## 151 *INDUSTRIAL PRODUCTION AND CAPACITY UTILIZATION: THE 2002 HISTORICAL AND ANNUAL REVISION*

In late 2002, the Board of Governors of the Federal Reserve System published a revision to its index of industrial production and the related measures of capacity utilization. The primary feature of the revision was the reclassification back to 1972 of production and capacity indexes for individual industries from the Standard Industrial Classification System to the North American Industry Classification System. The revision also reflects the incorporation of newly available, more comprehensive source data, and it introduced improved methods for measuring the annual real output of communications equipment manufacturing.

Along with the updating and the restatement of the data using the North American Industry Classification System, all production and capacity indexes are now expressed as percentages of output in 1997. The new information resulted in an upward revision to the rate of increase in industrial production and capacity from 1997 to 2000. For that period, the average rate of industrial capacity utilization is 0.7 percentage point higher than previously reported. The most recent business-cycle peak is still June 2000, at 116.2 percent of 1997, with the low being the fourth quarter of 2001. The rate of industrial capacity in the third quarter of 2002, at 76.2 percent, is essentially unchanged from previously reported data. The rate is more than 5 percentage points below its 1972–2001 average and about 3 percentage points below the trough in the 1990–91 recession but 5 percentage points above the trough in the 1982 recession.

# Industrial Production and Capacity Utilization: The 2002 Historical and Annual Revision

*Carol Corrado, of the Board's Division of Research and Statistics, prepared this article. Kristen Hamden provided research assistance.*

In late 2002, the Federal Reserve published a revision of its index of industrial production (IP) and the related measures of capacity and capacity utilization. The primary feature of the revision was the reclassification back to 1972 of production and capacity indexes for individual industries from the Standard Industrial Classification, or SIC, to the North American Industry Classification System, or NAICS. Also, the revision, as usual, updated all measures to incorporate newly available and more comprehensive source data for recent years, and it introduced improved methods for measuring the annual real output of communications equipment manufacturing.

Along with the updating and the restatement of the data using NAICS, the base year used for comparison has changed. Now all production and capacity indexes are expressed as percentages of output in

1997; the previous comparison base was 1992. The rebasing affects all series from their start dates, which are 1919 for total IP and manufacturing IP, 1948 for manufacturing capacity, and 1967 for total industrial capacity. The Federal Reserve's accompanying indexes of industrial electric power use, which begin in 1972, have also been restated to accord with NAICS, rebased to use 1997 as a comparison year, and revised to incorporate previously unavailable data.

The new information resulted in an upward revision to the rate of increase in industrial production and capacity from 1997 to 2000 (chart 1). Improved estimates for the production of communications equipment and semiconductor manufacturing accounted for most of the upward revision; revised estimates for the output of newspapers and related publishers also contributed. The upward revision to the rate of increase in production was greater than the upward revision to the pace of capacity expansion. As a result, for the 1997–2000 period, the average rate of industrial capacity utilization—the ratio of production to capacity—is 0.7 percentage point higher than that previously reported. The higher utilization rates were concentrated in the selected high-technology group of industries (semiconductors, computers, and communications equipment); in the

NOTE. Charles Gilbert directed the 2002 revision and, along with Kimberly Bayard, William Cleveland, and Dixon Trantum, prepared the revised estimates of industrial production. Norman Morin and John Stevens prepared the revised estimates of capacity and capacity utilization.

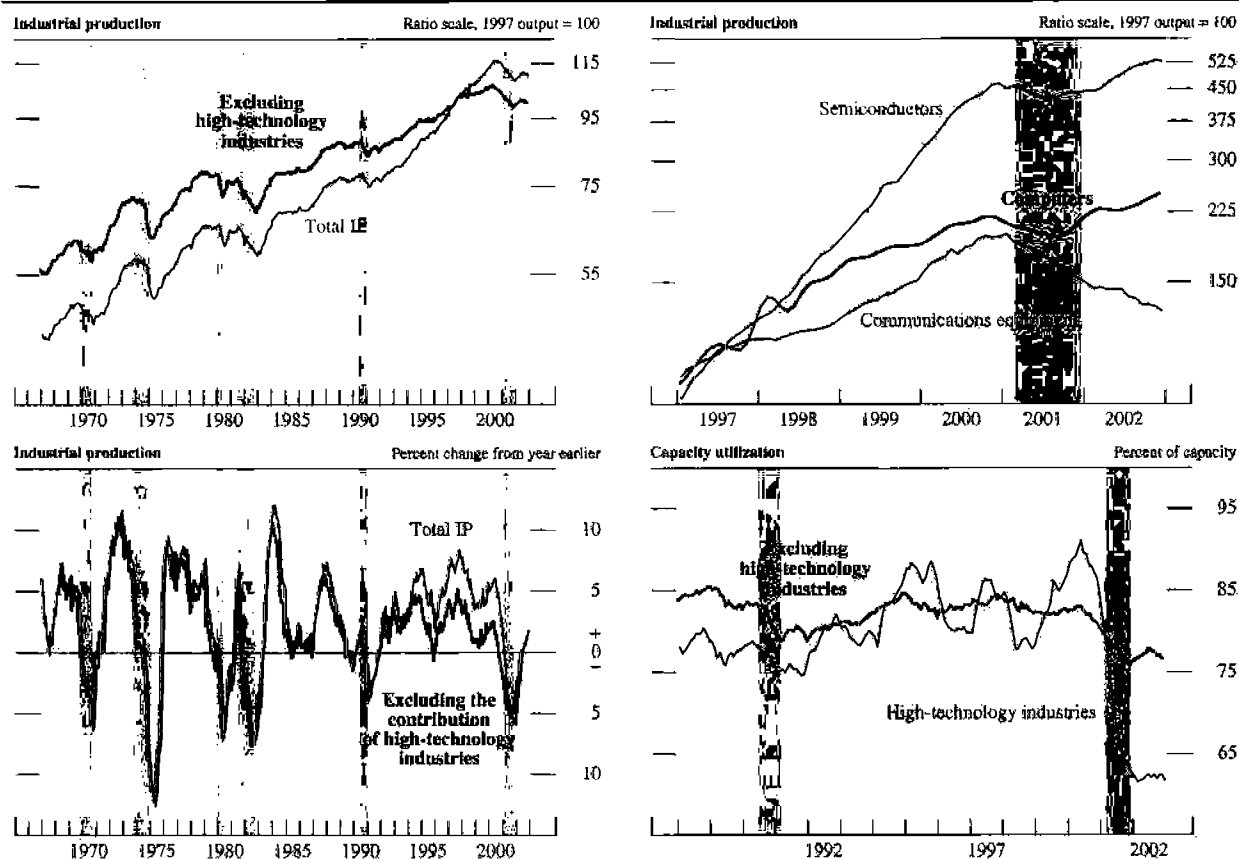

## 1. Total industrial production and capacity utilization

NOTE. The shaded areas are periods of business recession as defined by the National Bureau of Economic Research (NBER). The NBER has not yet

established a trough for the recession beginning in 2001; the shaded area arbitrarily stops at the end of that year.

## 2. High-technology industrial production and capacity utilization

NOTES. The shaded areas are periods of business recession as defined by the National Bureau of Economic Research (NBER). The NBER has not yet established a trough for the recession beginning in 2001; the shaded area arbitrarily stops at the end of that year.

High-technology industries are defined as semiconductors and related electronic components (NAICS 334412-9), computers (NAICS 3341), and communications equipment (NAICS 3342).

motor vehicle, fabricated metal product, and machinery-manufacturing industries; and in utilities.

On balance, the picture of the industrial sector in recent years is little changed by the revision (see appendix tables A.1–A.10 for detailed revision results). The most recent business-cycle peak in monthly IP is still June 2000, at 116.2 percent of 1997 output (table A.1), and the drop in the index from then until December 2001 is 6¾ percent, about the same as the previously reported decline. Accordingly, the second quarter of 2000 remains the peak in the rate of industrial capacity utilization, and the low is the fourth quarter of 2001 (table A.2). The revised utilization rate reaches 83.5 percent in the second quarter of 2000—0.9 percentage point higher than previously reported—before falling 2 percentage points by the end of 2000 and 6½ percentage points further by the fourth quarter of 2001; the cumulative drop in the rate of capacity utilization is 0.5 percentage point steeper than that previously reported.

In January 2002, industrial production rose; as in the earlier data, the January increase was the first monthly increase since September 2000. Monthly gains in industrial production then averaged 0.4 percent per month through July 2002, but from August to October 2002, industrial production retreated, on balance. In the third quarter of 2002, the revised and rebased production and capacity indexes stood at 111.4 and 146.2 percent of 1997 output, respectively. The rate of industrial capacity utilization in the third quarter of 2002, at 76.2 percent, is essentially unchanged from the previously reported data (table A.7). The rate is more than 5 percentage points below its 1972–2001 average and about 3 percentage points below the trough in the 1990–91 recession but 5 percentage points above the trough in the 1982 recession.<sup>1</sup>

1. These comparisons are based on quarterly averages of utilization rates.

## 1. Revised rates of change of industrial production and capacity and the revised average rates of capacity utilization, 1972-97

Item	Revised rates of change (percent)			Difference between revised and earlier rates of change (percentage points)		
	1972-77	1977-87	1987-97	1972-77	1977-87	1987-97
<b>Production</b>

Manufacturing (NAICS) .....	3.0	2.5	3.6	...	...	...
	Average rate, January 1972 to December 1997		Difference between revised and earlier average rate (percentage points)		MEMO Average rate, January 1972 to December 2001	
<b>Capacity utilization (percent)</b>						
Total industrial .....	81.5		-.15		81.5	
Manufacturing <sup>1</sup> .....	80.4		-.22		80.4	
Excluding high-tech industries ..	80.5		-.24		80.4	
MEMO						
Manufacturing (NAICS) .....	80.3		...		80.3	

NOTE. The rates of change are the average percentage change in the seasonally adjusted index from the fourth quarter of the first year specified to the fourth quarter of the last year specified. For 1972, the calculations begin in the third quarter.

1. Manufacturing comprises those industries included in the North American Industry Classification System, or NAICS, definition of manufacturing plus

the logging and newspaper, periodical, book, and directory publishing industries that traditionally have been considered manufacturing and have been included in the industrial sector. See also discussion under "New NAICS Industry Structure."

... Not applicable.

The updated measures continue to show that manufacturing IP, after having increased rapidly in 1999 and the first half of 2000, fell sharply in 2001 and rose at a tepid rate, on balance, in the first three quarters of 2002 (table A.3). On the basis of the revised production indexes and the results of the Census Bureau's 2001 Survey of Plant Capacity, capacity utilization in manufacturing still shows a sharp drop in 2001 (table A.4), and the expansion of manufacturing capacity still exhibits a noticeable slowing from the rapid pace posted in the last half of the 1990s. The factory operating rate has increased since its business-cycle low in the fourth quarter of 2001, but as of the third quarter of 2002, its level of 74.3 percent was more than 6 percentage points below its long-term average.<sup>2</sup>

As in the earlier data, the output of selected high-technology industries—computers, semiconductors, and communications equipment—increased at an

average rate of more than 40 percent per year from 1994 to 2000 but dropped off sharply in 2001 (chart 2). For 2002, the revised measures show a more modest rate of increase for their production than previously reported. The rate of capacity utilization in these industries has hovered at or below 63 percent for nearly one year, a level more than 17 percentage points below its 1972-2001 average of about 80 percent. Within this group of industries, the output index for computers was revised down for 1999 and 2000, a move reflecting updated results from the Census Bureau on the value of production in those years. In addition, the indexes for semiconductors and communications equipment were revised up, primarily for 1999 and 2000, a move reflecting new and refined estimates of prices.

The revisions to the IP index for recent years were derived principally from the inclusion of information contained in annual reports issued by the Bureau of the Census: the 2000 Annual Survey of Manufactures (ASM) and selected 2001 Current Industrial Reports. Revised annual data from the U.S. Geological Survey (USGS) on minerals (except fuels) for 2000 and some new data for 2001 have also been introduced. Also, the new monthly production estimates for 2001

2. For comparison with rates for industry subsectors, the period 1972-2001 will be used to represent the long-term average for capacity utilization rates.

## 2. Revised rates of change of selected industrial production market group indexes, 1967–2002

Item	Revised rates of change (percent)			Difference between revised and earlier rates of change (percentage points)		
	1967–87	1987–2000	2000–02	1967–87	1987–2000	2000–02
<b>Total industrial production</b> .....	<b>2.6</b>	<b>3.5</b>	<b>-1.8</b>	<b>-.2</b>	<b>.1</b>	<b>.0</b>
Final products .....	3.0	3.1	-2.2	.1	.2	.0
Consumer goods .....	2.5	2.5	-.5	-.2	.5	-.1
Business equipment .....	4.6	6.0	-7.0	.9	-.3	-.7
Nonindustrial supplies .....	2.9	3.9	-1.4	-.3	2.2	.3
Construction .....	3.0	2.3	-2.5	-.2	.0	-4.6
Other business .....	3.6	4.9	-.7	-.4	3.7	4.7
Industrial materials .....	2.3	3.8	-1.7	-.3	-1.0	-.2
Non-energy .....	2.8	4.8	-2.2	-.5	-1.1	-.3
Energy .....	1.1	.6	-.1	.2	.0	.2

NOTE: The rate of change is the average percentage change in the seasonally adjusted index from the fourth quarter of the first year specified to the fourth quarter of the last year specified. For 1967, the calculation begins in the

third quarter. For 2000, the calculation ends and begins in the second quarter. The difference between the revised and earlier rates of change for 2000 to 2002 is for the first three quarters of the year.

and 2002 reflect updated seasonal factors and the inclusion of monthly source data that became available, or were revised, after the closing of the regular four-month reporting window.

The capacity indexes and capacity utilization rates incorporate the revised production indexes, results from the Census Bureau's 2001 Survey of Plant Capacity for the fourth quarter of that year, and newly available 2001 data on industrial capacity from the USGS, the Energy Information Agency, and other organizations. In addition, the relationships used to estimate the current change in manufacturing capacity reflect the inclusion of ASM data on capital spending by industry for 2000 and updated indicators of capital spending by manufacturers in 2001 and 2002.

### SUMMARY OF THE HISTORICAL REVISION

The annual industry source data used to construct industrial production and capacity utilization are now being reported using NAICS. The Federal Reserve has adopted NAICS for its monthly statistics on the industrial sector; but to facilitate business-cycle analysis, research, and forecasting, it has done so without changing the scope or historical continuity of these statistics. Specifically, the introduction of the new classification system did not affect the coverage of production and capacity utilization for total industry and manufacturing, and the individual industry components of these measures are available on a NAICS basis back at least to 1972.

The consistency of the production and capacity indexes was further improved by the recompilation of the indexes using current methods, when possible,

back to 1972. (These changes are detailed in the section "Current Methods Applied to Earlier Data.") Table 1 summarizes the revised rates of change in the basic measures from 1972 to 1997. The application of current methods for benchmarking IP to annual real output measures, estimating changes in capacity, and aggregating individual series resulted in a small downward revision to the average rate of change in industrial production and capacity from 1972 to 1987. All told, however, the average utilization rate, at 81.5 percent of total industrial capacity from 1972 to 1997, was little changed by the revision.

The 2002 revision also introduced refined methods for grouping individual industry IP series into major market groups for analysis of industrial production and for grouping industrial capacity and capacity utilization rates by stage of process. These changes, which are explained in the section "New Market and Stage-of-Process Aggregates," begin with data for 1967; the revised rates of change in IP by major market groups from 1967 to 2002 on are shown in table 2. The revisions shown reflect not only the refined industry composition of the groups but also, as mentioned above, the application of current methods and available source data to estimates for earlier periods.

The changes in monthly IP reflect the updating of seasonal factors for all years using current methods and the inclusion, when possible, of current monthly and quarterly source data. All told, the revised rates of change in monthly IP from 1972 on are highly correlated with the previously reported rates; the simple correlation coefficient between them is 0.91, and the correlation between the revised and earlier quarterly rates of change is 0.97. In addition to revised changes in production, the monthly changes

## 3. Business-cycle peaks and troughs in the monthly industrial production index since 1972

Peak	Trough
November 1973	May 1975
March 1979 (May 1979)	July 1980
July 1981	November 1982
September 1990 (April 1989)	March 1991
June 2000	December 2001

NOTE: The dates shown in parentheses are as reported in earlier data.

in capacity utilization reflect the application of current methods for interpolating annual changes in capacity.

The months and years of the peaks and troughs in industrial production since 1972 are shown in table 3. The months of the peaks and troughs associated with the recessions that began in 1973, 1981, and 2000 are unchanged with this revision. The months of the peaks in IP before the onset of the episodes leading to the troughs in 1980 and 1991 did change. As in the earlier data, however, industrial production remained within a narrow range for more than a year before both downturns, and the changes did not alter the picture of cyclical activity in either period. The profile of the industrial expansion in the 1990s—rapid increases in IP punctuated by a slowdown in 1995 and again in 1998 in the aftermath of the Asian crisis—also is unchanged.

Although the timing of the business-cycle episodes in industrial production is essentially unchanged by the revision, the 1973–74 recession is now reported to be somewhat shallower than previously reported. As a result, the drop in capacity utilization—about 14½ percentage points from November 1973 to May 1975—is about 1¾ percentage points smaller than in the earlier data. Also, the recovery from 1975 to 1979 is now a bit less strong, and the peak reached by capacity utilization is not as high as previously reported. Finally, as already discussed, the revised rate of capacity utilization for total industry is higher, on average, from 1997 to 2000, but then it drops a bit more steeply in 2001 than previously reported.

### NEW NAICS INDUSTRY STRUCTURE

The Federal Reserve still defines the industrial sector as manufacturing, mining, and electric and gas utilities. The changes from the SIC system to NAICS, however, altered the industry composition of manufacturing. Specifically, NAICS moved the logging industry and the newspaper, periodical, book, and

## 4. Revised industrial production, capacity, and capacity utilization industry structure (abbreviated)

The 2002 revision	Correspondence to previous structure
Total industry	Total industry
<b>Major industry groups</b> Manufacturing (see note below)	<b>Major industry groups</b> Manufacturing (SIC)
Manufacturing (NAICS)	...
Durable	Durable (SIC) less logging
Nondurable	Nondurable (SIC) less newspaper, periodical, book, and directory publishing
Other manufacturing (non-NAICS)	...
Mining	Mining
Utilities	Utilities

NOTE: The industrial sector is defined as manufacturing, mining, and electric and gas utilities. For components of manufacturing, see table 1, note 1.

The correspondences shown in the table are illustrative.

NAICS North American Industry Classification System.

SIC Standard Industrial Classification.

