system. To judge from the way in which Congress treats the banks it might be supposed that a majority of the people in this country held an opinion regarding them the very reverse of that expressed by this writer. This would be a fair inference from the fact that the banks are allowed to be gradually but certainly squeezed out of existence from the lack of an amendment to the present laws, which, without costing the Government a dollar or impairing the safety of the currency one iota, would enable these institutions to continue business on the normal basis for an indefinite period. But, nevertheless, the deduction would be a false one. A large majority of the people fully appreciate the benefits they derive from the banks, and the immense superiority of the present notes over the old State bank-notes, or over any others that might be devised to take their place, attest their value. The difficulty lies solely in the kind of material that Congress is composed of. This is proved by the attitude of that body on any measure requiring independence and honesty in the members. There are a few who possess those qualities, but the majority have proved themselves a crowd of self-seeking, partisan demagogues. This is the reason why none of the important measures that the business of the country demands receive attention. Of course the people are primarily responsible for this, but at the same time it does not prove that the people are opposed to the National banks or are in favor of the silver dollar coinage.

---

WE ARE SURPRISED TO SEE A PAPER devoted to the banking interests quote with approval an article from the *Denver Journal of Commerce* in which the latter claims that "the absence of just laws on the subject of usury is a hindrance to the prosperity of our State." It goes on to say that "The laws of Colorado recognize as binding contracts to pay any rate of interest, no matter how ruinous or unjust to the debtor. The concurrent wisdom of nearly all the States of the Union has fixed upon some limit to the amount of interest that may be legally collected." The mistake here is in saying that the concurrent wisdom, instead of the concurrent ignorance and stupidity of the law-makers, are responsible for our so-called "usury laws." Intelligent men who have studied the subject agree that such laws are an impediment to commerce while they can only prove an injury to those for whose benefit they are intended. Colorado did well when it put itself on the same plane with Massachusetts in this respect.

---

IN THE COURSE OF A RECENT DEBATE in the House of Representatives it was stated that the coinage of silver dollars was stopped at San Francisco, where, it was claimed, the coin is popular, in order to increase the coinage at other points where the coin will not circulate, in order to throw discredit upon silver. The facts happen to be that the efforts of the Treasury officials at San Francisco to put the dollars in circulation were almost entirely unsuccessful, and they were being

minted merely to be piled up in the vaults, so that the discontinuance of the coinage became imperatively necessary. Some of our contemporaries seem to think this condition of affairs is inconsistent with the claim of the silver men that the Californians are strongly in favor of the coinage. They are wrong. RHODES' JOURNAL OF BANKING claims the credit of having discovered the theory which reconciles these seemingly conflicting facts. As applied to the case at hand, the theory works in this way: It is presumable that a majority of the people of California are in favor of the continuance of the silver dollar, and would insist upon their representatives in Congress voting for it, but they do not want the unwieldy coins forced upon themselves. The more the matter is examined the more the evidence accumulates that this is the attitude of the silver men of the West and elsewhere. They want the cheap dollars turned out in order to assist the silver mining industry, or with a view of enabling the debtor to pay off his mortgages the easier, but when it comes to the point of using the coins in actual every-day business they do not want and they will not have them.

---

THE CORRESPONDENCE BETWEEN SECRETARY MANNING and the President conveying the resignation of the former and a request for delay and reconsideration by the latter has been widely published, but in view of the apathy of Congress and, to a large degree, of the press to the important financial matters that have been waiting for action for years, the words of Mr. Manning will bear repeating: "The reforms in our fiscal policy which you have maintained," he says to the President, "and which have been framed and commended to the wisdom of the legislative branch, are reforms necessary to our safety, binding in honor, obligatory in the traditions of the Democracy, set down with promises in our statute book. . . . Our currency is a chaos into which we pour from forced purchases of one of the precious metals a mechanical increment under a coinage law so ill-judged and untimely that it hinders the opening of our Mints to the natural and unlimited coinage of both metals and the free expansion of our gold and silver coin along with the growing needs of a mighty people. . . . A better currency than elsewhere exists might be had by a few lines of repealing and empowering legislation, followed by two or three years of capable administration of the Treasury, and joined with the present sagacious conduct of our foreign policy by the State Department." This appeal, as it may be considered, to the better sense of Congress has availed nothing; but if Mr. Manning shall finally decide to retire he will always obtain credit for having made the best of a very trying situation.

---

THE PERSONS WHO PERSIST IN TALKING of the "present depression in trade" are in danger of being considered old fogies who exist only in the past, and cannot discern the signs of the times. There has been already a decided recovery from the past depression in this country

and the outlook for the future is encouraging. This fact is recognized by the best foreign authorities, and they are beginning to see the favorable effects of the reaction in Europe. The record of bank clearings which we mention from time to time shows that there has been a large increase in general transactions over those of last year. There is a marked falling off in the number of business failures. The earnings of the railroads, while not as good as might be wished, are yet better than in 1885. There were at a recent date blast furnaces in operation of a greater capacity than at any previous time. These facts and many others go to prove that there is a renewal of activity in trade. But at the same time the earnings of capital in interest and profits average very low. This is a characteristic of these times all over the world, and business men who ignore it will make serious mistakes.

---

MENTION IS MADE ON ANOTHER PAGE of the annual Convention of the American Bankers' Association, to be held at Boston on August 11th and 12th. One good feature of the Convention is changing the place of meeting from year to year, so that a large number of bankers in the different parts of the country are led thereby to take an interest in the work of the Association, and more of the regular members are likely to be drawn toward a fresh locality than to a set place however central and convenient. The Association has done good work in the past in influencing sound and honest financial legislation as well as in spreading the same kind of views. It deserves the aid of the banking community.

---

A CORRESPONDENT IN KANSAS WRITES respecting a rival bank which has a considerable amount of deposit certificates outstanding, payable on demand, some of them bearing interest as follows: Six months after date with 4 per cent. interest; nine months after date with 5 per cent. interest; twelve months after date with 6 per cent. interest. Our correspondent says he has been in the banking business since 1870 but never knew of a banker undertaking to pay such high rates. The rates mentioned are certainly very high to pay upon deposits, and especially so in view of the low rates of interest generally prevailing at the present time.

---

TREASURY OFFICIALS SAY, THAT in spite of the rapid payment of the 3 per cent. bonds and the high price of the other Government issues which are the sole basis of the bank circulation, new National banks are forming almost daily. This is an anomalous condition of things. The people want the banks or they certainly would not give them patronage to encourage their extension, the capitalists want them or they would not start them, and, finally, the Government is gaining and has gained more from them than any system the country ever had. As it is, the increase in the banks is for the most part in the newly settled portions of the country, Kansas, Nebraska, Illinois, Michigan and Dakota leading in order in this respect.

### THE WORLD'S COINAGE IN 1885.

The annual report of the Deputy-Master of the British Mint contains accounts of the coinage of the various countries of the world for the year 1885. These accounts have been collated in tabular form by the London *Economist*. The statistics, including as they do all the Mints of the world, with the exception of those of Russia and some of the minor States, are of great interest as showing the effect of the reduction in the market price of silver and of the alleged scarcity of gold upon the coinage of each of those metals.

The totals give rise to the reflection that the depression in prices that has caused so much remark for some years past can hardly be the result of a scarcity of gold, since the coinage of both metals is carried on so largely throughout the world, and it is the total coinage and not one part of it that affects prices: that is, if prices are governed by the amount of coinage, which is a dictum that is disputed by some noted authorities.

As the compilation of the same figures made by the Director of the United States Mint will not be published for some months to come, we have thought it well to change the *Economist's* figures into dollars for the benefit of the JOURNAL's readers. The first column, in each case, gives the gross amount of new coinage; the second column the recoinage of light coins, included in the former column; and the last column contains the net amount of new coinage added to the existing circulation:

#### GOLD COINAGE IN 1885.

MINT.	New Coinage.	Recoinage.	Net Coinage.
London.....	\$14,760,790	\$8,249,590	\$8,511,200
Sydney.....	7,480,000	302,265	7,127,735
Melbourne.....	14,860,000	000	14,860,000
Total, British and Australian.....	\$37,060,790	\$8,551,855	\$30,498,935
United States.....	24,861,105	.....	24,861,105
Germany.....	2,037,230	.....	2,037,230
France.....	57,880	.....	57,880
France (Monaco).....	170,620	.....	170,620
Italy.....	858,935	.....	858,935
Belgium.....	000	.....	000
Vienna.....	1,685,000	.....	1,685,000
Kremnitz (Hungary).....	1,211,320	.....	1,211,320
Stockholm.....	33,500	.....	33,500
Utrecht.....	474,115	.....	474,115
Madrid.....	2,513,065	.....	2,513,065
Lisbon.....	253,390	.....	253,390
Japan.....	840,500	.....	840,500
India.....	48,615	.....	48,615
	\$71,866,005	\$8,551,855	\$85,344,150

The omissions of most importance in these tables are Mexico, which in the last report of the Director of the Mint was credited with silver coinage for 1884 of \$25,377,878, and Russia, whose gold coinage for the same year

was \$19,840,548. The annual coinage of Mexico has been about the same for a number of years past, but that of Russia has been irregular.

## SILVER COINAGE IN 1885.

MINT.	New Coinage.	Recoinage.	Net Coinage.
London.....	\$3,697,850	\$1,025,000	\$2,612,850
Sydney.....	219,500	22,650	196,850
Melbourne.....	202,475	47,030	155,445
Total, British and Australian.....	\$4,059,825	\$1,094,680	\$2,965,145
India.....	28,950,000	.....	28,950,000
United States.....	28,848,980	.....	28,848,980
Germany.....	606,785	.....	606,785
France (for Cochin China).....	255,900	.....	255,900
Italy.....	658,935	892,000	233,085
Belgium.....	000	.....	000
Vienna.....	8,466,510	.....	8,466,510
Kremnitz (Hungary).....	896,040	.....	896,040
Sweden and Norway.....	126,470	.....	126,470
Utrecht.....	299,995	.....	299,995
Madrid.....	3,811,720	.....	3,811,720
Lisbon.....	000	.....	000
Japan.....	5,899,545	.....	5,899,545
	\$77,790,685	\$1,986,680	\$76,270,135

Assuming that the coinage of both countries was about the same in 1885 as in 1884, we will compare the round totals thus found with the world's coinage for a few years past, as compiled by the Director of the United States Mint :

YEAR.	Gold.	Silver.
1885.....	\$92,000,000	\$103,000,000
1884.....	99,459,240	90,039,443
1883.....	104,845,114	109,306,705
1882.....	99,697,170	110,785,934

It will be noticed that we use for this comparison the gross coinage for 1885. The reason for this is that the other official figures quoted are compiled on that basis.

A point that is particularly observable is the extent to which silver continues to be minted, showing conclusively that it is not the disuse of that metal which has caused its marked decline in value. Probably few people realize this fact. Only last month a contemporary, which is certainly not an advocate of our silver dollar, criticized the "British policy, by which," it says, "silver has been in a measure driven from its former use in the western world." Now, in our country silver is used far more largely than in any former period. The other countries of this hemisphere use it at least as fully as ever. Great Britain has not changed its policy regarding the metal in over half a century, and the Latin Union has stopped its coinage because it has all the silver it can handle (to use a common expression). In view of these facts it is not easy to understand how it can be claimed that silver has been driven from its former use. No matter which way we look at the silver question it seems as if fallacies confront us on every side.

### PRACTICAL ADVICE BY A BANKER.

At the annual meeting of the Merchants' Bank of Canada, held in Montreal on June 18th, Mr. George Hague, the General Manager, following his usual practice, made an extended address. The remarks on this occasion ranged outside the affairs of the bank, largely taking the shape of advice and caution to bankers and business men in general. No doubt the copious extracts given below will interest the readers of the JOURNAL :

I will not trouble you, for it would be out of place, with any general exposition of principles, but I will take time to make one practical remark, viz: That the banker will often consult his customers' interest and further his customers' progress by judiciously limiting the amount of his discounts. Long and bitter experience both of bankers and merchants has proved that the banker who lends a customer too freely is the merchant's greatest enemy. The amount to be loaned by a banker varies, of course, with the capital and position of the borrower. Ten thousand dollars may be an unreasonable and dangerous amount for one man to borrow whilst \$100,000 or more may be a small and safe amount for another. But every business has its limits, and it is only a certain amount of interest that any business can profitably pay. When a business borrows too heavily the interest eats away, in time, the customer's capital. Besides, when money can be borrowed too easily, credit is given too easily in return. A foundation for loss to the customer is thus laid which in time will result in loss to the bank. A judicious conservatism is of the highest value to the customer himself and its exercise has saved many a man from ruin and enabled him to stand up amongst the merchants of to-day. The opposite of it, when the merchant has been unfortunate enough to deal with an imprudent banker, has been the real primary cause, though there are subordinate ones, of his ruin. Not long ago, in one of the towns of the Dominion, a resident was remarking to a friend how many of the men who formerly were first in importance in the town had sunk into obscurity or left it altogether in an impoverished condition. The reply was, and I must commend its shrewdness: "The real foundation of the ruin of these men was that they could borrow *all the money they wanted* from the banks." This phrase, "borrowing all the money they want," is often used by customers who have not yet learned by experience that the banker who will lend them all the money they want without discrimination sometimes digs a pit for their ruin.

I am well aware that there are enterprises and lines of business which cannot usually be carried on without large advances of money. But such enterprises should be in the hands of those who have large capital of their own. It is the undertaking of large operations by people of small capital that brings about the disasters that trouble the country and the banks. If men would proportion their borrowings and their risk to the amount of their means they would seldom fail. But the contrary is only too common among us. Here it is that a banker's prudent judgment may well intervene and check operations that are beyond a customer's means by declining to make the advances desired. But if the banker is himself imprudent, and carried away

by the idea that the more money he loans a customer the more profit he will make out of him, the end, in nine cases out of ten, will be that both the customer and the bank will be made to smart for their folly.

With regard to the general aspect of business I need not make any remark ; but I may remind you that in every condition of the business of the country there are a large number of people—the large majority, in fact—who are able to go steadily on with their business come what may. Year by year, on the whole, they make steady progress whether the times are good or bad. Such persons conduct their business with prudence and economy. And they are economical also in their expenditure. In fact, economy in personal expenditure is the key to the whole position in a majority of cases. Such persons can easily tide over a few years of bad times by being more economical than usual, but when the profits of a fluctuating business are spent in a free-handed style and a habit of high expenditure becomes fixed a year or two of poor business is sufficient to bring about ruin. Nothing can be more unwise than for a high and liberal scale of expenditure to be indulged in by a person of small capital and uncertain position. When a large capital has been accumulated, and a portion of solid stability acquired, a corresponding expenditure is reasonable and commendable.

These are obvious truths, and it may seem as if such platitudes were out of place in an address like this, but experience shows them to be practical and pertinent truths. There is no need for such a large number of failures as constantly occur in this country. I repeat, there is no need for it. Thousands of persons conduct their business successfully, in the same trades, in the same localities, and with no better outward chances of success than the people who fail. I have no hesitation, after long experience, in saying that, with the exercise of prudence and common sense in business, combined with economy in expenditure, three-fourths at least of the failures that trouble the country might be prevented.

Indeed, the exercise of prudence and common sense at the beginning would often prevent men going into mercantile business at all. There are far too many men endeavoring to earn a livelihood by buying and selling merchandise. If one-third of the stores and shops of the country could be closed and their occupants transferred to the great prairies of our Northwest it would be a double benefit. It would transfer a mass of workers, who are working to their own and their neighbors' injury, to a sphere where their work would be highly productive and a benefit to themselves and the country. The great want of our Northwestern plains is inhabitants ; some of the finest farming regions of the world are there and can be got for a mere trifle. The best thing for numbers of our young men to do, instead of crowding the professions and mercantile life, is to go to the Northwest and take up land.

With regard to the outlook for the future I shall say nothing except this : That the habit of looking out for the future and basing commercial ventures upon it is a bad one. It has deceived many to their ruin, and is likely to do so again. Forecasts of the future, in nine cases out of ten, in every line of business are falsified by the event. Whether it is the condition of the coming harvest, or the future of grain or cotton, or the supposed exigencies of foreign markets, the man who ventures upon commercial operations on such forecasts in a majority of cases will be disappointed, no matter how shrewd the fore-

cast may seem. If he risks his own money in the venture and loses it he does harm to no one but himself, but if he carries on the venture (and such ventures are often large ones) on borrowed money he runs the greatest risk of losing the money of his banker and creditors. This he has no right to do, for as he did not mean them to share the profits of the venture they ought not to be called upon to share the loss. In this connection I must again warn all men of business to beware of speculation on margin either in Chicago or New York. This is the most dangerous of all. Chicago is a particularly attractive place for ventures of this sort. The attraction, however, is that of the gas jet for the moth. Every year numbers of traders fall to the ground, stripped of everything, many of them Canadians, who have been enticed by specious circulars from Chicago. If men knew the inner history of these circulars they would understand them to read, "Come walk into my parlor, said the spider to the fly." Many an unfortunate has been stripped of the savings of a hard working life by a month of dizzy speculation in the city of Chicago.

I repeat, it is not well to be always forecasting the future. It is as foolish as it is dangerous. Market prophets are as unreliable as weather prophets.

If persons in business will keep themselves wide awake as to the present they need not trouble themselves about the future. A person can always tell whether the demand for his goods is brisk or dull, whether it is continuous or fitful, and can guide himself accordingly. Laying up large stocks of goods or increasing manufactured products in view of a possible demand some months ahead is not sound trading but speculation. There are certain lines of business amongst us in which trading on the chances of the future is more common than others. In former times of delayed communications, long winters and slow voyages, risks had to be taken which are not necessary now. The cable, the telegraph, the railway, the ocean steamers, have done away with the necessities of former days, and especially the necessity of risking anything on the unknown future. One of the shrewdest and ablest merchants of Canada, who had accumulated great wealth, was wont humorously to say that he ascribed a good deal of his success to his ignorance—a curious remark to make—but he explained that he sometimes in former days envied competitors whose knowledge of the market was so extensive that they could tell where every bushel of wheat and every barrel of flour was to be found in the world, and who were able, *or thought they were* able, to forecast the market for months to come. For himself, he always felt like an ignoramus talking to these knowing ones, for he was accustomed to guide his own business by the little knowledge he had of what was passing in his own neighborhood and by his own wants from week to week and month to month. The result, however, showed that he was the wisest man in the circle. The "knowing ones," who had such great capacity and vast foresight, and ventured accordingly, disappeared from the scene as ruined men one after another while he managed to steadily accumulate wealth and hand it down to his children.

---

**TREASURY RECEIPTS.**—The surplus revenue for the past fiscal year was \$90,528,546. The surplus for the current fiscal year will probably reach \$100,000,000, to be applied to the redemption of the 3 per cents, of which there are now only \$144,000,000 outstanding.

## THE MONETARY QUESTION.

### A STANDARD.

*To the Editor of Rhodes' Journal of Banking :*

SIR:—Hearing much discussion of standards, units, measures, mediums, etc., etc., and reading many speeches on the question, it occurs to me that the debaters have not analyzed the question to its fundamental principles, so I have tried to do so, remembering that money is a means, not an end.

### I.

Money of account, or money in the abstract, is the money that we *think* and not the money that we touch and see.

For the sake of order, and to prevent the confusion which would result from making contracts in "things," "lots," "chunks," or other indefinite terms, we say that our money of account, or money in the abstract, shall be known by the term "dollar," which is the "unit of value," or divisor of value, and is merely the thaler, teller or tally, and by which contracts are to be interpreted.

Thus far we have been considering a question in the abstract, and there are times when it is necessary to reason from the abstract to the concrete and from the abstract to the relative, though the typical "practical man" scoffs at such reasoning.

Now to avail ourselves of an *idea*. When we want money of account, or money in the abstract, represented in a substance, sensible to touch and sight, or made concrete, and seek a material representative or sign thereof, we are confined to some one substance, no matter what that substance may be.

Assuming that we have selected gold, and that 23 22-100 grains is the material sign of the *idea* or money of account, then the necessity for a legal-tender having been granted, and this material dollar chosen to stand for the dollar which is in books and statutes, it becomes, or must of necessity be, a standard of value; and value for our purpose being defined as *things in action*, it is a standard or indicator of the relation of "things in action" to one another. No definite quantity of any other substance, whether perishable or imperishable, can be ordained the perpetual equal of this 23 22-100 grains, owing to the innumerable and inexplicable factors entering into the discovery, production, preparation, preservation and transportation of different substances.

This standard or thing standing in the material world for the dollar that is only of the statute (this exponent of the power of the dollar-of-the-statute), is then a measure of values and, incidentally, a medium for exchanging services and of exchanging substances, also. When a dollar has been thus made tangible and visible every other dollar must be just like it or "up to its standard" (23 22-100 grains of pure gold), and thus being equal to the same thing are equal to each other, one and all and always.

Without any ambiguity, then, the unit of value and money of account may be forever in books, and the standard of value, may be in the material world, acting as a measure of value, as a legal-tender to determine contracts and

as a medium of exchange, or, as Voltaire called it, "a pledge and agent of exchange" of services and substances, and rights and privileges.

## II.

Legislation never did make—indeed, can never make—23 22-100 grains of any other substance the *constant* of an equal quantity of fine gold, nor can it make  $371\frac{1}{4}$  grains of any other substance its perpetual equivalent. So, when legislators say that one part or quantity of one substance shall forever or for a day be equivalent to sixteen of another substance they simply assert that the impossible is possible, which is absurd.

It is an obvious consequence that a *standard* must be one thing, for if two or more things they must be so exactly alike as to be indistinguishable, just as two straight lines between two points cannot be; they join and become one and the same straight line.

In Cooper's satire of the Monnikins, the monkey-people of Leaphigh had no money excepting money in the abstract or "money of account." A debtor said, "I owe you two dollars" or "I hereby pay you five dollars," and there was an end of the matter. No concrete money was used, so no legislative legerdemain was necessary to make things unequal equal to the same thing. As was to be expected prices were very high and money abundant in Leaphigh, and the *per capita* circulation was great or "equal to the increasing demands of business." Their logicians never found it necessary to prove that there can be two or three standards of estimating and making manifest the attributes of a common indicator of values or "things in action."

Having thus cleared the way we may go from these principles to the question of what material may be used for the purpose of measuring, diffusing and transposing the value there is in things and services, rights and privileges, and what other material as subsidiary to the "standard."

WASHINGTON, D. C., June 10, 1886.

POSEY S. WILSON.

---

CANADA AS A REFUGE FOR DEFAULTERS.—Some of the newspapers make occasional sarcastic references to Canada because it has been made a place of refuge by many defaulters. The inference sought to be drawn is that the Canadians refrain from entering into a new extradition treaty on account of the gain they derive from the influx of that description of population. This is not so; but, on the contrary, many of their journals throw the blame on this country. One newspaper says: "As the financial world is perhaps more largely concerned in the arrangement of an ample treaty than any one other single interest, and as the capitalists have a formidable representation in each branch of the American Legislature, any serious pressure on their part on the powers that be could hardly fail to be successful. The discredit of the delay continues wholly at Washington, as both London and Ottawa have made every possible concession to come to fair and honorable terms." Whatever may be the nature of the "concessions" mentioned they have not been made public. It is certain, however, that the relations between Canada and this country have of late been influenced by a spirit of petty jealousy not confined to either side of the border. But it must be acknowledged that the Canadians seem to be most earnest in calling for a treaty. Chief-Justice Dorion, in a charge to the Grand Jury at Montreal recently, spoke eloquently on the subject.

**Methods and Machinery of  
\*PRACTICAL BANKING.**

CONSISTING OF BRIEF DESCRIPTIONS AND SUGGESTIONS RELATIVE TO THE  
METHODS OF CONDUCTING THE BANKING BUSINESS; WITH APPROVED  
MODELS OF BLANK BOOKS AND FORMS FOR THE USE OF  
BANKS OF DISCOUNT, SAVINGS BANKS, ETC.

[Prepared expressly for the JOURNAL by the Cashier of a long-established bank, who  
has had over twenty years' experience in practical banking, and who has always  
sought for better and safer methods.]

**THE MESSENGER'S ERROR.**

The note, bearing endorsements, was due, and at the close of bank hours it had not been paid. As it was signed by a well-known house which was in the habit of promptly meeting all its engagements the President presumed that there had been some forgetfulness or mistake somewhere and told the Messenger to take the note to the promisors and endeavor to collect it from them, giving them a chance to pay it before it should take its otherwise inevitable path to the hands of the notary. This action under such circumstances is what every bank should follow. It is always good policy to save good notes from protest, the failure to meet them being simply the result of somebody's error.

A bank Messenger should be careful to follow instructions in most cases and move in a machine-like manner under directions from responsible officers, neither adding to nor taking from such orders.

In the case in question the Messenger presented the note, demanding its payment. When the promisors told him they had made a mistake and forgot the paper but would pay it the next day the Messenger said "all right" and took the note back to the bank, to which he made no report of the way he had committed himself. The note not being paid was protested. The next day its signers came to pay it and were very indignant over its protest, because the representative of the bank had told them that "it was all right" when they said they would pay it to-morrow.

The matter in question caused so much trouble and annoyance that that bank Messenger never afterwards ventured to say "all right" except when specially instructed to do so.

**BREASTING A PANIC.**

The old gentlemen had been for many years the President of a leading Boston bank. In his old age he was fond of telling a story of his experience with a panic and a panic-stricken man. It happened at least fifty years ago, at a time when merchants daily congregated on 'Change in the open street at 2 o'clock or thereabouts—met there to look at each other, make trades and talk over business affairs. It was a time of prostration in business. Everybody was depressed over the situation. Failures were frequent. The credit of the strongest houses was shaken. The banks had become deeply alarmed, and hardly knew whom to trust. In the midst of this tremendous financial excitement and distress one of the best known merchants in the city came to the bank President we have named and told him that he believed he should have to fail to-morrow—that he had notes then due which he thought he should have to let go to protest. The President knew his man quite well—knew his

financial condition and prospects—so he unhesitatingly gave him this advice: He told him he could pull through easily enough if he would only keep up his courage and show a bold front. He explained to him that he was a marked man in the business community, who was owing considerable money, which he might be suddenly called upon to pay if his creditors lost confidence in him. The bank President's simple recommendation was that he go on 'Change every day regularly and promptly, and walk up and down there in the most cheery and indifferent manner—make himself conspicuous as a happy and hopeful man as long as the panic continued. This alarmed merchant was a man of ability and real financial stability. By following the course advised he passed unscathed through the fire of the financial trial and also helped others along. In the midst of the depression he was pointed out as a tower of financial strength. Only two men knew how near he came to failing—the President of the bank and himself.

#### HUSBANDS AND WIVES IN BANKING.

In England a married woman cannot open a bank account unless she has, in writing, the formal consent of her husband; neither can a woman who has opened an account with an English bank while she was a single person withdraw that money after she is married unless she has the approval of her husband.

Until a comparatively recent date many of the laws of this country relative to the rights and duties of women in matters of banking have been very burdensome to them. Here is a single illustration of this point, drawn from Massachusetts banking experience, in the days when a married woman holding bank shares in her own right and name could not transfer them until she had first obtained the approval of her husband.

She came to the transfer desk of the ——— Bank with her share certificate—a certificate of twenty shares standing in her own name, which was stock that had been a maiden inheritance. She was a highly intelligent woman, of the first respectability, and known at the bank. She asked that she might be allowed to make a transfer of the shares as she wished to turn them into money. The Transfer Clerk was obliged to ask her if she had a husband—a question which seemed an unwelcome surprise to her. After politely enquiring why she was thus interrogated, and receiving a full explanation of the situation, which amounted to a flat refusal to make the transfer unless the approval of the husband was obtained, the lady went away sorrowfully, and in time returned with a husband whose appearance and habits were such as rendered him remarkably unrepresentable. He was an intemperate, low, stupid man and a burden to his family, yet the law demanded that he should be brought to the bank and give his approving signature to the transfer though he and his signature were of little account elsewhere.

#### ALWAYS COURTEOUS.

The old merchant had been speaking of the various bank officers he had known upon a certain street, and was describing the characteristics of each one of them. Coming to Mr. ———, who was at the head of the largest bank in the place and had been its successful President for many years, having worked his way up to that position after serving in almost every other position in the bank, the merchant remarked that this President was an able man, but that he owed much of his success in life to what might be termed his uniform, unswerving courtesy. And then he related the following incident illustrative of the politeness and thoughtfulness of this officer:

"More than forty years ago I was an inexperienced new boy in a counting-room in this city and knew nothing about the town, business or the banks. My employer handed me a check to collect on the bank where he made his deposits. I did not know one bank from another—in fact supposed a bank check could be collected of any bank, and that it did not make the slightest difference at what bank I presented that individual check. So I stumbled into the first bank which bore that sign. It was not the right one, and the Teller savagely asked why I brought that check to him, but did not give me any

clear explanation of what I should do with it. Neither did some other Tellers to whom I wrongly presented that bothering check. But when I came to the bank where Mr. \_\_\_\_\_ was then acting as Paying Teller I was treated with a kindness and courtesy which I shall always remember. He explained to me that the check should be presented to the bank upon which it was drawn, told me how to find that bank, and did it all in such an attractive, pleasant way that I felt happy at once and was very grateful to him. And now," said the merchant, "I am going to see that man. The old gentlemen is ill, I hear, and I it will amuse and interest him by hearing this little story of the days when he was a bank Teller."

#### BANK LOCKS.

There was a time within the remembrance of most experienced bankers when the vaults of all the banks of the period were locked with keys of cumbrous size, and many were used to a single door. In the best arranged old-fashioned banks there were at least two huge iron doors to each vault and at least two sets of locks and keys to each door. A portion of the keys to each vault were generally taken home by the Cashier when the business of the day was done, and another portion, the complement of the set, were taken by the Messenger to the house of the President and by him put in a safe place.

In some banks, where the work extended far into the night, notably the case with the Suffolk Bank at its busiest season during the famous redemption period, the Presidents had to sit up late at night waiting for the Messengers to come with the trunk of keys, for there were so many and such heavy keys in use by every bank that they had to be carried in small trunks specially made for them.

At the present time combination locks without keys are in almost universal use, unless those combinations which Cashiers now carry in their heads can be termed keys.

There are a few points relative to the modern lock—the combination lock of various patterns and various degrees of merit—which should be noted. No single officer of any bank should be the custodian of the entire set of combinations to any vault. It is unsafe for both bank and officer.

When combination locks are placed in the hands of locksmiths to clean and repair their combinations should be changed when they are received back before they are again used. The following somewhat sensational statement taken from a lock-maker's circular proves this to be a necessary precaution:

*In several instances* there have been found experts, locksmiths, and others in large towns who have upon their memorandum book the combinations of all the safes of the principal business houses and banks of that town or city, and can go at any hour and open them or give information to others who can then do so.

The President of a bank should place a record of all the combinations under seal in the vaults of some other bank or safe deposit company.

The doors of vaults which are locked by combinations should have double sets of locks so that if one set gets out of order the doors can be opened by using the other.

#### THE TELLER WHO WAS SHORT.

He was the Paying-Teller of the largest bank in a leading city, had held that position for a long time, and was considered an able, honest and most faithful officer. He worked early and late and was somewhat noted for the rapidity and correctness with which he handled money in payment of the checks drawn upon the bank.

One morning the Teller of another bank upon the same street came to the desk of this Paying-Teller and said he wished to report to him an error of three cents which he had made several days before in a transaction between the two banks. The report and the rectification were received with apparent gratitude by the Paying-Teller, who said that he had been hunting everywhere for many days to find that three cents.

It is a curious fact that this little incident happened just at the time when the Paying-Teller was at the end of his rope, as it were, after a long period of irregularities in his department. The day of exposure, disgrace and punish-

ment was at hand, and on the forenoon when he made this remark about the long hunt for three cents he hung himself in the basement of the bank. When his books were examined he was found to be a defaulter to a large amount.

The experienced banker who has been brought into close connection with bank officers who, undiscovered, were engineering along defalcations can generally testify that the most remarkable thing about these defaulters has been the coolness and self-possession they have shown while up to their eyes in wrong-doing.

#### BANK CLERKS AND MARRIAGE.

The young man who in this country applies for a situation in a bank, where the position is a subordinate one paying but a small salary—a salary fitted to a low round in the ladder of promotion—is often asked by Managers and Directors questions relative to his general way of life, surroundings, home status, whether he is married or single, etc. But beyond these preliminary investigations, which often have considerable to do with coming to a decision regarding the fitness of an applicant for a position in a bank, there is not apt to be a very close inspection of the home ways of bank officers. Once in a position in a bank, the junior officer, who has entered the service as a single man, takes the question of whether he shall get married into his own hands and on his own financial responsibility without consulting Boards of Directors or any one else. A junior officer who becomes a married man, if he is a promising and deserving young man, is quite apt to receive from observing Directors a recognition of his change of circumstances in the shape of a slight advance of salary, an advance which is often repeated when, as time passes, the young clerk becomes more and more a family man.

This is about all there is to be said about the relation of banks as employers to the question of the marriage of bank officers.

In England matters in this regard take on a different aspect. This point is amusingly illustrated by the following significant paragraph from a London newspaper:

The London and Provincial Bank has passed the following resolution:

"The Board being of opinion that it is on many grounds inexpedient for clerks employed by the bank to contract marriages on insufficient means,

"Resolved, As a general rule, but subject to any exceptional circumstances which may induce the Board to dispense with such rule, that in future, if any member of the staff whose income is less than £150 a year shall marry, he shall be disqualified from continuing in the bank's service, and will accordingly be required to retire from it."

An American Board of Bank Directors which should pass a resolution of this character would be pretty sure to follow it up, in case of the marriage of a clerk whom they esteemed, with a vote at once raising his salary to a sum sufficient to support a family.

#### "MANUFACTURING" BUSINESS PAPER.

He was a heavy manufacturer and shipper of lumber in a city in Maine, sending his product wherever there was a harbor in Massachusetts, Rhode Island, etc. He was a bank Director in the city where he carried on his business, and his habit was to draw through this bank for his lumber shipments, at three and four months' time, on his consignees here and there, and have the paper for the most part at once discounted at this bank. The paper was always made payable at the Boston bank where the Maine bank did its business, and this Boston bank received all the paper, procured its acceptance, and held it for collection. So the business went on year after year, large in volume and promptly transacted. By and by the lumber dealer lost his money and very nearly ran out as far as his original and legitimate business was concerned. But the Maine bank seemed to be rather oblivious of these facts, for it kept on allowing him a heavy line of accommodation on discounts of what appeared to be legitimate lumber acceptances—drafts whose acceptance appeared to have been obtained by himself and bearing accepting names which sounded quite familiar to banking men who had long been dealing in lumber paper. The paper was, as usual, all made payable at the corresponding bank in Boston

This paper was fraudulent in all points. It was made up entirely, acceptance and all, by the party for whom it was discounted. The drawees—the acceptors—had no existence, yet their names as they appeared on the paper so nearly resembled the names of existing, strong, old-time consignees of the drawer that the bank had no suspicion of the deception which was being practiced upon it. In making up this fraudulent paper the drawer had hedged against any charge of forgery by carefully avoiding the use, as imaginary acceptors, of the names of any existing houses. He carried along this swindling, kiting business for a long period by paying all the paper, a little while before its maturity generally, through the bank where it was made payable in Boston. And the discovery of his irregularity was not made until he had become so deeply involved that he could no longer float even on paper so easily made and so readily negotiated. When he could no longer meet this paper he ran away.

#### DANIEL WEBSTER ON STATE STREET.

An office view has been given of Daniel Webster, showing him as he appeared when the bank Messenger called upon him to collect a draft. Here is a recollection of Mr. Webster on 'Change—as he appeared during one of his infrequent visits to State Street :

In appearance, general style and carriage Mr. Webster was one of the most remarkable men ever seen on that street. And he was about the only man whom the people on 'Change seemed anxious to get a good look at when he came among them. When he made his appearance on State street the word would quickly spread that Mr. Webster was coming and all would want to see him. His presence was majestic and entirely unlike that of most men. He seemed to move among the crowd as if apart from it and not of it—as one belonging to some other order of existence. He would pass along with slow and dignified step, his hat drawn low over his broad forehead and his deep-set eyes looking out from under his shaggy eye-brows in a kind of dreamy way as if their owner found little that was congenial in the moving panorama about him. His commanding form and impressive manner would cause the most indifferent stranger to turn at once to look at him and ask the nearest person who he was.

#### EXAMINING A BANK.

When a National Bank Examiner enters a bank at the present time for the purpose of seeing that everything there is as it should be he at once takes full possession. If it is a bank having a large business and many departments—departments which are inevitably mixed and intertwined with each other in their every-day transactions—he stops the work of each division and puts the cash and securities belonging to them under his private seal. By doing this he effectually guards against any concealment by defaulting officers of deficiencies in their own department by temporary and secret transfers of property from other divisions of work.

A brief explanation of what has been done by defaulters in banks by the methods just alluded to will give a very good idea of what might be again and again repeated, with variations, if the Bank Examiner's checks and guards just described were not now invariably put in force.

The Receiving Teller of a bank, which was undergoing an examination that occupied several days, received back his cash from the Examiner, who had thoroughly gone through it and found it correct in all points. The next day the same Examiner passed through the loan of the bank and examined all the notes discounted and the collateral security attached and reported them all correct and in harmony with the books of the institution. But dishonest collusion existed in this bank between the Teller and Discount Clerk, and important deficiencies in collateral belonging to the loan were secured from detection by the aid of cash temporarily borrowed from the Teller after his cash had passed under the Bank Examiner's scrutiny and before the loan was examined. It is easy to see how cash and vouchers may be made to do double duty in the hands of cunning defaulters where there is a lack of proper vigilance on the part of the Bank Examiner. The experienced and sagacious Bank Examiner is always sure to be alert in the matter of watching in an

unobtrusive manner the ways, methods and general carriage of the bank officers who are around him in the bank he is inspecting. It may be that at times he recalls an experience of this character.

A Bank Examiner became anxious about the discount department of a bank he was examining. He became suspicious, from certain circumstances, that the head of the department was trying to do something wrong. Placing a check in the right place at the proper time he detected this officer endeavoring to smuggle into the bank United States bonds which he had borrowed somehow to make up existing deficiencies in his collaterals.

#### **HOW EARLY IN THE DAY CAN A MATURED NOTE BE CHARGED TO A DEPOSITOR'S ACCOUNT?**

A bank discounted a note which was the promise of a depositor with the bank. It had considerable anxiety about the reliability of the note, particularly as far as the signer was concerned. On the morning of its maturity the signer, who had made the note payable at the bank, had a balance barely sufficient to meet the paper. The bank very naturally made haste to charge the note against the balance. It did this as soon as it opened for business. During the rest of that day checks upon this early appropriated balance came flowing in, through the Clearing-House and over the counter, and were, of course, refused payment. There was a legal contest over the question whether the bank had a right to seize the balance upon which checks were outstanding at so early an hour in the day and dishonor all the other demands upon it, the result being a final decision of the Courts that the bank did right and that a note due on any given day might, under the circumstances described, be considered as due as soon as the bank opened and not at the close of banking hours.

#### **PAYING UNENDORSED CHECKS WITH CERTIFICATES OF DEPOSIT.**

A very heavy customer of the bank, whose current daily balance was large and who seldom asked for accommodation of any kind, presented in person a perfectly good check upon the bank for one hundred thousand dollars. The check was drawn to the order of an individual who had not endorsed it. The drawer asked that the check be certified, without qualification, in its then unendorsed condition. The bank would have been perfectly willing to do this if it had not been for the fact that its Directors had voted to prohibit the Cashier from ever certifying checks. If it certified this unendorsed check it would have been obliged to use the certification form of "Good when properly endorsed." The customer was annoyed on account of the Cashier's enforced refusal to certify, because he wished, in paying the check to its payee, to secure upon it his endorsement as a receipt, a voucher, in a transaction he was making, and this payee had refused to take the check in settlement without a certification of it by the bank upon which it was drawn. The signer of the check now asked that a certificate of deposit, drawn in favor of the payee of the check, be issued upon the check in its still unendorsed condition, since the signer of the check could not, under the circumstances, secure the payee's endorsement. This request the bank very correctly declined to grant.

This little banking incident brings up two important details, whether a bank should give an unqualified certification of an unendorsed check and the question of the propriety and safety of the practice of paying an unendorsed check by issuing therefor a certificate of deposit drawn in favor of the payee. Without doubt the experienced banker who gives careful thought to these points will agree in the opinion that it would not have been good banking to accede to either of the requests made by the depositor in the case above described.

#### **WORSE THAN A DEFAULTER.**

There was very serious trouble in the ——— Bank. It was discovered that the Receiving-Teller and book-keeper, who appeared to have worked together dishonestly for a long time, had fled leaving behind them a defalcation of stupendous size for those times, amounting to more than two hundred thou-

sand dollars. The bank was under the management of an able Board of Directors, and, as its business was very extensive, it had a large corps of officers. The excitement in the management of the bank, among its clerks, and in the community, on discovering the defalcation, was very great. Not long after this explosion, and while the Directors were still delving into the ruin it had left in its track, the very kind-hearted President of the suffering institution called into his private room the youngest clerk in his bank, a young man about 21, who was a general assistant on a salary of \$500. The old gentleman and the junior clerk sat down before an open fire in the little room. The President then took from his pocket a letter and in a pleasant, fatherly manner read it to the clerk. Its contents were to the effect that the junior officer knew all about the defalcation while it was being worked up, and had, in fact, been a partner in it, participating in its proceeds. The President, having read this missive, passed it over to the clerk, who saw at once that this production, which was anonymous and written in a disguised hand, was in writing familiar to him. He told the President that the letter was evidently written by an acquaintance of his, who was a clerk in another bank on the street, and who had had a falling out with him in some matter connected with an election in a society to which they both belonged, and that he hoped he had no need of saying that its statements were false in every particular. The good President did not seem to need any assurance of this, for he tore the letter in small pieces and threw them into the fire, saying no one but himself had seen the letter and no one should ever hear more of it. The young clerk remained at that bank till he reached the highest position in it. The writer of the anonymous letter soon after became a defaulter to a large amount and fled the country.

#### **"I PROMISE TO PAY ON OR BEFORE."**

Notes have been drawn in the following manner: "For value received, I promise to pay on or before April 19th, etc.," the extreme date named being perhaps four or six months distant. Time-notes of this description have sometimes been discounted at banks when the rates for money have been low, and the borrowing promisors, taking advantage of their form, have anticipated their payment at the points where they were made payable, after a deduction of interest for the period of time anticipated, at the high rate established in the State in which they matured.

This point is noted for the purpose of stating that the note-form described is viewed from the discounting bank's stand-point as an exceedingly objectionable one—a form which they should most decidedly refuse to take into their loan. Paper of this class makes only an infrequent appearance. When it does present itself it is well to avoid it.

#### **PROTESTING A JOINT NOTE.**

The bank had for collection an endorsed note whose promisors, in a joint capacity, were two individuals, one residing in the place where the bank was located and the other living and doing business in a distant city. This note was not written payable at any particular point, and the day of maturity arrived without payment. It must now be protested, and the question arose as to the way this should be done, and how demand should be made and notices sent to firmly hold the endorers.

It was evident enough that it should have been made payable at some special point, but it had not been so framed, and what under the circumstances must be done with it? The course taken was the only safe one. A demand was made at once upon the promisor in the place where the note was held, and notices of his dishonor of the paper sent to the endorers. Subsequently the unpaid note was forwarded to the city where the other promisor was located, a demand made upon him for its payment, and notices of his refusal to pay promptly sent to all the endorers. There was a legal fight over the note, the endorers refusing to pay on the ground that a proper demand had not been made on both the promisors. The decision finally reached in the case was that the holding bank could not have done better in the matter of demand and notices and that it made the only legal protest possible.

## BANKING LAW.

### LEGAL DECISIONS AFFECTING BANKERS.

#### COLLECTING BANK—INSOLVENCY—RIGHT TO RECOVER FULL AMOUNT.

M brought a suit in equity to recover in full from the defendant, who was the assignee of one Hodges, the proceeds of a draft for \$1,500, drawn on the Ninth National Bank, of New York city, which draft was left with defendant's assignor for collection. The facts were as follows: Plaintiff, desiring to cash this draft, went to the bank of Hodges, in Platteville, on the 30th of January, 1884, to get the money on it. Hodges told him that he was not in funds at the time so as to cash the draft, but said he would collect it for him. Thereupon plaintiff left with Hodges the draft for collection and took a receipt therefor, which read as follows:

"Platteville, Wis., 1-30, '84. By Robert E. McLeod, for collection. Currency. —; Coin. —; Checks. —. Ninth National, New York, \$1,500. O. F. Griswold, Cashier.

Hodges told the plaintiff to return in a week, when he expected the money would be there for him. At the end of the week the plaintiff called, but was informed by Hodges that the money had not yet come from the Ninth National Bank," and that it took some time to make collections of this kind. Plaintiff then went away and did not again return until after Hodges had suspended the banking business, which was on the evening of the 8th of February, 1884. As a matter of fact the draft was not sent by Hodges to the Ninth National Bank, of New York, for collection, but was sent to the National Bank of America, Chicago, with which bank Hodges did his business in that city. The Chicago bank collected the amount of such draft. It did not, however, send the cash to Mr. Hodges, but gave him credit for the amount on its books, and after this Hodges drew on the Chicago bank drafts which were cashed by it, and at the time he suspended the Chicago bank owed him nothing. On February 11, 1884, Hodges assigned to the defendant all his property for the benefit of his creditors. Among the assets there was \$500 cash in Hodges' bank, which came to the hands of the defendant, but it did not appear that this sum was a part of the proceeds of the \$1,500 draft. This suit was brought by plaintiff against such Assignee to recover the full amount of the draft.

*Held*, The first question upon this state of facts is, does the plaintiff stand upon the same ground as the other creditors of Hodges, in respect to the estate in the hands of the Assignee, or has he a paramount right to be paid first out of such assets? It is claimed on behalf of the plaintiff that the collection of the draft was a trust assumed by Hodges; that neither the draft nor its proceeds belonged to him; that it was his plain duty to collect it and keep its proceeds separately and deliver them to plaintiff when demanded; that it was a gross fraud on his part not to do so; that he knew when he received the draft for collection he was in failing circumstances and largely insolvent; that the testimony indisputably shows that it was a mere pretense that he had sent the draft to New York for collection; that he really had the avails of it when the plaintiff called for his money at the end of the week, as he was directed to do, and was told that it had not come. It is said the relation between Hodges and the plaintiff was not that of debtor and creditor but that a fiduciary relation existed between them; that the proceeds of the draft was a trust fund in his hands which did not belong to him and which the Assignee could not take as a part of his estate. Plaintiff claims that "the general proposition which is maintained, both at law and in equity, upon this subject is that if any property, in its original state and form, is covered with a trust in favor of the principal, no change of that state and form can

divest it of such trust, or give the agent or trustee converting it or those who represent him in any right (not being *bona fide* purchasers for a valuable consideration without notice) any more valid claim in respect to it than they respectively had before such change. An abuse of a trust can confer no rights on the party abusing it or those who claim in parity with him."

2 Story's Eq. Jur., § 1258.

Defendant, although not challenging the correctness of the argument, or the soundness of the principle of law relied upon, claimed that they had no application to the facts of this case, because the proceeds of the draft could not be traced to, or identified in respect to, any property which had come to the hands of the Assignee. The Court holds that these facts are indisputable—that the Chicago bank to which Hodges sent the \$1,500 draft gave him credit for the amount on his books, Hodges drew against that credit in the regular course of his business as a banker, and his drafts were honored by the drawee. Presumably, Hodges obtained money for his drafts which he used in the transaction of his business or applied to the payment of his drafts. So, these funds which he obtained by his own drafts against the \$1,500 credit were substituted for the proceeds of the \$1,500 draft and went into his estate. The conclusion is irresistible from the fact that the proceeds of the trust property found its way into Hodges' hands and were used by him either to pay off his debts or to increase his assets. In either case it would go to the benefit of his estate. It is not to be supposed the trust fund was dissipated and lost altogether and did not fall into the mass of the assignor's property, and the rule in equity is well established that, so long as the trust property can be traced and followed into other property into which it has been converted, that it remains subject to the trust. The authorities fully sustain this position. We do not understand that it is necessary to trace the trust fund into some specific property in order to enforce the trust. If it can be traced into the estate of the defaulting agent or trustee, this is sufficient. Beyond all controversy the proceeds of the draft in Hodges' hands were a trust fund. He having used them in his business and benefited his estate by such use, as we must assume, a trust attaches to that estate which came to the defendant under the assignment.

Further *Held*, That proving his claim before the Assignee and receiving a dividend thereon, under the belief that the estate would pay dollar for dollar, is not a waiver of the right of the plaintiff to recover the full amount.

Judgment for plaintiff.

McLeod vs. Evans, Assignee, Supreme Court of Wisconsin, May 15, 1886.

#### TAXATION OF NATIONAL BANK STOCK.

Upon an application by the Receiver of Taxes of New York to the Court of Common Pleas, the appellant was adjudged guilty of misconduct in refusing to pay the tax assessed upon his personal property for the year 1881, and a fine was imposed upon him therefor. The proceeding was had under the provisions of Chapter 230, Laws of 1843, and was conducted in conformity therewith. The tax in question was predicated upon the customary annual assessment of property liable to taxation, under the general laws of the State, but was in this instance based upon an assessment of the value of National bank shares owned by the appellant. Certain irregularities were alleged by appellant to have occurred in the proceedings for the assessment of the property, which he claimed were jurisdictional in character and ought to render such assessment invalid and the tax levied thereon void. The Court of Appeals, however, holds that the proceedings were regular. The further objection was made by the appellant, that "the system of taxing the appellant's National bank shares resulted in taxing the moneyed capital invested in them at a greater rate than is assessed upon other moneyed capital in the hands of individual citizens of this State invested in other investments." And the particular ground upon which this point was based was the claim that "there is no law upon our statute books for the taxing of shares of stock of railway companies, street railways, ferry and canal companies, fire and life

insurance, trading, and other miscellaneous companies, and the deposits in savings banks." The Court of Appeals holds that this claim seems to be unfounded in fact. That a careful examination of the statutes and a comparison of the burdens laid upon the property, capital, and business of the people under the laws of the State will show that the money invested in National banks is subjected to no greater burden than that imposed upon other species of assessable property. The Court then reviews the different Acts relating to the taxation of National bank shares, and other legislation providing for the taxation of incorporated companies, and states that it is quite clear from even this cursory review of the statutes that if any discrimination is made by our laws in taxing capital invested it is not to the prejudice of that employed in banking corporations. Even if this were not the result of the statute, the Court is of the opinion that investments in the shares of the various railroad, ferry, canal, manufacturing and other industrial corporations do not come within the meaning of that clause in the Federal statute referring to other moneyed capital in the hands of individuals. That phrase, as generally employed, distinguishes such capital from other personal property and investments in the various manufacturing and industrial enterprises of citizens, and this is the sense in which it is used in the tax laws of the State. Such is also believed to be the meaning attached to such words as generally used in the Federal statute. The obvious intent of the Federal statute was to prevent discrimination against investments in National bank shares and put them on terms of equality, as to taxation, with similar institutions and investments in the several States, and the language of the statute seems to have been selected with reference to that object. The rule of comparison is not with the rate of taxation imposed upon personal property generally, or with specific investments in mining, manufacturing, or the various other industrial corporations organized throughout the State, but with other "moneyed capital" in the hands of individual citizens. These are words of limitation as well as of description and are to be defined according to the meaning which has been generally given them.

*In re McMahon, Receiver of Taxes, vs. Palmer, New York Court of Appeals, April 12, 1886.*

#### PROMISSORY NOTE—IMMATERIAL ALTERATION.

Where a promissory note contained the words "with interest at per cent. per annum," and the figure "7" was inserted in the blank space after its execution and delivery,

*Held*, That the note drew interest by its terms at 7 per cent. before the alteration was made. The legal effect of the note was the same before as after the change, and its payment cannot be avoided by reason of the alteration claimed, because it was an immaterial one.

*First National Bank vs. Carson, Supreme Court of Michigan, April 8, 1886.*

#### PROMISSORY NOTE—INDORSEMENT AFTER MATURITY.

A party to whom a promissory note is indorsed after maturity is not an indorsee in due course and does not acquire an absolute title thereto, so that it is valid in his hands notwithstanding any defect in the title of the person from whom he acquired it.

*Woodsun vs. Cole, Supreme Court of California, March 24, 1886.*

#### SAVINGS BANK—CHANGE IN BY-LAWS WITHOUT NOTICE TO DEPOSITOR.

Where the by-laws of a savings bank at the time plaintiff deposited her money provided that the same could only be drawn in a certain manner, and subsequently, without notice to the plaintiff or without any knowledge on her part, the by-laws were amended, making money payable in a different manner, and where, in consequence of such change, the money deposited by the plaintiff was drawn by a third person on forged orders and the by-laws of the bank, as amended, relieved the bank from liability for making such payment,

*Held*, That the bank was liable to the plaintiff for the money so drawn.

That although plaintiff at the time of depositing her money subscribed to an agreement to be governed and to abide by the regulations of the institution as expressed in the by-laws of the same, the bank did not derive from this agreement authority to make such a material change in plaintiff's contract without her knowledge as would be effected by the amended by-laws.

*Kimins vs. Boston Savings Bank, Supreme Court of Massachusetts, January 12, 1886.*

---

PROMISSORY NOTE—LIABILITY AS INDORSER.

The payee of a promissory note who indorses it in the regular course cannot be held as maker, and parol evidence is not admissible to enlarge his liability. The cases which hold that the liability of an indorser may be enlarged by parol have no application to indorsements made in the regular course.

If the maker of a promissory note becomes a non-resident after the assignment and before the note matures this affords a sufficient excuse for not suing. If, however, he is a resident of the State and owns property subject to execution when the note falls due he must be proceeded against at the first opportunity or the indorser will be discharged.

*Smyth vs. Scott, Supreme Court of Indiana, April 12, 1886.*

---

NEGOTIABLE INSTRUMENT—LIABILITY OF UNDISCLOSED PRINCIPAL.

It is a general rule that parol evidence is not admissible to establish the legal liability of an unnamed principal to be sued nor his legal right to sue on a negotiable instrument. As to bills of exchange and promissory notes it has been long settled that he who takes negotiable paper contracts with him who on its face is a party thereto and with no other person. An exception to this rule, however, arises in the cases of officers and clerks in banking houses who receive money or security over the bank counter and issue drafts or negotiable certificates of deposit therefor. In such cases the bank is liable although such draft or certificate be signed by the officer or clerk without disclosing the name of the bank.

*Webster vs. Wray, Supreme Court of Nebraska, April 14, 1886.*

---

SAVINGS BANK—FRAUDULENT ASSIGNMENT BY TREASURER—RECOVERY.

Where the records of a savings bank showed that at a meeting of the Trustees the Treasurer had been given power to "assign, discharge and release all mortgages belonging to the bank," and, on the faith of such record, B, a party acting in good faith and without any knowledge of fraud, bought certain mortgages of the bank from such Treasurer,

*Held*, In an action to determine the ownership of such mortgages, that the bank was bound by the authority appearing on its records, although the word "assign" had been fraudulently interpolated therein without the knowledge of the Trustees.

*Holden vs. Phelps, Supreme Court of Nebraska, April 14, 1886.*

---

PROMISSORY NOTE—MARRIED WOMAN—INTEREST.

Under the law of this State a married woman may bind herself by her promissory note as if sole. Where a note provides for the payment of interest due at a time certain an action may be maintained for such interest when due without previous demand and before the principal of such note becomes due.

*Homes vs. Bennett, Supreme Court of Maine, April 24, 1886.*

---

PROMISSORY NOTE—EXECUTED AND DELIVERED ON SUNDAY—DEFENSE.

Action was brought on a promissory note and the defense was set up that the note was executed and delivered on Sunday. By the statute of Maine of 1880, entitled "An Act in relation to defenses in actions involving contracts made on Sunday," it is provided that no party who receives any money or

valuable thing as a consideration for a contract made and entered into on Sunday shall be permitted to defend any action upon such contract until such consideration has been restored.

*Held*, The note bears date previous to the passage of this Act, but this action was commenced subsequent to that Act, and the case finds that there has been no offer to restore the consideration received for the note. The defense therefore fails.

*Erskine vs. Glidden*, Supreme Court of Maine, April 12, 1886.

#### PROMISSORY NOTE—ILLEGAL CONSIDERATION.

An agreement to stifle or hinder a public prosecution for a felony is illegal, and a promissory note given in consideration of such an agreement cannot be enforced.

*Ricketts vs. Harvey*, Supreme Court of Indiana, April 15, 1886.

#### PROMISSORY NOTE—CONSIDERATION—GAMBLING DEBT.

Where the foundation of a transaction and also the consideration of the note in suit both rested on a gambling operation,

*Held*, That although the note be negotiable, in form, it is void even in the hands of a good faith and innocent holder for value.

*Harper vs. Young*, Supreme Court of Pennsylvania, April 5, 1886.

#### POWERS OF BANK CASHIERS.

*Continued from page 448, June number of the JOURNAL.*

*VI. Power to Cancel Deeds of Trust.*—In a late case in the Supreme Court of the United States (*Martin vs. Webb*, 110 U. S., 7), decided in 1883, the question arose whether a banking corporation doing business in Missouri was estopped from denying that the cancellation in its name and by its Cashier of certain notes secured by trust deeds upon real estate and the release of record of the liens given by those deeds was by its authority and binding upon it. It was shown that the Cashier understood, and from the conduct of the Directors had reason to understand, that he was invested with full authority to manage the operations of the bank according to his best judgment, and without disturbing the Directors, and that from 1873 to 1880 inclusive he had entered in the name of the bank, upon the proper records of the county, satisfaction of more than one hundred and fifty different deeds of trust executed to secure debts held by the corporation. In no instance did he receive previous orders to do so from the Directors, and his authority or duty to do so was never questioned to his knowledge or to the knowledge of any one having business with the bank.

The Court holds that it is quite true that a Cashier of a bank has no power, by virtue of his office, to bind the corporation except in the discharge of his ordinary duties, and that the ordinary business of a bank does not comprehend a contract made by a Cashier—without delegation of power by the Board of Directors—involving the payment of money not loaned by the bank in the customary way. That ordinarily he has no power to discharge a debtor without payment nor to surrender the assets or securities of the bank. And, strictly speaking, he may not, in the absence of authority conferred by the Directors, cancel its deeds of trust given as security for money loaned; certainly not, unless the debt secured is paid. As the executive officer of the bank he transacts its business under the orders and supervision of the Board of Directors. He is their arm in the management of its financial operations. That, while these propositions are recognized in the adjudged cases as sound, it is clear that a banking corporation may be represented by its Cashier—at least where its charter does not otherwise provide—in transactions outside of his ordinary duties, without his authority to do so being in writing or appearing upon the record of the proceedings of the Directors. His authority may be by parol and collected from circumstances. It may be

inferred from the general manner in which, for a period sufficiently long to establish a settled course of business, he has been allowed, without interference, to conduct the affairs of the bank. It may be implied from the conduct or acquiescence of the corporation as represented by the Board of Directors. When during a series of years or in numerous business transactions he has been permitted without objection and in his official capacity to pursue a particular course of conduct it may be presumed, as between the bank and those who in good faith deal with it upon the basis of his authority to represent the corporation, that he has acted in conformity with instructions received from those who have the right to control its operations. Directors cannot, in justice to those who deal with the bank, shut their eyes to what is going on around them. It is their duty to use ordinary diligence in ascertaining the condition of its business and to exercise reasonable control and supervision of its officers. They have something more to do than from time to time to elect the officers of the bank and to make declarations of dividends. That which they ought, by proper diligence, to have known as to the general course of business in the bank they may be presumed to have known in any contest between the corporation and those who are justified by the circumstances in dealing with its officers upon the basis of that course of business.

Acting on these principles the Court held the bank bound by the act of its Cashier in canceling the deeds of trust.

### REPLIES TO LAW AND BANKING QUESTIONS.

**PROTEST AND THE NO-PROTEST SLIP.**—In view of the difference of opinion which has existed among bankers as to the sufficiency of the "no-protest" slip, or of the words "no protest" written or printed on a draft as an instruction not to protest, and with a desire to ascertain the understanding of different bankers in the matter, and also their opinion as to the meaning of the term protest when used in an instruction not to protest, we inserted in our May number the following questions, which we now publish, together with a few of the replies received and some remarks by us upon the subject:

1. When you receive a draft for collection, with instructions not to protest the same, how far do you consider yourself relieved from what would otherwise be your duty with regard to the presentment, protest and notice of non-payment of the same?

2. Do you regard the words "no protest" or "no pro." written on a draft or printed on the end, or written on a slip and pinned thereto, as a sufficient instruction not to protest, or do you disregard it unless the instruction is also contained in a letter accompanying the draft?

Following are some interesting replies to these questions:

J. M. Mumford, Cashier, National Bank of the Republic, Philadelphia, speaking of the "no protest" instruction, says:

"It has always been the rule with this bank to pay no attention to such requests unless instruction is also contained in a letter accompanying the item."

A. M. Hawley, Cashier, First National Bank of Trinidad, Col.:

"1. I consider it only relieves me from protesting, but must be presented and advised of non-payment, at once, unless it was a business draft without endorser and to be paid next day.

"2. 'No protest' printed on slip I consider sufficient, but always write it in letter myself."

R. E. Boyer, Cashier, Creston National Bank, Creston, Iowa.

"1. 'No protest,' attached to draft received by me, I have always considered relieved me of necessity to protest same by notary; but have always considered that I was bound to present for payment or notify by mail that the draft was held for collection. That, in the absence of further instruction, the draft, not being paid 'at due' or 'on demand,' as it may be drawn, that my duty was at once to notify or return at once the unpaid paper to the correspondent from whom received.

"2. I always regard the words 'no pro.' or 'no protest,' written or printed on the draft or attached thereto by 'no-protest slip' as an instruction not to protest. How-

ever, as a precaution, where no mention is made in the letter itself not to protest, I make annotation on the 'no-protest slip' of the fact of its having been attached by placing thereon the regular collection No. as it is indicated in our Collection Register. I am interested in the result of your investigation in this matter."

F. D. Kitchel, Cashier, Potters' National Bank, East Liverpool, Ohio :

"1. When I receive a draft with instructions not to protest I do not consider myself relieved at all as far as presentation is concerned. I present for acceptance or payment exactly the same as if it was to be protested. If the collection comes from a bank or has passed through any intermediate hands before reaching me I return at once if not paid or accepted. If it comes directly from the drawer I sometimes hold a day or two for the convenience of payee, but no longer without first advising the drawer.

"2. I regard the 'no pro.' notice attached to the draft as a full and legal instruction, for the simple reason that if it was not so regarded or intended by the person sending me the collection that person would have removed it. A person might very easily overlook or omit the instruction in the letter, but it is quite conspicuous when attached to the paper itself. With best wishes for your valued magazine, etc."

H. H. Hunn, Cashier, Merchants' & Planters' Bank, Pine Bluff, Ark. :

"1. It has been our practice to regard 'no protest' or 'no pro.' accompanying collections, either written or printed on the letter or on a ticket attached, as a waiver of presentment, protest and notice.

"2. Is answered in above; but it is our practice when receiving collections with 'no-protest' ticket attached to retain the identical ticket, pinning it to the letter when 'no protest' is neither printed nor written on it. We think we are sufficiently protected in that way—at all events all the evidence in such cases is in our hands."

"Generally, is it not likely that the Courts would give legal effect to what has been and is almost the universal practice of banks in construing the force of 'no protest.'"

C. A. Hubbard, Cashier, Lake City Bank, Lake City, Minn. :

"1. We have always assumed that directions not to protest relieved us from all liability other than presentment for payment and prompt remittance (or credit) of the proceeds if paid, or immediate return if not paid.

"2. We do not regard the words 'no protest' or 'no pro.' appearing on a draft as sufficient authority on which to base failure to protest in event of non-payment. We require that the letter of transmittal shall direct us to protest or no pro., and in the absence of instructions *in letter*, we always protest."

R. R. Hutchinson, Cashier, Mechanics' Bank, St. Louis :

"1. We consider that an order not to protest a draft relieves us simply from the duty of protesting same and sending notice to endorsers. Presentment and usual steps to collect must be taken, and draft returned promptly if not paid.

"2. We take instructions as to protest *solely* from the letter of our correspondent and pay no attention to instructions 'not to protest' printed or pinned to the draft *except* when the waiver is embodied as a part thereof in the draft. I have had several controversies on the question raised in No. 2, and would like to know the general custom."

A. Hansl, Cashier, San Antonio, Texas :

"1. 'No protest' I consider merely a waiver of presentment, protest and notice by notary, but not a waiver of the least diligence in collecting or promptness in returning or reporting on an unpaid item on the part of the collecting agent, nor implying authority to hold it for the convenience of drawee or maker, or for other reasons unless especially stated in letter conveying the item.

"2. In the absence of written instructions I am guided by the 'no pro.' on slips or on margin, inferring from the silence an acquiescence in those directions, otherwise I am guided by the written instructions no matter whether there be a slip or remark on margin or not."

W. F. Hinz, Banker, Fidelity, Wis. :

"1. I am of the opinion that a 'no-pro.' or 'no-protest' slip attached to a draft is sufficient reason why it should not be protested.

"2. We treat a draft of this kind the same as any other (excepting the protesting), and if payment or acceptance is not received upon asking for or demanding it we

at once notify the party from whom it was received, asking his advice, or return it stating reasons given (if any were given.) Should consider it sheer negligence to hold it without notifying the sender of its dishonor."

This leads us to briefly consider the questions submitted as follows :

1. When a bank receives a draft with a no protest slip printed thereon, or pinned thereto, or the words "no protest" or "no pro." written thereon, without any further instructions from the sender, is it justified in regarding the same as a sufficient instruction not to protest, and in not protesting the draft ?

With regard to that part of the proposition wherein the words "no protest" or "no pro." are written or printed on the draft at the time it is executed, or, so far as binding an indorser is concerned at the time it is endorsed, we think that the late decision by the Supreme Court of Kentucky in the case of Farmers' Bank *vs.* Ewing, below quoted, furnishes authority for the conclusion that such words are sufficient waiver by the drawer or the endorser, as the case may be, of the necessity of protest. It is true that in that case the words are different, but the principle is the same. In that case, which was decided in 1880 (78 Ky., 264), E was the holder and payee of a note executed to him by J and others, and indorsed it before maturity to the Farmers' Bank in these words, "Pay to the Farmers' Bank of Kentucky, value received. J. R. Ewing." On the back of the note also appeared this printed matter, "The indorsers waive presentment, protest and notice of dishonor." This indorsement was not signed by E, and was entirely disconnected from the indorsement to which his signature appeared. No notice of dishonor was given to E. The Farmers' Bank sued E, as indorser, and he claimed that he was not liable by reason of a want of protest and notice of dishonor; that, although the printed words were on the back of the note when he signed it, they were not subscribed or regarded as amounting to anything whatever. The bank on its part claimed that, by E's indorsement of the note, he had made himself a party to the printed matter and had waived notice of dishonor. The lower Court gave judgment for E, but, on appeal, this judgment was reversed, and the Court said :

"The only question in this case is, did the printed matter form any part of the contract between the indorser and the bank? If the words relied on as a waiver of the rights of the indorser had been written by the latter at the time it was discounted by the bank there can be no doubt but that it must be regarded as constituting a part of the contract, and, if so, we see no reason why the printed matter, if on the paper at the time he indorsed and discounted it to the bank, should not have the same effect. The only evidence is that this printed matter was there when the paper was delivered, and, if so, the bank had the right to regard it as a part of the contract of indorsement. It relates directly to the liability of the indorser, and if found on the back of the paper must be considered as much a part of his obligation as if inserted on the face of the paper assigned. The note is made payable to the appellee who has indorsed it to the bank with the statement upon it that the indorsers waive notice of presentment, protest and notice. It must be presumed that the parties knew of the memorandum when the contract of indorsement was executed; and when on the paper at the time of the indorsement it cannot be disregarded because of the ignorance of the appellee as to its legal effect. 'Daniel on Negotiable Instruments' says: 'It seems that the purport of the instrument is not only to be collected from the four corners, but from the eight corners; a memorandum on the back affecting its operation being regarded the same as if written on its face.' While this may be stating the rule too broadly, it must nevertheless be presumed that the parties regarded the printed matter as part of the contract, so far as it affects the indorser, and as a waiver of the latter's right to notice. That which is written on the back of the note, as well as that written on the face, if relating to the contract, becomes a part of it, and a construction must be given the whole instrument in order to determine the liability (Daniel on Negotiable Instruments, pages 121, 122). This, of course, has reference to what appears on the note at the time of its execution and delivery and not to subsequent memorandums or alterations placed upon it. Any words written on an instrument which qualify and restrain its operation constitute a part of the contract (13 Pickering, 168). The word *facilities* written on the margin of a note was held to constitute a part of the note

(14 Mass., 722). The words *foreign bills* written underneath the note were held to constitute a part of it (4 Mass., 245)."

By this decision it will be seen that any words, either printed or written on the paper at the time it is executed, would bind all parties to it as entering into and forming a part of their contract. In the above case the words "The indorsers waive presentment, protest, and notice of dishonor" were printed on the back of a note as part of the blank form, and the indorser was held to have waived those acts. The words "no protest" or "no pro" are equivalent to "Do not protest this draft," and if these words were printed or written on the draft at the time it was drawn and were allowed to remain it is reasonable to presume that a like decision would be made and that they would be held to be binding upon all the parties as an instruction not to protest and as a waiver thereof.

But the question still remains: When a no-protest slip is attached to a draft in such a manner that it cannot be regarded as a part thereof, but must be regarded as a collateral instruction not to protest, is a collecting bank who receives such a slip without any further instruction from the sender justified in regarding the same as a sufficient instruction and in not protesting the draft?

There is no legal decision of which we are aware wherein such a slip, or its sufficiency as an instruction, has been considered, and this question cannot be answered, therefore, either by direct legal decision or by any uniform understanding of bankers constituting a custom to regard it as a sufficient instruction, for there are neither. In the absence of judicial authority or general custom the legality and sufficiency of such an instruction must be determined by a consideration of the nature and object of such a no-protest slip and by viewing it in the light of such legal decisions as may bear collaterally thereon. The nature of such a slip has already been sufficiently described. Its object is to save the cost of protest. The drawer or other party who attaches such a slip to a draft clearly intends that the draft shall not be protested. He might write a letter to that effect, or he might verbally instruct the Cashier not to have it protested, but, as a shorter method than the letter, and as a surer method than the verbal instruction, which might be forgotten, he attaches a no-protest slip, or uses a draft with those words already on.

The attaching of the no-protest slip, therefore, as a matter of fact, clearly evinces the intention of the party attaching it to give an instruction not to protest the draft, and the only other question to be answered is: Is this form of instruction legally sufficient to justify the collecting bank in omitting the protest? Could a party who sent a draft with a no-protest slip attached repudiate the instruction as being legally insufficient, because unsigned by him or otherwise, and claim damages for an omission to protest?

In considering this question we will first briefly review such of the legal decisions as may relate collaterally to the matter.

It has been held that when a waiver is embodied in the instrument itself it enters into the contract of every party who signs it, whether as drawer, maker or indorser, and they are all bound thereby. Thus, where the words "Presentation and protest waived" or "Notices and protests of non-acceptance and non-payment waived," or equivalent expressions, are written in the bill, they are binding upon all parties thereto, whether maker or endorser, who, by becoming parties to the bill, become parties to the waiver also.

*Bryant vs. Merchants' Bank*, 8 Bush. (Ky.), 43; 8 Bush., 423; 27 Ind., 170; 78 Ky., 266.

Sometimes the waiver is not embodied in the instrument itself, but is made by one of the indorsers writing over his signature, "I waive presentment" or "I waive demand" or "Waiving demand and notice," or some equivalent expression. In this case the weight of authority holds the rule to be that such waiver is only the individual waiver of the indorser, who writes it over his signature, and not binding upon subsequent indorsers.

48 Md., 254; 7 Baxter, 498; 8 Cush., 157.

The contrary doctrine has been asserted in Maine, and, where the first indorser wrote over his signature, "Waiving demand and notice," the Court held that subsequent indorsers, who merely appended their naked signatures,

were bound by the waiver, and that, if any subsequent indorser intended to exclude himself from its operation, he should use the words "Requiring demand and notice."

69 Me., 90.

These decisions, however, do not cover the case of the no-protest slip when attached to a draft, for it cannot be regarded either as embodied in the instrument itself nor does it come under that class of decisions wherein the waiver is placed over an indorser's signature. It is a written memorandum, independent of the instrument, and pinned thereto as an instruction.

It is not, however, necessary that a waiver of protest should be contained in the instrument or indorsed on the back. A waiver of protest may be upon a separate paper.

Duvall vs. Framer's Bank, 7 Gill & J., 44.

In *Spencer vs. Harvey*, 17 Wend., 489, the holder of a note was relieved from demanding payment and giving notice of non-payment to an indorser who within a few days before maturity of the note wrote to him that the maker had failed, acknowledged his liability and asked indulgence until funds could be realized from security given by the maker.

Further, it has been held in many cases that an indorser may verbally waive demand and notice.

Dye vs. Scott, 35 Ohio, 194;

Taylor vs. French, 2 Lea (Tenn.), 260;

Boyd vs. Cleveland, 4 Pick., 525;

Barolay vs. Weaver, 19 Pa. St., 206;

Hazard vs. White, 26 Ark., 155.

But it has also been held that a verbal waiver is insufficient on the ground that the indorsement of a promissory note is the highest evidence of the nature of the agreement between the parties, and that evidence of a parol agreement made at the time, varying the legal liability, is inadmissible.

2 Porter (Ala.), 308; 3 N. H., 122; 67 Mo., 123; 70 Mo., 186.

But, after the obligation as indorser has attached, it is competent for the indorser to waive by parol the necessity for demand and notice.

67 Mo., 123.

In Maine a waiver of demand and notice is required to be in writing by statute.

There are also decisions which hold that the duty of demand, protest and notice may be waived by the acts or course of conduct of the party entitled thereto. Thus, "*Daniel on Negotiable Instruments*," says:

"Any act, course of conduct or language of the drawer or indorser calculated to induce the holder not to make demand, or protest, or give notice, or to put him off his guard, or any agreement by the parties to that effect, will dispense with the necessity of taking these steps" (§ 1103, and cases there cited).

In *Boyd vs. Bank of Toledo*, 32 Ohio, 526, the above language is cited and approved by the Court, and it was held that such conduct on the part of an indorser as was calculated to mislead a reasonable person and to put him off his guard and induce him to forbear taking the necessary steps to charge the indorser will dispense with the necessity of taking such steps.

In the case of *Moyer's Appeal*, 87 Pa., 132, the Court say:

"Demand and notice may be waived by an act of the indorser or drawer calculated to put the holder off his guard and preventing him from treating the note as he otherwise would have done. A parol promise to pay made at the time of, or subsequent to, the indorsement; a request by the indorser for forbearance; a declaration by the indorser of a check to the holder that the maker cannot pay, that the latter has made an assignment and has therein preferred him; an inquiry by the holder of the indorser on the day the note matured if it would be best to call on the makers and reply that it would be of no use, respectively, have been held as a waiver of demand and notice. No general rule can be laid down as to what words or acts will amount to a waiver, except they must be such as fairly to lead a reasonable man to believe that the indorser did not wish the regular course, in making demand and giving notice, to be pursued. Unless such be the direct and natural inference from the words or acts, and they be so

clear and pointed as to leave no reasonable doubt as to what was intended, they are not within the rule."

Is there anything in any of these decisions from which it could be inferred that the no-protest slip is insufficient, legally, as an instruction? By some of the decisions above cited a waiver of protest may be verbal and by others it is required to be in writing. But even conceding the rule to be that a waiver of protest must be in writing, though the weight of authority holds that it need not be, the no-protest slip is not a verbal instruction. It is not an instruction given by word of mouth, and, although it may not be signed by the party giving it, it is nevertheless a written instruction. Irrespective of these cases, however, the rule is well settled that any act, course of conduct or language of the drawer or indorser calculated to induce the holder not to make protest will dispense with the necessity of taking such steps. We think this rule is sufficiently broad to cover such an instruction. When a party attaches a no-protest slip to a draft he does it for the purpose of inducing the holder to omit the protest. The words "no protest" written on a slip and pinned to the instrument are a brief instruction to that effect and constitute a waiver on his part of the necessity thereof. The object of attaching it is to have the protest omitted. If on the faith thereof the holder does omit the protest has he not been induced to do so by the act of the party who attaches the no-protest slip, and can such party claim that such slip was not legally sufficient as a waiver, or legally binding as an instruction, and that the draft should have been protested? We think not. He has communicated a definite instruction, which has been followed, and is therefore bound by his acts. This view seems to us reasonable, and, although there is no direct legal authority on the sufficiency of the no-protest slip, we are inclined to regard it as a sufficient instruction.

2. When a draft is received for collection, with instructions not to protest, how far is the collecting bank relieved from its duty of demand, protest and notice of non-payment thereof.

As a matter of interest to our readers we give below a brief review of the legal decisions wherein the term *protest* has been construed and its meaning stated.

In *Union Bank vs. Hyde*, 6 Wheat, 572 (United States Supreme Court), the following undertaking of the indorser of a promissory note, "I do request that hereafter any notes that may fall due in the Union Bank in which I am or may be indorser shall not be protested, as I will consider myself bound in the same manner as if the said notes had been, or should be, legally protested," was held to be ambiguous as to whether it amounted to a waiver of demand and notice, and parol proof was admitted to show that it was the understanding of the parties that the demand and notice required by law to charge the indorser should be dispensed with.

In *Coddington vs. Davis*, 1 N. Y., 186, the indorser wrote to the holder to please not protest the note and he would "waive the necessity of the protest thereof."

The Court said:

"The term *protest* in a strict technical sense is not applicable to promissory notes. The word, however, as I apprehend, has by general usage acquired a more extensive signification, and in a case like the present includes all those acts which by law are necessary to charge an indorser. When among men of business a note is said to be protested something more is understood than an official declaration of a notary;"

And it was held that the indorser had waived the necessity of a demand upon the maker and notice to the indorser.

In *Jaccard vs. Anderson*, 37 Mo., 91, the Court, at page 94, says:

"There is no absolute necessity for the protest of a note or an inland bill of exchange; but, as to *protest* in such cases, the better opinion would seem to be that an agreement for a waiver of protest alone would fairly imply and import a waiver of demand and notice."

To the same effect is *Carpenter vs. Reynolds*, 42 Miss., 807, and *Fisher vs. Price*, 37 Ala., 407.

In *Gordon vs. Montgomery*, 19 Ind., 110, a note contained the words,

"Protest and notice of protest waived." The Court held: The waiver of protest included a waiver of a demand.

In *Townsend vs. Bank*, 2 Ohio, N. S., 345, the Court said, at page 353:

"Although it is true in a strict technical sense that the term *protest* when used in reference to commercial paper means only the formal declaration drawn up and signed by the notary, yet in a popular sense, and as used among men of business, it includes all the steps necessary to charge an indorser."

In Louisiana a waiver of protest does not include a waiver of notice although it is a waiver of demand. Thus in *Wall vs. Bry*, 1 La. Ann., 312, an indorsement on a note before maturity by the indorsers, "We hereby waive protest and acknowledge ourselves as fully bound for the within note as if the same was regularly protested," was held to be a waiver of protest and demand of payment but not to dispense with notice.

That a waiver of protest is not a waiver of notice of non-payment is also held in *Bird vs. Le Blanc*, 6 La. Ann., 470; *Ball vs. Grouard*, 14 La. Ann., 305.

A waiver of protest includes a waiver of notice.

60 Ga., 825.

In *Ayranet vs. Pacific Bank*, 47 N. Y., 575, a depositor said that he wanted a promissory note *protested* if not paid, and that by *protest* he intended simply a demand of payment in proper form and at a proper time, and, in case of non-payment, due and reasonable notice to the indorsers by the bank or any of its clerks or servants or other suitable persons.

The Court said:

"This is the usual and popular meaning of the term *protest* as used even among merchants and the sole meaning as used by non-commercial and unlearned men."

In *Brown vs. Hull*, Supreme Court of Appeals, Virginia, March Term, 1890 (33 Gratt., 23), the Court, speaking of the words "protest waived," says:

"In the case of a foreign bill of exchange the word *protest* means the taking of all the steps necessary to fix the liability of the drawer or indorser upon the dishonor of the paper. A waiver of protest in such case must therefore be ordinarily construed as a waiver of the steps necessary for that purpose. \* \* \* As to the words 'protest waived,' when applied to ordinary commercial paper, the authorities are not entirely accorded as to their precise meaning. By some of them it is held they amount merely to a waiver of demand upon the maker. By others, they include a waiver of demand and notice; and this is the more general and better received opinion."

In the case of *Annville National Bank vs. Kettering*, decided by the Supreme Court of Pennsylvania in 1884, the following is an extract from the opinion of the Court:

"No principle of the law merchant is better settled than that demand and notice of the non-payment of a negotiable note may be waived by the indorser either orally or in writing or by acts clearly calculated to mislead the holder and prevent him from treating the note as he otherwise would; but there is some diversity of opinion as to what constitutes a waiver of these necessary pre-requisites to charge the indorser. When a written waiver of 'demand and notice' accompanies the indorsement, or is given by the indorser before maturity of the note, there can be no question as to its legal effect, nor can there be any doubt when the language employed clearly imports or implies the same thing. It has been doubted, however, whether the words 'protest waived' written on a note by the indorser, or his separate request in writing not to protest it, is a waiver of both demand and notice, and in some cases these words have been considered insufficient to dispense with either; but the weight of both reason and authority is that they do constitute a waiver of both. Strictly speaking the term 'protest' applies only to foreign bills, but the custom to treat inland bills and notes in the same manner as foreign bills has become so well nigh universal that in common parlance the term means the taking of such steps as are required to charge the indorser. For the same reason the word 'protested,' sometimes employed in giving notice of dishonor to indorsers of inland bills and notes, clearly implies demand, non-payment and consequent dishonor of the bill or note in all cases where protest is necessary."

The Court further says:

"It is not essential that the waiver should be in writing. When the fact is established by competent evidence a parol waiver is as valid and as binding as a written one. The only difference is in the character of the proof. (*Barclay vs. Weaver*, 7 Harris, 386). It was there held that a verbal agreement between the holder and indorser to renew a note at maturity might be shown by oral testimony, and that demand and notice were thereby dispensed with. The general principle, underlying nearly all cases of waiver, is that the indorser has by word or deed done something calculated to mislead the holder and induce him to forego the usual steps to fix the liability of the former."

The Court also cites the case of *Huckenstein vs. Herman*, in the Supreme Court of Pennsylvania (34 Leg. Intell., 232), in which case it is said:

"A waiver of protest before maturity of a note is a waiver of all the steps leading to it, and includes demand and notice of non-payment. This, we think, is the general understanding of a waiver of protest among business men. The very purpose of waiver is to supersede the ordinary steps and avoid trouble and expense. To waive the mere act of the notary and yet suffer the duty of making demand and giving notice of its result to remain would scarcely be thought of by business men."

In some of the States which have codified their laws the subject of waiver of protest is regulated by statute. Thus, in California, section 3160 of the Civil Code provides that "A waiver of protest on any negotiable instrument other than a foreign bill of exchange waives presentment and notice;" and section 1879 of the Civil Code of Dakota also contains these identical words. By these statutes the subject of protest and notice, with reference to foreign bills of exchange, is also regulated.

By the forgoing decisions it will be seen that a waiver of the protest of a foreign bill of exchange is universally—and of an inland bill or promissory note generally—regarded as a waiver of all the steps necessary to charge an indorser, and that it is consequently a waiver both of the necessity of demand and of notice of dishonor.

Space will not permit us to give an extended consideration to this subject. Notwithstanding these decisions, however, we are of opinion that when a draft is sent to a bank for collection, with instructions not to protest, it is the duty of the bank to make a due presentment of the paper and in case of non-payment a prompt return thereof. Although under these decisions a holder for value with such an instruction attached might be relieved of the duty of presenting and giving notice and still hold the indorsers to their liability a collecting bank to whom the paper is sent to be collected should not relax the least diligence in accomplishing that object, and the instructions not to protest should not be regarded as dispensing with the necessity of presentment or with the prompt return of the paper in case it was not paid.

*Editor Rhodes' Journal of Banking:*

TRAVERSE CITY, Mich., June 19, 1886.

SIR:—I have twice sent you enquiries concerning important law questions and have to thank you for the well-considered replies thereto. Your Law Department together with the replies to legal questions arising in banking practice, are very valuable.

May I ask another question?

In your last issue you refer to the exemption by law of "greenbacks" from taxation. Greenbacks and all obligations of the United States being exempt, does it not follow that in the valuation of National bank-stock the amount of such obligations on hand on the day of valuation should be deducted from the value of the stock? A share of stock merely represents a certain interest in certain property, and if half, say, of that property is by law exempt from taxation it seems to me the stock should be appraised accordingly. A reply would greatly oblige, C. A. HAMMOND, *Cashier*.

*Answer.*—In the case of *Van Allen vs. The Assessors*, 3 Wallace, 573, decided by the Supreme Court of the United States in 1865, the question asked by our correspondent is fully discussed. In that case the Court held, three Justices dissenting, that a State possesses the power to authorize the taxation of the shares of the National banks in the hands of stockholders whose capital is wholly vested in stock and bonds of the United States. The

Court holds that a tax on the shares is not a tax on the capital of the bank. The question is elaborately discussed in the opinion of the Court, and the grounds and reasons for its judgment are clearly stated.

The minority opinion dissents from the judgment of the Court, and holds that such taxation is actual, though indirect, taxation of the bonds, and that taxation by the States of the shares of National banking associations, without reference to the amount of the capital invested in National securities, is not authorized nor intended to be authorized by Congress.

The judgment of the Court was affirmed in *Bradley vs. The People*, 4 Wallace, 459.

*Editor Rhodes' Journal of Banking:*

FT. SCOTT, Kans., June 14, 1886.

SIR:—When was the following note due?

<p>On May 6th, fixed, I promise to pay A or order three hundred dollars at the Commercial Bank. \$300.</p>	<p>JANUARY 3, 1886. B. &amp; Co.</p>
--	--

Would like your opinion in the next JOURNAL on the use of the word "fixed."

Yours truly, CASHIER.

*Answer.*—It has been held that the word "fixed" when used in a negotiable instrument imports that no days of grace shall be allowed.

*Durnford vs. Patterson*, 7 Mart. (La.), 60.

Giving the instrument this construction, therefore, the note was due on May 6th.

*Editor Rhodes' Journal of Banking:*

MILWAUKEE, Wis., June 17, 1886.

SIR:—Having read the JOURNAL of BANKING for some time I take the liberty of submitting to you the following question:

Suppose a check payable to the order of "John Brown" is endorsed "John Brown, Detroit, Mich." Is it not right to refuse payment, without guarantee, on the grounds that "John Brown, Detroit, Mich." is merely an address which any one may write?

Yours, INQUIRER.

*Answer.*—If the indorsement was made by the payee we are of the opinion that the addition of the words "Detroit, Mich.," would not render the indorsement invalid and it should be paid.

*Editor Rhodes' Journal of Banking:*

FITFIELD, Wis., June 10, 1886.

SIR:—As a subscriber to your valuable journal I take the liberty of submitting the two following questions:

1. A gives B his note, with interest, dated May 1, 1886, payable "on or before ten (10) days after date." Can the holder demand payment before it matures on May 13th?

2. A gives B his note for \$1,000, dated January 15, 1886, payable "thirty days after date," with interest at 10 per cent. per annum, which he (A) offers to pay February 14th (expiration of 30 days), but B wants to hold the note until February 17th (maturity) and collect interest for the 33 days. Can B collect interest for the 33 days, or will he be obliged to take interest for 30 days only? Very respectfully, W. F. HINZ.

*Answer.*—1. No. The promise to pay on or before a future date gives the maker the option to pay at any time before that date; but the holder cannot require payment before its maturity.

*Jordan vs. Tate*, 19 Ohio N. S., 586.

2. B is entitled to interest for the 33 days. The note is not due until the expiration of the days of grace, and the maker is liable for the interest for the full period:

*Editor Rhodes' Journal of Banking:*

—, Iowa, June 11, 1886.

SIR:—Will you please furnish me a reply to the following:

We have a capital of \$150,000 and a surplus of \$40,000. Our real estate cost the bank \$21,000. This is assessed at \$15,000. I would like your opinion of the per cent. at which this bank's stock is liable for taxation on the basis of 50 cents on the dollar.

Do you understand by late decisions of the Courts that the *surplus* of a National bank is liable to be taxed? Respectfully, NATIONAL BANK CASHIER.

*Answer.*—Section 5219 of the Revised Statutes provides that "the Legislature of each State may determine and direct the manner and place of taxing all the shares of National banking associations located within the State, subject only to the two restrictions, that the taxation shall not be at a greater rate than is assessed upon other moneyed capital in the hands of individual citizens of such State and that the shares of any National banking association owned by non-residents of any State shall be taxed in the city or town where the bank is located and not elsewhere." Under this provision there are many methods of taxation. There is a different method and valuation of the shares in almost every county in this State. The method adopted in this city is to assess the shares at the average market value from September to December. From this market value is deducted the real estate owned by the bank. If the remainder is divided by the number of shares the valuation of each share will be obtained. Many of the National banks in this city have declined to pay the city taxes for the last two years on the ground that other moneyed capital either escapes taxation altogether or is assessed at a much less rate than the shares of National banks. This question is now pending and will probably be decided by the Supreme Court of the United States during the present year.

In the case of the Iowa bank, upon the statement above given, if the valuation is to be upon the basis of 50 cents on the dollar on capital (\$150,000) and surplus (\$40,000) amounting to \$190,000, the assessed value of the real estate, \$15,000, should be deducted, leaving the amount \$175,000. Fifty per cent. of this amount would be \$87,500. As the number of shares is 1,500 the assessed value of each share would be a little more than \$58.

#### BRIEF REPLIES TO SUBSCRIBERS.

**M. F. A. (Penna.)**—We think it would be advisable for you to organize under the National system. The restrictions imposed upon National banks are the outgrowth of long experience and careful study, and irksome only to those who desire to go outside of the limits of safe and prudent banking. As a National bank you will enjoy a standing, both at home and with out-of-town customers, which you would not have as a State Institution. Make the capital \$50,000. You can do as much business at that amount as you could at \$100,000.

**C. B. T. (Kansas City, Mo.)**—You should not issue certificates of deposit payable at a future date. They are regarded as post notes, and as such are outside of the powers of National banks (see Comptroller's Report for 1885, page 86.)

**NOTE CLERK.**—A very convenient way to file notes without marking them is to have a book with twelve pasteboard leaves. Have the edges of the leaves cut like a ledger index and marked with the name of the month. Arrange the notes in order of maturity and any note wanted can be easily found. A similar book with thirty-one leaves, numbered from one to thirty-one, will serve for the notes of the current month.

**SUBSCRIBER (Minn.)**—The town you speak of is an excellent place to open a bank. It is prosperous and the surrounding country rich. Instead of starting a branch house begin as a National bank. Take as much of the stock yourself as you can conveniently pay for, and see that the balance is distributed among the best business houses. The Comptroller's office will give you all the necessary information in regard to organization papers, etc.

**A CONSTANT READER.**—The law prohibits a National bank from making a loan on the security of its own shares (Rev. Stat., Section 5201), but there is nothing in the National Bank Act to prevent a National bank making loans on security of the shares of another National bank.

**XMAS (Dakota).**—It is quite the correct thing now to spell "check" with a 'q' thus "cheque." "It's English, quite English, you know."

**F. N. & Co. (Boston).**—Corporations and firms can buy and hold stock in a National bank but they cannot take part in the original organization of the bank. Those taking part in the organization of the bank must be "natural persons—that is,

individuals who can legally hold and control property in their own individual right." The members can subscribe individually, and then, after the bank is organized, they can transfer their stock to the firm.

**NEW BANK.**—By sending the dimensions of your banking office to a manufacturer you can have the counter and everything made complete and shipped in separate pieces ready to be set up. Some banks now have the Teller's "cage" covered with a grating so as to completely protect him. It is getting to be a general custom—and a good one—to separate the money department from the rest of the bank.

**A SUBSCRIBER** (Toledo, O.)—National bank-notes are a legal-tender to any National bank (except gold banks) for any debt or liability to the bank (Rev. Stat., § 5196).

**INQUIRER** (Des Moines, Iowa).—We do not think it would be strictly correct to say that the banks are *hoarding* gold; at the same time it cannot be denied that there is a growing disposition on the part of the banks to pay out other kinds of money and keep their gold in the vault.

**ASSISTANT CASHIER** (Louisville).—For a clear and interesting discussion of the duties of the National Bank Examiner see Report of the Comptroller of the Currency for 1881, page 84.

**F. G. A.** (Texas).—At the present prices of United States bonds the profit on circulation is merely nominal. With money loaning at six and seven per cent. the profit is, say, from one-tenth to one-half of one per cent. For definite figures see Comptrollers' Report for 1885, page 125.

**BOOK-KEEPER** (Indianapolis, Ind.)—It will afford considerable relief to your eyes if you have your ledger, cash book, etc., made of light-blue paper. A blue tint is free from the dazzling effect of perfectly white paper.

**BANK RUNNER** (St. Louis, Mo.)—A small chain covered with leather and fastened to the left-hand inside end of your wallet will be a protection against any person snatching the wallet and will also leave both hands free to count money, etc. The chain goes over the shoulder under the coat. Thus, by buttoning your coat, the wallet is both secured and concealed.

**MERCHANT** (Detroit Mich.)—The reason that you see more National bank-notes in circulation than United States notes is because the latter are available to the National banks to make up the reserve fund on deposit. Consequently, National banks hold on to the legal-tender and pay out the National.

**CORRESPONDING CLERK** (Atlanta, Ga.)—In making up coupons to send away for collection it is not necessary to arrange them in the order of the numbers, but be careful to keep different kinds of coupons in separate envelopes.

**T. L. J.** (Springfield, Ill.)—A convenient way to mark pigeon holes in the Corresponding Clerk's case is to cut out the name of each corresponding bank from the printed envelope and paste it over the pigeon hole, and above that the name of the Cashier cut from your correspondent's letters.

**AN OCCASIONAL CORRESPONDENT** (Ohio).—The Comptroller of the Currency has a right to be informed at all times of the condition of every association organized under the National Bank Act. This information he obtains, either by (a) the general reports made five times a year, (b) special reports of any bank called for at his discretion, and, (c) by sending an agent to examine the condition of the bank (Rev. Stat., Sections 5211 and 5240).

**F. B. S.** (Portland, Me.)—Of course the drawee, after refusing to accept the draft, had not the least right to detach and retain the bill of lading in order to satisfy a debt due him by the shipper. If he refuses to give up the bill of lading, or the goods, threaten him with a criminal action.

**J. S.** (Pittsburgh).—As your banking office is to be on the second floor, and the first floor (or rather the basement floor) is to be rented out for offices, why not build your vault on the street side and support it on arches springing from four pillars resting on the ground floor. This would make a handsome effect. The vault, by its position, would thus be protected above, below, and on every side. Of course that part of the office where the clerks are would also be thrown on the street side.

**CURIOSITY** (Galveston, Texas).—To satisfy our anonymous correspondent's "curiosity" we would say that "Y. O. S." immediately preceding the signature to a letter or raft means "Your Obedient Servant." We wonder what he supposed it meant.

## BANKING AND FINANCIAL NEWS:

WITH COMMENTS ON THE MORE IMPORTANT MATTERS. THIS DEPARTMENT ALSO INCLUDES: RAILROAD AND INVESTMENT NEWS, AND A COMPLETE LIST OF NEW BANKS, CHANGES IN OFFICERS, DISSOLUTIONS AND FAILURES.

**Cost of Handling Silver.**—A subscriber in Kansas writes, "I have read with interest the articles on the silver question that appear in your valuable JOURNAL, but there is one item that I have never seen mentioned, and that is the tax on banks caused by the difference between the express rates on silver and currency. With us the rate for silver is just double the rate for currency, and I suppose it is the same all over the country. Has it ever been figured out as to what banks have to pay on this score?"

We have never seen an estimate made of the aggregate cost to banks of shipping silver, but it must certainly be very large. The Government formerly expended large sums for transporting silver from one Sub-Treasury to another, free of expense to private parties, for the purpose of having the coins generally circulated. This practice, in view of the small success and large expense which attended it, was stopped by the present Administration. Of course, whenever we speak of the inconvenience of the silver dollar the expense to banks and private parties in handling or transporting it is included in the idea.

**The Assayer at Denver.**—The Senate in secret session rejected the nomination of Posey S. Wilson to be Assayer of the Mint at Denver, Col.—*Press Despatch.*

Of course, what passes within the closed doors of the Senate is unknown without, but we venture the assertion that the reason of the action in Mr. Wilson's case was his open and bold advocacy of the cause of honest money. It should be understood that he did not begin the fight. Immediately upon his appointment the Colorado press began to attack him and to challenge him to publish his views. This he did to such good purpose that the papers soon attempted to shut him off. They seemed to consider it an outrage that any but a silver man should have been appointed Assayer. It would appear that the so-called "courtesy of the Senate" has in this instance been responsible for a wrong and cowardly action.

In a letter received from Mr. Wilson since the above was written he confirms our supposition. "Let me assure you," he says, "that my defeat was due entirely to the opposition of the Colorado Senators, or rather to Mr. Bowen, the junior Senator. Both the Colorado Senators assured me that their opposition was based solely on the ground of my views and expressions on the silver question."

**Change of Name and Location of National Banks.**—Washington advices say that since the President approved, on May 1st, the Act to enable National Banking Associations to increase their capital stock and to change their names or locations, up to the first of June only two or three banks filed applications with the Comptroller of the Currency to avail themselves of the privilege of the Act. This is rather singular, as hundreds of bills have been introduced in Congress to allow such changes in the case of individual banks which have never been acted upon. Comptroller Trenholm has prepared a circular giving the text of the new law and calling special attention to the clause depriving the Board of Directors of the power to increase capital even when this power is granted in the articles of association.

The text of the Act alluded to may be found in the June number of the JOURNAL, page 456.

**Maine Savings Banks.**—Although the large increase in deposits in Maine savings banks of \$1,181,964 in six months, and the comparative security of new and paying enterprises calling for money makes it very difficult for those having the deposits in charge to invest the money where it will be both safe and profitable, yet the last semi-

annual statement of the Maine Bank Examiners gives a gratifying report of the standing of the fifty-four savings banks in this State. The aggregate deposits May 1st were \$36,238,564; the aggregate reserve fund was \$1,297,548, an increase of \$76,977 in six months; the aggregate undivided profits were \$864,481, an increase of \$2,495. The excess of assets over actual liabilities is \$4,583,719, an increase during the year of \$483,972, or enough to pay \$112.50 for each \$100 deposited. But two securities held by the banks have suspended payment of interest for the first time during the year, and of these only \$7,000 are held by savings banks. In view of the low rate of interest on all classes of securities, the savings banks will this year reduce their dividends to 3 per cent. per annum, and a portion of the earnings will be appropriated to the payment of premiums for new investments. The design of the banks is primarily to make a safe place of deposit for persons of moderate means, and the character of the assets is of far more importance than the rate of dividends to depositors.—*Lewiston Journal*.

**Indiana.**—Mr. J. H. Tate, for thirteen years Cashier of the Parke Banking Company, at Rockville, Ind., has resigned, to take effect July 1st. Mr. Tate removes to Omaha, Neb., to engage in the real estate, insurance and loan agency business.

**Mr. Patten's Successor.**—Mr. Geo. B. Warren has been appointed Cashier of the State National Bank, of Boston, to succeed Mr. C. B. Patten, deceased. Mr. Warren was associated with Mr. Patten for many years, as junior officer, and he is well qualified to take up the work of his able predecessor. Mr. Warren is spoken of as a highly capable and progressive bank officer.

**Boston Bank Officers' Association.**—The following official letter, dated June 7, 1886, explains itself: "At the annual meeting of the Bank Officers' Association, held May 19, 1886, it was unanimously voted to extend the thanks of the Association to Messrs. Bradford Rhodes & Co., publishers of the JOURNAL OF BANKING, for the generous gift of pamphlets containing an account of the annual dinner of the Association. (Signed.) E. A. STONE, Secretary."

**Swift Punishment of Defaulters.**—The American Surety Company of New York takes speedy and summary action with defaulters. It appears that the company issued a bond of \$5,000 on John H. D. Meyer, Teller of the Pullman Loan & Savings Bank, at Pullman, Ill., and some time thereafter, having suspected him, an investigation was instituted which resulted in the arrest of Meyer for embezzlement. Meyer endeavored to make his escape by obtaining one "Haines," a professional "straw-bailer," to execute his bail-bond in the name of James Crow, a property owner in Chicago. The American Surety Company was not to be outdone by this manoeuvre, and as soon as the bogus James Crow justified on the bond he was immediately arrested, together with one "Palmer," who appears to have been the instigator of the scheme. The trial of Meyer was short, as he pleaded guilty and was sentenced to the Joliet, Ill., penitentiary for three years. "Palmer" was next tried, convicted and sentenced to twelve months' imprisonment and to pay a fine of \$500, and this action has had a very salutary effect on the "straw-bail" gang in Chicago.

**Convention of the American Bankers' Association.**—The annual Convention of the American Bankers' Association for 1886 will be held at Horticultural Hall, Boston, on August 11th and 12th. It should be understood that each bank, banking firm and trust company throughout the country is entitled to send one delegate to the Convention and to have a vote on all questions that may be discussed. The programme is not completed yet, but a report on the redemption system will be heard and the insolvency question will be thoroughly discussed. Consideration and action relative to a National Bankrupt Act will also take up some time in the Convention. A prominent feature of the meeting will be an address by Judge Lowell on the bankruptcy question. A large attendance is expected and it is understood that the Boston bankers will unite in showing courtesy to the visitors and in making their stay in that city a pleasant one.

Members who are preparing papers and other bankers desiring to suggest the names of speakers to address the Convention should report such names, with the proposed topics, before July 21st, to the Secretary of the Association, 128 Broadway, New York, and they will be brought to the notice of the Executive Council.

Probably many of the delegates will prefer the hotels at which they usually stay in Boston, but ample hotel accommodation will be available, and the Local Committee will give information to all delegates who may desire to make inquiries. Such dele-

gates will apply as early as possible to Mr. Edward Tyler, Cashier of the Suffolk National Bank, Boston, or to Mr. James H. Bouvé, President of the Boston National Bank, who has been appointed Registrar of the Convention.

#### MISCELLANEOUS BANK AND FINANCIAL ITEMS.

— It is stated that there will be a marked increase in the gold output of Colorado this year.

— The Philadelphia Stock Exchange has decided to remove to the corner of Fifth and Liberty streets.

— A new Clearing-House for the Consolidated Stock & Petroleum Exchange of New York was opened June 3d.

— The Bank of Monroe, La., suspended on June 21st. The assets are reported to be \$46,087 and the liabilities \$55,552.

— Samuel L. Wallace, Cashier of the Exchange Bank, of Spencer, Ind., is reported to be a defaulter for \$16,000, lost in speculation in Chicago.

— A claim amounting to \$4,823 against the Marine National Bank, of New York, on which 45 per cent. has been paid, was sold at auction recently for \$1,175.

— A Philadelphia Court holds that the Local Telegraph Company cannot be restrained from discontinuing the service of stock quotations to a "bucket-shop."

— Suit is being brought against some of the original subscribers to the stock of the insolvent Shackamaxon Bank, of Philadelphia, who only paid one dollar on each share.

— Counterfeiters who make dollars with only seventy-eight cents worth of silver must expect to be apprehended. Only Governments can do that.—*Philadelphia North American*.

— By order of the Chancellor, all creditors' bills have been paid by the Dime Savings Bank of New Brunswick, N. J., of which A. G. Ogilby was Treasurer, and the first dividend of 50 per cent. has been declared to depositors.

— The New York banks have been posting notices asking their dealers to transact their business by 1 o'clock on Saturday in order to allow the employees the benefit of early closing. The success of the movement has not been marked as yet.

— The Mower County Bank, a private concern, of Austin, Minn., of which Wilkins & Smith are proprietors, has suspended. The liabilities are stated at over \$90,000, and the assets, consisting mostly of real estate, are estimated at a larger amount.

— Judge Fullerton, of New York, is quite confident that the Government will have to pay the Confederate bonds "in time." Perhaps it may pay them in time—but in money; never, Judge. Fullerton wants to bull the waste paper market.—*Philadelphia Press*.

— The Bank of America, of Philadelphia, wants to change its title to the German-American Bank. The German-American Title, Insurance, Trust & Safe Deposit Company has filed exceptions, on the ground that the similarity of names would cause confusion.

— The Chancellor has ordered the Receiver of the defunct Gloucester City (N. J.) Savings Bank to take immediate steps for bringing about a final settlement with the depositors. Mr. Hurty has been going slowly with the hope of realizing more than he would by haste.

— The heaviest creditors of E. A. Willard, the Jonesborough (Ill.) banker, who about four years ago changed his place of abode to Mexico, leaving the depositors of his bank in the lurch to the tune of over \$108,000, are now receiving letters from him asking leave to return.

— The Van Wert (Ohio) National Bank received June 4th, by the United States Express, from the Union National Bank, of Cincinnati, a package purporting to contain \$10,000, but which, when opened, was found to be filled with cotton, pasteboard and railroad advertising bills.

— The Bank of Paola, Kan., which was established early in 1882, has a paid-up capital stock of \$50,000. It is a conservative institution, paying no interest on demand deposits. Its officers are L. C. Gilmore, President; E. Gilmore, Vice-President, and

V. E. Dennison, Cashier. A local paper says: "This institution is one of the solid banks of the country, and expects to remain so, widening in scope of operations with each succeeding month.

— A *nolle prosequi* has been entered in the case against Samuel Bingham, late Cashier of the Windham (Conn.) National Bank, who was charged with accepting bribes in dealings with Grant & Ward. Arrangements have been made to put the bank in an improved condition.

— Mr. Ed. F. Woodcock has resigned the Cashiership of the Citizens' National Bank, of Niles, Mich., to become Assistant Cashier of the new City National Bank at Lansing. The people of Niles are sorry to lose him, but his friends at Lansing are glad to welcome him back to his native town.

— The Hon. Willis S. Paine, Superintendent of the New York State Banking Department, has issued a certificate authorizing the City Savings Bank, of Brooklyn, to open an office for the deposit of savings, subject to the provisions of law governing such institutions. The proposed savings bank is to be located at No. 4 Fourth avenue.

— The Comptroller of the Currency has declared a second dividend of 15 per cent. in favor of the creditors of the Middletown National Bank, of Middletown, N. Y. The former dividend was 40 per cent. After this 15 per cent. is paid the claims will aggregate \$200,000. The Receiver says the liquidation is delayed by manifold suits at law.

— Stephano Treppo was taken before United States Commissioner Shields of New York on June 14th, charged with passing a counterfeit five-dollar bill, and subsequently a two-dollar bill. The bills are counterfeits, not very good in workmanship, of United States Treasury notes, series of 1880. They are the first that have been found in New York.

— The annual report of the Savings Bank Commissioners of New Hampshire will show the total amounts of deposits to be \$46,831,913, being an increase over 1885 of \$2,804,557. The aggregate deposits of last year were the largest in the history of the State up to that date. The surplus and guarantee fund is \$3,820,880, being an increase of \$354,483.

— David Moffatt, Jr., banker and millionaire, of Denver, Col., visited his native town of Blooming Grove, N. Y., recently, and while there purchased a site for a free public hall and library which he proposes to present to the town. He intends to furnish the library with books and other adjuncts complete. The building alone will cost about \$50,000.

— Veach's Bank, of West Middlesex, Pa., which was organized in 1886 under the name of Millers & Miners' Bank, closed its doors on June 15th. The cause of the failure is the shrinkage of values of real estate and inability to readily realize on commercial paper. The firm claim they have real estate and other property sufficient to meet all indebtedness if only given time.

— Joseph H. and Richard M. Collins, note brokers of New York, being indicted for larceny, fled to St. Paul, Minn., where they were arrested. They have been brought back to New York and remanded in default of bail. We know nothing of the merits of this case, but some previous instances go to show that business men are too careless regarding the persons they intrust their bills with.

— When Wilkinson Brothers, bankers, of Syracuse, N. Y., failed in December, 1884, deeds of their real estate valued at nearly \$500,000 to their brother, John Wilkinson, of Chicago, dated seven months previously, and also a mortgage to C. P. Crosby for \$125,000, were put on record. These articles have just been declared fraudulent by Justice Williams, of Watertown. An appeal is to be taken.

— Among the bills passed by the New York Legislature at the last session, but which, failing to be signed by the Governor, were not enacted, were the following: To incorporate the Nassau Trust Company; to incorporate the Grocers' Trust Company of New York; to incorporate the Merchants' Trust Company of New York; amending the charter of the Manhattan Loan & Trust Company of New York.

— J. Finley Hoke, bookkeeper of the Merchants' National Bank, formerly the Mechanics' National, of Peoria, Ill., disappeared recently, and it was discovered that he had swindled the banks out of about \$180,000. He was found in Canada in an insane

condition. The loss of the Mechanics' National is \$106,000, and \$68,700, the remainder of the amount embezzled, stands as a claim against the stockholders of the Merchants' National.

— The *Chicago Times* says: "Chicago bankers continue to be favored with an exceedingly satisfactory patronage for the middle of June. Their transactions in all departments of their business show a large increase over last year, and while money, of course, is plenty, their discount lines are considerably above an average summer showing. In all respects local financial affairs are in an encouraging condition, and on no hand is there cause for complaint."

— Receiver Shepherd F. Knapp reports that up to 1875 the Bowling Green Savings Bank, of New York, paid two dividends, one of 15 per cent., amounting to \$45,047, the other of 25 per cent., amounting to \$112,004. Mr. Knapp has distributed all he could collect, and very little remains to be done. The cause of the delay in settling up the bank's affairs is that there has been a great deal of litigation. Three cases have been to the Court of Appeals and one of them is likely to go there again.

— One of the last official acts of President Cleveland previous to his marriage was the pardoning of B. F. Bigelow, the defaulting Teller of the National Bank of the Republic, of Washington, D. C. Three years ago Bigelow was sentenced to five years' imprisonment. He had always been regarded as an honest man, but was led, through his speculations, into a misappropriation of the funds in his charge. During his imprisonment his wife has died, leaving seven little children in the care of their grandparents.

— Ex-Cashier Clements, of the failed State Bank of Fort Edward, N. Y., has been found guilty of misdemeanor in overdrawing his accounts and of perjury in swearing to a false report to the Bank Department. He has been sentenced to six months imprisonment on the former and five years and six months on the latter charge. Clements is 77 years of age. Although he had been a bank Cashier for twenty-eight years, he professed on the trial that he was not familiar with bank methods and that he had depended entirely on the Teller.

— J. E. Chandler, ex-President of the Farmers' National Bank, of Bushnell, Ill., who was indicted in the United States District Court for conspiracy to defraud the United States Government by altering the books of the bank, and who, after his bond was reduced from \$20,000 to \$10,000, jumped his bail and took refuge in Mexico, appeared in the District Court on June 16th and pleaded guilty. There were six counts in the indictment, and he was sentenced to two years' imprisonment on one count, the Court suspending sentence on the other five. The amount involved in the alterations was claimed to be about \$80,000.

## R. R. AND INVESTMENT NEWS.

### *New Issues.*

THE STATE OF MASSACHUSETTS has placed a short loan for \$300,000 at 2½ per cent.

THE GULF, COLORADO & SANTA FE RAILWAY has been turned over to the Atchison, Topeka & Santa Fé. The stockholders have increased the capital stock from \$7,000,000 to \$10,000,000.

CHESAPEAKE & DELAWARE CANAL COMPANY.—Holders of a third of the mortgage loan, maturing on July 1st, consent to extend their bonds 30 years at 5 per cent. The mortgage is for \$1,350,000 and now bears 7 per cent. interest.

THE PENNSYLVANIA RAILROAD management has made arrangements for issuing some new car trust certificates at four per cent. interest, placing them at par. This is the lowest interest rate at which a car trust has yet been placed.

MISSOURI PACIFIC.—Stockholders are offered the right to subscribe for a new issue of \$3,000,000 of capital stock at par, the subscriptions being limited to nine shares of new for each 100 of old stock held. This issue was authorized March 10, 1886.

NEW YORK CITY.—\$2,000,000 of new 3 per cent. water stock was recently awarded to Vermilye & Co. and Blake Bros. & Co., on joint bid, at 105.03. Eighteen bids, aggregating about \$14,000,000, were made at prices ranging upward from 101.

THE PORTLAND & OGDENSBURG RAILROAD corporation has been reorganized under the same name. It was voted that the capital stock should be issued to equal

the bonds and outstanding coupons, and the exchange of bonds for stock was provided for.

**CHICAGO & GREAT WESTERN.**—A mortgage for \$8,000,000 to secure 5 per cent. bonds on this railroad has been filed in Chicago. The mortgage is on the company's Chicago terminal property. John S. Stewart, of New York, and E. H. Abbott, of Milwaukee, are Trustees for the bondholders.

**HOUSTON & TEXAS CENTRAL.**—A compromise has been agreed upon by the bondholders, by which they accept for the first mortgage 7's a new 6 per cent. bond, for the second mortgage 8's a new 5 per cent., and for the general mortgage 6's a new 4 per cent. The new bonds are to cover unpaid coupons and to be guaranteed by the Southern Pacific Company.

**TEXAS & PACIFIC.**—Judge Pardee, with the concurrence of General Wistar's Committee, has ordered \$500,000 Receiver's certificates on the Rio Grande Division, Texas Pacific, and \$300,000 on the New Orleans Pacific. These certificates to be deposited with the Trust Company in New York, to bear 6 per cent. interest, and to be placed at par as fast as needed.

**TOLEDO, ST. LOUIS & KANSAS CITY.**—Articles of agreement for consolidation of the old Toledo, Cincinnati & St. Louis Railroad, and the organization of the Toledo, St. Louis & Kansas City, have been filed at Toledo. The capital stock of the new company is \$18,055,000, or 180,550 shares, of which \$5,805,000 is 4 per cent. preferred convertible stock, and balance common. Dollar for dollar of new common stock will be given for stock of the old company.

**CINCINNATI, INDIANAPOLIS, ST. LOUIS & CHICAGO.**—President Ingalls has sold \$1,000,000 gold mortgage 4 per cent. bonds to a syndicate composed of Taintor & Hoyt, Vermilye & Co. and others. The total issue of these bonds is \$10,000,000, and they mature in fifty years. The price is understood to be about 97½. The proceeds will be used for equipment, floating debt and premiums required in exchanging old bonds for the new. Nine million dollars of the bonds will be exchanged for underlying bonds.

**NEW YORK STOCK EXCHANGE LIST.**—The Governing Committee of the Stock Exchange have added the following securities to the list:

State of Tennessee—\$10,153,300 new settlement, 6 per cent., 5 per cent. and 3 per cent. bonds. The old bonds, new bonds, new series and compromise bonds will be re-classified on the list as presented.

Evansville & Indianapolis Railroad Company—Of these bonds \$301,000 having been exchanged by the Farmers' Loan & Trust Company for the bonds of the original Evansville & Indianapolis Railroad Company, and \$700,000 distributed to outside purchasers, bonds Nos. 1 to 301 inclusive and 1,261 to 1,960 inclusive, \$1,001,000, will be placed upon the regular list, and the Committee on Stock List is empowered to increase the amount upon the list to \$1,960,000 as they shall hereafter be exchanged by said Trust Company.

Gulf, Colorado & Santa Fé Railway Company—\$420,000 first mortgage bonds, numbered 7,921 to 8,340 inclusive.

Norfolk & Western Railroad Company—\$200,000 improvement and extension bonds, Nos. 2,501 to 2,700 inclusive.

Chesapeake & Ohio Railway Company—\$607,350 of the second preferred stock.

Utica & Black River Railroad Company—22,230 shares of capital stock, amounting to \$2,223,000.

Detroit, Bay City & Alpena Railroad Company—\$1,245,000 of first mortgage bonds, Nos. 1 to 1,245 inclusive.

Ohio Central stock has been taken from the regular list and placed with the unlisted securities.

#### *Railroad Reports.*

**CHICAGO, ROCK ISLAND & PACIFIC.**—The report for the year ended March 31st shows that the earnings were as follows:

	1894-5.	1895-6.
Total gross earnings .....	\$12,206,911	\$12,004,348
Total operating expenses .....	7,160,324	7,166,893
Net earnings .....	\$5,046,587	\$4,837,455

Following is a summary of income account:

	1884-5.	1885-6.
Total income.....	\$5,378,587	\$5,147,455
Total disbursements.....	5,729,401	5,080,215
Balance, surplus.....	\$37,186	\$37,240

The disbursements include dividends at the rate of 7 per cent. The bonded debt (including \$5,000,000 Chicago & South-western bonds guaranteed) is \$21,460,000 against \$20,500,000 last year.

**MISSOURI PACIFIC SYSTEM.**—The report for the year ended December 31, 1885 includes roads and mileage as follows: Missouri Pacific, 906 miles; St. Louis, Iron Mountain & Southern, 923 miles; Missouri, Kansas & Texas, 1,386 miles; International & Great Northern, 775 miles; Galveston, Houston & Henderson, 50 miles; Central Branch Union Pacific, 388 miles; total, 4,517 miles. The earnings of the Missouri Pacific proper were:

	1884.	1885.
Total earnings.....	\$8,777,628	\$7,943,562
Operating expenses.....	4,492,877	4,398,319
Net earnings.....	\$4,284,751	\$3,605,243

Following is a summary of income account:

	1884.	1885.
Total net income.....	\$4,491,572	\$4,398,078
Total disbursements.....	4,671,341	4,489,575
Balance, deficit.....	\$179,769	\$91,497

The disbursements include 7 per cent. dividends.

The earnings of the St. Louis, Iron Mountain & Southern were as follows:

	1884.	1885.
Total earnings.....	\$7,451,897	\$7,311,699
Operating expenses.....	3,987,298	3,692,223
Net earnings.....	\$3,464,599	\$3,619,416

Following is a summary of income account:

	1884.	1885.
Total net income.....	\$3,509,326	\$3,664,157
Total disbursements.....	2,780,947	2,612,826
Balance, surplus.....	\$748,379	\$1,051,331

Following are the earnings of the Missouri, Kansas & Texas:

	1884.	1885.
Total earnings.....	\$7,317,250	\$6,853,655
Operating expenses.....	4,347,246	4,065,101
Net earnings.....	\$2,970,004	\$2,798,554

Following is a summary of income account:

	1884.	1885.
Total net income.....	\$3,427,423	\$2,988,353
Total disbursements.....	2,919,279	2,750,073
Balance, surplus.....	\$508,144	\$238,280

The earnings of the International & Great Northern were:

	1884.	1885.
Total earnings.....	\$3,041,587	\$2,630,499
Operating expenses.....	2,416,865	1,814,850
Net earnings.....	\$624,722	\$824,639

Following is a summary of income account:

	1884.	1885.
Total net income.....	\$653,693	\$395,354
Total disbursements.....	1,069,707	941,296
Balance, deficit.....	\$406,014	\$45,912

The gross earnings of the Galveston, Houston & Henderson Railroad for 1885 were \$32,242 and the net earnings \$42,356 against a deficit of \$23,860 in 1884. The deficit of income in 1885 was \$41,844 and in 1884 it was \$77,394.

**SAVINGS BANK DIVIDEND.**—On another page is the announcement by the Seamen's Bank for Savings, of New York, that interest for the six months ended July 1st will be paid to depositors as follows: On accounts not larger than \$1,000, at 4 per cent.; from \$1,000 to \$3,000, at 3 per cent., and above \$3,000, at 2 per cent. per annum.

## POSTAL SAVINGS BANKS.

### INTERVIEW WITH BANK SUPERINTENDENT PAINE.

A reporter for RHODES' JOURNAL OF BANKING recently called at Albany upon Mr. Willis S. Paine, the Bank Superintendent of New York. Our representative asked Mr. Paine to give him a summary of his argument made at Washington some weeks ago before the House Committee on Post Offices and Post Roads in opposition to the proposed Postal Savings Bank bill.

Mr. Paine stated that he opposed the bill because he believed that the savings banks of the State—both depositors and managers—did not favor it.

"Speeches in its favor were made by Edward L. Godkin, Walter Howe, ex-Attorney-General Fairchild, Morris K. Jesup, all of New York; Mr. Gilman, the President of Johns Hopkins University, Representative McComas of Maryland (the author of the bill), and others."

He further said, that while these gentlemen were undoubtedly actuated by the best of motives, they were, in his opinion, wholly in the wrong in advocating the measure.

"Much was said by them in reference to the success of the postal savings banks in Great Britain. My answer to that was, that while it was true such banks have been successful, it must not be forgotten that of the 638 trustee savings institutions which existed in the United Kingdom at the time (1861) of the establishment of the post-office banks, 230 have been closed since that date and only 15 new ones created; \* and, also, that their deposits were not increasing and their growth had practically been stopped.

"The sum deposited in the savings banks of the State of New York is more than twice as much as that in institutions of a like character in the United Kingdom. This is shown to be the case by the return of the Comptroller-General to the House of Commons, July 22, 1884, as follows:

	s. d.
England .....	£33,881,686 6 1
Wales .....	1,103,200 14 9
Scotland.....	7,359,586 10 0
Ireland.....	2,082,548 15 8
Islands in British seas.....	580,087 0 3

£44,967,109 6 9

"I suggested, further, that to establish postal banks would be to create a permanent National debt; that the existing indebtedness of the Government would be paid in about twenty-one years at the present rate of payment; that the Government would necessarily be compelled to pay interest, however small, upon these deposits in order to induce people to make them. In other words, the Government would become a philanthropic affair.

"Further, that the postal savings bank system was in accordance with the English, or paternal, theory of Government, which was directly contrary to our own.

"The insolvency of savings banks in the city of New York was commented upon by Mr. Fairchild. My reply to that was, while there had undoubtedly been serious failures, it was because each failed bank was organized under a special charter. And, through what was termed the 'available fund' clause in such charters, their Trustees were permitted to invest in anything they desired; and, by reason of investments thus made, such failures, in almost every case, had occurred. But, in accordance with the Constitutional amendment of November 3, 1874, a general law was passed in 1875, whereby all the charters were conformed to a uniformity of powers, rights and liabilities, and since that time there have been no failures of any importance in the State of New York. In some instances the failed savings institutions have paid their depositors in full; in other cases, nearly so; the fact being that (excepting in one institution which is still in liquidation) few depositors suffered any considerable loss.

"I also spoke at some length in connection with the deplorable failure of the 'Freedmen's Savings Bank'—as it is popularly called—which was chartered by the United States and widely advertised as a Government institution.

\* Encyclopedia Britannica, Volume XIX., page 574.

"Other objections were made, which may be found in my last Savings Bank Report submitted to the Legislature, March 1, 1886, and printed in the April number of RHODES' JOURNAL OF BANKING.

"Permit me to add that I am glad to see that the JOURNAL is doing such effective work in opposition to the postal savings bank scheme, and is thus protecting the interests of the savings banks now doing business throughout the country."

[The "Freedmen's Savings Bank," referred to above by Mr. Paine, was in existence about nine years—chartered in 1885—and the percentage of loss to its poor depositors at the present date is over ten times the total percentage of loss experienced by depositors in the savings bank under State control, in the several States, covering the entire period of their existence—sixty-eight years—from the inception of the system down to the present date! And not a dollar more will be paid to the victims of this "United States Savings Bank" delusion unless the Government takes the money out of the Treasury for the purpose, as in simple justice it should do.—EDITOR JOURNAL.]

### DAKOTA BANKERS' ASSOCIATION.

The second annual Convention of the Dakota Bankers' Association, which was held at Huron, D. T., on June 23d and 24th, was an enthusiastic meeting. The attendance was large and the papers read were able and interesting.

At the opening of the proceedings on the afternoon of the 23d an address of welcome was delivered by the Rev. Mr. McCaslin, which was responded to in a witty and effective manner by Mr. D. W. Diggs, the President of the Association.

At the evening session, besides the delegates present, there were quite a number of spectators, the deliberations of the body being interesting to outsiders as well as to those more directly interested in the finances of Dakota.

Mr. W. E. Scarlett, of Watertown, read a valuable paper on "The Resources of Dakota," drawing comparisons with a number of States and Territories, always bringing Dakota high up on the ladder.

Mr. F. E. Stevens read a carefully prepared paper on the subject of "Dakota Laws on Negotiable Paper," in which he made some good points and offered a number of valuable suggestions which, if acted upon, will, it is predicted, prove beneficial to bankers and capitalists throughout the Territory.

Following Mr. Stevens an essay on "Usury," by Mr. E. Reiff, of Marion, was read. Mr. Reiff is far from being an advocate of usury laws. In fact, he advises against them and is very liberal in his views.

"Taxation" was the subject of an address by C. E. Judd, of Canton. He is thoroughly posted and his remarks met with general approval.

Some time was devoted to short speeches and comments upon the various papers presented and the views therein expressed, after which adjournment till Thursday morning was announced.

At the session of Thursday morning, June 24th, the following nominations were presented: For President, R. C. Anderson, of St. Lawrence; Vice-President, E. C. Judd, of Canton; Secretary, Eugene Steere, of Pierre; Treasurer, M. P. Beebe, of Ipswich. This ticket was elected unanimously.

Following is the Executive Council as announced: D. W. Diggs, of Milbank; H. M. McDonald, of Pierre; L. T. Graves, of Huron; F. B. Gannon, of Ellendale; Frank Drew, of Highmore; J. H. Trow, of Madison; F. W. Rogers, of Ashton; G. W. Fifield, of Lake Preston; E. Reiff, of Marion.

The subject of mortgages was thoroughly discussed, as were also exemption laws and farm loans.

The matter of the appointment of a Committee on Legislation brought out considerable discussion, this committee being deemed of great importance to the association.

A resolution was passed requesting Mr. Frank Drew, of Highmore, to write a history of the banking business of Dakota and of the Association, to be presented at the next annual meeting.

The President was instructed to appoint delegates to the American Bankers' Association, to be held at Boston, Mass., August 11th and 12th, 1886.

Watertown was selected as the place for the next meeting and the Association adjourned.

[If space will permit selections from the papers read at the Convention may appear in a future number.]

**\* CLAUDIUS B. PATTEN.**

The many friends of the late Mr. Claudius B. Patten, of Boston (writer of the papers on "Practical Banking" appearing in the JOURNAL), whose sad end was chronicled in the June number, have been pained to read the reports that have appeared in the newspapers as to the details of that event. Mrs. Mary D. Patten, the widow of the deceased, writes to the JOURNAL:

"The only witness to Mr. Patten's death was the engineer of the train, and he, of course, was obliged to proceed without delay. He was not personally interviewed by the reporters, who only obtained his story by hearsay. Here is the account of the engineer as recorded at the office of the Old Colony Railroad on the morning of the accident:

"Mr. Patten always saluted me by waving his hat, and this morning he swung his hat, but seemed confused, as if he did not know what he was doing. Then I had to give all my attention to the engine."

"This account is totally different from the stories published in the daily press at the time. On Monday my brother-in-law, Mr. J. B. Patten, attended an inquest at the Old Colony Railroad station. The officials were eager to find witnesses to make out a case of suicide, but when Mr. Patten assured them that the company was exonerated from blame on account of the enfeebled condition of his brother they were very glad indeed to have a verdict recorded of 'accidental death.'

"Another distorted newspaper item was that in regard to Mr. Patten's rowing in Dorchester Bay, behind our house. On Friday afternoon, May 21st, my eldest son was working on board his sloop yacht when his father said he would row about for a little while in the dory. My other children, a daughter and younger son, saw from the shore that the wind and tide were too strong for their father's weak arms and that he was being carried rapidly down the channel. They rowed out to him in another boat and helped him home. He was mortified and said the neighbors would think that he could not take care of himself. This is all the foundation there was for the sensational account in the papers."

The *Boston Commercial Bulletin* says on this subject, and regarding the character of the deceased gentlemen:

"The details of the sad death of Mr. C. B. Patten, Cashier of the State National Bank, which took place Saturday, May 22, and the causes which led to it, were in some respects incorrect as given by the daily press.

