SUBSCRIPTION PRICE OF BULLETIN

The FEDERAL RESERVE BULLETIN is the board's medium of communication with member banks of the Federal reserve system and is the only official organ or periodical publication of the board. The BULLETIN will be sent to all member banks without charge. To others the subscription price, which covers the cost of paper and printing, is \$2. Single copies will be sold at 20 cents. Outside of the United States, Canada, Mexico, and the insular possession, \$2.60; single copies, 25 cents.

FEDERAL RESERVE BULLETIN

VOL. 16

DECEMBER, 1930

No. 12

It is with the deepest regret that the Federal Reserve Board announces the death of Mr. Edward H. Cunningham, member of the Board since May 14, 1923. He died suddenly on November 28, 1930.

REVIEW OF THE MONTH

During November money rates, which have been at a low level throughout the year, showed a further easing tendency, indicated by declines in rates on open-market commercial paper and on bankers' acceptances of the longer maturities, as well as in rates charged by banks to their customers and in yields on United States Government bonds. The general level of money rates at the opening of December was as low as at any time since records became available. This ease in the money market has accompanied a further decrease in the demand for credit from the security market, which is shown by a rapid decline in brokers' loans to the lowest level in five years. Security loans of member banks consequently decreased, while investments continued to increase, and there was also an increase in all other loans. At the reserve banks there was little change through the third week in November in the total volume of credit outstanding or in its composition, a large part of the seasonal demand for currency being met by imports of gold from abroad.

During the 2-months period from September 24 to November 26 total loans and investments of reporting member banks increased by \$84,000,000; this change in the total reflected changes in the component parts shown by the accompanying chart and in the following table:

REPORTING MEMBER BANKS

[In millions of dollars]

	Sept. 24	Nov. 26	Change
Loans and investments.....	23, 297	23, 381	+84
Loans on securities.....	8, 461	7, 761	-700
All other loans.....	8, 451	8, 766	+315
Investments.....	6, 385	6, 854	+469

Investments of the reporting banks increased to the highest level on record, as the consequence of purchases by these banks of investment securities in the amount of \$1,460,000,000 since the low point in October of last year. Investments of members banks had been at a high level in the spring of 1928, but had declined continuously during the following 15 months of high money rates, and toward the end of October of last year were \$800,000,000

lower than at their previous high point. Since that time easy conditions in the money market and the small demand for credit from trade and industry have influenced the banks, not only to repurchase securities in an amount sufficient to replace the sales of the preceding 15 months,

but to add a further \$660,000,000 to their holdings.

Security loans of the reporting member banks decreased by \$700,000,000 during the two months covered by the table. This decrease reflected a rapid decline in loans to brokers and dealers, the course of which is shown in more detail in the following table:

LOANS TO BROKERS AND DEALERS MADE BY REPORTING MEMBER BANKS IN NEW YORK CITY
[In millions of dollars]

	Sept. 24	Nov. 26	Change
Total.....	3, 222	2, 123	-1, 100
For own account.....	1, 721	1, 288	-433
For account of out-of-town banks.....	782	380	-402
For account of others.....	719	455	-264

Brokers' loans declined by \$1,100,000,000 during the two months, the decline being shared among all classes of lenders. On November 26, 1930, brokers' loans were smaller by

Based on weekly figures reported to the Federal Reserve Board; figures beginning with 1926 are somewhat more inclusive than earlier figures

\$300,000,000 than at the low point in 1926. The decrease, compared with the low point in 1926, was chiefly in loans for account of out-of-town banks, an item that includes a certain amount of loans placed by these banks for their customers, i. e., for nonbanking lenders. Reported loans for account of nonbanking lenders also were smaller than in May, 1926, while loans to brokers by New York City banks for their own account were larger by \$400,000,000 on November 26, 1930, than at the earlier date. The chart shows the course of brokers' loans since 1917, when figures first became available. It indicates that

the present level of brokers' loans, while it is the lowest in five years, is higher than at any earlier time.

Commercial loans of the member banks increased by \$315,000,000 during the past two months, an increase that has continued beyond the middle of October when the seasonal peak of this class of loans is usually reached. These loans had decreased rapidly from the middle of last November, when the recession in business activity became pronounced, until the middle of June of this year; from May through September these loans showed little change, notwithstanding the fact that usually they show a seasonal growth with the beginning of the crop marketing season in the middle of August. The volume of the so-called "all other" loans, however, turned up at the end of September and continued to rise during October and the first three weeks in November. The growth after the middle of October was contrary to the usual seasonal trend and represented, at least in part, an increase in member bank holdings of bankers' acceptances. The volume of acceptances outstanding at the end of October this year, though somewhat smaller than a year ago, was much larger than in any earlier year, and the member banks, in view of the low rate of return and the absence of demand for credit in the security market, have supplemented their purchases of longer time securities by buying acceptances in the open market and by holding acceptances of their own creation. Member bank holdings of acceptances are consequently larger now than at any previous time, and member bank absorption of acceptances has been a factor in the smaller than usual growth of acceptance holdings of the reserve banks during this autumn.

The following table shows changes in the total volume of reserve bank credit and in its composition between the last week in July and the week ending November 22, 1930, compared with changes during the corresponding period, on the average, for the years 1923-1929. The chart shows the composition of reserve bank credit since 1926.

RESERVE BANK CREDIT

[In millions of dollars]

	Changes from last week in July to third week in November	
	Average, 1923-1929	1930
Total reserve bank credit.....	+212	+65
Bills discounted.....	-38	+18
Bills bought.....	+181	+26
United States securities.....	+66	+22

As compared with a 7-year average increase of \$180,000,000 in acceptance holdings of the reserve banks during this period of the year, these holdings in 1930 increased by only \$26,000,000. This smaller increase has been due

in part to the active market for bills at member banks, already mentioned, but chiefly it has reflected the smaller than usual seasonal demand for reserve bank credit, the total of which increased this year by \$65,000,000, compared with \$212,000,000 on the average during the corresponding period of the preceding seven years.

Diminution in the seasonal demand for reserve bank credit this autumn has reflected slack demand for currency, which in turn has been due in part to the decrease in pay-roll disbursements by factories, and to the continued decline in commodity prices, which have made the requirements for currency to transact the country's business much smaller than they have been in other recent years. The

following table shows changes between the last week in July and the third week in November in the volume of reserve bank credit, in the country's stock of monetary gold, which together represent the available supply of reserve bank funds, and in money in circulation and member bank reserve balances, which represent the principal demand for these funds. The table compares 1930 in this respect with the average for 1923 to 1929. It also includes a column showing on an average basis the changes that have occurred in these items during the remainder of the calendar year.

CHANGES IN RESERVE BANK CREDIT AND PRINCIPAL FACTORS

[In millions of dollars]

	Change from last week in July to third week in November		Change from third week in November to last week of year (average 1923-1929)
	Average 1923-1929	1930	
Reserve bank credit.....	+212	+65	+223
Monetary gold stock.....	+20	+31	-20
Reserve bank credit plus gold stock.....	+232	+96	+203
Money in circulation.....	+143	+77	+205
Member bank reserve balances.....	+83	+25	-8

Changes in monetary gold have not been large during the period from July to November, either this year or, on the average, for the preceding seven years. When the two sources of reserve-bank funds are combined it appears that this year the increase during the autumn was \$96,000,000, as compared with \$232,000,000 on the 7-year average. This diminution in the growth is accounted for in part by the decrease in the seasonal demand for currency, which was only half as large this year as on the average for the preceding years, and in smaller part by a decrease of about \$60,000,000 in the growth of member-bank reserve balances. It is usual for member banks to increase their loans, and consequently their deposits and their reserve requirements during the autumn months, but this year the relatively small demand for bank credit, caused by the inactive state of business, has resulted in a relatively small growth of bank credit and of bank reserves.

