1899.     | 1900.     | 1901.     | 1902.     |

It will be noticed that the failures of trust companies during these years have been relatively few. The total for the ten years is thirty-five companies, whose estimated liabilities were \$40,682,445, and indicated total assets \$29,171,030, making an apparent net loss of \$11,511,415. This is an average

of three and one half companies failed per year. Omitting 1893, the panic year, the total number of companies is twenty-one, an average of two and one-third companies per year.

The mere number of companies failed, without reference to what proportion they constituted of the whole number in existence, does not convey a correct idea of the situation. Unfortunately, however, we cannot know with exactness the number of trust companies in existence during each of these years. The best evidence the writer can gather indicates that there were not far from 350 trust companies in 1893. If this is correct, the number of failures of trust companies in that year was four per cent. of the total number. This is the same percentage as that of failed National banks in 1893, their total number being 3,781. Assuming the existence of 764 trust companies in 1902 (the number as figured from "Trust Companies of the United States"), the number of failures was about one-quarter of one per cent.

The totals from the above table, showing how the failures of trust companies compared with those of the other institutions for the ten years, are as follows:

|                               | Total estimated liabilities. | Indicated total assets. | Number of companies failed. | Average number of failures per year. |
|-------------------------------|------------------------------|-------------------------|-----------------------------|--------------------------------------|
| National banks.....           | \$185,148,064                | \$189,128,507           | 261                         | 28 <sup>1</sup> / <sub>5</sub>       |

from which a careful study may be made of various items of management as developed during the last quarter century. In the table on page 334 will be found figures dealing with a few of the important subjects.

#### RESERVES OF TRUST COMPANIES.

Of especial interest in view of the recent agitation of the question in New York and elsewhere is the subject of trust company reserves. The third column of the table gives the reserves carried by the companies each year, the figures representing the proportions of the amounts in the second column to those of the same years in the first column. From 1875 to 1884 inclusive the per cent. of reserve never exceeded 12.8, the lowest reserve reported being in 1882, when it was only 7.9 per cent. After 1884 the reserve reported was materially higher, never going lower than 14.5 per cent. (the figure for 1887), and reaching its maximum with 26.1 per cent. in 1894. The average reserve for the twenty-nine years was about fifteen and a half per cent. This is half of one per cent. greater than is required of National banks outside of the reserve cities, the percentage stipulated for them by the National Bank Act being fifteen.\*

The criticisms against the trust companies as to reserve have, however, been directed more especially towards the amount of actual cash carried in the vaults of the companies. In column 4 of the table are given the percentages of such cash reserves for the several years, (including as cash the amount reported for cash items) the figures representing the proportion of cash and cash items to total deposits. For the twenty-nine years the average of such cash reserve has been a little over 4.7 per cent. It was highest in 1875, with 10.6 per cent., 1886 being next, with 9.1 per cent. The lowest percentage was in 1901—2 per cent. From 1876 to 1884 inclusive, it ranged from 2.3 per cent. to 3.9 per cent. From 1885 to 1897 it was somewhat higher, averaging about 6.2 per cent. Since 1897, it has averaged 2.7 per cent.

#### INCREASE IN SURPLUS AND UNDIVIDED PROFITS.

A noticeable thing has been the tendency to increase in the surplus and undivided profits as compared with the capital. This has been due in part to the accumulation of earnings, and in part to the tendency in organizing new companies to have a large surplus paid in at the start. Most of the States that have any legislation on the subject require the accumulation of a surplus fund until it reaches a certain percentage of the capital stock; but the accumulation has gone far ahead of any legal requirements. Chart C shows the relative growth of these two items, the light line representing the capital, and the heavy line the sum of surplus and undivided profits. During 1899 the latter became greater than the capital, and has increased in greater ratio since then.

The average resources of the companies appear to have been greatest during the years 1881 to 1887. The writer has been unable to find any special reason for this. It might have been due to reports being received mainly from the larger institutions. During the greater part of the time the resources have averaged from three to three and a half millions. Since 1899 there has been an increase, the averages exceeding four millions.

STATISTICS OF TRUST COMPANIES IN THE VARIOUS STATES.

The following table gives the numbers of trust companies in the different States and Territories about August, 1903, the figures having been compiled from "Trust Companies of the United States," whose statistics are the most complete of any published, so far as the writer knows. The list probably contains all companies in existence at the date mentioned, with the exception of those organized too late in the year 1903 to be included. The reader is reminded, however, that there are included all institutions bearing the name of trust companies, and that many of them do a State banking business only, performing no trust functions.

|                           |    |                     |    |                     |     |
|---------------------------|----|---------------------|----|---------------------|-----|
| Alabama.....              | 10 | Louisiana.....      | 5  | Ohio.....           | 36  |

| Indiana.....              | 47 | New Jersey.....     | 56 | Washington.....     | 9   |
| Indian Ter.....           | 10 | New Mexico.....     | 2  | West Virginia.....  | 19  |
| Iowa.....                 | 22 | New York.....       | 78 | Wisconsin.....      | 4   |
| Kansas.....               | 5  | North Carolina..... | 13 |                     |     |
| Kentucky.....             | 19 | North Dakota.....   | 2  | Total.....          | 912 |

It will be seen that in the number of trust companies Pennsylvania is far in the lead; and as a matter of fact, that State developed the trust company movement earlier and more generally than any other. In the total resources of her companies, however, New York, which is second in the number of companies, is far ahead of Pennsylvania. Of the seventy-eight companies in New York, seventy-five report resources of \$1,141,170,925—an average of \$15,215,612 per company. Of the 210 Pennsylvania companies, 202 report resources of \$534,384,589—an average of \$2,645,470 per company.

The big average for New York is of course due to the great companies of New York city, the largest of which (the United States Trust Co.\*) has resources of seventy-seven millions.

Of the 912 companies in the country, 854 report total resources of \$2,938,047,346—an average of \$3,440,336 per company. That is to say, the trust companies of the United States now have total resources of approximately three billions of dollars.

We have seen that the trust company first came into existence in the United States in 1822, with a single company, which had no competitors for eight years, and only three after fourteen years. These early companies combined the trust business with the insurance business. It was many years later before the formation of trust companies as institutions apart from insurance companies began. After the Civil War a number of companies were organized, and the total number in 1875 was not far from fifty. During the later eighties a very distinct movement for the formation of trust companies began, which was lessened in degree during the early nineties, began again with phenomenal energy about 1897, and has continued in an increasing degree since that year.

During its career the trust company has undergone a radical evolution in the character of its business. To its original functions of trustee, agent, guardian, etc., have been added not only more extensive trust functions, such as executor, administrator, fiscal agent, etc., but other duties not contemplated by its originators. Most prominent among these has been the business of banking, which trust companies in many States now undertake to the same extent as do the State banks and Savings banks. The growth of corporate undertakings has brought to the trust company many added duties as representatives of such corporations in various capacities. Since the Civil War many companies have added safe-deposit departments. In some States other lines of work have been added, including fidelity and title insurance.

The conspicuous thing about the development of the trust company is that it has been able, largely through lack of legislative restrictions and because of the general breadth of its powers, to adapt itself to the particular needs of the time and community. When a new field has opened, it has been ready and able to step into that field.

---

\* Besides being the largest trust company in the United States, this company has the distinction of being the first one organized in this country to transact exclusively the business of a trust company. "Its charter was the basis of all special charters of a similar nature afterward granted in New York, as well as of the general law for the incorporation of trust companies, which was adopted in 1887." Since its organization on April 12, 1853, it has paid in interest on funds entrusted to it over thirty million dollars. Its statement for June 30, 1908, shows a capital of \$2,000,000; surplus and profits \$12,055,208; deposits in trust (it has no "general deposits") \$61,790,505; total resources, \$76,917,654.

## CAUSES OF THE GROWTH OF TRUST COMPANIES.

Regarding the causes of the growth of trust companies, the easiest thing to say is also probably the truest—that they are found in the tendencies of our age and nation. The trust company marks not a revolution, but an evolution in our methods of handling financial matters, and we cannot understand its development without taking into account the great changes which our civilization is undergoing. There is, to begin with, the accumulation of individual wealth—the increase in the number of persons and families having large interests to care for. This is not peculiar to the United States, but the general conditions which the holder of wealth has to meet here are quite different from those of the older countries of Europe, and make it of advantage to find other means than those used in Europe for the care and investment of great estates. A still more important influence has been the tremendous increase in corporate wealth, both in number of corporations and in the amounts under their control. Here are phenomena that are peculiar to the United States, and peculiar to this age. Nothing like the huge corporations formed in recent years in the United States has ever been known before since history began. To care for these institutions some special agency was needed. The trust company proved equal to the emergency. Says one writer: "Without their (the trust companies) agency some of the transactions in modern corporate business would be both cumbersome and difficult. For the success of schemes of reorganization of railroad interests and the financing of vast industrial consolidations, their intervention has grown to be at least an invaluable convenience, if not altogether a necessity." \*

Associated with this tendency to great consolidations—whether as result or as cause will not be discussed here—is the growing recognition among all classes of people of the value of associated effort. Here again the trust company finds itself in harmony with the times. It is an intermediary between great enterprises and the group of individuals who constitute its customers. It takes the amounts, large or small, contributed by the latter, in trust; and the result is a large amount which it can invest in any corporate undertaking to the mutual advantage of all concerned. The political economist will not fail to see here an important service to the community. Surplus funds, useless in small amounts, are gathered together and made to do service in enterprises that benefit the whole people. At the same time, the profits go to those who furnish the capital. The trust company is emphatically an institution of the people. As one writer has pointed out, it enables us to reap most of the advantages claimed for community of ownership, without the dangers that would come with the systems proposed by dogmatists. †

## ADVANTAGES OF THE TRUST COMPANY FORM OF ORGANIZATION.

Turning to the specific causes of growth of trust companies as compared with other financial institutions, various writers have pointed out the advantages which the trust company has over its competitors.‡ As compared with National banks, and with some State banks, it usually escapes with less tax-

\* BANKERS' MAGAZINE, Vol. LX, p. 272.

† Article on "The Trust Company," by Charles W. Stevenson, in "The Bankers' Monthly," Sept., 1903, p. 191. Articles by the same writer in "The Bankers' Monthly" for July, August and October, 1903, treat this phase of the subject at some length.

‡ See BANKERS' MAGAZINE, Vol. XLIII, p. 722, and Vol. LVIII, p. 506.

ation. It attracts deposits by paying interest on them. A third cause, and in the writer's opinion by far the most important one in most communities, lies in the wide range of powers which the trust company may exercise. In most States it may do all of the things that an ordinary bank may do, except issue notes; and it performs numerous duties that other banks may not undertake. These wide powers attract customers. It is a distinct convenience to most people to have all of their financial business attended to under one roof. The trust company will not only care for their banking business, but will also receive their valuables for safe-keeping, care for their property, manage their estates temporarily or permanently, make investments for them, give financial and legal advice, aid in the preparation of wills and execute the same after the decease of the customer.

CLAY HERRICK.

(To be continued.)

**THE DESIGNS ON THE COINS.**—The discussion in Congress over the various designs to be placed on our coins furnished a very amusing incident.

It was proposed to have on the reverse of the silver dollar an American eagle, when Hon. Matthew Lyon bitterly opposed having an eagle, saying that it was a monarchical bird.

The king of birds, he said, was not an appropriate representation of a country whose institutions were founded in hostility to kings.

The Hon. Judge Thatcher, replying, proposed a goose instead, which he said was a most humble and republican bird, and would in other respects prove advantageous, inasmuch as the goslings would be convenient to be placed on the dimes.

It is said that the laughter that followed at Hon. Matthew Lyon's expense was more than he could endure; so taking this good-humored irony for a personal insult, he sent the honorable judge a challenge for a duel, which he refused to accept.

"What!" said the bearer of the challenge, "will you be branded as a coward?" "Yes, sir, if he pleases. I always was a coward and he knew it, or he never would have challenged me."

On Tuesday, September 11, 1792, six pounds of old copper was the first purchase made for the United States mint, for which was paid one shilling three pence per pound.—*Prof. B. N. Rooks in "Bulletin of American Institute of Bank Clerks."*

**NEW COUNTERFEIT \$10 NATIONAL BANK NOTE.**—On the Third National Bank, of Rockford, Ill. Check letter B; series 1902; J. W. Lyons, Register of the Treasury; Ellis H. Roberts, Treasurer of the United States; portrait of McKinley.

This is a photographic production on two pieces of soft paper, between which silk threads have been distributed. Treasury and bank numbers are printed in red, instead of blue as on the genuine. The charter number (479) and geographical letter (M), which appear in two places on the face of the note, are dark brown on the counterfeit, instead of red. The back of the note is brown, badly faded, instead of green.

## MINOR PROFITS IN CANADIAN BANKING.

---

Many years ago a Canadian branch bank in Kingston would compel its borrower to draw his note payable at Brockville or Ottawa, even though all the parties to the note resided in Kingston, though the funds were to be used in Kingston and repayment made there. The object was, of course, to mulct the customer in exchange. On notes and bills payable at other points the Canadian law allowed a branch bank to charge exchange ranging from one-eighth per cent. on a thirty-day bill up to one-half per cent. on a four-month bill. In a transaction of this kind exchange profits were handsome; besides the charge made at the time of discounting there would be another when the bill became due, for the borrower would be obliged, forsooth, to buy Brockville or Ottawa exchange to retire his note.

Under such circumstances it is not to be wondered at that exchange and commissions should pay salaries and all office expenses at some country branches. For the fact that such a state of affairs does not rule in Canada to-day the people have to thank, not the laws, but banking competition. But, notwithstanding the increase in Canadian bank capital and in the number of branch banks, notwithstanding the growth of banking competition in the Dominion and the superior facilities of the branch system for collecting and transferring money, Canadian bankers have never been able to bring themselves to regard the minor banking profits, exchange commissions, etc., so cheaply as these are held by their brethren in the United States.

In the hope that this subject will have interest for American bankers, a short description will be given of Canadian methods, and an explanation of the position of the leading Canadian banks on the question.

I purpose to give, first, an outline of the Canadian system of collecting and clearing checks and bills, the expenses in connection, and the charges placed on bank customers; after that the banking theory as to the expediency and justice of these charges will be expounded, with a few remarks in conclusion as to how the matter is regarded by bank customers.

### HOW COLLECTIONS ARE HANDLED UNDER THE BRANCH SYSTEM.

At the country branch of a bank possessing seventy or eighty branches the day's procedure in collection business will be something like this: First thing in the morning there is the incoming mail, which contains checks drawn on the branch itself and on other banks in town, drafts at sight or on time on local merchants, credit advices and remittances in payment for its own collections sent away previously by the branch to other branches or to other banks. The most of these collections and payments will come from other branches and will therefore be par business. When collections are made for another branch, that branch is credited with the amount and there the matter ends; when they are made for another bank, drafts on Montreal, Toronto or Winnipeg are remitted, after deducting the commission charged. This will range from one-tenth per cent. to one-quarter per cent. with a minimum of ten cents for each bill.

Then there are checks and collections received from customers at the counter. These will consist mainly of items payable at home. Local checks are at par, of course; local bills also, if discounted. Local bills left for collection and not discounted are subject to a charge varying according to the relations existing between the customer and the branch; if his account is not otherwise profitable he would likely have to pay one-quarter per cent. with a minimum of twenty-five cents on each bill for using the bank's machinery to collect his accounts; if his business yielded profit in other ways these rates would be reduced materially.

In addition to these local items there will be deposited every day a certain number of checks and bills payable at other Canadian towns and cities, and perhaps some few bills on the United States or on London; if the town contained manufacturing establishments there would be a goodly number of manufacturers' bills offered for discount or for collection. On checks and sight drafts remitted the charge is regulated according to the time that will elapse before the bank is reimbursed; the instructions issued by the head office to the branches are: in all these cases to see that the bank gets due and proper interest for the use of its capital whether employed in the discount of bills or in the purchase of remitted checks. Therefore on a check drawn on a far-away point the charge will be heavier than on a check on a neighboring town; and on sight drafts heavier than on checks.

When time-bills payable elsewhere are offered for discount, it is customary to charge the regular rate of interest for the currency of the bill and a commission of one-eighth to three-eighths per cent. according to what it costs the branch to collect, the idea being to have one-eighth per cent. clear profit for collecting and transferring the funds. The rates for exchange on New York and London are advised daily to the branches from head office.

All items drawn on points where the bank has branches are sent direct, the amounts charged to the respective branches and the transactions closed. As every large bank has branches in nearly all the important cities and towns, the great majority of the collections are thus summarily disposed of. Whenever it can be safely done items on other points are sent to the settling centers where they can be cleared by allowing a commission. This places them on the same footing as the instruments drawn on branch-points. But it frequently happens that among these latter are bills in the case of which it is desirable to use diligence in presentment; then the circuitous route is avoided and the bills are sent direct, being charged to a "bills remitted" account until returns are received.

#### CANADIAN BANKS NOT COMPELLED TO CARRY HEAVY RESERVES.

The Canadian branch bank is not compelled to carry heavy reserves of cash, because it can carry ten, twenty or fifty thousand dollars in the bank's own notes which represent no cash at all until they are paid out; it need not carry a balance in New York; in fact, this is usually forbidden, because the New York account proper is run at the head office and funds are taken over from or supplied to the branches as is required by their business; the balance due by or to other branches does not have to be settled and will remain on the one side or the other according as deposits or discounts are the greater. Therefore, the state in which the New York or branch accounts happen to be exercises no influence when it comes to a point of rates for selling drafts to

customers. The matter resolves itself purely into a request by the customer to transfer so much to Montreal, Toronto or Winnipeg. The bank is in position to do this by a system of entries and the customer is charged rates established by competition, and which remain unchanged from January 1 to December 31. (At the settling centers of course exchange on other Canadian centers is influenced by movements of reserves, but fluctuations are confined to dealings with other banks and they do not affect materially the rates quoted to customers.)

At Montreal, Toronto and the other centers the collection business is on a much larger scale; a big wholesale or manufacturing account deposits fifty or a hundred or more bills in a day, drawn on points scattered all over the Dominion. With a large, well-placed system of branches a bank can collect the great majority of these at par, and can clear the greater part of the residue through the daily exchanges at the clearing-house. Items so cleared rarely pass through the hands of more than two banks and nearly always complete their journey when they have passed through three separate banking offices. The charges for commission are if anything slightly higher in the centers than in the country; it is a singular fact that the accounts of directors which are usually valuable, often pay stiffer rates of exchange than indifferent or worthless accounts at a country branch. Bankers in the cities are older and more experienced, they have a keener sense of the value of the services they perform for their customers; and in the country it very often happens that a town has more branch banks than it can properly support; for what little business there is the country managers compete too eagerly and offer ridiculous concessions.

#### ABANDONMENT OF RECIPROCAL PAR COLLECTIONS.

A little while ago a few of the large Canadian banks tried a scheme of reciprocal par collections, but abandoned it lately because it was found that the branch managers were inclined to give the benefit away to their customers. Able to collect at par on so many points, they reduced rates accordingly and the banks were doing for nothing a good deal of work for which they formerly got pay.

Of course it should be understood that the rates quoted above are not uniform by any means. Stress of competition has reduced them in many places.

#### IMPORTANCE OF PROFITS ON EXCHANGE.

The Canadian bankers regard their profits from exchange, etc., as of very great importance. They keep always before their eyes the fact that a bank is a corporation formed by subscriptions of private capital with the end of making profits; they can see no good reason why merchants and others should expect to have their accounts in distant cities collected, their payments made, money transferred from one part of the country to another, unless they pay for it; they believe that every account and every transaction should be judged on their merits and if there is no profit to be found they cannot understand why the bank should undertake them; they regard the men of their profession who habitually do work and perform services for their customers for nothing in exactly the same way as a conservative merchant regards competitors who habitually sell goods for less than cost. The bankers know

perfectly well that in this continent too much work is thrown upon the interest rate; that it is made to bear the cost of services which should carry themselves. In Europe this is not so; if a man opens an account with a bank there it must be profitable to the bank; if he wants services performed he pays for them, and the consequence is that every department of banking bears its proper share; discount is lower; the man who borrows a straight amount does not pay in his rate for the man who passes through his account a hundred checks a day.

It is true the Canadian bankers have not a troublesome currency question to vex them, but even if they had it is not likely that they would consider for a moment the question of abolishing the charges on remitted checks merely to expand the check circulation; they do not value greatly balances against which there are outstanding all the time checks to the full amount.

During all the competitive race for business that has characterized the last few years there were to be found in the Dominion as in the United States a number of banks that refused to do business for nothing; they held stubbornly to their terms as to security and to their rates and profits, and saw business leave them on that account. Long experience taught them that the race could not last forever. Since the unwonted stringency appeared in the American and Canadian money markets these conservative bankers have been in an advantageous position. Their more progressive competitors, having all the accounts they wished to carry, had little inclination to bid for new business that turned up.

At present the indications seem to point to the conclusion that on both sides of the border the old-fashioned bankers will have more power in the money markets; and in Canada at least it is likely that rates of discount and exchange will be stiffly maintained.

So far as the public is concerned it wants to get from the banks all they will give; it therefore takes full advantage of competitive struggles whenever they occur. The attitude of the public depends a good deal on the way it has been educated; in one town it might be accustomed to pay for what services it received from the banks while in the very next town it might have been under the rule of lax bank managers who gave away everything at par. When rigid rules are applied to a place of this latter description there rises a great roar of complaints, but it usually dies away if care is taken to explain the position of the banks and the reason for their change of front. Bank customers are made up of merchants, manufacturers, lawyers, etc., who would not themselves give their wares or their services for nothing, and they can easily see, if it is explained to them rightly, that bankers are under no obligation to do business at no profit. Of course if they can get things done at par at one bank while another strictly maintains its rates, they will rush to the cheap place perhaps till it is found out that the cheap bank has undermined its own position and lost its strength through doing too much of that kind of business.

H. M. P. ECKARDT.

---

Commendation of the Magazine.—Dwight F. Downing, Esq., Attorney-at-Law, Oskaloosa, Iowa, writes under date of February 17: "Please advise me of the annual subscription rate of your MAGAZINE; also send list of other publications of your firm. Hon. Lyman J. Gage, former President of the First National Bank, Chicago, and ex-Secretary of the Treasury, advises me of the high worth of THE BANKERS' MAGAZINE."

**OTTO T. BANNARD**  
President New York Security and Trust Co.

## TRUST COMPANIES UNITE.

On February 19 the trustees of the New York Security and Trust Company and the Continental Trust Company reached an agreement to consolidate the two institutions. The new corporation will be known as the New York Security and Trust Company, and will carry on business in the offices in the Blair Building now occupied by the Continental Trust Company. Otto T. Bannard, President of the Continental Trust Company, succeeds Charles S. Fairchild, as President of the New York Security and Trust Company, Mr. Fairchild continuing, however, to be a trustee, and chairman of the board of trustees.

The capital stock of the New York Security and Trust Company is to be \$3,000,000, with a surplus of \$9,000,000. The deposits will be over \$45,000,000.

The New York Security and Trust Company was organized in 1889, and has been one of the most successful trust companies in the United States under President Fairchild's administration. Its stock is now quoted at \$900.

The Continental was organized in 1890 and since Mr. Bannard was made President in 1898 its stock has advanced to \$700. His management of the company has been characterized throughout by rare discrimination and sound financial discernment. It is recognized by the strong interests represented in the consolidated companies that Mr. Bannard will bring to the discharge of his duties as President a ripe knowledge of trust company administration.

The new company will have the strongest financial backing in New York city, as in its board of directors will be found representatives of the New York Life Insurance Co., Blair & Co., J. P. Morgan & Co., the National City Bank, the John D. Rockefeller interest, the Chicago interest, including Marshall Field, John J. Mitchell and Armour & Co., to which should be added such names as Norman B. Ream, James J. Hill and John S. Phipps. The new board of trustees is yet to be selected, but will be made up of the following persons who are now trustees of the two trust companies: Charles S. Fairchild, James J. Hill, Stuart G. Nelson, James Stillman, M. C. D. Borden, John G. McCullough, B. Aymar Sands, John W. Sterling, John A. McCall, James A. Blair, Frank W. Stearns, Edmund D. Randolph, Geo. W. Perkins, Norman B. Ream, John S. Phipps, Frank Tilford, Woodbury Langdon, E. Parmalee Prentice, Otto T. Bannard, S. Reading Bertron, Robert W. DeForest, Jno. B. Dennis, Marshall Field, Chas. W. Harkness, F. N. Hoffstot, Wm. Jay, Frederick B. Jennings, Walter Jennings, Gordon MacDonald, John J. Mitchell, A. Lanfear Norris, Robert Olyphant, Charles Parsons, Myles Tierney and P. A. Valentine.

This consolidation brings under one control two of the city's large and successful trust companies, and will make possible greater economy of administration, and by reason of the increased capital and resources and the well-known capacity of the management, afford the highest attainable degree of safety and financial skill in caring for deposits, investments and trust funds.

The union of two such strong companies as these, either of which might profitably have continued business without losing its identity, is an example worthy of imitation by some of the smaller companies. A short time ago there was a tendency to overdo the organization of trust companies; and while this tendency has been checked, there are perhaps more companies now in the field than the business to be transacted requires. Trust companies and Savings banks are two classes of financial institutions that should be made as nearly impregnable as possible. Both the New York Security and Trust Company and the Continental Trust Company were perfectly sound and prosperous companies. That they have seen fit to merge their interests is a move in the direction of financial conservatism that may well attract the attention of other companies.

# BANKING LAW DEPARTMENT.

## IMPORTANT LEGAL DECISIONS OF INTEREST TO BANKERS.

---

All the latest decisions affecting bankers rendered by the United States Courts and State Courts of last resort will be found in the MAGAZINE'S Law Department as early as obtainable.

Attention is also directed to the "Replies to Law and Banking Questions," included in this Department.