"On the eighth of April, after having been for weeks harrassed by insomnia, and having tried a shorter voyage without finding relief, he embarked with his brother for England. Unlike his former voyage to Europe, this was taken unwillingly and only because his physician deemed it imperative. His parting from his family was trying, and though his brother's attentions were unremitting his homesickness increased to such a degree that a physician in North Wales ordered his return. When he reached his home the great depression under which he was laboring passed away and it was thought he was rapidly recovering, but the next morning the dark cloud again overwhelmed him, and his mental suffering was intense. He called on his physician, who, after hearing the account of his month's absence, asked for a consultation, and the result was communicated to his family that his disease was melancholia, from which, with time and change of scene, he might recover. Mr. Patten was a persistent walker, and specially addicted to an early morning walk, so no anxiety was felt when, on the morning of his death, he started for a short walk. It appears that he had several times walked to Crescent Avenue and back beside the railroad track, probably choosing it because more retired than the highway. He had taken his walk and returned to Savin Hill, and as he entered a rocky cut where the space was narrow we have no doubt he was confused and dizzy when the express train surprised him and he fell forward upon the track. He had sometimes spoken of a confusion in his head, but those who received his greetings that morning saw nothing unusual in his manner. When asked

\* Author of "Methods and Machinery of Practical Banking" now appearing in the JOURNAL. A portrait of Mr. Patten appears in this number.

by a doctor shortly before, who was examining him for the first time, if he felt any impulse toward self-destruction, he replied that it was most abhorrent to him, and that his death was other than accidental seems improbable.

"Mr. Patten was a valued contributor to the *Boston Commercial Bulletin*. In 1868, soon after he became Cashier of the State Bank, he was engaged upon this paper to contribute financial articles, which he continued to do with marked ability for more than two years when increase of business cares obliged him to discontinue. He was afterwards an occasional writer for the *Bulletin*, and his recently published book, 'England as Seen by an American Banker,' was a re-publication of a portion of his experiences published in the *Commercial Bulletin* in 1863, 1864 and 1865 under the title of 'English Echoes' and 'Bits of Britain.'

"Mr. Patten was an able and experienced banker. He lately contributed a series of articles on 'Practical Banking' to RHODES' JOURNAL, of New York; this was his latest and most important literary work, and the publishers, Bradford Rhodes & Co., will shortly issue the articles in book form.

"About two years ago Mr. Patten delivered a course of lectures before the Boston Young Men's Christian Union, entitled 'Talks on Banking,' which were of more than usual interest and admirably adapted for the young men who mainly composed his audience.

"Mr. Patten was a courteous, kind-hearted gentleman whose loss will be sincerely mourned by all who enjoyed his friendship or acquaintance. He leaves a widow and four children."

---

**Texas Banks and Bankers.**—The following letter is from the Cashier of one of the principal National banks in Texas:

*Editor Rhodes' Journal of Banking:*—Mr. Hansl, in his article on "Texas Banks and Bankers," published in the JOURNAL for June, among other statements, says there are two hundred National banks in Texas. In his report to Congress, in December last, the Comptroller of the Currency states the number of National banks doing business in Texas on October 1, 1885, to be sixty-eight. Mr. Hansl also says: "Though there are two hundred National banks in the State their actual working capital is small." From the Comptroller's report, above mentioned, I find the following:

"The National banks of the State of New York, excluding those of the cities of New York and Albany, have an average capital of \$130,000. The National banks of Ohio, excluding those of the cities of Cincinnati and Cleveland, have an average capital of \$115,000; Missouri, excluding St. Louis, has an average to each bank of \$92,000; Illinois, excluding Chicago, has \$89,000; Wisconsin, \$88,000; Nebraska, \$79,000; Kansas, \$67,000. Texas, with its small National banks, has an average to each of \$101,000."

There is nothing particularly remarkable about the latter statement, but, in saying that the actual working capital of the Texas National banks is small, the idea is conveyed that they are small in comparison to the National banks of other States, when such is not the case, as the figures show.

There are other opinions and statements in the article of Mr. H. from which the average Texas banker will dissent.

TEXAS BANKER.

—, TEXAS, June 20, 1886.

With regard to the first criticism of our correspondent, it is due Mr. Hansl to say that his article on "Texas Banks and Bankers," as originally sent to this office in MSS., read: "Though there are two hundred banks in the State," etc. In revising the article the word *National* was inserted by an error. In referring to the exchange market at Houston and Galveston, page 428, the latter part of the sentence should read: "Amounting to 164,000 bales of cotton (\$7,500,000) actually bought," etc. In regard to the average capital of Texas banks, Mr. Hansl writes:

"It is the great number of small *private* banks—some of them rating very high, but having actually a small capital employed in their business—which lowers the average working capital of Texas banks. Making this statement, I do not figure in Ball, Hutchings & Co., of Galveston, who are reported to have from \$3,000,000 to \$4,000,000 in the business. Including them, *their* capital would increase the average \$20,000 for each bank in the State. To convey a proper idea, I therefore thought it advisable to leave them virtually out of the calculation.

## NEW BANKS, CHANGES, FAILURES, ETC.

**New National Banks.**—The Comptroller of the Currency furnishes the following statement of National banks organized since our last report:

(Names of officers and further particulars regarding new National banks will be found under their proper State headings in this list.)

- 3510—Second National Bank, Haverhill, Massachusetts. Capital, \$150,000.  
 3511—First National Bank, Oberlin, Kansas. Capital, \$50,000.  
 3512—First National Bank, Colby, Kansas. Capital, \$50,000.  
 3513—City National Bank, Lansing, Michigan. Capital, \$100,000.

YARMOUTH.—Bank of Yarmouth; Assistant Cashier, H. G. Farish.

---

**Extracts from Recent Letters.**

Samuel C. Parks, Jr., Cashier, Lander, W. T.—“Am very much pleased with RHODES' JOURNAL OF BANKING. It can but benefit any one who reads it.”

Ed. F. Woodcock, Assistant Cashier, Lansing, Mich.—“You may rest assured I will renew my subscription to the JOURNAL, as I could not do without the work.”

J. B. Ramsay, National Bank Examiner for Maryland and Delaware.—“I do not think any bank can afford to be without your excellent JOURNAL OF BANKING. It is full of useful information.”

James S. Warden, Vice-President, Colby, Kansas.—“Please send your esteemed JOURNAL to the First National Bank, of Colby. Having taken it at the First National Bank, of Frankfort, for several years, I now consider it a necessity for the safe management of the banking business.”

James Stuart, Banker, Madison, Neb.—“I forward you herewith \$6.00, of which \$1.00 is to pay for my subscription to the *Bank List* and \$5.00 for one year's subscription to your JOURNAL OF BANKING. The *Bank List* is excellent both in workmanship and as a correct Directory of all the banks and bankers of the United States and Canada. We like it so well that we are induced to try the JOURNAL OF BANKING for a year.”

R. H. Thurman, Troy, N. Y., (late Cashier of the First National Bank).—“I have all the numbers of your JOURNAL from its first publication, and the bound volumes are exceedingly valuable for reference. After the series of articles on “Practical Banking” are completed in the JOURNAL I hope you will publish them in book form; such a work would surely have a large sale. Every bank officer, bank clerk and private banker should have a copy for reference. It would be a good plan for banks to purchase copies for each of their clerks—*would be a good investment*—and at the same time banking education among the young men in the business would be greatly promoted.”

J. R. Walsh, President of the Chicago National Bank, Chicago, Ill.—“Please send me the new issue of your *Banker's Reference Book*. It is very useful to this bank.

“I suggest that there is room for a publication to do for us what the *Stock Exchange Year Book*, published by Cassell & Co., does for England. All your work is so good that I have no doubt your present clients would be glad to know that you saw your way clear to get up a *Year Book* for this country, which would be taken as the official description of all stocks dealt in on the New York, Boston and Philadelphia exchanges.”

[We have such a work under consideration.—B. R. & Co.]

"JOURNAL OF BANKING" IN "PRACTICAL BANKING"

## THE BANKER'S GAZETTE.

**The Money Market and Financial Situation.**

NEW YORK, July 8, 1886.

We have occasionally said in regard to the financial situation that the outlook was good, but that there were some drawbacks or elements of danger. This describes the situation at present, but it should be stated more emphatically than before. The evidences of a revival of activity in general business are more marked, but the dangers ahead appear to be somewhat closer than for some time past.

The signs of improved trade are, some of them, familiar to most men of business. Witness the condition of the banks of this city, with loans amounting to \$355,000,000 against \$307,000,000 at this time last year. The cash reserve above 25 per cent. of the deposits was at that time \$62,000,000, representing mostly money that could not be safely invested at a profit, and now it is only \$11,000,000. The aggregate business of all the Clearing-Houses tells the same story. For the week ending June 26th the total was \$913,852,616 against \$673,754,420 in the corresponding week last year, an increase of 35.6 per cent. Leaving out the totals for New York the amount for the week was \$271,423,786 against \$225,700,499 last year, an increase of 20.3 per cent. The preceding weeks makes even a little better showing than this.

We have the statistics of the business failures of the country for the past six months as compiled by one of the credit agencies. Notwithstanding the serious consequences of the labor troubles there has been a marked decrease in the number of failures. For the first six months of 1885 they numbered 6,004, whereas for the past six months there were only 5,156. The aggregate amount involved in the failures of the first half of last year was \$74,722,000 against \$50,484,000 this year, being about 50 per cent. greater. The figures show a progressive improvement. The number of failures in the country during the first quarter of this year was 3,203, involving \$29,681,726; for the quarter just ended the number declined to 1,953 with only \$20,752,734 involved. No doubt a still more satisfactory showing would have been made but for the hostile attitude taken by combinations of workmen to their employers. These difficulties are not yet ended, but it is certain that the false principles upon which the great movement was based have received a blow from which they cannot recover. The complete and disastrous failure of the strike on the Missouri Pacific Railroad and of the strike on the Third Avenue street railroad of New York has proved conclusively that the program of the labor organizations, so far as it includes placing the control of business concerns in their hands, cannot be carried out, and the conviction of boycotters and riotous strikers and the feeling generally developed shows the public will not countenance the illegal acts which it seemed a few months ago could be carried on with impunity. The outcome of the whole trouble is a distinct gain of confidence in the power of the constituted authorities to defend the rights of the capitalists and employers, and, consequently, in the outlook for business enterprises.

A factor of considerable importance to the situation is the amount of railroad building that is going on and projected for the future. The *Railway Age*

says it is certain that the railway building of 1886 will far exceed that of most of the years in the history of the country. There have been no less than 1,751 miles of main track laid during the past six months, and, estimating, from proportions laid during each half of preceding years, it is probable that the total new railway mileage of 1886 will not fall short of 6,000 miles, and may considerably exceed that. This new construction, of course, makes business brisk in many departments, and it is also an indication of renewed willingness to risk capital in fresh directions.

The principal and overshadowing element of danger arises clearly and directly out of stupid, narrow and selfish legislation on the finances of the country. At a time when foreign nations are struggling to obtain gold so as to strengthen their condition in view of the extreme decline in the price of silver bullion our country is parting with its gold dollars at a tremendous rate in order to give place to depreciated silver dollars and its proper representatives. During last week the gold shipments from this port amounted to \$3,500,000, bringing the net export of the metal so far this year up to \$35,000,000. Some weeks ago the drain was toward France and it was given out that the gold was needed there in order to facilitate the negotiation of the Government loan, but the loan was awarded and France has not parted with the gold again. And now the movement is toward Germany. Exchange dealers are puzzled to account for the uniform high rates of exchange that prevail, and the conditions are outside of ordinary experience. In the mean time there is no particular anxiety to place contracts on a gold basis, but a continuation of the present conditions will certainly lead to that before long.

THE FOREIGN EXCHANGE market is strong, the rates being well up to the gold-exportation point and the dealers do not look forward to any immediate change. Following are the posted and actual rates of the principal dealers: Bankers' sterling, 60 days, nominal, \$4.88½; sight, nominal, \$4.90; 60 days actual, \$4.87@4.87½; sight, actual, \$4.88½@4.89; Cable transfers \$4.88¾@4.89¼; Prime commercial sterling, long, \$4.86¼@4.86¾; Documentary sterling, 60 days, \$4.85¾@4.86¼; Paris, bankers', 60 days 5.18½@5.18¾; sight, 5.16½@5.16¾; Paris, commercial, 60 days, 5.20@5.19¾; sight, 5.18½@5.17½; Antwerp, commercial, 60 days, 5.20½@5.20; Swiss bankers', 60 days, 5.18½@5.17½; sight, 5.16¼@5.15½; Reichsmarks (4) bankers', 60 days, 95½@95¾; sight, 95½@96; Commercial, 60 days 95¼@95¾; commercial, sight, 95½@95¾; Guilders, bankers', 60 days 40 5-16@40 3-8; sight, 40 1-2@40 9-16; Commercial, 60 days, 40 8-16@40 1-4; sight 40 5-16@40 3-8. Paris dispatches quote exchange on London 25f. 25½c.

The following shows the posted rates for prime bankers' sterling bills on London at 60 days, and sight, cable transfers, and prime commercial sterling together with exchange on Paris on June 1st, the changes in the rates as they occurred during the month, and the highest and lowest during the months of May and June, 1886:

MAY.	BANKERS		Cable		PARIS

English silver.....	4 80 @ 4 85	Fine gold bars par @ ¼ % premium on the	
Five francs.....	92 @ 95	Mint value.	

GOVERNMENT BONDS have been strong and high owing to the expectation that the 3 per cents will all be redeemed before the 4½ per cents fall due in 1891.

The following table shows the closing prices or closing bids at the New York Stock Exchange for the principal issues of Government bonds on each day of the month of June and the highest and lowest during the month. actual sales marked \* :

+ Ex-interest.

THE TREASURY.—The following table will show the condition of the Treasury, as regards the amount of gold and silver held, on the 1st of July, 1886, and, for comparison, on the 1st of May and June, 1886, with the amounts of certificates outstanding and the balances of coin owned by the Treasury :

	July 1, 1886.	June 1, 1886.	May 1, 1886.
Gold coin and bullion.....	\$232,838,124	\$236,424,734	\$240,580,532
Gold certificates outstanding.....	76,044,375	80,120,025	84,715,225
Gold owned by Treasury.....	\$156,793,749	\$156,304,709	\$155,865,307
Silver dollars and bullion.....	\$184,345,764	\$180,199,806	\$178,485,024
Silver certificates outstanding.....	88,116,235	89,184,129	90,733,141
Silver owned by Treasury.....	\$96,229,539	\$91,015,677	\$87,751,883

The table shows an increase in the silver owned by the Treasury of 8,500,000 during the past two months, while the gold owned has remained stationary. On June 21st the Acting Secretary of the Treasury issued the 38th call for the redemption of bonds. The call is for \$4,000,000 of the 3 per cent. loan of 1862, and notice is given that the principal and accrued interest will be paid at the Treasury of the United States, in the city of Wash-

ington, D. C., on the 1st day of August, 1886, and that the interest will cease on that day. Following is a description of the bonds: Three per cent. bonds issued under the Act of Congress approved July 12, 1882, and numbered as follows: \$50, original No. 136 to original No. 147, both inclusive; \$100, original No. 1,818 to original No. 1,883, both inclusive, and original No. 4,922 to original No. 9,926, both inclusive; \$500, original No. 825 to original No. 843, both inclusive, and original No. 4,226 to original No. 4,228, both inclusive; \$1,000, original No. 5,963 to original No. 6,144, both inclusive, and original No. 23,730 to original No. 23,737, both inclusive; \$10,000, original No. 12,966 to original No. 13,344, both inclusive, and original No. 28,209. Total, \$4,000,000.

**MONEY AND DOMESTIC EXCHANGE.**—The rates for call loans secured by good collateral have ranged momentarily at times to as high as 7 and 9 per cent. within a week or two. This seems to have been owing to the large need for money to meet semi-annual interests and dividends, and it is expected that the former low rates will rule again for some time to come. Call loans ranged on the 2d inst. from  $1\frac{1}{2}$  to 6 per cent. There is a good supply of commercial paper and rates of discount are quoted from  $3\frac{1}{4}$  per cent. up to  $5\frac{1}{2}$  per cent. per annum according to the grades. Following are the rates of domestic exchange on New York: Savannah, par; selling  $\frac{1}{8}$  to  $\frac{1}{4}$  premium. Charleston, 1-16; selling 3-16 to  $\frac{1}{4}$  premium. New Orleans commercial, \$1; bank, \$1.50 per \$1,000 premium. St. Louis, 75c. per \$1,000 premium. Chicago, 40 to 50c. per \$1,000 premium. Boston,  $12\frac{1}{2}$  to 15c. per \$1,000 premium.

THE NATIONAL BANK CIRCULATION was decreased \$2,818,594 during June against \$2,032,339 in May, the total decrease since July 1, 1885, being \$9,939,877. The amount of legal-tender notes on deposit with the United States Treasurer to redeem notes to be retired is \$61,603,690, an increase of \$351,076 in the past month. The amount of bonds deposited with the Treasurer to secure circulation was reduced by \$5,000,000 during June, the 3 per cents. called being only partially replaced with other issues.

The following will show the amount of each description of bonds held by the Treasurer to secure National bank circulation on or about the dates indicated:

	July 1, 1886.	June 1, 1886.	May 1, 1886.	April 1, 1886.
Currency 6 per cents.....	\$3,565,000	\$3,565,000	\$3,565,000	\$3,565,000
$4\frac{1}{2}$ per cents.....	50,484,200	49,974,250	49,599,750	49,243,350
4 per cents.....	114,143,500	114,233,400	114,114,300	114,216,550
3 per cents.....	107,782,100	113,134,750	118,169,000	122,691,750
Total.....	\$275,974,800	\$280,907,400	\$285,447,950	\$289,716,650

**ASSOCIATED BANKS OF NEW YORK.**—The loans have been increasing again, and the reserve is down to more moderate proportions than for some time past.

The following shows the condition of the New York Clearing-House banks for a number of weeks past, as well as about this time in 1885 and 1884:

1886.	Loans.	Specie.	Legal-tenders.	Deposits.	Circulation.	Surp. Res.
July 3...	\$355,743,700	\$64,483,900	\$40,896,400	\$377,411,400	\$7,819,700	\$11,021,460
June 28....	351,086,500	65,013,400	43,297,900	375,828,100	7,823,400	14,354,275
June 19....	347,413,900	66,581,500	42,067,100	371,708,700	7,846,400	15,711,422
1885.						
July 3....	307,206,400	114,119,600	42,688,000	380,798,800	9,839,300	61,607,900
1884.						
June 28....	293,450,500	55,817,900	28,843,300	286,158,300	14,384,500	13,121,625

**RAILROAD AND MISCELLANEOUS STOCKS.**—Good dividend paying stocks are generally high, and are in strong hands. There has been a large demand for interest bearing bonds, the fair outlook for the railroad business tempting the large amounts of surplus capital that have been lying idle to investment in this direction. The war of the railroads of the Northwest is being used as a lever to work some of the stocks. The earnings have been improving generally of late, but the circumstances hardly seem to warrant any large advance from present figures yet.

The following table shows the highest, lowest and closing prices of the active stocks at the New York Stock Exchange in the month of June, the highest and lowest since January 1, 1886, and also during the year 1885:

	JUNE, 1886.			SINCE JANUARY 1, 1886.		YEAR 1885.

## BANKERS' OBITUARY RECORD.

## In Memoriam.

"What is excellent, as God lives, is permanent; Hearts are dust; hearts' loves remain."

DR. WILLIAM O. BALDWIN.

At a Meeting of the Board of Directors of the First National Bank, the following resolutions in memory of President William O. Baldwin, offered by Judge David Clopton, were adopted:

*Whereas*, The Infinite Ruler has decreed, for all-wise purposes, that Dr. William O. Baldwin, late Director and President of this bank, should pass from the business associations of this world, from the ever widening circle of warm friends he drew about him, and from intercourse with us—his associates and fellow-directors:

*And whereas*, It is appropriate and consonant with the feelings of solemn and profound regret with which this event inspires us to give some expression, however inadequate, to our deep sense of loss, and to that respect and admiration which his character has won from us—

*Therefore, be it Resolved*, That in the death of its President this bank loses the able financier who has so successfully managed its increasing business since its beginning more than fifteen years ago, and this Board loses the wise adviser of almost unerring judgment, as well as the firm executive, whose steady hand has enabled them to conduct the affairs of this institution through many years of honorable and prosperous career.

*Resolved further*, That Dr. Baldwin's eminence in business and professional life merits every possible testimonial of honor, while his attractive qualities in private and in social companionship should receive that tribute they deserve, prompted by emotions deeply stirred to feelings that the genius of eloquence alone can express.

*Resolved further*, That this Board suffers with his family in the separation from one so much loved, esteemed and admired, and tenders that sincere sympathy which words are inadequate to express.

*Resolved further*, That a copy of these resolutions be spread *in memoriam* upon the minutes of this bank, and that an engrossed copy be sent to Dr. Baldwin's family.

MONTGOMERY, Ala., June 2, 1886.

**Brotherton.**—S. G. Brotherton, of the banking house of Benson & Brotherton, one of the most extensively known banking firms in Western Pennsylvania, died June 2d at his home in Waterford, at the age of 70.

**Hall.**—Isaac W. Hall, President of the Quaker City National Bank, of Quaker City Ohio, died May 29th, in his 76th year. He was officially connected with a number of business enterprises, and was widely known and respected.

**Marsh.**—The Hon. Charles Marsh, President of the National Granite Bank and of the Quincy Savings Bank, of Quincy, Mass., died June 4th, aged 68 years. He amassed a fortune in the leather business in Boston, retiring in 1874. He was a member of the House of Representatives in 1861 and of the Senate in 1869.

**Morse.**—A. E. Morse, Cashier of the First National Bank, of Stevens' Point, Wis., died June 19th, aged 83 years.

**Murphy.**—The Hon. W. W. Murphy, formerly a member of the banking firm of E. O. Grosvenor & Co., of Jonesville, Mich., died at Homburg-Hohe, Germany, on June 8th, aged 70 years. In 1861 he was appointed United States Consul-General at Frankfort-on-the-Main, and he negotiated the first sale of United States bonds in that place.

**Richardson.**—Colonel George W. Richardson, ex-Mayor of Worcester, Mass., and ex-President of the Worcester City National Bank, died at St. John, N. B., on June 15th.

**Roberts.**—Deacon George W. Roberts, the oldest resident of Rollinsford, N. H., died there on June 23d, aged 90 years. He was formerly President of the Rollinsford Savings Bank, of Salmon Falls, a member of the Legislature and a Selectman.

**Simpson.**—Canadian advices mention the death in May last of William Simpson, Manager of the branch of the Canadian Bank of Commerce at Montreal, aged 48 years. He had been connected with the banking business from his youth, and established a creditable reputation for ability and integrity.

**Wells.**—Arthur Wells, Assistant Cashier of the Western National Bank, of Philadelphia, Pa., died June 14th, aged about 58 years.

**Woodman.**—The Hon. J. C. Woodman, formerly President of the Bucksport (Me.) National Bank, died June 13th, aged 71 years. He had represented his town and county in both branches of the Legislature.

## NOTICES OF NEW BOOKS.

*Poor's Directory of Railway Officials and Railway Directors. 1886. Compiled from Official Information. Poor's Railroad Manual, New York; Effingham Wilson, London.*

This is the first annual number of what has always seemed to be a necessary work which will do for this country what the Directory of Directors does for Great Britain. An idea of its scope of usefulness may be gained from a mention of the contents, which are as follows: A list of the officials of every railroad in the United States, Canada, Mexico, Central America, South America, West Indies, and the United Kingdom, also of the street railroads in the same countries; Directors of all railroad companies in North America, alphabetically arranged, with their addresses; lists of the officials of companies auxiliary to railroads, such as transportation, bridge companies, etc.; officials of industrial establishments dependent on railroads; officials of the leading Exchanges and commercial organizations of the country; the leading railroad contractors; officials of new railroads in progress, and alphabetical list of the officials of all the American railways, with a convenient system of reference, showing the lines they belong to. A quarterly supplement of changes will be issued.

*The Silver Question. The Principal Facts, Figures and Arguments Relating to Metallic Money.* By CHARLES L. FRANKIE. Published by Jacob Krieger and Charles L. Frankie. Price, Twenty-five cents. Louisville, Ky. 1886.

The publishers believe that this pamphlet furnishes "absolute and conclusive proof that the demonetization of silver is a needless, useless, injurious and pernicious act, a blunder and a crime." The author argues that the silver dollar coinage should not be discontinued on the general ground that "silver should never be discarded in the United States and in the commercial world." This appears to us to be a *nonsequitur*. We can stop the coinage without discarding the metal, as the Latin Union has done. We have enough silver coin for all purposes. Why make more? However, the author has brought together a large amount of statistics bearing on the question, and his case is fairly and temperately stated.

*The Economic Fact Book and Free Traders' Guide. First Edition.* Edited by R. R. BOWKER. Honorary Secretary American Free Trade League, New York. The New York Free Trade Club. 1886.

The author of this pamphlet of 151 pages claims that in the Free Trade contest "it is all important that the real facts should be brought before the American people. 'It is protection,' he says, 'which is a 'theory.' The facts of history and of present experience, as well as the principles of economics, support freedom of trade. When the facts are fully known, and the principles which they prove are recognized, the theory of 'protection' will be wholly rejected. . . . The present compilation is intended to furnish the facts." We notice among the contents: "Protectionist Points and Free Trade Facts," summarized by Mr. Bowker; quotations from "Leading Americans on Freedom of Trade;" party platforms on the same subject; references to tariff legislation, by W. E. Foster; a short history of the tariff, etc.; besides numerous tables and statistics, with illustrative diagrams. The work appears to be carefully edited and is evidently well adapted for the use for which it is intended.

*Banca Nazionale nel Regno d'Italia. Capitale versato L. 150,000,000. Adunanza Generale degli Azionisti Tenuta in Firenze il 24 Febbraio, 1886. Anno Trentesimoetto.* Roma: Officina Industriale di Carte-Valori. 1886.

*Eighth Annual Report of the Bureau of Labor and Industries of New Jersey, for the year ending October 31st, 1886.* Trenton, N. J. 1886.

**NEW COUNTERFEITS.**—A new counterfeit five-dollar gold piece was recently discovered in Newark, N. J. It bears the date of 1821, and is larger in diameter and thicker than the genuine. The workmanship is good and the color fair. In the head of Liberty the chin is much elongated, and the "n" in the word "United" is reversed. The weight is eight grains less than the genuine, and the intrinsic value of the metal about one half.

Reports come from Quebec that a large amount of counterfeit one and two-dollar Dominion notes are in circulation there.

## CHRONOLOGICAL RECORD.—JUNE, 1886.

1. **TUESDAY.**—Decrease in the public debt in June, \$3,323,566. — John Kelly, the celebrated politician of New York, died. — Secretary of the Treasury Manning offered his resignation on account of ill-health, which was not accepted.
2. **WEDNESDAY.**—President Cleveland married.
3. **THURSDAY.**—The oleomargarine tax bill passed the House of Representatives.
5. **SATURDAY.**—Discount rate on commercial paper in New York, 4@6 per cent.; call loans, 1@2 per cent. — Discount rate in London on 60 days to 3 months' bank bills, 1½ per cent.; short loans, ¾ per cent.
7. **MONDAY.**—The Gladstone Ministry was defeated in Parliament on the second reading of the Home Rule bill.
10. **THURSDAY.**—The Bank of England's rate of discount was reduced from 3 to 2½ per cent.
12. **SATURDAY.**—Discount rate on commercial paper in New York, 3½@5 per cent.; call loans, 1@2 per cent. — Discount rate in London on 3 months' bills, 1½ per cent.; on short loans, ¾ per cent.
13. **SUNDAY.**—The town of Vancouver, B. C., was destroyed by fire.
14. **MONDAY.**—Juarez Selman was elected President of the Argentine Republic. — King Ludwig, of Bavaria, recently deposed, committed suicide.
17. **THURSDAY.**—Congress voted against the consideration of the Morrison tariff reform bill.—The French Government submitted to the Chamber of Deputies a bill to authorize the Panama Canal Company to issue its proposed lottery loan.
19. **SATURDAY.**—Discount rate on commercial paper in New York, 3½@5½ per cent.; call loans, 1@2 per cent. — Discount rate in London on 3 months' bills, 1½ per cent.; on short bills, 1 per cent.
22. **TUESDAY.**—The French Chamber voted in favor of a surtax on cereals.
23. **WEDNESDAY.**—The strike of switchmen on the Lake Shore Railroad was renewed at Chicago.
24. **THURSDAY.**—The strike of nailers at Pittsburgh and elsewhere, after a year's duration, ended to-day.
27. **SATURDAY.**—Discount rate on commercial paper in New York, 3½@5½ per cent.; call loans, 1@2 per cent. — Discount rate in London on 3 months' bills, 1 per cent.; short loans, ¾ per cent.

**NATIONAL BANK STATISTICS.**—Statement of the Comptroller of the Currency on July 1, 1886, showing the amounts of National Bank Notes and of Legal-Tender Notes outstanding at the dates of the passage of the Acts of June 20, 1874, January 14, 1875, and May 31, 1878, together with the amounts outstanding at date, and the increase or decrease.

**NATIONAL BANK NOTES.**

Amount outstanding June 20, 1874.....	\$349,804,123
Amount outstanding January 14, 1875.....	851,861,450
Amount outstanding May 31, 1878.....	322,556,965
Amount outstanding at date*.....	308,091,451
Decrease during the last month.....	2,818,594
Decrease since July 1, 1885.....	9,839,677

**LEGAL-TENDER NOTES.**

Amount outstanding June 20, 1874.....	\$382,000,000
Amount outstanding January 14, 1875.....	382,000,000
Amount retired under Act of January 14, 1875, to May 31, 1878.....	35,318,964
Amount outstanding on and since May 31, 1878.....	346,681,016
Amount on deposit with the Treasurer U. S. to redeem notes of insolvent and liquidating banks, and banks retiring circulation under Acts of June 20, 1874, and July 12, 1882.....	61,603,660
Increase in deposit during the last month.....	851,076
Increase in deposit since July 1, 1885.....	22,500,537

\* Circulation of National Gold Banks not included in the above, \$318,809.

W. L. TRENHOLM,

Comptroller of the Currency.

# RHODES' JOURNAL OF BANKING.

---

Vol. XIII.

AUGUST, 1886.

No. 8.

---

IN A SUBSEQUENT PART OF THIS NUMBER are given the views of several prominent bankers on the Morrison Surplus Resolution. The fate of the measure is in doubt at this writing, but it is certain that it will not be accepted by the Senate and signed by the President in the shape in which it came from the House. The action taken on this mischievous resolution is a pretty accurate measure of the extent to which partisan considerations override patriotism in the lawmakers. It is evident that many men voted for it, or declined to vote against it, who would have opposed it tooth and nail had no political consideration stood in the way. The amendments proposed by the Senate Finance Committee, giving the Secretary of the Treasury discretion to keep a working balance of \$20,000,000 in addition to the \$100,000,000 reserve, also providing that the amount of any bond call shall be in the Treasury in addition to these sums, and, finally, giving the Secretary power to suspend calls entirely in time of emergency, were suggested by men who did not believe at all in the principle of the measure. The course of the Treasury Department for some years back in holding a large surplus has been based on the fact that emergency required it, and that it was "necessary" in order "to maintain the public credit unimpaired." Therefore, the resolution, as amended, is useless for any purpose.

---

THE SMALL SILVER CERTIFICATE CLAUSE of the Sundry Civil Bill was hastily introduced in the House in June, and passed in a very imperfect form. The substitute proposed by Treasurer Jordan and adopted by the Senate Appropriation Committee is free from many of the defects of the original. The clause now merely provides for the issue of small silver certificates on the same basis as the larger denominations. During the hearing before the Senate Committee the Treasurer fully justified his action stopping the reissue of \$1 and \$2-greenbacks. He said: "That the withdrawal of the \$1 and \$2 legal-tender notes in order to admit of the use of the standard silver dollars has caused some criticism is no doubt true, but it should be remembered that the standard silver dollars, having once been coined,

should be made to attain the maximum of usefulness and not be held in the United States Treasury as a useless investment of money. The expense of coinage, which may be estimated at two cents on the dollar, having once been made, it would seem to be common sense to put the coins thus created into active circulation as far as possible." He does not believe that more than \$45,000,000 of the \$1 and \$2-certificates can be circulated, while the \$5-certificates may take the place of the \$5-National bank-notes returned to the extent of \$60,000,000; but it will take years before this will be attained.

THE CONVENTION OF THE AMERICAN BANKERS' ASSOCIATION, to be held at Horticultural Hall, Boston, on August 11th and 12th, occurs so soon after the issue of this number of the JOURNAL that further extended notice of the event would be superfluous. It is intended that the principal subjects for discussion will be reform in banking methods, the silver problem in its international aspect, and the defects of the present extradition treaties. It is expected that Comptroller Trenholm will take part in the discussion of the first subject mentioned. We earnestly hope that the meetings will be well attended and prove interesting and profitable. A full account of the proceedings will appear in the next issue of the JOURNAL.

"WE NOTE WITH PROPER DEFERENCE," says the Montreal *Shareholder*, "the words of wisdom that flow from the pen of the editor of RHODES' JOURNAL respecting a late speech of Mr. Gladstone's on bank-note issues." Whether any deference is due or not is a matter of slight consequence, but no one will deny that it is an important question whether a statesman possessing the acknowledged financial ability of Gladstone is an advocate of governmental note issues similar to American greenbacks. The *Shareholder* says that the Premier's language seems to convey the proposal "to give a Dublin Parliament unchecked power to issue paper money." The JOURNAL has already expressed the opinion that Mr. Gladstone's language was not fairly open to this construction. We leave this to the reader. "Ireland," said he, "might think fit to pass a law providing for the extinction of private issues in Ireland, and that no bank-notes should be issued in Ireland except under the authority and for the advantage of the State." No mention is made of Government note issues. The proposal is that no *bank-notes* should be issued except under authority of the Government, which should share in the profit of the issues. This would be just the idea that underlies our National bank issues, but would in no wise countenance note issues directly by the State.

ABOUT ONE YEAR AGO the Bank Commissioners of Massachusetts discovered that the accounts of the Framingham Savings Bank were in a very confused condition, and the Treasurer, C. S. Adams, was requested to resign. A few days later he committed suicide, and the

natural inference was that he was a defaulter. An exhaustive examination of the affairs of the concern proves that the unfortunate man was innocent, although keeping the accounts in a very loose manner. It appears that no system of book-keeping was followed, a cash-book not being kept. The report of the expert had to be compiled by searching through scraps of paper scattered about at random, some being found in waste-baskets. Such management of an institution owing over \$1,800,000 to depositors was criminal, and the person most to blame paid a terrible penalty. But the other officers and Trustees who allowed matters to drift along to such a disastrous conclusion have little less to answer for. This sad case should be a warning to others.

---

STEPS ARE BEING TAKEN FOR THE FORMATION of a Bankers' Association in Canada. Mention has been made of the new associations in Texas and Dakota. So much good may be expected from the spread of these organizations that every State in the Union should have one. They are useful to the members in a business way and to the banking community generally by diffusing knowledge of the principles of finance and of the general conditions of business, an idea of which is at all times much more important to the banker than to probably any other class of business men. Such organizations will tend to spread more enlightened views of the scope and usefulness of banks among the common people than now prevail. The prejudice that now and then crops up in legislative halls and elsewhere against this most indispensable business can only be dissipated by means that will dispel false notions and ignorance regarding it.

---

WORD COMES FROM LIMA, IN PERU, that in consequence of the depreciation and fluctuation in value of the silver currency of Peru, the Government is considering a proposition to use the United States gold dollar as the basis of all monetary transactions, public and private, the present silver to pass at the rate of 80 cents on the dollar. To make this plan at all practicable a considerable amount of gold will have to be imported into the country. At present the idea is in a nebulous condition. It is curious, however, to see a foreign country proposing to use American gold dollars in order to raise its currency to a stable gold standard at the very time that Congress has been voting for a measure calculated to drive gold out of circulation while refusing to stop the forced coinage of silver dollars.

---

IT IS NOT HARD TO DIVINE that greenbacks and "greenbackism" lie at the root of most of the financial vagaries that flourish inside and outside of Congress. Were it not for the \$346,000,000 worth of greenbacks now outstanding, and which should have been in process of redemption for some years past, there would be no reason for keeping \$100,000,000 as a reserve in the Treasury against them. Consequently there would be no attempt to compel the Secretary to reduce the surplus below an

amount required to keep the currency on the existing gold basis. But the present anomalous and dangerous condition of the public finances could never exist, in spite of the prosperous condition of the Treasury, except through the mischievous cheap money idea. Many of those who are possessed of this delusion, seeing that the greenbacks and the silver dollar are now kept at par with gold, believe that this would still be the case even though the Treasury reserve is dissipated. Anything less conformable to experience and reason can hardly be imagined.

PROBABLY THE STRONGEST ARGUMENT ADVANCED to oppose the redemption of the trade dollars is the statement that the coins have all drifted into the hands of speculators. It is a poor reason, and, as the JOURNAL has already stated, might be used with equal justice in any case when trying to repudiate an honest debt. But it has not even the virtue of being true. There are numerous instances to show that these United States ("In God We Trust") dollars are in the hands of parties who had accepted them at face value, fully relying upon the seal of the Government and its obligation to recognize them. An instance came to light on July 23d when the City Comptroller of Buffalo opened bids for the purchase of 5,159 trade dollars in the City Treasury. They were sold to a New York firm for 75.04 cents each. Again, the Philadelphia *North American* estimates that there are 750,000 of these coins distributed throughout the Schuylkill valley in the hands of persons who accepted them as good coins at the time they were generally current. That paper suggests that Congress should declare these dollars a legal-tender again, and thus easily dispose of a matter which would be settled long ago if it had not been involved in the vexed silver coinage question. While it is not desirable to have any addition to the silver circulation at present, yet this would be the best plan for the Government.

IT WOULD NOT BE SURPRISING if the new Government of Great Britain should be willing before long to enter into negotiations with the United States and other nations that are willing for the purpose of taking combined action for the rehabilitation of silver. The Commission on Trade Depression, which was appointed when the Conservatives were last in power, in its report finds that the supply of gold has decreased while the demand has increased. While the returns from external trade show little diminution in the volume of commodities, the money value, owing to the decline in prices, has been greatly reduced. The conclusion of the Commission is that the fluctuations in the relative value of gold and silver have caused serious losses to the traders, tending in some cases to divert the course of trade and aggravate the business depression. It is therefore strongly advised that a searching inquiry be made into the currency question. The sentiment in favor of acting in concert with other nations in this matter appears to be constantly growing in Great Britain.

### HOW GOLD ROSE TO A PREMIUM.

If the silver coinage is continued long enough past experience in similar cases shows that gold will go to a premium. This is a matter that all persons will agree on who have paid any attention to the financial history of this and other countries. But the circumstances that may be expected to accomplish such a change are yet merely matters of conjecture. The question of what may be expected to occur can be made easier by taking a look back at the conditions affecting the gold movement at the beginning of the civil war when the metal began to be held at a premium and to be bought and sold like merchandise.

The first issue of paper money during the war was made in accordance with the Acts of July 17th and August 5th, 1861, which embodied recommendations to that end made by Secretary Chase. Under these Acts and the supplementary law of February 12, 1862, nearly \$150,000,000 worth of seven-thirty notes were issued and \$60,000,000 worth of demand notes, without interest. The Treasury authorities took the method of paying out the first demand notes (which were issued in August, 1862,) for salaries at Washington. The business public looked upon the notes with distrust, and there was great difficulty in floating them, although a Treasury circular stated that they would be redeemed in coin on demand at the various sub-treasuries. At the time of the suspension of specie payments on December 28th only \$38,460,000 of the notes were in circulation. Gold rose to a premium almost immediately after the suspension, and during the following month (January, 1862,) it climbed to 103 $\frac{5}{8}$ %.

The first legal-tender notes were authorized by the Act of February 25, 1862, and the first notes of this description were issued March 10th of that year. On July 1st Treasury notes were outstanding as follows: Demand notes, \$53,000,000; legal-tender notes, \$96,620,000; seven-thirty notes, \$123,582,435. During July gold rose to 120 $\frac{1}{2}$ %.

It is specially worthy of remark that it was not the issue of notes, but the fact that the Government was not in a condition to redeem them, that sent gold to a premium. It may be argued from this fact that it will not be so much on account of the amount of the silver dollar coinage as the fact that the banks will not, and the Government cannot, give gold for these notes that will send gold to a premium.

During the war gold did not fluctuate so much according to the volume of greenbacks in circulation, but the people had no faith in the ultimate ability of the Government to redeem them. This fact is plainly set forth in the report of the Hon. Hugh McCulloch, Comptroller of the Currency, in 1864. He says:

"But while I entertain the opinion that the currency of the country is already too much expanded, and that it would be a calamity if the National banking system should be the means of materially increasing it, I must not be understood as sanctioning the notion, so generally prevalent, that the high price of coin is to be altogether or chiefly attributed to it, or that gold and silver are, at the present time, the standards of value in the United States. When gold sold in Wall street on the 1st of July last at 185

premium many of the best stocks,\* as well as productive real estate, were no higher than they have been upon a coin basis.

"By referring to the gold market in New York during the past three years it will be perceived that its value has been regulated by other causes than the inflation of the currency. In January, 1862, gold in New York was at a premium of  $1\frac{1}{4}$  per cent. It soon fell to 1 per cent., from which it rose on the 10th of October to 37 per cent. and closed on the 31st of December at 34. On the 24th of February, 1863, it had advanced to 72 $\frac{1}{4}$ , but on the 26th of March (favorable news having been received from the southwest) it went down to 40 $\frac{1}{4}$ ; but in twelve days, on the receipt of less favorable intelligence from that quarter, it went up to 59 $\frac{1}{4}$ . A few days after, upon a report of the iron-clad attack upon Fort Sumter, it fell to 46, and on receipt of intelligence of the surrender of Fort Hudson to 23 $\frac{1}{4}$ . On the 15th of October it rose to 54, but reached no higher point during that year.

"On the 1st of January, 1864, it opened at 52, went up to 88 on the 14th of April, and fell to 67 on the 19th of the same month. On the passage of the gold bill June 22d it rose to 180 and fell the next day to 115. On the 1st of July it was forced up to 185, but on the day following (the gold bill having been repealed) it fell to 130. On the 11th of the same month it went up again to 184, on the 15th it fell to 144, and after various fluctuations dropped on the 26th of September to 87, thus rising between the 1st of January and the 1st of July, 1864, from 52 to 185 per cent. and falling between the 1st of July and the 26th of September from 185 to 87 per cent. None of these fluctuations were brought about by an increase or decrease of the currency; on the contrary gold rose most rapidly when there was no considerable increase of the currency and fell in the face of large additions to it."

The facts here set forth are easily proved, and the JOURNAL only uses the language of another in stating them because his name will give them greater weight.

It cannot be held that the large issue of greenbacks was the first cause of their depreciation as much as the cessation of specie payments and the doubt whether the Government would be able to redeem the notes. But, of course, it is not to be supposed that gold would have gone as high as it finally did had the greenbacks been limited to the first issues. It is not an uncommon belief that gold was mostly exported from the country at the beginning of the war, and that this had something to do with making the premium. Director of the Mint James Pollock estimated the total coin in the country on July 1, 1861, to be from \$275,000,000 to \$300,000,000, and Secretary Chase concurred in this estimate.

Now let us look at the coin movement at the beginning of the war:

To July 1.	Imports.	Exports.	Excess Imports.	Excess Exports.
1859.....	\$7,434,789	\$63,887,411	.....	\$56,452,622
1860.....	8,550,135	66,546,239	.....	57,996,104
1861.....	46,889,611	29,791,180	\$16,548,431	.....
1862.....	16,415,052	36,887,640	.....	20,472,688
1863.....	9,584,105	82,364,482	.....	72,780,377
1864.....	13,155,736	105,125,750	.....	91,970,044

These official figures show that gold had been at a premium for some time before the export movement took large proportions as compared with previous years. In the year 1867, when gold ranged from 130 to 145 (30 to 45 per cent. premium), Comptroller of the Currency Hulburd reckoned, on the basis of the estimate for 1861, that there were \$300,000,000 of coin then in the country. A

\* Some monetary writers have been saying recently that if gold goes to a premium stocks will rise proportionally.

fair inference is that the import of gold is not a source of danger at present except that it may make it necessary for the Treasury and the banks, or either of them, to cease gold payments.

The facts cited will explode the theory once put forth in a respectable financial contemporary and quoted in the May, 1884, *JOURNAL*, as follows :

"Inconvertible paper will not expel coin until enough of such paper is issued to take the place of the coin; and, so long as any coin circulates, it will be proved that there is no depreciation of the paper and no premium on the coin. In like manner silver, inconvertible into gold, will not expel the latter metal until there is enough silver coin to take the place of the gold."

The few facts that have been brought together appear to lead irresistibly to the conclusion that as soon as the Treasury is compelled to issue silver which it is not able to redeem again in gold the latter metal will go to a premium. It is doubtful if a better plan could be devised to bring about this result than the enactment of the Morrison bill, directing the Secretary of the Treasury to pay out the surplus money now held.

---

## THE MONETARY QUESTION IN GERMANY.

[Translated for the *JOURNAL OF BANKING*.]

There are some questions that will not down until some satisfactory answer has been found. So much has been said and written on the monetary question that even banking circles begin to find the subject wearisome while in diplomatic and economic circles it is almost tabooed. Now and then, however, the views of industrial and outside parties are both important and interesting, and give an unprejudiced statement of the effects of existing financial conditions and the requirements of commerce and trade.

The Mining Union of Upper Silesia (Prussia) lately submitted its answers to certain inquiries concerning the monetary question. Although certain of their bearings are of a local nature, yet their general tenor affects the silver status. A translated *résumé* of the answers is as follows :

1st. The German Mint law has had a general influence on German industrial activity. The consolidation of the German Mint conditions and the consequent appreciation, thereby, of German exchange in the world's markets have undoubtedly had a beneficial influence on German commerce and trade and have had a specially favorable effect on the industrial situation of Germany. The moderate rate, and the constancy of the domestic discount, which have been also of such benefit to business, must also be partly regarded as a consequence of monetary legislation.

2d. Even if it cannot be denied that the sale of German silver has had a great deal of influence on the depreciation of silver, it must also be borne in mind that some 600,000,000 marks that have been put out of circulation during recent years (equivalent to the silver production in the same time) as well as the colossal stock of silver in other countries (in the countries of the Latin Union alone 6,117,000,000 francs in 5-franc pieces) have also had their due weight. The decline in the price of silver must be therefore ascribed for the most part to over-production of the metal, which rose nearly 40 per cent. from 1870 to 1884.

3d. It cannot be disputed that the decline in the price of silver facilitates imports from silver countries, as the cost of production, and especially the cost of labor, does not rise so speedily as the price of silver declines. This, of course,

can only apply to the period of the silver depreciation. As soon as there is a stability in the value of silver, the cost of production in the gold and silver countries will become normal. This increase of cost cannot count, however, against the protective duties of our own and neighboring States. The decline in price of silver has had no influence whatever on domestic consumption.

4th. There has been no scarcity whatever in the circulatory medium, although industrial employers required relatively large amounts twice a month for the payment of wages. There was no difficulty even in obtaining any particular kind of coin.

5th. There has been a not inconsiderable decline in the values of all mining products during the last few years, coal being affected least of all. The greatest decline was in the iron mining and manufacturing interests. This decline, however, has no relation with the demonetization of silver, but must be attributed to an excess of production over consumption.

6th. Although we consider the present German monetary legislation as suitable on the whole for the interests of German industrial activity, we cannot yet regard the position of the German thaler, which with its legalized value is considerably above its intrinsic one, as tenable, and as a further decline in the value of silver is not improbable, it is to the advantage of our financial and social interests to get rid of our silver thalers as soon as practical. In this case it would be requisite to increase the subsidiary coins by at least from 150 to 200 million marks. The question as to whether we believe it of import that the Reichsbank should have a certain proportion of their reserve in silver is somewhat out of our line and can be better answered by financial authorities. At the same time we think we may be permitted to express the conviction that a partial silver reserve of the bank-notes, so long as it would be in proportion with the market price of silver and not exceed a legalized proportion with the gold, would not be likely to create any harm.

7th. The only change in our monetary system that we would desire to see carried out would be the complete adoption of the gold standard, in which Germany can proceed alone. Any consideration for other States should only be had when a not too sudden decline in the value of silver would make it the interest of Germany to get rid of its superfluous silver gradually. We believe that any fixed relation of value between gold and silver as the result of an international monetary convention would not be lasting even if it were practical. In the interest of the economic independence of Germany, and with a regard for the dangers and losses resulting from the action of such conventions, we believe that Germany should keep aloof from every such movement. Especially do we believe that any monetary convention without England could not be possible.

8th. A continuance of the value proportion of 1:15½ between gold and silver we consider as an inadmissible and unjustifiable preference of the debtor to the creditor class. To the first category belong States, communes and all unions, companies and institutions holding mortgages. Among the creditors that would be injuriously affected by such a proportion we should have to count all Government and private officials. Even workmen would be affected thereby, as wages are slow to adapt themselves to changed relations of value.

9th. We do not believe a good Mint system possible without having a free coinage of the monetary metals. Any free coinage of silver would, however,

postpone a value proportion between two metals, conduce to a single silver standard, and either exclude gold from monetary circulation or produce a gold premium.

---

### THE MORRISON RESOLUTION

#### PROVIDING FOR THE PERMANENT REDUCTION OF THE SURPLUS.

The Presidents of the leading banks of New York city are unanimous in reference to the evil results which will follow from the large reduction of the surplus proposed by the Morrison resolution which recently passed the House of Representatives by a large majority.\* We give below the views of Assistant-Treasurer Canda, President Williams, of the Chemical National Bank, ex-Comptroller Knox, President of the National Bank of the Republic, and of President Dowd, of the Bank of North America.

Assistant-Treasurer Canda, as an officer of the Government, expressed some hesitancy as to the delicacy of expressing any views, but said: "I view with regret this Morrison resolution, because it is, as Mr. Hewitt aptly expressed it, voting 'a want of confidence' in the financial policy of the Administration. President Cleveland, Secretary Manning and Treasurer Jordan have well-defined views as to the nation's finances. They are sound, and it does seem to me, as a business man, that it is extremely shortsighted to attempt now an interference with their carefully prepared plans."

President George G. Williams, of the Chemical National Bank, said: "If the Morrison resolution becomes law a few things would be pretty sure to happen. In the first place, the passage of the resolution would weaken confidence in the stability of the continuance of gold payments. There is a strong probability that it would lead to exports of gold. It would have a tendency to a fictitious advance in prices, and would give us a very much larger circulation based on silver worth twenty-five cents less on the dollar than gold. It would undoubtedly lead timid people into hoarding gold, and the result would be a state of uncertainty which is as unsatisfactory a basis on which to do business as could well be desired. As an offset to the evils which would result from the passage of that measure, it may be stated that the United States bonds which would have to be called would necessitate the withdrawal of still further amounts of National bank notes, and it may be well enough not to lose sight of the fact that the National bank-note circulation has already been contracted over \$100,000,000 from the highest point it ever reached, and that about \$60,000,000 of legal-tenders are in the Treasury awaiting the redemption of National bank-notes. This contraction of the circulating medium has made a great vacuum that has been filled by silver certificates, which, not being paid in for customs, are no embarrassment to the Treasury. The Treasurer of the United States has been able to pay out legal-tender notes and hold on to his gold, and this has made the Treasury very strong in gold in remarkable contrast to its weakness about a year ago. The prospects of business are now in every way so favorable that this Pandora's box comes in as a disturbing element and weakens confidence."

John Jay Knox, President of the National Bank of the Republic, said "The Morrison resolution, as passed by the House, makes it the duty of the

---

\* The Senate has materially modified the terms of the Resolution. See reference thereto in the *Banking News* department in this number.

Secretary of the Treasury to apply any excess of surplus over \$100,000,000 to the payment of the interest-bearing debt of the Government in monthly installments of \$10,000,000 each. This resolution proposes not only to reduce the present surplus, but establishes this as the permanent policy of the Government. The law now provides in effect that there shall be a permanent deposit of \$100,000,000 of gold coin in the Treasury for the purpose of redeeming the legal-tender notes, and in the present form of statement the Treasury officials have set aside \$100,000,000 of gold for that purpose. National banks have deposited about \$60,000,000 of gold funds for the purpose of retiring bank circulation, and the Treasury is pledged to pay the greenbacks and these National bank-notes, amounting to more than \$400,000,000, on demand. The \$100,000,000 held by the Treasury is only twenty-five per cent. of this amount, and is a much less percentage than any prudent banker or any Government should keep on hand if it intends to maintain gold payments. The immediate operation of the resolution, if carried into effect, would not for some weeks largely reduce the amount of currency in circulation. The amount of three per cent. bonds is about \$182,000,000, of which the banks hold, say, about \$100,000,000, or three-fourths of the amount, as security for circulation. If \$40,000,000 of the bonds are called during the next four months one-fourth will belong to holders who will receive payment from the Treasury on presentation, and three-fourths, or \$30,000,000, of the amount will belong to the banks. The Government will pay the banks \$3,000,000 of this amount and transfer the remainder, \$27,000,000, to the fund in the Treasurer's statement for retiring the circulating notes of the banks, so that the operation will largely consist of book-keeping in the Treasury. But the bad effect of the proposition consists in the the demoralization which follows such legislation. It is the general opinion of the leading financial men of the country that the reserve now held by the Treasury is not too large, but too small, if payments are to be continued upon the present standard, and that any reduction of the amount is attended with peril. It is their opinion that the continued coinage of silver dollars must not long hence result in the suspension of gold payments and the substitution of silver payments. The effect of the proposed legislation is to increase this peril. The best use of a Treasury surplus at present is to assure all those who fear silver payments that there is no immediate ground for alarm, and the loss of interest upon even \$70,000,000 at 3 per cent. is really nothing in comparison with its good effect upon business, and is not to be considered if the holding of the present surplus now in the Treasury will have that effect. In other words, the money now held in the Treasury cannot be in any way so usefully employed as to dispel the alarm which now exists in the minds of many of the leading business men of the country. Senator Edmunds, many years ago, in speaking of holding a large surplus in the Treasury, said: "You must be ready for the evil day, and, being ready for the evil day, the evil day almost never comes; not being ready for the evil day, it is certain to come."

President Dowd, of the Bank of North America, who is prominent in the Clearing-House Association, and a financier whose opinions carry weight, spoke in unreserved condemnation. "It is a matter for great regret," he said, "that Congress is so prolific in financial geniuses. This project of Mr. Morrison's is extremely ill-advised. It contemplates the demonetization of gold and the bringing in of an era of inflation on a deteriorated silver basis. This is sure

to unsettle and disturb the financial and commercial world. It would indeed be hard to conceive of a thing more disastrous in itself. It would be a waste of effort for the Clearing-House Association to take any action. Congress pays no attention to men who know what they talk about. Secretary Manning should be let alone. He is a safe, sound man; his stature a good deal beyond what was first anticipated; and it is a shame to the country that a lot of pigmies in Congress can handicap his administration of the Treasury. The breaking down of his health is a National misfortune."

---

### SIR CHARLES WILLIAM SIKES.

SKETCH OF THE MAN WHO FIRST PROPOSED THE POSTAL SAVINGS BANK SYSTEM  
IN GREAT BRITAIN.

We are in receipt of a kind and appreciative letter from Sir Charles W. Sikes, Managing Director of the Huddersfield Banking Company, England, on whom Her Majesty conferred the honor of knighthood in recognition of the important part taken by him in introducing the system of post office savings banks in Great Britain.

A sketch in the London *Bankers' Magazine* says that this gentleman is the son of a private banker of Huddersfield and was born in 1818. He entered the service of the Huddersfield Banking Company (the second joint-stock bank established in England) in 1833, only a few years after its organization. While yet young his attention was directed toward bettering the condition of the workmen by encouraging habits of providence and thrift. It happened that, while considering this subject, he struck upon the following passage in Archbishop Sumner's "Records of Creation:"

"The only true secret of assisting the poor is to make them agents in bettering their own condition."

Simple as these words are they made a deep impression and became the key-note and test to which Mr. Sikes brought the various views and theories with which he had previously met. If self-reliance and self-help could only be made characteristics of the working classes generally nothing could retard their onward and upward progress.

In the year 1850 savings banks in England were open only a few hours in each week, and their scope of usefulness was very limited. In that year Mr. Sikes, in a letter published in the Leeds *Mercury*, recommended the formation of penny savings banks in connection with mechanics' institutes, mills, workshops and schools. The suggestions made in the letter were generally approved, and penny banks were established in connection with nearly every mechanics' institute in Yorkshire.

A further effort in the same direction was made in 1854 in the shape of the pamphlet "Good Times; or, The Savings Bank and the Fireside," which was very successful, 40,000 copies being sold.

Encouraged by the interest that was aroused Mr. Sikes was induced to take a still more active interest in improving the savings institutions, which were utterly inadequate to meet the requirements of the country. He endeavored to interest Sir George Cornewall Lewis, Chancellor of the Exchequer, with a view to having the Government guarantee the savings banks deposits, but without success.

When he had almost given up the notion of improving the existing savings banks the idea suddenly came to Mr. Sikes that in the Money Order Office

there was the very organization which might be made the basis of a popular savings bank. His plan was formulated and in 1859 submitted to Sir Rowland Hill, who approved of it. Mr. Sikes, thus encouraged, addressed a letter on Post Office Savings Banks to Mr. Gladstone, the Chancellor of the Exchequer, giving statistics of the increasing prosperity of the Kingdom and the surprising development of the Money Order system. He drew a contrast between those results and the comparative stationary condition of the Trustee Savings Banks. He showed that, while in 1846 the aggregate receipts of all the savings banks were £7,300,367, in 1858 there was only an increase of £600,000—about  $7\frac{1}{2}$  per cent. for a period of twelve years. He also pointed out that there were nearly 2,000 towns and villages and no less than fifteen counties in England through the streets of which their artisans and laborers might traverse without meeting with a savings bank. He appealed to Mr. Gladstone to found, through the medium of money order offices, the Post Office Savings Banks. Mr. Gladstone took up the scheme warmly, and subsequently carried a bill through Parliament.

The business of the Postal Savings Banks was begun September 16, 1861, in 301 towns that up to that time possessed no savings banks. The total deposits in almost 8,000 banks that were operating on May 22d, 1886, was £49,907,688, belonging to 3,696,860 depositors, averaging about £13 10s. each. A comparison of these figures with those of the Trustee Savings Banks shown above indicate the extent of the results of this great idea.

In recognition of the service thus extended to his countrymen, Mr. Gladstone in 1881 informed Mr. Sikes that the Queen intended to confer a knighthood upon him in recognition of his valuable services.

A fitting close to this sketch is the following tribute which Sir Rowland Hill, in his "Memoirs," pays to Mr. Sikes' disinterestedness:

"Mr. Sikes, I must not omit to say, never received nor ever sought any advantage, pecuniary or otherwise, in recompense for his admirable suggestion, contenting himself with the deep gratification of having done what lay in his power to confer an inestimable benefit on the humbler classes of his countrymen."

---

### RURAL BANKS IN ITALY.

In December last the JOURNAL gave an account of the progress of the popular banks of continental Europe, which form a system evidently very useful in extending banking accommodations to people of small means, but which are as yet unknown in this country. In connection with this subject it may be of some interest to consider a species of popular bank as it flourishes in Italy, possessing features peculiar to itself. It is possible that this account may convey a suggestion to those who at present can see no method of extending banking privileges to the poorer people throughout the country save through the establishment of a postal savings bank.

The rural banks, it should be understood, are somewhat new to Italy, the first one having been started only about the middle of 1883. This was at Padua, Leone Wollemborg being the founder. The principle followed is that which was devised by Frederick William Raiffeisen and which has had great success among the country people of the valley of the Rhine.

The system of Raiffeisen differs very materially from that of the more famous Schulze-Delitsch (the founder of the people's banks) in its aims as well

as its methods. The object of the latter was to assist the class of workingmen, principally in cities, by teaching them to employ their savings profitably. With this view the principles embodied are: the association of borrowers together, loans granted for a short term, and a division of the profits among the shareholders. The shareholders may be at the same time borrowers and lenders. But other persons may make use of the institutions, which, in fact, do an ordinary banking business. They are based upon the capital contributed by the shareholders, and the aim of the business is gain. Of the profits 80 per cent. is paid in dividends and the remainder goes to increase the capital.

The Raiffeisen banks, on the other hand, are formed without subscribed capital. Their object is not to earn money for shareholders, and consequently no dividends are paid. They do business only for the associates, who must be residents of the same commune. Again, the loans may be made for either a long or a short term, and must be secured by mortgage or pledge of property. In the case of these banks it is the lenders who are associated together and not the borrowers. The capital of each bank or association is composed of gifts to it and belongs to the society (which is perpetual) and not to the members, who are not at liberty to dissolve it or divide the capital.

The Schultze-Delitsch banks pay interest in advance at the end of the term and all services are rewarded; in the Raiffeisen banks only the Manager is paid.

Another peculiarity of the latter is that, besides the guaranties given for loans, the borrower is bound to explain the use to which the money is to be put, and, besides, they are submitted to the approval of a council of syndics instead of the Manager solely.

In short, the aim of the rural banks is less to encourage saving for the sake of the interest gained than to aid the small farmers by the loan of money circulating in the vicinity. The members of the society merely draw interest on their deposits, the surplus profit going to augment the capital.

In order to give an idea of the scope of these institutions, Mons. E. Fournier de Flaix, in *L'Economiste Français*, gives the figures of a recent statement of the Cassa Rurale di Lorezzia, which is the institution that was organized by Mr. Wollemborg at Padua. These figures show that the amount of the loans was only 12,545 lira (about \$2,509) while the total gift capital was 258 lira (\$51). The loans, it may be observed, were obtained for the most part for the purpose of purchasing cattle and (to a smaller extent) buying horses, sheep, provisions, etc.

The success of the bank mentioned (not in gaining money, but in being of use to the people) was so marked and immediate that eleven other institutions on the same model have been put in operation at as many different places. The system is now, in fact, considered to be well established in Italy. An important consideration, however, is that northern Italy, with a large rural population of very settled habits and strong social instincts, is a soil peculiarly well fitted for the growth of these banks, which are established and carried on almost gratuitously for the benefit of small borrowers.

So far as their practical administration is concerned, it may be said that each bank is a commercial association, with a central council and a President. The general affairs are acted upon by the council, which is itself under control of a higher body, known as the "syndics." The transactions are managed by the President assisted by a Manager, who acts as Cashier and also keeps the books, of which there are only three. The latter alone is remunerated for services.

Meetings of all the members, or associates, are held semi-annually, at which the affairs are subject to examination. New members must be passed upon by the council and accepted by the general assembly. Members may resign at pleasure.

The question appears worthy of consideration whether the plan here sketched or some modification of it would not succeed in parts of this country where the poorer people are deprived of banking privileges and savings institutions. It is certainly far more desirable that the people should learn to manage their own savings than that they should depend on the Government to do it. The chief menace to business at present is due to the fact that so many working people feel that they are not interested in business prosperity. In any case, however, this short account of the rural banks of Italy may serve to show that we have not in this country learned the last word as to the possible scope of banking.

---

"STOCKS" AND "SHARES.—Our readers may possibly be puzzled occasionally by a use of these terms by the English papers which is different from that prevailing in this country. They generally speak of railroad or bank stocks as "shares," and Government obligations in general they term "stocks," a use of that word unknown here. The name "stocks," given to investments of money, comes originally from a very curious custom. In old times, when money was lent to the British Exchequer, the officials took a long rod and cut notches on it, a notch of a certain size representing one thousand pounds, a smaller one a hundred pounds, and so on down to a mere scratch, which stood for a farthing. The rod was then split down the middle, the Exchequer keeping one half, and the lender—the stockholder, as we now say—the other. When the money was repaid the two halves were put together to see if they tallied. These rods or stocks were called "Exchequer tallies." In the Ashmolean Museum at Oxford, England, may still be seen some of these rods, with notches representing about thirty thousand pounds. This rude system survived till 1832.

---

MR. PATTEN'S PORTRAIT.—In justice to the many friends of the late CLAUDIUS B. PATTEN, as well as ourselves, we are obliged to state that the illustration shown in the July number of the JOURNAL is a very imperfect likeness of the author of "Methods and Machinery of Practical Banking." The photograph from which the portrait was obtained—the best obtainable at that time—was "flat," artistically speaking, so that in making a reproduction of it on a plate a true likeness could not be obtained. However, as it bore some resemblance to the original, and as from prior announcement the JOURNAL's readers expected the portrait in the July issue, we permitted it to appear.

It is with much pleasure that we are now able to give notice that a faithful portrait of Mr. Patten may be expected in "Practical Banking" when issued in book form. A photographic negative has just been secured—taken about two years ago—from which a correct likeness can be engraved.

The series of articles on "Practical Banking" which have appeared in the JOURNAL are now undergoing careful revision for publication in a volume. The various subjects treated in the series will be arranged under topical heads, and new matter will be introduced in some departments of the book. It will have a complete index to facilitate reference to any subject. A prospectus will shortly be issued giving further particulars.

**Methods and Machinery of  
\*PRACTICAL BANKING.**

---

CONSISTING OF BRIEF DESCRIPTIONS AND SUGGESTIONS RELATIVE TO THE  
METHODS OF CONDUCTING THE BANKING BUSINESS; WITH APPROVED  
MODELS OF BLANK BOOKS AND FORMS FOR THE USE OF  
BANKS OF DISCOUNT, SAVINGS BANKS, ETC.

---

[Prepared expressly for the JOURNAL by the Cashier of a long-established bank, who has had over twenty years' experience in practical banking, and who has always sought for better and safer methods.]

---

**DISCLOSING THE CONDITION OF A DEPOSITOR'S ACCOUNT.**

A nice point is to what extent is it justifiable and reasonable for the Managers or officers of a bank to reveal to third parties the condition of the account of one of its dealers. There is no direct and positive rule that can be laid down in this regard. Law and common sense must be left to rule according to circumstance in this delicate matter. The semi-public character of banking institutions is a feature which has an important bearing upon the question raised. National banks are obliged to publish reports of their condition, to make regular statements of their resources and liabilities to the Comptroller of the Currency, and to give the public Examiners access to all their methods, machinery and records of all transactions of every name and nature which they may have. It should be borne in mind that any shareholder in a bank, no matter how limited his holding, has a right, as one of the proprietors, to "look into" his bank to any extent that is not an unreasonable interference with its regular routine of work and not an unjustifiable interruption of its administration. It is often argued that any person who has found it difficult to get at the situation of the affairs of a bank by a direct approach can accomplish his purpose by carefully studying its published reports or by buying the smallest amount of stock and then demanding a view of the inside on the ground of being a stockholder.

Bank Managers and officers should take extreme care not to disclose in an indiscreet manner any business affairs.

**RATES FOR MONEY.**

There is nothing more confusing to the mind of the average money borrower than the reports of rates of interest upon call and time loans which are currently made in the money articles of the commercial newspaper to which he pins his faith. A few explanations of the difficulties he encounters as he endeavors to get at the financial situation through an inspection of a daily journal's monetary articles written by one who has long been familiar with the work of getting up the articles in question may be of value.

When rates for discount of paper are quoted by financial writers paper of the very choicest class is generally had in view about whose standing there can be no question whatever and the holders of which have first-class facilities for borrowing.

The notes which the average business man offers his bank are not discounted unless it is believed that they will be paid, yet they may not exactly belong to the class of paper just referred to but are rather those types of promises-to-pay so often alluded to in banking circles as being a fair business risk and which are quite sure of being charged 1 or 2 per cent. for discount

---

\* Practical Banking Series—Part XXV.

These papers will be continued through the 1886 volume of the JOURNAL. Copyright, 1884. All rights reserved.

above the iron-clad quotation of the money article. These differences between real and nominal rates for money are more marked in the London money market than in this country. Thus, I have noticed that London merchants in good standing were steadily paying 4 and 5 per cent. for their bank discounts when the *London Times* was quoting  $2\frac{1}{2}$  per cent. as the Bank of England rate for 60 days' loans.

The same apparent inconsistencies exist in the market for mortgages. The borrower reads in a paper that money upon pledges of real estate can be obtained for terms of years at 4 per cent., yet he may at the same time find himself paying 5 and 6 per cent. for a loan for three years upon the very house he is living in.

In quotations for advances of this description the figures in the newspaper have been based upon operations of great magnitude made by savings banks and trustees where the property pledged has been of the choicest character and the advances made upon it not over 40 per cent. of its assessed value.

In the call loan business there are apparent quotation discrepancies which need a word or two of explanation. Call loans between banks are often quoted at 3 per cent. when the individual borrower, upon first-class securities, is called upon to pay his bank 4 or 5 per cent. for demand money. The first-named between-bank call-loans are of large round sums of minute money that is put out at one day with the full understanding that it is liable to be swept in the next. The merchant who borrows call-money from a bank expects to call and pay it when it becomes convenient to do so, and some borrowers suppose this is why these loans are described as "call-money."

There is one other point relative to money negotiations to be alluded to. The business man who reads in a morning paper that money is a perfect drug, and that rates were never so low, often finds it hard to effect a discount, even at rates far above those he has seen quoted in a journal's money article, simply because of the well-known fact that when business is very much depressed and money exceedingly sluggish banks are of necessity obliged to exercise the utmost care in discriminating in the matter of credits.

It may be asked very naturally why writers of money articles do not give these varying quotations for varying types of loans, discounts and mortgages. The answer to this can be given by saying that no well-managed bank or savings institution is in the habit of taking on second-class paper or second-class mortgages, nor are borrowers willing to concede that they are in the habit of offering to banks either second-class notes or second-class real estate security.

But there are in our money markets various sorts of nominally first-class paper and many varieties of number one mortgages. The shadings of rates accompanying negotiations of these differing types of vouchers will be easily discovered by the borrowers who attempt to make them. But they cannot readily be classified in any brief monetary review.

#### CLEARING-HOUSE METHODS WITH A DEFAULTING BANK.

The numerous failures of banks in Clearing-House cities since the establishment of the morning system of settling balances have suggested methods of arranging matters left unsettled after a clearing bank has failed to respond to the demands made by the Manager of the Clearing-House. The Grant & Ward and Metropolitan Bank collapses were the last influences most effective in placing the associated banks upon a clear and equitable basis of supplementary settlements in those cases where the regular clearings were left unbalanced by defaults. It is now generally provided in Clearing-House articles of association, that where any bank fails to pay the balance due from it at the proper hour the amount of such balance shall be immediately furnished to the Clearing-House by the several other banks in proportion to their respective balances against the defaulting bank resulting from the exchanges of the day; and the Manager is required to make requisitions accordingly so that the general settlement may be accomplished with as little delay as possible, the amount so furnished to the Clearing-House constituting claims on the part of the responding banks respectively against

## Prize Competition—Announcement.

---

THE PUBLISHERS OF RHODES' JOURNAL OF BANKING OFFER A

# PRIZE OF \$100,

(To be competed for solely by Bank officials, Bank clerks, or others connected with a bank or banking firm in some capacity),

FOR THE **BEST ESSAY** ON

**"DOMESTIC EXCHANGES: HOW THEY CAN BE MADE WITH THE GREATEST ECONOMY AND SAFETY."**

---

*A condition of the competition is that not less than four Forms illustrative of the plan proposed—such as the design of Record Books, printed blanks, etc., to be used—shall be included and form a part of the article.*

*The text of the Essay when printed (exclusive of the Forms) should be sufficient to cover from six to eight pages of this magazine—type to be the same as used in the Practical Banking articles herein. The matter must be written on separate sheets of paper, on one side only.*

*Each manuscript must be distinguished by a motto, accompanied by a sealed envelope marked with the motto, containing the name, address, and banking position of the writer, and must be sent in to the Editor before the first day of November next.*

---

**Judges.**—The names will be announced in the September issue of the JOURNAL. [Three well-known bank officers of New York city have kindly consented to act as judges; two from other cities will be added, making five in all.]

---

*The successful Essay will be published in RHODES' JOURNAL OF BANKING, and the publishers make it a condition of the competition that they shall have the right to publish all or any of the Essays sent in as their sole property.*

THE UNIVERSITY OF CHICAGO LIBRARY

the defaulting bank. And the further provision is also usually made that either of these responding banks may cancel their exchanges with the defaulting bank by paying to it the amount of all checks and other items received from it through the exchanges of the day and receiving in return all checks and other items delivered by that bank to the defaulting bank in the said morning exchanges. In regard to this latter mode of settling scores it may be noted that opportunity for its application is not often likely to be afforded.

#### CLEARING-HOUSE RESPONSIBILITIES.

National banks have generally attempted to hedge against the responsibilities of the collecting business which they transact when associated together in Clearing-House arrangements. The dangers and difficulties which arise under these associated mutual morning settlements are well illustrated in the complications that grew out of the sudden failure of the Metropolitan National Bank, New York, which are too fresh and familiar to need description. An earlier trouble of the same nature occurred in Boston at the time of the failure of the Pacific National Bank, to which more particular allusion is made, since it resulted in a practical movement on the part of the Boston banks to protect themselves against similar difficulties in the future.

The Pacific National Bank was not a member of the Clearing-House Association. Sagacious Boston bankers who had little faith from the first in the management of this unfortunate concern decidedly and successfully opposed its admission to the Clearing-House, receiving very severe denunciations in many quarters for doing so. But the Central National Bank, which was intimately connected with the Pacific, was a member of the Clearing-House.

On the morning when the Pacific suspended the Central reeled somewhat under the blow, and did not respond to the Clearing-House demands upon it till some hours after the time fixed for the settlement of such demands. The alarmed banks which were creditors of the Central for large amounts of checks upon it which they had charged through clearing in regular course in the morning in some instances endeavored to recover the unsettled checks, hoping to be able to return them to their depositors or in some way to place themselves in a better position by obtaining the vouchers.

The Central refused to give up the checks. These they claimed were good—had been drawn against existing balances. It was not the depositors' balances which were deficient, it was the bank itself which was falling behind. The outcome of this excitement was the adoption by the Boston Clearing-House of the following regulation—an idea proposed and formulated by the late Francis Jaques, who was at that time the able President of the Webster National Bank:

\* \* \* It being understood that they, the said banks, receive checks and items payable by other banks, for collection, as agents only, and do not hold themselves liable for any loss or damage which may accrue through the default of any bank or banks upon which said checks and other items may be drawn.

#### RESPONSIBILITY FOR COLLECTIONS.

A bank receiving paper for collection payable at other banks, and which in due course sends such paper to those banks for collection and remittance, is responsible for the conduct of its collection agents. There have been suits at law where the question at issue and the verdicts and decisions fully cover this point, and the reader of these notes is supposed to have at hand the means of turning to the record of these interesting and important cases.

It is claimed that failed collecting banks have no right to cover in as a portion of their assets proceeds of collections made for their correspondents, and awaiting remittance at the time of their failure. It is held that such special balances should be deemed fiduciary or trust funds and not the property of the suspended bank. But all attempts to maintain this position have been upset by the Supreme Courts.

Banks have in many instances attempted to hedge against the disagreeable collection risks and responsibility involved in the situation explained by

setting up at the outset certain disclaimers. I have before me a bank pass-book upon the cover of which is pasted the following notice :

" This bank receives paper for collection as agents only, and does not hold itself liable for any loss or damage which may accrue through the default of any bank or banks to which said paper may be sent for collection."

Years ago, under old State bank systems, notices of a similar description have been printed upon bank pass-books and posted in conspicuous places in bank offices. Such disclaimers can certainly be of no possible harm to the disclaimants, but it should always be borne in mind that they are, like disclaimers of responsibility on railroad tickets or express receipts, resting upon very uncertain foundations. Courts often show them very little respect.

The railroad tickets in use in England are solidly packed with an immense variety of disclaimers of every name and nature printed in very fine type and supposed to cover every possible contingency which has proved to be of a disagreeable and costly character in past contests.

Not long ago the London *Times* took up *seriatim* the disclaimers upon one of the tickets of a leading English railroad and showed how every one of them had been overthrown in English Courts.

#### PREVENTION OF FORGERY.

A suggestion has been made that banks might protect themselves against the forgery of checks which they use if they would adopt an engraved check-plate of the highest style of the art. And the further suggestion has been made that all the National banks of the country use a uniform engraved check-plate of the class named, prepared with movable dates and locations.

There are no very serious objections to these suggestions. Were they adopted these between-bank checks would, as far as engraving, paper, etc., are concerned, have a sort of National bank bill character. But any hope to ensure absolute protection against forgery by the use of these nice plates and this uniform style would be fallacious. The National bank bills upon whose plates and paper so much mechanical skill has been bestowed have been very successfully imitated. There are in circulation counterfeits of these bills which have been made so accurate that they have escaped detection and are still doing circulation duty with the genuine notes.

Checks made like bank-notes would be more open to forgery, since the not infrequent immense size of these checks and their movable features in the way of names and dates would render them more liable to fraudulent assaults.

There has not been a preventative against forgery and alterations invented up to the present time which has not been successfully assaulted by swindlers. These so-called safety contrivances tend to make Tellers and others who are daily called upon to cash checks incautious about the men who present them, and thus they become sources of danger instead of a protection.

#### PROFESSORS OF THE ART OF DETECTING COUNTERFEIT MONEY.

A man came into the bank bringing with him a number of rather unskillfully executed counterfeit National bank-notes. These he showed to the Tellers, enlarging somewhat upon those points in the bills which revealed their fraudulent character, and solicited an opportunity to give to the officers for the sum of ten dollars special instruction in his "secret art" of detecting counterfeit bills. It needed but little conversation with this professor to convince the Tellers of what they suspected at the outset, that the man was an imposter. There are no secrets in the art of detecting counterfeits. There are no short roads to a knowledge of the business. Careful study, long experience and a natural aptitude for this work will make any bank officer an expert. One of the best schools for acquiring skill in detecting counterfeits existed in the Suffolk Bank of Boston at the time it was carrying on the business of redeeming the bank bills of all New England when an immense variety of issues of its state bank notes were in circulation, and out of that old "foreign-money shop" there graduated men who can to-day give points to any peddler of the so-called secrets of the art of detecting bad bills. The skill of these Suffolk sorters and counters was the outcome of long and patient

labor combined with a natural talent for the work. There were some clerks in the "foreign money department" who had labored in it twenty years who were the poorest sort of authority in this matter of counterfeit detecting, for they were naturally dull students in this field, while there were others with nimble fingers, sharp eyes, clear heads and marvellous cuteness who were the keenest sort of experts there. These last never made any mystery of the business of counterfeit discovering—never pretended there was any secret in the business. In time they could detect and condemn bad bills at sight with a facility which seemed wonderful to outsiders, but their skill was simply the result of a cultivated talent.

Bank officers are earnestly advised to have nothing to do with itinerant professional instructors in the art of detecting counterfeit money, for they have really nothing to sell that is worth buying.

#### FINANCE COMMITTEES.

Banks are in the habit of delegating a large part of their management to a Finance Committee made up of three or four of the most active members of the Board of Directors with the President of the board as Chairman *ex officio*. Unquestionably a majority of banks are "run" by their Finance Committees. The by-laws of these institutions usually fully define the powers of the Finance Committee, and from time to time, by vote, special duties are thrown upon them. This important committee is a very convenient and important "institution" in every systematically managed bank.

A little incident will illustrate the position and scope of a Finance Committee:

The bank voted as follows to sell five hundred shares of stock in the Midland Railroad which it was temporarily holding :

Meeting of the Directors of the Patten National Bank. MONDAY, June 9, 1886.

Present :—Messrs. Smith, Jones, Robinson, Brown and Page.

Voted, That the Finance Committee of the Board be authorized to sell 500 shares of the Midland Railroad, now belonging to this bank, and that the President is authorized to make the necessary transfer of these shares. Attest : R. BROWN, Cashier.

The Finance Committee made the sale. When the President came to sign a power of attorney to make a transfer under this vote the railroad declined to make the transfer unless it was furnished with the Finance Committee's approval. This was a curious point. The road had the duly signed power of attorney and the vote of the Board of Directors authorizing the sale and it had no right to ask for anything more. The bank very correctly declined to grant its request. After considerable delay and opposition upon the part of the road it finally consented to make the transfer, seeing that, as the greater includes the less, a vote of authority of a whole Board covers the action of a portion acting under the name of a Finance Committee.

#### RAISED CHECKS.

He drew a check upon a bank for \$50 in his usual neat and careful manner upon one of his regular check forms. Neither the paper, the ink nor the filling up were of a character to aid and encourage fraud. Yet, nevertheless, this check was manipulated in a fraudulent manner. After having passed out of the hands of its payee, bearing his endorsement, it fell into the clutches of a rogue who removed with acids the \$50 and inserted \$1,000 in its place. In this altered condition the check was presented to the bank upon which it was drawn, and, by request of its identified holder, who was the raiser of the check, it was certified good for the raised amount. In this certified condition it was cashed for the full sum by an innocent party and by him deposited in another bank, from which it came through clearing to the certifying bank for collection. But this bank had, in advance of its presentation, discovered that the check was a fraud and refused to pay more than \$50 for the check, this, the original amount, being all that could be charged upon it to the depositor who drew it. Here was an interesting complication. In the end the drawee bank was sustained in the position it had taken and obliged to pay only \$50. The loss of the \$950 fell upon the innocent party who had

first been victimized. And this is where losses of this and similar character are always placed. The man who in good faith was unfortunate enough to cash for another a check which had been raised from \$50 to \$1,000 lost the difference between the two sums, his only recourse, which was to the party for whom he cashed the check, being of no value, since the scoundrel could not be found. The fact that the bank had certified the check as good for \$1,000 did not help him, since the law does not hold banks liable in such matters where they have exercised proper care any more than it would if they cashed a check bearing forged endorsement. A bank is responsible for the signatures of its drawers, but it cannot be supposed to know the signatures of endorsers nor whether a check may or may not have been ingeniously raised. For these last contingencies the reliable, identified person for whom they have cashed the check is fully responsible.

The certification in the case in question did not help the matter as far as the last holder of the check was concerned and did not prejudice the bank in the least. If the bank had paid the full face of the check on its first presentation it could have demanded the \$950 back from the collector. In certifying instead of paying it certainly placed itself in no worse position than if it had immediately paid the \$1,000.

#### A QUALIFIED ACCEPTANCE OF A DRAFT.

A time draft for \$10,000 was drawn upon a house in Chicago by a person in New York. In working its way through for collection it passed into the hands of a bank in Chicago, which presented it to the Chicago drawees for acceptance. The draft was not drawn payable at any special point in Chicago; but the drawees in accepting made it payable at their own bank. The Messenger presenting the draft objected to this form of acceptance and took the ground that it was what is termed a qualified acceptance which changed the tenor of the paper and which he had no right to permit. The point was referred to the Chicago bank, and the general question of the right of an acceptor to alter the tenor of a draft by accepting it with the condition of making it payable at some bank or office was fully discussed.

It seems that the English Courts long ago decided that alterations of the character in question could not be permitted and that the drawee of a draft must accept it just as it is drawn if he accepts it at all. To meet the difficulty which was the outcome of this decision Parliament passed a law providing that acceptances made in this qualified manner making drafts which had not been drawn payable at a bank payable there should not be deemed qualified acceptances but proper and legal ones.

In this country there have not been any special enactments covering the point in question, but our Courts have always held precisely the same view that is expressed by the English law, that an acceptance of a draft not originally made payable at a bank whereby it is made payable at some particular bank in the place on which it is drawn is not what the law considers a qualified acceptance but is, on the contrary, a legal and satisfactory honoring of the draft. In the case we have cited the drawees were right in claiming the privilege of accepting their draft payable at the bank and the collecting bank safely approved the act.

#### THE USE OF STAMPED ENDORSEMENTS.

An authorized stamped endorsement is as binding as a written one. Nevertheless, there are to be found among our bankers and business men those who have a prejudice against the stamped signature, and it is almost impossible to obtain their acceptance of it.

But the use of the stamp is daily becoming more and more common, and law and common sense sustained it. The weak point about a stamped endorsement is that it cannot, like the written signature, bear that silent testimony of genuineness which handwriting always gives. In case of contention positive proof of the genuineness of the stamp must be established. Where the signature is a written one it may, in some instances, prove itself by its face appearance, though it must be acknowledged that expert testimony in

the matter of handwriting is apparently growing more and more out of favor. In getting up a stamped signature the practice of engraving and printing *fac-similes* is very generally indulged in. The result is, perhaps, more tasteful and impressive than that reached in making a simple type stamp to print the name in use, but the imitation is no more binding and authoritative than the plain type.

#### HOW TO DRAW CHECKS.

The person who keeps a regular open bank account should use in checking upon his balance a check blank of uniform type, taken from his regular book and no outside source, consecutively numbered and signed with a uniform signature. His check figures should always be supplemented with written ones. He should use good strong black ink, and endeavor to lay the ink on so strongly that it will sink well into the fibres of the paper. The inviolable quick use of a blotting paper upon freshly drawn checks has a serious objection. It prevents the new-laid ink from sinking into and becoming, as it were, part and portion of the paper, and leaves the check from which it has quickly taken the wet ink lightly and indistinctly impressed with its words and figures. The use of sand in place of a blotter can hardly be tolerated in common work, yet it has its advantages, since it adds to the strength and force of the fresh writing.

Dr. O. W. Holmes, now 75 years old, says: "I turn back to a record of my birth, made by my father the day I was born, and find the sand shining upon the entry seemingly as fresh as if it had been flung there but yesterday."

In drawing checks it is well, if possible, to let the newly written ones stand for a while, to permit the ink to imbed itself, before you press on a blotter.

In filling in the written amount of a check commence the writing well to the left, drawing a heavy line over any space left open to the right.

Prefixed alterations are generally more dangerous, easier made and harder to distinguish than affixed ones. A check drawn for one hundred dollars can, if the writing leaves an open space on the left, easily take on a prefix of twenty, making it twenty-one hundred dollars, while any affix would be made with difficulty. The reader who makes experimental studies of this point will find it well taken. But in whatever way the words of the amount are inserted, hedge them well in with fencing lines.

#### NATIONAL BANKS AND LOANS ON REAL ESTATE.

A National bank can take a mortgage upon real estate as security for debts due, or enter into full possession of the same class of property in the discharge of debts, yet it cannot make advances upon pledge of real estate and buy and sell this class of property. Where it has by force of debt circumstances become the owner of real estate mortgages or of real estate the Banking Department at Washington takes the ground that it must relieve itself of such holdings as early as practicable. Bankers and business men, mainly of the South and West, have from the beginning of the National bank system been urging the necessity of such a modification of the National Bank Act as shall permit National banks to enter regularly and systematically into the business of making loans upon real estate.

Though there is much that may be urged in regard to this proposed amendment it has never been received with favor by the majority of our best practical and theoretical financiers. They hold that advances upon real estate, as far as banks are concerned, should be left to savings banks, which are peculiarly competent to make what may be termed perpetual uncollectible loans upon solid security, while banks of the other class are best adapted for the negotiation and management of easily collectible loans of short dates. There is no immediate prospect of any modification of the Bank Act in this respect and it is well that such is the case.

#### REPEATING TELEGRAMS.

The bank was sending a very important dispatch to a distant point. It was extremely desirable that the telegram should be made absolutely accurate even to the smallest word. In writing this message upon one of the common

blanks of the telegraph line the Corresponding Clerk called the attention of the Cashier to the mass of rules and disclaimers printed upon the margin of the paper and asked if it would not be well in this instance to have the dispatch repeated.

Without doubt there are many bankers constantly using telegraph blanks who never carefully read and weigh their marginal notices. But there is always to be found upon them the old provision that the telegraph company assumes no responsibility where a message is not repeated, and the enquiry of the clerk brought up the point of its present binding force.

This repeating disclaimer, as well as many other notices upon telegraph blanks, has been overthrown by the Courts. In the early days of telegraphy, when the whole business was a new science, there was reason in a provision that repetition of a message must be demanded where responsibility was to be assumed, but at the present time, when wiring is one of the exact sciences, the telegraph company which undertakes to transact business must have operators and methods and machinery which will do the wiring work of the public with a reasonable degree of accuracy without the employment of such old-fashioned means as repeating a message. The Courts require the companies to be exact in the transmission of messages, and, as far as the sender is concerned, will not make him repeat his message in order to hold them responsible for its proper transmission.

#### GUARANTEEING AN ABSENT ENDORSEMENT.

A man in Boston received in payment of a bill of merchandise a check upon a bank in New York for \$500. The payee of the check, a merchant in Kansas, had mailed it to his Boston creditor without endorsing it. The Boston dealer endorsed the check, guaranteeing the absent endorsement, deposited it in a bank, and the bank repeated the guarantee of the absent name and forwarded it to its New York corresponding bank for collection and credit. This New York bank returned the check, saying that the check could not be collected unless properly endorsed by the payee; that guarantees of absent endorsements would not be taken by New York banks. In the present case, where the depositors of the check were perfectly responsible parties, and the check was all right except in the point of payee's endorsement, it seemed an awkward thing to send the paper away back to Kansas for rectification. Another method was suggested, to be recommended in similar cases. The Boston bank asked the depositor of the check to endorse the check for the payee as follows: "John Jones [Jones was the payee] by Smith & Roberts" [Smith & Roberts being the Boston depositors of the check]. After this endorsement the Boston bank endorsed "endorsement correct" and sent the check forward for collection, and the New York bank collected it and passed it to its credit.

This method has the advantage both of doing away with the always-obnoxious phrase of "absence of endorsement guaranteed" and of being successful with drawees who will not under any circumstances pay a check upon such a form of guarantee.

#### WHEN INTEREST ACCRUES.

There is sometimes a little confusion in the minds of bankers and business men regarding the question of the interest dues in transactions where there are no specific statements of interest contracts. There are certain well-defined principles which govern such cases that should be understood. Money voluntarily left by any one in the hands of another will not, of course, draw any interest unless a specific mutual agreement to that effect is made. But when funds belonging to one person are wrongly detained by another the owner can set up a legal claim for interest upon the sum out of which he has been kept, and the rate of interest collectible under such circumstances will be determined by the law of the place where it is detained.

There is a point of no little importance to be noted here. It is often asked whether or not interest can be enforced where a party gives a note to another payable on demand without inserting in such a note the words "with inter-

est," although the transaction was entered into with the understanding upon the part of both borrower and lender that interest should be paid upon the sum advanced. The claim for interest under such circumstances would be a very substantial one, for it would rest upon very solid grounds. In the first place it would always be probable that some proof of the existence of an agreement or understanding that interest should be paid upon the money advanced could be presented, but without such specific testimony the interest demanded would find a very solid support in law and equity in the fact that the very nature of the money transaction in question carries with it the idea of compensation—of hire or interest.

The money is the property of the lender, who has placed it in the hands of the borrower at the request of the borrower as an accommodation. The voucher given is not a simple certificate of deposit but is a promissory note carrying with it the distinct idea of accruing interest.

#### RECEIPTING FOR THE PAYMENT OF CHECKS.

The gentleman presented to the bank for payment a good check upon it for \$1,050. The check had been drawn payable to the order of a party who had duly endorsed it in blank and passed it over to the present identified holder who was endeavoring to collect it. The Paying-Teller asked this holder to put his name upon the back of the check. This he refused to do, saying it was not payable to his order, that he had no interest in it except to collect it, and that the paying bank had no right to demand from him a receipt for the money since it would have a full and complete voucher in its hands when it took up the check. The point here raised is of long standing and one that has always been difficult to settle. Unquestionably the bank had no legal right to compel the collector of the check to give an acquittance since his surrender to it of the perfect voucher was enough.

But the signature of a so-placed check collector is a very desirable thing for a bank to have for corroboration and reference should anything wrong about a paid check afterwards turn up, and it is desirable for all Paying-Tellers to procure this collecting name whenever possible. Few reasonable check collectors will, under the circumstances described, be found disposed to refuse to furnish it. And where checks are drawn payable, for instance, to "J. Smith, or order," to "order of J. Smith," and are presented by J. Smith, the bank would also do well to secure J. Smith's endorsement.

Many banks make a practice of securing the endorsements of the collectors of all checks paid over the counter to parties other than signers of the checks which are drawn payable "to bearer." This is a good method, because it gives the bank a name for reference in case there should be trouble in the future about the check.

#### BONDS OF OFFICERS OF NATIONAL BANKS.

The point has been made by A. S. Pratt & Sons, of Washington, the Washington agents of many National banks, that re-chartered National banks should, as a measure of prudence, require from their officers a renewal of their bonds, because the question whether such a renewal is needed has never been passed upon by the Courts, and it has been difficult to collect bank officers' bonds on account of technical defects found to exist in them when they were brought to the severe test of a lawsuit. They have scattered widely among the National banks, in a digest of reorganization duties prepared by them, the statement that one of these duties is a renewal of the bond in question. The banks receiving this "digest" very naturally concluded that it was a digest of existing laws and decisions relative to those questions. But it is important to remember that the statement of the renewal being a necessity was not made as a conclusion of law but as a suggestion.

We think that the recommendation is an unwise and unnecessary one.

The extended bank is especially declared by the Bank Act to be the identical bank in all respects it was before the extension. Even if it were not so declared the form of bonds usually given by bank officers would hold fast under the extension, since, without exception, they bind the bond-givers with

the clause of obligation to the successor and assigns of the bank for which they are executed.

It is easy for any intelligent banker or lawyer, by studying the bonds and the United States laws, to reach the conclusion that there is no real need of making the change in question when a bank obtains an extension of its charter.

If there is no necessity for so doing why put bank officers and bond-signers to the trouble of going through useless forms simply because parties who have not carefully studied the matter hinted that, as a matter of prudence, it would be better to obtain the renewal.

#### NOTES PAYABLE AT A BANK.

It was a note for \$5,000, bearing many endorsements. The bank held it for collection. At its maturity the promisor went to the bank in person and said he could not pay the note, that he had suspended payment, and that there would not be the slightest use in taking the trouble to present the paper at the somewhat out-of-the-way bank where it was written payable. The note was duly given to a Notary to protest, and he was told that the bank had made a personal demand upon the promisor and that the promisor had positively refused to pay it. The Notary followed the somewhat risky and unusual course of making out his protest and notifying the endorsers without making a demand for the payment of the note at the bank where it was made payable. A lawsuit over this method of protest was the result, the endorsers taking the ground that they were released because the proper demand had not been made upon the promisor. The Court held that the endorsers must pay; that as the note would not have been paid if it had been presented at the bank where it was made payable, and payment had been personally demanded from the promisor, who had assured the holders that it would not be paid by him under any circumstance, there was no loss to the endorsers through the alleged neglect of the Notary, and that they had not in any way been placed at a disadvantage thereby.

The course taken in this case by the collecting bank and its Notary is not by any means one to be recommended, yet endorsers of paper should be taught by its results that the law does not permit them to evade responsibility when equity, justice and common sense is against them.

#### CIVILITY TO DEPOSITORS.

Some bank officers in the discharge of their daily duties are brought more than others in contact with the customers of the bank. But each individual clerk of any bank is almost daily called upon to represent his institution in a more or less prominent way in dealing with depositors and general patrons. There is nothing more important than the practice upon the part of bank officers of courtesy and propriety in all business intercourse. The prosperity of their bank and their own reputation largely depend upon the character of their personal address. Though fully recognizing these facts it would hardly be fair to recommend to bank Managers the adoption of a plan for maintaining suitable politeness and civility in their corps of officers which has been adopted by one enterprising and most successful bank. The bank in question has pasted upon its pass-books the following notice: "Depositors will please report to the Cashier any want of civility upon the part of the Tellers, etc., of this bank." A business man whose attention was called to this item of financial literature rather emphatically characterized it as being of the horse-car description. Without wishing to condemn this attempt to place matters in good trim in the sphere of duties thus supervised the opinion must be expressed that this printed request is one of the things that should be left off the covers of bank pass-books.

#### PROBATE CERTIFICATES AND TRANSFER OF SHARES.

In another place is described the course of action of banks and other transfer agents in cases where shares belonging to estates of deceased persons are to be transferred. One point of great interest and importance relative to this matter has not been set forth. Perhaps the subject can be presented best

by giving an actual occurrence. There were ten shares standing upon the books of the bank in the name of a deceased person. His executor, a well-known lawyer, presented himself with the certificate of the shares in question, accompanied also with the probate certificate of his appointment as executor. As the papers and the man appeared to be all right the transfer was duly made. Six months after this executor notified the bank that a will later than the one under which he had acted had been found. This later will had been probated, the other thrown out and all action under the probate papers of the first will rendered void. In this case it fortunately happened that the two wills were so nearly identical in character that no embarrassment arose. The executor of the second will confirmed the action under the first, and that ended the case. Notwithstanding the aspect of the matter the bank was perfectly justified in taking its first action under the probate papers. If any loss had happened from the production of the new will it would not have fallen upon the bank. The acceptance of the new will by the Judge of Probate was a matter entirely discretionary with him, and he would not in all probability have allowed an entrance of the new will had it been probable that it would create embarrassment. Both common and statute law require that wills shall be presented for probate within a certain time, and the will that is not produced according to this requirement is not left in a situation to throw loss upon innocent parties who have acted in good faith in a legal manner under another will.

#### VACATIONS OF BANK OFFICERS.

All bank officers should be given vacations of at least two weeks annually. They are of advantage to the bank because they give an opportunity to deputize the work of absent officers to new hands, a change which is a benefit to the institution, since it absolutely interferes with the existence of any rust of management or the prevalence of dishonest practices in the department into which the fresh worker is introduced. Vacations are good for the employé because they recreate his mind and improve his health, rendering him the better able to do the work of his position when he returns. Officers should arrange among themselves as far as possible the time of their annual furloughs. These arrangements should be subject to the advice and approval of the management of the bank, the Board of Directors voting formally on each leave of absence so that there shall be on the Directors' records a minute of the period and length of absence of each officer.

In some banks there is shown such a degree of parsimony in arranging work for the purpose of allowing vacations that the officers who are worked too hard on their return to make up for lost time and who do their own and other's work during vacation seasons would, if they had their way, do away entirely with their annual periods of absence. In banks where the situation is of this character the long summer months which are generally the periods of bank vacations are looked forward to by the clerks with anxiety rather than with pleasure, and they all breathe freer and feel a sense of relief when the vacation season is over. The fault in such cases often rests with some chief executive officer who from want of judgment or absence of proper sympathy does not use his influence to see to it that the bank in his charge has help enough of the right description. It is very poor economy to run a bank short handed, and neither the shareholders who own the bank nor the Directors who represent them are apt to favor such a policy.

*How Bank Clerks Should Spend their Vacations.*—Their first duty is to cut entirely loose from the bank and go away somewhere. They should carry out a programme that will change their general way of life not only in regard to the hours they have been in the habit of giving to work but the time spent at home out of the bank. They should endeavor to obtain complete change of scene, of air, of surroundings, of companionship and of occupation. In order to obtain all these there is no necessity to make any great exertion or spend large sums of money. The bank officer whose life is passed in the city should seek rest and recreation in the country or the sea shore at a season when those localities are likely to be particularly attractive. The officer of a country

bank may find it pleasant and profitable to take a vacation at a season of the year when the great city is the most attractive to a man at leisure, and he may find it pleasant to spend his fortnight in "doing" the leading sights of the metropolis and mingling in the rush and whirl of a life which is to him a novelty and an inspiration. A bank officer's life and work is mainly of a sedentary and mind-wearing character. He should at all times bear in mind that what he needs most during his absence is out-of-door life and freedom from mental labor. There are bank clerks who have been in the habit of spending their yearly two weeks' vacation in getting on express trains during mid-summer and going like mad as fast and as far as possible without any special regard to the direction or attractions of their route. They have generally returned to their desks the worse for their "rest" from bank work. A certain amount of car riding is often a necessity in order to get to a change of scene, but the traveling part, where steam cars have to be used in hot weather, should be deemed only a necessary evil and made as short as practicable. In New England during spring and autumn a journey by horse, either by wagon or in the saddle, is delightful, but in hot weather they should be carefully avoided as something painful and unrefreshing either to mind or body. Trips by water in summer are delightful to people who are fond of the sea, but those who are not and those who are subject to sea sickness should carefully shun steamers and yachts. Most bank officers have families. Those so situated can hardly do better during a summer vacation than take their families into some pleasant rural region which does not waste money and time to get there and back in hot and dusty trains, where in green fields and under pleasant skies, with new surroundings, the short furlough may be made to glide by like a pleasant dream.

*A Vacation Every Day.*—An experienced and successful bank officer said that he believed in taking a vacation every day, and had succeeded in doing so. These daily vacations he did not propose to push into the place of an annual long vacation, for he also believed in and took his regular two weeks' furlough.

The average working hours of the bank officer are less than those of most business men and clerks, though their duties are arduous, responsible and wearing, as those acquainted with them know. When out of the bank all care and thought about the banking business can be thrown aside, and he should treat himself to a refreshing vacation by turning his mind and body to other mental and physical work and by recreation which should be made more prominent in his programme out of the bank than the work; in fact, he should not confine himself to any work which is not in itself a recreation. The banker who does not succeed in cultivating the habit of daily throwing off banking—and by proper thought and discipline almost any man can do this when not ill—will break down early and find himself obliged to take a long vacation.

It is generally believed, and there are good grounds for it, that not only the bankers but most business men of this country are more prone to become completely absorbed in their regular occupations than those of the great European centres, who are very successful in their attempts to throw off the shop when out of it. They know better than the bankers of this country how to live a daily dual life in availing themselves of a vacation every day.

*Vacation Work.*—In the Bank of England with its thousand employes there is a steady absence of fifty officers on vacations, while in the banks in this country, where the numbers employed are comparatively small, one or two is the average. The work of the clerks who are away is usually apportioned among those remaining who have a natural connection and acquaintance with the work of the absent ones. The Cashier of a bank should see to it that arrangements are made so that no one officer shall do more than his share of the extra work rising out of vacations. It is generally an excellent plan for the officers to have an understanding so as to be able to arrange this matter among themselves, subject, of course, to the revision and supervision of the

Cashier. Where there is not a sufficiently strong force in a bank to carry along vacation work in the way suggested outside help should be generously taken on. In our cities and large towns substitutes are anxious to obtain vacation work.

There are seldom any reasons why in ordinary times faithful bank clerks should not have the needed annual periods of rest from their wearing work.

*A Vacation on Sunday.*—No bank officer should work on the Sabbath except when it is demanded by necessity. There have been times during the Rebellion when some very patriotic and holy work was done in many a Northern bank on Sundays. In a time of terrible National distress the *London Times* once issued the only Sunday edition it ever printed, and that famous Sunday *Times* was sent forth for the purpose of announcing that the English Cabinet and the Directors of the Bank of England had had a Sunday meeting and that the outcome was a suspension by the Bank of England.

There are bank officers who of their own choice and simply because they did not know what else to do with themselves have fallen into the habit of going to the bank and doing clerical work on Sundays. Some have said that the complete quiet and absence of all interruption which they could get when at this Sunday work made it the best day in the week in which to bring up back work or get work ahead so that they need not be in a hurry on Monday. Viewed from any correct stand-point this habit of working on the Sabbath is a very objectionable one, and if bank officers are disposed to indulge in it the Directors should forbid it.

There is plenty of evidence of the highest character and authority proving that it is better physically, mentally and economically, throwing entirely out of the question all reference to its moral and religious aspect, for a man to do all his labor in six days and rest on the Sabbath.

#### COUNTRY CHECKS AND CITY CLEARINGS.

In many instances banks which are located in the vicinity of Clearing-House cities announce that checks drawn upon them will be settled through the clearing of the city near them. In furtherance of this plan they name their city corresponding bank as their settling agent. Every day after the morning's clearing the suburban bank presents itself in the person of one of its officers at the bank which is its settling agent and runs over the checks of its dealers which have been charged in, accepting the solvent ones and rejecting those which are "not good." There is a point with regard to these dishonored drafts which is a frequent source of annoyance and trouble to the city banks which have taken them for collection. Is the presentation of the rejected checks through clearing legal and solid enough for a basis upon which to rest a protest and notice of dishonor, or must the returned check, after having been charged in and rejected, be again presented in a formal and regular manner at the counter of the bank upon which it is drawn? The latter course, if necessary, becomes embarrassing, since the drawee bank may be distant enough to render it almost impossible to make this required demand on the day of the settlement. It is unquestionably the safest course to make this square demand upon the bank; yet the collecting bank which has made the demand charge through clearing in full accordance with notices from the suburban bank would have a strong case in Court in defence of its course. The question would wholly turn upon the character of the notices issued by the suburban bank in setting up for itself this system of paying its checks through the city clearing.

There is another point relating to checks upon suburban banks which needs particular notice. Many dealers with these near-city country banks have a custom quite confusing and misleading to both city banks and individual holders of such checks. They print upon the margin of these checks which they draw upon their local bank the rather equivocal statement that they will be received upon deposit by the banks of their nearest clearing city, a statement which seems to carry with it the idea that the city bank will unhesitatingly cash them on presentation or receive them on deposit on the same footing with regular city checks. The holders of these checks are often

disappointed to find that they are only checks on country banks which must be run through the usual collection mill at a cost in some cases of both time and money.

#### NATIONAL BANKS AS ACCEPTORS OF TIME DRAFTS UPON THEMSELVES.

There is nothing in the Bank Act absolutely prohibiting the acceptance of depositors' time checks upon National banks, yet such a method is certainly not in harmony with the spirit of the National Bank Act or consonant with the generally received ideas of what constitutes good banking. There have been periods when National bank acceptances of the class in question have been hawked about the streets of some of our cities much to the discredit of the banks which stood upon them as acceptors and the merchants and bankers who were the drawers of the paper. The circulation of this questionable sort of paper has always led to inquiries of the Banking Department at Washington as to its regularity and legality. Though the Comptrollers of the Currency have condemned the issue of vouchers of this description they have not been able to find any positive laws for their suppression. But they have generally suppressed themselves, for both the accepting banks and the time-drawing depositors who have figured upon this class of paper have in most instances made an early entrance into bankruptcy, and the issue of the objectionable "kites" discussed have usually been deemed an indication of the approaching collapse of all concerned in them.

#### POWERS OF ATTORNEY WHICH ARE NOT IRREVOCABLE.

The bank was asked to make a loan upon some registered bonds belonging to a borrower in a distant State. The applicant for the loan sent to the bank a properly drawn and signed note for the amount he wished to borrow and the bonds he was offering as collateral, the latter accompanied by his power of attorney for the execution of their transfer. In considering the matter two points of objection were raised. The first was that there was nothing to prevent the signer of the power of attorney from issuing another power of the same tenor to some other party, thus rendering the first power of no value. This point was not well taken, since no transfer could be obtained without the possession of the bonds, and these were in the hands of the bank now considering the loan. This point is often raised by comparatively inexperienced negotiators who seem to be unaware of the worthlessness of powers of attorney unaccompanied by the original vouchers—the share-certificates, registered bonds, etc., to which the powers may be applied. The other objection raised against the documentary security was as to the value the power would be to the bank in case of the death of the borrower whose signature it bore? This was a point worthy of more serious consideration than the one suggested. The power of attorney tendered was a simple power of transfer of the common type. Whenever powers of attorney confer an interest in the subject matter only and not in the results, and constitute an essential part of a security upon the faith of which money or other thing has been advanced or liability incurred, they are not revocable, even by the death of the principal, but may be thereafter executed where it can be done without the name of the principal.

In view of the correctness of the legal principles laid down the bank concluded to ask the applicant for a power of attorney coupled with a conveyance of interest, and here is a copy of the very satisfactory one which they received that can be used with safety in similar cases:

For value received I hereby sell, transfer and assign to the Essex National Bank eleven thousand dollars (\$11,000) registered water bonds of the town of Mansfield, County of Nampden, Md., dated January 1, 1885, being of \$500 each, and numbered as follows:

Four bonds, No. 63 to 66, due January 1, 1897;

Nine bonds, No. 68 to 76, due January 1, 1898;

Nine bonds, No. 77 to 85, due January 1, 1899;

and authorize Chas. M. Jones to make the transfer on the books of said town.

Witness my hand and seal the 10th day of June, A. D., 1885.

Witness: C. A. FLOYD.

J. M. JORDON. SEAL.

## BANKING LAW.

### LEGAL DECISIONS AFFECTING BANKERS.

#### DRAFT—NOTICE OF PROTEST.

In an action against the drawers on a foreign draft judgment was given for the plaintiff. On appeal, several defences were interposed.

*First.* That no notice of dishonor was given to the defendants. It appeared that notice was given by the notary who protested the draft, and that it was sufficient in all respects if it was given at the instance of the bank who had the draft protested. Defendants, however, claimed that, as it was not stated in the bill of exceptions that the notice was given by the notary as the agent of the bank, it amounts to nothing as a notice. On this point the Court holds: "It is true the burden is on the plaintiff to prove notice, and that it was in due time and was by some party to the instrument; but it also settled that the holder may act, in giving notice, by an agent and in his name. If, therefore, there was any evidence tending to show that the notary acted in behalf and by authority of the bank, the judgment for the plaintiff must be sustained on this point. We think there was such evidence. The case shows the notary was employed by this bank to protest the draft; that on the same day a notice of dishonor was made and forwarded by him. The notary had no motive to act in his own behalf. The duty rested on the bank to give notice. These facts and circumstances seem to us sufficient to warrant the inference which the judgment implies that the county Court made. We think the custom of notaries to give notice of dishonor, when they are employed to make the protest, is so general that the giving of the notice might properly be regarded as an incident of the employment without express request or direction, but we cannot properly regard the fact of such custom as it is not brought into the bill of exceptions."

*Second.* Another ground of defense claimed was that the envelope containing the notice was improperly addressed. The draft was dated at St. Albans, Vermont, and was signed "Burton & Sowles." The envelope was addressed "O. A. Burton, Edward A. Sowles, St. Albans, Vermont," the name O. A. Burton being written above the name Edward A. Sowles. Burton & Sowles were co-partners, and were the persons named O. A. Burton and Edward A. Sowles. On this point the Court held: The general rule is, that when the notice is to be sent by post, care must be observed that the letter be accurately addressed and directed, for any mistake occasioning delay, and which might have been avoided by due care, will deprive the holder of all remedy against the party to whom the notice ought to have been given. We think it cannot be said, as matter of law, that the address as made, instead of "Burton & Sowles," was fatal. It does not appear that any one was misled, or that there was any delay by reason of the address including the christian names, or the initial letters of the christian names, of these men. They, and they only, constituted the firm of Burton & Sowles. The place where they lived or did business is not a large city but a village, and the transaction indicates they were men of business prominence. The letter or envelope must be "accurately directed and addressed." This is the tenor if not the precise language of all the books, the same particularity being required in the

\* All the latest Decisions affecting Bankers will be found in this Department as early as obtainable. The Editor of the Law Department of RHODES' JOURNAL will furnish, on application of subscribers, further information regarding any case referred to herein; he will also answer questions in banking law which may be of sufficient general interest as to warrant publication in this Department. A reasonable charge is made for Special Replies asked for by correspondents and not authorized for publication.

direction as in the address. Yet it is not every change or mistake in the direction of a notice that vitiates it. "If the error is merely nominal and is not calculated to mislead, or does not mislead, the party the mistake will not be fatal" (Story, § 347). The word "accurately," as applied to direction and address of notice of dishonor, has not been so defined that a Court can in each case say as matter of law just what alteration constitutes an inaccuracy. A change may be so violent as to exclude the idea of accuracy or so slight as to exclude the idea of inaccuracy. In such cases the Court should so hold. Alterations intermediate of these extremes would seem to involve a mixed question of law and fact. In the case at bar it cannot be said that the alteration in the address was so great as to exclude the idea of accuracy. Error, therefore, cannot be predicated on the judgment on account of the alteration in the address.

*Third.* A further claim was made by the defendants that the first indorser on the draft received the notice of dishonor to the drawers in due course through the subsequent indorser, the plaintiff, and that it forwarded such notice to the drawers, the defendants, by depositing the same on the day it was thus received in the post office at St. Albans, addressed to the defendants. Said defendants and said first indorser were both located at St. Albans, and defendants claim that this resort to the mail, instead of personal notice, or written notice at the dwelling house or place of business, constituted laches. The Court held: "It is now settled law, as a general proposition, that the method of sending notice through the successive indorsers, as was adopted in this case, has the same effect as though the notice of dishonor was sent directly to each indorser" (5 Metc., 212; 4 Yerg., 265; 16 Me., 453). The contention here is that as the St. Alban's bank, the first indorser, was located in the same place where the drawers resided or did business, the proof of the deposit of the notice in the mail is not sufficient to charge the defendants without proof of the reception by them in due time. The general rule is that, when the parties reside in the same city or town, the notice, verbal or written, must be personal, or written notice must be left at the dwelling house or place of business, and notice by mail will be insufficient unless its reception in due time is proved; but, if the instrument is protested at a place different from the residence of the party who is sought to be notified, the mail may be used (Daniel on Neg. Inst., § 1005 and cases cited). And it has been held that it may be used by an indorser who has received notice by mail in sending notice to a previous party residing in the same town, provided the notice is re-deposited on the same day it was received so that it may reach the previous party on the same day it would have been received by him if originally addressed to him and had not been withdrawn from the post office and remailed (5 Metc., 213; 8 Fost., 313; 3 Co. L., 439; 102 Mass., 177). This rule is, at least, strict enough, and it fully covers the point as it comes up in this case. It being held that all the requirements of the law as to giving notice of dishonor to the drawers were complied with, their liability is established, although they may not have received the notice in due time to charge them if these requirements had not been complied with.

*Fourth.* Defendants further claimed that plaintiff could not recover because the draft in suit was indorsed to "E. G. Sherman, Cas." instead of the plaintiff bank, of which Sherman was Cashier. On this point the Court held: "It is the settled law of this State, contrary to the general commercial law, that an action upon a promissory note may be maintained in the name of the party beneficially interested where the note is in terms made payable to his agent as Treasurer, Cashier, etc. (24 Vt., 33).

Judgment for plaintiff.

United States National Bank vs. Burton, Supreme Court of Vermont, May 12, 1888.

#### NOTICE TO INDORSER—LAW OF PLACE.

In an action against the indorser of a promissory note by the indorsee the defendant claimed error in respect of certain instructions to the jury. The second and fourth instructions informed the jury that the notice to an indorser

was sufficient to fix his liability if the notice was mailed to him at his place of residence or any post office where he was then in the habit of receiving his mail, and that the notice was sufficient if mailed to the defendant at Fruitport, Michigan, if he then had a place of business there or was in the habit of receiving or sending out mail there even if he then resided at Grand Haven and received some of his mail there.

*Held, Correct.*

Further *Held*, That notes payable in Illinois, and the contract of indorsement being made in Michigan, and the indorser residing there, the law of the place where the notes were payable governs as to time and mode of presentment for payment, manner of protests and giving notice (2 Pars. N. & B., 344, 345; 1 Daniel on Neg. Inst., § 911, 912; 1 A. & E. N. S., 43; L. R., 1 C. P., 350). There is a conflict of authority as to what law should govern in the giving of notice of dishonor—whether the law of the place of payment or the law of the place where the indorsement is made. *Aymar vs. Sheldon*, 12 Wend., 439, and some other American cases, hold the notice should be according to the law of the place of the indorsement; and see Redf. & B. Lead. Cas., Bills and Notes, 712, in note to above case of *Aymar vs. Sheldon*. We are disposed to adopt the rule that the notice should be in accordance with the law of the place where the bill or note is made payable as resting upon the better reason.

*Wooley vs. Lyon*, Supreme Court of Illinois, May 15, 1886.

#### SAVINGS BANK—DEPOSIT OF CHECK—INSOLVENCY.

D, who was a depositor in the Clairmont Savings Bank, of New York, deposited in that bank two checks drawn on the Blackstone National Bank, of Boston, payable to his order. The checks were deposited under an agreement which he had with the bank that all out-of-town checks should be passed to his credit the day of the deposit, but if they were returned unpaid they were to be charged to his account. Before these checks were presented for payment the Clairmont Savings Bank suspended payment, and D thereupon telegraphed the drawers, who stopped payment of the checks. The Receiver of the bank then brought an action against the drawers of the checks to recover their full amount. Defendants claimed that the checks in question were deposited by D for collection; that the bank received them as his agent for the purpose of collecting them and depositing the proceeds to his credit; that the suspension of the bank revoked said agency, as did also the action of D in stopping payment of said checks. They further claimed that under the law of New York said bank had no authority or power to receive said checks as a cash deposit, and must be deemed to have received them simply for collection as the agent of D. The Court found that the relation existing between the bank and D was one by which the checks were credited as cash when deposited, with the right on the part of the bank of returning to D and charging back to him, unpaid, out-of-town checks, but that it did not compel such return; and ruled that if the bank did not return to D such checks it had the right to recover on them in this action. On appeal it was

*Held*, The law of the State of New York was a fact, and the evidence introduced of what that law was, in connection with the other evidence, warranted the Court in finding that by that law the bank was not merely the agent of D in collecting the checks but became the owner of them with the right of charging them back to D in his account if they were not paid by the bank on which they were drawn. On such a finding the rulings of the law were correct.

Judgment affirmed.

*Brooks vs. Bigelow*, Supreme Court of Massachusetts, May 8, 1886.

#### NOTICE TO INDORSER—MAILING IN STREET LETTER-BOX.

A notary presented a note for payment in Detroit, Michigan, and protested the same for non-payment. On the same day he sent notices of non-payment for all the indorsers to the last indorser in Louisville, Kentucky. Defendant,

a prior indorser, residing in Detroit, received notice in due course of mail, but several days later than he would have received it if it had been sent direct to him by the notary in Detroit. He claimed that he did not receive due notice of dishonor; that the notary should have made inquiry for his residence or looked in the directory, either of which would have given the information that he lived on the corner of Eighth and Howard streets, Detroit, and that the maker, as well as defendant, both living in Detroit, the notice would not be transmitted to Louisville without inquiry.

*Held*, The manner of sending the notices was according to commercial usages, and the Detroit bank was only required to give notice to its immediate indorser in Louisville. It was not necessary for the notary in a case like the present to take any notice of the residence of the maker being upon the note or to make any inquiry as to the residence of any of the indorsers except the last. Such a rule would greatly embarrass and obstruct business and is not required by the authorities.

Further *Held*, As to the claim that the notice should have been mailed at the general post office in Louisville, and not deposited in a street letter-box, which caused a delay of a day, that the street boxes and street delivery are a legal part of the post office system, and a letter deposited in one of these must be considered as being delivered at the post office.

Wood vs. Callahan, Supreme Court of Michigan, May 12, 1886.

#### CHECK—LIABILITY OF INDORSER—DUE DILIGENCE IN PRESENTING.

The holder of a check which is payable at a different place from that in which it is negotiated can recover against an indorser if he uses due diligence in forwarding it for presentment. The general rule is that he must deposit it in the mail on the day on which it is received or on the next succeeding day (40 Me., 60; 20 Wend., 192; 43 N. Y., 171). This rule, however, may be varied by the particular circumstances of the case. The presentment, however, must be made in every case with all the dispatch and diligence consistent with the transaction of other commercial concerns (10 Wend., 804). Where the holder of such a check retained it seven days for no other reason than that it chose to send it forward through the local bank with which it did business, and it did not suit its personal convenience to deposit the check at an earlier date, this clearly was not the exercise of that degree of diligence required by the law with reference to such transactions, and, the check having been dishonored, the holder could not recover thereon from the indorser.

Where, also, the notice of dishonor was directed to defendant at Boone, in Boone County, while his post office was Odebolt, in Sac County, it was held that this was clearly insufficient.

Judgment for defendant.

Northwestern Coal Co. vs. Bowman, Supreme Court of Iowa, June 16, 1886.

#### CONTRACT OF INDORSER—PAROL EVIDENCE TO CHANGE.

In an action against defendant, as the indorser in blank of a promissory note, evidence was admitted to show that the plaintiff asked the defendant to sign his name on the back of said note with the payee for the purpose, as plaintiff then stated and represented to defendant, of identifying the said payee, and that defendant then signed his name on the back of the note for that purpose and no other purpose whatever. Judgment was given for defendant and plaintiff appealed, claiming that the Court below erred in admitting such evidence.

*Held*, In the absence of any evidence other than the note and indorsement it is well settled by authority that the holder may write over the indorser's name words importing the absolute liability of the indorser to pay the holder the amount of money named in the note. There is, however, a serious conflict of authority as to the question whether it is competent to establish by parol, where there is a blank indorsement of a promissory note, a different contract from that which is in such case implied by law. We deem it

unnecessary to refer to the adjudged cases, or to determine with accuracy which theory is supported by the weight of authority, for the reason that this Court has adopted the theory that parol evidence is admissible for the purpose above stated (18 Iowa, 485). In the case at bar, however, the theory of the defense is that no contract whatever was entered into when defendant wrote his name on the note. No adjudged case to which our attention has been called goes so far as this. It has been held that a different contract than that imported by law may be shown by parol, and this, we think, is the extent of the doctrine. We are asked to go a step further and hold that it may be shown by parol that no contract of any description was entered into or intended by the blank indorsement of the note. This we are not prepared to do. The indorsement was in writing, and clearly of necessity, we think, must import some kind of a contract, and in the absence of any other showing it must be the contract conclusively implied by law about which there is neither doubt nor uncertainty. The effect of the oral evidence was to obliterate a written contract. It was not proposed to prove a different contract, but that none had been entered into. This in our opinion cannot be done, and therefore the Court erred in the admission of the evidence above referred to.

Judgment reversed.

Geneser vs. Wissner, Supreme Court of Iowa, June 15, 1886.

### POWERS OF BANK CASHIERS.

*Continued from page 580, July number of the JOURNAL.*

**VII. Power to Transfer Stock of the Bank.**—The Cashier of the bank, when in charge thereof, is the proper officer to transfer the shares on the books of the bank. Thus, in *Commercial Bank vs. Kortright*, 22 Wend., 348, Chancellor Walworth holds that an individual who is bound to make a formal demand for the transfer of stock is not obliged to hunt up the Directors of a corporation for the purpose of having some one appointed who is authorized to comply with his legal demand. It is sufficient for him to apply at the bank during the usual hours of business and make his demand upon the officers and clerks who may be in attendance there; and in case they are not authorized to transact that particular business they must either refer him to the proper officers in the bank or procure the attendance of such officer or the Board of Directors, if necessary, without any unreasonable delay. The transferring the shares of the capital stock on the books of the bank is a matter of ordinary occurrence, and in the absence of any proof to the contrary it may be fairly presumed that the principal officer or clerk in attendance at the bank during the usual hours of business is authorized to permit such a transfer when proper.

In *Smith vs. Northampton Bank*, 4 Cushing (Mass.), the authority of the Cashier to transfer shares on the books of the bank is recognized, and where certain shares had been sold under a warrant, and a certificate of that fact and an attested copy of the warrant were left with the Cashier, the Court held that they were left with the officer whose duty it was to record the transfer of shares.

The Supreme Court of the United States (Case *vs. Bank*, 100 U. S., 454), speaking of this power, say:

"Official acts may be performed by a Cashier which constitute the ordinary and customary functions of such an officer, and persons dealing with the bank are warranted in believing that the Cashier is duly authorized to perform any customary duty falling within the scope of that category, and may to that extent hold the bank responsible, as if he was so authorized, however the fact may be, save only in cases where his want of authority is affirmatively proved and actual knowledge of that fact is brought home to the third party. Concede that, and it follows that the Cashier, unless the charter or the by-laws of the bank forbid it, may properly make or superintend the transfer of shares of the capital stock, and that a person showing a *prima facie* legal right to claim such a transfer to himself may demand it from that

officer or any other principal officer left in general charge and superintendence of the bank during the regular hours appointed by the bank for the transaction of banking business.

### REPLIES TO LAW AND BANKING QUESTIONS.

*Editor Rhodes' Journal of Banking:*

MILWAUKEE, Wis., June 24, 1886.

SIR:—In the June JOURNAL you decided that a bank—having issued and paid a duplicate for an original draft represented to have been lost, which in due course turns up in the hands of a third party bearing the genuine endorsement of the payee, the party holding it giving cash for it, and having no knowledge of the duplicate—is liable thereon to the same extent as if no duplicate had been issued.

I would ask if there is no qualification or limitation to this answer? What does your enquirer mean by "in due course" and "having no knowledge of the duplicate?"

It appears to me that if a bank issues a draft which reads "Pay this first of exchange second unpaid," and such an original draft is presented for payment after the lapse, say, of a few weeks, the party cashing it should be on his guard on account of the age of the draft and on account of the terms of the draft which contemplates the issue of a second of exchange. It seems as if the bank cashing the draft should be the loser if it takes such a draft from an unknown or irresponsible party.

I would like to see this question more fully discussed.

MILWAUKEE.

*Answer.*—In the reply referred to by our correspondent we stated that, the original draft being indorsed by the payee and in the hands of a *bona fide* purchaser for a valuable consideration, the bank was liable thereon to the same extent as if no duplicate had been issued. Of course if the draft was not presented within a reasonable time, or had been outstanding for such a length of time as to cause it to be regarded with suspicion, then the holder could not recover. In the inquiry put, however, it being stated that the draft turned up in due course and that the holder had no knowledge of the duplicate, we considered the statement as implying that the holder was a *bona fide* holder for a valuable consideration and that the presentment had been made within the time required by law, so that, consequently, the bank was liable thereon.

We give below a brief statement of the law as to the time within which a sight draft must be presented in order to preserve the liability of the drawer and indorser.

With regard to the presentment of bills payable at sight or at a certain number of days after sight, the law does not deem it wise or equitable to prescribe a fixed period within which such a bill is to be presented for acceptance so as to charge the drawer and indorsers, and the only rule that can be laid down is that it must be presented within a reasonable time.

Wallace vs. Agry, 4 Mason, 336.

9 Moore P. C., 66.

19 Conn., 126.

If the bill is not presented within a reasonable time the drawer is discharged although all the parties to the paper continue solvent and there is no damage caused by the delay.

9 Moore P. C., 66.

16 M. & W., 743.

Whether the presentment is within a reasonable time is a mixed question of law and fact to be decided by the jury under proper instructions from the Court, and it may vary very much according to the particular circumstances of each case. If the facts differ then it should be submitted to the jury, but when they are clear and uncontradicted it is competent for the Court to determine whether the time required by law for presentment has been exceeded or not.

7 Gray, 217.

When a sight bill has been negotiated greater latitude is allowed as to the time within which it should be presented for acceptance; and the time which would be reasonable in the case of a negotiated bill would be quite unreasonable in the case of one that had not been transferred.

7 Taunt., 397.

The payee of a foreign bill, when he does not negotiate it, is not bound to present it immediately for acceptance. On the other hand he is not at liberty to lock it up for an indefinite length of time.

4 M. & W., 721.  
7 Gray, 217.

A delay of two months beyond the time within which presentment might have been made, unexplained, is sufficient evidence of negligence.

4 M. & W., 721.

A bill was drawn in Charleston, S. C., on New York, payable at 8 days' sight, and was not presented for 2½ months. The holder lived several days in the house of the drawee. *Held*, That the drawer was discharged by the delay.

1 McCord, 322.

The delay of one month in presenting was held too long when the distance between the residence of drawer and drawee was only 18 miles, with communication three times a week.

7 Blackf., 367.

Where a sight draft on New York was indorsed to the plaintiff in Wisconsin, and was not mailed to New York for presentment for 14 days, *Held*, *Prima facie* evidence of laches, which might be rebutted.

28 Wis., 384.

Where sight drafts were received at Detroit, Mich., on Chicago, and were not forwarded for 21 days, *Held*, too long.

11 Mich., 30.

13 Mich., 191.

Where an inland bill which was drawn on a Chicago bank was mailed on the day it was drawn to the payee in Dakota Territory, and, after some delay in the mail, was received by him and put in circulation by him at the first opportunity, and no delay ensued except that necessarily caused by the transaction of business in a thinly populated territory, and the bill was not presented until 35 days after date, *Held*, That the drawer who was duly notified was bound, the bank having failed in the mean time,

76 Ill., 306.

The Court in that case said :

"Bills, both inland and foreign, having the quality of negotiability, are intended in some degree to be used as part of the circulation of the country, and are indispensable in the conduct of extended commercial transactions. They afford a safe and convenient mode of making payments of indebtedness between distant points. Banking houses that for a consideration issue such bills must be understood to do so in accordance with the known custom of the country—that they will be put in circulation for a limited period. If this were not so their value would be greatly depreciated and their utility in commercial transactions would be destroyed."

Where a bill was drawn at sixty days at Augusta, Georgia, on parties in New York, and was put in circulation and not presented for two and a half months, *Held*, No laches.