In the last column of the table are shown average changes in reserve funds and in sources of demand between the third week in November, when the increased demand for currency to be used in the Christmas trade usually begins, and the last week of the year, for the seven years 1923-1929. The growth in these funds, combining reserve bank credit and gold, has been during the seven years on the average equal to about \$200,000,000 and has been entirely accounted for by the demand for currency for the holiday trade. In entering upon this season of increased demand for currency the member banks this year start with a smaller

volume of indebtedness to the reserve banks than at any time since 1917 and are, therefore, in an exceptionally strong position to meet this temporary demand.

Changes in Foreign Central Bank Discount Rates

The following changes have been made since the 1st of November in the discount rates of central banks in foreign countries: November 7—Bank of Norway, from 4½ to 4 per cent; November 13—Danish National Bank from 4 to 3½ per cent; November 20—Bank of India, from 5 to 6 per cent.

BRANCH, CHAIN, AND GROUP BANKING IN JUNE, 1930¹

Compilations of the board covering branch, chain, and group banking developments to June 30, 1930, are presented in detail in general tables on pages 811-817 of this issue of the BULLETIN, indicating changes during the first half of the year as well as over longer periods of time. These tables give, by States, statistics of banks and banking offices affiliated in branch, chain, and group systems, as well as the number of independent unit banks, and include revised figures with respect to groups and chains for June and December, 1929.

During the six months ending June 30, 1930, the number of branch banking systems in the United States decreased by 5 and the number of group² systems increased by 1, while the number of banking offices embraced in branch and group systems increased by 130, reflecting an increase of 66 offices in branch systems and

of 64 single-office banks in group systems. At the end of June there were 27,470 banking offices in the United States, of which 21,028 were independent single-office banks, 817 were head offices of banks operating one or more branches, 3,618 were branch offices, and 2,007 represented single-office banks belonging to groups or chains. Details in this respect are summarized in the following table:

NUMBER OF BANKING OFFICES IN AND OUTSIDE OF
BRANCH AND GROUP SYSTEMS

	June 30, 1930	Dec. 31, 1929 ¹
Banking offices—total.....	27,470	28,177
Single-office banks.....	23,035	23,808
Banks operating branches (head offices).....	817	822
Branches.....	3,618	3,547
Banking offices in groups—total.....	3,752	3,620
Single-office banks.....	2,007	1,943
Banks operating branches (head offices).....	137	122
Branches.....	1,608	1,555
Banking offices not in groups—total.....	23,718	24,557
Single-office banks ²	21,028	21,865
Banks operating branches (head offices).....	680	700
Branches.....	2,010	1,992

¹ Revised figures.

² Representing 23,852 banks: on Dec. 31, 1929, there were 24,630 banks.

³ Independent single-office banks.

¹ Articles on this subject have been published during the past few years in the following numbers of the BULLETIN: December, 1924, pp. 925-940; June, 1926, pp. 401-408; May, 1927, pp. 315-318, 384-389; February, 1929, pp. 97-103; December, 1929, pp. 762-771; April, 1930, pp. 144-157.

² The word "group" is used in the text of this article to include chains as well. Three types of chain or group systems have been reported, which may be characterized with reference to the controlling agency, as follows:

(1) Instances where control is exercised by a holding corporation, which has usually been formed by interests connected with one or more of the principal banks belonging to the system.

(2) Instances where control is exercised by the principal bank of the system, either through direct ownership of stock by the bank, or through ownership by the stockholders or directors of the bank.

(3) Instances of ownership of controlling or substantial interest in a number of banks by an individual, family, or group of individuals.

Recent developments have been conspicuously of the first and second types, and these developments, commonly utilizing holding companies as controlling agencies, have been distinguished in some discussions as "group systems," the designation of "chain system" being reserved for organizations of the third type. These classifications by types of control are, however, very general, since the actual method and agency of control varies from system to system and may in the case of any given system be modified from time to time.

In the board's compilations, only affiliations of three or more banks are classified as chain or group systems. It follows that some single banks classified as independent unit banks may be affiliated through stock ownership with other single banks.

During the 6-year period ending with June 30, 1930, a decrease of 5,144 occurred in the number of banks in the United States, accompanied by a smaller decrease—3,819—in the number of banking offices, the difference being accounted for by an increase of 1,325 in branches.

The group of 22 States in which the establishment of branches is now prohibited lost 3,051 banking offices, nearly one-fifth of those in existence at the beginning of the 6-year

period. In the area where state-wide branch banking is permitted, banking offices decreased by 287, or about one-twelfth—reflecting a decrease of 760 banks offset in part by an increase of 473 in branches. On the other hand, the group of States in which branches are restricted as to location showed a net increase in banking offices of 262, resulting from an increase of 860 branches, offset in part by a decrease of 598 in the number of banks. Details are given in Tables 1 and 2, pages 811–812.

Metropolitan branches.—Of the 3,618 branch offices in the country in June, a large majority—2,898—were located in the home-office city or county and a minority—720—were located outside the home city and county—California accounting for 451, South Carolina for 58, North Carolina for 46. The number of branch offices outside the home city and county increased during the half year by 28.

Twenty-five large banks in the cities of New York, Detroit, Los Angeles, Cleveland, Boston, Buffalo, and New Orleans, each with 18 or more branches, confining their branch activity to the city, had among them nearly 1,000 branches, and of the nearly 900 branches operated by 16 large systems whose branch activities were not so limited, more than one-fourth were within the home-office city.

Details regarding the location of branches are given in Table 3, p. 812.

Branch systems.—The net decrease of 5 during the first half of 1930 in the number of banks operating branches resulted from a gross loss of 39, offset in part by 32 new branch systems. Twelve branch-operating banks suspended during the half year and 20 merged with other banks. While 151 new branches were reported, these were partially offset in number by 60 discontinued and 22 suspended with their parent offices, and of the gross increase 89 were de novo branches and 62 represented banks converted into branches.

Number of branch systems:	
Dec. 31, 1929.....	822
Increases—	
New branch systems.....	+32
Suspended branch systems re-opened.....	+2
	+34
Decreases through—

	+153
Decreases—	
Discontinued.....	—60
Suspended (with suspension of parent bank).....	—22
	—82
June 30, 1930.....	3,618

Principal branch-banking States.—At the end of June, 1930, branches were in operation in 30 States and the District of Columbia—1,308 in the 9 States and the District of Columbia which permit state-wide branch banking, 2,257 in the 12 States which restrict the establishment of branches to the home city of the parent bank or territory nearly contiguous thereto, 52 in 8 States in which the further extension of branch banking is prohibited by State law, and 1 in the State of New Hampshire where there is no provision in State law regarding branch banking.

Two-thirds of the 3,618 branches in operation in June were located in 5 States—California, New York, Michigan, Ohio, and Pennsylvania—while more than 100 branches were in operation in each of 4 other States, Massachusetts, New Jersey, Louisiana, and Maryland.

Size of branch banking systems, etc.—A large majority of the banks operating branches in June were operating only 1 or 2 branches each. Of the 817 banks operating branches, 443, or more than one-half, were operating only 1 branch each, 144 were operating 2, and 132 were operating 3 to 5 branches each.

Of the 1,148 branches located outside the home city of the parent bank, 634 were located in places of less than 2,500 population; 144 in places of 2,500 to 5,000; 92 in places of 5,000 to 10,000; and 278 in places of over 10,000. The 278 outside branches located in places of over 10,000 population represented largely branches of state-wide California systems with head offices in Los Angeles and San Francisco operating branches in other large cities of the State. The number of outside branches located in places of less than 2,500 increased by 22 in the period from December, 1929, to June, 1930.

Two-thirds of the branches in operation in June were offices which had been established de novo as branches, the remaining branches representing largely conversions of independent

banks into branches, although in some instances the method of establishment was not ascertained. In the recent six months' period the number of de novo branches increased by 31, and the number of branches representing conversions of banks increased by 43.