---

### *PROMISSORY NOTE—PROVISIONS DESTROYING NEGOTIABILITY.*

Supreme Court of South Dakota, December 29, 1903.

DAVIS vs. BRADY.

An instrument is not negotiable which contains the following provision: "With interest from date until fully paid at the rate of ten per centum per annum, payable annually on principal and all overdue unpaid interest. If the said interest is not paid when due, it becomes part of the principal and draws interest at twelve per cent. per annum until paid."

---

FULLER, J. : The statute of limitations was the only defense offered to this action, commenced on November 4, 1901, and predicated upon the following instrument in writing:

"\$400.

LANGFORD, S. D., June 15, 1893.

November 1, 1895, after date, for value received, I promise to pay to the order of E. W. Davis, four hundred dollars, at Langford, So. Dak., with interest from date until fully paid at the rate of ten per cent. per annum, payable annually on principal and all overdue unpaid interest. If the said interest is not paid when due, it becomes part of the principal and draws interest at twelve per cent. per annum until paid.

The drawers and endorsers severally waive presentment of payment, protest and notice of protest and non-payment of this note, and I against the maker, and it is further stipulated and agreed that if suit is commenced on this note, or if the same is collected by an attorney, I will pay ten per cent. attorney's fees upon the whole amount of principal and interest sued for and collected.

JAMES G. BRADY,  
EMMA A. BRADY."

There was judgment for plaintiff, and the defendant appeals.

Unless the foregoing instrument is entitled to the usual days of grace, the action was not commenced within the six-year limitation, and the judgment appealed from must be reversed. Excluding Sundays and holidays from the computation, three days of grace are allowed by section 2236 of the Revised Civil Code for the payment of all promissory notes, and the exact question to be determined is whether this instrument is within the following statutory definition: "A promissory note is an instrument, negotiable in form, whereby the signer promises to pay a specified sum of money." (Rev. Civ. Code, § 2274.)

From date until paid this note and overdue interest will either draw interest at the rate of ten per cent. per annum, payable annually, or such unpaid interest will become a part of the principal, and draw interest at twelve per cent. per annum. It cannot be determined with any degree of accuracy whether overdue interest draws ten per cent. per annum, payable annually,

or twelve per cent. per year until paid. It is also a doubtful question whether the amount for which the note was given and the unpaid interest draw interest annually at ten per cent. per annum, or whether the principal, augmented by the first and all subsequent instalments of overdue and unpaid interest, draws interest at twelve per cent. until the entire amount is paid.

According to the decisions of this court, such uncertainty destroys the negotiability of the instrument. (*Hegeler vs. Comstock*, 1 S. D. 138; *Merrill vs. Hurley*, 6 S. D. 592; *National Bank of Commerce vs. Feeney*, 12 S. D. 156.)

As days of grace apply only to instruments negotiable in form, this action, when commenced, was barred by the statute of limitations.

The judgment appealed from is reversed, with the direction that the complaint be dismissed.

---

*RECEIVER FOR NATIONAL BANK—SECURITY FOR COSTS.*

United States Circuit Court, District of Connecticut.

PEIPPER vs. FIDELITY AND CASUALTY CO.

The United States statute which dispenses with a bond for costs on appeals and writs of error taken by the United States or by direction of any department, applies to the Receiver of a National bank.

---

This was a demurrer upon a plea in abatement, which asked for a dismissal of the suit upon the ground that it had been filed by a non-resident without giving bonds for cost.

PLATT, *D. J.* (omitting part of the opinion): The other plea also lacks merit. It is based upon a Connecticut statute which provides that, if the plaintiff in any civil action is not an inhabitant of the State, a substantial inhabitant thereof shall, before process is signed, either as surety or individually, give a bond to the adverse party that the plaintiff will make his plea good. (Gen. St. 1902, sec. 714.) The highest court of the State has decided that a writ cannot be made good by a bond given in court. (*Morse vs. Rankin*, 51 Conn. 326.) In ordinary cases the rule would be followed in this court, but in the case at bar it is necessary to obey the provisions of Rev. St. U. S. sec. 1001 (U. S. Comp. St. 1901, p. 713) :

“Whenever a writ of error, appeal, or other process in law, admiralty, or equity, issues from or is brought up to the Supreme Court, or a Circuit Court, either by the United States or by direction of any department of the Government, no bond, obligation, or security shall be required from the United States, or from any party acting under the direction aforesaid, either to prosecute said suit, or to answer in damages or costs. In case of an adverse decision, such costs as by law are taxable against the United States, or against the party acting by direction as aforesaid, shall be paid out of the contingent fund of the department under whose directions the proceedings were instituted.”

The defendant argues that the plaintiff does not come within the statute. The case of *Platt, Rec. F. and C. Nat. Bank vs. Beach*, 2 Ben. 303, Fed. Cas. No. 11,215, seems to settle that contention. Judge Benedict's decision therein was confirmed by Judge Blatchford in *Stanton, Rec'r First Nat. Bank of Washington, D. C. vs. Wilkeson*, 8 Ben. 357, Fed. Cas. No. 13,299. Both cases, decided as they were by such eminent jurists, will repay the earnest student for a careful examination, and, when surveyed from every viewpoint,

will afford the critic a light which I trust will illumine upon the entire contention before me, and furnish another reason for my reluctance to incumber records.

The demurrers are sustained. The pleas in abatement are overruled at the cost of the defendant.

---

*TAXATION OF NATIONAL BANK STOCK—VALUATION OF SHARES.*

Supreme Court of Oregon, December 7, 1903.

ANKENY vs. BLAKELEY, SHERIFF, *et al.*

Under the statute of Oregon shares of stock in National banks are to be assessed at their market value.

Where shares of stock of various banks in a county were assessed to the banks, but, on objection of one bank, its assessment was changed, and the stock assessed to the stockholders, the erroneous assessment to the banks did not amount to a discrimination against holders of stock in the bank which objected to the assessment to it.

---

This suit was brought to enjoin the collection of taxes levied against the plaintiff's stock in the First National Bank of Pendleton, Oregon, except such as would accrue upon a valuation of \$76.94 per share.

WOLVERTON, *J.* (omitting part of the opinion): This brings us to the contention most strenuously urged—that the assessor and the board of equalization purposely, willfully, and arbitrarily adopted a vicious system of valuation, assessment and taxation, with a view to discriminating against investment in shares of the capital stock of the First National Bank, and in favor of other moneyed capital in the hands of individuals and private banking concerns within the county. Incidentally it is urged upon the other hand that a court of equity is without jurisdiction to determine the controversy, because, it is insisted, the plaintiff has a plain, speedy, and adequate remedy at law. Of this, however, we will not stop to inquire further than to observe that the allegations of the complaint seem to bring the case within the purview of many cases entertained in equitable jurisdictions, both State and Federal, and especially the latter. (See *Oregon & C. R. Co. vs. Jackson County*, 38 Or. 589 and authorities cited next below.)

Our statute provides that all shares of capital stock of banks located in the State shall be taxed at their value to the owners thereof in the county, city, or district in which they reside, and all shares standing in the names of persons residing out of the State shall be taxed to such persons in the city, county, or district where the bank is located. (B. & C. Comp. Sec. 3042.)

By the Federal statute, the Legislature of each State may determine and direct the manner and place of taxing all the shares of National banking associations located within its borders, subject to two restrictions only—that the taxation shall not be at a greater rate than is assessed upon other moneyed capital in the hands of individual citizens of the State, and that the shares of any National banking association owned by non-residents of any State shall be taxed in the city or town where the bank is located, and not elsewhere. (U. S. Comp. St. 1901, Sec. 5219.) This latter statute has received explicit construction by the Supreme Court of the United States, so far as it has application here. The term "rate," as employed therein, has relation to the assessment as a whole, and was not intended to signify the mere percentage of levy upon any valuation that the authorities might see fit to adopt. The

principle announced is that the valuation is only one, but an essential, step in the process of making a valid assessment; that an inequality in the rate of valuation necessarily produces an inequality in the rate of assessment or taxation; and that it is this inequality or discrimination that the statute inveighs against, so far as it concerns the taxation of shares of stock in National banks as compared with the taxation of other moneyed capital coming in competition therewith. Any system adopted for the assessment of taxes, therefore, that exacts from the owner of shares in a National bank a greater tax in proportion to their actual value than it does from the owner of other moneyed capital similarly invested, results in the taxation of such shares at a rate in excess of that placed on other moneyed capital, and falls within the inhibition of the law. (*People vs. Weaver*, 100 U. S. 539; *Pelton vs. National Bank*, 101 U. S. 143; *Supervisors vs. Stanley*, 105 U. S. 305; *Hills vs. Exchange Bank*, 105 U. S. 319; *Evansville Bank vs. Britton*, 105 U. S. 322; *Boyer vs. Boyer*, 113 U. S. 689.)

The chief purpose of Congress in placing a limitation upon the State's taxation of investments in National bank shares was to prevent the State from creating and fostering through its taxing power an unequal and unfriendly competition, by favoring other individuals or institutions engaged in similar investments of capital; the expression "moneyed capital in the hands of individual citizens" being interpreted, in brief, as signifying capital employed in the operations of banking, and otherwise used as money as a source of profit. (*Mercantile Bank vs. New York*, 121 U. S. 138; *Aberdeen Bank, vs. Chehalis County*, 166 U. S. 440.)

Having now ascertained the meaning and purpose of Congress in the adoption of section 5219, *supra*, we will determine what standard of value should be adopted for the assessment of shares in bank stock, it being insisted that the measure of such value is the face or par value of the paid-up capital stock, increased by the undivided earnings or profits of the bank; that, while other species of personal property may fluctuate, and its value be best determined by what it will bring in the market, the value of shares of bank stock remains constant and invariable, so long, at least, as the capital remains intact and unimpaired and is capable of exact ascertainment; and that, therefore, in view of the statutory directions that such shares shall be taxed "at their value," it was intended that the book value should be the test, and not the "true value in cash," as it is elsewhere directed that personal property shall be valued for the purpose of taxation. (*B. & C. Comp. Sec. 3058.*)

In this we are unable to agree with counsel. The section just noted prescribes that "all personal property not exempt from taxation shall be valued at its true value in cash." Shares of bank stock are personal property, and there is nothing in the language employed by section 3042, *supra*, to betoken or signify an intention on the part of the Legislature to set a different standard of value for that particular species of personal property, or that it should constitute an exception to the general provision, and, not being money which determines its own value, it must likewise be measured as other personal property—at its true value in cash.

Mr. Justice Holmes, while on the supreme judicial bench of the State of Massachusetts, in discussing the meaning of the expression "fair cash value," which is the equivalent of "true value in cash," for the purpose of taxation, with reference to shares of stock in a National bank, says: "Value refers to

exchange. The cash value of an article is the amount of cash for which it will exchange in fact. That amount depends on the opinion of the public of possible buyers, or of that part of it which will pay the most. If, in their opinion, the stock is worth only \$102 per share—if that is all the stock will sell for—it is vain to show that the net value of the property of the corporation, that is to say, the opinion of the public about a chief component element of the value of the stock, if uncontrolled, logically leads to a different value for the stock. It has been recognized judicially that the value of the property and the value of the stock might differ, for reasons which have been found to exist in this case. \* \* \* The difference in the value found by him (the commissioner) depends upon whether it is assumed that the corporation was to continue its business, or was to be wound up. If it was to continue its business, \$102 was the fair and market value for a share; that is to say, \$102 was the full amount of cash that could be got or ought to be got for a share in that bank, its property and prospects being what they were. The bank actually was to continue its business. Therefore that was the actual fair cash value of its shares. What they would have been worth in a different state of facts, if the bank had come to a stop, does not matter. Actual values are based upon existing states of fact, not upon hypotheses; and the actual value of shares in a going concern depends not only upon its property, but also upon its prospects, since shares both represent property and prospects." (National Bank of Commerce, vs. New Bedford, 155 Mass. 313, 315.) This case is so apt that we are disposed to follow it, as indicating the correct method of ascertaining the true value in cash for the purpose of taxation, within the purview of our statute, as it relates to shares of stock in banking concerns while continuing in the business for which they were organized.

We can now readily determine from the evidence whether the system of assessment and taxation adopted by the assessor and board of equalization, and applied in the assessment of the bank stock to plaintiff and other moneyed capital investments within the county, was vicious in principle, and calculated to discriminate against the First National Bank or its shareholders, for such is the ground upon which the suit is based. As it respects the assessment of the investments of moneyed capital by individuals, they were valued at sixty per cent. of their face, so that they, with whatever accumulation of interest there might be, were considered to be worth par, since, as a general rule, the valuations of all property, whether real or personal, were made on the basis of forty per cent. reduction of the cash value. In assessing the banks, the real estate in every instance was assessed to the bank, and rightfully so. The Farmers' Bank of Weston was assessed upon real property at a valuation of \$18,720, and upon its bank stock at \$5,268. The testimony shows that its stock was worth in the market what its paid-up capital and undivided profits or book value would indicate, namely, \$127.83 per share, or \$38,349. Deduct forty per cent. from this cash value estimate, so as to put it upon the basis of other assessments, and we have \$23,010; but it was taxed upon a valuation of \$23,988, or \$978 above the initial cash value basis, allowing for the deduction.

The Pendleton Savings Bank was assessed upon its real property at a valuation of \$21,975, and its bank stock at \$27,315, aggregating \$49,290. From the testimony we find that the cash or market value of its stock was \$135 per share, or for the whole 500 shares \$67,500. The book value—that is, considering the paid-up capital and undivided profits—exceeded this, being at the

rate of \$149.20 per share. Reducing the total valuation by forty per cent. to bring it to the basis upon which other property was assessed, we have a balance of \$40,500, which shows an excess assessment to the Savings bank of \$8,790.

Upon a like reasoning from the facts established, taking its stock to be worth \$100 per share, as the evidence indicates, it will be seen that the property of the Bank of Milton was not valued as high as it should have been by \$2,774. Now, by applying the same test to the assessment of the First National Bank and its shareholders, we find that they have fared quite as well as other investors of moneyed capital, excepting only the Bank of Milton. The bank was assessed upon its real estate at a valuation of \$24,935, which it may be observed was its reduced valuation from the cash basis to bring it to that at which other real property was assessed in the county, and the shareholders were assessed by the board of equalization upon their shares of stock at the rate of \$160.74 and eight mills—to be exact, per share. This can be ascertained by a simple deduction made from the assessment of plaintiff's stock as it appears upon the tax roll, which is an exhibit in the case. This, of course, is the reduced valuation to bring it to the basis at which other personal property was assessed. At this rate the assessable value of all the stock of the bank, there being 700 shares, would be \$112,523.60. Add to this the real property valuation, and we have the total valuation at which the property of the bank and its shares would have been assessed if the stock of all the shareholders had been listed, namely, \$137,458.60. Now, the stock was worth in the market, to say the least, \$320 per share. The plaintiff, who was at the time the President of the concern, and assuredly fully cognizant of its true financial condition, purchased a block at that figure; and considering his recognized business sagacity, it is not at all probable that he paid more than its real worth—in fact, we must assume that the purchase was a good business investment, or he would not have made it. But beyond this, the testimony of Judge Hartman shows that the stock was actually worth from \$335 to \$350 per share. He was qualified to testify on the subject, as he was managing Mrs. Sturgis' business, who was the owner of 110 shares, was assessed thereon at the same rate as plaintiff, and has paid the taxes in full accruing by reason thereof. At \$320 per share, the aggregate valuation of the 700 shares would be \$224,000. Reduce this by forty per cent., and we have a valuation for assessment purposes upon the basis at which other property in the county was assessed of \$134,400, which shows an excess assessment of \$3,058.60. If, however, a primary cash valuation of \$335 per share—Judge Hartman's lowest estimate—be adopted, the proper deduction would show that the stock has been assessed below the standard by \$3,241.40, and there is no reasonable cause for plaintiff to complain.

The Ankeny trust fund has no place in the consideration, and could only be material upon the hypothesis that the proper standard of valuation was the par value of the stock, increased by the undivided profits, as contended for by plaintiff's counsel; and the question would then arise whether the fund should still be considered undivided profits, or a completed dividend to the shareholders. But this, we have seen, is not the appropriate standard, within the intendment of the Legislature, which at once puts an end to its relevancy. It was not taken into account by the taxing officers, as, at the time the board of equalization made the assessment of plaintiff's shares to him,

it had no knowledge of such a fund. Nor did the board adopt, as the complaint charges and counsel insist, as a standard for valuation for moneyed capital investments in shares of all bank stock, excepting national, the par value of the paid-up stock, increased by the surplus and undivided profits. The just and sincere purpose of the board, as the evidence clearly indicates, was to get at the value of such shares of stock in cash, and it applied the same rule for the valuation of plaintiff's shares of stock in the First National Bank. True, when we figure out precisely the results from the testimony here adduced, there appear to be some inequalities in individual cases; but they do not arise from the standard of valuations adopted, or from any vice in the system of assessment and taxation employed, and must be attributed wholly to some misinformation or mistake in judgment of such officers in determining values under a correct rule, as the assessment of individuals proceeded. As was said by Mr. Justice Field in *Stanley vs. County of Albany*, 7 Sup. Ct. 1234, 1239: "Absolute equality and uniformity are seldom, if ever, attainable. The diversity of human judgments, and the uncertainty attending all human evidence, preclude the possibility of this attainment. Intelligent men differ as to the value of even the most common objects before them—of animals, houses, and lands in constant use. The most that can be expected from wise legislation is an approximation to this desirable end, and the requirement of equality and uniformity found in the constitutions of some States is complied with when designed and manifest departures from the rules are avoided." For mere irregularities or overvaluations which do not result from the application of a principle unwarranted by law, or a vicious system designed or calculated to operate unequally upon a large class of taxpayers, a remedy is provided by statute, through resort to the board of equalization, which is deemed speedy and adequate, and a court of equity will not intercede. The action of the assessing officers "is judicial in its character," says the eminent jurist in the case just cited. "They pass judgment on the value of the property, upon personal examination and evidence respecting it. Their action being judicial, their judgments in cases within their jurisdiction are not open to collateral attack. If not corrected by some of the modes pointed out by statute, they are conclusive, whatever errors may have been committed in the assessment." Our own decisions are to the same purpose. (*Oregon & W. M. Sav. Bank vs. Jordan, supra*; *Ramp vs. Marion County, supra*; *Oregon & C. R. Co. vs. Jackson County, supra*.)

Nor does the mere fact that the shares of stock in the other banking concerns were assessed to the banks, and the stock of the First National Bank to its shareholders, amount to a discrimination of which the plaintiff can complain. The standard of valuation, as we have seen, was the same as applied to all; and while in one instance the shareholders were to pay the taxes directly, and in the other through the banks, this can now make no difference to the plaintiff. It seems it had been the custom previous to this time to assess all the stock to the banks, which was done at their instance and request, as a matter of convenience to them; and there probably would have been no divergence from the custom, had not the First National Bank insisted that it be relieved of the assessment. The assessment of the stock to the other banks was invalid of course, but no one challenged it on that account, and the banks and their stockholders have acquiesced therein; and, it not having been shown to the contrary, we must assume that the taxes have been

paid. In reality, therefore, there exists no such inequality between the taxation of the First National Bank and its shareholders, and that of the other banks and their stockholders, or of other moneyed capital within the county, as a court of equity will relieve against. There is not the slightest evidence in the record that the assessor, the board of equalization, or any member thereof, acted capriciously or arbitrarily, with a view to taxing plaintiff's shares of stock at any greater rate than was adopted for the taxation of other moneyed investments, nor was the rate of valuations adopted in any degree calculated to lead to such vicious discrimination.

The allegations of the complaint, therefore, are not established by the evidence, and the decree of the trial court in dismissing it was properly rendered.

---

*TRUST FUNDS DEPOSITED IN BANK—LIABILITY OF BANK FOR DIVERSION THEREOF.*

Court of Civil Appeals of Texas, Oct. 24, 1903.

INTERSTATE NATIONAL BANK vs. CLAXTON.

Where a bank accepts a deposit from a patron known by it to be insolvent at the time, with knowledge sufficient to put it on inquiry whether the fund belonged to the depositors, it is liable to the true owner of the fund for the amount of loss sustained by him, where the bank permits the fund to be diverted to other uses than the payment of the owner.

---

This suit was brought by the Interstate National Bank, of Kansas City, Mo., upon a note of \$520.83 made by W. N. Claxton, to the cattle commission firm of Tamblin & Tamblin, at the time also doing business in Kansas City, and by the said firm indorsed and assigned to the bank before maturity as security for certain advances. Claxton answered, admitting the cause of action upon the note, but sought to recover a balance of \$1,375.38, as the net proceeds of certain cattle shipped to Tamblin & Tamblin, and by them sold, and the proceeds, with other money, deposited in the bank to their credit. He alleged, in substance, that at the time of such deposit, October 28, 1901, Tamblin & Tamblin were insolvent; that the bank knew the funds deposited belonged to others, and, by the exercise of due care, could have known the persons to whom the same did belong, notwithstanding which, and notwithstanding the bank's knowledge of their insolvency, it allowed said moneys to be deposited to the individual credit of Tamblin & Tamblin, and applied the same to the payment of pre-existing indebtedness due from them to the bank, and in payment of checks of Tamblin & Tamblin to persons other than Claxton. A jury trial resulted in a verdict in favor of Claxton for a balance of \$835. The bank then took this appeal.

CONNOR, C.J.: Our principal difficulty has been to determine whether the appellant is also liable to the extent sought in this suit for the sums paid out on checks of Tamblin & Tamblin. We have finally concluded that, under the circumstances of this case, appellant is so liable; and in support of this conclusion we add that, in addition to the facts heretofore recited, the evidence tends to show that Tamblin & Tamblin were but commission dealers or factors; that they did not engage in the purchase and sale of cattle on their own account, save, perhaps, to a very limited extent; that, while the proceeds of cattle sold by them had been uniformly deposited with appellant in their own name, Tamblin & Tamblin had no real right thereto, beyond their

commissions and other usual charges, all of which was well known to appellant's officers.

The evidence also shows that the Cudahy check for \$4,528.65, hereinbefore mentioned, and which included the proceeds of appellee's cattle, bore upon its face the words, "Good only in payment for live stock and when drawn in favor of a Kansas City live stock commission office;" that all Cudahy checks were usually so indorsed, within the knowledge of appellant's officers. There is evidence also tending to show that, had said officers so desired, they could, by inquiry of Tamblin & Tamblin, or their employees, or of employees of the Cudahy Company, or by inspection of weighing slips used in the regular course of such sales, have easily learned of the fact and intent of appellee's real right in said check of \$4,528.65.

It appears, also, without dispute, that on October 30, 1901, the managing officers of appellant refused to receive and credit deposits by Tamblin & Tamblin in their individual character, but formed what is termed by said officers a "trust fund" for Tamblin & Tamblin; such fund, less commission and yardage, being credited on the bank books to the respective owners. A number of such "trust" deposits were thereafter made by Tamblin & Tamblin; including one item of \$396 and one of \$21.80 on the 30th, and one of \$130.90 on October 31, 1901, all in favor of, and subsequently paid to, the appellee in this case. It is also undisputed that on or about November 18, 1901, a petition in involuntary bankruptcy was filed against Tamblin & Tamblin, alleging that the act of giving the \$30,000 mortgage to appellant was an act of bankruptcy. On November 29 thereafter, Tamblin & Tamblin answered, admitting the act as well as the insolvency charged, and were duly adjudged bankrupts.

We feel no hesitation in concluding that this, as well, perhaps, as other evidence that might be adverted to, tends to show that Tamblin & Tamblin were in fact insolvent on October 28, 1901, when the appellee's money was deposited with appellant, as heretofore stated, and that appellant, through its managing officers, knew this fact. If so, and if appellant in the same manner also knew that the fund deposited did not belong to Tamblin & Tamblin, why should it not be liable for appellee's subsequent loss?

The general rule undoubtedly is that knowledge will be imputed to one who has the means of knowing. (Wade on Law of Notice, secs. 11, 22.) This doctrine of imputed knowledge has been frequently applied in cases in some respects similar to the one before us, as will be seen by an examination of the following authorities, where notice or knowledge was treated as material, viz.: *Wolfe vs. State*, 79 Ala. 206, where a draft signed by one as trustee was held to put the receiving bank on inquiry as to the trust character of the deposit. A like conclusion was reached in *Gerard vs. McCormick*, 130 N. Y. 266, in case of a check signed as agent.

In *Shaw vs. Spencer*, 100 Mass. 389, it was held that a certificate of stock in the name of one as trustee put the receiving bank on inquiry as to who was the beneficial owner, though not known in fact. This last case is cited with approval in *Duncan et Bank vs. Jaudon*, 15 Wall. 175.

In *Bank vs. Ins. Co.*, 104 U. S. 54, hereinbefore cited, it is said that the bank must be affected with knowledge of the trust character of the fund, if it had notice, either actual or constructive. So, also, in *Union Stockyards National Bank vs. Gillespie*, 137 U. S. 411, knowledge of the trust character of deposited proceeds of cattle sold by a factor was imputed to the bank.

In the case of *Davis vs. Bank*, 29 S. W. 926, by this court, the bank was held liable for trust funds applied in payment of the indebtedness of the depositing factor, and, in passing on the further question of the bank's liability for the payment of the factor's checks to others than the *cestui que* trust, it was said: "As to whether the bank should be protected in the amount it allowed Hancock (the depositing trustee) to check out, will depend on the question of notice. If it had notice of the real ownership of the funds, and that Hancock was not authorized to use them at the time it honored its checks, it is liable."