20 Johns., 146.

Where the holder of a draft drawn in Buffalo carried it with him into Indiana, and there mailed it, thereby causing a delay in presentment of five days, the indorser was discharged.

45 N. Y., 64.

And four days' delay in the place of presentment, unexcused, is unreasonable.

34 Barb., 249.

A delay of two and a half years, *Held*, Fatal.

28 Texas, 686.

Where a draft was drawn on New York by a bank in Pennsylvania, in favor of a traveling agent, who, on account of business, did not return to his home in New York, where he had the first opportunity to negotiate it, until ten days after its date, *Held*, under the circumstances the delay was not unreasonable.

63 Pa. State, 404.

By the foregoing extracts from the adjudged cases it will be seen that no definite time can be fixed that will apply to all cases within which a sight bill

must be presented and after which it will be considered dishonored, but that the facts of each case have something to do with the decision. We find the following provision, however, in the Civil Codes of California and Dakota.

"If a bill of exchange, payable at sight or on demand, without interest, is not duly presented for payment within ten days after the time in which it could, with reasonable diligence, be transmitted to the proper place for such presentment, the drawer and indorser are exonerated unless such presentment is excused."

*Editor Rhodes' Journal of Banking:*

WILMINGTON, Del., July 10, 1886.

SIR:—Will you answer the following questions:

A has the Cashier of the bank where he has funds on deposit certify a check payable to B as good when properly endorsed. B endorses it and pays it to C, who endorses it and sends it in the mail to D. The check is lost in transit. C then applies for another check, but is unable to indemnify the bank. A *refuses* to indemnify or become responsible to the bank but desires a duplicate check certified. If the bank certifies a check for the same amount and even date, marked duplicate, can it be held for the payment of the original in the hands of an innocent holder. SUBSCRIBER.

*Answer.*—If the check, indorsed by C in blank, should come into the hands of an innocent holder for value, he could enforce payment thereon. The fact that the drawer, A, issued a duplicate check could not in any way limit the right of the holder of the original to recover thereon, provided he was a *bona fide* holder without knowledge of the loss. Our correspondent asks, if the bank certifies a duplicate check in such a case can it be held for the payment of the original? It can, but, of course, our correspondent being a National bank, should not certify the second check unless it has sufficient funds of the drawer on hand to meet both checks, as it may become liable on both, and by Section 5208 of the National Bank Act it is unlawful to certify the check of a depositor unless he has on deposit at the time an amount of money equal to the amount of such check.

*Editor Rhodes' Journal of Banking:*

OIL CITY, Pa., July 12, 1886.

SIR:—A note payable at one of our banks is indorsed by the payee in this manner:  
*Safety Oil Mills.*

About an inch below it is indorsed:

*J. E. Smith,  
E.*

but apparently in the same hand as the first indorsement. It passes through three banks before it reaches us, and, when presented by our messenger at the bank where payable, it is refused unless we will guarantee the indorsement. This we decline to do, as we have no interest in the paper. The bank then refers it to the maker, who declines to accept the indorsement unless guaranteed. His bank certifies the note as good and returns it to us. We protest it against the wishes of the certifying bank, the Cashier saying it is unnecessary and thinks it a "shabby trick." Do you think we were justified in protesting the note? Our attorney thinks we were. Please give an answer in the next number of your JOURNAL.

F. W. M. & Co.

*Answer.*—Our correspondents were collecting agents for the holder of the note, and as such it was their duty to protest the same when payment was refused, providing there were any indorsers to hold, and give due notice thereof. If they had not done so and the bank which certified the note had failed and the maker become insolvent the payee and any prior indorser to the owner who had transferred it for value would have been released, and our correspondents would have been liable to the owner for any loss occasioned by their failure to do what the law required.

*Editor Rhodes' Journal of Banking:*

CARBONDALE, Pa., July 22, 1886.

SIR:—I have just read with care and much interest your discussion of the question of a "No-protest" allp, and I desire to say that I consider your reasonings and conclusions as sound. I rather regret there has been no legal decision by the higher Courts on that part of the question discussed by you commencing with the second

paragraph on page 523 of the July JOURNAL. On this question I wrote you (see page 375, May, 1886, JOURNAL). In my correspondence with the Cashier of the Honesdale National Bank I maintained precisely the same doctrine that you have so fully elaborated. What this Cashier will think of your views now I cannot say, but at that time he treated them lightly. Mr. F. D. Kitchel, Cashier of the Potters' National Bank, East Liverpool, Ohio, in the second paragraph, page 521, gives a very correct, common-sense opinion. In the case of a "No-protest" slip, pinned to the draft or check, suppose it was moved from the check or draft and pinned to the letter containing it, would it not be considered as directions not to protest? It seems it would and should on any principle of common sense and reasonable interpretation. It is very easy for Cashier Mumford, of Philadelphia, to dismiss the question so briefly, but that is not reasoning the question and not satisfactory to any one acting from reason. After all, perhaps, in the absence of a legal adjudication, banks are safest to do as Cashier Hawley says, "Always write it in the letter yourself." It may be superfluous, but it is not much trouble. I notice that none of the Cashiers or Presidents of the large New York city banks have thus far submitted their views and practice in this matter. I should be glad to see the opinion of Ex-Comptroller Knox, President of the National Bank of the Republic.

Very respectfully,

JAMES SCOTT, Cashier.

*Answer.*—Hon. John Jay Knox, President of the National Bank of the Republic, New York, being consulted about the matter of the "No-protest" slip, gave it as his opinion that such a slip ought to be recognized as an instruction not to protest, provided it appeared that it was not attached through error, just as much as if the letter forwarding the draft contained the instruction. He thought that in the majority of cases where such a slip was used there was nobody to hold by the protesting, as, for example, where a party in New York should draw on a party in Providence, advising him by mail that he had done so. The drawer would forward it for collection with instructions not to protest, and, in case the draft was not honored, he would not incur any expenses of protest. In a case, however, where a note was received for collection, having several indorsers, Mr. Knox thought that a bank should feel satisfied of the soundness and stability of its correspondent before complying with the latter's instructions and omitting the protest. If the note should not be protested and the indorsers released, and the bank who gave the instruction should turn out irresponsible, a question might arise as to the liability of the collecting bank for not taking the necessary steps to hold the indorsers.

Ex-Comptroller Henry W. Cannon, Vice-President of the same bank, concurred in the views expressed by Mr. Knox. He thought that no rule could be laid down which would cover every case, and that in some cases prudence would suggest that a draft be protested, while in others there would be nobody to hold, even if it were protested, and therefore it could safely be omitted.

Mr. O. D. Baldwin, President of the Fourth National Bank, New York city, said that that bank never recognized the "No-protest" slip as an instruction, but that, unless they received instructions in the letter enclosing the draft not to protest, they would always protest. He said that if the words were in the body of the draft they would be recognized, but otherwise not. He considered it safer to protest even if the bank had to lose the amount of the protest fees than to run the risk of being liable for the whole amount of the draft in case the no-protest instruction should be held insufficient.

*Editor Rhodes' Journal of Banking:*

CLEARFIELD, Pa., July 14, 1886.

SIR:—I beg leave to submit the following question for answer through the columns of the JOURNAL:

B. C. gives his note to A. B., as follows:

\$5,000.

JUNE 22, 1886.

On July 1, 1887, I promise to pay to the order of A. B. five thousand dollars, with interest from date, without defalcation, for value received.

(Signed,)

B. C.

What will be the value of this note at maturity? Should interest be calculated for one year and twelve days, making three hundred and ten dollars (\$310), or could it

legally be counted for three hundred and seventy-seven days, making it three hundred and fourteen dollars and sixteen cents (\$314.16)?

I embrace this opportunity to say your JOURNAL is invaluable in its line. Its monthly visits are awaited with the keenest interest. I would not be deprived of it for many times its cost.

H. B. POWELL, *Teller*.

*Answer.*—We do not think it would be legal to calculate the interest on the foregoing note as amounting to \$314.16 for three hundred and seventy-seven days. That result is reached by counting each day as the thirtieth part of a month, or the three hundred and sixtieth part of a year, making the interest on \$5,000 at 6 per cent. for one day 83 cents and  $3\frac{1}{2}$  mills, and for 377 days \$314.16. This, in effect, shortens the year to 360 days, and requires the payment of a full year's interest for the period of 360 days only. The method of computation which is authorized by statute in some of the States whereby a year is considered as 360 days and a month as consisting of thirty days and as the twelfth part of a year, does not, in our opinion, apply to a case like the present, where the interest is to be calculated for a period greater than a year, so as to allow the year to be considered as 360 days, thus making the interest about \$4 too much.

The statutes of the different States regulating the method of computation of interest are as follows:

The Statute of New York (1 R. S., 773, § 9) provides:

"For the purpose of calculating interest a month shall be considered the twelfth part of a year and as consisting of thirty days; and interest for any number of days less than a month shall be estimated by the proportion which such number of days shall bear to thirty."

In § 1917 of the Civil Code of California the following clause is contained:

"In the computation of interest for a period of less than a year three hundred and sixty days are deemed to constitute a year."

The Code of Dakota contains a similar provision.

In Connecticut, Illinois, Arkansas, California and Dakota, for the purpose of calculating interest, a month is considered the twelfth part of a year. And in Illinois and Arkansas interest for any number of days less than a month is estimated in the proportion which such days shall bear to thirty.

Previous to the enactment of the New York Statute, in an early case in New York (*Fireman's Ins. Co. vs. Ely*, 2 Cowen., 698), the question arose whether a note, payable in ninety days, was usurious in consequence of the interest having been calculated upon the supposition that ninety days were the fourth of a year and three days the tenth of a month, the effect of which mode of calculation was to give the lender interest for 365 days upon a forbearance for 360. The Court held that the transaction was usurious and the plaintiff could not recover. The Court further held that the fact that the principle of calculation adopted was the one in general or universal use among banks could not alter the law; that the statute fixed interest at the rate of seven per cent. per annum, and that was at the rate of seven per cent. for 365 days, and that the custom or usage of banks could not shorten a year to 360 days.

In New York, however, the method of calculation is now regulated by the statute above quoted.

The case put by our correspondent must be decided, however, by Pennsylvania law. The statute of Pennsylvania fixing the rate of interest (*Brightly's Purdon's Digest*; Title, "Interest") provides:

"The lawful rate of interest for the loan or use of money in all cases where no express contract shall have been made for a less rate shall be six per cent. per annum."

There is no statute regulating the mode of calculation, or allowing 360 days to be considered as a year in the calculation of interest for periods less than a year. Even if there was it would not apply to this case where the period is a year and over except for that portion over the year.

The interest should be calculated on the note in question at the rate of six per cent. for 365 days.

In the absence of any statute permitting it, the question whether, in calculating interest for the remaining days on the note, it would be legal, under the usage of bankers, to consider a year as 360 days, is doubtful. Several of the

States have deemed it necessary to enact laws permitting it, and the Supreme Court of New York, in an early decision, as has been seen, in the absence of such a statute, held it usurious. The safest method would be to calculate the remaining days in the proportion which they bear to 365.

*Editor Rhodes' Journal of Banking:*

SAN SABA, Tex., July 1, 1886.

SIR:—A difference of opinion having arisen, the matter has been referred to you to abide by your decision.

A man gives a note reading as follows. What is its value at maturity?

\$100.

SAN SABA, June 1, 1886.

Three months after date I promise to pay to John Smith one hundred dollars with interest at the rate of 12 per cent. per annum, value received. Due September 1-4, 1886.

JOHN DOE.

What would John Doe have to pay on September 1-4, 1886? An answer through the JOURNAL will oblige.

N. D. LIDSTONE, *Cashier.*

*Answer.*—In the absence of any statute in Texas regulating the mode of calculating interest, or allowing a month to be considered as the twelfth of a year and three days as the tenth of a month, we are of the opinion that the strict legal interest on the above note is the interest on \$100 for 95 days at the rate of 12 per cent. for 365 days, or \$8.12, making the amount due at maturity \$108.12. See reply on this subject to a Pennsylvania subscriber in this issue of the JOURNAL.

*Editor Rhodes' Journal of Banking:*

PORTSMOUTH, Va., July 15, 1886.

SIR:—Will you be kind enough to give me your opinion on the following questions, and state which is correct.

Enclosed find the combined check and warrant of the city of Portsmouth:

COUNTERSIGNED, E. F., PRESIDENT.	NO. 1. WARRANT FOR \$——		PORTSMOUTH, VA., July 7, 1886.
	TREASURER OF THE CITY OF PORTSMOUTH.		
	PAY TO THE ORDER OF A. B. ....		
	..... DOLLARS,		
	AND CHARGE TO —— Department.		C. D., AUDITOR.

NO. 1.	PORTSMOUTH, VA., ——, 188
BANK OF PORTSMOUTH.	
PAY WITHIN WARRANT FOR ..... DOLLARS,	
AND CHARGE TO ACCOUNT OF ..... G. H., TREASURER.	

Several of these checks have been presented to the bank without the individual endorsement of the person to whose order the Treasurer is directed to pay. The bank insists that the person to whose order the warrant is drawn should endorse before payment is made. On the other hand it is claimed that—the Treasurer having issued his check to pay "within warrant" without the endorsement of the person to whose order it (the warrant) was made payable—the bank is not called upon to require it, but, simply for its protection, to show that the check which it paid was to a legal warrant, which, it is held, is amply attested by the signatures of the Auditor and the President of the Council to the warrant and that of the Treasurer to the check.

S. SHERWOOD, *Auditor.*

*Answer.*—We think the bank is right, and that the payee named in the warrant should indorse the check before payment of the money. The warrant

and check are both part of the same transaction. The warrant directs the Treasurer to pay the amount to the order of A. B., and the Treasurer directs the bank to pay the warrant. The object is to pay A. B. Assuming that the Treasurer has the cash on hand to pay the amount of the warrant, he would pay it to A. B. on presentation of the warrant. Not having the cash he gives him an order on the bank where he has funds on deposit. The check on the bank must designate some one as the payee. It must be either payable to bearer, or to a specified person or to his order, or to ———, or any other designation wherein bearer is implied. The check in question in itself is not complete as it does not so designate a payee. It says "Pay within warrant," and the fair implication is that the bank is directed to pay such warrant according to its terms, not to substitute other terms, such as to pay the amount to the bearer or other party than A. B. If the warrant, in addition to what it now provides, had contained the words "One month after date pay, etc.," and the check of the Treasurer had been the same, namely, "to pay within warrant," the bank would not be justified in paying it before maturity, but would have been held to the terms of the warrant. So, if obliged to comply with the terms of the warrant as to time of payment, it is equally obliged to pay only to the person designated therein as payee or on his indorsement, and, consequently, is justified in refusing to pay without such indorsement. The claim that the bank can pay the check without the indorsement of the payee named in the warrant, as if it were payable to bearer, is based on the erroneous idea that the check, in itself, is a complete instrument which, not designating a payee, is consequently payable to bearer, whereas, in fact, the check refers to the warrant and must be construed with reference to the terms thereof. If the check simply said, "Pay within warrant," and did not contain the amount, it would be necessary to refer to the warrant to ascertain the sum to be paid. As it is, it is equally necessary to refer to it to ascertain the payee. We think the check on the bank fairly implies "Pay within warrant to the order of A. B.," and that, consequently, the bank is justified in refusing payment without his indorsement.

*Editor of Rhodes' Journal of Banking:*

OSKALOOSA, Iowa, July 2, 1886.

SIR:—In the June number of the JOURNAL, page 456, under the title "Greenbacks not Taxable," you say: "About one-half our paper money is greenbacks, and it is the custom to assess them the same as National bank-notes, gold and silver." Is it not true that gold and silver is the only money taxable? Section 3,701 of the Revised Statutes of the United States says: "All stocks, bonds, treasury notes and other obligations of the United States shall be exempt from taxation, etc." Section 5,413 says: "The words 'Obligation or other security of the United States' shall be held to mean all bonds, certificates of indebtedness, National bank currency, coupons, etc."

Respectfully yours,

JOHN R. BARNES, Cashier.

*Answer.*—Section 3,701 of the National Bank Act is as follows:

"All stocks, bonds, treasury notes and other obligations of the United States shall be exempt from taxation by or under State or municipal or local authority."

This section is contained in Title XLII., relating to "The Public Debt."

Section 5,413 is as follows:

"The words 'Obligation or other security of the United States' shall be held to mean all bonds, certificates of indebtedness, National bank currency, coupons, United States notes, treasury notes, fractional notes, certificates of deposit, bills, checks or drafts for money, drawn by or upon authorized officers of the United States, stamps and other representatives of value of whatever denomination, which have been or may be issued under any Act of Congress."

This section is contained in Chapter 5 of Title LXX., relating to "Crimes against the operation of the Government."

We are of the opinion that this definition of the words "Obligation or other security of the United States" was not intended to define the obligations of the Government so as to bring all the instruments therein enumerated within the operation of Section 3,701, exempting obligations of the Government from taxation, but that it was simply intended to be confined to the chapter wherein it is contained. Our reasons are briefly as follows:

The provisions of Section 5,413 were first enacted in Chapter 172 of the statutes of 1864, entitled "An Act to provide ways and means for the support of the Government and for other purposes," being Section 13 of that Act. This Act authorized the Secretary of the Treasury to borrow \$400,000,000 and to issue bonds therefor, and at the end of the first section the identical clause, now constituting Section 3,701, was enacted, exempting stocks, bonds, treasury notes and other obligations. This statute, among other things, provided a penalty for counterfeiting these bonds, using the plates, etc., and then concluded with the clause of definition now contained in Section 5,413.

In 1869 in a case which arose in Indiana (Board of Commissioners *vs.* Elston, 32 Ind., 27), it was decided that the provisions of this last-named section did not have reference to the exempting clause. The case was as follows:

A tax had been imposed upon one Elston on \$27,175 held by him, one-half of which consisted of treasury notes and the other half of National bank-notes. The Court held that the former were exempt under the decision in 7 Wall., 26 (expressly holding that treasury notes were exempt from taxation), but that National bank-notes were not exempt from State taxation. The defendant claimed that National bank-notes were exempt by reason of the provisions of Section 13 (now Section 5,413). On this point the Court said:

"It is insisted, however, that the Act approved June 30th, 1864, entitled 'An Act to provide ways and means for the support of the Government and for other purposes,' exempts this issue of the 'National currency' as it is entitled. The first section of that Act declares that 'all bonds, treasury notes and other obligations of the United States shall be exempt from taxation by or under State or municipal authority.' The last section is as follows:

'Section 13. And be it further enacted that the words 'obligation or other security of the United States' used in this Act shall be held to include and mean all bonds, coupons, National currency, United States notes, treasury notes, fractional notes, checks for money of authorized officers of the United States, certificates of indebtedness, certificates of deposit, stamps and other representatives of value of whatever denomination which have been or may be issued under any Act of Congress.'

"This at first glance might seem to bring 'National currency' within the exemption. But the words in quotation in the thirteenth section (now 5,413) are technical and are not the identical words used in the same order in the first section, and therefore the reference to that section would be more than questionable. All doubt, however, is removed by the use of the same technical phrase in the eleventh section of the same Act (corresponding to the present Section 5,430) in which it is provided 'that if any person having control, custody or possession of any plate or plates from which any obligation or other security, or any part thereof, shall have been printed,' etc., or 'shall have or retain in his custody or possession, after a distinctive paper shall have been adopted by the Secretary of the Treasury for obligations or other securities of the United States, any similar paper,' etc., 'every person so offending shall be deemed guilty of a felony and shall on conviction thereof be punished,' etc.

"It thus appears plain that the entire intent and purpose of the last section of the Act (now 5,413) was to throw around National currency the same guards against counterfeiting that were by law provided for 'obligations and other securities of the United States.'"

It will be noticed that the present Section 5,413 has been somewhat changed in its phraseology since this decision, and among other things contains the word "bank" between "National" and "currency," but none of these alterations affect the construction of the section there given.

For the reasons stated in the above decision, and from the fact that all through the chapter on crimes wherein Section 5,413 is contained, viz., in Sections 5,414, 5,430, 5,431, 5,432 and 5,434, the technical words "obligation or other security of the United States" appear, we are of the opinion that Section 5,413 defining those words has application to that chapter alone and cannot be held to define obligations of the United States with reference to the exemption from taxation thereof.

Assuming, then, that the obligations of the Government made exempt from taxation by Section 3,701 have never been defined or enumerated by statute

we come now to consider the question of our correspondent: Is it not true that gold and silver is the only money taxable?

1. As to treasury notes or greenbacks. These are not taxable. It was expressly so held in 7 Wallace, 26, and they are specifically enumerated in Section 8, 701.

2. As to National bank-notes. Are they taxable or exempt from taxation as obligations of the Government? On this question we find the following decisions:

- (1.) Board of Commissioners vs. Elston, 32 Indiana, 27, decided in 1860, holding that they are not exempt, not being obligations of the Government.
- (2.) Lilly vs. Board of Commissioners, Supreme Court of North Carolina, 60 N. C., 300, decided in 1873, holding that the State may tax National bank bills until Congress forbids them to be taxed.
- (3.) Ruffin vs. Board of Commissioners, 60 N. C., 498, to the same effect.
- (4.) Western Union Telegraph Co. vs. City of Richmond, 23 Gratt. (Virginia), 1, decided in 1875. To the effect that a State may tax a banking institution but cannot tax the currency or Government bonds belonging to such bank.
- (5.) Horne vs. Greene, Supreme Court of Mississippi, 52 Miss., 452, decided in 1876, holding that National bank-notes are obligations of the Government and exempt from taxation by the State.
- (6.) City of New Orleans vs. New Orleans Canal & Banking Co., 29 Louisiana Annual, 851, decided in 1877. The Court in discussing the question of the amount of taxable capital of a banking corporation treats the subject as though it were settled that National bank-notes were non-taxable, but does not decide that question specifically.

The question has never been passed upon by the Supreme Court of the United States, and by the above decisions it will be seen that no universal rule exists either one way or the other.

3. As to gold and silver certificates, the question of whether they are taxable or not has never been decided, to our knowledge, by any Court.

We would be glad to publish the views of any of our correspondents on the question of whether National bank-notes, or gold and silver certificates are exempt from taxation.

*Editor Rhodes' Journal of Banking:*

CONWAY, Mass., July 13, 1886.

SIR:—As a subscriber to your valuable JOURNAL, will you kindly inform me whether in your judgment a check drawn as below would be entitled to grace after July 15, 1886:

\$50.

CONWAY, Mass., July 1, 1886.

THE CONWAY NATIONAL BANK.

Pay to the order of John Smith, July 15, 1886, fifty dollars.

No. 1.

JAMES BROWN.

I enclose a copy of our law bearing on the subject:

CHAPTER LXXVII.—Sec. 9. On bills of exchange payable within the Commonwealth at sight or at a future day certain, and on negotiable promissory notes, orders and drafts payable within the Commonwealth at a future day certain, if there is not an express stipulation to the contrary, days of grace shall be allowed in like manner as they are allowed by the custom of merchants on foreign bills of exchange payable at the expiration of a certain period after date or sight.

Sec. 10. No days of grace shall be allowed on a bill of exchange, note or draft payable on demand, nor on a check drawn on a bank.

The question is in dispute between two Cashiers, one holding that the check as drawn is entitled to grace from July 15th, under Section 9, and the other holding that it is barred from grace by Section 10.

REGULAR READER.

*Answer.*—There has been a great conflict of decision on the question whether a check payable at a banker's on a future day was an inland bill of exchange and entitled to grace, or simply a check, on which no grace was allowable. The numerical weight of decision has been to the effect that an instrument, such as is above set forth, is an inland bill and entitled to grace; but there are also decisions of great weight which hold the opposite view. One of the earliest cases was that of Brown vs. Lusk, 4 Yerg. (Tenn.), 210. In that case a check was drawn and dated on the 18th of December, 1837, and made

payable on the 14th of January, following; and the Court held that it was an inland bill and entitled to grace. In *Minturn vs. Fish*, 4 Cal., 36, a check was dated on June 9th, and directed the bankers to pay \$3,890 "on the 15th inst." The Court held that it was a bill, and not a check, and that demand on the 15th was premature. In the case of *Morrison vs. Bailey*, 5 Ohio, 13, a check was dated on June 13th and made payable on July 18th, and the same decision was made that it was not a check but a bill entitled to grace.

In Missouri a similar rule was laid down by the Court in the case of *Ivor vs. Bank of State*, 36 Mo., 475. In that case the check was as follows:

OCTOBER 12, 1860.  
THE SOUTHERN BANK, OF ST. LOUIS.

Pay to M. C. Jackson & Co., or order, five hundred dollars on October 22d.

This was presented on October 22d and payment refused, and the bank was held to be liable for negligence in not presenting on the 25th, allowing grace. Decisions to the same effect have been made in Georgia and Delaware (See 39 Ga., 361; 46 Ga., 496; 5 Harr., 305.)

In New York the question was considered in *Bowen vs. Newell*, 3 Kern 290, decided in 1855. In that case a check was dated in New York, October 5th, drawn on a Connecticut bank, and directed the bank to pay Zenas Newell "on the 12th inst." the amount of the check. Newell indorsed the check to the plaintiff, who had it protested on the 12th, and Newell, being sued as indorser, claimed that the presentation and protest were premature and that he was discharged. The Court held that it was an inland bill of exchange under the laws of New York, and should have been allowed grace. On a second trial plaintiff proved that it was the uniform usage among bankers in Connecticut to treat such an instrument as a check, on which no grace was allowed, and this usage being admitted in evidence it was held to control the case, and plaintiff recovered.

On the other hand it has been held by high authority that such an instrument was a check, and not entitled to grace.

In the matter of *Brown*, 2 Story, 502, action was brought on the following instrument:

\$703.50.

GRANITE BANK.

BOSTON, April 18, 1841.

Pay to Curtis & Co., 18th of May, or bearer, seven hundred and three dollars and fifty cents.

EPHRAIM BROWN.

and it was held a check. In that case Judge Story said:

"We all know from the history of inland bills of exchange that originally they were not entitled to days of grace; and that days of grace were first established applicable to them by the Statutes of IX. and X., William III., chapter 18, and III. and IV. Anne Statutes, II., chapter 9. In Massachusetts days of grace were not formerly allowed upon promissory notes payable at future time; and the like rule was supposed to apply to inland bills of exchange, or, at least, the contrary was not established. This rule in Massachusetts was altered by the Statute of 1824, chapter 130, and by the Revised Laws of 1836, Statute XII., chapter 33, § 5, 6, which allows days of grace upon all bills of exchange payable at sight or at a future day certain, and on all promissory negotiable notes, orders or drafts payable at a future day certain. But no mention is made in either statute of checks; but they are silently left to the known rules, practice and usage of banks, which I believe to be invariably never to accept them prior to payment, and always to pay them on presentation on or after the day stated for payment by the date or upon the face of the check."

The judge goes into the question very fully, and holds that if a check be dated on the first day of December and be payable on the tenth of December it is presentable on the latter day, and on presentation on that day will be paid by the bank. That it is never presented for acceptance and no days of grace are allowed on it. In short, it is always treated as payable on the very day designated as the day of payment.

In the case of *Champion vs. Gordon*, decided by the Supreme Court of

Pennsylvania in 1872 (70 Pa. State, 474), the same rule is upheld. In that case the instrument was as follows :

PHILADELPHIA, November 22, 1869.

THE COMMONWEALTH NATIONAL BANK.

Pay to H. Yerkes, or order, one hundred and fifty (December 3d, 1869) dollars.

JOHN B. CHAMPION.

The check was protested on December 3, 1869, and defendant claimed that it was an inland bill and prematurely protested. Judge Sharswood said :

"The law merchant recognizes clearly a distinction in many respects between checks on banks and ordinary bills of exchange. One difference is that when the former are payable on demand or at sight no days of grace are allowed. The same rule holds where they are post-dated. (Byles on Bills, 14, note; 3 Kent's Comm., 104, note; *In re Brown*, 2 Story's Rep., 502; *Daniel vs. Kyle*, 1 Kelly, 304; *Mohawk Bank vs. Broderick*, 10 Wend., 405; 20 Wend., 205; 11 Ohio N. S., 89; 4 R. I., 30). Whether it applies also to checks payable at a future day named is a question upon which there is a contrariety of opinion and decision."

The Court then quotes from the opinion of Judge Story in the matter of *Brown*, above cited, and continues :

"The ordinary commercial form of a bill of exchange, payable at a future day, is at so many days or months after date or sight. An order so drawn, whether upon a banker or any other person, ought to be regarded as a bill with all the privileges and liabilities which, by the law merchant, are incident to a bill. The drawer by adopting this usual form must be held so to intend. So, if an order be drawn on a merchant or other person with whom the drawer keeps money on deposit subject to draft, payable at a future day named, there exists no reason why the same rule should not apply. But there is good reason why there should be a difference between an order so drawn upon a banker, which certainly must be presumed to be by a person who keeps money on deposit with such banker subject to draft, and an order on a merchant or other person. If such an order drawn on a bank, payable at a future day named in it, must be considered as an inland bill and not a check then the payee or holder has a right to present it at once for acceptance, protest it at once for non-acceptance, and sue the drawer immediately. Should it be accepted, however, the funds of the drawer in the bank would necessarily be tied up until the day of payment. All the objects of directing payment at a future day would thus be frustrated. What the drawer undertakes is that on the day named he will have the amount of the check to his credit in the bank. In the meantime he wants the full and free use of his entire deposit. It is not denied that a post-dated check cannot be presented for acceptance. That is by implication payable at a future day. Why, then, is a check expressly so made payable to stand on a different ground? In the case before us the ordinary printed form of a bank check was evidently used, and the day of presentment written in one of the blanks. This is the most convenient form, for it calls the attention of the Paying-Teller or Cashier to the fact, which he would be likely to overlook if it were expressed only by date. Nothing, I am told, is more common than such mistakes in the payment of post-dated checks, and depositors often thus find their accounts overdrawn very much to their embarrassment. If we determine that an order like that before us is not presentable for acceptance before maturity we settle the question. It is a check and not a bill of exchange."

The Court further states that more than twenty years previous the banks in Philadelphia adopted this rule, and it has been their rule ever since. That the usage of banks in the commercial metropolis ought to have great weight in determining a question of this character, and that it is perhaps quite as important that the usage should not be disturbed as that the point should be decided abstractly or theoretically right.

Such are the decisions on the question.

In many of the States, however, statutes have been enacted disallowing grace on paper payable at banks.

Thus the decision in Ohio, above cited, that such an instrument was entitled to grace, has been superseded by a provision that "*all checks, bills of exchange, or drafts*," payable at a banker's, shall be payable without grace (Revised Statutes of Ohio, 1886, section 3,175). Consequently, whether such a check payable at a future day is an inland bill or a check is immaterial in that State so far as grace is concerned.

In California, by the Civil Code, days of grace are not allowed in any case, so that the decision in *Minturn vs. Fish*, that a check payable at a future day is entitled to grace, has no further application.

And shortly after the decision by the New York Court of Appeals in the case of *Bowen vs. Newell*, holding the New York rule to be that such instruments were entitled to grace, the Legislature passed an Act (in 1857) that "*all checks, bills of exchange or drafts*" drawn upon bankers, payable on any specified day or in any number of days after the date or sight thereof, were payable without grace.

It is not intended in this article, and we have not attempted, to enumerate all the States wherein statutes on the subject have been enacted, nor to state the language or provisions of the various Acts. Nor have we examined the statutes in all of the States whose decisions we have above given to ascertain whether any of the other decisions than those in New York, Ohio and California have been superseded by statutes. Our efforts herein are confined simply to determining whether in Massachusetts, at the present time, under the statutes and laws of that State, the instrument set forth in the inquiry of our correspondent is, or is not, entitled to grace. The statutes bearing on the subject are sections 9 and 10 of Chapter 77 of the Public Statutes of Massachusetts, and they are set forth at length in the above inquiry. The provisions of section 9, allowing grace on the instruments therein enumerated, were first enacted in substantially the same language as they at present appear by Chapter 130 of the Statute of 1824, as appears by the statement of Judge Story in the case of *Brown* above cited. At the time of the decision in that case no statute existed in Massachusetts with reference to grace on paper payable at a bank; still, it was not only held to be the law, but stated as the usage of banks, that checks on bankers payable at a future day were payable on that day and not entitled to grace. The rule that a check was payable without grace was at that time not only stated in that decision but was a settled rule of mercantile law upheld by all the decisions. Thereafter, by Chapter 130 of the Laws of 1862, the provision contained in Section 10 that no grace should be allowed on a "*check drawn on a bank*" was enacted. At this time there was no conflict of decision on the question of grace being allowed upon a check, but the rule was universal that a check drawn on a bank was not entitled to grace, and was payable on demand. There was a conflict of authority, however, as we have shown above, on the question of whether a check drawn on a banker and payable at a future day was, or was not, entitled to grace.

Whether or not, therefore, the Legislature of Massachusetts by their enactment intended to consider a check payable at a future day as a *check*, and settle the question in favor of the disallowance of grace, or whether they simply intended to confirm the rule of mercantile law already existing that a check on a bank should not have grace, leaving the question of whether a check payable at a future day was or was not a *check* for the Courts to decide, is a matter of doubt. The language of the statute is different from those of New York and Ohio and some other States that we have not enumerated, wherein all *checks, bills and drafts* are disallowed grace; and it will be noticed that in these two States of New York and Ohio these statutes have been enacted following decisions which allowed grace on checks payable at a future day.

Whatever was the intention of the Legislature when they enacted that a check on a bank should not be allowed grace, whether to consider an instrument such as the one set forth in the inquiry as a check, or whether they simply intended to re-enact the rule of mercantile law already existing, leaving the question of whether a check payable at a future date was an inland bill and entitled to grace or was simply a check still open, we are nevertheless of the opinion that the instrument submitted by our correspondent,

under the Massachusetts law, is a check, and is not entitled to grace, for the following reasons:

1. Because the decision of Judge Story in the case of *Mason* expressly holds, and this decision should have great weight in Massachusetts.
2. Further, because it appears from that decision that the usage of bankers in Massachusetts is to so regard it; and,
3. In several instances where the contrary has been held, the decision has been abrogated by a legislative enactment.

### BRIEF REPLIES TO SUBSCRIBERS.

**INQUIRER (Md.)**.—No special qualifications are annexed by the National Bank Act to the office of Cashier. He is simply an appointee of the Board of Directors and may be removed by them at pleasure (Revised Statutes, section 5,138).

**H. A. P. (Tenn.)**.—You should have telegraphed. When your correspondent said in his telegram "answer" he meant answer by wire.

**SUBSCRIBER (Kansas)**.—Banks should always be designated by their corporate titles and not by the name of the President or Cashier. For example, drafts should be drawn payable to the "Reserve National Bank" and not to "A. B., Cashier." This rule applies to drawing negotiable instruments to the order of the bank, to endorsements, to addressing letters, and generally wherever there is occasion to specially designate the bank. By observing it any confusion that might arise from a change of officers or from similar names of officers of different banks is avoided.

**E. F. A. (Virginia)**.—Regarding your out-of-town customers it would be a good plan to enclose in the pass-book, when it is balanced, a postal card addressed to the bank and bearing a brief form certifying that the book has been duly examined and found correct and requesting an immediate return of the card. Customers who call at the bank should sign such a form when the pass-book is delivered.

**CASHIER (Texas)**.—Because A. B. has overdrawn his private account that is no reason why you should refuse to honor his checks drawn on his trustee account as long as the trustee account has sufficient money to meet them. The two funds are as separate and distinct as if they were deposited in different banks.

**ANXIOUS INQUIRER (Boston)**.—Because your hand is a little tremulous and has a tired feeling at the end of the day that is no sign you are contracting pen paralysis. Pen paralysis, or scriveners' palsy, as it is more properly called, is comparatively a rare complaint even among bank officers. It is often only a part of the weakness of old age. A gold pen and rubber pen-holder are said to be preventatives.

**CASHIER (Richmond, Va.)**.—We understand the case to be as follows: Your bank receives for collection a sight draft (protest if not paid) with bill of lading, drawn to shipper's order, attached. Shipper has neglected to endorse bill of lading and drawee offers to pay if the bank will endorse the bill of lading so he can get the goods. Question: Should the bank endorse the bill of lading? We think not. If the drawee is a responsible party he can give a bond and get the goods. If he is not responsible have nothing to do with him. The duty of the bank is to present the draft for payment. If it is paid deliver the draft with papers attached; if it is not paid protest it. The goods being perishable makes no difference. In any case, however, you should telegraph for special instructions.

**L. A. D. (Portland, Oregon)**.—Incidentally we would say that it is a good plan for every clerk to have a separate box or drawer in which to keep the property of the bank for which he may be responsible. For two men to use the same safe or box is a sure way to confusion and divided responsibility.

**TELLER (Buffalo, N. Y.)**.—It would be impossible to describe in detail the numerous schemes that have been contrived for swindling a bank. The following has been going the rounds of the press: The swindler procures a genuine check on a bank for a small amount and also a blank check printed, etc., like the genuine one. The

genuine check is laid on the blank check very carefully so that the two exactly coincide. Both checks are then torn irregularly across as near the signature as possible. The left-hand end of the blank check is then filled in at pleasure and neatly joined to the right-hand of the genuine check by a piece of paper pasted underneath. There is, of course, a frank explanation of how the check was "accidentally" torn. Sometimes they do not even paste the check, but simply lay the two pieces on the Teller's counter, with the remark, "It's torn in two, but I guess it's all O. K." The signature being genuine the Teller's suspicions are not aroused.

**CASHIER (Chicago).—**In view of the incident you relate would it not be a good plan to have all the banks in your city connected by telegraph with the nearest police station. An annunciator (similar to a hotel annunciator) could be set up in the station house and a wire run to each bank with the touch-button at the desk of the First Teller. This would enable the Teller to call a policeman without attracting the slightest attention. The cost when divided among the different banks would be trifling.

**G. A. P. (Providence).—**In future it would be better to put a strip of wood around the safe, between the bottom of the safe and the floor, so that "those troublesome little coupons" could not slip under the safe and hide themselves.

**CLERK (Poughkeepsie, N. Y.).—**It is not your duty to do anything more in the matter. The Cashier is the executive officer of the bank and your official superior. You have reported the matter to him and your part is fully performed.

**J. T. S. (Topeka, Kans.).—**We think you make a mistake in not having a light in your vault. The danger of an explosion from gas is very slight and electricity is perfectly safe.

**A. D. F. (Arkansas).—**From all the circumstances of the case we think that you yourself were to blame for your recent lock-out. Once in six months, or at least once a year, all the locks in the bank should be examined and put in order by a competent locksmith.

**DISCOUNT CLERK (Kansas City).—**The following is a fairly accurate method of calculating the interest actually received on an investment: Suppose a hundred-dollar bond has ten years to run at five per cent. and is quoted at one hundred and ten. At the end of ten years only one hundred dollars is received for the bond, so that ten dollars, or a dollar a year, must be saved out of the interest to make up the premium. This leaves four dollars per annum on an investment of one hundred and ten dollars, which is at the rate of 3.64 per cent.

**CASHIER (Texas).—**If you desire to pay your dividends by checks mailed to stockholders you had better get from each stockholder a written order to send him his dividend in that way.

**W. I. G. (Peoria, Ill.).—**In listing checks for the Clearing-House it is not necessary to put down anything more than the amount of the check.

**AN INQUIRER (Norfolk, Va.).—**The reason it takes a long time to finally wind up a failed National bank is because of the litigation usually involved and the fact that cases are frequently appealed to the United States Supreme Court, which is always overcrowded with business. As, however, many of the principles relating to Receivers, etc., are now finally settled, the winding up of a failed National bank takes less time than formerly.

**T. O. J. (New Orleans).—**In arranging the assessment on the banks to provide for the expenses of the Clearing-House it is more equitable to base it on the total amount of clearings than on the capital of the banks.

**SMALL NOTES (Michigan).—**The effect of the present policy of the Treasury Department in refusing to issue one and two-dollar notes in the place of such as may become unfit for circulation is felt throughout the country. Complaint is heard on every side of the inconvenience of the huge and weighty silver dollar. The outcome will be that the Treasury must either recede from its present policy or Congress will authorize the issue of one and two-dollar silver certificates.

## BANKING AND FINANCIAL NEWS:

WITH COMMENTS ON THE MORE IMPORTANT MATTERS. THIS DEPARTMENT ALSO INCLUDES: RAILROAD AND INVESTMENT NEWS, AND A COMPLETE LIST OF NEW BANKS, CHANGES IN OFFICERS, DISSOLUTIONS AND FAILURES.

**Redemption of Mutilated and Uncurrent United States Silver Coin.**—The following circular has been issued from the office of the Director of the Mint: "The Superintendents of the United States Mints at Philadelphia, San Francisco and New Orleans will pay for *mutilated and uncurrent United States silver coin*, when presented in sums of three dollars and upwards, at the current price as fixed from time to time by this Bureau to be paid for silver contained in, and parted from, gold deposits—that is, reckoned per Troy ounce at .900 fine. Payments will thus be made for deposits of mutilated coin at the Mint rate for standard silver current at the date on which such deposits are received. Coins can be forwarded to the above named Mints by registered mail or express (charges prepaid). Remittances in payment by express, registered mail, check or draft will be at the seller's expense and risk.

"JAMES P. KIMBALL, *Director of the Mint*. Approved: C.S. FAIRCHILD, *Acting Sec.*"

This means that the Government will redeem its damaged silver coins at the rate of less than seventy cents per dollar for fractional coins and less than seventy-five cents for dollars, after deducting for the damage. This is very kind. These coins are issued at 100 cents on the dollar. If damaged two per cent. the Government offers to redeem them at twenty-seven to thirty-two per cent. discount, or at the price of bullion, which they would demand anywhere in the world.

**Deposits of New York Savings Banks in Other Banks.**—At the request of Bank Superintendent Willis S. Paine, of New York State, the Attorney-General has prepared an opinion on the question whether savings banks can legally deposit their surplus money with banks or trust companies under agreement to give notice of intention to withdraw such deposits. On January 1st the total amount of the savings bank deposits in other institutions was \$29,228,685. It will be seen by the following that the Attorney-General decides that it is illegal to agree that such deposits shall not be withdrawn for a specified time:

STATE OF NEW YORK. OFFICE OF THE  
ATTORNEY-GENERAL, ALBANY, July 18, 1886. }

Hon. Willis S. Paine, *Superintendent Banking Department*:

DEAR SIR: I have considered the question submitted by you, raised by the Poughkeepsie Savings Bank, which is, as I understand it, as follows: Is it proper for a savings bank to deposit money with a bank of deposit or trust company upon the condition that a certain number of days' notice of the intention to withdraw it shall be given to the depository before it can be withdrawn:

Section 260 of the savings bank law provides how the funds of savings banks shall be invested, and said section does not permit said funds to be loaned to any bank or trust company unless upon such collateral securities as are mentioned in said section. Section 261 makes it the duty of the Trustees of a savings bank as soon as practicable to invest the money deposited with them in the securities mentioned in section 260, except that, for the purpose of meeting current expenses and payments in excess of the receipts, there may be kept an available fund of not exceeding 10 per cent. of the whole amount of deposits on hand, or on deposit, in any bank or banking association organized under the laws of this State, or the United States, or with a trust company organized under the laws of this State; but the sum so deposited in any one bank or trust company shall not exceed 25 per cent. of the paid-up capital and surplus of such bank or trust company; or such available fund, or any part thereof, may be loaned upon pledge of the securities, or any of them, named in subdivisions one, two, three and four of section 260.

Section 262 provides that "It shall further be lawful for any such corporation to deposit temporarily in banks or trust companies, as provided in the last preceding section of this Act, the excess of current daily receipts over payments, until such time as the same shall be judiciously invested in the securities named in section 260 of this Act."

It is made the duty of savings banks to invest money deposited with them as soon as practicable in the designated class of securities. They may, however, keep available

funds on hand to an amount not exceeding 10 per cent. of the deposits, for the purpose of current expenses and payments in excess of deposits; and they may also deposit temporarily in banks and trust companies the excess of daily receipts over payments until such time only as the same can be invested. It appears to me that the general intention of the law could easily be defeated by allowing the Trustees to deposit the funds of the corporation with banks or trust companies upon an agreement that they should not be withdrawn for a certain specified time. If such an agreement could be made for one day it could be made for one year and would, to all intents and purposes, if not in name, be a loan. It would not be a temporary deposit, but would put the funds so deposited out of the immediate control of the Trustees and might materially interfere with them in their duty of investing the moneys in the authorized securities as soon as practicable.

It would be impracticable to so deposit the funds allowed to be kept in hand for current expenses, as such funds deposited under such an arrangement would not be available for the very purposes for which they are authorized to be kept uninvested. I do not think therefore that the general policy of the law will permit the Trustees of savings banks to deposit the funds of the institutions with banks and trust companies under any arrangement by which said Trustees are bound not to withdraw the money so deposited within any agreed length of time.

D. O'BRIEN, *Attorney-General*.

**The Morrison Surplus Resolution.**—On July 14th the House of Representatives passed this measure by a vote of 209 to 55. It provides that whenever the surplus in the Treasury shall exceed \$100,000,000 the Secretary shall apply such excess, in sums not less than \$10,000,000 per month, to the payment of bonds due and payable, the surplus to be ascertained according to Treasurer Jordan's form of statement. This resolution was amended in the Senate and passed July 30th by a vote of 42 to 20. The Senate amendments provide that the amount of any bond call shall be in the Treasury in excess of the reserve of \$100,000,000; also that the Secretary may at his discretion keep \$20,000,000 as a working balance in addition to the reserve; also that the President may, when the public interests require it, by written order direct the Secretary to suspend bond calls. A final amendment provides for the redemption of the trade dollars.

*Later.*—Owing to the differences between the two branches of Congress on this question, a Conference Committee was appointed in accordance with the usual custom in such cases. Following is the text of the Resolution as agreed upon by the conferees on August 3d:

*Resolved*, That whenever the surplus or balance in the Treasury, including amounts held for redemption of United States notes, shall exceed the sum of \$100,000,000, it shall be and is hereby made the duty of the Secretary of the Treasury to apply such excess, in sums not less than \$10,000,000 per month during the existence of any such surplus or excess, to the payment of the interest-bearing indebtedness of the United States payable at the option of the Government. The surplus or balance herein referred to shall be the available surplus, ascertained according to the form of statement of the United States Treasurer, of the assets and liabilities of the Treasury of the United States employed on June 30, 1886; provided, that no call shall be made under the provisions of this resolution until a sum equal to the call is in the Treasury over and above the reserve herein mentioned; and provided further, that the Secretary of the Treasury in his discretion may have in the Treasury over and above the foregoing sums a working balance not exceeding \$20,000,000; and whenever in the case of any extraordinary emergency not now existing, and when, because thereof, in the opinion of the Secretary of the Treasury, the public interests shall require it, he may by written order postpone the further call for the payment of such indebtedness for such period of time as shall be necessary to maintain the public credit unimpaired; provided, that such postponement and the reasons therefor shall be reported to Congress within ten days after its next meeting, or immediately if Congress shall be in session.

On August 4th both the Senate and House of Representatives agreed to the Conference Committee's report on the Surplus Resolution, but the measure failed for want of President Cleveland's approval. Congress adjourned August 5th.

**Iowa.**—Messrs. Putnam & Rogers, of Davenport, Iowa, the oldest law firm in the State, have recently dissolved, Mr. Rogers retiring. The firm had been in existence twenty-six years and are well and favorably known. Mr. Chas. E. Putnam, the head of the late firm of Putnam & Rogers, has formed a new partnership under the style of Putnam & Putnam, his son being the junior member. Mr. Putnam was formerly President of the First National Bank, of Davenport, and was for fourteen years President of the Davenport Savings Bank. The new firm give special attention to commercial collections and investments in choice Iowa farm mortgages bearing seven per cent. interest. Business entrusted to them will have careful attention. For further particulars see their Card in this issue of the JOURNAL.

**Another Defaulter Captured.**—The American Surety Company, of New York, issued a bond to the Continental Oil Company, of Denver, Colo., upon Wait E. Davis, agent of the oil company at Las Vegas, New Mexico. Recently Davis closed up his

accounts, showing a deficit of \$499.00, and sent them to the company with the statement that he had lost his pocketbook which contained the money. He also left Las Vegas for Denver to get out of the jurisdiction of New Mexico. The oil company reported the situation to the American Surety Company, who forthwith despatched an inspector to Colorado to investigate the case. By a carefully arranged plan the presence of Davis was obtained at Las Vegas. Inquiries having elicited information showing conclusively that his story of the loss was false, he was immediately arrested, and on a preliminary examination, which was sharply contested, he was committed to jail in default of bail to await the action of the Grand Jury. His conviction is regarded as certain. The American Surety Company promptly paid the Continental Oil Company the amount of the loss, as indicated by the following letter:

Office of CONTINENTAL OIL COMPANY, }  
DENVER, Colo., July 1, 1886. }

American Surety Co., 160 Broadway, New York:

GENTLEMEN:—I have to thank you for remittance received from you, covering amount of shortage of our late agent, W. E. Davis, Las Vegas, N. M. It affords me much pleasure to testify to the very prompt action taken by you looking to the punishment of the party referred to and the early settlement of our claim.

Respectfully yours,

W. M. PATTERSON, *Secretary and Treasurer.*

This action of the American Surety Company, along with that in the Myer case previously noted, shows that the company is vigilant, and moves with celerity upon defaulters.

**Contesting Bank Taxation.**—Argument was heard by Judge Wallace, of the United States Circuit Court, at Syracuse, N. Y., on July 27th, on a motion for preliminary injunctions made by thirty-five National banks of the city of New York, and nineteen State banks, to restrain the collection of the taxes imposed upon bank shares for the year 1885, pending the issue of suits for permanent injunctions. The suits involve the constitutionality of the entire system of State taxation of the shares of National banks, and are considered the most important ever presented to the Court upon the subject. The main point urged by the banks is that the State law violates the provision of section 5,219 of the Revised Statutes of the United States, which forbids the taxation of shares of National banks by the several States at a greater rate than other forms of moneyed capital in the hands of individual citizens thereof. If the point is sustained it will affect the taxation of shares of National banks in nearly every State of the Union, and in many States the taxation of State bank shares as well. The taxation upon bank shares in New York city alone is more than \$1,000,000 a year.

**Counterfeiting in Canada.**—James J. Brooks, Chief of the Secret Service Division of the Treasury Department, writes: "An operative of the Secret Service, now investigating the report of counterfeiting the notes and coins of the United States by parties in Canada, advises this office that the alleged coin counterfeiting is not worthy of remark. Of the counterfeiting of United States National bank-notes there he reports the following description of an unfinished counterfeit note on the \$20 issues of the National Mohawk Valley Bank, of Mohawk, N. Y. It is printed from a glass plate, is a production of the camera, and is of the series of 1882, letter A, charter No. 1130, bank No. 280 in lower left corner face of note. This latter number will appear in all the counterfeit notes. The Treasury number in upper corner, right end, is put on with a rubber stamp and will vary, but as the numbers are heavier and larger than the genuine, and the space upon which they are put has no horizontal lines such as are in the genuine, the fraud is readily discovered. The note has a brown back, but the coloring is so poorly done as to attract attention and so disclose its true character. It is not known that one of these notes is in circulation, but, lest there may be, this note of warning is given."

**Days of Grace in Various Countries.**—The following compilation has been made of the days of grace allowed on business paper in this and various other countries: Great Britain, Ireland, Bergamo and Vienna, 3 days. Frankfurt, out of fair time, 4 days. Lelpic, Naumberg and Augsburg, 5 days. Venice, Amsterdam, Rotterdam, Middleburg, Antwerp, Cologne, Breslau, Nuremburg and Portugal, 6 days. Dantsic, Koningsberg and France, 10 days. Hamburg and Stockholm, 12 days. Naples, 8 days. Spain, 14 days. Rome, 15 days. Genoa, 30 days. Leghorn, Milan and some other places in Italy, no fixed number of days. Sundays and holidays are included in the respite days at London, Naples, Amsterdam, Rotterdam, Antwerp, Middleburg, Dantsic, Koningsberg and France, but not at Venice, Cologne, Breslau and Nuremburg. At

Hamburg the day on which the bill or note falls due makes one of the days of grace but it is not so elsewhere. Three days' grace are allowed in North America, at Berlin and in Scotland. At Rio de Janeiro, Bahia, and other parts of Brazil, 15 days. In the United States the three days of grace are reckoned exclusive of the day on which the note or bill falls due and inclusive of the last day of grace.

**A Large Bank for Philadelphia.**—George B. Roberts, President of the Pennsylvania Railroad Company; Joseph D. Potts, President of the Erie & Western Transportation Company; Col. B. K. Jamison, the well known Third street banker and broker; John C. Bullitt, the lawyer; George F. Tyler, and others prominent in Philadelphia financial circles, have applied to the Comptroller of the Currency at Washington for a charter for the Fourth Street National Bank, of Philadelphia, which is to start with a capital stock of \$1,000,000. The prospective President of the new corporation is Mr. Tyler. More than the necessary amount of capital has been subscribed. It is intended to build up an institution capable of conducting the heavy financial operations demanded by the great corporations of the present time. The lot at 131, 133 and 135 South Fourth street has been purchased and a building to cost \$250,000 is to be erected.

**Legal Holidays in New Jersey.**—A New Jersey law, passed at the last session, makes New Year's, Washington's Birthday, Decoration Day, Independence Day, Thanksgiving, Christmas, elections, and all other days appointed by the President or Governor, legal holidays. If any holiday falls on Sunday the Monday next will be observed, and notes or bills of exchange will be due on Tuesday. Twenty-four hours is given for notification of a dishonored note if it falls due on Sunday or a holiday. All checks fall due the same day as notes and bills of exchange.

**The Guarantee Company of North America, of Montreal,** have declared the usual semi-annual dividend of three per cent. upon its capital stock of \$300,000, being the twenty-fifth dividend, in unbroken succession, paid by this company. There is good reason for believing that not only has this dividend been declared out of the half-year's profits, but that no dividend is likely to be announced by the company while under Manager Rawling's administration which does not represent profits made and without encroaching on the company's surplus.

**New York Savings Bank Loans.**—The last Legislature amended section 27 of the General Savings Bank Law so as to allow savings institutions to loan money on the securities in which they are permitted to invest up to 90 per cent. of the market value of such securities, whatever the price may be. The law formerly was that available money might "be loaned upon pledge of the securities, or any of them, named . . . but not in excess of ninety per cent. of the cash market value of such securities so pledged, *nor in excess of the par value thereof.*" The clause printed in italics has been removed.

**Capital of National Banks, and Population.**—A new bank that is being started in West St. Paul, being the first in that part of St. Paul, with \$100,000 capital, recently applied to the Comptroller of the Currency for a National bank charter under the title of the "West Side National Bank." This was refused on account of the requirement of the National Bank Act that banks in cities of 50,000 inhabitants must have a capital of not less than \$200,000 each. It was contended for the bank that the authority for the extent of population should be the United States census of 1880, which gave St. Paul less than 50,000 souls, but Comptroller Trenholm overruled this point.

#### MISCELLANEOUS BANK AND FINANCIAL ITEMS.

- Most of the \$1,000,000 capital of a prominent Cincinnati bank is owned by women.
- The fine new building of the Emigrant Industrial Savings Bank in Chambers street, New York, is about completed.
- Several wealthy citizens of Woburn, Mass., are interested in a movement to establish another National bank in that town.
- The Assignees of the Penacook (N. H.) Savings Bank, at Penacook, began paying the second dividend of 25 per cent. to depositors August 2d.
- The doors of the Provident Savings Bank, of St. Louis, Mo., were closed on July 14th, the Cashier having absconded, leaving a deficit estimated at \$68,500. His official bond for \$30,000 reduces the amount of the defalcation. Criminal proceedings have

been commenced against the Directors on the charge of having received deposits after the bank was insolvent and for paying a dividend on July 1st.

— General Francis A. Osborn, President of the Eastern Banking Company, Boston, Mass., has been appointed a member of the State Civil Service Commission.

— Harry Richardson, 18 years of age, and a clerk in the Willard Bank, of Anna, Ill., has been arrested in St. Louis, charged with embezzling money from the bank.

— The surplus is doing no harm in the Treasury. This is more than could be said of it if it was scattered in a way to destroy all business confidence.—*Philadelphia Times*.

— At the request of the Bank Commissioners of Massachusetts, Judge William Allen has removed William H. McNeil from the Receivership of the Lancaster Savings Bank.

— The Hon. Hugh Smith Thompson, who has been appointed Assistant Secretary of the Treasury in place of W. T. Smith, is making a reputation as a civil service reformer.

— William Tilghman Owen, Superintendent of the Planters' Rice Mill, at Savannah, Ga., recently absconded after swindling four of the banks out of \$25,000 by means of bogus warehouse receipts.

— The new City Savings Bank, of Brooklyn, N. Y., was opened July 8th, and in two hours one hundred deposits, aggregating \$21,000, had been made. David A. Boody is President of the new bank.

— The Comptroller of the Currency has declared a first dividend of 50 per cent. in favor of the creditors of the City National Bank, of Williamsport, Penn., on claims proved, amounting to \$126,165.

— R. Porter Lee, who was sentenced to ten years' imprisonment in 1882, for embezzling funds of the First National Bank, of Buffalo, N. Y., of which he was President, has been pardoned by President Cleveland.

— Arthur G. Ogilby, the embezzling Treasurer of the Dime Savings Bank, of New Brunswick, N. J., has been sentenced to four years' imprisonment and \$500 fine. Ogilby has turned over \$41,000 to the wrecked bank.

— The final account of the condition of the Atlantic State Bank, of Brooklyn, N. Y., which went under when George I. Seney failed, was handed into Court recently and confirmed, and Receiver Freling H. Smith was discharged.

— Messrs. George F. Crane and Herbert L. Griggs, who have been trusted employees of the banking house of Kidder, Peabody & Co. for several years, were rewarded for their faithfulness on July 1st by admission to partnership in the firm.

— Cashier Beltzer, of the private Dundy County Bank, of Benkelman, Neb., who was also President of the Chase County Bank, of Imperial, Neb., has fled to Canada with an amount stated at \$100,000. Eastern banks are among the losers.

— It is thought that Secretary Manning will not resume his duties at the Treasury Department until Autumn. Assistant Secretary Fairchild has accordingly arranged to continue the performance of his duties as Acting Secretary of the Treasury during the Summer.

— J. H. Hixson, a banker at Cadillac, Mich., has made an assignment to Isaac Murphy. Besides a bank, he has been operating a barrel hoop factory, and is reputed to have encountered heavy losses. He is at present the Mayor of Cadillac, and has the reputation of an upright man.

— H. P. Tracy & Co., bankers of Elmwood, Ill., made an assignment on March 17th last. Owing to later developments, Harlan P. Tracy, the head of the firm, was recently arrested on the charge of embezzlement. The accounts of the firm are confused and it is supposed the shortage will be \$68,000.

— The total coinage of standard silver dollars for the fiscal year ended June 30th last was \$29,838,906. The coinage during the preceding fiscal year was \$28,528,552. The coinage of subsidiary silver during the past fiscal year was \$183,443. The coinage during the previous fiscal year was \$320,488.

— The prospectus of a new bank in San Francisco, under the name of the California National Bank, has been issued by Mr. C. H. Ramsden, who has been connected with

the First National Bank of that city for about eleven years. The paid-up capital is \$300,000 and the authorized capital \$1,000,000.

— A report of the condition of the Framingham (Mass.) Savings Bank shows the liabilities to amount to \$1,908,154 and the assets \$1,875,549, leaving a deficit of \$32,605. The liabilities will probably be reduced to \$1,850,000. The expert found no trace of dishonesty on the part of the late Treasurer Adams.

— It is reported that Mr. George Gage, of Nashua, will resign his position as one of the New Hampshire Bank Commissioners, to accept the place of Assistant Treasurer of the Merrimack River Savings Bank, of Manchester. It is supposed that the Governor will appoint Henry M. Putney, of Manchester, to succeed Mr. Gage.

— Treasurer Jordan has prepared a statement showing that the bonds held to secure the National bank-note circulation declined during the past fiscal year from \$312,000,000 to \$276,000,000, \$57,000,000 being withdrawn and \$21,000,000 received. The amount held to secure public money increased from \$17,000,000 to \$19,600,000.

— The President has nominated S. Davis Page to be Assistant-Treasurer of the United States at Philadelphia in place of Mr. Eyster. Mr. Page is a lawyer, about 50 years of age, and has been a member of the City Council and a candidate for other offices. Judge Kelley, of Pennsylvania, says Mr. Page has the respect of both parties.

— George I. Seney, formerly President of the Metropolitan National Bank, of New York, who failed in the panic of May, 1884, is rapidly settling his indebtedness. He has paid the Firemen's Trust & Insurance Company, of Brooklyn, which suspended in 1884, a final balance of \$97,000. The Trust Company will not resume business.

— The increasing business of the First National Bank, of Winona, Minn., has induced its management to interest a number of capitalists to become shareholders, and the capital has been increased from \$100,000 to \$225,000, in addition to the surplus of \$56,000. This places the First National among the very strongest banks of Minnesota.

— The statement of the Nevada Bank, of San Francisco, for June 30th last makes a fine showing. The capital is \$3,000,000; reserve, \$1,000,000; balance to credit of profit and loss account, \$191,808. The deposits amounted to \$7,546,627 and the loans and discount and current accounts to \$7,555,212. The condition of the bank is an indication of the prudent and able management of its officers.

— The forty-first annual report of the New Hampshire Bank Commissioners fills a book of 427 pages. The sixty-seven savings banks, with 125,273 depositors, have aggregate deposits of \$46,681,913.72, an increase over last year of \$2,804,567.31. The average to each depositor is \$372.25, and the average to each person in the State is \$131.35. The deposits are the highest ever reached.

— At the recent annual meeting of the shareholders of the Sioux Valley Bank, of Correctionville, Iowa, the title was changed to "The Sioux Valley State Bank." This was in view of the Act of the last Legislature authorizing banks incorporated under the laws of the State to use the word "State" in their titles and forbidding, under penalty, banks not incorporated from using that word. The surplus has been increased from \$10,000 to \$15,000, making the capital and surplus \$65,000.

— The Connecticut savings banks are required to make returns of sums which have been on deposit twenty years or more without alteration. The amount of such deposits is surprising. One Bridgeport savings bank reports \$9,143; the Norwich Society for Savings, \$27,919. The largest Norwich depositor has \$5,552 to her credit. A number of the depositors were soldiers who left considerable amounts in banks when enlisting and are supposed to have died in service. The Bridgeport Savings Bank has three such soldier accounts, for \$904, \$890 and \$126 respectively.

— The Abington (Mass.) National Bank stopped payment on July 1st, the President, Richmond J. Lane, having been arrested at Portland the evening before on a charge of embezzlement. He was also President of the Rockland Savings Bank, of Rockland, which position he has resigned, and this institution is but slightly involved. It appears that Mr. Lane has during the past few months drawn upon the National bank's Boston reserve without authorization to the amount of \$135,000. Of this, he explains, \$100,000 was invested in a leather board factory at Saccarappa, Me. Later advices (August 3d) state that Bank Examiner Gatchell has completed his examination of the bank, and as

a result, John F. Simmons, of Hanover, has been appointed Receiver. This is taken as an indication that the bank is not in a condition to resume business.

— The Third National Bank, of Chattanooga, Tenn., has increased its capital by \$50,000, making the total \$250,000. The new stock was sold immediately at \$1.15. It is only nine months since \$75,000 was added to the capital stock, making the total \$200,000. The shares then sold at \$1.05. The stock, surplus fund and undivided profits now make a total of about \$300,000. The Third National Bank is one of the most prosperous financial institutions of Chattanooga, which is attributed to the ability and care of Messrs. John A. Hart, the President, and W. E. Baskette, the Cashier.

— Sometimes a country merchant will draw on a merchant of New York and obtain thereon a discount at some country bank. The draft will have some months to run before it will become payable; but when it is payable the New York merchant will obtain the means of payment by drawing on the country merchant, payable some months thereafter, and getting a discount thereon in New York. Such transactions are termed "kiting," and are practiced on notes as well as on drafts, and by persons residing in the same place as well as at distant places.—*Dry Goods Chronicle*.

— Practically, to-day, the silver coin issued by the United States and made a legal-tender for a dollar is worth but 75 cents. There was a decline yesterday in India council bills, and silver bullion fell to 44 7-16 pence per ounce. At this rate the American silver dollar is worth intrinsically but 75.02 cents. In other words, the legal-tender currency of the United States is at a discount of 25 per cent. in comparison with the other principal countries of the world. With this experience of the power to sustain fiat money it might be a popular expedient to reduce the size and weight of the dollar so as to make it less inconvenient to carry while still answering all its present purposes and being little more of a false pretense and scandal than it is now.—*Journal of Commerce, N. Y., July 8th.*

## R. R. AND INVESTMENT NEWS.

### New Issues.

**NEW YORK STOCK EXCHANGE LIST.**—The Governing Committee have added the following securities to the list:

Illinois Central Railroad Co.—\$2,500,000 of 8½ per cent. mortgage bonds, coupon and registered, Nos. 12,501 to 15,000 inclusive.

Missouri Pacific Railway Co.—An additional \$3,000,000 stock, making the total on list to date \$36,000,000.

East Tennessee, Virginia & Georgia R. R. Co.—\$186,000 additional divisional 5 per cent. bonds, making the total \$3,008,000, Nos. 1 to 833 inclusive and Nos. 4,801 to 7,450 inclusive. Also 275,000 shares common and 165,000 shares preferred "assessment paid" stock of the same company.

Columbus, Hocking Valley & Toledo Railway Co.—\$1,000,000 of general mortgage 6 per cent. 20-year gold bonds, Nos. 152 to 824, 826 to 750, 1,027 to 1,061, 1,126 to 1,250, 1,642 to 1,650, 1,653 to 1,814 and 1,871 to 1,940 inclusive.

St. Louis & Cairo Railroad Co.—\$4,000,000 4 per cent. mortgage bonds, Nos. 1 to 3,000 inclusive, of \$1,000 each, and Nos. 3,001 to 5,000 inclusive, of \$500 each.

Central & South American Telegraph Company—\$4,000,000 capital stock.

East & West Railroad Company of Alabama—\$800,000 first mortgage bonds, Nos. 1 to 800, both inclusive, to be placed on the free list.

Chicago & Indiana Coal Railway Company—\$2,374,000 first mortgage 5 per cent. bonds, Nos. 1 to 2,374 inclusive, to be placed on the regular list.

New Orleans & Northeastern Railroad Company—\$1,050,000 prior lien mortgage 6 per cent. gold bonds, Nos. 1 to 950 and 1,000, both inclusive, to be placed on the regular list, to be called "prior lien mortgage 6 per cent. gold bonds."

Mr. Frederick Wolf having applied to the Stock Exchange to have \$3,300,000 4½ per cent. bonds of the State of Georgia listed, Mr. Henry Clews addressed a letter to the Stock Exchange, protesting vigorously against the proposal. His objection rests upon the old charge of repudiation. Action has been deferred until September.

**THE RICHMOND & DANVILLE** Directors, in the matter of funding the debenture bonds, have authorized the issue of a general consolidated 5 per cent. gold—not less than fifty year—bond, secured by mortgage upon the entire line of road belonging to

its system, at the rate of \$22,500 per mile, to provide for the retirement of all its outstanding obligations as they severally mature.

**MILWAUKEE.**—Messrs. C. H. Venner & Co., of Boston, have bought \$250,000 city of Milwaukee 4 per cent. water loan bonds, dated July 1, 1880.

**MISSOURI, KANSAS & TEXAS.**—A London paper says that the 6 per cent. gold bonds of the Missouri, Kansas & Texas Railway have been placed to the extent of \$2,000,000 in London and on the Continent.

**ALLEGHENY VALLEY RAILROAD.**—Application has been made to the London Stock Exchange Committee to list a further issue of £500,000 seven per cent. sterling first mortgage bonds of this company.

**THE EVANSVILLE, INDIANAPOLIS & CLEVELAND RAILROAD COMPANY** has been incorporated, with a capital stock of \$1,500,000. The road is to run from Elenora, Ind., to Cincinnati, a distance of 135 miles.

**ST. JOSEPH & ST. LOUIS.**—The stockholders of the St. Joseph & St. Louis Railroad have agreed on a proposition to issue \$250,000 first mortgage bonds to provide means for improving and equipping the road.

**TENNESSEE.**—Up to July 1st about \$21,500,000 of the State debt had been refunded at fifty cents on the dollar and 8 per cent. interest. It is expected that the entire debt will be refunded by the end of the year.

**NEW LOTS, L. I.**—The Brooklyn Trust Company has arranged to float the \$500,000 bonds authorized to be issued by the town of New Lots to improve its streets after it has become the Twenty-sixth Ward of Brooklyn.

**THE IDAHO CENTRAL RAILROAD** has been incorporated with a capital stock of \$100,000 in 10,000 shares. It will form a connecting link between the Oregon Short Line and the Northern Pacific, running via Boise City.

**THE MONTANA, SYRACUSE & TEXAS RAILWAY COMPANY** has filed its charter in Kansas. The road is to run from Miles City, M. T., to Galveston, Tex. The Kansas capitalists interested have fixed the capital stock at \$20,000,000.

**THE LAKE SUPERIOR & PACIFIC RAILROAD COMPANY** has been incorporated in Minnesota, to build from the head of Lake Superior to some point on the Pacific Ocean. The capital stock is fixed at \$5,000,000 and the incorporators are principally Duluth capitalists.

**ST. LOUIS, ARKANSAS & TEXAS.**—The stockholders having voted that \$4,000 per mile of mortgage bonds be issued for the purpose of widening the gauge of the road, \$1,500,000 of the bonds have been taken by a syndicate composed of Kuhn, Loeb & Co., Maitland, Phelps & Co., E. C. Benedict & Co., and others.

**CHICAGO & NORTHWESTERN.**—Messrs. Brown Brothers & Co. have been receiving subscriptions for a limited amount of 40-year 4 per cent. bonds of this company at 101 and accrued interest. These bonds are issued for the extension of the system of the Northwestern company, and are secured by deposit of first mortgage bonds.

**CENTRAL OHIO.**—The Central Ohio Railroad Company, Bellaire to Columbus, has made arrangements to refund the original bonds issued for the construction and equipment of the road. These bonds amount to \$2,500,000, bearing interest at the rate of 6 per cent. They will be refunded in new 4½ per cent. bonds maturing in 1930.

**CLEVELAND BONDS.**—Messrs. Chrystie & Janney, bankers, of 23 and 25 Nassau street, New York, are offering a limited amount of Board of Education, city of Cleveland, O., 4½ per cent., 10-year bonds, which they highly recommend. The interest is payable semi-annually in the city of New York. The total issue is \$304,900 against school property valued at \$2,500,000.

#### *Railroad Reports.*

**PENNSYLVANIA RAILROAD.**—The statement of the business of all lines of the Pennsylvania Railroad Company east of Pittsburgh and Erie for June, 1886, as compared with the same month in 1885, shows an increase in gross earnings of \$600,463; increase in expenses, \$158,774; increase in net earnings, \$441,689. The six months of 1886, as compared with the same period of 1885, show an increase in gross earnings of \$1,890,581; increase in expenses, \$780,806; increase in net earnings, \$1,149,765. All lines west of Pittsburgh and Erie, for the six months of 1886, show a

deficiency in meeting all liabilities of \$650,198, being a decreased deficiency as compared with the same period of 1885 of \$386,862.

**NEW YORK CENTRAL & HUDSON RIVER.**—At a recent meeting of the Directors, when a quarterly dividend was declared, the following statement of operations (including the West Shore) for the nine months ending June 30th was issued. The figures for 1886 are partly estimated:

	1885.	1886.
Gross earnings .....	\$18,376,028	\$21,725,000
Operating expenses .....	11,819,185	13,480,000
Net earnings .....	\$6,556,843	\$8,245,000
First charges .....	4,470,000	5,319,000
Profit .....	\$2,086,843	\$2,926,000
Dividends January, April and July .....	2,682,849	2,682,849
Surplus or deficit .....	Deficit, \$596,988	Surp., \$243,151

**CHICAGO & NORTHWESTERN.**—The report for the year ended May 31, 1886, makes the following showing of earnings and income:

	1884-5.	1885-6.
Gross earnings .....	\$23,502,066	\$24,279,569
Operating expenses and taxes .....	13,793,907	13,869,225
Net earnings .....	\$9,708,149	\$10,420,373
Disbursements:		
Interest, rentals, etc .....	\$5,151,101	\$5,594,262
Dividends .....	3,961,348	3,444,504
Total disbursements .....	\$9,112,449	\$9,038,766
Surplus .....	575,700	1,381,506

The company paid only 7 per cent. dividends on the preferred stock and 6 per cent. on the common, whereas 1 per cent. higher was paid on each in the preceding year. The bonded debt has been decreased \$949,000.

### NEW COUNTERFEITS—BANK NOTES AND COIN.

Parties have been arrested in Boston for passing \$10-notes of the Consolidated Bank of Canada. These are part of a number of unsigned notes that were stolen from the bank some time ago, and the signature of the Cashier has been forged.

T. B. Isaacs, a noted counterfeiter, has been arrested at Tronton, Canada, having in his possession, among other plates, one for notes of the Maverick National Bank, of Boston. It is poorly executed, and notes from it, if any are in circulation, can readily be detected.

The experts at the Sub-Treasury in New York have lately discovered several counterfeits in silver coins. One standard dollar, which had been cut in two, filled with base metal, and then put together again, was so good a piece of work that it has been sent to the Treasury Department at Washington, as worthy of exhibition. It retained its right weight and the ring of the original, and its milled edges were not abraded. "But," said Mr. Canda, "I do not see why so much trouble should be taken by the rascals in this way. They can now buy 75 cents' worth of silver and pay 5 cents for coining it, put it on the market at a profit of 20 per cent., and the counterfeit will be identical with the real."

Two young men giving their names as William Taylor and Cole Collocan were arrested at Paris, Ills., recently, having in their possession over one hundred counterfeit coins of the issue of 1884. The pieces have the silver ring, but are plainly spurious by weight and general appearance.

There is in circulation a ten-dollar counterfeit on the Merchants' Bank of Canada. The framework of the bill is photographed, but the green tint on its face and back, instead of being produced by fine green lines on a white ground, is hand-painted over a picture printed in dark colors. The General Manager says: "The imitation is a very poor one and the colors have been hand-painted. This is the first attempt at counterfeiting our bills, and only one note has been received at the bank. If people will only exercise a little care there is no need that any of the notes should be passed on them."

Some roughly executed spurious \$5 and \$2 legal-tender notes have been detected in New England towns. They are printed from wood blocks and circulated by Italians.

## CLAUDIUS B. PATTEN.

The following notice on the death of Claudius B. Patten is from the *Exeter, N. H., News-Letter*, to which Mr. Patten contributed, and which is published within a few miles of Kingston, his native place:

"The news of the sudden death of Mr. Claudius B. Patten on Saturday, May 22d, must have brought feelings of sincere sorrow and regret to every reader of the *News-Letter*, all of whom had come to regard him as a friend and almost an acquaintance. As was his custom, Mr. Patten had been out for an early morning walk and was returning to his residence at Savin Hill, a suburban portion of the city of Boston. He was walking along the outward track of the Old Colony Railroad, and had just entered a deep narrow cut through the solid rock when the first inward express, due at Savin Hill station at 6.27 A. M., came rushing along at full speed. Mr. Patten, in his bewilderment, stepped upon the inward track, was struck and instantly killed. A boy who witnessed the distressful accident testifies that Mr. Patten seemed bewildered on the track as if he did not know what he was doing or what he should do. In his enfeebled condition Mr. Patten probably became dazed and bewildered by the roar and rush of the train swiftly advancing through the narrow cut, stepped blindly upon the wrong track, and, in his dizziness, fell forward in the path of the on-coming train. To those who knew him intimately this explanation of the manner in which he came to his death seems the only one satisfactory, and altogether more probable, under the attending circumstances, than the ill-founded and cruel theory of suicide hastily advanced by the Boston papers.

"Mr. Patten had for some time been suffering from chronic dyspepsia, and about two months ago became afflicted with nervous prostration and insomnia. To enable him to recuperate the officials of the bank where he was employed as Cashier granted him indefinite leave of absence, and on April 8th he sailed from New York for Liverpool in company with his brother, I. Bartlett Patten. As his physician thought he would be better on board a vessel than on land, he started on his homeward passage five days after his arrival at Liverpool, and reached Boston on May 7th. The voyage brought him temporary improvement, but his maladies soon returned. He found himself unable to resume his business duties, but visited the bank occasionally. During long portions of the nights he was unable to sleep, and was accustomed to spend hours of the early morning in long and solitary walks. He would also spend hours in rowing about Dorchester bay, on the shore of which stood his residence. He was intending to visit his old home at Kingston, and had appointed Saturday, May 22d, for the journey, which he proposed to make by carriage. As he had slept very little the night before he remarked on arising that he felt unable to make the journey that day. He started out for his usual walk, and as the members of his family were waiting his return the tidings of his sudden death were brought them by a neighbor.

"Mr. Patten was born in Kingston, April 7, 1828. He went to Boston at the age of seventeen, and entered the employ of Priest & Ayling, iron merchants, of Water street. Soon afterwards he obtained a clerkship in the Suffolk Bank. He remained here about sixteen years and rose to the position of Assistant Cashier. His careful and systematic methods and his thorough knowledge of banking affairs, acquired during his long training, made him a very valuable man, and attracted outside attention to him, and when the State National Bank in March, 1867, found itself in need of a Cashier to succeed Mr. C. H. Smith they selected Mr. Patten for the place, and he has since served that institution in that capacity in a most acceptable manner. Early in life he joined the Boston Mercantile Library Association, and was always one of its most active members, at one time filling the office of Secretary.

"Besides being an excellent business man, he was possessed of no little literary ability, although his task in this direction was confined principally to banking and financial topics. He has in the past done considerable work for the newspapers, and for a time wrote the financial articles for the *Boston Commercial Bulletin*. A series of articles on 'Practical Banking' that have been running in *Rhodes' Journal*, of New York, for the past two years, and that have attracted wide-spread attention in banking

circles, came from his pen. About three years ago he delivered two very interesting courses of lectures on banking subjects before the Boston Young Men's Christian Union, and these at the time received the highest compliments from all who heard them. The greatest and unquestionably the most successful effort of his life was a book written by him, and published by Lothrop & Co. within the past year, entitled, 'England: As Seen by an American Banker.' This work was the result of a three months' trip through England in 1882, he making much of the tour on foot for the express purpose of seeing the country and its people as they really were and getting a perfect acquaintance with their peculiarities and methods as the ordinary tourist rarely finds it possible to do.

"To the *News-Letter* Mr. Patten had been a regular contributor for a score or more of years. His letters from Kingston, generally over the signature 'I. A.,' were always entertaining and, not unfrequently, most instructive. Collected, they would make many large volumes, and are written upon every conceivable topic. Historical subjects, reminiscences of men and events, journeys on foot, by carriage and on horseback throughout New England, the details of banking and financial matters, the peculiar customs and institutions of England and other countries, agriculture in all its phases, and a wide range of miscellaneous subjects, are all discussed in the liveliest manner so that new light is thrown upon them. Many of his letters to the *News-Letter* have gone the rounds of the city press. His last contribution appeared in our issue of March 28th. It is noticeable that in many of his later epistles he discusses insomnia, and sleep and its importance. His letters were rapidly written in his brief respite from other duties and forwarded two or three at a time to be printed as circumstances would permit.

"A keen observer and thinker and thoroughly well read, Mr. Patten was a most entertaining conversationalist as well as writer. Of a bright and cheerful disposition, he won friends in every circle in which he moved, and few men were more widely or favorably known. The esteem in which he was held by his business associates is well attested by the following tribute from Mr. A. W. Stetson, President of the State National Bank: 'His frank and open countenance, his pleasant smile and his cheerful greeting were my constant ministrations. And the memory of his untarnished character, his spotless integrity, his kind and courteous treatment of all who came into contact with him, will never fade away. His life was to all appearances one of perpetual sunshine, with a constant outflow of love and kindness to all.' Mr. Patten was a man of thorough integrity, a model official, and was regarded as excellent authority on all financial matters. He was passionately fond of out-door life, and was wont to spend his vacations and leisure hours in yachting, riding and walking.

"Mr. Patten married a Miss Perkins, of Auburndale, Mass., and she and his four children—two sons and two daughters—survive him. One son, Henry G., is connected with the Merchants' Bank, of Boston. Mr. Patten also leaves two brothers—Col. Ora P. Patten, of Montreal, P. Q., and I. Bartlett Patten, a druggist of Boston—and one sister, who has been teaching during the past winter in the Provinces.

"The funeral of Mr. Patten was held on Monday, May 24th, at his residence on Savin Hill avenue, Dorchester. The services were very simple. Appropriate selections of Scripture were read by Rev. E. N. Packard, of the First Congregational Church, Dorchester, at which the deceased was an attendant, followed by prayer by Rev. E. T. Atwood, D. D., of Salem. The services were largely attended by relatives of the deceased, neighbors, and many friends in both business and social circles. Many were present who had the pleasure of the friendship of Mr. Patten for years and who well remembered him as a young man in active relations with the Mercantile Library Association in his earlier and later business life, and others who will ever remember the deep interest he has felt in the young men of Boston as shown in more ways than one. The burial was in the cemetery at Newton Lower Falls."

---

**The Cashier's Hand-Book.**—A full description of "Bryant's Individual Ledger Index," on next page, will surely interest many of the JOURNAL's readers. The book is a most valuable invention, and we can heartily recommend it to bank officers generally. Attention is directed to the fact that the Index, in use, will be found fully as valuable to small banks as to those having a large number of accounts. The author is Mr. Howard Bryant, formerly Individual Book-keeper, Bank of Commerce, Buffalo, N. Y.

**BRYANT'S INDIVIDUAL LEDGER INDEX.**

A COMPREHENSIVE RECORD OF INDIVIDUAL ACCOUNTS.

*The Cashier's Hand-Book.*

In the construction of the Bryant Index the main object in view was to place before Cashiers and bankers a book which would contain a complete list of all the accounts opened during a period of five to ten years, this list not only to be an index to the accounts but to contain considerable valuable data regarding the current of the same, which would be of great advantage to both Cashier and Book-keeper. The principal difficulty with the old form of index is that there was an index for every ledger, which was filed away with the ledger whenever the latter was filled. This placed in the vault all medium of reference save the last ledger and its index, nothing remaining outside of the vault to give information regarding the accounts of the past. In the Bryant Index facilities are offered for recording the current of accounts over an extended period. The advantage of this is apparent in the fact that this valuable information is contained in one book instead of several. Frequently it is necessary to refer back to accounts which have become extinct and have been filed away in the vault. Unless you have the exact dates of the current of that account you are obliged to search through several indexes before the account is obtained; by referring to the Bryant Index, no matter if the account has been closed several years, you can turn to the ledger and page of that account without a moment's delay. It is particularly applicable to what is known as the Boston system of individual accounts, or the "skeleton ledger." It is in use, however, by many banks in connection with the old ledger, and works admirably. These books accumulate much more rapidly than the old ledger, and, as heretofore, no device has been invented for the indexing of that ledger, although the want has been apparent in innumerable instances. By simply recording the date of opening and closing the account, showing the ledger in which both of these entries were made, the account is thereby located between a certain number of ledgers. Knowing the duration of each ledger and the date when each was opened, it is an easy matter to refer to any information desired. Very frequently accounts open and close in one of these ledgers, the book is filed away, and no record left outside to which a Cashier could refer and turn instantly to the account. This index obviates that difficulty.

Space is given in the Bryant Index for the recording of that folio and of the opening and closing entries in the account as used in the old system of ledgers; this locates the account, so that reference is easy. It is not necessary to record each change of folio where the opening folio is given, because of the fact that each change is noted at the bottom of every page in the ledger.

The next feature is to show how the account was closed--whether a check was drawn for a balance or a deposit made to cover an over-draft, or whether there was a small balance of a few cents or a dollar or so which remained to the credit of the account and continued for an extended period. In such instances the labor of carrying forward this balance every morning is obviated by simply throwing it into an exchange or sundry account, making a memorandum here of the date and amount. Should this account be closed in this manner for several years any one presenting a check for the balance to either Cashier or Teller could easily refer to this book and ascertain by a glance whether the check is drawn for the correct amount or not, thereby saving considerable annoyance to both himself and the Book-keeper.

Again, facilities are offered for recording the rate of interest allowed on accounts if any, and the rate of discount charged. This entry is supposed to be made by the

\* Devised by Howard Bryant, formerly Individual Book-keeper, Bank of Commerce, Buffalo, New York.

Manufactured and sold solely by BRADFORD RHODES & Co., 78 William St., New York City.

Cashier at sundry times, so that during his absence he leaves behind him valuable information for the benefit of whoever assumes the responsibility of the position during that time. In cases of dispute this is particularly advantageous.

Another facility offered is for the notation of names of parties introducing the account. This is a very valuable point and should be rigidly enforced, as frequently it is desirable for the officials of a bank to know by whom the account was introduced. This point may come up after the decease of the party who took the account, and would be lost were it not for this memorandum.

Another valuable feature is that of an opportunity for recording in cipher the Cashier's opinion of the value of the account or any information of a nature which he would prefer to keep private. This cipher can be elaborated upon to almost any extent and cover a great deal of information which otherwise would be lost.

A column for remarks is added, which allows for the recording of where an account goes when it leaves a bank. A man may die or a firm dissolve, assign or remove to another city, or close its account with you and open it with another bank. These points show the channel through which the account disappears. In the course of six months or a year, in glancing over this column, the Cashier readily sees the channel through which his accounts are disappearing. Should he find some city bank has taken the majority of these accounts it immediately suggests to him that there is an incentive for such which can be obviated by a little investigation. These entries may appear to be too voluminous to be easily kept up, but it is not so, as there are very few entries to be made at any one time, and it is through the accumulation of these that the book becomes valuable. A good suggestion is for the Book-keeper to make his entries every Monday morning prior to the opening of the bank, and then place it on the Cashier's desk for him to make such entries as he sees fit any time during the week. As the book grows older it becomes more valuable, containing, as it does, a most complete synopsis of the accounts; and, for a book of reference for President or Directors, it furnishes a correct retrospect of the bank's customers.

As a permanent record of the bank's business it is invaluable, for in the course of a few years you have in a condensed form many valuable details, besides a complete index of all accounts. A few moments given to this book every few days would not be felt by any of the officers.

Mr. Bryant's suggestion for commencing the index is as follows: "Begin writing in names of the accounts at the beginning of the year in which the index is opened and simply make note that the accounts were current before that time. It will require but a few moment's search to make entry of what accounts have opened and closed between that time and the present period. You will then have a book nearly a year old. In many instances parties have gone back several years, especially where the Boston system of book-keeping is in use."

The phenomenal sale of this book proves it to be a most valuable invention. It is now in use by many leading banks, and is highly commended by all.

The Index will be found fully as useful to small banks as to those having a large number of accounts.

\*.\* Made of the best quality of Ledger paper. Contains 240 pages, handsomely bound in full Russia leather. Price, \$10 a Copy. Sent by mail or express, charges prepaid, on receipt of the price; or, will be forwarded C. O. D. if preferred. Address: BRADFORD RHODES & Co., 78 William Street, New York.

Percy E. Chapple, Cashier, Concord, Mich.—"We inclose our draft on Chase National Bank for \$5.00 to renew our subscription to the JOURNAL, which we cannot afford to do without. It is accurate, able, and progressive—every number seems better than the last. We hope for its continued prosperity."

Banking, Law, etc.—RHODES' JOURNAL OF BANKING for the current month continues the valuable papers on practical banking, and furnishes a complete list of current law decisions affecting bankers. The general banking intelligence is unusually full and varied."—*St. Paul Pioneer Press, July 25th.*

Jno. N. C. Stockton, Cashier, Jacksonville, Fla.—"We take great interest in the JOURNAL, and find valuable matter and information in every issue. May it ever live."

THE UNIVERSITY OF CHICAGO LIBRARY

## NEW BANKS, CHANGES, FAILURES, ETC.

**New National Banks.**—The Comptroller of the Currency furnishes the following statement of National banks organized since our last report:

(Names of officers and further particulars regarding new National banks will be found under their proper State headings in this list.)

- 3525—First National Bank, Sprague, Washington Territory. Capital, \$50,000.  
 3530—First National Bank, Superior, Nebraska. Capital, \$50,000.  
 3530—People's National Bank, Shelbyville, Tennessee. Capital, \$50,000.  
 3531—Salina National Bank, Salina, Kansas. Capital, \$100,000.  
 3532—People's National Bank, Ennis, Texas. Capital, \$100,000.  
 3533—First National Bank, Ballinger, Texas. Capital, \$50,000.  
 3534—The Dalles National Bank, The Dalles, Oregon. Capital, \$50,000.  
 3535—People's National Bank, Wapakoneta, Ohio. Capital, \$100,000.

**QUEBEC.**—Union Bank of Lower Canada; corporate name changed to Union Bank of Canada. Capital reduced to \$1,200,000.  
**ST. JOHNS.**—La Banque du Peuple has opened an office here. Manager, P. Baudouin.

## NOVA SCOTIA.

**PICTOU.**—Pictou Bank; shareholders vote to withdraw from business.

## THE BANKER'S GAZETTE.

**The Money Market and Financial Situation.**

NEW YORK, August 2, 1886.

The general business outlook is fair and very encouraging at present. There are comparatively few cases of dispute between employers and employees, the troubles that formed so ominous a feature of the business situation a few months ago having almost entirely subsided.

Accounts recently received from Chicago state that the pork-packing houses would soon attempt to return from the eight to the ten-hour plan, and that this would lead to new strikes; but so far nothing has been done on either side. It is not beyond possibility that fresh outbreaks may occur during the autumn, but it is not probable that they will be so serious as those of last spring.

A favorable element of the situation is the pending adjournment of Congress, from which business men have for some time ceased to look for any wise or statesmanlike action on financial matters. It is a matter for congratulation that the session is closing without any measure being enacted calculated to do serious harm.

The money market exhibits more strength than for some time past, and this, in the absence of gold exports and active speculation, indicates a demand for funds for use in legitimate business. Reports from New England say that additional amounts of commercial paper are being offered by mill and factory firms for the purpose of paying for cotton and other stock. Hardening rates for money are also reported at Western points. In this city the bank loans amount to \$354,000,000 against \$306,000,000 on August 1, 1885, and the rates for money are advancing, especially for long loans.

The figures compiled from the returns of the exchanges at the Clearing-Houses throughout the country continue to show a large increase over those of the corresponding period last year, at which time business had begun to improve. For the week ending July 24th the exchanges outside of New York were 26.4 per cent. larger than in the corresponding week of 1885. In New York they were smaller because the Stock Exchange dealings were less, but, after making proper deduction for this, there was an increase of 89.3 per cent.

There has been the usual number of statements and counter-statements with regard to the crop prospects. Within a few weeks exaggerated reports have been scattered abroad, for speculative purposes, of damage to wheat and corn by drouth, but the official reports are not nearly so bad. These exaggerated statements were used to affect the grain market, and to "bear" railroad stocks.

The favorable earnings statements of the railroads for some weeks past have overcome the previous depression. An important upward movement has begun in the Vanderbilt stocks, which are said to be largely purchased abroad.

The condition of the coal trade is improving and the coal stocks have felt the influence of the change.

The condition of the iron trade is acknowledged to indicate the state of business generally, and in view of this the semi-annual statistical statement of the American Iron and Steel Association is very encouraging. The pig iron production for the first six months of 1886 (2,954,209 tons of 2,000 pounds, or 2,637,687 tons of 2,240 pounds) was greater than for any previous half year. It was greater than for any whole year previous to 1879, and the stock left on hand is comparatively small. This country, the report says, will make more Bessemer steel, more Bessemer steel rails, and more open hearth steel, as well as more pig iron, in 1886 than in any previous year.

The statistics of the external trade show an improvement in the export movement of late. The Bureau of Statistics reports that the imports and exports of the United States for the month of June were as follows: Merchandise exports, \$55,808,445; imports, \$54,059,646. Gold exports, \$8,380,143;

imports, \$250,843. Silver exports, \$1,854,181; imports, \$582,918. The total exports of merchandise for the fiscal year just closed aggregated \$679,425,972, compared to \$742,189,755 for 1885. Imports, \$635,258,606, compared to \$377,527,329 for 1885. The exports of gold were \$42,952,191, compared to \$3,477,892 for 1885. Imports of gold, \$20,731,501, compared to \$26,691,696 for 1885. Exports of silver, \$29,502,219, compared to \$33,753,633 for 1885. Imports of silver, \$17,256,920, compared to \$16,550,627 for 1885.

THE FOREIGN EXCHANGE market, in view of the increasing exports of breadstuffs and cotton, has declined several points, and the probability of gold imports has been discussed. Following are the posted and actual rates of the principal dealers: Bankers' sterling, 60 days, nominal, \$4.85½; sight, nominal, \$4.87; 60 days, actual, \$4.84¼@4.84¾; sight, actual, \$4.85½@4.86; Cable transfers, \$4.86¼@4.86¾; Prime commercial sterling, long, \$4.83¼@4.84; Documentary sterling, 60 days, \$4.83@4.83½; Paris, bankers', 60 days, 5.20½@5.19½; sight, 5.18¾@5.17½; Paris, commercial, 60 days, 5.21½@5.21¼; sight, 5.20@5.19½; Antwerp, commercial, 60 days, 5.23½@5.22½; Swiss, bankers', 60 days, 5.20@5.19½; sight, 5.18¼@5.17½; Reichsmarks (4), bankers', 60 days, 95½@95¼; sight, 95½@95½; Commercial, 60 days, 94¼@94½; commercial, sight, 95¼@95¼; Guilders, bankers', 60 days, 40 3-16@40¼; sight, 40 5-16@40¾; Commercial, 60 days, 40@40 1-16; sight, 40¼@40 3-16. Paris dispatches quote exchange on London 25f. 20c.

The following shows the posted rates for prime bankers' sterling bills on London at 60 days, and sight, cable transfers, and prime commercial sterling, together with exchange on Paris on July 1st, the changes in the rates as they occurred during the month, and the highest and lowest during the months of June and July, 1886:

JUNE.	BANKERS'		Cable Transfers.	Commercial.	PARIS

† Ex-Interest.

THE NATIONAL BANK CIRCULATION outstanding was decreased \$2,175,813 during the past month, and the present amount, \$806,516,338, is \$10,394,810 less than it was on August 1, 1885. The amount of legal-tender notes on deposit with the United States Treasurer to redeem notes to be retired is \$61,841,327, an increase of \$237,637 in the past month and of \$22,756,954 since August 1st, 1885. The amount of bonds deposited to secure circulation is steadily decreasing, being \$2,200,000 less than on July 1st.

The following will show the amount of each description of bonds held by the Treasurer to secure National bank circulation on or about the dates indicated:

	Aug. 1, 1886.	July 1, 1886.	June 1, 1886.	May 1, 1886.
Currency 6 per cents.....	\$3,576,000	\$3,565,000	\$3,565,000	\$3,565,000
$\frac{1}{2}$ per cents.....	51,665,600	50,484,200	49,874,250	49,599,750
4 per cents.....	113,582,750	114,143,500	114,233,400	114,114,200
8 per cents.....	104,944,450	107,782,100	113,184,750	118,169,000
Total.....	\$273,768,800	\$275,974,800	\$280,907,400	\$285,447,950

THE TREASURY.—The following table will show the condition of the Treasury, as regards the amount of gold and silver held, on the 1st of August, 1886, and, for comparison, on the 1st of June and July, 1886, with the amounts of certificates outstanding and the balances of coin owned by the Treasury :

	Aug 1, 1886.	July 1, 1886.	June 1, 1886.
Gold coin and bullion.....	\$233,651,522	\$232,838,124	\$236,424,734
Gold certificates outstanding.....	74,718,517	76,044,375	80,120,025
Gold owned by Treasury.....	\$158,933,005	\$156,793,749	\$156,304,709
Silver dollars and bullion.....	\$185,309,993	\$184,345,764	\$180,199,806
Silver certificates outstanding.....	87,564,044	88,116,225	89,184,129
Silver owned by Treasury.....	\$97,745,949	\$96,229,539	\$91,015,677

The figures show the steady increase in the silver owned by the Treasury, the gold reserve being only slightly strengthened. On July 1st the Acting Secretary of the Treasury issued the 129th call for the redemption of bonds. The call is for \$4,000,000 of the 3 per cent. loan of 1882, and notice is given that the

principal and accrued interest of the bonds designated will be paid at the Treasury of the United States, in the city of Washington, D. C., on the 1st day of September, 1886, and that the interest on said bonds will cease on that day. Following is a description of the bonds:

Three per cent. bonds issued under the Act of Congress approved July 12, 1862, and numbered as follows: \$50—Original number 138 to original number 185, both inclusive. \$100—Original number 1,780 to original number 1,812, both inclusive. \$500—Original number 787 to original number 824, both inclusive. \$1,000—Original number 5,524 to original number 5,962, both inclusive. \$10,000—Original numbers 12,612 to 12,965, both inclusive, and original number 23,738 to original number 23,747, both inclusive. Total, \$4,000,000.

**MONEY AND DOMESTIC EXCHANGE.**—The rate for call loans against good collateral is somewhat higher than formerly, ranging from 2 to 4 per cent. per annum. The supply of commercial paper exceeds the demand and the rates of discount range from  $4\frac{1}{4}$  to  $6\frac{1}{2}$  per cent. according to grade. Following are the rates of domestic exchange on New York: Savannah, par; selling  $\frac{1}{2}$ @ $\frac{1}{4}$  premium. Charleston, par @ $\frac{1}{8}$ ; selling 3-16@ $\frac{1}{4}$  premium. New Orleans commercial, \$1; bank, \$1.50 per \$1,000 premium. St. Louis, 25c. per \$1,000 discount. Chicago, 60c. per \$1,000 discount.

**ASSOCIATED BANKS OF NEW YORK.**—There has been no important change in the condition of the banks of late. The difference between the present figures and those for one year ago is very significant, however. The following shows the condition of the New York Clearing-House banks for a number of weeks past, as well as about this time in 1885 and 1884:

1886.	Loans.	Specie.	Legal-tenders.	Deposits.	Circulation.	Surp.Res.
July 31...	\$354,327,400	\$44,271,200	\$43,033,300	\$377,703,100	\$7,854,000	\$12,878,725
July 24...	353,804,000	63,978,000	44,995,200	378,812,000	7,817,600	14,270,200

**RAILROAD AND MISCELLANEOUS STOCKS.**—There is a large demand for first-class investment securities of all kinds, and an increase in the purchase of the second grade, such as second mortgage bonds, is also noticed. Just at present there is a strong upward movement in the Vanderbilt stocks based on rumors that a closer connection is about to be arranged between the various companies. The grangers have been holding back on account of the precarious condition of the corn crop. The coal properties appear to be moderately improving.

The following table shows the highest, lowest and closing prices of the active stocks at the New York Stock Exchange in the month of July, the highest and lowest since January 1, 1886, and also during the year 1885:

## STOCK EXCHANGE QUOTATIONS.

Revised by the official lists up to the first day of this month. The following tables include all securities listed at the New York Stock Exchange. The Quotations indicate the last bid or asked price. In cases where there was no quotation during the past month the latest previous quotation is given. The highest and lowest prices for the year 1885—actual sales—are given for comparison.

## BANKERS' OBITUARY RECORD.

**Austin.**—Lorenzo B. Austin, a private banker of Detroit, Mich., died recently, leaving a number of bequests to religious and charitable institutions.

**Barnes.**—Lawrence Barnes, who was President of the Howard National Bank, of Burlington, Vt., from its first organization in 1870, died June 21st, aged about 71 years. He was born at Hillsboro, N. H., and began life as a journeyman carpenter, but eventually became a great lumber merchant and influential in many directions.

**Britton.**—John W. Britton, President of the Union Dime Savings Bank, of New York, died August 2d, at Carlsbad, Austria, at the age of 63 years. Mr. Britton had been since 1856 a member of the great carriage-making firm of Brewster & Co. (of Broome street), so-called. When the Union Dime Savings Bank became embarrassed some years ago he was chosen as its President, and by careful and judicious management its credit was restored. He refused to accept any salary up to two or three years ago.

**Butler.**—Edwin Butler, who for 33 years previous to January last was Receiving Teller of the National Shoe & Leather Bank, of this city, died August 3d. He was born in 1815 in Manchester, England. He accepted an offer of a position in the Shoe & Leather Bank in 1851. Last January he retired on account of feeble health.

**Fisher.**—Mr. Robert A. Fisher, who died at Middletown, N. Y., on July 8th, was formerly a member of the mercantile firm of L. M. Bates & Co., of New York, and later of the firm of Latham, Alexander & Co., bankers, having withdrawn from the latter on January 1st last.

**Flye.**—The Hon. Edwin Flye, for many years President of the First National Bank, of Damariscotta, Me., died July 12th, aged 60 years. He was an extensive shipbuilder, and sat in Congress as well as the State Legislature.

**Fullington.**—The death is announced of James Fullington, one of the proprietors of the Bank of Marysville, Ohio.

**Gaw.**—Henry L. Gaw, one of the oldest members of the Philadelphia Stock Exchange, and senior partner of the firm of H. L. Gaw & Co., died July 15th, after a short illness, at a summer resort near Gloucester, Mass., aged over 70 years.

**Greene.**—Albert J. Greene, formerly President of the late Gloucester (N. J.) Savings Institution, died July 21st, aged 63 years. He had been City Treasurer for 15 years, besides holding other positions of trust.

**Guthrey.**—The death is announced of J. G. Guthrey, President of the Miami Savings Bank, Miami, Mo.

**Harlow.**—The Hon. Hiram Harlow, President of the Windsor (Vt.) National Bank, died July 26th, aged 76 years. He served two terms in the State Senate and several terms in the Legislature. He held the office of State Prison Superintendent for 18 years.

**Moore.**—B. F. Moore, Vice-President of the First National Bank, of Lapeer, Mich., died June 18th, aged 77 years.

**Roak.**—Jacob H. Roak, formerly for many years President of the First National Bank, of Auburn, Me., died July 6th, aged 80 years.

**Small.**—William T. Small, Cashier of the Casco National Bank, of Portland, Me., and a member of both branches of the City Council, died July 23d, aged 42 years.

**Vall.**—Jonathan Vall, President of the Citizens' National Bank, of Yonkers, N. Y., died July 26th, at his country residence, near Middletown, N. Y., of pneumonia, aged about 60 years.

**Wilkinson.**—Alfred Wilkinson, of the late firm of Wilkinson & Co., bankers, of Syracuse, N. Y., died July 7th. He was formerly a member of the New York Stock Exchange.

**Williams.**—The death is announced of F. R. Williams, Vice-President of the Central State Bank of Lyons, Kan.

## NOTICES OF NEW BOOKS.

*The Country Banker: His Clients, Cares and Work. From an Experience of Forty Years.* By GEORGE RAE, author of "Bullion's Letters to a Bank Manager." With an American Preface by Brayton Ives. New York: C. Scribner's Sons. 1886. (\$1.50.)

This work appeared to be worthy of an American reprint at the time the JOURNAL noticed the English edition some months ago. As Mr. Ives says in the preface, the average writers on banking subjects "lack the ability to overcome their inherent difficulties and treat them in an attractive manner. To this rule, however, it seems to me," he continues, "that 'The Country Banker' is a notable exception. Without being pedantic or too technical, the author has given an accurate and minute account of the methods by which the branches of the London banks are managed, and at the same time has written a book which is so admirable in style that it presents strong claims to public attention viewed solely from a literary standpoint." Of course some of the technical information is solely for English use, but in the main the remarks are applicable to any part of the world. His expressed object is less to advance special views of his own "than to exemplify, from fresh points of observation, the accustomed lines and recognized limits of prudent banking, a rational observance of which would have rendered the bank failures of our time fewer in number, less scandalous in their revelations and less calamitous in their results." The suggestions given to this end are shrewd and sound.

*The Statesman's Year-Book. Statistical and Historical Annual of the States of the civilized world for the year 1886.* Edited by J. SCOTT KELTIE, Librarian to the Royal Geographical Society. Twenty-third annual publication. Revised after official returns. London: Macmillan & Co. 1886. (\$3.00.)

The limited amount of space devoted to book notices has prevented an earlier review of this publication. It is now issued some weeks after the beginning of the year in order to include the important statistics of a date later than would be otherwise available. The work, which is unique in the English language (giving as it does in compact form all the most important information regarding the reigning Government, revenue and expenditure, army and navy, trade and industry, etc., etc., of every Government in the world), is kept fully up to the former standard. Owing to the introduction of additional countries—Congo Free State, Straits Settlements and Fiji—and to the extension of other statistics, more than thirty pages have been added, bringing the total up to 936 pages.

[Johns Hopkins University Studies in Historical and Political Science. Herbert B. Adams, Editor. Baltimore: N. Murray, Publication Agent, Johns Hopkins University. 1885 and 1886.]

Third Series, I.—*Maryland's Influence upon Land Cessions to the United States.* With minor papers on George Washington's Interest in Western Lands, the Potomac Company, and a National University. By HERBERT B. ADAMS, Ph. D.

Fourth Series, V.—*An Introduction to the Study of the Constitution and Political History of the States.* By J. FRANKLIN JAMESON, Ph. D., Associate in History, Johns Hopkins University.

Fourth Series, VI.—*A Puritan Colony in Maryland.* By DANIEL R. RANDALL, A. B.  
Fourth Series, VII., VIII., IX.—*History of the Land Question in the United States.* By SHOSUKE SATO, Ph. D., Special Commissioner of the Colonial Department of Japan and Fellow by Courtesy, 1884-6, Johns Hopkins University.

This valuable monograph deals with the origin, the formation and the administration of the public domain, and the historical portion is treated exhaustively. It concludes as follows: "Although the public domain is of such vast extent, and the laws pertaining to it are so complex that some persons think that there are too many obstructions in the way of honest administration of the land laws—such obstructions, for example, as land grabbers and cattle kings—to my mind the present question of land administration in the United States is perfectly simple. Indeed, two words would suffice to indicate the future policy of the public land administration. These words are *reform* and *recovery*—*reform of legal abuses and recovery of the public lands from railroad corporations.*"

Smith & Carson, Bankers, Mt. Vernon, Iowa.—"We think the JOURNAL is just the magazine for young bankers—and old ones too, who wish to keep up with the times."

J. C. Brown, Cashier, Jamestown, Ohio.—"Here is \$5.00 to pay my subscription to the JOURNAL. Have received a great deal of information from it and would not like to do without it."

## CHRONOLOGICAL RECORD.—JULY, 1886.

1. THURSDAY.—Reduction in the public debt in June, \$9,061,818. — A Receivership was ordered for the Indiana, Bloomington & Western railroad.
2. SATURDAY.—Discount rate on commercial paper in New York,  $3\frac{1}{4} @ 5\frac{1}{4}$  per cent.; call loans,  $1\frac{1}{4} @ 2\frac{1}{4}$  per cent. — Discount rate in London on 3 months' bills, 1 per cent.; on short bills,  $\frac{1}{2}$  per cent.
5. MONDAY.—Holiday.
10. SATURDAY.—Discount rate on commercial paper in New York,  $3\frac{1}{4} @ 5\frac{1}{4}$  per cent.; call loans,  $1 @ 2$  per cent. — Discount rate in London on 3 months' bills, 1 per cent.; on short loans,  $\frac{1}{2}$  per cent. — Bar silver was quoted in London at 44 $\frac{1}{4}$  per ounce, the lowest price ever recorded.
12. MONDAY.—The Denver & Rio Grande railroad sold at Denver under foreclosure.
14. WEDNESDAY.—News received from London that an extradition treaty had been signed between the United States and Great Britain.
15. THURSDAY.—The managers of the railroads West and Northwest of Chicago made a temporary agreement to restore rates.
17. SATURDAY.—Discount rate on commercial paper in New York,  $3\frac{1}{4} @ 5$  per cent.; call loans,  $1\frac{1}{4} @ 2$  per cent. — Discount rate in London on 60 days to 3 months' bank bills,  $1\frac{1}{4}$  per cent.; on short loans,  $\frac{1}{2}$  per cent. — The convention between the steel rail manufacturers of England, Belgium and Germany, formed for the purpose of preventing ruinous competition, has expired.
19. MONDAY.—The 138th Treasury call issued, for \$4,000,000 three per cent. bonds.
20. TUESDAY.—The British Ministry, headed by Gladstone, resigned.
22. THURSDAY.—Bi-centennial celebration at Albany, N. Y. — The Anthracite coal companies agreed to advance prices 15 to 20 cents per ton.
23. FRIDAY.—The bill to tax Oleomargarine as amended in the Senate passed the House. — The Manchester, Eng., Canal scheme collapsed, the stock subscriptions being insufficient.
24. SATURDAY.—Discount rate on commercial paper in New York,  $4 @ 5\frac{1}{4}$  per cent. call loans,  $1\frac{1}{4} @ 3$  per cent. — Discount rate in London on 3 months' bills,  $1\frac{1}{4}$  per cent.; on short bills,  $\frac{1}{2}$  per cent.
27. TUESDAY.—Bar silver is down to 43 $\frac{1}{4}$ d. per ounce in London.
28. WEDNESDAY.—A new British Cabinet formed by Lord Salisbury.
31. SATURDAY.—Discount rate on commercial paper in New York,  $4\frac{1}{4} @ 6\frac{1}{4}$  per cent.; call loans,  $1\frac{1}{4} @ 2\frac{1}{4}$  per cent. — Discount rate in London on 3 months' bills,  $1\frac{1}{4}$  per cent.; short loans,  $\frac{1}{2}$  per cent.

Mr. Patten's Book on England.—The following notice of "England: As seen by an American Banker," the work of the late Claudius B. Patten, of Boston, author of the papers on "Practical Banking" appearing in RHODES' JOURNAL OF BANKING, is taken from the *Journal of the Institute of Bankers*, London. The remark, "This is an eminently readable book," may be applied to all of Mr. Patten's writings. The writer of the notice says the work "leaves the impression that we (the English people) have not much to learn from the methods of conducting the banking business pursued in the United States. Mr. Patten's book was not intended to teach American methods to Englishmen, but the reverse, to instruct Americans about England. It will be easier to judge if there is anything for English bankers to learn from this country by reading Mr. Patten's observations on "Practical Banking" when they shall appear in book form. The notice mentioned is as follows:

"This is an eminently readable book. The author adopted a way of seeing England more leisurely than is supposed to be characteristic of Americans, viz., walking through it, which he seems to have thoroughly enjoyed and recommends for other travelers. As in the compass of an octavo book of less than 350 pages he deals with the physical characteristics of this country as well as its people, institutions, customs and laws, he has, of course, not gone very deeply into details, but he finds a great deal to admire and much that he thinks his fellow-countrymen would do well to imitate. Readers of this *Journal* will turn, perhaps, with most interest to his opinion of the city and its mode of doing business, to which a considerable portion of the book is devoted. The Bank of England seems to fully come up to the opinion he had formed of it from reading and report, and his visit to that institution he describes at some length. He especially remarks on the practice so largely prevailing here of bankers taking care of the valuables of their customers, a business which, in America, is taken up by safe deposit companies. He considers that the American methods of collecting checks are far behind ours, though, of course, the difference of arcas of the two countries must be remembered in making comparisons. A complimentary notice of the *Institute* closes the banking portion of the work, which, on the whole, leaves the impression that we have not much to learn from the methods of conducting the banking business pursued in the United States."

# RHODES' JOURNAL OF BANKING.

---

Vol. XIII.      SEPTEMBER, 1886.      No. 9.

---

**T**HE American Bankers' Association has held \*eleven annual Conventions, the first being at Philadelphia in the Centennial year, upon the Exposition grounds, where the Hon. E. G. Spaulding, of Buffalo, who was the author of the legal-tender law and perhaps more nearly than any one person the author of the National Banking Act, delivered an address before the Association. Since that time five Conventions have been held at Saratoga, one in New York, one at Niagara Falls, one in Louisville, one in Chicago, and one in Boston. At Louisville and Chicago the members of the Association were received with great cordiality by the resident members, but it may be said without prejudice to the other cities that they have nowhere been greeted with such unbounded hospitality as at the late Convention in Boston.

The principal papers read at the Convention were excellent and to the point. The JOURNAL gives elsewhere the addresses of Lyman J. Gage, of Chicago, President of the Convention, of Hon. W. L. Trenholm, Comptroller of the Currency, and of Geo. S. Coe, of New York—all of which are full of practical and sound suggestions. There were but few other papers prepared; some of them will either be printed in full or their salient points will be referred to in a future issue. Near the close of the second day's session, Geo. A. Butler, of New Haven, delivered a short address. A full record of the proceedings of the Convention will be found in this number of the JOURNAL.

The Convention adopted resolutions upon the silver question similar to those adopted at previous Conventions, and in our opinion it would have been well if the Convention had gone no further than to pass a resolution in favor of the suspension of the coinage of the silver dollar. Other resolutions were introduced looking to the restoration of the French ratio of 15½ to 1; proposing that the Association consider whether a 400-grain dollar cannot by the unanimous agreement of the principal commercial nations be received by us as a substitute for the

---

\* Following is the order: 1876, Philadelphia; 1877, New York City; 1878-9-80, Saratoga Springs; 1881, Niagara Falls; 1882, Saratoga Springs; 1883, Louisville; 1884, Saratoga Springs; 1886, Chicago; 1886, Boston.

present dollar of 412½ grains at a time when 500 grains of silver are actually worth no more than the gold dollar. We are of the opinion, and believe that it is the almost unanimous opinion of the members of the Convention, that the ratio of gold to silver must be very greatly increased, while the present low price of silver continues, if any bi-metallic standard is to be adopted in this country. It is to be regretted, therefore, that such questions were brought before the Convention, because all the members of the Convention, almost without exception, can agree upon the question of the suspension of the coinage, and also a new International Convention if desired, while any proposition of the extremists on either side is likely to create dissensions.

The Convention unanimously elected Mr. Logan C. Murray, President of the United States National Bank, of New York, President of the Association. Mr. Murray had been First Vice-President for two years and was in the direct line of promotion.

Ex-Comptroller Knox, now President of the National Bank of the Republic, New York, was elected Chairman of the Executive Council. Mr. Knox, who has many times addressed the Convention on financial questions, was absent from the Convention for the first time, we believe, since the organization of the Association, and the compliment of the appointment was, therefore, the greater.

---

THE COMPTROLLER OF THE CURRENCY has prepared a statement which adds further proof to sustain the theory of the JOURNAL that the silver people are not in favor of the coinage because they want to use the coins themselves but because they desire to have other people forced to use them. In this statement are collated the reports of the National banks in the silver-producing States and Territories, embracing Arizona, California, Colorado, Dakota, Idaho, Montana, Nevada, New Mexico and Utah, for the past six years. The result shows that the average amount of silver coin and certificates held by these banks during that time was \$260,535 against \$2,985,225 of gold certificates and \$2,188,784 of other moneys. That is, the banks find it convenient and prudent to hold only 5 per cent. of their money reserve in silver, and this in the very strongholds of the silver men. But, if it were possible to count the money held by the people generally, a like condition of things would be discovered. No one wants the silver for himself, except for small change; but many of us are willing to sacrifice our neighbors in this cause.

---

THE POLICY TO BE FOLLOWED BY THE TREASURY OFFICIALS as to bond calls, in view of the agitation of the Morrison surplus resolution and of the restricted money supply, has of late been the subject of much newspaper discussion. The query has been whether the bond calls would be limited to the requirements of the sinking fund (about \$4,000,000 a month) or whether the Department would defer to the wishes of the majority of the House of Representatives and pay out

large sums in redeeming bonds. A proper understanding on the part of writers of the relations of the Treasury to the country in general would have prevented considerable shallow and misleading matter on the subject from appearing in print. As soon as the Treasury contains a sufficient reserve against present and contingent liabilities, it always has been, and doubtless always will be, the policy of the Department to pay out again as soon as convenient any other moneys that may come in through the regular channels of the Custom-houses, internal revenue, etc. For some time past the Treasury surplus has been sufficient, so that, as a matter of course, all surplus moneys coming into the Treasury, above what is paid out for Government expenditures, goes to the redemption of bonds. The impossibility of following any other course is so clear that it looks as if no explanation of this matter could be needed, but it evidently is, nevertheless. The gist of the matter is this: that it does not depend entirely upon the officials to say how much shall be paid out for bonds. It depends upon how much money there is available for the purpose.

---

IN ITS FAILURE TO TAKE ANY ACTION FOR OR AGAINST the new extradition treaty that has been arranged between Great Britain and the United States the Senate kept the record of the last session of Congress consistent and clear of any act requiring independence or manliness in the members. The necessity for such a treaty is too well-known to require any argument to support it. The fact that defaulters of every grade were able, by merely crossing the Canadian border, to snap their fingers at the law officers and the victims of their perfidy has been for years a subject of the gravest scandal, and has largely tended to bring the criminal laws of this country into contempt. And yet the treaty carefully formulated by the foreign departments of the two nations interested has been shelved by the Senate. The reason for this should be such a one as would commend itself to people of character. In fact, the reason is that one proviso of the treaty may be construed to include the extradition of dynamiters, and the United States Senate is not above toadying to even the dynamiters. The new treaty that has just been negotiated with Japan provides for the extradition of persons engaged in the "malicious destruction of, or attempts to, destroy railway trains, vessels, bridges, dwellings, public edifices, or other buildings, where the act endangers human life," so that it is hardly possible that the Senate will stultify itself by ultimately refusing to confirm the treaty with Great Britain because it contains a similar clause.

---

THE "MANUFACTURERS' RECORD," OF BALTIMORE, once more calls attention to the need of banking capital in the South. A correspondent writing from Bristol, Tenn., found at that place and all through Southwest Virginia "that the great want that is felt in fostering the industrial pursuits and developing the varied resources of the region is sufficient capital." It is estimated that there are not less than

one hundred thriving towns in the South in which, like the one named, business is severely hampered and restricted solely on account of the lack of banking capital, and in which a properly managed bank would doubtless yield good profits. The rates of interest are too high in the South, and it is often impossible for business men to secure the money needed on the best security owing to the paucity of banking facilities. It is said that 9 to 15 per cent. per annum is a common rate for business men to pay, and in view of the cheapness of money in recent years this seems very high. The *Atlanta Constitution* says that the lack of banking capital is seriously felt in Georgia. The commerce of the State has been largely increased since the war, but "the State and the people have been crippled—paralyzed, we may say—by a lack of capital." Another authority shows that at present the State of Georgia, with fifteen National and twenty-two State banks, has an aggregate banking capital of less than \$7,000,000. In 1860, Augusta, with a population of 13,000 souls, had a banking capital of \$9,000,000, being \$2,000,000 more than the whole State now has. To-day Augusta has a banking capital of only \$1,500,000. A connection might be found between this state of things and the repudiation sentiment of some sections, but it is preferable to point out this promising field to young men who are seeking opportunities to enter the banking business.

THE RESOLUTION REPORTED BY THE EXECUTIVE COUNCIL at the recent Convention of the American Bankers' Association on the silver dollar coinage, and unanimously adopted by the Convention, has been criticised by an anti-silver paper on the ground that it offers no new solution of the matter. It is intimated that the banks should have offered some sort of compromise plan, under which the coinage might be stopped at a future date, and providing in the meantime for the distribution of the coins now piled in the Treasury vaults. It is true that the previous resolutions of the Association calling attention to the dangers to be apprehended from the continuance of the coinage have proved ineffectual, but that is no reason why the bankers should recede from the position which they are positive is the right one. No doubt they would be glad to see any law passed to stop the silver coinage, even though it did not go into effect for some time to come; but until something of this kind is done it would be the height of folly for the bankers to assist in forcing the present coins into circulation. It should be observed that the resolution in question was skilfully drafted, being couched in the most conciliatory language, and every charge of self-interest in the matter disclaimed. The other resolution, accompanied by a long, obscure, and we might say undefinable preamble was referred to a special committee appointed by the President, consisting of Wm. G. Deshler, Chairman, Columbus, Ohio; George S. Coe and John Jay Knox, New York; Joseph Patterson, Philadelphia; L. J. Gage, Chicago; Asa P. Potter, Boston; N. B. Van Slyke, Madison, Wisconsin; Andrew Simonds, Charleston, S. C.; R. J. Lackland, St. Louis.

## PRODUCTION AND CIRCULATION OF THE PRECIOUS METALS.

The report of Dr. James P. Kimball, Director of the Mint, on the production of gold and silver in the United States during the calendar year 1885 does not indicate that any solution to the silver question is yet to be looked for from the producers of the precious metals. He estimates the gold production for the year at \$31,800,000, being an increase of \$1,000,000 over the amount for the calendar year 1884. The production of silver in the year 1885, calculated at the coining rate in silver dollars, is estimated at \$51,600,000 against \$48,800,000 in 1884, an increase of \$2,800,000.

It will be noticed that, although there has been a gain in the output of gold, the silver production has increased still more. If the silver product had fallen off considerably it is what might have been expected in view of the steady decline in the market value of the metal. On the other hand if, as the advocates of silver claim, it is gold that has advanced in value, and not silver that has declined, the production of gold would thereby be stimulated. Quite recently, however, following on the unprecedented reduction in the price of silver, accounts from the silver-producing districts predicted a reduction in the output of that metal. Advices from Colorado, Montana and Arizona picture in alarming language the fears of the people that the silver mines, upon which so largely depend the industries of large districts, will have to be shut down if the present depression in the silver market continues.

Looking the facts in the face in a business-like way, as all questions of trade and commerce should be, it may be asked, "Well, what would happen if some of the producing mines were shut down?"

The depression in the price of silver is certainly owing partly to the largeness of the output, which has been increasing in spite of the low price. Even bi-metallism is impossible so long as this continues. Although the nations should agree to establish free coinage of gold and silver they would have to take measures to cut off the superabundant supply of the white metal. Under any imaginable circumstances, short of the abandonment of gold for money, this will have to be done.

"But," cry the people of the silver producing districts, "if our mines are closed we shall be ruined." "Then," it may be confidently replied, "you will be ruined sooner or later in any case, for your mines are certain to give out in the course of time. Witness the case of the greatest silver producers of history, the mines of the Comstock Lode."

The fact is, there is an over-production of silver at present, and it should be checked, not stopped, in the interest of the producers themselves. The metal they are turning out so abundantly brings a very low price. To continue the present course would be to merely squander the mineral wealth with which nature has endowed those districts. That wealth, it should always be remembered, is strictly limited in quantity. To squander it now is foolish and short-sighted. To save part of it for the future is only what common prudence would dictate. It is, besides, well established by experience that

the permanent prosperity of a State must depend upon other industries than those connected with the production of gold and silver.

But to return to the Director's report: The coinage at the United States Mints during the calendar year 1885 was of the face value of \$56,926,810. Of this \$27,778,012 consisted of gold coin and \$28,962,176 of silver coin, the remainder being minor coin. The silver coin included 28,697,787 silver dollars.

The coin and bullion imported into this country during 1885 was valued at \$41,418,129, of which \$8,322,909 was bullion and \$33,095,120 was coin. Of the total import \$23,645,311 was gold and \$17,772,718 silver. The exports of gold amounted to \$11,417,207 and those of silver to \$33,205,542, making the total exports \$44,697,749. A computation of these figures shows that there was a net exportation of silver during the year of \$15,507,824 while there was a net importation of gold to the amount of \$12,228,104.

The amounts of the production and of the import and export of the metals being determined the matter of estimating the amount remaining in the country comes next in order. This would be a simple thing to calculate if the former estimates of the Director of the Mint were to be accepted without question. Director Kimball, however, has thought well to revise some of the former estimates that have been the subject of criticism for some years past.

It appears, for one thing, that an error was made in the statistics published some seven years ago. In these Mr. Burchard used the estimates of Dr. Linderman that the gold coin in the country on July 1, 1873, was \$135,000,000, whereas it now appears that of this amount \$15,669,981 consisted of gold bullion that should have been deducted. Another item of \$4,654,714 is deducted from former estimates, being the exports of gold between June and November, 1873, Mr. Burchard having accepted a statement of exports on the supposition that it extended down to the first of November whereas it only came down to July 1st in that year. The deduction is also made of \$30,000,000 of gold coin estimated to have been consumed in the arts between the years 1873 to 1880 inclusive (when Mr. Burchard first made deductions on this account), but the figures obtained from consumers of the metals in 1885 appear to show that this allowance was too large. Responses to the Director's circulars, made by 2,700 firms, show that they used \$10,837,944 of gold in 1885 against \$14,500,000 reported by the same number of firms in 1884. Of this amount \$2,800,000 consisted of United States coin, about \$6,000,000 of stamped United States bars, \$178,000 in foreign coin, \$819,000 worth of old jewelry, \$467,000 in native grains, and \$559,000 of wire and rolled plate. The same firms reported the silver consumption at \$3,470,000, consisting as follows: \$124,910 in United States coin, \$2,773,975 in United States refinery bars, \$40,000 in foreign coin, \$219,000 worth of old jewelry, plate, etc., \$94,000 in native grains, and \$217,000 worth of wire and rolled plate.

On the basis of all the above figures and previous reports of the Mint the Director estimates the amount of gold coin in the United States on January 1, 1886, to have been \$533,485,453, of silver dollars \$218,259,161, and subsidiary silver \$75,034,111, making the total stock of coin \$826,779,325.

Of the stock of gold coin the United States Treasury held over and above outstanding gold certificates \$75,434,379 and the National banks \$156,353,592, including Treasury and Clearing-House certificates. State banks and trust

companies to the number of 1,015 held on November 1, 1885, \$31,255,789, which left in the hands of the people and other banks \$270,441,683.

The silver dollars were held as follows: United States Treasury (above certificates outstanding) \$72,538,725, the National banks \$6,940,828, other banks (including silver certificates) \$138,780,408. Of the subsidiary silver about \$27,000,000 was in the Treasury and \$47,000,000 outstanding.

These figures are, of course, not exact, especially as regards the gold in the country, and the Treasury officials are of the opinion that still further deductions will have to be made from former estimates in order to get at the correct amount of that metal in the country. There is little doubt, however, that there is \$500,000,000 of gold in the country, and it is still more certain that the silver amounts now to over \$300,000,000. There is a sufficiency of each metal if only the public finances are managed with common sense.

### **COMPTROLLER TRENHOLM ON THE RESERVE OF THE BANKS.**

Comptroller Trenholm commenced his very excellent address, at the Bankers' Convention in Boston, with a reference to the reserve of the National banks of the country, and he presented two tables, showing at a glance the amount of deposits held on May 6, 1885, and June 3, 1886, by all the National banks of the country, and in three groups, namely, the amount of deposits held by the National banks outside of the Reserve cities, in the Reserve cities (excluding New York), and in New York city. Also, the total reserve and the ratio to deposits held upon the same dates by the same groups of banks. The second table gives the total reserve and the cash reserve—namely, specie and legal-tender notes and the redemption fund in the Treasury—held on June 3, 1886, the date of the last statement made to the Comptroller by the National banks. Following are the tables:

**COMPARATIVE STATEMENT OF DEPOSITS, AND OF THE RESERVE AGAINST THE SAME, HELD BY ALL THE NATIONAL BANKS; BY THOSE NOT IN RESERVE CITIES; BY THOSE IN ALL RESERVE CITIES, EXCEPT NEW YORK; AND, FINALLY, BY THOSE IN NEW YORK, AS SHOWN BY THEIR REPORT OF CONDITION, ON MAY 6, 1885 (2,682 BANKS), AND JUNE 3, 1886 (2,890 BANKS).**

<i>National Banks, classified as below.</i>	<i>Deposits.</i>		<i>Reserve.</i>		<i>Ratio of Reserve.</i>	
	May 6, 1885.	June 3, 1886.	May 6, 1885.	June 3, 1886.	May 6, 1885.	June 3, 1886.
					<i>Per cent.</i>	<i>Per cent.</i>
All in United States.....	\$1,184,543,821	\$1,206,726,667	\$418,467,445	\$394,192,310	35 33	30.42
Out of Reserve cities.....	349,281,214	611,733,799	171,011,833	181,552,848	31 65	29.68
In Reserve cities, excluding New York.....	346,515,068	387,240,951	123,962,577	122,784,157	35 71	31 71
In New York.....	297,744,544	206,751,907	123,493,035	89,855,515	41 48	30.28

STATEMENT OF LAWFUL MONEY RESERVE HELD BY ALL NATIONAL BANKS; BY THOSE NOT IN RESERVE CITIES; BY THOSE IN ALL RESERVE CITIES EXCEPT NEW YORK; AND, FINALLY, BY THOSE IN NEW YORK, AS SHOWN BY THEIR REPORT OF CONDITION, ON JUNE 3, 1896:

<i>National Banks, classified as below.</i>	<i>Total Reserve.</i>		<i>Cash Reserve.</i>	
	<i>Required.</i>	<i>Held.</i>	<i>Required.</i>	<i>Held in Cash and with U. S. Treasurer.</i>
All in United States.....	\$262,758,283	\$394,192,310	\$163,911,218	\$261,165,183
Out of Reserve cities.....	91,760,069	181,552,648	32,968,213	88,092,985
In Reserve cities, excluding New York.....	96,810,237	122,784,157	47,166,218	83,216,784
In New York.....	74,187,977	89,855,515	73,756,787	89,855,514

These tables are very interesting, for they show that the cash reserves of the National banks of the whole country are almost equally divided among the three groups designated in the tables—first, the banks in the city of New York hold nearly 90 millions; the banks in all other Reserve cities, excluding New York, 83 millions; and the remaining smaller banks in the country, 88 millions; thus showing that the 45 National banks in the city of New York usually hold considerably more than one-half as much cash reserve as the whole of the remaining 2,845 National banks.

