## FEDERAL RESERVE BOARD.

### Ex officio members:

A. W. MELLON,  
*Secretary of the Treasury, Chairman.*

HENRY M. DAWES,  
*Comptroller of the Currency.*

D. R. CRISSINGER, *Governor.*  
EDMUND PLATT, *Vice Governor.*  
ADOLPH C. MILLER.  
CHARLES S. HAMLIN.  
GEORGE R. JAMES.  
EDWARD H. CUNNINGHAM.

WALTER L. EDDY, *Secretary.*

J. C. NOELL, *Assistant Secretary.*

W. M. IMLAY, *Fiscal Agent.*

J. F. HERSON,  
*Chief, Division of Examination and Chief Federal  
Reserve Examiner.*

WALTER WYATT, *General Counsel.*  
WALTER W. STEWART,  
*Director, Division of Research and Statistics.*  
M. JACOBSON, *Statistician.*  
E. A. GOLDENWEISER, *Associate Statistician.*  
E. L. SMEAD, *Chief, Division of Bank Operations.*

## FEDERAL ADVISORY COUNCIL.

## SUBSCRIPTION PRICE OF BULLETIN

The FEDERAL RESERVE BULLETIN is the Board's medium of communication with member banks of the Federal Reserve System and is the only official organ or periodical publication of the Board. It contains, in addition to the regular official announcements, the national review of business conditions, detailed analyses of business conditions, research studies, reviews of foreign banking, and complete statistics showing the condition of Federal Reserve Banks and member banks. The BULLETIN will be sent to all member banks without charge. To others the subscription price, which covers the cost of paper and printing, is \$2. Single copies will be sold at 20 cents.

# FEDERAL RESERVE BULLETIN

VOL. 10

FEBRUARY, 1924.

No. 2

## REVIEW OF THE MONTH.

During the opening weeks of 1924, as in preceding years, the banking situation has reflected the financial movements usual at the turn of the year. The return flow of currency following the heavy holiday demand, the release of funds through first-of-year dividend and interest payments, the seasonal flow of funds to the financial centers, and the easing of money rates have been the important factors affecting the position of the banks and the money market during January. In recent weeks the inflow of currency from circulation has been unusually rapid, with the result that increases in reserves and decreases in volume of notes and of discounts at the Federal reserve banks were exceptionally large, even for this season of the year. As a consequence, the reserves of the Federal reserve banks rose to the highest figure on record, and notes in circulation and total volume of Federal reserve bank credit fell to the lowest point in more than five years. The return of currency increased demand deposits at member banks and furnished funds for the repayments of borrowings at the reserve banks. These currency and credit movements affect to a greater extent the condition statements of reserve banks than of member banks, since fluctuations in the demand for currency are the chief influence affecting changes in the volume of reserve bank credit.

The seasonal decrease in currency requirements after the opening of the year is due principally to the decline in the volume of retail sales from the peak reached during the Christmas trade and to the seasonal reduction in pay rolls during January. In many retail

Banking at  
turn of year.

Return flow  
of currency.

lines sales ordinarily average about 50 per cent lower in January than in December, reflecting both the decline in the actual volume of retail buying after Christmas and the price reductions in order to reduce stocks on hand. This smaller volume of sales results in reduced currency requirements for purchases and in less till money carried by merchants. Pay rolls also are usually smaller in January than in December, a seasonal decline following the slight upward trend during the fall months, with the result that less currency is withdrawn from banks during January for pay roll purposes. During the last three months of 1923 the total money in circulation increased by over \$100,000,000, and, since the volume of currency had been increasing almost continuously for a year and a half, the total circulation on January 1, 1924, was the highest in more than two years. Currency demand during this period was met by the reserve banks both by an increase in Federal reserve notes and by the payment of reserve cash into circulation, so that the total reserves of the Federal reserve banks, as well as the volume of notes, reflected changes in seasonal requirements for currency. Federal reserve notes reached their seasonal peak and reserves a seasonal low immediately following Christmas. The volume of the subsequent return flow of notes and gold into the reserve banks during the four weeks after Christmas is indicated by the fact that during those weeks Federal reserve note circulation decreased by \$291,000,000 and reserves increased by \$134,000,000. This represents an inflow of cash into the reserve system totaling \$425,000,000, with a consequent rise of the reserve ratio from 73.3 per cent on December 26 to 80.4 per cent four weeks later.

This unusually prompt return of currency accounts for the rapid reduction in discounts at the reserve banks, since member banks used the cash deposited with them to retire their borrowings at the reserve banks. The extent of borrowing by member banks at the reserve banks, as has been noted in previous reviews, is chiefly dependent upon changes in currency requirements. Member banks carry in their vaults only the amount of cash deemed necessary to meet current requirements and redeposit any excess amount with the Federal reserve banks. The currency returned by them to the reserve banks is available either to increase their required reserve balances or to reduce their borrowings. The recent growth in their deposits necessitated a corresponding increase in reserve balances, and this is reflected in a growth of deposits at the reserve banks. The larger part of the funds turned in to the reserve banks, however, was available for the repayment of discounts. During the four-week period this repayment, which was being effected at all reserve banks, amounted to \$316,000,000 and absorbed the bulk of the funds released by the decrease in currency requirements. Reduction in discounts carried the total earning assets of the reserve banks below \$1,000,000,000 for the first time since early in 1918.

The extent of the return flow of currency at the turn of the year and its effect on the earning assets of the reserve banks is shown for a series of years in the following table:

#### FEDERAL RESERVE BANKS.

[In millions of dollars.]

	Changes in four weeks at turn of year—				
	1919-20	1920-21	1921-22	1922-23	1923-24
Decrease in Federal reserve note circulation.....	213	290	218	243	291
Increase in total reserves.....	148	64	58	73	134
Decrease in discounts.....	41	249	311	60	316
Decrease in total earning assets...	47	340	327	207	360

<sup>1</sup> Decrease.

The figures show that the recent decrease in Federal reserve note circulation and the inflow

of cash into the reserve banks was greater than for the corresponding season in previous years. The reduction in discounts and in total earning assets was also larger for the four-week period than is usual at the season. In general the table indicates the considerable degree of elasticity in our currency system and the promptness with which changes in the demand for currency, even with the smaller volume of Federal reserve notes now outstanding, are reflected in the position of the reserve banks.

The recent seasonal decrease in the demand for currency, while it has had a considerable effect upon the position of the reserve banks, has had a relatively slight effect on the volume of member bank credit. Loans and investments of member banks in leading cities declined slightly after the first of the year, but were still at a level \$2,000,000,000 above the low point in the spring of 1922 and at approximately the level maintained during the larger part of 1923. In fact, during the last quarter of 1923 there has been a remarkably constant volume of total loans at these banks. This constancy, however, was the resultant of a moderate decline since the middle of October in loans for commercial and agricultural purposes throughout the country and a corresponding increase in loans on securities, particularly by banks in the financial centers. The decrease in the demand for credit in the interior after the crop-moving period resulted in a flow of funds to New York and a growth of bankers' balances at that center. These developments, together with the slackening demand for funds due to the recession in business activity, resulted in an easing of the money market.

The position of the money market during January is the outcome both of the credit

trends during the last quarter of 1923 and the seasonal movements characteristic of the opening weeks of the year. Money rates, after advancing in the spring and early autumn, reached their peak in October, decreased somewhat during the closing months of the year, and eased still further in January. Short-term money rates in the New York market at the turn of the year

1922-23 and 1923-24, and for selected dates during 1923 are shown in the table:

Week ending—	Commer- cial paper.	Certificates of indebted- ness.	Call loan- renewal.
	<i>Per cent.</i>	<i>Per cent.</i>	<i>Per cent.</i>
1922—Dec. 16.....	4.75	3.50	4.10
1923—Jan. 13.....	4.5	3.66	4.35
Apr. 14.....	5.0-5.25	4.16	4.80
Oct. 13.....	5.25-5.55	4.26	4.94
Dec. 15.....	4.75-5.00	3.86	4.85
1924—Jan. 12.....	4.75	3.80	4.50
Jan. 26.....	4.75	3.73	4.00

In commenting on the movement of money rates in the New York market in January the monthly review of the New York Federal Reserve Bank says:

Open market rates for commercial paper continued in January the gradual decline begun in October, and sales of prime paper were chiefly at  $4\frac{3}{4}$  per cent, as compared with  $4\frac{3}{4}$  to 5 per cent in December. New York City banks were limited buyers, but demand in the interior was sufficient to offset a moderate seasonal increase in the amount of paper offered. The market for short-term Government securities was also stronger, due both to an increased demand and to a marked scarcity in the floating supply of these issues. Prices of all maturities tended upward and by January 18 showed advances which, in the case of the issues maturing in from four to six months, reduced the yield from slightly under 4 per cent to  $3\frac{3}{4}$  per cent, the lowest quotation since June. In the bill market a broader demand led dealers on January 14 to lower their offering rates on 60 to 90-day maturities from  $4\frac{1}{8}$  to 4 per cent, but the rate was increased to  $4\frac{1}{8}$  again on the following day, as money conditions became somewhat firmer and sales were curtailed at the lower rate. Stock market time money was easier and the prevailing rate declined from 5 to  $4\frac{3}{4}$  per cent. Stock market call money, after the first few days of the month was mainly  $4\frac{1}{4}$  to  $4\frac{1}{2}$  per cent, but on two days renewals declined to 4 per cent for the first time since September, and the closing rate on January 11 touched  $3\frac{3}{4}$  per cent.

Money rates at the middle of January, while slightly higher than a year ago, showed a decline since December similar to the reduction in January of the previous year. Prior to the establishment of the Federal reserve system these seasonal fluctuations in money rates were much more pronounced. Both in the spring and the autumn money rates advanced in re-

sponse to seasonal demands for credit and currency, while under the present banking organization these seasonal changes are reflected largely in the volume of borrowing at the reserve banks rather than in money rates. The credit required to finance the crop movement and fall trade is obtained by member banks largely through discounting at the reserve banks, and with the passing of this demand the funds released do not remain in the market to the same extent as formerly but are absorbed by the repayment of discounts. Thus since the opening of the year seasonal reduction in credit and currency demands has been reflected primarily in a rapid liquidation of borrowings from the reserve banks and only to a limited extent in the decline of money rates.

Easier conditions in the short-term money market during the early weeks of 1924 have been accompanied by more active trading and advancing prices in the bond market. The large volume of interest and dividend payments made during January resulted in an active demand for investments, and while the flotation of new securities has been smaller than during the corresponding period of 1923, the new issues placed upon the market have been readily absorbed.

Domestic security issues in 1923 were larger than in 1922, particularly the issues of industrial

corporations, whose capital requirements as well as current

credit needs were larger during 1923, owing to the growth in industrial activity. Total flotations, domestic and foreign, were, however, about the same as during the preceding year, owing to a relatively large decrease in the flotation of foreign loans in the New York market. A compilation made by the Commercial and Financial Chronicle of the security issues for 1922 and 1923 shows the following totals:

[In millions of dollars.]			
	1922	1923	Increase (+) or de- crease (-).
Total.....	4,314	4,303	-11
Foreign issues.....	643	245	-398
Domestic issues, total.....	3,671	4,058	+387
Corporate issues.....	2,336	2,731	+395

Foreign loans floated both in the New York and London markets were on a much reduced scale compared with 1922, though the decline in London was not as marked as in New York. A summary of the principal foreign securities offered for public subscription in the United States during 1923 and a fuller discussion of recent developments in the London money and capital market appear elsewhere in this BULLETIN.

The decreased demand for credit for industrial and agricultural purposes during the last

#### Business and credit trend.

quarter of 1923, as reflected in the downward movement of commercial loans and money rates, followed upon a recession in productive activity and wholesale prices which had begun six months earlier. On the recession in 1923 changes in the volume of production and of credit followed the same sequence as on the advance in 1922. This sequence is in accordance with experience of recent years. The relative movement during 1922 and 1923 of

Index of production in 22 basic industries; wholesale price index of Bureau of Labor Statistics, and "all other" loans of member banks in leading cities. All expressed as percentages of average for 1922-1923.

production of basic commodities, the general price level, and the volume of commercial loans, all expressed as percentages of the average for the two-year period, are shown in the chart. The increase in the volume of production in basic industries, which began in 1921, continued at a rapid rate in the year

1922, preceding the advance in prices and the growth of credit, and reached its peak in May, 1923. Prices as well as production advanced during 1922, but at a much slower rate, and the turn in the price movement also came in the spring. The volume of borrowing for commercial purposes, as indicated by the so-called "other" loans made by member banks in leading cities, did not begin to increase until after a year of increasing production and a half year of rising prices, but continued to grow for six months after prices and industrial activity began their decline. From the low point in 1922 to the peak in last October, the volume of loans for commercial purposes increased by about \$1,000,000,000, and though there was a decline during the last quarter of 1923, these loans were still about half a billion above the level of a year ago.

The decline in the demand for credit during the closing months of 1923 was at a time when production and prices were at a lower level than earlier in the year, though prices were more stable than during any other three-month period in 1923. The volume of employment during the last quarter also remained relatively constant, buying power was sustained, and the volume of retail trade was larger than for any other quarter of the year and above the 1922 level. Movements in production and trade usually precede changes in the demand for credit; they are the basic factors upon which depends the volume of borrowing for commercial purposes. Recent changes in the condition of the Federal reserve banks are chiefly the consequence of seasonal changes in the demand for currency, and are, therefore, of little moment in undertaking to estimate the future course of the money market. The factors which are important for this purpose are the future course of trade and industry.

#### NOTES.

##### Change in bank statement.

The weekly statement of condition of Federal reserve banks, beginning with January 9, 1924, shows some changes in form. These changes are described on page 126.

## SUMMARY OF BUSINESS CONDITIONS IN THE UNITED STATES.

Production of basic commodities showed further decline in December and wholesale prices receded slightly. Christmas trade was somewhat larger than a year ago. Changes in the banking situation in January reflected chiefly an unusually large return flow of currency after the holiday season.

**Production.**—The index of production in basic industries declined 5 per cent in December to the low point of the year. The decrease for the month reflected principally a large reduction in consumption of cotton, but also reduced operations in the woolen, petroleum, sugar, and lumber industries. Production of pig iron and anthracite coal increased. The Federal Reserve Board's index of factory employment decreased 1 per cent and was 4 per cent lower than in the spring. The largest decreases were at plants manufacturing food products and railroad equipment. Building contract awards in December were smaller than in November, but almost 25 per cent larger than a year ago.

**Trade.**—Railroad shipments continued to decrease during December and were slightly less than in December, 1922. Loadings of coal and grain were smaller than a year ago, while loadings of miscellaneous merchandise and livestock were in larger volume. The volume of wholesale trade showed more than the usual seasonal decrease and was at about the same level as a year ago. Sales of meat, hardware, and drugs were larger than in December, 1922, while sales of dry goods and shoes were smaller. Retail trade, though larger in December, 1923, than in any other month on record, did not show as large an increase over November as is usual at the Christmas season.

**Prices.**—Wholesale prices, according to the index of the Bureau of Labor Statistics, decreased less than 1 per cent during December. The chief reductions occurred in prices of fuel and building materials, while prices of clothing and metals increased, and prices of farm products remained unchanged. During the first two weeks of January prices of corn, wheat, pig iron, petroleum, and lumber advanced, while quotations on cotton, sugar, and copper were lower.

Index of 22 basic commodities corrected for seasonal variation. (1919=100.) Latest figure, December, 111.

81733—24—2

Index of U. S. Bureau of Labor Statistics. (1913=100, base adopted by Bureau.) Latest figure, December, 151.

Weekly figures for member banks in 101 leading cities. Latest figure, Jan. 9.

Weekly figures for 12 Federal reserve banks. Latest figure, Jan. 16.

**Bank credit.**—The volume of credit extended by the Federal reserve banks showed the usual sharp increase during the latter part of December in response to holiday requirements for credit and currency and financial settlements falling due on the 1st of January. With the passing of the seasonal demands there was an unusually rapid return flow of currency to the reserve banks, reflected both in an increase of reserves and a decrease of Federal reserve note circulation. Member banks used the currency returned from circulation to reduce their borrowings, with the consequence that the earning assets of the Federal reserve banks declined by \$360,000,000 during the four weeks following Christmas, or approximately \$150,000,000 more than during the corresponding period of 1923. At the middle of January the volume of reserve bank credit outstanding was below \$1,000,000,000 for the first time since early in 1918.