Let us apply the principle of the above and other cases to the facts of this case. As mere factors, which they undoubtedly were, Tamblin & Tamblin's general authority to act for appellee ceased upon their insolvency. (Mechem on Agency, sec. 267, *et Audenried et al. vs. Betteley et al.*, 8 Allen, 302.) If it be conceded that, notwithstanding such insolvency, Tamblin & Tamblin would have been authorized to draw a check in appellee's favor for the part of the fund on deposit due him, yet authority to draw checks on such fund in favor of others cannot be presumed, and the evidence shows that the checks actually paid gave notice on their face that they were to others than appellee; and, as we have seen, appellant was possessed of the means of knowing that Tamblin & Tamblin were in fact performing unauthorized acts, and wrongfully diverting and appropriating appellee's money.

We think the circumstances such as to put the appellant upon inquiry, and, that, if not actually known, knowledge of the trust character of the fund, of the fact and extent of appellee's interest therein, of Tamblin & Tamblin's insolvency, and of their wrongful appropriation of appellee's money, must all be imputed to appellant; and, if so, regardless of the want of other notice or of demand previous to appellee's answer, appellant is liable as having, at its own peril, entered the deposit of appellee's money to the credit of Tamblin & Tamblin, and having thereafter not only participated in its unauthorized appropriation to the extent of the items heretofore noticed, but also of having permitted and enabled Tamblin & Tamblin to wrongfully divert and appropriate the remainder to appellee's entire loss. (See *Bank vs. Moore*, 79 Fed. 705, 25 C. C. A. 150; *Pearce vs. Dill* [Ind. Sup.] 48 N. E. 788; 5 Ency. Law and Procedure, p. 530, par. "e"; *Evans vs. Evans* [Iowa] 48 N. W. 929; *et authorities heretofore cited.*)

We conclude, therefore, that no reversible error is shown in the court's rulings on demurrer, or upon the introduction of evidence, or in the charges given, or in the refusal of special instructions presenting different theories.

---

#### DEPOSIT IN BANK TO CREDIT OF THIRD PERSON.

Supreme Judicial Court of Massachusetts, Suffolk, January 6, 1904.

#### HEATH VS. NEW BEDFORD SAFE DEPOSIT AND TRUST COMPANY.

Where money is deposited in bank by one person to the credit of another, and the bank informs the latter of the fact of such deposit, the ordinary relation of banker and depositor is established between the bank and him, and the bank can not pay out the money without his direction.

---

This action was brought to recover \$190 alleged to have been deposited to plaintiff's credit in defendant's bank by one Macomber, plaintiff's correspondent in New Bedford. At the trial in the Superior Court, it appeared

that, instructed by plaintiff, Macomber deposited the money to the credit of the plaintiff, and was given a signature card by the bank. After the deposit was made, the defendant's Cashier sent a telegram to the plaintiff to the effect that the deposit had been made to his credit. Before Macomber had returned the signature card, the plaintiff drew a check on the deposit, which the bank refused to pay. The bank then sent for Macomber, and returned the money to him. Subsequently, Macomber paid the money to one Rice, an agent of the plaintiff, but whom the plaintiff claimed was a special agent, not authorized to receive the money, and that it was never paid to the plaintiff. The verdict was for the plaintiff, and defendant excepted.

**BRALEY, J.:** The contention of the defendant that the money was received from Macomber on the condition that he was to obtain the plaintiff's signature on the card furnished him, and return it the company, and because he failed to comply with this request the money was not accepted, and it was returned to him, becomes untenable, because at the time the money was handed to the Cashier of the defendant he was informed that the deposit was to be made for the benefit of the plaintiff, and he was requested to send a telegram to him that it had been made and placed to his credit. A telegram was sent accordingly, informing the plaintiff that \$190 had been placed to his credit by Macomber. The defendant was not obliged to take the money or send the telegram, but, if it chose to do both, it must stand by the contract thereby made. Under the completed transaction, the relation between the parties was that of banker and depositor, and the defendant became the debtor to the plaintiff for the amount of the general deposit placed to his credit. And its liability could be discharged only by payment of the debt. Ordinarily this could have been done in either of two ways: The plaintiff might have gone in person and demanded and received over the counter the money, or he could have drawn his check on the defendant for a part or the whole of the sum; and if the company paid to him, or to a person lawfully presenting a check signed by him, its indebtedness would be discharged. (*Carr vs. National Security Bank*, 107 Mass. 45, 9 Am. Rep. 6.)

But while Macomber, in making the deposit, obeyed the instructions given him by the plaintiff, the fact that he was his agent for that purpose would not of itself be sufficient to clothe him with authority to check it out. And the rule is clear that the acts of an agent not within the scope of his authority do not bind his principal.

The defendant apparently became dissatisfied by reason of the delay in not receiving the card containing the signature of the plaintiff, as well as by the fact that the deposit was to be immediately withdrawn. But its dissatisfaction could not operate to change the nature of the contract or discharge it from liability. And when it paid over the money to Macomber it did so at its peril, and took the chance that he was authorized to sign the check by which it was withdrawn in the name and behalf of the plaintiff. In justification of its action, and under an allegation of payment in the answer, it now relies on a subsequent ratification by the plaintiff of this act of Macomber, arising out of a settlement of the accounts between them, and in which the amount of the deposit was included, and credited to the plaintiff. But it was a question of fact whether Rice, who purported to be an agent of the plaintiff for that purpose, was authorized by him to make such a settlement, and, if so, whether it included the amount of the deposit. And

the case was submitted to the jury under instructions which fully stated the legal rights of the parties. By their verdict they have found that the defendant has shown no sufficient legal reason to justify it in refusing to pay the demand of the plaintiff.

Exceptions overruled.

---

*RECEIVER OF NATIONAL BANK—WHEN STATE COURT MAY APPOINT.*

Supreme Court of Errors of Connecticut, December 18, 1903.

COGSWELL VS. SECOND NATIONAL BANK.

Where the period of corporate existence of a National bank has expired, and its affairs are being wound up, a Receiver for its property may be appointed by a State court upon the application of a stockholder.

Even though an order of a State court appointing a Receiver for the property of a National bank may be regarded as erroneous, yet where such a Receiver had been appointed, and has died, a State court may appoint a Receiver for the property which has then come into the hands of the personal representatives of such first Receiver.

---

This was an action for the appointment of a Receiver to wind up the affairs of a National banking association, and to collect certain assets which it was charged that its managers had wrongfully charged off or disposed of, brought to the superior court for New London county. An application for the appointment of a temporary Receiver was made to Hon. John M. Thayer, a judge of the court, in vacation. On the coming in of the superior court, a demurrer to the complaint was filed, pending which the temporary Receiver, after having filed an application for confirmation and a permanent appointment, died, and a successor was appointed as temporary Receiver.

BALDWIN, *J.* (omitting part of the opinion): That a National banking association derives its franchises from the United States does not exempt it from subjection to such State laws as do not impair its efficiency in performing those functions by which it was designed to serve the United States, nor trench upon a field occupied by Congressional legislation. (*National Bank vs. Commonwealth*, 9 Wall. 353, 362; *Davis vs. Elmira Savings Bank*, 161 U. S. 275, 283, 287; *Easton vs. Iowa*, 188 U. S. 220, 238.)

Jurisdiction of suits by or against such associations, "except suits between them and the United States, or its officers and agents, shall be the same as, and not other than, the jurisdiction for suits by or against banks not organized under any law of the United States which do or might do banking business where such National banking associations may be doing business when such suits may be begun." (Act July 12, 1882, c. 290, 22 Stat. 163, § 4 [U. S. Comp. St. 1901, p. 3458].)

For the purpose of all actions by or against them, at law or in equity, they are to "be deemed citizens of the states in which they are respectively located; and in such cases the circuit and district courts shall not have jurisdiction other than such as they would have in cases between individual citizens of the same State," saving only "the jurisdiction of the courts of the United States in cases commenced by the United States or by direction of any officer thereof, or cases for winding up the affairs of any such bank. (Act March 3, 1887, c. 373, 25 Stat. 436, § 4 [U. S. Comp. St. 1901, p. 514].)

For winding-up proceedings, in case of insolvency or certain other defaults on the part of the corporation, Congress has made special provision by

means of a Receiver appointed under authority of the United States. (Rev. St. U. S. §§ 5141, 5191, 5201, 5205, 5208, 5234 [U. S. Comp. St. 1901, pp. 3462, 3486, 3494, 3495, 3497, 3507]; Act June 30, 1876, c. 156, 19 Stat. 63 [U. S. Comp. St. 1901, p. 3509]. *Cook County National Bank vs. United States*, 107 U. S. 445, 448.)

These statutes were not designed to exclude proceedings within the ordinary jurisdiction of courts of equity to enforce rights of a solvent National bank against those who have mismanaged or are mismanaging its affairs. (*Richmond vs. Irons*, 121 U. S. 27, 48.)

The complaint in the case at bar is by a shareholder in the National banking association known as the "Second National Bank of Norwich." The bank is the sole defendant. It is alleged that in 1900 its capital was reduced from 3,000 to 2,000 shares, and certain of its choses in action charged off and set apart by direction of the Comptroller of the Currency for the benefit of those who up to that date had been the holders of the 3,000 shares, of whom the plaintiff is one; that certain property was held by certain trustees in trust for the payment of said choses in action; that the bank, in 1901, sued these trustees for an accounting; that in 1902 one Jerome and one Perkins obtained control of the affairs of the bank, for the purpose, among other things, of defeating said suit and preventing such an accounting, and did in fact afterwards succeed in effecting a withdrawal of the suit; that they made a fraudulent sale of the choses in action secured by the trust fund for an inadequate consideration; that they are wrongfully appropriating or wasting all the property of the bank in confederacy with certain others, and particularly with the Thames Loan and Trust Company, to which they have transferred its banking house and principal business; that the defendant's charter expired by limitation on February 24, 1903, and it now exists only for purposes of liquidation; and that the confederates named are arranging to transfer all its assets and use its good will "to serve the interest of said Thames Loan and Trust Company; and the winding up of the affairs of the defendant bank will be delayed, and its funds will get intermingled with the funds of the said Thames Loan and Trust Company; and the plaintiff is in great danger of irreparable injury and loss of property, will be subjected to great expense in litigation to ascertain what disposition has been made of the assets of the defendant bank and of those charged off as aforesaid, and by confusion of accounts it will be at least very difficult, if not impossible, to ascertain the exact facts, unless relieved by the interposition of this honorable court as a court of equity, and a Receiver is appointed, and the plaintiff is without adequate remedy at law." The sole claim is that by way of equitable relief "a Receiver be appointed of the defendant bank, with the power to wind up its affairs under the eye of this court, and to collect the assets of said defendant bank that were charged off as aforesaid, and pay them to such as are entitled to receive them." We have no occasion to inquire whether there was error in any of the proceedings had before the judge of the superior court in vacation, for none is assigned in the reasons of appeal. The superior court was first called upon to act by the application of Charles W. Carter, the temporary Receiver, appointed in vacation, made in pursuance of directions given in the order appointing him, for a confirmation of such appointment, and also for appointment as permanent Receiver. Before it was heard, the applicant died, and the plaintiff filed another application,

suggesting the death, and asking for the immediate appointment of some one else as a permanent Receiver. A series of written objections to either a temporary or permanent appointment, filed by the defendant, were all overruled, and a temporary Receiver appointed,

The third objection was founded on Rev. St. U. S. § 5242 [U. S. Comp. St. 1901, p. 3517], which reads as follows: "All transfers of the notes, bonds, bills of exchange, or other evidences of debt owing to any National banking association, or of deposits to its credit; all assignments of mortgages, sureties on real estate, or of judgments or decrees in its favor; all deposits of money, bullion, or other valuable thing for its use, or for the use of any of its shareholders or creditors; and all payments of money to either, made after the commission of an act of insolvency, or in contemplation thereof, made with a view to prevent the application of its assets in the manner prescribed by this chapter, or with a view to the preference of one creditor to another, except in payment of its circulating notes, shall be utterly null and void; and no attachment, injunction or execution, shall be issued against such association or its property before final judgment in any suit, action or proceeding, in any State, county, or municipal court.

In view of these provisions the defendant's claim was that no Receiver, either temporary or permanent, to take possession of its property, could be appointed before final judgment in the cause, inasmuch as the appointment would operate as an equitable execution, and be tantamount to an injunction touching the disposition of its property. The decretal part of the order of appointment made by the superior court, on June 23, 1903, after overruling these objections, was couched in these terms: "(1) That the Hon. Lewis Sperry, of South Windsor, in this State, be, and he is hereby, appointed to fill such vacancy as temporary Receiver of the Second National Bank of Norwich, and the assets and property thereof, and of the assets charged off as in the complaint in said action alleged, until further order of this court, or a judge thereof, with full power and authority to take possession and charge of the property, affairs, and assets of said defendant corporation, and to wind up its affairs, and of the assets and property charged off as in the complaint in this action is alleged, under the direction of the court or judge thereof. (2) That the said Lewis Sperry be required to furnish a bond in the sum of ten thousand dollars, with good and sufficient surety, to be approved by this court or a judge thereof, and to file the same with the clerk of the superior court for said county of New London. (3) From and after the filing and acceptance of said bond said temporary Receiver is hereby authorized and directed to take possession of all the property and assets of said the Second National Bank of Norwich, and of the assets charged off as aforesaid and the proceeds thereof, and to proceed under the direction of this court with the winding up of the affairs of said banking association and the collection of said charged-off assets, until further order of the court in the premises; and the officers and liquidating committee of said Second National Bank and the administrator of the estate of said Charles W. Carter are hereby ordered, upon demand of said Receiver, to deliver to him all property and assets of said defendant bank and said charged-off assets." The statute which has been quoted forbids the issue of any attachment, injunction, or execution under authority of a State court against any National banking association, whether solvent or insolvent. (*Pacific National Bank vs. Mixer*, 124 U. S. 721, 727.)

But was the order complained of process of that nature, when considered in view of the exigencies which, in the judgment of the court, made it proper, and of the effect which it could practically have? The original order of appointment was made at chambers on May 5, 1903. It contained directions to the temporary Receiver to take possession of the defendant's assets, and to its officers and liquidating committee to deliver them to him on demand, similar to those in the order of June 23. These directions, it must be presumed in the absence of anything in the record to the contrary, were promptly obeyed. The order superseded the power of the directors to proceed with the liquidation of the affairs of the bank as effectually as if they had been in terms enjoined against so doing. (*Bank of Bethel vs. Pahquioque Bank*, 14 Wall. 383, 400.)

When, then, the first temporary Receiver died, it is to be assumed that he had in his hands all the defendant's assets. His death necessarily threw them into the possession of the administrator upon his estate. The real purpose and effect of the order therefore was to recover them, as speedily as possible, from his personal representatives, so that they could be held and disposed of, under the supervision of the court, for the benefit of all who were legally entitled to participate in the proceeds. If, therefore, the order passed in chambers can be considered as erroneous, because in violation of the act of Congress, it does not follow that the order appointing the second Receiver was. That deprived the defendant of the possession of nothing, for it then held nothing in its possession. It sequestered no assets in favor of any particular creditor; for the plaintiff, though suing alone, in effect sued for the benefit of all those similarly interested in the funds, and of all creditors who might come in and show a right to share in any of the assets held by the Receiver. (*Richmond vs. Irons*, 121 U. S. 27, 44.)

In its mandate for the delivery of the defendant's property to the Receiver by its officers and liquidating committee and the administrator of the estate of Charles W. Carter, the reference to its officers and liquidating committee did it no harm, since the former order, which ran against them in the same way, had long before been fully executed. The court issued its process to preserve a fund, already in its hands under a decree to which no exception has been taken, from risk of loss by accident of death. It was an act for the benefit of the bank, the equity and validity of which it was in no position to deny on the ground in question, after so long a tacit acquiescence in the order of May 5, and which, as it did not affect it injuriously, would not, even if erroneous, support the appeal. (*Gen. St. 1902, § 802.*)

The fourth objection was that the bank had no corporate existence for the purpose of being sued in this action. Under act July 12, 1882, c. 290, 22 Stat. 164, § 7 (*U. S. Comp. St. 1901, p. 3459*), National banking associations, upon the expiration of the term for which they are incorporated, do not cease to exist, but their franchises are "extended for the sole purpose of liquidating their affairs, until such affairs are finally closed." For the proper liquidation of their affairs it is obviously necessary that they should retain the capacity of suing and being sued, and the statutory extension of the franchise accomplishes that result.

The fifth objection was that the superior court had no power to appoint a Receiver to wind up a National bank at the instance of a stockholder. This is true so far as concerns such cases of action as are by act of Congress made

the foundation of winding-up proceedings to be brought under the authority of the United States. For other causes of action Congress has left the State courts free to grant relief of that nature whenever the general rules of equity may be deemed to call for it. (Merchants and Planters' National Bank vs. Trustees, 63 Ga. 549; *Id.*, 65 Ga. 803; Elwood vs. First National Bank, 41 Kan. 475.)

The plaintiff sues not merely as a shareholder, but as a *cestui que* trust with respect to a specific fund. His general rights as a stockholder had also been enlarged by the expiration of the term of full corporate activity of the bank. It was no longer a going concern. It was kept in life only that its affairs might be wound up, and his complaint stated a case which sufficiently justified him in seeking to have it wound up, and the special trust fund administered by others than those who were found in control.

#### NOTES OF CANADIAN CASES AFFECTING BANKERS.

[Edited by John Jennings, B. A., LL. B., Barrister, Toronto.]

---

##### *CHOSE IN ACTION—ASSIGNMENT OF MONEY PAYABLE IN RESPECT OF CONTRACT—DAMAGES FOR INTERFERENCE WITH THE WORK—ATTACHMENTS OF DEBTS.*

GRAHAM vs. BOURQUE (6 Ontario Law Reports, p. 428).

**STATEMENT OF FACTS :** This was an appeal by the Bank of Ottawa, the claimants in garnishee proceedings, from an order made by the master at Ottawa directing payment to the judgment creditor.

Joseph Bourque, one of the judgment debtors, made a contract with the corporation of the city of Ottawa for the construction of a drain in Ottawa; he then entered into arrangements with the Bank of Ottawa to borrow the money for carrying on the work. As part of the security for the advances to be made to him by the bank he assigned to the bank "all and every sum or sums of money now due or to become due and payable to me by the corporation of the city of Ottawa in respect of a certain contract existing between myself and the said the corporation of the city of Ottawa for the construction of section three of the main drain in the city of Ottawa," and by the same instrument he appointed them his attorneys to receive the same and to give releases therefor.

While Bourque was proceeding with his work under the contract he found himself hindered and put to additional expense by the fact that the corporation of the city continued to send water down certain existing street drains of theirs, which water found its way into the works of Bourque under his contract, owing to defects in the drains through which the water was sent down. The money required from and advanced by the Bank of Ottawa to Bourque for the purpose of completing his contract work was largely increased because of the expense of getting rid of this water and the damage and inconvenience caused by it. Bourque brought an action against the city corporation to recover the additional cost occasioned by this water as damages, and obtained a judgment against them for \$2,810.50. The judgment creditor took garnishee proceedings against the judgment debtors to seize this judgment debt, and the Bank of Ottawa claimed the money under the assignment, their advances being still largely unpaid.

The learned judge of the county court of Carleton, before whom the garnishee proceedings were had, after hearing the evidence, held that the debt in question did not pass to the bank under the assignment, and ordered payment to be made by the city to the judgment creditor.

JUDGMENT (STREET, J.): In my opinion the Bank of Ottawa is entitled under the assignment from Bourque to receive from the city the moneys in dispute here. The language of the assignment extends to all moneys which may become payable "in respect of the contract." The contract between Bourque and the city gave rise to a duty or to an implied contract, no matter which, binding the city to do nothing to impede Bourque in the execution of the work and to a liability to compensate him if they should do anything to impede him. If this had been set forth in the contract it is clear that the compensation would have passed to the bank under the assignment; but the same duty on the part of the bank to pay, and the same right to the contractor to receive compensation, although not set forth in express language in the contract, arise out of the mere fact that such a contract has been made; and, therefore, the compensation should be held to be money payable "in respect of the contract."

The appeal should, therefore, be allowed with costs to the bank and the garnishees here and below.

*MORTGAGE ON UNDERTAKING—BONDS—INTEREST COUPONS—REAL  
PROPERTY LIMITATION ACT.*

TORONTO GENERAL TRUST CORPORATION vs. CENTRAL ONTARIO R. W. CO., *et al.*

STATEMENT OF FACTS: This was an appeal by certain of the defendants from the following certificate of the local master at Belleville.

The plaintiffs were mortgagees under a mortgage dated April 1, 1882, made by the defendant company to secure their bonds. The defendant company having paid neither principal nor interest, this action was against the company to recover \$2,200,000 principal and interest upon the bonds, and in default of payment for a sale of the defendant company's railway and property. Judgment was obtained by the plaintiffs directing a reference to the master, who added the appellants, and one Samuel J. Ritchie, among others, as parties in his office, they being respectively the holders of a large number of the bonds of the defendant company with interest coupons, and the defendant Ritchie being the holder of a large number of the earlier maturing coupons which he had acquired from the original holders of the bonds.

The master's certificate was as follows:

"I certify that pursuant to the judgment herein dated March 23, 1903, and April 6, 1903, I was attended by the solicitors for Thomas Gibbs Blackstock and Robert Weddell and Samuel J. Ritchie, and in the presence of the parties settled an advertisement calling upon all holders of bonds of the defendant company, and all persons having claims and charges on the undertaking of the company, to prove their claims, which said advertisement having been duly published, I was attended, amongst others, by Samuel J. Ritchie, who claimed to be the holder of a large number of bonds with coupons attached and also a large number of detached coupons, all of which detached coupons had matured more than six years prior to the institution

of this action, and objections having been raised by counsel for Thomas Gibbs Blackstock and Robert Weddell to the right of the said Ritchie to prove upon said detached coupons, and also all detached coupons which matured more than six years prior to the date of this action, and further to the right to charge the lands and undertaking of the defendant company with more than six years' arrears of interest. I proceeded in the presence of the parties to consider the said matter, and find that none of the coupons, whether they are attached or detached, are barred by the statute of limitations, and that they are all entitled to the same rank as the principal payable by the bonds."

The appeal was upon the ground that the master should have held that the holders of bonds were entitled to charge the defendant company's lands and undertaking with merely the principal and six years' arrears of interest upon the bonds, and that all the detached coupons, and such of the attached coupons as matured more than six years prior to the maturing of the bonds, were barred as a charge against the defendant company's lands and railway, under the Real Property Limitation Act.

JUDGMENT (BOYD, CHANCELLOR): The restrictions placed upon the right to recover arrears of interest charged upon lands imposed by secs. 17 and 24 of the Real Property Limitation Act, R. S. O. 1897, ch. 133, are not applicable to the case of coupons for the payment of interest on railway mortgage bonds, which are secured by mortgage deeds of trust. The land contemplated by the statute is a very different thing from the railway undertaking upon which the interest is secured. That undertaking is an integral, indivisible property consisting of land, chattels, and franchises, which for the satisfaction of creditors or bondholders must be dealt with or sold in its entirety. The remedy sought in this case by the corporation holder is not by way of action or distress as specified in sec. 17 of the statute, but is claimed under special provisions which pertain to this railway. Default has been made in the payment of the principal money of the bonds, and plaintiffs as trustees have proceeded under the third provision of the statutory mortgage to enforce payment of the principal and the interest unpaid thereon.

All the bondholders are subject to and bound by the terms of this instrument, and the proceeding is for the common benefit of all. The very trust which is to be observed in case of default is that the trustees are to take possession by a receiver, which has been done, and then to proceed to realize by sale, as has been determined in this case. The extended directions given in the second provision of the mortgage, where default has been made in payment of the interest, provides for the payment of all interest due and unpaid upon the bonds. That is also the necessary import of the third provision, and it is repugnant to any idea that only six years' interest is to be recovered on the coupons. These are in effect documents under seal; the bond under seal covenants for the payment of the coupons, and they partake of the nature of a specialty, and are good for at least twenty years.

It would be incongruous to find that the coupons are statute-barréd as to the realty part of the undertaking and yet exigible as to the personalty part. The security cannot be thus divided.

On this ground I am willing to affirm the master's finding, with costs to be paid to the respondent by the appellants.

*CONDITIONAL SALE—ESTOPPEL—DECLARATION AND CONDUCT OF OWNER—  
SALE BY OSTENSIBLE OWNER—IMPLIED AUTHORITY—TITLE OF BONA  
FIDE PURCHASER—CONDITION—WAIVER.*

THE PEOPLE'S BANK OF HALIFAX vs. ESTEY.

**STATEMENT OF FACTS:** This was an action brought by the plaintiff bank to recover the sum of \$2,766.63, the value of 321,702 feet of spruce logs. The bank had advanced to one Upham, a lumber operator, certain sums of money and had taken as security an assignment of all the spruce logs cut or to be cut by the said Upham during the then current season. Later Upham authorized the bank to sell this lumber in order to repay themselves. In July, 1900, the bank sold these logs to one McKendrick, a lumber-dealer of the city of Fredericton, but by a clause in the agreement retained the property in the said logs in themselves until McKendrick should have paid the purchase price.

After this the defendant Estey, desiring to purchase the same logs which were then in the Fredericton boom, applied to the plaintiff's Manager at Woodstock, who told him that the bank had sold the logs to McKendrick. Thereupon the defendant entered into negotiations with McKendrick, and in August, 1900, bought the logs in question from him and paid him in full. Out of this purchase money McKendrick paid the bank \$10,000 on account, and received a release in respect of logs to that value. Shortly after this McKendrick failed and did not pay the bank anything more. In January, 1902, the bank made a demand on the defendant for the logs in question claiming them as the bank's property under the clause referred to in the agreement with McKendrick, though they had made no objection to the delivery of the logs by the boom company to Estey.

The action was tried before Landry, J., who entered judgment in favor of the plaintiffs. From this judgment an appeal was taken to the Supreme Court.