Upon examination of these tables it will be seen that if the law in reference to the banks in New York city was applicable to banks outside of that city, requiring them to keep on hand 25 per cent. of their reserve in cash, the banks outside of the Reserve cities, whose deposits were \$611,000,000, would be found to have been deficient in cash nearly \$85,000,000; the Reserve cities out of New York, whose deposits were \$387,000,000, deficient nearly \$14,000,000, and the banks in New York city nearly \$16,000,000 in excess.

Again, it would be found that the banks outside of the Reserve cities, who are required to hold in all but 15 per cent. of reserve, held, at the time of their last report, a large amount in excess of the cash required, while the banks of the Reserve cities outside of New York held a large excess also.

It will be found upon examination that the amount on deposit in New York belonging to the interior banks was at that date, and usually is, chiefly the money held by the banks in excess of the reserve required by law. If, therefore, the present law were so amended as to discontinue the present depositories in the Reserve cities, it would have but little effect in the amount kept on deposit in the city of New York. The only result really would be to allow the banks in the interior to make their deposits as they may see fit in the vaults of private bankers, of trust companies, and of State banks, instead of the National banks, where they are now kept. This would weaken the whole system, as many banks in the larger cities would be glad to be relieved of the restrictions of the National Bank Act, and, if they did not receive a corresponding advantage in being made the Reserve

agents for their country correspondents, such banks would be likely to leave the National system and become private bankers or reorganize under the different State systems.

## THE PUBLIC DEBT OF GREAT BRITAIN.

### HOW IT IS MANAGED BY THE BANK OF ENGLAND.

[Delivered before the American Bankers' Association, at Boston, August 12th, by GEO. A. BUTLER, Vice-President of the National Tradesmen's Bank, of New Haven, Conn.]

In view of the fact that there is no further business before the Convention except the report of the Executive Council, for which we must wait a few minutes, it may not be amiss if I occupy a portion of the time by speaking on a subject which I think will be of interest to some of the members of this Association. I have not prepared a paper for this occasion, but I desire to say a few words on a subject which I may assume that many of you have not had the opportunity or the inclination to investigate. I consider it of some importance as it pertains to the greatest bank in the world and relates to a currency which commands the attention of all who take an interest in such questions. It has been said, though not before this Association, that the Bank of England does not receive interest on the Government debt held by the bank. So far as I know every writer, whether British or American, who has said anything at all on this point has made the statement that the bank did not receive interest on its Government debt, but that it received its equivalent in the issue of notes against it. Such statements have found their way into magazines and newspapers in this country, and politicians have made use of it in their efforts to undermine and destroy the National banking system. Even so distinguished a writer as Prof. Price has fallen into the same error, as will be seen by his published lectures on currency. From the first I have refused to believe that men who were capable of the management of such an institution would be willing to have the Government owe the bank £15,000,000 without paying interest on it; that such a thing was not to be believed of sensible men. The pressure of business and the difficulty of getting hold of the necessary documents prevented for a time my looking into the matter. I finally procured the Treasury Reports of the British Government, and found that they contained the proper information. The results of my examination are given herewith.

The following statement appears in the "Official Report of Disbursements on Account of the Public Debt:"

#### INTEREST OF THE GOVERNMENT DEBT TO THE BANK OF ENGLAND.

##### Original capital:

1694, Acts 5 & 6, William & Mary .....	£1,200,000	
1706, Act 7 do do .....	400,000	
1742, Act 15, George II. ....	1,600,000	£3,200,000

##### Capital purchased of the South Sea Company:

1721, Act 3, George I., residue of capital of £4,000,000, purchased of the South Sea Company .....	3,328,800
--	-----------

##### Other advances to the Government:

1716, Act 3, George I., balance of £2,000,000 of Exchequer bills cancelled .....	500,000
1727, Act 1, George II., advance to Government .....	1,750,000
1728, Act 2, George II., advance to Government .....	1,250,000
1746, Act 19, George II., Exchequer bills delivered up to be cancelled .....	986,800

Total, bearing interest at 3 per cent. per annum .....	£11,015,100
Interest .....	380,453

The Bank of England holds £15,000,000 of the debt against which it issues notes without holding coin against the same.

If we deduct the above £11,015,100 from the £15,000,000, we have £3,984,900 which the bank holds in some other form of the debt. From the published statement of the bank we cannot tell which issue of the debt it is, but we may fairly assume that it consists of the 3 per cent. consols, all of which pay interest, the bank managing the same and paying to itself the interest thereon. The statement is as follows:

DEBT HELD BY THE BANK OF ENGLAND.

Permanent debt as above.....	£11,015,100
Other debt.....	3,984,900
	<hr/> £15,000,000
Interest on £11,015,100.....	330,453
Interest on other debt held by the bank.....	119,547
	<hr/> £450,000

In view of the fact that the "Government Finance Accounts" contain the above statement of £11,015,100 due the bank, and includes in its disbursements the interest on the same, amounting to £330,453, and as the bulk of the general debt bears interest at the rate of 3 per cent. per annum, we may fairly assume that the Bank of England receives 3 per cent. interest on the whole amount of the debt held by the bank.

Following is a statement of the "Issue Department" of the Bank of England. It is not of recent date, but the figures answer the purpose as well as those of the present time:

Notes issued.....	£33,288,640	Government debt.....	£11,015,100
		Other stocks.....	3,984,900
		Gold coin and bullion.....	18,288,640
	<hr/> £33,288,640		<hr/> £33,288,640

The Bank of England manages the Government debt and receives compensation as follows:

On £200,000,000 at the rate of £300 per £1,000,000.....	£180,000
On £181,286,488, £150 per £1,000,000, leaving off the shillings and pence.....	19,094
	<hr/> £199,094
For manufacturing stock certificates and Exchequer bills.....	498
Management of Exchequer bills, bonds, and Treasury bills one year..	1,414
	<hr/> £201,004

The Government pays the salaries, etc., of those employed in the management of the debt:

Amount paid for year 1884-85.....	£15,414
-----------------------------------	---------

The Bank of England paid the Government £153,895, "Amount payable out of the profits of issue for the year to April 5, 1884."

The Government received from "Composition for the Duties on the Bills and Notes of the Banks of England and Ireland and of Country Bankers" £127,982. What portion, if any, of this tax the Bank of England paid I cannot say.

It will be seen that the position of the Bank of England to the Government is analogous to that of the National banks to their Government. It holds the Government debt, on which it receives three per cent. interest. It issues notes against the same, but does not hold a reserve against that portion of its

issue. It pays a tax in the form of a division of its profits on its issues and perhaps a portion of the duties above mentioned. So far its relation to the Government is similar to that of the National banks to their Government. It has the additional advantage of receiving more than £200,000 a year for the management of the Government debt, and it holds most of the current funds of the Treasury.

The Bank of England and the Bank of Ireland bear similar relations to the Government.

The Government owes the Bank of Ireland £2,630,769. It pays interest on this sum at the rate of 3 per cent., amounting to £78,923. The Government pays the bank for the management of £29,389,061 of the debt at the rate of £450 per £1,000,000, or £13,225. It also keeps a large deposit with the bank. In the report of 1885 it is stated at £1,372,652.

NOTE.—At the request of the Editor of RHODES' JOURNAL OF BANKING—and since from members of the Association—I have prepared the foregoing statement more in detail than I was able to give in my *extempore* remarks. GEO. A. BUTLER.

---

### \* LOGAN C. MURRAY.

---

#### THE NEW PRESIDENT OF THE AMERICAN BANKERS' ASSOCIATION.

It is comparatively only a few years since Mr. Logan C. Murray, the new President of the American Bankers' Association, became prominent among the bankers of the country by being called from his home in Louisville, Ky., to take an official position in the United States National Bank, of New York. For this reason it must be considered a high compliment, as well as an acknowledgment of his ability and sterling character, for the Association to have chosen him as its presiding officer.

Mr. Murray may be called a young man yet, having been born near Louisville in the year 1845. He comes of that sturdy, energetic Scotch-Irish Presbyterian stock to which James Parton has paid such a high tribute and which has numbered among its representatives in this country men like General Jackson, Horace Greeley and many others of lesser note. His grandfather served with distinction as an officer during the war of 1812, and was killed at the head of his command.

Mr. Murray's education, begun under private tutors, was completed at Princeton College. His first mercantile experience was gained in the management of his father's business, and so successful and influential was he with his fellow-townsmen that he was able, in the course of time, to organize the Kentucky National Bank, of Louisville.

In the year 1881 Mr. Murray was called to New York to take the Cashiership of the United States National Bank, which had not then been long in operation, and after three years of service in that position he was elected President of the bank. It is certain that his prudence and foresight, joined to popular manners and a wide acquaintance with bankers throughout the country, have built up that institution to its present condition. His loss to Louisville was deeply felt at the time.

Upon removing from his native State he was compelled to resign from a number of offices of trust—among others several connected with charitable

\* A correct portrait of Mr. Murray is presented in this number. It is from a recent photograph, reproduced by Bierstadt especially for RHODES' JOURNAL OF BANKING.

institutions—the most important of which was that of State Commissioner of Lunatic Asylums to which he had been appointed by the Governor.

Since his residence in New York, Mr. Murray has become a member of the Union League Club and the Union Club, and a Director of the Manhattan Eye and Ear Hospital. His influence has been steadily growing, and, being recognized as one of the most active and progressive men in the banking community, his election as President of the Bankers' Association has been well received.

President Murray can properly be classed among those engaged in the banking business who regard their profession from a broader stand-point than merely a means of gain. He believes that banking, carried on in a legitimate manner, is a powerful means for binding together and upbuilding his fellow-men. Those who have accomplished the greatest good in their day and generation, who have risen to the highest place in any department of the world's work, have been animated with a like faith while engaged in it.

---

**\* THE NATIONAL GERMAN-AMERICAN BANK,  
Of St. Paul, Minnesota.**

---

ORIGIN AND HISTORY.

The origin and the history of the above-named bank from its small beginning in the early history of St. Paul, with its steady and uninterrupted progress to its present mammoth proportions, will be traced with interest by those who have been familiar with the unparalleled growth of the city in which it is now one of the leading institutions of its kind, as well as by those who from remote points have noted with astonishment the wonderful development of St. Paul's great commercial and financial interests and institutions.

Its foundation was laid in 1856 by Mr. H. Meyer and Mr. Ferdinand Willius, who, under the firm name of "Meyer & Willius," engaged in the business of banking on a capital of but a few thousand dollars, a comparatively small beginning even in those early days.

In 1857, Mr. Fred. Meyer and Mr. Gustav Willius were admitted as partners, and the firm name was changed to "Meyer & Willius Bros." In October, 1857, Mr. H. Meyer died. This led to the withdrawal of his brother from the firm, the two remaining partners continuing the business under the style of "F. & G. Willius."

In 1863, Mr. Lewis L. Dunbar became a partner, and the firm name of "Willius Bros. & Dunbar" was adopted. The earnings of the business and the amount contributed by Mr. Dunbar gave the new organization the (for that time) very considerable capital of \$20,000, and the business began to increase in a very satisfactory manner.

On November 1, 1873, the copartnership of "Willius Bros. & Dunbar" was succeeded by the "German-American Bank," organized under the laws of the State of Minnesota, with a paid-in capital of \$200,000.

The following named gentlemen were selected as the first officers and Directors of the new organization, viz.:

**OFFICERS:** Ferdinand Willius, President; Gen. Jno. B. Sanborn, Vice-President; Gustav Willius, Cashier.

**DIRECTORS:** Conrad Gotzian, George L. Farwell, Adolph Paar, Ferdinand Willius, William Lindeke, Gen. Jno. B. Sanborn, C. L. Zschetzsche,

THE NATIONAL GERMAN-AMERICAN BANK,  
ST. PAUL, MINNESOTA.

SEE PAGE 696.

Bernhard Michel, Gustav Willius, U. L. Lamprey, John Matheis, J. M. Keller and Christ. Stahlmann.

From this time forward the bank took its place as one of the most substantial institutions in the State, enjoying the full confidence of the community, and it is a matter of just pride and gratification to its friends and organizers that the position then taken has been held to the present time.

In January, 1883, it was again decided to increase the capital to \$500,000, but before this was consummated another arrangement was proposed, resulting in the reorganization of the bank as a National association. A charter was obtained from the Government, and with a subscription list of TWO MILLION DOLLARS OF PAID-IN CAPITAL the reorganization was perfected under the title of

THE NATIONAL GERMAN-AMERICAN BANK OF SAINT PAUL.

Succeeding to and continuing the business of the German-American Bank, the new institution, with its largely increased capital and rapidly-extending connections, covering all points in Minnesota, and reaching far north and west into the Territories, at once found itself in pressing need of additional room, not only to accommodate its increasing number of local customers, but also to properly systematize the business of its various departments, each one of which must now transact a volume of business, daily, which would many times exceed the entire business of the original bank. For the comfortable and convenient transaction of the business of the various departments additional space was required.

To meet this requirement the erection of the elegant and commodious building represented by the cut, shown in this issue of the JOURNAL, was commenced.

THE NEW BANK BUILDING.

This elegant building is one hundred feet front by one hundred and fifty feet in depth, and is six stories in height, exclusive of the sub-basement, and contains, including the banking room, Directors' room, and rooms of safety deposit vaults, nearly one hundred rooms, thirty-seven fire-proof vaults, and is undoubtedly the most commodious and well appointed office building in the Northwest.

The foundation, which was laid during the summer of 1883, is constructed of blue limestone, the bottom course consisting of massive blocks of stone, seven feet wide and fourteen inches thick, constituting a course of solid masonry seven feet in width, followed by two similar courses of masonry, all embedded in best hydraulic cement, and gradually diminishing in width to four feet, on which rest the cellar walls and piers, three feet in thickness, also laid in cement.

The first story of the superstructure is of massive blocks of red sandstone, from the Duluth and Bayfield quarries, and is laid up in the style known as "rock face," with the exception of the main entrance, which is formed by an imposing arch resting on a base of dressed stone, and embellished by carving in special designs and finely polished columns of jasper and porphyry. The remaining stories are of Philadelphia pressed brick, in combination with ornamentations of terra cotta, the general design suggesting to the observer immense strength and beauty of outline.

INTERIOR CONSTRUCTION.

The partitions within the building are constructed of terra cotta, carried by iron girders of great strength, sustained by heavy iron columns. Each floor of joists is protected on the upper side by a layer of "grouting" two inches in thickness and on the under side by slabs of terra cotta prepared for the purpose, on which are laid three coats of plaster, rendering the whole thoroughly fire-proof. As an additional protection against any possible

calamity by fire, a broad stairway, constructed entirely of iron, and supported on one side by brick walls, and on the other by independent iron columns, extends, by easy ascent, broken by broad platforms, from the sub-basement to the upper floor of the building. The elevator shafts, of which there are two, are constructed of masonry from bottom to top, and are entirely separated from the stairs, and open only into the main halls.

#### ENTRANCE.

There are three principal entrances from the street, two on Fourth street and one, the main entrance, on Robert street. There are also street entrances to all the offices on the basement or ground floor. Passing the ponderous carved oaken doors of the main entrance, the visitor finds himself in a large and beautifully tiled vestibule, with halls leading directly back to the Safety Deposit Vaults, and intersecting the halls from the Fourth street entrances. From the intersection of these halls start the main stairs and elevators. All office rooms on this floor also open into these halls. From the main vestibule a broad flight of cut stone steps, ten feet in width, resting on arches of masonry springing from the foundation, leads directly up to the main hall on the banking floor. This hall is also beautifully tiled and richly decorated with arches in stucco and in carved natural wood.

#### HALLS.

All office rooms open on the main halls, on the north side of which, and near the centre, are the stairs and elevators, in direct view from the door of nearly every room on each floor. This arrangement adds greatly to the convenience of all occupants desiring frequent use of the elevators and stairs. It also presents special advantages in enabling visitors and patrons of the occupants to locate any particular office without the slightest difficulty, and immediately upon stepping from elevator or stairs. A striking feature of the halls in this building is their ample dimensions—the principal hall on each floor being twenty-eight feet wide by seventy-two feet in length. The halls on banking and basement floors are broad, well lighted and beautifully tiled throughout.

#### BANKING ROOM.

Proceeding up the broad, easy stone stairway, and passing to the left through either of the four beautifully arched and carved doorways, the visitor finds himself in the banking room. This superb room is forty-two feet wide by one hundred and twenty feet in length, and from the tiled floor to the richly decorated ceiling is seventeen feet. The entire finish of this room, and also the counters and furnishings, are of natural woods, forming a harmonious combination of birch, birds-eye maple, cherry and magnolia, with carvings and panels finished in oil. There are in this room seven fire and burglar proof vaults, whose artistic finish add to its beauty, and give a sense of security for the treasures which may be stored therein. The ample accommodations, comforts and conveniences here furnished for the transaction of the business of the bank certainly leave nothing to be desired by the patrons of the institution. In fact this room should be seen to be appreciated, and must for many years stand peerless for beauty and fitness for its purpose.

#### PERSONNEL OF THE BANK.

For the information of the JOURNAL's readers we append a brief sketch of the present active officers of the bank:

GUSTAV WILLIUS, the President, has been connected with the bank from its inception to the present time, a period of about thirty years, during which

time he has actively participated in all its operations and is entirely familiar with the financial conditions and requirements of the Northwest. This long experience has thoroughly prepared and admirably fitted him for his present responsible position.

WILLIAM LINDEKE, the Vice-President, is not what may be properly called an active officer, he being senior partner in the firm of Lindekes, Warner & Schurmeier, one of the leading wholesale dry goods houses in the Northwest. He is, however, thoroughly conversant with all the operations of the bank, and his long residence in the city, his acknowledged ability and his high standing in commercial circles make him a pillar of strength to the institution.

JOSEPH LOCKEY, the Cashier, has been connected with the institution since its organization as a National bank. Prior to that time he was for some years National Bank Examiner. He is well-known to the banking community throughout all that section of the country and enjoys the full confidence of all who know him.

THEO. DRAZ, the Assistant Cashier, has been connected with the bank about four years in its various departments. He was formerly engaged in similar employment in New York city, is familiar with all the details of the vast business and is a very efficient helper in the management of the institution.

The following named gentlemen constitute the

BOARD OF DIRECTORS:

F. WILLIUS, late President German-American Bank; WILLIAM LINDEKE, of Lindekes, Warner & Schurmeier; CONRAD GOTZIAN, of C. Gotzian & Co.; FREDERICK DRISCOLL, Manager Pioneer Press Co.; ALEX. STERNBERG, Wholesale and Retail Clothing; F. KNAUFT, Capitalist; GEN. JNO. B. SANBORN, of J. B. & W. H. Sanborn; ALEX. M. DRAKE, of St. Paul; MATT. HOLL, of Holl & Parr; H. M. KNOX, State Examiner; P. R. L. HARDENBERGH, of P. R. L. Hardenbergh & Co.; CHANNING SEABURY, of Maxfield & Seabury; JAS. S. WEED, of Weed & Lawrence; J. H. ALLEN, of Allen, Moon & Co.; W. S. CULBERTSON, of New Albany, Ind.; G. WILLIUS, President; JOSEPH LOCKEY, Cashier.

---

**INFLUENCE OF PERSONAL CHARACTER IN BUSINESS.**—It would be hard to over-estimate the value of a first-class reputation—or, what is better still, that which a good reputation is based upon, a thoroughly reliable character—to a business man. An illustration of this is given in the following respecting the late Joseph N. Tuttle, Treasurer of the Howard Savings Institution, of Newark, N. J. The appreciation of his integrity and faithfulness to public trusts was never better manifested than when the old Newark Savings Institution failed a few years ago. The writer was passing along the street one morning and stopped at the door of the Savings Institution, where a large crowd had congregated—there was a heavy “run” on the bank—waiting to secure what they could of their deposits. He heard one man say to another: “Have you any money in this bank?” The other replied: “No; mine is all in the Howard.” “Well, don’t you know there is a big “run” on that bank this morning?” “Yes, I know it.” “Are you not going to draw your money?” “No, not while Joseph N. Tuttle lives and remains Treasurer of the bank.” Mr. Tuttle’s death is announced on the obituary page in this issue of the JOURNAL.

**Methods and Machinery of  
\*PRACTICAL BANKING.**

CONSISTING OF BRIEF DESCRIPTIONS AND SUGGESTIONS RELATIVE TO THE  
METHODS OF CONDUCTING THE BANKING BUSINESS; WITH APPROVED  
MODELS OF BLANK BOOKS AND FORMS FOR THE USE OF  
BANKS OF DISCOUNT, SAVINGS BANKS, ETC.

[Prepared expressly for the JOURNAL by the Cashier of a long-established bank, who  
had over twenty years' experience in practical banking, and who always sought  
for better and safer methods.]

**MONEY BY TELEGRAPH.**

This phrase sounds strange to persons unacquainted with all the new-fangled modes of doing business, and many business people who avail themselves of the telegraph in transmitting funds to points more or less distant are but little acquainted with the exact methods used in making these remittances. To make the matter clear, it may be well to say that banks and bankers have a way of getting money home "by telegraph" which is in very common practice. For instance, if the Hub National Bank, of Boston, finds itself short of legal-tenders to-day at 3 o'clock, and feels confident it will be shorter still at clearing to-morrow, while at the same time it has a very heavy but unsalable balance with its New York correspondent, the Gotham National Bank, of New York city, the Cashier of the Boston bank at once sends a telegram to the Cashier of the New York bank, asking him to remit immediately fifty or one hundred thousand dollars, more or less, in Boston funds, and to-morrow when the Boston Cashier arrives at his bank he expects to find fifty or one hundred thousand dollars on his desk, which has come by the night mail from New York in response to his telegram, in the shape of checks upon other Boston banks that may be shoved through the ten o'clock clearing and turned into greenbacks.

A more rapid way to telegraph is as follows: If you wish to send to Mr. Jones at No. 400 Wall street, New York, ten thousand dollars, and know Jones needs and must have the ten thousand at once, there are two telegraphic methods of making an immediate remittance. Go to Smith & Robinson, in Boston, who have a New York correspondent, hand them ten thousand dollars, and at your request they will telegraph to their New York house to pay Jones ten thousand dollars whenever he presents himself properly identified. You also telegraph to Jones to call at the New York house and get his money. When you have done this, and paid the Boston banker his commission, the remittance may be said to be made. Regarding the commissions paid for telegraphing they may be said to vary largely with circumstances. Bankers have no fixed tariff of charges for making telegraphic remittances, and as a class they do not run after the business. In fact, they consider its risks so great that they are generally reluctant to go into it. Any leading telegraph company will remit to all points reached by their wires and charge according to distance, asking, of course, more in proportion for small sums than larger ones. One per cent. on fair sized remittances to New York has been paid within the last few days.

Allusion has been made to the great risks attending this business. These must be evident to any one. Various methods are resorted to in the endeavor to avoid the risks. Large telegraph companies have an expert and reliable

# Prize Competition—Announcement.

---

*The Publishers of RHODES' JOURNAL OF BANKING offer a*

## PRIZE OF \$100

*(To be competed for solely by Bank officials, Bank clerks, or others connected with a bank or banking firm in some capacity),*

FOR THE **BEST DESCRIPTIVE ESSAY**, WITH FORMS, ON

## DOMESTIC EXCHANGES:

**How bankers can handle them to ensure**

**PROMPT returns and the greatest**

**ECONOMY and SAFETY.**

---

**NOTE.**—By "Domestic Exchanges" is meant all out-of-town collections—checks on banks, bankers, etc., in any locality—with special reference to checks on the smaller cities and towns, how to collect them without the trouble, risk, and loss of time incident to the present cumbrous and round-about system.

The plan might also include, secondarily, the shifting of funds between the great cities and different sections of the country and the reasons for the varying rates of exchange.

Any plan of Country Check Collection proposed should be accompanied by complete Forms, showing plainly to even the inexperienced bank clerk how to put the plan into actual practice.

---

*A condition of the competition is that not less than four Forms illustrative of the plan proposed—such as the design of Record Books, printed blanks, etc., to be used—shall be included and form a part of the article.*

*The text of the Essay when printed (exclusive of the Forms) should be sufficient to cover from six to eight pages of the JOURNAL—types to be the same as used in the Practical Banking articles now appearing therein. The matter must be written on separate sheets of paper, on one side only.*

*Each manuscript must be distinguished by a motto, accompanied by a sealed envelope marked with the motto, containing the name, address, and banking position of the writer, and must be sent in to the Editor before the FIRST DAY OF NOVEMBER next.*

---

**Judges.**—The following gentlemen have kindly consented to act as judges :  
Hon. H. W. Cannon, Vice-President National Bank of the Republic ; Mr. C. I. De Baun, Assistant Cashier National Park Bank ; Mr. Wm. H. Gillen, with Messrs. Brown Brothers & Co., *New York*. Mr. C. O. Billings, President Globe National Bank, *Boston*. Mr. R. J. Street, Second Assistant Cashier First National Bank, *Chicago*.

---

*The successful Essay will be published in RHODES' JOURNAL OF BANKING, and the publishers make it a condition of the competition that they shall have the right to publish all or any of the Essays sent in as their sole property.*

**BRADFORD RHODES & CO.,**

78 WILLIAM ST., NEW YORK.

{ Supplement to  
Rhodes' Journal of Banking,  
September, 1886. }

THE UNIVERSITY OF CHICAGO LIBRARY

officer termed a Transfer Clerk. He receives all money to be remitted by wire, writes the transfer order himself, in the company's cipher, and hands the same to an operator who has not the least idea of the character of the message he is sending. This message, after reaching the point of the money transfer, is repeated back to the sending Transfer Clerk, to guard against all frauds and errors. When bankers make remittances by wire they almost invariably use a cipher, and they have a custom of having their money messages repeated back to them, for the purpose of confirmation and accuracy, over a line, if possible, other than the one through which it was sent forward.

This cipher business seems curious to one not accustomed to it. Here is a copy of an actual cipher message with its translation :—

*Crawford Douglass & Co., New York:*

**Boston, August 5.**

**Ireland, Emily, Montana, Franklin.**

(Signed,)

**HUB BANK.**

This is an order upon a large New York banking house, and it reads :  
 "Buy for our account one hundred thousand coupon United States sixty-five May and November bonds at 113½."

It will be seen that the cipher can answer a double purpose. It may serve as a short-hand as well as a useful and safe disguise. In cable work, for money transfers, and various missions, the cipher is widely used. Not long ago there was sent to a Boston banker a notice of protest of a London sterling bill which came to him in cipher.

#### ENGLISH BANK RETURNS.

These are made after the same general form as those of the National banks of this country ; or, it might be more proper to say that our returns, like very many business ideas, are copied after the English. There was a time when the Bank of England, which now publishes a weekly statement of its condition, made no public showing of any description whatever, and would not even do so when called upon for such by the Government and Parliament. The English authorities are now exceedingly strict in requiring that returns of the banks shall be made in regular form and at the right time. All limited English banks are required to post in their registered offices on the first Monday of February in each year a complete statement of their liabilities and assets. An instance occurred of recent date where a London bank was summoned into a police court at Westminster for violating this return law (Act of 1862), and though the bank proved that it had posted in all its offices at the date required balance sheets giving more than the information demanded by law, but not in regular form, it was fined £5, and each Director fined 40 shillings, one-half the penalties going to the informer, who in this case happened to be a man who was endeavoring to levy black-mail upon the bank, professing to have information of value which he would sell to them for £1,000.

#### PAYING PART OF A CHECK.

A man came to the bank with a check upon it for \$900, drawn by a depositor in his favor in payment of a bill. The Paying-Teller declined to pay it, finding only \$700 to the credit of the drawer. The holder, who had good reasons for being anxious about his claim upon the drawer of the check, having heard that he was in a failing condition, resorted to an ingenious method. He deposited \$200 with the Receiving-Teller to the credit of the drawer of the check, and then, returning to the Paying-Teller, presented again his \$900 check, and was paid its full amount. He had by this shrewd move received only \$700 for a demand of \$900, but this in the end proved a very heavy dividend compared with what other creditors received from the suspending debtor.

There are interesting questions naturally raised in recalling a case of this description. Can a bank be forced to pay part of a check ? In the instance given could the holder of the \$900 check compel the bank to pass over the

\$700 deposited to the credit of the check drawer upon giving the bank the \$900 check? It is a curious fact that there are upon record no legal decisions covering this point. Without doubt any bank paying a part as described and receiving the voucher for the whole check would be doing a safe and justifiable thing. It is a perfectly regular and legitimate method for a bank to accept a deposit and pay a short check. There is nothing out of the way either in the movement of the check-holder or the bank. The one had a perfect right to give away his \$200 and the other to receive the deposit of the \$200 and pay the \$900 check when it was made good.

#### ILLEGAL HOLIDAYS.

These are in many points a source of annoyance both to the banks and their customers. We have in this country none too many bank holidays, and in the matter of closing days it would be a far better arrangement than the one now existing if we had more lawful bank holidays and fewer days of closing which have not been legalized.

There are several points having special reference to these irregular illegal bank holidays that need particular notice here. Where notes maturing on the illegal holiday are in the hands of the closing bank for collection it cannot oblige the promisors to take them up the day preceding. Most makers of paper are, however, in the cheerful habit of doing this. They shut up themselves on the holiday and are, of course, glad to attend to all business which matures thereon on the day in advance. But those exceptional customers who do not favor the closing, and do not close themselves or wish any one else to do so, know their rights and are often quite willing to maintain them. Their holiday-maturing paper, where the holiday is an illegal one, must be kept in hand by its holders until the close of business on the holiday in question, for it cannot be protested until then. If the paper is payable at a particular bank that bank must in effect be open at its regular hours on the illegal holiday in order to attend to this paper. Banks which shut under such liabilities for collection and presentment are in the habit of posting a notice upon their doors stating where their unpaid paper maturing on the closing day in question may be found and where presentments coming to them may be demanded.

Before a note which is not payable at a bank or any other specially named point other than the signer's residence or place of business can be protested it must be presented to and its payment demanded from the maker personally (if he can be found) at his place of business, or residence if he cannot be found at his place of business.

Makers of notes of this last-named type cannot be forced to hunt up their paper—to go to a bank, for instance, to pay; they can demand that the paper shall be brought to them before a legal demand can be made upon its endorers.

The bank which shuts on an illegal holiday with paper of this class maturing on such a day must be very careful to see that the paper in question is attended to in the manner we have suggested.

The embarrassments arising on illegal holidays in the matter of the disposal of the mails of a bank are often very serious. The bank which takes its letters out of the post office on such days hardly knows what to do with their contents, while the bank which does not go to the post office on illegal holidays frequently incurs very unpleasant responsibility.

Awkward embarrassments also sometimes arise in closing on illegal holidays in the matter of a bank's deposits. A dealer has been known to make trouble for his bank because it shut up his balance (made it inaccessible) on an illegal holiday when he needed to check upon it to meet notes or pay bills.

#### CERTIFYING BY WIRE.

The bank received a despatch asking if Robert Livingston's check was good for \$8,000, and to answer at once by wire. The simple word "yes" and nothing more was sent in reply. It would, as it turned out, have been far better for the bank to have replied to this check enquiry in a more careful manner, and to do so under all circumstances. In this particular case trouble came in the following manner. Before the \$8,000 check reached the bank for

collection the cash which made it "good" when the telegram was replied to had disappeared—had been paid out on other checks of Mr. Livingston's—and Mr. Livingston had failed. The bank was at once sued by the holder of the \$3,000 check on the ground that the "yes" despatch was a *bona fide* certification, and that the bank having said the check was "good" could be squarely held for its amount. The Court held to the contrary, deciding that when the bank said it was "good" it meant only that it was "good" then, making no promise to set aside its amount to meet the check whenever it should come round, and giving no guarantee that it should be "good" at any future time. This decision is of course in accordance with common sense and equity, yet the style of telegraphic reply to the enquiry is not one that can be recommended. In the case referred to it entailed upon the sender an expensive lawsuit and a narrow escape from final loss. The better way would be to reply "good at the present time" or "the drawer has that amount to his credit now," or in some hedging way, various forms of which will readily suggest themselves to any banker.

Bankers have sometimes attempted to set aside the balance which has been apparently certified by telegraph without the actual presentation of the check. Such a course would take on an embarrassing aspect were other checks of the same certified drawer to press for payment before the wired one should come round for the cash. Without doubt the holders of the interim checks referred to could enforce their payment.

#### PAYING BACK MONEY.

The note was payable at the counter of an adjacent bank. The bank holding it had discounted it for a dealer, whose endorsement it bore. At maturity the paper was presented and it was cashed. The same morning the bank which had paid the note discovered that it had done so in error; that the promisor had not the funds to meet the paper, and that their Teller had committed a gross blunder in cashing the paper. They asked that the money be refunded. The repayment of the money was made with some hesitation, for it was now apparent that the promisor of the paper had failed. The money was returned, however, and the note taken back and protested. The endorser of the paper, who was a very sharp but perfectly solvent man, heard that his bank had once collected the note, and on that ground refused to pay it. In the end the Courts held that the endorser must pay because he had not been released or compromised by the collection and repayment in question.

This interesting case is of a very suggestive character. Bank Managers and Tellers are always reluctant to pay back money which they have once collected upon endorsed paper which will in case of non-payment be thrown back upon third parties with whom they can have no immediate consultation. This is perfectly natural and justifiable. In all cases where the circumstances are similar to those described, where money is paid through a mistake by innocent parties acting for others, it is perfectly legal and good banking to pay it back. This point comes up very often, and very many bank officers, acting under a fear of incurring responsibilities similar to those which the indorser in this particular case endeavored to throw upon his bank, refuse point blank to refund payments which have once been made unless they are able to secure consent to this repayment from endorsers.

#### PEN PARALYSIS.

When he came to sign his name in the place pointed out he made his signature with his left hand with a slow and laborious effort, although he had in his previous calls for the same purpose given a bold, dashing and rapid autograph with a firm right hand. The helpless, aimless swinging of his right hand and arm and the sinister signature revealed at once the fact that he had met with a partial stroke of paralysis. He was a young, stalwart and active man and I could not but show a sympathetic surprise over his condition—a surprise of an enquiring character—which drew from him the explanation that considerable writing with that modern instrument of torture,

the steel pen, had brought upon him a stroke of pen paralysis or what is often termed scriveners' palsy or writers' cramp. He was a gentleman of wealth and culture and a great traveler. In the conversation we fell into over this unfortunate and rapidly increasing complaint some very interesting light was thrown upon it. I had long given considerable attention to this crippling disease and was deeply concerned in what he had to say about it. The palsy comes suddenly, often with very slight warning. In the case of one bank Cashier it seized upon the two forefingers of his right hand at a time when he never dreamed of his liability to such a complaint and at once utterly incapacitated him for an occupation which was pretty much his sole reliance. The pen dropped at once from his helpless fingers. The saddest thing about this complaint is that so far the highest authorities have written it down as incurable. Yet few sufferers from it are willing to give up in this way. And the most of them are nowadays working away under electric and massage treatment, believing there is hope for them in these two fields of practice. There is little doubt but that help is received by improving the general health and by persistent but gentle exercise of the hand and arm affected. The disease can in many cases be warded off by certain methods of self management. Among these may confidently be recommended to those persons who are much in slavery to the pen the use of the quill or the pencil upon soft paper and the cultivation of an easy and erect position in writing and easy and correct methods of holding the pen. All persons who are largely occupied in writing should systematically and thoroughly exercise the arms in any natural and unstraining work. Cutting wood, sawing wood, hoeing, raking and similar arm and hand-using labors are to be recommended as under this head. Walking, riding and driving are pleasant and recreative exercises. But these do not always call in play the writing muscles of the hand and arm.

#### HE HAD MOVED.

The bank received from a corresponding bank a draft for acceptance and collection which bore endorsements and was drawn for \$5,000 upon a party described upon the paper as being in business in the place where the bank receiving the paper for collection was situated. But this bank happened to know positively that the drawee had transferred his place of business to another city, and knew the number and street where the drawee was now to be found. The Collection Clerk asked the Cashier what should be done with the draft, whether it should be protested for non-acceptance, since the drawee was not in the city, or sent to the actual place of business of the drawee, where, without doubt, its acceptance could be obtained. There was some little discussion between the officers over the point, and the Collection Clerk claimed that in "Daniel on Bills and Notes" the position was taken that a draft could not be protested for non-acceptance until it had been presented at the actual place of business of the drawee; that, at any rate, any other protest would not hold the drawer or endorser. But, Daniel or no Daniel, the bank finally came to the conclusion that the only safe and proper course was to present the draft as drawn, and protest it in the city of the bank receiving it if not accepted. Cases like this often come up, and the course taken in the example cited is the correct one. Drawers of drafts should draw them on the right parties in the right places, and banks which handle them for collection should, in the absence of other instructions, follow the address upon the face of the paper as far as the town of the drawees is concerned.

#### BANK OFFICERS AS NOTARIES.

Officers of banks not infrequently hold notarial commissions. There are no legal obstructions either in the National Bank Act or in the statutes of any State to the assumption of notarial work by bank employees of any class. But it is certainly an open question whether such a combination of duties is to be recommended. The special work of the notary public of the period—that of protesting bank-held paper—is of a peculiarly delicate and responsible character. With reference to the responsibility attaching to the business it has been urged with no little degree of reason that where a bank officer

serves as notary the bank whose servant he is might be held responsible for all his notarial work.

There is a widely prevailing impression among business men that the work of a notary is light, heavily paid and quite devoid of risks and responsibilities. This is far from being the case. Many of our best notaries feel a deep anxiety about their work and hold that it is by no means overpaid. Their transactions, of which the law requires they shall keep a full and accurate record, are often the basis of sharp legal contests, and in person and by book they are often summoned to the witness stand.

In the matter of the delicacy of their professional duties it may be well to remember that there have been cases where the charge has been made against bank-officer notaries that they have been unduly willing to protest paper which by error and forgetfulness has been left unpaid on the hands of their bank when a little extra pains on their part, as bank officers, would have kept the paper out of their hands as bank-notaries.

#### **"ANGULAR" HANDWRITING.**

An advertisement in a metropolitan daily paper set forth that the advertiser (a teacher) was ready to teach the fashionable "angular" style of handwriting at fifty cents a lesson. This style is used most in aristocratic society in Europe. Penmanship that has character and individuality is a desirable acquisition, but legible and easily read writing is the most to be desired. This so-called angular penmanship is coming somewhat into vogue in society in this country and is in some cases being carefully taught in schools under the names of the English or Gothic style. It is of an objectionable type since it is indistinct.

A young lady from a first-class school was handed some MSS. with the request that she prepare a fair copy of it for the printer. The transcript she returned looked neat, regular, well spaced and free from errors and alterations, but it had one fatal defect. It was impossible to read it because it had been written in the Gothic style. The most experienced printer would be sure to stumble and growl over it. The leading cause of its indistinctness lay in the fact that there was not the slightest perceptible difference in the construction of the n's, m's and u's.

Any system of instruction in writing that countenances such a method as this should be put aside.

Manuscript where all the t's are firmly crossed, the i's strongly dotted, the n's made distinctly unlike the u's, and l's not like J's, can be deciphered very easily by the printer though others might condemn the hand as homely and not stylish writing.

The first point to be considered in teaching penmanship is legibility.

#### **BANKS AND LIFE INSURANCE.**

Both in England and in this country there has been a custom of late years with many of the largest and best managed banks of insuring through well-established guarantee companies the fidelity of their entire corps of officers, on the favorable terms which can by this method be made with the fidelity companies, and paying the cost of the policies at the expense of the bank. This is a practice deserving of high commendation, and doubtless the time is rapidly approaching when it will be very generally adopted by the banks of the United States.

There is another bank insurance step not uncommon with the English banks, but which is hardly known in America. There are banks in London and elsewhere in Great Britain which arrange schemes of life insurance for their entire staffs of clerks with first-class life insurance companies, paying either the whole or one-half the cost of the policies taken out. By such action as this the banks show a humane interest in the welfare of their officers and those dependent upon them which must strengthen the confidence of the employees in the management of the institutions they are connected with and deepen the ties of devotion to their best interests. And such generous insurance has also a tendency to turn the mind of the insured from thoughts of those speculative schemes so often entered into by the bank officer who sees little

hope of putting by provision for those dependent upon him out of the wages he receives.

Another English banking practice in the matter of looking after the interests of faithful employees deserves notice. It is a good custom and should be copied by the banks of this country. We refer to the superannuation schemes of the banks of London and other English cities by which provision is made for the comfortable retirement at an advanced age of those bank clerks who have by long and faithful service worn themselves out by hard work, and who have certainly won a title to a pension for the rest of their lives from the employers whom they have so well served.

#### LOOKING AFTER THE DEAD.

On the share-lists of many banks may be found the names of parties now dead who have been shareholders. Their property has passed into the hands of executors and administrators, but these representatives of the dead stockholders have not transferred the stock to the heirs and assigns. There seemed to them no particular necessity for doing this as long as they could collect dividends and pass them over to the proper parties and the bank or the successors to the shares did not press them to make the transfers. There are various reasons why it is not well to move along in this careless and indefinite way. The law providing for the settlement of estates of deceased persons expects and demands that such settlements shall be attended to within a reasonable time. If transfers of the character named are delayed embarrassing circumstances are apt to arise. Many such cases have occurred. The parties whose duty it is to administer may pass away and then the situation becomes complicated. The continuance year after year of collecting dividends under administrators' and executors' orders on the shares of parties deceased is an irregular practice and one that banks should not permit. This habit of delaying the work of making the proper transfers causes difficulty when the bank wishes to reach its individual shareholders for the purpose of reorganizing, liquidating, etc. Bank Cashiers are earnestly recommended to keep a close watch of their share lists with a view of pressing upon slow executors the necessity of making the changes in the holding names of shares belonging to estates which they have been deputed to settle. This watchfulness can be exercised and made effective at the time of collection of dividends. A few enquiries and suggestions then made will often serve as effectual reminders and lead to an immediate attention to the matter.

#### LEISURE TIME IN A BANK.

Large and small banks, very active banks and banks which are not stirring institutions are obliged to have their staff of officers of a size adequate to get through the work in the busiest times. Being from necessity so situated there are days when many of these officers have very little to do. But they have, nevertheless, to be at their posts waiting for business that will not come.

Banking is a very intermittent business. Sometimes bank officers feel as if they were nearly worked to death. At other times they find they have nothing to do. This is an unpleasant feature of their business. As long as they have to be at their desks they would rather have regular and steady work. As it is, what shall they do with their leisure time? Reading newspapers don't look well and does not give a business aspect to the bank, and, besides, they are an injury to the mind. This poring over one daily paper after another, reading and forgetting as soon as read many things which are not worth reading at all, is weakening to the mind. All business men should read the newspapers, but the question is how to read them—how much time to spend over them. The late Wm. H. Prescott, who was one of the busiest of scholars, told a friend that he gave just ten minutes a day to the daily papers. Mr. Everett had the same habit. A bank officer would do well to devote his time in the bank when he has leisure to perfecting himself in his profession by learning thoroughly every department of business that is going on about him. He can also make a practice of studying into the general science and philosophy of banking, finance and political economy.

## BANKING LAW.

### \* LEGAL DECISIONS AFFECTING BANKERS.

#### CHECK—PAYMENT BY BANK AFTER DEATH OF PAYEE AND AFTER INDORSEMENT BY HIM.

Plaintiff sued defendant to recover money that it had before paid on the same check. On September 18, 1885, McLennan, doing business in Detroit, gave his check to the order of Walsh, for certain merchandise purchased from him. The check was given to Phillips, who was the clerk of Walsh and had general authority to receive, indorse and otherwise deal with negotiable paper for Walsh. Phillips at once indorsed the check in blank in Walsh's name, but did not present it that day. That night Walsh died. Subsequently Phillips gave the check to Walsh's widow, and at her request presented it to the defendant, who paid it, and the money was given to Mrs. Walsh. When defendant paid the check it had no knowledge of Walsh's death. Subsequently the bank returned the check, with others, to McLennan, who turned it over to the plaintiff, and plaintiff sued upon it. The Court below gave him judgment. On appeal this judgment was reversed.

*Held*, As appears from the case, and as was admitted on the argument, the indorsement by Phillips has the same effect as the indorsement by Walsh. It is undoubtedly true that, generally, an indorsement not delivered is not sufficient to create the responsibility of an indorser. But where a person has, by his own act, given negotiability in appearance to an instrument drawn by another, which is an existing contract and valid, in his hands, and it gets into circulation and is paid by the person on whom it is drawn, without notice of anything wrong, the payment will be protected. The bank in this case acted on the faith of an indorsement which was put upon the check by Walsh's authority, and made the check payable to bearer. If it had been lost in that condition any *bona fide* purchaser could have collected it. There is no authority that we have found which holds that the death of a payee or indorser after a note has been negotiated can affect its negotiability further or prevent the drawee from safely paying it. A different question might have arisen in case of the death of the drawer. But there is little dispute that even then a payment of a genuine check in the due course of business by the bank, in ignorance of his death, would be protected. And while there is some authority for holding that death, when known to the banker, revokes the check so far as the drawer is concerned, the authorities, such as they are, go no further. Here the check itself was undoubtedly good and bound the drawer. It had been made payable to bearer before Walsh's death, and the bank knew nothing to impeach that condition. The payment was authorized by the apparent condition of the paper, for which Walsh was responsible, and was protected.

Further *Held*, That although what has been said is enough to dispose of the case, there is another equally conclusive answer to the suit. Plaintiff claims entirely as the holder of the check. There is nothing else in the case that he can rely on. A bank is not liable on a check unless certified or accepted. Checks are sometimes certified, which amounts to an acceptance. But that is the only form in which a liability can very well be created, unless,

\*All the latest Decisions affecting Bankers will be found in this Department as early as obtainable. The Editor of the Law Department of RHODES' JOURNAL will furnish, on application of subscribers, further information regarding any case referred to herein; he will also answer questions in banking law which may be of sufficient general interest as to warrant publication in this Department. A reasonable charge is made for Special Replies asked for by correspondents and not authorized for publication.

perhaps, by some recognition by estoppel, and under the statute every acceptance must be in writing. If the payment of the check was wrongful (and we think it was not) McLennan may have had a right of action; but it is not set up in the declaration and is not shown to be assigned to the plaintiff. Some cases were cited from Pennsylvania and elsewhere, which purport to be based on a conjecture thrown out by Judge Davis in *Bank vs. Millard*, 10 Wall., 152, the decision in which seems not to be supported at all by the case itself and inconsistent with it. That case held that where a check on a banker had been paid on a forged indorsement the right holder had no action on the bank to recover the same money over again. But a query was put whether, if the payment had been allowed in settlement with the drawer, the bank would not hold the fund for the payee instead of the drawer. But the Court had already held that such a payment was a misappropriation of the drawer's funds, and the money would be still subject to his order as if not drawn, and it is not obvious how the settlement made by mistake could change the case. Upon the only theory suggested, which is that such an arrangement amounts to an acceptance, this would be contrary to our statute, which does not allow a parol acceptance unless there was some conduct which would have an equivalent effect. Whatever force may have been given to the conjectural doubt of Judge Davis in the case in 10 Wallace has been entirely destroyed by the subsequent carefully-considered action of the same Court in *First National Bank vs. Whitman*, 94 U. S., 343, where it was decided that there was no action in any case in favor of the true owner of a check against the bank where the bank had paid it on a forged indorsement, and that the fact that it had been included in settlements made no difference. This put an end to any supposed favoring of the contrary doctrine in *Bank of the Republic vs. Millard*, which is distinctly affirmed, while the other inference is denied and reasons given for its fallacy. Our rulings upon the relations of banks and depositors have always denied any interest of the payee of an unaccepted check in the drawer's funds in bank, and have followed those of the United States Supreme Court. (13 Mich., 284; 55 Mich., 201.)

Judgment reversed.

*Brennan vs. Merchants & Manufacturers' Bank*, Supreme Court of Michigan, July 8, 1896.

#### DEPOSIT OF SIGHT DRAFT—CREDIT AS CASH—FAILURE OF BANK.

Plaintiff deposited with the Marine National Bank, of New York, of which defendant is Receiver, a sight draft on parties in Boston. The bank was insolvent at the time, but forwarded the draft to its collecting agent at Boston, and the amount was paid to such agent after the failure of the Marine Bank. There was no express arrangement or understanding between the plaintiff and the bank that such deposit should be treated as cash, but the amount of the draft was credited by the bank on its own books to the plaintiff as a cash item.

*Held*, The question is whether the draft belonged to the plaintiff at the time it was paid by the drawee? If it did the defendant did not acquire title to the money. If the transaction in controversy was equivalent to a discount of the draft the bank acquired title to the paper; if it was not, the bank merely became the agent of the plaintiff to collect the proceeds. The case of *Metropolitan National Bank vs. Lloyd*, 90 N. Y., 531, is an authority directly in point against plaintiff's right to recover. In that case the plaintiff deposited with the bank a check drawn upon another bank in a different city indorsed by him, and the amount of the check was entered by the bank upon the pass-book of the depositor as cash with the depositor's knowledge. It was held that the bank became the owner of the check. The opinions delivered in this case, both in the Court of Appeals and in the Supreme Court, are a full and able discussion of the questions involved, and contain a full review of the authorities bearing upon them. On the other hand, the case of *Balbach vs. Frelinghuysen*, 15 Fed. Rep., 675, decided by the Circuit Court of the District of New Jersey, follows the views expressed in "*Morse on Banks and Banking*" (page 427), and holds that the checks so deposited do not become the property of the bank, although by the course of business between the depositor and the bank the depositor

has been allowed to draw against the deposits before the paper has been actually collected.

Further *Held*, That when a sight bill is deposited with a bank by a customer at the same time with money or currency, and a credit is given him by the bank for the paper just as a like credit is given for the rest of the deposit, the act evinces unequivocally the intention of the bank to treat the bill and the money or currency, without discrimination, as a deposit of cash, and to assume towards the depositor the relation of a debtor instead of a bailee of the paper. If the customer assents to such action on the part of the bank by drawing checks against the credit, or in any other way, he manifests with equal clearness his intention to be treated as a depositor of money, and, as such, as a creditor of the bank instead of a bailor of the paper. Under such circumstances it should be held that the bank acquires title to the paper just as it would to a deposit of money. The intention of the parties in the particular transaction may be ascertained from the course of their previous dealings. When it appears that it has been the uniform practice between the parties in their past dealings to treat deposits of paper as deposits of cash their intention to do so in the particular transaction should be inferred in the absence of new and inconsistent circumstances. It is quite certain that bankers do not invariably credit their customers for sight paper as for cash, but are generally influenced by the financial responsibility of the customer, or the drawee of the paper, or both. If a bank does not wish to assume the relation of a debtor for the paper to the depositor this intention may be manifested in a very explicit manner by crediting the paper as paper. This was done in *Thompson vs. Giles*, 2 Barn. & C., 422; in the case of *Rowton*, 1 Rose, 15; and in the case of *Sargent, Id.*, 153. Some significance must be attached to a credit entry of the bill upon the books of the bank as cash, and the natural implication would seem to be that the bank, by making such an entry, assumes to receive the bill as money. Correlatively, if the depositor understands that the bank proposes to receive the paper as money, and assents, expressly or by acquiescence, it would seem that he consents to part with the title to the paper. For these reasons the conclusions reached in *Metropolitan National Bank vs. Lloyd* are adopted as satisfactory.

Decree for defendant.

St. Louis & S. F. Ry. Co. vs. Johnston, Receiver, United States Circuit Court, Southern District of New York, April 21, 1886.

#### SUIT BY RECEIVER OF NATIONAL BANK—JURISDICTION OF CIRCUIT COURT.

The Receiver of an insolvent National bank, which was located in Vermont, brought suit in the Circuit Court of Vermont against defendant to try the title to certain bonds. Defendant claimed that the Court had no jurisdiction.

*Held*, No question would be raised but that the Court had ample jurisdiction of the suit prior to the Act of Congress of July 12, 1882, which provided that the jurisdiction of suits thereafter brought by or against National bank associations should be the same as, and not other than, the jurisdiction for suits by or against banks not organized under any law of the United States which do or might do banking business where such National banking associations may be doing business when such suits may be begun. That under that Act this Court had no jurisdiction of such a suit as this between a State bank located where this bank was and the defendant, and neither would it have jurisdiction if this bank had continued business in its own right and brought this suit. It is argued that the Receiver has no greater rights than the bank, and merely represents it, and that, therefore, the jurisdiction is the same as, and not other than, it would have been if the bank while doing business had brought the suit. This argument appears well enough founded to the extent that the Receiver stands upon and represents merely the rights of the bank as to the matter in controversy (17 Wall., 19; 14 Wall., 383). But this does not determine the full meaning of the Act of 1882. The purpose of that Act appears to be to put National banks, as such, in the same situation as State banks for the purposes of suing and being sued. No State bank, nor other bank not a National bank, could be in the situation in which this bank is. It

is wholly in the hands of the Receiver for the purpose of having its affairs wound up, and is not doing, and cannot do, any business whatever anywhere. It was brought into this condition by proceedings under the laws of the United States. The Receiver was appointed to his position by an officer of the United States, and is himself an officer of the United States and acts as such in bringing this suit. A suit in behalf of a corporation created by Act of Congress arises under the laws of the United States, although the cause of action itself is founded on the common law or other statutes. The right of the Receiver to sue arises in the same manner. He cannot proceed at all without invoking the aid of laws of the United States. The Court then holds that the Act of 1882, though it appears to take away the right of the bank, as such, does not affect the right of the Receiver to sue; and that the receivership is an entire thing, provided for, controlled and regulated by the laws of the United States through the Comptroller and the Courts of the United States within the district.

*Hendee vs. Connecticut & P. R. R. Co., United States Circuit Court, District of Vermont, March, 1886.*

#### PRESENTMENT OF CHECK—FAILURE OF BANK—EXTENSION OF TIME BY DRAWER.

A person who receives a check on a bank located in the same place that he receives it must, in the absence of special circumstances, present it the same day, or at latest the day after it is received, in order to hold the drawer in case of the failure of the bank. If, however, the person who receives the check and the banker on whom it is drawn are in different places, in the absence of special circumstances the check must be forwarded for presentment on the day after it is received, at the latest; and the agent to whom it is forwarded must in like manner present it, at the latest, on the day after he receives it to hold the drawer should the bank fail in the interim.

The time within which a check must be presented in order to hold the drawer in case of the failure of the bank may be extended by the assent of the drawer, express or implied.

Where the presentment of the check had been delayed by reason of its having been sent through the Clearing-House,

*Held*, The Clearing-House, and the method of conducting business through it, has no bearing upon the drawer's liability.

*Holmes vs. Roe, Supreme Court of Michigan, July 1, 1886.*

#### TRANSFER OF STOCK—UNRECORDED—PRECEDENCE OVER SUBSEQUENT ATTACHING CREDITOR.

Plaintiff sued defendant for damages by reason of its refusal to transfer 75 shares of its capital stock and to issue to him a certificate therefor. On December 30, 1875, the shares stood in the name of R. R. H., who on that day sold them to plaintiff and assigned them by a transfer written on the back of the certificate. On June 26, 1877, the shares were attached in a suit brought by P. C. against R. R. H., and on December 14, 1878, were sold under execution in that suit and were transferred to the purchaser on the books of the defendant. In January, 1880, plaintiff presented his certificate and his transfer to the officers of the bank and demanded that they be transferred to him and a certificate issued therefor, with which demand the officers refused to comply. Neither the bank nor the attaching creditor received notice of the transfer to the plaintiff or had knowledge of the same before the demand was made by him as above stated. The by-laws of the bank provided that shares of stock shall be transferred only on the books of the corporation.

*Held*, The question is whether an attachment of stock will take precedence of an unrecorded transfer of which the attaching creditor had no notice. The question has been much debated and has been differently decided in different jurisdictions. It is settled for this Court in a case involving the title to shares of stock in a National bank by the authority of the decision in *Bank vs. Lanier*, 11 Wall., 369. See also *Continental National Bank vs.*

Eliot National Bank, 7 Fed. Rep., 869. The defendant, therefore, is liable in damages for the refusal to transfer the shares.

*Hazard vs. National Exchange Bank of Newport*, Circuit Court, District of Rhode Island, January 15, 1886.

#### PAYMENT OF DRAFT TO WRONG PARTY—LIABILITY OF BANK.

An unknown party, impersonating one Daniel Guernsey, who owned land in Butler County, Kansas, applied to the agent of the plaintiff, and after negotiation obtained a loan upon such land, executing a mortgage and notes in the name of said Daniel Guernsey. The plaintiff thereupon bought a draft from the Exchange Bank of Eldorado on the defendant, the Emporia National Bank, payable to Daniel Guernsey, and caused it to be mailed to said Daniel Guernsey for such loan. It was received by the impersonator of Daniel Guernsey, and on presentation to the bank, indorsed by him with the name of Daniel Guernsey, was paid. The real Daniel Guernsey was out of the State at the time and knew nothing of the transaction. Subsequently plaintiff, having obtained an assignment from the Eldorado bank of all their interest in the draft, sued defendant to recover the money so paid, on the ground that the same was paid on the forged indorsement of Daniel Guernsey.

*Held*, That plaintiff could not recover. The Court cites the recent case of *Robertson vs. Coleman*, Supreme Court of Massachusetts (reported in *RHODES' JOURNAL*, May, 1886, page 368), as being analogous, and holds that the vital point in the case is that plaintiff intended the draft to be sent to the party executing the notes and mortgages, and intended it to be paid to the person to whom he sent it and whom he designated by the name of Daniel Guernsey, because that was the name which he assumed in executing the notes and mortgages, and therefore the defendant is protected in paying the draft to the very person whom plaintiff intended to designate by the name of Daniel Guernsey.

*Emporia National Bank vs. Shotwell*, Supreme Court of Kansas, June 4, 1886.

#### DEPOSIT IN BANK BY ORDER OF COURT—INSOLVENCY.

Where an order of Court appointed Receivers of a railroad who were directed to carry on and operate the same, and directed that the Receivers deposit the money coming into their hands in certain banks; and where the carrying on and operating of such railroad by the Receivers contemplated and required the handling, receiving and paying out of money, the payment and collection of bills, and the transaction of such financial business as would require the medium of and accommodation of banks; and where one of the aforesaid banks failed and refused to pay the checks of the said Receivers and assigned its property for liquidation,

*Held*, In an action against its President and Directors for contempt of Court, on the ground that the bank and its officers were officers of the Court, and therefore directly responsible to the Court for misappropriation of the moneys deposited by the Receivers under the order of the Court, that in the transaction of this business the moneys were not deposited as special funds to be drawn out on order of the Court, but were deposited generally to the credit of the Receivers, and to be handled and used by the bank like the deposits of its other patrons in a banking, loan and discount business.

Rule for contempt discharged.

*Southern Development Co. vs. Houston & T. C. Ry. Co. et al.*, Circuit Court, Eastern District of Texas, March 15, 1886.

#### CHECK—ASSIGNMENT OF FUND—APPLICATION OF FUNDS TO NOTE.

No action at law, nor suit in equity, can be maintained against a bank by a payee upon the mere possession and production of a check by him; there must be besides the possession of the check some other circumstances which either create a contract between the payee and the bank or which equitably require that the funds in the possession of the bank should be appropriated to

the payment of the particular check. One of these equitable circumstances is the insolvency of the drawer.

It is equitable for a bank which is the holder of a note payable thereat upon the day on which the same falls due, and at any time during that day, having funds of the maker in its possession, to apply those funds to the payment of that note, although by so doing it leaves nothing standing to the credit of the maker to apply on checks drawn by him. As between the bank which is the holder of a note due and the payee of a check upon that bank the equities are in favor of the bank; or, at least, if the equities are equal, legal title to the funds and possession is with the bank and it should not be postponed.

*Schuler vs. Laclede Bank*, Circuit Court, Eastern District of Missouri, April 12, 1886.

#### BANKER'S LIEN.

A bank has a general lien on the money and funds of its depositor in its vaults for the payment of the balance of the general account of the depositor. So, when the depositor is indebted to the bank, his funds in the bank may be applied to the payment of the debt at its maturity, and a failure of the bank to make such an application has been held to discharge the indorser or sureties. Where, however, securities are pledged to a banker for the payment of a particular loan or debt, the bank has no general lien for the payment of any other indebtedness, and it cannot assert such a lien to prevent the distribution of the surplus among the general creditors of the pledgor.

*Masonic Savings Bank vs. Bangs*, Court of Appeals, Kentucky, May 5, 1886.

#### PROMISSORY NOTE—INDORSEMENT BY WIFE—LIABILITY.

Where a promissory note was made by H to the order of his wife, who, before the delivery thereof, indorsed on the back thereof the following:

Pay to the order of Mrs. Louisa P. Peet. For value received I hereby charge my separate estate with the payment of the within note.  
(Signed,) GEORGINA I. HOTCHKISS.

and where, there having been no protest or notice of non-payment of the note, the wife was sought to be held liable as joint maker,

*Held*, Defendant is not liable on the note as joint maker. Her liability was that of an indorser.

Judgment for defendant.

*Hosford vs. Hotchkiss*, United States Circuit Court, Eastern District of New York, April 12, 1886.

#### NEGOTIABLE INSTRUMENT—LIABILITY OF ACCOMMODATION INDORSER.

Certain railroad bonds having been indorsed by the State, and having been misapplied by the company in violation of the terms of the statute under which they were indorsed,

*Held*, The indorsement creates no liability against the State while the bonds remain in the hands of the contractor, or are in the hands of any other person who had or was chargeable with notice of such misapplication; but the indorsed bonds being negotiable instruments and governed by the rules applicable to other negotiable paper, the State becomes liable as an accommodation indorser to any *bona fide* holder who acquired them for value in the usual course of business without knowledge or notice, actual or constructive, of the misapplication by the company and the contractor.

*Morton & Bliss vs. New Orleans & Selma R. R. Co.*, Supreme Court of Alabama, 1886.

#### CERTIFIED CHECK—LIABILITY OF BANK—DUTY OF AGENT FOR COLLECTION.

In the case of a certified check the bank certifying is primarily liable for its payment. It is not reasonable care and diligence for an agent who receives a certified check for collection to send it directly to the bank certifying for

payment. The agent should send it to a correspondent or agent in the same place for collection. If it has no correspondent or agent at that place it should so inform the holder, and then act on his directions.

*Drovers' National Bank vs. Anglo-American Packing Co.*, Supreme Court of Illinois, May 15, 1886.

**PROMISSORY NOTE—ILLEGAL CONSIDERATION—VOID IN HANDS OF INNOCENT HOLDER.**

Suit on two promissory notes given for an "option deal" in grain. Both were sold and transferred by the respective payees to this plaintiff, before due, and without notice of any alleged infirmity.

*Held*, The notes were void under the laws of the State of Illinois, where they were executed, and being void when they were given they were void for all purposes and for all time, and any number of transfers would not avail an innocent holder.

Plaintiff cannot recover.

*Root vs. Merriam*, Circuit Court, District of Nebraska, June 26, 1886.

**PROMISSORY NOTE—DUE BILL—WHEN DUE.**

Action on the following instrument :

DECEMBER 20, 1882.

Due P. Balcom the sum of two hundred and fifty dollars, value received, with interest at ten per cent. per annum after four months from date.

GEORGE S. LEE.

M. J. LEE per GEORGE S. LEE.

*Held*, That the instrument was a promissory note, and was due and payable at the time of its execution. That the words "after four months from date" refer to the next antecedent subject, viz., "with interest at 10 per cent. per annum," making the interest and not the principal payable "after four months from date."

*Lee vs. Balcom*, Supreme Court of Colorado, May 17, 1886.

**DEMAND NOTE—WHEN DUE—REASONABLE TIME.**

In this country a promissory note payable on demand has always been held to be overdue so as to subject any one taking it to all defences to which it would be open in the hands of the payee unless transferred within a reasonable time after its date, and what is reasonable time is a question of law depending upon all the circumstances of the particular case.

113 U. S., 476, 501; 7 Johns., 70; 15 Pick., 92; 13 Vt., 495.

The difficulties of applying this test and the convenience of a more definite rule have led the Legislatures of many States to regulate the matter by statute. The power of the State Legislatures to establish such a rule prospectively with regard to promissory notes made and payable within their respective jurisdictions has not been and cannot be doubted.

*Paine vs. Central Vermont R. R. Co.*, Supreme Court of the United States, May 10, 1886.

**CERTIFICATE OF DEPOSIT PAYABLE AT FUTURE TIME—LEGALITY OF ISSUE BY NATIONAL BANK.**

Where a National bank issued a certificate of deposit payable at a future time,

*Held*, The certificate of deposit was not illegal, as being in violation of the Revised Statutes of the United States, section 5,183, which forbids National banks to issue any other notes, to circulate as money, than such as are authorized by the provisions of the statute. Adjudicated cases show that certificates of deposit bearing interest or payable at a future date have often been before the Courts, and in the absence of statutory prohibition they have not been

deemed open to legal objection on this ground (18 How., 218; 14 Conn., 363; 6 Watts & S., 227; 36 Pa. St., 498; 25 Mich., 191; 19 Ill., 890; 11 Ohio St., 449.)

Matter of Hunt, Trustee, Supreme Court of Massachusetts, May 7, 1886.

#### CERTIFICATES OF DEPOSIT IN NATIONAL BANKS—NOT POST-NOTES—WHEN DUE.

Certificates of deposit of the usual form, issued in the ordinary course of banking business and not designated or adapted to circulate as money, are not post-notes within the prohibition of section 5,183 of the Revised Statutes. A certificate of deposit payable to the order of the depositor on return of the certificate is not due or payable until demand made and return of the certificate (107 Pa. St., 336).

Riddle vs. First National Bank, Circuit Court, Western District of Pennsylvania, April 21, 1886.

#### PROMISSORY NOTE—CONTRACT.

Action on the following instrument:

Two years from date, for value received, I promise to pay J. S. King, or bearer, one ounce of gold.	E. P. SMITH.
---	--------------

*Held*, Although the paper has the form of a promissory note it is not such and cannot be treated as such in pleading. It must be treated as a simple contract for the delivery of merchandise.

Roberts vs. Smith, Supreme Court of Vermont, June 24, 1886.

#### PROMISSORY NOTE—PAROL EVIDENCE.

Parol evidence is inadmissible to vary and contradict by an alleged contemporaneous verbal agreement the contract which the parties had reduced to writing, and where it is offered to show that a promissory note in the usual form was not intended by the parties to be a promissory note but was a mere memorandum by which the maker promised nothing, which gave no rights to the payee, and was to all intents and purposes vain, futile, and of no force or effect whatever; it is clearly inadmissible for such purpose.

Burnes vs. Scott, Supreme Court of the United States, April 5, 1886.

#### POWERS OF BANK CASHIERS.

*Continued from page 610, August number of the JOURNAL.*

*VIII. Power to Indorse the Negotiable Paper of the Bank.*—The Cashier has the power and is the proper officer to indorse the negotiable paper of the bank. In *Fleckner vs. The Bank of the United States*, 8 Wheat., 338, Judge Story, of the Supreme Court, holds that the indorsement of negotiable paper falls within the ordinary duties and rights belonging to the Cashier; that the Cashier is usually entrusted with all the funds of the bank in cash, notes, bills, etc., to be used from time to time for the ordinary and extraordinary exigencies of the bank; that he receives directly, or through the subordinate officers, all moneys and notes; that he delivers up all discounted notes and other property when payments have been duly made, draws checks from time to time for moneys whereof the bank has deposits, and, in short, is considered the executive officer through whom and by whom the whole moneyed operations of the bank in paying or receiving debts, or discharging or transferring securities, are to be conducted; and that it does not seem too much to infer, in the absence of all positive restrictions, that it is his duty as well to apply the negotiable funds as the moneyed capital of the bank to discharge its debts and obligations.

In *City Bank vs. Perkins*, 29 New York Reports, 569, it was held that the Cashier is the financial officer of the bank and the only person who can

transfer negotiable paper belonging to it by his indorsement. That his authority to make such transfer for a legitimate purpose is undoubted.

In *Robb vs. Ross County Bank*, 41 Barbour, 591, it was held that, in the absence of evidence or finding tending to show that the charter of a bank contained any restriction or limitation on its power of negotiating or indorsing notes or bills of exchange, or on the authority of its Cashier to indorse such negotiable paper for the bank, the presumption is that the bank has power and its Cashier authority to negotiate or indorse the bill.

The indorsement of negotiable paper made by the Cashier acting in his official capacity for the bank is sufficient evidence that he acted by its authority.

*Cooper vs. Curtis*, 30 Me., 400.

The Cashier of the bank is the proper officer to transfer and indorse the bills receivable of the bank.

8 Miss., 203.

*Prima facie*, the Cashier of the bank is deemed to have authority to transfer and indorse negotiable securities held by the bank for its use and behalf.

*Bank vs. Wheeler*, 21 Ind., 90.

The foregoing decisions show how the Courts have treated the question of the Cashier's power to indorse the negotiable paper of the bank, and establish the rule that such indorsement is an act which falls within his power as one of his ordinary duties. On the question of whether a clerk, temporarily acting in the place of the Cashier, has this power, it has been held that although a clerk, acting in the absence of the Cashier, would have authority to transmit negotiable paper for collection, and indorse it for that purpose, yet he would have no power or authority to otherwise transfer or dispose of it.

*Potter vs. Merchants' Bank*, 28 New York, 650.

## REPLIES TO LAW AND BANKING QUESTIONS.

*Editor Rhodes' Journal of Banking:*

THREE RIVERS, Mich, July 30, 1886.

SIR:—Will you please inform me in your next issue of the JOURNAL if the enclosed check would be payable, less the exchange, or with the exchange:

\$—.	THREE RIVERS, Mich, —, 1886.
THREE RIVERS NATIONAL BANK,	
PAY TO .....	OR BEARER
.....	DOLLARS
Payable in New York Exchange at current rate.	
No. —.	....., .....

E. E. W., Assistant Cashier.

*Answer.*—It is payable in whatever amount would be necessary to place in New York the amount called for by the check.

*Editor Rhodes' Journal of Banking:*

WATSONTOWN, PA., August 22, 1886.

SIR:—As a subscriber to your valuable JOURNAL, I beg leave to submit for your opinion the inquiry and answer given below in regard to protest of over-due check:

*Editor Thompson's Bank Report:*

WARREN, Pa., June 30, 1886.

"Yesterday, the 29th, we received from one of our bank correspondents a check of which the following is a copy:

"\$65.00 on June 18th.	"JUNE 8, 1886.
"Pay to the order of John Doe, sixty-five 60-100 dollars.	
"To First National Bank.	"A. & B."

"The 'on June 18th' being written above the 'Pay to the order of.' The check was presented and payment refused. Reason assigned was 'no funds.' At the close of business we handed the check to a notary and he objected to protesting it, as according to his idea it should have been protested on June 18th, and that if he should protest it it would have the same effect as protesting any other past-due paper. Is he correct or is the check payable on demand at any time on or after June 18th and subject to protest the same as any other check?"

*Answer.*—A past-due note or check may be protested but the effect of it is simply to notify the maker that he is looked to for payment. The endorser is released unless protest is made on or before the last day of grace. There is really

no necessity for protesting the maker, and we therefore are of the opinion that the notary was right in declining to protest."

Is the answer correct, and, if so, would it be if the check were necessarily delayed beyond the time it was due by the time required in passing through different hands to the bank on which it was drawn? A reply to your next issue will oblige,

H. DUNKEL, Cashier.

*Answer.*—The statement in the answer referred to, that the "indorser is released unless protest is made on or before the last day of grace," is erroneous, as in the case of an instrument entitled to grace a protest made before the last day of grace would be premature; and as applying to the check in question such statement is also erroneous because, in the first place, no question of grace arises with regard to that instrument, and, furthermore, because the indorser of a check is not released if it is not presented on the day it is payable, but only in the event that the presentment is not made within a reasonable time. The law applicable to the case may be stated as follows:

The drawer of a check remains liable thereon and is not discharged by a failure to present the same within a reasonable time unless he has sustained some loss or injury by reason thereof, as, for example, the failure of the bank on which the check is drawn, and then he is only discharged to the extent of such loss. As to the indorsers, however, they are absolutely and entirely discharged if presentment be not made within a reasonable time and due notice given.

6 Wend., 445; 2 Hill (N. Y.), 429; 6 Cowen, 490; 4 Duer, 129; 1 Kelly (Ga.), 304; 2 Litt., 298.

The question of what is a reasonable time within which to present a check in order to hold the indorsers depends very much upon the circumstances of each particular case. In the case of *Northwestern Coal Company vs. Bowman*, in the Supreme Court of Iowa, decided in June of this year (reported in the August number of the JOURNAL at page 608), the Court holds that an indorser is liable if the holder uses due diligence in forwarding the check for presentment; that the general rule is that he must deposit it in the mail on the day on which it is received or on the next succeeding day (citing 40 Me., 60; 20 Wend., 192; 43 N. Y., 171), but that this rule may be varied by the particular circumstances of the case; that the presentment, however, must be made in every case with all the dispatch and diligence consistent with the transactions of other commercial concerns (10 Wend., 304). And in that case, where the holder of a check retained it for seven days for no other reason than that it chose to send it forward through the local bank with which it did business, and it did not suit its personal convenience to deposit the check at an early date, the Court held that this clearly was not the exercise of that degree of diligence required by the law with reference to such transactions, and the indorser was released.

Our correspondent will thus see what the law is on the subject of the liability of the drawer and indorsers of a check. The drawer is not released by a failure to present unless he suffers damage, and the indorser is not released provided the presentment is made within a reasonable time. If "the check was necessarily delayed beyond the time it was due by the time required in passing through different hands to the bank on which it was drawn," and there was no delay that could be avoided by due diligence, we do not think that the time thus consumed would be unreasonable.

In the case referred to above, where the check was payable on June 18th and not presented till eleven days thereafter, there was no necessity for protesting the drawer; but we think a protest should have been made and notice given to the indorsers, as there might have been special circumstances in the case which would have rendered the eleven days' delay not unreasonable.

*Editor Rhodes' Journal of Banking:*

BOWDOINHAM, Me., July 23, 1886.

*SIR:*—A country bank sent for collection through its Boston reserve agent a note payable at another country bank. The Boston agent delivered the same to an express company for collection. Meanwhile the original holder of the note tells us to notify the bank when the note is payable, and to advise by wire if note is not paid. The note

however, is not delivered to the bank where payable, but is returned by the express company's agent, who notifies the drawer. We receive no notice of non-payment until six days after maturity through regular channels. Who is to blame?

H. P. KENDALL, Cashier.

*Answer.*—The note should have been presented to the bank where it was payable at maturity. The express company who failed to do so is ultimately liable if any loss resulted by reason of its negligence whereby any prior indorser was released. Of course the maker still remains liable. Assuming that loss resulted from the negligence of the express company, the question arises. Who is primarily liable? If the holder deposited the note with our correspondent for collection, it is uncertain in Maine whether the Courts would hold it absolutely liable for the negligence of any sub-agent, or simply to the exercise of reasonable care in the employment of a responsible agent to collect the note. There is a conflict of authority on this question in different States. The rule in Massachusetts is that a bank with which paper is deposited for collection is not absolutely liable for the default or neglect of its correspondent, but only for the selection of a proper sub-agent.

*Editor Rhodes' Journal of Banking:*

SPENCER, Ia., August 16, 1886.

SIR:—Will you please answer through your JOURNAL the following questions: We receive a draft for collection as follows:

\$60.	DENVER, Col., August 9, 1886.
Pay to the order of City National Bank, with exchange, sixty dollars, value received, and charge to account of	A. M.
To F. S., care of First National Bank, Spencer, Ia.	

The drawee lives in the country three miles from town. The draft has several endorsements of other banks on it.

1. Can this draft be protested by presentation to the First National Bank, or must it be presented to F. S. by notary?

2. Is the notary expected to go to the expense of going to F. S.'s residence to present it, or will the bank be justified in giving notice to F. S. by mail and holding draft until answer is received?

3. If draft was drawn simply to F. S., and not in care of the bank, would that alter the case any?

4. Is draft worded as above a "demand" draft?

5. By the laws of this State "all bills of exchange, drafts and orders payable within this State, except those drawn payable on demand, shall be entitled to grace." Can a draft drawn "at sight" be called a "demand" draft? CASHIER.

*Answer.*—1 and 2. The draft being addressed to the drawee at the First National Bank and payable thereat, its presence there was a sufficient presentment to the drawee, and we think that the notice by mail to him was all that could be required in the exercise of due diligence by our correspondent.

3. If, however, the draft was drawn simply to F. S., without any address, and sent to our correspondent for collection, it knowing that F. S. resided three miles from town, we think that, in the exercise of its duty as collecting agent, our correspondent should cause a personal presentment to be made either at the residence or place of business of the drawee.

4. A draft or bill in which no time for payment is mentioned is payable on demand, and therefore not entitled to grace.

First National Bank vs. Price, Supreme Court of Iowa, 1879.

5. A draft drawn at sight is not a demand draft.

*Editor Rhodes' Journal of Banking:*

DETROIT, Mich., July 23, 1886.

SIR:—Will you kindly reply to the following:

1. A. in Detroit, makes his accommodation note to order of B and C, of New York, each of whom endorses it in blank. B is to endeavor to get the paper discounted by his bank in New York, but, not succeeding, returns it to A and endorses it again payable to his (A's) order so as to protect it while in transit. It

is claimed that this endorsement to the maker nullifies the endorsements. Query: Is this the case? and, if not, is the liability of B greater than that of C, the former having first endorsed jointly with C and subsequently alone?

2. I should like to have the opinion of yourself and readers as to the propriety of the conditional "good-when-properly-endorsed" certification, as advocated by the writer of "Practical Banking" (whose untimely death is to be regretted) in his article in your June issue, page 434. I am aware that this form of certification is well established and extensively employed—we use it ourselves quite frequently—but is it equitable? It does not to me appear just that a check not entitled to payment by reason of an omission on the part of the payee or subsequent owner should receive certification, which is practically the same thing as between the holder and the drawer, and thus preempt the latter's balance to the exclusion, perhaps, of later-presented checks the owners of which have committed no fault. It would seem not unfair that the holder of the "lame" check should assume any risk involved by delay in payment caused by his own carelessness. Again, if the check in its defective state cannot be paid and made a valid charge to the drawer's account, how can it properly be certified when, according to the general usage, it is so charged at the time of certification? Would it not be fair to establish the rule that where a bank cannot pay neither can it certify?

Yours truly,

CASHIER.

*Answer.*—1. When the note was indorsed over to the maker and received by him it was extinguished. Even if the date of maturity had not been reached, if the maker attempted to reissue it the fact of its being in his possession under an indorsement back to him would be sufficient notice to put a purchaser upon inquiry and prevent recovery from the indorsers.

2. We do not see how the drawer of a check is injured by such a certification. When he gives a check in payment of a debt or obligation he has no further right to the money which the check calls for; but the payee is entitled to instant payment. If by reason of a defective indorsement to the holder the payment of the check is deferred this is not to the disadvantage of the drawer but to that of the holder, who by receiving such a certified check releases the drawer and looks to the bank for payment. As to the argument, that the certification "preempts the drawer's balance to the exclusion, perhaps, of later-presented checks the owners of which have committed no fault," that argument in effect says, that where A has a deposit of \$1,000 in bank and draws a check to the order of B for \$800 in payment of a debt to the latter, which check is indorsed by B to C, and is refused payment on the ground of irregularity in the indorsement, but which is certified as "good when properly indorsed," and where A has drawn later checks to the order of D and E for \$500 each, which when presented are refused payment by reason of the certification of B's check, whereby \$800 is preempted, D and E are injured by such certification, because they have committed no fault; whereas if the bank had no power to certify D and E would have got in ahead of C; and this they were entitled to do because there had been carelessness in the indorsement to C. This presents the question as between C and D and E, who is justly, equitably and fairly entitled to the deposit? Of course legally there is no question as to C's right thereto. But in this case would it be fair and equitable to establish the rule that as the bank could not pay C's check neither could it certify it, and thus allow D and E to get ahead of C? We think not. In the first place A had no right to issue the checks to D and E when the check to B was outstanding. By so doing he committed a fraud. In the next place, although D and E were innocent in the matter, B's check was ahead in point of time. And thirdly we would not consider it equitable to establish a rule which would enable the bank in effect to say to C, "Although there are funds on deposit sufficient to pay your check, we cannot pay it because the indorsement to you is defective, and we will not certify it because A is a fraud; and if he should issue other checks to D and E they ought to have the money provided they get in ahead of you. Of course, if we do not certify your check A may draw all his money out before you present it properly indorsed and you may never get a penny; but still you must run this risk, as it wouldn't be fair to certify it, for, if A should happen to issue checks to D and E, then this certification would prevent them getting the money on their checks. He may

never do this, but it is more equitable for us not to certify it and allow you to run the risk of his drawing it out ahead of you and cheating you out of it than it would be to certify it and prevent innocent D and E from getting their money in case he cheats them by afterwards issuing to them checks on the same funds."

*Editor Rhodes' Journal of Banking:*

COLUMBIANA, Ohio, July 29, 1886.

SIR:—Will you please answer the following question in the next number of your valuable JOURNAL:

A note dated January 30, 1886, one month after date, when is it legally due?

BOOK-KEEPER.

*Answer.*—A note due one month from January 30th matures February 28th–March 3d. If it be a leap-year, then February 29th–March 3d. See "Daniel on Negotiable Instruments," Sections 624–5, and also the May, 1886, JOURNAL, page 377.

*Editor Rhodes' Journal of Banking:*

BURLINGTON, Vt., Aug. 23, 1886.

SIR:—Will you please state briefly in the JOURNAL the liability of National and other banks for *special deposits* made with them. In substance, what was the "Brattleboro" decision? In receiving such deposits as an accommodation to depositors and without pay, would you not require from each a written release from all liability, etc.?

CASHIER.

*Answer.*—The liability of banks for special deposits is stated in our article on the "Powers of Bank Cashiers (*Power to Receive Special Deposits*)," in the March, 1886, number of the JOURNAL at page 196, and in that article the Brattleboro decision is quoted. In receiving such deposits as an accommodation to depositors and without pay, the bank is only liable for gross negligence, but it certainly would be to the advantage of the bank if it had a written release by the depositor from all liability.

*Editor Rhodes' Journal of Banking:*

BOSTON, August 5, 1886.

SIR:—What is the duty of a bank to whom a check of the following description is presented:

CANTON, July 1.

Three days after sight please pay to the order of Jones, Brown & Co. the sum of one hundred dollars, and charge to the acct. of yours,  
\$100.

JAMES ROBINSON.

Should, or can, the bank accept the check or draft? When is it due—in three days or in six?

Very truly yours,

H.

*Answer.*—In our last number we held that a check drawn on a banker in Massachusetts, and payable at a future date named, was not entitled to grace under the laws of that State as being a bill of exchange, but should be considered as simply a check on which no grace was allowable. We are now asked to determine whether an order on a banker, such as is set forth above, payable three days after sight, is entitled to grace, and whether it can be accepted by the banker.

A bank can accept a bill of exchange, and the instrument in question is clearly in the form of such a bill. Under the statutes of Massachusetts as they at present exist we are inclined to think that grace should be allowed upon the instrument. If it were drawn upon a firm of merchants instead of upon a banker, no question would exist but that grace should be allowed. The statute simply disallows grace upon *checks* on bankers. Under this and the decisions we held in our last number that a check which simply had inserted a future date for payment was no less a check for that reason, and was not entitled to grace. But in the case of the instrument above set forth the form and the tenor are different, and to hold that such a paper was not entitled to grace would be to say that no grace is allowed on any draft or bill of exchange payable at a banker's. The statutes of many of the States make such a sweeping provision, enacting that no grace shall be allowed on

checks, bills of exchange or drafts payable at bankers, the intention being evident to exclude grace on all paper payable thereat; but the Massachusetts statute simply excludes grace on *checks*, and we do not think it could be held under that statute that a bill of exchange payable after sight, drawn on a banker, was payable without grace. The question, however, is not free from doubt.

### BRIEF REPLIES TO SUBSCRIBERS.

**BOOK-KEEPER** (Ansonia, Conn.)—The art of adding two and three columns at a time is not very difficult to learn, but to become proficient in it requires a considerable amount of that bugbear to so many persons—persevering practice. Add first the units, then the tens and then the hundreds, but finish each line before passing to the next.

<i>Exhibit A.</i>	<i>Exhibit B.</i>
19	927
47	321
26	462
<hr/>	<hr/>
92	1710

Thus, going upward and naming the totals only:

(A.) 26, 33, 73, 82, = 92.

(B.) 462, 463, 483, 783, 790, 810, = 1710.

After a little practice the totals are taken in almost instinctively. A good way to learn is to add up two or three columns at a time and then prove by adding down one column at a time.

**PAYING TELLER** (Boston).—Yes, it is a good policy to keep your silver on the move. If the standard dollars collect too rapidly send them down to the Sub-Treasury and get certificates for them.

**A. J. S.**—There is no premium on the "V" nickels without the word cents. There were too many issued for that. A small premium is sometimes paid for gold dollars in good order. They are sought after as ornaments.

**M. R. J.** (Youngstown, O.)—Receivers of failed National banks are not paid regular salaries. The Comptroller usually makes an arrangement with the Receiver based on what he would be paid under the laws of the State where the bank is situated.

**L. Z.** (Waco, Texas).—You are correct in saying that the low rates of interest are compelling the banks to look closely after every legitimate source of profit. If proper arrangements can be made to meet the increased risk the keeping of valuables on special deposit can be made very profitable.

**J. B. N.** (Kansas City).—In issuing certificates of stock it is very important to have the name of the holder stated fully and correctly, especially in regard to trusteeships, etc. Lack of care in this particular has often caused considerable annoyance.

**A READER.**—If there is any question as to the propriety of certifying a particular check the Cashier should assume the responsibility and certify it himself.

**J. C. H.** (Pittsburgh, Pa.)—It is quite right to protect the Paying-Teller as much as possible; at the same time we think it is a point to have the window so arranged that the Teller can get a clear and distinct view of every customer. The counter should be about  $3\frac{1}{4}$  feet high and the window about 2 feet square, guarded by a wire grating with an aperture for passing out checks and money. It is a great advantage to the Teller to be able to see plainly with whom he may be dealing.

**CURIOSITY** (Galveston, Tex.)—In regard to the abbreviations "Y. O. S." at the close of a letter a witty correspondent of the JOURNAL suggests that probably you thought it meant "your old sweetheart."

**INQUIRER** (Charleston, S. C.)—If one speaks of a National bank simply as a *place* where the Government keeps certain public funds then *depository* is the proper term. But when one speaks of the bank as a *fiscal agent* of the Government or as the guardian of the public money then *depository* is the correct term. The former refers to a place, the latter to a person.

**DISCOUNT CLERK (Little Rock).**—You say that you work out your discounts on loose sheets first and then prove them by the interest tables. Would it not save time to buy another set of interest tables by a different author and work out the discounts by one table and prove them by the other.

**R. S. B. (St. Louis).**—Theoretically it would not be so very difficult to devise a system of checks and counter-checks in bank book-keeping that would render a falsification of the accounts next to impossible. But, practically, it would take so many additional clerks to work it that it is a question whether it would pay in the end.

**NUMEROUS INQUIRERS AS TO PRIZE ESSAY.**—1. By bank official is meant not only President and Cashier but Director as well. 2. The writer must put only his motto on his essay; the name must go in the sealed envelope. 3. In the forms proposed red lines must be ruled in red ink and everything made *complete* so as to leave nothing to be inferred or understood. 4. The decision will be announced as early as the convenience of the judges will permit. 5. Our object in offering this prize is not only to stimulate original research, but also to afford an opportunity to collate the views of experienced writers and financiers from all parts of the United States on the important subject of domestic exchanges.

**CORRESPONDING CLERK (Cairo, Ill.)**—It has been suggested as a good plan to have the lines on the letters numbered by the printer. In this way the exact number of items listed can be stated without the loss of time and liability to error involved in counting them up.

**L. S. M. (Nashville).**—Satchels lined with wire netting and made expressly for carrying money are furnished by the dealers in bank supplies.

**AN OCCASIONAL CORRESPONDENT (Boston).**—Your views as to additional "safety restrictions" to be incorporated into the National Bank Act are excellent if they could only be carried out. The practical difficulty is that if the National system is made too irksome to the banks they will gradually go out of it and reorganize under State laws, and thus even the present restrictions of the National Bank Act would be practically defeated. Remember the adage, "Draw not the cord too tightly lest it break."

**AN INQUIRER (Omaha).**—After the failure of the Pacific National Bank, of Boston, the Hon. John Jay Knox, then Comptroller of the Currency, issued a pamphlet in reply to certain strictures upon the action of the Department, explaining and fully justifying the Department's course. Write to Mr. Knox for a copy.

Since that time the machinations of W. J. Best have been very fully exposed. His "little game" was readily disposed of.

**A CRITIC (Chicago).**—We do not think you make sufficient allowances in your criticisms upon the rulings of the various bureaus of the United States Treasury Department. These rulings are made with great care and after the most thoughtful consideration, and always upon the correct theory that the Department has simply to *execute* the laws which are originally made by an entirely separate branch of the Government.

**A PRUDENT CLERK (New Haven, Conn.)**—The advertisement "how to write without pen or ink" is an old dodge. Send on your quarter and the answer will come back: "Write with a pencil."

**C. H. S. (Topeka, Kans.)**—In a small Clearing-House of six or eight members one man should be able to do the work of receiving and paying out balances, etc. The settling clerks would take scarcely twenty minutes to work out the amount of the balances. The paying in or taking out the actual cash balance takes no longer than cashing a check.

---

**NOTICE.**—The Publishers beg to announce that all present JOURNAL subscribers—as well as new subscribers entered this year—who renew for the year 1887 and remit the subscription price, \$5, before January 10th next, will receive a copy of the January 1887 edition of "RHODES' BANK LIST" *without extra charge*. The List is recognized as the most reliable as well as the most convenient Banker's Directory now published. It contains, also, "*Law Points for Bankers*," including every State and Territory. It will be printed on good paper and handsomely bound in red cloth.

## American Bankers' Association.

PROCEEDINGS OF THE ELEVENTH ANNUAL CONVENTION, HELD AT BOSTON,  
AUGUST 11 AND 12, 1886.

It is generally agreed among those who attended the annual Convention of the American Bankers' Association, at Horticultural Hall, Boston, on August 11th and 12th, that the meeting was a success. The three hundred delegates came from nearly every State—many being from remote points—and they included many representative bankers, besides financiers in public life and students of finance.

The proceedings were interesting. If the open discussions were not so varied as might have been desired this was more than compensated for by the marked increase in the social element. The bankers of Chicago made a step in this direction in the means they used to entertain the Association in that city last year, and it was the aim of the Boston bankers to surpass everything attempted in the social line at any previous Convention. Neither expense nor pains were spared in order to accomplish this result, and their success must have been very gratifying to the hosts as it certainly was pleasing to their guests.

### FIRST DAY'S PROCEEDINGS.

There was a good attendance, including bankers from all parts of the country and a sprinkling of ladies, when the Convention was called to order on Wednesday morning, August 11th, by the President, Mr. Lyman J. Gage, Vice-President of the First National Bank, of Chicago.

The proceedings were begun with prayer, offered by the Rev. Phillips Brooks, of Boston.

President Gage then delivered his introductory address, touching on methods of preventing fraud by counterfeiters, on the dangers of the silver coinage, the proposition to guarantee deposits in National banks, urging the bankers to take more interest in public affairs, etc. The remarks made were received with approbation. [The address is published in full in this issue of the JOURNAL.]

On the conclusion of the opening address, Thomas N. Hart, President of the Mount Vernon National Bank, of Boston, made a speech of welcome on behalf of the bankers of that city, as follows:

*"Mr. President and Gentlemen of the Convention:*

"The duty assigned to me is, in the name of the Boston banks and bankers, to bid you, sir, and the members of this Association a cordial welcome to this our good city of Boston—the metropolis of New England, the hub from which spokes have radiated in every direction into every State and Territory of our country, and are now surrounded by the good fellows representing the financial interests of the country bounded by the horizon on the East, the West, the North and the South. We bid you all welcome to the old Hub. You have come here to discuss questions of finance that affect the whole community. The question to-day with us is what is to be the outcome of the silver question, and on that we expect the Convention will tell us how to turn silver into gold. After your labors of to-day I am instructed by a committee of the banks and bankers to invite you, sir, and the members of the Convention to a reception at the Brunswick this evening at 8 o'clock, and on Thursday we ask you to adjourn in season to take an excursion down the harbor on the steamer Nantasket, at Rowe's wharf, at 2:30 o'clock, and on Thursday evening at 8 o'clock you are invited to dine with us at the Parker House. Tickets will be issued to all the members by the Secretary for the steamboat excursion. We desire to have you bring the ladies accompanying the delegates.

"Now, sir, while we recognize the great importance of the questions to be discussed and the good that is sure to result from this meeting, we feel that the acquaintance and

friendships formed by the social gatherings will have quite as much to do with creating a friendly feeling among the members, and result not only to the benefit of the institutions which we represent but much more to the welfare of the whole country."

These hearty words of welcome and the kind invitation conveyed were replied to by President Gage, who accepted in behalf of the visiting delegates the courtesies offered, and urged every member to add, as far as was in his power, to the social, as well as the business, success of the Convention.

The roll-call was next in order, but by a unanimous vote was omitted.

The report of the Treasurer, Mr. George F. Baker, President of the First National Bank, of New York, was then read and accepted. It is as follows :

Balance on hand September 16, 1885 .....	\$4,007 21
Received from banks on subscriptions .....	11,837 50
<b>Total</b> .....	<b>\$15,844 71</b>
Disbursements .....	12,752 73
<b>Total balance to date</b> .....	<b>\$1,591 98</b>

A motion was submitted by Mr. William G. Deahler, President of the National Exchange Bank, of Columbus, O., proposing to amend the constitution by adding to the end of section 1, article 8, the words "provided that hereafter no one shall be eligible to the office of Vice-President or member of the Executive Council for more than three years."

The proposition caused no little discussion, the argument being advanced that if the amendment was adopted it would materially injure the success of the Association by removing from office men who had thoroughly learned its business, and on the other hand that it was due to the members of the Association that rotation in office be enforced.

On motion of William H. Rhawn, President of the National Bank of the Republic, of Philadelphia, the motion for an amendment was referred to the Executive Council.

Next in order came the report of Secretary Marsland which was read, as follows :

"The progress of the year has been extremely gratifying in many points of view. The total membership is 1,466, against 1,402 last year, 1,384 in 1884 and 1,353 in 1883. The increase of our constituency in the West and South has been considerable. The total members and influence of the Association are greater now than during the success of our struggle a few years ago for the relief of the banking system from part of the burden of taxation. Much, however, remains to be done, especially in the Middle and Eastern States, and it is hoped that in the near future the progress already making in other sections of the country will not only be equalled but surpassed in New England.

"The income of the Association from the annual dues of members amounts to \$11,337.50, against \$10,940 the previous year and \$10,749 for the year before. The expenditures have been \$12,752.73 against \$12,326.96 last year. The active labors of the Association have been lately directed against dangerous forgers, more of whom within the last few months have been convicted and sent to the penitentiary than in any recent year. These labors have involved considerable outlay, and with the other labors of the Association have required a correspondence amounting to 247,650 letters and circulars received and sent out during the year from the office of the Secretary. In connection with the auxiliary membership an active correspondence has taken place, consisting of over 15,000 circulars and letters, to which about 100 replies have so far been received, partly from our members and partly from clerks and employees in banks. These replies have come from almost every State in the Union, but chiefly from the West and South.

"Our mortuary record this year shows a total of 224 members of the banking community who have died during the year. Of these twenty-six were more than 80 years of age, fifty-one between 70 and 80, and forty-six between 60 and 70, adding new evidence of the fact, which has often been observed in former years, how favorable to longevity are banking occupations and other callings which require regular, well-ordered habits of life.

"The pamphlets and documents issued by our Association have been for some years more in demand than formerly from State Legislatures and Courts, as well as

from libraries and public institutions, two of the most recent applications being from the Boston Public Library and the Library of Congress."

On the announcement that the election of officers was now in order it was voted that a committee of five be appointed on nominations, to report at the meeting on Thursday. The following were appointed on the Committee: Messrs. E. B. Judson, President First National Bank, Syracuse; J. W. Lockwood, Cashier National Bank of Richmond, Va.; J. T. Smith, President of the National Bank of Baltimore, Md.; Justus Clark, Cashier First National Bank, Red Oak, Ia., and A. U. Wyman, Vice-President Omaha National Bank, Omaha, Neb.

The following letter from Hon. Hugh McCulloch was listened to with interest:

"*Secretary of the American Bankers' Association:* "WASHINGTON, D.C., July 19, 1896.

"DEAR SIR:—Yours of the 14th inst. has been received. My engagements at home are such that I shall not be able to be present at the meeting of "The Bankers' Association" on the 11th and 12th proximo. Nor have I time to prepare a paper to be read at that meeting. Let me briefly say, however, that there has never been a time in our financial history when wise counsels were more needed than now. The country is drifting financially from old landmarks. Danger is menacing which Congress adopts no measures to avoid. The existing negative policy keeps the drift in one direction. Without a speedy change there will ere long be in the United States practically but one standard of value, and that, unfortunately, will be silver. If anything is clearly taught by financial history it is that a low standard of value places the nation that adopts it at great disadvantage in its trade with other nations, and at the same time consequently depresses its own industries. A low standard is invariably an uncertain standard, than which nothing is more prejudicial to enterprise, to trade, in fact to everything upon which national prosperity and reliable returns for labor depends. The opinion that abundant and cheap money stimulates industry and promotes prosperity has been disproved so frequently that its prevalence in the United States is not creditable to the intelligence of the people. It is unfortunate that the present depression in business and prices is attributed by some to whom the public looks for guidance to the maintenance of the gold standard by some nations and the efforts of other nations to adopt it. While I am clearly of the opinion that the world is not, and never will be, prepared for the adoption of a single standard, that both metals are and always will be needed as a medium of circulation and for facilitating exchanges, I am equally clear in the opinion that the adoption of the gold standard and the efforts that are made to adopt it have had no agency whatever in producing the existing depression. Money is abundant the world over. The rates of interest are lower than ever before, and yet most branches of business are greatly depressed and prices of manufactured goods and of agricultural productions are scarcely above their actual cost. And why? Simply because the supply is greater than the demand; because the revolution in all branches of industry caused by machinery is now felt in full force. Time is required to bring about equalizations, and there are hopeful indications that the process has been begun in this country, and that it will go on unless it is prevented by the wrong action or non-action of Congress.

"What then should be the voice of the Banker's Association?

"A suspension of silver coinage for an indefinite period.

"The discontinuance of the issue of notes under \$5.

"The recoinage of a part of the dollars now in the Treasury into fractional pieces.

"The maintenance of the public faith, not in letter only, but in spirit.

"Very truly yours,

"HUGH McCULLOCH."

Comptroller Trenholm not having arrived, the President called upon Mr. George S. Coe, of New York, to address the Convention, but he declined in order to give Mr. S. Dana Horton, of Pomeroy, O., an opportunity to speak on the silver question.

Mr. Horton began his remarks by announcing his belief, as an international bi-metallist, that the coining of silver had been a mistake. It was a blunder when it was begun in 1878, and it had been a blunder ever since. He said this, he added, in the interest of the re-establishment of silver. The indorsement of the banks of Europe in conjunction with those of America can do for silver what those institutions have done for the greenback. Whatever can be done

to further mutual understanding across the water will be very much to the point; but, by looking westward instead of eastward, there will be found a rage for suicidal legislation in a mistaken idea that the thing hoped for can be obtained in that way.

The speaker then offered the following resolution upon this subject :

"Whereas, The question of proper measures to be taken in concert by the commercial nations, in order to regulate metallic money, has, since the International Monetary Conferences of 1878 and 1881, received earnest and increasing consideration, while the growing divergence between the precious metals has caused cumulative disturbances of values, and has injuriously affected business relations in all parts of the world, and threatens further evil for the future; and,

"Whereas, The policy proposed to the nations by the United States in 1878, and by France and the United States in 1881, of restoring silver to free coinage by a union composing the chief monetary powers deserves universal support; and,

"Whereas, It is important, in order to prevent inequality between different nations, in the operation of the monetary system so proposed, that silver bullion and gold bullion should enjoy equality as well as silver coin and gold coin; and,

"Whereas, Experience has shown that the provision of the law of Great Britain, whereby it is the duty of the Bank of England to buy all gold offered to it at a fixed price per ounce, tends to establish a fixed price for gold bullion universally, and that analogous provisions of law in the several nations of the European Continent tend further to relieve gold bullion from local fluctuations of price; and it is evident that similar provisions applied to silver bullion, in support of its use as money, would give it similar protection from fluctuation; and,

"Whereas, Such provisions must become an important part of any plan of international action, and hence deserve thorough and thoughtful consideration; therefore be it

"Resolved, That the subject matter of this resolution be referred to the Executive Council of this Association."

Mr. Horton continued his address, giving a brief history of the silver question preceding and since the International Conference, of which he was Secretary.

The resolutions were referred to the Executive Committee.

The Hon. W. L. Trenholm, Comptroller of the Currency, being next introduced, delivered an interesting address, embracing concisely a number of topics bearing upon financial legislation and the growth and safeguards of the National banking system. [The address is published in full herewith.] The Comptroller's remarks were received with much applause, and on motion of Mr. E. B. Judson, President of the First National Bank, of Syracuse, N. Y., the thanks of the Convention were tendered Col. Trenholm for his instructive address.

Mr. George S. Coe, President of the American Exchange National Bank, of New York, upon the invitation of the President, addressed the Convention upon the subject of the currency. He argued that in order to hold a first-class place among the commercial nations we must do business with the recognized currency of the business world. "The danger of a return to paper currency is not past, for, when the country has become flooded and disgusted with silver, there will undoubtedly be an overwhelming demand made upon Congress to issue a paper currency." [Mr. Coe's speech is printed in *extenso* in the JOURNAL.]

At 1:15 P.M. the session was adjourned until 10 o'clock the following morning.

#### THE EVENING RECEPTION.

The afternoon was spent by the members of the Convention in driving about the city, visiting points of interest in its environs, etc. In the evening a grand reception tendered by the banks and bankers of Boston was held at the Hotel Brunswick. The reception proper lasted from 8 until 10 o'clock, but a large portion of the party gathered in the large parlors and circulated through the cool corridors of the building until long after the hour named for the close of the affair. All the gentlemen present seemed to thoroughly enjoy the

pleasant greetings of old friends as well as in meeting new ones. The occasion was enlivened with good music, and a collation spread in the large dining hall received ample attention during the evening. The weather was warm, "but," as a local paper says, "it was only typical of the warmth of welcome which the Boston banker gave his brother from other sections, whether North, South, East or West."

It was nearly 8:15 when Mr. Asa P. Potter, President of the Maverick National Bank, Chairman of the Reception Committee, escorted President Lyman J. Gage into the ladies' parlor, and Hon. W. L. Trenholm, Comptroller of the Currency, was at the same time escorted to his side. At once the reception began, Messrs. George Tirrell, Walter Potter, A. W. Newman and L. W. Burlen, of Boston, performing the duties of ushers, and introducing the long line of gentlemen to President Gage and Comptroller Trenholm. Among those present were the following: Hon. H. W. Cannon, Ex-Comptroller of the Currency, Vice-President of the National Bank of the Republic, New York; Hon. A. W. Beard, Treasurer of Massachusetts; Asa P. Potter, President Maverick National Bank; A. O. Bigelow, President Massachusetts National Bank; Isaac Pratt, President Atlantic National Bank; E. L. Tead, Exchange National Bank; C. R. Batt, Security National Bank; C. O. Billings, President Globe National Bank; Hon. Nathan Morse, Edward Atkinson, Charles A. Vialle, President National Bank of the Republic; Charles S. Butler, National Hide & Leather Bank; A. W. Newman, National Bank of the Commonwealth, all of Boston; Mr. Seeley, of Texas; Mr. Beal, President Second National Bank, Boston; John Carr, President First National Bank, Boston; N. G. Snelling, Manager Boston Clearing-House; Hon. D. M. Sabin, ex-United States Senator from Minnesota; James H. Bouvé, President Boston National Bank, Boston; G. W. Simpson, President Chicago, Liverpool & Boston Company; Samuel Atherton, President New England National Bank, Boston; Rev. George Ellis; ex-Senator Charles A. Denny, President Leicester National Bank, Leicester, Mass.; Nathan Robbins, President Faneuil Hall National Bank, Boston; Secretary Crosby, New England Trust Company, Boston; Hon. Peter Butler, Hon. M. P. Kennard, United States Sub-Treasurer, Boston; M. J. Perry, Providence, R. I.; E. L. Covill, President Eagle National Bank, Boston; Chester Guild, President Manufacturers' National Bank, Boston; Charles M. Clapp; Isaac T. Burr, President National Bank of North America, Boston; Col. E. H. Hewins, C. C. Garland, Minneapolis, Minn.; T. N. Hart, President Mt. Vernon National Bank, Boston; I. A. Evans, Charles W. Weil, Representative Joseph Mason, President of the Central National Bank, Worcester, Mass.; A. Ewer, Assistant National Bank Examiner; J. H. De Ridder, Cashier National Bank of Schuylerville, Schuylerville, N. Y.; C. H. Warner, President of the National Bank of Commerce, Boston; Bradford Rhodes, of New York; G. S. Bullins, President of the National Revere Bank, Boston; Charles A. D. Sheppard, Daniel B. Hallett, Cashier of the Boston National Bank, Boston; Charles H. Cole, Cashier of the Globe National Bank, Boston; A. Lawrence Edmands, President of the Suffolk National Bank, Boston; Joseph W. Work, Cashier of the Maverick National Bank, Boston; J. W. Lockwood, Cashier National Bank of Virginia, Richmond, Va.; J. Thomas Smith, Cashier National Bank of Baltimore, Md.; John B. Dixon, Director National Bank of Baltimore, Md.; J. M. Fetter, President Kentucky National Bank, Louisville, Ky.; S. K. Sneed, Henderson National Bank, Henderson, Ky.; J. S. Barrett, Cashier German Security Bank, Louisville, Ky.; Clinton McClarty, Manager Clearing-House, Louisville, Ky.; Henry Hurter, Cashier Western Bank, Louisville, Ky.; L. J. Gage, Vice-President First National Bank, Chicago, Ill.; J. H. Merrill, Vice-President Citizens' National Bank, Des Moines, Ia.; J. J. P. Odell, Vice-President Union National Bank, Chicago, Ill.; F. M. Mills, President Merchants' National Bank, Des Moines, Ia.; J. W. White, President Second National Bank, Nashua, N. H.; Miss Anna L. Pritchard, Draft Teller, Sioux National Bank, Sioux City, Ia.; E. H. Pringle, Bank of Charleston N. B. A., Charleston, S. C.; Henry C. Brewster, Cashier Traders' National Bank, Rochester, N. Y.; E. B. Judson, President First National Bank, Syracuse, N. Y.; A. U. Wyman, Vice-President Omaha National Bank,

Omaha, Neb.; William Means, President Metropolitan National Bank, Cincinnati, O.; N. A. McMillan, Cashier First National Bank, Waxahachie, Tex.; Justus Clark, President Red Oak National Bank, Red Oak, Ia.; Winthrop E. Scarritt, President Watertown National Bank, Watertown, Dak.; H. H. Camp, President First National Bank, Milwaukee; J. G. Flint, of the Commercial Bank, Milwaukee; C. D. Osborn, President Warren National Bank, Peabody, Mass.; A. H. Moss, President of Moss National Bank, Sandusky, O.; G. F. Davis, President City Bank of Hartford, Conn.; O. M. Carter, President National Bank of Ashland, Ashland, Neb.; William G. Alexander, Alexander & Co., Monongahela City, Pa.; E. E. Lawrence, Director First National Bank, Chicago; S. U. Penny, Attorney State Bank, Madison, Wis.; A. T. Frothingham, Cashier Tremont National Bank, Boston; Francis E. Ball, Teller Manufacturers' National Bank, Providence, R. I.; A. C. Cheney, President Garfield National Bank, New York; L. H. Roots, President First National Bank, Little Rock, Ark.; L. P. Daniels, Vice-President Cedar Rapids Savings Bank, Cedar Rapids, Ia.; Charles Whithead, Cashier First National Bank, Trenton, N. J.; H. Abbott, Cashier Winchester National Bank, Winchester, N. H.; J. W. Taylor, Cashier City Savings Bank, Pittsburgh, Pa.; H. P. Hilliard, Cashier Citizens' National Bank, Weatherford, Tex.; J. H. De Ridder, Cashier Schuylerville (N. Y.) National Bank; George H. Sprague, Treasurer Leicester Savings Bank, Leicester, Mass.; A. D. Cady, Cashier Berkshire National Bank, North Adams, Mass.; John H. Sage, Cashier First National Bank, Portland, Conn.; A. A. Howe, Cashier First National Bank, Grafton, Mass.; A. W. Stearns, President National Bank of Lawrence, Lawrence, Mass.; O. C. Hatch, Cashier Littleton (N. H.) National Bank.

At the close of the reception, about 10.30 o'clock, President Gage, Comptroller Trenholm, ex-Comptroller Cannon and several other members were entertained at the Algonquin Club by President Asa P. Potter.

#### SECOND DAY'S SESSION.

The session of Thursday was opened shortly after 10 o'clock, Mr. Gage presiding.

Mr. W. H. Rhawn, President of the National Bank of the Republic, Philadelphia, presented the report of the Executive Council on the amendment to the Constitution submitted on Wednesday. The report suggested the following reading of sections 1 and 2 of Article 3:

"SECTION 1. The administration of the affairs of this Association shall be vested in the President of this Association, one Vice-President for each State and Territory which may be represented in this Association, and in an Executive Council, composed of twenty-one of the members of this Association, who shall be elected at the annual meetings, and who shall serve until their successors are chosen or appointed, but none of whom shall hereafter be eligible for election to the same office for more than three consecutive years.

"SECTION 2. To have the words, 'or first Vice-President,' inserted after the word 'President' in the third line."

The amendment was adopted.

Mr. J. W. Lockwood of Richmond, Va., Chairman of the Committee on Nominations, then reported the following list of officers of the Association proposed for the ensuing year:

#### *President,*

LOGAN C. MURRAY, President United States National Bank, New York, N. Y.

#### *First Vice-President,*

HOEL H. CAMP, President First National Bank, Milwaukee, Wisconsin.

#### *Vice-Presidents,*

ALABAMA—James H. Masson, President First National Bank, Mobile.

ARIZONA—M. W. Kales, of Kales & Lewis, Bankers, Phoenix.

ARKANSAS—Creed T. Walker, Cashier German National Bank, Little Rock.

CALIFORNIA—S. G. Murphy, Cashier Pacific Bank, San Francisco.

COLORADO—David H. Moffatt, President First National Bank, Denver.

CONNECTICUT—George A. Butler, Vice-President National Tradesmen's Bank, New Haven.

DAKOTA—Asa Fisher, President First National Bank, Bismarck.  
 DELAWARE—Edward Betts, President First National Bank, Wilmington.  
 DISTRICT OF COLUMBIA—Samuel Norment, President Central National Bank, Washington.  
 FLORIDA—M. H. Sullivan, President First National Bank, Pensacola.  
 GEORGIA—Alfred Baker, President Augusta Savings Bank, Augusta.  
 IDAHO—John Huntton, Cashier First National Bank of Idaho, Boise City.  
 ILLINOIS—Calvin T. Wheeler, President Continental National Bank, Chicago.  
 INDIANA—William H. English, First National Bank, Indianapolis.  
 IOWA—Samuel Merrill, President Citizens' National Bank, Des Moines.  
 KANSAS—John R. Mulvane, President Bank of Topeka, Topeka.  
 KENTUCKY—James M. Fetter, President Kentucky National Bank, Louisville.  
 LOUISIANA—Joseph H. Oglesby, President Louisiana National Bank, New Orleans.  
 MAINE—Ira P. Farrington, President Casco National Bank, Portland.  
 MARYLAND—Douglas H. Thomas, President Merchants' National Bank, Baltimore.  
 MASSACHUSETTS—John Cummings, President Shawmut National Bank, Boston.  
 MICHIGAN—Theo. H. Hinchman, President Merchants & Manufacturers' National Bank, Detroit.  
 MINNESOTA—Henry P. Upham, President First National Bank, St. Paul.  
 MISSISSIPPI—Edward S. Butts, President Vicksburg Bank, Vicksburg.  
 MISSOURI—Rufus J. Lackland, President Boatmen's Saving Bank, St. Louis.  
 MONTANA—Samuel T. Hauser, President First National Bank, Helena.  
 NEBRASKA—Henry W. Yates, President Nebraska National Bank, Omaha.  
 NEVADA—D. A. Bender, President First National Bank, Reno.  
 NEW HAMPSHIRE—George B. Chandler, Cashier Amoskeag Nat. Bank, Manchester.  
 NEW JERSEY—E. F. C. Young, President First National Bank, Jersey City.  
 NEW MEXICO—Jefferson Reynolds, President First National Bank, Las Vegas.  
 NEW YORK—Henry C. Brewster, Cashier Traders' National Bank, Rochester.  
 NORTH CAROLINA—S. D. Wallace, Cashier Bank of New Hanover, Wilmington.  
 OHIO—Hugh W. Hughes, President Union National Bank, Cincinnati.  
 OREGON—Henry Failing, President First National Bank, Portland.  
 PENNSYLVANIA—Benjamin B. Comegys, President Philadelphia National Bank, Philadelphia.  
 RHODE ISLAND—H. J. Wells, Pres. Rhode Island Hospital Trust Co., Providence.  
 SOUTH CAROLINA—Andrew Simonds, President First National Bank, Charleston.  
 TENNESSEE—Thomas Plater, President First National Bank, Nashville.  
 TEXAS—A. P. Wooldridge, President City National Bank, Austin.  
 UTAH—W. S. McCornick, of McCornick & Co., Bankers, Salt Lake City.  
 VERMONT—Charles W. Woodhouse, President Merchants' Nat. Bank, Burlington.  
 VIRGINIA—John P. Branch, President Merchants' National Bank, Richmond.  
 WASHINGTON—Dexter Horton, of Dexter Horton & Co., Seattle.  
 WEST VIRGINIA—J. Nelson Vance, President Exchange Bank, Wheeling.  
 WISCONSIN—N. B. Van Slyke, President First National Bank, Madison.  
 WYOMING—T. B. Hicks, President First National Bank, Cheyenne.

The report of the Committee was accepted and the above-named gentlemen declared elected officers of the Association for the ensuing year.

Mr. Logan C. Murray, the President-elect, was called to the platform by President Gage. Mr. Gage then made a brief but feeling valedictory, and President Murray on taking the Chair made a short address, in the course of which he thanked the members of the Association for the honor they had conferred upon him. He called attention to the fact that the banking class of the country should make every effort to show the people that they are not inimical to their interests, but, on the contrary, are a most important and necessary factor in the public welfare. Mr. Murray also referred pleasantly to the cordial reception which had been extended the visiting bankers by their Boston brethren.

Mr. Wm. H. Rhawn, of Philadelphia, reported that the new Executive Council of the Association had met and organized by the selection of the Hon. Jno. Jay Knox, of New York, as Chairman; George F. Baker, President of the First National Bank, of New York, as Treasurer, and Dr. George Marsland, as Secretary.

The following named gentlemen compose the Executive Council for the year 1886-7 :

- New York City.* { JNO. JAY KNOX, President National Bank of the Republic.  
 { GEORGE S. COE, President American Exchange National Bank.  
 { WILLIAM P. ST. JOHN, President Mercantile National Bank.
- Philadelphia.* { JOSEPH PATTERSON, President Western National Bank.  
 { WILLIAM H. BRAWN, President National Bank of the Republic.
- Chicago.* { LYMAN J. GAGE, Vice-President First National Bank.  
 { JOHN J. P. ODELL, Vice-President Union National Bank.
- Boston.* { EDWARD TYLER, Cashier Suffolk National Bank.  
 { JAMES H. BOUYE, President Boston National Bank.
- Baltimore, Md.*—J. THOS. SMITH, Cashier National Bank of Baltimore.
- Richmond, Va.*—J. W. LOCKWOOD, Cashier National Bank of Virginia.
- Pittsburgh, Pa.*—W. E. SCHMERTZ, President Third National Bank.
- St. Louis, Mo.*—CHARLES PARSONS, President State Savings Association.
- Columbus, Ohio.*—WILLIAM G. DESHLER, President National Exchange Bank.
- Sandusky, Ohio.*—AUGUSTUS H. MOSE, President of the Mose National Bank.
- Portland, Me.*—WILLIAM E. GOULD, Cashier First National Bank.
- Syracuse, N.Y.*—EDWARD B. JUDSON, President First National Bank.
- Little Rock, Ark.*—LOGAN H. ROOTS, President First National Bank.
- Henderson, Ky.*—S. K. SNEED, Cashier Henderson National Bank.
- Cumberland, Md.*—DAVID ANNAN, Cashier Second National Bank.
- Omaha, Neb.*—J. H. MILLARD, President Omaha National Bank.

The Convention was then addressed by the Hon. John Lowell, of Boston, on the subject of "Bankruptcy Legislation." "A National bankrupt law is required," he said, "because the States cannot deal with the subject. They cannot give a uniform and equitable system. A bankrupt law is equally valuable to debtors and creditors." The difficulties in the way of passing a law were dwelt upon. "A public officer should be charged to supervise the Assignees and other officers, and the latter should be paid by salary. A careful and judicious law ought to be passed."

Mr. George Hague, General Manager of the Merchants' Bank of Canada, then being introduced, read an address upon the Canadian system of branch banks, prefacing his remarks upon that subject by giving a very lucid and elaborate description of the banking systems of the several countries in Europe. He then said: "Small as the population of the Dominion is—it is about 5,000,000—there are in it three banks that have a larger capital than any bank in the United States. And the rest have capital on a much larger scale than is generally prevalent with you; the reason being that they are nearly all central banks, with ramifications and branches spread over more or less of the country." Mr. Hague's address will be published in a future issue of the JOURNAL.

At the close of Mr. Hague's address the following report of the Executive Council was submitted upon the resolutions presented by Mr. S. Dana Horton on the silver question :

"Whereas, The American Bankers' Association embraces in its membership men of every political party, as well as those who acknowledge no party obligations, it has in all its Conventions carefully avoided all mere party and political questions. Representing, as it does, the business public, as well as the customers and stockholders of banks, it again emphatically gives warning of the impending danger to the whole country in the continued coinage of silver dollars under the Act of 1878. While we fully recognize the fact that both silver and gold are required as the money of the land, we believe that neither should be coined in such ratio that the other shall be driven out of general use.

"We repudiate the idea, so often maintained, that banks and bankers opposed the continued coinage of silver dollars on account of self-interest; but, on the contrary, we here assert that they have no special interest in one kind of coin more than another so long as each discharges its legitimate purpose as money.

"We believe that all persons having limited incomes, and particularly the earners of wages, will most largely suffer when the threatened evils shall come. We therefore earnestly appeal to all Boards of Trade, Chambers of Commerce, and civil and political

associations of every kind, to make persistent efforts to secure the repeal of the law or a suspension of the coinage of such silver dollars."

Pending the adoption of the report, Hon. John K. Ewing, President of the National Bank of Fayette County, Uniontown, Penn., offered an amendment to the above to the effect that the Association was opposed to the demonetization of silver. He thought that it was important that the position of the Bankers' Association on this question be clearly stated as opposed to the demonetization of silver. Some discussion ensued, and the original resolution of the Council was finally adopted.

Mr. Ewing then offered his resolution as an addition to the original resolution, and on motion of William G. Deshler, of Columbus, O., the rules were suspended to allow of immediate action. Mr. Ewing's resolution was as follows :

"Resolved, That it is the sense of this Convention that the coinage of silver dollars under the compulsory law of 1878 is detrimental to the best interests of the people and dangerous to the welfare of the Government, and that the law should be immediately suspended and remain inoperative until an international agreement with leading commercial nations shall give substantial assurance as to the future relations of gold and silver as money."

The resolution was unanimously adopted.

A communication on the production and coinage of silver, from the Hon. Conrad N. Jordan, Treasurer of the United States, was read as follows :

"TREASURY OF THE UNITED STATES,  
WASHINGTON, August 10, 1886. }

SIR:—In answer to your inquiries, I would state that

The total number of silver dollars coined to June 30, 1886, was...	233,723,286 00
(The amount to July 31, was \$235,644,286.)	
The estimated volume of subsidiary silver is .....	\$70,000,000 00
Of which amount there is \$28,905,000 in the Treasury.	
Total silver .....	\$308,723,286 00
The value of silver in the standard dollar at to-day's price (42½) is 71.21 cents. The value of the subsidiary silver per dollar is 66.61 cents, exclusive of abrasion. Making the present value of the silver coinage .....	\$213,061,352 00

Difference between par and actual value. ....	\$90,661,934 00
The total output of silver dollars from the Mints and Sub-Treasuries to June 30, 1886, was .....	890,336,734 08

The silver profit fund has credit, in silver dollars, by the sum of .....	24,998,670 00

I will be pleased to furnish you with any additional information, if requested, during the progress of your deliberations. C. N. JORDAN, Treasurer United States."

Upon motion of Mr. Logan H. Roots, of Little Rock, Ark., a vote of thanks was extended to Treasurer Jordan.

A letter from ex-Governor Hoyt, of Pennsylvania, was then read, expressing regret at his inability to be present. The paper which he had expected to deliver on "Some Phases of the Banking, Industrial and Financial Growth of the Country" was referred to the Executive Council to be printed in the report of the proceedings.

A number of other papers, including one by Mr. B. B. Comegys, of Philadelphia, on the silver question; by Mr. A. W. Blye, of Middletown, N. Y., on the same subject; by Mr. E. K. Olmstead, on "Bills of Lading as Documents of Title"; by Mr. F. H. Tuthill, Cashier of the First National Bank, of Hammond, Ind., on the maintenance of the gold standard; by Mr. W. A. Caldwell, Cashier of the First National Bank, of Jackson, Tenn., on the restoration of the currency; by Mr. B. C. Wright, on "California Banks"; and by Clinton McClarty, of Louisville, E. A. Hazen, and others, were also ordered to be printed in the report of the proceedings.

Mr. Rhawn offered a resolution providing that the headquarters of the Association shall remain located in the city of New York, and that the Executive Council be requested to prepare and submit to the next Convention an amendment to the Constitution to this effect. The resolution was referred to the Executive Council.

Mr. George A. Butler, of New Haven, made a motion thanking the bankers of Boston for the bountiful hospitality shown the Association.

It was carried enthusiastically by a rising vote. At this juncture, while the Convention awaited the return of a Committee, Mr. Butler made a short speech on the Bank of England's conduct of the British National debt. [Mr. Butler's remarks—with full statistics—will be found in this issue of the JOURNAL.]

A resolution of thanks to the writers of papers presented at the Convention was adopted; also, a resolution authorizing the Executive Council to fill any vacancies in the office of Vice-President occasioned by a declination to accept or an omission to act.

The mortuary report, reports on membership, defalcations, bogus banks, etc., were referred to the Executive Council.

On motion of Mr. Hoel H. Camp, of Milwaukee, the following resolution was adopted:

"Resolved, That the Executive Council is hereby authorized and requested to continue such steps as are necessary, by memorial on behalf of the Association, or otherwise, to procure such amendments to existing extradition treaties as will in the future secure the return of fugitives from justice who shall be at large on account of what are considered defects in the existing treaties."

On motion of Mr. H. H. Hughes, of Cincinnati, the following was passed:

"Be it Resolved, That it, the Executive Council, be authorized and requested to communicate to the members of the Association, from time to time, such views and information touching the silver questions, and touching the future security of bank-notes, as may appear expedient, and to solicit replies and suggestions, comparisons, and opinions upon these subjects."

The following was also adopted:

"Resolved, That, in order to defray the expenses of the coming year for carrying on the work of the Association, in accordance with the Constitution, Article III., section 8, the Treasurer be and he is, hereby directed to draw upon members for their annual dues; and, in doing so, that he urgently request them to invite other banks and bankers to unite with us by becoming members with the view of extending the usefulness of the Association and of co-operating in its objects."

A resolution of thanks to the press was adopted, and at 1 o'clock P. M. the Convention adjourned *sine die*.

On the afternoon of this day, by invitation of the Boston bankers, the delegates to the Convention, to the number of about 200, and the ladies accompanying them, enjoyed a trip on the steamer Nantasket around Boston harbor. The beauties of the harbor were pointed out to the visitors as the steamer put down the main channel, skirting along Nantasket shore below

the Boston Light, and returning by another route. A substantial luncheon was served on board, and a band of music discoursed popular airs, while nothing was left undone to make the trip a pleasant one.

The entertainment of the members of the Convention by the bankers of Boston culminated in a reception and banquet at the Parker House in the evening. It was a notable gathering, a number of the prominent men of Massachusetts being among the guests, and the feast was all that good taste, joined to hospitality, could provide. "The feast of reason and the flow of soul" were, of course, not lacking on such an occasion, and the many wise and witty speeches made were highly appreciated. The reception from 7 to 8 o'clock was informal. Shortly after the latter hour the orchestra in the corridor began the overture, and the line of guests, headed by Messrs. Asa P. Potter and Logan C. Murray, arm-in-arm, filed into the banquet room and took their places at the tables covered with delicacies and beautifully ornamented. The menus were elegant and costly, made of heavy card-board, handsomely decorated by hand painting, and bound with satin ribbons of various colors. The conductors of the feast were Messrs. Asa P. Potter, Charles O. Billings, Thomas P. Beal and Thomas N. Hart, the committee representing the Boston banks, and the perfect success of their efforts was commented upon. There were present about 300 gentlemen, including, besides the members of the Association, Lieutenant-Governor Ames, United States Senator Dawes, Ex-Comptroller Cannon, Mayor Hugh O'Brien, of Boston, Hon. P. A. Collins, Hon. Charles H. Allen, Chairman of the Board of Aldermen, besides others of note.

At 8:10 P. M. the Rev. Phillips Brooks asked grace, and the next two hours were devoted to the enjoyment of the good things provided.

At 10:25 President Potter rapped for order, and made a graceful speech of welcome and of good will on behalf of the banks of Boston, thanking the Association for coming to Boston, and extending an invitation to it to visit the city again. He said:

*"Gentlemen of the American Bankers' Association:*

"For the first time in the organization of your Association it is our privilege and our pleasure to welcome you at a session in our city. On behalf of the banking interest here I extend you our cordial thanks, our felicitations, on the selection of our city as your place of meeting this year. The advantages that grow out of associations such as you have inaugurated are highly appreciated, and, while the results are not always spontaneous, yet, like the planting of seed, it brings its return by and by in an abundant harvest, and furnishes us with the inspiration that maintains and sustains good and healthy banking. [Applause.] To those gentlemen who conceived the advantage of this institution, who took it in hand at its early day, who have stood by it, who have nurtured it and seen it through, we, as bankers of Boston, extend our hearty congratulations. [Applause.]

"Gentlemen, we here realize the changes that time has brought about. Banking has kept pace with other business. We realize that formerly the men of the East furnished the capital and wisdom to conduct financial undertakings. Not, gentlemen, that we would describe ourselves the wise men of the East looking back with pride, which is natural to a Bostonian, recollecting what we were once and wondering why we are not that now—we appreciate that it is because time has wrought changes, and that now the West and the South have become independent, and the capital that formerly was demanded of the East is no longer in such demand. [Applause.] The progress and enterprise of the West have now made money as cheap at their important centres as it is in our own, and the indications are that the South is following in their wake. And were it not for the new States and Territories that are coming in there would be little for an Eastern banker to look to for remunerative rates of money.