Of the 817 banks in June which were operating branches 165 were national banks with 1,041 branches, 169 were State member banks with 1,308 branches, and the balance non-member State banks (including mutual savings and private institutions) with 1,269 branches.

Details are given in Tables 4, 5, and 6, pages 813-814.

Group systems.—The net increase in the number of groups during the half year was only 1, with 289 in existence at the end of the period. New groups were created to the number of 12, but suspensions, mergers, etc., accounted for the disappearance of 11 groups. The movement as a whole gained 79 banks, the accession of 180 new banks being offset in part by losses from mergers, suspensions, and the like.

³ Reducing the number of constituent banks to less than 3.

⁴ Revised.

⁵ Not included in the total—represents merely transfers from one group to another.

⁶ Represents banks left in a group after mergers, suspensions, sales or withdrawals had reduced the number of constituent banks to less than 3, thereby dissolving the group.

Area of group banking.—While group-banking developments have not been generally restricted by provisions in State banking codes, the area within which these developments have been more considerable in extent is composed largely of States which have prohibited the establishment of branch-banking offices either by statute or by administrative policy, as, for example, in Minnesota, North Dakota, Kansas, Iowa, Illinois, Oklahoma, and Texas. Developments of this character have, however, by no means been restricted to these States, as groups have shown very considerable developments in certain other States, particularly in several which have restricted the development of branch banking to the building up of home-city or local branch systems, as in Michigan and New York, as well as in California, which permits state-wide branch banking. There were, in fact, few States in which no affiliation of banking institutions in group systems was reported in June, 1930, and the group-banking area is in general much more extensive and less clearly defined than the branch-banking area.

During the six months' period the group movement showed considerable gains in Illinois, where 12 banks were reported as additional members, in Wisconsin, 9; and in Florida, 8—all States in which branches are prohibited by law—and in Tennessee, 11; and in Ohio, 7—States in which branches are restricted as to location. In Iowa there were 14 fewer banks members of chains and groups than six months earlier.

Details with respect to group systems appear in Table 1 (p. 811) and also in Table 7 (p. 815) which presents revised figures for December, 1929, and June, 1929.

Large group systems.—Several of the large group systems in operation in June included one or more banks operating branches, and while in some instances all of the banking offices of the group were located within the confines of a single State, in other instances banks and branches of a system were located in several States. Forty-four important groups, none with less than six banks, had among them 902 of the total number of 2,144 banks associated with groups in the country as a whole. In addition, the members of these large groups had 1,037 branches in all, 621 in the home-office city and 416 outside the home-office city. One large group in the Northwest had as many as 108 bank members, another in the Northwest 100, while an important group with its head office in New York City, operating chiefly in that city and in California, reported 22 bank members having 475 branches.

NATIONAL SUMMARY OF BUSINESS CONDITIONS

[Compiled November 21 and released for publication November 24]

Volume of industrial production and factory employment declined in October, and there was a further downward movement of commodity prices. Volume of sales by department stores increased by more than the usual seasonal amount. There was a considerable inflow of gold from South America and the Orient, and a further slight easing of money rates.

Production and employment.—Industrial production, including both factories and mines, decreased by about 3 per cent in October, according to the Federal Reserve Board's index, which makes allowance for usual seasonal changes. This decline reflected chiefly a further decrease in output of steel ingots, contrary to the usual seasonal movement, and a larger than seasonal decline in the output of automobiles. Output in the shoe industry was also curtailed. Consumption of cotton by domestic mills showed a further increase of slightly more than the usual seasonal amount, and stocks of cotton cloth were further reduced; increased activity was also reported for the silk industry. Output of coal was in substantially larger volume than in September, while production of copper and petroleum declined.

Number of workers employed showed a decrease for the month in foundries and in the automobile, machine tool, woolen, and shoe industries, while increases were reported in number of persons employed in the production of silk goods, hosiery, and radios. Employment at coal mines increased considerably, partly in response to seasonal influences.

Value of contracts for residential buildings, as reported by the F. W. Dodge Corporation, which had shown a growth in September, increased further in October, but by an amount smaller than is usual for that month. Contracts for public works and utilities also increased somewhat, reflecting a larger volume of awards for pipe lines. Owing to a substantial decrease in contracts for industrial building, however, there was little change in the total value of building contracts awarded.

Distribution.—Volume of distribution of commodities by rail showed a decline from September to October. Retail trade, however, as indicated by sales of department stores, increased by considerably more than the seasonal amount, according to preliminary reports to the Federal reserve system.

Wholesale prices.—The general level of wholesale prices, as measured by the Bureau of Labor statistics index, declined in October, and the decline continued in the first half of November. Further decreases in the prices of many agricultural products, including grains, livestock, and meats, were accompanied by reduction in the prices of hides, tin, petroleum, and gasoline, while sugar and copper advanced. The price of cotton rose considerably at the end of October from the low level prevailing early in the month.

Bank credit.—Total volume of credit at reporting member banks in leading cities showed relatively little change for the 4-week period ending November 12. Loans on securities declined further by \$350,000,000, reflecting reductions in loans to brokers and dealers in securities, while all other loans increased by \$150,000,000, partly on account of purchases of acceptances by the member banks. The banks also increased their holdings of investments. The volume of reserve-bank credit in use showed little change between the middle of October and the middle of November. There was a further addition of \$30,000,000 to the stock of monetary gold and a decline of \$20,000,000 in money in circulation, while member-bank reserve balances increased. No material change in the composition of the reserve-bank portfolio was shown for the month.

Money rates in the open market have eased slightly since the middle of October. The rate on prime commercial paper declined from 3 per cent to a range from $2\frac{3}{4}$ to 3 per cent, and there was a reduction in the rate on bankers' acceptances of the longer maturities. Long-time money rates, as measured by yields on United States Government securities, declined slightly.

NOTE.—Figures relate to rates charged by reporting banks to their own customers as distinguished from open-market rates (which are given in preceding table). All averages are based on rates reported for 3 types of customer loans—commercial loans, and demand and time loans on securities. The method of computing the averages takes into account (a) the relative importance of each of these 3 types of loans and (b) the relative importance of each reporting bank, as measured by total loans. In the two group averages the average rate for each city included is weighted according to the importance of that city in the group, as measured by the loans of all banks.

¹ Without seasonal adjustment.² Includes also lead and zinc; see "Minerals."³ Preliminary.⁴ Revised.

NOTE.—The combined index of industrial production is computed from figures for 58 statistical series, 50 of manufactures, and 8 of minerals most of which are shown in this table. Adjustments have been made in the different industries for the varying number of working days in each month and for customary seasonal variations, and the individual products and industries have been weighted in accordance with their relative importance. The sources of data and methods of construction were described in the BULLETIN for February and March, 1927.

FACTORY EMPLOYMENT AND PAY ROLLS

FOREIGN BANKING AND BUSINESS CONDITIONS

ANNUAL REPORT OF THE NATIONAL BANK OF DENMARK

The annual report of the National Bank of Denmark for the year ended July 31, 1930, was presented to the general meeting of shareholders on September 20, 1930. Sections of the report dealing with discount policy, price movements, interest rates, and the gold policy of the bank, are given herewith:¹

Discount policy.—A few days after the annual report for the year 1928–29 was submitted; the upward movement of discount rates, which had marked the situation in the international money market for several months previous, reached its climax when the Bank of England raised its rate to 6½ per cent on September 26, 1929. As noted in our last report, this rise in the level of rates abroad had to be reckoned with in Denmark; and although the banking situation was such as to enable this country to meet for a considerable period the difficulties arising out of the increased margin between the Danish rate of 5 per cent and the higher English rate, the National Bank nevertheless thought it prudent to counteract the effects to some extent. The bank therefore raised its discount rate to 5½ per cent on December 27; on the same day the Swedish Riksbank advanced its rate from 4½ to 5½ per cent, and the Norges Bank from 5½ to 6 per cent.