... Not applicable.

directory publishing industries from manufacturing to other sectors; logging was placed in agriculture, and the publishing industries were placed in the new information sector.<sup>3</sup> For the statistics reported in the Federal Reserve's monthly G.17 release, the manufacturing measures will continue to comprise those industries included in the NAICS definition of manufacturing *plus* the logging and newspaper, periodical, book, and directory publishing industries that have traditionally been considered manufacturing.

An abbreviated version of the new industry structure appears in table 4. The G.17 release shows the aggregate of industries representing the NAICS definition of manufacturing, along with the aggregate of industries representing the traditional definition of manufacturing. For the most part, the two series are similar, in terms of their long-term trends (see memo items in table 1) and their basic cyclical profile. However, the average annual proportion of the traditional manufacturing measure in total industrial production is about 85 percent, whereas the proportion of manufacturing (NAICS) is about 80 percent (see table A.10).

### Conversion of the Data to NAICS

The historical source data needed to compile IP and capacity utilization are not publicly available on a NAICS basis before 1997; hence, the issuance of thirty years of NAICS industry statistics represents a major effort by the Federal Reserve to preserve the historical continuity of the basic measures presented in its G.17 release. As a result, many frequently used

3. See [www.census.gov/ipcd/www/naics.html](http://www.census.gov/ipcd/www/naics.html) for further information on NAICS.

## Technical Note on Reclassifying Data in the Census of Manufactures from the SIC to NAICS

The industrial production and capacity utilization measures are developed, either directly or indirectly, from industry-level data in the Census of Manufactures. Beginning with the 1997 Census, these data are classified according to the North American Industry Classification System (NAICS), but the data from previous censuses are classified according to the Standard Industrial Classification (SIC) system. Because some SIC industries map into several NAICS industries, the construction of historical NAICS-based industrial production and capacity indexes is not straightforward; information on the share of the value of production in each SIC industry that should be assigned to *each* NAICS industry in *each* census year is required. Historical plant-level data, or microdata, in the Census Bureau's Longitudinal Research Database was used to develop this information.

### Recoding the Historical Microdata

The Census Bureau published its detailed industry-level data from the 1997 Census of Manufactures (COM) using both classification systems. These statistics provide sufficient detail to determine the proportion of each SIC industry that should be assigned to its corresponding NAICS industries for one year, 1997. For many industries, however, the shares derived from the 1997 data will not accurately reflect the industrial distribution of activity in earlier years. Historical SIC-to-NAICS shares for industry-level COM variables (value added, shipments, and the like) were calculated from

the results of a Board research project that assigned a NAICS industry code to each establishment in the microdata files of the historical censuses back to 1963.<sup>1</sup>

The plant-level records from the 1997 Census of Manufactures, which contained both SIC and NAICS industry codes for each plant, was the jumping-off point. Then, each earlier census year was re-assessed sequentially, and industry codes were assigned to each plant using two methods: exact matching and statistical matching. "Exact match" cases were those plants for which the 1997 information permitted the assignment of a NAICS code with a high degree of certainty. These cases included (1) plants with NAICS codes that could be identified directly from product information, (2) plants in earlier censuses that also appear in the 1997 census, and (3) plants in industries with an SIC code corresponding to one, and only one, NAICS code. These exact matches accounted for more than three-fourths of the cases (see the table for more detail on the prevalence of each method of assignment).

For the remaining plants, the "statistical matches," a model-based procedure was employed. The COM contains information that is common to plants in a specific industry, and these data were used to determine the probability that a

NOTE. Kimberly Bayard developed the material reported in this technical note.

1. See Kimberly Bayard and Shawn Klimek, "Reclassifying the Census of Manufactures from the Standard Industrial Classification System to the North American Industry Classification System, 1963 to 1992" (Board of Governors, forthcoming working paper).

industry series whose definition and coverage were altered by NAICS—communications equipment, construction equipment, and chemicals, to name a few—are still available with substantial history.

The restatement of the industrial production and capacity utilization data from 1972 to present on a NAICS basis relies on the results of a research project conducted by the Federal Reserve Board and the Center for Economic Studies of the Bureau of the Census (see "Technical Note on Reclassifying Data

in the Census of Manufactures from the SIC to NAICS" for further information). In a nutshell, the project developed NAICS codes for each establishment in the files of seven Censuses of Manufactures (COM)—1963, 1967, 1972, 1977, 1982, 1987, and 1992. The information needed to derive NAICS-based source data for industrial production and capacity utilization was obtained by tabulating the historical COM establishment-level data using the NAICS codes assigned by the research project.

### Technical Note on Reclassifying Data—Continued

plant would be assigned to a given NAICS industry. Specifically, the likelihood that a plant with a given set of characteristics (such as the value of shipments per worker, the hourly wage of production workers, the geographic location, and the like) should be classified in a particular NAICS industry was generated using predictions from a multinomial logit regression model. A bootstrapping technique was employed to determine the final assignment of each plant to a NAICS industry. See the Bayard and Klimek paper, noted earlier, for a discussion of this procedure and of the robustness of the results.

All in all, plant-level observations in seven censuses—1992, 1987, 1982, 1977, 1972, 1967, and 1963—were coded with a NAICS industry assignment along with their “native” SIC code. With the dual coding, the economic data on value added, value shipments, and the like were tabulated to obtain the SIC-to-NAICS share of each variable in each census year.

### The Importance of Variable Shares

The motor vehicle industry provides an example of the importance of variable shares and the reason that information for one year is insufficient for developing historical NAICS-based industry data. Before 1997, the Census Bureau reported statistics for motor vehicles and passenger car bodies (SIC 3711) as a single aggregate. From 1997 on, under NAICS, these data are split into five industries: automobiles, light trucks, heavy duty trucks, (part of) motor vehicle bodies, and (part of) military armored vehicles.

The 1997 census data provide the share of the total output in SIC 3711 that should be attributed to its NAICS counterparts for automobiles, for light trucks, and so on in that

year. The NAICS-coded microdata (the work of Bayard and Klimek) yield the share of total motor vehicle output that should be attributed to autos, to light trucks, and to the other industries in each census year before 1997—that is, 1992, 1987, and so on. The chart shows the path for the value of production of light trucks from 1972 to 2000 using these variable shares. The chart also shows a path that would be obtained if the 1997 share had been applied to earlier years. As may be seen, the application of the 1997 industry structure to all years would result in a dramatic overestimation of light truck production, particularly before the early 1990s.

Light trucks (NAICS 336112)

Note. The shaded areas are periods of business recession as defined by the National Bureau of Economic Research (NBER). The NBER has not yet established a trough for the recession beginning in 2001; the shaded area arbitrarily stops at the end of that year.

The derivation of NAICS-based source data was an extensive effort. It involved reconstructing many working data sets that underlie the estimation of IP and capacity, including the annual comprehensive estimates of industry value added and value of production and the annual (fourth quarter) survey data for industry utilization rates. All in all, annual figures for most variables reported in the Censuses and Annual Surveys of Manufactures (shipments, value added, cost of materials, inventories, capital spending, production-worker hours, and the like) were derived at the six-digit NAICS level from 1972 on. Utilization rates from the Survey of Plant Capacity were reconstructed beginning in the fourth quarter of 1974, the start date of the survey. The Federal Reserve's data on monthly electric power use were derived at the four-digit NAICS industry level from data in the Annual Survey of Manufactures, which

were also restated to accord with NAICS. The 2002 NAICS was used for all restatements and conversions.<sup>4</sup>

### Restructuring of Industry Subsectors

NAICS substantially restructured many industries within manufacturing. One significant change was the reorganization of high-technology industries. NAICS created a new subsector for high-technology manufacturing, computer and electronic product

4. Further information on the Federal Reserve's work to construct historical NAICS industry-level data will be available in the proceedings of the session "Industrial Production and Capacity Utilization: The Construction of Current and Historical NAICS-based Measures" to be held at the 2003 Joint Statistical Meetings (August 3–9, 2003, San Francisco).

manufacturing (NAICS 334), which combined into a sensible aggregate industries that had been scattered across various two-digit SIC industry groups. For some time, the G.17 has reported output, capacity, and capacity utilization for selected high-technology industries: semiconductors, computers, and communications equipment manufacturing. These industries account for most of the new NAICS 334 subsector. The new subsector also contains audio and video equipment and navigational, measuring, electromedical, and control instruments. The output, capacity, and capacity utilization measures for selected high-technology industries will continue to be reported in the monthly G.17 release along with data for the new NAICS subsector.

Within the transportation equipment manufacturing subsector, NAICS introduced a new industry group for motor vehicle parts manufacturing (NAICS 3363). The group contains eleven new six-digit industries for motor vehicles parts, many of which—metal stamping, vehicular lighting and electronic equipment, motor vehicle seating and interior trim, and motor vehicle air-conditioning manufacturing—were previously parts of a wide range of two-digit SIC major groups, including fabricated metals, furniture, apparel, and electrical and nonelectrical machinery. As a result of these changes, the monthly IP index for motor vehicle manufacturing now comprises nine NAICS-based industry series. Some of these series, such as metal stamping and motor vehicle air-conditioning manufacturing, were separate series in the previous IP index, and the change entailed a simple rearrangement of the data. As in the previous structure, each industry series in motor vehicle parts, except for metal stamping, is further disaggregated into two sub-industry indexes—one for the production of original equipment and the other for the production of replacement parts. All told, the motor vehicle parts industry group is now represented by seventeen individual IP series, and the proportion of the industry group in the overall index is 3.4 percent, about 1¼ percentage points larger than it was in the SIC-based IP data.

Another change split the SIC two-digit textiles and products major group (SIC 22) into two NAICS subsectors: textile mills (NAICS 313) and textile product mills (NAICS 314). Within these subsectors, a few industries in SIC 22 were moved to apparel manufacturing (NAICS 315), and a few others previously not in the SIC textile group were newly included (mainly from the SIC two-digit group for apparel). The implementation of the NAICS structure for textiles in the IP index was accompanied by an extensive review of available source data; the result was the introduction

of several product series new to the IP system. In particular, the IP physical product measures for NAICS 3131 (fiber, yarn, and thread mills) were broadened relative to the corresponding SIC series to include wool fibers. In addition, IP measures for NAICS 3132 (fabric mills) now use a quarterly production series for cotton and synthetic fabrics. Finally, tire cord production (part of NAICS 3149) is now being compiled as a separate IP series derived from physical product data.

The revised industrial production index contains monthly output indexes for 227 NAICS six-digit (or combination of six-digit) industries; previously, the index represented 207 SIC-based industries. Of course, the industrial production index contains many sub-industry indexes, developed from product data, that are used to compile market groups and, ultimately, the total index. The introduction of NAICS does not change the way in which product data are used to compile monthly IP; taking these product-based sub-industry indexes into account, the revised IP index is now built from 295 individual component series.<sup>5</sup>

The implementation of NAICS for capacity and capacity utilization resulted in the introduction on net of nine new series in the system. The new industry series are mainly in the chemical and machinery manufacturing subsectors (NAICS 325 and 333, respectively); a new capacity series for lime and gypsum product manufacturing (NAICS 3274) was derived using capacity data issued by the Gypsum Association and introduced from 1972 on. All told, the capacity measures now are built from eighty-five industry series, most of which are NAICS four-digit industries (or combinations of them).<sup>6</sup>

The NAICS subsectors that are now being published in the regular monthly release are shown in the bottom half of table A.5 (which reports changes in IP) and in table A.7 (which shows capacity utilization rates); additional industry detail are being published in the supplemental tables available from the Board's web page for the G.17. The annual proportions of the new industry subsectors in total IP from 1994 on are shown on the bottom portion of table A.10.

5. The detailed new NAICS structure and monthly data sources for all NAICS subsector, industry, and sub-industry IP indexes are in the updated "Source and Description" table at [www.federalreserve.gov/releases/g17/sdtab1.pdf](http://www.federalreserve.gov/releases/g17/sdtab1.pdf).

6. The detailed new structure for capacity and capacity utilization is shown in the updated table at [www.federalreserve.gov/releases/g17/captab1.pdf](http://www.federalreserve.gov/releases/g17/captab1.pdf).

### NEW METHODS IN THE REVISION

In this revision, new or refined methods for three series were introduced as follows: (1) a new benchmark index for the real output of communications equipment manufacturing, (2) a refined structure of the monthly IP index for semiconductors, and (3) improved methods for estimating light vehicle capacity.

### Communications Equipment Manufacturing IP

The Federal Reserve improved the methods it uses for compiling the production series for communications equipment manufacturing (NAICS 3342) from 1988 on. In recent years, the Federal Reserve has made numerous improvements in its measures of real output for the high-tech sector. Two years ago, it introduced a new production index for one component of communications equipment, local area network (LAN) equipment. With the current revision, new results for other types of communications equipment—namely, fiber optic equipment, cable modems, public branch exchanges, and cellular communication equipment—have been introduced.<sup>7</sup>

Price indexes for three types of equipment that are used to run fiber optic networks—multiplexers, dense

### 5. Price index for communications equipment manufacturing

Year	Price index
1988 .....	100.000
1989 .....	96.069

wave division multiplexing equipment, and digital cross connects—are shown in chart 3. As may be seen, prices for fiber optic equipment declined noticeably from 1996 to 2001. The value of the production of these devices also grew rapidly in the late 1990s and reached more than 10 percent of the total value of communications equipment production in 2000. Overall, value added in communications equipment manufacturing was 2.0 percent of total IP from 1994 to 2000.

The new results are annual price measures that more accurately reflect the technical advances and quality change in the equipment produced by the communications equipment industry. An annual price index for communications equipment manufacturing, which incorporates the previously issued statistics on LAN equipment as well as the new results, is shown in table 5. This index was used to construct the annual IP benchmark index for communications equipment manufacturing and affects the annual changes in that index from 1988 on.

### Semiconductors and Related Devices IP

The IP series for the manufacture of semiconductors and related devices (NAICS 334413) is now built from five sub-industry indexes—microprocessor units (MPUs), metal oxide semiconductor (MOS) logic devices excluding MPUs, MOS memory chips, other integrated circuits (linear and analog), and optoelectronics and other discrete devices—from 1992 on. The new series are not published separately, but their inclusion in the IP structure improves the accuracy and compilation of the published monthly index for semiconductor and related electronic components

7. The new results are from Mark Doms, "Prices for Communications Equipment," in C. Corrado, J. Haltiwanger, and D. Sichel, eds., *Measuring Capital in the New Economy*, vol. 64, Studies in Income and Wealth (Chicago: University of Chicago Press, forthcoming).

### 3. Price indexes for fiber optic equipment

SOURCE: Mark Doms, "Prices of Communications Equipment."

(NAICS 334412–9). Value added for this series averaged 3.4 percent of total IP from 1994 to 2000.

The data on the value of production for the new subcategories of semiconductors, which are not available in reports from the Census Bureau, were developed from information issued by trade associations, private research companies, and company reports. The basic data, which are monthly and quarterly and based largely on reports issued by the Semiconductor Industries Association and Dataquest, are adjusted to comprehensive annual measures issued by the Census Bureau. The price measures for each component, which are updated annually and are thus subject to revision each year, are developed from (1) revised data from the same sources, (2) quarterly data on microprocessor prices that are available annually from Micro Design Resources, and (3) producer price indexes issued by the Bureau of Labor Statistics.

### *Light Vehicle Capacity*

The capacity of automobile and light duty motor vehicle manufacturing (NAICS 33611) is estimated from plant-level data; in the most recent model year, sixty-six light vehicle assembly plants were operating in the United States. For each of these facilities, capacity in units was developed from data on the actual number of shifts, the length of the shifts, and the speed of the assembly line (line speed). Aggregation of the plant capacities using model-specific prices from 1987 on yielded a capacity index consistent with the production index.

The methods for determining plant capacity from shift and line speed data were refined to better reflect current operating practices and technology.<sup>8</sup> With this revision, a plant's line speed at capacity was determined by the peak within the past ten years; previously, the peak line speed was obtained from all available data, which may have covered more than ten years. The revision also introduced a nonstandard shift configuration, with plants able to rotate three crews over two ten-hour shifts, six days per week; previously, plants were assumed to operate two or three standard-length shifts. In recent years, two to four plants have used the nonstandard configuration, about the same number that have used the standard three-shift configuration. Last, the revision refined the assumptions used to determine annual plant hours at capacity for plants with standard-length shifts.

The greater discounting of past peaks in line speeds and the improved assumptions and use of data by shift lowered, on balance, the estimates of unit capacity for light vehicles. As a result, the average utilization rate for light vehicles in the revised data was about 0.8 percentage point higher than in the earlier data. Also, consistent with the revised production index, the new capacity series for light vehicles begins in 1972, five years earlier than the previous measure.

### *CURRENT METHODS APPLIED TO EARLIER DATA*

The consistency of the production and capacity indexes was further improved by recompiling the new NAICS indexes using current methods—in so far as possible—back to 1972. Many changes and refinements to methods were introduced in the historical and annual revisions issued in the 1990s and in 2000 and 2001; the historical revisions affected IP beginning in 1977 and capacity beginning in 1967, but the regular annual revisions were implemented only from 1987 or 1992 on. The revision to the 1972–1977 segment of the IP index is the first since the issuance of the 1985 historical revision.

The revised IP index was compiled as a chain-type index with monthly weights beginning with data for 1972. Previously, a linked-Laspeyres formulation was used to aggregate data from 1972 to 1977, and a chain-type formulation (with annual weights) was used for data from 1977 to 1992.<sup>9</sup> In addition, the annual benchmark indexes for real industry output from 1972 to 1987 were newly compiled using current methods as well as NAICS-based source data. With the exception of computers and semiconductors, annual output benchmarks for those years were not previously compiled as chain-type indexes. Moreover, annual revision and benchmark methods established in the mid-1990s, previously applied to data

9. An annually weighted version of the Fisher-ideal index formula was introduced as the aggregation method for the IP index in a historical revision issued in January 1997; the formulation was refined to use monthly weights in the fall 2000 annual revision. The refined version affected data from February 1992 on, whereas the original formulation was applied beginning July 1977.

See pp. 72–76 in Carol Corrado, Charles Gilbert, and Richard Raddock, "Industrial Production and Capacity Utilization: Historical Revision and Recent Developments," *Federal Reserve Bulletin*, vol. 83 (February 1997), and page 137 in Carol Corrado, "Industrial Production and Capacity Utilization: the 2000 Annual Revision," vol. 87 (March 2001), for further information on this formulation for aggregation. The derivation of the weights used in aggregation is also discussed in these articles.