Loans made largely for commercial purposes by member banks in principal cities declined between December 12 and January 16 to a point \$264,000,000 lower than at the peak in October and to about the level of July, 1923. This decrease in loans, which was general throughout the country, was accompanied by a movement of funds to the financial centers and an increase in loans on securities, principally in New York.

Easier money conditions in January were reflected in a further slight decline in the rate on prime commercial paper to  $4\frac{3}{4}$  per cent, compared with  $4\frac{3}{4}$  to 5 per cent in December, and in increased activity in the investment markets.

## RULINGS OF THE FEDERAL RESERVE BOARD.

### Eligibility of notes of nonmember banks for rediscount when secured by Government bonds.

The question was recently raised whether the board's ruling published on page 891 of the August, 1923, BULLETIN, which withdrew from member banks the general permission to rediscount nonmember bank paper, has the effect of repealing the ruling published on page 743 of the August, 1918, BULLETIN, which held that Federal reserve banks may discount the notes of nonmember banks, when secured by Government obligations and indorsed by a member bank, if the proceeds of the notes are used to carry or trade in Government obligations.

The ruling on page 891 of the August, 1923, BULLETIN purported to rescind all rulings relating to the rediscount of nonmember bank paper, but did not specifically mention the ruling on page 743 of the August, 1918, BULLETIN. This was due to the fact that the ruling in the August, 1918, BULLETIN considered only the question whether notes of nonmember banks secured by Government bonds would be eligible for rediscount under the provisions of section 13, and did not consider the provision of section 19 which prohibits member banks from acting as the media or agents of nonmember banks in obtaining rediscounts from a Federal reserve bank without the board's consent. Although the ruling in the August, 1923, BULLETIN did not specifically refer to the August, 1918, ruling, it did state that all previous rulings granting member banks the privilege of acting as the media or agents of nonmember banks in rediscounting paper were rescinded, and further expressly stated that "except with the board's permission, no Federal reserve bank shall discount any paper acquired by a member bank from a nonmember bank or bearing the signature or indorsement of a nonmember bank." Notes of nonmember banks secured by Government obligations necessarily bear the signature of such nonmember banks and, therefore, come within this express prohibition against the rediscount of nonmember bank paper.

The board ruled, therefore, that the ruling on page 743 of the August, 1918, BULLETIN must be deemed to be rescinded by the ruling published on page 891 of the August, 1923, BULLETIN, and that, consequently, member banks may not rediscount with Federal reserve banks the paper of nonmember banks, even

though such paper be secured by Government bonds, except with the board's permission.

### Board's resolution on branch banking.

The Federal Reserve Board on January 7, 1924, passed the following resolution on branch banking. The November resolution referred to was published in the BULLETIN for December, 1923:

Whereas, the board, in resolutions adopted November 7, 1923, established certain principles, or policies, regarding the board's attitude toward the extending of branch banks: Be it

*Resolved*, That the banks making these applications, as well as others interested in the question of branch banks, be informed that under regulations heretofore established blanket authority will not be granted to establish branches. Each application must be presented to the board separately and in regular form and manner, subject to the approval of the State banking authorities and a recommendation of the Federal reserve bank of the district; and be it further

*Resolved*, That any application to establish a branch or branches in definitely named places or locations in territory noncontiguous to the city of the home office, which is made in good faith and filed prior to February 1, 1924, may be considered by the board, as to detailed arrangements, after February 1, 1924. Be it further

*Resolved*, That the Federal Reserve Board reserves to itself the right to pass upon each application on its merits and to act accordingly.

### New National Bank Charters.

The Comptroller of the Currency reports the following increases and reductions in the number and capital of national banks during the period from December 22, 1923, to January 25, 1924, inclusive:

	Num- ber of banks.	Amount of capital.
New charters issued.....	11	\$2,275,000
Restored to solvency.....	0	0
Increase of capital approved <sup>1</sup> .....	35	4,575,000
Aggregate of new charters, banks restored to solvency, and banks increasing capital....	46	6,850,000
Liquidations.....	22	14,740,000
Reducing capital <sup>2</sup> .....	6	515,000
Total liquidations and reductions of capital..	28	15,255,000
Consolidations of national banks under act of Nov. 7, 1918.....	2	500,000
Aggregate increased capital for period.....		6,850,000
Reduction of capital owing to liquidations, etc.....		15,255,000
Net decrease.....		8,405,000

<sup>1</sup> Includes one increase in capital of \$15,000 incident to a consolidation under act of Nov. 7, 1918.

<sup>2</sup> Includes one reduction in capital of \$100,000 incident to a consolidation under act of Nov. 7, 1918.

### Acceptances to 100 per cent.

Since the issuance of the January BULLETIN the following member institutions have been authorized by the Federal Reserve Board to accept drafts and bills of exchange up to 100 per cent of their capital and surplus:

Atlantic Exchange Bank & Trust Co., Baltimore, Md.; Industrial Trust Co., Providence, R. I.; Wells Fargo Bank & Union Trust Co., San Francisco, Calif.

### Fiduciary Powers Granted to National Banks.

During the month of January the Federal Reserve Board approved applications of the national banks listed below for permission to exercise one or more of the fiduciary powers named in section 11 (k) of the Federal reserve act as amended, as follows: (1) trustee; (2) executor; (3) administrator; (4) registrar of stocks and bonds; (5) guardian of estates; (6) assignee; (7) receiver; (8) committee of estates of lunatics; (9) in any other fiduciary capacity in which State banks, trust companies, or other corporations which come into competition with national banks are permitted to act under the laws of the State in which the national bank is located.

Place.	District No.	Name of bank.	Powers granted.
Willimantic, Conn.....	1	Windham National Bank.	1 to 9.
Metuchen, N. J.....	2	Metuchen National Bank.	1 to 9.
Warrensburg, N. Y.....	2	Emerson National Bank.	1 to 9.
Delmar, Del.....	3	First National Bank.	1 to 8.
Toms River, N. J.....	3	First National Bank.	1 to 9.
Norristown, Pa.....	3	Peoples National Bank.	1 to 9.
Warren, Ohio.....	4	Second National Bank.	1 to 7 and 9.
Norton, Va.....	5	First National Bank.	1 to 9.
Rushville, Ind.....	7	American National Bank.	1 to 9.
Bentonville, Ark.....	8	First National Bank.	1 to 9.
Fort Smith, Ark.....	8	City National Bank.	1 to 9.
Fergus Falls, Minn.....	9	First National Bank.	1 to 9.
Galveston, Tex.....	11	United States National Bank.	1 to 9.
Houston, Tex.....	11	South Texas Commercial National Bank.	1 to 9.

### State Bank and Trust Companies.

The following list shows the State banks and trust companies which were admitted to membership in the Federal reserve system during the month ending January 28, 1924, on which date 1,618 State institutions were members of the system:

#### ADMISSIONS.

	Capital.	Surplus.	Total resources.
<i>District No. 4.</i>			
Citizens Banking & Trust Co., Conneaut, Ohio.....	\$125,000	\$32,750	\$1,261,754
<i>District No. 5.</i>			
Atlantic Exchange Bank & Trust Co., Baltimore, Md.....	1,000,000	1,000,000	10,677,070
<i>District No. 7.</i>			
Citizens Savings Bank, Mt. Clemens, Mich.....	150,000	50,000	2,995,331
<i>District No. 8.</i>			
Crittenden County Bank, Marion, Ark. (succeeded Crittenden County Bank & Trust Co., a member).....	200,000		1,725,164
<i>District No. 12.</i>			
Wells Fargo Bank & Union Trust Co., San Francisco, Calif.....	9,000,000	5,000,000	131,823,000

### CHANGES.

	Capital.	Surplus.	Total resources.
<i>District No. 2.</i>			
Buffalo Trust Co., Buffalo, N. Y., a member, has absorbed the Merchants National Bank, Buffalo, N. Y.	\$400,000	\$120,160	\$3,421,800
<i>District No. 6.</i>			
Bank of Camilla, Camilla, Ga. (closed)	50,000	50,000	645,212
Bank of Hattiesburg & Trust Co., Hattiesburg, Miss. (converted into national bank).....	100,000	15,000	917,110
The Merchants Bank, Mobile, Ala., a member, has absorbed the Farmers & Merchants Bank, Mobile, Ala., a nonmember.....	100,000	18,820	647,370
<i>District No. 7.</i>			
City State Bank, Ogden, Iowa (voluntary withdrawal).....	50,000	20,000	661,763
Foreman Trust & Savings Bank, Chicago, Ill. (voluntary withdrawal).....	1,000,000	500,000	7,880,702
Iowa Savings Bank, Audubon, Iowa (closed).....	50,000		300,853
American Exchange Bank, Milwaukee, Wis. (converted into national bank).....	1,000,000	200,000	12,419,871
Citizens Savings Bank, Decorah, Iowa (closed).....	50,000	50,000	679,724
Ewart State Bank, Ewart, Mich. (closed).....	50,000		715,330
<i>District No. 8.</i>			
First State Bank, Mount Carmel, Ill. (absorbed by a national bank).....	100,000	19,000	492,854
Bank of Waynesville, Waynesville, Mo. (closed).....	50,000	6,000	544,266
<i>District No. 9.</i>			
American Bank & Trust Co., Missoula, Mont. (closed).....	100,000	25,000	1,464,868
Philipsburg State Bank, Philipsburg, Mont. (closed).....	40,000	20,000	336,245
Conrad Trust & Savings Bank, Helena, Mont. (voluntary liquidation).....	200,000	100,000	1,672,783
Citizens State Bank, Culbertson, Mont. (closed).....	25,000	10,000	306,033
Commercial & Savings Bank, Sioux Falls, S. Dak. (closed).....	200,000	2,000	1,349,078
Farmers State Bank, Rockham, S. Dak. (voluntary withdrawal).....	25,000	10,000	418,343
<i>District No. 10.</i>			
American Bank & Trust Co., Denver, Colo., a member, has absorbed the Union State Bank, Denver, Colo., a nonmember.....	100,000	60,580	848,400
Fort Scott State Bank, Fort Scott, Kans. (voluntary liquidation).....	100,000	50,000	1,385,830
<i>District No. 11.</i>			
Falfurrias State Bank, Falfurrias, Tex. (absorbed by a national bank).....	75,000	1,500	549,707
State Trust & Savings Bank, Albuquerque, N. Mex. (succeeded by a national bank).....	100,000	80,000	1,453,310
Texas Bank & Trust Co., Galveston, Tex. (succeeded by a national bank).....	400,000	600,000	9,703,954
First State bank, Alamogordo, N. Mex. (closed).....	50,000	5,000	627,867
<i>District No. 12.</i>			
Imperial Valley Bank, Brawley, Calif.....	300,000		2,060,200
Surprise Valley Bank, Cedarville, Calif. (merged with a nonmember).....	25,000	50,000	389,370
Union Trust Co., San Francisco, Calif. (merged with Wells-Fargo Nevada National Bank, San Francisco, under the name "Wells-Fargo Bank & Union Trust Co.").....	1,200,000	1,975,000	41,941,784
Albion State Bank, Albion, Wash. (voluntary liquidation).....	25,000	6,000	100,508

<sup>1</sup> Surplus and profits.

*Change of title.*—The Hub Trust Co., Boston, Mass., has changed its title to the Bank of Commerce and Trust Co.

AN INDEX OF THE LABOR MARKET.<sup>1</sup>

[Derived from Employment Office Statistics.]

In the BULLETIN<sup>2</sup> for December, 1923, a new index of employment was presented which combined certain employment statistics in such a manner as to measure the relative changes in the number of wage earners employed in the manufacturing industries of the country. The present article explains how entirely different statistics, representing employment from another angle, were used to make a second index of employment conditions. This index is derived from data collected by public employment offices in six important States and shows the relation between the number of open positions which employers report to the public employment offices and the number of places applied for. In other words, it reflects the trend of the labor market—the relation between the demand for and the supply of workers. The statistics collected by different agencies were so diverse in character that statistical methods somewhat more complicated than those used in the former index were required to develop a representative general index. The results appear to be satisfactory and compare favorably with other measures of industrial fluctuations.

**Source of employment office data.**—Public or semipublic employment offices are now maintained in not less than 170 cities and towns, located in nearly 40 States, for the purpose of finding work for the unemployed and filling vacant jobs. These offices are generally operated by the State, sometimes by the municipalities, and occasionally by the State and municipalities jointly. In a few cases they are conducted by local civic organizations with only a semiofficial status. Most of these offices keep records of their operations and from these records statistics are gathered which reflect labor-market conditions in the different localities.

Although these statistical data vary considerably in scope and manner of presentation, they commonly show: (1) Number of applications for jobs, as indicated by the registrations on the books at a given date, or of registrations recorded during the report period (including or excluding registrations of "repeaters"); (2) number of jobs offered by employers (these also generally include some duplication, and usually refer to operations

during the report period); (3) number of positions to which registrants have been sent by the offices during the period; (4) number of positions for which registrants have been accepted by the employers during the period.

Table I gives an example of the form in which the data for one State are tabulated; namely, the summary for men, presented in the report of the Pennsylvania State Employment Bureau for December, 1923. Similar figures were published by sex for 10 industrial groups and for each city. The ratio given in the last column was not published by the State bureau but was computed to illustrate the first step in compiling the index.

TABLE I.—PENNSYLVANIA STATE EMPLOYMENT BUREAU—MEN.

	Period covered.	Men applying for positions.	Men asked for by employers.	Men sent to positions.	Men receiving positions.	Ratio of jobs to applicants. <sup>1</sup>
December, 1923...	4 weeks...	10,425	5,665	5,675	5,114	54
November, 1923...	4 weeks...	13,345	7,910	8,099	7,327	59
October, 1923....	5 weeks...	17,854	15,136	13,606	12,588	85
September, 1923...	4 weeks...	14,164	12,884	10,508	9,715	91
December, 1922...	5 weeks...	17,013	16,267	13,924	12,870	96
December, 1921...	5 weeks...	34,532	4,609	4,664	4,159	13

<sup>1</sup> Number of positions offered per 100 applicants for positions.

**Variations in original data.**—The statistical data available vary widely from State to State in many respects. Most of the statistics are collected weekly, and monthly figures usually represent the sum of four or five weeks. This practice makes possible comparison between different items for the same month, but makes difficult comparison with other months or with data from other States using different periods. In some offices records are kept more accurately or more completely than in others, and recourse to the bureaus by both employers and employees is more common in some localities, hence the statistics provided by the different offices vary as to comprehensiveness. Furthermore, such a variety of definitions of terminology exists that the various items are frequently not at all comparable as between different States. For example, in certain States an applicant for a position is listed every time he inquires at the office, although he may inquire every day in the week before he is given a position, whereas in other States he is registered only once during the period. There are similar diversities in the recording of employers' applications for workers. Moreover, definitions have from time to time been changed in some States, thereby interrupting the con-

<sup>1</sup> The method used in the preparation of this index was planned, and its construction directed, by Dr. William Berridge, of Brown University, with the assistance of Mr. Woodlief Thomas, of the Division of Research and Statistics, Federal Reserve Board.

<sup>2</sup> Vol. 9, No. 12, pp. 1272-1279, December, 1923.

tinuity of the series. Variation is found also in geographical and occupational representation. Certain States have offices only in the largest cities or industrial communities, whereas in others they are more widely distributed. Generally many lines of work are covered by the operations of the offices—manufacturing, clerical, building, domestic, agricultural, and others; but it is nevertheless true that in many offices the greater part of the applications are confined to a limited number of job classifications. This may be due to the local importance of certain industries in some instances, but not in all. Not infrequently an office has been established with the view of catering almost exclusively to one class of work, such as domestic or professional or commercial service.