"Gentlemen, we have a great many friends here, and I know it is your expectation to listen to them, and far be it from me to occupy any time that will deprive you of hearing them. The beneficent effects of this Association are felt among us already. Gentlemen, the banking interest of Boston is under the greatest obligation to this Association for coming here. Previous to their appearance the rate of money was very, very small. [Loud applause.] There was no use for it. [Applause.] They have been with us but two days, and from a nominal rate of 2 per cent. per annum at

the Clearing-House it is now, I am credibly informed, worth 7 per cent. But to you representative merchants who are with us to-night to extend your congratulations to these Western and Southern men, I desire to say for your comfort and your pleasure that they are going—[laughter]—and I trust for your sakes there will come a decrease of rate. But now, gentlemen, this is the last formal occasion that we shall meet our visiting guests, and I am expected to give the parting word. As I do it I say—and I know I echo the sentiment of every Boston banker, every Massachusetts and every New England man—that you from the West, the South, the Northwest, and from all parts of our country, when you leave us, will carry with you the same good feeling that we have always felt toward you. And, gentlemen, come and see us again. [Applause.]

"Gentlemen, I have great pleasure in presenting to you the President of the American Bankers' Association, Mr. Logan C. Murray, of New York. He needs no formal introduction from me." [Applause.]

Mr. Murray spoke as follows :

*"Gentlemen of Boston :*

"I had the pleasure a few years ago of having a friend who was a doctor in the city of New York, who kindly invited me to dine with one of your distinguished and lovable men—your own Dr. Holmes. Mr. Evans was a guest that night, and said to him, 'Dr. Holmes, I am glad to meet you. I would rather see you with these three hundred doctors than to see one doctor alone.' [Laughter.] Now, I feel just that way to-night. Sitting about this table I can meet you all face to face with a much better grace than I could from the platform in the hall over yonder. I had hoped, however, that my friend from Chicago—which you know is the metropolis of the West—would speak from this place to you; but he would not allow it; I don't know why; but we shall rope him in later. [Laughter.] But, responding for the bankers who have come to this city and have been so generously entertained, it is entirely fitting and extremely gratifying to be here, for it was from this city there came to us the first President of this Association, the Hon. Charles B. Hall—[applause]—whom we learned to love during the few years we were associated with him.

"But, as Mr. Gage has not chosen to speak just now, I shall try to 'ring in the new,' and, if possible, not 'ring out the old.' I just want to say one word, if I may go a little outside of Boston, and ask, putting a great interrogation point to it, how much has New England done for this Association? For many years we have stood together under all circumstances, with but very few men sometimes who seemed to know the spirit of our Association, few men seeming to appreciate what we were trying to do; not one thought but what was best for every man, woman, and child in this country—not one idea of selfishness, but all for the good of the entire banking community, which is so closely allied with the prosperity of every nook and corner of this broad land. [Applause.] I say it because every effort, whether successful or not, has been for the good of the country. Your own Senators have stood by us, and it is fitting that Senator Dawes is here to-night. I must say, just here, that even in our own State and city we have not had that support which we should have had. Now, I think that is a pretty good text from which to say that we should like to have New England enter into this Association more fully and more heartily. [Applause.] A few men have stood by us. The very first President was from New England, but not many men followed him. Now we have come here from all over the United States. I see men from California; in fact, nearly every Western and Southern State is represented. I repeat that this Association wants more New England men in it. I hope that every New England man who is here, and those not here who will read about this meeting, will consider well what his duty is toward the wide-extended community of bankers in every part of the country. We must stand shoulder to shoulder more and more as the years roll by, in promoting honest legislation and sound principles of finance.

"There is a matter which is troubling New York bankers. That is the silver question. About the only man that is not troubled is our own Senator, Mr. Evans. He said something about it when members of Congress were all worn out, and about to pack up for home, the first time he ventured to speak on the question. [Laughter.] It does seem to me that with all that New England has at stake she ought to lead in the matter, for the time will soon come when we shall see a great division on this

question. What nation has ever gained what we have? The position we have secured is that of putting the credit of this Government higher than that of any other Government on the face of the earth. [Applause.] New England has done her part in bringing the Government's credit to the height to which it has reached, and now see that it is maintained. It is one year since we spoke so confidently at Chicago, and now another year has passed and nothing has been accomplished. We must labor for positive results. How much is New England going to do? But we must for the moment 'quit the shop' while around this festive board. We have so fully enjoyed your hospitality, so admired your institutions, your homes, and your atmosphere of content, that we can appreciate your reverence for this historic spot, the center of so much that is good and true. There is a story told of some devoted Boston lady who went out of the city about a mile and saw a milestone marked 'one M from B.' She looked at it and thoughtfully said: 'Poor fellow; how simple, yet how sufficient!' [Laughter.] Well, we have had a sufficient illustration of what Boston can do for strangers. We return most sincerely our thanks for this bountiful hospitality which has been extended us. We shall leave this city with hearts full of gratitude and goodwill, and look forward to the time when you will invite us to come again."

Comptroller W. L. Trenholm, being next introduced, was received with applause, and spoke as follows:

*"Gentlemen of Boston and the guests of Boston:*

"I can hardly express to you the appreciation that I have of the kindness of your reception. I cannot venture to take it to myself. I must believe that you recognize in me a type of that which all New England has been accustomed to respect—a type of a Pilgrim. [Applause.] I am here as a Pilgrim, and if I have not reached Plymouth Rock it is only because Boston lay in my path. [Laughter.] I will undertake to say that no pilgrim of any century would ever have reached Plymouth Rock if Boston lay on his road. [Applause.]

"The Pilgrim Fathers have had several centuries of reverence, and let us now claim some attention for the Pilgrim sons, the descendants of those Pilgrim fathers who, actuated by the same spirit which brought their fathers to that barren rock, have gone forth from the centre, from this new nest, with pilgrim sentiment and pilgrim courage, to the utmost confines of this great Continent. [Applause.] Why is it, gentlemen, that you have here in Boston representatives from Texas, from Oregon, from every other remote point on the frontier? It is because from Boston, from New England, have gone forth pilgrims to those remote points and every point intervening. Where will you find over this broad country any place where New England sentiments and New England culture has not made a lodgment for itself and a nucleus for the surrounding influence. [Applause.] Fitting was it, gentlemen, that this Association should seek Boston for its place of meeting. Fitting was it that Boston should give to this Association the magnificent reception of which I have been a favored witness. [Applause.] Worthy guests and worthy hosts. Here let this Association take a new start in life. It has been said that Boston, that New England, has not given its support to this Association. If that be true, if that be so, to-day will mark the new point. To-day the half of New England will go into this Association, because it is as if the children of New England were coming back to their home. [Applause.]

"The characteristic of the American Bankers' Association is a characteristic which has been especially illustrated in the monetary history of the State of Massachusetts. The cardinal principle is that men should pay their debts. [Applause.] More than that, gentlemen, that they should pay their debts in that medium which the creditor has a right to demand. [Great applause.] More than that, gentlemen, that they should pay their debts in that medium which the honor of the debtor requires. And the State of Massachusetts paid her debts in gold when all the rest of the country was satisfied with paper. [Great applause.]

"I need say nothing more. Personally I have to thank you for some of the very pleasantest experiences of my life. I came to Boston a stranger, without claims. I have received great kindness and great personal consideration which I value and shall always remember. But persons are of no account in these meetings. It is not what one man feels or what one man thinks. But we all have here one interest in common, one thing upon which we should all unite, and that is to maintain the honor, the financial

honor, of the United States at the point at which Massachusetts has fixed it. [Great applause.]

"I thank you, gentlemen, for your attention and for your kind reception." [Loud applause.]

Three hearty cheers were then given for Col. Trenholm.

Mr. Potter next introduced Mayor O'Brien as the "noblest Roman of them all," and as President of one of Boston's most successful savings banks. He made a hearty and witty speech, in which he good humoredly took occasion to introduce a good word for Boston and its city bonds.

Judge Ewing, of Uniontown, Pa., speaking to the toast, "Pennsylvania, the Keystone State of the Union," spoke in an appreciative strain of the hospitality which the Association had enjoyed, acknowledging that Boston was the "hub of the universe," and also praised the services of Massachusetts in founding the Republic.

Mr. Lyman J. Gage, ex-President of the Bankers' Association, was next called upon as the representative of "Little Chicago," and spoke in a witty and eloquent manner of his pain at relinquishing office, adding a graceful parting tribute to the kindness of the Boston bankers.

Mr. S. K. Sneed, Cashier of the Henderson National Bank, of Henderson, Ky., followed with a graceful and patriotic address, concluding as follows: "I think I speak a sentiment that will be responded to by all our people when I say that whenever Massachusetts, the home of Webster, calls upon Kentucky, the home of Clay, she will never call in vain. [Great applause.] And coming from a southern State, I say, and I believe that my friend from the home of John C. Calhoun will respond to what I say, that the Union is worth all it cost to save it." [Tremendous applause.]

The speaker was followed by the Hon. Henry L. Dawes, who made some extended remarks advocating the National banking system and the maintenance of the gold standard.

Mr. Henry D. Hyde was next introduced as one of the minute-men of Massachusetts. He eulogized the qualities of Comptroller Trenholm, and, recalling briefly the incidents of the war twenty years ago, spoke in favor of a firm friendship between the North and South.

Mr. Logan H. Roots was next introduced as the "Arkansaw Traveller." He said, among other things: "I should not arise at this late hour if I did not feel it our duty to rise and say to the gentlemen of Boston, we thank you for this magnificent entertainment. There never was such a royal reception as we have had here. I have been in the habit of saying to people who asked me about the streets of Boston that they followed the cow paths. And now, having seen your streets, I want to apologize to the cow. [Laughter.] Gentlemen, if we had a Texas steer that made such crooked paths we should think he had the blind staggers. [Shouts of laughter.] But when we went out to the Back Bay we saw some streets laid out on a different plan. But while we were out there we looked for Silas Lapham's house, but we couldn't find his name on the door-plate." [Laughter.] Mr. Roots in concluding made some comparative statements as to America's growth, saying that in that growth there was no one greater factor than the thrift, intelligence and the shrewdness with which Boston had accumulated her money and the liberality with which she had loaned it to the Western people.

Mr. W. H. Rhawn, of Philadelphia, who was then called upon, spoke a good word for the State banks. He said:

"Having been intimately connected with National banks since their inception, I have listened with pleasure to their deserved eulogy by the distinguished speaker, Senator Dawes, but I cannot forget my earlier connection with State banks, and I remember that it was those institutions that first came to the aid of the Government in the hour of her supreme trial and strengthened the hands of Judge Chase, then Secretary of the Treasury, by loans of one hundred and fifty millions of dollars in 1861, nearly two years before the first National Bank Act was passed. And the man who most inspired this patriotic action, which restored the credit of the Government and gave it *shew*s of war, was one who has been present until within a few moments at this dinner, the venerable Joseph Patterson, of Philadelphia. I regret that he has passed

out of the room, as he might have entertained us with reminiscences of so interesting a period in the history of banking. A brief sketch of the banks in 1881 may be found, however, in the current number of *Lippincott's Magazine*. This is the first published account of a great service rendered to the Government, an event that has hitherto been wholly without public recognition or acknowledgment."

Mr. B. R. Guild being called upon to speak for the press, responded with some witty remarks. At 12:20 A. M. the band played "Auld Lang Syne," while the party dispersed well pleased with the entertainment.

### THE PRESIDENT'S ADDRESS.

[By LYMAN J. GAGE, President of the American Bankers' Association and Vice-President of the First National Bank of Chicago.]

My first word must be an acknowledgement of your kindness which has again called me to the honorable duties of this Chair. This distinction is, if possible, heightened by the fact that you are convened in a city whose name is connected with so much that is honorable in the historic past and is so intimately associated in the present with all that is best in moral and intellectual advancement.

If the committee under whose direction you meet here to-day, had it in mind to put you for a short period under these good influences they did well, but if I were to reveal the true motives which actuated them I should have to confess that it was in a spirit of missionary enterprise chiefly that the City of Boston was selected.

Your Association, strong as it is in numbers, and favored as it is with representatives in all sections of the country, has not received a deserved recognition nor a satisfactory support from New England. This has been a disappointment to many of us, and we have hoped that by meeting here we should bring the great experience and the valuable influence of New England bankers into heartier co-operation with us. The New England man, it would seem, does not relish long journeys from home, and it may be that the distance to travel to reach our meetings hitherto has kept him away. We have, therefore, come to meet, and, if possible, make friends with him here.

When a young man I made my first visit to Boston, and while here I took the earliest opportunity to call on an esteemed banking correspondent. The President of the bank, a man of ripe years and great experience, received me with kind words, and in answer to inquiries gave much valuable information concerning the city, the growth of its trade, its increasing financial importance, and its brilliant prospective future. When I asked him, however, if he had visited that great West, whose resources and future development were to furnish so largely the elements of his city's future growth, a look, half of pride and half of chagrin, passed over his face as he answered: "No, sir; I have never been west of the Hudson River. The door of that vault near you," he continued, "I have locked with my own hands every night for eight years." Confessedly guilty myself of being an absentee from official duties I retired from the interview burdened with a sense of self-reproach; but from this a full recovery was had when, a few months later, the fact was developed that this faithful, painstaking President had been engaged for many years in locking up each successive night a steadily diminishing portion of the capital and surplus of his bank. For it then appeared that his Cashier, equally faithful in personal attendance, had, by the aid of peculiar methods in his accounts, abstracted over half a million of dollars from the bank's resources. This reminiscence—too personal, perhaps, for time and place—may be pardoned because it illustrates an old truth that, "to learn to live wisely at home, men should occasionally go abroad;" but I relate it because it brings clearly before us one of those disastrous events which it is an object of your Association to render less frequent and, if possible, wholly prevent. If it were only to confer together for the sole purpose of rendering less frequent occurrences of this kind—occurrences by which so naturally and necessarily our calling is brought into disrepute and the immediate interests of all made sympathetically to suffer—your Association would find abundant reason to exist. Recognizing this as an important object which you aspire to accomplish, you will not fail to recognize also that there are, incidental and helpful to it, other objects very important, even if confessedly subordinate. To accomplish these in their fullest sense the hearty co-operation of the whole banking fraternity is needed.

In the kingdom of nature there is a mysterious law under the operation of which every form of useful life seems to develop and sustain surrounding agencies obnoxious to its own welfare. From the fungus on the plant to the tiger in the jungle the predatory tribes attack and destroy. In the social condition of man we may observe the same law in operation. The idle and the vicious prey upon the industrious and the virtuous. Every good, first secured, must thereafter be diligently defended.

As bankers we find ourselves oppressed by our own peculiar enemies. Many of these we must avoid or resist alone. Others can only be overcome by the union of defensive powers. The complete dependence of modern commerce upon instruments of credit, such as checks, drafts, promissory notes and bills of lading, offers to the unscrupulous an inviting opportunity for the quick gains of fraud and forgery. The degree to which commercial transactions are hindered or made insecure by these possibilities or the actual losses suffered by the community therefrom may not be definitely stated, but a good deal is known. It is known, for instance, that three distinct combinations of persons, very skillful and bold in their operations, have within the past year carried on systematic and, to a considerable extent, successful forgeries. The losses to banks throughout the United States from this source within a year have probably aggregated more than one hundred thousand dollars; and if the modest and bashful who have suffered from these depredations would come in with their returns the total would no doubt be considerably increased. It is true that through individual effort and by help of your Association several of these evil doers have been brought to book and made to answer for their crimes. But others are still at large, and though these may be overtaken others still will be found to take their places. Now it is necessary to maintain the great stream of commerce free from these invasions, and your Association can, if it will, substantially secure this result. The means to this end are twofold: better guards against crime and a more vigorous following up of offenders. In many respects present methods are loose, and simply invite criminal operations. Any lithographer, without regard to his character and responsibility, can, by offering low terms, get orders from any banker for the printing of forms in use in their daily business, and once possessed of these he can, if he will, dispose of them to the dishonest schemer. In my opinion bank drafts should possess more dignified and safer characteristics. Is it not worth your time to consider the propriety of a special manufacture of paper for use in bankers' drafts? Paper might be provided whose special feature should be difficult of imitation, manufactured under such guards and restrictions as to make it practically impossible for it ever to be used for any fraudulent purpose. Lithographing or engraving establishments into whose hands this paper might be permitted to pass should in their turn be held strictly accountable for every sheet going into their possession. If these two things were secured and the advantages of them given to your members they would give a peculiar dignity and a superior negotiability to your drafts over others.

Membership in your Association may become, and should become, not only an honorable duty, but a valued privilege. Every life worth living, whether individual or associated, owes it to itself to extend and strengthen its legitimate powers by all honorable means. So far in your history you have been liberal enough to recognize as in fraternal relations all banks and bankers of the United States without regard to their spirit or disposition in the matter of membership, and have made the insignificant annual due a voluntary offering. A privilege so gratuitous is but lightly esteemed, and you are without the advantage of that sense of unity and fellowship which stricter terms of membership would secure. I am certain that among those who apprehend the value of this Association—those who are themselves members of it and in hearty accord with its aims—there is a valuable sense of fellowship; and I would recommend that the Executive Council take steps to secure in the published almanacs, bank lists and annuals designed for bankers' use a distinguishing mark against the name of every member in good standing with the Association. However lightly bankers themselves may regard the value of affiliation in the objects you contemplate there is abundant reason to believe that the business public appreciate and value highly the purposes of your organization and would take due note of this distinguishing feature.

Within twenty-five years the banking business, as you well know, has received, in common with our general industries, a great development. It is of necessity carried on mostly by us who are without the advantages of a long preparatory training. The many precedents and established usages which in older countries are looked to as a

guide do not here exist, and in these different and changeful conditions we are called upon to discharge duties of a very delicate and trying character. Moreover, in the course of our rapid development, legislation, both State and National, on economic and financial questions, is for similar reasons attended with many hazards. From such legislation there often follow two effects. If happily the end sought is gained an incidental or secondary consequence results carrying with it evils which more than outweigh the good secured. Thus, in 1881, a bill for the refunding of the maturing public debt into a three per cent. bond was offered in Congress. A distinguished member from Kentucky proposed an amendment which made it compulsory upon National banks to substitute the proposed new bonds as security for their circulation as fast as bonds then on deposit with the Treasury, as security to such circulation, should mature and be paid. As a penalty for non-compliance it provided for the appointment of a Receiver and the winding up of the affairs of any bank which should fail, within thirty days after the maturity of any bonds belonging to them, to make such substitution. It was believed, and rightly, that the new three per cent. bonds would command a price nearly or quite equal to par in the open market. But this attempt to make the banks *forced* purchasers of the new securities precipitated a financial crisis. The bill promptly passed both houses of Congress, but the time at which it was to take effect gave opportunity for action. Without consultation, but with the quick instinct of self-preservation, the National banks from twenty-five different States availed themselves of a present liberty by depositing United States notes for the redemption of their circulation and withdrew their bonds from the Treasury Department. In a few days more than eighteen millions of money were thus taken from the usual channels of business, and it was then evident that the movement had just begun. The price of all Government bonds as well as all other investment shares and general securities experienced a sharp decline. The most serious consequences were threatened, but the prompt veto, by the President, of a mischievous Act stopped the movement and restored confidence. A year later the same bill in substance, denuded, however, of the vicious amendment, became a law, and the bonds were eagerly taken by the banks at prices above par.

It is not always, it is probably not often, that the evil effects of unwise legislation are so quickly made apparent nor the remedy so easily applied. Our so-called protective tariff system, with its great code of tariff regulations, even if we admit that great benefits result, carries with it beyond doubt deranging and perverting influences which can only be approximately estimated. The legislation resulting in our present course of silver coinage is a financial curiosity—a mere compromise with all principle left out. Those who advocate the free and unrestricted coinage of gold and silver upon a declared ratio of value, but otherwise on terms of perfect equality, have at least the advantage of historic precedent to support their argument, while those who demand the subordination of silver to gold and the maintenance of the latter as the sole money standard draw their reasons from the natural constitution of things as they now exist. Our present course, on the one hand, postpones whatever of doubtful advantage may lie in the degradation of our money standard, while, on the other hand, it threatens the stability which the gold standard, fully recognized and boldly defended, will give. In effect we see the Government of the United States engaged in buying silver bullion brought from rocky caverns, where it lay harmless, if useless. After melting and minting it it is again put away in other rocky caverns, artificially made, where it lies equally useless and equally harmless—except for the damaging exactions it must make upon industry to cover the loss incurred by an uninterrupted depreciation in its exchangeable value and to make good the great loss of interest sustained. Beyond this it is a standing menace, growing more and more dangerous to the established relation of things.

A bill has been presented in Congress which proposes to make the Government the ultimate guarantor that all depositors shall be paid in full whenever any National bank shall be put in final liquidation. It provides that a tax to be collected from the National banks as a whole shall be set aside and accumulated to protect the Government in the prospective but unknown liability it will thus voluntarily assume. The measure has an attractive side and there is reason to believe that it has many warm supporters. Convinced myself that its adoption would be an unwise step I shall not debate it now, but content myself by saying that in all these matters of legislative action affecting financial and commercial interests the thought and influence of the

banking class may be, and ought to be, usefully exercised. No other class has its attention more quickly attracted to such matters. In our busy country no other class has a greater leisure to give to their consideration, and no other class has greater facilities for reaching and rightly influencing the opinion of that portion of our people to whose voice, when heard, all Legislatures become obedient.

It was while a good man slept that the enemy sowed tares, and in a Government of the people by the people we need not be surprised that demagogues pander to passion nor that political tricksters seek to confuse and mislead. It is because of indifference or hopelessness in the conservative that the field is too much left to their pernicious labors. It will be said in answer to these suggestions that a banker is a business man pure and simple; that as a banker he has no concern with politics; that he is simply a shopkeeper who sells the use of money and for a consideration helps forward the exchanges of the country, and that outside of these functions he has no concern. This answer is but a statement of half the truth. It is true that in a sense he is a shopkeeper, but a shopkeeper the value of whose wares are determined by the general state of public welfare. Beyond this he is a citizen, and as a citizen and as a shopkeeper, deeply concerned in the public good he has the right to associate himself with common interests in order that by associated counsel and by associated action he may bring into the field of economic affairs, in which he has so great concern, his strongest influence. We need not be over modest in claiming such a privilege. Associated industries of various kinds, honorable in character, have already set us the example. In a recent convocation at Cleveland, representing a body said to number more than five hundred thousand, a memorial to Congress was adopted, recommending certain legislation of a most original kind. It formally approved by vote what it was pleased to call "An Act fixing the measure of value and further regulating the value of money." That Act provides that three per cent. per annum shall be the legal rate of interest for money loaned, and that any persons who shall lend money at any other rate shall forfeit to the borrower both principal and interest. It further provides that the Secretary of the Treasury shall establish loan offices, not less than one in each county in all the States, where money shall be loaned upon request and the offer of good security for a term of not more than one year at three per cent. per annum payable quarterly. It thoughtfully provides that any person securing a loan on worthless security shall pay double the amount borrowed and suffer imprisonment for twenty years, and also be disfranchised. We must grant, what this body in its preamble claims, that it is composed mostly of citizens of the United States and members of the laboring class of society and deeply interested in the general welfare. But one may well hesitate whether to laugh at the grotesque ideas brought forward in these remarkable utterances from which I have made a brief extract or ponder in sad silence on that condition of intelligence which could seriously adopt such a complete parody on the teachings of economic science.

Another large assembly recently met in this very city. By a vote approaching unanimity it expressed itself in favor of the most radical changes in our National Constitution. It proposed abrogating the Presidential office, discarding the Senate, and clothing with full power for all legislation a single House of Representatives, whose decrees should be executed by a committee of three of its own choosing. I might cite other examples going to show the existence of a spirit of innovation, which, contemptuously ignoring the results of human experience, is ready to rush on any experiment, however fantastic. But enough has been said to show you that, however indisposed we may be to exercise careful thought and conserving influences for the public welfare, it is not safe to rest in this indifference.

I would by no means turn your organization into a political machine—that would be as unwise as it would be impossible—but if I could I would make it an avenue through which should be poured in many streams over all the people the healthful influences of a better knowledge of the true laws of our politico-social-economic life.

There are unhappily unmistakable tokens that our democratic institutions have not yet been put upon their severest strain. The lugubrious prophecy of Lord Macaulay admitted that while land was cheap and the population sparse things would go on with us without much trouble. It was when New England should become as thickly settled as old England and when we should have developed our Manchester and Birminghams that he predicted the hour of our trouble would come.

At such a time he foreboded that demagogues would gain control of the ignorant and discontented, and that, under the forms of law, unjust reprisals would be made on accumulated capital. In some moment of industrial distress spoliation will, he says, occur. "The spoliation will increase the distress, and the distress will produce fresh spoliation." In the awful climax he declares that civilization or liberty must perish. With the light of history to aid us, with passing events full of suggestion, it is not wise to deny the possible realization of this wise man's speculative thought. We may confidently assert, however, that the time for its realization has not yet come, and we may well entertain the courageous belief that if we act with proper wisdom it will never come. In the knowledge of physical forces we have made great advancement. The dynamic powers of nature have become obedient and docile to social use; or, to speak more truly, having faith fully studied the action of nature's forces, we have learned to put our mechanical devices in the line of their powerful operator, and the high material advantages everywhere evident have been secured. We *now* need, more than anything else, a knowledge of the true laws of social and economic forces. We need men who, in plain words that all may comprehend, shall bring into popular view the true relations of Labor and Capital: who shall be able to discover and teach nature's irrevocable laws in the field of social and industrial economics; men who by the right word shall help allay the distrust which ignorance and passion on one side and selfish greed and dangerous indifference on the other are hastening to create. This is the problem of the age which will more and more press us for a solution. With growing accumulations of unemployed capital, it is a problem in finance. With a large contingent of labor unemployed, it is an economic problem. With liberty and order and general happiness to preserve, it is a problem in statesmanship. With the moral welfare of coming generations involved, it makes a pathetic appeal to philanthropy and religion.

Now it is not to be expected that the objects special and general to which I have ventured to allude will be secured in a day—nor possibly in half a life-time. It is a great gain, however, when high and desirable ends are comprehended and sought, and it will be an important step towards their attainment if the bankers of the United States with great unanimity will come together in the friendly and broad union your Association offers. The ways of mutual improvement will become more and more clear. We shall gradually learn how to use wisely and well the increased power we shall thus acquire, and if we do this the advantages to ourselves and the helpful good to the body politic, of which we form a part, will no longer require argument—the need of argument having ceased in the light of demonstration.

## THE BANKING AND FINANCIAL SITUATION.

[By the Hon. W. L. TRENHOLM, Comptroller of the Currency.]

At the request of the Executive Committee of the American Bankers' Association I have prepared the following presentation of the "Banking and Financial Situation" as seen from the point of view of the Comptroller of the Currency.

The National banks, as you are aware, made a "Report of Condition" on the 3d of June, the results of which, compared with those obtained from previous similar reports, are exhibited in the tables annexed to this paper. [See\* foot-note.]

No. 1. Abstract of condition of 2,809 banks, June 3d, 1886.

No. 2. Abstract of condition of 2,689 banks, May 6th, 1885.

No. 3. Statement of lawful money reserve held by these banks on June 3d, 1886, grouped as to location in and out of the reserve cities.

No. 4. Comparative statement of deposits and reserve in May, 1885, and June, 1886.

When you have had an opportunity to examine these tables carefully you will find that they show the following results, which bear upon and illustrate the present banking situation.

1. Tables 1 and 2 show that the National banks increased 120 in number between May, 1885, and June, 1886. Their capital, surplus, and undivided profits increased

\* Tables 3 and 4 are printed in full in an editorial article on another page. The abstract of condition of the National banks in May, 1885, and June, 1885—Tables 1 and 2—have appeared in former issues of the JOURNAL.

about \$35,000,000, and the amount due individual depositors increased about \$40,000,000. The outstanding circulation, however, decreased nearly \$25,000,000.

2. On the 3d of June the National banks throughout the country held considerable more than the amount of reserve which the law requires them to keep. In the second column of table No. 3 you will find that they held, in cash, nearly a hundred millions more than the cash requirement. Looking into this table a little more closely, you will find that the excess over legal requirements is least in the case of the New York banks, next come the other reserve cities where the reserve is 40 per cent. more than the requirement, while the banks scattered throughout the country held nearly double what the law requires.

3. Table No. 4 shows that while the ratio of aggregate reserve to aggregate liabilities has decreased from 35.33 to 30.42 per cent. this decline has not been uniform, being greatest in New York, 11.20 points, and least among the banks out of reserve cities, 1.97 points.

It will be seen, on examining the table, that the deposits in New York have remained nearly stationary, while the reserve at this point has declined nearly \$34,000,000; but the banks out of reserve cities have gained \$61,500,000 in deposits and \$10,500,000 in reserve.

Concurrently with this change in the condition of the banks, we have passed through a year of great commercial depression, and the prices of all our staple products are lower than they have been since 1850.

This is only the culmination of a tendency that has prevailed for several years, both in this country and abroad, and while I shall not attempt to divert attention from our own situation by speculation as to foreign industrial conditions, it is only proper to say that the whole civilized world is now so closely united in interests that whatever affects injuriously one great nation must be felt more or less sensibly in others.

Since 1850 the entire face of the earth has been changed over great areas in the five continents, and any one who will reflect upon the revolutions in Government and industry, the movements of population, the wasting wars, the vast material constructions that have characterized this period, will find evidence of an expenditure of vital and financial force that should go far to account for the lassitude now observable.

It is true that the whole world has gained in force by wider education, better machinery, more rapid and cheaper communication and transportation, and in many other ways, but the books of account showing these things are not yet written up, and no man has ventured to state the balance in definite terms.

Let us, therefore, limit our attention to our own situation, and try to draw from those things immediately surrounding us instruction and some light to direct our future business dealings.

Recurring to the tables, and to the analysis of the facts they exhibit, the most obvious reflection is that there is no lack of money in any part of the United States. On the contrary, the banks would not hold such large sums idle if they could employ it. It is notorious that for the past year the rates of interest have been lower, all over the country, than they have been at any time previously since 1860.

It follows, therefore, that a great mistake is being made by those who attribute the present low prices to an insufficient supply of money, and who, in consequence of that mistake, consider it a wise thing to urge the disbursement of funds from the Treasury.

No one familiar with commercial affairs, observing the relations which have grown up in this country between industry and the National finances, can fail to perceive that it is a great misfortune to business interests that they are susceptible to influences which take their rise in the administration of the Treasury of the United States. Commercial forces, which ought always to be free to adjust themselves to that condition of equilibrium which alone conduces to solid and permanent prosperity, become diverted from their natural direction and modified in their legitimate effects by movements of currency and fluctuations of credit, inevitably resulting from variations in policy—though they form no part of the intended effects—of the administration of the National finances.

The perception by the public of the influence exercised upon business by the operations of the Treasury, though these may be conducted, as they ought to be,

solely with reference to public economy and the maintenance of National credit, induces efforts through the press and in Congress to warp that administration into courses supposed to be beneficial to industry.

Objectionable as such efforts are in principle, they are also mischievous in effect, because, while it is impossible for the Government to conduct its fiscal operations so as to benefit some interests without injuriously affecting others, the public apprehension, arising from an administration influenced by other than the most legitimate considerations, disturbs the confidence of business men in the stability of values and discourages them from industrial undertakings in consequence of their inability to calculate with certainty upon the future course of the money market.

These effects are more widespread now than they could have been formerly, because the characteristic of our times, viewed from an industrial stand-point, is that all undertakings are based upon calculations as to the future.

In every department of industry men are eager to escape from uncertainty and to hedge against adverse chances of the future, and those who seek these ends are so numerous that they have everywhere organized exchanges and other institutions for the purpose of facilitating the creation and clearing of contracts, so that now nearly all the leading products of the country are sold before they are produced. In the concourse of a multitude of dealers individual risks are reduced to a minimum, but at the same time this selling and buying for a distant day of settlement greatly augments the effects of public apprehension in reducing prices. It follows that any occurrence at Washington that excites apprehension reduces prices of all commodities which are dealt in in this way, and therefore measures designed to raise prices by increasing the volume of money have practically contributed to their reduction through the effect of apprehension.

Per contra, whatever evils attend the organization of speculation, it must be admitted that such organization contributes to the stability of prices.

It is true that this stability of prices has in our case been reached by reducing them to a point below their range for many years previously, but after making due allowance for the influences just referred to, as well as for economy of rates and of time in transportation, and for the reduction of risk (consequent upon the contract system), it will be found that the general range of prices is not below that which prevailed thirty-five years ago.

It is natural that the present generation, unfamiliar with that old range of prices, should regard the re-establishment of low prices as a discouraging sign of the times, but to those who look at it from a point of view which enables them to compare the present with previous experiences there is no ground for disquietude. This country attained more general and more uniformly distributed prosperity before 1850 than is generally remembered now.

It must not be forgotten that after 1849 prices were stimulated by peculiar circumstances, and that since 1860, in this country, we have been subject to influences tending to exaggerate the scale of prices, because these were for a long time expressed in a currency constantly fluctuating in value and inflated in volume, and great masses of people are always slow to adopt new scales in computing the prices they ought to pay and receive.

The influence upon prices, exerted by currency disorders, emphasizes the importance of the relation already referred to between the condition of industry and the administration of the National finances, because the currency has constantly reflected in its volume and in its value the progress of the Treasury, first towards embarrassment during the war period, and afterwards towards re-established strength during the period now drawing to a close.

From Washington influences went forth which produced inflated prices up to 1873, and which since that time have been operating to bring prices down again to their normal level.

It cannot be doubted that all industry is safest when prices stand on the solid ground of real and substantial value, and as we have already borne the stupendous strain necessarily attending the retrogression towards this solid basis, it would be a great misfortune to the people and a great wrong on the part of the Government if anything should now be done to raise prices once more to the unsubstantial level of an inflated currency.

These reflections should encourage us in surveying the present position of business; they should satisfy us that, while the conditions now prevailing offer but few

opportunities for the rapid acquisition of great riches, they afford ample scope for a steady gain in wealth through the practice of enterprise, industry and economy, and I believe that they will restore again to the laboring masses of our people an opportunity to receive their due share of the fruits of industry.

We have lately passed through experiences to which the American public has heretofore been a stranger; we have seen armed conflicts between organized labor and incorporated capital; we have seen great industries paralyzed by the demands of the workers for a larger share in the profits of their work, and we have seen the traffic of railroads and the security of public thoroughfares interrupted by the violence of men excited by a sense of being wronged, but unable to find either the source or the real instruments of the evils from which they are suffering.

These occurrences are worthy of anxious study by such a body as this, popularly supposed to be in antagonism to the laboring masses, but really bound by the strongest obligations of interest to promote their prosperity and secure their rights.

A just and dispassionate view of these occurrences must take in the fact that since 1860 there has arisen in this country a greater disparity of wealth than ever existed before not only among individuals but among the different classes of the community. When we examine more closely into this it will be apparent that this disparity had its origin during the period of inflated prices and its culmination when we were afflicted with an inferior currency. As long as the rich were growing richer and the poor were growing poorer the masses had to be patient in their poverty and submissive under their deprivations; while now, after a long period of redundant capital and low rates of interest, the laborers have become able to bear the strain of long periods of idleness and thus to stand out for higher compensation against those whom they were formerly too poor to resist.

It is evident therefore that for the masses of the people, for the great laboring classes, for the toilers in field, forest and mine, the present condition of stable values, low prices, solid basis of industry, is better than that other period during which vast fortunes were accumulated while the people at large became straightened in their circumstances and too much impoverished even to combine for their common protection.

The National banks suffer unjustly the odium of being associated in the public mind with a class who augmented their fortunes during the period of inflation, whereas the facts show that these banks have increased in number and in resources much more largely during the last thirteen years than during the times of inflation.

The next annual report of the Comptroller of the Currency will show how largely National bank stock is distributed among all classes of the people, and how small a proportion of it is held by those who are distinctively capitalists. I regret that the statistics are not ready to be laid before you at this time, but from the progress so far made in their compilation I am satisfied that they will show a much wider distribution of National bank stock among the people at large than is suspected by those who seek public favor through disparaging these institutions.

But whether this stock is held by many or by a few, whether the holders are capitalists or industrial workers, whether they belong to what is called the creditor class or to the so-called debtor class, this is certain, that the banks owe their existence and their prosperity much more to their depositors and to the borrowers from them than they do to their stockholders.

If it were not that these institutions attract deposits from the public at large, if it were not that they afford accommodation to men of business who are constantly in need of borrowing the means to ensure the success of their undertakings, and to enlarge the scale of their operations, the capital invested in them would yield no profit and the banks would soon go out of existence.

By reference to the "Report of Condition" of National banks, made on the 3d of June last, it will be found that the aggregate of individual deposits reached the sum of \$1,146,246,911.43, while the combined capital, surplus and undivided profits, which constitutes the entire property of the stockholders, amounted to \$780,415,112.60. As the loans and discounts at the same time amounted to \$1,393,253,742.57, it will be seen that these institutions find their chief function in bringing within reach of one class of the community the idle money of another class, and we all know that as a general rule both these classes consist of persons of very moderate means.

These simple facts show beyond contradiction, and with a clearness adapted to the commonest understanding, that the real and substantial interests of these banks are

identified rather with the interests of their depositors and their borrowers than with the interests of any particular class among their widely-distributed stockholders.

This identity of interest between the banks and their customers places them under the very strongest inducements to seek the favor of the public. No bank can prosper that disregards the broad and general interests of the community in which it is located; no Directors are true to their trusts who fail to remember that the highest interest of their stockholders is inseparable from security to their depositors and a prudent distribution of bank accommodation among as large a number as possible of the business people in their locality.

The National bank system was in its origin a product of the necessity on the part of the Government at a moment of great financial strain to bring to its aid the accumulated capital of the country. Necessarily the stress of the Government enabled the banks to exact the concession of great privileges, and for many years the National banks were really a highly-favored class of institutions; but since January, 1875, when the limitation upon bank circulation was removed, it has been practically a free banking system under the supervision and control of the Government, and from that time these banks have steadily grown in number and in strength, and are to-day so intimately mingled with all the industrial interests of the country that they are more essential to the conduct of business and to the maintenance of prosperity than any other class of institutions except, perhaps, the railroads.

It is quite certain that the destruction of our National banks would be a calamity second only in degree to the sudden annihilation of all our railroads.

Referring to the relation between the National finances and the business of the country, there is encouragement to hope that for the rest of the year, at least, no disturbing influences will emanate from Washington, and, therefore, we may expect that our people will be untrammelled in realizing to the best advantage the fruits of their varied industry.

Upon the realization of these expectations depends, of course, the welfare of the banks, while on the other hand the prudent management of these institutions will contribute materially to that realization.

As well as I am able to judge, from the comprehensive system of reports which enable the Comptroller of the Currency to obtain a general view of all the banks of the country, I am gratified to be able to say that as a whole these institutions are strong in resources, sound in condition and conservative in management.

Each individual association has an obvious interest in the stability and prosperity of the entire body of National banks, because each comes in for whatever share of the public confidence is enjoyed by all. Hence, every bank should realize that its own welfare depends upon all being held to a strict conformity with the law and with those principles of good banking by the observance of which alone permanent success can be attained.

It is a matter of vital importance to our whole banking system, and therefore to all our industries, that these institutions should be in the hands of men not only capable, but also trustworthy; not only expert at making money, but also steadfast to the great trusts confided to them.

From the earliest times of which we have any record, banks and their predecessors, the goldsmiths and the money-changers, sought the confidence of the people as the essential basis of their business.

To be trusted was the aim and the desire of every man who earned his living or amassed profits by taking care of the money of others.

This stewardship of the money of other people remains to-day the most prominent feature of all banking systems of the civilized world, and it is recognized under the National banking system, as it ought to be, by those provisions of law which secure to the depositors and other creditors of these banks the benefit of Government inspection and regulation and a ratable distribution of assets in case of insolvency.

While the law, in providing for inspection and for an orderly and economical liquidation, affords to creditors a security which cannot well be underestimated in its importance, still those who are charged with the management of the banks are not thereby relieved from responsibility both to the stockholders, to whom they owe their positions, and to the creditors of the bank, whose confidence they solicit.

Vain would it be for the law to command or to prohibit, vain for the Comptroller to counsel, to direct and to censure, vain for Examiners to scrutinize accounts, to

inspect assets and to verify liabilities, vain that massive buildings should be erected to prevent depredations, and vaults and safes cunningly contrived to defy robbery, were it not that bank Directors and bank managers, as a class, deserve and enjoy the confidence of the public. Long before Government supervision of banks was thought of in any country, and now in many where no such supervision is in existence, the public have entrusted the keeping of their money to banks in absolute confidence in the integrity and capacity of the bankers.

This, then, is the natural, and therefore the only permanent, foundation upon which banks can build. Public confidence is the bed-rock of our National banking system; this confidence can be gained and preserved only by integrity of management; and integrity can be insured only by constant vigilance on the part of Directors, not in watching unknown or suspected officials, but in securing the services of men of known probity and paying them enough to live upon honestly.

If we review the history of the National banks since 1863 we shall find that the period of inflated prices and of the eager pursuit of sudden riches was also the period in which banks, and those interested in them, suffered most from the dishonesty of their managers. With the return to lower prices, and the re-establishment of our industries upon the firm basis of solid values, there has been a more general observance of prudence and a stricter adherence to integrity in the administration of the banks.

In this respect, therefore, as in others, the banks and the public are the gainers by a return to low prices and moderate profits.

The experiences through which we have passed should remain with us as a guide to the future. No bank should tolerate among its managers men of uncertain principles, or who resort to doubtful methods for the sake of inordinate gain. The capital and the deposits of banks cannot rightfully be employed in speculative enterprises for the benefit of the bank or of its Directors or of its customers. Such employment of the resources of the bank is a betrayal of trust on the part of its managers, and a perversion of its means from those purposes for which alone a National bank can find constitutional warrant for its existence.

There is no authority in the Constitution of the United States under which Congress could authorize the organization of associations entitled to enter the arena of speculation under the sanction of a National charter.

The National banks exist only because they are invested by the law with functions of wide and general usefulness to the community at large; for that reason they are prohibited from permitting any borrower to absorb too large a proportion of their available means of accommodation. They are prohibited from locking up in permanent investments of any sort funds which should be held by them always in a condition of ready convertibility so as to answer the calls of an active trade. They are required to be moderate and reasonable in their rates of interest and discount. And when disaster overtakes them they are prohibited from making any discriminations among their creditors.

These are the general outlines of the law under sanction of which the banks exist, and any association that departs from the spirit of these provisions is unworthy to enjoy the confidence accruing from adherence to them by the great mass of the banks.

If the truth and force of this view of the relations of the National banks to the law, and to each other, were practically realized among bank managers it would go far to strengthen and improve the general condition of the banks, and in that way to benefit the business of the country at large. It is because such views are not yet universal, because there will always be some men more intent on immediate gain than on permanent success, that the law places the banks under official supervision, and, therefore, on the ground of your own highest interests, I venture to ask your support and your indulgence in the exercise of those duties which have been confided to me and which carry with them a weight of responsibility from which my thoughts never escape. In order that you may benefit by whatever measure of ability I may have to explain the law, and to influence your operations, it is essential that I should have your confidence and be entrusted with the exact knowledge of the condition of every association.

To whatever extent the operations of any bank are veiled from the observation of the Comptroller of the Currency to that extent is an opening made for mischief to the whole body of banks as well as of losses and wrong to the stockholders and

to the creditors of that particular association. For a full and frank statement of all that is proper to be made known the Comptroller is largely dependent upon the Directors of the banks, for experience has shown that officers who have the ability and the disposition to deplete upon their banks have also sufficient ability to conceal their depredations from Bank Examiners.

In conclusion, gentlemen, allow me to express the gratification I feel at having this opportunity of meeting so many gentlemen eminent in finance and identified with the progress and prosperity of our country in wealth and greatness.

You will, no doubt, have many topics of interest to discuss, but I earnestly commend to your intelligent consideration two questions which appear to me very important not only to the banks but to the public:

1st. How can the banks be released from the obligation to invest a portion of their capital in United States bonds without losing the power to issue a thoroughly-secured circulation?

2d. How can the National bank circulation be made, what it ought to be, the elastic element in our National currency?

### THE REAL SERVICE THAT BANKS RENDER TO COMMERCE, AND HOW THEY DO IT.

[Address of GEORGE S. COE, President of the American Exchange National Bank, New York.]

The highest material prosperity in the world is best secured by the widest distribution and interchange, at the least cost, of every article of useful industry. To promote the exchange among men of desirable things for other things more desired is the impelling motive of all commercial enterprise and the spring of industry and social intercourse the world over. In estimating the worth of all exchangeable property there must of necessity be some one kind of property universally appreciated and desired to a relative quantity of which any other article for sale can be compared as an equivalent in value and in which that value can be expressed. This third thing is money. By money I mean the precious metals which have been used in all ages of the world as distinguished from any kind of paper instrument. It is not a fetch, a myth, an arbitrary appointment, or even a human creation. It is one product of labor that all men desire. Its value and utility for any people is diminished or destroyed just in the degree that it is not kept in accord with all others or as its character for universal use is in any way impaired. The real presence of this potential medium need not attend every commercial transaction. In fact, as the world progresses toward a higher civilization, money is less and less used as a direct instrument for purchase and sale, but is more and more held in reserved stores ready for aggregated movements between institutions and nations in payment of balances in values of commercial exchanges between them. Yet its vital spirit and significance, as the definite thing of universal desire and recognition, must of necessity be present and prevail in all legitimate commerce. No one nation can for itself change its quality or substitute something else for money not already current in the outside world without deranging its own commercial affairs.

These simple statements seem self-evident, but, like ethical truths, they are easily forgotten in practice.

There is a community of human interests ante-dating all history and perpetually working to bring the world into one compact and vital organism. Commerce, in its onward sweep, pays little respect to distinctions of race, to lines of nationality, or to special legislation. It moves upon men as men, continually extending and strengthening the bond of human brotherhood and mutual dependence. Every improvement in navigation, every revelation in science, every mechanical invention, and every discovery of new and useful productions, is a louder call for human intercourse. But money remains substantially the same indispensable agent through every change. The world grows practically smaller every day. There are now but few isolated and exclusive parts. The forces of nature no less than those of commercial enterprise invite all men to come out of barbarism into civilization—to do some useful work and to bring the productions of their industry into the markets of the world. Those who at first refuse are soon constrained to come. While older nations are thus brought into more intimate intercourse with the new they

are themselves subjected to unlooked for competitors in their own cherished industries. The volume composing the commercial currents thus continually changes and expands in measure, place and variety, and the necessity of a uniform and universal standard of value by which these vast aggregates can be equitably transferred from nation to nation, and from hand to hand, is more and more apparent every day. Because money expresses all other material good it has ever been the object of direct pursuit. Just in proportion as industry languishes men have tried to thrust upon the world as true money some debased or counterfeit thing, believing that it will perform the service of the true. Whether this is done lawlessly by one man, or by combined society through forms of law, the fraud is the same in kind, and differs only in degree. It is always a crime against humanity at large.

To produce by industry the money's worth is the legitimate way to make money. Men do not want the money itself, but what the money's worth will bring by exchange. This is the beneficent and binding law of nature. Older nations have tried in vain to evade it, and their records show how invariably and ignobly they have failed. It is left to our own new country, and particularly to the newer parts of it, to repeat these old errors—errors all the more conspicuous and aggravated because commerce has so largely extended its sway and brought all parts and peoples of the earth into closer relations.

Commerce is greater than local statutes and will over-ride them all. The instruments it uses are still those that the experience of long ages has tested and approved. They cannot be supplanted by any one nation without throwing that people into discordant relations with the rest of mankind and turning it back towards barbarism. Natural law, while it is universal and omnipotent in its operations, is at the same time so genial, beneficent and quiet, and so fits all conditions of men everywhere, that it seems to be no law at all. We only find our mistake when we disregard it and substitute for it our own petty contrivances. Faith in the law of natural law and individual rights under it lies at the very foundation of the American Government.

But the importance of observing what money is is immeasurably exceeded by regarding what it does. It is the money's worth, and not the money itself, that so incessantly passes throughout the commercial tides.

More than nine-tenths of the world's commerce consists of the simple exchange of one thing for another by means of paper instruments which convey but do not themselves like true money possess its real value. Such instruments, when they have discharged their appointed service, necessarily die and are withdrawn. Every document that traverses the great highway of nations must have its constituent of real property concurrently in motion to meet it and by which it is redeemed when the property is sold. The ships that pass each other upon the ocean bear the substantial things given in traffic one for another by pre-arrangement of their owners through the offices of merchants and bankers. All their cargoes, of whatever they may consist of useful merchandise, are in effect held in the portfolios of bankers through whom they are exchanged and re-exchanged for their money's worth of other things desired in any other part of the commercial world. Fortunately there is no international power that under forms of law can forcibly inject into the world's commerce a fictitious paper intended to perform the offices of money while not doing the substantial duty of carrying an equivalent value along with it. That stupendous folly can only be perpetrated by individual States, most of whom in the old world have repeatedly tried it and proved its evil results.

Now what is true of commerce in its larger aspects is equally true when applied to men living in separate communities. Their wants are the same vital, personal wants, and their rights to supply them are private, personal rights, fairly embraced in those classed as inalienable, such as "life, liberty and the pursuit of happiness, to secure which Governments are instituted among men;" and, therefore, if ever admitting of Government interference, it is only when, and only while, life, liberty and happiness are each and all in deadly peril. Having referred to these "self-evident truths," it may not be out of place to say a passing word respecting the only expressed constitutional power of the American Government over money, viz: "Congress shall have power to coin money and fix the value thereof and of foreign coins." This clearly implies the duty, while coining our own, of keeping in view the coins of other nations,

with reference to commercial relations with them, and of adjusting our own coins in conformity to, or in equivalence with, theirs in value for the better promotion of trade. Certainly this cannot be a power given to impede its commerce by gratuitously throwing this great nation into a debased standard of value as compared with others with whom it must deal. This relation is not one between organized nations themselves, as States, but between individuals composing them, and therefore the chain of connection cannot be arbitrarily broken nor be permitted to remain needlessly severed without unequally invading the personal rights of men both within and without the State.

It is perfectly natural that a nation like ours, having speedily subdued a continent of almost boundless extent and fertility, should regard itself as a self-sustaining power, independent of all others in its internal methods and resources, and able to set at defiance the principles which ages of experience have elsewhere approved. Even if this were so, what is the use of doing it? With all our rapid advance many other portions of the earth are also rapidly developing new productions which are fast coming into market to claim a division of profits which this people had begun to estimate as peculiarly their own exclusive reward for supplying the old world with food. But the rapid progress of industry everywhere else is giving us due warning that to hold a place of first rank among the nations we must cultivate commerce with the world at large upon established methods and carefully keep pace in the line of march with the peoples without as well as with those within our National boundary.

To have two moneys, or measures, different in value, is a waste of capital. The larger proportion of money is best kept an idle and torpid reserve. But it is none the less a treasure of indispensable necessity. Like other reserved forces it must consist of full vital qualities and be held in suspense until the exigency arises for which it was provided. And the very fact that great crises suddenly come in commercial affairs, and that they have relations with men beyond the National boundary, makes it all the more necessary that the money of the nation should consist of the universal solvent. To have enough of this, and then to duplicate it by an inferior coin, is at best providing a destructive stimulant and a most expensive encumbrance. Not to have it, or to diminish the aggregate reserve by dividing the required service between the better and the worse medium, is only to ensure the withdrawal of the first from use at a critical moment because it is then the safest investment of timid capital, leaving the business community in its utmost need to suffer the thousand evils of panic and financial derangement. This is now our imminent danger. The shadow of such a prospect is already plainly evident.

But how has it occurred that a people like ours, of general intelligence, fertile in expedients, with a rich country of boundless resources and an excess of exportable productions that has created a favorable balance of trade for successive years sufficient to fill the National Treasury and supply every commercial depository with the world's money, now finds itself contending with initial financial questions and with difficulties ordinarily associated with poverty and want? Why were we not satisfied to "let well enough alone"? The long use, as a substitute for money, of orders upon an empty Treasury, emitted without provision for their redemption, and continually re-issued and renewed, and which, in an unguarded moment, were deprived of their original right to be funded into the public debt, and were afterwards, at the discretion of Congress, made legally perpetual by the Supreme Court, has unconsciously begotten in the minds of our people a feeling that money itself can be created from any material substance, and that, *as money*, a printed promise to pay coin and the coin itself are somehow identical in value; that the Government is endowed with power as the master rather than that it is itself the subject and the servant of natural conditions. The ordinary results of this fundamental error, fatal without exception in every other place in the world where it had been tried, were miraculously averted here by the exceptional conditions of the country. A large army of energetic men, inured to severe toil and privation, were suddenly transferred from war and from older States and nations to the fresh fields of the great West, which in a single year, and year after year, from unbroken solitude, yielded to their labor rich crops of golden fruits, sufficient to turn the commercial balance from the old world to the new. This providential and unlooked-for interposition saved us from our own undoing. Besides all this, the variable monetary conditions of the country, and even the vicissitudes in market prices produced by the alternating volumes of nominal and real money, gave

frequent opportunity for the people to take chances in commercial and financial affairs, congenial to all men of adventurous nature, and has schooled our people more or less into the love of speculative enterprises. All these influences, together with the common opinion that to revive those prosperous days immediately succeeding the war we must repeat the financial expedients with which they were associated, have created the public sentiment at present so largely prevailing. And so, although the war has since a quarter of a century passed into history, the special compulsory measure most reluctantly adopted by the fathers to carry it on, and avowedly justified by them for that purpose alone, is the one measure most persistently cherished and prolonged by their sons as an approved article of political and financial economy in time of peace. When it is assumed that money can be stamped into being from paper by an edict of a republican Government it is easy to conclude that the same omnipotent power can say, "Let one dollar's worth of silver bullion become two coined dollars, or any fraction thereof," and it is done. And this state of public feeling will not easily be changed so long as political power is best secured by reflecting the transient opinions of the people rather than by a diligent study of economical subjects by statesmen who will conscientiously impart to their constituents the results of their own careful investigations.

It is also a striking demonstration of the substantial error in these financial expedients that while commerce is striving with all its might to maintain itself upon the world's standard of value, and instinctively repels such unnatural devices, it is in peril of being overwhelmed by an excessive creation of one of them and by the re-issue of the other to be used in the enforced payment of the public debt into which some of the war currency had been safely funded at the lowest rate of interest, thus completely reversing the provision originally made for its entire extinction.

It may seem that, in thus referring to Government paper, I am needlessly dwelling upon a thing of the past not likely to be continued or repeated. But is it so? When this constant and unprecedented creation and storage of silver coins shall exceed the power of Treasury resources to retain them they must be forced out in payment of all Government dues and become at once the standard measure of the domestic trade of the country. They cannot be mixed together in the commercial currents in any continuous service. Their parity with gold will be destroyed in practice as it already is in fact. Gold will be withdrawn from use as money and become merchandise, daily more and more cherished for its superior value. When this will occur, we all know, is merely a question of time. This will obviously leave a sudden void to be filled by some other medium. It is easy to see that the financial distress produced by this transition will naturally seek relief by an overwhelming demand upon Congress for new issues of the familiar greenbacks, redeemable, if at all, in the same deteriorated silver coin. Thus the two forms of currency will indefinitely increase, become more closely united, and will sink down together. When law thus silently invades established methods, by the compulsory creation of merely local money, law is consistent with itself in demanding that it be used. This second error, the necessary consequence of the first, can only be prevented by firmly withholding the threatened flood and by revoking the fatal edict—fatal, as events have proved, even to the special interest which it was intended to protect. Will this law be repealed? This is the great issue before which our nation, with its business disturbed, now stands halting, neither following the example nor taking counsel with other nations perplexed by the changed aspects of the silver question and with whose commerce we are inextricably involved. That we should so needlessly inflict upon ourselves such confusion and discord in the simple affairs of life, when every motive points clearly in the opposite direction, is one of the marvels of our time.

Meantime our banks, the special servants of commerce, are pursuing their way as best they can, subject to these conflicting currents. The exchanges of property passing through them, between the people, amounts to more than one thousand million dollars in value per week, and in all these vast aggregates comparatively little money is used. The currency or paper instruments by which these changes are effected is substantially like that which is used by the world at large. It consists of orders for the transfer of the money's worth of merchandise in whatever form passing from one person to another by means of deposits and checks which carry with them their expressed value given or received in the infinite variety of things required in life. These orders or checks, like those used in international commerce, having performed their intended

service, become defunct. They are currency redeemed. They have no other vitality than that inherent in the particular property which originates them, and which, to give them validity, must pass concurrently with every one of them from hand to hand. Like tickets for baggage, and receipts for freight, they only facilitate the things conveyed by the motive power supplied by the banks. If it were possible for any man by his simple mandate to enforce his checks upon others when he had no deposit in bank he could thus create legal-tender currency, which is nothing more or less than an arbitrary overdraft of resources, a giving of power to expend wealth in advance of production, and is in effect a derangement and disturbance of the equities among men, reaching far out in its results through all society. To estimate the larger volume of legitimate currency existing it is necessary to take into view the property in process of exchange as it is represented by deposits in banks subject to draft. It is evident that the sum of these, as of any other legitimate currency, has no relation whatever to the number of existing population, but solely to their industrial character and to the results of their labor; and if every person in the great hive of industry who has any thing to exchange with others were connected with such an organization the trade of the community could be affected by this kind of currency alone. This truth is practically recognized every day. Dealers in banks are increasing rapidly in number, and banks are regarded more and more the indispensable agents in the economies of life. Their simple instruments of exchange relieve the public from the personal cares and risks of transporting money, and they accomplish all the objects which any other forms of currency can possibly secure. If there were but one such institution in a given community, and it embraced every inhabitant transacting business, other things being equal, it is plain that but little actual money would be in movement; that the deposits and checks of that institution would, in effect, represent all the property in the community marketable or in process of exchange, and that the only money absolutely required would be that which was needed in payment of wages and that kept in reserve for sudden exigences and for the settlement of balances of trade with other communities outside of itself. That such a community would be injured and not aided by creating for itself an arbitrary standard of value not in accord with those surrounding it is obvious. As no paper currency can possess commercial vitality beyond that given by its accompanying constituent so no dead issue can possibly be endowed with commercial life by process of human law. The practical difficulty attending a currency of checks and deposits alone lies in the fact that to pass a check or to secure creditable relations with a bank demands a degree of moral standing and personal intelligence not possessed by all the members of a community, and for these a form of currency is needed which easily attests its own authenticity. But this medium is but the smaller part, probably not more than one-tenth of the aggregate currency required. It should somehow be made to rest upon that same substantial foundation which accredits the great volume of currency of the same community and which carries along with it the means for its own prompt redemption. If this smaller portion of the currency be unduly expanded or debased, do you not disproportionately raise retail prices and impair the wages of labor, and thus afflict the poor? This larger medium of deposits and checks now constitutes the currency of more than nine-tenths of the aggregate business of the country as other forms of transfer do of the world. Observe the published records of Clearing-House movements from week to week! See how the great staples are moved to market! After the simple labor is expended upon them their value is drawn for and the drafts deposited in banks from place to place as they progress towards their destination. Checks upon banks drawn against them for their money's worth are converted by the same process into the money's worth of other needful things until they reach the place of exportation when the same paper instrument for international purposes takes another name although it does the same duty in substantially the same manner through foreign bankers. In all these changes and interchanges of merchandise the values to and fro may be so nearly equal that little or no money is touched in the process, but it is of vast importance that the standard of value, as money, in which the reckoning is made, shall be kept everywhere the same. All this, so plain in statement, must commend itself as both practical and just. And when you multiply banks over a vast country and divide this important service among them all, both the principle and the practice remain unchanged. The wonder is that a subject so simple in itself could ever have been so completely enveloped in cloud as to admit of the boundless abuse and mystery that has surrounded this most practical question of life.

But our banks are now subject to special trials and dangers. On the one hand they are under the highest obligation to persistently continue their efforts to maintain the gold standard of value, which anchors the prices of the countless millions of property annually passing through their exchanges upon solid commercial ground, and also secures the validity of existing contracts unto their true intent and upon the common level of other commercial nations. On the other hand they are under the dominion of local laws creating a debased dollar and prolonging indefinitely a paper currency of unsubstantial foundation which together continually tend to force the financial measure down to a degraded level. Fidelity to the course which a sense of justice and substantial prosperity alike prompt them to pursue carries with it a feeling of irreverence for, and of insubordination to, the laws of the land. They have waited in hope, and so far in vain, for the legislators of the nation to come to a better mind, and they now rely upon the co-operation of those who so ably administer these peculiar laws to avert from the business community their almost inevitable consequences. The situation presents a novel spectacle to the world. It is not the first time that the laws of the land and the higher law have been in conflict in respect to things that are only "made perfect through suffering."

The unity of interest in our banking system throughout the land will be more apparent when we consider that the staples which form the great body of our industrial exchanges are in universal demand and largely find their markets abroad; and there is no spot, from the place of production to the place of final use, where the measure of value can be changed without confusion and danger. The wages for culture of these products are first entitled to full compensation in the most reliable form of money existing. Anything less than this is the grossest injustice and a fatal blow at social order (and just here a debased or fictitious currency does the greatest wrong). This first step rightly taken, these productions are in effect placed in the custody of banks, which give capital and credit to their money's worth, and permit that value to be drawn out by checks of the depositors in amounts as their convenience demands. These checks are essentially currency, because their money value in property has by them been made current in commerce. The same property moving on to its next destination may be there again divided and sub-divided and sold or started further onward with like results; and as it goes forward from bank to bank and from place to place and is drawn upon it creates new currency, at the same time by its proceeds at every subsequent station discharging that which it had created before until the port of foreign export has been reached when it finally becomes the subject of a foreign check or draft at the equivalent in the world's money, and thus discharges all the currency it left behind it. In all this progress there is no legitimate room for dislocation or change of measure, but to be natural and free all must be uniform throughout.

From the very nature of their duties every bank will seek to be in kindly relations, more or less responsible, with others in the direction of its trade, and the whole body will then move together as one organism, all finally uniting, directly or indirectly, with those that reside at the commercial centres where international trade goes and comes. These receive and pay the money balances which such trade creates, and the money that they use must be, therefore, such as will be accepted as well at its real as at its nominal value both at home and abroad. It is obvious that two unequal forces of this character cannot work kindly together. Here we reach the place where the United States of America, free and independent, enters into conflict with the world. The banks upon the ocean border, where the great waves of commerce within and without meet each other, are now the places of special danger. They perceive, with reference to their own resources, how the rapid increase of debased dollars is continually absorbing the resources of the country by the conversion of the current coin that larger commerce desires into the local kind which it flatly refuses, while the existing statute inexorably calls for additional monthly sums, irrespective of commercial laws and needs, and demands admission of the swelling volume into the healthful currents of trade.

They dread the day when Government will be compelled to enter the Clearing-Houses there and pay its current obligations in deteriorated money, and thus at once subject the countless articles of human industry exchanged throughout the land and every existing contract for value to a local and debased measure of varying value. They see how dexterously the Treasury Department is working as a National wizard in the tireless endeavor to retain a stock of good money sufficient to keep both kinds of

arbitrary currency up to the common level of mankind—anxiously and ingeniously trying to do impracticable things. All this they are compelled to observe while in daily dread of the inevitable result, in the profoundest sympathy with the men who so bravely maintain the integrity of the nation, and in the hope that an intelligent people will early come to the rescue. And what fancied good to this wealthy nation can possibly be expected by this novel and unequal struggle which every thoughtful man knows must end in greater disaster the more it is prolonged? Why should the governmental forces be wasted and distressed in this vain contest with the powers of nature, the universal practices of men and the laws of God rather than be employed in the easier task of finding the shortest way back to the paths of peace and prosperity?

Fortunately this great question is not one that either of the political parties just now claims as its own peculiar property. Both have split upon it into unaccountable fragments, and both, in undefined apprehension of danger, prefer to seek other issues for consolidation. We may, therefore, here discuss it as economists without embarrassment. But its essential importance and vast embrace will inevitably command for it the most absorbing consideration, not as a measure of lower politics, but of higher statesmanship, until it is finally and rightly settled in the National council.

This is not merely a cold question of dollars and cents but one embracing every department of human welfare. It involves all industry, and its reward, making virtuous endeavor variable and uncertain, not dependent on wise forecast and intelligence but subject to legislative caprice and to all the influences which enter into the devices of political parties. When currencies part company their divergence is variable and uncertain. They not only become themselves the subject of speculation and wicked control, but every thing they respectively measure and affect is thrown into similar complications. No community can be contented, virtuous or happy under such conditions of life. All business affairs fall into confusion and become games of chance, subject to endless antagonisms and dangers. *"If the foundations be destroyed, what shall the righteous do?"*

While the railroad system is stretching its long lines from every direction, combining one local structure with another, to reach the sea-coast so as to bring this nation into closer contact with the commercial world, it is a strange anomaly that its Legislatures should at the same time be gratuitously creating obstacles which interrupt the National exchanges of the merchandise they convey and embarrass the commerce they secure.

Banks and bankers that perform their duties at the great gates of commerce must of necessity hold in custody a proper proportion of the money's worth of exchangeable property and of the money itself to meet the variable conditions and demands of trade in either direction. Experience both in the old world and in the new seems to have proved that as a general rule nearly one-third of the current liabilities of such institutions should be represented by cash in hand in order to promptly meet the changes and vicissitudes incident to National and social affairs, and that whenever this ratio begins to subside the expansion of trade can be naturally arrested and the equilibrium restored by charging a higher rate of interest for the use of capital so as to make property more expensive to carry and thus to expedite its conversion into money.

It is evident that if merchandise can be thus most advantageously released it, rather than money, will run into the channels of commerce and produce the desired international result. It is equally plain, if healthy monetary currents are suspended by the introduction of a false and variable medium, that this commercial gauge and index of trade will cease its natural operation and no longer give a signal of danger. Property will be blindly created and exchanged for other property in unknown proportions and in profligate ignorance, when the end will be insolvency. The power presumptuously assumed by the Government to create money and to change its value is thus all the while deceiving the people as to their ability to expend and producing National disappointment and civil discord, so beneficent in their restraints are natural laws and the ways of Providence.

But passing from these general considerations respecting banks located at the points of junction of international commerce, permit me to show how intimately these institutions are related to each other and to those scattered over this vast country. "All are but parts of one great whole." If it be true that a certain ratio of money and of exchangeable property is necessary to hold one commercial locality in healthful

relations with the rest of the world, it is equally true that every institution, of whatever kind, that participates in this service is under honorable obligation to keep itself in the required condition. The Clearing-Houses in large commercial cities make all banks there one in movement, and one in danger. They are therefore bound to be one in general condition and character.

This responsibility rests especially upon those cities to which the lines of commerce from every direction converge and in the measure of the volume of property thus interchanged.

Those banks are safe whose assets consist of liens upon such property as is readily convertible into money. They are more safe when they possess similar property of their own to re-enforce that which they hold upon deposit for others, and still more so when an adequate ratio of cash is habitually maintained to meet all possible exigencies of the situation.

There is a strong temptation to evade and reverse each and all of these conditions by establishing banks of the smallest practicable capital, who seek to secure the largest measure of deposits by giving special bounties for them, because dividends are more easily earned by borrowing the capital of others than by possessing it themselves. These are the practices that lead to destructive competition among banks, alienate members of the same Clearing-House from each other, and weaken the whole system. They are a producing cause of financial panics and crises, and institutions which commit them are those that are always first compelled to seek protection from their colleagues. Whenever banking institutions offer premiums for patronage their stability may be suspected. Banks in commercial centres holding the reserves of the country at large are especially liable to sudden demands from home and abroad. They are beset with temptations to invest their resources in enterprises promising large profits, but not readily convertible into money. It is manifest that their management requires sleepless vigilance and care. They are entitled from the public to a just discrimination and from each other to the most honorable and liberal support. They have a right to demand of each other a strict adherence to such practices as will harmonize and consolidate the total strength and secure prosperity to all and safety to the country. Rightly understood, these conditions and these results are inseparably united in the business.

By reference to the printed reports of Clearing-Houses, it will be observed that two-thirds of the total value of property changing hands in the United States passes through banks in the city of New York. So far as those institutions generously hang together and honorably maintain the high standard of business which their exposed situation demands they present to the nation and to the world the strongest guarantee of safety and stability. The experience of the last thirty years, since they became a more compacted and coherent system, has won for them as a body a deservedly high reputation. This result has not been attained by an equal contribution from each member of business care and character. It has been proved that no institution is large enough to declare independence of its colleagues and no one so small but it may do irreparable damage to them all. There is a limit to the forbearance which the strong may exercise towards the weak in time of trouble, and even the whole bond of union may be broken when an important portion find it their interest to withdraw.

But the lapse of time and the facilities of commercial intercourse are proving the expediency and the necessity of more general consolidation of the banking interest, not in the central city only, but throughout the land. By their instruments the industries of the nation are chiefly promoted, distributed and exchanged. They are so indispensable to life that no substitute for them is possible. The immediate prospect before them all is not by any means cloudless. They will have to encounter, in their service to the public as agents of all industrial exchanges, the caprices and vicissitudes respecting the legal standard by which all property is valued. Stability in the existing financial conditions is impossible. These must rapidly grow worse or be early restored. In either event the banks throughout the land must largely participate in the chances and changes which the business will have to meet and to suffer before a healthy condition can be generally enjoyed.

It becomes us all to keep our respective houses in order and to work harmoniously together for mutual protection and for the public good.

## BANKING AND FINANCIAL NEWS:

WITH COMMENTS ON THE MORE IMPORTANT MATTERS. THIS DEPARTMENT ALSO INCLUDES: RAILROAD AND INVESTMENT NEWS, AND A COMPLETE LIST OF NEW BANKS, CHANGES IN OFFICERS, DISSOLUTIONS AND FAILURES.

**Light-Weight Gold Coins.**—Acting under instructions received from Acting Secretary of the Treasury Fairchild, the Collector of Customs at New York and also the Assistant Treasurers at the various Sub-Treasuries have begun the practice of stamping all gold coin offered, which is below the legal weight, with the letter "L" and returning it to the owner. The instructions mentioned are contained in the following letter:

"TREASURY DEPARTMENT, OFFICE OF THE SECRETARY, {  
WASHINGTON, D. C., July 9, 1886. }

"Assistant Treasurer of the United States, New York:

"SIR:—You are instructed on and after August 1, 1886, to reject and place a distinguishing mark upon all gold coins of the United States presented at your counters for deposit which may be found below the standard weight and limit of tolerance provided by law for the single piece. Although the law makes such coins a legal-tender "at valuation in proportion to their actual weight," it is found to be impracticable for public officers generally who receive them to determine the actual valuation.

"The true value of light weight gold coins can only be ascertained at the United States Mints at Philadelphia, New Orleans and San Francisco, and the United States Assay Office at New York, where they will be received, their value determined, and proper amount of coins of legal weight, or a check therefor, returned.

"This action is taken to avoid the necessity of testing the same coin more than once, experience having shown that when a light weight coin is handed back to a depositor without placing thereon some distinguishing mark, a Cashier or Teller may in the course of business handle and reweigh the same coin several times.

"You will notify depositors accordingly.

"Respectfully yours, "C. S. FAIRCHILD, Acting Secretary."

The standard of tolerance for gold coins is one-half of one per cent. below the legal weight, and when a coin is worn to such an extent that it does not come up to this requirement it is worth only its bullion value. The act governing this is the following section of the Revised Statutes:

SECTION 3,585. The gold coins of the United States shall be a legal-tender in all payments at their nominal value when not below the standard weight and limit of tolerance provided by law for the single piece, and when reduced in weight below such standard and tolerance shall be a legal-tender at valuation in proportion to their actual weight.

Some four years ago it was the practice at the New York Sub-Treasury to stamp light coins in order to prevent the clerks being deceived by them at some future time, but, on complaint to the Secretary, the practice was stopped. There is considerable complaint again in San Francisco as well as in New York, because it is impossible to pass anywhere a stamped coin at its face value. But the law does not contemplate that this shall be done, and the stamp does not prevent the coin from passing at its "valuation in proportion to actual weight." However, the law now puts the burden of loss on worn gold coins upon some innocent holder, and it is a question whether it would not be more just for the Government (that is, the people at large for whom they are made) to bear this expense.

**The Largest Savings Bank.**—A subscriber wishes us to settle a dispute by stating which is the largest savings bank in this country. Undoubtedly the institution doing the largest business purely of that nature in this country, if not in the world, is the Bowery Savings Bank, of New York. Its statement for July 1st shows that its total resources were \$53,697,083, and included the following items: Bonds and mortgages, \$10,118,428; United States, State, city and county bonds, par value \$33,335,200, market value \$11,415,649, the United States bonds alone being of the par value of \$22,000,000 and market value of \$27,873,661. The amount due depositors is \$43,048,790 and the surplus \$10,599,192. The number of open accounts is 108,148, the number opened since

January 1st being 9,371 and the number closed 8,450. The average amount of each account is \$409.71. The interest credited for the six months ended July 1st was \$788,381, the rate per annum allowed being 4 per cent. On January 1st the bank reported: Due depositors, \$42,391,370; surplus, \$9,653,841; open accounts, 102,216. The increase in the surplus during the intervening six months was nearly \$950,000.

**End of the Surplus Resolution.**—Among the bills and joint resolutions remaining in the hands of the President when Congress adjourned was the Morrison Surplus Resolution. This was filed, according to usage, in the State Department, with the following memorandum explaining the reason for the President's non action:

"This resolution involves so much and is of such serious import that I do not deem it best to discuss it at this time. It is not approved because I believe it to be unnecessary and because I am by no means convinced that its mere passage and approval at this time may not endanger and embarrass the successful and useful operations of the Treasury Department and impair the confidence which the people should have in the management of the finances of the Government."

**The New Silver Certificates.**—Washington advices say that the new silver certificates authorized at the last session of Congress will not be ready for issue much before the first of November. Considerable time is required for the preparation of the certificates, principally in the manufacture of the distinctive paper and in the designing and engraving of the plates. The contract for the paper was recently awarded to Crane & Co., of Dalton, Mass. The designs of the plates have been prepared in part and were recently approved by Acting-Secretary Fairchild. The \$1 certificate contains a vignette of Mrs. Martha Washington, the \$2 certificate a vignette of Major-General Hancock in full uniform, and the \$10 certificate a vignette of Vice-President Hendricks.

**Savings Banks of New York.**—The reports made to Bank Superintendent Paine as of July 1, 1886, show that the number of banks in operation in the State of New York is 123, twenty-four of which are situated in the city of New York. On June 21st a charter was issued to the City Savings Bank, of Brooklyn, being the seventh granted since the passage of the General Savings Bank Law in 1875. The aggregate resources of the savings banks of New York city on July 1st were \$312,353,207, being an increase of \$11,210,376 since January 1st. The increase in deposits for the six months was \$8,024,304, and in surplus \$3,181,439. During the same period the number of open accounts increased 14,231. On July 1st the sum of \$4,382,070 in interest was credited and paid to depositors. The expense of management of the twenty-four banks for the last six months was \$370,175. On July 1st the sum of \$18,959,502 in cash was held uninvested by the city savings banks, of which \$15,630,859 is deposited with banks and trust companies at low rates of interest and \$3,328,643 is held in the vaults of the several banks.

The total resources of all the savings banks of the State on July 1st was \$552,770,635, which includes the surplus held by the banks, amounting to \$82,984,629.

#### MISCELLANEOUS BANK AND FINANCIAL ITEMS.

— Perhaps if we conquer Mexico we can shove our seventy-one-cent dollars off on her.—*Baltimore American*

— A new bank is being organized in North Minneapolis, Minn., to be known as the German-American, with a capital of \$100,000.

— The salary of the Sub-Treasurer at Boston has been set at \$5,000 through the persistent efforts of Senator Dawes and Governor Long.

— H. E. & W. D. Macomber, proprietors of the Farmers' Bank, of New Lisbon, Wis., have made an assignment to O. B. Chester. The assets amount to \$14,000.

— The capital stock of the Inchoate Fourth Street Bank, of Philadelphia, has been fixed at \$1,500,000, and it is intended to begin business early in October.

— Superintendent Fox, of the Philadelphia Mint, says there is great need of more vaults for storing silver. There is now about \$17,000,000 stored in the Post-office.

— The Acting Comptroller of the Currency has declared a dividend of 10 per cent. in favor of the creditors of the Schoharie County National Bank, of Schoharie, N. Y. This makes 30 per cent. paid to the creditors on claims proved amounting to \$137,334.

— The assets of the Gorham Savings Bank, at Gorham, N. H., have been scaled 20 per cent. on account of depreciated securities and to prevent a run on the institution.

— The Comptroller of the Currency has declared a first dividend—50 per cent.—in favor of the creditors of the First National Bank, of Angelica, N. Y., on claims proved amounting to \$48,860.

— Judge Gresham of Chicago has appointed Judge E. B. Martindale, of Indianapolis, Receiver of the New York, New England & Western Investment Company, under a bond for \$10,000.

— Some regret is expressed that the new silver certificates have no picture of an American citizen passing triumphantly through the Niagara whirlpool in a barrel.—*Louisville Courier-Journal*.

— The cheaper the silver dollar the more anxious many Congressmen are to pay the public debt with it. That is just what honest men would not prefer in their private dealings.—*N. Y. Tribune*.

— Boyd C. Caldwell, Cashier of the City National Bank, of Williamsport, Pa., which failed several months ago, was arrested August 22d, charged with embezzling funds of the bank amounting to \$20,000.

— It may be a good thing for defaulters to commit suicide and so rid the world of their presence, but it would be better still if they would perform the happy dispatch before the embezzling begins.—*Pittsburgh Chronicle*.

— Judge Pratt, on petition of the National Bank of Middlebury, Vt., which was interested to the extent of \$10,000, has authorized insolvency proceedings against Albert Sowles, Cashier of the defunct First National Bank of St. Albans.

— The Pittsburgh Associated Banks have extended an invitation to the American Bankers' Association to hold its next annual meeting in that city. The time and place of meeting of the next Convention will not be decided upon until next June.

— The interest allowed by the English Government to savings bank depositors is uniformly  $2\frac{1}{4}$  per cent. per annum, while the joint-stock and private banks have been paying only 1 per cent. recently, and their rate is almost always under  $2\frac{1}{4}$  per cent.

— Advices from Buenos Ayres say that Elbert P. Cook, formerly of the banking firm of Cook & Sackett, of Havana, N. Y., which failed through his default and disappearance in January, 1885, has been killed, together with his daughter, by an insane man.

— The Merchants' National Bank, of Boston, has accepted the resignation of Cashier George R. Chapman, seemingly on account of the dealings of C. P. Mudge, a member of the Stock Exchange, who kept his account at the bank. It does not appear that the bank lost anything.

— J. S. Van Doren, the Cashier of the Bank of Sonoma County, Petaluma, Cal., has been arrested on a charge of embezzling \$37,000 of the bank's funds. Van Doren has been in the bank's employ for eighteen years. The solvency of the bank is not affected. Van Doren denies the charge.

— The examination of the condition of the Sub-Treasury at Baltimore, consequent on the transfer of the office to the new Assistant Treasurer, was concluded on August 12th. A count of the moneys and securities verified the books of the office with the single exception of an excess of four cents.

— The Receiver of the Provident Savings Bank, of St. Louis, has compromised with the bondsmen of Almon B. Thomson, the absconding Cashier, who were nominally responsible for \$60,000, by accepting \$50,000 in cash. It is expected that the bank's affairs will soon be straightened out.

— Mr. John White, of Key West, Fla., has sold out his large business interests, including the John White Bank, to Mr. James A. Waddell, who has been connected with him for the past five years. Mr. White wished to take a well-earned rest, but he has consented to continue as President of the bank.

— The Metropolitan National Bank, of New York, has negotiated a sale of most of its assets. The bank has liquidated over \$500,000 of the Clearing-House certificates

issued during the panic in May, 1884, and the remaining \$200,000 or \$300,000 are about to be paid. A dividend is expected to be declared soon.

— Heavy demands have been made on the Treasury Department of late for minor coin, especially 1 and 5-cent pieces, and arrangements are being made with the Mint authorities which will result in securing a supply sufficient to meet all reasonable demands. It will, however, take some time to coin the additional amount required.

— The following story is told of John Bright. Mr. Bright is connected in some official way with a bank somewhere in England, and somebody asked him how it was that this bank had been so uniformly successful, and Mr. Bright's answer was: "Well, the only reason I know of is that we have never had any very clever fellows about it."

— Mr. W. W. Corcoran's recent gift of \$31,000 to Columbian College prompts us now to state that he was born in Georgetown, D. C., December 27, 1798, and has given to good causes largely over \$2,000,000. His father was an original Trustee of Columbian College, and he himself has been President of the Board of Trustees for some years.—*Richmond (Va.) Religious Herald.*

— Messrs. Brown Bros. & Co., the bankers, have bought the property at the southeast corner of Fourth and Chestnut streets, Philadelphia, and it is said intend to begin the erection in the course of a year's time of a spacious and costly edifice that will rival the other imposing buildings of money institutions in that vicinity. The property has a frontage of fifty-four feet.

— Owing to the discovery of the heavy defalcations and suicide of E. Gray, Jr., Treasurer of the Atlantic Cotton and Indian Orchard mills, Mr. Samuel R. Payson, President of the City National Bank, of Boston, who was largely interested in both mills, has been compelled to make an assignment. He has also resigned his position in the bank, which is not supposed to be involved.

— The Attorney-General of New York State has obtained an injunction to prevent the Trustees of the Whitestone Savings Bank from paying out any money pending a hearing on an application made by him for a Receiver for the bank. The last official statement of the institution shows that its business has dwindled away to such an extent that it is insolvent. No contest will be made.

— One year ago, LeRoy Moore, a banker at Greenville, Mich., failed, and many depositors were left out in the cold. When the City National Bank was organized Mr. Moore was made Cashier, and worked hard. Recently all of his depositors, many of whom had given up their money as lost, were agreeably surprised to receive notice that Mr. Moore was prepared to pay deposits with interest to date.—*Detroit Tribune.*

— Dr. Abraham T. Lowe, who for nearly a quarter of a century has been connected with the First National Bank, of Boston, and for more than twenty years its President, attained his ninetieth birthday on Sunday, August 8th. He is believed to be the oldest living representative of the Legislature of Massachusetts and of the graduates of any department of Dartmouth College. His connection with the Masonic fraternity dates back to 1817. He has lived under the administration of all the Presidents of the United States.

— Silas M. Waite, of Brattleborough, Vt., the ex-financier, having finished his six years' sentence at the Rutland, Vt., Workhouse, was released on August 15th. He was sentenced for violation of the National banking laws, and several indictments are still hanging over him. The expiration of the sentence was kept secret, and he was spirited away in less than five minutes after his release at midnight, and was quietly taken to an early morning train for the North. From Montreal he goes to Omaha, Neb., where he will join his son. Waite petitioned for a pardon last winter, but failed on account of a protest from old neighbors in Brattleborough.

#### R. E. AND INVESTMENT NEWS.

##### *New Issues.*

MONTREAL, P. Q.—This city recently placed \$500,000 of 4 per cent. bonds at 101.

NEW HAVEN & NORTHAMPTON.—The stockholders of this railroad have voted for an issue of convertible bonds to the amount of \$700,000 for the funding of the floating

debt incurred in the construction of the northern extension of the road from Northampton to Williamstown.

**EAST ORANGE, N. J.**—The Finance Committee has been receiving proposals for \$150,000 sewer loan bonds, bearing interest at the rate of 4 per cent. and maturing in from one to twenty years.

**JEFFERSON, MO.**—The Fund Commissioners have been calling for bids for \$700,000 five-twenty year  $3\frac{1}{4}$  per cent. funding bonds, principal and interest payable at the National Bank of Commerce, New York.

**THE CITY OF BINGHAMTON, N. Y.**, Bridge bonds, recently offered for sale by the Commissioners, have been sold to J. F. Mahoney & Co., of New York, at 116. The amount was \$33,000, and the interest 4 per cent.

**BALTIMORE, BIRMINGHAM & GULF.**—This is the name of a railroad company just chartered in Alabama, and promoted by the iron masters of the Birmingham district. The capital is \$1,500,000, with the privilege of increasing to \$10,000,000.

**MADISON, IND.**—Proposals have been received at the office of the clerk of the city of Madison, Jefferson county, Indiana, for \$104,000 four per cent. funding bonds, running from two to fourteen years, in equal instalments of \$8,000 each.

**BURLINGAME, LYNDON & SOUTHERN.**—A charter has been issued in Kansas to the Burlingame, Lyndon & Southern Railroad Company for the construction of a line from Burlingame to the City of Lyndon. The capital stock is placed at \$1,000,000.

**THE KANSAS CITY & OMAHA RAILROAD COMPANY** is a new Nebraska corporation, with a capital of \$1,000,000, and backed by influential men, which has been organized to build feeders to the St. Joseph & Grand Island Railroad. It will press work rapidly.

**THE VICKSBURG, SHREVEPORT & PACIFIC RAILROAD COMPANY** has arranged with the Central Trust Company, of New York, to exchange the income bonds and stock for a new bond issued for \$2,500,000, secured by a first mortgage on the land and a third mortgage on the railroad.

**SHARPSBURG & SHENANGO.**—A charter has been granted in Pennsylvania to the Sharpsburg & Shenango Railroad Company. The road will be 13 miles long, extending from Shenango to Mercer, in Mercer county. The capital stock is \$130,000. All the Directors are residents of Sharpsburg.

**CINCINNATI, INDIANAPOLIS, ST. LOUIS AND CHICAGO.**—At the recent annual meeting at Chicago the stockholders formally approved Mr. Ingall's refunding measure, providing for calling in old interest-bearing obligations and refunding them into 4 per cents. A mortgage for \$10,000,000 was ordered placed upon the company's property to secure the new bonds.

**WILKESBARRE & WESTERN.**—A mortgage for \$1,000,000, executed by the Wilkesbarre & Western Railroad Company in favor of the Central Trust Company of New York, has been filed in the Recorder's office at Wilkesbarre, Pa. This is as security for 1,000 bonds of \$1,000 each. The road is a new one. Its eastern terminus will be at Shickshinny and its western terminus at or near Watsonstown, Northumberland County.

**CENTRAL OHIO.**—At a recent meeting of stockholders of the Central Ohio Railroad Company, held at Columbus, it was decided to issue a forty-year  $4\frac{1}{4}$  per cent. gold loan of \$2,850,000. The proceeds of the new bonds are to be used to pay the Baltimore & Ohio Company for shops and other improvements at Newark, terminals of Central Ohio Road at Columbus and for Central Ohio's portion of second track from Columbus to Newark.

**NEW YORK CITY.**—Bids for school-house bonds of the city of New York to the amount of \$470,845.47, at 3 per cent. interest, and redeemable on August 15, 1894, were opened recently. The total amount of the bids received was \$4,066,763. Blake Brothers & Co. were the highest bidders, offering to take the whole of the issue at 102.918, and the award was made accordingly. The other bids ranged from 100.50 to 102.89.

**LONDON STOCK EXCHANGE.**—Application has been made to the London Stock Exchange for special settling day and quotation for Grand Rapids & Indiana Railroad Company (Muskegon division)—\$750,000 5 per cent. first mortgage gold bonds, and quotations for Grand Rapids & Indiana Railroad Company—\$3,034,000 first mortgage

guaranteed land grant bonds, and New York, Pennsylvania & Ohio Railroad—deferred interest warrants.

**MONTANA UNION RAILWAY.**—President Harris, of the Northern Pacific Railroad, President Adams, of the Union Pacific Railroad, and others, have organized the Montana Union Railway Company with a capital of \$500,000. The road is a short line near Butte, Montana, and comprises short branches of the above-named roads.

**MIDDLETOWN, UNIONVILLE & WATER GAP.**—The first mortgage bonds issued by the Middletown, Unionville & Water Gap Railroad Company, dated November 1, 1886, of which issue there are outstanding \$150,000, mature on November 1, 1886. By resolution of the Board of Directors the privilege is given to holders of the first mortgage bonds of extending the same for twenty-five years at 5 per cent. per annum, provided they avail themselves of this privilege on or before October 1st.

**NEW YORK STOCK EXCHANGE LIST.**—The following securities have been added to the list:

Texas Pacific—Engraved receipts of the Wistar Committee for Texas Pacific consolidated Eastern Division bonds and general mortgage and terminal bonds. The application for listing states that the committee represents \$7,767,000 Eastern Division bonds and \$2,158,000 terminal bonds.

West Tennessee, Virginia & Georgia Railroad—\$81,000 divisional bonds.

New York, Brooklyn & Manhattan Beach Railway Company—\$185,000 consolidated mortgage 5 per cent. gold 50-year bonds.

Norfolk & Western Improvement Company—200 bonds.

#### *Railroad Reports.*

**FRENCH BROAD RAILWAY.**—The charter for the French Broad Railway, Tennessee, has been filed. The principal incorporators are the officers and directors of the Richmond & Danville Railroad Company, and they propose to build a road from Paint Rock, N. C., to Knoxville, Tenn., a distance of seventy-five miles, at a cost of \$2,000,000. Work will begin at once. When completed this will open the long looked-for Chicago & Charleston air line.

**CHICAGO & NORTHWESTERN.**—The report of this railway company for the year ended May 31 last shows that the mileage was increased from 3,843 to 3,949 miles. The earnings were:

	1884-85.	1885-86.
Gross earnings.....	\$23,502,056	\$24,279,600
Total expenses. . . . .	13,793,907	12,859,226
Net earnings.....	\$9,708,149	\$10,420,374
Deduct total disbursements.....	9,132,449	9,038,867
Balance, surplus.....	\$575,700	\$1,381,507

The disbursements include dividends of 7 per cent. on the preferred and 6 per cent. on the common stock during the past year against 8 and 7 per cent. respectively in the previous year. The amount of stock was unchanged, but the bonded debt was reduced from \$91,400,500 to \$90,511,500.

**ST. PAUL & DULUTH.**—A summary of the operations of this railroad for the twelve months ended June 30th is given below. The first items show net income:

	1885.	1886.
From land and stumpage sales.....	\$86,598	\$213,061
From operation of railroad.....	449,268	629,941
Total net earnings.....	\$535,866	\$843,002
Paid interest on bonds.....	50,000	50,000
Improvement, construction and equipment.....	86,226	417,104
Net income.....	\$399,639	\$375,898
Balance income from previous year, less dividend fund.....	44,103	69,414
Applicable to dividends on preferred stock..	\$443,742	\$445,312
Dividends on preferred stock, 7 per cent.....	374,328	374,657
Balance income as of June 30.....	\$69,414	\$70,654
Deferred receipts from land and stumpage sales..	425,695	360,709

# NEW COUNTERFEITS, SPURIOUS COINS, ETC.

**NEW COUNTERFEIT \$10 SILVER CERTIFICATES.**—Under date of August 31, 1886, Chief James J. Brooks, of the Treasury Department, writes: "There has appeared in the State of Ohio a counterfeit silver certificate of the denomination of \$10; Series 1880: Jas. Gillfillan, Treasurer; B. K. Bruce, Register. It appears to be the joint production of lithography and job printing. The stone from which part of it was printed is of the coarsest grain and the workmanship of the crudest character. The words "there have been deposited with" and "payable at this office to the bearer on demand" are all in script type and are the only clear lines in the note, all else being blotchy, blurred and soiled. The Treasury number is B376780 X, and is probably the same on all. Although its defective workmanship is so glaring its existence must not be ignored, for already several persons have been victimized by its acceptance as a genuine issue."

**TWO COUNTERFEITERS** who have been occupied in raising \$1 and \$2 American bank-notes to \$10-notes have been arrested in Lambton county, Ontario.

**THE SPURIOUS \$10-notes** of the Canadian Bank of Commerce are described thus: The forgery has a yellowish appearance. The shading on the large green letters is much lighter than in the original; the large TEN in green letters is too high on the paper, running into the coat of arms instead of being immediately under it.

IT IS REPORTED that \$5 counterfeit Bank of Commerce bills are in circulation at Quebec.

A SO-CALLED "AUTHORITY" is warning people against counterfeit Treasury notes, especially of the \$5 denomination. As we have frequently said, bank Tellers who make a careful study of *genuine* paper money, National bank bills as well as United States Treasury notes, will not be "caught" with counterfeits once in a lifetime. Traveling "Detector" agents, however, with their wallets full of stock-in-trade samples, can usually show some exquisite tricks while playing their trade among bankers and merchants.

THERE IS COMPLAINT of a light-weight and very deceptive counterfeit of the United States silver dollar which is in circulation in Mexico. It seems to have deceived some bankers who have taken it in and passed it out.

COUNTERFEITERS in Germany do not disdain small profits. Several pfennig pieces are reported to have lately made their appearance, made of bronzed pasteboard, and so perfectly imitated as almost to defy detection.

FOR THE PAST two or three years the European Continent has been deluged with forged Bank of England notes executed in a style which sometimes deceives the inexperienced judges of genuine notes.

**ASSOCIATED BANKS OF NEW YORK.**—The loans of the Associated Banks of New York have been considerably reduced within the past few weeks in consequence of the calling in of call-loans and a refusal on the part of the banks to discount as freely as hitherto. Notwithstanding the recent squeeze in money the surplus reserve keeps at what used to be considered a respectable figure for this season of the year. The following shows the condition of the New York Clearing-House banks for a number of weeks past as well as about this time in 1885 and 1884:

1886.	Loans.	Specie.	Legal-tenders.	Deposits.	Circulation.	Surp. Res.
Aug. 28...	\$342,383,200	\$68,582,100	\$25,673,800	\$349,393,000	\$7,982,900	\$8,907,150
July 31...	354,327,400	64,271,200	43,033,800	377,703,100	7,864,000	12,878,725
June 28...	361,086,500	65,013,400	43,297,900	375,823,100	7,823,400	14,354,275
May 29...	341,540,500	69,516,800	35,624,300	365,242,000	7,851,700	13,890,600
Apr. 3....	349,806,600	78,459,800	26,241,100	370,893,000	7,974,100	11,991,400
Mar. 27....	356,068,600	79,084,600	28,778,700	380,264,600	7,989,600	12,797,150
Feb. 27....	349,877,000	92,343,600	31,187,200	380,252,100	8,666,100	25,937,775
Jan. 30 ...	337,934,700	100,212,700	33,432,400	389,954,700	9,599,600	36,156,425
1885.						
Aug. 29...	320,112,500	115,655,000	39,040,400	391,140,600	9,684,200	56,910,250
1884.						
Aug. 30...	287,993,200	75,916,500	31,221,900	304,152,100	14,355,300	31,100,375

**BANK TAXATION, AND TRUST COMPANIES.**

Among the "Banking and Financial News" in the August number of the *JOURNAL* mention is made of the argument before the United States Circuit Court in the test case of the Mercantile National Bank against the authorities of the city of New York, brought to decide on the constitutionality of the present State taxation of banks. The decision is awaited with much interest, as it will affect the matter of the taxation of the National banks throughout the United States and also of the other banks in some of the States. A side-light was thrown upon the subject by the President of a prominent New York bank in an interview recently had with him.

"This is a test case," explained the President, "by which we hope to show that the tax imposed by the Legislature of this State upon National banks is contrary to the law of Congress establishing National banks. The tax on the National banks of this city amounts to \$2.40 per hundred. On this bank, for instance, the State tax is \$80,000 a year, and the aggregate on all the National banks in the city is over \$1,000,000. There are many arguments against the imposition of additional burdens on the National banks, but the principal one to my mind is the discrimination in favor of trust companies as against the National banks. The law of Congress forbids such discrimination.

**"HOW THE TRUST COMPANIES ESCAPE.**

"For instance, there are some fifteen trust companies in this city. A single one of these, which is now taxed \$3,756, would be obliged to pay, if it was taxed as the National banks are, \$708,000 a year. What with our heavy tax and the heavy deposit we have to keep with the Treasury Department at Washington any trust company can afford to do business cheaper than we can and can pay interest on deposits that a National bank cannot afford to handle. The relative positions of the trust companies and the National banks are like this:

"The shares of stock of trust companies have been exempted from taxation. For local purposes trust companies are taxable only upon their capital stock. The aggregate actual value of the shares of the capital stock of trust companies in this State and organized under its laws is \$32,018,900. Remembering that the entire capital stock of all National banks in the city of New York was \$46,250,000 only, and in the entire State but \$83,054,160, it appears that the exemption of \$32,000,000 of shares of capital stock is a very material discrimination. We claim that the discrimination under the laws of the State of New York in favor of the shares of trust companies as against the laws of National banks is a very material one and in violation of the Act of Congress in another sense than that arising from the mere weight of dollars' worth of property excluded from the taxable class in which the shares of National banks have already been included.

**"THE LAW OF THE MATTER.**

"The Supreme Court has said, in the *Boyer* case, that a very material discrimination against National bank stock by the laws of a State would be a violation of the condition imposed by Congress upon their right to tax National bank stocks. The special discrimination in regard to trust companies is such a peculiar one as to render it very material without regard to the amount of property involved.

"The purpose of Congress in imposing the condition which it did in the National Banking law was to protect its creatures, the National banks, from such discrimination as would affect their efficiency as an organ of the National Government. Hence any discrimination which does affect the efficiency of a National bank is such a discrimination as was prohibited. The law creating the National banks expressly granted the power of receiving deposits and of making discounts of commercial paper. That is to say the National banks, besides being banks of issue, are also banks of deposit and discount. If any faculty is of greater importance than another to the efficient and profitable operation of the banking system it is that of discount and deposit, and Congress, of course, contemplated its protection when it proscribed in the National Banking Act careful restrictions as to this faculty.

"Hence, if the State of New York by any species of legislation pertaining to its own creatures which possess the franchise of discount and deposit, as in the case of

the trust companies, does relieve them from the burden of taxation which it imposes upon the National banks, such legislation is a discrimination in violation of the Act of Congress.

**"ADVANTAGE OF THE TRUST COMPANIES OVER THE BANKS.**

"The earning power of the trust companies as compared with the National banks is nurtured by the State to the disadvantage of the banks. As competitors in the conduct of this business of discount and deposit the State has to this degree diminished the efficiency of the creature of the National Government. The trust companies receive deposits subject to check; they make investments in commercial paper; they make loans of money on pledge of security. At the same time they are not required to hold a cash reserve of any portion of these demand deposits and they may loan without restriction as to amount to a single borrower. The effect of this disparity is shown in the fact that the average dividend of the trust companies of New York city for the year 1884 was 16 $\frac{1}{4}$  per cent. as against the average dividend of the National banks of 8-10 per cent. Ten trust companies of this city, possessing a capital of \$9,850,000, had on the 31st of December, 1884, individual deposits amounting to \$113,540,000, while forty-four National banks of this city, having a capital of \$46,250,000, had individual deposits of \$201,600,000—that is to say the trust companies had nearly three times the amount of the deposits possessed by the National banks considered with relation to their respective capital."

## THE AMERICAN NATIONAL BANK, Of Kansas City, Missouri.

### A SKETCH OF THE NEW INSTITUTION.

The rapid growth of Kansas City as a financial centre is attracting no less attention than her wonderful strides in commercial and industrial development. One of the most notable evidences of this growth is the recent organization of the AMERICAN NATIONAL BANK, which on Monday, August 9th, opened its doors to the public. This new financial institution starts out under the most favorable auspices and upon an unusually solid financial basis, its paid-up capital being \$1,250,000 and its stockholders including not only many of the strongest business men and bankers of the city and the West but also a large number of the most prominent capitalists, bankers and monetary corporations of the East, thus forming a combination of financial strength of which few western banks can boast.

The management has been fortunate in securing offices in the centrally located "Alamo" building at the northwest corner of Seventh and Delaware streets, which has been remodeled throughout. The bank occupies the entire first floor. The main office is 35 x 70 feet, fronting on both Delaware and Seventh streets, and is the most spacious and well lighted banking room in the city. To the right of the main entrance, which is on Delaware street, are the desks of the Vice-President and Cashier, and adjoining these are their private office and stenographer's room. On the left of the entrance a room has been attractively fitted up for the use of patrons and visitors. The rooms of the President and Directors are conveniently located at the rear of the main office. Elegant furniture adorns the offices and the entire room has been decorated in a unique and artistic style which reflects credit upon the taste and skill of Messrs. Moore Brothers, the designers. The floor is tiled. The furniture and counters were supplied by A. H. Andrews & Co., of Chicago, and in design and finish fully sustain the reputation of this firm. The counters are of birch with elaborately carved bases, surmounted by beveled French plate glass with antique brass ornamentation of a new design. A novel feature in their construction is in so arranging them that each of the Tellers' windows faces the main entrance, thus enabling a customer to determine at a glance where his business should be transacted. The vaults are constructed in the strongest manner and are supplied with two large burglar-proof safes.

The officers of the new organization are: Wm. B. Grimes, President; W. P. Rice, Vice-President; H. P. Churchill, Second Vice-President; H. P. Stimson, Cashier, and F. W. Hunton, Assistant Cashier.

The following well-known gentlemen compose the Board of Directors: T. B. Bullene, Wm. B. Grimes, H. P. Stimson, J. C. Avery, W. P. Moqres, H. P. Churchill,

W. P. Rice, J. I. Reynolds, A. Drumm, C. A. Brockett, E. E. Parker and F. W. Hunton. The officers and Directors are closely identified with the business interests of the city and include many prominent citizens whose well-known financial responsibility, wide business experience and conservative judgment strongly commend the new institution to the confidence of the public. The managers are all men of practical business training who have for many years been actively and successfully engaged in banking and other financial enterprises in the city and in Kansas, where they still have large interests. They have, therefore, already acquired a thorough knowledge of the methods and requirements of western banking, which will be of special value in enabling them to intelligently appreciate and safely meet the wants of their patrons.

The stock of the bank has been so placed as to give to the institution the greatest possible financial strength and at the same time to secure an organization that will be of service in developing the resources of that section of the country. Among its eastern stockholders are included not only men of national reputation but also some of the most prominent capitalists, bankers and others. The close relations thus established between the East and the West will naturally make the AMERICAN NATIONAL BANK the medium through which a practically unlimited amount of eastern capital will seek investment, a result which will not only be in the highest degree beneficial to Kansas City but will also give to this bank unequalled facilities and advantages for supplying at all times the wants of its city and country customers.

There is undoubtedly an excellent opening at Kansas City for the new bank and it has the most flattering prospects. The city now has a population of 130,000 and is the tenth city in the Union in the volume of its business, while its banking capital is smaller in proportion to the actual business done than that of any other city in the country. Bank deposits are growing rapidly and there is an active demand for money at good rates and upon good security, thus supplying all the necessary conditions for a large, safe and profitable business.

Having the largest capital and strongest financial support of any bank in the Southwest, organized at a time when the growth and business of the city demand such an institution, possessing already established business connections and managed by practical bankers thoroughly acquainted with all the details of their business, it is safe to predict that the AMERICAN NATIONAL BANK will at once take rank with the leading and most successful financial institutions and prove an important factor in promoting the growth and development of Kansas City and the West.

Attention is directed to the card of the new bank in this number of the JOURNAL. In the next number the managers will have something further to say in a more extended advertisement.

---

UNDER THE HEADING, "A MYSTERY OF FINANCE," the *New York Journal of Commerce* recently treated the subject of the recent sudden stringency in the money market. The views set forth might be passed by without comment were they printed by a paper of ordinary calibre, but, as it is otherwise, they are more likely to mislead. The editor proclaims the stringency a "mystery" because he finds the ordinary reasons assigned to be false. He has discovered, for instance, that the reason most commonly given—the demand from the West for moving the crops—is unsatisfactory because there is an equal demand for money in the West as elsewhere, and the express companies have moved very little money there. In fact, "there is no scarcity of either currency or credit, but a freshened demand for it," the advancing rates for money being the result of "a general idea that the money market is growing 'tighter.'" But the trouble is that the "idea" has a very solid basis, as the writer quoted might have easily seen by glancing at the weekly statements of the New York banks. On August 21, 1886, the aggregate loans of the Clearing-House banks were \$348,057,600 against \$317,554,700 a year ago. On the other hand the money reserve is this year only a little over \$96,000,000 against \$158,000,000 a year ago. This shows that not only is there a greater demand for credit but that a large proportion of the reserve money has been withdrawn, and the idea that it has gone into the interior has that much basis at least. Of course, it is to be agreed that the renewed demand for money is the result of revived activity in business.

## NEW BANKS, CHANGES, FAILURES, ETC.

**New National Banks.**—The Comptroller of the Currency furnishes the following statement of National banks organized since our last report:  
(Names of officers and further particulars regarding new National banks will be found under their proper State headings in this list.)

**WATFORD.**—Bank of London; T. A. Telfer, Manager, deceased. Thos. Fuller; sold out.

#### QUEBEC.

**QUEBEC.**—Union Bank of Canada; E. E. Webb, Cashier, instead of Acting Cashier.

**OPINION OF THE LATE SAMUEL J. TILDEN UPON THE RIGHT OF CONGRESS TO ISSUE LEGAL-TENDER NOTES.**—Mr. Tilden during his life wrote many letters upon public topics and his opinions were always received by the public with great favor. Perhaps no letter that he ever wrote was more tersely expressed than the following one addressed to ex-Comptroller Knox upon the subject of the recent decision of the Supreme Court of the United States, which held that Congress had the right to issue legal-tender notes in unlimited quantities in time of peace. Following is the letter.

"I thank you for the copy you were kind enough to send to me of your interesting work on 'United States Notes.' Every good citizen, friendly to an honest circulating medium and to preserving the limitations of governmental power imposed by the Constitution of the United States from overthrow by sophistical constructions, is indebted to you."

## THE BANKER'S GAZETTE.

*The Money Market and Financial Situation.*

NEW YORK, September 1, 1886.

THE LATEST ACCOUNTS represent the condition of mercantile business as fulfilling the favorable promises of a month ago. The crop reports are no longer used as a medium for affecting speculation on either the bull or bear side, and it is pretty well decided that the harvest of Indian corn will be from fair in some sections to very good in others, as was the case with wheat. The prices obtained by the farmers are better than those of last year, and European financiers expect that our breadstuffs will find a good market abroad, as the harvests there are generally rather poor.

The principal disturbing factor in financial matters is the early and somewhat unexpected demand for money which sprang up a few weeks ago, and which was taken advantage of to depress the stock market. It appears that the warm, dry weather ripened the wheat crop about three weeks earlier than usual, and this, together with the improvement in the price, led to the rapid marketing and shipment of the grain. The revival of activity in general trade was added to other causes in depleting the surplus reserve of the New York banks, while the banks at other eastern centres as well as in the west have had a stronger drain upon their resources than has been felt since 1884. This call for money is undoubtedly a good sign as to the condition of business, but there are aspects of the matter which, in view of the muddled state of the Government finances (arising wholly from stupid and half-honest legislation), demand serious attention.

During the past month the Acting-Secretary of the Treasury has issued three calls for 3 per cent. bonds, the aggregate being \$35,000,000. The reason for this action is that money has been flowing rapidly into the Treasury, and, besides, the views of Congress were strongly pronounced in favor of the liquidation of the public debt as quickly as possible. Under any imaginable circumstances than the present ones this payment of money for bonds would relieve the money market to about the full extent that it was restricted by the inflow to the Treasury. But at present a large part of the money paid for bonds does not come out of the Treasury at all, but is held to redeem National Bank circulation, which is retired through the redemption of bonds held to secure it. For instance, of the \$10,000,000 bonds embraced in the 140th call no less than \$7,047,750 were held in the Treasury to secure circulation, and of the \$15,000,000 included in the 141st call \$11,086,100 were held for the same purpose, making \$18,000,000 bonds out of this \$25,000,000 called that were held to secure circulation. Of course, part of these will be replaced with other United States bonds, but only a part, and the remainder represents a permanent reduction in the circulation.

The call for \$10,000,000 issued to day is evidently framed so as to obviate this trouble, being worded so as to embrace any 3 per cent bonds offered up to September 15th, not to exceed \$10,000,000. The contraction alluded to will be to some extent obviated by the new silver certificates when they are issued. It appears that the law leaves it optional with the Secretary of the Treasury to make a larger use of this paper than was hitherto supposed. He might

withdraw the legal-tender \$5 notes, as he has already withdrawn many of the smaller notes, and issue larger notes in their place. This would leave room for a large amount of \$5 silver certificates, which would be an actual addition to the circulation.

As remarked above, the features of general trade are very favorable. The movement of merchandise in August is represented to have been larger this year than for some years past. The bank clearings show a large increase over this time last year. The record of business failures is also encouraging, the number reported since January 1st being 6,678 against 7,693 last year, a decline of 1,015. The earnings of the railroads for a number of weeks past have generally shown large increases over the same weeks of 1885.

The external trade up to August 1st did not call for any movement of gold to this country. More recently, however, the increased shipments of merchandise and securities overbalanced the large imports, and gold has begun to come in considerable amounts.

The Bank of England on Thursday last raised its rate of discount from  $2\frac{1}{2}$  to  $3\frac{1}{2}$  per cent., and the present continuance of the inflow is conjectural.

THE FOREIGN EXCHANGE MARKET, as may be judged from the above, has been very low of late. Following are the posted and the actual rates actual rates of the principal dealers: Bankers' sterling, 60 days, nominal,  $\$4.81\frac{1}{2}$ @ $\$4.82$ ; sight, nominal,  $\$4.84\frac{1}{2}$ @ $\$4.85$ ; 60 days, actual,  $\$4.80\frac{1}{2}$ @ $\$4.81$ ; sight, actual,  $\$4.83\frac{1}{2}$ @ $\$4.84$ ; Cable transfers,  $\$4.84$ @ $\$4.84\frac{1}{2}$ ; Prime commercial sterling, long,  $\$4.79\frac{3}{4}$ @ $\$4.80\frac{1}{4}$ ; Documentary sterling, 60 days,  $\$4.79\frac{1}{4}$ @ $\$4.79\frac{3}{4}$ ; Paris, bankers', 60 days,  $5.25\frac{5}{8}$ @ $5.25$ ; sight,  $5.23\frac{1}{8}$ @ $5.23\frac{1}{2}$ ; Paris, commercial, 60 days,  $5.26\frac{7}{8}$ @ $5.26\frac{1}{2}$ ; sight,  $5.24\frac{3}{8}$ @ $5.23\frac{3}{4}$ ; Antwerp, commercial, 60 days,  $5.28\frac{1}{8}$ @ $5.27\frac{1}{2}$ ; Swiss, bankers', 60 days,  $5.25\frac{5}{8}$ @ $5.25$ ; sight,  $5.23\frac{1}{8}$ @ $5.22\frac{1}{2}$ ; Reichsmarks (4), bankers', 60 days,  $94\frac{1}{2}$ @ $94\frac{3}{4}$ ; sight,  $94\frac{3}{4}$ @ $94\frac{1}{2}$ ; Commercial, 60 days,  $94\frac{1}{8}$ @ $94\frac{1}{2}$ ; commercial, sight,  $94\frac{3}{8}$ @ $94\frac{1}{2}$ ; Guilders, bankers', 60 days,  $39\frac{3}{4}$ @ $39\frac{1}{2}$ ; sight,  $39\frac{1}{2}$ @ $39\frac{1}{8}$ ; Commercial, 60 days,  $39\frac{1}{8}$ @ $39\frac{1}{2}$ ; sight,  $39\frac{1}{4}$ @ $39\frac{1}{8}$ . Paris dispatches quote exchange on London 25f. 28c.

The following shows the posted rates for prime bankers' sterling bills on London at 60 days, and sight, cable transfers, and prime commercial sterling, together with exchange on Paris on August 1st, the changes in the rates as they occurred during the month, and the highest and lowest during the months of July and August, 1886:

JULY.	BANKERS		Cable		PARIS	
	60 days.	Sight.	Transfers.	Commercial.	60 days.	Sight.
Highest...	4.88 $\frac{1}{4}$	4.90	4.89 $\frac{3}{4}$	4.86 $\frac{1}{2}$	5.20 $\frac{1}{4}$	5.18 $\frac{1}{2}$

**COINS AND BULLION.**—Bar silver is quoted in London at 42½d. per ounce. This quotation for silver the bullion value of the standard dollar is 72.27 cents.

The following are New York quotations in gold for other coins and bullion :

Trade dollars.....	\$ 71 @ \$ .	Victoria sovereigns.....	\$4 84 @ \$4 88
New (412½ grains) dollars	99¼ @ 1 00	Twenty francs .....	3 84 @ 3 88
American silver ½s & ¼s.	99¼ @ 1 00	Twenty marks .....	4 74 @ 4 80
American dimes .....	99¼ @ 1 00	Spanish doubloons.....	15 55 @ 15 65
Mutilated U.S. silver coin,		Mexican doubloons.....	15 55 @ 15 65
per oz.....	81 @ .	Mexican 20-pesos.....	19 50 @ 19 60
Mexican dollars .....	72 @ 74	Ten guilders .....	3 96 @ 4 00
Peru soles & Chilean pesos	.. @ ..	Fine silver bars, per oz....	82¾ @ 83¼
English silver.....	4 80 @ 4 85	Fine gold bars par @ ¼ % premium on the	
Five francs.....	22 @ 25	Mint value.	

THE NATIONAL BANK CIRCULATION was reduced by \$2,146,528 during the month of August, leaving the amount outstanding \$304,369,745, a decrease of \$12,205,358 since September 1, 1885. The amount of legal-tender notes in deposit with the United States Treasurer to redeem notes to be retired is \$62,201,499, an increase of \$360,172 in the past month and of \$22,997,921 since September 1, 1885. The amount of bonds deposited to secure circulation is steadily decreasing, as is shown below.

The following will show the amount of each description of bonds held by the Treasurer to secure National bank circulation on or about the dates indicated :

	Sept. 1, 1886.	Aug. 1, 1886.	July 1, 1886.	June 1, 1886.
Currency 6 per cents.....	\$3,578,000	\$3,576,000	\$3,565,000	\$3,565,000
4½ per cents .....	53,579,100	51,665,900	50,484,200	49,974,250
4 per cents .....	113,719,750	113,582,750	114,143,500	114,233,400
3 per cents .....	101,219,300	104,944,450	107,782,100	113,134,750
Total. ....	\$271,094,150	\$273,768,900	\$275,974,800	\$280,907,400

**MONEY AND DOMESTIC EXCHANGE.**—The rates for money have been decidedly stronger, call loans on stock collateral having momentarily risen to 40 per cent. one day in this market. The rate to-day ranges from 5 to 1 per cent. The supply of commercial paper exceeds the demand and the rates vary from 5 to 7 per cent. according to the quality. The following are the rates of exchange on New York: Savannah, ½ discount; selling at 1½ premium. Charleston, par; selling 3-16 @ ¼ premium. New Orleans commercial, \$1 per \$1,000 discount; bank, 50c. per \$1,000 discount. St. Louis, 50c. per \$1,000 discount. Chicago, 78 @ 80c. per \$1,000 discount.

**THE TREASURY.**—The following table will show the condition of the Treasury, as regards the amount of gold and silver held, on the 1st of September, 1886, and, for comparison, on the 1st of July and August, 1886, with the amounts of certificates outstanding and the balances of coin owned by the Treasury :

	Sept. 1, 1886.	Aug. 1, 1886.	July 1, 1886.
Gold coin and bullion.....	\$235,430,635	\$233,651,522	\$232,838,124
Gold certificates outstanding.....	77,698,347	74,718,517	76,044,375
Gold owned by Treasury.....	\$157,732,288	\$158,933,005	\$156,793,749
Silver dollars and bullion.....	\$185,038,397	\$185,309,993	\$184,345,784
Silver certificates outstanding.....	89,021,760	87,564,044	88,116,225
Silver owned by Treasury.....	\$96,016,637	\$97,745,949	\$96,229,559

On August 12th Acting-Secretary Fairchild issued the 140th call for the redemption of \$10,000,000 of the 3 per cent. loan of July 12, 1882, and

notice is given that the principal and accrued interest of the bonds will be paid at the Treasury of the United States at Washington on September 15, 1886, and that the interest on said bonds will cease on that day. They are numbered as follows: \$50—Original No. 124 to original No. 132, both inclusive, and original No. 1,882 to original No. 1,885, both inclusive. \$100—Original No. 1,678 to original No. 1,729, both inclusive, and original No. 9,927 to original No. 9,989, both inclusive. \$500—Original No. 729 to original No. 786, both inclusive, and original No. 4,229. \$1,000—Original No. 4,997 to original No. 5,523, both inclusive, and original No. 23,748. \$10,000—Original No. 11,664 to original No. 12,611, both inclusive. Total, \$10,000,000.

The 141st call was issued on August 19th, being for \$15,000,000 of the 3 per cent. loan of 1882, principal and accrued interest to be paid October 1, 1886, viz.: \$50—Original No. 104 to original No. 123, both inclusive. \$100—Original No. 1,522 to original No. 1,677, both inclusive. \$500—Original No. 650 to original No. 728, both inclusive. \$1,000—Original No. 4,207 to original No. 4,996, both inclusive. \$10,000—Original No. 10,248 to original No. 11,663, both inclusive. Total, \$15,000,000.

The following circular was issued by the Treasury Department on August 30th:

"Notice is hereby given that on the 15th day of September, 1886, or at any time prior thereto, the Department will redeem at the Treasury of the United States, in the city of Washington, D. C., or at the office of the Assistant-Treasurer at New York, paying par and accrued interest to date of redemption, any uncalled United States 3 per cent. bonds to an amount not exceeding \$10,000,000. Bonds forwarded to Washington for redemption should be addressed to the 'Secretary of the Treasury, Division of Loans, etc., Washington, D. C.,' and all the bonds should be assigned to the 'Secretary of the Treasury for redemption.' Assignments must be dated and properly acknowledged as prescribed in the note printed on the back of each bond. Where checks in payment are desired in favor of any one but the payee the bonds should be assigned to the 'Secretary of the Treasury for redemption for account of —' (here insert the name of the person or persons to whom order the check should be payable).

C. S. FAIRCHILD, *Acting Secretary.*"

GOVERNMENT BONDS.—The following table shows the closing prices or closing bids at the New York Stock Exchange for the principal issues of Government bonds on each day of the month of August and the highest and lowest during the month. Actual sales marked \*:

RAILROAD AND MISCELLANEOUS STOCKS.—The market has been remarkably quiet since the recent pressure for money began. In the meantime the railroad traffic is very good and the companies are at peace. The coal business is steadily improving.

The following table shows the highest, lowest and closing prices of the active stocks at the New York Stock Exchange in the month of August, the highest and lowest since January 1, 1886, and also during the year 1885:

	AUGUST, 1886.			SINCE JANUARY 1, 1886.		YEAR 1885.

### BANKERS' OBITUARY RECORD.

**Blanchard.**—The death is announced of S. S. Blanchard, Director and ex-President of the Hamilton National Bank, Boston, Mass.

**Brown.**—J. Munro Brown, of the brokerage firm of A. H. Brown & Co., and a member of the New York Stock Exchange, died August 5th.

**Butler.**—Edwin Butler, who for thirty-two years ending January last was Receiving-Teller in the National Shoe & Leather Bank, of New York, died August 3d. He entered the service of the bank in 1851, and retired finally on account of failing health.

**Dick.**—Enoch Dick, who was Paying and Receiving Teller in the Chatham National Bank, of New York, for more than thirty years, died at his desk from apoplexy on August 21st.

**Durkee.**—Harrison Durkee, one of the oldest members of the New York Stock Exchange and one of the Vice-Presidents of the Western Union Telegraph Company, died August 5th, aged about 78 years. He was at one time Manager of the Howard Banking Institution, of Troy, N. Y.

**Guild.**—Henry Guild, President of the People's National Bank, of Roxbury, Mass., died July 21th. He was formerly in business in Boston, retiring about twenty-five years ago. He subsequently succeeded his father as President of the above bank.

**Millard.**—The Hon. Ezra Millard, President of the Commercial National Bank, of Omaha, Neb., died suddenly of heart disease at Saratoga Springs, N. Y., on August 20th, aged about 60 years. He was formerly Mayor of Omaha.

**Rewalt.**—Cashier Neil Currie, of the Murray County Bank, Currie, Minn., writes: "It is with the deepest regret that we announce the death of James W. Rewalt, Assistant Cashier, which occurred on August 14th, at the early age of 23 years and 3 months. The funeral, under the auspices of the Masonic fraternity, was the largest ever held in this county."

**Telfer.**—T. A. Telfer, Manager of the Bank of London, at Watford, Ontario, was drowned while yachting on Lake Huron on August 1st.

**Tuttle.**—Joseph N. Tuttle, President of the Howard Savings Institution, of Newark, N. J., died August 12th, aged 78 years. He was one of the members of the first city government of Newark.

**Vail.**—Jonathan Vail, President of the Citizens' National Bank, of Yonkers, N. Y., died July 26th, aged about 60 years.

### CHRONOLOGICAL RECORD.—August, 1886.

2. MONDAY.—A Bank of England holiday. — Decrease in the public debt in July \$9,049,103. — The President signed the bill to tax oleomargarine.
4. WEDNESDAY.—The Hon. Samuel J. Tilden died.
5. THURSDAY.—Congress adjourned. — The President left the Surplus resolution unsigned.
7. SATURDAY.—Discount rate on commercial paper in New York,  $4\frac{1}{4}$  to  $6\frac{1}{4}$  per cent.; call loans,  $2\frac{3}{4}$  per cent. — Discount rate in London on 3 months' bills,  $1\frac{1}{4}$  per cent.; short loans,  $1\frac{1}{4}$  per cent.
9. MONDAY.—Bloody riots occurred at Belfast, Ireland.
10. TUESDAY.—Daniel Magone appointed Collector of the port of New York. — The Pennsylvania R.R. cut the Baltimore & Ohio's through connection to New York.
11. WEDNESDAY.—The annual Convention of the American Bankers' Association was opened at Boston.
12. THURSDAY.—The Steel Rail Manufacturers' Association, in session at Long Branch, N. J., decided to continue the output agreement of last year. — The 140th call was issued from the Treasury, for \$10,000,000 3 per cent. bonds, to mature September 15. — The coal companies agreed upon an advance in prices.
14. SATURDAY.—Discount rate on commercial paper in New York,  $5\frac{1}{2}$  to 7 per cent.; call loans,  $3\frac{1}{2}$  to  $5\frac{1}{4}$  per cent. — Discount rate in London on 3 months' bills,  $1\frac{1}{4}$  per cent.; short loans, 1 per cent. — The new Panama Canal loan was successfully floated in Paris. — Destructive forest fires occurred in Wisconsin.
19. THURSDAY.—Gold is being shipped from England and France for the United States. — The 141st Treasury call issued, for \$15,000,000 3 per cent. bonds, to mature October 1st. — The British Parliament reassembled.
20. FRIDAY.—Seven Chicago anarchists were condemned to be hanged.
21. SATURDAY.—Discount rate on commercial paper in New York,  $5\frac{1}{2}$  to 7 per cent.; call loans,  $3\frac{1}{2}$  to 5 per cent. — Discount rate in London on 3 months' bills, 1 per cent.; on short bills,  $2\frac{1}{4}$  per cent. — Prince Alexander, of Bulgaria, was forced to abdicate the throne.
23. MONDAY.—Cutting, whose arrest in Mexico caused a dispute with the United States, was released.
26. THURSDAY.—Bank of England rate of discount was advanced from  $2\frac{1}{4}$  to  $3\frac{1}{4}$  %.
27. FRIDAY.—The Anaconda and St. Lawrence copper mines at Butte, Montana, were shut down.
28. SATURDAY.—Discount rate on commercial paper in New York,  $5\frac{1}{2}$  to 7 per cent.; call loans,  $4\frac{1}{2}$  to 10 per cent. — Discount rate in London, 60 days to 3 months' bank bills, 1 per cent.; on short loans,  $1\frac{1}{4}$  per cent.

# RHODES' JOURNAL OF BANKING.

---

Vol. XIII.      OCTOBER, 1886.      No. 10.

---

IT has been spoken of as a matter for surprise that Treasurer Jordan recently ordered some new one-dollar notes that had never been circulated to be thrown into the macerating machine to be destroyed, this being done in spite of the fact that there was an urgent demand for the notes throughout the country. Yet this action was in perfect accord with the policy which the Department has pursued for a long time past, and the only really surprising thing about the matter is that so many intelligent people do not understand it. The Treasury has been for years loaded down and choking with silver dollars, which the Treasury officials refrain from forcing upon the public creditor lest the resulting alarm should cause gold to go to a premium, bringing about all the evils of such a condition of affairs. The officials, however, found a more legitimate way for putting the coins into use by declining to pay out any of the one and two-dollar notes coming into the Treasury, thus creating an artificial demand for the silver pieces. In pursuance, partially, of the same policy, Congress at the last session passed a clause in an appropriation bill ordering the issue of five, two and one-dollar silver certificates. The object of the Treasury Department is now to have out as few greenbacks of these denominations as possible so as to make room for the new paper. By this method a limited function will be devolved upon the at present useless silver dollars in the Treasury, and without especial danger to the general circulation. But it will be necessary to exercise great care as regards the amount of the new issue, for so long as the compulsory silver coinage law is in force there is more danger from the silver in actual circulation than if it were in the Treasury.

---

WORD COMES FROM MEXICO that a Commission has been appointed by Congress to study the silver question. The matter has taken a peculiar phase in that country of late, and one which it would be well for the advocates of the silver coinage in this country to take note of. Before the decline in the value of silver the Mexican dollar (it is well known) was a favorite coin largely used in international trade, but

now, of course, it is only received in foreign countries at its bullion value. This fact, it would appear, has caused much feeling among the people of Mexico, who resent what they consider an unjust discrimination against their coin. The *Diario del Hogar* recently gave voice to this feeling by saying: "If our coin had less intrinsic value and weight than foreign coin the depreciation of the Mexican dollar might be understood, but it being superior in both intrinsic value and weight there is no cause to justify that depreciation, which is nothing else than a robbery disguised under the term rate of exchange." This talk is foolish, as Americans know, because silver coins of every nation are equally at a discount except when they are redeemable in gold and thus sustained above their bullion value. But it appears that the matter has taken such hold on the Mexicans that the question has been agitated in many places of stopping the importation of foreign goods in order to retaliate against countries which refuse to take the silver dollar at its former value. Now, every other silver mono-metallic nation is in the same plight as Mexico, and, notwithstanding this fact, here we have some of the most popular papers in the country straining every effort to bring us directly into the same condition. On the pretext of a small saving in interest they are agitating vehemently the policy of immediately paying off the outstanding 3 per cent. bonds with the Treasury surplus (which is largely composed of silver), a measure almost certain to precipitate a reduction to the silver standard and a premium on gold. Such a villainous act would be a blow to the business of the country from which it would not recover for many years.

---

THE BOSTON *Commercial Bulletin* is much puzzled to account for the many large failures that have occurred in New England of late. It is certainly strange, in spite of improving business and a fair outlook for every industry, and without any apparent cause excepting a moderate increase in the current rates of interest, that many large concerns should be collapsing. The *Bulletin* concludes that "the underlying course of this disturbance" is "the laxity of the banks in scrutinizing commercial paper. It is the banks mainly," continues our authority, "who are to blame for the failures that show up \$500,000 liabilities and \$90,000 assets, \$272,000 liabilities and \$14,000 assets, \$76,000 liabilities and \$5,000 assets, and so on to the end of the long list." The times imperatively demand some system of clearing notes or else a much closer inspection of paper by the banks. We think, also, that the practice, so prevalent among business men, of issuing notes against their credit and with no collateral behind them is a dangerous departure from the custom of former years and should be discouraged by the banks." The case against the banks is certainly stated too strongly here. If we are to follow the *Bulletin* the banks are principally to blame for the failures because they lend too freely to doubtful parties. This is about the same thing as to say that the man who

mismanages his business, and fails, is less to blame than the man who trusted him. It is true, however, that the banks in the large cities have had for some years past every temptation in a surplus of money and great scarcity of safe, paying investments to grant accommodation to doubtful parties. If business should continue to be done under the same conditions in the future—if the banks, in order to invest their funds, shall be compelled to purchase largely of the commercial paper of parties other than their customers—it will be absolutely necessary to have some better means than are now at command of ascertaining the standing and indebtedness of such parties.