8. The basic method used to estimate light vehicle capacity was reviewed on pp. 442–43 of Richard Raddock, "Recent Developments in Industrial Capacity and Utilization," *Federal Reserve Bulletin*, vol. 76 (June 1990).

from 1987 on, were newly applied to data for all years in so far as possible.<sup>10</sup>

The monthly changes in IP beginning in 1972 also now reflect the improved seasonal adjustment techniques introduced in the 1993 and 1995 annual revisions; previously, these techniques, which include adjustments for holiday and other calendar effects derived using a regression approach, were applied to data starting in 1987.<sup>11</sup> Seasonal factors for all years continue to be derived using the “intervention approach” introduced in the 1985 revision; this approach shields the estimates from extreme business-cycle movements.<sup>12</sup>

The monthly IP indexes that use the Federal Reserve’s electric power data as a production indicator were further refined by (1) excluding the systematic influence of the weather on seasonally adjusted electricity use (this modification, introduced in the fall 1998 annual revision, previously applied to data from 1992 on) and (2) including data that were issued in a major revision of the electric power data in early 1997.<sup>13</sup> Although these electric power data had been included in the IP index from 1987 on, the 1997 revision modified them from their start date of 1972.

The annual changes in capacity are estimated from improved models that were introduced in the 1999 annual revision and were used to develop capacity indexes beginning with 1992.<sup>14</sup> The capacity estimates before 1992 are also affected by the application

of an interpolation procedure that allows the rate of change in monthly capacity to evolve slowly; the procedure was introduced in March 1999 and, in that year’s fall revision, applied to data from 1992 on. Previously, monthly capacity figures had been computed on the assumption of a constant rate of change in capacity through a year, with potentially abrupt changes between the last months of one year and the first months of the next. The rates of change in the monthly capacity indexes are, all else being equal, revised in line with industrial production. The application of the current aggregation formula to earlier periods of production and capacity data, however, does not materially affect the monthly utilization rates.

Other changes in basic methods include the extension back to 1967 of various refinements to the structure of market groups, including the changes within business equipment introduced in the 1990 historical revision and implemented from 1977 forward, and the new structure of groups within consumer durables introduced with the new release format in February 2001 and implemented from 1982 forward. The new materials subgroup (semiconductors, printed circuit boards, and other electronic components), which was introduced in the 1998 revision and implemented from 1992 forward, was extended back to 1972. Finally, the improvements to the methods used to estimate value added in the electric utility industry, which were introduced last year and implemented on a best-change basis from 1992 forward, were fully implemented and linked back to 1972 in this revision; and the refined methods and source data used to determine the consumer and business shares of motor vehicle production were newly included in the market group indexes for the years preceding 1992.<sup>15</sup>

Since the 1990 historical revision, new or refined procedures for measuring nearly sixty individual production and capacity series from product data were introduced. Most of the improvements were implemented beginning in, or near, the start year of the source data for the series. For about a dozen series, however, the revision incorporated new source data and methods for earlier years (see box “Individual

10. In particular, the May 1993 revision introduced explicit adjustments for “drift” in the data from the Annual Survey of Manufactures from 1987 to 1991; the adjustments were refined with the availability of results from the 1992 Census and incorporated in the fall 1994 annual revision. For further discussion, see pp. 24–25 in Richard Raddock, “Industrial Production and Capacity Utilization: A Revision,” *Federal Reserve Bulletin*, vol. 81 (January 1995).

These adjustments are newly applied to data from 1982 to 1986. Other methods, such as the adjustment of all industry-level series in manufacturing to comprehensive annual real output measures, were applied to data for all years.

11. See pp. 23–24 in Richard Raddock, “A Revision to Industrial Production and Capacity Utilization, 1991–95,” *Federal Reserve Bulletin*, vol. 82 (January 1996), for a description of seasonal factors in the production indexes.

12. See pp. 77–86 in Board of Governors of the Federal Reserve System, *Industrial Production—1986 Edition* (Board of Governors, 1986).

13. For a further elaboration of the weather adjustment, see p. 24 in Charles Gilbert and Richard Raddock, “Industrial Production and Capacity Utilization: the 1998 Annual Revision,” *Federal Reserve Bulletin*, vol. 85 (January 1999).

The electric power data revision was reviewed in Carol Corrado, Charles Gilbert, and Richard Raddock, “Industrial Production and Capacity Utilization: Historical Revision and Recent Developments,” *Federal Reserve Bulletin*, vol. 83 (February 1997), appendix B, pp. 89–92.

14. Models are used to develop most of the Federal Reserve’s estimates of the annual change in industry capacity. The models related an implied capacity measure (calculated as the industrial production index for an industry divided by survey data on utilization rates for the industry) to an industry capital input measure and a

variable that measures the average age of the industry’s net capital stocks.

See pp. 196–97 in Charles Gilbert, Norman Morin, and Richard Raddock, “Industrial Production and Capacity Utilization: The 1999 Annual Revision,” *Federal Reserve Bulletin*, vol. 86 (March 2000), for a description of the way capacity is modeled with utilization rates and information on industry capital stocks and capital input.

15. In the industrial production index, a consumer vehicle that is leased is included in consumer goods. Information on retail purchases and leases is used to determine the consumer share.

### Individual Series for Which the 2002 Revision Applied Current Source Data and Methods to Earlier Years

For the production index, the affected series include

- Coal mining (NAICS 2121). The current coal production measures were taken back to 1972; the measures weight the tonnage produced in a region by the Btu content typical of a ton of coal mined in that region and were introduced in the 1998 revision from 1992 forward.
- Stone mining and quarrying (NAICS 21231) and sand and gravel mining (NAICS 21232,1). A single series, based on quarterly product data from the U.S. Geological Survey and interpolated using monthly data on railroad car loadings, was introduced in the January 1997 revision from 1992 on; two series using the same data now begin in 1987. From 1982 to 1987, for each series, monthly railroad car loadings are used as the production indicator; from 1972 to 1982, data on production-worker hours are used.
- Support activities for oil and gas operations (NAICS 213112). The activity was newly represented in the fall 1997 revision from 1987 on; monthly product data from the same source are now used as the indicator from 1972 on.
- Gypsum product (NAICS 32742). The gypsum series newly introduced in the 1993 revision from 1987 on was taken back to 1972; monthly product data from the same source are used as the indicator from 1977 on; production-worker hours are the monthly indicator from 1972 to 1977.
- Room air conditioners (NAICS 33341pt). Seasonal adjustment factors derived using an additive approach, which were previously applied to the data from 1992 on, are now used from 1972 on.
- Completed aircraft, civilian (NAICS 336411pt). The methods that had been used to compile civilian aircraft production from 1992 on (approximately a forward-looking ten-month moving average of actual or future planned completions of commercial aircraft by Boeing Corporation) were extended back to 1972.
- Automobile and light duty trucks (NAICS 33611). The monthly series for the production of automobiles (NAICS 336111) and the production of light duty trucks (NAICS

33612) are now compiled as annually weighted chain-type indexes from 1987 on; these refined within-year estimates of light vehicle production were introduced in the 1999 revision and previously applied to data from 1992 on. In addition, the series for light trucks now begins in 1972, whereas it previously began with data for 1977.

- Motor vehicle parts, original equipment (NAICS 3363pt). The series are now constructed in two segments: from 1972 to 1992, the monthly changes are proportional to changes in production-worker hours and motor vehicle assemblies; from 1992 on, the series also reflect product data when available. (Product data were newly introduced in the revision issued in January 1997.)

- Motor vehicle parts, repair (NAICS 3363pt). The Federal Reserve's annual estimates of motor vehicle repair parts were re-estimated from 1972 on using a procedure introduced in the 2001 revision; the procedure sets the indexes proportional to an estimate of the outstanding stock of vehicles (in units) times the average age of the fleet, modified by (1) a cyclical pattern identified using data on consumer replacement tires and (2) a trend adjustment to control the combination of repair and original equipment parts production to the output of the industry.

For capacity system, the affected series include

- Natural gas extraction (NAICS 21111pt). The new annual source data, issued by the Energy Information Agency and introduced in the 2001 annual revision from 1992 on, were included back to 1983.
- Automobile and light duty trucks (NAICS 33611). As with the production index, the annual weighting of the unit data by model-year prices was extended back to 1987; also see the new methods discussion above.
- Heavy duty trucks (NAICS 33612). The series, which previously began in 1987, was extended back to 1972 using current methods.

Series for Which the 2002 Revision Applied Current Source Data and Methods to Earlier Years").

As noted earlier, the revised changes in monthly IP overall are highly correlated with the previously published rates of change. Nonetheless, the application of current seasonal adjustment and compilation methods to the pre-1987 data reduced the volatility of changes in the monthly IP index. The reduction is illustrated in chart 4, which shows an eight-year moving standard deviation of the percentage change in the revised and earlier monthly IP data.

### NEW MARKET AND STAGE-OF-PROCESS AGGREGATES

To complement the industry measures, the monthly G.17 statistical release presents IP indexes for market groups (such as consumer goods, business equipment, and the like) as well as stage-of-process groups for utilization rates in *manufacturing* (advanced and primary processing). The 2002 revision (1) introduces new allocations of individual industry production indexes into market groups and (2) assigns utili-

4. Percent change in monthly IP,  
eight-year moving standard deviation

NOTE. The shaded areas are periods of business recession as defined by the National Bureau of Economic Research (NBER). The NBER has not yet established a trough for the recession beginning in 2001; the shaded area arbitrarily stops at the end of that year.

zation rates to more-refined stage-of-process groups for *total industry*.

The new groups for capacity and capacity utilization are developed from a stage-of-process classification of the 227 industries in the IP industry structure; the classification is also used to develop new supplementary output indexes on industrial output by stage of process. The supplementary statistics on the gross value of products now provided in the G.17 release have been updated and revised to reflect the new allocation of industry series to the IP market groups.

### Market Groups

The IP market groups depict industrial output as flowing from the production of industrial materials and nonindustrial supplies to the production of final products. Because a market group index represents the *input* to a defined economic activity (such as the production of goods for household consumption), an industry's output cannot generally be assigned to only one market group. For example, the outputs of petroleum refineries and motor vehicle producers are inputs to multiple markets. As a result, twenty-six industry series in the industrial production index are further disaggregated, based on detailed product and end-use statistics (for example, gasoline and jet fuel and autos and heavy trucks), so that their output can be assigned to multiple market groups.

With this revision, when appropriate, *all* industries in the IP index have their output allocated to multiple market groups. Market group shares for the 181 industries represented by individual series in the

industrial production index were derived using relationships in the 1992 input-output (I-O) tables issued by the Bureau of Economic Analysis.<sup>16</sup> The resulting changes in industry composition of the market group indexes led to a renaming of two major aggregates. The new names are highlighted in table 6, which shows the new IP market structure (in abbreviated form). The index representing the input for nonindustrial use is named "nonindustrial supplies" (rather than "intermediate products"), and the index that combines inputs to final demand and nonindustrial use is named "final products and nonindustrial supplies" (rather than "total products").

The more noticeable revisions to the industry composition of the IP market groups were in the indexes for (1) business equipment, (2) other business supplies, a subgroup of the broader grouping of inputs for nonindustrial use, and (3) materials. Table 7 shows the revised and previous proportion of the major groups in the total index (in value-added terms) at five-year intervals starting in 1972 and for recent years. The revision lowered somewhat the estimate of the proportion of final products in total industrial output, primarily because the proportion for business equipment has been reduced. Many industries whose

16. The I-O make, use, and bridge tables can be used to express the total domestic production of a good as the sum of its use as an intermediate input and its absorption by final demand (consumption, investment, government, exports).

The market group shares were derived from the allocation of the gross value of industrial output (in producer prices) to the following major components: inputs for intermediate industrial use; inputs for intermediate nonindustrial use (construction and other business supplies); and inputs to final demand (consumer goods, producers' durable equipment, and government defense purchases).

The IP market shares will be updated with the availability of the 1997 I-O table in this year's fall revision of industrial production and capacity utilization.

NOTE. Proportions not in parentheses are revised; proportions within parentheses are previous.

Not applicable.

entire output was previously included in business equipment also produce equipment parts; that portion is now included in materials. The composition of the consumer goods group was, on balance, little changed.<sup>17</sup>

The input-output analysis resulted in a substantial refinement of the composition of the "other business" component of nonindustrial supplies. Outside energy, newspaper advertising, job printing, and periodical publishing still are the predominant components in this grouping; but with this revision, noticeable portions of the output of plastics products, microprocessor units, and of numerous other smaller industries have been added. The resulting market group is now more than 2 percentage points larger as a proportion of the overall index.<sup>18</sup>

Chart 5 shows the cyclical profile of the major market group components. Though most of the series

changed in composition, their cyclical patterns were not materially altered by the revision. (Revisions to the indexes for consumer durables and business equipment were noticeable during the 1980s, but they reflected mostly a reallocation of the consumer—as opposed to business—share of total light vehicle production on the basis of the data that were introduced for those years; see the previous section).

### Stage-of-Process Groups

Production in the economy can be subdivided into distinct segments so that, when arranged sequentially, the outputs of earlier segments become inputs to subsequent ones; the sequence ends with final demand. This structure of the production process allows *industry data* to be grouped into stages of processing. In this revision, input-output methods were used to classify the industries in the IP index into four stages of processing—crude, primary, semi-finished, and finished.<sup>19</sup> For example, the organic chemical industry sells to makers of plastic materials,

17. As in the previously reported measures, the consumer goods group contains replacement car parts, canned and bottled beverages, and pharmaceutical preparations even though these products are distributed to consumers by nonindustrial businesses.

18. The detailed series that compose each market group are documented in the table on the Board's web site at [www.federalreserve.gov/releases/g17/sdtab2.pdf](http://www.federalreserve.gov/releases/g17/sdtab2.pdf).

19. The analysis, which was conducted using 1992 input-output relationships, was similar to the analysis reported in Robert Gaddie

## 5. Industrial production by market groups, 1972–2002

NOTE. The shaded areas are periods of business recession as defined by the National Bureau of Economic Research (NBER). The NBER has not yet

established a trough for the recession beginning in 2001; the shaded area arbitrarily stops at the end of that year.

who sell to makers of plastic bottles, who sell to soft drink bottlers, who sell soda to consumers; these industries are in a sequence that reflects the way the transactions flow, one that ends with final demand.

These stage-of-process (SOP) groupings, which assign each IP industry series to a single processing stage, may be used in two ways: (1) to construct indexes for the *input* to each stage of process and (2) to construct indexes for the *output* of each stage of process. The existing IP market groups are akin to SOP input indexes; for example, the IP index for final products is the industrial input to final demand (less exports), and the IP index for nonindustrial supplies is the input to nonindustrial finished processors. From a stage-of-process perspective, however, the IP materials index, which combines the production for all earlier stages of process in one group, is broader than desirable for analysis of industrial production.

In this revision, the SOP groups were applied to the industrial production and capacity utilization data in three ways:

1. The IP index for materials represents all domestically produced inputs for intermediate industrial use—that is, for use by finished, semifinished, and primary industrial processors. With this revision, the SOP classification of IP industries was used to develop two new components for the IP materials index: (1) non-energy inputs to finished processors and (2) non-energy inputs to primary and semifinished processors.

The two SOP-based materials sub-aggregates are new combinations of the individual series in non-energy materials. The index for inputs to finished processors mainly comprises consumer durable parts, equipment parts, textile product materials, and paper product materials. The index for inputs to primary and semifinished processors comprises basic metals, miscellaneous durable materials, chemical materials, and other nondurable materials.

## 8. Revised industrial capacity stage-of-process structure

The 2002 revision	Correspondence to previous structure
Total industry	Total industry
Stage-of-process groups	Stage-of-process groups
Crude processing	Most of mining and some basic manufacturing industries
Primary and semifinished processing	Primary processing and utilities
Finished processing	Advanced processing and oil and gas well drilling

NOTE. The correspondences shown in the table are illustrative. See text for the full discussion.

The new indexes are shown as memo items in table 5 of the regular release (see also table A.5).

2. The SOP classification of IP industries was used to develop three aggregates of industries within total industrial capacity and capacity utilization: (1) crude processing, (2) primary and semifinished processing, and (3) finished processing. These aggregates have been compiled from 1972 on. The results are linked to sparser data for earlier years to form continuous times series from 1967 on.

The relationship between the new stage-of-process groups for capacity and capacity utilization and the previous published aggregates is summarized in table 8. The first new aggregate, crude processing, covers a relatively small portion of total industrial capacity and consists of logging (NAICS 1133), much of mining (excluding stone, sand, and gravel mining and oil and gas drilling, which are NAICS 21231, 21221–2, and 213111) and some basic manufacturing industries, including basic chemicals (NAICS 3251); fertilizers, pesticides, and other agricultural chemicals (NAICS 32531,2); pulp, paper, and paperboard mills (NAICS 3221); and alumina, aluminum, and other nonferrous production and processing mills (NAICS 3313,4).<sup>20</sup>

The second new aggregate for capacity, primary and semifinished processing, is a combination of the two middle SOP groups; it corresponds loosely to the previously published aggregate, primary processing. The new aggregate excludes the basic manufacturing industries involved in crude processing as well as part of textile mill products (carpet and rug mills and curtain and linen mills), which is now included in the

## 6. Capacity utilization by stage of process

NOTE. The shaded areas are periods of business recession as defined by the National Bureau of Economic Research (NBER). The NBER has not yet established a trough for the recession beginning in 2001; the shaded area arbitrarily stops at the end of that year.

third SOP capacity aggregate. Primary and semifinished processing also includes utilities and portions of several two-digit SIC industries included in the former advanced-processing group.<sup>21</sup>

The third SOP capacity aggregate is finished processing, which generally corresponds to the previously published aggregate, advanced processing. Besides the industries previously classified as advanced processing, this new group includes oil and gas well drilling (a mining industry previously not included in the capacity SOP aggregates) and carpet and rug mills (previously included in primary processing). Finished processing excludes those portions of two-digit SIC industries that were in the former advanced-processing group but are now in primary and semifinished processing.

20. The crude processing capacity aggregate excludes a few other manufacturing industries that are classified as crude processors in the IP industry structure, but because they are not included as individual series in the capacity system, they could not be included in the capacity aggregate for crude processing. They are alumina refining (NAICS 331311), primary aluminum production (NAICS 331312), nonferrous metal (except aluminum) smelting and refining (NAICS 33141), wood container and pallet (NAICS 32192), support activities for printing (NAICS 32312), and lime (NAICS 32741).

21. These include printing and related support activities (NAICS 3231); paints and adhesives (NAICS 3255); and newspaper, periodical, book, and directory publishers (NAICS 5111).

The primary and semifinished capacity aggregate includes turbine and turbine generator set units (NAICS 333611). This industry is included in finished processing in the SOP classification of IP industries, but the capacity system combines NAICS 333611 with other industries in NAICS 3336. The resulting aggregate consists mainly of industries classified as semifinished processors.

Despite the many differences from the previously published manufacturing aggregates, the new aggregates are similar in cyclical profile. Chart 6 plots the rates of capacity utilization for these three stages of processing.