Evidently it was difficult with such widely varying data to select a sufficient number of comparable series and to combine them so as to make a representative index for the country. Series which have been collected for too short a period to make empirical tests possible and those in which important shifting in definition or administrative policy was known to have been made during the period covered (1919–1923) were in general not used in the index. Among the agencies reporting statistics, the data appeared to be most reliable in six States, which furthermore from the standpoint of population, industrial diversification, and geographical distribution are fairly representative of the country as a whole. They are Massachusetts, New York, Pennsylvania, Ohio, Illinois, and Wisconsin. The exact series used are as follows:

New York, all occupations,<sup>1</sup> both sexes, from January, 1919.

Pennsylvania, all occupations, males only, from April, 1919.

Ohio, all occupations, males only, from January, 1919.

Massachusetts, all occupations, both sexes, from January, 1919.

Illinois, all occupations, both sexes, from February, 1920.

Wisconsin, all occupations, both sexes, from January, 1919.

**Description of ratio.**—The many series of statistics reported were carefully tested, and the variable finally selected as having the greatest significance was the monthly ratio of the number of jobs offered to the number of persons applying for jobs. This ratio is shown in the last column of Table I. In periods of

increasing industrial activity, employers seek to expand their operations and offer jobs in greater numbers, and hence the numerator of this ratio rises. At such times the denominator falls, because workers either are mostly employed or are able to find positions with ease without need of applying to the employment offices. Conversely, in a time of business depression the scarcity of jobs brings about a decline in the numerator and the plethora of applicants causes a rise in the denominator, with a resulting rapid diminution of the ratio between the two. Thus the value of the ratio tends to vary in either direction through a wider range than either of its terms and is therefore a more sensitive barometer of cyclical changes than either variable taken separately. On the other hand, the ratio is less susceptible to insignificant fluctuations than either of its terms, which fluctuate violently from month to month because of inconsistencies in the original data, such as the varying use of four and five week periods as representing the month. Where

CHART I.

The indexes of labor market and of factory employment generally move together. Both indexes are expressed in terms of standard deviations from 1919–1922 average and are corrected for seasonal variations

these inconsistencies are found alike in numerator and denominator they are eliminated. Finally it tends to lessen the influence of long-time growth, which is likely to affect the numerator and denominator in nearly equal degree.

The process used in securing the general index was not to add for each month the jobs offered in all the selected States, then to add

<sup>1</sup> The series for manufacturing, for trade, and for building and construction were also analyzed separately, but that for all occupations seemed more representative.

the jobs applied for in those States, and to divide the first aggregate by the second. Such summation has the advantage of simplicity, but it would lead to deceptive results. Undue weight would thereby be given to those States in which the policy of establishing employment offices and the practice of resorting to them has proceeded further than in other States. Such a method would likewise overweight those in which the definition of the numerator (jobs offered) is most inclusive, or that of the denominator (jobs applied for) least inclusive. There is still wide diversity among the States in their statistical definitions, despite the strenuous efforts toward standardization made in recent years. Largely as a result of this diversity, the actual ratios of jobs offered to jobs applied for varied considerably among the States. This variation is illustrated in Table II, which shows for certain months the ratios used in the index. It will be noted that the average ratios for the four years 1919-1922 ranged in size from 16 per cent for Massachusetts to 107 per cent for Pennsylvania and Wisconsin. Other columns of the same table show the monthly ratios reduced to relatives, with the average for the four years, 1919 to 1922, as the base or 100 per cent. Although the diversity among the relatives is not so great as among the ratios, it is nevertheless too large to permit direct comparisons between the various States. This is partic-

ularly true as to fluctuations from one time to another, as shown by the degree of change from November, 1922, to November, 1923.

TABLE II.—RATIO BETWEEN JOBS OFFERED AND PERSONS APPLYING FOR JOBS.

[Compared with relatives expressed in terms of 1919-1922 average as 100 per cent.]

	Average ratio, 1919-1922.	November, 1923.		November, 1922.	
		Ratio.	Relative.	Ratio.	Relative.
New York.....	97	83	86	91	94
Pennsylvania.....	107	59	55	105	97
Massachusetts.....	16	11	71	15	97
Ohio.....	54	41	75	60	110
Wisconsin.....	107	94	88	104	97
Illinois.....	81	76	95	89	111

<sup>1</sup> Average for period February, 1920, to June, 1923.

Relatives for certain States are presented on Chart II for the entire period from 1919 to 1923, and examination of the curves will show that they vary greatly in the extent or amplitude of their fluctuations, although in point of time the changes were fairly coincident. Hence further statistical treatment was necessary in order to combine the series for the six States into a composite index without overemphasizing the influence of those States which fluctuated more widely than the others. A detailed description of these methods is given in a later section. In its final form, each index (see Charts I and III) is presented in terms of its standard or "normal" deviation above and

CHART II.

CHART III.

Chart II shows relatives computed from ratios between the number of jobs offered and applicants for positions in certain States, with 1919-1922 average as 100 per cent. Chart III shows the same curves corrected for the regular seasonal variations and differences in amplitude which appear in Chart II. The unit in Chart III is one "standard deviation" from the four-year average.

below its four-year average. It is also corrected for seasonal variations. Chart III shows certain of the State indexes in this form. Comparison with Chart II, which shows the relatives for these same indexes without corrections for varying amplitudes or seasonal variations, indicates that there is a greater similarity in the data than was evident before the application of additional statistical methods. This closeness of agreement is indicated by the following coefficients of correlation between each series in turn and the weighted combination of the six.

New York.....	0.88	Ohio.....	0.93
Pennsylvania.....	.93	Wisconsin.....	.90
Massachusetts.....	.95	Illinois.....	.92

Perfect agreement would be indicated by a correlation coefficient of 1.00, and in economic statistics a coefficient above 0.90 is considered unusually high. This surprising general agreement among the six independently collected series lends support to the view that statistics on employment office operations may prove to be of much greater value in the study of industrial fluctuation than has commonly been supposed heretofore.

**Uses of resulting index.**—The lighter curve on Chart I shows the index of employment in manufacturing industries (number on pay roll), also expressed in terms of standard deviation from the 1919–1922 average and with a tentative correction for seasonal variations. The two curves show general agreement; in fact, the coefficient of correlation between the two for the four years 1919–1922 was 0.96. The labor-market index is perhaps the more sensitive of the two, as it generally started downward a little earlier than did the index of factory employment, and was the first to move rapidly downward. An important advantage of this new index is that it includes many groups of workers, whereas the other treats only of factory employees. This index includes statistics covering workers in the building trades, in agriculture, in wholesale and retail trade, and in other important lines for which no data showing numbers employed are available. In some respects this feature was a disadvantage in that certain types of work not sensitive to variations in business conditions were also included. For example, in some offices applicants for domestic service made up a fairly large percentage of the total. As women are dominant in this line of work, consideration of statistics relating to men only would provide a series more nearly

representative of industrial conditions. This procedure was practicable with the series for Pennsylvania and Ohio, where comparable data by sexes were available for the entire period covered.

**Statistical methods used.**—Because of wide diversity in the manner of presenting the original data used in making this index, somewhat more complicated statistical methods than are commonly used were necessary in order to put the various series upon a comparable basis before combining them. A brief description of these methods is given below. The statistics utilized varied in respect to (1) period of time covered; (2) reliability and representativeness; (3) definition of terms; and (4) geographical and occupational representation. The chief results of these diversities were disagreement among the various State series as to seasonal variations and as to amplitude of fluctuations. It should be pointed out, however, that the difficulties so introduced do not necessarily vitiate or even seriously impair employment-office data for *timing* the course of the labor market. Naturally, if a given State introduces, from time to time, variations in its own practices, it does greatly impair the usefulness of its statistics for the study of fluctuations. But since the index includes no State which has failed to maintain a fairly stable practice during the past four or five years, that objection is avoided.

In combining the data for the several States to form the general index, these differences in amplitude and in seasonal variations had to be eliminated. The six series, after such corrections were made, were weighted in accordance with the relative economic importance of their respective States and averaged to secure the final index. The several steps taken in forming the index are indicated below:

(1) For each State the number of jobs offered per 100 applicants for work was computed for every month since January, 1919. Table I shows recent data and ratios for Pennsylvania and Table II gives ratios for each State.

(2) All of these ratios were then expressed as relatives with the four-year average, 1919–1922, as a base, or 100 per cent. This step somewhat reduced the wide divergence between the ratios, but differences in seasonal variations and in amplitude remained. See Table II and Chart II.

(3) Seasonal variations of relatives in each series were computed by a modification of the link-relative method, as applied by Prof. Warren M. Persons, of the Harvard Economic Serv-

ice.<sup>1</sup> This gave the following seasonal indexes for each State:

TABLE III.—MONTHLY SEASONAL INDEXES OF LABOR MARKET, BY STATES.

	New York.	Pennsylvania.	Massachusetts.	Ohio.	Wisconsin.	Illinois.
January.....	81	69	85	57	86	77
February.....	85	75	86	66	90	86
March.....	98	77	86	81	96	104
April.....	108	97	112	122	107	111
May.....	108	101	115	125	108	109
June.....	105	121	112	116	105	105
July.....	108	104	95	105	107	99
August.....	111	109	107	104	107	102
September.....	113	137	119	125	110	110
October.....	105	119	111	115	104	116
November.....	91	109	92	103	93	93
December.....	87	82	81	81	87	88

(4) Further steps included the computation of percentage deviations of each relative from its seasonal index, and of the equivalent standard deviations, which were used as units for measuring the fluctuation of each series above and below its four-year average corrected for seasonal changes. The weights assigned to the various State series were based upon (a) the number of all gainfully occupied persons in January, 1920, according to the latest census of occupations; (b) the number gainfully occupied at "manufacturing and mechanical pursuits," according to the same census; (c) the average number of wage earners employed in manufacturing establishments, in 1919 and in 1921, according to the two latest censuses of manufactures. Each of these bases gave practically the same distribution of weight among the six States, and the following weights represent this distribution:

New York.....	28	Ohio.....	15
Pennsylvania.....	23	Illinois.....	14
Massachusetts.....	15	Wisconsin.....	5

To secure the composite index the algebraic sum of weighted figures by States for each month was divided by 100, the sum of the weights. The general index, with that for each State, is tabulated by months from 1919 to 1923 in Table IV.

<sup>1</sup> Method explained in Review of Economic Statistics, preliminary Vol. I, pages 18-31, January and April, 1919. This method was likewise used to adjust the Federal Reserve Board index of department-store sales, as explained in the BULLETIN for January, 1924, pages 17-19.

## SWISS EXCHANGE AND MONEY RATES, 1915-1923.

The increased importance of Switzerland as a money market during the period of currency and financial disorganization in other European countries, and the relative stability of Swiss exchange during the war and post-war periods, make it opportune to present a brief study of the course of exchange and money rates in Switzerland since the outbreak of the war.

During 1915 and 1916 the Swiss franc was somewhat below par as compared with the dollar. With the entry of the United States into the war in 1917, the Swiss franc, in terms of dollars, rose rapidly, and in June, 1918, reached its highest exchange value, being quoted in New York at 31 per cent above par. In 1919 Swiss exchange began to decline, and

Average monthly buying rate of the Swiss franc in the New York market, expressed as a percentage of par (19.3 cents per franc).

in December, 1920, it was quoted in New York 20 per cent below par. With the beginning of 1921 the Swiss franc improved rapidly, and toward the end of that year it was again above par, as measured in dollars. This situation lasted until May, 1922, when the franc began to decline, and on December 10, 1923, it was quoted at about 10 per cent below its par of exchange. With all these fluctuations, Swiss exchange has been more stable than that of any other European currency, except the Swedish.

**Bank-note circulation.**—The volume of notes of the National Bank of Switzerland in circulation increased considerably during the period from 1913 to 1920, but this increase—in round numbers from 300,000,000 to 1,000,000,000 francs—was moderate as compared with cur-

rency increases in other countries. The rise of prices in other countries of the world tended to induce a corresponding advance in the price level and cost of living in Switzerland, since Switzerland is dependent mainly upon importations for her foodstuffs and raw materials. This advance in prices in itself created a demand for more currency, which demand was further enhanced by the tendency to transact business more generally on a cash basis. It is to be noted also that considerable quantities of Swiss currency were being hoarded in adjoining countries, especially in Germany and Austria.

Before the war notes in circulation were based upon gold and commercial bills of exchange. With the outbreak of war documentary bills of exchange largely disappeared, being supplanted by short-term treasury notes. The policy of the Government, however, was to fund regularly its floating debt so as to prevent too large an increase in the outstanding volume of discounted short-term treasury paper. Increase in the amount of bank-note circulation was accompanied by an increase of the metallic reserve held by the bank. Even at its lowest point in 1918 the ratio of gold to notes in circulation was 40 per cent as compared with 54 per cent in 1913. Since 1918 this ratio has considerably improved. By the end of July, 1923, it had risen to 61.15 per cent, and, if silver is included, to 73 per cent.

### NATIONAL BANK OF SWITZERLAND.

[In millions of francs.]

	De- cember 1913.	De- cember 1914.	De- cember 1915.	De- cember 1916.	De- cember 1917.	De- cember 1918.

Ratio of gold to notes in circulation	49.80	53.03	54.44	54.80	61.15

It may be remarked that the large accumulation of gold has had little, if any, influence on exchange rates. In 1918, when the reserve ratio reached its lowest point, the Swiss franc stood at its highest level, while during the following two years Swiss exchange, in terms of dollars, decreased rapidly, though the ratio of gold to notes increased steadily.

*Money rates.*—The discount rate of the Swiss National Bank reflects only to a small extent the general trend of economic conditions in the country. From the beginning of 1915 to October 3, 1918, the official bank rate remained unchanged at 4½ per cent. During 1915 open-market rates were comparatively high and only about 1 per cent lower than the bank rate. Large shipments of gold into Switzerland during the following year, at a time when the development of war conditions made the exportation of capital hazardous, provided an abundance of funds and caused easier rates for money. Low interest rates prevailed until the fall of 1917. The large excess of imports over exports during 1918, combined with heavy taxation, tended to harden open-market rates, and the steady decline of the gold ratio during 1918 induced the National Bank of Switzerland, on October 3, 1918, to increase its discount rate to 5½ per cent. Although it was lowered on August 21, 1919, to 5 per cent, interest rates remained high throughout 1919, 1920, and the first quarter of 1921. Decline in the general price level was followed by the stagnation of industry and trade which set in in the middle of 1920, and was coupled with the liquidation of many war industries. As a result money became plentiful and interest rates declined rapidly, at times below 1 per cent. The bank rate which had already been lowered three times was further reduced on August 17, 1922, to 3 per cent.

<sup>1</sup> On July 13 the bank rate was increased to 4 per cent.

Low interest rates prevailing throughout 1922 stimulated the issue of securities, public and corporate. During 1922 such issues amounted to 892,000,000 francs, as compared with 703,000,000 francs for 1921 and 328,000,000 francs for 1914. The supply of loanable funds was, however, so large that it was not absorbed by domestic demand, and 70,000,000 francs of foreign loans were placed in Switzerland.

In this period the abundance of loanable funds represented in part the influx of funds from abroad, and in part it developed as a consequence of industrial and trade depression within the country. Even with the low rate of interest, securities floated for industrial and commercial purposes decreased from 98,000,000 francs in 1920 to 87,000,000 francs in 1921 and to only 18,000,000 francs in 1922. This decrease in capital issues for commercial purposes was, however, more than made up in 1922 by the issue of Government securities to the amount of 500,000,000 francs—by far the largest amount ever issued by the Government in any one year.

#### SWISS NATIONAL DEBT.

[In thousands of francs.]

	Consolidated debt.	Floating debt.	Net total debt.	Debt per inhabitant.
1913.....	146,270	.....	112,270	28.95
1919.....	1,381,536	435,046	1,794,061	463.70
1920.....	1,605,857	311,634	1,899,332	490.02
1921.....	1,758,151	372,645	2,116,576	546.07
1922.....	1,902,527	200,497	2,089,702	539.12

Some factors, such as the adverse balance of payments, which tended to raise interest rates, exercised a depressing influence on exchange rates, and generally these moved in a direction

opposite to that of interest rates. Thus during 1920, when interest rates were high, the Swiss franc was quoted at its lowest point in the New York market, while at the end of 1921 and during the first part of 1922, when open-market rates were steadily declining, the dollar was quoted at a discount in Zurich. The extremely low rate of interest prevailing during the second half of 1922 and the first half of 1923 caused an outflow of funds and depreciation of the Swiss franc. The rise in the discount rate from 3 to 4 per cent in July, 1923, was intended principally to protect Swiss exchange from further depreciation and to check the outflow of funds. Open-market rates soon reacted and rose rapidly. At present they are close to the bank rate. Long-term rates show the same upward tendency.