---

AN OCCURENCE IN THE BRITISH PARLIAMENT last month gives rise to a reflection. In replying to a question put by Sir John Lubbock, Lord Randolph Churchill, the Chancellor of the Exchequer, said: "I may, however, allow myself to say this much, that if anything is to be done to rehabilitate the gold coinage of the country it must be done at the cost of the State." The *Economist*, commenting upon this, says: "At present whatever rehabilitation of the currency effected is being carried out, not at the expense of the State, but at the expense of the unfortunate last holders of light gold coin, upon whom the cost of substituting full-weight coins for those worn out in circulation is made to fall. As the Chancellor of the Exchequer declares this to be unjust he should see that it is not permitted to continue." Only recently considerable dissatisfaction was caused by an order of the United States Treasury Department that all light gold coins offered should be stamped "L." This action throws upon the unfortunate last holder the loss from light weight, as it is impossible to pass a stamped coin. An injustice is committed by this means, for the last holder may be no more to blame for the wear of the gold than a hundred previous holders. The public should bear this expense, since they have had the benefit.

---

THE GOULD DEFALCATION has given rise to the usual crop of editorials. Most of these are devoted to denunciation of Gould, and much ingenuity has been displayed in harping on variations of this theme. There seems to be nothing left to say on the personal side of the matter further than to deplore the fall of a man of large influence and of evidently good impulses, but without the strength of principle to withstand strong temptation. Among the few references that have been made to the business side of the matter one serious article proposes as a preventive of similar defalcations, not that the Directors and bank officers generally be held to a more strict accountability, but that the official examinations be more rigid. To take this view is at once to acknowledge that the general or State Government is better able to oversee and manage a private business than are the proprie-

tors. When matters come to such a pass it would be better to give up the banks altogether. The idea is not only slavish—it is totally impracticable. The only solution to the problem of how to overcome the present evil of allowing one man to run a joint-stock bank without the supervision or interference of officers or Directors is for the owners of banks to put a stop to it at once. They must hold those whom they trust to oversee matters to a strict accountability when that trust is betrayed. This is certain to work a cure, and nothing else will.

---

THE NEW YORK STOCK EXCHANGE has refused to place upon its list the new bonds of the State of Georgia. The effect of this is to shut these securities out from the best market in the country, and it is natural that some of the people of Georgia should be angry about the matter. The Georgia newspapers are sarcastic in their references to the "unscrupulous Wall street speculators" who opposed the listing of the bonds, saying that Georgia is independent of the Stock Exchange and looks only to investors for placing its bonds. Unfortunately the advocates of the State decline to go into the merits of the question. The State some years ago repudiated \$8,000,000 of bonds that had been regularly issued by its own authorities and refused to even allow the question of the validity of the bonds to be arbitrated in its own courts. The purchasers of the last issues have no security for the payment of their money other than the promise of a State which only a few years ago repudiated a similar promise. It is only to be desired that the Stock Exchange would be equally scrupulous regarding every security on its list. There could then arise no question of favoritism or prejudice, as in the present instance, and its reputation would stand much higher than it now does.

---

IT APPEARS THAT THE OFFICERS of some of the National banks have grown to consider the reports required by law to be made to the Comptroller of the Currency upon his call to be a perfunctory matter to be attended to at their convenience or not at all. In order to put a decided check upon this abuse, which has been for a long time past making it next to impossible to keep a correct account of the condition of the banks in the aggregate, the Comptroller has deemed it necessary to impose fines of \$100 each upon five banks. No doubt this action will correct the difficulty for the future.

---

IT IS REPORTED THAT, although the \$75,000,000 three per cents remaining uncalled will probably all be called within a year and the banks will not replace their holdings with other bonds, Treasurer Jordan does not expect that any contraction of the circulation will result. It is hard to see how it will be avoided unless the notes retired are replaced with silver.

## THE TRUST COMPANIES.

---

### A STANDING MENACE TO THE MONEY MARKET.

An article was published in RHODES' JOURNAL OF BANKING last month in which it was shown to what an extent the trust companies of New York are favored in the matter of taxation at the expense of the banks, especially the National banks. It is there stated that one of the trust companies, which is now taxed \$3,756 per annum, would, if it were taxed at the same rate as the National banks, be bound to pay \$709,000 a year. It is partly by reason of this disparity in taxation that the trust companies were in 1884 enabled to pay dividends averaging  $16\frac{1}{2}$  per cent. as against an average of only 8-10 per cent. paid by the National banks.

But there are other and more potent reasons why the trust companies have flourished throughout the long period of depression that preceded the present revival of business activity when the banks and other financial institutions were barely able to hold their own.

It would be a matter for gratulation if the profits of these companies were fairly earned—if they, bearing their share of the burdens and responsibilities lying upon the financial institutions in general, by superior management or good fortune were able to earn such profits. The fact is, however, and we believe every banker in New York knows it, that, leaving the matter of taxation aside, the trust companies do not bear their share of the burdens. The State laws have made their privileges far greater than those of the banks, whose legitimate business they have largely trenched upon. At the same time they leave the banks as almost the sole conservators of the money reserve, and thereby put a burden upon the shoulders of those whose pockets they have lightened. Of course these remarks apply only to trust companies doing a banking business.

It may be asked, "But why should the banks keep more than their fair share of the reserve? Why not leave the trust companies to take care of themselves?" No one experienced in the business or acquainted with the history of banking would ask this question, for he would know that the business depends absolutely upon the confidence of the business community in banking institutions generally. What hurts one injures all. A run upon a weak bank threatens the stability of sound institutions. It is for this reason that good banks are always bound to sustain the public confidence even though while so doing they have to aid undeserving institutions to their own loss.

In order to illustrate and justify the above remarks it is only necessary to compare the reports of the condition of the banks with the reports of the trust companies. And here it may be observed that the latter are required to report only twice in the year. The banks associated in the New York Clearing-House publish every Saturday a report showing the average condition of each bank during the week. At many times during every ordinary year these reports are eagerly awaited by business men and critically scanned, as they

are supposed to show the condition of that most uncertain factor in business, the money market. It is often of the first moment to know whether money is likely to be "tight" or easy, and the weekly bank reports are the best means of judging of this.

But very few people indeed take into account the fact that there are a number of trust companies doing in the aggregate a large banking business whose condition they for most of the year know nothing about. These companies may, at a critical time, when the bank conditions appear to be good, be in such a position as to very suddenly draw down the reserve and put a wholly different face upon affairs. This is one way in which the trust companies which do a banking business, without the publicity which is so necessary in the case of the banks, are a menace to the money market.

To what extent this is true, and how important a factor the trust companies now are in the New York money market, may be seen by a glance at the following table. In this have been grouped some items contained in the semi-annual report for July 1, 1886, of eleven of the trust companies of New York and Brooklyn which do a banking business of some amount, and these items are compared with similar items in the statement of the clearing banks on July 3d :

<i>Clearing Banks.</i>		<i>Eleven Trust Companies.</i>	
Specie.....	\$64,488,900	Cash deposited in banks.....	\$9,830,096
Legal-tenders.....	40,890,400	Cash on hand.....	7,301,231
Total cash.....	\$105,374,300	Total cash.....	\$17,131,327
		Deposits in trust.....	\$76,577,201
		General deposits.....	71,184,759
Total deposits.....	\$377,411,400	Total Deposits.....	\$147,761,960

We find that on July 1st the eleven trust companies held 39 per cent. of the amount of deposits that all the clearing banks did, or 28 per cent. of the total deposits in both. The trust companies report their deposits somewhat irregularly, some under the head of "deposits in trust," some of "general deposits," while some report under both heads; but it should be observed that the total amount of deposits made "by order of court" is found by calculation to be only \$4,518,379, so that the "deposits in trust" are not by any means confined to this head.

Comparing the cash reserve kept by both classes of institutions it is found that the banks had 28 per cent of cash in proportion to the deposits, and at that time the surplus over 25 per cent was only \$11,000,000, which is a moderate amount compared to what they sometimes have on hand. The proportion of reserve has not been much lower than this at any time during the present year. The proportion of cash reserve to deposits held by the trust companies was only  $11\frac{1}{2}$  per cent., and of this over half was deposited in various banks, leaving only 5 per cent. of actual cash on hand.

On analyzing the matter more closely it is found that of this cash actually on hand over \$7,000,000 was held by three institutions alone, leaving only \$265,411 actual cash against deposits of over \$87,000,000. The remainder of

the cash held by these companies was deposited in banks, where it, of course, figured as part of their reserve.

Now these figures, if they referred to concerns doing a purely banking business, would be positively alarming. It is not claimed, however, that it is necessary for every banking institution to keep as large a proportional money reserve as the Chemical National Bank, of New York, or as the Bank of England holds. But does not this great system which is rapidly growing up behind the banks appear to be unhealthy and dangerous?

A few years ago we had a comparatively safe system of banks, doing a moderately conservative business, reporting their condition every week, and keeping, except in occasional times of stringency, a cash reserve of 25 per cent. of the deposits or over. The departures from the last rule were brief and very seldom important. Within a comparatively few years, by methods which thrive best in the dark, there has grown up a huge parasite system feeding from and sustained by the old one.

Generally supposed to be originally formed for the purpose of caring for and investing moneys under control of the Courts and other trust funds, acting as Trustees of railroad mortgages, etc., many of these trust companies have gradually encroached on the regular banking business, and have been able to reap large gains because their peculiar position has enabled them to escape the legitimate publicity and burdens of the business.

By allowing interest on deposits, varying, according to the official reports, from 1 to 5 per cent., they make certain of receiving large deposits. The latter are of every description, being to some extent (it is impossible to state this exactly) composed of regular business deposits subject to check at sight. This money they invest as follows: in bonds and mortgages, stocks and bonds, loans on collateral and personal securities (meaning commercial paper). These are the principal items, and out of the aggregate resources (for 11 companies) of \$178,000,000 the sum of \$158,000,000 comes under these heads. On July 1st the proportion was as follows:

Bonds and mortgages (10 companies) .....	\$5,916,665
Stock investments, market value (11 companies).....	38,315,289
Loaned on collateral (11 companies).....	100,764,018
Loaned on personal securities (10 companies)....	12,766,806
Total.....	\$157,762,777
Total resources.....	\$178,203,098
Bank loans on July 3d.....	\$355,743,700

It has been shown above that the eleven companies held at this time only \$7,000,000 cash against \$147,000,000 of deposits. In case there is a run upon the cash recourse is had to the cash deposited with the banks, whose reserve is thus partially made to secure much larger liabilities than ordinarily appears. If this cash does not serve the purpose the next easy resource is to call in loans made on collateral security. The money thus called can only come out of the banks, and in such a case, if the bank surplus is low, there will be every element of a monetary stringency.

It was a source of much surprise that after a long period of very easy money the market was squeezed so suddenly in August last.

Do not the new conditions brought about by the assumption of the functions of banking by the trust companies make the market far more liable to money panics than it used to be?

## BRITISH INQUIRY INTO THE SILVER QUESTION.

Bi-metallists in this country as well as abroad take considerable interest in the Commission\* being appointed by the British Government to inquire into the causes of the depreciation of silver and appreciation of gold, believing that their cause has made a gain in compelling the attention of the most conservative of Governments (on financial questions) to this matter. On the other hand the mono-metallists, while not looking for any important result from the labors of the Commission, make no objection to the appointment, believing that the facts brought to light will only serve to prove that they are right. However this may be the report of the Commission will be awaited with eagerness in this country, as it will tend to show how far the opinion in favor of an international monetary agreement has spread in Great Britain of late years and also how much probability there is of the Government ever entering into such an arrangement.

The cause that led to the appointment of the present Commission was the report dated July 21, 1886, of the Commission on the Depression of Trade, who intimated that the disturbance "in the relation of the precious metals to other commodities or to each other" might be partly responsible for the existing depression in business. They recommended the appointment of a new special commission on this subject, and were seconded by a petition signed by numerous members of Parliament, in which it is declared :

"That, as one reason of many which might be adduced for the necessity of holding the inquiry recommended by the Commissioners appointed to inquire into the depression of trade and industry, we say the annual value of the cotton manufactures of the United Kingdom is about £80,000,000 sterling, of which about £65,000,000 are exported to British possessions and foreign countries, most of whom have a silver standard of value, and in which our manufactures are, therefore, sold for silver; and, on account of the continued fall in the value of silver relatively to gold, several departments of the cotton manufacturing industry of the United Kingdom are in a state of great depression and stand in risk of permanent injury. We further submit that the enormous decline in the value of all agricultural produce and of agricultural land may on inquiry be shown to be to a large extent produced by the disturbance to our currency equilibrium.

"Your memorialists would also submit that the increasing variation in the values of gold and silver is producing the most serious derangement to the finances of India. In a special despatch from the Government of India to the Secretary of State, dated February 2, 1886, in which this subject is dealt with, after describing the effects produced, the despatch, signed by Lord Dufferin, goes on to say: 'This state of affairs would be an evil of the greatest magnitude in any country in the world; in a country such as India it is pregnant with danger.'"

The petition states that no Parliamentary inquiry has been held on any subject relating to the precious metals since the Silver Commission of 1876,

---

\* The members of the Commission are as follows: R't Hon. A. J. Balfour, M. P. (chairman); R't Hon. Joseph Chamberlain, M. P.; Leonard Courtney, M. P.; Lionel Cohen, M. P.; W. H. Houldsworth, M. P.; Sir John Lubbock, M. P.; John W. Birch, Director of the Bank of England; D. M. Barbour, Secretary to the Government of India, Department of Finance and Commerce; Sir Thomas H. Farrer; Hon. W. Fremantle, C. B., Deputy Master of the Mint; S. R. Bullen Smith, C. S. I., Member of the Council of India.

and urges that the recommendation of the Royal Commission on the Depression of Trade and Industry be adopted.

Following is the text of the Treasury minute on the appointment of the new Commission :

"The First Lord and the Chancellor of the Exchequer call the attention of the board to the third report of the Royal Commission upon the Depression of Trade, recommending that a special inquiry into the group of questions which relate to the currency should be set on foot and conducted under an order of reference carefully prepared so as to include all branches of the subject.

The necessity for such an inquiry as the Commission suggests is confirmed by the evidence of anxiety widely felt both here and in India; and the First Lord and the Chancellor of the Exchequer, considering that the advice of the distinguished men who constituted the Commission is entitled to the utmost consideration, propose to advise Her Majesty to issue a Royal Commission of inquiry into the recent changes in the relative values of the precious metals shown by the decrease in the gold price of silver.

1. It would be the duty of the Commission to investigate the causes of these changes. And especially to inquire whether they are due—

- (1) To the depreciation of silver; or
- (2) To the appreciation of gold; or
- (3) To both these causes.

2. If they should find the changes to be due to the depreciation of silver, they would then inquire whether such depreciation arises from increase of supply or diminution of demand, or from both, and they would endeavor to ascertain the proportions in which these different causes have operated.

3. If they should find the changes to be due to the appreciation of gold, they would inquire whether the appreciation arises from the diminution of supply or from increase of demand, or from both, and they would endeavor to ascertain the proportions in which these different causes have operated.

4. Having regard to these different causes and their respective effects, they would next inquire what has been the bearing of the changes in the value of the precious metals on the following matters of practical business:

#### I.—India—

- (a) Upon the remittance of the Government of India.
  1. For payments on old or fixed contracts.
  2. For payments on new or current contracts.
- (b) Upon the persons in India who have to make remittances home in gold.
- (c) Upon the producers, merchants and taxpayers of India.
- (d) Upon merchants and manufacturers at home who trade with India.

#### II.—The United Kingdom.

- (a) Upon the trade of the United Kingdom with other silver-using countries.
- (b) Upon the foreign trade of the United Kingdom generally.
- (c) Upon the internal trade and industry of the United Kingdom.

5. If the Commission should come to the conclusion that the aforesaid changes in the values of the precious metals are causing permanent or important evils or inconveniences to any of the interests above referred to, it would be their duty then to inquire whether it is possible to suggest any remedies within the power of the Legislature or the Government, by itself or in concert with other Powers, which would be effectual in removing or palliating the evils or inconveniences thus caused without injustice to other interests and without causing other evils or inconveniences equally great.

6. Lastly, if the Commission are of opinion that this is possible, they would state the precise form which such remedies should take and the manner in which they should be applied.

My Lords concur, and on learning that it is Her Majesty's pleasure to issue the Commission they will give the directions for the preparation of the necessary documents."

### THE IOWA SAVINGS BANK SYSTEM.

In a communication which appeared in the *JOURNAL OF BANKING* for May, 1884, the following unfavorable comments were made upon the Iowa savings bank system :

" Wisconsin and Minnesota have laws for the organization of mutual savings banks; Illinois, Iowa and Dakota as yet have none, and hence have no savings banks properly so-called."

Pursuing the same line of thought, the *Banker's Monthly*, of Chicago, in its issue for January, 1886, makes the following strong statement:

" It may almost be said there are no savings banks west of the Alleghanies, and it is certainly a fact that nothing of a financial sort is more needed. The savings banks of the West are stock companies; the real savings bank has no capital, and the earnings all go to the depositors."

It will be perceived that the foregoing criticisms make the adoption of the " mutual " plan the sole test of the true savings bank system. The essential purpose, however, of any such system is to provide institutions for receiving and securely investing the savings of industry, and for their accumulation at compound interest, with provision for their repayment on demand or at short notice. It would therefore seem reasonable to conclude that any such institution either with or without capital which subserves this great purpose is, properly speaking, a savings bank, and that the adoption of a " capital-stock " in its organization, instead of imperiling the safety of deposits, must furnish to the depositor additional security. The Iowa law, it is true, has not adopted the " mutual " plan, and it will be the purpose of this paper to ascertain whether in other more essential particulars it has provided for a true savings bank system.

In striking contrast with the foregoing criticisms upon the Iowa savings bank system we find in the last report of the Auditor of State a list of thirty-four savings banks apparently in successful operation and holding deposits to the large aggregate of \$7,644,658.32. The question, therefore, thus plainly presented provokes inquiry as to the character of the institutions doing business in Iowa as " savings banks " and the validity of their claim to the use of that time-honored designation.

Upon examination of the Iowa law of 1874 we find that, in undertaking to provide a system of " savings banks," it requires in all such corporations a capital stock in proportion to population and deposits, and authorizes these banks to receive deposits to an amount ten times in excess of capital, and from any individual in unlimited amounts, and to repay same to such depositors in such manner and with such interest as the banks may from time to time provide, the only restriction being a provision allowing the banks to require sixty days notice of withdrawal of deposits. These banks are authorized to invest their deposits in stocks or bonds or interest-bearing notes, or certificates of the United States; in the stocks or bonds or evidences of debt bearing interest of the State; in the stocks, bonds or warrants of any city, town, county, village or school district of this State, issued pursuant to law; in notes or bonds secured by mortgage or deed of trust on unencumbered real estate in this State; and to

discount, purchase, sell and make loans upon commercial paper, notes, bills of exchange, drafts or any other personal or public security.

The so-called "savings banks" of Iowa, therefore, are all organized with a capital stock, and have authority to sell, exchange, discount paper, keep accounts subject to check, and to transact a general commercial business. All these attributes constitute the usual business of ordinary banks of discount. As a matter of fact it is well-known that all over the State, with perhaps the exception of the city of Davenport, these banks are now transacting under this system a general banking business. From the abstract of the law given above it will be perceived that their investments are practically unrestricted and their power nearly unlimited. The fundamental principles of savings banks are therefore wanting in these institutions. In all important particulars they are ordinary banks of discount, with the addition of some unusual powers. In despite of these defects of system, and because of excellent management, it must be conceded that many of these banks are strong and safe; but, notwithstanding this fact, they are in no proper sense savings banks.

In this connection it will be found instructive to review the history of this legislation looking to the establishment of a savings bank system in the State. The law went into force in 1874. Previous to that date all such institutions were organized under the general incorporation laws of the State, and their operations were conducted without restrictions or limitations. In view of the dangers surrounding this loose practice the idea originated with the writer, then engaged in the management of such a bank, of transplanting to our State the essential features of the well-established savings banks of other States and countries, and a bill was thereupon carefully drafted to accomplish this purpose. In this Act the difficult task was undertaken of engrafting the Western idea of a capital stock upon the fundamental principles of a genuine savings bank. In the effort to secure this compromise the capital stock was made a guaranty fund for the better security of the depositor, and so required to be invested in some safe and available securities. In all other particulars it made ample provision for the establishment of a strict and exclusive savings bank system. Previous to the meeting of the Legislature of 1873-4 this bill was submitted to the then Governor and Auditor of State, and had their approval.

The bill as originally reported to the Legislature was the result of an extensive correspondence with old and experienced bankers in different parts of the country, and was regarded with approbation by so eminent an authority as Emerson W. Keyes, author of the "History of Savings Banks in the United States," who devotes to it a chapter in his valuable work and who contributed to it excellent suggestions.

It was a principal object in the bill as originally prepared and reported by Judge Cooley to entirely separate the interests of savings banks from the business of general banking. It was considered that the latter should be established under a separate and different law. All over the State, however, this attractive name had been used to allure deposits which were being employed as a banking capital, and hence this prohibition of general banking provoked a strong opposition and brought together a powerful lobby to prevent its passage. A substitute was therefore prepared changing this and some other features of the bill and in this form it was adopted. One of the most radical and sweeping amendments was in the fifth clause of section nine

of this Act. As a matter of curious interest I will give the original and amendment in parallel columns, as thus the contrast will be more clearly disclosed :

*Original Savings Bank Bill.*

"Fifth.—It shall not be lawful for said banks to discount commercial paper, nor in any form to make loans upon notes, bills of exchange, drafts, or any other merely personal security whatever, nor shall said bank purchase, hold, or make loans upon the shares of its capital stock."

*Act as Amended and Passed.*

Fifth.—It shall be lawful for said banks to discount, purchase, sell and make loans on commercial paper, notes, bills of exchange, drafts, or any other personal security, but said bank shall not hold or make loans upon the shares of its capital stock."

It will thus be seen that the Act, as passed, was made to serve an exactly opposite purpose from that had in view in the original bill, and that instead of a savings bank system it was used to establish a scheme for general banking. While this result was doubtless a misfortune it must be conceded that even this imperfect system is a vast improvement upon the financial disorder that preceded it. Under this system a large number of so-far strong banks have been organized and are now in successful operation. These banks have encountered the ordinary banks of discount with a sharp competition ; they have jostled even the National banks in their strongholds ; they have been potent to compel entangling alliances ; and their successes have been so surprising as to seem almost portents of impending disaster. From the homes of the State, from the hands of industry, from women and children, from toilers everywhere, deposits have been brought forth from nook and cranny, from secret hiding-places, in small sums and large, in dribblets often, and the vast aggregate is now being used to turn spindles, improve farms and develop the resources of the State, and upon all this large deposit a fair increase is being faithfully put aside for the trustful depositors. The conscientious trustees who, despite an imperfect system, have administered their trusts thus faithfully deserve high honor in the estimation of their fellow-citizens. The system, however, must be judged by its possibilities, and it will be conceded by all friends of true savings bank principles that there is in it inherent weakness.

Mr. Keyes, in his admirable "History of Savings Banks," thus indicates our danger, viz.:

"The important feature in which the substitute differed from the original bill was in respect to investments, the original confining these to public and real estate securities, and to loans with public securities as collateral, while the substitute makes lawful all dealings in commercial paper or other personal security. This is the weak feature of the Iowa law, and one which will, probably, some day bring dismay upon the depositors of some institutions and reproach upon the name of savings bank in that State. Such misfortune will be more serious in the future than it has been in the past for the reason that savings banks are now understood to be under the restraint of the law and subject to the inspection of executive officers whereby protection is afforded to their dealing with them, whereas strictest compliance with the law may, in fact, prove no protection whatever."

This timely warning our legislators will do well to heed and, while yet these institutions are successful and prosperous, to surround them with all needful safeguards for the evil days sure to come.

The wisdom of the important distinction in the character of investments for these trust funds, as above stated, finds strong support in the action of Courts of Chancery in the care of the estates of wards of Court. Upon this

subject the illustrious Chancellor Kent, in the case of *Smith vs. Smith*, 4 Johns. Ch. R., page 284, makes use of the following emphatic language, viz.:

"I have no doubt that it is a wise and excellent rule that a trustee loaning money must require real security, or resort to the public funds. But personal security is always more or less precarious, particularly when the credit is given for a considerable length of time, or when the borrower or his surety is engaged in mercantile or other hazardous pursuits."

And, in the valuable work of Tiffany & Bullard on "Trusts and Trustees," the editors thus summarized the decisions of the American Courts, viz.:

"An examination of the leading American authorities would seem to justify the conclusion that where the trust instrument has left the manner of investing the trust funds to the discretion of the trustee, and where there is no fund sanctioned by the Court in which to invest, the safer way will be for the trustee to invest in unquestionable real security. Such security has been approved by the Courts in many or quite all of the States, and less than this has been questioned in very many of them."

Story, in his "Equity Jurisprudence," Vol. II., page 733, section 1274, makes use of this strong language concerning the investment of trust funds, viz.:

"If a trustee invest trust money in mere personal securities, however unexceptionable this might seem to be, in case of any loss by the insolvency of the borrower he would be held responsible, for in all cases of this sort Courts of Equity require security to be taken on real estate or in some other thing of permanent value."

And upon the subject of such investments, Lord Kenyon, Master of the Rolls, makes these observations, viz.:

"It was never heard of that a trustee could lend an infant's money on private security. This is a rule that should be rung in the ears of every person who acts in the character of a trustee, for an act may very probably be done with the best and honestest intention, yet no rule in a Court of Equity is so well established as this."

These rules in Courts of Equity, all over the world, as to the safe investment of trust funds are based on a wide and wise experience, and are no less valuable for the protection of the depositors in our savings banks than they have been found to be in guarding the interests of wards of Court. In these banks are gathered the savings of our homes, and upon the stern and rigid administration of this great trust will depend the well-being of the family and the stability of the State. The toilers who here hoard their earnings may well be considered the wards of the State, and their interests must be kept under careful watch and guard.

In another paper, as leisure is afforded me, I may set down some additional observations indicating defects in the savings bank system of Iowa which should be corrected and pointing out some mistakes of practice which should be avoided. It seems fitting that every citizen ought to contribute somewhat from his fund of experience for the common weal, and to be instrumental in some slight degree in advancing so good a cause should satisfy any reasonable ambition.

The true savings bank system encourages thrift, stimulates enterprise, elevates the home, and permeates society with pure principles. Its lines of influence radiate through all the homes of the State. They may be traced by the school-house, the church, the asylum, the click of spindles, the hum of machinery, the jar of the passing trains, by farms gladdened with golden harvests and by cities throbbing with abundant commerce. As labor is at the foundation of all wealth so it is that a savings bank system which saves, increases and jealously guards the funds entrusted to its care becomes a potent instrumentality for good in the progress of the State.

DAVENPORT, IOWA, September 18, 1886.

CHARLES E. PUTNAM.

## THE MYSTERIES OF BANKING.

BY AN UNDER OFFICER.\*

A well-trained bank officer cannot fail to be often amused at the inability of many persons, whom he knows to possess much greater intellectual power than he has himself, to comprehend what they are pleased to term the mysteries of banking. A little observation indicates the reason: it is that men seek a mystery where none exists, and if they would but divest themselves of the idea that there is anything in it beyond the comprehension of an average pupil of a common grammar school they would often avoid an unpleasantness and as often save money.

In some cases the bank is at fault; indeed, in many instances the banker fails to suggest what he sees the customer is ignorant of; and sometimes the banker's failure to be frank and outspoken is simply that he may profit thereby. Here is a case in point: Yesterday a man presented a certificate of deposit for \$1,000 at the Teller's window with the request that a new certificate be made for \$800 and the balance paid him in cash, saying he would not need the \$800 for a year or so. As soon as the customer had counted and recounted the money paid him he ascertained that he received no interest on the \$1,000 certificate, whereupon a discussion arose between the Teller and his customer, the former claiming that a request to stamp the certificate of deposit as bearing interest was *not* made when the money was deposited, the latter, of course, saying he *had* made the request. In the end the bank carried the point and the customer carried \$30 less in his pocket.

I do not mean to say the bank lost very much by not paying the customer his interest; however, they lost an account, and a profitable one at that. Besides, at the time of the discussion the office was well filled with people, and it gave some of them an unfavorable idea of the institution's way of doing business.

I think, myself, the bank was at fault. Their advertisement in the banking publications and in the city papers reads, "Interest paid on all time deposits," which gives people an idea that if money is left a year on deposit they are entitled to interest at the advertised rates; however, if they do not make a request to have their certificate stamped with the interest stamp they receive no interest, which I call unjust. Banks should publish a little notice, instructing depositors to make this request, which would avoid all unpleasantness.

I might also say, in passing, that bank advertising in reputable publications is sure to bring good returns for the outlay. Let it be done, however, only in the best publications. Those disreputable weekly sheets which prey on the banking community (there are one or two notorious examples of such printed in New York) should not get a dollar of patronage from

---

\* The writer is Receiving-Teller in a prominent Minnesota bank. In submitting the facts herein he writes: "The subject I deal with is one of some importance to the banking community and should be looked into."

any banker who prizes his reputation or who wishes any returns for his investment.

Banks say they have too much money and cannot afford to pay interest on deposits. I know this is not so; there is hardly a bank in the West at the present time that does not re-discount and pay from 4 to 5 per cent. for their money.

Now, would it not be more profitable to the banker, and also to his customers, to pay interest at the rate of, say, 3 per cent.? If all certificates were stamped bearing interest it would encourage many to hold their certificates a few months or a month longer and enable the banker to accommodate the merchant, without re-discounting, for just as many months. TELLER.

---

**THE NATURAL WEAR OF GOLD COINS.**—Very few are aware of the real extent of the "wear and tear" of gold coins. It may be said without any exaggeration that coins become merely thin chips after a few centuries, and if used for a thousand years or so would stick to the fingers or pockets of their possessors. Perhaps the use of iridium might greatly lessen this quality, but the wear would exist nevertheless. The German Government is now making some experiments to obviate this as much as possible.

John Herschell, the English Mint Master, has made special inquiries into the matter, and finds that the English gold coins should not be longer than  $33\frac{1}{2}$  years in circulation, sovereigns losing 0.4325 grains and half-sovereigns 0.4379 grains annually, as found by Martin in 1882.

Professor Soetbeer took up the question in Gottingen as to German coins, and found that the annual depreciation of 20-mark pieces was 0.72 grains for every 1,000 coins, 0.81 grains for every 1,000 ten-mark pieces, or 0.0904 of the face value. The conclusion he arrived at was that the first-mentioned might be allowed to remain fifty years in circulation and the latter twenty-five. A very large amount of the precious metal is thus annually lost in atoms.

---

**THE NATIONAL BANKS AND THE THREE PER CENTS.**—Inquiry was made at the Treasury Department recently in regard to a published statement that the National banks are being greatly disturbed by the calling in of the three per cent. bonds which largely form the basis of their circulation. Several of these institutions have given notice of withdrawal from the system and others are trying to have their called bonds retained as a basis for circulation, preferring to forego interest altogether rather than risk buying four per cents and four-and-a-half per cents at the present high premium. It has always been held by the Treasury Department that when bonds cease to bear interest they become unavailable as a basis for circulation. This ruling, however, has lately been contested by some of the banks and the question has been referred to the Attorney-General for an opinion. Until this decision is rendered the department will adhere to its practice. In many cases, however, the banks whose bonds have been called are deferring their replacement, expecting apparently a decision allowing those bonds to remain. It has been wondered why the banks wish to retain the three per cents after the profit from circulation has been cut off. The reason may be that they hope to be able by a turn in the market to obtain four or four-and-a-half per cents at lower prices than the present ones.

## Methods and Machinery of \*PRACTICAL BANKING.

CONSISTING OF BRIEF DESCRIPTIONS AND SUGGESTIONS RELATIVE TO THE  
METHODS OF CONDUCTING THE BANKING BUSINESS; WITH APPROVED  
MODELS OF BLANK BOOKS AND FORMS FOR THE USE OF  
BANKS OF DISCOUNT, SAVINGS BANKS, ETC.

[Prepared expressly for the JOURNAL by the Cashier of a long-established bank, who had over twenty years' experience in practical banking, and who always sought for better and safer methods.]

### LETTER OF CREDIT—FORGED SIGNATURE—IDENTIFICATION.

If you are traveling a letter of credit will be of incidental service to you as a means of information—particularly regarding a forged signature. American travelers say you must be careful not to lose your letter of credit. They inform you if it is lost that the loss will be yours to the full extent of the face of the credit. They are confident that a dishonest finder of the letter who should forge your signature and draw the money would inflict its loss upon you and not upon the parties who cashed it; and they tell various stories of how travelers in England have lost all their traveling funds in this way. These statements are incorrect. If you lose your credit letter notify at once the parties upon and by whom it is drawn. Whoever cashes your bill upon a forged signature loses and not you, provided you have not been negligent in putting them on their guard. This incorrect impression as to who shall be held responsible comes from a misapprehension of a peculiar law of England. The origin and character of this law is as follows:

English bankers became disgusted with the law and custom requiring that the payers of checks drawn to order should demand an identification of the parties collecting them. Checks payable to bearer could be paid without risk and responsibility on the part of the bank, but if the checks payable to order were paid to a wrong person on a forged endorsement or anything else the bank was the loser. The bank pressed Parliament to make a law putting both classes of checks on the same footing, and such a law was enacted. "To-day," says a bank Teller of London, "I pass out the money for all checks presented as fast as I can to whoever presents them. My only care is to assure myself that the drawer's balance and signature is all right." When he was told that in the United States an identification was demanded of all parties collecting checks no matter whether the checks were payable to order or bearer, he smiled. He said they never could get through their banking business in London if they attempted to do it that way. This remark is true, because there are so many people there and so much to be done in a short time that a person can hardly see how they get through at all.

This is the check situation in England to-day: If a check is dropped in the London streets the first man who picks it up can rush into the bank and collect it and pocket the money. But to collect money fraudulently is a great crime. England punishes such a crime severely. The severity of its laws and the promptitude with which they are enforced are great safeguards in business matters.

The man who loses a check in England must make lively time to stop its payment. Until he has stopped its payment he is in the same position he would be if he lost so many Bank of England notes or sovereigns. The person

who loses a letter of credit anywhere must make quick time in stopping its payment if he would not incur great responsibility.

The bankers of England are always ready to cut red tape when they can do so without incurring too great a risk. They are willing to rely upon signatures as a means of identification. In fact, in collecting payments upon a letter of credit, signatures alone satisfy bankers in England that the payments are being made to the right party. Every traveler's letter of credit has attached to it a long list of banks and bankers where it may be presented and advances obtained. Few travelers are aware that this list is merely suggestive. The fact is it is to be understood that the bill can be presented and payments negotiated with most any banker of standing in any country named on the bill. It is hard to imagine any civilized country on the face of the globe that is not glad to purchase from you a reliable sterling draft on London. Such drafts should sell at a premium most anywhere. A Boston man just returned from a tour round the world says he always received a premium when he drew on his letter of credit from points distant from London.

#### WOMEN OF BUSINESS.

Men of business, often those of comparatively limited experience, are sometimes heard speaking unfavorably of woman's capacity for doing business, particularly that of a general financial character or in the line of banking. A somewhat extended period of practice and observation in business, especially in the business of banking and finance, will lead any sensible person to take an exception to these remarks. The great majority of women have been given few opportunities to show what they could do in managing financial matters. The average woman of the period has only a spending acquaintance with money. She is furnished with more or less of it, but is not expected to understand how it is made or managed. In those exceptional cases where women have been called upon to assume wider financial responsibilities they have shown skill and ability in their management. There are many women who are to-day serving faithfully as Treasurers of savings banks, bank Directors, etc., and there are numerous instances where women are doing the entire work, as far as business details are concerned, in small banks in the interior. The time is undoubtedly approaching when there will be a more common employment of women in our National, State and savings banks.

There are various classes of work to be done in banks for which women have special natural qualifications. Among these are the business of handling paper money, assorting checks, folding and mailing letters and cutting and trimming new bank-notes.

The growing practice of using type-writers and stenographers in banking is giving to women a very useful sphere in banks. The wonderful facility with which an expert type-writer lady will manipulate this piano-like aid to correspondence proves to many a banker her special fitness for playing upon this invaluable help. What may be termed an extremely attractive combination in the work of "talking upon paper" in a bank or general business office is that of a union of the services of a stenographer and type-writer. The hard pressed bank Manager or merchant can drive with ease through considerable writing by dictating to a stenographer who writes the short-hand into type on the type-writer, and women will do for both, because they can work as well at stenography as type-writing.

In discussing the comparative value of male and female help in banks and other positions of responsibility the suggestion has been made that women are less honest than men—more likely to commit breaches of trust than the opposite sex. This idea was recently advanced by a lady who had considerable intimacy with girls, having been for many years at the head of a seminary for young ladies. She gave it as her decided opinion that girls were more given to petty thieving than boys. Possibly her opinion may have had less value from the fact that she never had much to do with boys. There is not a doubt that this verdict of a woman on women is an unjust one.

In the great money establishment at Washington is a small army of girls who have assorted bills for years. Under former Treasurers men had been

employed to do this work. The Treasurer of the United States says that losses have been far less under the present system of employing female help in assorting than when men did the work. He thought the young women had proved themselves more honest than the young men. Comparisons in this matter are not particularly attractive, but the remark of the lady above quoted has produced them.

As to the comparative value of women as financial administrators many persons claim that their status has been emphatically settled by the maladministration and financial diversion of bankers like Mrs. Howe. Argument like this overlooks the fact that there have been male Mrs. Howes in abundance from the days of the South Sea bubble down to the more modern Pacific Bank and Grant & Ward failures.

#### WHAT CONSTITUTES A SHAREHOLDER IN A BANK.

In the matter of qualifying as a Director in a National bank working under an Act of the United States demanding as a property qualification for a Director's position a proprietorship of at least ten shares of the stock of the bank it is the best and the most regular way for the candidate to buy his ten shares for cash, have them duly transferred to him on the books of the bank and a certificate issued in the usual form. As contingencies might arise where it would be desirable to prove proprietorship, when some of the usual methods had not been conformed to, it may be important to note what steps in the acquisition may be waived. The transfer is absolutely essential, yet the matter of taking out the certificate (the voucher) of the stock is not necessary. Neither is it absolutely necessary in cases where stock has been subscribed for in a corporation that it should be paid for. The bank has a right to give credit for the stock and to make, as it were, a loan in this as in any other regular way. Rulings to this effect are on record in cases under State banking laws. As National banks are not allowed by the Bank Act to make advances upon their own shares this matter of establishing a stockholdership where a stockholder has not paid his assessments might take on a different aspect.

#### BANK OF ENGLAND NOTES.

Bank of England notes are a very plain bill—merely black printing upon white paper of the best possible quality. This paper is specially made for the bank, and is not only very strong but also a paper not easily burned. The visitor at the bank is shown notes that remain worthy of redemption after having been the victims of hot scorplings and fiery singeing. No Bank of England note is paid out the second time though it may have lived only to cross the street. In the sorting and canceling room, where hundreds of young men keep the air about them white with flying notes, the bulk of the circulating notes they were canceling by tearing from them their signatures were as new and fresh in their appearance as if they had never traveled outside of the bank. After cancellation they are packed away in small wooden boxes in the vaults of the bank. Notes are taken from the vaults and burned in a furnace when they have five years storage age on them. The stock of notes on hand and ripening for destruction in the bank fill ten or twelve thousand of these little boxes and amount to perhaps \$8,500,000,000. The Bank of England note is very popular with financiers on account of its splendid workmanship and excellent paper and, more than that, its soundness as currency.

#### CLEAN AND TASTEFUL BANKING ROOMS.

There are few if any reasons why all banking rooms should not be clean, and if they are otherwise it is not as a general rule because the shareholders do not desire that they should be so, as they are perfectly willing to pay to have them kept clean, but it is on account of the carelessness and want of taste on the part of the Directors or Cashier and their neglect to see that subordinates, particularly the Messenger or janitor, do their duty. A dirty, badly ventilated bank room is not only demoralizing and injurious to all its officers but it is bad in a business sense because the opposite state of affairs draws business by attracting new accounts. Why is it not a good idea to have the windows of a

bank kept clean, its floors and stairs scrubbed or painted, its walls and ceilings neatly colored, its public desks well supplied with public stationery, its desks tidy and its floors not littered with stray papers? The interiors of many of our banks are open to considerable improvement in this direction. Bankers have an idea that our cities eclipse the world in the cost and elegance of their banking rooms. It is a fact that many of them have been fitted up without much regard to expense and in some instances with unwarrantable extravagance, but some of the most ornate of these offices are as open to the charge of untidiness as the humble little banking rooms in the corner of a wooden house in the rural districts. No offense is intended by presenting any unfavorable comparisons, but the banking rooms of our American towns and cities are not upon the average nearly as neat, tidy and appropriate for their business as those of foreign countries.

#### HE MAKES HIS MARK.

Checks are endorsed, notes are signed, dividends are receipted for and all kinds of vouchers given and documents executed by what may be termed the signature of a mark. In common and statute law and by legal decisions and business custom a formally executed signature by mark is recognized as just as binding and as regular as a clearly written and acknowledged signature. The law fully prescribes the form in which the signature by mark shall be executed, and tradition and custom have united in agreeing upon its general style. Where a signature by mark is to be made and accepted some person who can write records the name of the party who is seeking to give his sign-manual. Then a mark is made in the middle of the name by the would-be signer. If he is incapacitated from even making a simple mark he may touch or hold the top of the pen as the mark is being made for him.

The law demands that a mark shall always be witnessed. To make this matter perfectly clear a form is given below showing an endorsement by mark on the back of a check that had been drawn payable to the order of a party who for some reason or other had to make his witness mark :

There is less importance than many people suppose resting on the mere act of making a mark or signature of assent. The approval (the consent or the real endorsement) is the act of the will. It is a mental act. The handwriting or simple mark are but evidences of the act, though very convenient and tangible testimony.

The proportion of persons doing business with our banks who cannot make a written signature is small, yet there are few bankers who have not had, at one time or another, to help along through this mark-making some collector of a dividend or indorser of a check.

This mark-making is quite an institution in England. The plan of getting up a signature by mark came from that country. At one time about half the agricultural laborers in an average rural district signed a political petition by their marks.

Says Blackstone: "The methods of the Saxons was for such as could write to inscribe their names, and whether they could write or not, to affix the sign of the cross; which custom our illiterate vulgar do, for the most part, this

day keep up, by signing a cross for their mark when unable to write their names."

#### OUTSIDE HABITS OF BANK OFFICERS.

The inside daily life of a bank officer is of necessity one of a sedentary and confined character, involving considerable mental strain. It therefore follows that the best outside life for him is that which brings him into the open air and keeps him out of sedentary and mental occupations. Long walks, gardening, chopping wood, riding and driving are better for him than chess, cards, late hours at places of amusement, balls, or parties. He should not forget to reap all the practicable advantage that comes from social enjoyments, and endeavor to be a good citizen and neighbor as well as a good banker, but there are limits to be set up, for his strength must be husbanded. He can discharge his political duties, yet it is not necessary that he should plunge into politics. He can do his share of work in religious, social and educational matters, yet it is not absolutely necessary that a bank Cashier should try to run a Sunday-school, a church with all its week-day evening meetings, or serve as chairman of a School committee or as a member of the Board of Selectmen or Aldermen. Bank officers have broken down under the attempt to be very prominent in public work and at the same time do faithful work at the bank, and there are bank officers who have neglected the interests of the bank in trying to do too much outside work.

#### A DOCTOR FOR A BANK.

The Bank of England has a regular medical attendant who is one of the standing officials of that institution. His duty is what his title indicates. He daily goes his rounds among the officers of the bank for the purpose of looking after their health. If an officer wishes a vacation on account of illness the bank doctor considers it his duty to make a confirmatory examination. He also considers it his duty to keep a constant watch over the condition and surroundings of the men in his charge so as to see that in sanitary matters everything is as it should be. It would be an excellent plan for banks and other large employers of help to adopt this medical notion.

#### TRUST COMPANIES AND THE MATTER OF GRACE.

In States where statutes provide that grace shall prevail on time paper other than checks on banks the question whether a trust company is a bank according to the statutes becomes one of importance. Trust companies have greatly increased in numbers and business within the last ten years. In the matter of current accounts with their dealers they do a deposit-receiving and check-paying business so like the National and State banks proper that they are hardly distinguished from them. In Massachusetts, where the modern trust companies have had a remarkably successful career, an attempt has been made on the part of the regular banks to procure the enactment of a law requiring trust companies to keep reserves equal to those maintained by the National banks, but it has been a failure up to the present time. In making this move the point was taken that trust companies are really banks without circulation. It has not been held by these Massachusetts authorities that these companies are banks in the eye of the law covering the question of grace and other points though they possess many of the functions and privileges of banks.

Trust companies have as much right to take grace as individuals or corporations other than banks.

#### FORGED ENDORSEMENTS.

A bank is supposed to know the signatures of its depositors. It is one of its first and most important duties to have them on file and immediately accessible by the use of a well-kept signature book. Holders of checks, in very many cases, know nothing about these drawer-signatures. They have taken them, supposing, of course, that they are genuine. When they have collected the checks at the banks upon which they are drawn they are to a very great extent relieved of all further responsibility as to the signatures of the signers, for the bank by paying them has guaranteed their genuineness. But the bank

which cashes for a good holder a much-endorsed check, the signature of which is all right, generally knows nothing about its many endorsements beyond the fact that they seem to be all right and stand there in regular order, apparently correctly made. For the honesty and genuineness of these many or few preceding endorsements the last endorser for whom the check is cashed, whether he endorse the check or not, is fully and legally held, and no reasonable lapse of time before a discovery of the forgery is made will relieve him of this liability.

But when the paying bank has received from a drawer or endorser a statement that it has had the misfortune to cash at some past date a check bearing the forgery of the endorsement of some one whose endorsement was needed upon the paper, accompanied by a demand for a refunding of the money on that account, it must proceed carefully in this matter of acknowledging the fraud and repaying the amount. It has a right, and it is its duty, to demand from the party who declares that his name has been forged upon the back of the check a well-supported affidavit to that effect. The relations and responsibilities of the paying bank to the drawee and to the other genuine endorsers of the check render this course absolutely necessary.

#### **TREATMENT OF NOTES PAYABLE AT A BANK.**

This seems to vary in different localities. As a general thing, where banks hold for collection notes payable at other banks they charge them in to those banks through clearing in Clearing-House places, and, where there are no clearing settlements, send them in by Messengers at the time of maturity. But the exception to such action is where the collecting banks happen to know that the maturing payable-at-bank notes which they hold will not be paid at the bank where they are made payable—that the promisors have not provided for their discharge in this manner, but intend to call at the bank which holds them for collection and pay them over its counter. Banks which keep the accounts of depositors who have made their notes payable there are not in the habit of paying such notes out of deposit balances unless the depositors have left with them special instructions so to do. Legal decisions have so far sustained the banks in the position that they have no right to pay notes of the character and under the circumstances described unless they do so under special instructions. There are many good reasons for these views. The maker of a note may not wish to pay his note at all, concluding to stop its payment for some reason or other. A bank which acts in the matter without special orders, not having in hand a full description of the maturing paper which a promisor may wish to have it pay, assumes considerable risk in the possible payment of fraudulent paper.

There is, however, a point relative to the matter of set-off which should be noted. A bank which has discounted a note for a depositor has the undoubted right to charge it to that depositor's balance if at maturity it remains unpaid. If it did not so act it would certainly be in danger of losing any endorsers of the paper through thus neglecting to secure its payment.

#### **ENDORSEMENTS BY BANK MESSENGERS.**

Made under some circumstances these are really as good, if not better, than Cashier's endorsements. The regular and legitimate duty of a Messenger is to receive drafts from the bank for presentation. He obtains acceptance of those which are payable on time and the pay for those which are payable on demand. In cases of the latter description it is his duty to receipt for the moneys paid to him, and as he is the officer of the bank who, as its representative, actually takes the payment, his receipt—his endorsement upon the back of the paid and surrendered draft—is certainly as good as that of the Cashier and will bind the bank and secure the payer equally as well as that of the latter. Drawees are not apt to take this view. They are in the habit of demanding a Cashier's endorsement. To give them this endorsement requires that the Cashier shall endorse payment received upon paper in advance of its presentation by the Messenger, and when he is really entirely ignorant whether it will be honored or not. This is a practice neither safe nor convenient. It

is not safe, for the paper bearing his receipt may be lost while in transit; it is not convenient, because the paper will have to be mutilated by an erasure of his endorsement if it is not finally paid.

#### DUTIES OF BANK DIRECTORS.

Custom and law have clearly defined what these duties are, and no man should accept a Director's position unless he is fully resolved to discharge them to the best of his ability. At the same time it is well to bear in mind that it is exceedingly injudicious and dangerous for the officers in question to endeavor to perform duties and assume responsibilities which do not really belong to the positions they have accepted. An illustration of this point, which applies fully here, though it is a savings bank story, is as follows:

The trustees of a rotten savings institution, who had voluntarily and illegally widely advertised themselves in newspapers and circulars as individually responsible for all moneys deposited, were arrested for fraud, although, as it turned out, no recourse could be had to them to make up deficiencies in deposits out of their private property, since the Courts held that the improper advertisement was not in the nature of a legal contract.

Without doubt there are instances where parties accept—seek—positions as Directors for the simple purpose of adding to their own personal revenues by the use of the facilities afforded by such positions for making money in various ways. Such instances are, however, rather exceptional. To meet such abuses Vermont has recently passed a law which is a good example for other States to follow and the leading features of which might well be copied into the National Bank Act. The law in question prohibits, under severe penalty, any bank trustee, Director, or, in fact, any bank employee, from receiving any bonus, commission or any consideration whatever from borrowers of the institution with which they are connected.

The great majority of the members of these boards are men of the highest business character who have achieved success in finance and manufactures, and who accept the positions because they are pleased with the nature of the legitimate duties and associations belonging to them, and are more than willing to take a Director's responsibility in consideration of the honorable nature of the position and the opportunities afforded for doing business service.

#### BANK OFFICERS LOSING INTEREST IN THEIR BUSINESS.

Managers and clerks who have served long and faithfully in the routine paths of banking, by their industry and skill placing the business under their charge in such perfect and systematic running order that it has finally attained a machine-like perfection of movement, are in the habit of falling into an indifference and loss of vital interest in their professional work. Assured of their position and the fair success of the institution, they grow inclined to let what they deem well enough alone, and become anti-progressive, old-fashioned and unenterprising. A hint in time of the dangers lurking in their ways of life and work may be of no little value. They should be given to understand that they cannot stand still in this life either in business or in social spheres of action and must keep fully abreast of the times or be in critical danger of falling behind in the lively race in which they are pretending to take a part. Every one of their business days should be characterized by alertness in seeking out new methods and applying improved machinery in the administration of their business. They should be, as business men, active and practical students in their special departments of financing.

#### "ULTRA VIRES."

There are few legal phrases more often used in banking than the one which heads this paragraph. Translated, it reads, of course, "beyond their strength—beyond their powers." Many a section of these papers has shown what duties and offices were within, and what not within, the scope of banks and the various officers of banks. And the lawsuits which have taken place over these matters have been of the most varied and important character. The latest case coming under immediate observation illustrates in an amusing manner the con-

tests which may arise on such a point: The bank had made an ignoble failure. The liabilities were immense and the assets small. The President and Cashier attempted to sell the safe belonging to the bank to raise money to meet the creditors' demands. The point was raised that the power to sell the old safe did not inhere in President or Cashier—that only the shareholders could make the sale. The final grave ruling of the high Court to whom the question was referred sustained this point by deciding that Presidents and Cashiers have no right under the circumstances described to trade off plant.

#### A QUANDARY.

It was an endorsed note for \$10,000 and the day of its maturity had arrived. The promisor came to the bank which held it for collection for a correspondent and stated to the Cashier that the note was not to be paid, since arrangements had been made for its renewal, and asked if it had not been ordered home. The Cashier had received no such instructions, and said the note would have to be paid or protested. The promisor raised the money and met the note. The next day the Cashier of the collecting bank received an order by mail to return the note to the correspondent who had forwarded it for collection. He did not have the note, but, instead, the money for it. To return the money to the promisor and get back the note would be assuming an unwarrantable responsibility. It is always a risky piece of business, no matter if the circumstances may be as peculiar as those described, for a collecting agent to pay back money where paper has been duly and apparently correctly collected for a correspondent unless that correspondent instructs him so to do. And in this case the only safe course was that which the Cashier pursued. He wrote to the owner of the paper, told him it had been paid and passed to his credit, and asked him whether he should reverse the credit, pay back to the maker the money and take the note, or if he should let the matter stand as it was. Instructions came to follow the latter course and that ended the matter.

#### NOTES PAYABLE AT A BANK.

It has long been a question with bankers whether they should consider notes and acceptances drawn payable at a bank in the same light as checks upon the bank—as orders to pay without further advice or instructions. The English view is that they should be so considered. The London promisor or acceptor who makes his paper payable at a London bank knows that that paper will at its maturity be charged in through clearing to the bank where it has been made payable, and that it will be paid at the bank if he has balance enough precisely as if it was his own direct check upon the bank. In New York city the London idea prevails in general. There have been important decisions in the Courts of this country contrary to this action. It has been held that the bank which pays paper made payable at its place of business performs a gratuitous service and assumes an unwarrantable risk, unless it has received from the maker of the paper special instructions to make such payment. The banks of Boston have long taken this ground: parties who make their paper payable at a bank in Boston must, before its maturity, furnish that bank with a list, giving dates, amounts, and full instructions for payment, if they wish to ensure its payment out of their regular balances. This last method of management is the one likely in the end to be the general custom in the United States.

#### RESPONSIBILITY FOR COLLECTIONS.

A contemporary presents misleading views upon this subject, quite contrary to those advanced in these articles. The journal in question holds that the bank which exercises diligence is not responsible for the conduct of its collecting agent—that, for instance, any loss occurring from the failure of the bank to which it had with good judgment and in good faith forwarded paper for collection would fall upon the owner of the paper depositing it with the bank for collection. This is generally known in banking and collection circles as the Massachusetts view, and was at one time widely held. Parties who look up the point by referring to legal decisions not of a recent date are likely to conclude that the responsibility rests with the owner of the collections. But

decisions of the highest Courts comparatively recent have changed the whole aspect of the matter and throw the responsibility upon the first collecting hands.

#### COLLATERAL VERSUS PERSONAL SECURITY.

Very many private capitalists and some banks and bankers who are in the business of buying paper and making loans prefer to make advances upon purely personal security than upon paper accompanied by collateral, especially coupon bond collateral. Their reason for this preference is found in the fact that they dislike the care and responsibility involved in holding this last-named class of collateral, or any collateral the loss of which would cause them serious trouble. Whatever may be the character of the legal theories advanced there is not a shadow of doubt but that any promisor who found the bonds he had pledged with his promise not forthcoming when, at the maturity of his promise, he made ready to pay his note, would refuse to make the payment and would demand his collateral before making a settlement. Heavy buyers of paper—investors who have for a long series of years made a practice of putting all their funds into notes and acceptances—have had so strong a prejudice against bond collateral that they have never touched paper thus fortified. The institution of safe deposit companies has greatly facilitated the business of handling collateral loans, and quite a good proportion of their patronage comes from private capitalists, who use them for the storage of bonds, etc., upon which they have made advances.

The question is often raised whether or not banks and bankers examine coupon bonds which they are currently taking in such vast quantities to see if all the right coupons are attached when the bonds are taken on as collateral. Such examinations are very infrequently made. Neither is the borrower in the habit of looking into the coupon portion of his collateral when he receives the bonds back from responsible holders after paying the notes secured by them. Once in a while there is trouble, and it is found that bonds which have been doing a large business in a collateral capacity have somehow lost coupons—losses which are exceedingly embarrassing since it becomes extremely difficult to locate the deficiency.

Holders of bond collateral who deliver coupons to owners while bonds are being held by them awaiting maturity of notes should always take receipts for such deliveries.

#### BANKING TERMS.

An explanation of a few banking terms—or rather an explanation of the way certain banking terms in frequent use should be applied—may not be out of place :

1. The word *bank*. This is a noun of multitude, and can have pronouns as well as verbs agreeing with it either in the plural or singular number. Yet regard should be had in its use to the import of the term as conveying unity or plurality of ideas. Gilbert lays down the following rules to be observed in the use of the term: "When any operation or feeling of the mind is ascribed to a bank the verbs and pronouns are placed in the plural, as follows: The Bank of England petitioned against this bill, and were heard by counsel; but *their* representations produced no effect." When reference is made to a bank simply as an institution the term is considered to belong to the singular, as follows: "The Bank of Scotland continued the only bank from the date of *its* establishment in 1695 to 1727." When the rules or habitual acts of a bank are noticed the word belongs to the singular, as, "The Provincial Bank *allows* interest at the rate of 2 per cent." When the word bank is connected with a past participle by means of the neuter verb *to be* it usually belongs to the singular, as, "Suppose a bank *was enabled* to take 6 per cent. on a cash credit instead of 4." When the word bank is preceded by the indefinite article *a* or *an*, by the demonstrative pronouns *this* or *that*, or by the words *each*, *any*, *every one*, it belongs to the singular, as, "Suppose one bank in Scotland made *its* notes payable in Scotland at the place where the notes were issued." When the word bank is introduced in either the singular or the plural number the same number should be preserved throughout the sentence. Hence, the following sentence of Smollett's is inaccurate: "By the same acts the bank

was required to advance a sum not exceeding £2,500,000 towards discharging the National debt, if wanted, on condition that *they* should have £5 per cent. for as much as *they* might advance redeemed by Parliament." When the word bank is used in the singular number it is considered as a substantive of the neuter gender, and hence is associated with the relative pronoun *which*; but when used in the plural number it implies the idea of persons and has accordingly the personal relative *who*, as, "The bank with *which* he kept his account *has* stopped payment; or, "The bank *whose* interests are affected by the proposed measure *have* petitioned against it." McCulloch, in his "Commercial Dictionary," considers a bank to be a lady, for, under an article on banking, he says: "The Bank of Ireland draws on London at 20 days. *She* neither grants cash credit nor allows any interest upon deposits; *she* discounts at the rate of £5 per cent." And it is quite common with English writers to characterize the Bank of England as a lady—an old lady!

Mr. Gilbert, the writer on banking already quoted, takes the ground that, when speaking of the *acceptor* of a bill, the word should be spelled in the same way as when speaking of the *accepter* of a present or fee. The Scotch bankers always write this word *accepter*. Says Gilbert: "We do not say the drawor or the payor; why should we say the *acceptor*?"

2. In regard to another word the question is raised: Should it be written *indorse* or *endorse*. *Indorse* is derived direct from the Latin *in dorsum*, which means "on the back." *Endorse* comes from the Latin through the French *endusser*. Most legal writers adopt *indorse*.

3. Should *check* or *cheque* be written? This word is derived from the French *echecs*, *chess*. In England chequers placed at the doors of public-houses are intended to represent chess boards, and originally denoted that the game of chess was played in those places. Similar tables were employed in reckoning money, and hence came the expression, "to check on account;" and the Government office, where the accounts were kept, was called the Exchequer. The word *cheque* is in universal use in England. The word *check* is used in the United States, and this mode of spelling is not likely to be changed in this country.

4. Shall we write *enclose* or *inclose* when we make up letters in sending away notes, drafts, etc.?" Either word is correct, and the writer can consult his own tastes in using them.

#### ACCEPTANCE AND RETURN.

Banks are often called upon to send forward to various points for acceptance and return drafts which they have discounted or received for collection. Paper of this description is sometimes received from depositors who wish it returned to them after acceptance has been procured, since it is due a long time ahead, and they for that reason prefer to hold it in their own hands until near maturity.

It is not a good plan to send paper endorsed in blank through the mails, since it becomes, under such circumstances, negotiable in any hands into which it may fall even without the assistance of a forged endorsement.

It often becomes a question with banks how this acceptance and return paper shall be endorsed before it is sent forward. A good plan is to stamp over the last endorsement the words, "Pay to the order of [here insert the name of the bank which is handling the paper, that owns it or has received it from dealers who wish to have it accepted and returned to them]." With such an endorsement it is in good form for a journey through the mails and in the right shape to go into the collection files of the banks sending it forward when it comes back to them accepted. The only embarrassment in these cases arises when the customers wish to take the paper back—to hold it themselves, after it has been accepted, till close on to maturity, at which time they may wish to put it into some other bank. In some instances they may wish to sell the paper after it has been accepted as described—may even wish to get it discounted in some quarter other than the bank through which it has been passed for acceptance and return. In such cases there seems nothing to be done except to run the risk of sending the paper through the mail endorsed in

blank, or to submit to having it disfigured a little by putting on and crossing out what may be termed a simple transmission endorsement such as the one described.

#### ADVICE OF CHECKS DRAWN.

It is a custom of long standing for banks and bankers to advise by letters to their correspondents all checks which they draw upon them. These advices generally embody a full description of the drawn checks—a statement of their marks, numbers, amounts and payees. Drawees who receive such advance notices are supposed to compare carefully every check presented for payment which has been thus advised by this description of it placed in advance before them. But the methods of check-settlement have now become so complicated and the volume of this business so increased that this advice is very exceptional, and where it is still adhered to on the part of drawers the practical result is that few payers are able to watch, compare and be governed by these advices in the daily transactions of a large banking business. Embarrassments sometimes arise from this system of advice that are quite troublesome to Paying-Tellers and other officers. Correspondents who advise their checks issued sometimes fail to get these advices into the hands of the banks upon which the checks are drawn in advance of the time of their presentation—fail through errors and delays of their own or the mails. The question then at once arises with the bank upon which the checks are drawn whether or not these checks which come round in advance of their advice shall, if they appear all right in other points, be duly honored—cashied in spite of the absence of the usual advice. But intelligent bankers do not hesitate long over such a question as this. They pay the checks and wait for an advice to come afterward. In some instances where an advice system is in use errors and delays such as those named and the difficulty of keeping a run of advices received combine to make the advice feature a dead letter with the paying banks. Their Tellers gradually fall into the habit of paying all checks as presented, without regard to the fact that some of them may be drawn by correspondents who are accustomed to advise. In view of these facts it might perhaps be well to suggest that it would be wise for banks and bankers to give up altogether this old-time practice of sending out the between-bank advices in question.

#### PAYABLE "IN EXCHANGE."

There is a class of business men who have the inveterate habit of making drafts payable "in New York exchange" rather than "with exchange." Thus a party in the east will draw a draft upon a house in Chicago, written "payable in New York exchange." This is a risky and objectionable way of framing paper, and banks should set their faces very strongly against the use of such a form. The bank which attempts to collect paper drawn in this manner is liable to find itself in an unpleasant predicament. The drawee of paper of this type may take the stand that he can pay the paper by offering in settlement any draft on New York which he may select. If the collecting bank attempts to discriminate regarding the character of the exchange on New York that is offered and raises the question whether or not the tendered exchange is of good repute it may find itself in an unwelcome controversy with the payer, and it may, in the end, be difficult to say who has the right to decide upon the repute of the exchange tendered. This form of draft drawing should be entirely done away with, and, in order to hasten the abolition of its use, the banks should take the position that they will not assume any responsibility in the matter of collecting such paper.

#### A PASSWORD FOR CHECK-BEARERS.

Good banking requires payment of checks on identification by signatures. The California Bank, of San Francisco, advises John Doe that it has drawn a check on him for one thousand dollars in favor of Robert Smith. The payee being acquainted with no one in San Francisco, the bank takes his signature and forwards it with the advice of the check to John Doe, thus leading him to infer that he is to accept a comparison of signatures as a method of identifying the payee. When the payee presents himself he is identified in this manner if other circumstances tend to favor his case—that is, if the man

seems all right and there is nothing to excite suspicion. There is another method of procedure of a somewhat novel type adopted by some bankers when a payee desires to travel with his check into a strange country and wishes to be sure of collecting it when he gets there. In order to place an obstacle in the way of fraud Cashiers have been known to give the payee an oral password which he could use as an identification or as the complement of an identification by signature, in the latter case both password and signature being communicated to the drawee in the letter of advice.

#### COLLECTIONS BY EXPRESS.

The leading express companies of the country and many of the small ones are managed with a skill and a system which command not only admiration but a very large patronage from bankers. There was a banking period when the express system was not in existence. In those days of a smaller breadth of banking than at present the banks somehow existed without the express companies, but it is now hard to see how they managed to do without them. Into towns and villages where there are no banks or bankers, and even no lawyers or notaries, the ubiquitous express companies now stretch their lines of connection and in such places do for the banks with skill, promptness and safety a collection business which it would be almost impossible for them to have done in any other way. Some banks are so much in favor of express companies as collecting agents that they even employ them freely in the work of making collections in cities and towns which are supplied with banks. This they do because they believe the express to be often the quickest and cheapest. In another place in these papers has been shown how under city systems of clearing country collections a very profitable collection use might be made of the express companies and their admirable collection arrangements. A feature of their business in this department illustrates the point just named. The express companies dislike to take collections on points where there are no notaries. Some of them even endeavor to decline business of that class. Yet if pressed they will generally give way, for they are prepared to get along with their non-payments without a notary by the following letter of instruction, intelligently drawn up by one of the largest express companies:

#### EXPRESS COMPANY.

##### NOTICE TO AGENTS.

The collection that accompanies this is due.....and must be presented to..... on that day for payment, and if not paid

##### MUST BE PROTESTED.

In order to have this done you will hand it to a Notary Public, or, if there is no Notary Public in your town or vicinity, present it to a Justice of the Peace or Magistrate for that purpose. In case there is no Notary Public or Justice of the Peace in your vicinity, you *must make the demand* for the payment—this should be done in presence of a witness—and, if not paid, you must immediately notify by mail each endorser that demand has been made and payment has been refused and that the holder looks to him for payment. This notice must be sent by the first mail after the demand has been made, and you must be prepared to prove, on your oath, the date and time of making the demand and of mailing the notices. To assist you in doing this you had better make some memorandum of it at the time. In case you are not furnished with the address of the endorsers you should write the notices to the endorsers and inclose them to the Agent at the office from which the collection was sent. It will be his duty to mail the notices to the proper address AT ONCE.

Unless it is protested on the day it is due the endorsers will be relieved and the Express Company will be made liable.

(Signed,) ..... , *Manager and Sup't.*

#### A DEMORALIZING PRACTICE.

There are bankers and others who see nothing wrong in undervaluing packages of bonds, coupons and negotiable securities forwarded by express which go through the money departments of these common carriers and receive the best transportation and protection that can be afforded. People who avail

themselves of the services of an express company should understand distinctly that the practice we have in mind is not an honest one. The individual who deliberately marks a value of one thousand dollars on a package of ten thousand dollars in money or undescribed coupon bonds and sends it by express from New York to Chicago on an express receipt and express charge for only a thousand dollars is guilty of a deliberate fraud upon the express company. In doing this he undoubtedly argues with himself that it is all right, since the company cannot be made responsible to him in case of loss for more than the sum he has marked on the package, and which they have receipted for, and that he has only put upon them the risk and responsibility of the smaller sum for which he has paid. But this superficial reasoning does not by any means cover the point. Fairly stated, the express company may be said to have carried for him nine thousand dollars for which he has not paid, and are deceived and defrauded by him to this extent. He has availed himself of all the facilities the company has at its disposal for the carriage in safety of valuable packages and has not paid for the services he has received.

Managers of express companies are justifiably indignant over the wide prevalence of this undervaluing practice. The Superintendent of one of the largest express companies not long ago declared that he would never take a package a second time from a sender who had been known to undervalue and underpay without having the contents of the package shown to him before he receipted for it, nor would he deliver packages to such offenders without demanding a sight of their contents before he settled for their carriage.

Not long ago coupons amounting to over \$20,000, marked "no value," were sent through an express company on a charge of fifty cents. The package was lost, and the most troublesome and costly complications arose as a consequence of the fraud.

Undervalued packages sent by express to the United States Treasury are always reported at once to the express companies.

#### MAILING LETTERS.

This is a matter demanding care. A list of all letters written can be recorded upon a book, a description of which is elsewhere given, and the Messenger or porter who takes the letters to the post office should check off by this list all the letters in his hands before mailing them. He should have a satchel in which to put the letters. Before they are mailed he must see that his superior officers have properly sealed and addressed them. The care that he bestows in mailing should be exercised in taking letters from the post office and bringing them to the bank. He should not let them go out of his hands until they have been delivered to the Cashier or his proper deputy. Considerable trouble has grown out of the non-observance of these simple precautions.

#### CAN NATIONAL BANKS BUY PAPER?

There is no question but that they do, or think they do, almost every day; yet it is an interesting and important fact, though this question has often been raised in contests between banks and parties to whom advances upon notes have been made, that it has never been passed upon or decided by the United States Supreme Court. This Court has ruled that paper may enter a bank loan either by way of a discount or purchase. But, though all purchases of time paper may be termed discounts all discounts are not purchases. Where a bank discounts paper for a broker who does not endorse it, it may be held that the transaction is a purchase. If a bank makes loans to a customer upon his endorsed paper, which in addition to any other names bears his own endorsement, it may be assumed that the transaction is in the nature of a discount and not of a purchase. But the note which enters the loan of a bank either by way of a discount or purchase is, in either case, subject to usury laws. Whether or not a National bank can buy notes turns, of course, upon the construction of the meaning of the word "negotiate" in that section of the Bank Act which relates to its powers in the matter of making investments. It is there declared that a bank can buy bonds, bullion, etc., and "negotiate" paper.

## BANKING LAW.

### \* LEGAL DECISIONS AFFECTING BANKERS.

#### NOTICE TO INDORSERS—SUFFICIENCY.

It is important that the law of negotiable paper be definite and certain, and, when notice has not been actually received in due time by the indorser, the question is whether due diligence in giving notice has been shown; and this, when the facts are all found, is a question of law. Notice may be given at the place of residence or the place of business; and, when the place of residence is not the place of domicile, notice at the place of residence is sufficient, although it has not been decided that notice at the place of domicile is not also good. The facts may indeed be such as to make it difficult to determine what is the place of residence or the place of business, or whether there is any place of business distinct from the place of residence, and Courts must deal with such cases as best they can. The guiding principle is that notice should be sent to the place where the party to be notified will be most likely to receive it, and reasonable diligence must be shown in ascertaining where that place is. When the indorser is a partnership notice to one partner is notice to all; but as the partners may reside at different places, and sometimes far distant from the place where the business is carried on, a notice at the place of business, if there is such a place, is plainly the better, because there the partnership can best consult and act so as to protect itself from loss.

Where a notice of protest in proper form and addressed to a partnership who were indorsers on certain notes was duly sent to the place where they had done business, such partnership at the time being insolvent, but what remained of the business being still carried on at that place by their Assignee, and the partners being still interested in the management of the trust, and where such defendants had no other place of business, and the plaintiff had no knowledge of any other address of the members of such partnership,

*Held*, That such notice was sufficient to bind the indorsers.

*Bank of America vs. Shaw*, Supreme Judicial Court of Massachusetts, July 3, 1886.

#### PROMISSORY NOTE—JOINT MAKER OR INDORSER—PAROL EVIDENCE.

Action was brought to recover the amount due on a promissory note given by defendant C to defendant B, made payable to him or bearer, and which was sold and transferred by B to plaintiff for full value. When B transferred the note to plaintiff he placed his name thereon, at the request of the plaintiff, right under that of C. In this form it was received by the plaintiff, and on its face was a joint and several note. When the note became due it was not paid, and the plaintiff gave no notice to defendant B of its non-payment. C subsequently becoming insolvent, and unable to pay the note, plaintiff brought this suit against both C and B, and B alone made defense. At the trial defendant claimed that he was an indorser and not a maker of the note, and that such was in fact his contract with the plaintiff when he let him have the note; that no notice of protest was ever given to him, and that he never waived notice of protest; and he was allowed to give evidence of these facts. Plaintiff insisted that the note showed B to be a joint maker, that no fraud or mistake was

\*All the latest Decisions affecting Bankers will be found in this Department as early as obtainable. The Editor of the Law Department of RHODES' JOURNAL will furnish, on application of subscribers, further information regarding any case referred to herein; he will also answer questions in banking law which may be of sufficient general interest as to warrant publication in this Department. A reasonable charge is made for Special Replies asked for by correspondents and not authorized for publication.

claimed, and parol evidence could not be introduced to show that, by the contract of the parties, he was an indorser only; that by the contract proved he is a maker and not an indorser. Verdict was given for the defendant, and plaintiff appealed.

*Held*, The rights claimed by the defendant in this case are those of indorser of the note. Upon the face of the note, as the name appears, he is clearly the maker of the note. In the one case whether or not his liability shall continue after the note becomes due is contingent, in the other his liability is absolute until the note is paid. The difference between the two contracts is substantial and important. When the contract is full and complete upon its face, whether it shows one or the other, and no fraud or mistake is imputed, it cannot be changed or modified by parol evidence. When, however, the indorsement is in blank, or the parties' names are so placed upon the instrument, or the contract is so ambiguous upon its face as to leave it doubtful what the real intention of the parties is, then resort may be had to parol evidence and to all the circumstances surrounding the transactions of the parties having any bearing upon the subject to establish the true relation of the parties to the note and to each other. This we understand to be the tenor of the decisions in this Court and of the authorities elsewhere which best commend themselves to our judgment (5 Mich., 210; Id., 222; 18 Id., 354; 26 Id., 92; 39 Id., 518; 41 Id., 196; 31 Id., 150; 51 Id., 95; 40 Id., 337; 42 Id., 329; 16 Gray, 537; 41 N. H., 434; 44 N. H., 174; 30 N. J. Law, 263; 1 Conn., 249; 35 N. J. Law, 522; 8 Camp., 57; 7 Taunt., 159; 2 Barn. & C., 483; 5 Car & P., 37; 6 Pet., 51; 23 Me., 392; 6 Blackf., 509; 4 Ga., 106; 42 Wis., 689; 38 Conn., 15).

There can be no question as to the completeness of this note and the relation that the parties sustain to it under the rules above recognized.

Judgment reversed.

*Cook vs. Brown*, Supreme Court of Michigan, July 15, 1886.

#### CERTIFICATE OF DEPOSIT—PAROL EVIDENCE.

Parol evidence is inadmissible to contradict or vary the terms of a certificate of deposit. All contracts have imported into them legal principles, which can no more be varied by parol evidence than the strongest and clearest express stipulations. One example of this is that of the days of grace added by force of law to a promissory note. A more striking example, perhaps, is that supplied by the contract of indorsement, for, in such cases, although not a word more than the name of the indorser is written, the contract which the law implies cannot be varied by parol. The authorities all agree that the regular indorsement of a promissory note is as perfect a contract as though the liability which the law implies were written out in full. (*Smyth vs. Scott*, 6 N. E. Rep., 145, November Term, 18-5, Ind.)

Our cases, in accordance with the very great weight of authority, hold that a certificate of deposit, written in full and regular form, is a promissory note, and as such is negotiable. (37 Ind., 238; 52 Ind., 404; 51 Ind., 393; 21 Ind., 433.)

The law implies a promise to pay back to the depositor his money, and where there is a written contract stipulating that money has been received on deposit that promise is an essential part of the written contract itself. An acknowledgement that money was received on deposit implies a promise to pay it to the depositor, and this promise is implied by law as an obligation arising from the language of the contract, thus forming one of its terms.

*Lang vs. Straus*, Supreme Court of Indiana, June 19, 1886.

#### PROMISSORY NOTE—HUSBAND TO WIFE—ACTION ON BY THIRD PARTY.

In an action on a promissory note given by a husband to his wife for a claim allowed to her against her father's estate, of which the husband was administrator, and by her transferred to the plaintiff,

*Held*, This is an action of *assumpsit* upon said note, the note being negotiable in form. The material question is whether the note is enforceable by the

assignee of the wife. Nothing appearing to the contrary the plaintiff is to be treated as a *bona fide* holder for value of the note. It was payable one day after date. Still, the holder of a negotiable note is presumptively a *bona fide* holder and is clothed with the protection of such a holder in the absence of facts discrediting his title. Being such a holder does he stand any better in respect to the enforceability of the note than Mrs. Hopkins did when she held it? As between Hopkins and his wife the note was null and void. They were, at law, incapable of contracting with each other and contracts assumed to be made between them were not merely voidable but absolutely without legal obligation or force. Such being the character of the note when executed and delivered to Mrs. Hopkins the transfer of it to the plaintiff added nothing to its legal efficacy. The transfer merely carried the instrument as it was. The protection which the indorsee as a *bona fide* holder gained over the former holder has relation to the defense which the maker might urge as against such former holder and does not spring from the quality of the note itself but from commercial policy. If the defendant had forged a note and delivered it to A and A transfers it to an innocent holder it is plain that nothing has been added by the transfer. The defendant had no legal power to make such a note and the instrument was not a note. If the defendant executes a note to his wife he is attempting an act that he has no legal power to do and the note is as void as the forged one. The transfer of the note in this case then operated to give the plaintiff all the rights to enforce it so far as its legal validity is concerned that Mrs. Hopkins had and no more, and being void as to her it was so to all the world.

It is to be observed that the facts detailed leave the question to be determined upon common law principles. There is nothing to show that this note was the separate statutory or equitable estate of Mrs. Hopkins. Had such facts appeared the note might have represented an enforceable equitable obligation which equity would protect, and the transfer of it might with much reason be held to have avoided the technical bar to a suit at law which arose from the coverture of the parties. The case of *Sweat vs. Hall*, 8 Vt., 187, is full authority for the conclusion we have reached. This is the doctrine in Massachusetts (4 Allen, 412; 155 Mass., 87; 139 Mass., 202).

*Ellsworth vs. Hopkins*, Supreme Court of Vermont, August 11, 1886.

#### USURY—RIGHT OF STATE TO INTERVENE.

In a suit in Oregon between private parties on a note, the District-Attorney of the district in which the suit was pending considered that there was usury in the transaction between the parties regarding the execution and acceptance of the note, and attempted to intervene in behalf of the State and have the debt forfeited to the school fund.

*Held*, There is no provision of the statute which permits such intervention, and we can discover no principle on which the right can be claimed. The statute provides that if it shall be ascertained, in any suit brought on any contract, that a rate of interest has been contracted for greater than is authorized, etc., the design of which is to obtain for money so loaned a greater amount than that allowed by the statute, the same shall be deemed usurious and shall work a forfeiture of the entire debt so contracted to the school fund of the county where such suit is brought, and that the Court shall render a judgment for the amount of the original sum loaned, etc., without interest, against the defendant, and in favor of the State of Oregon, for the use of the common school fund, etc. (Section 8, chapter 27, Misc. Laws). It is not unusual in statutes against usury to inhibit a recovery of the debt, but this provision enforces payment of the principal sum, and requires that the Court adjudge it to be paid to the State. It does not permit the defendant, in case usury is established upon a trial, "to go hence without day," but compels him to pay the principal of the debt, though it relieves him from the payment of the interest. But it seems to us that the right to plead usury is still a personal privilege, and that no other party can interpose such plea. The statute makes it the duty of District-Attorneys to prosecute for all penalties and forfeitures to the State which may be incurred in any county in their district, and for

which no other mode of prosecution and collection is expressly provided by statute (Sec. 945, Civil Code). But it has to be by action at law (Sec. 342, Civil Code). If the District-Attorney has the right to intervene in such cases, as he has done in this case, it then becomes his duty in all cases where money has been loaned, and its payment sought to be enforced by action or suit, to make diligent inquiry in order to ascertain whether or not he ought to intervene, and that duty alone, in a commercial town like Portland, would keep him constantly and actively employed, and interfere so much with the enforcement of payment of debts as to become a serious annoyance. We do not think the provision referred to contemplates any such thing. Nor, in our opinion, is this the character of the suit in which the remedy mentioned can be applied. This is in the nature of a bill to redeem, and the Court has only to ascertain the amount the respondent should pay the appellant in order to compel him to re-convey.

*Holladay vs. Holladay*, Supreme Court of Oregon, June 17, 1886.

The same Court, in another case, between private parties, where the District-Attorney attempted to intervene in the same way, held that parties may contract for, pay and receive usury without forfeiting anything to the State or giving the latter any right to claim a forfeiture. The provision of the statute referred to does not require or authorize the District-Attorney to go mousing around to ascertain whether a forfeiture of some man's choses in action cannot be effected in favor of the school fund, although the latter may be increased in consequence of the folly, misfortune or criminality of individuals, but it is a mere result arising from circumstances that neither the school fund, the State nor the District-Attorney has any direct agency in producing. Where the Court, in a suit upon a contract, ascertains that an illegal rate of interest has been contracted for, it renders judgment for the amount of the original sum against the defendant in favor of the State of Oregon for the use of the common school fund of the county; but it has no right to ascertain the fact upon the plea of an interloper; it must be ascertained by a judicial inquiry concerning matters alleged in the complaint or averred in the answer or reply, and the proof must be clear, positive and convincing. The right of property in all civilized communities is held sacred, and no one should be deprived of it except by due process of law.

Further *Held*, We seriously doubt the constitutionality of this statute. The Legislature might provide for denying a remedy to a party for the collection of a debt where he had been guilty of exacting an illegal rate of interest, but it is very questionable, in our mind, whether it could go further and direct its absolute forfeiture. "No conviction shall work corruption of blood or forfeiture of estate" is the language of a clause in our Constitution. In this case the Court below decreed that the appellant's debt of \$2,000 be forfeited and that the State of Oregon recover it of the defendants in the suit, because, as it found, the appellant, at some time after its creation, received \$81.25 "as interest upon interest" prior to the time which, by the note, interest or principal was payable. If that is not "forfeiture of estate" we hardly can imagine what would be.

*Sujette vs. Wilson*, Supreme Court of Oregon, June 17, 1886.

#### NATIONAL BANK STOCK—LIABILITY OF SHAREHOLDER—ASSESSMENT.

Where certain shares in a National bank had been sold by the executors of the owner, but had never been transferred on the books of the bank, and at the time of its failure they still stood in the name of the defendants' testator,

*Held*, In an action by the Receiver against such executors to recover an assessment levied upon such shares, that it was the duty of the defendants to have seen that the stock was transferred on the books of the bank. The by-laws provided that the stock should be assignable only on the books of the bank, and that the certificates of stock should state upon the face thereof that the stock was transferable only upon the books of the bank, and when transferred the certificates should be returned and cancelled. This being a suit brought by the Receiver who represents the creditors, and it appearing

that the stock was not transferred on the books of the company as provided by the by-laws, we think the defendants liable and that judgment must be entered for the plaintiff. (44 Conn. 582; 6 Hill 624; 111 U. S., 479, 483; 103 U. S., 800, 804; 95 U. S., 418; 5 Biss., 181.)

Price, Receiver, vs. Whitney, Circuit Court, District of Massachusetts, July 30, 1886.

#### NATIONAL BANK—EMBEZZLEMENT—NO JURISDICTION OF STATE COURT.

Where a clerk in a National bank had been convicted of embezzlement of the funds of the bank by a State Circuit Court under the State statute, on appeal to the Supreme Court of the State, it was

*Held*, That the Circuit Court was without jurisdiction; that the crime of embezzlement was provided for by the National Bank Act, and that the offence was within the exclusive jurisdiction of the Federal Court.

Judgment reversed and prisoner discharged.

People vs. Fonda, Supreme Court of Michigan, July 15, 1886.

#### PROMISSORY NOTE—CONSIDERATION—IGNORANTIA JURIS.

In an action against defendant on a promissory note it appeared that he was surety on an old note which was surrendered up to him on the execution of the note in suit. At that time he knew all of the facts connected with the plaintiff's holding of the old note and believed himself liable thereon, although in law he was discharged from liability thereon.

*Held*, The plaintiff made no misrepresentation, but acted in good faith in the matter, and the parties discussed together the question of defendant's liability on the old note, and both believed him liable, and therefore the new note was taken and the old note given up. Thus it appears that the new note was not given under any mistake of fact. The most that can be said is that the new note was given in ignorance of the law. But this will not avail the defendant. In *Stevens vs. Lynch*, 12 East., 38, the drawer of a bill of exchange, knowing that time had been given by the holder to the acceptor, but apprehending that he was still liable on the bill in default of the acceptor, three months after it was due said he knew he was liable and would pay it if the acceptor did not, and it was held that he was bound by the promise. The universal rule is *ignorantia juris non excusat*, the word "*juris*" being used as denoting general law, the ordinary law of the land, and not a private right (1 Benj. Sales, § 611). The cases that hold that money paid in ignorance of the law is not recoverable are analogous (5 Taunt., 144; 9 Cow., 647).

Further *Held*, Any act that is a detriment to the plaintiff is a sufficient consideration for the promise to pay money (1 Taunt., 523). It was a detriment to the plaintiff to give up the old note, as it was good against the principal; and the fact that the principal was insolvent made no difference, for the note must be taken to have some value, and a small consideration will support a larger promise (6 A. & E., 438; 11 C. B., 481, 494; 10 A. & E., 309; 12 Vt., 505).

Judgment for plaintiff.

Churchill vs. Bradley, Supreme Court of Vermont, July 19, 1886.

#### PROMISSORY NOTE—CONSIDERATION.

A note given to a wife by her husband to help support herself and child is without legal consideration and cannot be enforced in a suit by the wife.

Fuller vs. Lambert, Supreme Judicial Court of Maine, June 26, 1886.

#### PROMISSORY NOTE—PRIMA FACIE EVIDENCE OF CONSIDERATION.

Plaintiffs introduced and read to the jury certain notes. Upon their face they purported to be "for value received."

*Held*, This recital "for value received" is *prima facie* evidence of consideration, and this *prima facie* evidence was not disproved by the introduction of

a letter from one of the plaintiffs to defendant which at most only tended to prove that the notes were without consideration as between the parties to them.  
*Noyes vs. Smith*, Supreme Judicial Court of Maine, August 5, 1886.

PROMISSORY NOTE—AUTHORITY OF PARTNER TO SIGN—INADMISSIBILITY OF PARTNERSHIP AGREEMENT.

In an action on a promissory note executed by a member of a partnership in the firm name, evidence of a partnership agreement prohibiting either of the members from making a note without the consent of the other was held inadmissible on the ground that it was a private agreement of which the holder of the note could not be charged with notice.

*Bates vs. Forcht*, Supreme Court of Missouri, June 7, 1886.

POWERS OF BANK CASHIERS.

*Continued from page 695, September number of the JOURNAL.*

*IX. Manner of Indorsing the Negotiable Paper of the Bank.*—In the last number it was stated that the Cashier was the proper officer to indorse the negotiable paper of the bank. This article will treat of the manner of indorsing such paper. The technically proper form of indorsing the bank's paper is by writing the name of the bank with the addition of the signature of the Cashier, as, for example: "First National Bank by John Brown, Cashier." If the indorsement is thus made no question can be raised as to its sufficiency in form to pass the title of the bank therein. The practice has become common, however, of transferring paper to and from a bank by the simple use of the name of the Cashier as such without any designation of the bank of which he is Cashier appearing in the indorsement. The sufficiency of this form of signature was once seriously questioned but it is now upheld by the decisions.

In *Bank of Genesee vs. Patchin Bank*, 13 N. Y., 316, where paper was on its face made payable to the order of the Cashier of the bank, the Court said that it was in the form usually adopted to vest the title of the paper in the bank (citing 1 Denio, 608); and, where the Cashier indorsed the paper to the plaintiff by his name simply as Cashier, it was held that the bank was liable as indorser.

In *Folger vs. Chase*, 18 Pick. (Mass.), 63, the plaintiff derived title to certain notes through the Phoenix Bank which had been indorsed "P. H. Folger, Cashier." The Court held that the plaintiff was entitled to recover, saying: "As to the objection that the indorsement is not made in the name of the corporation, we think the indorsement by the Cashier in his official capacity sufficiently shows that the indorsement was made in behalf of the bank, and, if that is not sufficiently certain, the plaintiff has a right now to prefix the name of the corporation."

In *Robb vs. Ross County Bank*, 41 Barb., 591, the Court discusses the question in the following language: "The question presented is, did the omission of Kingsbury, the Cashier, to write on the back of the bill before or after his name and the name of his office the words 'For the Ross County Bank' preclude the plaintiff from recovering against the bank as indorser? In other words, although we know that this paper was indorsed as paper negotiated by banks is usually indorsed, that is, by the Cashier writing his name on the back of it with the addition of the name or the designation of his office merely, and although we know that banks deal with the public at large, and that their officers, President, Cashier, etc., are generally spoken of and designated and dealt with by the name of their office merely, and although we must presume that the plaintiffs when they took the bill knew that there was such a bank as the Bank of Ross County and that B. P. Kingsbury was its Cashier, and although we know that corporations from their very nature can act only through or by their officers or agents, yet is there any technical, unbending rule of law which compels us to hold in this case that the indorsement of the bill by Kingsbury, the Cashier, writing his name with the addition of the name or description of his office on the back of it, was not the indorse-

ment of the bank and did not bind the bank as indorser? We should be sorry to think that there was, and believe that there is not."

In an action by a bank on a note the only proof offered as to the title was that it was indorsed to J. R. M., Cashier of the plaintiff. *Held*, That this was sufficient to show title in the bank.

*Pratt vs. Topeka Bank*, 12 Kan., 570.

A certificate of deposit to S. B. K., Cashier, although of funds deposited belonging to the bank, may be transferred by K, and if they come into the hands of an innocent holder he will hold them against the bank.

*St. Louis Perpetual Ins. Co. vs. Cohen*, 9 Mo., 418.

In the case of *Baldwin vs. Bank of Newbury*, 1 Wall., 234, decided by the Supreme Court of the United States in 1863, the promise, as appeared by the terms of the note, was to O. C. Hale, Cashier, and the question was whether parol evidence was admissible to show that he was Cashier of the plaintiff bank and that in taking the note he acted as the Cashier and agent of the corporation. The Court held that banking corporations necessarily act by some agent, and it is a matter of common knowledge that such institutions usually have an officer known as their Cashier. That in general he is the officer who superintends the books and transactions of the bank under the orders of the Directors. His acts within the sphere of his duty are in behalf of the bank, and to that extent he is the agent of the corporation. That, viewed in the light of these well-known facts, it is clear that evidence may be received to show that a note given to the Cashier of a bank was intended as a promise to the corporation, and that such evidence has no tendency to contradict the terms of the instrument; and the bank therefore recovered on the note.

In addition to the cases given above the following decisions bear upon the question:

3 Blatch., 431; 1 Cush., 254; 9 Cush., 46; 16 Pick., 381; 5 Gray, 561; 11 Mass., 238; 17 Mass., 94; 3 Barb., 523; 1 Denio, 608; 6 Hill, 476; 29 N. Y., 632; 26 Wis., 663; 17 Conn., 259; 24 Vermont, 33; 1 Williams, 87; 14 Ala., 307.

## REPLIES TO LAW AND BANKING QUESTIONS.

*Editor Rhodes' Journal of Banking:*

PAOLA, Kans., August 30, 1886.

SIR:—A customer discounts a note at his bank, writing across the back "I guarantee payment," and signing his name. The makers fail to pay at maturity and the note is protested. Can this note be charged to the customer's account, he having sufficient to his credit to pay the same? SUBSCRIBER.

*Answer.*—Yes. The bank has a lien on the funds of the depositor for any indebtedness by him.

*Editor Rhodes' Journal of Banking:*

SIOUX FALLS, Dak., September 1, 1886.

SIR:—Will you kindly answer the following question in your next issue:

A National bank doing business becomes the creditor of a corporation to the extent of \$40,000 on notes. The bank subsequently gets notes secured by real estate and chattel mortgage on all the corporation's property for \$30,000, after which the President of the bank enters into a contract to sell all the bank's interest in the mortgages, etc., for \$29,000 and to assume any liability of the said corporation (the amount of which is not positively known). The bank President makes this contract as such President without any action of the Board of Directors. The party buying the property pays \$2,000 cash down and gives notes for \$7,000, which is the purchaser's agreement in contract. Shortly after the bank fails and a Receiver is appointed. The Receiver finds this a very bad contract for the bank, and refuses to comply with the terms of the contract, believing that it is *ultra vires* on the grounds that the President of the bank could not alone enter into such contract without a ratification of the Board of Directors and in the absence of any by-laws. If the amount of money paid and the notes are returned, would the Receiver not be released? RECEIVER.

*Answer.*—We do not think the purchaser could enforce the contract as the President clearly had no power to bind the bank thereby unless the Board of Directors subsequently ratified it and made it the act of the bank. The

purchaser paid \$2,000 in cash and \$7,000 in notes on account of the purchase price of \$29,000. If this were returned to him and the contract repudiated we do not see how he could make any claim to the property, unless, as we before said, the contract was in any way ratified by the Board of Directors either expressly or by acquiescence and receipt of the money.

*Editor Rhode's Journal of Banking:*

MAYVILLE, D. T., September 6, 1886.

SIR:—I would like an answer to the following questions:

1. If A gives his check on a bank, representing it as good, and the check is protested, to what extent is A liable?
2. Is it necessary to prove that he had no money in the bank at the time he gave the check to make him liable for obtaining money under false pretenses?
3. Supposing he gives his check one day, and the next day, before it is sent to the bank, he makes a boast that all he owns is what he has on his person, could he not be arrested?

C. C. BROWN, Cashier.

*Answer.*—1. If A gave his check, knowing that he has no funds in bank to meet it, and represented it good, by means of which he obtained any signature, money or property, he is liable to fine, imprisonment, or both, under Sections 619, 620 and 621 of the Penal Code of Dakota.

2. We think so. If A had money in bank sufficient to pay the check at the time he gave it for the property thus obtained, this would not be obtaining money under false pretenses, although he subsequently drew it out. In an indictment for false pretenses it must clearly appear that there was a false pretense of an existing fact.

R. vs. Henshaw, L. & C., 444 (1864).

To constitute the offense or swindling some false representation as to existing facts or past facts must have been made.

Allen vs. State, 15 Tex. App., 150 (1884).

It is well settled that to be criminal the pretense must be as to an existing event and not of a future fact

5 Ohio, 280; 41 Tex., 65; 51 Ind., 111; 49 Mo., 542; 55 Ala., 84; R. vs. Henshaw (*supra*); Allen vs. State (*supra*).

Applying these rules to the present case, if A had money in the bank sufficient to pay the check at the time he obtained money on it, there was no false representation as to an existing fact, and consequently it would be necessary to prove that he drew or delivered the check without funds to meet it.

3. This is covered by the above statement of his liability.

*Editor Rhodes' Journal of Banking:*

BYRON, Neb., August 25, 1886.

SIR:—Please answer the following in the JOURNAL:

A wants to borrow money and offers B for security. Should city banks prefer B's signature on the face or on the back of the note? Which is customary? SUBSCRIBER.

*Answer.*—To obtain the absolute liability of B on the note we think it would be better to have him sign with A as joint-maker on the face of the note.

*Editor Rhodes' Journal of Banking:*

PHILADELPHIA, Pa., September 14, 1886.

SIR:—Here is a question the answer to which is very important to me:

When a check reads "Pay to the order of Mr. ——— or bearer," does bearer do away with the word order or does it remain an order check? JOHN M. DAVIES.

*Answer.*—Were the check payable simply to the bearer it would not require the bearer's endorsement. Mr. Morse, in his treatise on "Banks and Banking," says that checks drawn payable to bearer do not need to be endorsed. The question then is, Do the words "to the order of" apply to "bearer" as well as to "Mr. ———?" We think not. Inserting the name of Mr. ——— is done rather with the view to particularize the check. In adding the word "bearer" the drawer evidently intended that any lawful holder of the check should draw the money without the necessity of being

identified. We think, therefore, that if Mr. ——— presented the check he must endorse it ; if a third party presents it (not under suspicious circumstances) he is entitled to the money upon surrender of the check.

*Editor Rhodes' Journal of Banking :*

BUFFALO, N. Y., September 14, 1886.

SIR :—In your September 1886 number, at page 690, you treat a check drawn "three days after sight" as under the laws of Massachusetts being entitled to grace. As I am a regular reader of your valuable JOURNAL I would like to enquire what the laws of New York are on a check drawn like the one above referred to. A check drawn in a similar manner on a bank in an adjoining county passed through my hands for collection. The bank on which it was drawn claimed it was entitled to grace. Is it correct?

TELLER.

*Answer.*—The Massachusetts statute simply denies grace to checks on bankers, and in the last number we held that an instrument in the form there given, and payable "three days after sight," would not in our opinion be considered as a check so as to fall within the statute, but must be considered as a bill of exchange drawn on a banker and entitled to grace the same as any other bill of exchange. The statute in New York, however, provides as follows :

"All checks, bills of exchange or drafts appearing on their face to have been drawn upon any bank or upon any banking association or individual banker carrying on banking business under the Act to authorize the business of banking which are on their face payable on any specified day or in any number of days after the date or sight thereof shall be deemed due and payable on the day mentioned for the payment of the same without any days of grace being allowed, and it shall not be necessary to protest the same for non-acceptance" (Laws 1857, chapter 416, section 2).

Under this statute no grace would be allowed on the instrument in question.

*Editor Rhode's Journal of Banking :*

MIDDLETOWN, O., September 6, 1886.

SIR :—To settle a controversy I send you copy of draft and the points in dispute :

NEW YORK, September 1, 1886.

Sixty days after date pay to the order of ourselves one thousand dollars and charge to account of

JOHN BROWN & Co.

To John Smith, Esq., Albany, N. Y.

Endorsements: "Accepted. Payable at First National Bank, New York, N. Y. JOHN SMITH. JOHN BROWN & Co."

Mr. Blank, a banker in Cincinnati, claims that the place of demand and protest is in doubt even if in the hands of an innocent purchaser after acceptance. I claim that the place designated by the acceptor is the place, and the only place, of demand and protest. He refers to some decisions of the New York Court of Appeals to sustain his position. I claim that they are not applicable, as they refer to cases of acceptances while payee is the owner, who alone could object to change of the place of payment. Failing to object and setting draft afloat, the place of payment, as designated by the acceptor, is irrevocably fixed. Please give us your opinion. CHAS. F. GUNCKEL, President.

*Answer.*—Our correspondent is right. The rule of law is that the holder of a bill of exchange is entitled to require from the drawee an absolute engagement to pay in money according to the terms of the bill, unencumbered with any condition or qualification ; and if the holder should take from the drawee an acceptance extending the time of payment, or altering the place of payment, the drawer and any previous indorsers cannot be held liable on the bill unless they consent to such change or qualification. In the present case, however, the drawer and holder being the same parties and consenting to the change in the place of payment, they were bound thereby, and a presentment by any subsequent holder at the place designated in the acceptance would be undoubtedly sufficient to bind the drawers. As to the acceptor, the rule in this country is that in an action against him on an acceptance payable at a particular place it is not necessary to aver or prove a demand of payment at that place, but if he was at the place at the time designated, and was ready

and offered to pay the money, it is matter of defense to be pleaded and proved on his part, and this would exonerate him from liability for interest and cost thereafter.

### BRIEF REPLIES TO SUBSCRIBERS.

**G. F. B. (Pittsburgh).**—It is a good plan to have customers renew their signatures from time to time, as a man's handwriting often changes with advancing years. Occasionally Tellers have been much embarrassed by the fact that the signature left with the bank was made a number of years before, and owing to the pass-book having just been balanced there were no checks in the bank with which comparison could be made.

**PAYING TELLER (St. Louis).**—If at the close of the day every customer sent the bank a descriptive list of checks drawn that day, having previously instructed the bank not to pay any check until such notification was received, it would be an almost perfect preventive against forgeries, raised checks, etc. But to keep a systematic record of such notices would require a double set of ledgers and book-keepers, and that's where the objection comes in.

**CASHIER (Columbus, Ga.)**—When stock is to be transferred on the books of a bank the production of the original certificate should always be insisted on. Occasionally this precaution has been neglected and the original certificate has turned up afterwards in the hands of an innocent third holder for value (see the JOURNAL for September, page 690).

**A NEW BANK (Kansas).**—A good many banks provide wire "cages" about 5 x 5 feet and 8 feet high for convenience of customers in counting money, making up deposits, etc. This is especially the case with banks having a large market trade or extensive country custom.

**CONSTANT READER (Xenia, Ohio).**—It is a good thing to be on the lookout for small improvements. We noticed the other day an excellent way of proving postings to the ledger. The Book-keeper has convenient to his hand a pile of slips of thin blotting-paper, say ten inches long and two wide. These are slipped in as the postings are made. When through one lot of postings commence at the end of the ledger and carefully prove each posting. The slips serve as markers.

**A CORRESPONDENT (Missouri).**—"I borrowed \$5,000 on a mortgage for five years at 6 per cent. The fees, etc., came to \$300. What rate am I really paying?" *Answer.*—\$300 for five years is \$60 per annum, or 1 2-10 per cent. on \$5,000. The total rate is 7 2-10 per cent.

**B. M. F. (Raleigh, N. C.)**—Under the circumstances you were right in refusing to take the drawer's uncertified check. Though not usually availed of a bank has the right to demand money that is a legal-tender for drafts, notes, etc., and to refuse anything else—even certified checks.

**F. X. A. (Nebraska).**—Flat glass plates of various sizes for the Teller's counter can be had of the dealers in bank supplies. They are better to count money on than the ordinary counter of wood.

**H. C. N. (Deadwood, Dak.)**—It is the bank's duty to count the depositor's money when he offers it for deposit. If the Teller, for his own convenience, holds a package of money over until the following morning and then finds it short it would be difficult to compel the depositor to make it good.

**BOOK-KEEPER (Montpelier, Vt.)**—In opening a new ledger it will be found more convenient to arrange the accounts in alphabetical order, leaving a reasonable space at the end of each letter for new accounts. In posting arrange checks and tickets according to the order of the accounts on the ledger.

**A NEW SUBSCRIBER (Kansas City).**—A good way to familiarize yourself with a signature is to take a batch of the depositor's checks and open them out so as to show the signatures one above the other. Resemblances and differences will then be easily noted.

**PAYING-TELLER** (Bangor, Me.)—We never heard of a patent drawer for bank Tellers. If you will get a carpenter to set your drawer on rollers it will run in and out very easily without sagging on either side.

**STUDENT**.—A "maxim" is a short and formal statement of an established principle of law. A list can be found in Bouvier's *Law Dictionary* under "Maxims."

**INQUIRER** ("Way-Out-West").—The difference between interest calculated on the basis of 365 days to the year and that calculated to 360 days is one seventy-third of the former amount.

**H.** (Holyoke, Mass.)—A *chose* is a legal term for any kind of property except real property or some estate therein. A *chose* is often called a chattel personal. A man's money in his pocket is a *chose in possession*; a man's money in bank is a *chose in action*. For a book containing a clear explanation of usual law terms we would recommend "Robinson's Elementary Law", price \$3.00. Bradford Rhodes & Co., New York, sell it, as well as all law and other books of interest to bankers and students of finance.

**B. R. G.** (Springfield, Mass.)—There are numerous tests for determining the genuineness of gold and silver coins. They are good enough in their way, but if a Bank-Teller is not sufficiently expert to at least *suspect* a counterfeit coin the "tests" will not be of much value.

**M.** (Glencoe, Minn.)—The bank, in this special case, may not be liable, but we think it was to blame; the check being drawn payable to bearer is not sufficient justification for the bank to pay it under such suspicious circumstances as would put a prudent man upon his enquiry to ascertain how the holder obtained it.

**F. T. L.** (Jackson, Miss.)—Official reports are usually considered rather "dry" reading, but we think the reports of the Comptroller of the Currency form an exception. They are full of correct information in regard to the National banks, and indeed in regard to banking matters generally, and will repay careful perusal and preservation for future reference.

**ONE OF THE CREDITORS**.—When a firm falls and offers a cash settlement, even a small percentage, it is almost always best to take it and be done with the matter.

**BANK SALARIES** (Columbiana, Ohio).—This subscriber writes to inquire as to the salaries usually paid in country banks. We find the question somewhat difficult to answer, as bank salaries vary greatly according to circumstances. Where the Cashier is the active man and the President gives the bank only a general oversight the former gets the highest salary, but where these conditions are to a certain extent reversed the President takes the larger salary, or perhaps the salaries of the two are equalized. In the East, where rates are low and competition among bankers makes the margin of profits small, salaries are naturally much lower (especially in the country banks) than they are in the West. In the South, where rates are high and competent men more in demand for other employment, the wages of bank clerks are usually somewhat higher than those paid in mercantile establishments, owing, we suppose, to the confining character and the greater responsibility attached to bank work. A subscriber residing in one of the large cities writes us that the salaries paid Presidents and Cashiers in his city vary from \$1,800 to \$8,000; Tellers, \$1,500 to \$2,500; Book-keepers, \$600 to \$2,000; Messengers, \$300 to \$700.

---

**An Improvement Suggested**.—Mr. H. L. Kelley, Cashier of the First National Bank, Fairfield, Maine, writes September 23d: "For three years I have been a regular reader of your *JOURNAL* and have derived much profit and pleasure from its pages. I have your Directory also—RHODES' BANK LIST—and have consulted it daily in my work, and in all cases find it accurate and to the point. I have a suggestion to offer regarding future editions of the LIST which, if adopted, would make it invaluable both to the banker and merchant in making country collections."

The improvement suggested by Mr. Kelley, as well as some others, will appear in the January issue. By reference to a notice on another page it will be seen that *JOURNAL* subscribers for 1887 will receive a copy of our January *BANK LIST* without charge. This is an exceptional offer and will guarantee a very large circulation for both publications.

## BANKING AND FINANCIAL NEWS:

WITH COMMENTS ON THE MORE IMPORTANT MATTERS. THIS DEPARTMENT ALSO INCLUDES: RAILROAD AND INVESTMENT NEWS, AND A COMPLETE LIST OF NEW BANKS, CHANGES IN OFFICERS, DISSOLUTIONS AND FAILURES.

**Last of the Clearing-House Certificates.**—The following notice was issued from the New York Clearing-House on September 22d:

"The last Clearing-House certificate issued to aid the Metropolitan Bank has been called in and will be cancelled to-morrow, the bank having settled for the same."

These certificates were issued between May 15th and June 24, 1884, in order to tide over the monetary crisis occurring at that time. The Metropolitan National Bank had not cash enough to settle its differences at the Clearing-House. The associated banks appointed a committee to take charge of a large amount of the securities belonging to the bank, against which the committee issued certificates that were used as cash in settling balances. The highest amount of the certificates was \$24,915,000, but, as soon as the securities could be disposed of to advantage, the amount was reduced, and finally, after two years and a quarter, they have all been retired. By the means stated a dangerous crisis was overcome. The whole conception and management of the affair does great credit to the banks represented in the New York Clearing-House.

**The New Silver Certificates.**—On September 20th about \$5,000 of the new \$1 silver certificates were delivered at the Treasury building in Washington, being all finished except printing the seal, which is done there. These are the first of the new issues, and it is not expected that the \$2-certificates will be ready before the middle of October. The new silver certificates, in denominations of one, two, five and ten dollars, are pronounced the most attractive paper money ever issued. The silver certificates issued under the law of 1878 were as unlike the greenback notes as it was possible to make them. The new certificates are printed with the same colored inks on the back and face as the greenbacks. The backs are engraved with original designs in lathe work covering the entire space except an ellipsoid in the centre, in which in small but plain letters are these words: "United States silver certificate. This certificate is receivable for customs, taxes and all public dues, and when so received may be reissued." The blank spaces which have been left on the backs of the latter issues of the legal-tender notes and former issues of silver certificates are to be filled with lathe work in the new issues, because the distinctive fibre in the paper which the blank spaces were intended to show has been dispensed with, and instead thereof a single blue thread is run horizontally through the note. The vignette of the \$1 silver certificate is a portrait of Martha Washington; that of the \$2-certificate is an excellent portrait of the late General Hancock, and that of the \$10-certificate a well-engraved portrait of the late Vice-President Hendricks. The vignette for the new \$5 silver certificate will probably be a portrait of the late Samuel J. Tilden. The demands for the one and two dollar certificates have been urgent from all parts of the country.

**The Demand for Small Coins.**—One result of the revived activity of trade is a large demand upon the Treasury for small coins. Experience has shown that the slightest business depression and consequent decrease in small transactions brings the minor coins back into the Treasury vaults, and a first result of renewed activity is to draw them out again. The demand has of late been greater than could be supplied. The recoinage of dimes has been going on under an appropriation of \$10,000 to pay the loss involved by the recoinage into these pieces of the uncurrent and defaced silver coin held by the Treasury. These uncurrent coins are silver threes and fives, twenty-cent pieces and mutilated quarters and halves, and amount to several hundred thousand dollars. The demand is now greater for pennies and five-cent nickels, but none are being coined. An appropriation was made for cleaning, reissuing and

transporting such of these coins as were held by the Treasury, and they have been turned over to the Philadelphia Mint and are being washed in acid and reissued as rapidly as possible.

The Director of the Mint has issued the following circular in regard to the issue of minor coins: "Five-cent nickel pieces and one-cent bronze pieces will be forwarded in the order of application from the Mint of the United States at Philadelphia, Pa., to points reached by the Adams Express Company, free of transportation charges, in sums of \$20 or multiples thereof, upon the receipt and collection by the Superintendent of that Mint of a draft on New York or Philadelphia payable to his order. To points not reached by the Adams Express Company, and where delivery under its contract with the Government is thus impracticable, the above coin can, on the same terms, be sent by registered mail at the applicant's risk, registry fee on the same to be paid by the Government. Orders for transportation at the risk of the applicant should express the acceptance of the risk."

**The Portland Defalcation.**—The people of Portland, Me., and bankers throughout the country were startled by hearing the news published on September 19th that William E. Gould, Cashier of the First National Bank of Portland, Vice-President of the Portland Trust Company, and a Trustee of the Maine Savings Bank, was a defaulter for a large sum. The amount abstracted from the bank is stated at \$175,000, of which Gould's property will be good for \$80,000; but investigation may show these amounts to be far out of the way. The capital of the bank is \$1,000,000 and the surplus nearly \$300,000, so that it is almost certain the capital is unimpaired. Mr. Gould had a first-class reputation, and it appears that the affairs of the bank were left entirely under his control. The bank's condition is being investigated by Examiner Wiswell. Gould was imprisoned in default of bail for \$50,000.

On September 30th the defaulting Cashier was brought into court and arraigned on three indictments—all for embezzlement. He pleaded guilty to all the indictments, and District-Attorney Bird then moved for sentence on the third indictment only, which charged him with embezzling \$14,700. Mr. Drummond, Gould's counsel, then read a paper for Gould acknowledging his guilt and saying that he was willing to suffer the punishment, but that he threw himself on the mercy of the court. Judge Webb, after a few remarks, sentenced Gould to ten years' imprisonment in State prison.

**The American Surety Company Causes the Arrest of an Absconder in Canada.**—Under the Acts of Canada, 32-33 Victoria, "an absconder with money stolen in the United States can be arrested and punished criminally in Canada on the complaint of any one."

The American Surety Company, No. 160 Broadway, New York, issued its bond April 1, 1886, on the fidelity of Wm. T. Steward, manager for the Western Union Telegraph Company at Wichita, Kansas. About August 10, 1886, Steward absconded, being a defaulter for about \$1,700. Search was at once instituted by the Surety Company for the fugitive, and he was located at Winnipeg, Manitoba. The company offered a reward for his arrest and conviction, and Steward was at once apprehended. The American Surety Company retained counsel to prosecute him under the statutes of Canada referred to.

This is an important case, and the American Surety Company, in securing Steward's arrest in Canada, have shown that they can get along pretty well in handling fugitives in the Dominion, even without the aid of an extradition treaty. They also show that Canada is not an absolutely safe place for defaulters from the United States when followed and prosecuted promptly. The example thus set by the American Surety Company might be emulated by employers who have sustained loss through the dishonesty of employees and who have not had the foresight to obtain a bond from that company.

The prompt payment of the amount of the claim elicited the following communication:

WESTERN UNION TELEGRAPH COMPANY,  
President's Office, 197 Broadway,  
New York, September 2, 1886.

H. D. Lyman, Esq., Vice-President American Surety Company, No. 160 Broadway, New York.

DEAR SIR:—In acknowledging the prompt payment by the American Surety Company of our claim made this day under the bond issued upon Wm. T. Steward, the manager of this company at Wichita, Kansas, I wish to express my appreciation of

the celerity with which the culprit was followed, apprehended and prosecuted at the instance of your company in the Dominion of Canada.

Yours truly, NORVIN GREEN, *President.*

We have had occasion heretofore to allude to the arrest of several defaulters and their prosecution in the United States through the instrumentality of the American Surety Company, but this invasion of Canadian territory for the purpose of punishing an absconder is quite unprecedented.—*Exchange.*

#### MISCELLANEOUS BANK AND FINANCIAL ITEMS.

— The stockholders of the Bank of America, at Philadelphia, have authorized the Directors to increase the capital stock by \$500,000.

— J. M. Moore & Co., brokers in the Consolidated Exchange, New York, made an assignment on September 23d to A. R. Cassidy, with preferences for \$13,900.

— The Receivers of the Lancaster Savings Bank, of South Framingham, Mass., have begun suit against the Receiver of the Lancaster National Bank, at Clinton, for \$100,000.

— The South has many resources to bank upon. In times of misfortune she is allowed to check upon the deposit accounts of her Northern kin.—*Macon (Ga.) Telegraph.*

— Mr. Nathan Robbins, who recently celebrated his eighty-third birthday, still actively discharges the duties of President of the Faneuil Hall National Bank, of Boston.

— The New England Trust Company and the International Trust Company, of Boston, both recently advanced the rate of interest allowed on deposits from 2 to 2½ per cent.

— The number of silver dollars coined under the Bland bill has reached a total of \$239,000,000, which is larger than the gross gold coin and bullion in the United States Treasury.

— Receiver A. W. Blye, of the Middletown (N. Y.) National Bank is suing on a large claim against the West Point (Neb.) Butter and Cheese Association, on which he hopes to recover.

— William H. Rhawn was elected President of the National Bank of the Republic, at Philadelphia, on August 29, 1886, and Joseph P. Mumford, Cashier, September 1st of the same year.

— Henry J. Christoph, a private banker of Chicago, committed suicide on September 6th. He had not been speculating, and his business affairs are reported to be in an excellent condition.

— The Treasury Department has decided that the valuation of the Mexican silver dollar for customs purposes, as legally proclaimed on January 1st last, cannot be changed during the year.

— Elisha Gifford, Jr., a stock broker of Hudson, N. Y., has made an assignment to William Bostwick. Creditors are preferred to the amount of \$49,000. His full liabilities and assets are not yet reported.

— Gramm & Sinnett, stock brokers of Philadelphia, failed on September 23d on account of short sales of Reading and Pennsylvania stocks. The liabilities are estimated at about \$8,000 or \$10,000.

— Mr. J. J. Crusman has been elected President of the Farmers & Merchants' National Bank, at Clarksville, Tenn., in place of the Hon. Horace H. Lurton, who has resigned to become one of the Supreme Judges of Tennessee.

— Judge Taschereau of Montreal has decided that guarantee companies are not liable for the amount of their guarantees in cases of defalcation unless served with notice of such defalcation immediately upon its being discovered.

— The Post Office Department rules that check-books and books of blank drafts are "third-class matter," the rate of which is one cent for each two ounces or fraction thereof. Ordinary blank-books are fourth-class, and the rate twice as high.

— The leading Australian banks allow to depositors interest at the following rates: Deposited for three months, 3 per cent.; six months, 4 per cent.; twelve months and

over, 5 per cent. There is no allowance of interest for sums deposited for a shorter time.

— Mr. Taaker H. Marvin, member of the New York Stock Exchange, who was caught on the "long" side of the market last Spring, but who afterwards settled up and was reinstated, has been caught "short" during the recent upward movement and is again suspended.

— The Grand Jury in the United States District Court at Boston has found an indictment against Richmond J. Lane, recently President of the Abington (Mass.) National Bank. The charges are embezzling \$79,416, making false entries in the books and false reports.

— The Howard County Bank, of Glasgow, Mo., has placed its assets in the hands of a Trustee for the benefit of the creditors. James S. Thompson, the President, states that the assets are ample to pay off the depositors and stockholders in full, and that the causes of the liquidation are hard times and difficulty in making collections.

— A remedy for thinly attended meetings of Directors is perhaps best found in the payment of a small fee to those reporting punctually. The Bank of Commerce pays \$2.50 and the Maverick Bank \$5 to all Directors present at the hour of meeting. This same policy is successfully pursued in New York to a large extent, and in England generally. The fee in England is generally a guinea.—*Boston Commercial Bulletin*.

— In the case brought by the creditors against Wilkinson & Co., insolvent bankers, of Syracuse, N. Y., Justice Williams has decided against the latter. He has appointed Charles E. Hubbell and Albert K. Hiscock as Receivers. The judgment decrees that the Wilkinsons surrender to the Receivers the Globe Hotel property and other property covered by deed and mortgage to Charles P. Crosby of New York city and John Wilkinson of Chicago.

— September 2d was the ninetieth birthday of Thomas Lamb, for fifty years the President of the New England Bank and the oldest ex-bank President in Boston. Until within a year or two Mr. Lamb had enjoyed excellent health, which was the more remarkable as his lameness prevented him from taking much exercise and he had to depend on a carriage to take him to his office. He is now confined to the house by the infirmities of age, but he keeps up his spirits wonderfully, and has a fund of interesting reminiscences about old-time Boston.

— It is a happy omen that the sumptuous invitations prepared for the hospitalities to the American Bankers' Association bore as their crest the golden double eagle rather than the silver dollar. If the Congressmen who tinker the finances of the nation were as scrupulous of the public honor as are these gentlemen who administer the fiscal machinery of the country they would also discard the dishonored coin which for a dollar contains only 71 cents of value and the unblushing legend that "In God we trust" for the other 29 cents.—*Boston Post*.

— The National banking system is so well organized in other respects and is so good an example of the principle that the people should do things for themselves instead of asking the Government to do everything for them as to make it a duty on the part of its friends to save it from every such equivocal attitude. The banks should carry their great principle just one step further and find a basis of circulation for themselves instead of demanding that the Government furnish them with one. The National bank-note would then be an ideal form of currency.—*Philadelphia Times*.

## R. R. AND INVESTMENT NEWS.

### *New Issues.*

LOUISVILLE, NEW ORLEANS & TEXAS.—A first mortgage has been registered by this company at Memphis, Tenn., to the Union Trust Company, of New York. The amount of the mortgage is \$16,900,000 in bonds of \$1,000 each.

RICHMOND & DANVILLE.—In order to provide for betterments and improvements, to adjust its indebtedness, and to retire its outstanding obligations as they mature, this company proposes to issue a consolidated five per cent. gold bond to run fifty years.

CENTRAL MASSACHUSETTS.—The Boston & Lowell Railroad Company has leased the Central Massachusetts Railroad on a rental basis equivalent to thirty per cent. of

its gross earnings, and the Central Massachusetts is authorized to issue bonds up to the amount of its capital stock.

**THE VICKSBURG, SHREVEPORT & PACIFIC** has taken up all of its income bonds and stock and issued to the Central Trust Company, of New York, first mortgage land grant bonds and second mortgage bonds for the same at the rate of 50 cents for the incomes and 25 cents for the stock.

**THE BEACH CREEK, CLEARFIELD & SOUTHWESTERN** road has been reorganized as the Beach Creek road with the \$5,000,000 of prior liens bearing interest reduced to four per cent., the \$1,300,000 on which suit for foreclosure was brought represented by preferred stock, and the common stock fixed at \$5,000,000.

**THE SAN ANTONIO & ARANZAS PASS RAILWAY COMPANY** filed a deed of trust at San Antonio, Tex., in favor of the Farmer's Loan & Trust Company, of New York, for \$10,000,000. The mortgage covers the main line from San Antonio to the Gulf, also the Corpus Christi branch and Northwestern extension into the Pan Handle country.

**FAYETTEVILLE & LITTLE ROCK.**—Articles of association of the Fayetteville & Little Rock Railroad Company have been filed at Little Rock, Ark. The capital stock is \$1,500,000. The road commences near Fayetteville, running thence *via* St. Paul to Lewisburg, on the Arkansas river. The number of miles of road will be about 150.

**POUGHKEEPSIE BRIDGE COMPANY.**—There was recorded at Poughkeepsie, recently, a mortgage from the Poughkeepsie Bridge Company to the Mercantile Trust Company, of New York, for \$5,000,000. The mortgage covers a bridge to be constructed over the Hudson at that place, and is given to secure the payment of one equal amount of six per cent. bonds to run 50 years from August 1, 1886.

**CHICAGO, BURLINGTON & NORTHERN.**—An issue of new Chicago, Burlington & Northern six per cent. 10-year debentures is limited to \$2,250,000, and \$2,000,000 of them have been sold to E. Rollins Morse & Bro., representing themselves, and Drexel, Morgan & Co. The balance of \$250,000 is to be retained in the company's treasury. The \$2,000,000 have all been placed in New York, Boston and London.

**THE HAMMOND & CALUMET RIVER RAILWAY COMPANY** has filed articles of incorporation with the Secretary of State of Illinois. It is proposed to construct this road from a point in Hyde Park, on Lake Michigan, north of the mouth of the Calumet River, to Thornton, on the Illinois and Indiana State line, and thence back to a point south of the mouth of the Calumet River. The capital stock will be \$2,000,000.

**THE CINCINNATI, HAMILTON & DAYTON RAILROAD** stockholders have resolved to issue preferred stock to take up bonds now bearing five, six and seven per cent. The preferred stock is to be redeemable in three years at the option of the company, with a guaranteed dividend of six per cent., two per cent. to be deferred until redeemed. If redemption is postponed for ten years the dividend is to be four per cent. The amount of stock to be issued is about \$10,000,000.

**MISSOURI PACIFIC.**—Arrangements have been made for the extension of the \$7,000,000 first mortgage six per cent. bonds of the Missouri Pacific Railroad Company due in 1888 for fifty years at four per cent. gold, and an agreement for such extension has been entered into by the company with a syndicate represented by Kuhn, Loeb & Co., and including, among others, Drexel, Morgan & Co., August Belmont & Co., Morton, Bliss & Co., L. Von Hoffman & Co., Heidelbach, Ickelheimer & Co., J. Kennedy Tod & Co., Maitland, Phelps & Co., Unger, Smithers & Co., and the National Bank of Commerce, of New York.

**NEW YORK STOCK EXCHANGE LIST.**—The following securities have been added to the regular list:

Farmers' Loan & Trust Company's certificates, issued for bonds of the Rio Grande and New Orleans & Pacific divisions of the Texas Pacific Railroad, deposited with it under the Wistar-Fleming reorganization plan.

Texas & Pacific—engraved Central Trust Company receipts for the income and land grant mortgage bonds.

Spokane & Palouse (branch of Northern Pacific)—\$688,000 (Nos. 1 to 688 inclusive) first mortgage sinking fund 6 per cent. gold bonds.

East Tennessee, Virginia & Georgia Railway Company—\$11,000,000 first preferred stock, \$18,500,000 second preferred stock, \$27,500,000 common stock and \$11,175,000

consolidated first mortgage five per cent. bonds (numbers 1 to 11,175 inclusive). The Trust Company receipts for the same securities have been taken off the list.

Peoria & Pekin Union—second mortgage bonds substituted on the list for income bonds.

Buffalo, Rochester & Pittsburg—48,000 shares of common stock, the Trust Company's receipts for Rochester & Pittsburg stock to be stricken from the list on October 6th.

#### Railroad Reports.

**NORTHERN PACIFIC.**—The report for the year ended June 30, 1886, shows that the special committee on the claims of the Oregon & Transcontinental Company conclude that the latter company owes the Northern Pacific over \$700,000. The earnings were as follows:

	1884-5.	1885-6.
Total gross earnings.....	\$11,234,149	\$11,730,527
Operating expenses.....	6,196,301	6,156,264
Net earnings.....	\$5,037,848	\$5,574,263
Following is a summary of income account:		
Total income.....	\$5,231,076	\$5,890,008
Total disbursements.....	5,139,111	5,778,899
Balance, surplus.....	\$91,969	\$111,199

The balance to the credit of profit and loss on June 30th was \$2,408,398 against \$2,297,199 in the previous year, but of these amounts \$2,205,239 has been invested in equipment.

#### NEW COUNTERFEITS, SPURIOUS COINS, ETC.

**ACCORDING TO SAGUA AND CIENFUEGOS** exchanges there is in those localities a large number of false gold and silver coins in circulation, especially of Spanish \$5-pieces and Mexican silver dollars.

**BANK OF ENGLAND NOTES.**—The forged Bank of England notes which have been circulated widely on the Continent, and perhaps elsewhere, are finding their way to London and are there marked "forgery" at the bank. They are so well done, both as to engraving, paper mark and paper, that it requires an expert to tell the real from the false. The severe simplicity of the Bank of England note has not been altered since its first issue in the seventeenth century, but great improvements have been made in the style of engraving, in the paper and the water-mark.

**CANADIAN COUNTERFEITS.**—Detectives in Ottawa have lately been informed of the extensive issue of new counterfeit bills issued on *La Banque Nationale* and the Bank of Commerce. The bills closely resemble the genuine notes in every respect except in coloring, which is a trifle light and will not stand acids. It is thought that about \$20,000 of these bills have been circulated. It is believed that they have been mostly put out in the New England States. Some years ago \$40,000 in \$10 bills was stolen from the Montreal Consolidated Bank. They were not recovered, the bank failing a few years afterwards. The bills are now being passed in California.

**SPLIT GREENBACKS.**—A new departure in the matter of counterfeiting money was brought to light quite recently at the United States Sub-Treasury in Baltimore. A somewhat worn \$10 Government bill was presented at the Cashier's window with a request for change, which was given. The note was sent to Washington as mutilated currency and was returned with the information that one side of the note was good but the other side was a well-executed counterfeit of the original. It was found that a genuine \$10 bill had been split, the face being separated from the back, a seemingly impossible undertaking. The original face with a counterfeit back had been used and it is quite likely that the genuine back with a well executed counterfeit face has been passed in some other quarter. More recently another \$10 "front" was presented at the Cashier's window with a similar request for change. The clerk at the window, suspecting the bill, told the man who handed it in to wait a moment until he could consult Dr. Bishop, the Sub-Treasurer. Dr. Bishop recognized in the note the familiar game and said it was worth just \$5. When the clerk returned to the window the man had left without waiting for his change. The Sub-Treasury, which was out \$5 on the first transaction, was evened up by the second.

### DAKOTA BANKERS' ASSOCIATION.

The JOURNAL has many times urged upon bankers throughout the United States the necessity for State Associations and has portrayed the benefits that might be derived from them in the way of the formation of useful acquaintance, spreading sound ideas among the public, and giving valuable information regarding business among bankers, as well as promoting conservative and business-like legislation.

In a previous number was published a summary of the second annual Convention of the Dakota Bankers' Association, which is a flourishing institution, and that appears to reflect upon bankers in the older States, who have more time and better facilities of every kind for forming such societies.

A pamphlet just issued contains the full proceedings of the second Convention of the Dakota Bankers' Association and does credit to their enterprise and good sense.

The opening remarks of President D. W. Diggs (formerly a successful merchant in New York) are replete with wit and good fellowship. His speech was followed by a discussion on notes of exchange and collection.

At the next session a paper by W. E. Scarritt, President of the Watertown National Bank, was read on "The Resources of Dakota and the West." He said: "Our rapid increase of wealth, our high rates of wages, the prosperity of our business, in spite of blundering legislation, have all been due to the fact that we have had an abundance of the richest lands. \* \* \* In speaking of the West I refer to the country this side of the Mississippi river. Of the twenty-two States west of the Mississippi only three are so small as all of New England. Montana alone would stretch from Boston harbor to Cleveland. As one writer has graphically expressed it: 'Lay Texas on the face of Europe, and this giant, with his head resting on the mountains of Norway, with one palm covering London, the other Warsaw, he would stretch himself down across the kingdom of Denmark, across the empires of Germany and Austria, across northern Italy, and lave his feet in the Mediterranean. Dakota could be carved into half a dozen kingdoms of Greece, or, if Dakota were divided into twenty-six equal counties, one might lay down the two kingdoms of Judah and Israel in each.' If you could place the entire population of the United States in Dakota it would not then be as densely settled as England or Wales. I recently heard Edward Atkinson make the statement before an Eastern audience that the product of one man's toil in Dakota for one year would produce enough bread to feed a thousand men one year. Dakota can raise enough products within her own border to feed and clothe every man, woman and child in the United States. Everybody has heard of the bad lands of Dakota. But the 75,000 acres of bad lands are a mere item when compared to the 94,528,000 acres within her borders. But even these bad lands afford excellent stock ranges. The United States Surveyor-General says: 'The proportion of waste land in Dakota, owing to the absence of swamps, mountain ranges, overflowed and sandy tracts, is less than in any other State or Territory in the Union.' 'The Great American Desert,' like the Indian and buffalo, has receded before the advance of the white man. There is no longer a doubt but that the settling up of a country, the stirring of the soil, the stretching of railroad iron and telegraphic wires, all tend to better climatic change. To-day the West has over 1,600,000 square miles of useful land against 800,000 in the East."