**JUDGMENT (TUCK, C.J.):** Upon the foregoing state of facts, about which there can be no dispute, the defendant, by his counsel, contends that the bank waived the condition in the contract with McKendrick, that the property should remain in it; and I do not entertain a doubt that this contention is sound. If it were otherwise it would strike at the very root of the principal commercial business of this country. All of us, who know anything about lumber operations, know that banks, especially those having branches outside of Saint John, make advances in the fall and winter, and oftentimes in the spring, to lumber-getters, and take security somewhat similar to that which the plaintiffs took from Upham; and again and again the operator, who cuts the trees in the woods, and brings the logs to market, is allowed to deal with them as if they were his own, and they are not dealt with as if they were subject to any lien. The bank, or the individual it may be, who makes the advances and takes the security, trusts the debtor that he will pay. It is only when a suspicion arises as to the honesty or ability of the debtor that the creditor looks to the security.

Take the case in hand. It is much stronger against the plaintiffs than an ordinary one. The bank, doubtless having every confidence in the honesty and ability to pay of McKendrick, sells him the Upham logs, with a condition that the property in the goods sold is to remain in the vendor until the purchase money is paid. This contract is put away in the bank's safe. The

defendant calls upon the bank's Manager, and seeking to buy these very logs, is told that they are sold to McKendrick. The boom company and Sewell receive orders from the bank to deliver the logs, and they are delivered to him accordingly. Afterwards the defendant buys from McKendrick and the bank receives from him \$10,000 which had been paid on account of these logs. Not only that, but the bank lies by, and makes no demand upon the defendant for the logs until January, 1902. Why, if the bank should prevail in this suit, no purchaser would feel safe in buying sawlogs, or the deals manufactured from them. Carry the bank's contention to its ultimate conclusion, and it might amount to this, that if McKendrick had, instead of selling, sawn the logs, and sold the manufactured lumber, to a merchant in Liverpool, and had not paid the proceeds of the sale to the bank, it could, as well as in this case, sue the Liverpool merchant in trover or for money had and received. The idea is too absurd to be entertained for a moment in a mercantile community. It is neither common sense nor good law.

I am convinced, from the evidence, that from the outset the bank meant that McKendrick should dispose of the lumber, and trusted him to pay the proceeds of the sales to them. It was never in their contemplation to follow the lumber in the hands of an innocent purchaser. Call it estoppel, call it waiver, call it by what name you please, the bank cannot recover in this action. I have examined many of the cases cited at the argument and have not found one which favors the plaintiffs' view.

But I need not cite other cases. It seems to me that the law applicable to this case is plain; that the verdict given must be set aside, and a verdict entered for the defendant.

*Editor Bankers' Magazine :*

GROTON, N. Y., February 27, 1904.

SIR: (1) M, a President of a National bank and also a President of a manufacturing corporation, loans a sum of money to said corporation for the bank, or hires from said bank for said corporation for said sum. At this time the bank had already loaned to the corporation its full limit under the banking law, and for the purpose of evading the law takes a note made by an employee of the corporation and endorsed by the said corporation. At the same time the President saying in substance to the maker of the note, that he will never be called upon to pay anything and stating to him the reason for wanting the note made in this way. The note was delivered to the bank and the corporation has full credit for it. Can this note be enforced against the maker by the bank? The corporation was insolvent at the time and is so yet; none of the other officers or directors of the bank knew anything about the details of this transaction; the note was renewed by the maker several times and after the death of the President. It seems that the President of the bank was acting for the bank and the corporation.

(2) Also another case. The President of the bank and President of this same corporation permits the corporation to overdraw its account with the bank to the amount of \$7,000 at a time when the corporation was insolvent and was owing the bank its full limit. Some time thereafter at a meeting of the directors of the bank a vote was taken and carried charging this overdrawn account to undivided profits, at the same time the corporation makes its note for the amount. Of course this note was not considered good and has not been counted as assets of the bank. Can the bank maintain an action against the President for loaning its funds in negligent manner or what is its remedy.

W. B. GALE, Cashier.

*Answer.*—(1) We do not think that the bank can enforce the note against

the maker. The case is very much like *Higgins vs. Ridgway* (153 N. Y. 130). In that case, the defendant made a promissory note for \$14,000, to the order of himself, and indorsed and delivered the same to the President of the North River Bank, without consideration, and upon the assurance of the President that he should not be held liable thereon. The Court of Appeals held that this was a good defense, and that as the transaction constituted a conditional delivery, the evidence was not objectionable as tending to vary or contradict the written instrument.

(2) Upon the facts stated, we think the bank could maintain an action against the former President to recover the amounts lost through his negligence. (*Briggs vs. Spaulding*, 141 U. S. 132; *Hun vs. Cary*, 82 N. Y. 65; *Williams vs. McKay*, 40 N. J. Eq. 356; *Ackerman vs. Halsey*, 37 N. J. Eq. 356; *Myer vs. Caperton*, 87 Ky. 306.)

*Editor Bankers' Magazine:*

ROME, N. Y., February 10, 1904.

SIR: We are receiving from time to time notes reading "With interest thereon, at the rate of — per cent. per annum." There seems to be some doubt in our mind as to whether or not we should charge interest upon such an item. I have one before me which is sent us for collection by an out-of-town correspondent, and I notice that they have not figured interest upon the same. One attorney tells me that the note draws interest; another one that it does not. Your answer will be awaited with interest.

CASHIER.

*Answer.*—The general rule is that where the instrument provides for the payment of interest, and no *rate* is prescribed, the legal rate is implied. (*Scotland County vs. Hill*, 132 U. S. 107; *O'Brien vs. Young*, 95 N. Y. 428.) And in the absence of evidence to show a contrary intention, a note containing the provision given in the inquiry would bear interest at six per cent. But this implication might be rebutted by the circumstances of the case. Suppose, for example, that a note on a blank form, containing these words, had been discounted by the payee, who had taken out the interest on the full amount of the principal. In such case, the inference would be very plain that the provision in regard to interest was left in the note by mistake, and the payee would not be permitted to recover more than the principal, especially as this would make the transaction usurious. Each case, therefore, must depend upon its own particular circumstances. In the special case stated in the inquiry, we think that the fact that the transmitting bank has said nothing about interest, and has made no computation of interest, would justify the collecting bank in accepting a payment of principal only.

*Editor Bankers' Magazine:*

CLIO, Mich., February 23, 1904.

SIR: Mr. A issues a check on bank B, payable to C or order for \$1,000. Mr. C endorses check and before depositing it in his local bank loses it. C asks A to stop payment on the original and issue him a duplicate, offering at the same time to furnish a satisfactory bond to protect A in case the original appears. A refuses to give a duplicate within sixty days of his notice that original was lost. What law or custom governs the issue of duplicates, and has C any legal right to demand an immediate settlement of the indebtedness represented by the check?

CASHIER.

*Answer.*—There is no way in which A can be compelled to issue a duplicate check. But C has another form of remedy. The delivery and receipt of the check did not extinguish the original indebtedness absolutely, but operated as a payment only *sub modo*, and the check being lost, C can still sue on the original debt. (*Angel vs. Fulton*, 8 Johns. [N. Y.] 149; *Lazell vs. Lazell*, 12 Vt. 443.) In such action the court would fully protect A by requiring C to give security to indemnify A in case the check should come into the hands of a *bona fide* holder for value.

## SAVINGS DEPARTMENTS IN COMMERCIAL BANKS.

---

Commercial banks in many parts of the country are establishing interest or savings departments. The custom seems to have originated in the towns that were too small to support both a commercial and a Savings bank ; and, while it has not yet been adopted to any great extent in cities of the first magnitude, it is being introduced into many cities which already have Savings banks, while in such cities as New York, Chicago and St. Louis, the trust companies do a business which is practically a combination of commercial and savings banking. The recent acquiescence of the Comptroller of the Currency in the policy will doubtless tend to spread it greatly among National banks, where it has hitherto been rather slow in taking root.

Naturally, this movement has attracted the attention and excited the opposition of the Savings banks, whose officers consider it an invasion of their rightful field, and a dangerous financial policy. Especially in States where the Savings banks are carefully regulated by laws prescribing the safest possible forms of investment for the savings of the laboring classes, the objection is raised that it is wrong in principle and mischievous in practice to permit the savings of the poor to be jeopardized by the larger risks taken by commercial banks.

In banking, as in all other lines of business, every radical improvement temporarily injures certain existing interests ; and, notwithstanding the complaints of the Savings banks, the establishment of savings departments in commercial banks seems to be a step toward greater profits for the banks and greater safety for the public. The question of the profitableness of a savings department to a commercial bank need not be discussed at any great length. The fact that the movement is rapidly spreading is sufficient evidence of its profitableness. The lessening percentage of clerical expenses to business done is a well-established business principle ; it is at the foundation of the universal tendency toward consolidation in all industries. After the machinery of a bank is once well organized, comparatively little is added to the expense account by handling the business of a savings department. This remark applies with added force to the host of small banks in which the commercial business transacted is not sufficiently large to take the whole time of the two or three men employed ; but even in the largest banks the doubling of the business by no means doubles the administrative expenses.

Another advantage, more subtle but none the less real, derived by a bank from its savings department, is the increase of its totals in the published reports. " Nothing succeeds like success," and an increase of fifty per cent. to 100 per cent. in a bank's deposits is perhaps the best advertisement the bank can have in the community. Not only does it attract attention to the bank and produce a favorable opinion regarding its management, thus tending to bring it more business, but the increased number of depositors gives a busy, wide-awake air to the banking house, and as most men decide upon their banking connections upon the recommendation of friends, the more satisfied depositors a bank has, the more missionaries it has in the community.

An advantage derived by a commercial bank from a savings department, which seems to the writer of more importance than the bank's own profit, inasmuch as it affects the welfare of the general public, is the added safety of the banking business made possible by proper management. The ordinary commercial bank holds all of its deposits subject to withdrawal upon demand, while it places a considerable

portion of them in time loans. If, therefore, for any reason confidence in the bank is shaken and all of the depositors demand their balances—in other words, in case of a general “run”—the institution must inevitably close its doors, as it cannot realize at once upon all of its assets. This fear of a panic is the constant dread of the careful banker. If, however, a considerable line of savings deposits, with sixty or more days' notice of withdrawal stipulated, is built up, the danger from a run is greatly lessened, and if the bank holds fixed deposits payable at the end of six months or a year, it is evident that there can be no possible danger from a run, if such deposits are placed in loans maturing within the time when the deposits are payable; consequently it is perfectly proper for a commercial bank to attract fixed or time deposits by offering a special rate of interest for them—that is, by establishing a savings department.

This point is of such vital importance that, at the risk of repetition, it seems well to illustrate it. Suppose that an institution with a banking capital of \$100,000 has \$100,000 in demand deposits in its commercial department, and \$100,000 in savings deposits with the privilege of demanding sixty days' notice of withdrawal. If in a central reserve city, the bank must keep \$50,000 reserve; if in a country town, it might have this amount in cash and with its reserve agents. By loaning \$50,000 on call against proper collateral, the bank would at all times be in a position to meet its demand deposits instantly. The \$100,000 savings deposits could be used with absolute safety in discounting thirty and sixty day paper, since the right of demanding notice of withdrawal would guarantee the maturity of the notes before the obligations to depositors became due. Of course, under normal conditions notice of withdrawal would be waived; but the provisions for a bank's safety must be like those for the safety of a ship—not made to hold in fair weather only, but in storms and hurricanes as well. The bank's own capital of \$100,000 could then be used in four or six months' loans or invested in prime securities, or even in mortgages upon real estate, which is actually done in many of the small western banks, in spite of the fact that it has never been considered a safe procedure for a commercial bank. It will be readily seen that the bank here used as an illustration is at all times in a position to meet every possible demand upon it by the public (provided, of course, its investments are safe). The constant worry of the commercial banker—the consciousness that he has obligated himself to repay on demand funds which he has placed out of his reach for from three to six months—is thus seen to disappear under a properly conducted savings department operated in connection with his bank.

One more advantage of a savings department must be mentioned. It is a well-known fact that in the keenness of present-day competition a bank cannot secure large mercantile accounts without the promise of a certain line of accommodation. It is also well known that, while conservative banks do not care to accept a note running more than sixty or ninety days, there is frequently an understanding, tacit or expressed, to renew the loan at maturity, and in many well-managed banks borrowers are not expected to fully liquidate their indebtedness to the bank oftener than once or twice a year. It is evident that the banker who has a large line of time deposits is in a better position to promise a line of accommodation with the certainty of being able to carry out his agreement, than the banker whose deposits may be withdrawn without a moment's notice, thus compelling him to refuse promised assistance to borrowers in time of stringency or panic, when such assistance is most needed, and perhaps causing the houses to fail. The promise of a continuous line of credit is another of the points at which the commercial banker must frequently stretch his conscience a little. Of course he can always raise the rate to a prohibitive figure, or cavil at the conduct of the account. A savings department, by insuring a more uniform line of deposits, removes the necessity for sudden and ruinous contractions of credit, and this is a strong argument in its favor.

It would be unfair to close this discussion without noticing some of the principal objections urged against the savings department. Perhaps the favorite one is, that the savings of the poor should not be subjected to the risks of a commercial bank. In order to attract fixed deposits, however, commercial banks must offer a higher rate than the Savings banks, and if the risks are greater, so are the returns; and it is optional with the depositor, to be content with a small return and greater safety, or to take greater risks for the higher rate. It is a universal economic law, that the returns and the risks rise and fall together. Limit the risk to which savings may be subjected, and you limit the income from those savings.

It is objected further that the savings department, necessitating a higher earning capacity to pay the interest offered, has a tendency to lead to less conservative loans and investments. If the rate of interest offered be abnormally high, this tendency cannot be denied. While a savings department has been shown to be advantageous, it is not to be built up by offering a ruinous rate of interest to attract deposits. If, however, a moderate rate only is paid, there is no undue danger of unsafe investments or speculation. The higher earning capacity necessitated by the payment of interest is at the same time made possible by the longer loans which the bank is enabled with safety to make.

A third objection to the introduction of the savings department in commercial banks is the assertion that there is an essential and radical difference between the business of a Savings bank and that of a commercial bank; that they are, in fact, two entirely different lines of business and cannot be joined without detriment to both, any more than a racer and a workhorse can be driven together. The Savings bank, it is said, deals in funds that are not employed in trade, but are entrusted to the bank for the purpose of safe and comparatively permanent investment, while the commercial bank deals with the constantly fluctuating working balances of the active trader left with him for convenience and safe-keeping only, and which the banker must therefore keep in the form of quickly convertible investments. While this is a correct description of the typical savings and commercial accounts, respectively, they represent two extremes between which there are numerous classes of bank accounts shading insensibly into the ideal types. In other words, accounts vary without a perceptible hiatus from the totally inactive savings account to the most active mercantile account. There is no hard-and-fast distinction in this tenure of deposits between a commercial and a Savings bank, and as the loans and other investments shade as gradually from the demand loan to the five year mortgage on real estate, it would seem that the banking business is naturally one harmonious whole, and that its separation into two arbitrary and artificial divisions is more dangerous and detrimental to the interests of the bank and of the public than its unification would be. At any rate, the advantages of the latter pointed out above seem worthy of attention.

OSCAR NEWFANG.

---

RECONCILING LABOR TROUBLES.—I would rather have the credit of making successful the movement to bring labor and capital into closer relations of confidence and reliance than to be President of the United States. If by resigning my seat in the United States Senate I could bring to fruition the plans we are now fostering to make strikes, lockouts and great labor disputes impossible, I would gladly do so. I think it is the grandest thing that could be accomplished in this country. I would want no greater praise than to have the country remember that I did something to end the wars between American labor and American capital.—*The late Senator Hanna.*

# \* THE PRACTICAL WORK OF A BANK.

## THE COLLECTION DEPARTMENT.

### III.

Broadly speaking, the collection department of a bank is that part of its force and routine that attends to the collection of everything payable in the bank's own locality that is not of a strictly cash nature; and also of everything due and payable elsewhere. It is the recording machine through which the instruments of credit pass; and, taken as a whole, this department of banking forms one of the most important arteries of commerce.

The person at the head of this department, the collection clerk, should be one of

pleasing address, sound judgment, accurate and careful. He should have a thorough knowledge of the principles of banking law, especially of those governing negotiable securities. Being brought into direct contact with the bank's customers and the general public, he must possess unfailing courtesy, patience, and self-control. As many problems and vexatious questions will come to him, particularly at busy periods when his impulse will cause him to be brusque, and possibly say things lacking in consideration and courtesy, it is always well to remember that politeness is one of the cheapest of things and also one of the most effective, and productive of the best returns. His work is not confined in such narrow limits as many positions in the bank, and the greater variety and broader scope which his work affords give him good opportunities to develop himself and his ability. In fact, there are few bank positions which can show such direct results for persistent endeavor.

\* A series of articles to be published in competition for prizes aggregating \$1,050, offered by THE BANKERS' MAGAZINE. Publication of these articles was begun in the July, 1901, number, page 18.

The grist upon which the collection mill is fed (checks, notes, drafts, etc.) divides itself into two divisions, local and foreign, according to place of payment.

METHOD OF DEALING WITH LOCAL COLLECTION ITEMS.

The local collections received from the mail or the bank's customers are separated into those which are complete in character (such as notes and acceptances), and those which must be presented for acceptance or completion. The former are entered in a maturity tickler (Fig. 1) giving full description and history, notices sent,

FIG. 2.—DRAFT REGISTER.

and are then practically laid away until their day of maturity brings them back to life. During the interim their safe-keeping is the only cause for anxiety. When the notes are due a long way ahead, the notices may be filed with the maturities until a convenient date, and then mailed to the proper parties. Notices are not required by law, but custom is so general that it would not be wise to be careless in regard to them.

The drafts and other items which are to undergo presentation should be entered in a register (Fig. 2) giving their vital points of description, and then given to the messengers to take out. In handling these items, the main fact to bear in mind is whether they are protestable or not. If it is "protest," the latitude which the bank exercise in the matter is very small; the law prescribing just what may or may not be done, and any departure from such conventional customs will be at the bank's peril. But in regard to an item forwarded with "no protest" instructions, the case is different. The very fact of its being forwarded in such manner is practically a permission to the collecting bank to use its common sense, and collect if possible. But even with these, it is much better to follow the terms of the instrument, and not take too much for granted. If delay of a day or two will secure payment, it is sometimes well to grant it, unless there are directions to the contrary. The law gives a drawee twenty-four hours, anyway, in which to accept a draft. If a longer time is asked for, the plan would be to ask for instructions, thereby both giving notice and avoiding responsibility. A demand draft, of course, does not receive indulgence at the hands of the law, and, as its terms specify, is payable on presentation and demand. And in accommodating the drawee of a draft the bank must not let him fall into the habit of expecting and demanding delay. Some men are persistently chronic in this respect, and they should be handled firmly yet courteously. A bank should control its own business, not be controlled. Some banks follow

the practice of holding a draft the length of time they would have it if it were duly accepted, but technically it does not seem to be a plan to be favored.

The messenger on receiving the drafts which he is to take out to be presented to the drawees, should endeavor to make a personal presentation wherever possible, and secure an answer thereon as early as possible. Where the item is refused, the messenger should try to obtain the reason therefor and write it on the back of the draft. A notice should be left when a draft has been presented and the drawee not seen. Drawees of drafts who are practically inaccessible on account of distance should have notices sent them giving the principal facts of the draft, and requesting prompt attention. If such draft happens to require protest for dishonor, it is generally given to the notary to present and protest if necessary. But in all cases where possible, whether the draft is protestable or not, the drawee should personally see the draft. It will be considered an acceptance if the drawee merely write his name across the face of the draft, if the time of payment is signified in the body of it. If it is drawn at sight or if the time dates from the acceptance, it is necessary that the date of the acceptance be written also. A proper acceptance should have the word "accepted," the date, and the signature of the acceptor. The acceptance may direct its presentation at some bank for payment, but may not alter the conditions of the instrument by making it payable in some foreign locality. Minor technicalities will, of course, be interpreted according to the intention of the parties, but it is never wise to pass loose or ambiguous acceptances, as they are always dangerous and open to dispute. A good collection clerk can use some freedom according to his knowledge of the parties with whom he is dealing, but it is safer to be technically correct. The messenger will frequently be asked by drawees to whom he presents drafts to leave them that they may be examined at leisure. Such a course is generally allowed in cases where the parties are of good standing, but it is simply a courtesy and not compulsory. The messenger has discharged his duties correctly if he does not care to leave the draft (which may have more or less valuable papers attached), and simply leaves a notice instead. If he leaves the draft, however, he should always take a receipt in lieu of it. Acceptances made under powers of attorney add to the worry in this department. A person accepting a draft in this manner may tell where his power is on file, and the bank can thus verify it. But such powers can be revoked at any time, and a bank does not probably have time to verify each and every instance of this sort. In most cases they will hunt it up at once and take it for granted thereafter. The case may be put down as one of the legitimate risks of banking, and is another instance where the collection clerk's knowledge of men helps him to decide how much risk to run. He should endeavor, however, to have such "powers" in his own file.

Arrival drafts (drafts payable on arrival at destination of goods represented by the draft) are an invention of modern times to facilitate business, but which the hard-worked collection clerk calls a decided nuisance. Generally they are presented to the drawees when received, and then filed away waiting for the drawees to notify and pay the bank when the goods arrive and the draft consequently matures. But it can be readily seen that the bank in accepting the collection of these drafts renders itself liable, in a way, to the drawer and endorsers to see that that indefinite period "arrival," is properly attended to. It is a particularly awkward time to measure a draft by, yet they have obtained the right of "custom" and consequently must be endured. The method of handling these items seems to be to treat them as demand drafts, payable on arrival of the goods referred to. They are presented and the verbal direction of the drawee to hold is all that is asked for, and probably is all that is desired by the drawer of the draft. But with these, as with others, instructions regarding protest form the keynote of the collection clerk's actions. If the draft requires technically accurate handling a written acceptance must be obtained, as in case of ordinary drafts, protesting same if acceptance is refused.

A draft for which a presentation notice has been mailed shall be held at the bank until the parties notified have had reasonable time to attend to it. How long is a reasonable time? All business matters are expected to be attended to promptly by business men. Some clerks, however, apparently hold items for an indefinite period, awaiting the drawee's convenience, or the limits of patience of those from whom he may have received the draft. One day added to the quickest possible time of attention should be ample.

Drafts are sometimes drawn, for example, "with exchange on New York" (or sometimes with the obnoxious substitute—"in New York exchange," which would permit the drawee to tender any kind of a New York check in payment). Some banks hold that as, in many cases, the exchange is not an absolutely determinable sum, they are not obliged to pay any attention to it in case the drawee objects to paying what is asked. This course is probably most widely followed. Technically, however, a refusal to pay the exchange is a refusal to comply with the terms of the draft—hence a refusal of the draft. The common sense reasoning is that the amount of exchange is, in the vast majority of cases, not worth bothering about.

After the drafts have all been presented they are checked off the register. Those which are accepted are separated from those which are to be held, returned, or protested; and entered in the collection tickler under their maturity dates, the date being noted on a convenient section of the item (the upper right-hand corner being a favored place, as in running over the dates a glance takes in the identity of the instrument as well), and then they are filed away with the notes and acceptances according to their dates of payment. Then when a day's maturities are taken out they should be compared with the record on the tickler, thus making a safety check against error. Those which are payable at another bank should be given to the messenger to present and collect, and acceptances payable through the clearing-house should be charged in through the clearing. It is customary in some places to charge through the clearing any maturities payable at a particular bank, whether there happen to be explicit instructions or not. But this course has not unanimous approval, and the items do not stand on the same footing as checks.

In collecting the drafts and notes payment should be required in cash, bank check, or certified check. There are naturally occasions where the demand for the above forms of payment may be inexpedient, or ill-advised, but the exceptions should be the subject of the most careful discrimination. In taking the check of a firm in good standing the chance of loss is extremely small, but in the matter of collections it is not a bank's business to take chances. A bank is merely an agent, and cannot therefore know all the circumstances surrounding a collection.

Ambiguous instruments will come in occasionally, and also collections of an unusual character—such as stocks to be sold or delivered on more or less specified payment, bills of lading without any accompanying draft, but to be delivered and released on the payment of a certain sum. An instrument to be negotiable (and consequently under protest responsibilities), is supposed to be absolutely clear in all its parts; but once in a while one comes along of so unusual a nature that it is hard to decide just how to treat it. In general, however, it is better to follow the maxim, "It is better to be safe than sorry," and to protest in all doubtful cases. The cost of protest fees is a small item compared to the liability which might arise from the neglect to protest. But the collections just referred to should not be encouraged. The bank in accepting the performance of the transfer, sale, or delivery, may unwittingly become a responsible party to transactions of which it may have no clear knowledge, and liable as such. When papers or securities are attached to a draft, it becomes a documentary bill and the collection clerk experiences no difficulty or worry in handling it, owing to his familiarity with the rights and duties connected with negotiable instruments. In the latter case the attached security becomes of second-

ary importance ; depending entirely upon the tenor of the draft. Any and all business out of the usual course should always be subjected to the most searching examination. An alert collection clerk must ever be on the lookout, "Eternal vigilance is the price of safety."

In the case of documentary bills, the most uncomfortable feature is the frequently unreasonable demands of the drawees for the surrender of the attached papers on acceptance, irrespective of whether the facts of the case render such a course permissible. In the absence of explicit instructions it is generally best to hold such papers until the payment of the draft. This, at least, is probably the safest way, the courts having rendered somewhat conflicting decisions on the subject. With reference to bills of lading, "McMasters Decisions" give the terms of the draft and the title of the bill of lading as deciding the rights of the drawees in the matter. Demand drafts being only for payment, and not for acceptance, furnish no such troublesome problems. With a time draft having the bill of lading attached, the case is different. If the title in the bill of lading is made direct to the drawee as consignee, the bill of lading may be released on acceptance, in the absence of specific instructions. If, however, it is made to the order of the consignor, and endorsed in blank, the evident inference is that the title to the goods represented is not to pass to the drawee until he has paid the draft, and consequently the bill of lading must be held. When instructions accompany the draft relative to the bill of lading or documents which may happen to be attached thereto, they should be followed. When there are no instructions, the law and common sense should rule. The collection clerk should err, if he err at all, on the side of safety.