With these advances, the upward movement came to an end and was followed, some time after the crisis on the New York Stock Exchange in October, 1929, by a decline which carried the rates down to their present level. This decline was not only very abrupt, but was also notable for the fact that it applied chiefly to short-term funds, whereas securities with fixed yield followed the movement only very gradually. Thus the decline of the interest rate on bonds, according to computations made by a number of countries (the United States, England, the Netherlands, France, Germany, and Denmark), amounted to only from one-fourth to one-half of 1 per cent. A considerable margin was thus created between rates of interest on bank deposits and the rate on bonds in several countries (Germany, Sweden, and Denmark, for example); this caused friction between the commercial banks and the savings institutions, because the

latter were not obliged to reduce interest rates on their deposits to any considerable extent, inasmuch as the return on their investments underwent only slight fluctuations. From time to time the central banks tried to foster an upward movement in bond prices and thus to bring about a reduction in interest rates of savings institutions. No results of importance were accomplished along this line, however, because of the general situation in the international money market.

The margin between interest rates for short and long term funds was reflected in the rates established by those central banks which quote, besides the discount rate, other official rates on advances. It is always difficult to compare the situation in the money markets of different countries, because of differences in the organization of the market and the position of the central bank; it should be noted, however, that the Bank of France, for example, with a discount rate of 2½ per cent, kept its rates on advances on collateral at 4½ per cent, and to this latter figure must also be added the transfer tax of four-tenths of 1 per cent. Similar differences, though less marked, are shown in the rates on advances of the Bank of Netherlands; while the discount rates, as well as the low rates for bills of exchange in the open markets, are generally lower than the rates charged by the banks for other forms of advances (advances on security, current accounts, advances in current account, etc.). In this country, where the bond market is of exceptional importance, and so long as the National Bank chooses to quote one rate only, at which it discounts prime bills and grants advances on securities and advances under other forms, it has seemed necessary to keep the discount rate closer to the interest rate on bonds than in cases where the rate applies only to short-term funds. Accordingly, the National Bank stopped the reduction of the discount rate at 4 per cent, which has thus been in force since May 3, 1930.

Price movements and foreign trade.—The decline in international rates of interest followed a course parallel to, and was partly caused by, the decline in prices which began in July, 1929, primarily as the result of the fall in the price of grain, and became still more pronounced at the time of the crash on the American stock market in October of the same year. The various wholesale price indexes differed, of course, to

¹ The report, available in French, contains in addition sections dealing with the international situation and with the operations of the bank in detail, as well as a number of tables. For earlier reports, see *FEDERAL RESERVE BULLETIN*, December, 1929 and 1928.

some extent, but the decline from July, 1929, to July, 1930, might be estimated at about 15 per cent. The central banks endeavored to check the price decline by the reduction in discount rates which has been mentioned, but this reduction led in turn to a renewed discussion of the importance of gold in international settlements. This question has become of the greatest importance—especially in England where large purchases of gold for account of the Bank of France have made it difficult for the Bank of England to replenish its gold reserves after the losses to the United States during the stock exchange boom, and to Germany during the negotiations over the Young plan.

The export of gold from London caused some anxiety at one time lest England should be compelled to abandon the low discount rate which she had established; this would have resulted in a further depression of the economic situation both in England and in those countries with which she had close relations. It is, therefore, entirely reasonable to hope that the Bank for International Settlements, which began operations in June of the current year, may be able to induce the central banks to come to an agreement on the subject of gold policy, of such character that the various countries will maintain only so much of a stock of gold as is actually necessary for their needs, and may be able to intervene in any markets which are suffering particularly from gold movements and may moderate the disastrous effects of such movements.

Although in a number of countries the economic depression seems by no means to have reached its climax, the situation of Denmark has by contrast been rather favorable during the past year. It is true, of course, that prices in Denmark have followed somewhat closely the trend of prices in other countries on the gold standard, and Danish shipping has suffered as a result of the depression in commerce; but in general the price decline has affected to a more marked degree those commodities which we import rather than those which we export—the raw materials which we do not produce (or produce only in very limited quantity) rather than manufactured commodities which our national industry and agriculture supply to our own or to foreign markets. This situation is reflected

in the following table, which shows the average of monthly indexes of wholesale prices for the past two years:

	1929-30	1928-29	Decline
Raw materials and semimanufactured commodities.....	121	134	13
Commodities for consumption.....	161	170	9
Commodities imported.....	137	148	11
Commodities exported.....	141	146	5

It should be borne in mind, however, that only when the year is considered as a whole is the situation seen in so favorable a light. If, for instance, the indexes for July, 1929, are compared with those of July, 1930, the index of imported commodities has declined from 145 to 126, or by 19 points; whereas the index of exported commodities has declined from 150 to 122, or by 28 points, as a result of the decline in the price of butter and lard. Moreover, in spite of the favorable change which took place in these prices from 1928-29 to 1929-30, our foreign trade shows results for the past year which are considerably below those for the year 1928-29; and excess imports amounted to 115,000,000 kroner (\$30,820,000) in 1929-30 as against 43,000,000 kroner (\$15,240,000) in 1928-29. This has been due to the increase in imports.

[In millions of kroner]

	1929-30	1928-29
Imports.....	1,802	1,727
Exports:		
Danish commodities.....	1,589	1,583
Foreign commodities.....	100	101
Excess of imports.....	115	43

That the value of imports has risen in spite of the fall in prices is due to the increasing importation of lumber and iron, (for example, for the construction of dwellings), of automobiles, of gasoline and other fuel oils, of commodities for consumption properly so-called (provisions). This increased consumption of foreign commodities is clearly reflected in the volume of foreign balances of the banks, which have been reduced by about 40,000,000 kroner (\$10,720,000) during the course of the year.

[In millions of kroner]						
	National Bank, July 31		Private banks, July 31		Total, July 31	
	1930	1929	1930	1929	1930	1929
Due from foreign correspondents.....	66.5	91.6	122.6	138.0	189.1	229.6

Net balances..	66.0	89.6	57.1	71.6	123.1	161.2

A considerable part of the excess imports, therefore, was not covered by current receipts in the balance of payments or by the flotation of loans, but had to be covered by means of the foreign balances of the banks, especially by those of the National Bank. This was made possible by the fact that the National Bank, through expansion of its advances, made a large volume of purchasing power available to the market, which employed it to buy foreign exchange. The following table shows the movement of advances (in the broad sense of the word) of the National Bank:

Demand deposits of the private banks with the National Bank have also been reduced by about 8,000,000 kroner (\$2,144,000), partly for conversion into foreign exchange.

The money market.—While the greater part of the increase in the advances of the National Bank has been converted into foreign exchange, it may be presumed that a smaller part remains on deposit with the banks, inasmuch as their deposits have risen by about 58,000,000 kroner (\$15,544,000), while advances have risen by 44,000,000 kroner (\$11,792,000).

Total.....	1,818	1,774	2,010	1,952

Thus the national money market has been well supplied with funds, and the National Bank has been able, through its purchases of bonds, to make the low discount rate effective. While the rates of interest charged on advances by the banks have generally followed the discount rate rather closely—that is to say, they have shown a reduction of 1 per cent during the course of the year—interest rates on deposits have been reduced in the majority of cases by one-half of 1 per cent; and this, according to the best information available, is true also for the majority of savings banks.