A short practical address on "Usury," delivered by Mr. E. Reiff, banker, of Marion, is as follows:

*"Mr. President and Gentlemen of the Convention:*

"I have the honor to address the Dakota Bankers' Association with plain figures, to show that the present usury laws are absurd and unjust.

"Say a banker does his business with \$15,000, of which \$10,000 is his own. Of this capital he will need about \$1,000 for the bank building, another \$1,000 for safe, furniture and fixtures, books and stationery; outside of this he has to keep about \$500 of his own capital on hand, besides his deposits, to run his exchange business and for small change. This leaves him a working capital of \$7,500—which he is allowed, according to our laws, to let out at 12 per cent. interest—that will insure him a gain of \$900. Add

to this the exchange business, which will net him, say, \$300, making his gross earnings \$1,300. To arrive at the net gain deduct \$300 for a good clerk or cashier (poor and cheap help come higher indirectly), taxes at 4 per cent. on the working capital of \$7,500 would be \$300 (I know bankers often succeed in avoiding to pay taxes on their *full* working capital, but the law wants them to pay it), and \$200 for current expenses, as fuel, light, insurance, postage, etc. You all know that this is figured very low, as the expense account generally runs higher. Now, if no losses at all are met with you will readily see that a banker under the above-named circumstances will have to pay \$100 a year for the doubtful honor of being called a banker. Besides this his family's living will have to come out of the working capital. We stand before the appalling fact that a man working all the year around in his business, with a capital of his own of \$10,000, has the two choices, either to run himself into hopeless bankruptcy or be guilty of misdemeanor, the prey of any bad-meaning customer or citizen. I do not want to say that my figures apply to every bank in Dakota, but I claim them to be correct for localities where deposits are few and of such fluctuating character that they cannot be relied upon as working capital, and know that in some places it would be daring rashness to use even so small an amount as 10 to 15 per cent. of them for only short-time loans.

"If a law should be made that a merchant should charge no more than 12 per cent. per annum profit on his goods—that is to say, that he were allowed to charge for twenty-five pounds of rice which cost him a dollar a dollar and twelve cents if paid in a year, a dollar and six cents if paid in six months and a dollar and one cent if paid in a month—if a fine should be enacted for the enforcement of this law that the customer could collect the whole profit of the merchant, and that the latter would be guilty of misdemeanor and subject to the punishment of same in case he should charge more profit, such a law would be the ridicule of the world; it would mean, if enforced, the utter destruction of all mercantile life.

"Why, then, shall the money, the *nervous rerum*, be treated in such a restrictive way? The price of goods which a merchant may be able to obtain for money is governed by the supply and demand; so is the interest obtainable for the money. If the demand and supply of goods is so that a certain amount of merchandise is worth a dollar a merchant could not get a dollar and a quarter for such an amount; if the supply and demand of the money has regulated the interest at 6 per cent. your customer would leave you if you charged 10 per cent.

"The enterprise and pluck of our farmers and citizens is making a garden, dotted with busy towns, improved farms and growing groves, out of what was once called the Desert of America, *with the aid of our capital!* If the farmers and citizens are worthy of the fruit of their labor I say our capital is worthy of such rate of interest as will be regulated by supply and demand."

Mr. Frank E. Stevens, Vice-President of the Beadle County National Bank, Huron, followed with a studied address on the laws of Dakota relating to negotiable instruments. This address contains many remarks of practical interest, but is not easy to quote from. Mr. Stevens concluded as follows: "Here we can contract legally for 12 per cent., and if we take more the payer can recover it of us. This is not all; the Criminal Code steps in, and says on conviction we can go to jail for a year. Happy reflection! A man works hard in the East, accumulates a little money and comes here to invest it. He lends it to a neighbor who absconds that night. Another borrower sells the chattels and claims they died, another claims they were stolen, and so on. Finally a suit is brought against one of these two latter thieves, who pleads usury; he pleads that he has paid a little more than an honest man who always meets his obligations. We are told the hazard of the loan cuts no figure. An insurance company will charge 9 per cent. for a frame risk while a good brick is taxed but 1 per cent. The grocer can charge 25 per cent., but if the consumer wants to borrow the money to pay this 25 per cent. the tune is changed. In the fifth chapter of Matthew it is written: 'And if any man will sue thee at the law, and take away thy coat, let him have thy cloak also;' but Dakota was not then on the map; if it had been the verse might have come down to us: 'If any man will sue thee at the law, plead usury.' A man might come here a saint, but if he dealt long in chattels or farm loans he would leave a heretic.

"In conclusion, I may say our code is quite explicit, and I can but give an epitome of it. It will repay any banker to look it over, but the good banker refuses to entertain

a legal quibble. '*Alti jus incertum tibi jus nullum*' (when the law is uncertain there is no law). The day of the rustler is vanishing. Less attention is being paid to acquiring business and more to caring for it.

"Bushwacking, tax titles, real estate, insurance, farming, merchandising and other features of primitive banking are disappearing. Security instead of law points is now our test, but at the same time a knowledge of our commercial laws is almost indispensable, and every banker should have a code. It is impossible for me to reach every point when the law is so complete and satisfactory as with us. I am glad to attend these bankers' meetings, where these matters can be talked over. I am glad to see cohesion among bankers of this Territory, situated as we are so far from money centres. It may cause a rival a little platonic amusement to witness a 'run' on his neighbor, but that amusement will soon take him into the maelstrom and many another. Let us conserve our interests unitedly. '*Vivis untia fortior.*'"

In a paper on assessment and taxation Mr. Charles E. Judd, Cashier of the Dakota Loan & Trust Company, at Canton, protested against discrimination against banks in the matter of taxation, holding that a bank has the same right as an individual.

The whole proceedings of the Convention were illustrative of the usefulness of such Associations.

## THE WORLD OF FINANCE.

*Some Current Opinions from Many Sources.*

### THE BRITISH SILVER COMMISSION.

[From the *London Statist.*]

What is necessary is that the Commissioners should have thoroughly studied the subject they are appointed to inquire into and know in what direction further investigations are needed, and should guide the inquiry accordingly. Unless Ministers can induce men of this kind to undertake the inquiry it must lead to nothing. A commission like that upon trade depression will be just as valueless as the Trade Depression Commission. Furthermore, it is absolutely essential that the inquiries should not be confined to any particular subject. If it contents itself with the relation between gold and silver it must of necessity be barren of results. The production of one of those metals is decreasing, that of the other is increasing, and the relative value must consequently continue to fluctuate. The relation between gold and silver necessarily forms part of the inquiry; but it is only a part and by no means the most important part. What really requires elucidation is the cause of the fall in prices; and it is evident that those causes are not confined to the relations between gold and silver. It is at least possible that not the least influential of those causes is the extraordinary mechanical inventions of the present century; and unless the inquiry embraces the action of those mechanical inventions upon prices it cannot be of real value.

### RECENT DEFALCATIONS.

[From the *Springfield Republican.*]

\* \* \* One of the excellent features of the administration of the National bank law is that it is as relentless as death. For a sworn officer of a National bank to betray his trust by embezzling or by falsifying the books is to court certain imprisonment and disgrace in the event of discovery, and the punishment meted out to Wm. E. Gould is in strict accordance with this law. This is, of course, a terrible humiliation to him and grief to his innocent family, but cannot be helped.

When the National Association of bank men met at Boston a few weeks ago the retiring President referred to the anxiety of the members of that body to detect and prevent breaches of trust. At that moment a Vice-President of the Association must have been conscious that he was a criminal in the eye of every man present.

[From the *New York Times.*]

Nevertheless, we repeat that it is hard to blame these men very severely. When a man has once secured the confidence of those about him it is very easy for him to nullify any safeguards that they may have provided against his unfaithfulness. Perhaps such a punishment of these Directors as was inflicted upon the innocent and

negligent Directors of the Glasgow Bank might for a time do good in inducing other Directors to look more carefully into the doings of their executive officers. It is impossible, however, in the long run to prevent men from relying upon their own confidence in other men. Business cannot be conducted exclusively upon the detective's motto, "Suspect everybody." It is only by the inquisitions of outsiders, conducted in the spirit of that motto, that the misdeeds of trusted officers are brought to light. Such an inquisition into the affairs of the National banks is provided by law. It would be well if it could be extended to other financial corporations.

#### A WESTERN VIEW OF THE SILVER QUESTION.

[From the *Rocky Mountain Mining Review*.]

All the principal nations of the earth are compelled to reconstruct their finances upon some plan which shall promote the interests of trade instead of hampering and depressing it, and that the basis must be some sort of international agreement that will bring the separate parts into harmonious union. It is a vast problem and calls for the broadest and wisest statesmanship. It is certain that the remonetization of silver must be the bottom of the scheme, whatever it may be. This is no longer a theory but a demonstrated fact, and the sooner the governments set about it the sooner the end in view—which is the establishment of prosperity—will be reached. The movement well begun in England and the United States should be pushed to a conclusion. The men in our Congress and out of it who understand the question should preach it boldly until the whole people who do not understand it are enlightened. Ignorance is the main obstruction in the way. It can be removed by an honest presentation of facts. The most important business before the next Congress is the free coinage of silver. It should be passed. When passed the other nations will fall into line, because they are waiting for us to take the initiative.

#### FORCING PAYMENT OF CALLED BONDS.

[From the *Daily Indicator*.]

The question whether the Comptroller of the Currency should compel the banks whose deposited 3 per cent. bonds have been called to replace them with other bonds or surrender circulation seems to us to be one of policy rather than law. There is no express provision of law compelling the banks to maintain their deposits in interest-bearing bonds, although the law does require them to deposit such bonds when they take out circulation. In the absence of any express legal provision, and failing any possible benefit to arise, we see no reason why the Comptroller should insist upon the banks substituting for the called bonds other bonds upon penalty of forfeiting their circulation. The Government will gain nothing, for it will save no interest by destroying the bonds. The volume of money in circulation will not be appreciably increased, for the banks will have to deposit lawful money to secure their notes if they decide to surrender their circulation. And herein lies the anomaly which the Comptroller's interpretation of the law creates. He virtually declares that the banks cannot have their circulation based upon 90 per cent. of the par value of non-interest-bearing Government bonds, but they can have it upon 100 per cent. of non-interest-bearing Government notes. We submit that there is no good to be served by following the course proposed by the Comptroller.

#### THE RECENT RISE IN SILVER.

[From the *London Times*.]

There are several causes for this rise: (1) Speculative purchases are stimulated each time the Government takes any definite step in the direction of appointing a body of experts to investigate the causes of the decline in the value of silver, whether there is any chance of any tangible advantage being derived from such an inquiry or not. (2) The price of silver always moves in sympathy with the extent of the allotment of telegraphic transfers by the India Council. Of these, an unusually large amount was allotted yesterday, as much as 22 lakhs in addition to the usual 15 lakhs. The price accordingly rose and continued to advance until the operation was completed. The reason for this increased demand for cable transfers was the new rupee loan for 12,000,000, which will be tendered for to-morrow at Calcutta. These are more or less temporary influences, but there is one still more potent than either, and that is the

improvement in some departments of business, particularly in wool, the effect of which is already beginning to be felt. Some even go so far as to assert that silver has at length fallen sufficiently low to render the working of some of the silver mines unremunerative; but we have not yet any direct evidence that that is the case.

[From the *London Standard*.]

The appointment of the Silver Commission was set down as the reason for the disturbance of markets by those who dealt in rupee paper, but that, in truth, had little to do with it.

#### THE FORTHCOMING COMPTROLLER'S REPORT.

[From the *New York Commercial Bulletin*, Washington Correspondence.]

The report of the Comptroller of the Currency, now well advanced in many of its features, will be Mr. Trenholm's first contribution to official financial literature, although he has been almost a life-long writer on financial subjects. Mr. Trenholm has given ample evidences of his conservatism, ability and devotion to the interests of the vast organization over which he presides and which he regards as the most perfect financial system in the world. His recommendations will be prompted by a sincere regard for the best interests of the country at large, the banks and their depositors. The new Comptroller is an original and independent thinker, and is likely to put forth many new and carefully matured suggestions entitled to the most respectful consideration of the bankers and of Congress.

#### TRUST COMPANIES AND THE MONEY MARKET.

[From the *Financial and Commercial Chronicle*.]

An important part of these changes has arisen from depositors with trust companies who placed their funds therein for safe keeping at a low rate of interest and who are now withdrawing their money because they find more remunerative employment for it; these withdrawals, of course, compel the trust companies to call in loans, and, as the banks carry the only reserves, they must be ready to meet such demands upon their cash. While these movements are in progress and loans are in process of readjustment the supply of money at the Stock Exchange for daily requirements is materially lessened.

#### WHAT THE SILVER MEN ARE DRIVING AT.

[From the *Journal of Commerce*, New York.]

One of the most earnest and active of those engaged in this silver movement, the *New York Sun*, now shows us how the advance in wages is to be secured. It frankly admits that the only way is through an advance in prices of all marketable commodities. The "fatal obstacle" to the desired advance in everything produced and afterward in wages that paper asserts to be "the maintenance of gold as the standard measure of value." The first effect of a drop from 100 to 70 or 72 in the measure of value which would result when silver as the sole standard takes the place of gold would be to check "the diminishing prices for all kinds of staple commodities," as the *Sun* mildly expresses it. \* \* \* Every man, however, who had a dollar coming to him would only get the value of 70 cents for it. Every man who had anything in a savings bank when he drew it out would get a silver dollar that would only buy for him as much as 70 cents did under the old standard. And those who own nothing and are not thrifty enough to have anything laid by for a rainy day would gain nothing by having their wages put to one dollar for the labor now earning 70 cents when the one dollar will buy nothing more than the old 70 cents would purchase before the change.

**IMPORTANT NOTICE.**—The Publishers of RHODES' JOURNAL OF BANKING announce that all present JOURNAL subscribers—as well as new subscribers entered this year—who renew for the year 1887 and remit the subscription price, \$5, before January 10th next will receive a copy of the January 1887 edition of "RHODES' BANK LIST" without extra charge. The List is recognized as the most reliable as well as the most convenient Bankers' Directory now published. It contains, also, "Law Points for Bankers," including a digest of the Laws of every State and Territory affecting the business of banking. It will be printed on good paper and handsomely bound in red cloth.

NATIONAL BANKS OF THE UNITED STATES.—Abstract of reports made to the Comptroller of the Currency, showing the condition of the National Banks in the United States at the close of business on August 27, 1886; and, for comparison, an abstract of the reports of December 24, 1885. [Cents omitted.]

**One Dollar Silver Certificates.**—The United States Treasurer, under date of October 1st, issued the following notice in regard to the issue of one dollar silver certificates:

Owing to the great demand for other denominations of notes, the Treasurer of the United States is unable to supply one dollar notes except in small amounts. In order to satisfy as far as possible the public demand it has been decided to furnish from this office these notes in sums of \$1,000 to each bank making application and at the same time depositing that sum with the Assistant Treasurer at New York. Upon receipt of the certificate of deposit a like sum will be forwarded at the expense of the banks making application. In order to effect an equitable distribution, as far as possible, applicants will obtain these notes in the order in which deposits are made at the Sub-Treasury at New York. Until further notice, no such application will be granted until the supply of notes is adequate to meet all current demands.

The maximum amount of these certificates that the Treasury can furnish daily will not exceed \$80,000, and it is suggested by the Acting Treasurer that it will be well for banks to ascertain through their New York correspondent the probable time when they will receive the shipments of \$1's in the order in which deposits are made.

## THE BANKER'S GAZETTE.

### The Money Market and Financial Situation.

NEW YORK, October 2, 1886.

THE CONDITION OF GENERAL TRADE is reported to be fully as good as it was a month ago, and it would appear that more business is being carried on at a profit this autumn than at any time in some years past. The prices of dry goods are well sustained, some sorts being advanced, and a good demand is reported. Wool is being bought more freely and prices are very strong. There has been a large amount of wheat and corn marketed within the past few weeks at prices more satisfactory to the farmers than those ruling previously. The heavy movement of breadstuffs and provisions has brought increased earnings to the railroad companies. A fine trade is being done in iron at good prices and with a prospect of advancing rates. The reports of the coal trade are very encouraging and there has been a steady advance in prices since midsummer. In fact, in most of the great staple trades business is flourishing, but without undue excitement.

A somewhat doubtful feature of the situation is the number of heavy business failures that have lately occurred. "Bradstreet's" compilation shows that the number of failures during the past three months was 2,120 against 2,317 in the corresponding quarter of 1885. This shows a decrease in number; but the aggregate liabilities were \$23,869,213 against \$22,405,853 last year, a small but surprising increase. The figures compiled by Dun's Mercantile Agency show a larger increase in liabilities. The cause of this increase appears to be the hardening of rates for money since August and the increased difficulty that weak concerns have experienced in obtaining accommodation from the banks. But this would only prove that there have been a number of such concerns in a precarious condition, since the mere restricting of loans to a conservative basis has been sufficient to carry them down.

The receipts of the general Government are an indication of the favorable condition of business. For the past three months they have been as follows:

	1886.	1885.
Customs.....	\$58,756,085	\$51,029,846
Internal revenue.....	28,638,119	28,018,448
Miscellaneous.....	6,124,794	5,754,285
Total.....	\$93,518,999	\$84,802,580

The statistics of the foreign trade likewise show increased activity in both the imports and exports of merchandise. Following are the latest figures received from the Bureau of Statistics, and later reports of the trade of this port do not show much change in the movement. The total value of the exports and imports for the two months ending August 31st are as follows:

	1886.	1885.
Exports .....	\$108,960,716	\$89,895,976
Imports .....	114,332,473	99,859,451

These figures indicate a good trade and also show that we need export no gold from abroad in order to settle trade balances. There has been good buying of American securities abroad for a number of weeks past, and this has kept the monetary movement in our favor; but a reverse movement may easily set the current the other way. There would be no particular difficulty to be apprehended from this were the National finances in the condition in which they should be; but so long as we are threatened with an avalanche of silver and a steady contraction of bank notes there is good reason for caution.

FOREIGN EXCHANGE.—The market for part of September was down to the gold importation point, but quite recently it has fluctuated a little higher. Following are the posted and actual rates of the principal dealers: Bankers'

sterling, 60 days, nominal, \$4.83; sight, nominal, \$4.86; actual, 60 days, \$4.81½@4.82; sight, actual, \$4.84¼@4.84¾; Cable transfers, \$4.84¾@4.85¼; Prime commercial sterling, long, \$4.80½@4.81; Documentary sterling, 60 days, \$4.80@4.80½; Paris, bankers', 60 days, 5.24¾@5.23¾; sight, 5.21¾@5.21¼; Paris, commercial, 60 days, 5.25½@5.25; sight, 5.23½@5.22½; Antwerp, commercial, 60 days, 5.26¼@5.25½; Swiss, bankers', 60 days, 5.24¾@5.23¾; sight, 5.21¾@5.21¼; Reichsmarks (4), bankers', 60 days, 94½@94¾; sight, 95½@95¼; Reichsmarks (4), commercial, 60 days, 94¾@94½; commercial, sight, 94¾@94½; Guilders, bankers', 60 days, 39 13-16@39 7-8; sight, 40@40 15-16; Guilders, commercial, 60 days, 39 1-16@39¾; sight, 39 7-8@39 15-16. Paris dispatches quote exchange on London 25f. 32½c.

The following shows the posted rates for prime bankers' sterling bills on London at 60 days, and sight, cable transfers and prime commercial sterling, together with exchange on Paris on September 1st, the changes in the rates as they occurred during the month, and the highest and lowest during the months of August and September, 1886:

AUGUST.	BANKERS—		Cable		PARIS—	
	60 days.	Sight.	Transfers.	Commercial.	60 days.	Sight.
Highest...	4.85½	4.87	4.86½	4.84	5.25¼	5.22¾
Lowest...	4.81½	4.84	4.83¼	4.79¾	5.20¼	5.18¼
SEPT. 1.....	4.82	4.85	4.84¼	4.80¼	5.25¼	5.22½
" 8.....	4.82	4.85	4.84¾	4.80¾	5.25¼	5.22½
" 9.....	4.82½	4.85½	4.85	4.80¾	5.24¾	5.21¾
" 10.....	4.82½	4.85½	4.85	4.81	5.24½	5.22¼
" 13.....	4.82½	4.85½	4.85	4.80¾	5.24½	5.22¼
" 15.....	4.82	4.85	4.84¾	4.80¾	5.24½	5.22¼
" 17.....	4.83	4.85	4.84¾	4.80¼	5.24½	5.22¼
" 21.....	4.82½	4.85½	4.84¾	4.80¾	5.24½	5.22¼
" 23.....	4.82½	4.85½	4.84¾	4.80¾	5.24½	5.22¼
" 23.....	4.83	4.86	4.85½	4.81	5.24½	5.22¼
" 24.....	4.83	4.86	4.85¼	4.81¼	5.24	5.21½
" 27.....	4.82½	4.85½	4.85	4.81	5.24	5.21½
" 28.....	4.83	4.86	4.85½	4.81	5.24	5.21½
Highest.....	4.83	4.86	4.85¼	4.81¼	5.25½	5.22¼
Lowest.....	4.82	4.85	4.84¼	4.80¼	5.24	5.21½

COINS AND BULLION.—Bar silver is quoted in London at 44½d. per ounce. At this quotation for silver the bullion value of the standard dollar is 75.45 cents.

The following are New York quotations in gold for other coins and bullion:

Trade dollars.....	\$ 74 @ \$ .....	Victoria sovereigns.....	\$4 83 @ \$4 87
New (412½ grains) dollars	99½ @ 1 00	Twenty francs.....	3 84 @ 3 88
American silver ½s & ¼s.	99½ @ 1 00	Twenty marks.....	4 74 @ 4 60
American dimes.....	99½ @ 1 00	Spanish doubloons.....	15 55 @ 15 65
Mutilated U.S. silver coin,		Mexican doubloons.....	15 55 @ 15 65
per oz.....	85 @ ..	Mexican 20-pesos.....	19 50 @ 19 60
Mexican dollars.....	76¼ @ 77½	Ten guilders.....	3 86 @ 4 00
Peru soles & Chilean pesos	72 @ 73	Fine silver bars, per oz...	96¼ @ 97¼
English silver.....	4 80 @ 4 85	Fine gold bars par @ ¼ % premium on the	
Five francs.....	92 @ 96	Mint value.	

MONEY AND DOMESTIC EXCHANGE.—The money market remains stronger. The rates for call loans against stock collateral are irregular, ranging to-day, for instance, from 6 to 15 per cent. Commercial paper is in good supply, the rate of discount ranging from 6 to 9 per cent. according to grade. The following rates of domestic exchange on New York show a continued demand for money throughout the country: Savannah, ¼ discount; selling, ½ discount. Charleston, buying, 8-16 discount; selling, par. New Orleans, commercial, \$1.50@1.75 per \$1,000 discount; bank, 75c. per \$1,000 discount. St. Louis, 50c.@75c. per \$1,000 discount. Chicago, 75c.@80c. per \$1,000 discount.

THE NATIONAL BANK CIRCULATION has been further reduced \$1,157,598 during September, leaving the amount now outstanding \$808,212,152, which

is \$13,810,652 less than the amount on October 1, 1885. The practical decrease in circulation, however, is shown by the increase in the amount of legal-tender notes on deposit with the United States Treasurer for the retirement of bank notes, amounting in the past month to \$6,327,918. The total deposit is now \$68,529,417, an increase of \$28,655,274 since October 1, 1885.

The following will show the amount of each description of bonds held by the Treasurer to secure National bank circulation on or about the dates indicated :

	Oct. 1, 1886.	Sept. 1, 1886.	Aug. 1, 1886.	July 1, 1886.
Currency 6 per cents.....	\$3,576,000	\$3,576,000	\$3,576,000	\$3,565,000
4½ per cents.....	56,276,100	52,579,100	51,665,900	50,484,200
4 per cents.....	113,740,850	113,719,750	118,582,750	114,143,500
3 per cents.....	86,515,450	101,219,300	104,944,450	107,782,100
Total.....	\$260,108,400	\$271,094,150	\$273,768,800	\$275,974,800

THE TREASURY.—The following table will show the condition of the Treasury, as regards the amount of gold and silver held, on the 1st of October, 1886, and, for comparison, on the 1st of August and September, 1886, with the amounts of certificates outstanding and the balances of coin owned by the Treasury :

	Oct 1, 1886.	Sept. 1, 1886.	Aug. 1, 1886.
Gold coin and bullion.....	\$242,409,018	\$235,430,635	\$233,651,522
Gold certificates outstanding.....	84,691,807	77,698,347	74,712,517
Gold owned by Treasury.....	\$157,917,211	\$157,732,288	\$158,933,005
Silver dollars and bullion.....	\$185,020,987	\$185,038,397	\$185,309,998
Silver certificates outstanding.....	95,387,112	89,021,700	87,564,044
Silver owned by Treasury.....	\$89,633,875	\$96,016,637	\$97,745,949

These figures show that the Treasury has disposed of over \$6,000,000 net in silver certificates during the past month.

A statement prepared at the Treasury Department shows that the status of the 3 per cent. loan at the close of business on September 27th was as follows : Total loan, \$305,581,250 ; redeemed in 1883, \$52,250 ; surrendered under circular of August 80, 1886, \$788,000 ; circular of September 15, 1886, \$596,550 ; called, \$228,616,250 ; uncalled, \$75,528,200.

On September 15th the Acting Secretary of the Treasury issued the 142d call for the redemption of bonds. The call is for \$15,000,000 of the 3 per cent. loan of 1882. The principal and accrued interest of the bonds will be paid at the Treasury in Washington on the 16th of October next, and the interest will cease on that day.

"Three per cent. bonds issued under the Act of Congress approved July 12, 1882, and numbered as follows: \$50—Original No. 56 to original No. 108, both inclusive. \$100—Original No. 777 to original No. 1,521, both inclusive. \$500—Original No. 841 to original No. 649, both inclusive. \$1,000—Original No. 2,835 to original No. 4,206, both inclusive. \$10,000—Original No. 8,811 to original No. 10,247, both inclusive. Total, \$15,000,000.

"Parties holding bonds called by this circular can obtain immediate payment, with interest to date of presentation, by requesting the same in the letter forwarding the bonds for redemption."

The paragraph of the above call, authorizing immediate payment of bonds upon presentation before the date mentioned, is a new feature, and will be incorporated in all succeeding calls.

What is commonly known as the "voluntary bond call," or the circular of August 30th, issued by Acting Secretary Fairchild, offering to redeem uncalled 3 per cent. bonds to the amount of \$10,000,000 if presented before September 15th, has been so modified as to offer to redeem "until further notice" all 3 per cent. bonds presented at the Treasury at par and with accrued interest up

to the date of redemption. The modification extends indefinitely the amount of the bonds that may be presented and the date within which they will be redeemed.

Of the \$15,000,000 3 per cent. bonds included in the 142d call about \$11,000,000 are held to secure National bank circulation.

The Acting Secretary of the Treasury issued on September 27th the 149d call for the redemption of \$15,000,000 of the 3 per cent. loan of July 12, 1882, and notice is given that the principal and accrued interest will be paid at the Treasury of the United States, in Washington, on the 1st day of November, 1886, and that the interest will cease on that day. The numbers are as follows :

\$50—Original No. 50 to original No. 55, both inclusive. \$100—Original No. 641 to original No. 776, both inclusive. \$500—Original No. 286 to original No. 340, both inclusive. \$1,000—Original No. 2,485 to original No. 2,884, both inclusive. \$10,000—Original No. 7,309 to original No. 8,810, both inclusive. Total, \$15,000,000.

GOVERNMENT BONDS.—The following table shows the closing prices or closing bids at the New York Stock Exchange for the principal issues of Government bonds on each day of the month of September and the highest and lowest during the month. Actual sales marked \* :

$\frac{1}{2}$ %	$\frac{1}{2}$ % '91, coup.	1s, 1907, coup.	3 per cents.	C'y 6s, 1895.	C'y 6s, 1899.	$\frac{1}{2}$ %	$\frac{1}{2}$ % '91, coup.	1s, 1907, coup.	3 per cents.	C'y 6s, 1895.	C'y 6s, 1899.

ASSOCIATED BANKS OF NEW YORK.—The bank loans are about the same as a month ago and the specie resume is stronger. There has been a heavy draft upon the legal-tender notes, however, bringing the total reserve down to the lowest point of the year.

The following shows the condition of the New York Clearing-House banks for a number of weeks past as well as about this time in 1885 and 1884 :

	1886.	Loans.	Specie.	Legal-tenders.	Deposits.	Circulation.	Surp. Res.
Oct. 2.....		\$340,195,700	\$74,082,900	\$18,570,100	\$346,758,300	\$8,164,400	\$5,963,925
Sept. 25....		337,485,700	76,642,800	19,211,000	347,065,700	8,138,700	9,079,875

Sept. 27...		291,126,700	73,826,500	30,395,800	305,148,300	14,137,400	27,935,725

RAILROAD AND MISCELLANEOUS STOCKS have been very strong lately, reaching on the average higher prices than in some years back. There are some indications of a reaction, based on trouble in the trunk-line pool and other causes.

The following table shows the highest, lowest and closing prices of the active stocks at the New York Stock Exchange in the month of September, the highest and lowest since January 1, 1886, and also during the year 1885:

	SEPTEMBER, 1896.			SINCE JANUARY 1, 1886.		YEAR 1885.

## STOCK EXCHANGE QUOTATIONS.

Revised by the official lists up to the first day of this month. The following tables include all securities listed at the New York Stock Exchange. The Quotations indicate the last bid or asked price. In cases where there was no quotation during the past month the latest previous quotation is given. The highest and lowest prices for the year 1885—actual sales—are given for comparison.

### BANKERS' OBITUARY RECORD.

**Adams.**—John H. Adams, President of the Central National Bank and of the Security Trust & Safe Deposit Company, at Wilmington, Del., died August 17, aged 65 years. He was formerly President of the City Council and of the Board of Education.

**Christoph.**—Henry J. Christoph, a well-known private banker of Chicago, Ill., died September 6th.

**Cockayne.**—Colonel V. L. Cockayne, President of the Marshall County Bank, at Moundsville, W. Va., died September 21st.

**Elliott.**—J. W. Elliott, Cashier of the Concho National Bank, at San Angelo, Tex., died July 9th, aged 33 years.

**Lang.**—Joseph W. Lang, President of the Meredith Village Savings Bank, at Meredith, N. H., died recently, aged 88 years. He was at one time a member of the State Legislature.

**Lines.**—O. K. Lines, a member of the New York Stock Exchange since 1873, died recently.

**Moore.**—George Moore, President of the West Side Bank, New York, ever since its organization in 1870, died September 17th. He was a native of Scotland and was formerly in the specie trade.

**Puffer.**—George S. Puffer, formerly President of the Atlantic State Bank, of Brooklyn, N. Y., which was carried down by the failure of the Metropolitan National Bank, of New York, in 1884, died September 23th, aged 86 years.

**Taylor.**—John D. Taylor, Treasurer of the Pennsylvania Railroad Company, who died September 25th, was one of the Trustees who wound up the affairs of the Bank of Pennsylvania after its failure in 1857.

**Trowbridge.**—George T. Trowbridge, Cashier of the Natick (Mass.) National Bank, died at his home in Newton, Mass., September 9th. He was first employed in the Everett National Bank as messenger about twenty years ago, and seventeen years ago, when the Natick National Bank was organized, he was appointed its Cashier.

**Tyler.**—The death of Thomas B. Tyler, President of the Bank of Sparta, Wis., was announced recently.

**White.**—Nathaniel Gilman White, Vice-President of the Essex Savings Bank, at Lawrence, Mass., died September 12th, aged about 87 years. He was formerly President of the Boston & Maine Railroad, resigning in 1882.

**Williams.**—Abijah Williams, President of the Oneida National Bank, at Utica, N. Y., died July 27th, aged 81 years.

**"THE OLD, OLD STORY."**—Following is a press dispatch which appeared in the daily papers of September 18th:

"MOUNT STERLING, Ill., Sept. 17.—J. B. Glass, banker, this morning made an assignment to J. J. McDonald for the benefit of his creditors. The liabilities are about \$75,000; assets about \$60,000. The losses will fall almost wholly upon the people of Brown County, who deposited their savings with Mr. Glass."

Referring to this strange condition of affairs, a correspondent, who is familiar with the facts, writes: "The cause of his failure was a lack of business capacity. He is a doctor and should have stuck to his profession. Doubtless the estimated capital was based on a high valuation of his real estate. He had the confidence of the people and his depositors could not distinguish between a bank of known capital and one that they knew nothing whatever about."

It is high time that the State of Illinois—as well as many other States in the West and South—should pass a general law for the establishment and correct supervision of savings banks. The wage earners and others who wish to save should be provided with secure depositories by the State. Postal savings banks managed by the general Government will not answer the purpose—such a scheme is wholly impracticable in this country—but banks especially for savings, organized and conducted under rigid State laws, would be a boon to the people generally. Legislators ought to take the matter in hand at once.

## NOTICES OF NEW BOOKS.

*Paul's Merchants' Directory of Bankers and Attorneys, and Digest of the Laws.* 1886. Chicago: Solon W. Paul, publisher, 107 Madison Street. July, 1886. (\$3.)

This book of 672 pages contains: A list of banks and bankers in the United States and Territories, with the names of the President, Cashier and Assistant Cashier of each bank; the amount of capital and surplus of incorporated banks; a list of villages accessible to banking towns, showing the distance in miles to the nearest banker or attorney; a select list of reliable attorneys throughout the country; a synopsis of the laws of the United States governing the jurisdiction and practice of United States courts; and, finally, digests of the laws of the States and Territories relative to the collection of debts, banking, taking of depositions, etc. This latter part has been prepared by lawyers of ability located in the several States expressly for this directory, and is very full and comprehensive. The other parts of the work appear to have been conscientiously prepared, and the whole is calculated to be very useful in the counting-house.

*Poor's Manual of the Railroads of the United States for 1886.* New York: H. V. & H. W. Poor. 1886.

The last number of this publication more than sustains its reputation for completeness and accuracy, possessing, as it does, several new features by condensing in some places in order to give fuller detail in others. We find from the general statistics in the introduction (which forms in itself a valuable work of reference) that the number of miles of railroad constructed in the United States in 1885 was 3,181, bringing the total up to 123,967. This would appear to be about as much as the total mileage of Europe. The aggregate shows that the capital of the roads making returns was \$3,817,697,832 and the total share capital and indebtedness \$7,342,533,179. A new feature of great value appearing in this number of the manual is a tabular statement showing the dividends paid by all the railroads of the United States for the last eight years, with the periods of their payment, whether annually, semi-annually or quarterly; also statements showing the highest and lowest monthly quotations for eight years of the active stocks and bonds dealt in at the leading Stock Exchanges of the country. By reference to the statements of many important companies full accounts of all the dividends paid by them since their organization may be found. It is intended to continue these and extend such statements, in time, to all the dividend-paying roads in the country. By keeping up the work to its former standard and adding improvements from time to time the publishers continue to make the manual a necessity to investors, bankers, statisticians, lawyers, railroad officials and business men in general.

## BUSINESS OPPORTUNITIES—SITUATIONS, CLERKS, &amp;C., WANTED.

**BANK FOR SALE.**—Parties with from \$40,000 to \$65,000 to invest in a well-established bank will do well to address "Kansas," care Bradford Rhodes & Co.

**WANTED.**—A private banking firm in Texas about to re-organize as a National bank wants a man of experience as Cashier who will take \$20,000 in stock. Address "Texas," care of this office.

**WANTED.**—A general clerk and correspondent in a New York banking-house; must be able to correspond in German and French; salary \$900 for first year. Address "Correspondent," care of this office.

**WANTED.**—A situation as Book-keeper in a bank; have had a number of years' experience; can furnish the best references and security if required. Address "R," care of RHODES' JOURNAL OF BANKING.

**WANTED.**—A young man, aged 32, with 12 years' experience in banking—Savings and National—is desirous of securing a permanent position in a bank on or before January 1st; best of references. Address "Ba k." care RHODES' JOURNAL OF BANKING.

## CHRONOLOGICAL RECORD.—AUGUST, 1886.

30. **MONDAY.**—A Treasury call issued for \$10,000,000 3 per cent. bonds on or before September 15th.
31. **TUESDAY.**—Severe earthquake shocks were felt throughout the States east of the Mississippi. — In Charleston, S. C., many buildings were injured and lives lost.

## SEPTEMBER, 1886.

1. **WEDNESDAY.**—Reduction in the public debt in August, \$1,910,000.

Increase in deposit since October 1, 1885.....	28,655,274

\*Circulation of National Gold Banks not included in the above, \$299,069.

W. L. TRENHOLM,

Comptroller of the Currency.

# RHODES' JOURNAL OF BANKING.

---

Vol. XIII. NOVEMBER, 1886. No. 11.

---

SINCE the business of banking is much the same the world over we may now and then get a useful suggestion from the usages of the most distant countries. It is interesting to read in the *Australian Insurance and Banking Record* that a question which a few years since agitated New York banking circles has awakened discussion of late in Melbourne. It appears that the banks of the latter city formerly had an agreement under which the rates of interest allowed on deposits were limited to maximum figures fixed upon. But this agreement has now been abandoned, and some of the banks are competing for deposits by offering very high rates. The *Record* for July 14th quotes the following rates: On deposits for three months, 4 per cent.; six months, 5 per cent.; twelve months and over, 6 per cent. It is an open secret that some banks allow even as high as  $6\frac{1}{2}$  or 7 per cent. for twelve months' deposits. Now, as the discount rates are 7 to 9 per cent., it would appear, judging from American standards, that the rates allowed on deposits are entirely too high. The *Record* properly calls the abandonment of the agreement as a distinct misfortune, pointing out the fact that the higher rates do not increase the aggregate deposits of the banks one penny. Too sharp competition between banks to obtain deposits is contrary to all the traditions of sound banking, and ultimately will result in loss to the public.

---

IT IS A VERY PECULIAR CIRCUMSTANCE that at the present time, when a number of American journals are starting an agitation in favor of a return to State bank circulation, some of the newspapers of Canada protest against the similar kind of currency which is now in circulation there. The *Toronto World*, for instance, considers it "something more than a grievance that a Maritime Province bank bill is not at par in Ontario, and that an Ontario bill suffers a shave in British Columbia. A Canadian ought to be able to travel from one end of his country to the other upon money which goes at par." It is to be hoped that every American believes the same thing regarding his country. But it certainly will not be the case if the old State bank

circulation is revived. "In the Dominion," says the Montreal *Shareholder*, "we have now only the poor and somewhat humiliating alternative of using either United States Government greenbacks or the paper issue of private American banks (presumably National banks.) These circulate at par throughout Canada, while our own notes have to undergo a shave outside the Province whence they originally emanated." Let the reader note the comparison here presented between our paper currency and the Canadian, and consider whether a return to State issues, perhaps ten times worse than the Canadian, is desirable. It is quite within the possibilities that, should the people of this country be foolish enough in the future to allow this change, by that time the Canadians would be converted so far as to take up a system like our present one. In that case, no doubt, the Canadian bills would circulate all over this country at par while our own would "suffer a shave" in every State outside its parent one. Here would be a "state of affairs" to contemplate.

---

THE BOSTON *Commercial Bulletin* quotes from the JOURNAL as follows :

"It is true, however, that the banks in the large cities have had for some years past every temptation in a surplus of money and great scarcity of safe, paying investments to grant accommodation to doubtful parties. If business should continue to be done under the same conditions in the future—if the banks, in order to invest their funds shall be compelled to purchase largely of the commercial paper of parties other than their customers—it will be absolutely necessary to have some better means than are now at command of ascertaining the standing and indebtedness of such parties."

To this the *Bulletin* replies by asking : "What 'better means' will the JOURNAL of BANKING suggest? The matter ought not to drop here." The choice of a method to overcome the dangers and losses to which the banks are now subjected through the means above-mentioned lies more within the domain of practical business than do the questions we are generally called upon to discuss. There has been for some years a system in operation in Louisville, Ky., under which the banks are mutually kept informed of the amount of paper that each firm usually asking accommodation has outstanding. This system is said to have worked well—of course on a somewhat restricted scale—up to this time ; but the bankers in the larger cities have found real or imaginary difficulties in the way of introducing it generally. If the evils flowing from the present method, or lack of method, shall prove so great as to demand a change to the Louisville, or some similar system, the bankers will find a way sooner or later of adopting it.

---

MR. AMOS W. STETSON, President of the State National Bank, of Boston, has written an open letter to the Boston Clearing-House Association which, although it relates to a custom peculiar to the banks of that city, seemed to be of sufficient general interest to warrant its publication in the JOURNAL. [See under "Open Letters from Bankers."] There is no question but that Mr. Stetson's criticism

is just in so far as that the system of daily loans between banks in settlement of Clearing-House balances appears strange to New York bankers, and is probably followed regularly nowhere else. But this is not a conclusive argument against the plan if it can be proved to have worked for a long time without danger. One thing in favor of it is that the available money in the city is all used to advantage. But if the case is just as the letter states it, and "the feeling now prevalent is that every dollar which a bank holds above its legal requirements must be loaned at one rate or another to some neighbor bank," then there can be no question that the custom is an abuse. The matter is important enough to call for discussion among the bankers of Boston.

---

IT IS BELIEVED THAT THE PRINCIPAL THEME in the annual report of Comptroller Trenholm will be the problem of how to provide a basis for the National bank circulation to take the place of the United States bonds. There is certainly no subject more worthy of his attention, and there is reason to hope that his conclusions and recommendations may meet a more ready acceptance in Congress than those of his predecessors. Being a Southern man (of the new South) this fact may influence members from localities inimical to the National banks to give his arguments a kindly hearing, and it may be expected that members who have hitherto been in favor of the banks will continue to be so. There are a number of plans for the Comptroller to choose from. There appears to be no insuperable objection to the substitution, under proper rules, of State or railroad bonds for the present securities. The idea of making silver coin or bullion a basis for bank notes does not seem practicable, because it would allow hardly any margin of profit to either the banks or the Government. The proposal of the last two Comptrollers to have a sufficient redemption fund at Washington, contributed by all the banks, to secure the notes of any one that might fail, and to make the notes a first lien upon the assets of the issuing bank, appears upon the whole to present fewer difficulties than any other plan.

---

IT IS APPARENT, JUDGING FROM THE LETTERS of many Washington correspondents, that the Treasury officials are anxious not only to prevent any stringency in the money market but also a public fear of such an occurrence. This spirit is very commendable if not carried too far (which it may be) by postponing the natural result of the present anomalous condition of the currency, so that the crisis, when it comes, will be all the more severe. If the people could actually realize the inconvenience of a silver coinage they would soon demand a change in the present law. But the policy of the Treasury department appears to be to allow the coinage to continue and to encourage the use of silver certificates. Again, if the business community were allowed to realize the proximity of the danger of a complete reduction to a silver standard its voice would be loudly raised against the continuance of

the coinage, but it looks as though the authorities were endeavoring to prevent this. There also appears to be considerable solicitude lest an opinion should prevail that the calling of bonds, and the consequent retirement of National bank notes, would cause contraction of the circulation. Now, this will be the natural result, and it can only be overcome under the present laws by substituting silver or its representative certificates for the notes. Is it not better that every person should understand this, so that they may make their choice whether or not to allow matters to take their present course?

---

IS THE MONETARY CIRCULATION BEING CONTRACTED to the extent of the lawful money deposited by the National banks to retire their circulating notes? It is represented in Washington that it is not, on account of the new silver certificates and because the legal-tenders deposited are not held in the Treasury for the purpose named. At a recent date, for instance, the amount of legal-tenders held was only \$33,000,000, while the amount to the credit of the banks on account of notes was \$83,000,000. This credit, it is said, is payable from any money in the Treasury; but, at the same time, this money must be held in addition to any sums that may be necessary for other purposes, and therefore it would certainly appear that the active circulation is diminished to this extent. The fact of the matter is, however, that the idle silver in the Treasury must be considered to be to a large extent a reserve to pay the bank notes instead of the legal-tender notes that were deposited for the purpose. In this way, then (besides by means of the new certificates), is the depreciated silver taking the place of the bank note circulation. It is no use to disguise this fact. Of course it is wrong to raise any unnecessary alarm about the currency, but the people should be allowed to make their choice intelligently between the bank notes and the seventy-five cent dollars.

---

IT IS SAID THAT ONE OF THE PROPOSITIONS that Secretary Manning has been considering with a view to embodying it in his annual report is a plan to keep a large amount of the surplus funds of the Government in those National banks which are Government depositories. By this means a great deal of labor and expense would be saved in the Treasury Department and an immense sum of idle money would be put to some use. The idea is thoroughly in consonance with the modern methods of carrying on monetary affairs, while the existing method is antiquated if not laborious. There is at present a sum of about \$250,000,000 of coin and bullion in the Treasury over and above the total certificates outstanding, an amount much larger than is held in any other depository in the world, with the exception of the Bank of France. But the money in the other great depositories is used in the commerce of the respective countries, care, of course, being taken to always keep a sufficient reserve. It does not follow because this is

done in other countries that it ought to be done here, but the fact that the finances of other great nations have been carried on successfully for many years under a more safe and far more economical system than ours is a strong argument in favor of its adoption. Since the National bank depositories are widely scattered throughout the country there should be no room for the jealousy which caused the ruin of the United States Bank in a past generation, and the gains to be derived from the proposed system would inure to the benefit of every one.

---

ATTORNEY-GENERAL GARLAND has delivered an opinion to the effect that bonds called for payment by the Treasury cannot continue to be availed of as security for circulating notes. This conclusion is chiefly based upon the supposed intention of Congress as expressed in the Act of July 12, 1882, "To enable National Banking Associations to extend their corporate existence," and the following proviso in Section 9 thereof, "The provision of this section shall not apply to bonds called for redemption by the Secretary of the Treasury." It is probable that this opinion will be accepted as conclusive in the matter and that the called bonds will be redeemed. The result will be to hasten somewhat a reduction of the bank circulation. It appears that some of the banks have been holding on to their 3 per cents after they were called in order to see if Congress would do anything to enable them to continue under the National system. The decision just promulgated makes it all the more imperative to have an early declaration on the subject during the coming session.

---

THE BANK OF AMERICA, of Philadelphia, recently opened its third branch in that vicinity and is about to establish a fourth. In this respect the bank is departing from an old-established custom peculiar to the United States, under which nearly all our banks, however small, are independent. It is a question whether the custom is not more honored in the breach than the observance. Every business man must have noticed that the banks started in the newer districts of our cities are generally weak concerns, and that there are many failures among them. The measure of success attained in the case cited above will be watched with interest.

---

BANKERS AND BUSINESS MEN GENERALLY will be glad to read the assurance of First Assistant Secretary of State Porter that the negotiations for a new extradition treaty with Great Britain have been concluded. The terms have been agreed upon by the two Governments interested, but, of course, they must be ratified by the United States Senate before taking effect. This will probably be done soon after the assembling of Congress, and the scandalous condition of affairs which the existing treaty has made possible will be reformed.

---

### THE BANKS OF MINNESOTA.

The duties required of the Public Examiner of Minnesota include not only the inspection of the accounts of the County Treasurers of the State but also the supervision of State and savings banks. Notwithstanding this multiplicity of duties the reports of Examiner Henry M. Knox touching the banks are prepared with care and skill, and his suggestions looking to legislation on banking subjects are of the highest value. From his biennial report, just issued, we extract a summary of the condition of the banks of the State of every description.

The figures given below, so far as they relate to the National and State banks, the savings associations and the loan and trust companies, are obtained from official sources only. Those pertaining to the National banks are furnished by the Comptroller of the Currency, and are compiled from the returns of the banks made to that office under the calls for June 20, 1884, and August 27, 1886. The figures used in the case of State banks, savings associations and loan and trust companies are compiled from official statements made to the Public Examiner under the calls for June 20, 1884, and for July 31, 1886. The data regarding private banks have been obtained from private sources. The Examiner has added to the number and capital of the State banks six banks organized since the call for July 31, 1886, but which are now in operation, with a capital of \$250,000.

#### NUMBER OF BANKS IN THE STATE.

	1884.	1886.	Increase.
National.....	48	51	3
State.....	82	47	15
Savings.....	6	7	1
Trust companies.....	2	2	0
Private.....	128	130	2
Totals.....	216	227	21

#### CAPITAL STOCK.

	1884.	1886.	Increase.
51 National.....	\$10,240,080	\$12,285,000	\$2,024,940
47 State.....	3,475,000	4,613,800	1,138,800
2 Savings.....	150,000	150,000	.....
2 Trust.....	889,354	650,400	261,046
71 Private.....	2,039,685	2,470,100	430,415
173 Banks. Totals.....	\$16,294,099	\$20,149,100	\$3,855,001

#### SURPLUS FUND.

	1884.	1886.	Increase.
51 National.....	\$1,562,964	\$2,185,779	\$592,825
20 State.....	423,182	554,094	130,912
4 Savings.....	36,510	67,363	30,553
1 Trust.....	10,000	25,000	15,000
27 Private.....	247,198	368,800	116,402
108 Banks. Totals.....	\$2,310,144	\$3,196,896	\$886,692

## INDIVIDUAL DEPOSITS.

	1884.	1886.	Increase.
51 National .....	\$16,960,669	\$20,568,114	\$3,642,455
40 State .....	7,698,715	10,416,219	2,717,504
7 Savings .....	2,634,743	3,655,289	1,020,546
2 Trust .....	55,832	328,251	272,419
100 Banks. Totals .....	\$27,350,949	\$34,992,873	\$7,652,924

## LOANS AND DISCOUNTS.

	1884.	1886.	Increase.
51 National .....	\$25,334,442	\$30,614,682	\$5,280,240
41 State .....	9,814,784	12,375,051	2,560,267
7 Savings .....	2,423,550	2,790,228	366,678
7 Trust .....	268,770	626,309	357,539
101 Banks. Totals .....	\$37,841,546	\$46,406,270	\$8,564,724

## SUMMARY OF ABOVE.

	Totals.	Increase.
Number of banks .....	237	21
Capital stock (173 banks) .....	\$20,149,100	\$3,855,001
Surplus fund (106 banks) .....	3,195,836	885,692
Individual deposits (100 banks) .....	34,992,873	7,652,924
Loans and discounts (101 banks) .....	46,406,270	8,564,724

The combined capital and surplus of the National, State, savings and private banks and trust companies, and their individual deposits (except private banks, the deposits of which are not known), show a grand total of \$58,337,809, being an increase in the two years since the last report of \$12,393,617.

The capital, surplus and individual deposits of the corporate banks and trust companies only amount to \$55,504,109, showing an increase since the last report of \$11,846,800.

The loans of the 101 corporate banks of the State (including the two trust companies) amount to \$46,406,270, being an increase in loans of \$8,564,724.

Among other recommendations Mr. Knox proposes an enactment requiring that a small percentage of the net profits of the banks be carried at stated times to the surplus fund. The law requires the banks to hold as reserve 20 per cent. of the immediate liabilities, one-half of which must be cash on hand while the other half may be deposited in good solvent banks. Some of the banks do not appear by the report to be closely adhering to the requirement. For convenience the Examiner publishes the banking laws in an appendix, and also for the purpose of bringing into relief the grievous defects in the existing statutes. He calls attention to attempts of business banks to illegally encroach on the province of the savings institutions. He recommends that the provision of law empowering State banks to deal in mortgages and loan money on real securities should be repealed. "Real estate," says the report, "should not be taken by commercial banks as original security for any loan." It is

recommended that, for reasons stated, the banks be empowered to make loans against produce in store, under proper conditions.

Considerable space is given to the subject of private firms transacting a banking business under corporate names, of which there were 119 in July, 1886. The Examiner holds that "the broader and more sensible ground which the State should occupy for the designation and protection of banks conforming to its laws is that persons and partnerships engaged in the banking business without conforming to the laws should be forbidden names which do not indicate that they are owned and operated by certain individuals or firms." This view is supported by arguments similar to those used heretofore in the JOURNAL on the same subject.

The Legislature of Minnesota will do well to give the recommendations of Mr. Knox careful consideration.

**A USEFUL TABLE.**—The following little table is suggested as useful at the discount desk. It is conveniently written on the right-hand margin before beginning the work for the day:

TUESDAY, November 23, 1886.

				<i>November 10</i>
				<i>December 41</i>
				<i>January 72</i>
				<i>February 100</i>
				<i>March 131</i>

That is to say, to the end of November (including the three days' grace) is ten days, and to the end of December is 41 days, etc. Thus, a note discounted November 23d and due March 3-8 has 108 days to run. If the day of maturity is included in the calculation it makes one day more all through the table.

**A NEW DEPARTMENT.**—In this number we open a Special Department for correspondence under the head of "OPEN LETTERS FROM BANKERS." This is intended to include bank officers, bank clerks and other regular readers of the JOURNAL who wish to write short, business-like letters of interest to the banking community. Subjects of local interest, *i. e.*, referring to the banking customs, improvements, etc., in a certain city or neighborhood will be published. Honest criticism is invited, but nothing of a personal nature likely to give offense will be admitted. It is especially requested that matters of financial policy, business methods, and practical banking questions be discussed therein.

The editor of the JOURNAL receives many letters from subscribers and others interested in the banking business, and some of these may properly find a place in this Department.

"Open Letters" will, we hope, furnish a valuable interchange of ideas from very many of the JOURNAL's readers. Communications will be printed with the writer's name attached, or otherwise, as preferred, though the author's name must be furnished for our protection whether it is to appear in print or not.

### OPENING A LEDGER.

The adage "Well-begun is half-done" applies as forcibly to opening a ledger as it does to larger things. It is a good point to arrange the accounts so that they can be found without constantly referring to the index. This can be done by placing them in strictly alphabetical order, leaving a proper number of pages for each account and a reasonable space at the end of each letter for new accounts. Where there are several accounts of the same name sub-arrange according to first names and also place single names first, then names with titles, then firms, and then corporations. For example take the following arrangement: A. F. Banks; R. M. Banks; S. J. Banks; Th. Brown; Th. Brown, Executor; Th. Brown, Trustee; Brown & Banks; Th. Brown & R. M. Banks, Trustees; Brown Publishing Co. Where this arrangement is thoroughly carried out it is an easy matter to find any account on the ledger. Upon opening the ledger at random one knows at once which way to turn for the desired account. Again, by arranging checks and deposit tickets in the same order the postings are much more easily made and proved than where the accounts are scattered at random. When a Book-keeper becomes used to a certain order he is much less liable to make errors in posting. A new man taking the desk either permanently or only for a few days has no difficulty in learning the order, because it is arranged on an intelligent principle. Some Book-keepers prefer to place the large accounts first, but this is not as good as the alphabetical plan, because the determining exactly which of the medium-sized accounts are large and which are small introduces an element of confusion and uncertainty. The ledger should be headed and the index made out at leisure before the day on which the amounts are to be transferred from one ledger to the other. In adding a ledger a good many Book-keepers add in pencil immediately under the ink figures. It makes a neater appearance, however, to have separate columns for the additions, thus:

#### BROWN & BANKS.

1886.					1886.				
Oct.	1			2 145 67	Oct.	1			7 326
	2			328 96		2			1 050 19
	3	4 255 87		1 781 24		4			963 25
	4			327 08		5			3 500
	"			1 000		6	Dis.	14 025 61	1 186 17
	5	6 082 95		500					

By this arrangement the necessity for constant additions is avoided and fresh additions are readily proved by trying back to a previous addition.

**Methods and Machinery of  
\*PRACTICAL BANKING.**

CONSISTING OF BRIEF DESCRIPTIONS AND SUGGESTIONS RELATIVE TO THE  
METHODS OF CONDUCTING THE BANKING BUSINESS; WITH APPROVED  
MODELS OF BLANK BOOKS AND FORMS FOR THE USE OF  
BANKS OF DISCOUNT, SAVINGS BANKS, ETC.

[Prepared expressly for the JOURNAL by the Cashier of a long-established bank, who had over twenty years' experience in practical banking, and who always sought for better and safer methods.]

**CIRCUITOUS COLLECTION ROUTES.**

Under collection arrangements in vogue and constantly on the increase, banks often send their collection paper to the points where it is payable over routes not only far from direct but so extremely circuitous as to throw upon the senders a responsibility for not exercising diligence in case of non-payment and return of the paper. Interior banks are constantly competing for the Clearing-House city banks' work of collection and they sometimes contract to make collections for districts so wide as to embrace many points far out of the natural line of connection between the bank for which they are collecting and the point of payment of the paper received. Banks should be very cautious about entering into wholesale collection arrangements which have this element of danger and are so unbusiness-like in their character. Where the paper handled is small the work may run along without much risk, but a day will come when a check or draft for a large amount may linger so long on its collection travels as to take on an alarming aspect if after many days it returns dishonored to its owners. There is little need of giving any pointed illustrations of the objectionable workings of these round-the-horn methods of making collections. Every banker almost daily observes the absurdity of some collection trades of this description which have been made by one bank or another. Not infrequently a bank in a central city finds collections which it has sent to a bank in another State to be collected coming back again through some third bank to be placed once more in its collection line under some other wholesale arrangement. A note of caution in regard to this matter should be all that is needed.

**EVADING COLLECTION BARGAINS.**

Banks are expected to be exceedingly systematic and correct in the administration of their internal affairs. When a customer goes to a bank with a suggestion that there has possibly been an error in its interest computations, notices sent out, or some other thing, he often hedges against what he fears may have been his own error by venturing the polite remark, "The banks are always right, so I suppose I must be wrong." Banks should be correct standards in matters belonging to a higher range of duties than the management of the internal details. They should be just and honorable in their dealings with the public and other banks. A point of neglect in this regard relating to the collection business, and which may not come under the personal observation of many bank officers who may read this paragraph, is as follows: Under the most common collection arrangements of the period a bank in a Clearing-House city—Boston, for instance—will make an agreement with some centrally-situated bank in a neighboring State to make

\* Practical Banking Series—Part XXVIII.

These papers will be continued through the 1886 volume of the JOURNAL. Copyright, 1884. All rights reserved.

through it its collections which are payable in that State. The contract under such an arrangement is very likely to be that the collecting bank shall make the collections in question at par, remitting for the same once a week or once in ten days, or something of that sort, depending for its remuneration upon the average balance which the business will under this plan yield. So far so good. The collections in this instance may be supposed to range in amount from checks or drafts of \$10 to those of \$1,000 or more. But when some deposit transaction leaves on the hands of the Boston bank a draft of, say, \$25,000, payable at a handy point in the State alluded to, in such a case the duty of the Boston bank would be, of course, to send it for collection to the correspondent with whom it has made the arrangement referred to. If it does not do this and sends this large collection to some other bank in the locality where the draft is made payable for the purpose of getting, on account of its size, a cheaper collection rate than it would receive from its regular correspondent, it violates both the letter and the spirit of a contract which it has deliberately made and commits an act which is decidedly reprehensible. The proper way of action under the circumstances would be to let the Boston bank do as it had agreed—send the large check to its regular correspondent, simply calling attention to its unusual size and asking on that account for as early a remittance of its proceeds as the collecting bank may deem just and equitable in view of the fact that the periodical remittance arrangement was not based on the expectation of such large transactions.

#### COUNTRY COLLECTIONS.

Under the present system practiced by country merchants of settling their city bills by remitting checks on their home banks, the interior banks do a vast amount of what may be termed a retail collection business. These banks are not as a general thing strong in the matter of staff workers. In many country banks the Cashier does the entire work of the institution—opening the bank in the morning, discharging the duties of Book-keeper, Teller and Collection-Clerk during the day and shutting up at night. Bankers who are thus crowded with hard work soon learn to perform every branch of their labors in the easiest manner. They use all the short-hand processes that are available and endeavor to mark out new quick cuts to desired results. In illustration of this point take the following cunningly-devised form of a letter of a country bank for returning unpaid collections to its correspondents. This letter inclosed, as will be seen by the record, an unpaid draft, to which the drawee had replied that he would "write or interview the drawer." The table of "excuses" is certainly a comprehensive and ingenious one:

#### FIRST NATIONAL BANK,

Southampton, Mass..

*November 11, 1886*

*Sight draft on Noyes Bros. returned herewith.*

*Reasons for refusal checked below.*

*Express charges ..... cents, which please remit. S. A. MAY, Cashier.*

Parties cannot be found.

Notice given, but no response.

Parties have written.

Draft not according to agreement.

**DISCOUNTS FOR SHAREHOLDERS.**

One provision of the National Bank Act is as follows: "No bank shall loan or discount on the security of shares in its own capital stock unless such security or purchase shall be necessary to prevent loss upon a debt previously contracted in good faith." When shares are taken under the contingency last named the Bank Act demands that they be sold within six months. This provision has some points to recommend it, but it is open to serious objections. Every practical banker knows that cases are often coming up where deserving shareholders who are little accustomed to negotiating loans, and seldom in want of bank accommodation, very naturally come to "their bank" (that is, to the bank in which they are old shareholders) with their stock certificates asking for some temporary advance of money on their shares. In instances of this kind first-class security is offered by parties who seem to have a reasonable claim for loans. They may have no other collaterals to offer, but, unless the bank can introduce them to some other bank where these shares can be legally pledged, applicants of this type go away disappointed. As these negotiations are almost always of a moderate size it is possible that a practical way out of the difficulty might be found in an amendment to the Bank Act permitting banks to loan limited sums to any one person upon a pledge of their own shares. The ideas of the original framers of the Bank Act were correct enough in theory. They wished to prevent promoters of banking schemes from having an opportunity of carrying along their unpaid shares in the loans of the banks which issued them.

**STOPPING PAYMENT OF BONDS AND COUPONS.**

Where such bonds and coupons are not of the registered or (as Londoners term them) inscribed class their payment cannot, speaking in general terms, be effectively stopped. There are, of course, exceptions to this rule. Common law, custom and common sense demand that all persons shall exercise caution and transact business with their eyes open so that no opportunity can be taken advantage of to further schemes of fraud. It would be easy to imagine cases where judges and juries might hold purchasers of stolen coupon bonds or coupons liable for not exercising protective care and prudence in transactions incident to taking them. Whenever cases of this character are brought into Court they are settled as far as practicable in accordance with the surrounding circumstances and the laws and customs governing in similar instances. Broadly stated, the ground taken in business and financial circles in regard to stopping payment of bonds and coupons is that so squarely assumed by the United States in its coupon transactions. The Treasury Department does not now attempt to caveat or stop payment of lost or stolen coupon bonds or coupons, or to assume the slightest responsibility in deciding questions of disputed ownership, but recognizes only the *bearer* as entitled to payment. Courts have decided over and over again that a coupon bond payable to the bearer is good in the hands of an innocent and *bona fide* holder who has obtained it in an innocent manner by honest purchase at a reasonable market price, though the bond may have been lost by or stolen from another person. Bankers and general dealers in securities often buy and sell bonds which have been very extensively advertised as lost or stolen and their payment "stopped." It is easy to see why this position regarding coupon bonds and coupons assumed by the Government, and which has been generally received as a correct one, is the only ground which can be deemed consistent with the exigencies of cases likely to arise. The only practical way out of this stopping-notification business is to take no cognizance of the caveats. The shower of them which are continually falling upon the banks finds its way nowadays into waste-paper baskets. It is absolutely impossible for the banks and bankers to compare the rafts of coupons which pass through their hands for collection with these lists of the marks and numbers of stopped coupons, even if they attempted to preserve and keep the run of them. This question is very like that of stopping Bank of England notes. Notices of such stoppages of payment are being constantly advertised in London papers and sent to the Bank of England. The bank will pay all its genuine notes held by honest

hands whether stopped or not. The only advantage of the notifications is the use which may be sometimes made of them in tracing back stolen notes to thievish hands. The Bank of England lends a hand in this work, for when stopped notes are presented there full observation is taken by comparing them with the marks and numbers of the lists and notifications of the lost or stolen notes which are always kept at work in the bank, and the presenter may be called upon to show where he received them. Outside of the bank the lost and stolen notes which have been "stopped," travel as well as any others, since it is utterly impracticable for the public to make any discrimination. In this country attempts have sometimes been made by large losers of coupons and coupon bonds to secure from banks through the medium of the great express companies receipts for notifications of stoppages of payment delivered them. Banks should not make such acknowledgments, since they must not concede that it is their duty to recognize the binding force of these notifications.

#### STOPPING CHECKS.

A full description of the check has been left with the bank (its number, date, amount and endorsements as far as known) accompanied by a written order to stop or refuse its payment, the person making this request having discovered that it had been stolen or miscarried and wishing to make it valueless in the hands of wrong parties. At the present time, when such vast numbers of checks are drawn and almost all money settlements are made by the use of checks, while it is easy for a bank to receive and place on file a notice such as the one described, it is exceedingly difficult for the bank to undertake to insure stopping the payment of such a genuine one. This matter is daily growing more and more embarrassing to banks, especially in large clearing cities, where checks center representing the business of an immense circuit. Careful banks attempt to hedge by distinctly declaring, when requests to stop payment are presented, that they will endeavor to obey the "injunction" but cannot promise to do so. In some banks notices are conspicuously posted reading as follows: "While this bank will use due diligence it will not be responsible for checks paid, although payment of the same has been stopped." But waivers of this description have no legal force. An order from the drawer of a check not to pay it is as binding on a bank as one ordering the bank to pay it—as the check itself before it is stopped—provided both orders are drawn in a formal and proper manner. The only way out of the difficulty is, that if it becomes evident that banks cannot safely conduct business under laws and customs binding them to stop checks, legislation must be called in to help them by enactments that shall relieve them of the responsibility in question. When London banks could no longer get through their daily mass of check paying under laws and customs requiring them to procure identifications in cases of order checks, Parliament relieved them by a law permitting them to pay without identifications. The legislation we suggest would work a similar benefit in this country.

#### NOTIFYING NOTES.

A universal custom having no legal obligation behind it prevails among the banks of notifying promisors of the paper which the bank holds for collection from them for the account of its depositors or loan department. Having undertaken to do this notifying, and placed the makers of the paper in expectation of being told when and where to meet their notes and acceptances, this business should be attended to carefully and promptly. There is one system of making out and delivering these notices that has many points in its favor, which is to allow all the notices to be made out at the time the paper is received into the discount and collection departments without regard to the fact that the time of maturity is yet a great way off. Keep the notices on file in the order of their maturities and deliver them as the maturities draw reasonably near. This plan has several advantages. With the notices before him at all times, the Messenger can mail and deliver at his own convenience and fully avail himself of wholesale deliveries—that is, can pick from his file many notices for one house and deliver them in a lump. Under this system the notices should always be made out direct from the face of the paper and not

from covers or records; for by so doing notices which have been correctly drawn may correct errors in filing or covering.

#### DEPOSITORS' RATES.

The banking business as far as loaning money is concerned is in a muddle in some localities from causes which will be recognized and fully understood by most experienced bankers. The business of paying interest upon deposits has so woven itself into the banking system that its influence must now be taken into full account in any discussion of banking. Banks are so generally in the habit of paying interest upon all deposit accounts which are of respectable size that depositors of this class who do not have an interest contract expect compensation for their accounts of another sort, but well up to the proportions of that received by the accounts upon which interest is paid. This compensation is discount accommodation on what may be termed nominal terms—loans of money whenever they are in want on rates based not on the market rates but on their claims as depositors. This matter has become so difficult of adjustment and so demoralizing in its influence upon rates for loans that many bankers have at times been inclined to favor the adoption of a plan which would do away entirely with all discount obligations to depositors by paying a small rate of interest upon all important deposits and loaning their money in open market at the best rates possible, thus doing business very much on the London joint-stock bank and American trust company principles.

#### RATES FOR LOANS.

There are some general principles governing the theory and practice of bank loaning and discounting which it may be profitable to mention. In loaning money on demand, when it is strictly understood between bank and borrower that the money so advanced is positively and purely minute money—to be called in promptly whenever the bank needs it and to be paid promptly when called—banks are accustomed in ordinary times to charge low rates of interest, and are certainly justified in so doing. There are, of course, exceptions to this practice. Banks sometimes loan more or less of their funds on nominal call to dealers and others who have some real or imaginary claims upon them for accommodation of this description. This nominal demand money is taken by the borrower with the mutual understanding that it shall be repaid, not when the bank may need it and be inclined to call for it, but when the borrower no longer needs it and finds it convenient to pay it back, no matter what may be the wants or wishes of the bank in regard to it. These loans are a great convenience and accommodation to the borrower and an inconvenience to the lender. The fewer loans of this type a bank has outstanding the better for the institution. But somehow or other most banks find themselves obliged to carry along more or less of this unavallable minute money—the minute characteristic being apparent only in the fact that the borrower can pay it any minute he pleases and will not pay it one minute sooner than is convenient for him so to do. Any experienced banker will concede that “demand” loans of this character should pay the highest rates of any loans made by the banks, and all bank Managers will, when they can, charge more on them than on any class of time-paper. Again, in periods of great stringency—of panic—borrowers who have full faith that the close times will be of short duration are often glad to pay very high rates for call money rather than indulge in the luxury of a discount at the current high rates, because in this way they hope to tide over the days that may elapse before rates on time paper sink to a normal basis. During such periods sagacious bank Managers are willing to strain a point—to run up their loan a little higher than they otherwise would—in order to take on long paper at the current high rates—that is, they aim to let out as little call money as safety will allow, no matter how high it may bid, and discount all the long paper prudence will approve.

#### BILLS OF LADING.

Since the peculiar decision of the Supreme Court of the United States apparently requiring holders of bills of lading accompanying time drafts to

deliver them to the drawees on acceptance of the drafts unless otherwise instructed, the National banks of the country have not seemed to adopt any uniformity of action regarding them. At the time of the rendering of this decision the banks of New York issued circulars to their correspondents instructing them to give special instruction in any case where they desired bills of lading held after acceptance of the drafts accompanying them. Where the New York bank receives no special instructions to the contrary it invariably surrenders the bill of lading upon acceptance of the draft. In Boston many of the leading banks have taken the very safe ground that they must have from their correspondents in all cases absolute and specific instructions as to whether the bills of lading shall or shall not be surrendered. In cases where instructions are not at first sent with the drafts the mail or wire is at once used to obtain them, and, as twenty-four hours are allowed for acceptance of drafts, these required instructions ought in that time to be procurable from anywhere in the United States. This is by far the most prudent course of action and one which should be recommended for general adoption. Our reasons for holding to this opinion are found in the character of the famous Bill of Lading decision itself. A careful study of it will convince any one that the only safe course is that recommended, which has been endorsed by the most eminent counsel.

#### DIVISION OF LABOR IN A BANK.

When practicable, where the bank is large and its business extensive, it is well to have separate officers for every department of work. Safety lies in this method of administration. The different departments, when managed entirely, distinctly, and with proper system, act as checks upon and guards of each other. The situation under such methods is such that irregularities and defalcations become almost impossible except when two or more dishonest officers work in collusion. But if various kinds of bank work are to be combined under one department great care should be taken in making up the mixture. Some combinations are comparatively safe while others are exceedingly dangerous. If a bank finds itself able to get along with one Teller—an officer who shall do all the paying out and receiving—such an arrangement can be made without incurring any of the risk which might exist if the combination was of a different type. But it is always objectionable on the grounds explained to put the work of a Book-keeper and Teller in the hands of one officer. It is desirable for the same reasons that the discount and collection departments, which can if economy demand be combined together, should be kept distinct from and independent of the receiving and paying-out departments. In the largest banks, where there are very systematic divisions of labor under many heads, there will be changes and substitutions growing out of the illness and vacations of some of its officers. In making the shifts and transfers which become imperative under such circumstances Managers should carefully bear in mind the necessity of avoiding even for short periods unsafe combinations. Officers who are transferred from one department to another under pressure of necessity should be careful to see that the work they enter upon is well arranged and in an honest condition when it is turned over to them. A Teller should not expect any officer to take charge of his cash until there has been a mutual examination and assurance that the cash is all right at the time of the new departure.

#### UNPAID PAPER.

When maturing notes and acceptances held by a bank under discount or collection for the account of its dealers remain unpaid at the close of banking hours on the day of their maturity there are one of two courses for the bank Manager to take with regard to them. He may hand the paper at once to the Notary for protest (we are considering paper which bears endorsements) or, instead, dispatch his Messenger to notify either the promisor, acceptor or endorser—that is, to notify the first one likely to respond—that the paper remains unpaid. The latter course is the most judicious one in many cases. The parties to the paper who were to pay it may have forgotten it, made a

mistake in entering its time of maturity on their books, or mislaid the notices. It may happen that the non-payment is owing to some error made by the bank in leaving with the promisor a wrongly-filled-out notice which has misled him. Whatever may be the reason for the non-payment in question, it is better for a bank, where it is dealing with parties who are believed to be responsible and are supposed to be ready to meet all demands upon them, to give them an opportunity to do so and to correct their errors before handing the demands upon them over to a Notary. Such a course of action cultivates a kindly feeling between the bank and the dealer, and in the long run helps the business of a bank by bringing it favor and custom.

#### DISCOUNT TIME.

A note written payable a certain number of days from date must have its maturity ascertained by taking just that number of days and the three days of grace, without any regard to the month. Thus, a note of 90 days from November 10th matures in 93 days—on February 8th–11th. The *discount* time is a question of custom. The New York custom is to reckon the days to maturity on everything. In most, if not all, of the Boston banks the actual days are reckoned when the note is written in days, and months and days are reckoned when the note is written in months.

#### THE SIGNATURE BOOK.

In another place has been described the use of the Paying-Teller's common signature book—the indexed reference volume in which is recorded the signatures of all regular depositors including, in cases of check-drawing firms with partners, the autograph of each individual member of the concerns.

There is a further use that might profitably be made of the book in question to which it is seldom put. In it should be placed the signatures of the Cashiers and Presidents of all the banks in the town in which the institution is located and the signatures of the bankers with whom it is constantly dealing.

From time to time Assistant Cashiers are appointed in these near-by banks whose signatures are liable to crop out spasmodically on certifications and Cashier's checks. When these Assistant Cashiers are appointed the banks commissioning them send to their correspondents a circular announcing the appointment and containing the new signature. These circulars should be carefully preserved in the Paying-Teller's signature book, so that he may not be forced to rely solely on his memory when the signatures in question turn up, and that the deputies in his department, who do his work in his absence, may not have to send around to banks to inquire whether such and such a man, signing as Assistant Cashier, is a duly authorized signer for the bank.

#### IDENTIFICATION BY SIGNATURE.

Good banking permits identifications of this character under certain circumstances. Under ordinary circumstances signatures are considered only in the light of partially corroboratory evidence. But there are occasions when they must be accepted as positive and satisfactory testimony and used as a sure and reliable basis of monetary transactions. Take the letter of credit business for an illustration: A resident of the Pacific coast who has never visited the East comes to New York, a city in which he has not a single acquaintance, bearing with him to meet his cash wants a letter of credit drawn by a San Francisco bank, with stipulations upon it that it shall be honored by their correspondent in New York on proper identification of the payee. When the San Francisco bank gave out this letter of credit it took the signature of this payee and mailed it to the New York correspondent with advice of the letter issued. When the Pacific man presents himself at the New York bank with his letter of credit, asking for advances upon it, he offers his signature, which has been sent as an *avant courier* of the letter, as his only possible identification. The bank looks at the man and the letter, sees nothing about either to arouse any suspicion of irregularity, compares the signature made by the payee under their eyes with the one sent in advance of the letter, is satisfied that they are apparently the same, pays the money and takes a

voucher for it. The necessities of this branch of banking often require that such a method shall be practiced. There may be some risk in the operation, yet it is a fair business one, and must at times be assumed by any bank which is transacting a letter of credit business. The writer found that the only way out of financial difficulty when presenting a letter of credit while traveling in Europe was through the willingness of drawees to pay money to a stranger on the strength of an identification by signature.

#### TRANSFERRING SHARES TO DEAD MEN.

Below are a few points of special interest to bank Cashiers, transfer clerks and others.

Parties who are executors or administrators of deceased shareholders often present themselves at banks with share and probate certificates asking for transfers of the following character: They have perhaps made a sale or in some other way prepared themselves for a transfer of a portion of the stock upon which they are administering, but wish a new certificate for the balance in the name of the deceased holder, generally for the purpose of holding this balance, say, until they can sell the shares or make some other legitimate transfer of them. Although the issue of this new certificate for the balance is not in spirit a new issue of stock it has, nevertheless, on its face this appearance, and to make such an issue in the name of a dead person is a course that cannot be recommended. The only proper way in such a case is for the representatives of the estate—the executors or administrators—to make a direct transfer of all the stock, transferring the sold shares to their purchasers and the remaining shares to themselves. Regarding this last class of transfers it should be remembered that it is always better to transfer to and issue certificates in the name of the executors or administrators than to transfer to the estate of —, not naming the representatives of the estate. It is often questioned whether a bank has a right to demand that executors and administrators shall go through the form of making a transfer when they surrender old certificates of a deceased shareholder and take out new ones in their own names as representatives of the estate, because it is claimed that all that is necessary in such cases is that the old certificates shall be surrendered and a demand for new ones made by the administrators on the simple exhibition of probate proof that they are the legal representatives of the deceased shareholder. But it seems clear that a bank should not cancel old certificates and issue fresh ones in a new form without having behind such a retirement and reissue the most direct evidence and record that the action has been duly authorized and demanded. And what better form of proof of and support for such action can be furnished than that supplied by a formal act of transfer upon the books of the bank?

#### A MARK AS GOOD AS A NAME.

Many banks and bankers take the ground that special guarantees are required for endorsements by attorney and procuration, but no one well informed in this regard will claim that there is any need for a special guarantee of an endorsement by mark. A "signature" of this primitive Anglo-Saxon type has a good and regular standing, according to law, custom and tradition, and no one has the right to question it if it is duly witnessed. As regards the mark itself, there are no rigid rules governing its style or shape. It may be in the form of the rude cross of the Saxon signer or it may be little more than the thumb mark of the middle ages. Anything that signifies a signature will pass if witnessed. Notwithstanding the good bank authorization given this style of "writing" it is by no means a form of penmanship to be recommended. Any person who is not physically disqualified from using a pen should not make a "mark" in this country of free evening schools for adults. It is to be noted, as an important signature fact, that an attorney, if he has authority of the right character, may sign the name of his principal without expressing that he has so done under a power of attorney or by procuration. This practice is not one to be recommended, since it leads to confusion in the matter of discriminating regarding signatures. A bank was at one time in the

habit of receiving for collection the cotton drafts of a certain Southern dealer. Drawees found that these individual drafts varied in the character of the signature of the drawer and hesitated to honor them. The bank finally discovered that this drawer, who was an illiterate man, employed other men to write his name on notes and drafts, which they did under powers not requiring that their agency should be expressed.

#### INTEREST TABLES.

These have their place in practical banking, but they do not fill a very large vacancy. Discount Clerks make but infrequent use of them and very many people never think of referring to their pages. Experts in casting interest and men who, like Discount Clerks, are at all times up to their eyes in calculating interest, have not the patience to turn to interest tables for aid or even confirmation in the work of making interest calculations. Their short-hand processes of casting interest are the fruits of constant practice and quicker and better than any table processes. The experience of most practical bankers tallies with each other. A discount officer may be for years in a large bank, where scores of small business notes are almost daily ground through the loaning mill, and have standard interest tables of the period lying around, yet not make any use of them except for occasional reference where there are stubborn cases of variance in figures between himself and the dealer. For a use of this kind these tables may once in a while be in request and for this reason every bank should have them in its library. It would be out of place to attempt to decide which is to-day the best book of interest tables in the market. The advertisements in the bankers' periodicals present the claims of various interest manuals, and there are many good ones. Bank officers who wish to use such a book can easily tell by examination which suits them the best. They are all alike in their leading feature of bringing together within their two covers what may be described as a vast number of interest solutions—answers to interest conundrums, based on wide ranges of time and rates. But there are different ways of arranging these books of tables, and upon the merits of their arrangement their value hinges. The interest results have of course to be brought within limits to be determined by the question of convenience in hunting up the needed replies, and a table which attempts to give too many rates and dates must be very skilfully arranged not to defeat the end aimed at by making the task too hard and long of hunting up and applying its solutions.

#### LETTER ENVELOPES.

A reader of these articles has sent for criticism an envelope which he has patented. The point of his invention lies in the fact that it secures the final preservation of the envelope by making it a part (a fixed attachment) of the letter itself.

The rapid increase in the use of the common envelope which has sprung up within the time of many a banker who reads these papers is of curious interest. They originally came from Paris. In Europe at one time they were only used as an outer covering for regularly folded and sealed letters to preserve the latter when they were sent out by the hands of private messengers and servants. About fifty years ago the first envelopes used in Boston were made for Mr. Allyne Otis by Mr. N. D. Cotton, a venerable stationer still living, on patterns brought from Paris. Mr. Cotton got them up by hand and Mr. Otis and his friends used them after the Paris fashion. From this small beginning the envelope has spread to its present enormous use in the United States.

It is possible that the serious objections to the present common envelope may in time lead to its being thrown aside for a substitute that will not be open to criticism, or the envelope system may entirely go out of fashion and folded and sealed letters in some improved form come into general use.

#### POWERS OF ATTORNEY.

The banker who is asked to accept for himself or to guarantee for some one else the correctness of an endorsement by attorney expects that the paper of authorization under which the attorney acts will be left with his bank or

placed on file at some other bank or an equally accessible and public place. Powers of this sort—in fact all kinds of what may be termed per procuration papers—are in many cases very judiciously made a matter of public record at the offices of Registers of Deeds. In such cases the fact of the records is carefully minuted on the original power by the officers at the office of the Register of Deeds, and the record at this office is of great reference value in case evidence of the correctness and existence of the powers in question are asked for. In drawing up papers of the class discussed ready aid may be found in the books of law forms which are sure to be in the library of every bank. Below will be found an original form of a power of attorney from a husband to his wife to draw checks, collect dividends, etc. It is a model of conciseness and directness. It will have a curious interest for the reader from the fact that it was never before put in print and is the power of attorney of Daniel Webster to his wife—in Mr. Webster's own handwriting—a power taken from the files of the bank where it was actually used by Mrs. Webster :

I know all men by these presents that  
 I, Daniel Webster, have constituted & appointed,  
 & do constitute & appoint, my  
 wife E. L. Webster, my true & lawful  
 attorney, in my name & stead, or in her  
 own name, to make & draw, at all times  
 hereafter, checks, or orders for any money  
 standing my credit in the State Bank  
 in Boston; & I hereby authorize said  
 Bank & its officers to pay all such orders  
 & checks, in the same manner as if  
 drawn by myself

Witness my hand, at Boston,  
 the 4<sup>th</sup> day of January 1847—

Attest  
 Peter H. H. H.

Daniel Webster

#### DUTIES OF A BANK MESSENGER.

A Messenger is sure to be found on the staff of banks which have many departments of work and a number of officers. In fact, almost all banks,

small as well as large, are apt to have a Messenger even if they double up in some departments and run along on a limited corps of clerks. Some of the great banks in the Clearing-House cities have a large number of Messengers, and there are several which have at least a dozen. The duties of this officer vary with the circumstances under which he labors. In some banks he may give his whole time to what may be termed legitimate Messenger work—presenting drafts, delivering notices, making cash collections on coupons, drafts, etc., and doing the bank's post-office business in the town or city where it is situated. The Messenger in a small bank having no janitor opens the doors in the morning, closes them at night, takes care of the rooms and does all the outside errands. Honesty, accuracy and ability are qualifications essential for the proper discharge of the duties of the position.

Many faithful Messengers are doing good service who entered into the work when mature in years, having spent a large portion of their lives in other occupations from which they have turned to banking when unable to secure employment at their trade. Men of this class are generally content to work without the wish or hope for promotion, since their ambition in life as well as capacity for getting on have been somewhat weakened by service and disappointment elsewhere. Other Messengers are alert and bright young men who have gladly stepped on to this lower round of the bank ladder with the determination to spring to a higher rung at the earliest opportunity.

The position has many advantages, viewed as a school of preparation for higher duties, and any young bank Messenger may reasonably hope to secure rapid promotion if he does his duty and avails himself of every opportunity of qualification for a higher place—that is, provided he has natural fitness for the banking business. If he has not he is pretty sure to remain in the first place he is put on entering a bank. Promptness, carefulness and courtesy are highly desirable traits in a bank Messenger. He should be a person capable of acting strictly in the line of his orders and should, in a strict sense of the phrase, be but an intelligent machine, for in many cases he is called upon to bear messages and do general errands the bearings of which his superiors have no time to explain and of which he can perhaps know but little.

#### INTEREST.

*Interest at Six Per Cent.*—The usual modes of casting interest are founded upon the idea that the year is cut into twelve months of thirty days each. Though this is not exactly correct the results obtained are sufficiently exact for most practical purposes. At six per cent. per annum the interest on \$1 for one year is six cents: for two months, or sixty days (one-sixth of a year), it is one cent, or one-hundredth of one dollar; for six days (one-tenth of sixty days) it is one mill, or one-thousandth of one dollar. To find the interest for two months point off the two right hand figures of the dollars as decimals, thus:

The interest on \$2,530 for two months is .....	\$25 30
The interest on \$2,530 for six days is .....	\$2 53

And the interest on \$2,530 for two months and six days is .....

\$27 83

If time be divided into aliquot parts, fractions of the principal may be taken for the given time; thus interest at 6 per cent per annum for two months, or sixty days, is 1 per cent. of the principal.

For 6 days it is 1-10th of 1 %.	For 8 months it is $1\frac{1}{4}$ %.	For 9 months it is $4\frac{1}{2}$ %.
For 12 days it is 2-10ths of 1 %.	For 4 months it is 2 %.	For 10 months it is 5 %.
For 15 days it is $\frac{1}{4}$ of 1 %.	For 5 months it is $2\frac{1}{2}$ %.	For 11 months it is $5\frac{1}{2}$ %.
For 18 days it is 3-10ths of 1 %.	For 6 months it is 3 %.	For 15 months it is $7\frac{1}{2}$ %.
For 20 days it is $\frac{1}{2}$ of 1 %.	For 7 months it is $3\frac{1}{2}$ %.	For 20 months it is 10 %.
For 24 days it is 4-10ths of 1 %.	For 8 months it is 4 %.	For 25 months it is $12\frac{1}{2}$ %.

This is founded on what is called the two hundred months method, in which period simple interest will equal the principal.

*Accurate Interest.*—The Treasury Department pays accurate interest, founded on 365 days in the year. To find accurate interest, count the actual number of days, find one year's interest on the given sum at the given rate

and take as many 365ths of this interest as there are days in the given time, thus: Wanted true interest on \$1,000, at 6 per cent., from May 17th to July 18th, or 62 days. One year's interest is \$60.  $\$60 \div 365 = 0.16438 \times 62$  days = \$10.19177, or \$10.19 true interest. Or, multiply one year's interest on the given sum at the given rate by the actual number of days and divide the product by 365, thus:  $\$60 \times 62 = 3720 \div 365 = \$10.19177$ , or \$10.19 accurate interest.

**Interest at Various Rates.**—Interest at many rates may first be computed at 6 per cent. per annum, and aliquot parts of itself added or subtracted in the ratio of the given rate, as follows:

For 10 per cent. add .....%	For 5 per cent. subtract ..... 1-6
For 9 per cent. add ..... $\frac{1}{2}$	For $4\frac{1}{2}$ per cent. subtract ..... $\frac{1}{2}$
For 8 per cent. add ..... $\frac{2}{3}$	For 4 per cent. subtract..... $\frac{1}{3}$
For $7\frac{1}{2}$ per cent. add ..... $\frac{1}{4}$	For 3 per cent. subtract ..... $\frac{1}{4}$
For 7 per cent. add ..... 1-6	For 2 per cent. subtract .....%

The interest on \$100 at 7 3-10ths per cent. per annum is two cents per day.

### COSTS OF COLLECTING.

Every bank desires to conduct its collection business by the best system, and to do it at the least possible expense and minimum of work, responsibility and delay. Hints which may help towards the attainment of these ends must be of value. There is one point which has not been noted in these articles. Every bank should keep a carefully-indexed book—the ledger-index form is the best—containing a full record of all the collection arrangements it has in force with the various correspondents to whom it is in the habit of sending paper for collection and remittance. Thus, for instance, it may be desirable to know, on the instant, what sort of a collection trade the bank has negotiated with its corresponding bank in Worcester. An immediate reference is made to the letter "W" in the indexed manual, which may read as follows: "Worcester remits at par three times a month." This statement, in abstract, is easily understood by any bank man. Useful information may be incorporated into this handy book in regard to collection prices. There are hosts of points in all parts of the United States to which National and other banks doing a large collection business are constantly forwarding for collection notes, drafts and checks. With these points they have no fixed collection arrangements. In sending paper to correspondents of this class the sending bank turns to its banker's almanac, selects what it believes to be the best bank at the given point—the bank, perhaps, having the largest capital and surplus—and to that bank sends the paper, trusting that it will collect it promptly and at a reasonable price. A condensed record of its experiences with these "casuals" should be made in the lettered collection *vade mecum* described, so that the cost of getting home the funds from them may be quickly arrived at in any future time when paper payable in that town may be offered for collection or discount.

### EXCHANGE OF COLLATERAL.

A few points relative to this business deserves particular notice. In making time and demand loans upon collateral of bonds, shares, etc., bank Managers are very particular at the start to scrutinize the character of the collateral taken. Every item of the securities upon which the advances are made are carefully passed upon by the responsible management of the bank. So far so good. But the notes have no sooner passed into the loan of the bank than there begins to be effected in very many cases a series of changes of collateral. The pledgors, in the regular course of business, often sell portions of the original collateral from time to time, and then they withdraw these marketed portions and in their place substitute new purchases which they have made. Before the loan is finally settled the collateral has in very many cases been so completely changed as to be entirely unlike that which was pledged at the start. In very many banks an insufficient supervision is indulged in by Managers, Directors, etc., in regard to these changes. The details are attended to by the officers of the discount department, and as the collaterals themselves

are often left in the hands of these officers it is very natural to slide into easy-going habits regarding this business. Old collateral is often delivered and new collateral taken on without that careful consultation with Managers which the situation demands. To obviate this difficulty a book should be kept whose special work should be that of presenting a clear and detailed record of all the changes in question made the moment the changes are made. This book should be constantly open to the inspection of the Manager and Directors, and they should be expected to make their check marks of recognition and approval of these current changes.

#### NOT A MODEL BANK.

In these papers have been presented what may be termed ideal—model—methods of banking. A good point of instruction in these lessons may be scored by presenting in a brief manner a picture of a bank whose methods and machinery are in all points nearly as bad as they can be. This story will be both amusing and instructive to good bankers. The bank in question is an old-fashioned institution, located in a small interior town, and is in good and regular standing. The men who run it were not born bankers, yet they are honest men. Its books are kept upon a sort of homespun system from which it would be impossible to gather any forms for reproduction as models. Its pass-books are not balanced at any regular time. They get them in when they find it convenient to do so—say on an average of once in three months. Trial balances and general settlements of the leading books of the bank are not considered important adjuncts to the payment of a dividend or the preparation of reports. Certificates of deposit payable on demand are issued upon which their holders are allowed to draw checks at their pleasure, returning the original certificates when the money is all drawn out—if they do not forget to do so. The letters which the bank sends out are not copied and none which it receives are filed or preserved. They are all thrown into the waste basket. The same disposition is made of all the tickets and other papers used in the current business of the bank. One might go on indefinitely describing the ways of this very unsystematic institution where everything in methods is about as it should not be. The example proves that it is possible for a little bank in honest hands to run along for years without great disaster and not have any system in managing the details of its business, but it is a possibility which a bank should not experiment upon.

#### SHALL WE PROTEST?

It was a certificate of deposit, regularly issued by one of the strongest National banks. Its amount was \$5,000. In time it came back for payment through the Clearing-House from another National bank, bearing numerous endorsements besides that of its first payee, because it had passed through many hands, being made payable from one to another. When the Paying-Teller of the issuing bank came to pass upon this certificate before he should finally pay and cancel it he found one clearly demanded endorsement missing. One payee had omitted to put his name to the voucher. The certificate was for this reason at once stopped and returned to the bank last holding it and from whom it had been received through the clearing settlement. This latter bank refused to guarantee the missing endorsement, and, after a second regular demand upon the bank issuing the certificate, protested it for non-payment and returned it with charges. This case is of an instructive character, since the question at issue under it is whether there is any need of or any advantage in protesting checks, certificates of deposits, etc., of whose face there is no shadow of doubt and which are sure to be good when presented, simply because of fully conceded irregularity of endorsements or an absence of needed endorsements. It seems clear enough that there is not the slightest need of protesting under such circumstances, and the protesting bank, in the case we have described, was clearly in error in making a protest. What possible need is there of protesting a certificate of deposit which is sure to be paid whenever presented properly endorsed simply because the bank which has issued it refuses to pay it because it is not properly endorsed? Protests are made to hold endorsers; but what object is there in securing endorsers if a bank is entirely satisfied with the promisors?

## BANKING LAW.

### \* LEGAL DECISIONS AFFECTING BANKERS.

#### NATIONAL BANKS HAVE THE RIGHT TO BORROW MONEY AND PLEDGE THEIR ASSETS AS COLLATERAL—AN IMPORTANT DECISION.

The following is a decision made by Judge Bond, of the Circuit Court of the United States for the District of Maryland, the full text of which with a complete statement of the case never having been previously published. It will be seen that Judge Bond decides that a National bank has power to borrow money and pledge its assets as collateral to secure repayment thereof, which is contrary to the interpretation of the law heretofore given by the Comptroller of the Currency.

Section 5,136 of the Revised Statutes provides that a National banking association, upon filing the necessary papers in the office of the Comptroller of the Currency, shall be a body corporate, and in the name designated in the organization certificate shall have authority to exercise by its Board of Directors or duly authorized officers or agents, subject to law, all such incidental powers as shall be necessary to carry on the business of banking, by discounting and negotiating promissory notes, drafts, bills of exchange and other evidences of debt, by receiving deposits, by buying and selling exchange, coin and bullion, by loaning money on personal security, and by obtaining, issuing and circulating notes, according to the provisions of the title.

Comptroller Knox held that this section contained the entire powers possessed by the National banks, among which was *not* the right to borrow money, and that all powers not here enumerated are withheld, and this decision has been the rule of the office since the organization of the National banking system. The case was as follows:

Plaintiff, the Receiver of the Exchange National Bank, of Norfolk, Va., brought suit in the United States Circuit Court for the District of Maryland against defendants, citizens of Maryland, and doing business as bankers under the firm name of Alexander Brown & Sons, to recover certain securities of the bank pledged in the hands of the defendants, and for settlement of the accounts.

For a number of years before its failure the Exchange National Bank, of Norfolk, had had close and important business relations with the defendant firm of Alexander Brown & Sons, and of late years, especially, since the great development and increase of the cotton trade of Norfolk, these transactions had been large and frequent. The bills drawn against cotton shipped from Norfolk and negotiated through that bank were transmitted to Europe and collected through the firm of Alexander Brown & Sons. In connection with this cotton business, the bank, for a series of years, required large sums of money at particular seasons, some of which it borrowed from that firm. Its needs were greatest in the early Autumn, and when the cotton season was over such loans were repaid. The money so borrowed at six per cent. was lent out by the Exchange Bank at ten or twelve per cent., and when the use of it ceased to be profitable to the bank it repaid the firm. On October 2, 1883, the defendant firm discounted for the bank its two notes, each for \$100,000, each with a contract as to collaterals, which was a part thereof, and placed

\* All the latest Decisions affecting Bankers will be found in this Department as early as obtainable. A reasonable charge is made for Special Replies asked for by correspondents and not authorized for publication.

the proceeds to its credit, with advice thereof to the bank, which was duly acknowledged. One of these notes fell due on January 2, 1884, and was then, at the request of the bank, extended until April 4, 1884, when it was paid by the bank by its check to the order of Alexander Brown & Sons. The other fell due on February 4, 1884, and was then, at the request of the bank, extended for three months. It became due in May, 1884; but at that time and long afterwards the money market was very stringent and the demand for money urgent because of the failure of banks and business houses in New York, and the Exchange National Bank requested and received renewals of the last-mentioned note for \$100,000 from time to time. The last renewal was made by note dated December 15, 1884, which was executed on behalf of the bank by John B. Whitehead, its President. This note fell due after the failure of the bank and remains unpaid. The entire proceeds of the discounts so made were paid to the Exchange National Bank and received by it in the course of its business. John B. Whitehead had been for many years the President and George M. Bain, Jr., the Cashier of the bank, and the dealings of the bank with the firm had been from the first, and were throughout, conducted on the part of the bank by its official correspondence, its letters being signed by one or the other of those officers. The transactions of the firm with the bank were, from first to last, conducted in absolute good faith and under the conviction that the officers of the bank were acting also in good faith, with full authority on behalf of the bank and for its benefit.

After the failure of the bank it for the first time appeared that for many years before its failure the Directors left the whole management of the business and affairs of the bank to its executive officers, chiefly to Mr. Bain, the Cashier, and that the Directors met only at intervals of six months to elect officers and declare dividends.

At frequent intervals, as a guard against mistakes, Alex. Brown & Sons were in the habit of mentioning in their letters to the bank the balance of its account on their books at the dates of such letters respectively, and of asking if they were correct, to which the bank as often replied, admitting those balances to be correct. In addition to this the firm semi-annually rendered to the bank a detailed statement to the 31st of December and the 30th of June of each year.

The securities which had been pledged to the firm of Alexander Brown & Sons to secure the various notes of the bank or any renewals thereof, and remaining in their hands at the time of the failure, had been pledged by Whitehead, as President, acting in behalf of the bank, not only as security for such notes but for any other indebtedness of the bank to them.

In addition to the indebtedness on the note defendants had issued a letter of credit, at the request of the President and Cashier of the Exchange National Bank, to the Hogdon Spencer Company, customers of that bank, through Brown, Shipley & Co., of Liverpool, by which the Hogdon Spencer Company were enabled to import a cargo of guano, which was stored in warehouse. Certain sales of this guano having been made, the proceeds were deposited in the Exchange Bank by the Hogdon Spencer Company, and the money so paid was credited on the books of the bank to the account of "Guano per Plantian," although the understanding was that it should be deposited to the credit of the defendants. At the time of the failure of the bank the sum of \$23,160 stood to the credit of that account. Defendants insisted on holding the securities pledged as collateral and applying the proceeds not only to the payment of the note for \$100,000 and interest but also to the payment of the \$23,160 standing to the credit of the account "Guano per steamer Plantian" at the time of the failure. Plaintiff claimed that the loan was unauthorized by the Directors of the bank, that the President had no power to contract it, and that the contract was null and void; further, that the bank had no power under the Acts of Congress to borrow the money and execute the note, that the pledge was illegal, and that defendants could not legally hold the securities either for note or deposit account. Plaintiff therefore prayed the Court that the defendants be required to make proof of any claim as general creditors, without lien on any securities of the bank, for

the payment of said note of \$100,000 and said deposit account, that defendants be restrained from selling the securities, and that it be decreed that they cannot sell them for either of said alleged advances. The Court

*Held*, We are of the opinion that the bank had power under its charter to borrow money and pledge its assets as collateral to secure repayment thereof, and we find that in this case any want of specially delegated authority by the Board of Directors to the officers of the bank is supplied by the acquiescence on their part to be presumed from the undisputed facts with regard to the management of the bank and from the long-continued course of dealing between the bank and respondents in respect to borrowing money for the use of the bank upon pledge to them of its securities as collateral.

With regard to the money in the bank at the time of its failure arising from the sales of guano pledged by the Hogdon Spencer Company to respondents to secure a letter of credit issued by respondents in favor of the Hogdon Spencer Company, we find that the Hogdon Spencer Company paid this money to the bank to release the several deliveries of guano for which the bank by its officers issued orders in favor of the Hogdon Spencer Company to the Warehouse Company in which the guano was stored. We find that the money was received by the bank under authority from the respondents and under instructions to place it to respondents' credit and advise them. We find that the bank neither put it to respondents' credit nor advised them, but kept it, and that at the bank's failure this money constituted a debt due by the bank to respondents, to secure which respondents have a right to hold the property in their hands both under the agreement pledging the collaterals and under their general bankers' lien.

Bill dismissed.

William H. Peters, Receiver of the Exchange National Bank, of Norfolk, Va., vs. George S. Brown and others, Circuit Court of the United States, District of Maryland, July 6, 1886.

#### STATE TAXATION OF NATIONAL BANKS—AN IMPORTANT DECISION.

[NOTE.—We publish in this number, by reason of its importance, the full text of the decision of Judge Wallace, of the United States Circuit Court for the Southern District of New York, on the subject of the taxation of National bank shares by the State of New York. It is provided by Act of Congress that the taxation of the shares of National banks by States "shall not be at a greater rate than is assessed upon other moneyed capital in the hands of individual citizens of such States." Many National banks have claimed that the principle of equality intended to be established by this Act between capital invested in such shares and other moneyed capital has been violated, and that they are taxed at a higher rate by the States than other moneyed capital in the hands of individual citizens. The case of *Boyer vs. Boyer*, decided by the Supreme Court of the United States in 1884 (113 U. S., 689), was one in which this claim was made as to the State of Pennsylvania, and it was there decided, after a review of the law of that State, that, "in respect of county taxation of National bank shares, there has been, and is, such a discrimination in favor of other moneyed capital against capital invested in such shares as is not consistent with the legislation of Congress," and the collection of the tax levied under an assessment upon such National bank shares, it was held, could not be enforced.

In the State of New York, in the recent case of *McMahon vs. Palmer*, decided by the Court of Appeals of that State (reported in *RHODES' JOURNAL OF BANKING* for July, 1886, page 516), the same claim was made, but the Court held in that case that a "careful examination of the statutes and a comparison of the burdens laid upon the property, capital and business of the people under the laws of the State will show that the money invested in National banks is subjected to no greater burden than that imposed upon other species of assessable property."

The present case also arises under the laws of New York, and the decision of Judge Wallace is to the same effect as that in the case of *McMahon vs. Palmer*. The Court holds that, if the position of the complainant is correct that in the taxing system of the State there is a discrimination between the taxation imposed upon National bank shares and that imposed upon the other moneyed capital of individual taxpayers which is hostile to the former, there can be no valid assessment of National bank

shares, and these shares will be relieved from any contribution whatever to the general burden of taxation; but after an exhaustive review and consideration of the statutes of the State and the decisions of the Supreme Court of the United States, the Court reaches the conclusion that there is not manifested any "unfriendly discrimination on the part of the State as between the shares of National banks and moneyed capital generally"; that the exemptions from taxation, when "compared with the exemptions considered in *Boyer vs. Boyer*, are insignificant," and "are not of a character to justify the complainants' contention," and states that "the conclusion reached is in accord with the recent decision in *McMahon vs. Palmer*, where it was held by the Court, on a full consideration of the question presented here, that the taxing system of this State does not result in taxing National bank shares at a greater rate than is assessed upon other moneyed capital in the hands of individual citizens of the State."

This decision will undoubtedly be appealed and the case carried to the Supreme Court of the United States for final adjudication.

As the matter at present stands, we have the decision of the Supreme Court of the United States in the *Boyer* case, holding that, in Pennsylvania, National bank shares have been unjustly taxed, and the decision of the Court of Appeals of New York and of the United States Circuit Court for the Southern District of New York to the effect that the laws of New York do not impose unjust taxation upon such shares. Suits are also pending in other States on behalf of certain National banks located in Chicago, Boston, and other places, to restrain the collection of taxes upon the same grounds. Decisions in these cases will be awaited with interest.]

UNITED STATES CIRCUIT COURT, SOUTHERN DISTRICT OF NEW YORK.—The Mercantile National Bank, of the City of New York, vs. the Mayor, etc., of the City of New York, and George W. McLean, Receiver of Taxes.

Opinion of WALLACE, J.:

"Thirty-five National banking associations located in the city of New York have brought suits against the defendants to restrain them from collecting taxes levied pursuant to an assessment made in January, 1885, upon the shares of the respective shareholders of the several associations. This suit is one of the number, and is here upon a motion for an injunction *pendente lite*. As the case turns upon questions of law the decision of this motion will be practically a final decision by this Court of the rights of the parties. The fact that these associations pay in round numbers a million of dollars annually in taxes upon the shares of the shareholders, and more than one-fourth of the total taxation upon personal property in the city of New York, sufficiently indicates the importance of the controversy to both parties. The case has been prepared with great thoroughness and has been elaborately and ably argued.

"The position of the complainant is that the New York State system of taxation creates or effects a discrimination between the taxation imposed for local purposes (which is everywhere the most onerous taxation) upon National bank shares and that imposed upon the other moneyed capital of individual taxpayers, which is hostile to the former and forbidden by the Act of Congress, by which alone authority exists for any taxation of such shares by the States. The theory of this discrimination is that so much of the moneyed capital of individual taxpayers is exempt from assessment by the State laws that what remains, including the capital represented by National bank shares, is subjected to a higher rate of taxation than is assessed upon the moneyed capital generally of the taxpayers. If this position is correct there can be no valid assessment of National bank shares for taxation in this State, and these shares will be relieved from any contribution whatever to the general burden of taxation.

"State taxation of National bank shares is lawful only by the law of Congress first enacted as a provision of the National Banking Act of 1864, which, as amended by the Act of February 10, 1868, is now embodied in section 5,219 of the Revised Statutes of the United States. This section provides that 'the taxation shall not be at a greater rate than is assessed upon other moneyed capital in the hands of individual citizens of such State.' As Congress was conferring a power on the States, which they would not otherwise have had, to tax these shares, it undertook to impose a restriction on the exercise of that power manifestly designed to prevent taxation which should

discriminate against that class of property as compared with other moneyed capital. If the greater part of the moneyed capital of individual taxpayers of the State is exempt from taxation by the State laws, the rule of equality of burden between such capital and the capital invested in National bank shares, which Congress intended to prescribe as a condition of the permission given to the States to tax these shares at all, is violated, and the State whose system permits the discrimination cannot justly complain because National bank shares are wholly exonerated from taxation. This is the result of many decisions of the Courts in construction of the law of Congress. The most recent expression of the Supreme Court of the United States upon the subject is found in *Boyer vs. Boyer* (118 U. S., 689), where it is declared that 'while exact uniformity or equality of burden cannot be expected under any system, capital invested in National bank shares was intended by Congress to be placed upon the same footing of substantial equality in respect of taxation by State authority as the State establishes for other moneyed capital in the hands of individual citizens, however invested.' In that case the doctrine was applied to a state of things found in the taxing system of the State of Pennsylvania, by the laws of which State there appeared to be exempt from taxation for local purposes all mortgages, judgments or recognizances whatever, all moneys due or owing upon articles of agreement for the sale of real estate, all loans issued by corporations which were liable to pay a designated State tax, all bonds or certificates of indebtedness of any railroad company incorporated by the Commonwealth, and all shares of stock in the hands of stockholders of any corporation of the State liable to pay a specified tax into the State treasury. The Court, in the opinion, used the following language: 'Upon such facts, and in view of the revenue laws of the State, it seems difficult to avoid the conclusion that in respect of county taxation of National bank shares there has been and is such a discrimination in favor of other moneyed capital against capital invested in such shares as is not consistent with the legislation of Congress. The exemptions in favor of other moneyed capital appear to be of such a substantial character in amount as to take the present case out of the operation of the rule that it is not absolute equality that is contemplated by the Act of Congress—a rule which rests upon the ground that exact uniformity or equality of taxation cannot in the nature of things be expected or attained under any system. But, as substantial equality is attainable, and is required by the supreme law of the land in respect of State taxation of National bank shares, when the inequality is so palpable as to show that the discrimination against capital invested in such shares is serious, the Courts have no discretion but to interfere.' The bill of complaint in the present case is framed to bring the controversy within the scope and principle of this decision. The allegations are that under the laws of this State there is exempted from taxation all moneyed capital represented by shares of stock in all incorporated companies of the State liable to taxation on their capital, exclusive of banks, banking associations and trust companies; all represented by shares of stock in trust companies and life insurance companies incorporated under the laws of this State; and all represented by deposits in the savings banks of the State and investments in the bonds and stocks of the State and the bonds created by the villages, cities, towns and counties of the State. The bill also alleges that under the laws of the State as construed by the highest Court of the State all moneyed capital of individuals invested in the shares of stock corporations of other States or foreign companies is not taxable. It sets out the amount or value of the respective classes of invested capital which escaped taxation in the year 1885 under the operation of these laws. If the averments are true the exemptions aggregated over \$2,000,000,000 of moneyed capital, while the personal property actually reached and subjected to assessment in the hands of individuals throughout the State for that year was less than \$400,000,000 in valuation.

"An examination of the State system will show that, although a comparatively small part of the personal property of the taxpayers is actually reached and subjected to taxation against the taxpayers individually, the result is not attributable to the special features of the taxing system of this State, but is a

logical consequence of any system which attempts to reach personal property for direct taxation.

"By the fundamental rule of the New York State system all lands and personal estate within the State, whether owned by individuals or corporations, subject to the exemptions hereinafter specified, is liable to taxation. (Revised Statutes, Part I., chapter 13, title 1, section 1.) Personal estate is declared to include all household furniture, moneys, goods, chattels, debts due from solvent debtors (whether on account, contract, note, bond or mortgage), public stocks and stocks in moneyed corporations, and such portion of the incorporated companies liable to taxation on their capital as shall not be invested in real estate. (Same title, section 8.) By section 7 of the same title it is provided that 'the owner or holder of stock in any incorporated company liable to taxation on its capital shall not be taxed as an individual for such stock;' and by section 1 of title 4 of the same chapter it is provided that 'all moneyed or stock corporations deriving an income from their profits or capital or otherwise shall be liable to taxation on their capital in the manner hereinafter prescribed.' The manner prescribed, as altered by chapter 456 of the Laws of 1857, section 3, is as follows: 'The capital stock of every company liable to taxation, except such part of it as shall have been excepted in the assessment roll or as shall have been exempted by law, together with its surplus profits or reserved funds exceeding 10 per cent. of its capital after deducting the assessed value of its real estate, and all shares of stock in other corporations actually owned by such company which are taxable upon their capital stock under the laws of this State, shall be assessed at its actual value and taxed in the same manner as the other personal and real estate of the county.'

"By the Laws of 1880, chapter 542, section 3, a franchise tax for the use of the State is imposed upon every corporation, joint-stock company or association organized under the laws of this State or of any other State or country doing business in this State, except savings banks, life insurance companies, banks, foreign insurance companies and manufacturing corporations carrying on manufacture within this State; and by section 8 such corporations, joint-stock companies and associations as are compelled to pay a franchise tax are exempted from assessment and taxation for State purposes except upon their real estate, but in all other respects remain liable to assessment and taxation. No franchise tax is imposed on banks or banking associations, and in this respect they stand upon an equality with National banking associations as they do in all other respects for the purposes of taxation under the laws of the State. The capital stock of these associations is not liable to taxation as against the corporation, but the shares are taxable as a part of the personal property of the individual stockholder. (Laws of 1882, chapter 409, section 320.)

"In the language of a recent decision of the Court of Appeals (*re Mac-Mahou*, decided April 13, 1886), 'the general laws of the State require all property, both real and personal, no matter by whom owned, except in certain classes of special exemption, to be assessed for purposes of taxation; this requirement embracing all property owned by individuals as well as corporations and including all shares of stock held by individuals in corporations except in cases where the capital stock of such corporations is itself liable to taxation as against the corporation.'

"The exemptions created by the State laws, so far as they are material to this case, are comprised of two classes: (1) those which include shares of stock in corporations of the State exempting them from taxation as against the holders or owners individually and substituting a tax upon the capital stock at its actual value against the corporations themselves for local purposes and a franchise tax for State purposes, and (2) those which include investments in life insurance companies, in the stocks of the State or the bonds of its municipalities, and deposits in savings banks. The exemptions of the first class have reference solely to the mode of collecting a tax on capital invested in corporations in the most efficient way; those of the second class are founded upon considerations of State policy and are intended to promote peculiar interests for the benefit of the public.

"The provisions of the State laws respecting exemptions of the second class are as follows: By the provisions of chapter 552 of the Laws of 1880 certain bonds and stocks of the city of New York are exempt from taxation except for State purposes. By chapter 523 of the Laws of 1881 all bonds thereafter issued by any village, city, town or county of the State to pay and retire any existing bonded indebtedness which was created in aid of the construction of any railroad are exempt from taxation for local or State purposes. By chapter 584 of the Laws of 1880 the personal property and shares of stock of life insurance companies are exempt from taxation for local purposes, but these companies are required to pay a State tax of 1 per centum annually upon the gross amount of their premiums, interest and other income. By section 4, chapter 456, Laws of 1857, deposits in any bank for savings which are due to depositors are declared not to be liable to taxation, and, according to the interpretation of some of the State Courts, this section is to be construed as exempting the depositors as well as the corporation from taxation upon such deposits.

"Prior to July 1, 1882, the shares of the capital stock of trust companies organized under the laws of the State were taxable in the hands of individual holders in the same manner and to the same extent that shares of the capital stock of National banks and State banks were taxable—that is, they were included in the valuation of the personal property of the stockholders in the assessment of taxes at the place where the company was located; but by an Act passed on that day (chapter 409, Laws of 1882) to revise the statutes of the State relating to banks, banking associations and trust companies, no provision was made for taxing them such as was made for taxing banks and banking associations. Section 824 of that Act, however, subjects trust companies to a franchise tax for State purposes. These companies are not exempted from taxation for local purposes upon their capital stock, and the result of the legislation respecting them, as is conceded by the counsel for the complainant, is to subject them to the taxation imposed on the miscellaneous incorporated companies of the State—that is, to taxation upon their capital stock assessed at its full valuation for local purposes besides a franchise tax for State purposes.

"Respecting the averments of the bill relative to the immunity from taxation of that class of moneyed capital invested in the shares of corporations of other States and foreign countries, it suffices to say that it is not claimed that the State laws exempt such shares from taxation in the hands of individual taxpayers who hold or own them, but they escape taxation because the State Courts have decided that such shares are beyond the taxing jurisdiction of the State. Unless these decisions are correct and the State has no power to tax these shares such moneyed capital is taxable as part of the personal property of the taxpayer.

"Thus it appears that, exclusive of exemptions not complained of in the bill, such as the personal property of ministers of the gospel to a limited amount and the personal property of charitable or reformatory institutions, the State system of taxation is designed to reach and subject to equality of burden—so far as that is practicable in a manner where the intrinsic difficulties are so great—all taxable property, both real and personal, except investments in life insurance companies, deposits in savings banks, the public stocks and the bonds of the municipalities of the State.

"It is not open to fair doubt that the personal property of taxpayers represented by shares of stock in incorporated companies of the State is taxed as substantially and as onerously as is the other moneyed capital of the citizens. Indeed, it cannot be reasonably doubted that this kind of personal property is taxed much more effectually and onerously than is the moneyed capital generally of individuals. It does not militate against this proposition that a part of the moneyed capital of citizens which is invested in forms that enable it to be easily traced and its value accurately ascertained does not escape taxation by evasion or oversight and is consequently more effectually reached and taxed than the bulk of the moneyed capital of individuals. Shares in National banks fall within this category, as do shares in State banks and also

the capital invested in private banking; and capital invested in these forms does undoubtedly bear more than its just burden of taxation relatively to other moneyed capital or to personal property generally, but this is a result which is not peculiar to the system of taxation of this State, but exists everywhere.

"The case is thus narrowed to the question whether the exemptions relating to shares of stock in life insurance companies, to deposits in savings banks and to certain classes of municipal obligations, together with the special features of the taxation of the capital invested in the shares of miscellaneous corporations, effect a discrimination in taxation between National bank shares and other moneyed capital obnoxious to the law of Congress. In the language of Mr. Justice Nelson, in *People vs. The Commissioners* (4 Wall., 256), 'it is known as sound policy that in every well-regulated and enlightened State or Government certain descriptions of property and also certain institutions, such as churches, hospitals, academies, cemeteries and the like are exempt from taxation; but these exemptions have never been regarded as disturbing the rates of taxation even where the fundamental law had ordained that it should be uniform.' In *Hepburn vs. The School Directors* (23 Wall., 430), the section in question was before the Court in a case where, by the laws of the State, all mortgages, judgments, recognizances and money owing upon articles of agreement for the sale of real estate were exempt from taxation, except for State purposes, and Chief Justice Waite, delivering the opinion of the Court, said: 'It could not have been the intention of Congress to exempt bank shares from taxation because some moneyed capital was exempt.' In *Adams vs. Nashville* (95 U. S., 19) the unfriendly discrimination complained of consisted in the exemption of certain municipal bonds, the argument being that there were many such bonds in existence in the hands of individuals, and that the complainant's shares being taxed while the bonds were not the taxation violated the Act of Congress. But the Court held that the Act of Congress was not intended to control the power of the State on the subject of taxation, or to prohibit the exemption of particular kinds of property, but was intended to protect the capital invested in National bank shares from unfriendly discrimination by the States in the exercise of the taxing power. The cases of *Hepburn vs. The School Directors* and *Adams vs. Nashville* are referred to in the opinion in *Boyer vs. Boyer*, with the comment that they leave untouched the question as to the power of the States to subject shares of National banks to taxation 'when a very material portion of other moneyed capital in the hands of individual citizens within the same jurisdiction or taxing district is exempted from taxation.' No rule was intimated in that opinion defining what exemptions are permissible as within the discretionary policy of the State or what are so serious as to constitute a very material portion of the moneyed capital of the taxpayers and an unlawful discrimination against National bank shares. Consequently the question whether the exemptions in the system of this State are such as to preclude any taxation of such shares is wholly open. This question must be solved by determining what Congress meant by the term 'other moneyed capital in the hands of individual citizens of such State' and what is substantial equality as between that kind of capital and the capital invested in bank shares.

"It is obvious that if shares of stock in miscellaneous corporations, other than those which are commonly known as moneyed corporations, fall within the designation of 'moneyed capital' the very large amount of this kind of capital which under the system of this State is exempt from taxation 'in the hands of individual citizens' forms a material portion of the aggregate capital. It is contended for the complainant that such shares of stock are moneyed capital, and that they are not assessed in the hands of individual taxpayers, and are therefore to be classed with moneyed capital which is exempt from taxation, in ascertaining whether the rule of equality prescribed by Congress is violated.

"It is not to be denied that these shares are not taxed technically as the property of the owners by the State laws, although the corporations themselves are taxed for the capital which these shares represent. The capital stock of a corporation and the shares held by the several stockholders are distinct

species of property for the purpose of taxation, as distinct as real estate and the mortgage by which it may be incumbered. The corporation and its capital and property are one thing; the stockholders and their shares quite another. The corporation has the legal title and right of disposition of all the corporate property, subject to the conditions of its charter. The stockholders' right is to enjoy a proportionate part of the profits, or, upon dissolution of the corporation, a proportionate part of the assets after payment of debts. This is a distinct, independent interest or property held by the shareholder like any other property that may belong to him. It is this interest which the Act of Congress leaves subject to taxation by the States while the States are denied the power to tax the capital stock of National banks. It is well settled by the authorities that because the property of shareholders in the shares and the property of the corporation in its capital are distinct property interests both may be taxed. (*Albany City Bank vs. Mayor*, 6 Fed. Rep., 418; *Van Allen vs. the Assessors*, 3 Wall., 573; *The Delaware R. R. Tax*, 18 Wall., 206; *Farrington vs. Tennessee*, 95 U. S., 679).

"It may therefore be fairly urged that Congress did not intend that the taxation imposed by the State upon the capital stock of manufacturing, railroad, mining, and many other corporations, should be considered in ascertaining whether the taxation of National bank shares is greater or is less than that of moneyed capital in the hands of individual taxpayers. State policy may legitimately dictate different modes and rates of taxation for the different kinds of corporations which the State creates, and discourage the operations of some and foster the interests of others by a diversity of taxation. And it would be manifestly difficult, if not impossible, in view of the discriminations which are found in the system of every State, to deduce any general rule of taxation and make it the test of the lawful taxation of National bank shares.

"But it does not follow that the capital invested in such corporations is to be classed as exempt from taxation in ascertaining whether National bank shares are subjected to unfriendly discriminations. When it appears that the capital of individual taxpayers invested in these shares is required to bear as great a burden of taxation as that invested in National bank shares there is no reasonable or real foundation for the claim of hostile discrimination. While Congress did not intend that the taxation of the States on the property of corporations should furnish the rule or standard of the taxation authorized for National bank shares, but intended to limit the States to a taxation no greater than that imposed on the moneyed capital of their individual citizens, there is no reason to suppose that Congress cared at all about the mode the States might adopt for the collection of their taxes. A tax imposed on the capital or property of a corporation falls as effectually on the capital of the shareholder represented by his shares as does a tax upon the shares directly; and although in legal discrimination a tax upon the former is not a tax upon the latter, practically and substantially taxation of the capital of the corporation is taxation of the capital of the shareholders.

"If shares of stock in corporations other than moneyed corporations are not 'moneyed capital' then it is immaterial to the question under consideration whether such shares are subjected to taxation directly or indirectly; and even if the capital invested in such shares is not taxed at all it should not be classed with exempt capital in ascertaining whether a material portion of the moneyed capital of individuals is exempt. The Supreme Court has never decided precisely what signification belongs to the term moneyed capital as used in the Act of Congress. It is hardly appropriate to call shares in manufacturing or trading corporations 'moneyed capital in the hands of individual citizens,' and if Congress had intended to include all capital thus invested it would have been easy to do so under some such comprehensive term as personal property. It is not obvious how the equitable interest of the shareholder in such corporations which entitles him to share in the profits, or upon dissolution in the division of the assets, should be deemed moneyed capital any more than the capital invested in any other kind of personal property which can be converted into money by sale is to be deemed moneyed capital. Shares of stock in moneyed corporations, such for instance as trust companies, and capital

invested in the business of private banking, is doubtless appropriately described as moneyed capital. So also the capital represented by all obligations which are solvable in money, such as notes, bonds, certificates of indebtedness, and other securities for the payment of money, would seem to be within the description. The capital which was exempt from local taxation under the laws of Pennsylvania and which the Court held in *Boyer vs. Boyer* to be a material portion of the moneyed capital of individual taxpayers was almost wholly of this kind, being mortgages, judgments, bonds, certificates of indebtedness and moneys owing upon articles of agreement. It is true that shares of stock of all corporations of the State liable to pay a State tax were also exempt in that case, but no emphasis was placed in the opinion of the Court upon the exemption of this kind of capital, and, of course, this exemption included shares of stock in moneyed corporations as well as in other corporations. The term moneyed capital has a more limited meaning than the term personal property, and it must be assumed that it was employed deliberately in the Act of Congress to denote more restricted forms of invested capital. In one sense the capital invested by the merchant or the manufacturer in his business is moneyed capital, but it is no more so than that which the professional man has invested in his library or the mechanic in the implements of his trade; and if such investments are to be deemed moneyed capital then the term has substantially as wide signification as the term personal estate. If the capital of the merchant or the manufacturer is not moneyed capital it would seem to follow that the interests represented by the shares of manufacturing or trading corporations are not appropriately described as moneyed capital. The Supreme Court say, in *Evansville Bank vs. Britton*, 105 U. S., 824: 'The Act of Congress does not make the tax on personal property the measure of the tax on the bank shares of the State but the tax on moneyed capital in the hands of individual citizens. Credits, money loaned at interest and demands against persons or corporations are more purely representative of moneyed capital than personal property, so far as they can be said to differ. Undoubtedly there may be much personal property exempt from taxation without giving bank shares a right to similar exemption, because personal property is not necessarily moneyed capital.'

"If it should be assumed, however, that Congress meant to include in the term moneyed capital all capital invested in business or for income not represented by real estate, and that shares of miscellaneous corporations are therefore included, this kind of capital should not be deemed exempt from taxation under the system of this State, because, as has already been stated, it is taxed as effectually and as onerously as other kinds of moneyed capital of individual citizens; and, although such taxation is not assessed against the shares directly, it falls ultimately and inevitably upon the capital of the individual invested in it. The beneficiaries of a trust estate are the persons upon whom the taxation of the estate really falls, although the assessment is not made against them but against the trustee who has the legal title of the personal property.

"It only remains to be considered whether the exemptions of shares of life insurance companies, of the stocks and bonds issued by the city of New York, of the bonds issued by other municipalities of the State, and of the deposits in savings banks, are such as to manifest a serious discrimination against National bank shares.

"The assessable value of the shares of life insurance companies in this State is relatively an insignificant part of the whole moneyed capital of the taxpayer, and the exemption is made to foster a class of corporations which exercise a salutary influence upon the community.

"The assessable value of the bonds and stocks issued by the city of New York which are exempt from local taxation appears by the stipulation of the parties to be \$13,467,000. Assuming that these securities are principally held by citizens of the State it is not obvious how holders of National bank shares have any substantial ground for complaint at the exemption from taxation. These securities are taxable for State purposes. Inasmuch as National bank shares are taxed at the place where the bank is located, and not elsewhere, the holders of such shares have the same interest as all other taxpayers of the municipality which has created a debt in having the best sum possible realized

from the obligations issued to meet it. Such obligations are exempted from taxation in the hands of the holder to enhance their value in the market and to enable the municipality to realize more from them in diminution of the burden of taxation. The holders of National bank shares derive the same benefit from the exemption as do others who are taxed upon their moneyed capital for local purposes in the same taxing district. The same observations apply measurably to the exemption of the bonds of the other municipalities of the State, although these are not taxable for State purposes, and it may therefore happen that the taxpayers of certain municipalities are to that extent compelled to contribute to taxation for which they have derived no direct benefit.

"This is one of those instances of inequality which illustrate the axiom that absolute equality and strict justice are unattainable in tax proceedings. The exemption is restricted to a limited class of these obligations, and in the absence of any attempt on the part of the complainant to show that they are of any considerable amount relatively to other moneyed capital it is to be assumed that but little importance should be attached to this exemption.

"The more important exemption is that of the deposits in savings banks. The aggregate of these deposits is quite large, being in the year 1885 over \$437,000,000. Savings banks in this State are not permitted to owe any depositor more than the sum of \$3,000 (laws of 1878, chapter 347, section 2), and it appears by the report of the Superintendent of the Bank Department that the average of these deposits on the first day of January, 1886, was \$378 each. These deposits represent mainly the savings of people of small means. It is not probable that a twentieth part of the whole would be actually reached for taxation if they were not exempt. Such accumulations tend to the extinction of pauperism, to the encouragement of economy and to the general thrift and comfort of the masses of the people. It is as much the part of a wise policy on the part of the State to encourage them as it is to encourage benevolent and charitable institutions. In the large such an exemption reduces the burden of taxation on other moneyed capital.

"None of the exemptions which have thus been considered manifest any unfriendly discrimination on the part of the State as between the shares of National banks and moneyed capital generally. Taken together they form a much less important part of moneyed capital generally than was exempt by the State laws in the case of *Hepburn vs. The School Directors*, where the exemption was treated as not disturbing the rule of equality of the Act of Congress. Compared with the exemptions considered in *Boyer vs. Boyer* they are insignificant. It is therefore held that they are not of a character to justify the complainants' contention.

"The conclusion reached is in accord with the recent decision of the Court of Appeals of this State *in re MacMahon vs. Palmer*, 6 *Northeastern Reporter*, 400, where it was held by the Court upon a full consideration of the question presented here that the taxing system of this State does not result in taxing National bank shares at a greater rate than is assessed upon other moneyed capital in the hands of individual citizens of the State.

"The motion for an injunction is denied."

#### INTEREST AND USURY—LAW OF PLACE—INTEREST ON INTEREST.

Plaintiff, a Connecticut corporation, brought suit against defendants, citizens of Oregon, in the Circuit Court of the United States for the District of Oregon, to enforce the lien of a mortgage on certain real property. It appeared that on April 21, 1881, defendants made and delivered their promissory note, payable to the order of the plaintiff on April 21, 1886, for \$2,000, "with interest from date until paid at eight per centum per annum, as per coupons attached, at the office of the Corbin Banking Company, New York city," and said note also contained the following stipulations:

"Unpaid interest shall bear interest at ten per centum per annum. On failure to pay interest within five days after due the holder may collect the principal and interest at once. And in case suit is instituted to collect this note, or any portion thereof, I

promise to pay such additional sum as the Court may adjudge reasonable as attorneys' fees in said suit."