On the local portion of the collection business, the profit is derived from direct exchange charges; from loanable funds on account of the deposit balance of collection accounts which have periodical remittances; and also from reciprocal accounts. Items on which direct exchanges are made come principally from large mercantile houses who particularly desire quick returns. They also come in from banks and banking houses whose collection arrangements are not very extensive, or perhaps for individual reasons. This class of business is discouraged by some banks and looked at more in the light of a necessary evil; but by careful handling, and persistent "nursing," or solicitation, it can be developed into a profitable branch of the bank's business. To determine the rate to be charged on this class of business is a problem for each bank to work out for itself; but it should be small enough to encourage more, and yet large enough to show an average profit. The main point to bear in mind is that the larger the volume of business, the less the average proportion of expense, and the greater the profit. Many banks also enclose a slip when returning unpaid items of this kind, asking for a small fee to cover the expense of time and postage. The New York and Boston Clearing-House regulations have caused an increase in this business by making iron-clad charges which affect all but a few "par points" throughout the country.

With the collection accounts which are remitted for periodically, the returns are less definite but probably much more satisfactory. Banks having a large line of this business can count on quite a handsome average deposit balance from it, and the returns from the loanable funds thereof help the interest account materially. Where possible a bank should try to receive a deposit balance in connection with any collection agreement. The loaning of funds is a bank's principal business, and the source of its greatest profit.

#### THE FOREIGN COLLECTIONS.

The foreign collections (items of all kinds which are due or payable elsewhere) are more a matter of methodical routine than the local division. Many institutions have what may be termed wholesale collection arrangements. That is, they arrange

with some correspondent or correspondents to collect all of their foreign items free of expense, usually offsetting this accommodation by keeping with the collecting bank a certain agreed deposit balance. In such cases a bank merely enters up and records all its items, sending them forward to its correspondent, who may send them in a more or less direct channel to their ultimate destination.

It quite frequently happens that the collecting bank may have some wholesale arrangements of its own, and a check or note frequently travels long and far before it is finally presented for payment. Theoretically, such agreements are not to be approved of, as there is a certain element of danger in the delay. But with banks, as with individuals, the prevailing desire is to "get the most for the least." Endless-chain affairs, however, are to be deplored. Naturally, it is impossible for a bank to have a correspondent in every place in the country, and the expense of forwarding each check and note direct would be very heavy financially, as well as a great bother. But a bank should have a sufficient number of good correspondents to insure, at least, a fair degree of directness and promptness in collection.

FIG. 3.—CHECK REGISTER OR LETTER FORM.

All collection agreements, as indeed any important information in connection with this department, should be carefully recorded and easily referred to. The different branches and details of the work are so many and varied that it is easy to get matters mixed if things are not carefully systematized, and information tabulated. Collection agreements with correspondents should be recorded when made, rates charged on drafts should be posted, and so on. A good bank officer will always try to have affairs in his department in such shape that if he should suddenly step out, another man could step right into his place and proceed with the routine with practically no trouble or friction. A man frequently forgets, but a record does not.

Another point to be kept in mind in making agreements is, that the law holds a bank responsible for the custody of notes, drafts, and checks and also for the selection of its collection agents. So security and strength must be borne in mind and sought for.

Checks should be entered in a register (Fig. 3), or written on a letter form, giving a record of the item's vital points. In all cases sufficient information should be taken that any lost check could be traced and a duplicate obtained if necessary. All lost items should be promptly notified to all the parties thereto, and a duplicate may then be issued. If it is a note, and the day of maturity is at hand, payment

should be demanded the same as if the note were at hand, and protest may be made from records.

In forwarding time items a somewhat more detailed record is required than is the case with checks (Fig. 4). In addition to the conventional points of checks, the details of time, protest, and attached documents enter into the record. In writing these on the letters, it is well to list the name, maturity, documents attached (if any), and amount. Instructions as to protest and delivery of any attached papers are usually noted, and banks almost invariably follow such directions in preference to any instructions which may be attached to the draft itself. The reason is that

| Date sent | Who from | Pay to                 | Place due   | Date  | Time | Amount     | Bank to | Information |
|-----------|----------|------------------------|-------------|-------|------|------------|---------|-------------|
|           |          | To Ash Williams C. Ely | Chicago Ill | 2 mos | 20   | 1st Aug 01 |         |             |

FIG. 4.—COLLECTION TICKLER, FOREIGN.

they are liable to the bank from whom they received the item, and that bank's instructions are naturally those which will be followed.

The numbering system is a popular assistant in this part of a bank. This is used by individualizing the collection by number, and having correspondents advise credit by that number. A common form is to write the number of the page of the collection tickler together with the number of the line on which the item is recorded. For example: first line of two hundred forty-fifth page equal No. 24501, thirty-first line of the second page equal No. 231. This system prevents confusing duplicate amounts, as well as assisting in turning to the record of the item. It is especially a great aid in regard to the foreign collections. With the local collections the item itself is usually before one, so the number is unnecessary, excepting in case of banks whose business reaches a very large scale. C. JOEL.

**MR. ATKINSON'S SIGNATURE.**—Though not so very aged (he is only 70,) Edward Atkinson, the noted anti-imperialist, anti-expansionist, economist and inventor of the "Aladdin Oven," is so feeble that he can no longer write with a pen, but uses a rubber stamp in signing his name. This is done even on checks of small or large amount. As such a signature is not legal, Mr. Atkinson renders it so by attesting it according to the Bertillon system. He inks the ball of his thumb on a pad and leaves the imprint on the check, as much as to say—"Edward Atkinson, his thumb." Bank Cashiers in Boston and elsewhere have become familiar with the hair lines of the Atkinsonian thumb, and a piece of paper bearing it is as good as legal tender.

Why should not all banks and trust companies adopt this system? If every one who draws a check were to attest his signature by means of the thumb mark, forgeries would be few and far between. It would not be necessary for Cashiers or paying tellers to familiarize themselves with 1,000,000 thumb marks, more or less, but a book of such marks could be kept for reference when doubts arose concerning a signature. There is nearly always something about a forgery that leads to suspicion, and if followed up, to detection.—*New York Press.*

FRANK W. WOOLWORTH  
President Guardian Trust Co., New York

## FRANK W. WOOLWORTH.

*THE NEW PRESIDENT OF THE GUARDIAN TRUST COMPANY, NEW YORK.*

Frank W. Woolworth, who was elected President of the Guardian Trust Company, of New York city, in July, 1903, and re-elected to that position on January 25 last, is one of the self-made men of the American metropolis. His career illustrates what can be accomplished in this country by energy and business aptitude, and what great possibilities there are in humble beginnings.

Mr. Woolworth is a typical, pushing American, and has achieved a degree of success that ranks him among the notable men of the country.

There have been few developments in retail merchandising so unique and successful as the five and ten cent stores established by him and now in operation in sixty-six cities of the country. There are seventy-eight stores in all, ten of them in Greater New York, and they do a business amounting to over \$10,000,000 annually, and employ from 1,500 to 5,000 people—the former number representing the minimum in mid-summer and the larger figures the busy season.

The founder of this business, and its energetic proprietor and manager, Frank W. Woolworth, was born and reared in the country. He was born in Jefferson county, N. Y., April 13, 1852, and lived on a farm until he was twenty-one, receiving a common-school education. In the winter of 1871-72 he attended a commercial college at Watertown, N. Y., and on his graduation entered a drygoods store in that place. For the first three weeks he got no wages, but paid \$3.50 per week for board. The second three weeks he received a salary of \$3.50 per week. He remained in this situation for six years, his salary never exceeding \$10 a week. He married, and out of his salary saved \$50 a year.

His attention to the possibilities of his present mercantile business was attracted by the success of a five-cent counter put in by the firm with which he was employed. His employers soon succeeded so well that they became wholesale dealers, and Mr. Woolworth applied to them for a stock of goods on credit. Having secured the goods to the value of \$325, he opened his store, although he lacked the \$35 necessary to pay the first month's rent. At first he did fairly well, but lacking an adequate stock, business declined and his first attempt was practically a failure. In about four months after beginning this venture, he decided to try it over again elsewhere, and after obtaining another stock of goods he opened in June, 1879, at Lancaster, Pa. Here he did a good business from the start and cleared \$1,500 the first year. He now has a handsome modern five-story office building at Lancaster, which may be said to fitly commemorate the scene of his early mercantile triumph.

New stores were established from time to time, but for the first fifteen years progress was slow. In 1894 Mr. Woolworth opened his first store in New York, and his method of selling goods proved so popular that he now has ten stores in the greater city. It should be said that he has made a notable success in a field where many others have failed.

Mr. Woolworth's city residence, at Fifth avenue and Eightieth street, is one of the notably fine houses in that center of wealth and fashion.

## THE "R" SYSTEM.

FOR USE IN BANKS DOING A COMMERCIAL BANKING BUSINESS.

[Supplemental to article in the January issue, showing forms for Collection and Auditing Department. By CHARLES W. REIHL, Philadelphia.]

In the article in the January *BANKERS' MAGAZINE* I gave description and illustrations of a scientific system for handling credits and debits in bank work, which allows doing away with the pass book. This is too great a departure from the ordinary methods for very many bankers to adopt at once. While they are anxious to have the best methods for doing the work, they fear to take so advanced a step as doing away with the pass books. But this method, or a similar one that will banish the pass book from its present position in banking, is quite certain to come into almost universal use in time, for it has all the advantages of safe and systematic banking, and that is more than can be said of the pass book as it is generally used.

The adoption of the system might at first make some depositors feel a little anxious as to how it will affect their relation with the bank, but they would soon lose the anxiety when they found their monthly or quarterly statements so complete in every detail, and they would be convinced that the change was for their good as well as for the good of the bank.

The country banker may think that it is not for him because it establishes a new department—the auditing department. But this can be arranged in most cases by a slight rearrangement in the work. Of course where one or two do all the work it would not have much advantage in point of safety.

For the benefit of those who desire to see the other forms, referred to, for the collection and auditing departments, they are now presented.

### COLLECTION DEPARTMENT.

In this department use the same forms for making record of notes and drafts as shown in Figures 1, 2 and 3 in the previous exposition of the system. In fact, the only change in this department is omitting the advice cards, Figures 4 and 5, and for them have the card for the items of collection credits, as shown here in Figure 1. One of these cards is to be used for each depositor who uses the collection department. On the card is to be made a record of all collection items credited to the party, with date and name, as given in the illustration.

These cards are to be kept in the collection department, and if the amount of business is not too heavy they can be kept in the same place where the returned items are kept until returned to the depositor.

The depositor's name placed at the side of the amount column is for convenience in handling when filed away in the wallet pocket or sectional drawer.

The memorandums on the cards are to be made from the credit slips before they start on their journey to the ledgers and auditing department.

The object of the cards is this: When the depositor brings his pass book to have the credits entered, you simply need to get his card and copy the entries that are on it into his book. When entry has been made tick it on the card—see the illustration again. This saves the time and trouble of looking up entries under the various dates in credit scratcher or day book, if either is used.

The daily record settlement sheet is to be used as described in January—amounts only to be placed on it.

THE AUDITING DEPARTMENT.

The settlement sheet as shown in Figure 14 of the January article is the only form used in the auditing department under that plan; but in this alternative

| DATE | NAME          | AMOUNT |

BALANCE 1,811.45

FIG. 1.

FIG. 2.

method it is not used. But it can be used and the use of the pass book continued, for some banks do it. In its place two or three forms are suggested and here shown. This method will no doubt suit the average country banker better than the settlement sheet.

All credit and debit slips are to come to this department, but instead of being listed on the settlement sheet before being filed away they are filed away at once in their proper places. When an account is to be settled the credits and debits are to be listed on the statement of account slip shown in Figure 2.

This slip is designed to have items listed either on the adding machine or with pen. It is ruled on both sides. Debit and credit columns are on the front of the slip, and as there are usually many more debits than credits, the back of the slip is arranged for debits only. If the slip is to be used on the adding machine it might be well to have all columns on the front and not use the back.

The total of credits and debits and the balance as shown on the slip are to be entered in the pass book; and it should be seen that the credits in the pass book, correspond to those on the slip.

The debits and credits can be listed on the slip every day or two, or they can be left until the account is to be settled.

With this plan is a card, Figure 3, on which to keep a record of balances at time of settlement. One of these cards is to be made out for each account and kept in the section of the check file drawer where the credit and debit slips are kept. This card is not to be taken away from the auditing department. By using this card the account can be settled at any time without referring to the ledger for last balance and without having the pass book. It can also be used at any time in proving the ledger accounts. The settlement should be compared with the ledger to prove the balance before the book or statement is delivered to the depositor.

Under certain circumstances it may be well to have a record in the auditing department of the daily balances in the ledgers so that the department can keep in close touch with the standing of all accounts. For this purpose the daily balance sheet, Figure 4, is suggested. It is arranged to use on the adding machine and to hold six-days' work on each side of the sheet. It would be convenient to have these made so they could be filed in loose-leaf binders, and so they would be in handy form for reference.

The writer feels like offering an apology for the suggestions here presented

to use as substitutes in place of the forms presented in the original article, for that is very complete in itself. At first thought some may say these suggestions weaken the system, but they do not—they show its adaptability to all conditions.

The forms given herewith are presented so that those who object to doing away with the pass book will see how the pass book can be retained and many of the good features of the system still used.

The system as originally presented, or with these substitutes, can be adapted to the use of any bank doing a commercial banking business. This is evident, because from the unit or single form in each department it is capable of expansion to

meet the needs of a small bank, a medium-size bank or a large bank, the same principles operating in each case.

I have no patent or copyright on this system, although it has cost me much time, thought and study—not to mention money, and any bank is at liberty to use any part or all of it without paying royalty.

**ADVISING DEPOSITORS.**—It may be of interest to state here that it is a rule in the Bowery Savings Bank whenever any of its depositors are supposed to be drawing money to invest in stocks to ask them respectfully if they would be willing to go back and see the President. With but a single exception such an invitation has been cheerfully accepted, and in a great majority of the cases the depositor has been made to see the very great risk he or she was taking, especially those who are contemplating buying on a margin, and they have abandoned their intention and left their savings in the bank, leaving with thanks for the kind and unexpected interest taken in their personal affairs. When a man, however, comes in and states that he is withdrawing his money to "play the races," and that it is his business, upon which he depends for a living for himself and family, any one can see that it is "up to the President," and a difficult job for him to handle. It is a little singular to note that one of the depositors admitted that he drew his money (some \$500) to bet on the election of McClellan. If he did he must have won his bet, but so far he has not returned with the \$500 that he risked in such gambling nor its increase, and the probable result will be that this first step has led to its total loss. But the case of the honest old Dutchman, who drew \$1,500 to buy a husband for his daughter, was laughable.—*W. H. S. Wood, President Bowery Savings Bank, in "New York Times Annual Financial Review."*

**THE EVILS OF OUR PAPER CURRENCY.**—A paper currency such as we have invites and encourages the exportation of gold upon the first symptoms of adversity. Rigid in volume, dependent upon the condition of the Government revenues, and ultimately redeemable only out of the Government's reserve, reissuable practically at the pleasure of the Government, it stands as a continuing menace to the stability of prices and values, interferes with the normal development of existing business, and checks new enterprises both at home and abroad; whereas, a properly regulated bank-note currency, expanding and contracting with the needs of our commerce and industry as manifested from time to time, promptly redeemable in coin, and when so redeemed actually put out of use unless the occasion for reissue arises from a demand based upon trade—such a currency would enable us to protect our reserves of specie just as other nations do.—*M. L. Muhleman, late Deputy Assistant Treasurer of the United States, in "New York Times Annual Financial Review."*

## \*GEORGE F. SEWARD.

Hon. George Frederick Seward, LL.D., for nearly a score of years connected with the United States diplomatic service, holding the post of Minister to China from 1875 to 1880, and of recent years prominently identified with underwriting, and since 1893 President of the Fidelity and Casualty Company, of New York, was born in the village of Florida, Orange County, New York, November 8, 1840. His family, a distinguished one in American annals, is traced to an ancestor who came hither from Wales. For centuries past the name has been of heraldic rank in England and Ireland, and not a few of its bearers in those kingdoms have been persons of eminence in letters, science and statecraft. During the Revolution the American Swards were loyal to the cause of the Colonies, and John Seward, the great-grandfather of the subject of this sketch, sturdily fought for freedom, holding the rank of colonel in the patriot army. A son of this gallant officer, Dr. Samuel S. Seward of Sussex, New Jersey, settled in Orange county, N. Y., after the Revolution, and, engaging in business pursuits apart from his profession, acquired considerable wealth. His third son, William H. Seward, an uncle of the subject of this sketch, won signal distinction as a statesman; and, as one of the brilliant and able leaders of the Republican party, had strong support as a presidential candidate. He was successively Governor of the State of New York, United States Senator, and Secretary of State in the Cabinet of President Lincoln; and narrowly escaped death at the time the latter was assassinated. George Washington Seward, son of Dr. Seward, married Tempe Wicke Leddell, daughter of Dr. John W. Leddell, of Mendham, N. J. They had five children. George Frederick, the subject of this sketch, was the fourth of these. He was prepared for college at the Seward Institute, Florida, N. Y., founded by the family, and in 1856 entered Union College. Being called upon to assume the management of the large property of the family, he withdrew from the college before completing the full course and, devoting himself to the task with intelligence and ardor, won substantial reputation as a business man before he attained his majority. Appointed United States consul at Shanghai in 1861, and confirmed notwithstanding some opposition on the part of those unacquainted with his practical business training, he brought to the discharge of his official duties the freshness, purity, energy and daring of youth, fortified by excellent common sense, and the skill and judgment of a practical man of affairs. The extra-territorial authority attaching to the consular office in China, vesting it with judicial as well as business functions, and conferring practically arbitrary power in both civil and criminal cases, added to the gravity of the consul's duties, which were further complicated by the disturbed conditions prevailing at the time.

Mr. Seward's wisdom, justice and energy, in the difficult situation in which he was placed, were publicly commended by both the American and British Ministers, Mr. Burlingame and Sir Frederick Bruce, and by Gen. Gordon; and between these gentlemen and the young American official a life friendship developed. In 1864 Mr. Seward was raised to the rank of Consul-General, and given jurisdiction over all American consuls in the Chinese Empire. He used his powers vigorously, and effected notable reforms that vastly improved the service. About this time he became doyen of the foreign consuls at Shanghai, a position which in various ways

\*A portrait of Mr. Seward is presented in this issue of the MAGAZINE as a title illustration.

added to his responsibilities. Offered the post of United States Minister to Corea in 1867, he declined the honor, not deeming the time auspicious for attempting to open relations with "the Hermit Kingdom"; and again in 1870, when asked by his Government to accompany Mr. Low, then Minister to China, upon a mission to Corea, asked to be excused because of the disturbed conditions in China. But always actuated by a sincere desire to promote friendly relations between the United States and Corea, he awaited the opportune moment, and, when it arrived, laid down the lines which led eventually to the cordial state of affairs now existing. In a variety of ways while in the East Mr. Seward showed his fitness for high executive office and ability to cope with difficult, even grave situations.

In 1875 Mr. Seward was appointed Envoy Extraordinary and Minister Plenipotentiary to the Court of Peking. Although but thirty-five years of age when he was promoted to this, the highest rank in the American diplomatic service at that time, he had abundantly demonstrated his fitness for its duties and entered upon them practically endorsed on all sides. His wise and just conduct of the intercourse between his Government and that of China greatly strengthened the bonds of friendship between the two nations, and vastly raised the Chinese esteem for the American character, intelligence and honesty of purpose. He continued in office until 1881, when he was succeeded by Professor Angell, of Michigan University, who, with two others, was instructed to negotiate with China a treaty under which the American Government might legislate toward the exclusion of the Chinese—a treaty which Mr. Seward had declined to attempt to negotiate.

Besides his many State papers and occasional papers and pamphlets on economic and political subjects, Mr. Seward is the author of a notable work entitled, "Chinese Immigration in its Social and Economic Aspects" (published by G. P. Putnam & Co., New York, 1881).

In 1887 Mr. Seward's splendid abilities as a business man were drawn into the field of underwriting by his election to the vice-presidency of the Fidelity and Casualty Company, of New York, to the presidency of which he succeeded in 1893, since which time he has been the company's active executive director. Although but twenty-six years in operation this corporation has reached a commanding position. It has assets approximating five millions, a net surplus largely in excess of one million, and has paid in losses between fourteen and fifteen millions. At its home office building, one of the large structures in the business section of the metropolis, the company maintains a clerical staff of upwards of five hundred members; and including its agents has an aggregate working force of about three thousand seven hundred and fifty persons.

The labor Mr. Seward has performed in the interests of casualty underwriting has been enormous. A close student and thinker, he has brought to the business all the resources of a strong intellectuality and an analytical mind, and has added the benefits of an unusual experience.

Mr. Seward was president of the North China branch of the Royal Asiatic Society in 1865-6. The degree of Doctor of Laws was conferred upon him by his Alma Mater—"Old Union"—in 1902. He is vice-president of the Willson Aluminum Company, and a member of the American Geographical Society, of the Academy of Political and Social Science, of the Institute of Civics, the New Jersey Historical Society, and of various local associations at Orange, N. J., where he resides, and of the Authors' Reform, Lawyers' and Patria Clubs of the city of New York, and of the Chamber of Commerce of the State of New York, in which he is chairman of the committee on taxation. He married, in 1870, Miss Kate Sherman, of Marysville, California, whose father, a member of the Ohio family of that name, was one of the "Argonauts." They have one son, George Oulton Seward, and three daughters, Marian, Annie Leddell and Emma, all now living.

# STATE BANKS—REPORTS OF SUPERVISING OFFICERS.

## STATE OF MAINE.—FORTY-SEVENTH ANNUAL REPORT OF THE BANK EXAMINER.

To the Honorable John F. Hill, Governor, and the Executive Council of the State of Maine :

The Bank Examiner has the honor to submit herewith the forty-seventh annual report of the general conduct and condition of all banking institutions created and authorized by the State, for the fiscal year ending on this date.

The number, classes and assets of all State institutions under the supervision of this department are as follows :

|                                     |     |                  |
|-------------------------------------|-----|------------------|
| Saving banks.....                   | 51  | \$80,538,169.30  |
| Trust and banking companies.....    | 23  | 19,914,010.63    |
| Loan and building associations..... | 35  | 2,932,206.28     |
| Total.....                          | 109 | \$103,384,386.21 |

This is a gain of six in the number of institutions reported, seven new institutions having been organized and added to the list and one liquidated during the year. The total assets have increased \$5,540,002, as against \$5,043,506 in 1902, being \$591,496 in excess of the increase for last year. This unusually large increase is due to the additions coming from the new institutions organized during the year. As a matter of fact, the increase in assets in those institutions organized prior to the present year has been less than during 1902. This is undoubtedly due to the disturbed condition of business affairs; and also to the great local demand for capital which has led those having surplus funds to invest a larger portion of them directly, instead of through the medium of banking institutions. These total assets make a per capita of \$148.86 for the inhabitants of the State, as against \$140.78 in 1902—a gain of \$8.08.

During the present fiscal year the State banking institutions have paid to depositors and stockholders in interest and dividends \$2,938,969, as against \$2,510,540 last year. This is an increase of \$428,429 in the amount of income thus distributed among our people. The total amount paid to depositors in Savings banks, shareholders in loan and building associations and depositors in trust companies, in other words the amount paid in dividends upon the real savings funds in all State banking institutions, has been \$2,822,049—an increase of \$123,458 from last year.

The aggregate of the reserve funds set apart by these institutions under provisions of law now amounts to \$1,581,971, as against \$3,290,292 in 1902. This is an increase of \$1,241,678, while last year it was but \$378,876. This large increase in these funds is unprecedented in the history of these institutions. It clearly shows that they are coming more and more to appreciate the importance of setting apart a portion of their current earnings, in times of business activity, as an insurance against future losses and the reduction of income incident to depressions in business affairs.

The total assets of all kinds of authorized banking institutions in this State are now \$153,606,634. This is a gain of \$6,753,744 in this class of personal property during the year. In this connection it is interesting to note that the assessed valuation of personal property in the State has increased but \$2,633,064 during the same time. An equal distribution of this banking capital would give to each inhabitant of the State \$221.19—a gain of \$9.78 during the year.

It has been generally understood that for the most of the year all of these institutions have been unusually short of current funds, or cash on hand. It appears, however, that upon the date of these returns they had in "cash on hand and on deposit" \$10,504,870, as against \$9,667,358 at the corresponding date last year, or \$837,512 more in cash assets. While it is impossible to ascertain exactly the amount of actual cash held at these dates—the returns of State institutions not giving the necessary items—a careful computation shows that, including National bank notes, it was at least \$3,000,000. This erroneous impression as to the amount of cash carried by the banks has undoubtedly been due to the fact that, because of the disturbed financial conditions, they have kept on hand a larger amount of available funds than usual. Their answer of "no funds" to borrowers has usually meant no funds

which they thought it prudent to invest. They have been forced into this position, too, at a time when new investments could have been made to better advantage than at any other time for several years. Every dollar of assets thus held without investment has reduced the income of the banks and affected their general showing. Thus they have assisted in tiding business over the recent period of distrust and depression. This is but another illustration of the manner in which they have frequently been able to prevent panics in financial affairs. In this way they have served the public to an extent not fully appreciated. The inherent right of the government to restrict and regulate the affairs of public service corporations is everywhere recognized, while private corporations are usually allowed the same freedom granted to natural persons in conducting their business affairs. Yet because of the great influence banks have on business affairs, they are more closely supervised than quasi public corporations, notwithstanding they are, strictly speaking, private corporations, conducting a private business. Their stockholders are even placed under a double liability for the protection of the public—a liability not imposed upon the stockholders of other kinds of corporations.