The rates of interest on bonds were less affected, as was noted above, inasmuch as the effective rate on these investments was reduced by only about one-fourth of 1 per cent during the course of the year. This may be due to the fact that, in spite of the slight advance in the price of bonds—the bond price index rose from 93.3 in July, 1929, to 97.1 in July, 1930—the net increase in the volume of mortgage bonds nevertheless amounted to 39,000,000 kroner (\$10,452,000) more in 1929–30 than in 1928–29 (being 276,000,000 kroner and 237,000,000 kroner, respectively). The effects of such purchases as the National Bank felt justified in making were, therefore, considerably lessened by this augmentation of the enormous volume of bonds outstanding on our market. Yet it would have been dangerous for the bank to undertake much larger purchases of bonds, in view of drafts upon its foreign exchange holdings, described above, for the purpose of covering the deficit in the balance of payments—all the more as it was necessary to reckon with the possibility that the world-wide depression might make itself felt more keenly in Denmark, in which case

it would be necessary to afford some measure of protection to the portfolio of foreign bills.

The fact that it has been difficult to lower bond yields, and the resulting spread between rates of interest paid on bank deposits and those paid on deposits in savings institutions, has constituted an argument against creating, by successive reductions, too great a disparity between the discount rate and the prevailing return on bonds. Although the bank was persuaded that it should follow the international movement of discount rates in a falling market during the spring, it did so in order to maintain practically the same level as the other Scandinavian countries and because it wished to contribute to the reduction of interest rates on advances to the extent which, in the nature of the case, could be accomplished by reductions in the official discount rate. Furthermore, it was desirable to avoid the disturbance which might take place in the Danish money market if the reduction of the discount rate were delayed while commercial circles felt that they had reason to expect it.

Gold policy and the Scandinavian Monetary Union.—Although the Danish level of interest rates has reflected to a marked extent the influence of the international market, the question of gold has not become acute with us because the National Bank has protected its gold reserve by sales of foreign exchange, and the quotation of the Danish krone has at no time been high enough to permit the importation of gold. We have, however, thought it advisable, especially in view of the interest which this entire question has assumed for England, and in view of the importance which the Bank of England attaches to it, that Denmark should for the time being maintain unchanged her system of conversion into gold bars which is in force at present, in order to further, even though to a slight degree, economy in the use of gold. So long as this is the case, and so long as the system of a uniform fractional currency has not been adopted in the three Scandinavian countries, the conditions necessary for the reestablishment of the Scandinavian Monetary Union will remain unfulfilled. The conversations of the past year

among the three Scandinavian banks of issue have also indicated that, in view of the great differences which have been gradually introduced into the structure of the money markets of the three countries, there might be serious disadvantages in coordinating the discount and credit policy of the three countries so closely that it would be necessary to give the three Scandinavian crowns an absolutely uniform international value. On the other hand, it may be supposed that no national economy attaches any decisive importance to such uniformity, inasmuch as the system of the gold standard renders impossible any great fluctuations in the exchanges.

ANNUAL REPORT OF THE COLOMBIAN BANK OF THE REPUBLIC

The annual report of the Colombian Bank of the Republic for the year ended June 30, 1930, was presented to the board of directors on July 20, 1930. Sections of the report dealing with the economic situation of the country, national finance, and banking policies are given herewith:¹

Economic depression.—The period reviewed by this report has been one of serious difficulties for Colombia from both an economic and a fiscal point of view. These difficulties have been aggravated to a large degree by the international recession in business, which made itself felt with special severity in the coffee industry, the basis of our foreign trade and the foundation of our economic life. This decline in the price of coffee, which amounted to about 30 per cent during the year, came at the precise moment when imports were at their highest level as a result of large external loans floated in 1927 and 1928, and when conditions prevailing in the foreign bond markets had made it necessary to suspend such credit operations. The violent disorder which these events produced in the commercial balance of the country made it necessary to draw upon the metallic reserves of the Bank of the Republic in order to meet our foreign commitments. The withdrawal of gold automatically caused a sharp contraction in the volume of notes in circulation, and this in turn brought its logical consequences—a general reduction in prices and salaries, restriction of consumption and therefore of sales, paralysis of all commerce with its inevitable accompaniment of enormously increased unemployment, and lowered standards of living for the general public. No public works could be undertaken as relief measures, because the supply of funds from foreign loans, which were used to finance them, had been stopped. Added to this was the fact that the ordinary income of the nation barely sufficed to cover the most urgent general expenses, inasmuch as the almost complete stoppage of sales had greatly reduced the proceeds of customhouse duties, which are the principal source of revenue.

Political factors.—This difficult situation was further adversely affected by the political agitation which accompanied the approaching presidential election and which threatened to disturb public order. One of its worst

consequences was the inaction of the previous Congress, which solved none of the grave problems confronting the nation, nor enacted any of the remedial measures demanded by national opinion for alleviating the crisis. Among the measures advocated were immediate reduction in public expenditure, and a budget drawn up and balanced according to actual necessities; scientific organization of the department of public works, both as to projects and management; carefully thought-out legislation on petroleum, which should assure the exploitation of this national resource and contribute to the public treasury; and authorization to establish a fiscal agency abroad—this being indispensable for maintaining the nation's credit.

Recommendations of the special committee.—Inasmuch as the National Congress had recessed without passing the budget for the period under review, and in the face of an exceedingly difficult fiscal situation, the Government appointed a special committee composed of three cabinet ministers, the comptroller, the managers of the Bank of the Republic and the Agricultural Mortgage Bank, and one member of each of the legislative chambers, to study and to draw up a budget which, although observing the normal legal restrictions, might meet the emergency. The committee worked faithfully at its difficult task and had the constant assistance of the President and members of the cabinet. They made an estimate of revenues based on a "minutely cautious and guarded study of the probabilities in perspective"; and they estimated expenditures at an amount considerably less than that presented to Congress by the Government. This enabled the Government to appropriate the anticipated surplus for payments immediately due and forming part of the deficit brought forward from previous fiscal years. The results of the budget were not all that might have been desired, because the Government lacked authority to reduce the salaries of employees and to introduce economies in certain branches of public expenditure, such as the administration of justice. Moreover, several measures proposed by the committee for reduction of expenditure were ineffective, as they required the express authorization of Congress to make them operative. These circumstances, in addition to the fact that the decline in revenues during the first half of the year exceeded even the most cautious calculations, continue to aggravate the fiscal situation.

¹ Taken with some textual revision from the English translation published by the bank. In addition, the report contains sections dealing with the recent elections, recommendations for economic improvement and for education, personnel, and operations of the bank in detail.

Post-election improvement.—The result of the election, the comprehensive program of the President-elect, and his repeated promises to establish a Government of a genuinely national character with the assistance of all well-meaning citizens, contributed greatly to relieve the misgivings of the people and to reestablish confidence. Immediately after the election a marked decline in the demand for drafts on foreign centers was noticeable. Later, during May and June, a considerable increase took place in the metallic reserves of the Bank of the Republic, indicating that the funds which many apprehensive persons had converted into gold during the previous period, and had hoarded or sent abroad, were returning to circulation. A sharp decrease in imports into the country also contributed to this reaction. During the first four months of the year imports amounted to only 19,000,000 pesos (\$18,493,000), so that, even allowing for a considerable increase from now on, the total for the year will probably not exceed 70,000,000 pesos (\$68,131,000). In this case the adverse commercial balance which we have experienced in recent times will be changed to a balance in our favor.

Successful functioning of the central bank.—Two facts should be emphasized in reviewing the incidents of the year as having an important influence on the nation's credit. The first is the satisfactory manner in which the central bank, during the grave crisis through which the country has passed, was enabled to fulfill its essential functions. As the result of a conservative, wise, and far-seeing policy pursued during times of prosperity, the Bank of the Republic was able at all times to effect the redemption of its notes in gold and to meet the demand for bills of exchange, in spite of the fact that its metallic reserves declined in 18 months by 30,000,000 pesos (\$29,199,000), or about 50 per cent. This was a perfectly normal development, because it is just to meet such emergencies that reserves are built up in prosperous periods. The bank was at all times in a position to assist affiliated institutions in case a panic should arise; this, indeed, appeared quite likely on several occasions in view of the lack of confidence which existed among the public. The course adopted by the bank kept the foreign exchanges stable throughout the crisis—a result that not all the nations in America were able to achieve, since Argentina, one of the richest and most prosperous, was obliged to close its conversion office.