3. Given the availability of SOP classifications for all detailed industries in the IP index, new supple-

mentary output indexes measuring industrial output by stage of process have been introduced for publication in a new table in the regular monthly release. They are formed using gross value weights to combine the IP indexes in each stage-of-process group. □

*Appendix tables start on page 168.*

## APPENDIX A: TABLES BASED ON THE G.17 RELEASE, JANUARY 14, 2003

## A.1 Revised data for industrial production for total industry

Seasonally adjusted data except as noted

Year	Jan.	Feb.	Mar.	Apr.	May	June	July	Aug.	Sept.	Oct.	Nov.	Dec.	Quarter				Annual avg. <sup>1</sup>

NOTE: Monthly percent change figures show change from the previous month; quarterly figures show the change from the previous quarter at a compound annual rate of growth. Production and capacity indexes are expressed as percentages of output in 1997.

Estimates for November 2002 and December 2002 are subject to further revision in the upcoming monthly releases.

1. Annual averages of industrial production are calculated from indexes that are not seasonally adjusted.

## A.2. Revised data for capacity and utilization for total industry

NOTE: Estimates for November 2002 and December 2002 are subject to further revision in the upcoming monthly releases.

1. Manufacturing comprises those industries included in the North American Industry Classification System, or NAICS, definition of manufacturing plus the logging and newspaper, periodical, book, and directory publishing industries

that have traditionally been considered manufacturing and included in the industrial sector.

2. Annual averages of industrial production are calculated from indexes that are not seasonally adjusted.

A.4. Revised data for capacity and utilization for manufacturing industries<sup>1</sup>

Seasonally adjusted data except as noted

Year	Jan.	Feb.	Mar.	Apr.	May	June	July	Aug.	Sept.	Oct.	Nov.	Dec.	Quarter				Annual avg. <sup>2</sup>

NOTE. The IP proportion data are estimates of the industries' relative contributions to the overall IP change between the reference year and the following year. For example, a 1 percent increase in durable goods manufacturing between 2000 and 2001 would account for a 0.462 percent increase in total IP.

## *APPROVAL OF FINAL RULE AMENDING REGULATION B*

The Federal Reserve Board on February 19, 2003, approved a final rule amending Regulation B, which implements the Equal Credit Opportunity Act (ECOA). Among other things, the final rule addresses the collection of applicants' personal characteristics in connection with nonmortgage credit and record retention for prescreened solicitations.

The final rule amending Regulation B is effective April 15, 2003. However, to allow time for any necessary operational changes, the mandatory compliance date is April 15, 2004.

The ECOA prohibits discrimination on the basis of a credit applicant's national origin, marital status, religion, color, sex, race, age, receipt of public assistance benefits, or the exercise of rights under the Consumer Credit Protection Act.

In 1976, the Board adopted a general prohibition against creditors inquiring about, or noting, applicant characteristics such as race or national origin in connection with nonmortgage credit.

By restricting access to such information, the existing prohibition serves to deter credit discrimination. But it also prevents creditors from examining their own lending policies and practices using information about applicant characteristics.

The Board is now creating an exception that will allow creditors to collect personal characteristics in a self-test for compliance with the ECOA. This exception will enable creditors to develop compliance programs that utilize applicant data in a controlled and targeted manner. The self-test must meet standards set by the regulation, which carries out a provision contained in the ECOA.

Under the regulation, a self-test is a program, practice, or study designed and used by a creditor specifically to determine compliance with the ECOA. The regulation requires the creditor to take corrective action when the results of the self-test indicate that "it is more likely than not" that a violation occurred.

The results of a self-test can be made privileged, provided the creditor carries out corrective action when appropriate. This means, for example, that the results cannot be obtained in an examination or investigation alleging a violation of the ECOA. Other

information—such as whether a creditor conducted a self-test, the methodology used, or the scope of the test—is not privileged.

Creditors that conduct a self-test and request information about personal characteristics must disclose to applicants that providing the information is optional, that it is being collected to monitor for compliance with the ECOA, that it will not be used in making the credit decision, and, when applicable, that information may be noted based on visual observation or surname. A model form is contained in the regulation to ease compliance.

The final rule also requires creditors to retain for twenty-five months certain records related to prescreened solicitations, such as the list of criteria used to select potential customers. The retention of these records is intended to allow the systematic review and analysis of creditors' possible use of race, age, national origin, and other prohibited bases of credit discrimination in connection with prescreened solicitations.

The Board has also amended the official staff commentary to Regulation B that gives guidance on the requirements of the regulation.

## *FINAL RULE AMENDING REGULATION B PUBLISHED*

The Federal Reserve Board on March 5, 2003, announced that it had published a final rule amending Regulation B, which implements the Equal Credit Opportunity Act. The Board approved the final rule at its meeting on February 19, 2003.

The ECOA prohibits discrimination on the basis of a credit applicant's national origin, marital status, religion, color, sex, race, age, receipt of public assistance benefits, or the exercise of rights under the Consumer Credit Protection Act. Among other things, the final rule addresses the collection of applicants' personal characteristics in connection with nonmortgage credit and record retention for prescreened solicitations.

The final rule amending Regulation B was effective April 15, 2003. However, to allow time for any necessary operational changes, the mandatory compliance date is April 15, 2004.

The rule will be published in the *Federal Register* shortly.

### *PROPOSED AMENDMENT TO REGULATION C*

The Federal Reserve Board on March 3, 2003, published transition rules in a proposed amendment to the official staff commentary that applies and interprets the requirements of Regulation C (Home Mortgage Disclosure Act).

Comment is requested by April 8, 2003. The Board expects to issue final guidance, after taking into account comments received, as soon as possible after the close of the comment period.

In 2002, the Board substantially revised Regulation C, effective January 1, 2004. The revisions require lenders to report new data items, including information about loan pricing. The proposed transition rules provide guidance on collecting and reporting this information for applications received before January 1, 2004, upon which final action is taken on or after January 1, 2004. More specifically, the transition rules provide that:

- Lenders would not have to identify applications or loans involving manufactured homes or requests for preapproval.
- Lenders could, at their option, continue to apply the current definitions of a home improvement loan and a refinancing.
- Lenders would report applicant information on ethnicity and race in accordance with the conversion guidance set forth in the proposed comment.
- Lenders would have to report the purchaser type, rate spread, whether a loan is subject to the Home Ownership and Equity Protection Act (HOEPA), and the lien status of applications and originated loans. Information about these items is available at the time of final action.

### *PROPOSAL TO AMEND REGULATION Y*

The Federal Reserve Board on March 11, 2003, requested public comment on a proposal to modify a condition in the Board's Regulation Y (Bank Holding Companies and Change in Bank Control) in order to allow bank holding companies engaged in permissible derivatives activities to transfer title to commodities underlying derivative contracts on an instantaneous, pass-through basis.

The Board will publish its proposed rule in the *Federal Register* shortly. Comment was requested by April 21, 2003.

### *INTERPRETATION OF REGULATION K ON SECURITIES UNDERWRITING*

The Federal Reserve Board on February 7, 2003, issued an interpretation concerning securities underwriting by banking organizations that are subject to the Bank Holding Company Act.

The interpretation clarifies that a banking organization that wishes to engage in underwriting securities that are to be distributed in the United States must be either a financial holding company or have authority to engage in underwriting activity under section 4(c)(8) of the Bank Holding Company Act.

### *AGENCIES ISSUE ADVISORY ON MORTGAGE BANKING ACTIVITIES*

Federal bank and thrift regulatory agencies on February 25, 2003, jointly issued an advisory letter discussing risks related to mortgage banking activities. The letter highlights concerns and provides guidance regarding mortgage banking activities, primarily in the valuation, accounting, and hedging of mortgage servicing assets.

The guidance, issued under the auspices of the Federal Financial Institutions Examination Council (the Office of the Comptroller of the Currency, the Federal Reserve Board, the Federal Deposit Insurance Corporation, and the Office of Thrift Supervision), applies to all banks and thrift institutions; however, it is primarily applicable to those institutions that are actively involved in mortgage banking activities. Although the number of institutions with significant exposure to mortgage banking assets is limited, mortgage banking is a significant and growing business line for many institutions.

The agencies developed the guidance in response to recent examinations and market developments, especially the record volume of refinancings caused by the decline in interest rates.

The guidance details the agencies' expectations regarding risk-management activities including valuation and modeling processes, hedging activities, management information systems, and internal audit. The guidance also notes that the agencies may require additional capital for institutions that fail to consider the sound practices set forth in this advisory in their risk-management programs.

### *MEETING OF THE CONSUMER ADVISORY COUNCIL*

The Federal Reserve Board announced on February 14, 2003, that the Consumer Advisory Council

would hold its next meeting on Thursday, March 13. The Council's function is to advise the Board on the exercise of its responsibilities under various consumer financial services laws and on other matters on which the Board seeks its advice.

### ENFORCEMENT ACTIONS

The Federal Reserve Board on February 13, 2003, announced the issuance of a Final Decision and Order of Prohibition against Cynthia Rowe, a former employee of Key Bank, N.A., Cleveland, Ohio. The Order, the result of an action brought by the Office of the Comptroller of the Currency, prohibits Ms. Rowe from participating in the conduct of the affairs of any financial institution or holding company.

The Federal Reserve Board on February 13, 2003, announced the issuance of a Final Decision and Order of Prohibition against Marian L. Butler, a former employee of CoreStates Financial (now First Union), Philadelphia, Pennsylvania. The Order, the result of an action brought by the Office of Comptroller of the Currency, prohibits Ms. Butler from participating in the conduct of the affairs of any financial institution or holding company.

The Federal Reserve Board on March 5, 2003, announced the issuance of a consent Order against Dale and Betty Skrobot, both former institution-affiliated parties of the First Western Bank, Cooper City, Florida, a state member bank.

The individuals, without admitting to any allegations, consented to the issuance of the Order to resolve allegations that they violated the Change in Bank Control Act and an order issued under the Change in Bank Control Act by the Board of Governors in connection with their acquisition of beneficial ownership of shares of the bank.

The Federal Reserve Board on March 5, 2003, announced the issuance of a consent Order against Michael Sahlgren, an institution-affiliated party of the First Western Bank, Cooper City, Florida, a state member bank.

Mr. Sahlgren, without admitting to any allegations, consented to the issuance of the Order to resolve allegations that he violated the Change in Bank Control Act and an order issued under the Change in Bank Control Act by the Board of Governors in connection with his acquisition of beneficial ownership of shares of the bank.

The Federal Reserve Board on March 5, 2003, announced the issuance of a consent Order against James C. Agee, an institution-affiliated party of the First Western Bank, Cooper City, Florida, a state member bank.

Mr. Agee, without admitting to any allegations, consented to the issuance of the Order to resolve allegations that he violated the Change in Bank Control Act and an order issued under the Change in Bank Control Act by the Board of Governors in connection with his acquisition of beneficial ownership of shares of the bank.

The Federal Reserve Board on March 13, 2003, announced the issuance of a consent Order of Assessment of a Civil Money Penalty against First Bank, Creve Coeur, Missouri, a state member bank.

First Bank, without admitting to any allegations, consented to the issuance of the Order in connection with its alleged violations of the Board's Regulations implementing the National Flood Insurance Act.

The Order requires First Bank to pay a civil money penalty of \$17,150, which will be remitted to the Federal Emergency Management Agency for deposit into the National Flood Mitigation Fund.

The Federal Reserve Board on March 13, 2003, announced the issuance of an Order to Cease and Desist and of Prohibition against Terry Frierson, a former chief executive officer, president, and institution-affiliated party of MSB Shares, Inc., and the Midsouth Bank, Jonesboro, Arkansas.

The Federal Reserve Board on March 7, 2003, announced the termination of the enforcement actions listed below. Terminations of enforcement actions are listed on the Federal Reserve's public web site [www.federalreserve.gov/boarddocs/enforcement](http://www.federalreserve.gov/boarddocs/enforcement) as they occur.

## *FINAL RULE—AMENDMENT TO RULES OF PROCEDURE*

The Federal Open Market Committee is amending its definition of a quorum of the Committee. The amendment is designed to enhance the Committee's ability to perform its functions in the event of a national emergency.

Effective February 6, 2003, 12 C.F.R. Part 272 is amended as follows:

### Part 272—Federal Open Market Committee—Rules of Procedure

1. The authority citation for Part 272 continues to read as follows:

*Authority:* 5 U.S.C. 552.

2. Section 272.3 is revised to read as follows:

#### *Section 272.3—Meetings*

\* \* \* \* \*

- (c) *Quorum.* Seven members constitute a quorum of the Committee for purposes of transacting business except that, if there are fewer than seven members in office, then the number of members in office constitute a quorum. For purposes of this paragraph (c), members of the Committee include alternates acting in the absence of members. Less than a quorum may adjourn a meeting of the Committee from time to time until a quorum is in attendance.

\* \* \* \* \*

By order of the Federal Open Market Committee, January 30, 2003.

VINCENT R. REINHART  
*Secretary*

*Federal Open Market Committee*

## *ORDERS ISSUED UNDER BANK HOLDING COMPANY ACT*

Orders Issued Under Sections 3 and 4 of the Bank Holding Company Act

*Mizuho Financial Group, Inc.*  
*Tokyo, Japan*

## Order Approving the Formation of Bank Holding Companies and Acquisition of Nonbanking Companies

Mizuho Holdings, Inc., Tokyo, Japan ("Mizuho Holdings"), a bank holding company within the meaning of the Bank Holding Company Act ("BHC Act"), has submitted applications on behalf of Mizuho Financial Group, Inc. ("MHFG") and Mizuho Asset Trust & Banking Co., Ltd. ("MHAT") (collectively, "Applicants") under sections 3 and 4 of the BHC Act in connection with an internal reorganization of the operations of Mizuho Holdings and its subsidiaries. MHFG has requested the Board's approval under section 3 of the BHC Act (12 U.S.C. § 1842) to become a bank holding company by acquiring Mizuho Holdings and indirectly acquiring Mizuho Corporate Bank of California, Los Angeles, California ("MCB California"); Mizuho Corporate Bank (USA), New York, New York ("MCB (USA)"); and Mizuho Trust & Banking Co. (USA), also in New York ("MTBC (USA)"). MHAT has requested the Board's approval to become a bank holding company by merging with Mizuho Trust & Banking Co., Ltd., a subsidiary bank holding company of Mizuho Holdings also in Tokyo, and thereby directly acquire MTBC (USA).<sup>1</sup>

MHFG also has requested the Board's approval under section 4(c)(8) and 4(j) of the BHC Act (12 U.S.C. § 1843(c)(8) and (j)) and section 225.28 of the Board's Regulation Y (12 C.F.R. 225.28) to acquire the existing nonbanking companies of Mizuho Holdings and thereby engage in certain permissible nonbanking activities.<sup>2</sup> Applicants do not propose to expand the banking or nonbanking operations of Mizuho Holdings in the United States or to acquire or control any additional U.S. banks.

Notice of the proposal, affording interested persons an opportunity to submit comments, has been published (68 *Federal Register* 1615 (2003)). The time for filing comments has expired, and the Board has considered the

1. Mizuho Holdings is a top-tier holding company that controls directly three Japanese banks: Mizuho Bank, Ltd.; Mizuho Corporate Bank, Ltd.; and Mizuho Trust & Banking Co., Ltd. Mizuho Bank and Mizuho Corporate Bank each control approximately 28 percent of the voting shares of MHAT, and the remaining shares are widely held by the public. Under the reorganization, MHFG would become the top-tier holding company of Mizuho Holdings. In addition, MHAT would merge with Mizuho Trust & Banking Co., Ltd., with MHAT as the surviving entity to be renamed Mizuho Trust & Banking Co., Ltd. ("New Mizuho Trust"). After consummation of the proposal, MHFG would directly control approximately 74 percent of the voting shares of New Mizuho Trust. Applicants represent that the remaining voting shares would be widely held by the public.

2. These nonbanking activities are listed in the Appendix.

proposal and all comments received in light of the factors set forth in sections 3 and 4 of the BHC Act.

Mizuho Holdings, with total consolidated assets equivalent to \$1.2 trillion, is the largest banking organization in the world by assets.<sup>3</sup> Mizuho Holdings operates depository institutions in California and New York. MCB California, with total consolidated assets of \$592 million, controls deposits of \$323 million, representing less than 1 percent of total deposits of insured depository institutions in California.<sup>4</sup> In New York, MCB (USA), with consolidated assets of \$3.6 billion and deposits of \$1 billion, and MTBC (USA), with consolidated assets of \$118.3 million and deposits of \$48.8 million, together control less than 1 percent of total deposits of insured depository institutions in that state.

### *Factors Reviewed by the Board*

The BHC Act sets forth the factors that the Board must consider when reviewing the formation of bank holding companies or the acquisition of banks. These factors are the competitive effects of the proposal in the relevant geographic markets; the financial and managerial resources and future prospects of the companies and banks involved; the convenience and needs of the community to be served, including the records of performance of the relevant insured depository institutions under the Community Reinvestment Act ("CRA");<sup>5</sup> the availability of information needed to determine and enforce compliance with the BHC Act and other applicable federal banking laws; and, in the case of applications involving a foreign bank, whether it is subject to comprehensive supervision and regulation on a consolidated basis by its home country supervisor.<sup>6</sup>

The Board has considered these factors in light of a record that includes information provided by Applicants, confidential supervisory and examination information from various federal agencies, and publicly reported financial and other information. The Board also has considered information from Japan's Financial Services Agency ("FSA"), the primary home country supervisor of Mizuho Holdings. The Board notes that the FSA has issued a preliminary approval of the proposed restructuring. In addition, the Board has considered all the public comments received on the proposal.<sup>7</sup>

3. Foreign asset and ranking data are as of September 30, 2002, and are based on the exchange rate of \$1/¥122.6 on that date.

4. State asset, deposit, and ranking data are as of December 31, 2001. In this context, depository institutions include commercial banks, savings associations, and savings banks.

5. 12 U.S.C. § 2901 *et seq.*

6. See 12 U.S.C. § 1842(c).

7. One commenter objected to the proposal. The commenter asserted that MHAT should, as part of these applications, also file for the planned closure of its representative office in New York. Section 211.25(f) of the Board's Regulation K establishes the notice requirements for the closure of a foreign bank's representative office, and its provisions do not require such notices to be filed with a BHC Act application. See 12 C.F.R. 211.25(f).

### *Competitive Considerations*

Section 3 of the BHC Act prohibits the Board from approving a proposal that would result in a monopoly. The BHC Act also prohibits the Board from approving a proposed bank acquisition that would substantially lessen competition in any relevant banking market unless the anticompetitive effects of the proposal are clearly outweighed in the public interest by the probable effect of the proposal in meeting the convenience and needs of the community to be served.<sup>8</sup> This proposal would effect an internal reorganization of existing operations and would not result in either an expansion of operations or an acquisition of an additional bank in the United States. Based on all the facts of record, the Board concludes that consummation of the proposal would not have a significantly adverse effect on competition or on the concentration of banking resources in any relevant banking market.