## SAVINGS BANKS.

There are fifty-one Savings banks now doing business in the State. The following is an exhibit of their resources and liabilities on October 31, 1903, and a comparison with those of October 25, 1902 (cents omitted):

| RESOURCES.                                        | 1902.               | 1903.               |
|---------------------------------------------------|---------------------|---------------------|
| United States and District of Columbia bonds..... | \$1,845,900         | \$767,850           |
| Public funds in Maine.....                        | 2,823,108           | 2,953,492           |
| Public funds out of Maine.....                    | 16,665,151          | 17,912,873          |
| Railroad bonds in Maine.....                      | 6,841,123           | 6,836,076           |
| Railroad bonds out of Maine.....                  | 24,907,683          | 23,562,048          |
| Corporation bonds in Maine.....                   | 4,083,852           | 4,063,725           |
| Corporation bonds out of Maine.....               | 601,237             | 524,047             |
| Railroad stock in Maine.....                      | 862,566             | 873,431             |
| Railroad stock out of Maine.....                  | 400,852             | 370,937             |
| Corporation stock in Maine.....                   | 539,853             | 452,066             |
| Corporation stock out of Maine.....               | 67,972              | 61,572              |
| National bank stock in Maine.....                 | 2,111,757           | 2,023,421           |
| National bank stock out of Maine.....             | 84,496              | 73,336              |
| Other bank stock in Maine.....                    | 85,450              | 53,325              |
| Loans on mortgages of real estate.....            | 3,212,635           | 3,504,705           |
| Loans on collateral.....                          | 3,107,086           | 3,571,264           |
| Loans to municipalities.....                      | 641,763             | 400,373             |
| Loans to corporations.....                        | 1,033,887           | 1,076,974           |
| Real estate investment.....                       | 545,168             | 621,562             |
| Real estate foreclosure.....                      | 483,488             | 427,384             |
| Furniture and fixtures.....                       | 37,529              | 42,992              |
| Premium account.....                              | 489,048             | 452,237             |
| Expense account.....                              | 53,159              | 38,751              |
| Other resources.....                              | 10,233              | 4,314               |
| Cash.....                                         | 1,354,409           | 1,559,398           |
| <b>Total resources.....</b>                       | <b>\$77,853,815</b> | <b>\$80,533,189</b> |
| <b>LIABILITIES.</b>                               |                     |                     |
| Deposits.....                                     | \$73,102,924        | \$75,107,203        |
| Reserve fund.....                                 | 2,777,374           | 3,573,343           |
| Special reserve fund.....                         | 20,374              | 3,391               |
| Profits.....                                      | 1,952,741           | 1,794,231           |
| Other liabilities.....                            | 400                 | 55,000              |
| <b>Total liabilities.....</b>                     | <b>\$77,853,815</b> | <b>\$80,533,189</b> |
| Number of depositors.....                         | 203,273             | 209,011             |
| Average to each depositor.....                    | \$369               | \$369               |
| Average rate of dividends paid.....               | 3.23                | 3.24                |
| Amount of dividends paid.....                     | \$2,263,120         | \$2,352,764         |
| Municipal tax.....                                | 13,649              | 13,631              |
| State tax.....                                    | 537,720             | 485,046             |

## Classification of Deposits.

| EXHIBIT A.                                          | Number of Depositors. | Amount of Deposits. |
|-----------------------------------------------------|-----------------------|---------------------|
| Deposits of \$500 or less .....                     | 161,815               | \$18,916,120        |
| Deposits of over \$500 and not over \$2,000 .....   | 44,140                | 45,977,212          |
| Deposits of over \$2,000 and not over \$5,000 ..... | 3,343                 | 8,352,206           |
| Deposits of over \$5,000 .....                      | 213                   | 1,851,663           |
|                                                     | 209,011               | \$75,107,203        |
| EXHIBIT B.                                          |                       |                     |
| Deposits of \$2,000 or less .....                   | 205,455               | \$64,898,333        |
| Deposits of over \$2,000 .....                      | 3,556                 | 10,218,869          |
|                                                     | 209,011               | \$75,107,203        |

The present number of depositors is 209,011, while that at the date of the last report was 203,273—a gain of 5,738. The average amount now standing to the credit of depositors is \$359.35, as against \$359.62 last year.

## RESOURCES.

The following table shows the classes, and the amount and percentage of assets in each class, now held by Savings banks, and, for the purpose of comparison, the percentage of those holdings in 1902 and 1893 (cents omitted):

| RESOURCES.                               | 1905.                 |                           | 1902.                     | 1893.                     |
|------------------------------------------|-----------------------|---------------------------|---------------------------|---------------------------|
|                                          | Amount of each class. | Percentage of each class. | Percentage of each class. | Percentage of each class. |
| U. S. and District of Columbia bonds.... | \$767,350             | .95                       | 2.37                      | 1.15                      |
| Public funds in Maine.....               | 2,953,492             | 3.87                      | 3.63                      | 1.77                      |
| Public funds out of Maine.....           | 17,912,873            | 22.24                     | 21.41                     | 28.45                     |
| Railroad bonds in Maine.....             | 6,896,076             | 8.49                      | 8.79                      | 7.00                      |
| Railroad bonds out of Maine.....         | 26,562,048            | 32.98                     | 31.99                     | 19.57                     |
| Corporation bonds in Maine.....          | 4,063,725             | 5.04                      | 5.18                      | 5.36                      |
| Corporation bonds out of Maine.....      | 524,047               | .65                       | .77                       | .72                       |
| Railroad stock in Maine.....             | 878,431               | 1.09                      | 1.11                      | .84                       |
| Railroad stock out of Maine.....         | 370,937               | .46                       | .52                       | .72                       |
| Corporation stock in Maine.....          | 452,066               | .56                       | .60                       | .60                       |
| Corporation stock out of Maine.....      | 61,572                | .08                       | .09                       | .09                       |
| National bank stock in Maine.....        | 2,028,421             | 2.52                      | 2.71                      | 4.23                      |
| National bank stock out of Maine.....    | 73,396                | .09                       | .11                       | .54                       |
| Other bank stock in Maine.....           | 53,325                | .07                       | .11                       | .18                       |
| Loans on mortgages of real estate.....   | 8,804,705             | 10.93                     | 10.55                     | 12.45                     |
| Loans on collateral.....                 | 3,571,264             | 4.43                      | 3.99                      | 9.81                      |

| Cash.....                                | 1,559,398             | 1.94                      | 1.74                      | 1.57                      |
| Total.....                               | \$80,538,169          | 100.00                    | 100.00                    | 100.00                    |

The principal changes for the year are: a decrease of \$1,077,850 in Government bonds; and an increase of \$1,247,721 in public funds out of Maine; \$1,654,414 in railroad bonds out of Maine; \$52,069 in loans on mortgages of real estate; and \$464,169 in loans on collateral. Other minor changes account for the difference between the \$2,684,353 increase in total assets and the summary of the items stated.

Ten years ago the percentage of loans on mortgages of real estate was 12.45 while now it is but 10.93, yet during that time the amount has increased from \$7,061,638 to \$8,804,705.

This increase of \$1,743,066 in mortgage loans carried by Savings banks during a period when such loans have been generally decreasing, as well as the \$1,056,238 increase in mortgage and collateral loans during the present year, seem to answer conclusively the assertion frequently made that the funds of Savings banks are not available for local use among our people.

So long as the financial conditions and the laws regulating investments by Savings banks remain as now, the largest holdings of these banks must be in public funds out of Maine and railroad bonds out of Maine. These two items now constitute 55.22 per cent. of all the assets of

these banks. No institution confining its investments entirely to any one class would be as likely to prosper as under the present policy of distributing its assets among these various holdings. For this reason each institution should endeavor so to place its funds as to keep a due proportion among these various classes.

#### MARKET VALUES.

The following is an exhibit of the reserve, undivided profits and estimated market value of resources above liabilities, for each of the past five years, together with other totals convenient for comparison therewith (cents omitted):

|                                                            | 1899.       | 1900.       | 1901.       | 1902.        | 1903.        |
|------------------------------------------------------------|-------------|-------------|-------------|--------------|--------------|
| Estimated market value of resources above liabilities..... | \$8,258,819 | \$8,916,887 | \$9,940,301 | \$10,816,944 | \$10,198,908 |
| Reserve fund.....                                          | 2,243,454   | 2,321,685   | 2,468,025   | 2,777,374    | 3,578,848    |
| Undivided profits.....                                     | 1,263,606   | 1,480,769   | 1,867,044   | 1,952,741    | 1,794,231    |
| Total book surplus.....                                    | \$3,477,069 | \$3,802,455 | \$4,805,069 | \$4,730,116  | \$5,372,576  |
| Estimated market value above book surplus.....             | \$4,781,259 | \$5,114,422 | \$5,685,231 | \$6,086,828  | \$4,821,338  |
| Premium account.....                                       | 508,412     | 635,416     | 497,006     | 499,048      | 452,237      |
| Total dividend paid.....                                   | 2,081,543   | 2,138,788   | 2,204,022   | 2,268,120    | 2,852,764    |
| Deposits.....                                              | 64,009,896  | 67,240,489  | 70,288,968  | 73,103,924   | 75,107,203   |

#### OVER-CAPITALIZATION AND ITS INJURIOUS EFFECTS ON SAVINGS BANK INVESTMENTS.

The serious depression in the values of all kinds of securities during the year, though decidedly improved at the date of this report, has been occasioned largely by a reaction in such industrial and railroad stocks as have been grossly over-capitalized. Speculators, under the guise of promoters, during the prosperous times of the past few years, have floated an immense amount of such stocks. The unusually large earnings resulting from the prosperous conditions of business of all kinds have in many cases made dividends possible upon such stocks, sufficient to tempt investors. But in many instances promoters have been able to place such securities simply upon the strength of the general confidence incident to the prosperous conditions of business. It is evident that these operations have not reduced the amount of the actual wealth of the country, although in many cases they have resulted in serious loss to investors. These results are unfortunate only as affecting unsuspecting honest investors. Those who knowingly speculate in such stocks need but little sympathy, and their transactions one with another do not reduce the aggregate wealth of the country and should have but little effect upon general business. The real and serious injury to the public comes from the effect of these transactions upon the honest securities and legitimate business of the country. There has been nothing in the general financial and industrial conditions during the year to occasion depression or disturbance. As a matter of fact, business apparently has never been better than now, labor is employed and well paid and there seems to be an abundance of capital to carry on all legitimate enterprises. The trouble is that the operations of these promoters have finally aroused the suspicion and distrust of conservative investors generally, making it more difficult to secure capital for legitimate enterprises and thus indirectly affecting business conditions and especially the value of securities. Again, the large amount of money required and used by these operators, together with this distrust on the part of capitalists, have caused a severe strain upon the financial resources of the country and led to a material advance in interest rates and to the consequent falling off in the market price of all securities, including even those that could not be directly affected by the conditions suggested.

Fortunately, the Savings banks have been by law largely restricted in their investments of deposits to those stocks and bonds not directly affected by these conditions. All of their securities have, however, felt the effects of this depreciation, and their "estimated market value of resources above liabilities" has been materially reduced thereby. At the present time the stocks and bonds held by the Savings banks amount to \$68,537,704.92. Notwithstanding these consist largely of securities that are affected as little as any by ordinary depressions in the money market, the decrease in their market value from last year is approximately \$8,000,000. It is true that these conditions have only reduced the market value of their securities, and thus the apparent present standing of the Savings banks. But while they will ultimately receive the principal and interest in full upon their securities, and thus obtain the same results, their present standing is affected to the extent named by the existing conditions, as well as their ability to realize upon their assets if such a thing should become necessary. It appears,

therefore, that the assets of the Savings banks of the State of Maine, in other words, the interests of the 200,011 depositors therein, have suffered to the extent of at least \$3,000,000, that speculators and promoters might have the opportunity of manipulating the stock market to their profit. Were it possible to ascertain or estimate as easily the effects of these conditions upon other investors, and upon all other legitimate business, as upon this class of institutions, we should find the tax thus incurred an enormous one.

It is often said that "watered stocks will soon find their proper level." If they would, without causing such depression in legitimate business, then would they do comparatively little harm. It is amazing, however, that the great mass of our people, who have no interest in such manipulations, who cannot be benefited thereby, and who certainly suffer serious loss therefrom, will permit them to continue.

In the report of this department for 1900, attention was called to this matter as one seriously affecting investment securities. The present conditions emphasize the statement then made, and show to what a degree the manipulation of watered stocks, under the authority of the present laws, is influencing the general business of the country. Present conditions ought to teach a lesson that will lead to radical changes in our corporation laws.

It is commonly claimed that such matters will adjust themselves without regulation of law. This principle is not, however, applicable to the case in hand. Corporations can only exist through legislative authority. The right to issue stock is not a natural and inherent right of any individual or association of persons. It is a privilege exercised only under authority of law, and a law which permits it is as unwise as though it directly authorized such issue. No one will contend that a law for the organization and conduct of corporations, expressly giving them the power of issuing, say \$100,000 of capital stock for each \$1,000 of capital actually paid in, would be wise, yet this is substantially the effect of the present laws in nearly all of the States. While such authority is not contained in the statute in express terms, and while no Legislature would enact laws containing such provisions, yet in many States the laws give such authority by implication or permit this practice at the will of the speculators.

In addition to the depreciation in the value of the assets of the Savings banks, the present conditions have indirectly affected them to their disadvantage in another way. Commercial banks ordinarily invest a large portion of their assets in call and short time loans. They are, therefore, able within a period of, say six months or one year, to take advantage of changes in interest rates. When rates are advancing as at the present time, they are given a great advantage over the Savings banks, which have a large portion of their funds invested in securities that will not mature for a term of years. The result is that interest rates upon private investments, and the dividends paid by other classes of banks, have advanced, while in the Savings banks they must remain substantially the same. For these reasons, if the present rates should prevail, it would be three or four years, at least, before the Savings banks could safely advance their rates of dividends. This would lead to the placing elsewhere of much of the money that would otherwise be deposited in Savings banks, to the embarrassment of these banks and to the damage of the State in the way of taxes received therefrom. We have frequently called attention to this fact in the reverse condition that has existed for a number of years. The gradual reduction in interest rates, during the period preceding the present year, has enabled the Savings banks to pay larger dividends than they could have paid upon the rates prevailing at the time, because of the benefits received from old investments made under higher interest conditions.

#### DIVIDENDS.

The following table gives the rates and amounts of dividends paid by the Savings banks during the year covered by this report, and a comparison with those of the previous fiscal year (cents omitted):

| RATE OF DIVIDEND.         | Number of banks. |       | Amount of dividends. |             |
|---------------------------|------------------|-------|----------------------|-------------|
|                           | 1902.            | 1903. | 1902.                | 1903.       |
| 4 per cent. paid by.....  | 2                | 2     | \$12,745             | \$3,901     |
| 3¾ per cent. paid by..... | 2                | ..... | 48,559               | .....       |
| 3½ per cent. paid by..... | 18               | 20    | 1,425,430            | 1,606,599   |
| 3¼ per cent. paid by..... | 3                | ..... | 142,495              | .....       |
| 3 per cent. paid by.....  | 26               | 29    | 633,990              | 740,204     |
| 3.24 average rate, 1903.  | 51               | 51    | \$2,263,120          | \$2,352,704 |

As explained elsewhere, there has been but little increase in the earnings of the Savings banks during the year resulting from the advance in interest rates. Even should the present

rates continue it will be several years before the income of the banks will be increased sufficiently to warrant higher rates of dividends. In the meantime they should not anticipate any such possible increase of earnings, but pay only such dividends as the profits actually collected will warrant. This is the only safe policy to follow, especially in view of the fact that interest rates are likely soon to drop to those prevailing last year.

## TAXES.

The amount of taxes paid the State for the year has been \$485,046 as against \$537,720 last year—a decrease of \$52,673. This is due to the reduction in the rate made at the last session of the Legislature of approximately one-eighth of one per cent. for the year. Under the provisions of the present act taxing Savings banks, there will be a further reduction taking effect April 1, 1904. After that date the tax upon savings deposits in trust companies and in Savings banks will be substantially the same, and the revenues of the State will not be materially affected by the placing of these funds in either class of these institutions. These funds are not, however, liable to pay a direct tax to the State when deposited in the National banks, although legally liable to municipal taxation if found and listed by municipal assessors. Should the National banks continue in this business, and obtain as large a proportion of the annual savings of our people as during the present year, the time when the amount of the tax will equal that paid in 1902 is likely to be postponed considerably beyond that estimated when the enactment of the present law was under consideration. The further reduction in rate will probably reduce the amount of tax next year to approximately \$425,000.

## TRUST AND BANKING COMPANIES.

There are now twenty-three trust and banking companies doing business in this State, six having been added to and one dropped from the list during the year.

In the following table is presented a statement of the resources and liabilities of the trust and banking companies as of October 31, 1903, and a comparison with those of October 25, 1902 (cents omitted):

| RESOURCES.                                       | 1902.               | 1903.               |
|--------------------------------------------------|---------------------|---------------------|
| Demand and time loans.....                       | \$7,860,608         | \$9,064,171         |
| Mortgages of real estate.....                    | 1,420,801           | 1,545,540           |
| Stocks and bonds.....                            | 5,135,097           | 6,002,151           |
| Trust investments.....                           | 143,613             | 96,392              |
| Sinking fund investments.....                    | 614,481             | 862,447             |
| Real estate owned.....                           | 216,079             | 234,745             |
| Due from other banks and bankers.....            | 2,547               | 3,995               |
| Expense account.....                             | 26,454              | 38,501              |
| Furniture and fixtures.....                      | 108,000             | 129,161             |
| Cash on hand and on deposit.....                 | 1,482,869           | 1,890,735           |
| Other resources.....                             | 25,918              | 28,167              |
| <b>Total resources.....</b>                      | <b>\$17,085,941</b> | <b>\$19,914,010</b> |
| LIABILITIES.                                     |                     |                     |
| Capital stock.....                               | \$1,676,800         | \$2,022,000         |
| Surplus fund.....                                | 446,150             | 885,400             |
| Undivided profits.....                           | 769,755             | 575,426             |
| Time deposits.....                               | 5,265,675           | 6,512,022           |
| Demand deposits.....                             | 7,171,198           | 7,582,878           |
| Certificates of deposit.....                     | 562,880             | 680,152             |
| Trust department.....                            | 165,794             | 96,392              |
| Sinking funds for corporations.....              | 671,349             | 878,499             |
| Unpaid dividends.....                            | 773                 | 1,062               |
| Deposits for coupons.....                        | 39,907              | 64,354              |

| Amount of interest paid on demand deposits.....  | 121,221             | 94,576              |
| <b>Total profits distributed.....</b>            | <b>\$402,380</b>    | <b>\$469,526</b>    |
| Average rate of dividends paid on stock.....     | 7.50 p. c.          | 7.94 p. c.          |
| Average rate of interest on time deposits.....   | 3.37 p. c.          | 3.23 p. c.          |

The total number of depositors in these institutions is 81,624, while at the date of the last report they numbered 26,212—a gain of 5,412. Of these accounts, 20,346 are reported as liable, and 11,278 as not liable, to State taxation under present law. The total profits distributed by these institutions during the year have been \$469,536, while in 1902 they were \$402,860.

The increase in resources is made up principally of \$1,223,568 in demand and time loans, and \$367,053 in stocks and bonds.

## STATE TAX.

In 1901 a tax of one-half of one per cent. per annum was laid upon the average amount of all "time interest-bearing deposits" held by these institutions. In 1906 this law was amended so as to tax all "time deposits and deposits bearing interest at three per cent. or more per annum." The amount of this tax for 1902, under the first provision, was \$22,663, and in 1906, under the amended provision, \$37,174, being an increase of \$14,510. While this gain is in some degree due to the increase in deposits, it is more largely due to the fact that the amended law includes certain deposits that were not liable to taxation under the first provision.

Respectfully submitted,

FREMONT E. TIMBERLAKE, *Bank Examiner.*BANKING DEPARTMENT, AUGUSTA,  
December 1, 1908.

## CONNECTICUT.—BANK COMMISSIONERS' REPORT.

To His Excellency, Abram Chamberlain, Governor:

The Bank Commissioners have the honor to submit their annual report with the annual statements of the Savings banks as of October 1, 1908; also with the statements of the State banks and trust companies, showing their condition at the close of business September 9, 1908. There are ninety Savings banks, and the following statement gives an abstract of their assets and liabilities as compared with October 1, 1902 (cents omitted):

| ASSETS.                                                                                   | October 1,<br>1903.  | October 1,<br>1902.  | Increase or<br>decrease. |
|-------------------------------------------------------------------------------------------|----------------------|----------------------|--------------------------|
| Loans on real estate.....                                                                 | \$71,398,064         | \$70,204,429         | \$1,193,635              |
| Loans on collateral security.....                                                         | 10,757,879           | 8,371,604            | 2,386,275                |
| Loans on personal security only.....                                                      | 3,083,641            | 3,730,471            | *646,830                 |

STATE BANKS AND TRUST COMPANIES.

The number and the amount of capital stock of the State banks remain the same, but the number of trust companies is increased two, and the capital stock increased \$230,000.

Five reports were called for during the year showing the condition at the close of business on November 26, 1902, February 6, April 9, June 9 and September 9, 1903. An abstract of these reports follows the statements of the banks and trust companies in detail.

An abstract of the reports for September 9, 1903, showing the total assets and liabilities, will be found below (cents omitted):

CHARLES H. NOBLE,  
GEORGE F. KENDALL,  
*Bank Commissioners.*

HARTFORD, December 31, 1903.

# NEW YORK SAVINGS BANKS AND TRUST COMPANIES.

ANNUAL REPORT OF THE SUPERINTENDENT OF BANKS FOR THE YEAR 1903.

STATE OF NEW YORK, BANKING DEPARTMENT,  
ALBANY, February 23, 1904.

To the Legislature :

Eighty-one trust companies made report to the Banking Department as of the morning of January first, 1904, as against seventy-seven the year before. During the year the Atlantic Trust Company, of New York, was merged into the Metropolitan Trust Company, and the Manufacturers', of Brooklyn, into the Title Guarantee and Trust Company, of New York, and these new trust companies were chartered :

| NAME AND LOCATION.                            | Capital.           | Paid-in surplus.   |
|-----------------------------------------------|--------------------|--------------------|
| Bankers' Trust Company, New York.....         | \$1,000,000        | \$500,000          |
| Citizens' Trust Company, Utica.....           | 200,000            | 50,000             |
| Commonwealth Trust Company, Buffalo.....      | 500,000            | 500,000            |
| County Trust Company, White Plains.....       | 100,000            | 50,000             |
| Mount Vernon Trust Company, Mount Vernon..... | 200,000            | 200,000            |
| Syracuse Trust Company, Syracuse.....         | 300,000            | 300,000            |
|                                               | <b>\$2,300,000</b> | <b>\$1,600,000</b> |

In the same period five companies increased their capital by an aggregate of \$3,875,000, issuing the new stock at a premium which added substantially to their surplus, and two companies reduced their capital from one million dollars each to five hundred thousand dollars each. The surplus paid in during the calendar year upon the organization of new companies and in connection with increases of capital reached a total of over thirteen million dollars, while the total net increase for the year in these same items, as reported by all of the companies, is about a half a million dollars less. It would seem, therefore, that but for such payments the combined surplus and undivided profits of the eighty-one companies would have shown a very considerable loss for the year. That statement measures in part, undoubtedly, the cost to this class of institutions of the depreciation in stock and bond values which has been so general and severe. How well the companies have met such losses—charging the shrinkage to profit and loss, so that their statements should reflect their condition with substantial accuracy—is evidenced by the fact that, estimating their investments at prices current on the first of January, their combined surplus and undivided profits were over a million and a half dollars larger than the figures at which they are carried on the books of the respective companies. That signifies heroic treatment as to the matter of losses, and will, I imagine, prove a surprise to the public. Nor can it fail to strengthen confidence, and it comprehends the assurance of a corresponding gain in the companies' profit accounts when the security markets take a turn upward.

The companies making report on the first of January are herewith listed, together with the capital and the combined surplus and undivided profits of each, both at book and market values (cents omitted):

| NAME AND LOCATION.                                  | Capital.  | Surplus and undivided profits at book value. | Surplus and undivided profits at market value. |
|-----------------------------------------------------|-----------|----------------------------------------------|------------------------------------------------|
| Adirondack Trust Co., The, Saratoga Springs.....    | \$100,000 | \$56,956                                     | \$56,178                                       |
| Albany Trust Company, Albany.....                   | 300,000   | 231,887                                      | 157,607                                        |
| Bankers' Trust Company, New York.....               | 1,000,000 | 557,064                                      | 580,971                                        |
| Binghamton Trust Company, Binghamton.....           | 300,000   | 201,058                                      | 186,826                                        |

\* Combined surplus and undivided profits for 1904 on book value of stocks and bonds, \$141,504,561; on market value, \$143,030,334. The surplus and undivided profits, as given in table for 1903, are on market values.

The resources for the two years are remarkably close together in their aggregates, though, of course, but for the business of the new companies, the loss since January, 1903, would be larger than the figures themselves make it appear. A comparison with the July reports is still less favorable resources having decreased over one hundred and six and a half million dollars in six months. Deposits fell off in the same time one hundred and seven and one half millions. More than the entire net decrease occurred in the companies located in the Borough of Manhattan, in the City of New York, where the deposits decreased more than one hundred and thirteen millions. In the companies in the Borough of Kings there was a slight increase, and in those located outside of the City of New York the gain was about five and a half millions. Various explanations are assigned for the decrease in the Borough of Manhattan, the three most probable being, that because of the low rates prevalent in Wall street for call loans, the companies themselves discouraged interest-bearing deposits; that funds were withdrawn in many instances to be put into permanent investments at the prices which seemed so attractive a few months ago; and that large interests which had been accustomed to carry heavy balances with the trust companies found it expedient, under prevailing conditions in the loan markets, to use such moneys for improvements and for purchase of equipment instead of having recourse to bond issues.