Foreign obligations fully met.—The second fact which should be emphasized is that, even

at times of greatest fiscal difficulty, our public bodies have fully met their foreign-credit obligations—not only the national Government, but also the departmental governments and municipalities. In this respect they have followed the custom established by this country during the World War, when Colombia continued to fulfill its international obligations with unfailing punctuality, although nearly all other nations found themselves obliged to delay their payments in varying degrees.

The period reviewed briefly thus proved a severe test for Colombia; at the same time it furnished valuable experience which will help the country to proceed in future with more caution, and therefore with greater ability. It is possible now to perceive clearly what errors were committed and what are the real necessities of the country.

Measures for rehabilitation of foreign credit.—The rehabilitation of the nation's foreign credit is one of the most important and most urgent needs. To achieve this end strict compliance with our contractual obligations is obviously not sufficient; sincere and serious consideration must be given to matters involving revenue and expenditure, and strict technical control, combined with judicious handling, must be exercised over the use of funds obtained through loans [and allocated to public works].

In order to secure proper consideration of expenditure it will be necessary to embody in the constitution the provisions of law No. 34 of the year 1923; withdraw from members of Parliament the right to propose expenditure or financial assistance of any nature, leaving such proposals exclusively in the hands of the Minister of Finance; create the post of Chief of the Budget (Director del Presupuesto), investing this official with fullest powers, including the authority to visit and inspect the ministries and their dependent offices. The Chief of the Budget would be appointed by the President of the Republic, would act exclusively on his instructions, and would make to him final recommendations in all matters concerning the estimates of expenditure of the different ministerial offices. These measures may appear to be excessively severe, but it is necessary to bear in mind the chaotic state of our finances resulting from lavish parliamentary decrees of assistance and expenditure, which have produced continual deficits in recent fiscal years in spite of the steady and considerable increase in public revenues.

Regarding the necessity of proper control over funds allocated to public works, no argument is needed. The public realizes that they

have been mismanaged; that purely local interests have often determined the undertaking and completion of these works. Undoubtedly, any prospective lenders will first wish to know for what purpose and in what manner their funds are to be used.

Another factor which would aid greatly in the reestablishment and maintenance of external credit is the creation of fiscal agencies in foreign countries. These should be first-class firms of high financial standing in their respective countries, who would make the interests of Colombia their own, and would use their influence to create a favorable impression regarding this country and to advise and support it in all its credit operations. Many nations, indeed, owe their high credit standing to the wise choice of a competent fiscal agency of high standing.

In connection with external loans there is a point which should be carefully considered—namely, that the bank of issue should be consulted when such arrangements are being made, whether the loans are floated for public bodies or private credit institutions. The annual report of the bank for 1927, after calling attention to the risks involved in such operations, made the following recommendation:

It appears reasonable, in connection with the raising of loans, that the Bank of the Republic should be consulted and its advice followed in regard to the opportuneness, convenience, and conditions of each negotiation, as it must be remembered that the bank is entrusted with the control of the monetary circulation and the stability of the foreign exchange, on which external loans may exert a decisive influence.

Operations with the National Government.—The difficult fiscal situation of recent months has led the Government on frequent occasions to apply to the bank for discount of treasury bills in order to meet its most immediate obligations. The bank has always considered such requests to the full extent permitted by law, and in certain operations has made special concessions to the Government in the rate of interest. Desiring to render all possible assistance in the present difficult times, the bank went so far as to sell, at a discount, practically its total holding of bonds of the public debt, which had previously been acquired for investment. Thus, of its total holdings of 442,800 pesos (\$430,980) of bonds of the Colombian internal debt, the bank had in its possession on June 30 last only 42,800 pesos (\$41,660). This action enabled the bank to expand the scope of its operations with the Government to the extent of these bond sales. For the sake of the national welfare, the bank

unhesitatingly accepted the loss involved in the operation.

Credit policy.—The credit policy of the bank during the period covered by this report was governed by many factors, chief among which were the movements of gold to and from the bank and the fluctuating volume of the bank's credit operations. Credit policy was reflected especially in changes of discount rates.

For reasons stated in the previous report, the bank raised the discount rate in March, 1929, to 8 per cent after it had stood at 7 per cent for several years. The principal reason for the advance was the continued fall in the institution's gold reserves. In July, 1929, however, when the bank's credit operations had declined to 11,500,000 pesos (\$11,193,000), and reserves once more exceeded 100 per cent in relation to demand liabilities, the discount rate was restored to 7 per cent. Unfortunately, this rate could not long be maintained, inasmuch as in August the general situation again became acute, causing an increase in discounts and a corresponding decrease in the gold reserves. Another occurrence about this time also affected the situation adversely—namely, the sudden and unexpected action of the Federal Reserve Bank of New York in raising its discount rate to 6 per cent, a level which had not been reached by that institution since the crisis of 1921. This measure, by giving still further cause for uncertainty and apprehension in addition to the factors already affecting the commerce of this country, accentuated and aggravated the depression.

Under these circumstances prudence and good banking technique justified the advance of the discount rate to 8 per cent on October 9 and the further advance to 9 per cent on November 19. On both occasions the rate for discount of obligations guaranteed by agrarian lien, produce, or livestock was fixed at 1 per cent lower than the discount rate in order to assist agricultural production even under the prevailing unfavorable conditions.

These high rates—which were, however, not so high as those in force during the first year of the bank's establishment—were maintained until May, 1930, when, in view of the improvement in volume and ratio of the metallic reserves as well as of the marked decline of discount rates in the world's monetary centers, the discount rate of the Bank of the Republic was reduced to 8 per cent and the rate for operations guaranteed by agricultural produce or livestock to 7 per cent.

Since this reduction several suggestions have been made to the bank by the press and by

important bodies for still further reduction in the interest rate. Under existing economic and financial conditions in this country such a step appears inadvisable. It is sincerely to be hoped, however, that a favorable change may shortly take place in these conditions and justify such reduction, which would be of great benefit to the general situation.

The organic law of the Bank of the Republic, following the accepted principles of banking technique, prohibits the bank from granting discounts if the proceeds are intended for speculative purposes or for permanent investment. This is not a condemnation of such operations, but merely a recognition of the fact that such paper is unsuitable for inclusion in the portfolio of a bank of issue, which should at all times maintain a liquid position and use its resources exclusively to assist industry and commerce. The Bank of the Republic has always endeavored to comply faithfully with this provision, and has accordingly made every effort to find out for what purpose the proceeds of discounting are intended. This feeling of responsibility is shared to a great extent by all banks of issue, as is indicated by the following extract from the annual report just published by the Federal Reserve Board, Washington, covering the operations of the Federal reserve banks in the United States:

The protection of Federal reserve credit against diversion into channels of speculation constitutes the most difficult and urgent problem confronting the Federal reserve system in its effort to work out a technique of credit control that shall bring to the country such steadiness of credit conditions and such maintenance of economic stability as may be expected to result from competent administration of the resources of the system.

With us the problem presents more serious difficulties than in any other country, as a result of the small volume of strictly commercial operations and the nonexistence of negotiable instruments such as bankers' and trade acceptances.

Credit operations are usually effected in this country by means of promissory notes at 90 days, with two signatures, one of which is usually given as a favor or accommodation. Such procedure gives no indication of the use for which the proceeds of the operation are intended. The bank of issue, therefore, must rely on the statement of the establishment applying for rediscount. These statements are frequently unreliable, inasmuch as private banks are naturally more interested in the security of a discount than in its purpose.