### *Financial and Managerial Considerations*

The Board has carefully considered the financial and managerial resources and future prospects of Applicants and the banking and nonbanking companies involved in the proposal; the effect the proposed transaction would have on such resources; and other supervisory factors in light of all the facts of record, which include the examination records of Mizuho Holdings and its subsidiary depository institutions by the appropriate federal financial supervisory agencies. The Board has also consulted with the FSA.

The Board notes that the proposal is intended to enhance the overall financial strength and future prospects of Applicants and Mizuho Holdings. The corporate reorganization would be effected through the exchange of shares. No debt would be issued by Applicants, Mizuho Holdings, or any of its subsidiaries as part of the transactions that would effect the reorganization. Mizuho Holdings' stated capital levels exceed the minimum levels that would be required under the Basle Capital Accord, and its capital levels are considered equivalent to the capital levels that would be required of a U.S. banking organization under similar circumstances. Moreover, no expansion or restructuring of existing U.S. operations would result from the proposed reorganization. In addition, the proposal would not materially affect the management of Mizuho Holdings' operations, including its subsidiary insured depository institutions, in the United States. In this light, and based on all the facts of record, the Board concludes that the financial and managerial resources and future prospects of Applicants and their subsidiary banks are consistent with approval.

### *Convenience and Needs Factor*

The Board has carefully considered the effects of the proposal on the convenience and needs of the communities to be served in light of all the facts of record, including

8. 12 U.S.C. § 1842(c)(1).

a comment received during the public comment period, information on the performance under the CRA of the relevant subsidiary insured depository institutions received from other federal agencies, publicly available data, and information submitted by Applicants. As noted above, the U.S. operations of Mizuho Holdings and its subsidiary insured depository institutions would remain unaffected by the proposed reorganization.

The Board has long held that consideration of the convenience and needs factor includes a review of the records of the relevant depository institutions under the CRA. As provided in the CRA, the Board evaluates an institution's record of performance in light of examinations by the appropriate federal supervisors of the CRA performance records. An institution's most recent CRA performance evaluation is a particularly important consideration in the applications process because it represents a detailed, on-site evaluation of the institution's overall record of performance under the CRA by its appropriate federal supervisor.<sup>9</sup>

Mizuho Holdings' subsidiary depository institutions received either "outstanding" or "satisfactory" ratings at their most recent examinations under the CRA by their primary federal supervisor at the time of the examinations, the Federal Deposit Insurance Corporation ("FDIC"). MCB (USA), a state member bank, was established on December 1, 2002, as a result of the merger of two wholly owned insured depository institutions of Mizuho Holdings, Fuji Bank and Trust Company ("Fuji Trust") and the Industrial Bank of Japan Trust Company ("IBJ Trust"). Fuji Trust received an "outstanding" rating, as of June 24, 2002, and IBJ Trust received an "outstanding" rating, as of March 8, 2000.<sup>10</sup> MCB California, which changed its name from Dai-Ichi Kangyo Bank of California on April 1, 2002, received a "satisfactory" rating, as of April 30, 2001,<sup>11</sup> and MTBC (USA) received a "satisfactory" rating, as of June 30, 1998.<sup>12</sup>

9. See *Interagency Questions and Answers Regarding Community Reinvestment*, 66 *Federal Register* 36,620 and 36,639 (2001).

10. Another wholly owned subsidiary insured depository institution of Mizuho Holdings, IBJ Whitehall Bank & Trust Company ("IBJ Whitehall"), was merged into IBJ Trust on March 31, 2002. IBJ Whitehall received a "satisfactory" rating, as of December 11, 2000, from the Federal Reserve Bank of New York. The commenter criticized the overall number of loans originated by IBJ Whitehall and the amount of lending in its assessment area, citing these data as evidence of deterioration in the overall CRA performance of IBJ Whitehall. Examiners found that the community development lending, qualified investments, and community development services of IBJ Whitehall were adequate. Moreover, examiners commended IBJ Trust, which acquired IBJ Whitehall, for the high level of community development loans it originated and described IBJ Trust's responsiveness to the credit needs of its assessment area as excellent.

11. The commenter pointed out statements in the performance evaluation of MCB California that the bank's overall lending, especially in low-income census tracts, had slowed, and that the bank's level of market penetration among business customers with gross annual revenues of \$1 million or less was poor. However, the examiners also commented that the decrease in lending was due to the reorganization of the bank when it became a subsidiary of Mizuho Holdings, a reduction in lending personnel, and problems in the Asian economy. In addition, the examiners generally commended MCB

In reviewing the effect of the proposal on the convenience and needs of the communities to be served, the Board has carefully considered all the facts of record, including the views of the commenter, the Applicants' response, and reports of examinations of CRA performance of the institutions involved. Based on the review of the entire record and for the reasons discussed above, the Board concludes that considerations relating to the convenience and needs factor, including the CRA performance records of the relevant depository institutions, are consistent with approval.<sup>13</sup>

### Other Supervisory Considerations

Section 3 of the BHC Act also provides that the Board may not approve an application involving a foreign bank unless the bank is subject to comprehensive consolidated supervision or regulation on a consolidated basis by the appropriate authorities in the bank's home country.<sup>14</sup> The Board has previously determined in applications under the BHC Act that certain Japanese commercial banks, including The Fuji

California for its *overall* small business lending activities, stating that a high percentage of the bank's small business loans and letters of credit were originated during the review period in the bank's designated assessment areas, and that the geographic distribution of its small business lending reflected an excellent level of penetration throughout its assessment areas.

12. MTBC (USA) was named Yasuda Bank and Trust Company (U.S.A.) when last evaluated for CRA performance. The commenter questioned whether MCB (USA) suspended its CRA activities for a portion of 1999 and 2000. At that time, MCB (USA) was a limited-purpose trust company, and this type of institution is not subject to the CRA under the relevant FDIC regulations. See 12 C.F.R. 345.11(c)(3). MCB (USA) was subsequently designated as a wholesale bank for purposes of the CRA and received a satisfactory performance rating from the New York State Banking Department under the New York State Community Reinvestment Act. See N.Y. Banking Law § 28-b (McKinney 2003).

13. The commenter cited news reports about the level of Mizuho Holdings' lending in Japan, particularly its small business lending, and asserted that these reports should cause the Board to closely scrutinize its record of lending under the CRA. The Board does not consider the non-U.S. lending performance of an applicant when considering the convenience and needs factor under section 3 of the BHC Act. However, the Board has carefully considered the entire record of lending of Mizuho Holdings' subsidiary depository institutions in the United States in considering the convenience and needs factor. The commenter also voiced a concern about the manner in which Mizuho Holdings' predecessor institutions reacted to the terrorist attacks on September 11, 2001. This concern is outside the limited statutory factors the Board is authorized to consider when reviewing an application under the BHC Act. See *Western Bancshares, Inc. v. Board of Governors*, 480 F.2d 749 (10th Cir. 1973).

14. 12 U.S.C. § 1842(c)(3)(B). Under Regulation Y, the Board uses the standards enumerated in Regulation K to determine whether a foreign bank that has applied under section 3 of the BHC Act is subject to consolidated home country supervision. See 12 C.F.R. 225.13(a)(4). Regulation K provides that a foreign bank will be considered to be subject to comprehensive supervision or regulation on a consolidated basis if the Board determines that the bank is supervised or regulated in such a manner that its home country supervisor receives sufficient information on the worldwide operations of the bank, including its relationship to any affiliates, to assess the bank's overall financial condition and its compliance with law and regulation. See 12 C.F.R. 211.24(c)(1).

Bank, Ltd., The Industrial Bank of Japan, Ltd., and The Dai-Ichi Kangyo Bank, Ltd., were subject to comprehensive consolidated supervision by their home country supervisor.<sup>15</sup> In this case, the Board has determined that MHAT and Mizuho Corporate Bank are supervised on substantially the same terms and conditions as the other Japanese banks. In addition, the Board also has previously considered the supervisory regime in Japan with respect to bank holding companies, including Mizuho Holdings, and determined that supervisory factors are consistent with approval. Applicants have stated that there would be no change in the supervision of the Mizuho group as a result of the proposed restructuring.

In addition, section 3 of the BHC Act requires the Board to determine that applicants have provided adequate assurances that they will make available to the Board such information on their operations and activities and those of their affiliates that the Board deems appropriate to determine and enforce compliance with the BHC Act.<sup>16</sup> The Board has reviewed the restrictions on disclosure in jurisdictions where Applicants would have material operations and has communicated with relevant government authorities concerning access to information. Applicants have committed that, to the extent not prohibited by applicable law, each will make available to the Board such information on the operations of their affiliates that the Board deems necessary to determine and enforce compliance with the BHC Act and other applicable federal law. Applicants also have committed to cooperate with the Board to obtain any waivers or exemptions that may be necessary to enable their affiliates to make any such information available to the Board. In light of these commitments, the Board has concluded that Applicants have provided adequate assurances of access to any appropriate information the Board may request. For these reasons, and based on all the facts of record, the Board has concluded that the supervisory factors it is required to consider under section 3(c)(3) of the BHC Act are consistent with approval.

### Nonbanking Activities

MHFG also has filed a notice under section 4(c)(8) and (4)(j) of the BHC Act to acquire the U.S. nonbank subsidiaries of Mizuho Holdings and thereby engage in various permissible nonbanking activities. Through these subsidiaries, MHFG would engage in a number of nonbanking activities listed in the Appendix that are currently authorized for Mizuho Holdings. MHFG has committed that it would conduct these activities in accordance with the Board's regulations.

To approve the notice, the Board must determine that the proposed acquisition of the U.S. nonbank subsidiaries and subsequent performance of their activities by MHFG may

reasonably be expected to produce benefits to the public that outweigh possible adverse effects, such as undue concentration of resources, decreased or unfair competition, conflicts of interests, or unsound banking practices.<sup>17</sup>

MHFG has indicated that it expects that the proposal would improve the financial position and future business prospects of its current banking and nonbanking operations. In addition, as the Board has previously noted, there are public benefits to be derived from permitting capital markets to operate so that bank holding companies can make potentially profitable investments in nonbanking companies and from permitting banking organizations to allocate their resources in the manner they consider to be most efficient when such investments and actions are consistent, as in this case, with the relevant considerations under the BHC Act.<sup>18</sup>

The Board also believes that the conduct of the proposed nonbanking activities within the framework established in this order, prior orders, and Regulation Y is unlikely to result in any of the adverse effects noted above that would not be outweighed by the public benefits of the proposal, such as increased customer convenience and gains in efficiency.

Accordingly, based on all the facts of record, the Board has determined that the balance of public interest factors that the Board must consider under the standard of section 4(j) of the BHC Act is favorable and consistent with approval.

### Conclusion

Based on the foregoing and in light of all the facts of record, the Board has determined that the applications and notice should be, and hereby are, approved.<sup>19</sup> In reaching

17. See 12 U.S.C. § 1843(j)(2)(A).

18. See, e.g., *Banc One Corporation*, 84 *Federal Reserve Bulletin* 553 (1998), and *First Union Corporation*, 84 *Federal Reserve Bulletin* 489 (1998).

19. The commenter requested a hearing in connection with the proposal. Section 3 of the BHC Act does not require the Board to hold a public hearing on an application unless the appropriate supervisory authority for any of the banks to be acquired makes a timely written recommendation of denial of the application. The Board has not received such a recommendation from the appropriate supervisory authority. The Board's regulations provide for a hearing under section 4 of the BHC Act if there are disputed issues of material fact that cannot be resolved in some other manner. See 12 C.F.R. 225.25(a)(2). Under its rules, the Board also may, in its discretion, hold a public meeting or hearing on an application to acquire a bank if a meeting or hearing is necessary or appropriate to clarify factual issues related to the application and to provide an opportunity for testimony. 12 C.F.R. 225.16(e).

The Board has considered carefully the commenter's request in light of all the facts of record. In the Board's view, the public has had ample opportunity to submit comments on the proposal, and, in fact, the commenter has submitted a written comment that the Board has considered carefully in acting on the proposal. The request fails to identify disputed issues of fact that are material to the Board's decision and that may be clarified by a public meeting or hearing. Moreover, the commenter's request fails to demonstrate why its written comments do not present its views adequately or why a meeting or hearing otherwise would be necessary or appropriate. For

15. Mizuho Corporate Bank resulted from the merger of The Fuji Bank, Ltd.; The Industrial Bank of Japan, Ltd.; and The Dai-Ichi Kangyo Bank, Ltd. See *Mizuho Holdings, Inc.*, 86 *Federal Reserve Bulletin* 776 (2000).

16. See 12 U.S.C. § 1842(c)(3)(A).

its conclusion, the Board has considered all the facts of record in light of the factors that it is required to consider under the BHC Act and other applicable statutes. The Board's approval is specifically conditioned on compliance by Applicants with all the representations and commitments made in connection with the applications, and prior commitments referenced in this order, and on the receipt by Applicants of all necessary regulatory approvals. These representations, commitments, and conditions are deemed to be conditions imposed in writing by the Board in connection with its findings and decision and, as such, may be enforced in proceedings under applicable law.

The banking transactions shall not be consummated before the fifteenth calendar day after the effective date of this order, and the transactions may not be consummated later than three months after the effective date of this order, unless such period is extended for good cause by the Board or by the Federal Reserve Bank of New York, acting pursuant to delegated authority.

By order of the Board of Governors, effective February 24, 2003.

Voting for this action: Chairman Greenspan, Vice Chairman Ferguson, and Governors Gramlich, Bies, Olson, Bernanke, and Kohn.

ROBERT DE V. FRIERSON  
*Deputy Secretary of the Board*

## Appendix

MHFG proposes to engage in the following nonbanking activities:

1. Extending credit and servicing loans, in accordance with section 225.28(b)(1) of the Board's Regulation Y (12 C.F.R. 225.28(b)(1));
2. Activities related to extending credit, in accordance with section 225.28(b)(2) of the Board's Regulation Y (12 C.F.R. 225.28(b)(2));
3. Providing leasing services, in accordance with section 225.28(b)(3) of Regulation Y (12 C.F.R. 225.28(b)(3));
4. Owning, controlling, or operating an industrial bank, in accordance with section 225.28(b)(4) of Regulation Y (12 C.F.R. 225.28(b)(4));
5. Performing trust company functions, in accordance with section 225.28(b)(5) of Regulation Y (12 C.F.R. 225.28(b)(5));
6. Providing investment and financial advisory services, in accordance with section 225.28(b)(6) of Regulation Y (12 C.F.R. 225.28(b)(6));
7. Providing securities brokerage, riskless principal, private placement, futures commission merchant, and

other agency transactional services, in accordance with section 225.28(b)(7)(i)-(v) of Regulation Y (12 C.F.R. 225.28(b)(7)(i)-(v));

8. Underwriting and dealing in government obligations and money market instruments in which state member banks may underwrite and deal under 12 U.S.C. §§ 335 and 24(7), and investing and trading activities in foreign exchange and other eligible derivative instruments, in accordance with section 225.28(b)(8)(i) and (ii) of Regulation Y (12 C.F.R. 225.28(b)(8)(i) and (ii));
9. Providing management consulting services, in accordance with section 225.28(b)(9) of Regulation Y (12 C.F.R. 225.28(b)(9));
10. Engaging in specific insurance agency activities through a subsidiary that engaged in such activities on May 1, 1982, in accordance with section 225.28(b)(11)(iv) of Regulation Y (12 C.F.R. 225.28(b)(11)(iv));
11. Community development activities, in accordance with section 225.28(b)(12) of Regulation Y (12 C.F.R. 225.28(b)(12)); and
12. Data processing and transmission activities, in accordance with section 225.28(b)(14) of Regulation Y (12 C.F.R. 225.28(b)(14)).

## ORDERS ISSUED UNDER INTERNATIONAL BANKING ACT

### *The Daiwa Bank, Limited Osaka, Japan*

#### Order Approving Establishment of a Representative Office

The Daiwa Bank, Limited ("Bank"), Osaka, Japan, a foreign bank within the meaning of the International Banking Act ("IBA"), has applied under section 10(a) of the IBA (12 U.S.C. § 3107(a)) to establish a representative office in New York, New York. The Foreign Bank Supervision Enhancement Act of 1991, which amended the IBA, provides that a foreign bank must obtain the approval of the Board to establish a representative office in the United States.

Notice of the application, affording interested persons an opportunity to submit comments, has been published in a newspaper of general circulation in New York, New York (*The New York Times*, October 23, 2002). The time for filing comments has expired, and all comments have been considered.

Bank, with total consolidated assets of approximately \$111 billion,<sup>1</sup> is one of the largest banks in Japan, providing lending, securities, real estate, and private banking services. Bank is a wholly owned subsidiary of Resona Holdings, Inc. ("Resona"), also in Osaka. Resona's shares

these reasons, and based on all the facts of record, the Board has determined that a public hearing or a public meeting is not required or warranted in this case. Accordingly, the request for a public hearing on the proposal is denied.

1. Unless otherwise indicated, data are as of September 30, 2002.

are publicly traded and widely held. Bank currently conducts no activities in the United States. In March 2003, Bank plans to merge with another Resona subsidiary, Asahi Bank, Limited ("Asahi"), Tokyo, Japan. After the merger, Bank (to be renamed Resona Bank, Ltd.) plans to retain the existing New York representative office of Asahi.

The proposed representative office would provide liaison services for Bank's head office and engage in limited marketing activities directed at U.S. subsidiaries and offices of Bank's Japanese corporate clients. The proposed representative office would also be involved in administrative activities related to the closing of Asahi's former branch office.

In acting on an application to establish a representative office, the IBA and Regulation K provide that the Board shall take into account whether the foreign bank engages directly in the business of banking outside of the United States and has furnished to the Board the information it needs to assess the application adequately. The Board also shall take into account whether the foreign bank and any foreign bank parent is subject to comprehensive supervision or regulation on a consolidated basis by its home country supervisor (12 U.S.C. § 3107(a)(2)).<sup>2</sup> In addition, the Board may take into account additional standards set forth in the IBA and Regulation K (12 U.S.C. § 3105(d)(3)–(4); 12 C.F.R. 211.24(c)(2)).

As noted above, Bank engages directly in the business of banking outside the United States. Bank also has provided the Board with information necessary to assess the application through submissions that address the relevant issues. With respect to supervision by home country authorities, the Board has previously determined, in connection with applications involving other Japanese banks, that those banks were subject to home country supervision on a consolidated basis.<sup>3</sup> Bank is supervised by the Japanese Financial Services Agency ("FSA") on substantially the same terms and conditions as those other Japanese banks. Based on all the facts of record, it has been determined that Bank is subject to comprehensive supervision and regulation on a consolidated basis by its home country supervisor.