In view of what has preceded, the statement that the trust companies were less prosperous in 1903 than in 1902 is almost superfluous. In fact, their gross earnings decreased \$4,199,075, while their expenses increased \$2,219,555.06, reducing, in comparison with the previous year, the amount applicable to dividends or for addition to surplus account by \$6,418,630.06. Besides, the dividends declared were \$259,648 less than for the preceding year. But even at this, the net earnings for 1903 (though without allowance for losses or for depreciation in investments) were \$17,388,606.40, or \$8,383,756.40 in excess of dividend distributions. Aside from the companies of comparatively recent organization, all but two or three paid dividends for the year ranging from the rate of three per cent. to eighty per cent. on their capital. This calculation does not take into consideration, however, the additional investment carried as surplus, which, in nearly all companies formed laterally, has been equal to the capital, while in some of the older institutions the accumulation of earnings undivided is several times larger than their capital.

Apart from the Holland Trust Company, which is in liquidation, and whose annual expenses exceed its income nearly three times, and excepting also two or three companies which have suffered through special causes, the trust companies of the State, though not making the very large profits that it was their good fortune to earn in the previous year, are nevertheless strong and prosperous. The eagerness to organize new institutions of this class has abated within the year, and where fifteen were chartered in 1902, and four were in course of organization at this time last year, the net increase in the number in 1903 was but four, and only two are now in process of organizing. Moreover, four companies in New York are now taking merger proceedings, the McVickar and Empire State to form one company to be known as the Empire Trust Company; and the Continental and the New York Security Trust Company to consolidate under the latter name, with their combined capital increased to three million dollars, their surplus to perhaps three times that sum, and with a board of directors representing many most important interests.

#### THE SAVINGS BANKS.

One Savings bank, the Maiden Lane, in New York city, was authorized by me during the year 1903. Its trustees have executed a bond that they will defray all of the expenses of the institution until such time as its earnings shall be sufficient to meet the cost of operation after paying three per cent. to its depositors. I have authorized no Savings bank in the past eight years except upon similar conditions, and but five in all. A new institution of this class is at a great disadvantage, having to build a business against most formidable competition. The older Savings banks, besides having gained public confidence, have accumulated surpluses in considerable amounts, and thus have these funds, as well as the sums designated, "due depositors," to contribute to their earnings. Even at this, few of them are able to pay dividends in excess of three and one-half per cent, and a half dozen do not pay more than three per cent. It would be a calamity if any Savings bank should fail—serious not merely to that particular institution's depositors, but to the entire system, which such a misfortune would tend to discredit in the public mind. For these reasons it is my practice, before permitting a Savings bank to start, to require that convincing testimony be supplied that it will probably succeed.

A comparison of the reports of the Savings banks for the first of January, last, with those of the year preceding shows a large growth during the year by the institutions in question, but far short of that in 1902. The total amount deposited was larger by nearly ten million dollars than ever before in the like period, but market, industrial and labor conditions during a part of the year made it a fact also that the withdrawals were the largest ever known—the excess over 1902 having been more than twenty-two million dollars. But still the depos-

its exceeded the withdrawals by more than seventeen millions, which, with the interest credits, carried the gain for the year in the amount due depositors to close upon fifty-four million dollars, or to the total of \$1,131,281,943.46. The total resources now aggregate \$1,238,800,468.61, or about forty-seven and a half millions more than a year ago. The discrepancy in these two increases represents, of course, whatever losses the Savings banks may have incurred, the depreciation in the market value of their bond holdings, and possible payments in a few instances of dividends in excess of net earnings. It is not determinable accurately what the shrinkage has been in the market value of the bond investments of the Savings banks, but some comprehension of the amount may be had from the fact that, while these investments have increased twenty-four and a half million dollars at par value, the gain at market value has been only thirteen and a third million dollars, and the combined surplus of all the banks upon market valuations has decreased six and a quarter millions, while the par value surplus has increased nearly five millions.

The gain for the year in the amount due depositors, though ten million under that made in 1902, and seventeen millions under that for 1899, is yet six millions greater than was ever shown in any year prior to 1897; and double that for any year in the history of the system prior to the one last named, except two in the early seventies, and except also the years 1892 and 1895. When it is considered that, as the officers of Savings banks understand the fact to be, the larger withdrawals were really investment funds, and were diverted from the banks to be put into securities at last summer's low prices, the showing does not suffer materially even in comparison with the record year 1899. The closing of such accounts, moreover, is to be held to be a gain rather than a loss, for it was not to be the custodian of the funds of capitalists that the Savings banks were authorized, and vested with special privileges and tax exemptions.

The number of open accounts increased by almost exactly ninety thousand during the year, or ten thousand under the increase in 1902. Quite possibly the disturbed labor conditions in many of our cities may account for this falling off.

The year's expenses of all the Savings banks, as the various banks have been accustomed to classify expense payments, aggregated \$3,570,046.07, which is an increase of \$157,181.61 over 1902. A portion of this increase is attributable to the larger franchise tax paid, equal to one per centum on the par value surplus of the banks, such tax having amounted in 1902 to \$771,474.94 or \$34,249.74 more than 1902. Not all of this tax, however, is returned as expense, some of the banks carrying the item under another head. Analyzing each report, I find items not listed as expense, but which I am clearly of the opinion should be so listed, that aggregate \$358,708. Most of this sum is made up of payments on account of the franchise tax. Joining this to the expense recognized by the banks themselves as such, the total becomes \$3,928,749. At this sum it includes the entire franchise tax, all taxes paid locally on banking houses, insurance on same, all rents for banking rooms, fees paid for appraisals of real property on which loans are made, advertising, fuel and lights, purchase of supplies, assessments toward defraying the expenses of the Banking Department, and all salaries paid. Upon the former basis employed to ascertain expenses, the percentage to resources figures at \$2.88+ per one thousand dollars, or at practically the same ratio as last year. Upon the basis of including all expense payments, it is \$3.17+ per thousand dollars.

The condition of the Savings banks in the aggregate, as of the morning of January first, 1904, is shown by their reports to be (cents omitted) :

CLOSED AND FAILED SAVINGS BANKS.

Of the \$73,997.23 reported one year ago as held by me for account of depositors in closed and failed Savings banks who had not made proof of their claims either with the receivers of the respective institutions, or with this department, only \$32.30 was called for and paid over during the year. All of these claims being of many years' standing, and many of the individual credits insignificant in amount, the presumption seems reasonable that a considerable part of the total sum will never reach those to whom it should go. Yet since the first of such funds was lodged with the Superintendent of Banks, the total payments therefrom to the depositors have been \$42,623.85. It is the policy of the Superintendent to make it easy for these claimants to realize the sums due them, no technical requirements being imposed as a condition precedent to payment, though, of course it is exacted in each case that reasonable proof of identity or of the right to draw the money be supplied.

INSTITUTIONS SUBJECT TO THE SUPERVISION OF THE BANKING DEPARTMENT.

The total amount of resources of each of the classes of institutions below mentioned, subject to the supervision of this department on the first day of January in each of the last thirteen years, is shown by the following tabulation (cents omitted):

Total Resources.

| January 1. | Savings banks. | Banks of deposit and discount. | Trust companies. | *Safe deposit companies. |
|------------|----------------|--------------------------------|------------------|--------------------------|
| 1892.....  | \$675,967,634  | \$371,830,699                  | \$300,765,575    | \$4,870,117              |
| 1893.....  | 718,454,663    | 295,456,929                    | 835,707,779      | 5,045,787                |
| 1894.....  | 704,536,118    | *271,496,822                   | 841,466,011      | 5,025,769                |
| 1895.....  | 735,868,598    | 284,911,681                    | 865,419,729      | 5,102,689                |
| 1896.....  | 783,078,580    | 285,407,997                    | 892,680,045      | 4,517,669                |
| 1897.....  | 812,178,632    | 280,691,855                    | 866,742,947      | 4,677,325                |
| 1898.....  | 869,751,244    | 324,766,619                    | 483,739,925      | 5,116,362                |
| 1899.....  | 923,420,861    | 355,485,972                    | 579,205,442      | 5,197,998                |
| 1900.....  | 1,000,209,069  | 366,904,183                    | 672,190,671      | 5,239,271                |
| 1901.....  | 1,066,019,216  | 380,711,930                    | 797,963,512      | 5,255,452                |
| 1902.....  | 1,131,584,624  | 431,616,408                    | 969,408,911      | 5,663,016                |
| 1903.....  | 1,191,327,573  | 368,932,847                    | 1,039,956,625    | 6,111,411                |
| 1904.....  | 1,238,800,468  | 382,080,238                    | 1,639,735,228    | 6,939,799                |

\*November 23, 1893; the other reports called in December.

†The Buffalo Loan, Trust and Safe Deposit Company and Rochester Trust and Safe Deposit Company are not included, as they are given under the head of trust companies.

The total gain in resources of these four classes of institutions during the year 1903 was \$63,223,377. The increase in the past eight years, or since I became Superintendent, has been \$1,261,922,011.

SECURITIES DEPOSITED.

The securities held in trust by the Superintendent of Banks under the law, for the protection of depositors with and creditors of the several trust companies on the first day of January, 1904, are shown in the following table:

|                                      | January 1,<br>1904. |                                       | January 1,<br>1904. |
|--------------------------------------|---------------------|---------------------------------------|---------------------|
| United States 2 per cent. bonds..... | \$2,000             | Rochester city 3½ per cent. bonds..   | \$80,000            |
| United States 4 per cent. bonds..... | 25,000              | Rochester city 6 per cent. bonds....  | 10,000              |
| New York State 3¼ per cent. bonds.   | 100,000             | Niagara Falls city 4 per cent. bonds. | 20,000              |
| New York county 3.3 per cent. bonds  | 50,000              | Middletown city 3½ per cent. bonds.   | 20,000              |
| New York city 2½ per cent. bonds..   | 165,000             | Albany city 3½ per cent. bonds.....   | 41,750              |
| New York city 3 per cent. bonds....  | 885,000             | Jamestown city 4 per cent. bonds.     | 20,000              |
| New York city 3½ per cent. bonds.    | 5,547,500           | Buffalo city 3½ per cent. bonds.....  | 50,000              |
| Brooklyn city 3 per cent. bonds..... | 220,000             | Bonds and mortgages.....              | 50,000              |
| Brooklyn city 3½ per cent. bonds.... | 250,000             |                                       |                     |
| Brooklyn city 4 per cent. bonds..... | 100,000             |                                       | \$7,686,250         |

## RECOMMENDATIONS.

I have but one recommendation to submit here beyond renewing those contained in that part of my report which was transmitted to the Legislature upon the day that it convened.

It cannot be urged too strongly that the quality of investments legalized to the Savings banks be maintained at the highest practicable standard. Seven years ago these institutions counted among their bonds one hundred and eleven million dollars of United States consols. To-day they hold of this particular class of securities less than nineteen millions, and in the same period they have increased their ownership of railway bonds from nothing to one hundred and seventy-seven millions. Undoubtedly, if there had been no broadening during this time of the scope of the investments open to Savings banks, the rates of interest paid by them to depositors must have been out much more than has been the case, and, so far as the change has gone, I am disposed to regard it as a wise one. The railway bonds that the law authorizes are in the main the best that could have been chosen from this class of securities, and are in all probability safe. But scrupulous care should be had not to extend the list unduly, and also against permitting to be thrust into it any bonds of an inferior sort. The underlying security for a Savings bank bond ought to be not only ample and absolute, but the character of the corporation that floats it should be of the highest. Extensions of the list of railway bonds for Savings banks should proceed slowly, and only upon lines that the united judgment of the officers of such institutions shall approve. The mere fact that a corporation wants a market for its securities should have no weight whatever in the matter.

The recommendations submitted in January, and herewith renewed, are:

I. The discovery in December, upon the regular annual examination of the Bank of Staten Island, at Stapleton, that the Cashier of that institution had appropriated its bond investments to the amount of \$185,437.28 at book value again emphasizes the need for a statutory requirement obligating boards of directors to make periodic examinations of their banks. In this case the Cashier began abstracting the bank's securities the very day following my examination in 1902, and employing the proceeds to protect his personal interests in the stock market. Almost within a fortnight the entire amount had been so taken, and converted by the Cashier to his own uses, so that for almost exactly twelve months the bank had no possession of the bonds, and no record of their disposal. The wrongdoing of the Cashier culminated in his suicide while my examination was in progress. Every report of the bank to this Department during the year contained the verified representation that the bonds so taken were among the assets. Here we have, with the similar appropriation last summer of bonds that belonged to the Cornwall Bank, two instances within a year where the practice of permitting a single individual to administer an institution's affairs has been attended by bad failures. If the statutes of the State should make directorships in banks carry a more certain responsibility and more specific obligations, by requiring examinations in the manner that my annual reports have several times suggested, with the exception that verified reports of such examinations be filed in this Department, the chances for repetitions of the Cornwall and Staten Island experiences would at least be lessened.

II. If foreign trust companies have the right to come into this State and maintain offices and transact any kind of business here, which I do not believe, such right exists without express statutory declaration of it, and power of visitation and examination of corporations of this class maintaining offices in New York is only implied. This is certainly an anomalous condition, and it ought not to be permitted longer to continue. It is recommended that the rights of such companies in this State be defined clearly by the Legislature: that positive prohibition be enacted against their receiving deposits here, or acting as trustee, guardian, executor, or in any trust capacity; and that if they shall be permitted to do business of any kind in this State, they may enjoy such privilege only upon license from the Superintendent of Banks, and with liability to annual examination by him of their branches in New York.

III. The right of domestic trust companies to hold stocks in private corporations might wisely be differently defined, their right to engage in underwriting schemes unqualifiedly denied, and the obligation imposed upon them to carry a legal reserve. As a part of this latter proposition I am confident that it would be advisable to require also that these institutions and the State banks in New York make weekly reports similar in scope to those submitted by the clearing-house banks and the non-member banks to the clearing-house association. All of these matters were discussed at length in my January report, and occasion is not thought to exist for amplifying them here.

Respectfully submitted,

FREDERICK D. KILBURN, *Superintendent of Banks.*

## THE HISTORY OF A TRUST.

[CERDIC SAXON in "The North American Review."]

To sum up briefly the trust's history. At the opening of 1866, it controlled absolutely the business of the country in its own line. Its position was apparently unassailable. The prospects could be expressed only in superlatives. All the great, successful men of the industry were under one management. No opposition was in sight. A surplus was in the treasury and a very large profit was in the business.

To-day, the trust's surplus is gone, and in its place is a bonded indebtedness of some \$17,000,000. It is perhaps doing about sixty per cent. of the business of the country, and that at little or no profit. The gains of the best mills are largely wiped out by the losses at the others, not to mention the constant interest drain and the drag of dismantled plants. Instead of being owner of the field, it has about ten well established competitors, each of the competing mills being headed by some of the ablest men in the industry, all of whom were formerly in the trust. Those who were the great leaders in this industry and its chief fortune-makers are dead, retired or at the head of companies outside the trust.

The public's appreciation of the trust is fairly well reflected in the stock market. Where the stock formerly sold at from 100 to 120 for the preferred, and from 60 to 65 for the common, it is now quoted at from half to one-third of those figures with no purchasers. The present managers are striving valiantly to put the trust on its legs again, but the task is herculean: while their newness in their position, their uncertainty of tenure of office, the changes and rumors of changes of various sorts each year of late, coupled with the absence of any one dominating master mind equipped for the requirements of the trust, handicap the future excessively. Furthermore, the moment the trust again gets where it can declare dividends on its \$50,000,000 capital, the field will offer too great an inducement for competition to be overlooked. This point is, perhaps, made clearer by the statement that the present live plants of the trust could be all duplicated, ready for business, for less than \$5,000,000 cash.

Now, what has been the result of ten years' experience with this typical industrial trust, which produced a commodity that is necessary to almost every person in America? Has the original fear of the public, or the claim of the monopoly promoter, been realized? Does not this trust excite more titters than terrors among the trade to-day? Did competition remain suppressed, or did inflated prices continue beyond a comparatively short period? Its original managing board embraced all the ablest and most successful captains of the industry; but was the trust able to bring about and continue that subordination and co-operation among them which was essential to its harmonious and successful development? Was it able to eliminate human nature in these men, and remove all traces of feelings generated during their careers of rivalry? This history seems to give answer to all these queries in a manner which suggests the absence of grounds for fear of continued industrial tyranny from any such combinations. Theoretically, a trust can become a monster of oppression; practically, trusts hurt only the confiding investing public. The average trust is as powerless for permanent harm as the bogymen of our childhood.

---

PROCEEDINGS OF THE FIFTH ANNUAL CONVENTION OF THE PENNSYLVANIA BANKERS' ASSOCIATION.—Through the courtesy of Samuel R. Shumaker, committee on publication, we have received the Proceedings of the Fifth Annual Convention of the Pennsylvania Bankers' Association. In paper, printing and binding, this volume is a model of quality and taste, and it might well be wished that other associations would profit by the example of Pennsylvania. Too many of these publications are wretchedly printed and poorly bound. There would seem to be some arguments in favor of making all these publications issued by the different States of uniform size, if not of style also. The high standard of typography set by William H. Rhawn, who supervised the publication of the proceedings of the first convention of the Pennsylvania Association, has been well sustained by Mr. Shumaker.

## THE WHITAKER WRIGHTS OF AMERICA.

[From the Monetary Times, Toronto.]

That a man is convicted of fraud and dies in disgrace by his own hand is no reason why his own version of his career should not be listened to with respect, even by those who have never been arraigned in a law court. Whitaker Wright, at the time of his capture in New York, said, or is reported to have said: "There is no difference between what I did in England and what your industrial companies are doing in America." Now, Wright may have fully believed what he said, but this does not exculpate him from the guilt for which his tragic death was such a sorry atonement, because the deeds for which punishment was meted out to him were committed not in America, but in England, where he must have known they were criminal acts.

But his terse statement does lead to a train of reflections upon the question, what constitutes a crime? Nominally, a crime is that which is contrary to and forbidden by the law. Moreover, at this stage of the world's civilization, it may generally be taken for granted that what is looked upon as a crime in one country is, or should be, considered a crime in other countries. Now, in this case, the methods of financing companies, which Whitaker Wright adopted in England, are there deemed distinctly fraudulent, and punishable by the law, while, on the other hand, they may be indulged in in this country and in the United States with impunity. Which, then, of the two alternatives does this more likely imply—that such methods are not really fraudulent, or that the law here is itself faulty in not touching them?

In England, Wright, the bold financier, came to be looked upon as little better than a buccancer, and, as such, the law speedily came into play. The interesting way in which his subsidiary companies bought from and sold to one another at an immense so-called profit, just before annual-meeting time, the rapidity with which thousands paid in became millions on paper, the extraordinary facility with which dividends were paid out of profits as yet unearned, the oceans of "water" in his vaunted stocks, all were looked upon by the courts, not as high finance, but as the sure evidence of a very acute desire to deceive the public. This was enough; he was found guilty; and the judge decided that no punishment within his power to measure out was too much for the man who would carry on such practices. On this continent, the same methods are used; dividends are paid out of unearned profits; worthless shares are loaded on a confiding public; companies are grossly over-capitalized, and the public, in order that shareholders may be paid dividends on a vast quantity of "water," has sometimes to pay through the nose for the necessaries of life. Yet nothing is done! In England, this sort of thing is criminal; is it less a crime here?

We have, of course, not so much to do with what goes on in the United States, but it is surely time that the Canadian laws which have to do with the formation of companies should be so amended as to afford more protection to the public than they do now. We remember noting the surprise of one of the English delegates to the recent Chambers of Commerce Congress, expressed at the way in which common stock is sometimes issued in this country at a merely nominal price to bondholders, giving the rein to the gambling element in its worst form. There are, however, several directions in which our joint-stock companies might be improved with advantage. What is so emphatically criminal in England cannot properly be deemed legitimate business here. That this is becoming recognized by business men is manifested by the passing of a resolution at the annual meeting recently of the Montreal Board of Trade calling for such changes in the Dominion and Province of Quebec Joint Stock Companies Acts as will put a stop to the fictitious over-capitalization of companies.

---

SAVINGS BANK INVESTMENTS.—The Attorney-General of New York recently ruled that the \$7,000,000 issue of the Philippine land-purchase bonds were not a legal investment for New York Savings banks.

## THE GOVERNMENT OF BUSINESS.

---

No other invention of the past two centuries has contributed more to the material prosperity of the world than the invention of the stock company.

What machinery is to hand labor, the stock company is to individual enterprise. It provides a method of aggregating capital so as to make great enterprises possible. No individual would be rich enough, no partnership would have sufficient resources to build railroads, construct ocean steamers, and conduct vast business operations. But for the stock company these things would have to be done—if done at all—by the State. The stock company enables them to be done as private enterprises. It is, therefore, a wonderful device for preserving the principle of individualism, and at the same time achieving the results of socialism. It not only aggregates capital, but gives continuity to a business. The world's greatest development has been accomplished by means of the corporation. The stock company ranks with the steam engine, the telegraph, the electric motor, almost with the printing press, as the greatest contributions to modern civilization.

Yet at every stage of its development the stock company had met with strong opposition. That is the fate of every useful thing that has appeared in the world. But in the case of the corporation, the antagonism has grown stronger as the corporation has grown larger and the possibilities of its power have been developed.

So to-day there is a popular prejudice against corporations stronger than has existed at any stage of the evolution of the stock company. It is well, therefore, to direct attention to the benefits of the corporation, lest many who feel some of the evils which result from the misuse of the corporate principle should go so far as to advocate measures that would destroy it altogether, or shackle it with restrictions which would prevent its development as an important tool of civilization.

Among the other benefits of the stock company—and this is not generally recognized—is that it affords an opportunity for persons of very moderate means to become partners in immense enterprises. If there were no stock companies, a person with a capital of one hundred, or one thousand dollars, could not become a partner in such an enterprise as the Pennsylvania Railroad or the United States Steel Corporation. The stock company is, therefore, an agent for the diffusion of wealth.

Abolish it, and there would be only two alternatives—socialism in its most radical form, or a military despotism. The stock company is, when properly considered, as much a development in the direction of liberty as popular government itself. It is a remarkable fact that the growth of democracy and the growth of the stock company have been contemporaneous events, and the relation between them is close. Both are based on the principle that the source of all power should be in the people.

This fact, however, seems to have been overlooked entirely both by the directors of corporations and by their enemies. The latter see anything but liberty in the latest evolution of the corporation. They discover in it only tyranny. They charge it with being the ally of monopoly. They declare that it is being employed to crush out competition and to concentrate the power of capital in a few hands. They proclaim loudly that the corporate power over the great enterprises of business is gradually extending itself so as to control the political power. Many, therefore, have come to believe that the modern corporation is a peril to human liberty.

Now this belief is the result (1) of prejudice, and (2) of excesses in the organization and the management of the corporations.

The prejudice must be removed by making clear to the people the inestimable benefits to themselves of the stock company. Who would abolish railroads, because they prevent the profitable operation of the stage coaches, and occasionally cause loss of life and property through accidents? Who would abolish the printing press because it has made yellow journalism possible?

Among the evils which have attended the extraordinary growth of the corporations in recent years are: 1. Concentration of control, which in many cases is independent of ownership; 2. Power without any proper sense of responsibility to stockholders and public; 3. The close identification of many companies with speculation; 4. The failure of directors to direct, and the neglect of stockholders to exercise their power; 5. The absence of any well regulated corporation conscience; 6. Gross abuses in promotion and organization; 7. Denial of the

rights of the people from whom the corporations derive their existence and power to do business; 8. Refusal to grant a reasonable publicity, such as is essential to safeguard the interests of public and investors. In addition it may also be asked whether the corporation principle has not been carried too far by the creation of companies owning other companies, thus permitting of a process of pyramiding of control, having grave possibilities of peril.

The problem is to reform these evils without destroying the benefits of organization and combination. Those who, in all sincerity, advocate these reforms are not the enemies of corporations, but their best friends. The greatest era of the stock company is not in the past, but in the future. The problem of remedying these abuses ought not to be so difficult. Moderate laws will accomplish something, though the danger in legislation is that it is often the expression of popular prejudice and clamor. More will be accomplished by the establishment of a comprehensive, but fair publicity, which shall inform the people of their rights and powers, safeguard investment against fraud, and protect the country against the exercise of corporate power for oppression and corruption.

In other words, what is wanted, and what is surely coming, is a government of business through corporations that shall be "a government of the people, by the people, for the people."—*Wall Street Journal*.

---

## NEW YORK AND LONDON BANKS.

---

[From the London "Statist."]

Through ignorance of the New York money market some of our daily contemporaries, with the "Times" at their head, have been preaching a policy of bank management in New York which is not merely misleading but positively mischievous. It applies to American banks a rule which the peculiar constitution of our own money market made necessary, and it tends to foster in the minds of our bank managers and of the public at large a mistaken sense of security which may lodge us some day in disaster.

It is to be hoped that, as a community, we are at last awakening up from the delusion into which the free trade agitation lulled us, and are about to overhaul and reform our whole business of bank organization. We have, during the past two sessions, been reconstructing our educational system. Mr. Chamberlain has invited us to reconsider our fiscal policy, and the columns of our newspapers show how busily we are engaged in doing so. It is sincerely to be desired that we may go on and deal properly with our banks, our railways, and other institutions. But if we are to legislate wisely for them, we must first get rid of existing misconceptions. Therefore we invite our readers to-day to examine with us the management of the leading banks of London and New York.