*Foreign trade and gold movements.*—The balance of Switzerland's merchandise trade has always been adverse, since the country has always depended largely upon "invisible exports" in effecting payment for supplies of raw materials and foodstuffs imported from abroad. With the outbreak of the war an extraordinary demand for goods developed abroad, and Switzerland found herself unable to buy from other countries in her usual amount, under restrictions imposed by the belligerents. The excess of imports over exports accordingly decreased, and in 1916 exports even exceeded imports. These foreign trade developments influenced exchange rates and caused an inflow of gold into Switzerland.

At the termination of the war Switzerland was almost "sold out" and in great need of goods. Consequently, imports increased rapidly. In 1920 they amounted to 4,243,000,000 francs, the largest total in the history of Switzerland, and an amount in excess of exports by 966,000,000 francs. This large trade balance tended to depress Swiss exchange, since the surplus of imports greatly exceeded the amount of Switzerland's invisible exports even under normal conditions, and prevailing conditions were in fact far from normal. During this period Swiss capital invested abroad sustained heavy losses, involving a corresponding decrease of interest payments. Furthermore, the political and economic changes taking place in central Europe, and depreciation of the exchanges of former belligerent countries affected the tourist traffic, which normally provides an important credit item in the Swiss international balance sheet. Under these conditions the balance

of payments became adverse, demand for funds increased, and money rates advanced at times to 7 per cent. The demand for foreign bills accordingly increased and the Swiss franc depreciated.

Exports and imports both declined during 1921, and the adverse balance of trade decreased considerably. In this year also liquidation of many enterprises increased amounts on deposit in banks, and was followed by a decrease in the demand for funds. At the same time foreign funds began to seek refuge in the Swiss money market. The inflow of funds was further augmented by repayment of about 600,000,000 francs of gold credits granted to France, Germany, and some other countries. As a consequence, the Swiss balance of payments became favorable and the Swiss franc for several months was quoted above its dollar parity.

During 1922 imports and exports continued to decrease and the excess of imports was smaller than that for any year since 1917. Foreign trade figures for the first six months of 1923 show an increase of imports, while exports have remained more or less stable, giving an unfavorable balance for the half-year of about 230,000,000 francs.

<sup>1</sup> Excess of exports.

The causes which have affected Swiss foreign trade have to a considerable extent also influenced the movement of precious metals from and to Switzerland. The large excess of gold imports over exports during the war represented principally cash payments for purchases by belligerents. Of the gold imported during 1921 and 1922, amounting to about 655,000,000 francs, it appears that about 400,000,000 francs was Russian gold which came

mainly from Sweden and partly by way of the Baltic States. This gold was melted down in Switzerland and eventually found its way to the United States. In addition to gold, large quantities of silver were shipped to Switzerland, largely from countries of the Latin Monetary Union, in the form of 5-franc and 5-lire pieces.

#### SWISS GOLD IMPORTS AND EXPORTS.

[In millions of francs.]

Year.	Imports.	Exports.	Excess of imports.
1914.....	58.3	6.1	52.2
1915.....	16.7	1.7	15.0
1916.....	118.5	.8	117.7

1923 (first half).....	148.1	35.3	112.8

Imports and exports of precious metals during the past two years have not materially affected the metallic reserve of the Swiss National Bank, which has remained fairly constant since 1920. During the period from the end of 1921 to May, 1922, when the Swiss franc stood higher than the dollar, the Swiss National Bank put about 200,000,000 gold francs in circulation, which were generally hoarded and subsequently, when the Swiss franc began to depreciate, were probably melted down in considerable amounts and clandestinely exported.

*Balance of payments.*—Since imports of merchandise and of precious metals greatly exceeded exports, visible and invisible, it would appear that large sums were sent to Switzerland by foreigners for temporary investment, and that some foreign exporters preferred to accumulate credits in Switzerland. That funds originating in this way were not sufficient in amount entirely to offset the adverse balance of merchandise trade and net importation of precious metals is indicated by the estimated value of Switzerland's invisible exports, which, even though reduced in amount in recent years as compared with pre-war times, still constitute an important item in Switzerland's balance of payments.

According to figures published recently by the Schweizerische Volksbank, the invisible exports of Switzerland before the war and during 1922 were as follows:

#### SWITZERLAND'S INVISIBLE EXPORTS.

[In millions of francs.]

	Before the war.	1922.
Excess of interest on Swiss capital invested abroad over interest on foreign capital invested in Switzerland.....	69	40
Profits of Swiss enterprises abroad.....	200	100
Profits from tourist traffic.....	265	135
Transit traffic of Swiss railways.....	25	20
Insurance.....	20	10
Exportation of electric power.....		10
Total.....	579	315

According to these figures, although the value of Switzerland's invisible exports had decreased 46 per cent, it was sufficient in 1922 to cover the excess of imports over exports and to exercise a favorable influence on Swiss exchange rates. A brief survey of the more important items in this statement is of interest as indicating changes that have taken place since 1914.

*Capital investments.*—According to Swiss sources, foreign capital invested in Switzerland before the war amounted to about 1,200,000,000 francs. It has been estimated by the Swiss Bank Corporation that most of the securities representing this investment by foreigners have been returned to Switzerland, and that at present foreign holdings do not much exceed 200,000,000 francs. It appears also that loans floated by Switzerland in the United States after the war were repurchased in considerable amount at the time when the dollar was quoted at a discount. At the end of 1922 these loans totaled 258,600,000 francs, as compared with 309,000,000 francs at the end of 1921. Thus, while before the war Switzerland had to meet considerable interest payments on account of loans floated abroad and foreign capital invested in Switzerland, under present conditions the amount of such payments is comparatively small.

In what amount Swiss capital has been invested abroad can not be accurately determined, since estimates vary greatly. Doctor Zollinger estimated the total amount so invested before the war at 2,680,000,000 francs, while the Swiss Bankers' Union estimated it to be between 7,000,000,000 and 8,000,000,000 francs. In this connection it is of interest to note that Swiss nationals owned 202,600,000 francs of Mexican securities alone

It is difficult to ascertain with accuracy the value of Switzerland's foreign investments at the present time when large holdings have depreciated and have in some cases been completely wiped out. According to Swiss sources, a total of about 4,500,000,000 francs was invested in the former Austro-Hungarian Empire, in Germany, and in Russia, and about 500,000,000 francs in the Balkan States and in Central and South America. Thus, of the total Swiss investments abroad, about 5,000,000,000 francs at present have either been lost entirely, as in Russia, or have decreased in value owing to depreciation of the exchanges on Austria, Germany, and the Balkan States.

The belief generally prevails that large amounts of foreign funds, especially German and Austrian, have been invested in Switzerland. To what extent this belief corresponds with facts it is difficult to say. It is, however, well known that after the armistice Germany, Austria, and other central European countries transferred considerable sums to Switzerland. Economic factors were probably less important than political conditions in inducing these transfers. Switzerland, as the only neutral country in central Europe, was regarded by many investors of the Central Powers as the safest place for their funds. Here, it was believed, funds and investments could be better protected against confiscation, heavy taxation, and currency depreciation. Generally such transfers of capital to Switzerland were for temporary investment until political conditions in Europe should become more stable, and in many instances foreign funds transferred to Switzerland were after a brief period invested in other countries where they were likely to figure as Swiss capital.

The outflow of foreign funds and holdings from Switzerland has assumed large proportions, especially since 1922. Low rates of interest (yields of Swiss securities ranged between 4 and 4½ per cent, as compared with a range of from 5 to 7½ per cent on securities of similar quality in the United States, Holland, Sweden, etc.), coupled with the heavy burden of taxation, caused an outflow of funds, which was further accelerated by the agitation for a capital levy. The petition for the bill providing for a capital levy was presented to the Government on September 13, 1921, and was discussed by the chambers from September 28 to October 6, 1922. Although the bill was rejected by a referendum on December 3, 1922, the proposal of a capital levy created great uncertainty in the money market and caused foreign as well as domestic balances to leave the country. In

addition, the complete stabilization of the Austrian krone since August, 1922, and the high rate of interest prevailing in that country made it more profitable for Austrian investors to withdraw their Swiss holdings for investment in the Vienna money market. Decreased trade relations between Germany and Switzerland induced many German firms also to withdraw their Swiss balances and to transfer them to the United States and England, where they needed credits to finance the importation of foodstuffs and raw materials.

Not only foreign but also Swiss funds began to leave the country through different channels, especially at the time when the capital levy was under discussion. This movement from Switzerland assumed such proportions that at a conference called by the chief of the finance department it was resolved that funds should be exported only in such amounts as would not affect domestic needs, and that in making loans to foreign countries the interests of Switzerland should be considered paramount. In fact, credits granted by Swiss banks to Rumania and Yugoslavia carried a stipulation that a percentage of these loans should be used for purchases in Switzerland.

It is probable, in view of all these developments, that the amount of foreign capital at present invested in Switzerland is small, and this is the conclusion stated in a communiqué issued by a conference of Swiss financiers held in Berne on October 30, 1921.

#### FOREIGN LOANS PLACED IN THE UNITED STATES, 1919-1923.

In continuation of similar figures published on page 1017 of the September, 1922, number of the FEDERAL RESERVE BULLETIN, the Guaranty Co. of New York has furnished the Federal Reserve Board with figures of foreign government and corporate loans placed in the United States during the calendar years 1919 to 1923. The methods used in the preparation of the present compilation are the same as described on page 1016 of the September, 1922, number of the BULLETIN. Separate figures are given for new capital and refunding issues, and the geographical segregation is in accordance with the domicile or place of business of the issuers and not the part of the world to which the capital may have been exported. The classification of the securities also remains unchanged. In the preparation of the tables use has been made of similar compilations by the Commercial and Financial Chronicle and the Monetary Times of Canada.

Foreign security issues during the calendar year 1923 totaled \$398,217,000, of which over three-fourths represented new capital and less than one-fourth refunding operations. This total is the smallest for any year since the end of the Great War, the annual totals for the post-war period running as follows:

[In thousands of dollars.]

	Total.	Government.	United States possessions.	Corporate.
1919.....	681,707	564,559	11,700	105,448
1920.....	621,512	376,609	16,277	228,626
1921.....	675,317	478,305	27,145	169,867
1922.....	897,208	626,758	50,373	220,077
1923.....	398,217	291,908	8,186	98,123

Foreign government loans placed during the past year totaled \$291,908,000, compared with \$626,758,000 in 1922. The list of foreign governments which have placed loans in the United States during the past year comprises Cuba, the Dutch East Indies, Norway, Switzerland, Finland, Salvador, and Argentina. About 40 per cent of these loans were floated by Latin American governments, including a refunding loan of \$50,000,000 placed by the Argentine Government during the first half of the year. Canadian Government loans, including refunding loans, placed in this country during 1923 show a decline of over 75 per cent since 1922, though the total volume of Canadian Government issues for the past year,

\$306,279,000, was only 8.6 millions less than the year before.

Of the foreign corporate issues those of Canadian origin constituted over 40 per cent. European corporate issues, which totaled \$97,270,000 in 1922, declined to \$18,500,000, the average volume for the three years following the Great War. Corporate issues of Latin American origin, which had gradually increased to nearly \$66,000,000 in 1922, fell off to nearly one-fourth in the year just passed. A similar decline is shown for security issues of our noncontiguous territories.

Foreign and colonial capital issues in Great Britain, according to the London Statist, totaled £129,828,000 in 1923, compared with £146,306,000 in 1922. While the volume of colonial security issues shows an increase for the year from £79,158,000 to £80,675,000, the volume of foreign issues proper declined from £67,148,000 to £49,153,000, the 1923 total being only about one-half of the total capital placed in foreign loans in 1913. By far the larger portion of these issues was placed during the earlier part of the year, when the position of the London money market was more favorable for foreign financing than the position of the New York market. A comparison of the British with our own figures shows that in 1922 combined colonial and foreign capital issues in Great Britain were 28 per cent less than in the United States, while in 1923 they were about 50 per cent larger than like issues in this country.

## BUSINESS CONDITIONS IN THE UNITED STATES.

### AGRICULTURE.

The movement of agricultural products to market passed its seasonal peak during November and December and the demand for credit to finance distribution declined. Prices of both agricultural products and livestock declined slightly during the marketing season, but with the turn of the year the markets became firmer and at the close of the third week in January quotations of most products were higher than at the beginning of the month. The greater returns for the 1923 crop than in either of the two previous years enabled many producers to further liquidate old indebtedness, and the extent to which this has been done is particularly significant in the Richmond, Atlanta, St. Louis, and Dallas districts, where increased value of the cotton crop resulted in much larger returns to the producers. Weather conditions during the greater part of December were generally favorable in most districts for outdoor work and winter-sown grains continued to make good progress. The first weeks of January were accompanied by exceptionally cold weather in sections of the Chicago, Minneapolis, and Kansas City districts, but due to the heavy covering of snow little damage was done to the growing crops. In the San Francisco district the continuation of dry weather delayed plowing and seeding in December, but rains early in January were generally beneficial. Rains in the St. Louis district, however, were excessive in December and seriously delayed threshing of rice, so that approximately 10 to 15 per cent of the crop still remains in the field. Deliveries of sugar beets in the Kansas City district were practically completed in December and refinery operations for the season were brought to a close.

#### Grain.

As a result of generally favorable growing conditions during December, the winter grain crops continued to make good progress. Although the acreage sown to winter wheat is approximately 12 per cent smaller, the condition of the crop is better than a year ago. During the first weeks of January low temperatures prevailed throughout the winter wheat areas of the St. Louis and Kansas City districts, but with a heavy snow covering as a protection

little damage has been reported. Corn husking was practically finished in the Kansas City district during December, but in the Chicago district it continued during the first weeks of January.

The marketing of grain during December was in greater volume than in November but smaller than in December, 1922. The principal developments during the month were a seasonal increase in the distribution of corn and a decrease in the marketing of wheat. Compared with December a year ago, the outstanding changes were great decreases in the distribution of wheat and rye. Wheat declined 37 per cent and the volume of rye marketed was 71 per cent smaller.

During the first six months of the crop year exports of wheat were considerably smaller than in any corresponding period in recent years. Flour, on the other hand, was shipped abroad in greater quantities than in any year since 1919, and it is interesting to note from the chart that while total wheat exports were approximately the same as for the corresponding period in 1913, flour exports were 43 per cent greater.

Total wheat exports since the beginning of the crop year have been smaller than in the preceding season and only slightly larger than in 1913. Flour has been exported in larger volume than any year since 1919 or than in 1913.

#### Cotton.

During December and early January the harvesting and ginning of cotton continued and prior to January 16 9,946,462 bales had been ginned, compared with 9,648,261 bales for the

same period a year ago. Final estimates indicated a total crop of 10,081,000 bales, which is only 134,538 bales greater than ginnings to January 16. During the harvesting season, as more definite information became available relating to the probable size of the crop, the price advanced rapidly and reached a peak of 36 cents per pound in the last week of December. Early in January the market weakened and on January 18 the price had declined to 33.30 cents per pound. Under the effect of high raw-cotton prices and holiday curtailment in mill operations consumption was considerably below the level of the preceding month and was 13 per cent below that of December, 1922. Since the beginning of the crop year domestic consumption has been 5.7 per cent less than for the same period in 1922, but exports have exceeded those of the previous year and are 14.6 per cent greater than a year ago. The following table shows the monthly consumption and exports of raw cotton and the percentage change from the corresponding periods in 1922:

[Bales.]