2. In assessing this standard, the Board considers, among other factors, the extent to which the home country supervisors:

- (i) ensure that the bank has adequate procedures for monitoring and controlling its activities worldwide;
- (ii) obtain information on the condition of the bank and its subsidiaries and offices through regular examination reports, audit reports, or otherwise;
- (iii) obtain information on the dealings with and relationship between the bank and its affiliates, both foreign and domestic;
- (iv) receive from the bank financial reports that are consolidated on a worldwide basis or comparable information that permits analysis of the bank's financial condition on a worldwide consolidated basis;
- (v) evaluate prudential standards, such as capital adequacy and risk asset exposure, on a worldwide basis. These are indicia of comprehensive, consolidated supervision. No single factor is essential, and other elements may inform the Board's determination.

3. See *UFJ Holdings, Inc.*, 87 *Federal Reserve Bulletin* 270 (2001); *Mizuho Holdings, Inc.*, 86 *Federal Reserve Bulletin* 776 (2000).

The additional standards set forth in section 7 of the IBA and Regulation K (*see* 12 U.S.C. § 3105(d)(3)–(4); 12 C.F.R. 211.24(c)(2)) have also been taken into account. The FSA has no objection to the establishment of the proposed representative office.

With respect to the financial and managerial resources of Bank, taking into consideration Bank's record of operations in its home country, its overall financial resources, and its standing with its home country supervisor, financial and managerial factors are consistent with approval of the proposed representative office.<sup>4</sup> Bank appears to have the experience and capacity to support the proposed representative office and has established controls and procedures for the proposed representative office to ensure compliance with U.S. law.

Japan is a member of the Financial Action Task Force ("FATF") and subscribes to the FATF's recommendations on measures to combat money laundering. In accordance with these recommendations, Japan has enacted laws and developed regulatory standards to deter money laundering. Money laundering is a criminal offense in Japan, and Japanese financial institutions are required to establish internal policies, procedures, and systems for the detection and prevention of money laundering throughout their worldwide operations.

With respect to access to information on Bank's operations, the restrictions on disclosure in relevant jurisdictions in which Bank operates have been reviewed and relevant government authorities have been communicated with regarding access to information. Bank has committed to make available to the Board such information on the operations of Bank and any of its affiliates that the Board deems necessary to determine and enforce compliance with the IBA, the Bank Holding Company Act of 1956, as amended, and other applicable federal law. To the extent that the provision of such information to the Board may be prohibited by law or otherwise, Bank has committed to cooperate with the Board to obtain any necessary consents or waivers that might be required from third parties for disclosure of such information. In addition, subject to certain conditions, the FSA may share information on Bank's operations with other supervisors, including the Board. In light of these commitments and other facts of record, and subject to the condition described below, it has been determined that Bank has provided adequate assurances of access to any necessary information that the Board may request.

On the basis of all the facts of record, and subject to the commitments made by Bank and the terms and conditions set forth in this order, Bank's application to establish the

4. In 1995, the Federal Reserve and other federal and state banking regulators issued a series of orders terminating the U.S. operations of Bank and Daiwa Bank Trust Company in connection with Bank's failure to disclose to regulators and law enforcement authorities trading losses of more than \$1 billion. The prohibition against Bank's re-entry into the United States ended in 1998. Since the termination of its U.S. operations, Bank has provided information about reforms to its internal controls and reporting systems. The proposal to maintain the representative office in New York arises from a reorganization of the Japanese operations of Resona and no change or expansion of U.S. operations is contemplated.

representative office is hereby approved.<sup>5</sup> Should any restrictions on access to information on the operations or activities of Bank or any of its affiliates subsequently interfere with the Board's ability to obtain information to determine and enforce compliance by Bank or its affiliates with applicable federal statutes, the Board may require or recommend termination of any of Bank's direct and indirect activities in the United States. Approval of this application also is specifically conditioned on compliance by Bank with the commitments made in connection with this

application and with the conditions in this order.<sup>6</sup> The commitments and conditions referred to above are conditions imposed in writing by the Board in connection with this decision and may be enforced in proceedings against Bank and its affiliates under 12 U.S.C. § 1818.

By order, approved pursuant to authority delegated by the Board, effective February 28, 2003.

ROBERT DE V. FRIERSON  
*Deputy Secretary of the Board*

5. Approved by the Director of the Division of Banking Supervision and Regulation, with the concurrence of the General Counsel, pursuant to authority delegated by the Board. See 12 C.F.R. 265.7(d)(12).

6. The Board's authority to approve the establishment of the proposed representative office parallels the continuing authority of the State of New York to license offices of a foreign bank. The Board's approval of this application does not supplant the authority of the State of New York or its agent, the New York State Banking Department ("Department"), to license the proposed office of Bank in accordance with any terms or conditions that the Department may impose.

*APPLICATIONS APPROVED UNDER BANK MERGER ACT*  
*By Federal Reserve Banks*

Recent applications have been approved by the Federal Reserve Banks as listed below. Copies are available upon request to the Reserve Banks.

Applicant(s)	Bank(s)	Reserve Bank	Effective Date
IBERIABANK, New Iberia, Louisiana	LBA Savings Bank, Lafayette, Louisiana	Atlanta	February 12, 2003
Sky Bank, Salineville, Ohio	Metropolitan Bank and Trust, Highland Hills, Ohio	Cleveland	February 25, 2003
UnionBank, Streator, Illinois	UnionBank/Central, Princeton, Illinois	Chicago	January 29, 2003

*PENDING CASES INVOLVING THE BOARD OF GOVERNORS*

*This list of pending cases does not include suits against the Federal Reserve Banks in which the Board of Governors is not named a party.*

*Sedgwick v. United States*, No. 02-5378 (D.C. Circuit, filed November 26, 2002). Appeal of the dismissal of appellant's claim for a declaratory judgment under the Federal Tort Claims Act and the Constitution regarding the banking agencies' alleged failure to intervene on his behalf in civil litigation involving a regulated institution.

*Albrecht v. Board of Governors*, No. 02-5325 (D.C. Cir., filed October 18, 2002). Appeal of district court order dismissing challenge to the method of funding of the retirement plan for certain Board employees.

*Caesar v. United States*, No. 02-0612 (EGS) (D.D.C.), removed on April 1, 2002 from No. 02-1502 (D.C. Superior Court, originally filed March 1, 2002). Action seeking damages for personal injury.

*Community Bank & Trust v. United States*, No. 01-571C (Ct. Fed. Cl., filed October 3, 2001). Action challenging on constitutional grounds the failure to pay interest on reserve accounts held at Federal Reserve Banks.

*Artis v. Greenspan*, No. 01-CV-0400 (EGS) (D.D.C., complaint filed February 22, 2001). Employment discrimination action. On August 15, 2001, the district court consolidated the action with *Artis v. Greenspan*, No. 99-CV-2073 (EGS) (D.D.C., filed August 3, 1999), also an employment discrimination action.

*Fraternal Order of Police v. Board of Governors*, No. 1:98CV03116 (WBB)(D.D.C., filed December 22, 1998). Declaratory judgment action challenging Board regulation on labor-management relations at Reserve Banks.

FHLMC	Federal Home Loan Mortgage Corporation	REMICs	Real estate mortgage investment conduits
FmHA	Farmers Home Administration	RHS	Rural Housing Service
FNMA	Federal National Mortgage Association	RP	Repurchase agreement
FSA	Farm Service Agency	RTC	Resolution Trust Corporation
FSLIC	Federal Savings and Loan Insurance Corporation	SCO	Securitized credit obligation
G-7	Group of Seven	SDR	Special drawing right
		SIC	Standard Industrial Classification
		TIIS	Treasury inflation-indexed securities
		VA	Department of Veterans Affairs

## GENERAL INFORMATION

In many of the tables, components do not sum to totals because of rounding.

Minus signs are used to indicate (1) a decrease, (2) a negative figure, or (3) an outflow.

"U.S. government securities" may include guaranteed issues of U.S. government agencies (the flow of funds figures also

include not fully guaranteed issues) as well as direct obligations of the U.S. Treasury.

"State and local government" also includes municipalities, special districts, and other political subdivisions.

18 Repurchase agreements <sup>10</sup>	3.0	-7	27.5	45.0	67.8	-4.8	55.3	77.7	-23.8
19 Eurodollars <sup>10</sup>	3.6	-4.7	.2	14.4	21.2	11.6	12.0	5.7	7.9

1. Unless otherwise noted, rates of change are calculated from average amounts outstanding during preceding month or quarter.

2. Figures incorporate adjustments for discontinuities, or "breaks," associated with regulatory changes in reserve requirements (See also table 1.20.)

3. The seasonally adjusted, break-adjusted monetary base consists of (1) seasonally adjusted, break-adjusted total reserves (line 1), plus (2) the seasonally adjusted currency component of the money stock, plus (3) (for all quarterly reporters on the "Report of Transaction Accounts, Other Deposits and Vault Cash" and for all weekly reporters whose vault cash exceeds their required reserves) the seasonally adjusted, break-adjusted difference between current vault cash and the amount applied to satisfy current reserve requirements.

4. Composition of the money stock measures is as follows:

M1: (1) currency outside the U.S. Treasury, Federal Reserve Banks, and the vaults of depository institutions, (2) travelers checks of nonbank issuers, (3) demand deposits at all commercial banks other than those owed to depository institutions, the U.S. government, and foreign banks and official institutions, less cash items in the process of collection and Federal Reserve float, and (4) other checkable deposits (OCDs), consisting of negotiable order of withdrawal (NOW) and automatic transfer service (ATS) accounts at depository institutions, credit union share draft accounts, and demand deposits at thrift institutions. Seasonally adjusted M1 is computed by summing currency, travelers checks, demand deposits, and OCDs, each seasonally adjusted separately.

M2: M1 plus (1) savings (including MMDAs), (2) small-denomination time deposits (time deposits—including retail RPs—in amounts of less than \$100,000), and (3) balances in retail money market mutual funds. Excludes individual retirement accounts (IRAs) and Keogh balances at depository institutions and money market funds.

Seasonally adjusted M2 is calculated by summing savings deposits, small-denomination

time deposits, and retail money fund balances, each seasonally adjusted separately, and adding this result to seasonally adjusted M1.

M3: M2 plus (1) large-denomination time deposits (in amounts of \$100,000 or more), (2) balances in institutional money funds, (3) RP liabilities (overnight and term) issued by all depository institutions, and (4) eurodollars (overnight and term) held by U.S. residents at foreign branches of U.S. banks worldwide and at all banking offices in the United Kingdom and Canada. Excludes amounts held by depository institutions, the U.S. government, money market funds, and foreign banks and official institutions. Seasonally adjusted M3 is calculated by summing large time deposits, institutional money fund balances, RP liabilities, and eurodollars, each seasonally adjusted separately, and adding this result to seasonally adjusted M2.

5. Sum of (1) savings deposits (including MMDAs), (2) small time deposits, and (3) retail money fund balances, each seasonally adjusted separately.

6. Sum of (1) large time deposits, (2) institutional money fund balances, (3) RP liabilities (overnight and term) issued by depository institutions, and (4) eurodollars (overnight and term) of U.S. addressees, each seasonally adjusted separately.

7. Small time deposits—including retail RPs—are those issued in amounts of less than \$100,000. All IRA and Keogh account balances at commercial banks and thrift institutions are subtracted from small time deposits.

8. Large time deposits are those issued in amounts of \$100,000 or more, excluding those booked at international banking facilities.

9. Large time deposits at commercial banks less those held by money market funds, depository institutions, the U.S. government, and foreign banks and official institutions.

10. Includes both overnight and term.

1. Amounts of vault cash held as reserves are shown in table 1.12, line 2.

2. Includes securities lent to dealers, which are fully collateralized by other U.S. Treasury securities.

3. Face value of the securities.

4. Compensation that adjusts for the effect of inflation on the original face value of inflation-indexed securities.

5. Cash value of agreements, which are fully collateralized by U.S. Treasury and federal agency securities.

6. The Federal Reserve Banks began offering primary credit and secondary credit on January 9, 2003. The adjustment credit program was discontinued.

7. Cash value of agreements, which are fully collateralized by U.S. Treasury securities. The Federal Reserve Banks began using these agreements on December 13, 2002.

8. Excludes required clearing balances and adjustments to compensate for float.

1. Data in this table also appear in the Board's H.3 (502) weekly statistical release. For ordering address, see inside front cover. Data are not break-adjusted or seasonally adjusted.

2. Excludes required clearing balances and adjustments to compensate for float and includes other off-balance-sheet "as-of" adjustments.

3. Vault cash eligible to satisfy reserve requirements. It includes only vault cash held by those banks and thrift institutions that are not exempt from reserve requirements. Dates refer to the maintenance periods in which the vault cash can be used to satisfy reserve requirements.

4. All vault cash held during the lagged computation period by "bound" institutions (that is, those whose required reserves exceed their vault cash) plus the amount of vault cash applied during the maintenance period by "nonbound" institutions (that is, those whose vault cash exceeds their required reserves) to satisfy current reserve requirements.

5. Total vault cash (line 2) less applied vault cash (line 3).

6. Reserve balances with Federal Reserve Banks (line 1) plus applied vault cash (line 3).

7. Total reserves (line 5) less required reserves (line 6).

			17	3.50	3.50			

1. Available for very short terms as a backup source of liquidity to depository institutions that are in generally sound financial condition in the judgment of the lending Federal Reserve Bank.

2. Available in appropriate circumstances to depository institutions that do not qualify for primary credit.

3. Available to help relatively small depository institutions meet regular seasonal needs for funds that arise from a clear pattern of intrayear movements in their deposits and loans and that cannot be met through special industry lenders. The discount rate on seasonal credit takes

into account rates charged by market sources of funds and ordinarily is reestablished on the first business day of each two-week reserve maintenance period.

4. Was available until January 8, 2003, to help depository institutions meet temporary needs for funds that could not be met through reasonable alternative sources. For earlier data, see the following publications of the Board of Governors: *Banking and Monetary Statistics, 1914–1941*, and *1941–1970*; and the *Statistical Digest, 1970–1979, 1980–1989, and 1990–1995*. See also the Board's Statistics: Releases and Historical Data web pages (<http://www.federalreserve.gov/releases/H15/data.htm>).

1.15 RESERVE REQUIREMENTS OF DEPOSITORY INSTITUTIONS<sup>1</sup>

Type of deposit	Requirement	
	Percentage of deposits	Effective date
<i>Net transaction accounts<sup>2</sup></i>		
1 \$0 million–\$6 million <sup>3</sup>	0	12/26/02
2 More than \$6 million–\$42.1 million <sup>4</sup>	3	12/26/02
3 More than \$42.1 million <sup>5</sup>	10	12/26/02
4 Nonpersonal time deposits <sup>6</sup>	0	12/27/90
5 Eurocurrency liabilities <sup>7</sup>	0	12/27/90

1. Required reserves must be held in the form of deposits with Federal Reserve Banks or vault cash. Nonmember institutions may maintain reserve balances with a Federal Reserve Bank indirectly, on a pass-through basis, with certain approved institutions. For previous reserve requirements, see earlier editions of the *Annual Report* or the *Federal Reserve Bulletin*. Under the Monetary Control Act of 1980, depository institutions include commercial banks, savings banks, savings and loan associations, credit unions, agencies and branches of foreign banks, and Edge Act corporations.

2. Transaction accounts include all deposits against which the account holder is permitted to make withdrawals by negotiable or transferable instruments, payment orders of withdrawal, or telephone or preauthorized transfers for the purpose of making payments to third persons or others. However, accounts subject to the rules that permit no more than six preauthorized, automatic, or other transfers per month (of which no more than three may be by check, draft, debit card, or similar order payable directly to third parties) are savings deposits, not transaction accounts.

3. Under the Garn–St Germain Depository Institutions Act of 1982, the Board adjusts the amount of reservable liabilities subject to a zero percent reserve requirement each year for the succeeding calendar year by 80 percent of the percentage increase in the total reservable liabilities of all depository institutions, measured on an annual basis as of June 30. No corresponding adjustment is made in the event of a decrease. The exemption applies only to accounts that would be subject to a 3 percent reserve requirement. Effective with the reserve maintenance period beginning December 26, 2002, for depository institutions that report weekly, and with the period beginning January 16, 2003, for institutions that report quarterly, the exemption was raised from \$5.7 million to \$6.0 million.

4. The Monetary Control Act of 1980 requires that the amount of transaction accounts against which the 3 percent reserve requirement applies be modified annually by 80 percent of the percentage change in transaction accounts held by all depository institutions, determined as of June 30 of each year. Effective with the reserve maintenance period beginning December 26, 2002, for depository institutions that report weekly, and with the period beginning January 16, 2003, for institutions that report quarterly, the amount was increased from \$41.3 million to \$42.1 million.

5. The reserve requirement was reduced from 12 percent to 10 percent on April 2, 1992, for institutions that report weekly, and on April 16, 1992, for institutions that report quarterly.

6. For institutions that report weekly, the reserve requirement on nonpersonal time deposits with an original maturity of less than 1.5 years was reduced from 3 percent to 1.5 percent for the maintenance period that began December 13, 1990, and to zero for the maintenance period that began December 27, 1990. For institutions that report quarterly, the reserve requirement on nonpersonal time deposits with an original maturity of less than 1.5 years was reduced from 3 percent to zero on January 17, 1991.

The reserve requirement on nonpersonal time deposits with an original maturity of 1.5 years or more has been zero since October 6, 1983.

7. The reserve requirement on eurocurrency liabilities was reduced from 3 percent to zero in the same manner and on the same dates as the reserve requirement on nonpersonal time deposits with an original maturity of less than 1.5 years (see note 5).

1. Some of the data in this table also appear in the Board's H.4.1 (503) weekly statistical release. For ordering address, see inside front cover.

2. Includes securities lent to dealers, which are fully collateralized by other U.S. Treasury securities.

3. Face value of the securities.

4. Compensation that adjusts for the effect of inflation on the original face value of inflation-indexed securities.

5. Cash value of agreements, which are fully collateralized by U.S. Treasury and federal agency securities.

6. Valued daily at market exchange rates.

7. Includes special investment account at the Federal Reserve Bank of Chicago in Treasury bills maturing within ninety days.

8. Cash value of agreements, which are fully collateralized by U.S. Treasury securities. The Federal Reserve Banks began using these agreements on December 13, 2002.

9. Includes exchange-translation account reflecting the daily revaluation at market exchange rates of foreign exchange commitments.

10. Includes U.S. Treasury STRIPS and other zero coupon bonds at face value.

11. Includes face value of U.S. Treasury and agency securities held outright, compensation to adjust for the effect of inflation on the original face value of inflation-indexed securities, and cash value of repurchase agreements.

12. Face value of agreements, which are fully collateralized by U.S. Treasury securities. The Federal Reserve Banks began using these agreements on December 13, 2002.

14 Borrowings from the Federal Reserve	.32	.21	.07	.08	.14	.19	.33	.23	.14	.27	.08	.03	

1. Latest monthly and biweekly figures are available from the Board's H.3 (502) weekly statistical release. Historical data starting in 1959 and estimates of the effect on required reserves of changes in reserve requirements are available from the Money and Reserves Projections Section, Division of Monetary Affairs, Board of Governors of the Federal Reserve System, Washington, DC 20551.