We need hardly remind our readers that our own joint-stock banks keep no reserves. The Bank of England does keep a gold reserve—whether a sufficient reserve or not we need not now stop to inquire. But it keeps a real reserve. The joint-stock banks do nothing of the kind. What they call their reserves are balances lodged with the Bank of England which are really required for their clearing-house operations, cash in hand, and moneys lent to bill brokers at call or short notice. The cash in hand consists mainly of Bank of England notes, and therefore is not a reserve, for it is based upon the reserve of the Bank of England. The money lent to bill brokers could not be called in in a real crisis unless the Bank of England were empowered to break the Bank Charter Act. Over and above these funds, the banks hold as a reserve, but which cannot be regarded as a cash reserve, investments in consols and other first-class securities. But consols could not be sold in a panic, as was proved in 1890, and therefore are not a reserve.

### BANK MANAGEMENT IN LONDON.

Our joint-stock banks, then, we would impress upon our readers, hold no cash reserves at all. They throw upon the Bank of England the whole cost and burden of providing a reserve for the whole United Kingdom. That being so, however anxious the banks might be to lend and discount to a dangerous extent, they have to impose some restraint upon themselves. Therefore they keep a portion of their funds invested. They lend out another portion at call or short notice, and they lay down the rule that the loans and discounts must never equal the deposits. It will be seen that the rule is a purely local one, born of the unwillingness of our banks to do their duty to the public by keeping reserves, and consequently fear that unless some such rule is observed disaster will follow. We need not remind our

readers how very loosely our banks observe even this self-laid-down rule. The amount they keep in hand even of the Bank of England notes is trifling. They are unwilling to keep even £100,000 idle for a single night, and the so-called reserves which they make such a parade of every month are lent out for the greater part of the month, and are called in at the end of the month, in the hope of hoodwinking the public. Yet several of our newspapers, who ought to know better, are applying this absurd rule to New York, and are leading the uninformed to infer that because it is not observed by the New York banks those latter are in a perilous state.

The banking law in the United States, we need hardly remind our readers, differs totally from the English banking law. In the first place, the National banks are compelled to call up the whole of their capital. Here, our readers will remember, the banks have a large amount of uncalled capital. Whether that uncalled capital would really be available in case of disaster depends upon whether the shareholders of the several banks are strong persons capable of paying up in an emergency or are not. In any case, of the capital which the banks themselves consider requisite as a guarantee for the safety of the deposits only a portion is paid up. In the United States the National banks have to call up the whole of their capital. In addition, the American banks lay by every year very handsome surplus profits—profits, that is to say, which they do not distribute to their shareholders.

#### BANK MANAGEMENT IN NEW YORK.

At the present time the aggregate capital of the New York associated banks—the banks, that is to say, associated in the clearing-house—amount to a little under 110 million dollars, or 22 millions sterling; and the surplus or undivided profits amount to a little over 120 million dollars, or somewhat less than 26 millions sterling. The paid-up capital and the undivided profits, therefore, together amount in round figures to about 48 millions sterling. This 48 millions sterling is available for employment in the business, because the New York banks keep a real reserve.

We have seen that English joint-stock banks keep no cash reserves, and that, therefore, they have to provide a large uncalled capital to give confidence to the depositors. But the New York banks are required—such of them as are National banks, by law, and such of them as are State banks, by the rules of the clearing-house association—to keep in lawful money of the United States reserves equal to twenty-five per cent. of their deposits.

Apart, altogether, therefore, from the capital and the undivided profits, there is an actual cash reserve for the security of the deposits amounting to twenty-five per cent., or five shillings in the pound sterling. Over and above this, the New York banks—at all events such of them as are National banks—issue notes which, of course, are employed in lending and discounting. On a recent date the circulation of the New York associated banks amounted to \$43,862,600, or £8,772,520.

After this preliminary explanation of the law relating to the New York banks, let us see how the banks stood on Saturday last according to their weekly returns. The loans and discounts amounted to \$908,350,000, or £181,670,000, and the net deposits amounted to \$908,340,000, or £180,868,000, from which it appears that the loans and discounts exceeded the deposits by £1,002,000.

Now let us inquire whether this is so serious a state of things as to raise a presumption that the banks are badly managed. We have seen already that the aggregate capital and undivided profits of these banks amount, in round figures, to 48 millions sterling. We have seen further, that the notes in circulation amounted to \$43,862,600, or £8,772,520; and it will be recollected that these notes are secured by the deposit in the United States Treasury of United States interest-bearing bonds of full amount. The notes, therefore, are practically beyond question. Lastly, the banks hold deposits amounting to £180,868,000.

Thus in capital and undivided profits in fully-secured notes and in deposits the funds at the command of the banks for employment amount to £237,440,000. Of this sum they employ £181,670,000 in loans and discounts, they hold no less than £49,000,000 in hard cash, and they have £8,772,000 of Government bonds in the Treasury against their note circulation. Therefore, for every £1 they owe to their depositors they hold 5s. 6d., or 27.5 per cent., in hard cash, and over £1, or 100 per cent., in loans and discounts. Moreover, is it not better and safer to hold securities as collateral than as investments? If the investments held depreciate in value, does not the loss fall on the banks themselves? But if the securities held as collateral depreciate in value, does not the loss fall upon the customers of the banks? Will any reasonable man say that this is an unsatisfactory state of things? On the contrary, is it not clear that, if the loans and discounts have been made with ordinary prudence, the banks are as sound as any in the world?

## BANKING AND FINANCIAL NEWS.

This Department includes a complete list of **NEW NATIONAL BANKS** (furnished by the Comptroller of the Currency), **STATE AND PRIVATE BANKS, CHANGES IN OFFICERS, DISSOLUTIONS AND FAILURES, etc.**, under their proper State heads for easy reference.

### NEW YORK CITY.

—Henry W. Cannon, for many years President of the Chase National Bank, has resigned that position, and has been succeeded by A. B. Hepburn, formerly Vice-President. Albert H. Wiggin, Vice-President of the National Park Bank, succeeds Mr. Hepburn as Vice-President of the Chase National. Mr. Cannon desired to be relieved of the active management of the bank, owing to length of service and impaired health. He will hereafter be chairman of the board of directors. During his long connection with the Chase National it has grown to be one of the most successful banks of the country. Mr. Cannon has also rendered distinguished services to the financial interests of the city and country through his official relations with the clearing-house.

Mr. Hepburn and Mr. Cannon are both former Comptrollers of the Currency. Mr. Hepburn was also a National bank examiner at one time, and was Superintendent of the New York Banking Department. He is widely known for his successful banking career and by his writings on financial and economic subjects.

—The money brokerage business formerly conducted by the late Oscar F. Richardson in the Drexel Building, No. 8 Broad street, will be continued by his son, Rudolf S. Richardson, in the Wall Street Exchange Building, 43 Wall street and 43 Exchange Place.

—It is reported that several additional trust companies will terminate their clearing-house arrangements, unless there is a modification of the rule, effective June 1 next, requiring the trust companies to keep a reserve of not less than ten per cent.

—At a meeting of the New York Chapter American Institute of Bank Clerks on the evening of February 23, James R. Branch, secretary of the American Bankers' Association, made an interesting address describing the protective work of the association.

—Dantel J. Sully & Co. have opened offices in the Wall Street Exchange Building for the purpose of conducting a general banking business, dealing in New York Stock Exchange securities, and purchasing and selling contracts on commission on the New York, New Orleans and Liverpool cotton exchanges and the New York Coffee Exchange. Mr. Sully, the head of the firm, is the well-known cotton operator, and the other members are S. F. B. Morse, Walter S. Crandell and Edwin Hadley, Jr. The firm has a branch at New Orleans.

—Gilbert G. Thorne, a Vice-President of the National Park Bank, was elected a director of the bank February 16.

—Regarding the recent defalcation of the agent of the American Surety Co. at Boston, President H. D. Lyman writes:

"The American Surety Company in its long career has, as surety, had to meet the losses of other corporations, sometimes in very large amounts, and has done so with equanimity. With equal equanimity, but with no pleasure, it now announces to you that Wallace H. Ham, treasurer of St. Paul's Church, treasurer of St. Luke's Home for Convalescents, and Manager of the American Surety Company at Boston, Mass., is a defaulter in about the net sum of \$190,000 divided between the Home and the Surety Company in such amounts as only a joint examination may hereafter determine. On ascertaining the facts in full, the executive committee of the American Surety Company ordered the arrest of the culprit and appropriated out of its surplus and undivided profit account of \$2,048,000, sufficient to defray its proportion of the shortage.

The above is all that can be said at this time. We have put the loss behind us and jailed the culprit."

—Plans for consolidating the National Citizens' Bank and the Central National have been approved by the directors of both institutions. The Central National will go into liquidation, the National Citizens will increase its capital from \$1,550,000 to \$2,550,000, using the added capital in acquiring the assets of the Central National. The consolidated institution will be

known as the Citizens' Central National Bank, and it will probably occupy the premises of the Central National at 220 Broadway. The officers of the consolidated bank will be the same as in the National Citizens'; President, Edwin S. Schenck; Vice-President, Ewald Fleitman; Cashier, Henry Dimse.

—Arrangements have been made between the International Banking Corporation and the Guaranty Trust Company whereby the latter withdraws from business at Shanghai, Hong Kong and Manila, and assigns the good-will of its business at these points to the International Banking Corporation, which will carry out existing contracts of the Guaranty Trust Company in China and the Philippines.

—The directors of the Morton Trust Co. have elected Harry Payne Whitney a director, to succeed his father, the late Wm. C. Whitney.

—It is regarded as probable that the Mechanics' National and the Leather Manufacturers' National will unite under the former title, President Gates W. McGarrah, of the latter bank, becoming President of the combined institutions.

—Messrs. Speyer & Co. recently contracted to take the \$35,000,000 Cuban loan, the price paid being 90%.

—The stockholders of the Empire State Trust Co. and the McVicar Realty Trust have ratified the plan for consolidating the two companies under the title of the Empire Trust Co.

—W. E. Gillette, director of the Guaranty Trust Co., and vice-president of the Mutual Life Insurance Co., and Charles R. Henderson, a director of both these corporations, were recently elected directors of the International Banking Corporation.

—The clearing-house committee recently made a ruling in regard to endorsements on checks. The question involved was whether a member bank presenting for payment through the clearing-house a check or draft to such member bearing a prior endorsement, "pay to any bank or banker or order," must guarantee all prior endorsements. The clearing-house committee rules that such endorsements are "qualified or restrictive," and that all prior endorsements must be guaranteed.

#### MIDDLE STATES.

**Pittsburg.**—Group 8 of the Pennsylvania Bankers' Association met at the Hotel Schenley February 22. The election of officers resulted as follows: Chairman, Wilson A. Shaw; vice-chairman, J. A. Herron, of Monongahela City; secretary, R. J. Stoney, Jr.; treasurer, Walter R. Stauffer, Scottdale; executive committee, Edward E. Duff, Pittsburg; John G. Kelly, Braddock; J. M. Painter, Kittanning; E. R. Baldinger, Allegheny, and David Johnston, New Castle. Group No. 8 of the Pennsylvania Bankers' Association includes in its membership nearly all the bankers and bank clerks of Western Pennsylvania.

In the evening a banquet was held, Col. Hugh Young, President of the Federal National Bank, Pittsburg, acting as toastmaster. A number of interesting addresses were made by local bankers and others.

**Appointed Bank Examiner.**—W. J. Robinson, for many years Cashier of the Mercer County National Bank at Mercer, Pa., has been appointed bank examiner for the central district of Pennsylvania.

**Pennsylvania Bankers Meet.**—The annual meeting of Group 5, Pennsylvania Bankers' Association, was held at the Lochiel Hotel, Harrisburg, at 8 o'clock P. M., February 22, the President, F. K. Ployer, of the Second National Bank, Mechanicsburg, Pa., in the chair, and about thirty of the representative bankers of Dauphin, Lancaster, York, Cumberland, Lebanon and other counties, comprising the group, in attendance. Subjects pertaining to the banking business were discussed and action taken likely to increase the growth and usefulness of the association.

The following officers were elected for the ensuing year: President, J. H. Shook, Cashier First National Bank, Greencastle; secretary and treasurer, C. W. Few, Cashier First National Bank, Lebanon, Penna.

**Executive Committee:** F. K. Ployer, Second National Bank, Mechanicsburg; J. S. McIvane, Cashier National Bank Chambersburg, Chambersburg; J. H. Breneman, Lancaster Trust Co., Lancaster; J. J. Frick, Cashier York National Bank, York; Al. K. Thomas, Cashier East End Bank, Harrisburg.

The business of the meeting concluded, the members of the association partook of the usual annual banquet, which was nicely served, and much enjoyed by all in the private dining-room of the Lochiel Hotel.

**Reserves for Trust Companies.**—On February 10 Mr. Matthews introduced a bill in the New York Assembly making the law in regard to banking reserves applicable to trust companies. Should the bill pass trust companies in New York will be compelled to keep a re-

serve of fifteen per cent. of their deposits, and those outside New York a reserve of ten per cent.

**Orange, N. J.**—Henry L. Holmes of Montclair, N. J., who has been State Bank Examiner since 1902, has been appointed Cashier of the Orange National Bank. Charles Hasler, who has been paying teller of the bank for many years, has been made Assistant Cashier.

**Baltimore.**—The great fire of February 7, which destroyed a large part of the business district of the city, was especially severe on the banks, many of the principal banks losing their buildings. Fortunately, the vaults withstood the fire and the securities and money were saved. Among the buildings burned were: National Exchange Bank, National Bank of Baltimore, National Union Bank, National Mechanics' Bank, National Bank of Commerce, Farmers and Merchants' National Bank, Third National Bank, First National Bank, German Savings Bank and Savings Bank of Baltimore.

Two of the financial institutions which had marvelous escapes from the fire are the Safe Deposit and Trust Company in South street, and the Mercantile Trust Company at the southwest corner of German and Calvert streets. These were in the heart of the burned district, and were not touched.

Measures were promptly taken by the banks for having outstanding checks on them cashed, and the situation has been met in all respects with energy and resolution.

**New Jersey Bankers' Association.**—Members of the New Jersey Bankers' Association met in annual convention at Atlantic City, February 26 and 27.

Mayor F. P. Stoy made the address of welcome, and President Edward C. Stokes responded on behalf of the association. Wm. C. Heppenheimer, President of the Trust Co., of New Jersey, Hoboken, spoke on "Special Departments of Trust Companies;" James R. Branch, secretary of the American Bankers' Association, spoke of the protective and educational work being done by that association; Edward S. Campbell, President of the National Newark Banking Co., spoke on "Collections and Exchange; Should We Charge Our Customers?" Thomas K. Johnson, Deputy Commissioner of Banking and Insurance, also delivered an address.

A banquet was held at the Hotel Chelsea. Hon. Leslie M. Shaw, Secretary of the Treasury, was the principal speaker, his theme being the relations of the Federal Government to the banks and the financial integrity of the country. Other speakers were Attorney-General Robert H. McCarter, ex-Senator Edward C. Stokes, Mayor Mark Fagin, of Jersey City, and George L. Record, Corporation Counsel of Jersey City.

At the second day's session the following officers were elected:

Uzal H. McCarter, President of the Fidelity Trust Company, of New Brunswick, president; Wilbur F. Rose, President of the State Bank of Camden, vice-president; Henry G. Parker, of the National Bank of New Jersey, treasurer. Edward C. Stokes, of Trenton, and William C. Heppenheimer, of Hoboken, were elected to three-year terms on the executive committee.

**New York Bankers' Meeting.**—Group V of the New York State Bankers' Association met at the Fort Orange Club, Albany, on the evening of February 18. The following officers were elected: Chairman, F. G. Haviland, of Hudson; secretary, C. E. Bullock, Jr., of Albany; executive committee, F. E. Howe, of Troy; F. S. Vanderveer, of Amsterdam; D. C. Dow, of Cobleskill, M. F. McGarren, of Malone, and G. P. Wilson, of Cohoes.

F. D. Kilburn, Superintendent of the Banking Department, was one of the speakers. He said in part: "I hardly believe there is a banker in the State who does not deprecate the practice on the part of banks paying interest on individual deposits, nor who would not do away with it, at least so far as his own bank is concerned, if he could see his way clear to do so without, as he believes, serious injury through loss of business to his own institution; nor one who does not believe it to be contrary to sound principles of banking and on the whole detrimental to the banking interests of the whole State. This practice has grown to such proportions that in many sections of the State it is relied upon as the chief means of attracting deposits. This competition, which in many instances has developed into an unseemly scramble, is often accompanied by undignified, misleading and in many instances absolutely false advertising; and in this particular I do not confine my remarks to the banks alone, but include some of the trust companies of the State. Of course it would be improper and impolitic for me to particularize. Your own observation will verify my statement and suggest the institutions to which I refer."

Other speakers included President A. V. V. Raymond, of Union College, John A. Sleicher, of New York city, Joseph A. Deboer, of Vermont, and others.

#### WESTERN STATES.

**St. Louis, Mo.**—On February 26 the organization of the Bankers' World's Fair National Bank was completed. H. A. Forman, President of the Fourth National Bank, was elected

President. The Vice-Presidents chosen are C. H. Huttig, President of the Third National Bank; August Gehner, President of the German-American Bank; R. R. Hutchinson, President of the Mechanics' National Bank; William H. Thompson, Cashier of the Boatmen's Bank, and N. A. McMillan, Vice-President of the St. Louis Union Trust Company. The new bank, which has a paid-up capital of \$200,000, will be situated near the entrance of the Exposition grounds.

**Terre Haute, Ind.**—The business of the Terre Haute Trust Co. has had a very steady growth in the past few years. Its deposits have increased from \$114,161 on January 31, 1901, to \$372,518 on January 31, 1904; and in the same time the assets have increased from \$362,539 to \$706,567.

#### PACIFIC SLOPE.

**San Francisco.**—The twenty-eighth annual report of Charles Sleeper, Manager of the San Francisco Clearing-House, issued February 11, contains figures of the remarkable growth of business in this city, as shown by the transactions of the banks through that institution.

The clearings for the year 1903 are placed at \$1,520,200,682 as compared with \$1,373,362,025 for 1902, a gain of \$146,838,656 or 10.7 per cent. and an average daily gain of \$481,438.22.

Business in general has been good during the year, with an increase in real estate transactions and an increase in State, city and suburban population.

The balances of the clearing-house banks in 1903 were 11.7 per cent. of the clearings and amounted to \$177,810,822 and were paid in United States gold coin (22.62 per cent.), \$40,215,822.37 and United States Treasury gold certificates (77.38 per cent.), \$137,595,000. The average daily balance for 1903 was \$582,986 as compared with \$549,629 for 1902, an average daily increase of \$34,357.

The clearing-house resumed the use of United States Treasury gold certificates in the settlement of balances on August 19, 1899, since which time to December 31, 1903, the balances have been in amount \$648,078,472.43, and paid as follows: In gold coin (26.14 per cent.), \$169,393,472 and in certificates (73.86 per cent.), \$478,685,000.

The certificates saved at least a fourfold handling of an equal amount of gold coin, the fourfold weight of which would be over 7,057,000 pounds avoirdupois.

The United States Treasury gold certificates used by members as clearing-house certificates are now \$2,565,000.

The total clearings of the San Francisco Clearing-House for the twenty-eight years of its existence have been \$21,796,794,043 and the total balances for the same time have been \$3,235,269,509. Last year's clearings of \$1,520,200,682 and the balance of \$177,810,822 were the largest of any year in the history of the institution. The highest average daily clearing for the twenty-eight years was \$4,984,264, also in last year.

The following officers have been elected for the year: President, William Alvord; Vice-President, Homer S. King; Secretary, Frederick W. Zelle; Clearing-House Committee—William Alvord (chairman), President Bank of California; Ign. Steinbart, Manager Anglo-Californian Bank, Limited; S. G. Murphy, President First National Bank of San Francisco; James W. Wilson, President San Francisco National Bank; A. Kains (secretary), Manager Canadian Bank of Commerce. Manager, Charles Sleeper; Assistant Manager, J. T. Burke.

---

**Tax on Savings Deposits.**—The great incubus which rests upon all the banks of the State is the so-called franchise tax imposed by Gov. Odell in his determination to support the State by indirect taxation. The \$1,191,330,573.18 assets of the 127 Savings banks of the State was too tempting for him to resist laying hands upon in some way. We have then to pay this tax of one per cent. upon the surplus and undivided earnings of every Savings bank in the State each six months. Before a dollar can be paid to depositors, the State must have one per cent. of the earnings of the previous six months. How can the trustees pay four per cent. under such burdensome restrictions?

Here are several thousand of the very best men in the State giving their services without any pecuniary remuneration to the benevolent purpose of encouraging the poorer classes to save their earnings, and directly, as well as incidentally, no doubt often saving those from becoming a public charge, and yet the great State of New York taxes these gentlemen for the privilege of helping their fellow citizens, and lays upon them a burden which is wholly unworthy of an enlightened people.—*W. H. S. Wood, President Bowery Savings Bank, in "New York Times Annual Financial Review."*

President Wood is right in declaring that the tax on Savings banks is wholly unworthy of an enlightened people. This tax is one that bears directly on the Savings bank depositor, as such banks have no capital, and all the funds of the banks belong to depositors. The rich depositor in a commercial bank can "swear off" his deposits, and thus escape taxation, but no such escape is open to the poor who have their few dollars or pennies in the Savings banks.

The tax on Savings banks ought never to have been imposed, and should be repealed without delay.

## NEW BANKS, CHANGES IN OFFICERS, ETC.

### NEW NATIONAL BANKS.

The Comptroller of the Currency furnishes the following statement of new National banks organized since our last report.

#### APPLICATIONS TO ORGANIZE NATIONAL BANKS APPROVED.

The following notices of intention to organize National banks have been approved by the Comptroller of the Currency since last advice:

Cranford National Bank, Cranford, N. J.; by Thomas A. Sperry, et al.  
Citizens' National Bank, Paul's Valley, I. T.; by J. T. Hill, et al.  
First National Bank, Miami, Texas; by Thos. B. Lee, et al.  
First National Bank, Ventura, Cal.; by Wm. Mead, et al.  
First National Bank, Carterville, Ill.; by E. E. Denison, et al.  
Hudson National Bank, New York, N. Y.; by Wm. Hanhart, et al.  
First National Bank, Shirley, Ind.; by John R. Kitterman, et al.  
Wellesley National Bank, Wellesley, Mass.; by Chas. N. Taylor, et al.  
First National Bank, Halstad, Minn.; by H. Thorson, et al.  
American National Bank, Tampa, Fla.; by L. L. Buchanan, et al.  
Linden National Bank, Linden, Ala.; by J. H. Wood, et al.  
Farmers and Merchants' National Bank, Hico, Texas; by J. F. Wieser, et al.  
Citizens' National Bank, Orange, Va.; by R. C. Slaughter, et al.  
Enid National Bank, Enid, Okla.; by O. J. Fleming, et al.  
First National Bank, Pennsboro, W. Va.; by Creed Collins, et al.  
Altus National Bank, Leger, Okla.; by T. G. Braddock, et al.  
Bankers' World's Fair National Bank, St. Louis, Mo.; by W. H. Thompson, et al.  
First National Bank, Millerstown, Pa.; by C. A. Rippman, et al.  
First National Bank, Newark Valley, N. Y.; by T. F. Chamberlain, et al.  
First National Bank, Salem, W. Va.; by Gen-  
ius Payne, et al.  
First National Bank, Mountain Grove, Mo.; by E. J. Green, et al.  
First National Bank, Deer Creek, Minn.; by F. J. Evans, et al.  
Hico National Bank, Hico, Texas; by J. H. Gage, et al.  
First National Bank, Lakeview, Ore.; by A. McClallen, et al.

National Bank of La Follette, Tenn.; by R. B. Baird, et al.  
Farmers' National Bank, Manor, Texas; by J. W. Hoopes, et al.  
First National Bank, Napa, Cal.; by H. P. Goodman, et al.  
Western National Bank, Fort Worth, Texas; by W. H. Eddleman, et al.  
First National Bank, Alturas, Cal.; by B. F. Lynip, et al.  
Clinton National Bank, Clinton, Mo.; by Henry Koehler, et al.  
First National Bank, Bisbee, Ariz.; by J. N. Porter, et al.  
Farmers' National Bank, Henderson, Iowa; by C. E. Irwin, et al.  
Sonora National Bank, Sonora, Cal.; by Clifford McClellan, et al.  
People's National Bank, Fairmont, W. Va.; by W. S. Haymond, et al.  
First National Bank, Saxton, Pa.; by M. B. Breneman, et al.  
People's National Bank, Lexington, Va.; by Wm. M. McElwee, et al.  
First National Bank, Graceville, Minn.; by John McRae, et al.  
First National Bank, Bridgeport, Texas; by H. G. Leonard, et al.  
First National Bank, Mansfield, La.; by Bol-  
ing Williams, et al.  
Cooperstown National Bank, Cooperstown,  
N. Y.; by Datus E. Siver, et al.  
Citizens' National Bank, Bangor, Pa.; by Jas.  
Weldman, et al.  
First National Bank, Williamstown, N. J.; by  
M. M. Chew, et al.  
First National Bank, Mounds, Ill.; by P. T.  
Chapman, et al.  
First National Bank, Mena, Ark.; by L. C.  
Acruman, et al.  
People's National Bank, Muncie, Ind.; by C.  
F. Wachtell, et al.  
First National Bank, Zachry, La.; by L. M.  
Tooke, et al.  
Royall National Bank, Palestine, Texas; by  
N. R. Royall, et al.

#### APPLICATION FOR CONVERSION TO NATIONAL BANKS APPROVED.

Farmers' Bank, Martinsville, Va.; into First  
National Bank.  
Crooksville Bank Co., Crooksville, Ohio; into  
First National Bank.