	1922	1923	Percentage change from 1922.
<b>CONSUMPTION.</b>			
August.....	526,000	492,000	-6.5
September.....	494,000	484,000	-2.0
October.....	534,000	542,000	1.5
November.....	579,000	531,000	-8.3
December.....	529,000	462,000	-12.7
Total.....	2,662,000	2,511,000	-5.7
<b>EXPORTS.</b>			
August.....	273,000	244,000	-10.6
September.....	368,000	639,000	87.2
October.....	799,000	782,000	-2.1
November.....	858,000	770,000	-10.3
December.....	608,000	846,000	39.1
Total.....	2,906,000	3,331,000	14.6

### Tobacco.

Marketing of tobacco in the Richmond district showed a seasonal slackening, but total sales for the entire country were considerably greater than in December a year ago. Sales in the Richmond district reached their peak in November and fell off in December, but in the tobacco sections of the Cleveland and St. Louis districts sales continued to increase in December, although smaller than in the same month a year ago. The crop is one of the largest in the history of the country, but the quality is inferior to that of the preceding crop, and as a result the prices received by the producers are lower than in the previous season. The average prices per 100 pounds received

during the month in the principal producing States of the Richmond district are as follows:

	1923	1922
Virginia:		
Bright tobacco.....	\$20.03	\$28.77
Dark tobacco.....	16.49	18.90
North Carolina.....	20.28	28.24

The cooperative association operating in the Richmond district reports that total deliveries by producers in the Carolinas and Virginia for the season prior to January 1 amounted to 118,267,149 pounds. The associations in the St. Louis and Cleveland districts have opened receiving plants throughout the tobacco sections and are receiving a considerable proportion of the crop in those districts.

With the passing of the holiday demand for tobacco products and the closing of plants for inventory takings the production of all products declined in December from the high levels maintained in October and November and was generally smaller than in December a year ago. In the Philadelphia district manufacturers report that the Christmas trade was heavy and stocks held by manufacturers and the trade were low after the holiday season. Prices of cigars and leaf tobacco remained firm and generally unchanged during the period. Stocks of both cigars and leaf tobacco were reported to vary from light to moderate at the beginning of the year.

### Fruit.

During December the volume of citrus fruits marketed from Florida was smaller than a year ago, but total shipments for the season show an increase of 3,342 cars. The movement of the large orange crop was very rapid earlier in the season and considerable quantities of immature fruit were shipped, which in December became a depressing factor on the market. Lower prices resulted, which in turn checked shipments, and the value of the crop is now estimated to be less than that of the smaller production of the previous season. Total shipments for the season through December amounted to 18,346 cars of oranges and grapefruit, compared with 15,004 cars a year ago. At the beginning of the 1923 fruit-packing season in the San Francisco district packers had large stocks on hand and as a result little fruit was canned in excess of that needed to fill immediate orders. As a result of these factors the market was depressed and prices received by the producer, as indicated by representative

returns to growers in California, were approximately 50 per cent lower than in 1922. The market became somewhat firmer during the year and at the beginning of 1924 spot prices were slightly higher than the opening 1923 prices. For many canned and dried fruits, however, stocks are still heavy on account of the large carry-over from 1922, and in such cases prices are still low.

#### Livestock.

Conditions affecting the pastures and ranges continued generally favorable throughout December, but during the early weeks of January severe cold weather with accompanying snows prevailed over the principal livestock sections and considerable feeding was necessary. A serious shortage of grass feeds, resulting from the long drought in sections of the San Francisco district, was an unfavorable factor in December, but scattered rains in January were generally beneficial. The continuation of favorable weather during the autumn season was particularly advantageous to the livestock industry and conditions are generally better than a year ago.

The Department of Agriculture in its pig survey for December reports that hog production has passed the crest in the surplus producing regions and a downward movement is under way. The number of sows farrowing in the fall of 1923 decreased 9 per cent from 1922 for the entire United States and 6 per cent for the Corn Belt.

Marketing of livestock in December was seasonally smaller than in November, but receipts of all animals except cattle were larger than in December a year ago. Throughout the year the marketing of livestock was in exceptionally large volume. The number of all cattle marketed was approximately the same as in 1922, but the number of hogs marketed exceeded all previous records. Marketing of hogs during the summer months, when seasonal declines are generally evidenced, was particularly heavy and shipments continued unprecedently large in the autumn months. The large volume of livestock marketing in 1923 showed a continuation of the liquidation of the livestock industry, further evidence of which is given in the pig survey of the Department of Agriculture mentioned above.

#### MINING.

##### Coal and coke.

Colder weather and rumors of a possible strike slightly stimulated the demand for soft coal during January. Sales were larger and

prices were firm at a level a little above the low point of 1923, which was reached in December. The market, however, is by no means active and much of the current output is going into stocks. Production revived quickly after the holiday season had passed and in the week ending January 12 equaled 11,921,000 tons, the largest weekly total recorded since December, 1920. The monthly total for December, on the other hand, was smaller than for any month since the 1922 strike. The Coal Age index of soft coal prices rose from \$2.16 in the week ending December 24 to \$2.25 in the week ending January 21.

Anthracite markets were but temporarily affected by the brief cold spell early in January and during most of the month were quiet. Most retail dealers are fairly well stocked, and buying of domestic sizes is light. Steam sizes are in slightly better demand than in previous months. Production during December was a little greater than in November, but weekly output in the first two weeks of January did not attain the level prevailing before the holiday curtailment. A few concessions have been made in prices, but no definite market trend was noticeable.

Increased output of by-product coke in December offset a decline in beehive production. Weekly output of the latter for the first half of January was not up to that for the corresponding period in December. With increased blast-furnace activity during January, however, pig-iron producers have bought coke more freely and several contracts have been closed for first quarter requirements. Furnace coke at ovens was reduced 25 cents a ton on December 31.

##### Metals.

Lead continued throughout December and the first half of January to be in a more favorable position than the other nonferrous metals. In spite of the fact that shipments of lead ore from the Joplin field increased 53 per cent in December, ore prices advanced steadily during the month and reached the highest point since last April. Since the turn of the year there has continued to be a large demand for lead, and the price of common lead at New York was 8 cents per pound on January 16, as compared with 7.75 cents on December 31.

Zinc ore stocks in December were reduced to the lowest level of the year, as a result of the closing of most zinc mines for one week in each of the past three months. December shipments from the Joplin mines were larger than November shipments, and there was a slight

decrease in the average price received per ton. Production of slab zinc was increased during December for the third successive month and exceeded shipments by about 6,000 tons. Demand for zinc was moderately strong during the first half of January and there was a slight stiffening of prices.

An increase in mine production of copper during December and announcement of the partial dissolution of the Copper Export Association resulted in a further decline in prices. Refined electrolytic copper delivered at New York was quoted at 12.5 cents per pound on January 16, as compared with 12.9 cents on December 31. The consumption of refined copper in the United States was larger in 1923 than in any other year outside of the war period and was almost equal to the mine output. Imports from South America, however, have been very large and tend to equal exports in their volume.

Silver production declined from 4,894,000 ounces in November to 4,748,000 ounces in December, yet there was a further reduction of silver quotations at New York during the first half of January which amounted to about 2 cents per ounce.

#### Petroleum.

A continuation of the decline in the production of crude petroleum and advances in the prices at the principal producing fields were the outstanding developments in the industry during December. Daily average production, with the exception of the week ending December 22, declined continuously throughout the month and until the end of the first week in January. For the week ending January 12 the daily average production was slightly above that of the preceding week, but still below any week in December. Prices declined steadily during the autumn when production was at its peak, but following declines in production markets became firmer in December and for the first time since early in the spring quotations at all of the principal producing fields advanced. This upward movement continued in the early weeks of January.

Developments in the industry in December were particularly significant in marking the close of a year that was characterized by a long-continued increase in production and decline of prices. Prices advanced rapidly in the first quarter of 1923 and reached a peak in March. Production was stimulated by rising prices and month by month, with the exceptions of June and September, the output increased. The year's production was estimated by the

Petroleum Institute at 745,000,000 barrels, an increase of 187,000,000 barrels, or 33.6 per cent, over 1922.

The output of refined-oil products likewise increased during the year, and on December 1 the supply of gasoline was 11 per cent greater than at the same period a year earlier. Quotations for gasoline followed the trend of crude petroleum prices and declined throughout the year until December, when they turned upward. At the end of the third week in January refinery quotations had been marked up in most sections of the country and were at the highest levels since the middle of October. Export demand for petroleum products continued better in January than had been anticipated, and reports state that both English and German houses have been inquiring for kerosene in the Gulf districts.

#### MANUFACTURING.

##### Food products.

Notwithstanding the slight curtailment in mill operating capacity and a slackening in the domestic flour trade during the holiday season, the production of wheat flour increased 1.9 per cent from the output in November and was 6.3 per cent greater than in December a year ago. Total production during 1923 was approximately the same as in the preceding year, amounting to 126,721,000 barrels, compared with 125,657,000 barrels in 1922. Following the seasonal dullness in the trade during the closing weeks of December, an active demand for flour, particularly from the South, was evidenced in the early weeks of January. Prices advanced and for the week ending January 18 the market was firmer than at any period in recent months; quotations were at approximately the same levels as were maintained early in October. Foreign demand during the last quarter of the year continued better than in 1922 and the volume of flour exported since the beginning of the harvesting season was 18 per cent greater than during the same period a year ago.

The volume of meat packing continued large in December and for the year the total output was the greatest in the history of the country. The liberal marketing of hogs was particularly significant throughout the year and contributed largely to the unprecedented volume of meat production. Notwithstanding the large volume of production, stocks of meat products did not increase to any appreciable extent during the year. Prices of many pork products, on the other hand, declined during the year and with the opening of 1924 they

were at approximately the 1913 levels. Both domestic and foreign demand for all products, especially pork, were good throughout the year. The trade in meats was particularly good with England, but was light with the Continent. Lard and fats, on the other hand, were in demand from the Continent, especially Germany, but the trade with England was only fair. Domestic demand for meat products continued active during the year, although there was some cessation in distribution during November and December, when poultry and fresh products came upon the market for the holiday season.

#### Textiles.

Quietness generally prevailed in textile markets during December and January. Operating schedules were curtailed during December, and production statistics showed rather marked declines, which were not due entirely to seasonal influences. Prices fluctuated within narrow ranges during the period, the previous advance in cotton and decline in silk being fairly well checked.

After somewhat of a recovery during the fall, cotton-mill activity declined in December to practically the same level as during last July, the least active month of the year. Statistics for both mill consumption of cotton and active spindle hours corresponded fairly closely to the July figures. The greatest reduction was among the New England mills, and unofficial reports indicate further curtailment during January. Mills are apparently operating over 50 per cent for stock. Buying of both goods and yarns was light in December, and following the decline in the raw-cotton market prices on gray goods and yarns were reduced somewhat. The Fairchild cotton-goods price index was 18.127 for the week of January 5, the highest point since last April, but declined to 17.709 for the week ending January 26. Many prices on finished goods were announced during January—fancy flannels at about the same quotations as last year, staple gingham nearly 2 cents lower, muslins one-half cent lower to 1 cent higher. Cotton finishers reported declines in orders and production during December, with shipments and stocks practically unchanged.

Wool markets have been relatively inactive but nevertheless firm for the past two months. Inventory taking at the end of the year and the pending opening of heavy-weight lines for next season have caused a suspension in buying. On the other hand, active buying of raw wools in foreign markets at higher prices than

those prevailing here and low stocks in this country have prevented price declines. In fact, many quotations have advanced. The Boston Wool Trade Association reported a substantial decrease during the year in stocks of foreign wools held by their members, more than offsetting an increase of domestic stocks. The following table summarizes the figures for the past three years:

[In thousands of pounds.]

	1923	1922	1921
Total domestic .....	47,739	22,085	27,107
Total foreign—out of bond.....	9,869	17,753	26,332
Total foreign—in bond.....	16,184	46,478	8,103
Grand total.....	73,792	86,316	63,542

Trading in woolen and worsted fabrics was light during January, awaiting openings of fall lines which usually take place at this time of the year. Manufacturing activity, as shown by statistics of wool consumption and of active machinery, was curtailed considerably in December. In fact, operations as a whole were less than at any time since August, 1922. Buying of clothing continues to be relatively light and fairly large stocks are unofficially reported to be in the hands of both manufacturers and retailers, although colder weather and recent clearance sales have somewhat stimulated retail selling. Employment increased in the men's clothing industry and decreased in women's clothing during December, in accordance with usual seasonal tendencies. Wholesale clothing sales in the New York district in December were much smaller than in November. They totaled more than in December, 1922, although men's clothing sales were 10 per cent less.

Inactivity continues to dominate the silk industry, although some manufacturers reported a slight improvement in demand during January. Deliveries of silk to American mills during December were the smallest since May, 1920. Operations were curtailed throughout December and January, and many plants closed down around the first of the year. Imports of raw silk, although fairly well maintained, have not been particularly large, yet stocks at warehouses have increased steadily since July. Raw silk prices fluctuated within a comparatively narrow range throughout December and January.

Seasonal declines were noted in the production of knit underwear during December. For summer underwear orders decreased and shipments increased, whereas orders for winter

garments were much larger than in November and shipments were smaller. Sales of underwear were somewhat retarded in January. Hosiery manufacturers reported declines in production, shipments, and orders during December. Some improvement was noted during January in the demand for silk hosiery for women. Prices of silk hosiery have been reduced by some manufacturers, whereas quotations on a number of cotton-hosiery lines have advanced.

#### Iron and steel.

Definite indications of an upward turn were evident in the iron and steel industry during December and January. Total pig-iron production was slightly greater in December than in November, and unfilled orders of the United States Steel Corporation increased in December for the first time in nine months. Buying, however, was in general only fair toward the end of the year, and many plants closed down for a week or two during the holidays for the purpose of making repairs and taking inventories. Consequently, early in January steelingot production fell to about 68 per cent of capacity and blast furnace operations averaged as low as 63 per cent. Later new business was received in somewhat larger volume and steel activity increased considerably—to 76 per cent of capacity. Also some idle blast furnaces were started, enlarging pig-iron output to 69 per cent. The upward tendency in prices, begun late in November, continued, and on January 23 the Iron Trade Review's composite iron and steel price was \$43.35, compared with \$43 a month previous. The increase was due chiefly to advances in pig iron.

Recent increases in buying have come largely from the same sources which consumed the greater part of the 1923 steel output, namely, railroads, building, and automobile manufacturing. Railroads have recently made inquiries regarding new equipment, and a number of orders have been placed. Car orders in December totaled 10,600, the largest since March. Prospective building is reflected in the more active demand for structural steel. Automobile manufacturers have been in the market for a number of steel products in preparation for their spring demand. The agricultural implement industry is also buying somewhat more actively.

#### Automobiles.

At the end of the most active year in automobile history manufacturers are now preparing for continued large output and sales. This

is shown by the announced plans of many producers and is reflected in inquiries and orders for various materials. Automobile shows held during January indicated the increasing popularity of closed models. Production and shipments of cars during December, although seasonally less than in November, were well maintained at a level one-third higher than that of a year previous. December truck production was only slightly smaller than the November output. Statistics collected by the Federal Reserve Bank of Chicago from 55 distributors and dealers in the Middle West showed increases during December in the number of cars sold at both wholesale and retail as compared with November. Wholesalers reported decreases as compared with December, 1922. Stocks of both new and used cars on hand continued to increase and were larger than a year ago.

Reports from rubber tire manufacturers indicate enlarged production and shipment of pneumatic casings during December, accompanied by a decrease in stocks to the lowest point since January, 1922. Shipments of inner tubes and solid tires were also larger, whereas production changed but slightly. The only substantial change as compared with December, 1922, was a 60 per cent decrease in the production of solid tires.

#### Leather and shoes.

Definite improvement has recently been noticed in hide, leather, and shoe markets. Activity is by no means great but is sufficient to mark recovery from somewhat depressed conditions. The greatest increase was in the hide market, where sales have been fairly large since some time in December, and prices have risen from the low point reached late in November. Packers are closely sold up and the market continues strong. Heavy leather markets have also improved some since the first of the year, owing to their better statistical position and a seasonal increase in demand from shoe manufacturers. The improvement in demand for upper leathers was not so great. Production of sole leather decreased further in December and was less than in any month since early in 1921. Stocks in process of tanning were also smaller than in November, but the reduction in finished stocks was insignificant. Leather prices have strengthened under the influence of better demand.