2. Figures reflect adjustments for discontinuities, or "breaks," associated with regulatory changes in reserve requirements. (See also table 1.10.)

3. Seasonally adjusted, break-adjusted total reserves equal seasonally adjusted, break-adjusted required reserves (line 4) plus excess reserves (line 16).

4. Seasonally adjusted, break-adjusted nonborrowed reserves equal seasonally adjusted, break-adjusted total reserves (line 1) less total borrowings of depository institutions from the Federal Reserve (line 17).

5. The seasonally adjusted, break-adjusted monetary base consists of (1) seasonally adjusted, break-adjusted total reserves (line 1), plus (2) the seasonally adjusted currency component of the money stock, plus (3) (for all quarterly reporters on the "Report of Transaction Accounts, Other Deposits and Vault Cash" and for all those weekly reporters whose vault cash exceeds their required reserves) the seasonally adjusted, break-adjusted difference between current vault cash and the amount applied to satisfy current reserve requirements.

6. Break-adjusted total reserves equal break-adjusted required reserves (line 9) plus excess reserves (line 16).

7. To adjust required reserves for discontinuities that are due to regulatory changes in reserve requirements, a multiplicative procedure is used to estimate what required reserves

would have been in past periods had current reserve requirements been in effect. Break-adjusted required reserves include required reserves against transactions deposits and nonpersonal time and savings deposits (but not reservable nondeposit liabilities).

8. The break-adjusted monetary base equals (1) break-adjusted total reserves (line 6), plus (2) the (unadjusted) currency component of the money stock, plus (3) (for all quarterly reporters on the "Report of Transaction Accounts, Other Deposits and Vault Cash" and for all those weekly reporters whose vault cash exceeds their required reserves) the break-adjusted difference between current vault cash and the amount applied to satisfy current reserve requirements.

9. Reflects actual reserve requirements, including those on nondeposit liabilities, with no adjustments to eliminate the effects of discontinuities associated with regulatory changes in reserve requirements.

10. Reserve balances with Federal Reserve Banks plus vault cash used to satisfy reserve requirements.

11. The monetary base, not break-adjusted and not seasonally adjusted, consists of (1) total reserves (line 11), plus (2) required clearing balances and adjustments to compensate for float at Federal Reserve Banks, plus (3) the currency component of the money stock, plus (4) (for all quarterly reporters on the "Report of Transaction Accounts, Other Deposits and Vault Cash" and for all those weekly reporters whose vault cash exceeds their required reserves) the difference between current vault cash and the amount applied to satisfy current reserve requirements. Since February 1984, currency and vault cash figures have been measured over the computation periods ending on Mondays.

12. Unadjusted total reserves (line 11) less unadjusted required reserves (line 14).

## NOTES TO TABLE 1.21

1. Latest monthly and weekly figures are available from the Board's H.6 (508) weekly statistical release. Historical data starting in 1959 are available from the Money and Reserves Projections Section, Division of Monetary Affairs, Board of Governors of the Federal Reserve System, Washington, DC 20551.

2. Composition of the money stock measures is as follows:

M1: (1) currency outside the U.S. Treasury, Federal Reserve Banks, and the vaults of depository institutions, (2) travelers checks of nonbank issuers, (3) demand deposits at all commercial banks other than those owed to depository institutions, the U.S. government, and foreign banks and official institutions, less cash items in the process of collection and Federal Reserve float, and (4) other checkable deposits (OCDs), consisting of negotiable order of withdrawal (NOW) and automatic transfer service (ATS) accounts at depository institutions, credit union share draft accounts, and demand deposits at thrift institutions. Seasonally adjusted M1 is computed by summing currency, travelers checks, demand deposits, and OCDs, each seasonally adjusted separately.

M2: M1 plus (1) savings deposits (including MMDAs), (2) small-denomination time deposits (time deposits—including retail RPs—in amounts of less than \$100,000), and (3) balances in retail money market mutual funds. Excludes individual retirement accounts (IRAs) and Keogh balances at depository institutions and money market funds. Seasonally adjusted M2 is calculated by summing savings deposits, small-denomination time deposits, and retail money fund balances, each seasonally adjusted separately, and adding this result to seasonally adjusted M1.

M3: M2 plus (1) large-denomination time deposits (in amounts of \$100,000 or more) issued by all depository institutions, (2) balances in institutional money funds, (3) RP liabilities (overnight and term) issued by all depository institutions, and (4) eurodollars (overnight and term) held by U.S. residents at foreign branches of U.S. banks worldwide and at all banking offices in the United Kingdom and Canada. Excludes amounts held by deposit-

ory institutions, the U.S. government, money market funds, and foreign banks and official institutions. Seasonally adjusted M3 is calculated by summing large time deposits, institutional money fund balances, RP liabilities, and eurodollars, each seasonally adjusted separately, and adding this result to seasonally adjusted M2.

3. Currency outside the U.S. Treasury, Federal Reserve Banks, and vaults of depository institutions.

4. Outstanding amount of U.S. dollar-denominated travelers checks of nonbank issuers. Travelers checks issued by depository institutions are included in demand deposits.

5. Demand deposits at commercial banks and foreign-related institutions other than those owed to depository institutions, the U.S. government, and foreign banks and official institutions, less cash items in the process of collection and Federal Reserve float.

6. Consists of NOW and ATS account balances at all depository institutions, credit union share draft account balances, and demand deposits at thrift institutions.

7. Sum of (1) savings deposits (including MMDAs), (2) small time deposits, and (3) retail money fund balances.

8. Sum of (1) large time deposits, (2) institutional money fund balances, (3) RP liabilities (overnight and term) issued by depository institutions, and (4) eurodollars (overnight and term) of U.S. addressees.

9. Small time deposits—including retail RPs—are those issued in amounts of less than \$100,000. All IRAs and Keogh accounts at commercial banks and thrift institutions are subtracted from small time deposits.

10. Large time deposits are those issued in amounts of \$100,000 or more, excluding those booked at international banking facilities.

11. Large time deposits at commercial banks less those held by money market funds, depository institutions, the U.S. government, and foreign banks and official institutions.

12. Includes both overnight and term.

NOTE. Tables 1.26, 1.27, and 1.28 have been revised to reflect changes in the Board's H.8 statistical release, "Assets and Liabilities of Commercial Banks in the United States." Table 1.27, "Assets and Liabilities of Large Weekly Reporting Commercial Banks," and table 1.28, "Large Weekly Reporting U.S. Branches and Agencies of Foreign Banks," are no longer being published in the *Bulletin*. Instead, abbreviated balance sheets for both large and small domestically chartered banks have been included in table 1.26, parts C and D. Data are both merger-adjusted and break-adjusted. In addition, data from large weekly reporting U.S. branches and agencies of foreign banks have been replaced by balance sheet estimates of all foreign-related institutions and are included in table 1.26, part E. These data are break-adjusted.

The not-seasonally-adjusted data for all tables now contain additional balance sheet items, which were available as of October 2, 1996.

1. Covers the following types of institutions in the fifty states and the District of Columbia: domestically chartered commercial banks that submit a weekly report of condition (large domestic); other domestically chartered commercial banks (small domestic); branches and agencies of foreign banks, and Edge Act and agreement corporations (foreign-related institutions). Excludes International Banking Facilities. Data are Wednesday values or pro rata averages of Wednesday values. Large domestic banks constitute a universe; data for small domestic banks and foreign-related institutions are estimates based on weekly samples and on quarter-end condition reports. Data are adjusted for breaks caused by reclassifications of assets and liabilities.

The data for large and small domestic banks presented on pp. A17–19 are adjusted to remove the estimated effects of mergers between these two groups. The adjustment for mergers changes past levels to make them comparable with current levels. Estimated quantities of balance sheet items acquired in mergers are removed from past data for the bank group that contained the acquired bank and put into past data for the group containing the

acquiring bank. Balance sheet data for acquired banks are obtained from Call Reports, and a ratio procedure is used to adjust past levels.

2. Excludes federal funds sold to, reverse RPs with, and loans made to commercial banks in the United States, all of which are included in "Interbank loans."

3. Consists of reverse RPs with brokers and dealers and loans to purchase and carry securities.

4. Includes vault cash, cash items in process of collection, balances due from depository institutions, and balances due from Federal Reserve Banks.

5. Excludes the due-from position with related foreign offices, which is included in "Net due to related foreign offices."

6. Excludes unearned income, reserves for losses on loans and leases, and reserves for transfer risk. Loans are reported gross of these items.

7. This balancing item is not intended as a measure of equity capital for use in capital adequacy analysis. On a seasonally adjusted basis, this item reflects any differences in the seasonal patterns estimated for total assets and total liabilities.

8. Fair value of derivative contracts (interest rate, foreign exchange rate, other commodity and equity contracts) in a gain/loss position, as determined under FASB Interpretation No. 39.

9. Includes mortgage-backed securities issued by U.S. government agencies, U.S. government-sponsored enterprises, and private entities.

10. Difference between fair value and historical cost for securities classified as available-for-sale under FASB Statement No. 115. Data are reported net of tax effects. Data shown are restated to include an estimate of these tax effects.

11. Mainly commercial and industrial loans but also includes an unknown amount of credit extended to other than nonfinancial businesses.

12. Total amount outstanding.

## 1.32 COMMERCIAL PAPER OUTSTANDING

Millions of dollars, seasonally adjusted, end of period

1. The prime rate is one of several base rates that banks use to price short-term business loans. The table shows the date on which a new rate came to be the predominant one quoted by a majority of the twenty-five largest banks by asset size, based on the most recent Call

Report. Data in this table also appear in the Board's H.15 (519) weekly and G.13 (415) monthly statistical releases. For ordering address, see inside front cover.

NOTE: Some of the data in this table also appear in the Board's H.15 (519) weekly statistical release. For ordering address, see inside front cover.

1. The daily effective federal funds rate is a weighted average of rates on trades through New York brokers.

2. Weekly figures are averages of seven calendar days, ending on Wednesday of the current week; monthly figures include each calendar day in the month.

3. Annualized using a 360-day year or bank interest.

4. The rate charged for primary credit under an amendment to the Board's Regulation A, which became effective January 9, 2003. This rate replaces that for adjustment credit, which was discontinued after January 8, 2003. For further information, see: <http://www.federalreserve.gov/boarddocs/press/bcreg/2002/200210312/default.htm>. The rate is that reported for the Federal Reserve Bank of New York. Historical series for the rate on adjustment credit is available at: <http://www.federalreserve.gov/releases/h15/data.htm>.

5. Quoted on a discount basis.

6. Interest rates interpolated from data on certain commercial paper trades settled by the Depository Trust Company. The trades represent sales of commercial paper by dealers or direct issuers to investors (that is, the offer side). See the Board's Commercial Paper web pages (<http://www.federalreserve.gov/releases/cp>) for more information.

7. An average of dealer offering rates on nationally traded certificates of deposit.

8. Bid rates for eurodollar deposits collected around 9:30 a.m. Eastern time. Data are for indication purposes only.

9. Yields on actively traded issues adjusted to constant maturities.

10. Based on the unweighted average of the bid yields for all Treasury fixed-coupon securities with remaining terms to maturity of 25 years and over.

11. A factor for adjusting the daily long-term average in order to estimate a 30-year rate can be found at <http://www.treas.gov/offices/domestic-finance/debt-management/interest-rate/ltcompositeindex.html>.

12. General obligation bonds based on Thursday figures; Moody's Investors Service.

13. State and local government general obligation bonds maturing in twenty years are used in compiling this index. The twenty-bond index has a rating roughly equivalent to Moody's A1 rating. Based on Thursday figures.

14. Daily figures are averages of Aaa, Aa, A, and Baa yields from Moody's Investors Service. Based on yields to maturity on selected long-term bonds.

15. Effective December 7, 2001, the Moody's Aaa yield includes yields only for industrial firms. Prior to December 7, 2001, the Aaa yield represented both utilities and industrial.

16. Standard & Poor's corporate series. Common stock ratio is based on the 500 stocks in the price index.

1. In July 1976 a financial group, composed of banks and insurance companies, was added to the group of stocks on which the index is based. The index is now based on 400 industrial stocks (formerly 425), 20 transportation (formerly 15 rail), 40 public utility (formerly 60), and 40 financial.

2. On July 5, 1983, the American Stock Exchange rebased its index, effectively cutting previous readings in half.

3. Since July 1983, under the revised Regulation T, margin credit at broker-dealers has included credit extended against stocks, convertible bonds, stocks acquired through the exercise of subscription rights, corporate bonds, and government securities. Separate reporting of data for margin stocks, convertible bonds, and subscription issues was discontinued in April 1984.

4. Free credit balances are amounts in accounts with no unfulfilled commitments to brokers and are subject to withdrawal by customers on demand.

5. Series initiated in June 1984.

6. Margin requirements, stated in regulations adopted by the Board of Governors pursuant to the Securities Exchange Act of 1934, limit the amount of credit that can be used to purchase and carry "margin securities" (as defined in the regulations) when such credit is collateralized by securities. Margin requirements on securities are the difference between the market value (100 percent) and the maximum loan value of collateral as prescribed by the Board. Regulation T was adopted effective Oct. 15, 1934; Regulation U, effective May 1, 1936; Regulation G, effective Mar. 11, 1968; and Regulation X, effective Nov. 1, 1971.

On Jan. 1, 1977, the Board of Governors for the first time established in Regulation T the initial margin required for writing options on securities, setting it at 30 percent of the current market value of the stock underlying the option. On Sept. 30, 1985, the Board changed the required initial margin, allowing it to be the same as the option maintenance margin required by the appropriate exchange or self-regulatory organization; such maintenance margin rules must be approved by the Securities and Exchange Commission.

1. The U.S. Treasury first issued inflation-indexed securities during the first quarter of 1997.

2. Includes (not shown separately) securities issued to the Rural Electrification Administration, depository bonds, retirement plan bonds, and individual retirement bonds.

3. Nonmarketable series denominated in dollars, and series denominated in foreign currency held by foreigners.

4. Held almost entirely by U.S. Treasury and other federal agencies and trust funds.

5. Data for Federal Reserve Banks and U.S. government agencies and trust funds are actual holdings; data for other groups are Treasury estimates.

6. U.S. Treasury securities bought outright by Federal Reserve Banks, see *Bulletin* table 1.18.

7. In March 1996, in a redefinition of series, fully defeased debt backed by nonmarketable federal securities was removed from "Other miscellaneous investors" and added to "State and local treasuries." The data shown here have been revised accordingly.

8. Includes nonmarketable foreign series Treasury securities and Treasury deposit funds. Excludes Treasury securities held under repurchase agreements in custody accounts at the Federal Reserve Bank of New York.

9. Includes individuals, government-sponsored enterprises, brokers and dealers, bank personal trusts and estates, corporate and noncorporate businesses, and other investors.

SOURCES: Data by type of security, U.S. Treasury Department, *Monthly Statement of the Public Debt of the United States*; data by holder, Federal Reserve Board of Governors, *Flow of Funds Accounts of the United States* and U.S. Treasury Department, *Treasury Bulletin*, unless otherwise noted.

NOTE. Major changes in the report form filed by primary dealers induced a break in the dealer data series as of the week ending July 4, 2001. Current weekly data may be found at the Federal Reserve Bank of New York web site (<http://www.newyorkfed.org/pihome/statistics>) under the Primary Dealer heading.

1. The figures represent purchases and sales in the market by the primary U.S. government securities dealers reporting to the Federal Reserve Bank of New York. Outright transactions include all U.S. government, federal agency, government-sponsored enterprise, mortgage-

backed, and corporate securities scheduled for immediate and forward delivery, as well as all U.S. government securities traded on a when-issued basis between the announcement and issue date. Data do not include transactions under repurchase and reverse repurchase (resale) agreements. Averages are based on the number of trading days in the week.

2. Outright Treasury inflation-indexed securities (TIPS) transactions are reported at principal value, excluding accrued interest, where principal value reflects the original issuance par amount (unadjusted for inflation) times the price times the index ratio.

NOTE: Major changes in the report form filed by primary dealers included a break in many series as of the week ending July 4, 2001. Current weekly data may be found at the Federal Reserve Bank of New York web site (<http://www.newyorkfed.org/p/home/statistics>) under the Primary Dealer heading.

1. Data for positions and financing are obtained from reports submitted to the Federal Reserve Bank of New York by the U.S. government securities dealers on its published list of primary dealers. Weekly figures are close-of-business Wednesday data. Positions for calendar days of the report week are assumed to be constant. Monthly averages are based on the number of calendar days in the month.

2. Net outright positions include all U.S. government, federal agency, government-sponsored enterprise, mortgage-backed, and corporate securities scheduled for immediate and forward delivery, as well as U.S. government securities traded on a when-issued basis between the announcement and issue date.

3. Figures cover financing U.S. government, federal agency, government-sponsored enterprise, mortgage-backed, and corporate securities. Financing transactions for Treasury inflation-indexed securities (TIIS) are reported in actual funds paid or received, except for pledged securities. TIIS that are issued as pledged securities are reported at par value, which is the value of the security at original issuance (unadjusted for inflation).

<i>Other lending<sup>14</sup></i>									
25 Farmers Home Administration	9,500	6,665	5,275	n.a.	n.a.	n.a.	n.a.	n.a.	n.a.
26 Rural Electrification Administration	14,091	14,085	13,126	13,876	14,338	13,599	14,029	14,058	n.a.
27 Other	20,538	21,402	22,174	25,220	23,492	29,226	25,575	23,026	n.a.

1. Consists of mortgages assumed by the Defense Department between 1957 and 1963 under family housing and homeowners assistance programs.

2. Includes participation certificates reclassified as debt beginning Oct. 1, 1976.

3. On-budget since Sept. 30, 1976.

4. Consists of debentures issued in payment of Federal Housing Administration insurance claims. Once issued, these securities may be sold privately on the securities market.

5. Certificates of participation issued before fiscal year 1969 by the Government National Mortgage Association acting as trustee for the Farmers Home Administration; the Department of Health, Education, and Welfare; the Department of Housing and Urban Development; the Small Business Administration; and the Veterans Administration.

6. Off-budget.

7. Includes outstanding noncontingent liabilities: notes, bonds, and debentures. Includes Federal Agriculture Mortgage Corporation; therefore, details do not sum to total. Some data are estimated.

8. Excludes borrowing by the Farm Credit Financial Assistance Corporation, which is shown on line 17.

9. Before late 1982, the association obtained financing through the Federal Financing Bank (FFB). Borrowing excludes that obtained from the FFB, which is shown on line 22.

10. The Financing Corporation, established in August 1987 to recapitalize the Federal Savings and Loan Insurance Corporation, undertook its first borrowing in October 1987.