Desiring to correct this situation the Bank of the Republic is trying in every way to improve

its information service. The bank realizes that only by possessing exact and detailed information respecting every firm will it be able to fix with justice the amount of credit which each firm should receive and to know exactly the object for which the proceeds will be used. Unfortunately, in this country the purposes and principles of banking are not generally understood. The Bank of the Republic, accordingly, incurs the deep resentment of firms to whom discounting must be refused because the funds so obtained are intended for uses outside the scope of the bank's legitimate activities; or firms who feel that they should receive larger credits than have been assigned to them.

Operations with member banks.—Owing to the crisis, the deposits of private banks with the Bank of the Republic declined in proportion to the reduced deposits which the private banks received from the public; this, in turn, lowered the "basic line" fixed by the Bank of the Republic and representing the volume of its operations with member banks. Although this line does not represent a rigid maximum for such operations, and may be passed by applying a slightly higher discount rate it was considered advisable, in order to facilitate commerce, to raise the basic line by 20 per cent during the last few months as a temporary measure. The augmented limit thus fixed for the month of July amounted to nearly 24,000,000 pesos (\$23,359,000), whereas the loans and discounts granted to member banks amounted to slightly more than half this total.

ANNUAL REPORT OF THE BANK OF JAVA

The annual report of the president of the Java Bank for the year ended March 31, 1930, was presented to the general meeting of shareholders on July 9, 1930. Sections of the report dealing with the money market, and with the proposed substitution of nickel for silver coinage are given herewith:¹

The money market.—The Netherland East Indies find themselves in a somewhat different position from that of other countries. Being an agricultural country, they feel the influence of a dearer international money market to only a slight extent. It is true that it proved necessary to raise the rate of discount from 4½ to 5½ per cent on July 22—a rate which even then was below both the English and Federal reserve bank rates, although a country like the Netherland East Indies, poor in capital, might well be expected to have higher rates of interest than those ruling in states which are provided with an international capital market. Rela-

tively speaking, the raising or lowering of the rates of interest in the international markets only slightly affects those ruling in the Netherland East Indies. Supply and demand of foreign exchanges, as well as of guilders, originate from genuine trade and the possibilities of their increase or decrease are confined within narrow limits. The same might be said with regard to the speeding up or slowing down of exports.

The absence of a local money market causes the working capital, employed by the banks here, to remain more or less tied to the country, and outward movements can only develop gradually. A too pronounced difference between the rates of interest in Europe and in this country would in the long run naturally influence the financing of the Netherland East Indian trade, because, whenever rates are lower here, business concerns, which are normally financed in Holland, will seek accommodation locally, while an incentive is created for the banks to transfer funds abroad. The resulting demand for foreign remittances had to be

¹ Taken, with some textual revision, from the English translation published by the bank. In addition the report contains sections dealing with international conditions, the exchanges, trade movements, prices, etc., and with the operations of the bank in detail.

counteracted by a raising of the rates of discount, while a simultaneous shrinkage of loans against stocks and bonds could only be deemed desirable.

In these times the close connection between the Netherland East Indies and Holland causes local economic conditions to be less dependent on the prices of agricultural produce than is the case with other agricultural countries. The plantation industry is for the greater part financed by Dutch capital, and the unfavorable consequences of a general trade recession are mostly felt by Dutch investors.

Proposed substitution of nickel for silver coins.—The monetary system of the Netherland East Indies during 1929 required special attention. The problem of replacing the silver token coins by nickel money, which was being dealt with by a committee appointed by the Minister of Finance and the Colonial Secretary as per decree of April 12-18, 1929, particularly attracted public attention.

During some months of the past financial year a thorough investigation was made by the branches of the Java Bank into the composition of the circulating medium in use. The data thus collected made it possible to form an estimate of the total coinage in circulation in regions which come within the sphere of the Java Bank. On March 31, 1930, the circulation of new coinage of a fineness of 720/1000 amounted to 34,438,757.50 florins (\$13,844,381), in addition to which the Java Bank held an amount of 26,361,242.50 florins (\$10,597,219). These figures may be taken as accurate. As regards old coinage it was estimated with the aid of the above mentioned data, that the maximum still in circulation amounted to 51,250,000 florins (\$20,602,500), to which had to be added 4,562,270.50 florins (\$1,834,033) in the vaults of the Java Bank. The total amount of silver coinage, therefore, was estimated at not higher than 116,612,000 florins (\$46,878,024), of which 30,923,513 florins (\$12,431,252) was held by the Java Bank. It should again be emphasized, however, that available figures can not form a basis for an estimate of the amount of coinage withheld from circulation by temporary hoarding, or of the amount in circulation in those districts which are more or less out of contact with the Java Bank. The above figures, therefore, are given with due reserve.

Should it be decided to replace the silver coinage by nickel coins, it is to be expected that the native population will be unwilling to use this new material for hoarding purposes.

At present ryksdaalders and guilders are preferably used, and the fact that these are of silver has a profound psychological significance.

Although the nickel token coinage would bear the same fiduciary character as the existing silver circulating medium, this has no practical bearing on the question as to how the native population will react on the proposed alteration. Therefore I do not consider the argument that paper money has been successfully put into circulation in the Netherland East Indies, brought to bear by the supporters of nickel coinage against its opponents, either consistent or valid. The latter circulating medium has never occupied the same preponderant position in this country that it holds in Holland, while, since the regulation of the monetary system in the middle of the nineteenth century put an end to the circulation of copper stivers and doubtful paper money, there has never been in the Netherland East Indies any tampering with the significance of silver as the savings medium of the native population. Replacement of silver by nickel coins will necessarily result in a considerable decline in the demand for coinage. It is improbable that this measure would induce the populace to abandon their hoarding methods in favor of a more modern savings system. What may be expected is, that gold will in this instance be resorted to as a substitute for the silver token coins, and with a view to the existing banking policy of the country, I consider the issue of gold standard coins for this purpose undesirable.

A further development which may be expected is the probable increase in the demand for ducats and other foreign gold coins, so that quantities of hoarded silver coins having at the moment an intrinsic value of 25 to 30 per cent of their face value, but practically representing gold for the natives, will be replaced by coinage of an intrinsic value of 100 per cent.

The result will be that the objective of the advocates of nickel coinage, viz, the release for productive purposes of that part of the people's wealth now locked up in unproductive silver, will not be attained.

The conclusion which I would draw from the above is, that the introduction of nickel coinage would on the one hand effect an undesirable change in the savings methods of the population—methods which may indeed be primitive but can not at present be dispensed with; while on the other hand the financial benefits accruing to the State are sure to fall below expectations. Under these circumstances, and merely for the

sake of uncertain financial gains, there can be no justification for replacing a satisfactory monetary system by a new one, the reaction of which on the primitive social conditions prevailing can not be foreseen.

* Revised.

NOTE.—All of the indexes shown, with two or three exceptions, are compiled by official agencies in the countries to which they relate, as indicated specifically in the BULLETIN for March (p. 124), where references are also given to sources in which current figures of the index numbers may be found.

The base periods are as follows: *United States*—1926; *Australia*—July, 1914; *Austria*—January–July, 1914; *Belgium*—April, 1914; *Canada*—1926; *China*—February, 1913; *Czechoslovakia*—July, 1914; *Denmark*—1913; *Dutch East Indies*—1913; *Egypt*—January 1, 1913–July 31, 1914; *England*—1913; *Finland*—1926; *France*—1913; *Germany*—1913; *Hungary*—1913; *India*—July, 1914; *Italy*—1913; *Japan*—October, 1900; *Netherlands*—1913; *New Zealand*—1909–1913; *Norway*—December 31, 1913–June 30, 1914; *Peru*—1913; *Poland*—1927; *Russia*—1913; *South Africa*—1910; *Spain*—1913; *Sweden*—1913; *Switzerland*—July, 1914.

Annual indexes for the years 1925–1929 and in certain cases for 1913 and 1914 were given in the BULLETIN for April (p. 256).