Shoe production declined 16 per cent in December and totaled less than in any month except one within the past two years. In the Boston, Philadelphia, and Chicago districts the

decreases were about 20 per cent, in the New York district 17 per cent, whereas in the St. Louis district there was a decline of only 8 per cent. Reports from manufacturers in the Boston, Philadelphia, and Chicago districts likewise showed decreases in shipments and orders as compared with both November and with last December. The Philadelphia Federal Reserve Bank, however, reports a seasonal increase in buying in January, and many factories have sufficient orders to keep them busy through March. The index of wholesale shoe sales for the United States was 48 for December, compared with 59 in November and 58 for December, 1922. Retail sales of shoes increased in December.

#### Lumber.

After an unusually well-sustained output throughout the fall, the production of lumber declined in December by somewhat more than the usual seasonal amount. Total production and shipments reported by the National Lumber Manufacturers' Association were, excepting production for last February, the smallest for any month since April, 1922. The greatest part of this reduction occurred during the last week of the year. Weekly figures for January indicate an increase in production from this low point, with shipments exceeding cut and orders larger than shipments. These developments ordinarily occur at this season of the year, as bad weather prevents woods operations, yet dealers begin about this time to place orders and receive shipments for spring needs.

Lumber prices, which in December were at or close to the low point for 1923, have been fractionally higher in January. Lumber's index of softwood prices was 32.35 for the week of January 25, compared with 31.58 a month previous. The hardwood index for the same week was 43.63, slightly above the low point for 1923, 43.39, reached one month before.

#### BUILDING.

The value and volume of new buildings for which contracts were let in December were somewhat smaller than in November, but were substantially larger than in December, 1922. The total value of contracts awarded in 10 Federal reserve districts amounted to \$302,585,000 in December, which was 5 per cent less than in November. Decreases were reported from the New York, Philadelphia, Cleveland, Chicago, and Kansas City districts, whereas the value of awards was slightly larger than in November in the Boston, Richmond, Atlanta, St. Louis, and Minneapolis districts.

The floor space of new buildings for which contracts were let in 27 northeastern States totaled 47,845,000 square feet in December, which was 8 per cent less than in November, but 24 per cent more than in December, 1922. Space contracted for all the main classes of construction, except business buildings, was smaller than in November. Comparison with contracts let a year ago indicates increases for almost all types of construction; the most important gains being shown in the awards for residential, business, and educational buildings. Statistics of new construction, classified by geographical districts and by purpose of structures, are published on page 112.

Production and shipments of building materials showed decreases during December, as is usual in the early winter, but were larger than in the corresponding months of other years. The sustained production has led to a moderate accumulation of stocks and has resulted in a further slight reduction of prices.

#### TRANSPORTATION.

Railroad shipments showed a larger decrease in December than is usual at that season. Car loadings totaled 3,586,000, as compared with 4,232,000 in November and 3,599,000 in December, 1922. Loadings of coal and grain were considerably smaller than a year ago, while movements of miscellaneous merchandise and livestock were in greater volume.

The most important factor in the improvement of railroad service in 1923 was the increased purchase of new rolling stock. A recent report of the American Railway Association states that 197,875 freight cars and 4,037 locomotives were installed by the railroads of the United States in 1923, a larger amount than in any other year of the last decade. The accompanying chart shows installments and retirements of freight cars, by years, since 1908 (retirements in 1923 being partly estimated). Retirements exceeded installments in six of the last sixteen years and were very large in 1923, but the net gain in carrying capacity is more than that indicated by the difference between number of cars put in service and number of cars retired, because the average capacity of cars built has been increasing year by year.

On January 7, 1924, the United States Supreme Court upheld the recapture clause of the transportation act in the case of the Dayton-Goose Creek Railway Co. The decision held that every shipper should "share with all other shippers of the same section the burden of maintaining an adequate railway capacity to do their business," but that "the carrier is not

entitled as a constitutional right to more than a fair net operating income upon the value of its properties which are being devoted to transportation." By this decision the railroads which are earning more than the fair return fixed by the Interstate Commerce Commission on their property are required to pay one-half of the excess to the commission for the purpose of establishing a contingent fund. This fund is to be used by the Interstate Commerce Commission in extending loans to the weaker railroads.

The number of freight cars installed in 1923 reached the largest total in 16 years and exceeded retirements for the first time since 1919.

### TRADE.

#### Wholesale trade.

Sales of wholesale dealers were smaller in December than in any other month of 1923 and were of about the same size as a year ago. The Federal Reserve Board's index was 15 per cent lower than in November, due to greatly reduced sales of groceries, dry goods, and shoes. Firms selling furniture, clothing, hardware, and drugs also reported a seasonal recession in their business. The only reporting lines for which an increase in sales was shown as compared with November were diamonds, machine tools, and agricultural implements.

The volume of wholesale business was probably slightly larger in December, 1923, than in the corresponding month of 1922, as sales were of equal value and the average level of wholesale prices was 3 per cent lower. Sales of meat, hardware, drugs, agricultural implements, diamonds, women's clothing, and automobile supplies were larger than a year ago, whereas sales of dry goods, shoes, men's clothing, furniture, stationery, and jewelry were smaller.

Reports from the Chicago and Dallas districts indicate that merchandise stocks held by

wholesalers were larger at the close of 1923 than at the close of 1922 in all lines except groceries. Stocks of shoes in the Chicago district and stocks of dry goods and farm implements in the Dallas district showed the largest accumulations during the year 1923. The most significant changes in volume of stocks during December were increases of 24 per cent in dry goods stocks in the Dallas district and of 20 per cent in shoe stocks in the Chicago district, and a decrease of 15 per cent in grocery stocks in the Dallas district.

Collections were prompter in December than in November, but outstandings at the end of 1923 were slightly larger than at the end of 1922.

#### Retail trade.

Trade at retail stores in December reached the largest total of any month on record, although Christmas trade was somewhat smaller than had been anticipated. Sales of chain 5-and-10-cent stores and chain candy stores both showed gains of about 19 per cent as compared with a year ago. Business at department stores, music stores, drug stores, and cigar stores was also in record volume, while mail-order sales showed about the usual seasonal decline as compared with November.

December sales at 333 department stores in all sections of the United States were 43 per cent larger than in November and 8 per cent larger than in December, 1922. Trade was larger than in last December in all districts except Minneapolis and Kansas City. The largest increases as compared with a year ago were reported from the Chicago and San Francisco districts and amounted to 13 per cent and 16 per cent, respectively. Analysis of sales by departments in the New York district shows that sales were larger than a year ago in all departments except woolen goods and shoes. Sales of men's and boys' clothing were 12 per cent larger than in December, 1922, and sales of hosiery, furniture, house furnishings, silk goods, and cotton goods showed increases ranging from 7 per cent to 5 per cent.

Stocks of merchandise at department stores were much reduced by the heavy Christmas sales and curtailment of new buying, which is the usual development in December. Stocks of 286 stores decreased 17 per cent during December, but were about 14 per cent larger than at the end of 1922. The largest increase in stocks during the year 1923 occurred in the Chicago district and amounted to 24 per cent. Winter clearance sales were started earlier than usual this season in many cities in order

to reduce these accumulated stocks. Statistics of wholesale and retail trade are published on pages 113 and 114.

### PRICES.

The December movement of the index was downward, due to a decrease of almost 2 per cent in prices of producers' goods and smaller decreases in both the other major groups. The classification of the Bureau of Labor Statistics showed decreases in prices of fuel, building materials, and foods, while prices of clothing and metals advanced.

During the first half of January price increases were somewhat more numerous than decreases. Prices of wheat, corn, sheep, pig iron, petroleum, and lumber advanced, while quotations for cotton, sugar, and copper were slightly lower than in December.

This chart shows the price index of the Bureau of Labor Statistics regrouped by stage of manufacture of commodities. (Monthly average 1913=100.) Prices of raw materials and producers' goods have been decreasing, while prices of consumers' goods have increased since last spring.

The comparative trend of prices of raw materials, producers' goods, and consumers' goods during the past three years is shown by the accompanying chart. This regrouping of the index of the Bureau of Labor Statistics indicates that commodities in all stages of manufacture, after declining during 1921, commenced to advance early in 1922; that prices of raw materials and producers' goods reached peaks in August, 1922, and April, 1923, respectively; and that prices of consumers' goods continued to show a gradual upward trend during most of the year 1923. As a result of the decline in quotations for raw materials and producers' goods and the advance in consumers' goods during the past year, prices of raw materials and consumers'

goods at the beginning of 1924 had returned to about their pre-war relationship, but prices of producers' goods were relatively lower than the other groups.

### EMPLOYMENT.

Continued recession in the volume of industrial employment was indicated by a drop in the index of employment in manufacturing industries from 100 in November to 99 in December. The December index was the lowest figure of the year. A decline of 4 per cent has occurred since last April, the high point of 1923. The labor-market index, compiled from public employment office statistics, first presented in this issue of the BULLETIN,<sup>1</sup> showed a more drastic decline. It was at its maximum last February, has dropped fairly steadily since that time, and in December reached the lowest point since April, 1922. This decline reflects not only the decrease in the number of jobs offered after the peak of industrial activity had passed, but also the increase in the number of applicants, caused partially by the flow of workers to cities and industrial centers. The factory employment index is not influenced so much by these forces, as employers generally stop calling upon public employment offices for workers before they start cutting down the number of employees on their pay rolls.

By industries, the greatest decline in number on pay rolls was noted among establishments building and repairing railroad cars and locomotives. The index for this group, excluding railroad repair shops, dropped 9 per cent. Recessions in food products and lumber were largely seasonal. The iron and steel industries continued the downward trend begun last summer. Changes in textiles, on the other hand, were slight, and increases were reported in paper and printing. As compared with December, 1922, only the textile, tobacco, and leather groups showed declines.

According to data compiled by the Bureau of Labor Statistics, total value of pay rolls in December declined slightly more than the number employed, bringing about a minor decrease in per capita earnings. Wage changes were few, and reductions largely offset advances. There was a further decrease in establishments operating full time. Declines in number employed, total pay roll, per capita earnings, and full-time operations all indicate reductions in industrial activity during December. One

<sup>1</sup> See page 83.

partial explanation of this reduction is the fact that many plants ordinarily curtail operations at the end of the year for the purpose of taking inventories.

#### COMMERCIAL FAILURES.

Commercial failures for December numbering 1,841, with liabilities amounting to \$51,614,730, are reported by R. G. Dun & Co. Although insolvencies were more numerous than in December last year, the indebtedness was somewhat less.

During 1923 there were 18,718 failures, involving liabilities of \$539,386,806. Both figures are smaller than 1922 totals, although the average amount involved per failure was somewhat larger in 1923. The ratio of commercial failures to the number of business concerns in the country was 0.94 per cent, which compares with 1.19 per cent for the previous year. The proportion of manufacturing insolvencies to the total number as well as to the total liabilities was higher last year than in 1922. Comparative data, by districts, are given below for the month of December and the entire year.

#### MONEY RATES.

The New York money market in January showed the usual easier conditions following first-of-year disbursements and the seasonal flow of funds to that center. The bulk of commercial paper sold at  $4\frac{1}{4}$  per cent during January, as compared with  $4\frac{1}{4}$ –5 per cent in December, with increased demand from the interior. Although the volume of bankers' acceptances in the market was smaller than in the preceding month, the offering rate on 90-day bills remained at  $4\frac{1}{2}$  per cent, with the exception of one day, when the rate was 4 per cent. The price of Treasury certificates rose sharply with a decrease in the supply and the decline in money rates, and the weekly average yield on 4–6 months' maturities fell to  $3\frac{3}{4}$  per cent, the lowest average since June, and about equal to that for the first week in January, 1923. Liberty bond yields also declined, after remaining almost unchanged for four weeks, to the lowest point since October, 1922. The table below shows the rates prevailing in the New York market during the last two months compared with the corresponding months a year ago.

	Prime commercial paper, 4–6 months.	Prime bankers' acceptances, 90 days.	Yield on certificates of indebtedness, 4–6 months.	Average yield on $4\frac{1}{4}$ per cent Liberty bonds.	Renewal rate on call loans.
December..... 1922.....	$4\frac{1}{4}$	4	3.65	4.41	4.65
January..... 1923.....	$4\frac{1}{2}$	4	3.66	4.41	4.32
December..... 1923.....	$4\frac{1}{4}$ –5	$4\frac{1}{2}$	3.88	4.41	4.96
1924					
Average for week ending—					
Jan. 5.....	$4\frac{1}{4}$	$4\frac{1}{2}$	3.89	4.40	5.44
Jan. 12.....	$4\frac{1}{4}$	$4\frac{1}{2}$	3.80	4.35	4.50
Jan. 19.....	$4\frac{1}{4}$	$4\frac{1}{2}$	3.75	4.32	4.25
Jan. 26.....	$4\frac{1}{4}$	$4\frac{1}{2}$	3.73	4.29	4.00

#### ACCEPTANCE MARKET.

During the four-week period ending January 9 the acceptance market was less active than during the preceding three months, when acceptances were drawn to finance the marketing of agricultural commodities. In the latter part of December there was a decreasing supply of bills, but in January the volume of new bills increased somewhat and the demand became more active, due to requests for bills from commercial firms and banks in the interior. The demand for bills was fairly good except during the last week of December, but it was less than

the supply, and as a consequence dealers' aggregate portfolios showed moderate increases at the end of the period. Rates remained generally firm and unchanged at  $4\frac{1}{2}$  bid and 4 offered for 30-day bills and  $4\frac{1}{2}$  bid and  $4\frac{1}{2}$  offered for 60 and 90 day bills. Rates on longer maturities ranged from  $4\frac{1}{4}$  to  $4\frac{5}{8}$  bid and  $4\frac{1}{2}$  to  $4\frac{3}{4}$  offered. Bills were drawn principally against cotton, silk, sugar, grain, wool, agricultural implements, provisions, and to provide dollar exchange.

#### SAVINGS DEPOSITS.

Statistics furnished by 882 banks distributed throughout the United States indicate that savings deposits increased nearly 2 per cent between December 1, 1923, and January 1, 1924, the unusually large increase being attributable chiefly to the crediting of semiannual interest. The increase over January 1, 1923, was 9.1 per cent, slightly less than the increase of December 1 deposits over those of a year previous. The total deposits reported on January 1, 1924, amounted to \$6,913,252,000 as compared with \$6,778,828,000 on December 1, 1923, and \$6,336,928,000 on January 1, 1923. No district showed a decrease during the month of December, 1923, and the highest rate of increase—that occurring in the Philadelphia district—was 3.7 per cent. A comparison of savings deposits by Federal reserve districts on January 1, 1924, with deposits on December 1, 1923, and January 1, 1923, is shown in the following table. The figures for the Boston and New York districts are those of large mutual savings banks, but in all other districts reports of other banks are included to make the figures representative.

#### SAVINGS DEPOSITS, BY FEDERAL RESERVE DISTRICTS.

[000 omitted.]

District.	Number of banks.	Jan. 1, 1924.	Dec. 1, 1923.	Jan. 1, 1923.
Boston.....	64	\$1,217,267	\$1,207,722	\$1,130,998
New York.....	30	1,923,763	1,876,107	1,807,550

Dallas.....	113	91,622	90,409	79,247
San Francisco.....	74	980,205	957,986	861,565
Total.....	882	6,913,252	6,778,828	6,336,928

#### FOREIGN TRADE.

Decreasing imports and rising exports during December brought about an export balance of \$140,000,000, the largest excess of exports for any month since October, 1921, when it totaled \$155,000,000. Compared with the preceding month, December imports declined by about \$6,500,000, to \$285,000,000, while imports rose \$25,000,000, to \$425,000,000.

For the year 1923, as compared with 1922, total imports rose from \$3,100,000 to \$3,800,000, an increase of about \$700,000. Exports rose from \$3,800,000 in 1922 to \$4,100,000, an increase of \$300,000. The total export balance, accordingly, declined from about \$720,000 in 1922 to about \$375,000 in 1923. The export balance since 1913 has been as follows:

#### TOTAL IMPORTS OF MERCHANDISE INTO AND EXPORTS OF MERCHANDISE FROM THE UNITED STATES.

[In millions of dollars.]