11. The Farm Credit Financial Assistance Corporation, established in January 1988 to provide assistance to the Farm Credit System, undertook its first borrowing in July 1988.

12. The Resolution Funding Corporation, established by the Financial Institutions Reform, Recovery, and Enforcement Act of 1989, undertook its first borrowing in October 1989.

13. The FFB, which began operations in 1974, is authorized to purchase or sell obligations issued, sold, or guaranteed by other federal agencies. Because FFB incurs debt solely for the purpose of lending to other agencies, its debt is not included in the main portion of the table to avoid double counting.

14. Includes FFB purchases of agency assets and guaranteed loans; the latter are loans guaranteed by numerous agencies, with the amounts guaranteed by any one agency generally being small. The Farmers Home Administration entry consists exclusively of agency assets, whereas the Rural Electrification Administration entry consists of both agency assets and guaranteed loans.

1. Figures represent gross proceeds of issues maturing in more than one year; they are the principal amount or number of units calculated by multiplying by the offering price. Figures exclude secondary offerings, employee stock plans, investment companies other than closed-end, intracorporate transactions, and Yankee bonds. Stock data include ownership securities issued by limited partnerships.

2. Monthly data include 144(a) offerings

3. Monthly data cover only public offerings

4. Data for private placements are not available at a monthly frequency.

NOTE. This table has been revised to incorporate several changes resulting from the benchmarking of finance company receivables to the June 1996 Survey of Finance Companies. In that benchmark survey, and in the monthly surveys that have followed, more detailed breakdowns have been obtained for some components. In addition, previously unavailable data on securitized real estate loans are now included in this table. The new information has resulted in some reclassification of receivables among the three major categories (consumer, real estate, and business) and in discontinuities in some component series between May and June 1996.

Includes finance company subsidiaries of bank holding companies but not of retailers and banks. Data in this table also appear in the Board's G-20 (422) monthly statistical release. For ordering address, see inside front cover.

1. Owned receivables are those carried on the balance sheet of the institution. Managed receivables are outstanding balances of pools upon which securities have been issued; these balances are no longer carried on the balance sheets of the loan originator. Data are shown

before deductions for unearned income and losses. Components may not sum to totals because of rounding.

2. Excludes revolving credit reported as held by depository institutions that are subsidiaries of finance companies.

3. Includes personal cash loans, mobile home loans, and loans to purchase other types of consumer goods, such as appliances, apparel, boats, and recreation vehicles.

4. Outstanding balances of pools upon which securities have been issued; these balances are no longer carried on the balance sheets of the loan originator.

5. Credit arising from transactions between manufacturers and dealers, that is, floor plan financing.

6. Includes loans on commercial accounts receivable, factored commercial accounts, and receivable dealer capital; small loans used primarily for business or farm purposes; and wholesale and lease paper for mobile homes, campers, and travel trailers.

1. Weighted averages based on sample surveys of mortgages originated by major institutional lender groups for purchase of newly built homes; compiled by the Federal Housing Finance Board in cooperation with the Federal Deposit Insurance Corporation.

2. Includes all fees, commissions, discounts, and "points" paid (by the borrower or the seller) to obtain a loan.

3. Average effective interest rate on loans closed for purchase of newly built homes, assuming prepayment at the end of ten years.

4. Average contract rate on new commitments for conventional first mortgages; from U.S. Department of Housing and Urban Development (HUD). Based on transactions on the first day of the subsequent month.

5. Average gross yield on thirty-year, minimum-downpayment first mortgages insured by the Federal Housing Administration (FHA) for immediate delivery in the private secondary market. Based on transactions on first day of subsequent month.

6. Average net yields to investors on fully modified pass-through securities backed by mortgages and guaranteed by the Government National Mortgage Association (GNMA), assuming prepayment in twelve years on pools of thirty-year mortgages insured by the Federal Housing Administration or guaranteed by the Department of Veterans Affairs.

7. Does not include standby commitments issued, but includes standby commitments converted.

8. Includes participation loans as well as whole loans.

9. Includes conventional and government-underwritten loans. The Federal Home Loan Mortgage Corporation's mortgage commitments and mortgage transactions include activity under mortgage securities swap programs, whereas the corresponding data for the Federal National Mortgage Association exclude swap activity.

1. Multifamily debt refers to loans on structures of five or more units.

2. Includes loans held by nondeposit trust companies but not loans held by bank trust departments.

3. Includes savings banks and savings and loan associations.

4. FmHA-guaranteed securities sold to the Federal Financing Bank were reallocated from FmHA mortgage pools to FmHA mortgage holdings in 1986:Q4 because of accounting changes by the Farmers Home Administration.

5. Outstanding principal balances of mortgage-backed securities insured or guaranteed by the agency indicated.

6. Includes securitized home equity loans.

7. Other holders include mortgage companies, real estate investment trusts, state and local credit agencies, state and local retirement funds, noninsured pension funds, credit unions, and finance companies.

SOURCE: Based on data from various institutional and government sources. Separation of nonfarm mortgage debt by type of property, if not reported directly, and interpolations and extrapolations, when required for some quarters, are estimated in part by the Federal Reserve. Line 69 from Inside Mortgage Securities and other sources.

1. The Board's series on amounts of credit covers most short- and intermediate-term credit extended to individuals, excluding loans secured by real estate. Data in this table also appear in the Board's G.19 (421) monthly statistical release. For ordering address, see inside front cover.

2. Comprises motor vehicle loans, mobile home loans, and all other loans that are not included in revolving credit, such as loans for education, boats, trailers, or vacations. These loans may be secured or unsecured.

3. Outstanding balances of pools upon which securities have been issued; these balances are no longer carried on the balance sheets of the loan originator.

4. Totals include estimates for certain holders for which only consumer credit totals are available.

Note. The statistics in the G.17 release cover output, capacity, and capacity utilization in the industrial sector, which the Federal Reserve defines as manufacturing, mining, and electric and gas utilities. Manufacturing consists of those industries included in the North American Industry Classification System, or NAICS, manufacturing plus those industries—logging and newspaper, periodical, book, and directory publishing—that have traditionally been considered manufacturing and included in the industrial sector.

1. Data in this table also appear in the Board's G.17 (419) monthly statistical release. The

data are also available on the Board's web site <http://www.federalreserve.gov/releases/g17>. The latest historical revision of the industrial production index and the capacity utilization rates was released in December 2002. The recent annual revision is described in the April 2003 issue of the *Bulletin*.

2. Capacity utilization is calculated as the ratio of the Federal Reserve's seasonally adjusted index of industrial production to the corresponding index of capacity.

3. Monthly highs, 1978–80; monthly lows, 1982.

4. Monthly highs, 1988–89; monthly lows, 1990–91.

Note. The statistics in the G.17 release cover output, capacity, and capacity utilization in the industrial sector, which the Federal Reserve defines as manufacturing, mining, and electric and gas utilities. Manufacturing consists of those industries included in the North American Industry Classification System, or NAICS, manufacturing plus those industries—logging and newspaper, periodical, book, and directory publishing—that have traditionally been considered manufacturing and included in the industrial sector.

1. Data in this table appear in the Board's G.17 (419) monthly statistical release. The data are also available on the Board's web site <http://www.federalreserve.gov/releases/g17>. The latest historical revision of the industrial production index and the capacity utilization rates was released in December 2002. The recent annual revision is described in the April 2003 issue of the *Bulletin*.

2. North American Industry Classification System.

<b>MEMO</b>									
<i>Changes in official assets</i>									
39 U.S. official reserve assets (increase, -)	-290	-4,911	-3,681	-199	390	-1,843	-1,416	-812	
40 Foreign official assets in United States, excluding line 25 (increase, +)	39,549	7,106	96,472	5,590	8,431	47,198	8,533	32,310	
41 Change in Organization of Petroleum Exporting Countries official assets in United States (part of line 22)	12,000	-1,725	-8,132	3,382	-8,532	838	-1,289	851	

1. Seasonal factors are not calculated for lines 11-16, 18-20, 22-35, and 38-41.  
 2. Associated primarily with military sales contracts and other transactions arranged with or through foreign official agencies.

3. Consists of investments in U.S. corporate stocks and in debt securities of private corporations and state and local governments.

4. Reporting banks included all types of depository institutions as well as some brokers and dealers.

5. Consists of capital transfers (such as those of accompanying migrants entering or leaving the country and debt forgiveness) and the acquisition and disposal of nonproduced nonfinancial assets.

1. Gold held "under earmark" at Federal Reserve Banks for foreign and international accounts is not included in the gold stock of the United States; see table 3.13, line 3. Gold stock is valued at \$42.22 per fine troy ounce.

2. Special drawing rights (SDRs) are valued according to a technique adopted by the International Monetary Fund (IMF) in July 1974. Values are based on a weighted average of exchange rates for the currencies of member countries. From July 1974 through December 1980, sixteen currencies were used; since January 1981, five currencies have been used. U.S.

SDR holdings and reserve positions in the IMF also have been valued on this basis since July 1974.

3. Includes allocations of SDRs by the International Monetary Fund on Jan. 1 of the year indicated, as follows: 1970—\$867 million; 1971—\$717 million; 1972—\$710 million; 1979—\$1.139 million; 1980—\$1.152 million; 1981—\$1.093 million; plus net transactions in SDRs.

4. Valued at current market exchange rates.

3.13 FOREIGN OFFICIAL ASSETS HELD AT FEDERAL RESERVE BANKS<sup>1</sup>

Millions of dollars, end of period

Asset	1999	2000	2001	2002						2003

1. Includes the Bank for International Settlements.  
 2. Principally demand deposits, time deposits, bankers acceptances, commercial paper, negotiable time certificates of deposit, and borrowings under repurchase agreements.

3. Includes nonmarketable certificates of indebtedness and Treasury bills issued to official institutions of foreign countries.

4. Excludes notes issued to foreign official nonreserve agencies. Includes current value of zero-coupon Treasury bond issues to foreign governments as follows: Mexico, beginning March 1990, 30-year maturity issue; Venezuela, beginning December 1990, 30-year maturity issue; Argentina, beginning April 1993, 30-year maturity issue.

5. Debt securities of U.S. government corporations and federally sponsored agencies, and U.S. corporate stocks and bonds.

6. Data in the two columns shown for this date reflect different benchmark bases for foreigners' holdings of selected U.S. long-term securities. Figures in the first column are comparable to those for earlier dates; figures in the second column are based in part on a benchmark survey as of end-March 2000 and are comparable to those shown for following dates.

SOURCE: Based on U.S. Department of the Treasury data and on data reported to the Treasury by banks (including Federal Reserve Banks) and securities dealers in the United States, and in periodic benchmark surveys of foreign portfolio investment in the United States.

3.16 LIABILITIES TO, AND CLAIMS ON, FOREIGNERS Reported by Banks in the United States<sup>1</sup>

Payable in Foreign Currencies

Millions of dollars, end of period

Item	1998	1999	2000	2001	2002		
				Dec.	Mar.	June	Sept
1 Banks' liabilities	101,125	88,537	77,779	79,363	74,955	89,892	81,761

12. Before January 2001, data for Belgium–Luxembourg were combined.

13. Before January 2001, these data were included in data reported for the United Kingdom.

14. Since December 1992, has excluded Bosnia, Croatia, and Slovenia.

15. Includes the Bank for International Settlements and the European Central Bank. Since December 1992, has included all parts of the former U.S.S.R. (except Russia), and Bosnia, Croatia, and Slovenia.

16. Before January 2001, data for "Other Latin America" and "Other Caribbean" were combined in "Other Latin America and Caribbean."

17. Beginning January 2001, data for the Cayman Islands replaced data for the British West Indies.

18. Comprises Bahrain, Iran, Iraq, Kuwait, Oman, Qatar, Saudi Arabia, and United Arab Emirates (Trucial States).

19. Comprises Algeria, Gabon, Libya, and Nigeria.

20. Before January 2001, these data were included in "All other."

21. Principally the International Bank for Reconstruction and Development. Excludes "holdings of dollars" of the International Monetary Fund.

22. Principally the Inter-American Development Bank.

23. Asian, African, Middle Eastern, and European regional organizations, except the Bank for International Settlements, which is included in "Other Europe."

1. Reporting banks include all types of depository institutions as well as some brokers and dealers.

2. Before January 2001, combined data reported for Belgium-Luxembourg.

3. Before January 2001, data included in United Kingdom.

4. Since December 1992, has excluded Bosnia, Croatia, and Slovenia.

5. Includes the Bank for International Settlements and European Central Bank. Since December 1992, has included all parts of the former U.S.S.R. (except Russia) and Bosnia, Croatia, and Slovenia.

6. Before January 2001, "Other Latin America" and "Other Caribbean" were reported as combined "Other Latin America and Caribbean."

7. Beginning 2001, Cayman Islands replaced British West Indies in the data series.

8. Comprises Bahrain, Iran, Iraq, Kuwait, Oman, Qatar, Saudi Arabia, and United Arab Emirates (Trucial States).

9. Comprises Algeria, Gabon, Libya, and Nigeria.

10. Before January 2001, included in "All other."

11. Excludes the Bank for International Settlements, which is included in "Other Europe."

1. For banks' claims, data are monthly; for claims of banks' domestic customers, data are for quarter ending with month indicated.

Reporting banks include all types of depository institution as well as some brokers and dealers.

2. For U.S. banks, includes amounts due from own foreign branches and foreign subsidiaries consolidated in quarterly Consolidated Reports of Condition filed with bank regulatory agencies. For agencies, branches, and majority-owned subsidiaries of foreign banks, consists

principally of amounts due from the head office or parent foreign bank, and from foreign branches, agencies, or wholly owned subsidiaries of the head office or parent foreign bank.

3. Assets held by reporting banks in the accounts of their domestic customers.

4. Principally negotiable time certificates of deposit and bankers acceptances, and commercial paper.

5. Data available beginning January 2001.

6. Includes demand and time deposits and negotiable and nonnegotiable certificates of deposit denominated in U.S. dollars issued by banks abroad.

1. Averages of certified noon buying rates in New York for cable transfers. Data in this table also appear in the Board's G.5 (405) monthly statistical release. For ordering address, see inside front cover.

2. U.S. cents per currency unit.

3. The euro is reported in place of the individual euro area currencies. By convention, the rate is reported in U.S. dollars per euro. The bilateral currency rates can be derived from the euro rate by using the fixed conversion rates (in currencies per euro) as shown below:

Euro equals		
13.7603	Austrian schillings	1.936.27
40.3399	Belgian francs	40.3399
5.94573	Finnish markkas	2.20371
6.55957	French francs	200.482
1.95583	German marks	166.386
.787564	Irish pounds	340.750
	Italian lire	
	Luxembourg francs	
	Netherlands guilders	
	Portuguese escudos	
	Spanish pesetas	
	Greek drachmas	

4. Starting with the March 2003 *Bulletin*, revised index values resulting from the periodic revision of data that underlie the calculated trade weights are reported. For more information on the indexes of the foreign exchange value of the dollar, see *Federal Reserve Bulletin*, vol. 84 (October 1998), pp. 811–818.

5. Weighted average of the foreign exchange value of the U.S. dollar against the currencies of a broad group of U.S. trading partners. The weight for each currency is computed as an average of U.S. bilateral import shares from and export shares to the issuing country and of a measure of the importance to U.S. exporters of that country's trade in third country markets.

6. Weighted average of the foreign exchange value of the U.S. dollar against a subset of broad index currencies that circulate widely outside the country of issue. The weight for each currency is its broad index weight scaled so that the weights of the subset of currencies in the index sum to one.

7. Weighted average of the foreign exchange value of the U.S. dollar against a subset of broad index currencies that do not circulate widely outside the country of issue. The weight for each currency is its broad index weight scaled so that the weights of the subset of currencies in the index sum to one.

# Maps of the Federal Reserve System

## LEGEND

### *Both pages*

- Federal Reserve Bank city
- ★ Board of Governors of the Federal Reserve System, Washington, D.C.

### *Facing page*

- Federal Reserve Branch city
- Branch boundary

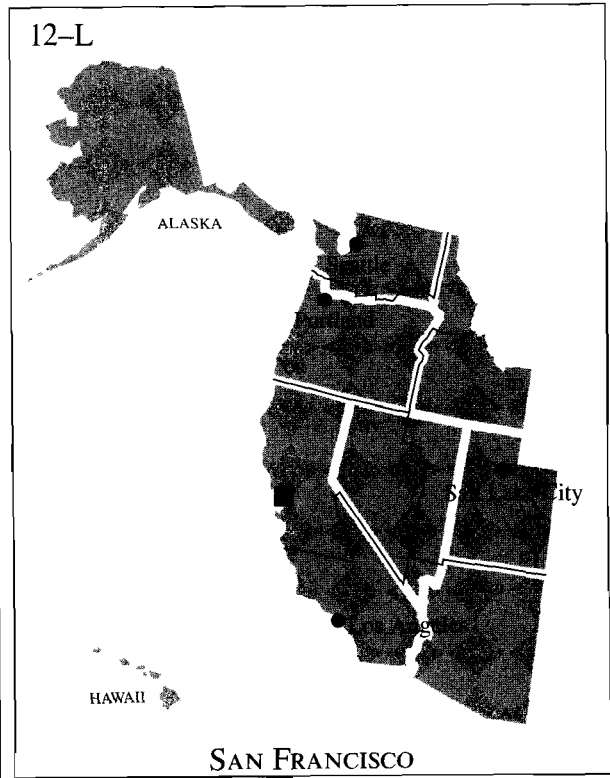

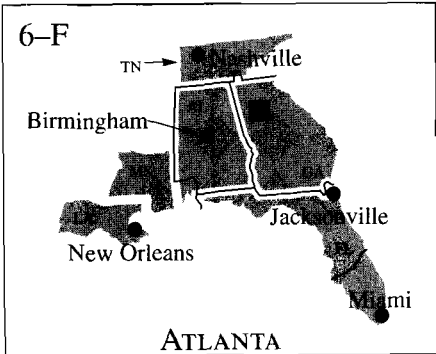

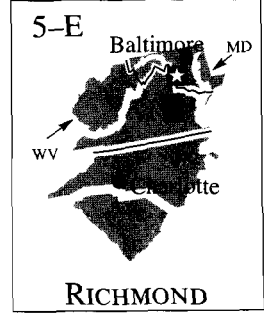

## NOTE

The Federal Reserve officially identifies Districts by number and Reserve Bank city (shown on both pages) and by letter (shown on the facing page).

In the 12th District, the Seattle Branch serves Alaska, and the San Francisco Bank serves Hawaii.

The System serves commonwealths and territories as follows: the New York Bank serves the Commonwealth

of Puerto Rico and the U.S. Virgin Islands; the San Francisco Bank serves American Samoa, Guam, and the Commonwealth of the Northern Mariana Islands. The Board of Governors revised the branch boundaries of the System most recently in February 1996.