¹ The index for other commodities, recently published by the Bureau of Labor Statistics, includes the prices of articles in the all-commodities index with the exception of those for farm products and foods; the nonagricultural index omits merely farm products.

* Revised.

NOTE.—Annual indexes for the groups shown in the table are given for the years 1913 and 1925-1929 in the BULLETIN for April (p. 257). Original sources for these indexes are: *United States*—Wholesale Prices of Commodities, Bureau of Labor Statistics, Department of Labor; *England*—Board of Trade Journal and Commercial Gazette, Board of Trade; *France*—Bulletin de la Statistique Générale de la France, Supplément Mensuel, Statistique Générale de la France; and *Germany*—Wirtschaft und Statistik, Statistisches Reichsamt.

DETAILED FEDERAL RESERVE STATISTICS, ETC.

FEDERAL RESERVE BANKS—RESOURCES AND LIABILITIES IN DETAIL AND FEDERAL RESERVE NOTE STATEMENT

[In thousands of dollars]

	1930		1929
	Nov. 30	Oct. 31	Nov. 30
RESOURCES			
Gold with Federal reserve agents.....	1,592,356	1,580,615	1,639,265
Gold redemption fund with United States Treasury.....	35,334	34,755	76,287
Gold held exclusively against Federal reserve notes.....	1,627,690	1,615,370	1,715,552
Gold settlement fund with Federal Reserve Board.....	472,069	514,463	577,816
Gold and gold certificates held by bank.....	881,169	874,093	654,891
Total gold reserves.....	2,980,868	3,003,926	2,948,259
Reserves other than gold.....	133,887	144,734	142,065
Total reserves.....	3,114,755	3,148,660	3,090,324
Nonreserve cash.....	54,302	60,633	74,423
Bills discounted ¹	274,596	207,101	1,030,442
Bills bought:			
Outright ²	166,863	159,631	244,703
Under resale agreement.....	7,710	3,228	11,372
Total bills bought.....	174,573	162,859	256,075
United States securities:			
Bought outright.....	599,286	601,559	322,155
Under resale agreement.....			3,910
Total United States securities.....	599,286	601,559	326,065
Other reserve bank credit:			
Other securities.....	6,358	6,322	18,698
Due from foreign banks.....	707	702	724
Reserve bank float ³	23,080	19,238	44,897
Total reserve bank credit outstanding.....	1,078,600	997,781	1,676,901
Uncollected items not included in float.....	546,756	496,899	639,810
Federal reserve notes of other reserve banks.....	13,571	16,418	26,988
Bank premises.....	59,702	59,632	59,157
All other resources.....	21,420	14,048	11,837
Total resources.....	4,889,106	4,794,071	5,579,440
LIABILITIES			
Federal reserve notes:			
Held by other Federal reserve banks.....	13,571	16,418	26,988
Outside Federal reserve banks.....	1,441,684	1,351,337	1,922,618
Total notes in circulation.....	1,455,255	1,367,755	1,949,606
Deposits:			
Member bank—reserve account.....	2,373,260	2,418,005	2,458,021
Government.....	23,347	18,181	38,871
Foreign bank.....	5,552	5,334	5,278
Other deposits.....	19,520	23,331	20,233
Total deposits.....	2,421,679	2,464,851	2,522,403
Deferred availability items.....	546,756	496,899	639,810
Capital paid in.....	170,467	170,426	168,369
Surplus.....	276,936	276,936	254,398
All other liabilities.....	18,013	17,204	44,854
Total liabilities.....	4,889,106	4,794,071	5,579,440
Contingent liability on bills purchased for foreign correspondents.....	428,842	433,137	508,792
FEDERAL RESERVE NOTE STATEMENT			
Federal reserve notes:			
Issued to Federal reserve banks by Federal reserve agents.....	1,851,749	1,783,356	2,446,282
Held by Federal reserve banks ⁴	396,494	415,601	496,676
In actual circulation.....	1,455,255	1,367,755	1,949,606
Collateral held by agents as security for notes issued to banks:			
Gold.....	1,592,356	1,580,615	1,639,265
Eligible paper.....	400,051	326,557	1,257,050
Total collateral.....	1,992,407	1,907,172	2,896,315

¹ Includes bills discounted for intermediate credit banks as follows: Latest month, \$1,111,000; month ago, \$117,000; year ago, \$2,332,000; and note secured by adjusted service certificates discounted for nonmember banks as follows: Latest month, \$42,000; month ago, \$44,000; year ago, \$50,000.

² Includes bills payable in foreign currencies as follows: Latest month, \$31,587,000; month ago, \$21,583,000; year ago, \$1,027,000.

³ Uncollected items in excess of deferred availability items.

⁴ Excludes "F. R. notes of other F. R. Banks," which are consequently included in "actual circulation".

¹ Branches established prior to prohibitory legislation. Other States which have prohibited establishment of branches (no branches in operation) include Colorado, Connecticut, Idaho, Illinois, Iowa, Kansas, Missouri, Montana, Nevada, New Mexico, Texas, Utah, West Virginia.

² The branch shown for New Hampshire was authorized by the Comptroller of the Currency in 1930 upon the submission of satisfactory evidence that it had been in operation for 25 years prior to the enactment of the McFadden Act. Other States which have enacted no legislation respecting branch banking are North Dakota, Oklahoma, South Dakota, and Wyoming. No branches are in operation in these States.

TABLE 4.—SUMMARY OF BRANCH BANKING DEVELOPMENTS: 1924-1930

Class of bank or branch	June 30, 1930	Dec. 31, 1929	June 30, 1929	June 30, 1928	June 30, 1924
Number of banks:					
Total.....	23,852	24,630	25,115	25,950	28,996
Operating branches.....	817	822	818	835	714
National banks.....	165	166	164	169	108
State-bank members.....	169	180	190	186	191
Nonmember commercial banks.....	414	407	398	415	387
Mutual savings banks.....	66	65	62	58	28
Private banks.....	3	4	4	7	(¹)
Number operating branches:					
Only in home city.....	512	517	518	526	391
Only outside home city.....	256	257	252	262	283
Both in and outside home city.....	49	48	48	47	40
Number of parent banks in cities with population of:					
100,000 or more.....	344	351	359	372	284
50,000 to 100,000.....	78	81	84	81	108
25,000 to 50,000.....	80	75	70	66	108
Less than 25,000.....	315	315	305	316	289
Not classified.....					233
Number operating:					
1 branch.....	443	448	443	469	376
2 branches.....	144	150	153	150	129
3-5 branches.....	132	124	130	126	176
6-10 branches.....	38	41	37	35	176
11-30 branches.....	41	41	38	41	176
Over 30 branches.....	19	18	17	14	176
Not classified.....					233
Number of branches:					
Total.....	3,618	3,547	3,440	3,230	2,293
Of national banks.....	1,041	1,027	993	941	248
Of State-bank members.....	1,308	1,299	1,298	1,220	1,137
Of nonmember commercial banks.....	1,164	1,115	1,046	973	908
Of mutual savings banks.....	101	99	96	86	(¹)
Of private banks.....	4	7	7	10	(¹)
In home city.....	2,470	2,432	2,362	2,214	1,508
Outside home city.....	1,148	1,115	1,078	1,016	785
Outside branches in places with population of:					
Less than 2,500.....	634	612	591	572	(²)
2,500 to 5,000.....	144	136	133	128	(²)
5,000 to 10,000.....	92	86	84	79	(²)
10,000 or over.....	278	281	270	237	(²)
Number established:					
De novo as branches.....	2,410	2,379	2,329	2,214	(²)
By conversion of banks.....	1,060	1,017	958	853	(²)
Not reported.....	148	151	153	163	(²)

¹ Not separately tabulated; included with "nonmember commercial banks."

² Mutual savings and private banks.

³ Not available.