	Imports.	Exports.	Export balance.	Ratio of imports to exports.
1913.....	1,793	2,484	691	72
1914.....	1,789	2,114	325	85
1915.....	1,779	3,555	1,776	50
1916.....	2,392	5,483	3,091	44
1917.....	2,952	6,234	3,282	47
1918.....	3,031	6,149	3,118	49
1919.....	3,904	7,920	4,016	49
1920.....	5,278	8,228	2,950	64
1921.....	2,509	4,485	1,976	56
1922.....	3,113	3,532	719	81
1923.....	3,789	4,165	376	91

**GOLD MOVEMENTS.****UNITED STATES.**

Gold imports into the United States during December, 1923, were \$32,641,000, compared with \$39,757,000 for November and an average of \$26,370,000 for the preceding 11 months of the year. The bulk of the imports, 46 per cent, came from England, about 16 per cent came from France, and 7 per cent from the Netherlands. A considerable consignment of gold, amounting to \$5,206,000, was received during the month from Argentina in connection with public debt operations of the Argentine Government. Gold exports for the month, \$711,000, were directed largely to Mexico, Hongkong, and Canada.

Net gold imports for the past calendar year totaled \$294,072,000, compared with \$238,295,000 for 1922 and \$667,376,000 for 1921. Gold imports from England, composed mainly of gold of South African extraction, constituted 46.4 per cent of the total gold imports for the year. Next in importance were gold imports from Germany, which constituted 15.3 per cent of the total, this gold coming largely out of the reserves of the Reichsbank; gold imports from Canada also constituted over 15 per cent of the total. Imports from the three countries named constituted over 77 per cent of the total foreign gold brought to this country during the past year. Substantial gold imports for the year are also credited to France and the Netherlands. Imports from the Scandinavian countries, mainly of gold of Russian origin, which in 1922 constituted about 22 per cent of the total gold brought to this country, have practically ceased, except for a consignment of about \$3,500,000 received from Denmark during July of the past year.

Gold exports for the year totaled \$28,643,000, compared with \$36,875,000 in 1922 and \$23,891,000 in 1921. Over one-half of the total gold exported was directed to India, other less important destinations for the year being Mexico, Hongkong, and Canada.

Silver imports for December, \$8,172,000, were largely in excess of imports for the immediately preceding months and of the average for the year. Imports from Mexico increased from \$4,328,000 in November to \$6,534,000 in December and those from Peru from \$88,000 to \$519,000. Silver exports for the month, \$9,521,000, were larger than imports and exceeded the exports for any month since April,

1920. China and India continued as the main destinations of the silver exported during the month. Net silver imports for the year were less than \$2,000,000, compared with about \$8,000,000 the year before and \$11,667,000 in 1921.

A detailed table of gold and silver movements appears on page 144.

**GREAT BRITAIN.**

Total imports of gold into Great Britain during November fell off £400,000 as compared with October, while total gold exports rose by £3,000,000, giving a net export balance for November more than 2½ times as large as that for October, and increasing the total net export balance for the 11 months of 1923 from £6,869,000 to £12,975,000, an increase of almost 90 per cent.

By far the greater part of the decline in total imports was accounted for by lowered imports from the Transvaal. The increase in exports, on the other hand, was due to large exports to the United States, which rose from £5,122,000, or 83 per cent of the total, in October to £8,411,000, or 91 per cent of the total, in November.

## FOREIGN EXCHANGE.

Continued marked declines took place in most of the leading European exchanges during January. Sterling declined from \$4.31 on the 4th to \$4.21 on the 21st, the lowest rate touched since January, 1922. French francs made a new low record, declining from 5.01 cents per franc on the 2d to 4.38 cents on the 14th, which was 1 point below the 4.39 cents quoted on that day for the Italian lira. The lira, contrary to the prevailing movement of the exchanges, rose from 4.28 cents on the 3d to 4.39 cents on the 12th, and maintained this rate through the 15th. On the 21st it was quoted at 4.33 cents.

German marks, since the establishment of the official ratio between the new rentenmark

and the paper mark (1 billion paper marks = 1 rentenmark), have stopped their downward movement, and showed some improvement. Other European exchanges showed moderate recessions.

The Canadian dollar declined from 97.49 cents on the 2d to 97.05 cents on the 14th, but rallied to 97.73 cents on the 18th.

Of the South American currencies, Argentine pesos and Brazilian milreis showed advances, while the Chilean peso showed a slight decline.

In the Oriental currencies, the Shanghai tael and Indian rupee remained relatively stable. Japanese yen declined from 45.77 cents per yen on the 2d to 43.38 cents on the 15th, rallied to 46.09 cents on the 18th, and stood at 45.59 cents on the 21st.

## INDUSTRIAL STATISTICS.

The year 1923, in which many production records were established, ended with a rather sharp decline in industrial activity. The index of production in basic industries, including minerals and manufactured products and corrected for normal seasonal changes, declined to 111, the lowest figure recorded since October, 1922. The average for the year was 120. The unadjusted manufacturing index, shown on the chart below, has not indicated such a low rate of industrial activity since July, 1922. Factory employment during December was also the smallest of the year, and the labor-market index, described in this BULLETIN, registered a reduction in the demand for workers relative to the supply. The index of mining output declined nearly 4 per cent to a point only slightly above that of September, the month of the anthracite strike. The drop in the index of agricultural movements was almost entirely seasonal.

All the chief groups of manufactures were operated at a reduced rate during December. The greatest decline, besides the seasonal recessions in tobacco, lumber, and cement, was in the textile group, in which all three lines—cotton, wool, and silk—were less active. Steel-ingot output was further reduced, but the total production of pig iron increased

slightly, and the unfilled orders of the United States Steel Corporation turned upward for the first time in nine months. A larger number of locomotives were completed than in November, but unfilled orders at the end of the year equaled less than two months' output. The decline in automobile production and shipments was no more than seasonal. Sole leather finished during the month totaled less than in any month since early 1921, and the number of shoes manufactured was likewise considerably reduced. Among food products, declines in sugar meltings and cattle and calves slaughtered more than offset increases in wheat-flour production and sheep and hogs slaughtered. In agricultural movements also the increase in hog receipts was more than balanced by decreases in the marketing of other livestock. Although corn receipts nearly doubled in December, the movement of grains, as a group, was smaller than during November. Cotton receipts and tobacco sales were seasonally less than in November, but greater than a year ago. The drop in the mineral index was due to substantial reductions in the output of petroleum and bituminous coal, as the other products, except lead, were produced in somewhat greater volume than during November.

INDEX OF EMPLOYMENT IN MANUFACTURING INDUSTRIES.<sup>1</sup>

Production.....	128,122	181,194	139,525
Stocks.....	140,863	139,763	109,444
Oleomargarine consumption (pounds, 000 omitted).....	20,748	24,101	19,965

## COMMODITY MOVEMENTS—Continued.

	December, 1923.	November, 1923.	December, 1922.
<b>Other Agricultural Products—Continued.</b>			
Tobacco sales at loose-leaf warehouses (pounds, 000 omitted):			
Dark belt, Virginia.....	6,059	2,742	6,895
Bright belt—			
Virginia.....	12,231	17,467	8,232
North Carolina.....	45,314	75,810	17,617
Burley.....	15,722	965	19,185
Western dark.....	15,162	1,355	18,683
Sale of revenue stamps for manufacture of tobacco, excluding Porto Rico and Philippine Islands (000 omitted):			
Cigars (large).....	491,359	650,687	561,042
Cigars (small).....	31,427	45,523	40,514
Cigarettes (small).....	4,429,842	5,363,016	3,544,624
Manufactured tobacco (pounds).....	23,272	30,148	23,547
Fruit shipments (carloads):			
Grapefruit.....	1,661	2,546	1,549
Oranges.....	8,508	8,288	8,047
Lemons.....	504	315	368
Apples.....	7,747	25,187	8,229
Vegetable shipments:			
White potatoes (carloads).....	11,403	19,400	11,591
Onions (carloads).....	1,683	2,622	1,526
Rice (pounds, 000 omitted).....	81,965	123,610	94,032
Sugar, all ports (long tons):			
Receipts.....	108,809	159,886	149,438
Meltings.....	168,000	268,442	244,391
Raw stocks close of month.....	491,640	473,136	571,927
<b>Fishery Products.</b>			
Fish landed by American fishing vessels, total catch (pounds, 000 omitted).....	12,891	15,777	9,505
Cold-storage holdings, frozen and cured fish, on 15th of month (pounds, 000 omitted).....	84,019	84,719	75,653
<b>Forest Products.</b>			
<b>Lumber:</b>			
Number of mills—			
National Lumber Manufacturers' Association.....	562	583	583
Southern Pine Association.....	179	182	174
West Coast Lumbermen's Association.....	124	125	135
Production (feet, 000,000 omitted)—			
National Lumber Manufacturers' Association.....	1,027	1,332	1,103
Southern Pine Association.....	336	414	365
West Coast Lumbermen's Association.....	359	425	368
Shipments (feet, 000,000 omitted)—			
National Lumber Manufacturers' Association.....	1,025	1,230	1,281
Southern Pine Association.....	342	384	410
West Coast Lumbermen's Association.....	321	380	402
Naval stores at 3 southern ports:			
Spirits of turpentine (casks)—			
Receipts.....		26,586	24,513
Stocks at close of month.....		39,221	45,742
Rosin (barrels)—			
Receipts.....		106,088	105,574
Stocks at close of month.....		316,820	355,421
<b>Fuel and Power.</b>			
Coal and coke (short tons, 000 omitted):			
Bituminous coal production.....	40,165	42,946	46,240
Anthracite coal production.....	7,974	7,746	8,430
Anthracite coal shipments.....		5,829	6,455
Coke—			
Beehive coke production.....	1,063	1,103	1,233
By-product coke production.....	2,999	2,942	3,063

## COMMODITY MOVEMENTS—Continued.

<b>Fuel and Power—Continued.</b>			
Petroleum, crude (barrels, 000 omitted):			
Production.....	58,892	64,829	50,137
Stocks at close of month.....	333,053	331,077	264,578
Producing oil wells completed (number).....	887	1,007	1,197
Oil refineries: <sup>1</sup>			
Production (000,000 omitted)—			
Crude-oil run (barrels).....	50	66	44
Gasoline (gallons).....	613	659	567
Kerosene (gallons).....	221	191	234
Gas and fuel oils (gallons).....	1,053	1,070	892
Lubricating oils (gallons).....	96	88	89
Stocks (000 omitted)—			
Crude-oil run (barrels).....	33	34	33
Gasoline (gallons).....	985	947	777
Kerosene (gallons).....	239	225	255
Gas and fuel oils (gallons).....	1,500	1,437	1,852
Lubricating oils (gallons).....	231	218	226
Electric power produced by public utility plants (kilowatt hour, 000,000 omitted):			
Produced by water power.....	1,089	1,516	1,417
Produced by fuels.....	3,257	3,327	3,195
Total.....	4,547	4,843	4,612
<b>Metals.</b>			
<b>Iron and steel:</b>			
Iron ore shipped from Lake Superior (tons, 000 omitted).....	10	4,938	10
Pig-iron production (long tons, 000 omitted).....	2,921	2,894	3,087
Steel-Ingot production (long tons, 000 omitted).....	2,844	3,114	3,300
Unfilled orders, United States Steel Corporation (long tons, 000 omitted).....	4,445	4,369	6,746
Fabricated structural steel orders (tonnage).....	203	133	150
Steel barrels (number)—			
Shipments.....	144,648	154,562	201,319
Unfilled orders.....	379,008	385,436	424,107
Steel castings bookings (net tons).....	41,098	39,660	68,889
Silver production (troy ounces, 000 omitted).....	4,748	4,894	5,052
Copper production (pounds, 000 omitted).....	128,193	127,963	104,675
Zinc (pounds, 000 omitted):			
Production.....	92,970	88,560	85,682
Stocks, close of month.....	73,156	61,808	36,504
Shipments.....	81,622	78,326	88,172
Tin (pounds, 000 omitted):			
Deliveries to factories.....	10,774	15,198	10,909
Stocks, close of month.....	3,700	2,401	8,297
<b>Textiles.</b>			
<b>Cotton (bales, 000 omitted):</b>			
Sight receipts.....	1,707	2,135	1,510
American spinners' takings.....	1,007	1,054	1,190
Stocks at mills.....	1,623	1,439	1,917
Stocks at warehouses.....	3,526	3,771	4,069
Visible supply.....	3,405	3,226	3,812
Consumption by mills.....	462	532	529
Spindles active during month (000 omitted).....	34,045	34,101	34,968
Spindle hours active during month (000,000 omitted).....	7,139	8,015	8,228
Finished cotton fabrics:			
Finished yards billed (yards, 000 omitted).....	94,824	97,531	106,716
Orders received (yards, 000 omitted).....	81,041	91,829	96,558
Shipments (cases).....	46,586	46,548	55,764
Finished stocks (cases).....	49,506	49,017	45,846
Knit underwear (dozens):			
Production.....	311,131	370,364	328,402
New orders received.....	499,969	292,442	762,027
Shipments.....	290,582	353,813	317,051
Cancellations.....	14,192	12,805	4,926
Unfilled orders end of month.....	1,215,517	1,020,322	1,703,666

<sup>1</sup> Figures for November, 1923; October, 1923; November, 1922.

## WHOLESALE AND RETAIL TRADE STATISTICS.

The volume of retail trade was larger in December than in any previous month on record, although the increase in sales was somewhat less than usual for the Christmas season. Wholesale trade was 15 per cent less than in November and about the same size as in December, 1922. The trend of wholesale and retail trade by lines and districts is shown in the following tables.

## PRICE MOVEMENTS IN PRINCIPAL COUNTRIES.

### INTERNATIONAL WHOLESALE PRICE INDEX.

In December the price index of the United States was unchanged for the fourth consecutive month, and that for Canada declined 2 points. Coincident with the fall in the exchange, prices rose 6 points in England and 10 points in France. The recent price movement has been particularly abrupt in England, where in the last two months prices have risen 6.6 per cent, compared with an advance of 5.4 per cent in France and no change in this country. As a result, the British gold index is now only 4 points below the American, contrasted with 9 points during the preceding two months, while, owing to the fact that French exchange has been falling much faster than French prices have been rising, the gold index of that country dropped 3 points to 116, where it is 47 points below the American index.

Comparing December, 1923, with the same month of the preceding year, prices in the United States have fallen 1.2 per cent and in Canada 2.7 per cent. The close relation between prices and the exchange movement over a period is illustrated by the fact that while sterling exchange between those dates fell 5.4 per cent, British prices rose 7.9 per cent, while French exchange dropped 27.5 per cent and prices rose 26.4 per cent.

The tables below give the all-commodities and group index numbers of wholesale prices in the five countries included in the Federal Reserve Board's international index. In the first table the all-commodities index for each country is shown both in terms of the actual currency and "converted to a gold basis." The latter figure takes into account the depreciation of the foreign currency in terms of the American dollar and the series indicates relative price levels in the several countries when all prices are expressed in dollars.

<sup>1</sup> Complete descriptions of these index numbers may be found in the following issues of the BULLETIN: United States—May and June, 1920, June, 1921, and May, 1922; England—February, 1922; France—August, 1922; Canada—July, 1922.

# **REVISION OF THE INDEX OF WHOLESALE PRICES IN FRANCE—ERRATA.**

In the FEDERAL RESERVE BULLETIN for January, 1924, there appeared a revision of the board's index number of wholesale prices in France. The figures for goods produced from December, 1921, to December, 1923, were incorrect. Corrected figures are as follows: December, 1921—308.

	1922	1923		1922	1923
January.....	309	339	July.....	333	382
February.....	306	372	August.....	322	381
March.....	313	389	September.....	314	393
April.....	328	384	October.....	312	394
May.....	332	379	November.....	322	402
June.....	332	386	December.....	332	409

The foreign index numbers of wholesale prices are cabled to the Federal Reserve Board by the various foreign statistical offices. Index numbers of commodity groups for most of the countries are also available in the office of the Division of Research and Statistics of the Board, and may be had upon request.

Wherever possible the indexes have been shifted from original bases to a 1913 base. Exceptions are noted. Further information as to sources, number of commodities, and period of the month to which the figures refer may be found on page 48 of the January, 1924, issue of the BULLETIN.

## BUSINESS AND FINANCIAL CONDITIONS ABROAD.

### THE LONDON MONEY MARKET IN 1923.

**Short-term rates in the British market.**—The movement of short-term rates during the past year in the London money market was influenced partly by treasury operations and partly by current demand arising out of commercial activity. During the first half of the year short-term liquid funds, which had maintained a daily average of 5.21 per cent in 1921 and 2.65 per cent in 1922, became so abundant that rates on three-month bankers' bills fluctuated between 2 and 2½ per cent, with day-to-day money at still lower rates. These low rates tended to increase loans not only to British but also in some measure to American borrowers, since at that time rates in the New York and in the London market were not

commercial sources, enhanced by rising prices, may be noted as affecting rates, and also the reviving use of commercial bills in domestic transactions, which indicated general improvement in credits and a feeling of greater confidence. Nevertheless, it would appear that even the routine of Government financing—collection of taxes, disbursement of interest, anticipating revenue by short-term bills, and debt funding—under present conditions involves amounts sufficient to affect the current position of the money market.

**Long-term rates.**—Abundance of funds affected long-term as well as short-term rates. On long-term paper rates averaged lower during 1923 than during the two preceding years. Monthly average yield for four British Government securities declined from 5.75 per cent in 1920 to 5.55 per cent in 1921, 4.63 per cent in 1922, and about 4.50 per cent in 1923. During the first quarter of the year long-term rates tended downward, reacting upward in the later months and finishing the year slightly lower than at the beginning. Fluctuations in long-term rates have, however, been less considerable than those shown for short-term rates. The relation between rates on three-month bankers' bills and long-term rates may be seen from the following chart.

Average yield on four British Government long-term securities and rate on three-months acceptances in the London market.

closely adjusted. On July 5 the discount rate at the Bank of England was raised from 3 to 4 per cent and rates on three-month bankers' bills advanced in this month to between 3½ and 3¾ per cent, bringing the London rates nearer to the rates prevailing in New York. These higher rates were practically sustained during the remainder of the year. The advance in commercial rates can not be ascribed solely to treasury flotations, although the offering of treasury bills in amounts sufficient to effect a net increase of outstanding floating indebtedness by £50,000,000 in the period from March 31, the end of the fiscal year, to December 22 probably accounts in part for the greater scarcity of money during the latter half of the year. Increased demand from com-

**Capital market.**—The year 1923 witnessed a material decrease of activity in the British capital market and this in face of abundant funds. The volume of new security issues was below that of any year since 1913. Total loans floated, as reported by the Statist, amounted to only £285,955,000, of which 70 per cent were issued during the first half of the year when short-term rates were low. The corresponding total for 1922 is £584,951,000, more than double the 1923 figure, and for 1921, £392,800,000, which also considerably exceeds the total for 1923. Under these conditions utilization of British funds in purchasing American securities which were yielding better returns tended to sustain British long-term rates.

An analysis of the new security issues shows that the greater part of the decline took place in government and municipal borrowing, which dropped from £459,228,000 in 1922 to £182,848,000 in 1923. Commercial issues, although larger than in 1921, were £22,616,000 lower than during 1922. Government borrowings declined from £438,000,000 in 1922 to £156,126,000 during the past year. Also the

total amount of foreign securities placed in London was less by £18,265,000 than in the preceding year.

**London banks.**—Reports of the nine London clearing banks for the year 1923 show that the reduction in loans and deposits which had continued throughout 1922 came to an end in March, 1923. Total discounts and advances in March were £992,000,000, and total deposits £1,596,000,000. By October loans and discounts had advanced to £1,021,000,000 and deposits to £1,629,000,000. As pointed out above, this increase in loans, discounts, and advances is probably due to both treasury operations reflected in the larger amount of treasury bills outstanding and the increased commercial demand for credit caused by a greater volume of transactions at a higher price level.

Though totals for the above items increased from the spring of 1923 on, the expansion was so slight that end-of-month averages for the year of the more important items were lower than those of the two preceding years. This decrease is in some measure accounted for by reduction in the average floating debt outstanding in 1923 as compared with 1922—a reduction effected partly out of revenue. In part, however, it represents substitution both by banks and private investors of long-term government bonds yielding a higher rate of interest for treasury bills. End-of-month averages for the nine London clearing banks are shown below:

#### NINE LONDON CLEARING BANKS.

[Monthly averages. In thousands of pounds.]

	Money at call and short notice.	Discounts and advances.	Investments.	Deposits.
1921.....	96,875	1,175,690	309,238	1,768,361
1922.....	107,078	1,067,745	372,398	1,727,341
1923.....	105,248	1,015,058	337,672	1,632,167

The position of the banks throughout the year was affected by the availability of treasury bills. Whenever loanable funds increased and the demand for commercial loans proved insufficient, treasury bills offered a good outlet for the surplus; and when the demand for commercial loans increased, or funds declined, treasury bills were allowed to run off at maturity.

Weekly averages of the more important items in the Bank of England statement were somewhat lower than corresponding averages for the preceding year, and no considerable fluctuation in these items developed. The ratio of reserves

to liabilities, with the exception of some seasonal movements, fluctuated around an end-of-month average of 18.375 per cent. Averages of weekly figures for the principal items are shown in the following table for the past four years:

#### BANK OF ENGLAND.

**Banking developments on the Continent.**—In Germany, the Rentenmark seems to have had a measure of success, and mark exchange has remained stable for the past few weeks. It may be noted also that the balance sheet of the Reichsbank for January 7 showed a decrease in notes outstanding of about 82,000,000,000 marks, the first decline since April, 1922. On December 23 the official rate of the Reichsbank was decreased from 108 per cent to 10 per cent on loans in terms of a stable currency, while the higher rate was maintained for loans in terms of paper marks.

Increased demand for funds coupled with the steady decline in the principal exchanges led to advances in the discount rates of many central banks. In fact, since November 1, 1923, eleven central banks have advanced their rates of discount. The rates prevailing at principal central banks and changes for the month are shown on page 125. The Bank of France on January 10, 1924, raised its rate from 5 per cent to 5½ per cent, and the following week made a further advance to 6 per cent. The apparent reason for these increases is found in the recent rapid expansion of discounts and the corresponding increase in circulation. At the end of September discounts, which do not include advances to the Government, amounted to 2,500,000,000 francs; on January 3 these discounts reached the unprecedented total of 4,264,000,000 francs, an increase of 68 per cent in 3 months. During the same period note circulation rose from 37,600,000,000 francs to 39,100,000,000 francs, the highest figure since November, 1920, and within 2,000,000,000 francs of the legal maximum. Two weeks later the statement of January 17 showed discounts had been reduced by 677,000,000 francs and note circulation by 436,000,000 francs.

<sup>1</sup> Figures for August and September, 1923, and cumulative through September, 1923 and 1922.

The following tables present the Federal Reserve Board's index numbers of the monthly volume of foreign trade of the United States, and monthly fluctuations in ocean freight rates prevailing between this country and principal European trade regions. For methods of construction of these indexes, reference may be made to the FEDERAL RESERVE BULLETINS for July, 1920, and August, 1921.

## FOREIGN TRADE INDEX.

<sup>1</sup> On loans in terms of Rentenmarks and other stable currencies.

*Changes for the month.*—Bank of France: January 10, from 5 to 5½ per cent; January 17—to 6 per cent. National Bank of Denmark: January 17, from 6 to 7 per cent. Czechoslovakia: January 28, from 5½ to 5 per cent. Netherlands: January 24, from 4½ to 5 per cent. Poland: January 25, from 48 to 96 per cent. Germany: On December 28, 1923, the Reichsbank reduced its rate on loans made in terms of Rentenmarks and other stable currencies from 108 per cent to 10 per cent. The rate on loans in terms of paper marks was maintained at 108 per cent.

# BANKING AND FINANCIAL STATISTICS.

## CONDITION OF FEDERAL RESERVE BANKS.

Beginning with January 9, 1924, a number of changes were made in the arrangement of items in the board's weekly press statement showing the condition of the Federal reserve banks. The principal changes included the insertion of a subtotal representing "Gold held exclusively against Federal reserve notes" in place of the subtotal heretofore carried representing "Total gold held by banks"; the substitution of "Total bills discounted" for "Total bills on hand"; the addition of the subtotal "United States Government securities"; and the placing of the liabilities to the public and to member banks for Federal reserve notes and deposits at the beginning of the liability statement.

Since the passage of the June, 1917, amendment to the Federal reserve act, authorizing the Federal reserve banks to count gold deposited with the Federal reserve agents as part of the reserve required to be carried against Federal reserve notes in actual circulation, the board's weekly statement has shown the amount of gold so pledged against the caption "Gold with Federal reserve agent," and has

also shown the amount of gold in the bank's gold redemption fund with the United States Treasury against the caption "Gold redemption fund." In accordance with the provisions of the Federal reserve act gold in these two accounts is described in the new caption as gold held "exclusively" against Federal reserve notes.

The subtotal "Total bills discounted" was substituted for "Total bills on hand" in order to show the total amount of accommodation extended to member banks through the discount of eligible paper.

The more important items among the liabilities of the Federal reserve banks are those to the public in the form of Federal reserve notes and to member banks for the legal reserves which must be deposited with them. Accordingly these current liabilities to the public and to member banks, rather than the capital and surplus accounts, as has heretofore been the practice, were placed at the beginning of the liability statement.

<sup>1</sup> Including bankers' acceptances drawn for an agricultural purpose and secured by warehouse receipts, etc.

## EARNINGS AND EXPENSES OF FEDERAL RESERVE BANKS.

Total earning assets of the Federal reserve banks have remained relatively constant during the past two years, with the result that gross earnings of the reserve banks in 1923 were approximately the same as for the preceding year, or about \$50,000,000. Earnings from discounted bills constituted a larger proportion of the total in 1923 than in 1922 because of the fact that the greater part of the United States securities owned by the Federal reserve banks at the beginning of 1923 matured during the early part of that year and no additional securities were purchased to take their place. The decline in security holdings was accompanied by an approximately equal increase in the volume of discounts for member banks.

A comparison for the past two years of daily average holdings of each class of earning assets, earnings therefrom, and annual rates of earnings is given in the table.

As in the case of earnings, current expenses have also been on about the same scale for the past two years, in spite of the fact that in larger departments, such as transit and cash, the volume of work handled has continued to increase. Salaries paid to clerical employees showed a reduction for the year of \$196,000 or from \$14,222,000 to \$14,026,000. Total current expenses, however, exclusive of fiscal agency department expenses reimbursable by the Treasury Department, increased slightly and aggregated \$29,771,000, as compared with \$29,559,000 in 1922.

From the current net earnings of the banks, which aggregated \$20,938,000, was deducted

\$8,227,000, representing mainly additional reserves set aside to provide for probable losses in connection with the failure of member banks, for depreciation on bank premises, and for furniture and equipment purchased during the year. Of the \$12,711,000 of net earnings remaining, \$6,553,000 went to member banks in payment of the 6 per cent annual dividend, \$2,545,000 was transferred to surplus account, and the remainder, or \$3,613,000, was paid to the Government as franchise taxes. The latter amount brings the payments to the Government as franchise taxes since the organization of the Federal reserve banks up to a total of \$139,001,000.

## CHANGES IN MEMBERSHIP IN THE FEDERAL RESERVE SYSTEM.

Changes in membership in the Federal reserve system between the 1st and the 15th of January, together with those occurring late in December and not included with the data previously published for that month, are shown in the table below. The net change in membership for the system, a decrease of 30, was due to the loss of 3 members through voluntary liquidation, 16 through closing, suspension, or insolvency, 9 through mergers and absorptions, 6 through absorption by nonmember banks, and 2 through voluntary withdrawal; as against these losses 5 nonmember banks joined the system and 1 member bank was newly organized.

State bank and trust company membership decreased by 9 as a result of the addition of 3, one previously a national bank, and the loss of 12, due to 3 conversions to national banks, 2 member bank mergers, 1 absorption by a nonmember bank, 1 voluntary liquidation, 2 voluntary withdrawals, and 3 banks closed. National-bank membership showed a decrease of 21. There were 7 additions, 1 by primary organization and 6 by the conversion of former

State banks and trust companies, 3 of them previously nonmembers. Of 28 losses of national members, 3 were absorptions or successions by nonnational members, 5 were absorptions by national banks, 5 were absorptions by nonmember banks, 2 were voluntary liquidations, 10 were suspensions occurring in the Minneapolis, Kansas City, Dallas, and San Francisco districts, and 3 were insolvencies occurring in the Minneapolis district.

	Number.			Capital and surplus.		
	State banks and trust companies.	National banks.	All member banks.	State banks and trust companies.	National banks.	All member banks.
Gains:						
By absorption.	1 (2)	0	(2)	3,000,000	.....	3,000,000
All other..	3	7	10	13,025,000	3,052,500	16,077,500
Losses.....	* 12	* 28	40	4,317,000	16,090,750	20,407,750
Net change	-9	-21	-30	+11,708,000	-13,038,250	-1,330,250

\* Does not affect State bank and trust company numbers and is included among national-bank decreases in number and capital and surplus.

\* Includes 1 merger of members and absorption of 1 member bank by another affecting number only.

\* Includes 5 absorptions of national banks affecting number only.

<sup>1</sup> Includes United States paper currency in circulation in foreign countries and the amount held by the Cuban agencies of the Federal reserve banks.

<sup>2</sup> Includes money held by the Cuban agencies of the Federal reserve banks of Boston and Atlanta.

<sup>3</sup> Does not include gold bullion or foreign coin outside of vaults of the Treasury, Federal reserve banks, and Federal reserve agents.

<sup>4</sup> These amounts are not included in the total since the money held in trust against gold and silver certificates and Treasury notes of 1890 is included under gold coin and bullion and standard silver dollars, respectively.

<sup>5</sup> Includes gold held in trust against gold certificates and standard silver dollars held in trust against silver certificates and Treasury notes of 1890, the aggregate of which should be deducted from the sum of money held by the United States Treasury and the Federal reserve system and money in circulation to arrive at the stock of money in the United States. The amounts of such gold and silver held in trust as of the date of this statement are shown in parentheses in the first column.

DEBITS TO INDIVIDUAL ACCOUNTS BY BANKS IN SELECTED CITIES.<sup>1</sup>

<sup>1</sup> Figures for other reporting cities are given to the press weekly and can be obtained upon request.

## MONEY RATES PREVAILING IN LEADING CITIES.

The following table shows the customary rates charged on loans and discounts in the various cities in which Federal reserve banks and their branches are located, as reported by representative banks. The table differs from that previously published in the BULLETIN in that high and low rates and rates on bankers' acceptances and commercial paper bought in the open-market are omitted. A discussion of open-market rates in New York, on which open-market rates throughout the country are based, will be found currently elsewhere in the BULLETIN in this issue on page 103. Instead of high and low rates, which generally depend on the quality of the paper, a comparison of customary rates prevailing during the last month, the previous month, and the

corresponding month a year ago is shown below. Column 1 under each class of paper shows rates for the month ending January 15, 1924, column 2 for the month ending December 15, 1923, i. e., a month earlier, and column 3 for the month ending January 15, 1923, i. e., a year earlier. In most cases these rates are not averages but are those rates at which the bulk of paper of each class is handled by reporting banks. These banks represent from 20 to 100 per cent, generally over 50 per cent, of the banking resources of the cities in which they are located. Where it appears from the reports that no one rate clearly covers the bulk of the paper handled by all the reporting banks, a range of rates charged by the different banks is given.

[Column 1, under each class of paper shows customary rates for month ending January 15, 1924; column 2 for the preceding month, and column 3 for the corresponding month the year before.]

District and city.	Customers prime commercial paper.						Interbank loans.			Loans secured by Liberty bonds.			Loans secured by stocks and bonds.						Loans secured by warehouse receipts.			Cattle loans.