Defendants also made and delivered to the plaintiff their six coupons or interest notes for the interest to accrue on said principal note as follows: One for \$110.68, payable January 1, 1882; four for \$160 each payable respectively January 1, 1883, 1884, 1885 and 1886; and one for \$49.32 payable April 21, 1886. At the time of the suit plaintiff claimed to be due and unpaid on the principal note and the last two coupon notes the sum of \$2,320, with interest on \$2,000 thereof at eight per centum per annum from January 1, 1886, and on said coupon notes from the date when they became payable at ten per centum per annum in United States gold coin.

Defendants also, on April 21, 1881, to secure the payment of said note and coupons, executed to the plaintiff the mortgage in suit on certain land in Lane county, Oregon, which mortgage stipulated, among other things, that if said defendants fail to pay any of said interest when due the same shall bear interest at the rate of ten per cent. per annum.

Defendants claimed that they were not liable on the following grounds:

1. That the notes were made payable in New York in violation of the usury laws of that State, and were therefore void.

2. That the agreement to pay interest on the interest notes after maturity was an agreement to pay compound interest, and therefore void.

The Court, as to the first point raised,

*Held*, As to this point it is admitted that the rate of interest allowed by the statute (June 27, 1879) of New York is only six per centum, and that this Court will take judicial knowledge of the laws of that State. (9 Pet., 624; 1 Dedy, 309.) The argument in behalf of the defendants is that, by making this note payable in New York, the parties to the contract made that the place of performance, including the rate of interest payable by the law thereof. There is some confusion and contradiction in the writers and authorities on this subject, but the current of the later ones establish the just and convenient rule for the solution of the problem, namely, the place of performance depends on the intention of the parties to the contract. Where a note made in one place is made payable in another, *prima facie* the place of payment is the place of performance, and the law of the latter for the purposes of payment and its incidents applies to the transaction. But this fact is by no means conclusive evidence that such was the intention of the parties, and the contrary may be inferred from the immediate circumstances or shown by extraneous evidence. (Whart. Conf. Laws, § 505.) And even when the place of payment is to be taken as the place of performance for the purposes of payment and matters incidental thereto, including days of grace, the rate of interest, where none is specified in the contract and the like, it may satisfactorily appear from the circumstances of the case that it was not the intention of the parties that the rate of interest should be governed by the law of such place. And, generally, "the law of the place where the contract is made is to determine the rate of interest when the contract specifically gives interest" (2 Kent. Comm., 460; Story Conf. Laws, § 305). And this conclusion must be based on the fact that an agreement for a specific rate of interest on a loan constitutes a part of the obligation of a contract which is always measured or tried by the *lex loci contractus* and not the *lex loci solutionis*; and for the purposes of this question it is said by an eminent writer that "the true view seems to be that the place of performance of an obligation for the payment of money is the place where the money is used" and put at risk (Whart. Conf. Laws, 508). Again, when the rate of interest is different in the place where the note is made and where it is payable, and two conflicting laws are thus brought to bear on the same point, the Court will apply that law to the transaction which will best support the validity of the obligation; for it is not to be presumed that the parties in fixing the rate of interest acted with reference to the law of a place which would make the contract void (Whart. Conf. Laws, § 507).

Now, in this case, all these controlling circumstances point to the conclusion that, although the note was made payable in New York, the parties in fixing the rate of interest had reference to the law of Oregon and intended to be governed

thereby. The contract was made in Oregon and the rate of interest specified therein. The money was used in Oregon, and the rate of interest agreed on is allowed by the law of Oregon but forbidden by that of New York.

In *Miller vs. Tiffany*, 1 Wall., 310, Mr. Justice Swayne, quoting with approval from *Andrews vs. Pond*, 13 Pet., 77, 78, says: "The general principle in relation to contracts made in one place to be performed in another is well settled. They are to be governed by the law of the place of performance, and if the interest allowed by the law of the place of performance is higher than that permitted at the place of contract, the parties may stipulate for the higher interest without incurring the penalties of usury." And adds: "The converse of this proposition is also well settled. If the rate of interest be higher at the place of contract than at the place of performance, the parties may lawfully contract in that case also for the higher rate." Citing *De Pau vs. Humphrey*, 10 Mart. (La.), 1.

The Court here refers to, and quotes from, the following cases and text writers: *Jones on Mortgages*, § 657; *Townsend vs. Riley*, 46 N. H., 300; *Peck vs. Mayo*, 14 Vt., 33, 38; *Kilgore vs. Dempsey*, 25 Ohio St., 413; *Thornton vs. Dean*, 19 S. C., 583; *Daniel on Neg. Instr.*, § 922; *De Pau vs. Humphreys*, 10 Mart. (La.), 1, and then continues:

In the light of these authorities, and on every consideration of convenience and utility, the parties to this transaction being at liberty to contract for either the Oregon or New York rate of interest, the very fact that they adopted the former is satisfactory evidence that they contracted in this respect with reference to the laws of Oregon and intended to be governed thereby. The note of the defendants was made payable in New York simply for the convenience of the lender. There is no pretense that there was any design or purpose to contract for or obtain what might be regarded as a usurious rate of interest. On the contrary the contract was openly made in good faith in accordance with the laws of Oregon, where the defendants resided, and it would be a reproach to the administration of justice if the defendants could now defraud the plaintiff out of its money simply because their note was, with their consent, and only for the convenience of the lender, made payable in New York rather than Oregon.

Further, as to the second point raised by the defendants,

*Held*, There is no law of Oregon that prohibits the payment of interest on interest; and the better opinion is that no contract for the payment of interest, whether on interest or principal, is usurious or illegal unless prohibited by statute. (Tyler, "Usury," 64.) But the rule was early established in equity that compound interest would not be allowed, not because it was usurious or contrary to the statute on that subject, but because the practice, if allowed, would lead to the oppression of improvident debtors. (Connecticut *vs. Jackson*, 1 Johns. Ch., 13.) This rule, doubtless, had its origin in the old ecclesiastical idea that the taking of interest under any circumstances was usury, and a grievous sin. But the tendency of opinion has been towards the suggestion of Lord Thurlow in *Waring vs. Cauliffe*, 1 Ves. Jr., 99, that there is nothing unjust in compelling a debtor, who neglects to pay interest when it becomes due, to pay interest upon that interest; and so it was early settled that a promise to pay interest on interest after the latter became due is valid. (1 Wend., 521; 11 Or., 66.)

By the law of Oregon (Sess. Laws, 1880, page 17), interest is allowed at "eight per centum per annum; and no more, on all money after the same becomes due \* \* \* but on contracts interest at the rate of ten per cent. per annum, and no more, may be charged by express agreement of the parties."

These interest notes are distinct contracts for the payment of money, and when they became due were entitled, under this statute, without any agreement of the parties on the subject, to draw interest at eight per centum per annum until paid, or, by the agreement of the parties, they might draw ten per centum. The provision of the statute is, in effect, that interest shall be allowed "on all moneys after the same become due," and that, at least, includes the case of money due on an interest or coupon note or a promise or agreement in a principal note to the effect that the interest thereon shall be paid at a certain

period or periods prior to the maturity thereof. But interest concerning the payment of which no special promise is made, and which does not otherwise exist than as an increment of the principal sum, is not included in this statute as "money" due and entitled to bear interest. But a promise to pay interest as a distinct debt or liability, either in or out of the principal contract, and before or as the principal sum falls due, is a promise to pay a sum of money which, when due, bears interest under the statute either at the legal rate or according to the agreement of the parties within the limit allowed thereby.

In *Bledsoe vs. Nixon*, 69 N. C., 89, it was held that when a promissory note contained a stipulation that the interest thereon should be paid semi-annually an unpaid instalment of interest drew interest as if a note had been given therefor.

In *Wheaton vs. Pike*, 9 R. I., 132, it was held that, where a promissory note was made payable in three years after date, with interest payable semi-annually, each installment of interest falling due before the maturity of the note drew interest from the time it was due until paid.

In *Aurora vs. West*, 7 Wall., 104, it was held that interest coupons, by universal usage and consent, have all the qualities of commercial paper, and should draw interest after payment is neglected or refused. To the same effect is the ruling in *Clark vs. Iowa*, 20 Wall., 589; *Town of Geneva vs. Woodruff*, 92 U. S., 502; *Gelpcke vs. Dubuque*, 1 Wall., 200.

In "Jones on Mortgages," sections 653, 1141, it is said that coupons for the interest on a mortgage debt are, in effect, promissory notes, and draw interest in the same manner after maturity. To the same effect is *Daniel on Neg. Inst.*, § 1513. See, also, *Harper vs. Ely*, 70 Ill., 581; *Thayer vs. Star Mining Co.*, 105 Ill., 552.

In the judgment of this Court these interest notes are entitled to draw interest, at the rate agreed on, from the date of their maturity.

*New England Mortgage Security Co. vs. Vader*, Circuit Court, District of Oregon, August 9, 1886.

#### DIRECTORS OF NATIONAL BANK—ACT OF MAJORITY, INDIVIDUALLY, AND NOT AS A BOARD, INSUFFICIENT TO BIND BANK.

In an action against D, the former Cashier and President of the plaintiff, to recover among other things money paid to himself as interest on demand certificates of deposit issued to himself while Cashier in violation of the rules and by-laws of the bank.

*Held*, Defendant admits that he took the money at the times and in the amounts charged by the plaintiff, and the jury have found that, during all the time the defendant was acting as an officer of the bank, there existed a rule or by-law of the bank which prohibited the payment of interest on demand certificates of deposit, and that at no time while the defendant was an officer of the bank did he ever inform the Board of Directors that he had taken interest on these certificates; and it was also found that the Directors did not at any meeting of the Board authorize or ratify the action of the defendant in taking interest. The defendant contended and contends that, although his act in taking the money was contrary to the by-laws of the bank, yet that there had been a ratification of the unauthorized act by the Board of Directors which is binding upon the bank. The findings clearly show that the only sanction which the unauthorized acts of the defendant received from the plaintiff was given by a majority of the individual members of the Board, acting singly and separately, and not as a Board. Action thus taken is not binding on the bank and does not constitute a defense to the plaintiff's claim. The statute declaring the method in which the bank may exercise corporate power provides that the appointment and dismissal of its officers, the enactment of by-laws regulating the manner in which its officers and agents shall conduct its business, and the general supervision and management of its affairs shall reside in and be exercised by a Board of Directors (Rev. St. U. S., § 5,136). This statute provides for the election of a President of the Board, and otherwise assumes that the Directors shall act unitedly as an organized body. The election of an individual as a Director does not constitute him an

agent of the corporation with authority to act separately and independently of his fellow members. It is the Board duly convened and acting as a unit that is made the representative of the company. The assent or determination of the members of the Board acting separately and individually is not the assent of the corporation. The law proceeds upon the theory that the Directors shall meet and counsel with each other, and that any determination affecting the corporation shall only be arrived at and expressed after a consultation at a meeting of the Board attended by at least a majority of its members. As the only powers conferred upon Directors are those which reside in them as a Board, and when acting collectively as such, the individual consent of a majority of the members, acting separately, is not enough to ratify the unauthorized appropriation of the money of the bank by the defendant. (Ang. & A. Corp., § 504, *et seq.*; Mor. Priv. Corp., § 247; Field Corp., § 242; 26 Minn., 43; 40 N. J. Law, 435; 15 Ind., 236; 7 Ch. App., 161; L. R. 2 Exchq., 158; 24 N. J. Eq., 143; 2 Sandf., Ch., 186; 3 Fost., 555; 45 Pa. St., 386; 22 Barb., 400.) See also the following cases which are somewhat analogous and applicable: 27 Kan., 139; Id., 253; 20 Kan., 534; 16 Kan., 302; 47 Iowa, 11; 29 Ohio St., 419.

*First National Bank vs. Drake*, Supreme Court of Kansas, July 9, 1886.

PAYMENT OF CHECK BY UNITED STATES ON FORGED INDORSEMENT—RIGHT TO RECOVER BACK THE MONEY—NOTICE.

A check was drawn by a paymaster in the United States Army on the Assistant Treasurer of the United States payable to the order of T. Two weeks thereafter defendant presented the check and received the money thereon, the check bearing what purported to be the indorsement of the payee, but in fact such indorsement being false and forged. Nearly twelve years thereafter the United States commenced this action to recover the money paid out on the strength of this forged indorsement. Defendant pleaded negligence and laches on the part of the Government, alleging that soon after the payment of the check the Government was informed by the real payee of the forgery, but that it never notified the defendant, or any one interested in the transaction, until about ten years thereafter, and until defendant had lost all opportunity to protect itself. Plaintiff demurred to this defense, and the demurrer was overruled. On appeal,

*Held*, Do the facts stated constitute a defense? That no mere statute of limitations will bar a claim for money due the Government is settled (U. S. *vs.* Thompson, 98 U. S., 486). But the defendant contends that the Government, dealing in commercial paper, is subject to the same rules and obligations that control individuals in like transactions, and that, as between individuals, "it is undoubtedly necessary that the maker, acceptor, or other party, who demands restitution of money paid under a forged indorsement, or under a forged signature of the drawer of a bill, should make the demand without unnecessary delay" (2 Daniel on Neg. Inst., § 1371). The first of these two propositions was decided in *Cooke vs. U. S.*, 9 U. S., 389. See also U. S. *vs.* National Bank, 6 Fed. Rep., 134. The second seems to be sustained by the common voice of the authorities. See, in addition to 2 Daniel on Neg. Inst. *supra*, 2 Pars., "Notes and Bills," 598, and cases cited in notes to text of both authors. The principal cases cited by counsel for the Government are those in which the liability of the defendant being absolute, fixed and constant, the question has been purely one of the statute of limitations, while in the case at bar the right of recovery is conditioned on promptness in giving notice. The distinction between the two is obvious.

Judgment affirmed.

*United States vs. Clinton National Bank*, Circuit Court, Southern District of Iowa, July 5, 1886.

INDORSEMENT OF NOTE—PROOF OF BY PLAINTIFF NECESSARY.

Action on a promissory note, sold and assigned to the plaintiff by the payees and which was indorsed in blank by them. Plaintiff offered the note

in evidence and rested without any proof of indorsement, though it subsequently appeared that the note had written on the back of it the name of the payees. Defendant then moved for a non-suit on the ground that there was no proof of the indorsement of the note. Plaintiff's counsel contended that no such proof was necessary. The Court, after hearing argument, intimated that proof of the indorsement was necessary. Thereupon plaintiff's counsel asked leave to open the case and introduce testimony concerning the indorsement. This the Court refused to allow and granted the motion for a non-suit. Plaintiff appealed, and it was

*Held*, We are of opinion that justice to the plaintiff demanded of the Court that he should have been allowed to introduce testimony to prove the endorsement. The views of plaintiff's counsel in regard to the questions presented were novel and peculiar and the course pursued by him singular, but we do not think that this justified the Court in refusing to allow the plaintiff to prove that the note had been indorsed to him. The request was simply to prove the handwriting of the payees of the note. It was not an offer to prove something which rested in parol merely, as to which a wider discretion in granting or refusing it might be conceded to the Court below. If the non-suit were allowed to stand the plaintiff would be compelled to bring a new action to which the statute of limitations would be a bar. The plaintiff would thus suffer the loss of money justly due to him. Under the circumstances this should not be allowed. The Court erred in refusing to permit the plaintiff to introduce testimony as to the endorsement.

Judgment reversed and cause remanded for a new trial.

*Low vs. Warden, Supreme Court of California, June 17, 1886.*

#### INDORSEMENT OF NOTE—PROOF OF BY PLAINTIFF NOT NECESSARY.

A note payable to order may be sold and transferred without indorsement, but, of course, thus transferred, it is not negotiable. Even if there is no written endorsement none is necessary to enable the plaintiff to sue in his own name. A negotiable promissory note may be assigned orally, and the mere delivery for a valuable consideration will pass the title. Possession of a note, where it does not appear upon the note who the owner thereof is, is *prima facie* evidence of ownership (3 Kan., 295; 28 Kan., 710). A plaintiff who holds a note on which he has not proved the written indorsement to him is still entitled to judgment thereon, unless the defendant has made out a case of failure of consideration.

*State Savings Institution of St. Louis vs. Barber, Supreme Court of Kansas, July 9, 1886.*

#### PROMISSORY NOTE—PAROL EVIDENCE TO CHANGE LIABILITY OF MAKER.

In an action against the maker of a promissory note by one who took it from the payee with full knowledge of the facts, the defendant sought to introduce evidence to show that the note was given in consideration of hay purchased from the payee, and that at the time the note was given the quantity of hay purchased by the defendant was not known but was estimated to be of the value of the note by the plaintiff, who was interested with the payee in the sale of such hay, and that the note was given under an agreement between the parties at the time that if the hay, when the quantity was ascertained, should not amount in value to the amount of the note the defendant should be credited with the difference, and that the ascertained value of such hay was \$300 less than the face of the note.

The Court below refused to admit this evidence and a judgment was given for the plaintiff. On appeal this judgment was reversed, and it was

*Held*, The defendant should have been allowed to prove the oral contract alleged in the answer. The evidence if admitted would not have varied or contradicted the terms of the writing as expressed in the promissory note. The defendant does not deny in his answer that he made just such a contract as that on which the plaintiff seeks to recover, but alleges that the assignor of plaintiff at the same time entered into an engagement on his part which was

subsequently broken. For his damage arising from a breach of the contract of the vendor of the hay the defendant is entitled to recoup in an action brought upon his note. (3 Hill, 171; 55 N. Y., 280-298; L. R., 6 Exch., 70; 8 Ch. App., 756; 78 N. Y., 74.)

There is nothing to indicate that the promissory note was intended to express the whole contract of the parties.

Judgment reversed.

*Braly vs. Henry*, Supreme Court of California, May 27, 1886.

#### TAXATION OF NATIONAL BANK STOCK—RIGHT TO DEDUCT BONA FIDE DEBTS.

In the assessment and taxation of shares of National bank stock, the owners thereof, having no other credits or moneyed capital from which to deduct their *bona fide* debts, are entitled to deduct them from the assessed value of such shares of stock.

*Wasson vs. First National Bank*, Supreme Court of Indiana, June 25, 1886.

#### PROMISSORY NOTE—WAIVER OF PROTEST—GUARANTY.

When a certain promissory note was delivered to the plaintiff there was written upon it as follows: "I hereby acknowledge the receipt of notice of protest on the within note," and this was signed by all the indorsers thereon.

*Held*, The word "protest" includes all acts necessary to hold indorsers, and the legal effect of the acknowledgment is to release the plaintiff from any obligation to make demand or give notice. (62 Me., 578; 8 Cush., 157.)

Where on another note there was written "For value received we guaranty the within note until paid," which was signed by all the parties on the note except the maker,

*Held*, This was an absolute and unqualified contract by each of the signers to pay the note if the maker did not. Upon non-payment at maturity it became, and has since continued to be, their duty to go to the holder and pay it, and this without demand or notice. (7 Conn., 523.)

*City Savings Bank vs. Hopson and others*, Supreme Court of Errors of Connecticut, May 31, 1886.

#### USURY—LOAN BY AGENT.

Where plaintiff made a loan of money through her general agent, who had full authority to act for her in the premises, and by agreement between plaintiff and her agent he was to receive no compensation from her for his services in loaning her money, but "was to make what he could out of it," and the agent deducted and retained from the sum purporting on the face of the note to be loaned, which was \$125, a month's interest at the rate of 10 per cent. per annum, viz., \$1.04, and also \$6.46 as commission, which commission was mostly, if not altogether, a bonus or gratuity, there being nothing to show that the agent performed any services whatever for the borrower, or any for his principal, for which any such compensation would not be unreasonably large,

*Held*, Whatever the agent did in exacting from the borrower any sum for his services to his principal in and about the loan must be taken to have been authorized and sanctioned by her, and in contemplation of law to have been her personal act; and while it would have been competent for her to have authorized him to exact from the borrower a reasonable compensation for his services to her in making the loan (28 Minn., 211), if he went beyond this and with her sanction exacted a sum in addition to the highest legal interest and to such reasonable compensation then the case would be one of usury, for there would be a taking of a greater sum for the loan or *forbearance* than the legal rate of interest, because there would be nothing else on account of which such sum could be said to have been taken. So far as the facts found show, the compensation charged as "commissions" was unreasonable and a mere cover for usury, and made the note and the transaction evidenced by it usurious in law.

*Avery vs. Creigh*, Supreme Court of Minnesota, July 17, 1886.

## POWERS OF BANK CASHIERS.

*Continued from page 803, October number of the JOURNAL.*

*X. Power to Indorse the Non-negotiable Paper of the Bank, and in Respect to Transfers.*—It has been stated that the Cashier has the power, by virtue of his office, to indorse the negotiable paper of the bank. The character of negotiability, however, marks the limit of his inherent power. He cannot pass the title of the bank to non-negotiable paper, or other property not negotiable, solely by virtue of his office, but only when proper authority has been given. The rule is thus laid down in *Holt vs. Bacon*, 25 Miss., 570, that the Cashier of a bank has no authority to transfer judgments in its favor, or dispose of its property; that his authority in this respect extends only to negotiable instruments; that the President and Directors are the only persons who could legally make the transfer; and if the Cashier acted as their agent in the matter this fact ought to be shown in evidence. In *Barrick vs. Austin*, 21 Barb., 241, the rule is also stated that the Cashier of a bank has no power to assign a promissory note, not negotiable, without authority of the bank evidenced by a resolution of the Board of Directors, usage in similar cases, or in some other way. It has also been held that the President and Cashier have no power to mortgage, assign or dispose of the property of the corporation without the assent and authority of the directors (*Hoyt vs. Thompson*, 5 N. Y., 320). And in the late case of *Lamb vs. Cecil*, 25 W. Va., 294, it was held that where the charter of a banking institution intrusts the management of its affairs to the Board of Directors, the Cashier, without authority from the Directors, has not, *virtute officii*, the right to dispose of the discounted bills and notes of the bank to a depositor in payment of his deposit.

Certificates of shares of the stock of corporations, however, do not fall within the above rule denying inherent authority to the Cashier to dispose of the property of the bank other than negotiable instruments. Although neither in form nor character negotiable paper, certificates of stock approximate to it as nearly as practicable. They pass, in commercial transactions, like negotiable notes or bills of exchange; they are sold and pledged, and in many ways form the basis of credit. (See 11 Wall., 377; 48 N. Y., 613; 46 N. Y., 325; 34 N. Y., 41; 20 Wend., 91; 22 Wend., 348; 30 Conn., 373; 1 Holmes, 396.)

Another exception to the rule that the Cashier has no inherent power to dispose of the property of the bank would seem to be stated in the case of *Bank of Vergennes vs. Warren*, 7 Hill (N. Y.), 81. In that case the Cashier of a bank assigned a certificate of sale owned by the bank to a party desiring to redeem the property, and affixed the corporate seal to the assignment. His power to make the transfer being questioned, the Court held that the authority of the Cashier to use the seal and to make the assignment would be presumed until the contrary appeared. That the want of a vote of the Board of Directors proved very little, for it often happened that the Cashier, or other officers of the bank, exercised a large range of powers with the tacit approval of his principals, although the nature and extent of his authority had never been defined by any direct act of the corporation. In that case it was claimed that the Cashier had no authority to transact such business, and that the parties desiring to redeem should have gone to the Board of Directors. As to this claim, the Court held that it was enough that the parties went to the banking house in business hours and there made the payment to one of the principal agents of the corporation, the Court saying: "A creditor having the right to purchase from a corporation must of necessity have the right to deal with the principal officer or agent of the Company who may be found at its place of business. To hold that the creditor must go to the Board of Directors would put it in their power, by refusing or neglecting to meet, to deprive him of a right secured to him by law."

## REPLIES TO LAW AND BANKING QUESTIONS.

*Editor Rhodes' Journal of Banking:*

WINTHROP, IOWA, October 12, 1886.

SIR:—A twenty-dollar bill on the Citizens' National Bank of Cincinnati was presented to me that had not been signed by the Cashier. Would you advise taking it?

Are there good bills in circulation signed by but one officer, either the President or Cashier.

**Answer.**—Section 5182 of the Revised Statutes, relating to circulating notes of National banks, provides: "After any association receiving circulating notes under this title has caused its promise to pay such notes on demand to be signed by the President or Vice-President and Cashier thereof in such manner as to make them obligatory promissory notes, payable on demand, at its place of business, such association may issue and circulate the same as money. \* \* \*"

Without the signature of the Cashier, therefore, a National bank note would, in our opinion, be irregular and not in conformity with the law authorizing their issue, and we would not advise the taking of such a note.

**Editor Rhodes' Journal of Banking:**

HONESDALE, Pa., October 9, 1886.

SIR:—We have sent to us for collection a note of which the following, suppressing names, is a copy:

\$25.	TOWNSHIP OF —, September 15, 1885.	
On or before October, 1886, I promise to pay John Smith or bearer twenty-five dollars, waiving all benefit of valuation or appraisement laws, for value received, with interest.		
Payable at First National Bank in Honesdale, Pennsylvania.		
I own 100 acres of land.	(Signed,)	JOHN DOE. RICHARD ROE.

The "on or before October, 1886," is printed in the note, and it is listed to us as maturing October 1-4. We claim that where the limit of time is fixed at a calendar month, instead of a day, that the payer is entitled to the whole month so specified and three days' grace, and that this note is not due or protestable until November 3d. Am I correct?

E. F. TORREY, Cashier.

**Answer.**—When a bill or note matures on a specified day the rule is clear that the maker or acceptor has the whole of that day in which to pay it; and were the note in question made payable on a specified day, as, for example, October 11th, the maker would have the whole of the 11th and three days additional to pay it. Instead of being payable on a specified day it is payable on (or before) a specified month, viz., October, 1886; and, in our opinion, the same rule should apply and give the maker the whole of that month and three days additional to pay the note unless he chooses to pay it earlier.

**Editor Rhodes' Journal of Banking:**

SOUTH WHITLEY, Ind., October 11, 1886.

SIR:—1. How much can the indorsee of a note or bill recover from an indorser on failure of the maker to pay the note? Is it the amount the indorsee pays for the note plus a certain rate of interest or is it the face of the note or bill?

2. Is the collection of damages on protested notes generally enforced?

I am a subscriber to the JOURNAL and prize it highly.

JAMES ARNOLD.

**Answer.**—1. The general rule appears to be that in an action by an indorsee against an indorser the amount paid by the indorsee with legal interest is the amount recoverable (54 Ill., 337; Sedgwick on Damages, 6th Ed., page 28\*). In Indiana the rule is laid down in *Murphy vs. Lucas*, 58 Ind., 364, decided in 1877. In that case the Court says:

"Under the law merchant, when the action is between two parties to such a note (viz., a note negotiable under the laws of that State) who stand in immediate connection with each other, such as the maker and payee, or the indorsee and his immediate indorser, the consideration which passed between such parties, as between themselves, may be a subject of inquiry or a matter of defense. But where the action is by the indorsee against the maker of a promissory note governed by the law merchant, if it be conceded that the plaintiff is an innocent purchaser in good faith and without notice before maturity of the note sued upon, the amount paid by plaintiff in the purchase of said note is a matter of no possible interest to the defendant as it cannot afford him even a partial defense in such action. In such a case the measure of the plaintiff's recovery from the maker of the note is the amount due on the note and not the

amount paid by the plaintiff in the purchase of said note; and the want or failure of consideration, in whole or in part, of such a note, as between the maker and the payee thereof, cannot be set up as a defense by the maker in an action against him by the indorsee of such note."

It may be said in passing that under the laws of Indiana a promissory note is not negotiable so as to be governed by the law merchant unless it is made payable to order or bearer in a bank in that State.

2. We think not.

*Editor Rhodes' Journal of Banking:*

PEABODY, Kans., October 1, 1886.

SIR:—Will you kindly answer through the JOURNAL the following question:

We received a draft for collection, as follows:

\$500.00.

AUGUSTA, Kans., September 20, 1886.

At sight pay to the order of B. Bros. five hundred dollars, value received, and charge to account of

E. W.

To J. W., Peabody, Kansas, Stockmen's Exchange Bank.

This draft was presented at the Stockmen's Exchange Bank and at his residence. The answer the bank made was "No provision made for it," and at his residence they said, "Will not be home for two weeks." Can this draft be legally protested without being presented to him in person?

E. W. DETBLER, Cashier.

*Answer.*—A personal demand is not necessary, and the presentment at the place where it was addressed to the drawee, viz., the Stockmen's Exchange Bank, and the answer, "No provision made for it," was sufficient basis for a protest.

*Editor Rhodes' Journal of Banking:*

MONTPELIER, Vt., October 7, 1886.

SIR:—Will you please inform me through the pages of your valuable JOURNAL:

1. If a National bank who issues a demand interest-bearing certificate of deposit can file an offset on account of debts owing the bank from the party to whom the certificate was issued, provided the certificate is purchased by a second party after the certificate is past due or has been issued more than sixty days (the time when demand notes are due in our State)?

2. Is it within the jurisdiction of a State Legislature to require National banks to make returns of the deposits of individuals to the listers for the purpose of taxation, the same as savings banks are required to do?

M. B. C.

*Answer.*—1. Is the certificate of deposit in this case, in effect a promissory note, payable on demand, so that a party taking it after the period of sixty days had elapsed would take it subject to the equities between the original parties?

It has been held in many cases and the great weight of authority is to the effect, that a certificate of deposit in the regular form is a promissory note and is negotiable. (18 How., 217; 14 Conn., 363; 12 Ohio, 302; 87 Ind., 238; 19 Ill., 390; 1 Iowa, 531; 7 Ga., 84.) In *National Bank of Fort Edward vs. Washington County National Bank*, decided by the Supreme Court of New York in 1875 (5 Hun., 605), the plaintiff sued on a certificate of deposit "payable on the return of this certificate properly indorsed" which had been transferred to him seven years after its date. The bank claimed to offset a payment made six years before to the payee on the ground that the certificate was in effect a promissory note, payable on demand, and being transferred when overdue, the plaintiff took it subject to the equities between the original parties. The Court, however, held that the certificate was not dishonored until presented, and disallowed the offset.

A directly opposite case is that of *Tripp vs. Curtenius*, decided by the Supreme Court of Michigan in 1877 (36 Mich., 495). In that case an action was brought on a certificate of deposit payable "on the return of this certificate properly indorsed," which, it was claimed, was transferred after a reasonable time had elapsed, and that, consequently, certain offsets of the defendant should be allowed. The Court held that the instrument was in legal effect a promissory note payable on demand, and that the offset should be allowed, saying:

"To hold such instruments to be in legal effect promissory notes payable on demand, and yet not apply the principles applicable to demand notes, either because

of the peculiar form of the instrument or because issued by a firm engaged in the business of banking, would be to create a distinction unsound in principle and one not warranted by any reason or necessity that we can discover."

In *Brummagin vs. Tallant*, 29 Cal., 503, the Court holds that a certificate of deposit payable on demand is, in fact and in law, a promissory note; that the statute of limitation begins to run from its date, and no special demand is necessary to put it in motion.

In *Lynch vs. Goldsmith*, 64 Ga., 42, a certificate of deposit payable to the order of the depositor with interest at 7 per cent. on call or 10 per cent. by the year, and indorsed in blank by the payee, was held to be in effect a negotiable promissory note payable on demand and due immediately.

On the other hand, in *McGough vs. Jamison*, decided by the Supreme Court of Pennsylvania in 1884 (107 Pa. State, 436), suit was brought on a certificate of deposit payable to the order of the depositor "on the return of the certificate," and the Court held that it was "not due until demand made and a return of the certificate;" and to the same effect is the case of *Riddle vs. First National Bank*, U. S. Circuit Court, W. D. of Pennsylvania, decided April 21, 1886.

It was probably in view of this seeming anomaly of holding a certificate of deposit "payable on the return of the certificate" to be a negotiable promissory note payable on demand, and yet that it was not dishonored until presented (whereas a promissory note, if not transferred within a reasonable time, would be deemed dishonored, and subject to the equities existing between the original parties) that led the Supreme Court of Massachusetts, in the recent case of *Shute vs. Pacific National Bank*, to hold that a certificate of deposit payable to the order of the depositor "on the return of this certificate" was not a promissory note. In that case (decided February, 1884, 136 Mass., 487) action was brought upon three certificates of deposit payable to the order of the depositor "on return of this certificate, properly indorsed." The defendant attempted to offset two notes given by the payee to the defendant on the ground that the certificates declared on were promissory notes, payable on demand, and that when the plaintiff took them sufficient time had elapsed to let in the equities. In his opinion, the Court said:

"The certificates of deposit upon which this action is brought, though having in most respects the incidents of promissory notes, and classed as such, differ from common promissory notes in important particulars. Such a certificate is not merely a promise to pay a certain sum, but it declares that a certain fund has been deposited which is payable to the depositor or his order on the return of the certificate properly indorsed. A promissory note payable on demand is due as soon as it is given; an action may be brought upon it immediately without demand; and the statute of limitations begins to run against it from its date. A certificate of deposit is not due until a demand is made and the certificate returned or tendered. Such certificates are issued with the design that they shall be used as money and taken with as much confidence as the bills of the bank, and to avoid the risk and inconvenience of keeping, carrying and counting sums of money, and are so regarded in mercantile affairs. The statute relied upon by the defendant is founded on the principle that a person who takes an overdue note takes it subject to all the equities between the original parties, and that a promissory note on demand is overdue as soon as given. But a certificate of deposit is not due until demand made. Such certificates are commonly known in the community as promissory notes. To include them in the statute making promissory notes on demand subject to all the equities between the original parties would defeat entirely the purpose for which they are given."

This brief review of the decisions is preliminary to considering the question with reference to the State of Vermont, and will show the conflicting condition of the decisions outside of that State.

It is held by the numerical weight of authority that such certificates are promissory notes.

Some of the decisions hold that, such certificates payable "on the return of this certificate" being in effect promissory notes payable on demand, the rules applicable to such notes apply, and offsets are allowed when they are transferred after due. Other decisions hold that although such certificates payable on

demand are in effect promissory notes they are not due or dishonored until presented, and the decision in Massachusetts, above quoted, holds that they are not due until presented and that this is one reason why they are not promissory notes.

In Vermont the statute makes promissory notes on demand overdue after sixty days, and the only question is whether a demand, interest-bearing certificate of deposit is covered by this statute so as to let in the equities if transferred after sixty days or whether it is not due until presented. There are but two decisions in that State (so far as we have been able to find) which have any bearing upon the question. The first is *Smilie vs. Stevens*, 39 Vermont, 315, which was a suit brought upon a certificate of deposit payable to order "on demand with interest from February 15, 1864, on the return of this certificate." No question as to when the instrument matured arose in this case, but the point to be determined was whether it was negotiable so as to permit of a suit by the transferee. The Court said: "It is a general principle of the common law that a chose in action is not assignable even if in terms made payable to bearer or to the order of the promisee, but by the law merchant it is otherwise in the case of promissory notes and bills of exchange in terms made payable to bearer or the order of the payee. *The question is whether this instrument is a promissory note within the meaning of the law merchant as applicable to this question?*" And the Court, after stating the general rule that promissory notes and bills must be payable absolutely and not on a contingency, holds "that the fact that the instrument in question is made payable 'on the return of this certificate' is not such a contingency as affects its negotiable character."

The other case is that of the *Bellows Falls Bank vs. The Rutland County Bank*, 40 Vermont, 377. The action was upon a certificate of deposit payable to the order of the payee on the presentation of the certificate properly endorsed. The Court holds that "it is a negotiable instrument within the law merchant. That the time when the instrument is due by its terms is ascertainable only by an actual presentation of it to the defendant's bank properly endorsed and call for the money. \* \* \* In this case it is clear upon principle that no action should be allowed against the defendant without a previous demand, and we think this view of the subject will give operation to the instrument according to its legal effect and the obvious intention of the parties."

Under this last decision it will be seen that the Court holds that a certificate of deposit "payable on the presentation of the certificate properly indorsed" (which is, in effect, payable on demand), is not overdue until actually presented, and that it is clear upon principle, and in view of its nature and the obvious intention of the parties, that no suit can be brought upon it until demand is made.

We are inclined to think, in view of this latter decision, and also in view of the fact that the certificate mentioned in the inquiry of our correspondent bears interest, that the Vermont courts would hold that it did not become overdue at the expiration of sixty days, but only when presented, and that the bank could not offset a claim against the depositor if the certificate had not been presented and dishonored even though it was transferred more than sixty days from its date.

It is true that in the first case above cited such a certificate is held to be a promissory note, and it might be claimed that the rules applicable to promissory notes should apply and thus make it overdue at the expiration of sixty days, but the point at issue in that case was not the date of its maturity but whether or not a certificate of deposit was negotiable, and the Court simply holds that it is a promissory note within the meaning of the law merchant *as applicable to this question*. In the second case, wherein the question of maturity arose, the Court holds that it is a *negotiable instrument*, and apparently avoids holding that it is a promissory note. We are, therefore, of opinion that in view of these decisions the offset would not be allowed unless it had been dishonored by an actual presentation before it was transferred, and that until such time it would not be regarded as overdue.

2. Without going into a detailed discussion of this question we are of the opinion that a State Legislature would have the power to enact such a law. A

somewhat analogous case was that of *Waite vs. Dawley*, decided by the Supreme Court of the United States in 1878 (94 U. S., 527). In that case a statute of Vermont was held valid which required the Cashier of each National bank in the State, and the Cashiers of all other banks, to transmit to the Clerks of the several towns in the State in which any shareholder of such bank should reside a true list of the names of such stockholders, with the number of shares standing against their names on the books of the bank (together with the amount of money actually paid in on each share on the first of April), on or before the 15th day of April in each year, and which imposed a penalty in case of neglect or refusal. The Court in that case delivered quite an extended opinion on the question, and, among other things, said:

"We have more than once held in this Court that the National banks organized under the Acts of Congress are subject to State legislation, except where such legislation is in conflict with some Act of Congress or where it tends to impair or destroy the utility of such banks as agents or instrumentalities of the United States, or interferes with the purposes of their creation."

### BRIEF REPLIES TO SUBSCRIBERS.

**AN INQUIRER** (New York city).—The bank is under no obligation to certify a check even though the drawer has sufficient funds to his credit to meet it. The only act which the bank is under obligation to perform for the holder of the check is to pay it.

**A SUBSCRIBER** (New Orleans).—"..... the account stands in the name of 'A and B, trustees of the ——— Hospital.' The check form used has lines for two signatures, thus:

\_\_\_\_\_, } Trustees of the  
\_\_\_\_\_, } Hospital.

Will the signature of one trustee be sufficient?"

**Answer.**—We think not. "Morse," 2d Edition, page 290, says: "If the deposit is placed to the credit of divers persons, as *trustees*, the signatures of all are indispensable to the validity of the check."

**H. C. S.** (Albany, N. Y.).—If, owing to the peculiar circumstances of the case, it be doubtful on which of two days a note falls due, and it is unlikely that the note will be paid at all, there is no objection to making presentment and protest on both days.

**A READER** (Columbus, O.).—The fact that the Cashier and clerks went freely to the Note-Clerk's box for the purpose of examining and at times withdrawing notes will be sufficient to relieve the Note-Clerk of any *individual* responsibility for the safe custody of the paper.

**TELLER** (Texas).—Yes, a bank is ordinarily supposed to know whether notes purporting to be issued by itself are genuine or not. As a general rule it is not allowed to return such notes, though counterfeit, after having once received them. It is to be noted, however, that if the person presenting the counterfeit note knew it to be counterfeit he would be obliged to take it back, because a man cannot take advantage of his own fraud. The bank is also allowed a reasonable time, say a day or two, to determine the character of the note.

**NEW MAN AT THE HELM.**—We appreciate your position and think you have a rather difficult task before you. The system of book-keeping at your bank evidently needs a thorough reorganization and you are the man to carry it through. But go slowly, until the clerks appreciate that the work is being reduced, then you will have all the co-operation you want.

**A. N. J.** (Oregon).—When a note made payable at a bank has been duly honored we see no objection to the bank canceling the note in the same way as a check.

**IN A FIX.**—Whether a Teller should be compelled to make good any shortages in his cash depends upon circumstances. An occasional shortage of a small amount would probably be passed over, but repeated occurrences of

this kind, or even a single one, if for a considerable amount, would require attention. Shortgages in the Teller's cash are very disagreeable under any circumstances.

**CASHIER** (Quincy, Ill.)—We do not think the bank is liable to pay the protest fees; but under the circumstances, as the amount is small, we would advise you to pay them and say no more about it.

**MESSNGER**.—Your proper course is to report the matter to the Cashier. The responsibility for action or non-action then rests with him.

**TELLER** (Beaver, Pa.)—A post-dated check is payable on the day of date without grace. But care must be taken not to confound such a check with one made payable in the body of the instrument a certain number of days after date or on a certain date. Whether the latter bears grace or not is unsettled.

**CASHIER** (Ohio).—So far as we know, no compilation of the rulings of the Treasury Department has been published. Such a work would, no doubt, be very useful. The Department, however, is always ready to furnish any desired information.

**SEVERAL INQUIRERS**.—It is impossible, in a limited space, to give any satisfactory statement of a legal doctrine, *e. g.* the doctrine of estoppel; even a definition, unless supported by a context of illustrations and explanations, is apt to be misleading. The only way to gain such information is by reading the standard text-writers.

---

### Change in Name—New Features, Etc.

With the January issue the name of the publication heretofore known as "Rhodes' Bank List" will be changed to **BRADFORD RHODES & Co.'s**

#### **BANKERS' DIRECTORY AND COLLECTION GUIDE.**

As indicated by its title this book will be a complete Directory of the Banks and Bankers of the United States and Canada, including Collection Agents, Brokers, and all others engaged in any department of the Banking business. Corrected to the latest date and conveniently arranged for ready reference.

**WHERE TO SEND COLLECTIONS ON PLACES HAVING NO BANKS** (*A new feature*).—At the end of the regular list of Banks in each State will appear a List of Villages accessible to Banking towns and on which Bankers can readily make collections, showing the distance in miles to the nearest Bank; and other important information for Bankers, Merchants and others handling collections.

**LAW POINTS FOR BANKERS, MERCHANTS AND COLLECTION AGENTS**.—A carefully prepared digest of the Business Laws of the various States relating to bills and notes, interest, usury, days of grace, assignments, attachments, insolvency, the statutes of limitation, etc., and a new summary of the Banking Laws of each State, will appear in the new issue. This department of the **DIRECTORY** will be revised to date by the Law Editor of the **JOURNAL OF BANKING**.

---

**PRICE, WITH PLAIN EDGE, \$2 A COPY; WITH NAMES OF STATES INDEXED ON EDGE OF THE BOOK, \$3 A COPY.**

Printed on fine paper and handsomely bound in red cloth.

---

**SPECIAL**.—*A copy of the January 1887 Edition of the BANKERS' DIRECTORY AND COLLECTION GUIDE (bound in cloth, plain edges) will be furnished WITHOUT CHARGE to all Journal subscribers for the year 1887. This offer applies to present subscribers who renew for the coming year as well as to new subscriptions received before the 1st day of January next.*

## BANKING AND FINANCIAL NEWS:

WITH COMMENTS ON THE MORE IMPORTANT MATTERS. THIS DEPARTMENT ALSO INCLUDES: RAILROAD AND INVESTMENT NEWS, AND A COMPLETE LIST OF NEW BANKS, CHANGES IN OFFICERS, DISSOLUTIONS AND FAILURES.

**Bank Thieves Fooled.**—The President of the Merchants' National Bank, of Baltimore, Md., writes as follows:

"I send you papers containing accounts of the manner in which we handle 'crooks' in Baltimore. These gentlemen apparently have a spite against us, but thus far we have come out all right. In 1880, for forgery in each case, we sent three of them to the penitentiary for a combined sentence of nineteen years, and in 1884 the same number for a combined sentence of twenty years; and now, within eleven days after the commission of the crime, we have been able to get two more sentenced for ten-and-a-half years each. I hope the balance will let us alone.

"With kind regards, yours truly, DOUGLAS H. THOMAS."

The facts relating to the latest attempt at robbery mentioned above are as follows: On October 4th, Andrew L. Hand and John Burke, malefactors well-known to the police, tried to play the "drop game" in the Merchants' National Bank. One of them attracted the Teller's attention while the other dropped three one-dollar notes on the floor beside a customer who was counting his money, and, calling the latter's attention to them, grabbed the pile of notes on the counter. Before the thief could escape from the bank Major Thomas caught him. On October 13th the two thieves were sentenced as mentioned in the letter. If all bank sharpers were treated as vigorously their industry would soon be destroyed.

**Extension of New York State Bank Charters.**—Bank Superintendent Paine recently submitted the following question to the Attorney-General of New York State: "Is there any provision of law which authorizes the extension of the charter of a bank formed on the 12th day of January, 1867, under the general banking law of 1838?" Following is the substance of the Attorney-General's reply, under date of October 6, 1886:

"The Act of 1838 having been repealed it is, of course, immaterial whether said Act contained such a provision or not (Chap. 402, Laws of 1832). It is asserted by you that there is no such provision in the General Banking Act of 1862, and after diligent search I have been unable to find one. Chapter 937 of the Laws of 1867 is a general Act, however, passed for the purpose of enabling companies or corporations organized under any general law to extend the term of their existence by conforming to its provisions, which are as follows:

**'Extensions of Time of Existence.**—SECTION 1. Any company or corporation heretofore formed under any general law of this State at any time within three years of the expiration of its term of existence may extend the term of existence of such company or corporation beyond the time mentioned in the original articles of association or certificate of incorporation by the consent of the stockholders owning two-thirds in amount of the capital stock of such company or corporation in and by a certificate to be signed by such stockholders and acknowledged or proved so as to enable it to be recorded, which certificate shall be filed in the office of the Secretary of State and in the office of the Clerk of the county in which its original certificate or articles of association, if any, are filed or recorded \* \* \* and thereupon the term of existence of such company shall be extended as designated in such certificate for a term not exceeding the term for which said company or corporation was organized in the first instance."

"The real question to be determined is, does this Act apply to banks which were formed under the Act of 1838. The Act is only applicable to corporations formed prior to its passage, which was on May 17, 1867, subsequent to the incorporation of the bank in question. Unless it can be demonstrated that the general banking law of 1862 has, in so far as the Act of 1867 applies to banking corporations, repealed the same, I think there is no doubt but that the bank can extend its corporate existence under the provisions of said Act of 1867. The only case which I have been unable to find which

would indicate by analogy that the statute of 1867 could not be made applicable to banks formed under the Act of 1838 is the case of *Leavitt vs. Blatchford*, 17 N. Y., 521, referred to in your communication. \* \* \* Still, by a close examination of that case and the case of *Curtis et al. vs. Leavitt*, 15 N. Y., 1, it will be found that the chief reason for holding that the Revised Statutes did not apply to banking associations formed under the law of 1838 was because an association formed under that Act was not strictly a corporation. I have been unable to find any provision in the banking law of 1882 which either expressly or by irreconcilable inconsistency repeals the law of 1867. That Act includes corporations, associations and companies, and I fail to see why it should not apply to a banking association formed under the law of 1838. The repeal of that Act would not invalidate or make void a corporation formed under it. I am of the opinion, therefore, that the bank in question may extend its corporate existence by complying with the provisions of the law of 1867 *supra*.

"Very respectfully, your obedient servant, D. O'BRIEN, Attorney-General."

**Missouri Banks.**—Following is a statement of the resources and liabilities of the incorporated, private and National banks in the State of Missouri at the close of business on August 28, 1886, compiled from official reports and furnished to the JOURNAL through the courtesy of the Hon. M. K. McGrath, Secretary of State. There are 200 incorporated, 93 private and 44 National banks in the State:

RESOURCES.	Incorporated Banks.	Private Banks.	National Banks.	Total.
Loans on personal and col- lateral security.....	\$43,338,568 72	\$4,722,140 00	\$21,106,896 60	\$69,167,545 32

**The Chemical Bank of New York city** has had a remarkable history. In 1824 the Legislature of the State of New York granted to the "Chemical Manufacturing Company" of New York city a charter with banking privileges. The charter was to run twenty years, and under it they had the right to issue bank notes without limit and without depositing securities. Under the charter (in 1824) a chemical manufactory was started at Thirtieth street and Tenth avenue and a bank at No. 216 Broadway. The capital was \$500,000. At the expiration of the charter (in 1844) it was reorganized as the Chemical Bank," with a capital of \$300,000. No dividends were paid until 1849, when they began paying annual dividends of 12 per cent. and continued

up to 1851, when they paid 18 per cent. annually up to 1854, then 24 per cent. until 1863, 36 per cent. until 1868, and 60 per cent. until 1872, since which time it has paid 100 per cent. annually, besides accumulating a large surplus. This surplus now amounts to about \$5,000,000. Every share of stock of \$100 will sell for more than \$3,000. Its deposits, on which not a cent of interest is paid, are the largest of any bank in New York city, amounting at the present time to about \$23,000,000.

**New York Clearing-House.**—At the annual meeting of the New York Clearing-House Association, held on October 5th, the following officers and committees were elected for the ensuing year: *Chairman*—Jacob D. Vermilye. *Secretary*—Richard Hamilton. *Manager*—William A. Camp. *Clearing-House Committee*—Edward H. Perkins, Jr., Frederick D. Tappan, William Dowd, Wm. A. Nash and Percy R. Pyne. *Conference Committee*—Geo. G. Williams, John L. Jewett, Richard D. Edwards, Octavius D. Baldwin and George S. Coe. *Nominating Committee*—Clinton W. Starkey, John T. Hill, Henry Rocholl, J. Theodore Baldwin and Chas. H. Leland. *Committee on Admission*—John M. Crane, Geo. M. Hard, A. S. Frissell, A. S. Apgar and D. B. Pratt. *Arbitration Committee*—W. H. Oakley, John Jay Knox, D. C. Hays, George Montague and George F. Baker.

Manager Camp's report of the transactions for the fiscal year ending October 1st (cents omitted) is as follows:

	Exchanges.	Balances.
October, 1885 .....	\$3,189,746,197	\$138,009,947
November, 1885 .....	3,318,946,571	120,799,054
December, 1885 .....	3,238,393,366	152,901,882
January, 1886 .....	2,875,528,894	138,003,471
February, 1886 .....	2,745,507,741	123,065,747
March, 1886 .....	2,905,076,441	136,183,049
April, 1886 .....	2,420,974,948	128,701,494
May, 1886 .....	2,410,327,661	103,849,285
June, 1886 .....	2,734,162,902	125,867,248
July, 1886 .....	2,476,040,405	127,027,384
August, 1886 .....	2,454,177,828	112,668,774
September, 1886 .....	2,805,799,756	114,898,041
Total .....	\$33,374,682,216	\$1,519,565,385
Clearings for year .....	\$33,374,682,216	
Balances for year .....	1,519,565,385	
Total transactions .....	\$34,894,247,601	
Average daily exchanges .....	\$169,067,588	
Average daily balances .....	4,965,899	
Average daily transactions .....	114,033,488	

The total transactions of the Clearing-House since its organization in October, 1853, thirty-three years, are \$812,256,912,962.

**Canadian Law against Absconding Defaulters.**—Many American business men have a vague idea that there is a law on the Canadian statute books under which foreign defaulters bringing their spoils into that country may be punished, and, again, many have no knowledge regarding the matter. The fact is that there is a real law for the purpose mentioned, and not long ago a man from St. Louis who had money stolen from his employer in his possession was arrested and imprisoned in Canada. Doubtless many other defaulters might also have received punishment if their cases had been followed up vigorously. It should be remembered, however, that it is necessary to prove that the malefactor has the stolen money or property in his possession, and that it has been obtained in such a manner as would constitute a felony or misdemeanor in Canada. However, here is the law itself, being Section 112 of Acts 32 and 33 Victoria (1869):

"If any person bring into Canada, or has in possession therein, any property stolen, embezzled, converted or obtained by fraud or false pretences in any other country in

such manner that the stealing, embezzling, converting or obtaining it in like manner in Canada would by the laws of the land be a felony or misdemeanor, then the bringing such property into Canada, or the having it in possession therein, knowing it to have been so stolen, embezzled, converted or unlawfully obtained, shall be an offence of the same nature and punishable in like manner as if the stealing, embezzling, converting or unlawfully obtaining such property had taken place in Canada, and such person may be tried and convicted in any district, county or place in Canada into or in which he brings such property or has it in possession."

**Death of Mayer Karl Rothschild.**—Mayer Karl Rothschild, the head of the parent house of the great Rothschild banking firm at Frankfort, died suddenly on October 16th of heart disease in that city. He was in the third generation of the financiers, but was not in direct descent from Mayer Anselm, who laid the foundation of the fortune of the Rothschild or Bauer family, for the name of the family is now taken from the red shield that marked the little shop of Anselm Moses in the Judengasse in Frankfort-on-the-Main in 1774. Mayer Anselm died in 1812, leaving five sons and five daughters, the eldest son, Anselm Mayer, succeeding his father in Frankfort, while the other sons went to Paris, London, Vienna and Naples. Anselm Mayer married his cousin, the eldest daughter of Nathan, who was conducting the London branch, but no sons resulted from the union, and upon his death he appointed as his successor at Frankfort his nephew, the late Mayer Karl. It is related that when he determined upon this appointment he embraced young Mayer Karl, saying, "Much as I love you I should have loved you better had you let me be your father. Daughters are dear to my heart, but they can't be bankers, you know."

**A Correction.**—A subscriber calls attention to a typographical error in the Treasury circular, "One Dollar Silver Certificates," published on page 825, October number of the JOURNAL. The last sentence reads: "Until further notice, no such application will be granted until the supply of notes is adequate to meet all current demands." This contradicts the previous sentences. It should read: "Until further notice, no *second* application," etc.

#### MISCELLANEOUS BANK AND FINANCIAL ITEMS.

— It is a great shock to a newspaper publisher to have the banks stop his paper.—*N. O. Picayune.*

— The "Bankers' Institute of Australia" has been organized, beginning with a membership of 500.

— Mrs. Sarah Howe, after serving out her sentence in the House of Correction, has again started her fraudulent "woman's bank" in Boston.

— The silver dollar would have to be at least 500 grains to equal in value the gold dollar. They would be nice for quilts.—*Springfield Republican.*

— In a savings bank of Charleston, S. C., it is stated that the colored people have \$124,938 on deposit. The largest depositor has \$6,000 to his credit.

— On October 28th the doors of the bank of William M. Dustin, of Lincoln, Ill., were closed. The liabilities are stated at \$200,000 and assets \$67,000.

— The decision setting aside the assignment and transfer of property by the late banking firm of Wilkinson & Co., of Syracuse, N. Y., will go to the Court of Appeals.

— Mr. Sanford Gibbs, banker and merchant, of Huntsville, Tex., who died recently, left his entire estate to his wife, who, at his request, will continue the business in his name.

— The new one-dollar silver certificates have the likeness of Mrs. George Washington. They couldn't put George's phiz on, because he never told a lie.—*Burlington Free Press.*

— B. Rantonberg, a clerk in the Winona (Minn.) Savings Bank, absconded on October 12th, taking \$1,200 of the funds belonging to the institution. He is supposed to have gone to Canada.

— The value of the Shanghai tael for custom house purposes is now fixed at \$1.004 instead of at \$1.175, the former rate, and the value heretofore attached to other Chinese taels has been reduced in the same proportion.

— The stockholders of the Alabama State Bank, of Birmingham, recently determined to increase the capital stock from \$200,000 to \$500,000, and the additional stock

was subscribed for immediately. The institution is to become a National bank under the title of the Alabama National Bank.

— The capital of \$1,000,000 of the First National Bank, of Portland, Me., is not only not affected by William E. Gould's defalcation, but there remains \$112,256 of the surplus fund and \$30,699 of the undivided profits.

— Otto Baumann, Receiving Teller of the Union Dime Savings Bank, of New York, disappeared suddenly on October 3d, and it was discovered that he had embezzled nearly \$20,000. The surplus of the institution (deducting the loss) is \$578,721.

— Cashier Byron Roberts of the Bank of Topeka, Kan., has resigned in order to become Treasurer of Shawnee county, Kana. Mr. J. W. Thurston has been elected to succeed him as Cashier and Mr. Wm. Wadsworth becomes Assistant Cashier.

— It is reported that about a dozen National banks have given notice to the Comptroller of the Currency that they have decided to withdraw from the National system rather than pay the present high prices for other bonds to replace their three per cents.

— Through the operations of M. N. Neeld, of the Chicago packing-house of J. C. Ferguson & Co., who has fled to Canada, the banks of Chicago and New York are reported to have lost between \$300,000 and \$400,000 advanced on fraudulent warehouse receipts.

— The report of the Special Master of the bankrupt Houston (Tex.) Savings Bank shows a list of claims approved and allowed amounting to \$169,229, and there is now on hand for distribution \$51,000. The Receiver, Dr. D. F. Stuart, has been ordered to pay 30 per cent. of all the claims mentioned in the report.

— Mr. G. A. Taylor, who was formerly connected with the New Hampton Bank, New Hampton, Iowa, has become Cashier of the Farmers & Merchants' Bank, of Bird City, Kans. This is a new bank of which Mr. W. L. Darrow is President and A. K. Darrow, Vice-President. The proprietors claim an individual responsibility of \$100,000.

— In the estimates for the maintenance of the Treasury Department for the next fiscal year appropriation will be asked for a larger force than is now employed in the preparation of the one and two-dollar silver certificates, it being inferred at the Department that for at least one year the demand for these notes will be greater than the present capacity of the Treasury to supply.

— The Pacific National Bank cases, involving the question of the liability of the stockholders of the insolvent Pacific National Bank, of Boston, for the amounts of stocks subscribed to by them when the capital stock of the bank was increased from \$500,000 to \$1,000,000 in September, 1881, were decided in the United States Court at Washington on October 12th.

— At the recent annual election of the Boston Stock Exchange the following officers were chosen for the ensuing year: *President*, Murray R. Ballou; *Vice-President*, Henry W. Dodd; *Treasurer*, Charles Dudley Head; *Secretary*, William C. Fisk; *Governing Committee* for the term ending October 1, 1896, Elisha D. Bangs, Charles Head, James P. Brewer, E. Rollins Morse, Joseph W. Davis, Edward W. Mussey.

— Recent Washington advices say the officials of the Mint Bureau believe that the preparations now perfected will be sufficient to supply the demand for one, two five and ten-cent pieces. Within a few weeks delays in complying with orders will be obviated. The present employes of the Mint Bureau have no recollection of so great a demand for small coin as has been made within the past three months and which is still in progress.

— The organization of the First National Bank, of Taylorsville, Ill., was completed on October 9th, and business began about November 1st. This bank, with \$75,000 capital, succeeds Messrs. W. W. Anderson & Co., of the same place. The management will be essentially similar to that of the former firm, and the same conservative policy that has proved so successful in the past will be continued in the future. This is the first bank incorporated in the county.

— The Treasury Department has published a statement showing the population, net revenue and net expenditure of the Government for the last fiscal year with the *per capita* of revenues and expenditures. The population is figured at 58,420,000 and the net revenues at \$336,430,727, being a *per capita* of \$5.76 or .08 per cent. greater than

the fiscal year of 1885. The expenditures were \$242,483,188, a *per capita* of \$4.15 or .24 per cent. less than that of the previous year.

— The English holders of Virginia bonds have made a proposition that, if Virginia will reopen the debt question and agree to appropriate no more money annually to her public schools than she does now, to keep down the expenses of the State Government to the present figures, to give no more than now to universities, colleges, asylums, etc., and to turn over every year to the bondholders the sum remaining of the revenues of the State (these revenues never to be diminished by a reduction of taxes), they will accept the proposed terms and under them make a new settlement.

— The Comptroller of the Currency has declared dividends to the creditors of insolvent National banks as follows: The Marine National Bank, of the City of New York, a seventh dividend (5 per cent.), making in all over 50 per cent. on claims proved amounting to \$4,466,599. The Pacific National Bank, of Boston, Mass., a fourth dividend (5 per cent.), making in all 20 per cent. on claims proved amounting \$2,291,997. The First National Bank, of Angelica, N. Y., a second dividend (25 per cent.), making in all 75 per cent. on claims proved amounting to \$49,879. The First National Bank, of Sioux Falls, Dakota, a first dividend of 20 per cent. on claims proved amounting to \$49,383.

— The Institute of Accounts (formerly "The Institute of Accountants and Book-keepers of the city of New York"), is an organization formed for the elevation of the profession and the intellectual advancement and improvement of its members. More specifically the objects are the discussion at the meetings of technical questions together with methods of practice, mutual aid to members in the performance of their professional and social responsibilities, furnishing the business community with trustworthy accountants and book-keepers, and through its beneficiary branch providing mutual life insurance for its members. The Institute appears to have a useful career before it.

#### R. R. AND INVESTMENT NEWS.

##### *New Issues.*

**NEW YORK STOCK EXCHANGE LIST.**—The following securities have been added to the regular list:

Lake Erie & Western—Stamped certificates.

Joliet Street Company—Capital stock, \$2,666,000.

St. Joseph & Grand Island—\$4,600,000 capital stock.

Detroit, Hillsdale & Southwestern—\$1,350,000 stock.

Gulf, Colorado & Santa Fe—\$660,000 (Nos. 8,341 to 9,000 inclusive) first mortgage bonds.

Chicago, Burlington & Northern—First mortgage 5 per cent. bonds (due April 1, 1926), \$9,000,000.

Chicago & Northwestern Railroad Company—\$4,385,000 four per cent. extension bonds, due 1926.

Philadelphia Company—\$6,500,000 stock in shares of \$50 each. The company supplies natural gas.

Chicago & Indiana Coal—An additional \$434,000 of first mortgage 5 per cent. bonds, making a total of \$2,808,000.

Chicago, Milwaukee & St. Paul—\$2,140,000 (Nos. 18,541 to 20,680 inclusive) Chicago & Pacific, Western division, bonds.

Toledo & Ohio Central Railroad Company—31,080 shares preferred and 15,920 shares common stock, amounting to \$4,700,000.

Burlington, Cedar Rapids & Northern—An additional \$384,000 of consolidated 5 per cent. bonds, making the total amount listed up to date \$5,000,000.

Missouri, Kansas & Texas—An additional \$1,000,000 of six per cent. general consolidated bonds, making a total amount of 6's and 5's up to \$32,000,000.

Northern Pacific Railroad Company—\$1,000,000 additional first mortgage railroad and land grant bonds. They are on 40 miles of new road built in Washington Territory.

Richmond & Danville—Assented debenture bonds, \$1,000,000, exchangeable into a consolidated 5 per cent. bond at the rate of \$1,180 in the new bonds and \$29.50 cash for each \$1,000.

Cincinnati, Indianapolis, St. Louis & Chicago—\$1,250,000 of the 50-year general first mortgage 4 per cent. bonds. Under provision of the mortgage \$1,000,000 of the bonds

are sold for cash and the remaining \$9,000,000 are to be issued only in exchange for bonds of prior liens.

**Grand Rapids & Indiana**.—Registered bonds, \$594,000 (Nos. 1 to 594 inclusive); coupon bonds, \$2,639,000 (Nos. 1 to 108 inclusive, 1,501 to 2,095 inclusive, 2,097 to 3,494 inclusive, 3,598 to 3,796 inclusive and 4,287 to 4,625 inclusive).

**LAKESIDE & MARBLEHEAD RAILROAD**.—This company has increased its capital stock to \$150,000 and decided to issue \$110,000 first mortgage bonds.

**THE CHICAGO, CAIRO & GREAT SOUTHERN RAILROAD** has been reorganized with a capital of \$10,000,000. It will build a road from Chicago to Cairo.

**METROPOLITAN RAILROAD**.—This company has been chartered to build an underground railway in Philadelphia. The capital stock will be \$2,250,000.

**THE ARKANSAS CITY & VARNER RAILROAD** has been incorporated with a capital of \$500,000. Arkansas and Boston capitalists are interested in the enterprise.

**BEACH CREEK RAILROAD**.—A mortgage for \$5,000,000 has been filed by this company in Clinton County, Penn., to the Knickerbocker Trust Company, of New York.

**MARIETTA & NORTH GEORGIA**.—First mortgage 6 per cent. 30 year bonds of this company are being offered for sale. They are issued at the rate of \$7,000 per mile.

**NEW YORK DOCK BONDS**.—Bids for \$500,000 of registered 3 per cent. Dock bonds payable November 1st, 1916, were opened October 19th. The bids ranged from par to 104.

**EAST TENNESSEE, VIRGINIA & GEORGIA**.—On November 20th the stockholders will vote on the question of issuing \$1,500,000 consolidated first mortgage bonds to be used for betterments.

**CHICAGO, KANSAS & WESTERN—ATCHISON, TOPEKA & SANTA FE**.—These companies have filed an amended charter in Kansas and will build 52 miles of road in that State. The capital stock will be \$154,000,000.

**CINCINNATI, HAMILTON & DAYTON**.—This road will be extended from Dayton, Ohio, into the Hocking and Jackson coal fields, 200 miles. For this purpose \$4,000,000 first mortgage 50-year 4 per cent. bonds will be issued.

**CINCINNATI, WASHINGTON & BALTIMORE**.—It is reported from Baltimore that the Baltimore & Ohio Railroad Company realized 18 per cent. for the \$4,000,000 Cincinnati, Washington & Baltimore second income bonds sold to the English bondholders, or a total of \$640,000.

**THE WILKESBARRE & WESTERN RAILWAY COMPANY** will issue \$900,000 first mortgage 5 per cent. bonds for the construction of 50 miles of road. There will be \$100,000 additional held in the Treasury. The Central Trust Company of New York is the trustee of the mortgage.

**THE DELAWARE & HUDSON COMPANY** has decided to issue \$1,000,000 of stock to retire an equal amount of bonds of the Union Coal Company maturing January 1, 1887. Twenty-five per cent. of the subscription was payable October 15th and the remaining seventy-five per cent. is payable December 14th.

**MISSOURI PACIFIC**.—A new issue of \$4,000,000 of stock to pay for rolling stock and new construction will be divided among the stockholders of record October 30th. Each stockholder is allowed to subscribe for one share of new stock for every 10 shares held. The first instalment of 20 per cent. will be payable November 1st.

**CLEARFIELD BITUMINOUS COAL COMPANY**.—This company's property was recently sold under foreclosure and a new company called the Clearfield Bituminous Coal Corporation has been organized. The capital stock is reduced from \$5,000,000 to \$1,650,000, of which \$1,300,000 is common stock and \$350,000 preferred, the latter to be increased to \$500,000 if necessary.

**ST. PAUL, MINNEAPOLIS & MANITOBA**.—A syndicate composed of Kuhn, Loeb & Co. of New York, the Berliner Handelsgesellschaft, Mendelssohn & Co. and Robert Warschauer & Co. have taken \$8,000,000 worth of 4½ gold preference bonds of the St. Paul, Minneapolis & Manitoba Railroad. The bonds will soon be offered for subscription in New York, London and Berlin.

**LONDON STOCK EXCHANGE**.—The London Stock Exchange Committee has ordered the following quotations: New York, Lake Erie & Western Railroad Company—Funded

coupon five per cent. bonds (1860). Norfolk & Western Railroad Company—Improvement and extension six per cent. bonds (Nos. 2,501 to 2,900). Grand Rapids & Indiana Railroad (Muskegon division)—Bonds in lieu of scrip.

#### Railroad Reports.

**EVANSVILLE & TERRE HAUTE.**—The annual report for the year ended August 31 1886, shows earnings and expenses as follows:

	1884-5.	1885-6.
Total gross earnings.....	\$718,823	\$761,932
Operating expenses.....	361,223	375,181
Net earnings.....	\$357,600	\$386,801

Following is a summary of income account:

Total net income.....	\$357,600	\$386,801
Total disbursements.....	262,320	322,320

Balance, surplus.....	\$75,280	\$64,481
-----------------------	----------	----------

No change was made in the stock or bonded debt. The latter amounts to \$4,257,000, of which 1,027,000 is held in the treasury.

**WESTERN UNION TELEGRAPH.**—At the annual meeting on October 13th Messrs. Austin Corbin, John G. Moore and Henry B. Hyde were elected Directors in place of Harrison Durkee, deceased, Frank Work and Hugh J. Jewett. The earnings were as follows:

	1884-5.	1885-6.
Total gross earnings.....	\$17,708,534	\$18,398,639
Operating expenses.....	12,005,910	12,378,783

Profits..... \$5,700,925 \$3,919,856

Disbursements:

Dividends.....	\$4,909,325	\$3,399,573
Interest on bonds.....	495,072	494,461
St king funds.....	39,962	39,991

Total disbursements.....	\$5,534,359	\$3,934,025
--------------------------	-------------	-------------

Balance of profits.....	166,536	def., 14,169
-------------------------	---------	--------------

The total nominal surplus on June 30th was \$4,309,835 against \$4,324,004 in the previous year.

**LOUISVILLE & NASHVILLE.**—The annual report for the year ended June 30, 1886, shows a floating debt of \$2,149,020 against which are floating assets amounting to \$3,764,637. The earnings were as follows:

	1884-5.	1885-6.
Total gross earnings.....	\$13,936,347	\$13,177,018
Operating expenses.....	8,182,255	8,213,295

Net earnings.....	\$5,754,062	4,963,723
-------------------	-------------	-----------

Following is a summary of income account:

Total net income.....	\$5,952,688	\$5,171,530
Total disbursements.....	4,637,806	4,643,727

Balance, surplus.....	\$1,356,800	\$692,496
-----------------------	-------------	-----------

Of the disbursements in 1884-5 \$42,012 is to be refunded and included in the surplus, and, in 1885-6, \$164,602. The bonded debt was reduced \$603,000 during the year.

**ST. PAUL, MINNEAPOLIS & MANITOBA.**—The report for the year ended June 30, 1886, will make the following showing:

	1884-5.	1885-6.
Gross earnings.....	\$7,776,164	\$7,321,736
Expenses and taxes.....	3,509,927	3,838,652

Net earnings.....	\$4,266,237	\$3,483,084
-------------------	-------------	-------------

Total income.....	\$4,463,813	\$4,004,314
-------------------	-------------	-------------

Deduct:

Interest on bonds.....	\$1,960,280	\$1,969,820
Dividends (6½ per cent.).....	1,300,000 (6 p.c.)	1,200,000
Sinking fund.....	131,292	350,114

Total.....	\$3,411,573	\$3,549,384
------------	-------------	-------------

Surplus.....	\$1,052,241	\$454,380
--------------	-------------	-----------

## OPEN LETTERS FROM BANKERS.

*An Interchange of Opinion by the "Journal's" Readers.*

### PROMOTION IN BANKS.

*Editor Rhodes' Journal of Banking:*

SIR:—Noticing the interest that the JOURNAL displays in everything pertaining to the banking business, I take the liberty of writing a few lines on a subject that has for some time occupied my thoughts, viz.: the right way to regulate the promotion of clerks in a bank. There is a wide-spread notion that promotion in a bank, though slow, is sure, but experience does not always bear this out. Another theory is that promotion ought to go by merit. This, like a good many other ideas, is very well in theory, but in practice it usually means promotion by influence and favor. Here is my idea on the subject. I think the desks in a bank should be arranged in regular order, a certain salary fixed to each desk and new clerks commence at the lowest one. Every time a vacancy occurs at any desk all the clerks below that desk should be advanced one step. Each clerk should be required to learn the desk ahead of him so as to be ready for promotion when it comes. I think this is the best and the fairest way for all concerned. Yours respectfully, TEN YEARS' SERVICE.

NEW YORK, October 20, 1886.

### DEFALCATION AND INDEPENDENT CLERKS.

*Editor Rhodes' Journal of Banking:*

SIR:—There are few subjects connected with banking more generally discussed at present than defalcation. Various suggestions have been made as to the best way to check this evil. There is one point, however, that does not seem to have been considered and to which I should like to call your attention, and, if space can be found in your well-filled pages, the attention of the banking profession generally. I refer to the safeguard afforded by the presence in the bank of *clerks* whose circumstances are such as to render them *independent*—that is, clerks who cannot be coerced into *silence* by a fear of losing their situations. He must be a very shrewd man indeed who can carry on any extensive speculation in a bank without the clerks at least suspecting what is being done. In choosing clerks I think care should be taken to secure young men who are, in the first place, independent in spirit. Secondly, I should prefer clerks who are supported by influence, either in the Board of Directors or among the larger customers of the bank; and, thirdly, clerks who are not entirely dependent on their salary for support. I should like to see this subject enlarged upon, for I think it a good point.

Boston, October 15, 1886.

HENRY JONES.

### THE BANKER'S LUNCH.

*Editor Rhodes' Journal of Banking:*

DEAR SIR:—In common, I am sure, with all your subscribers, I have read with much interest the admirable series of articles on "Practical Banking" prepared by the late Mr. Patten. Though the accomplished author goes through a wide range of subjects, yet there is one point, and a very important one, as I take it, upon which, so far as I remember, he does not touch, viz.: "What and when should a bank man eat?" The gravity of this question can scarcely be over-estimated. If a man does not eat at all he will die; if he eats too much or too little, or at irregular times, or if his food be badly cooked, he will have dyspepsia, and that, the writer has been told, is scarcely to be preferred to the fate just mentioned as the result of total abstinence. When one reflects how many good customers are lost to a bank through the outward and visible effects of this malady it would seem to be worthy of consideration whether it would not pay a bank to provide a free lunch all around, especially for the Paying-Teller, in banks of any size. As to what a bank man should have for his lunch your correspondent admits that tastes differ, and what one may consider a delicacy another would not fancy at all, as, for example, bacon and cabbage or a plate of mulligatawny soup. In this respect every one must be governed by his palate and his early bringing-up. As

to when the lunch should be partaken of, some say "Eat when you can." But wise Mother Nature bids us take our meals with regularity. Your correspondent patronizes a neighboring *restaurant* every day at 12:30 P. M., and in consequence feels pretty comfortable for the rest of the day. A cold lunch taken in the bank is, in the writer's estimation, an invention of the evil one. Allow me to conclude this brief note with the well-known lines:

"May good digestion wait on appetite  
And health on both."

BANK CLERK.

RICHMOND, Va., October 28, 1886.

#### A SCHOOL OF BANKING.

*Editor Rhodes' Journal of Banking:*

SIR:—The duties imposed upon the head officer of a bank are not, perhaps, fully appreciated outside of the profession. These duties, I have found by experience, become doubly difficult where the bank is the only one in a country village and everybody looks to the Cashier as the sole authority upon all questions pertaining to the banking business. In the cities the banks are large and their dealings more complicated than those of country banks, but the country Cashier is thrown more upon his own resources, having fewer persons with whom he may consult. Particularly is this the case with younger men who have, one may say, neither friends to advise them nor past experience for their guidance. And this brings me to the object of my letter, which is, Mr. Editor, to suggest that you conduct in your valuable JOURNAL (or under the management of its editorial staff) a School of Banking for the benefit of the younger members of the fraternity. I am encouraged to make this suggestion on account of your recent offer of a valuable cash prize for the best essay on "Country Collections," which shows that you are alive to the necessities of the times.

Every one has heard of the remarkable success of the Chautauqua system of home education. Though I have never myself been a member of the society I have seen something of its methods, one of my young folks having joined a Reading Union established by the Chautauqua Society for the benefit of junior members. Would not a School of Banking, conducted by the JOURNAL upon somewhat the same lines, be of practical benefit? I beg that you will take the matter into consideration.

I take advantage of this communication to express the pleasure and profit I receive in reading the JOURNAL. It is my principal connection with the outside world of finance.

—, Kansas, October 17, 1886.

A COUNTRY CASHIER.

#### THE MYSTERIES OF BANKING.

*Editor Rhodes' Journal of Banking:*

SIR:—Each century develops, discusses and adapts to itself, in some degree, certain truths or principles the conception of which belonged to the preceding period. This work usually goes on without being perceived by those who do not read the signs of the times; but, as soon as the day of application arrives, when principles claim their part in practice, when new methods aim at penetrating or abolishing ancient usages, men are found ready to enforce them who are possessed with the sense of right and the intellect necessary to define and practice it.

The banks of our country wield an influence over the masses; they stand midway between capitalist and laborer, negotiating the business of each with accuracy, honesty and profit. As an educator the banks and bankers stand on a very high plane, though one can often see that they avoid to impart instruction to customers when it interferes with their own source of revenue or profit.

Some people have an idea that when they deposit money it will bear interest during the period it remains in the bank. They are tendered a certificate of deposit, which is carefully preserved, and often avoid presenting it for payment when they really need the money simply that more interest may be added. As soon as it is presented and the depositor advised that his certificate does not call for interest a very unpleasant discussion arises between the Teller and the customer which could easily be avoided if the officer had asked his customer how long the money would remain on deposit or whether he wanted it to bear interest. I maintain that when the bank officer sees that a man does not know enough to make a request to have his deposit bearing interest he should inquire how long the money would remain on deposit—if for three months or more—then stamp it with the interest stamp. To do this it will not be necessary to

ask the customer's permission; the greatest economist does not refuse to employ his money provided he is sure of thereby increasing it. However, banks generally, though not universally, neglect this important duty, and it is unfair that they avail themselves of a man's ignorance.

If banks cannot afford to pay interest on money deposited for six months or a year then why do they advertise interest paid on all time deposits? The word "all" in the advertisement covers every certificate issued by the bank that is not presented within three or six months, and does not the word "time" usually mean in business circles three or six months? But bankers maintain they can't afford to pay interest on deposits. I maintain they can't afford *not* to pay interest on deposits. Discontinue paying interest and your deposits decrease; take away the money deposited and how quickly your loans fall.

Cashiers, enlighten your customer; do unto him as others have evidently done unto you—EDUCATE HIM.

SECOND TELLER.

—, Minnesota, October 25, 1886.

### BOSTON'S BORROWING BANKS.

#### *To the Boston Clearing-House Association:*

The custom which has prevailed with the Boston banks for some years of loaning their surplus funds to each other after morning settlement at the Clearing-House is one of very doubtful utility. It began many years ago in occasional loans, but of late years has degenerated into a regular trade between Cashiers and Settlement Clerks, by which they dispose of their surplus funds and establish the rate of interest which shall be paid therefor. It seems to me that this constant borrowing and loaning with each other forms no part of the legitimate business of our city banks. One of the first elements of sound banking is for each and every bank to hold the full control of its own resources and so manage those resources that it should be in condition to accommodate its patrons and meet its liabilities without being obliged to rely upon its neighbor banks for assistance. Of course, occasions may arise when it would be the duty of a bank to loan or to assist its neighbor bank, but no prudent banker can justify or approve of the management of those banks which are found in a condition which compels them to be constant borrowers. Now, while I am willing to admit that it is very pleasant and agreeable for a bank, having a handsome surplus unemployed, to find another bank which can use it, and will borrow it, yet such loans are, in my opinion, illegitimate, and have the tendency to render such banking extra-hazardous. In my judgment the custom of loaning and borrowing as it now prevails at the Boston Clearing-House is fraught with injurious effects not only to the business interests of Boston but to all other financial institutions.

In the first place such a custom stimulates and encourages the imprudent expansion of bank loans, because borrowing is rendered so easy that banks whose entire available resources are already employed are tempted to borrow any temporary surplus which may be thrust upon them.

Second—Such a custom weakens the conditions of the banks by exhausting their surplus reserves, for, instead of holding any surplus which a bank may gain, thereby strengthening the bank's resources, the feeling now prevalent is that every dollar which a bank holds above its legal requirements must be loaned at one rate or another to some neighbor bank, and the result is that the weaker and borrowing banks continue to expand their loans, until, owing to the depletion of reserves, they are called upon to pay, when, to their dismay, they find they are so deeply in the mire that they are forced to pay almost any rate of interest which may be demanded.

Third—Such a custom makes the rate for money contingent upon the wants of the borrowing banks. The banks whose reserves are for any cause depleted depend upon their neighbors for a supply, and the loaning banks are, of course, glad to meet that demand, and loan their surplus funds at the best rate obtainable, whether high or low. The rate must, therefore, in the very nature of things, under the present pernicious custom, be erratic and unstable. As the banks, having a temporary surplus, may hold it for a day or two, they are, of course, anxious to make something out of it, hence are eager to loan it at the best rate they can get. This erratic action on the part of Settlement Clerks and Cashiers, by which they make an artificial rate on a mere temporary or fleeting surplus, is construed by the community generally as establishing

a market rate for money. Hence we find many borrowers waiting upon the street corners every morning to hear what rate of interest the necessity of our bank reserves has established; and if, perchance, some bank should gain a small amount for which it could not find a borrower, then, to effect a loan, down goes the rate to some borrowing bank which does not really want it except as it may be used effectively to break the rate for other indebtedness. And so day by day the rate is reduced by the skill and manipulating of the borrowing banks; and so day by day the borrowers in the general market avail themselves of the Clearing-House manipulations to break down the rate of the outside market.

Fourth—Such a custom is often the cause of frequent and violent fluctuations in the rate for money. This arises from the fact that the exigencies of some of the banks are such, that, owing to the unwise inflation of their loans, and the depletion of reserves, when called upon to pay, they are compelled to strengthen their reserves at any cost. These banks, having been borrowing their neighbors' surplus at the Clearing-House, have not only used up their own reserves, but have been depending upon their neighbors, and when the call comes to pay, then the rate goes up like a rocket. Such sudden and violent fluctuations are disturbing forces in our financial and commercial circles and calculated to bring into disrepute the management of our banking institutions.

Nothing connected with our banking institutions creates greater surprise among the bankers of New York than the mention of the fact that the Boston banks loan their money to each other at the Clearing-House. Such a thing would not be allowed by the banks in New York. Whenever a New York bank wishes to borrow money of a neighbor it is at once considered a sign of weakness. How different it is here? Why, this custom has become so much a part of our being that we are led to look upon the borrower as stronger than the lender, and upon the bank which can borrow and use the most of its neighbors' resources as the most brilliant of them all. Where banks have been so long addicted to such a practice it is useless to attempt to break it up at once, and I suppose it will continue until some great disaster shall discover to the banks their greater folly. But it seems to me that it might be wisely checked by establishing a fixed rate of interest for all loans made between banks at the Clearing-House. If the rate cannot be fixed permanently then let it be fixed once every month, and then we shall be relieved from a rate which changes every day in the week and which is dependent upon the condition of some bank which happens to gain or lose at clearing. If the rate could be fixed at 6 per cent. for every loan made at the Clearing-House it would be of great advantage to the business and financial interests of the city, for it would tend to strengthen the reserves of our banks, check inflation and make our banks more self-reliant.

AMOS W. STETSON.

BOSTON, October 25, 1886.

**Bank Examiner Hogarth—A TRIBUTE TO HIS MEMORY.**—"Hon. John P. Hogarth, of Monroe, Mich., died on Saturday morning, September 18th. He was born in Geneva, N. Y., April 9th, 1820, and was the youngest brother of Rev. William Hogarth, D. D., of Geneva. As a boy he was quiet, studious and reticent. He was a student of the old Geneva Academy, which has sent out not a few men of mark. He was married in 1857 to Miss Sarah E. Field, of Geneva, and, after her death in 1864, to Miss Sarah Conant, of Monroe. He pursued a successful career as a merchant and banker first in Geneva and afterwards in San Francisco, New York city and Detroit, taking up his residence ten years ago at Monroe.

"During the first Administration of President Grant he was appointed United States Bank Examiner for Michigan, which office he filled at his death. He was a model officer, and his books were the perfection of neatness and order. Careful of the reputation of the banks, he was at the same time exhaustive and unswerving in his examinations. Though he had millions of dollars under his care, money had no temptation for him.

"He was a great reader of the best books—especially religious—a delightful conversationalist and a most courteous gentleman. A lover of home, he was most devoted in all its duties and relations, and those who have enjoyed it can never forget his charming hospitality. \* \* \* To his family and friends his loss is unspeakably great, and the whole community mourns."—*From a letter in the New York Evangelist of October 14th, 1886.*

## THE WORLD OF FINANCE.

*Some Current Opinions from Many Sources.*

### HARTFORD'S BUSINESS METHODS,

[From the *Hartford Post*.]

The financial cloud is blowing over here in Hartford, and it is beginning to be very generally understood that the wrong-doing of any one man can by no means shake the credit of our institutions or destroy confidence in them. Business in Hartford is conducted on just as good a basis as anywhere in the country.

### A SOUTHERN PROTEST AGAINST NATIONAL BANKS.

[From the *Atlanta Constitution*.]

The National banks, as they are now organized, are emphatically war institutions. They were established for the purpose of providing funds for carrying on a great conflict, and the law which hedges them in is not specially adapted to an era of peace and prosperity. For instance—and the instance covers sufficient ground for our present purposes—the National banks are not permitted to lend money on real estate. Now, real estate is the only capital of the South, and the law which shuts our people off from reasonably cheap money and drives them into the hands of the mortgage brokers cannot be said to be specially adapted to this section.

### DANGER FROM THE SILVER COINAGE.

[From the *New York Times*.]

If there was no other reason why Americans should hesitate to take too great risks in speculation, they surely may stop to reflect that our currency is in a condition to invite grave difficulties, and, indeed, to compel them, unless a remedy such as Congress shows no disposition to even consider be administered with a good deal of promptness. It ought not to be forgotten that the law still arbitrarily requires the coinage of some \$32,000,000 a year of silver; that there is not any limit to the time that this must, under the law, be carried on; that, if it be not arrested, this process must compel the Treasury to make payments in silver, which would bring back securities from abroad and would reduce the legal-tender notes to the value of silver. These results are not mere possibilities; if the law compelling coinage be not suspended they are certainties, and it cannot be amiss to recall attention to them at a time when speculation is assuming anew its most attractive appearance.

### BUSINESS IN CALIFORNIA.

[From the *San Francisco Journal of Commerce*.]

Despite the recent failures and the dullness in some departments of trade there is not only more business doing than a year ago but prospects are better than they have been for a long time. In most departments there has been an increase in the volume of sales as compared with last year of 10 to 25 per cent. Profits are, as they are everywhere, small, so that the improvement noted is not welcomed as it would have been in other days. Still, there is a marked difference in the tone of our merchants as to business prospects from what there has been any time during the past two years. If other evidence were wanting that of the Clearing-House exchanges and of the receipts and sales of some of our leading products would be sufficient. Our receipts of wheat and flour for three months have been 70 per cent. more than they were a year ago, of barley more than two-fold, of oats just about double, and so on of other articles of less importance. Our exports of wheat have been three-fold—in round numbers three and a half million centels of wheat, valued at \$4,600,000, against 1,200,000 centels, valued at \$1,725,000, for the same time last year. \* \* \* Our wheat crop this year will be worth \$40,000,000 against \$24,000,000 last year, while wine will be in much larger

proportion, also fruit, barley and many other products. Clearing-House exchanges show an increase of 12 per cent. over 1885, 12 per cent. over 1884,  $1\frac{1}{2}$  per cent. over 1883 and 5 per cent. over 1881, the percentage being approximative—that is to say, we have the greatest volume of trade, with one exception, that we have had at any time in six years.

#### SWIMMING ON BLADDERS.

[From the *Springfield Republican*.]

It is noticeable that no stock of the Indian Orchard Mills was found among the assets of the late William Gray, Jr., although he had 1,147 shares in the Atlantic Mills. His real estate is appraised at \$158,000 (all mortgaged for more than it is worth) and his personal estate at \$93,442. All his shares which were of any value were pledged to various parties for all that could be borrowed on them. His yacht Huron, valued at \$8,000, was sold for \$10,000. Thus men spread on a hollow pretence of financial solidity, swimming on bladders far beyond their depth of power to return. So it happens that a man who had not \$5,000 he could call his own not only cut the figure of a millionaire in the world but was looked up to and trusted with great interests as a "strong man," a "great business man" and a "practical financier." One of the most curious of these humbugs was that of Judge Spencer, of Syracuse, who was greatly trusted by persons in need of an investing agent and who was especially valued because he was so "careful in keeping his books." When he died it was discovered not only that the trust funds had gone in speculations but that the books were inextricably tangled. We have now a curious spectacle of the comparative effects of financial crime subjectively or upon those guilty of it. Gray shot himself. Snelling pleaded guilty and went to State Prison. So did Gould of Portland, while Bartholomew became what the *Weekly Underwriter* tenderly calls "that lonely old man in Montreal."

#### IMPROVEMENT IN BRITISH TRADE.

[From the *London Economist*.]

The long expected improvement in trade has fairly set in. In our Trade Supplement we give a record of the movements during the past quarter in the prices of a number of the most important commodities, and it is satisfactory to find that the majority of these are in the upward direction. So distinct, indeed, has been the rise that the "index number," which indicates the general drift of prices, is higher than it has been since the latter half of 1884. No doubt the rise is to some extent speculative, and it would not be surprising if, in certain directions, there were to be a temporary reaction. Still, the advance is so general that it is difficult to resist the conviction that it rests upon the solid ground of increased demand, and as it spreads and progresses its influence must make itself felt in the money market, not only because as prices rise more money is needed to do a certain amount of work but also because more work will have to be done. It is a coincidence worth notice in passing that just at the time that the Royal Commission on Trade is trying to make up its mind as to the causes of the depression and to tell us what we ought to do to relieve it, trade, as if in mockery of the inquiry, has begun to right itself. And it will also be interesting to see how far the assertions of those who maintain that the fall in prices has been produced by a gold scarcity are falsified by the fact that although gold supplies have not increased prices are advancing. In the face of a decided upward movement it will be impossible longer to maintain that changes in the supply and distribution of the precious metals have had other than a very secondary influence upon prices. These, however, are considerations upon which it would be out of place to dwell here. The main point is that in the present condition of the market it would need but a slight augmentation of the trade demand for money to cause rates to advance.

#### STATE OR NATIONAL BANK NOTES.

[From a recent Speech of Mr. Stephen V. White.]

"You do not know to-day, nor in fact do you care to know, whether the National bank bills that you handle in your business or have in your pockets are issued by a bank in Florida or New York or Minnesota, for you know that they are all equally good in New York. They are redeemable there and that is all that you care about it.

The people \* \* \* have been freed from those losses which inevitably attended doing business in prior times. If I had the time this evening I could relate to you some amusing incidents about this "wild-cat" and "yellow dog" currency of the time of which I speak. I was in business at that time in Missouri, and remember that upon one occasion I had to take quite a large sum of money, all in bills, issued by a certain bank. I knew what the state of the money market was that morning, and I knew how unreliable those bills were. Notwithstanding the fact that I made all possible haste to the bank to get that money on deposit before the valuation should drop the telegraph wires were too quick for me and before I got there the banks had been advised of the failure of the bank upon which I held these bills and they had dwindled 15 per cent. on my way across the street!"

---

[From the *New York Daily Indicator*.]

The proposition of the *Atlanta Constitution* to re-establish the State bank system is not meeting with hearty encouragement. The *Chicago Times* goes for the idea in a way that is both very telling and very amusing. Regarding the demand of the *Constitution* for a currency that will not "all the time be drifting into the coffers of a few monopolists of Wall street," the *Times* suggests: "Therefore there must be a currency that will not run off to 'Wall street' when it is wanted, say, in Atlanta—a currency that will stay around home and come up nights, so to speak, like a good cow." Then the *Times* goes on to say:

"That is something very nice to have, to be sure. One can easily imagine what an admirable stay-at-home currency they would have in Georgia if it were issued by State banks and secured (1) by Georgia bonds. Such a currency wouldn't stray off very far, because no person of respectable information would touch it. If a Georgian wanted to go out of his State he would have to provide himself with some other kind of money wherewith to pay his expenses—that is, if he could get any other kind. If Georgians were supplied with Georgia money they would find themselves in a protectionist paradise—living within themselves."

---

#### THE SILVER DOLLAR.

[From the *Philadelphia Times*.]

The country is in much less danger from the tariff than from the debased silver dollar, and every Congressman of either party should be made to declare himself. Let the law-makers speak out.

---

[From the *Providence Journal*.]

The inconvenience of the silver dollar might be obviated, not by coining the silver purchased, but by storing the metal and issuing certificates. This, of course, does not answer the question why the Government should purchase all of one of the various products of the country and not any or all of the others, but it would be a vast improvement upon the present system.

---

[From a recent Speech of Senator Sherman.]

"There is one point to which I wish to call your attention, and I do it the more freely because it is not political in any sense. I want the business men of Cincinnati to think about the silver question. It is to me the most pressing and distressing question of the times. The gap that has been made between the intrinsic values of our silver and gold dollars will undoubtedly produce its effects upon every department of business. If you should be compelled eventually by this gap to adopt silver as the only standard of value that adoption would derange all our foreign commerce as well as our domestic commerce. If only the present difference in intrinsic value of the two dollars should continue, without any increase in that divergence of value, and if any adverse change in our affairs should compel you to resort to the cheaper metal, the pound sterling now quoted in your market at \$4.86 3-5 would go up to \$6, and the franc, now quoted at about 20 cents, would go up to 25 cents. Such a calamity would disturb all your foreign relations and foreign trade. It is true the nominal price of all your products would advance, but the effect would be extremely serious and disastrous upon the business of the country and especially upon its labor, which, after all, is the foundation of our national prosperity. 'What shall be done?' is a conundrum for you, the business men of the country, to solve. If you will do that we politicians will 'catch on!'"

## NEW BANKS, CHANGES IN OFFICERS, FAILURES, ETC.

# THE BANKER'S GAZETTE.

## The Money Market and Financial Situation.

NEW YORK, November 2, 1886.

THE BUSINESS SITUATION continues very satisfactory, everything being considered. The great staple trades like the iron manufacturing and coal producing are active, with comparatively small stocks on hand and advancing prices. The iron business is especially promising, the demand for steel by the railroads, new and old, being very large, and many orders having been placed to extend into next year. The progress of improvement in the coal trade at present is not as rapid as it was some weeks ago, the mildness of the weather having checked the demand for some grades, but otherwise the business is in better shape than for a long time past. The dry-goods business is represented to be in a like condition, an improvement in prices since last year averaging 5 per cent. being estimated by competent authorities. This is a result of a genuine demand for goods.

All kinds of securities have shown the effect of the improved condition of affairs, although movements in the stock market have been very irregular of late. Recently the trading has been largely in specialties like New York & New England stock, Richmond Terminal, Manhattan Elevated, etc., on account of proposed consolidations or new traffic arrangements which are expected to put the companies on a better basis. The rates for money have not been so high as to be a disturbing factor in the situation, until yesterday, when the rate for call loans rose suddenly. During the past month a large proportion of the active stocks have touched the highest figures for the year, and many issues of bonds show large advances in prices.

The statistics of the foreign trade of the United States would make it appear that the monetary stringency this fall would have been much stronger than it was but for the demand for our securities from abroad. Had not the trade balances been settled in this way it would appear that we should have lost gold instead of receiving it from abroad. This may be seen by the following official figures showing the merchandise movement:

	1884.	1885.	1886.
<b>EXPORTS:</b>			
September.....	\$56,220,490	\$47,967,247	\$54,064,070
July, August and September.....	164,045,506	187,868,228	158,046,956
<b>IMPORTS:</b>			
September.....	51,359,168	50,895,432	55,328,245
July, August and September.....	157,147,447	150,224,833	169,061,178

At this period of the year, when the exports are largest, there is an excess of imports. At this time we should naturally have an expansion in bank circulation, but the reverse is the case. It is to the demand for money that is to be attributed the large number of commercial failures this autumn, the only noticeable unfavorable factor in the business situation.

**FOREIGN EXCHANGE.**—The rates have been fluctuating down about the gold importation point for some weeks past, so that about \$3,000,000 arrived during the past week. Following are the posted and the actual rates of the principal dealers: Bankers' sterling, 60 days, nominal, \$4.81½; sight, nominal, \$4.85; 60 days, actual, \$4.80½@4.80¾; sight, actual, \$4.84@4.84¼; Cable transfers, \$4.84½@4.85; Prime commercial sterling, long, \$4.79½@4.80; Documentary sterling, 60 days, \$4.79½@4.79½; Paris, bankers', 60 days, 5.25½@5.25; sight, 5.23½@5.23½; Paris, commercial, 60 days, 5.26½@5.26½; sight, 5.24½@5.23¾; Antwerp, commercial, 60 days, 5.27½@5.26½; Swiss, bankers', 60 days, 5.25½@5.25; sight, 5.23½@5.22½; Reichsmarks (4), bankers', 60 days, 94¾@94¾; sight, 94¾@95; Reichsmarks (4),

commercial, 60 days,  $94\frac{1}{8}$ @ $94\frac{1}{4}$ ; commercial, sight,  $94\frac{5}{8}$ @ $94\frac{3}{4}$ ; Guilders, bankers', 60 days,  $39\frac{3}{4}$ @ $39\frac{1}{2}$  13-16; sight, 39-15 16@40; Guilders, commercial, 60 days,  $39\frac{5}{8}$ @ $39\frac{1}{2}$  11-16; sight, 39 13-16@ $39\frac{1}{2}$ . Paris dispatches quote exchange on London 25f. 34c.

The following shows the posted rates for prime bankers' sterling bills on London at 60 days, and sight, cable transfers and prime commercial sterling, together with exchange on Paris on October 1st, the changes in the rates as they occurred during the month, and the highest and lowest during the months of September and October, 1886:

COINS AND BULLION.—Bar silver is quoted in London at 45 $\frac{1}{2}$ d. per ounce. At this quotation for silver the standard value of the standard dollar is 77.78 cents.

The following are New York quotations in gold for other coins and bullion:

Trade dollars.....	\$ 77 @ \$ 78 $\frac{1}{4}$	Victoria sovereigns.....	\$4 83 @ \$4 87
New (412 $\frac{1}{2}$ grains) dollars	99 $\frac{3}{4}$ @ 1 00	Twenty francs.....	3 84 @ 3 88
American silver $\frac{1}{16}$ s & $\frac{1}{8}$ s.	99 $\frac{3}{4}$ @ 1 00	Twenty marks.....	4 74 @ 4 60
American dimes.....	99 $\frac{3}{4}$ @ 1 00	Spanish doubloons.....	15 55 @ 15 65
Mutilated U.S. silver coin,		Mexican doubloons.....	15 55 @ 15 65
per oz.....	88 @	Mexican 20-pesos.....	19 50 @ 19 60
Mexican dollars.....	78 @ 78 $\frac{1}{2}$	Ten guilders.....	3 96 @ 4 00
Peru soles & Chilean pesos	73 @ 75	Fine silver bars, per oz....	99 $\frac{3}{4}$ @ 1 00 $\frac{1}{4}$
English silver.....	4 80 @ 4 85	Fine gold bars par @ $\frac{1}{4}$ % premium on the	
Five francs.....	92 @ 95	Mint value.	

THE TREASURY.—The following table will show the condition of the Treasury, as regards the amount of gold and silver held, on the 1st of November, 1886, and, for comparison, on the 1st of September and October, 1886, with the amounts of certificates outstanding and the balances of coin owned by the Treasury:

	Nov. 1, 1886.	Oct 1, 1886.	Sept. 1, 1886.
Gold coin and bullion.....	\$246,832,148	\$242,609,018	\$235,430,635
Gold certificates outstanding.....	88,294,969	84,691,807	77,698,347
Gold owned by Treasury.....	\$158,537,179	\$157,917,211	\$157,732,288
Silver dollars and bullion.....	\$186,739,180	\$185,020,987	\$185,038,397
Silver certificates outstanding.....	100,306,900	95,887,112	89,121,760
Silver owned by Treasury.....	\$86,432,280	\$89,133,875	\$95,916,637

The only noticeable change is an increase of \$5,000,000 in the amount of silver certificates outstanding, probably a result of the issue of small certificates. The effect has been to reduce the silver owned by the Treasury over \$3,000,000.

On October 29th the Secretary of the Treasury issued the 144th call for the redemption of bonds. The call is for \$10,000,000 of bonds of the 3 per cent. loan of 1882, and notice is given that the principal and accrued interest of the bonds will be paid at the Treasury of the United States, in Washington, on the 1st day of December, 1886, and that the interest on said bonds will cease on that day, viz.: Three per cent. bonds issued under the Act of Congress approved July 12, 1882, and numbered as follows: \$50—Original No. 49; \$100—Original No. 610 to original No. 640, both inclusive; \$500—Original No. 267 to original No. 285, both inclusive; \$1,000—Original No. 2,176 to original No. 2,434, both inclusive; \$10,000—Original No. 6,326 to original No. 7,308, both inclusive. Total, \$10,000,000.

The bonds described above are either bonds of the "original" issue, which have but one serial number at each end, or "substitute" bonds, which may be distinguished by the double set of numbers, which are marked plainly "original numbers" and "substitute numbers." All of the bonds of this loan will be called by the original numbers only. Parties holding bonds called by this circular can obtain immediate payment, with interest to date of presentation, by requesting the same in the letter forwarding the bonds for redemption.

ASSOCIATED BANKS OF NEW YORK.—The reserve has been growing a little stronger recently, as will be seen in the table. The figures indicate a large volume of general business.

The following shows the condition of the New York Clearing-House banks for a number of weeks past as well as about this time in 1885 and 1884:

1886.	Loans.	Specie.	Legal-tenders.	Deposits.	Circulation.	Surp. Res.
Oct. 30....	\$341,401,800	\$76,681,200	\$17,049,500	\$349,128,100	\$8,237,500	\$6,398,675
Oct. 23. ...	341,555,000	75,779,400	16,848,600	348,633,700	8,249,000	5,469,575

July 31....	354,327,400	64,271,200	43,033,300	377,703,100	7,854,000	12,878,725
1885.						
Oct. 31.....	344,360,800	97,034,200	27,517,600	384,479,200	9,992,400	28,432,000
1884.						
Nov. 1....	291,724,100	77,430,100	32,838,700	315,939,400	12,985,300	31,271,456

THE NATIONAL BANK CIRCULATION was reduced during October by \$1,978,332, leaving the amount now outstanding \$301,233,820, which is \$14,229,079 less than the amount on November 1, 1885. The practical decrease in circulation, however, is shown by the increase in the amount of legal-tender notes on deposit with the United States Treasurer for the retirement of bank notes, amounting in the past month to \$12,993,748. The total deposit is now \$81,523,165, an increase of \$42,864,455 since November 1, 1885.

The following will show the amount of each description of bonds held by the Treasurer to secure National bank circulation on or about the dates indicated:

	Nov. 1, 1886.	Oct. 1, 1886.	Sept. 1, 1886.	Aug. 1, 1886.
Currency 6 per cents.....	\$3,586,000	\$3,576,000	\$3,578,000	\$3,578,000
4½ per cents .....	57,306,850	56,276,100	52,579,100	51,665,600
4 per cents .....	115,313,150	113,740,850	113,719,750	113,582,750
3 per cents .....	69,538,050	66,515,450	101,219,300	104,044,450
Total. ....	\$245,744,050	\$280,108,400	\$271,094,150	\$273,768,800

GOVERNMENT BONDS.—The following table shows the closing prices or closing bids at the New York Stock Exchange for the principal issues of Government bonds on each day of the month of October and the highest and lowest during the month. Actual sales marked \* :

† Ex-interest.

MONEY AND DOMESTIC EXCHANGE.—The money market is a little easier than it has been, but call loan rates are irregular. The extremes have been 2 and 15 per cent. of late, with an average of 5 or 6 per cent. Commercial paper is in demand at rates varying from 5½ to 8½ per cent. according to grade. The following rates of domestic exchange on New York indicate a demand for money throughout the country: Savannah, ¼ discount; selling, ½ discount; Charleston, buying, 3-16@¼ discount; selling, par. New Orleans, commercial, \$1.25@\$1.50 per \$1,000 discount; bank, 75c. per \$1,000 discount. St. Louis, 50c. per \$1,000 discount. Chicago, 50c. per \$1,000 discount.

RAILROAD AND MISCELLANEOUS STOCKS, as mentioned above, have touched high prices during the past month. The Vanderbilt issues are especially strong on account of prospective dividends on Lake Shore and Michigan Central. The coal stocks are steady at nearly the highest prices yet reached, but the grangers are not so steady on account of the labor troubles in Chicago, and the earnings for the time being not comparing with those of last fall.

Cable advices from European centres, dated October 31st, are as follows: There was an active inquiry for discount at 3¼@2¾. The Stock Exchange loan rate was 5@4½ under the heavy settlement, the subscription for Guinness shares also increasing the demand. Business on the Stock Exchange was dull and most changes were downward. There was a persistent decline in American railway securities early in the week owing to sales by weak operators for a rise. The fall seemed to have been checked after Wednesday, but yesterday the depression was renewed. Business on the Paris Bourse was quiet during the past week. There was a general fractional rise in prices. New loans advanced 50c.; 3 per cent. rentes, 25c.; Crédit Foncier, 12f.; Panama Canal shares, 3f. 75c.; Suez Canal shares, 16f.; Bank of France, 50f. The only assignable reason for the rise is that there was a reaction against long bear speculation. There was a steady business on the Berlin Bourse during the week and the tendency was good. The changes in prices were slight. The rise in the Imperial Bank's rate of discount to 3½ per cent. is due partly to the advance in the Bank of England rate and partly to the decrease in the bank's stock of bullion, the increased note circulation and heavy loans on public and private securities. The increased demands on the banks funds are attributed solely to revival of trade. Mines and steel works have received large new orders from America. The leading textile industries also show marked signs of progress. Prices on the Frankfurt Bourse during the week were firm. International securities advanced ½ per cent.

The following table shows the highest, lowest and closing prices of the active stocks at the New York Stock Exchange in the month of October, the highest and lowest since January 1, 1886, and also during the year 1885:

### STOCK EXCHANGE QUOTATIONS.

Revised by the official lists up to the first day of this month. The following tables include *all securities listed at the New York Stock Exchange*. The Quotations indicate the last bid or asked price. In cases where there was no quotation during the past month the latest previous quotation is given. The highest and lowest prices for the year 1885—actual sales—are given for comparison.

**STATE SECURITIES.**

## BANKERS' OBITUARY RECORD.

**Baldwin.**—R. T. Baldwin, President of the National Mechanics' Bank, of Baltimore, Md., is dead.

**Clerk.**—Andrew Clerk, President of the Provident Institution for Savings, of Jersey City, and one of its oldest and most prominent citizens, died October 13th, aged 73 years.

**Du Bois.**—Gilbert Du Bois, President of the Ellenville (N. Y.) National Bank, died October 23d, aged 69 years. He held a number of public offices during his lifetime.

**Garfield.**—Harrison Garfield, President of the Lee (Mass.) National Bank, died October 15th, aged 76 years.

**Gibbs.**—The death is announced of Sanford Gibbs, banker, of Huntsville, Tex.

**Gelbach.**—George Gelbach, President of the National Security Bank, of Philadelphia, Pa., and a successful and widely-known man of business, died September 30th, aged 75 years.

**Hotchkiss.**—Charles B. Hotchkiss, formerly (for sixteen years) President of the Pequonnock National Bank, of Bridgeport, Conn., died October 11th, aged 60 years.

**Keith.**—John Keith, formerly President of the Franklin County National Bank, at Greenfield, Mass., died October 19th, aged about 58 years.

**Kimball.**—John G. Kimball, Treasurer of the New Hampshire Banking Company, Nashua, ex-City Clerk, and a highly-esteemed resident, died very suddenly of heart disease at Shirley Hill, N. H., October 19th, aged 55 years.

**Knoblauch.**—Charles Knoblauch, for many years a prominent member of the New York Stock Exchange, died October 12th, aged about 40 years.

**Lee.**—Cyrus P. Lee, Secretary and Treasurer of the Erie County Savings Bank, of Buffalo, N. Y., died November 2d, aged 77 years.

**Lee.**—James Lee, of James Lee & Co., bankers, of Colton, California, died recently.

**Maury.**—Robert H. Maury, of the firm of R. H. Maury & Co., bankers and stock brokers, of Richmond, Va., died suddenly on October 10th, at the age of 70.

**McKewan.**—John P. McKewan, a member of the New York Stock Exchange, died October 23d.

**Norton.**—W. F. Norton, Sr., one of the most prominent business men of Louisville, Ky., and formerly a member of the late banking firm of G. W. Norton & Co., died October 20th, aged 67 years.

**Robertson.**—S. R. Robertson, Cashier of the First National Bank of Elizabethtown, Ky., is dead.

**Rothschild.**—Mayer Karl Rothschild, head of the banking house of the Rothschilds at Frankfurt, Germany, died suddenly of heart disease on October 16th.

**Thompson.**—The death is announced of John A. Thompson, banker, at Edinburgh, Ind.

**Whittlesey.**—Francis D. Whittlesey for over twenty years Treasurer of the South-ington (Conn.) Savings Bank, died suddenly on October 10th, aged 65 years.

**PRESIDENT CANNON.**—The following notice was issued by the Directors of the National Bank of the Republic, of this city, on October 30th:

"At a meeting of the Board of Directors of this bank, held this day, the resignation of Henry W. Cannon as Vice-President was accepted with regret. Mr Cannon continues a member of the Board of Directors, but resigns as Vice-President for the purpose of accepting the Presidency of another National bank in this city."

On the same date—October 30th—the Directors of the Chase National Bank, of New York city, sent out this notice:

"At a meeting of the Board of Directors, held this day, John Thompson, President, and Lewis E. Ransom, Vice-President, resigned their positions. Henry W. Cannon was elected President and John Thompson Vice-President of this bank."

## CHRONOLOGICAL RECORD.—OCTOBER, 1886.

1. **FRIDAY.**—Decrease in the public debt in September \$10,627,013. The Canadian Pacific Railway took possession of the telegraph lines throughout British Columbia.
2. **SATURDAY.**—Discount rate on commercial paper in New York, 6@9 per cent.; call loans, 3@7 per cent. — Discount rate in London, 2½@2 per cent.
4. **MONDAY.**—The issue of \$1 silver certificates began from the Treasury.
5. **TUESDAY.**—Annual election at the New York Clearing-House.
6. **WEDNESDAY.**—Work stopped in the Chollar and Hale & Norcross mines on the Comstock Lode.
8. **FRIDAY.**—A decree granted in Philadelphia for the foreclosure of the Philadelphia & Reading Railroad.
9. **SATURDAY.**—Discount rate on commercial paper in New York, 6@9 per cent.; call loans, 5@6 per cent. — Discount rate in London, 1¼@2¼ per cent. — A strike occurred among the pork packers of Chicago against a return to the 10-hour system.
11. **MONDAY.**—Wheat sold in Chicago as low as 69¼ cents a bushel.
12. **TUESDAY.**—Sabine Pass, Tex., destroyed by a Gulf storm, with large loss of life.
13. **WEDNESDAY.**—Secretary Manning resumed his duties in the Treasury Department. — The President issued a proclamation revoking the suspension of discriminating customs on goods coming under the Spanish flag from Cuba and Porto Rico.
16. **SATURDAY.**—Discount rate on commercial paper in New York, 6@9 per cent.; call loans, 4@6 per cent. — Discount rate in London, 2¼@1¼ per cent.
18. **MONDAY.**—The Pennsylvania Supreme Court sustained the decision declaring the purchase of the South Pennsylvania Railroad by the Pennsylvania Railroad illegal. — The strike of pork packers in Chicago ended by the men agreeing to work ten hours daily.
21. **THURSDAY.**—The Bank of England rate of discount was raised from 3¼ to 4 per cent.
23. **SATURDAY.**—Discount rate on commercial paper in New York, 6@8½ per cent.; call loans, 3@6 per cent. — Discount rate in London, 3¼@2¼ per cent.
27. **WEDNESDAY.**—The President issued a proclamation abolishing the discriminating duties against Spanish cottons. — The Meridian Conference opened at Berlin.
29. **FRIDAY.**—The 144th Treasury call issued, for \$10,000,000 three per cent. bonds.
30. **SATURDAY.**—Discount rate on commercial paper in New York, 5¼@2¾ per cent.; call loans, 5@6 per cent. — Discount rate in London on 3 months' bills, 2¼@3¼ per cent.; Stock Exchange loan rate, 4¼@5.

**NATIONAL BANK STATISTICS.**—Statement of the Comptroller of the Currency on November 1, 1886, showing the amounts of National Bank Notes and of Legal-Tender Notes outstanding at the dates of the passage of the Acts of June 20, 1874, January 14, 1875, and May 31, 1878, together with the amounts outstanding at date, and the increase or decrease.

**NATIONAL BANK NOTES.**

Amount outstanding June 20, 1874.....	\$349,894,122
Amount outstanding January 14, 1875.....	351,861,450
Amount outstanding May 31, 1878.....	322,555,905
Amount outstanding at date*.....	301,233,639
Decrease during the last month.....	1,978,333
Decrease since November 1, 1885.....	14,229,079

**LEGAL-TENDER NOTES.**

Amount outstanding June 20, 1874.....	\$382,000,000
Amount outstanding January 14, 1875.....	382,000,000
Amount retired under Act of January 14, 1875, to May 31, 1878.....	35,318,984
Amount outstanding on and since May 31, 1878.....	346,681,016
Amount on deposit with the Treasurer of the United States to redeem notes of insolvent and liquidating banks and banks retiring circulation under Acts of June 20, 1874, and July 12, 1882.....	81,523,165
Increase in deposit during the last month.....	12,998,748
Increase in deposit since November 1, 1885.....	42,364,455

\* Circulation of National Gold Banks not included in the above, \$296,069.

W. L. TRENHOLM,

Comptroller of the Currency.

# RHODES' JOURNAL OF BANKING.

---

Vol. XIII.      DECEMBER, 1886.      No. 12.

---

IT HAS BEEN ALMOST THE UNIFORM CUSTOM of advocates of silver coinage to denounce bankers as "gold-bugs" who from self-interest seek the demonetization of silver. The *Louisville Courier Journal*, a devoted adherent of bi-metallism, and a believer in free coinage in this country with or without the co-operation of other countries, takes quite a different view. It says :

"The single gold standard begins by making money dear, and therefore favoring the interests which deal in it actively as well as the reserve capital, so to speak, which draws its profits from long and fixed investments. But the active class of money-lenders and bankers, such as the State and National banks of the United States, are all injured when the appreciation of money results, as it always inevitably will result, in the converse conditions of depression in values and unremunerative trade. It is this natural consequence of money contraction that active or business banks should recognize as an incomparably greater evil to themselves as well as their customers than the rise in the value of gold or gold investments can be beneficial, as their stock ordinarily in the latter is insignificant in comparison with that in current business ventures."

Whatever difference of opinion there may be as to the relative merits of the gold or silver standard of bi-metallism or mono-metallism, it cannot be disputed that the prosperity of the banks depends upon the prosperity of the community they serve. It is idle, therefore, to talk of the banks as enemies of the people or as growing rich out of the distresses of the country.

---

IT IS A VALID OBJECTION to the financial system of the Government that when its revenues are in excess of its expenditures the surplus is absolutely withdrawn from circulation and locked up in the Treasury. An excess of revenue not only implies an excess of taxation, but it also produces a contraction of the currency. In only one way is it possible under the law to prevent this result and still keep the surplus, and that is by depositing the moneys received with the National banks. This the law allows to be done upon a deposit with the Secretary of the Treasury of such securities as he in his discretion may require. The rule heretofore has been to allow the banks to hold public deposits to the extent of 80 per cent. of the amount of 3 per cent. Government bonds deposited with the Secretary. The calling in

of the 3 per cents and the high premium on the other issues has caused a modification of the rule, and now the banks are allowed to hold deposits to the extent of 90 per cent. of the amount of 4 per cent. bonds deposited. This has made it more desirable to exchange the 3 per cents for 4 per cents, and has also prevented to some extent the locking up of money in Government vaults which could be better employed in circulation. An extension of the rule so as to allow deposits to the amount of 100 per cent. of the bonds would be advantageous and involve no risk to the Government. It is most desirable that the locking-up process should be avoided as much as possible.

---

Senator Beck, in a speech before the Iroquois Club at its annual banquet in Chicago on November 17th, expressed himself as opposed to the locking up of funds in the Treasury, an increase in appropriations or the purchase of bonds at a premium. "Should Congress refuse to reduce taxes," he said,

"I shall propose before this Congress adjourns to lend the surplus at, say, 3 per cent. per annum to any one who will deposit the outstanding  $4\frac{1}{4}$  or 4 per cent. bonds of the United States as security, apportioning the amount loaned in the first instance among the States in proportion to population and authorizing either party to cancel the transaction by giving the other six months' notice. If citizens of the several States do not take their proportion, I would after ninety days make it free for all."

Perhaps no better illustration of the muddle into which the National finances are getting could be offered than this proposition made by an able Senator as a *dernier resort*. That it will not be received with favor by Congress ought to go without saying. The collection of \$100,000,000 per annum—and possibly more—merely to lend again would be a disastrous policy. It would be prolific of scandals which the purest of Administrations could not protect itself against.

---

THAT SOME OF THE BANKS were anxious to leave temporarily their called 3 per cent. bonds on deposit to secure circulation is a fact concerning which there can be no dispute. It is a mistake to assume, however, that such a policy was entertained by more than a few of the banks. Taking the period from September 1st to November 1st, when a large amount of called bonds matured, and there was no opinion of the Attorney-General to interfere with the banks, the changes in the 3 per cent. bonds and the holdings of the banks show that the latter were generally surrendered as the calls matured. In the two months mentioned \$44,000,000 called bonds matured, and the banks surrendered \$31,681,250 of 3 per cent. bonds, or over 70 per cent. of the amount called. On September 1st the banks held 75 per cent. of the total 3 per cent. bonds outstanding, so that the percentage of bonds surrendered to those called was but slightly below the percentage of bonds owned prior to the calls. It is interesting to note how the calls affected the banks. Of the \$25,350,100 3 per cent. bonds surrendered \$4,727,750 were replaced with 4's, \$1,593,400 with  $4\frac{1}{4}$ 's and \$10,000 with currency 6's. The remaining \$25,350,100 were not replaced at all, but

the circulation outstanding was reduced \$3,135,925 and \$19,321,666 of legal-tender notes were deposited to retire circulation, making a total contraction of circulation of \$22,457,591, which is very nearly 90 per cent. of the amount of bonds withdrawn.

---

AN ECONOMIC FACT WORTH REMEMBERING is that even during periods of depression countries increase in aggregate wealth. The excess of production over consumption is continuous, although varying in degrees, and this added to previous surpluses makes the wealth that exists. In this country the increase in wealth has been very rapid and is now being accelerated. From the *London Economist* we learn that the same feature predominates in Great Britain. The income tax in 1875 showed a gross assessment of £571,000,000 while in 1885 it was £631,500,000. "In reality," the *Economist* says, "the growth of annual income was considerably larger than these figures show, because in the interval the limit of exemption from the tax was increased." The returns from the succession tax show that the average amount of property which changed ownership by reason of death for the five years ended 1875 averaged in value £134,500,000 a year, and from 1880 to 1885 averaged £164,500,000 a year. Estimating this property at 2 per cent. of the total, the increase in the capital value of the property of the country would be no less than £1,500,000,000 in ten years. Yet fully six years out of the ten were industrially bad years. Surely the world grows.

---

THE DEMAND FOR SMALL COIN for use in various part of the country has had the novel effect of reducing the public debt without actual debt paying. Since Treasurer Jordan changed the form of the monthly statement of the condition of the Treasury the minor coin and fractional silver on hand have not been included among the available assets. In effect, therefore, the more of this kind of money that went into the Treasury the poorer the Government was, and the more of it that went out the richer it was. Recently the Treasurer has been putting out the minor coin at the rate of about \$60,000 per month, and now he has only about \$200,000 on hand against nearly \$521,000 on January 1, 1886, and over \$896,000 on June 1, 1885. By spending nearly \$700,000 since the latter date, the net debt has virtually been reduced that much. A still larger amount of fractional silver has been issued, for the amount on hand has been reduced from about \$29,000,000 to \$26,000,000 since July 1, 1886.

---

ALTHOUGH ONLY SIX WEEKS elapsed between the last two reports of the National banks of the United States to the Comptroller of the Currency some very important changes are shown in their condition. There is an increase of only three in the number of banks reporting, so the changes are not traceable to that cause. The most encouraging change is an increase of \$59,500,000 in deposits. From December 24,

1885 to August 27, 1886, the increase was only \$2,000,000, although the number of banks increased 117 in that time. Loans increased \$28,000,000. United States bonds held to secure circulation decreased nearly \$12,000,000 and circulation outstanding \$9,600,000. While there is little change in the amount of gold coin held there is an increase of \$22,700,000 in gold Treasury certificates and a decrease in gold Clearing-House certificates of \$16,800,000.

---

IT MIGHT SEEM A REFLECTION upon the position we have taken regarding the establishing of branch banks that the Bank of British North America should close its branch in Chicago. But in establishing branches, as in opening banks, due consideration should be given to the needs of the locality selected. Three Canadian banks opened branches in Chicago, where, as results have shown, there was business for only one; consequently two out of the three have closed. It does not follow, however, that a Chicago bank could not open a branch in some part of the city where it would be a great convenience to small tradesmen and others who are distantly removed from banking facilities. In such a locality a branch might be made to pay while a bank could not. The plan is being tried in Philadelphia, and with satisfactory results. Large banks in other cities may find the experiment worth trying.

---

A CURIOUS STATEMENT has been published to the effect that the Treasury officers now realize that it would have been a more advantageous policy to have issued the five-dollar silver certificates first and afterward the two-dollar certificates and then the one-dollar certificates. In view of the fact that officials in the Treasury have expressed surprise because of the large amount of five-dollar notes surrendered in order to get the one-dollar silver certificates the statement seems improbable. There has been a pressing need for notes of the smaller denomination for some time, the result of the retirement of the small legal-tender notes and the absolutely filthy condition of those which remained in circulation. The demand for the one-dollar certificates (which the Treasury has not yet been able to meet fully) is a pretty good indication that the Secretary made no mistake in issuing them first.

---

WHEN COMPARISONS come to be made with other Governments the United States Government seems to be pretty economically managed. It is estimated that the cost of the French Government is now 463,000 francs, or about \$92,500, per hour. Under the different regimes the estimated cost was as follows: For the Consulate and first Empire, \$23,000 per hour; for the Restoration, \$23,800; for Louis Philippe, \$30,000; for the second Republic, \$34,600; for the second Empire, \$49,800; for the present Government up to 1882, \$8,100, and now, \$92,500. Cost of the United States Government, including \$50,000,000

for interest, is only about \$250,000,000 per annum, or about \$28,500 per hour. The comparison is an agreeable one for Americans to contemplate.

---

THE FAILURE OF RUSSIA TO NEGOTIATE the loan for 125,000,000 marks with the German bankers, Herr Bleichroder and Herr Schwarzbach, bears the construction of open hostility between Russia and Germany at no distant day. There was a prospect that the loan would be made, but, after an interview with Prince Bismarck, banker Bleichroder modified the terms of his proposal and demanded much greater concessions than Russia could have been expected to grant. That the demands were made in the expectation that they would be rejected is considered certain, and the reason is believed to be that Prince Bismarck has no desire to have German investors in Russian securities opposing any policy of war with Russia which he may propose.

---

HOW TO SPEND THE SURPLUS appears to be the absorbing question of the day, if one may judge from the numerous propositions which appear in the public prints. One writer suggests that the surplus should be used in the purchase of telephone patents and plants, so that the poor man can enjoy the telephone service "without feeling that he is robbing his children of their daily bread." We do not know of any better reason for advising the disposition of the surplus as speedily as possible than that its existence gives rise to such suggestions. A Government of the people by the people has no need of monopolizing private rights or duties.

---

IN THE LAST FEW WEEKS there has been a rapid appreciation in the value of New Orleans and Louisiana bonds, and the people of that State and city have congratulated themselves not a little upon this evidence of their increased credit. We are glad that they trace the cause of it to the right source—the honest payment of their debts. Louisiana was for a long time under a cloud because of the repudiation of part of its debt. Since 1879, however, it has been paying interest on its bonds regularly and punctually, while the principal and interest are both guaranteed by the Constitution. Debt-paying always pays the debtor as well as the creditor.

---

IT DOES NOT SEEM NECESSARY to publish any extended announcement of the JOURNAL'S plans for the year 1887. The past year has been the most successful in its history, and for the new year the standard of every department will be fully maintained and improvements will also be introduced from time to time to make the publication, if possible, more valuable. The JOURNAL is progressive, and its constant aim will be to furnish its readers with every class of information required by those engaged in the banking business or in anywise interested in current financial affairs.

## CONSTITUTIONALITY OF THE NATIONAL BANK ACT.

*Editor Rhodes' Journal of Banking:*

DETROIT, Mich., November 13, 1886.

SIR:—The writer desires that you would either by letter or through your very ably-conducted JOURNAL OF BANKING inform him under what provision of the Constitution of the United States, Congress authorizes the present system of National banks. Should you reply, I may follow up my inquiry. I doubt the authority.

Very respectfully,

E. D. S.

The best way to answer the above inquiry is to quote the language of the Supreme Court in its various decisions upon the question of the constitutionality of the National Bank Act.

Chief Justice Chase, in *8 Wallace, 533, Veazie Bank vs. Penna.*, upon the right of Congress to tax the circulation of State banks, says: "Having thus, in the exercise of undisputed constitutional powers, undertaken to provide a currency for the whole country, it cannot be disputed that Congress may constitutionally secure the benefit of it to the people by appropriate legislation. To this end Congress has denied the quality of legal-tender to foreign coins, and has provided by law against the imposition of counterfeit and base coin on the community. To the same end Congress may restrain by suitable enactments the circulation as money of any notes not issued under its own authority. Without this power, indeed, its attempts to secure a sound and uniform currency for the country must be futile."

Justice Strong, in *Tiffany vs. National Bank of the State of Missouri, 18 Wallace, 413*, says: "The purpose of the Currency Act was in part to provide a currency for the whole country, and in part to create a market for the Government loans."

Justice Swayne, also, in *Farmers & Mechanics' National Bank vs. Dearing, 1 Otto, 29*, discusses this subject at a greater length, and says: "The constitutionality of the Act of 1864 (National Bank Act) is not questioned. It rests on the same principle as the Act creating the second Bank of the United States. The reasoning of Secretary Hamilton and of this Court in *McCulloch vs. Maryland, 4 Wheat., 316*, and in *Osborne vs. The Bank of the United States, 9 Id., 738*, therefore applies. The National banks organized under the Act are instruments designed to be used to aid the Government in the administration of an important branch of the public service. They are means appropriate to that end. Of the degree of the necessity which existed for creating them Congress is the sole judge. Being such means, brought into existence for this purpose and intended to be so employed, the State can exercise no control over them nor in any wise affect their operation except in so far as Congress may see proper to permit. Anything beyond this is an abuse, because it is the usurpation of power which a single State cannot give. Against the National will the States have no power, by taxation or otherwise, to retard, impede, burthen, or in any manner control, the operation of the constitutional laws enacted by Congress to carry into execution the powers vested in the general Government." (*Bank of the United States vs. McCulloch, supra; Weston and*

*others vs. Charleston, 2 Pet., 449; Brown vs. Maryland, 12 Wheat., 419; Dobbins vs. Erie County, 16 Peter, 435.)*

The power to create carries with it the power to preserve. The latter is a corollary from the former. The principle announced in the authorities cited is indispensable to the efficiency, the independence, and indeed to the beneficial existence, of the general Government; otherwise it would be liable, in the discharge of its most important trusts, to be annoyed and thwarted by the will or caprice of every State in the Union. Infinite confusion would follow. The Government would be reduced to a pitiable condition of weakness. The form might remain but the vital essence would have departed.

In the complex system of polity which obtains in this country the powers of Government may be divided into four classes: Those which belong exclusively to the States; those which belong exclusively to the National Government; those which may be exercised concurrently and independently by both; and those which may be exercised by the States; but only with the consent, express or implied, of Congress. Whenever the will of the nation intervenes exclusively in this class of cases the authority of the State retires and lies in abeyance until a proper occasion for its exercise shall recur. (*Gilman vs. Philadelphia, 3 Wall., 713; ex parte McNeil, 13 Id., 240.*) The power of the States to tax the existing National banks lies within the category last mentioned. It must always be borne in mind that the Constitution of the United States, "and the laws which shall be made in pursuance thereof," are "the supreme law of the land" (Constitution, Art. 6), and that this law is as much a part of the law of each State, and as binding upon its authorities and people, as its own local Constitution and laws.

---

### COMPTROLLER TRENHOLM'S REPORT.

We give in this number some of the principal features of the report of the Comptroller of the Currency, the Hon. W. L. Trenholm. In the next number of the JOURNAL it will be published more at length, with the principal tables, and with additional comment on its leading features.

Those who are familiar with the twelve annual reports of Comptroller Knox and the two reports of his successor, Mr. Cannon, will not find in the report for 1886 the familiar arrangement of tables which was gradually built up and improved from year to year for fourteen years. Mr. Cannon followed closely the arrangement and style of tables of his predecessor.

Comptroller Trenholm, representing a new and democratic Administration, naturally desired to make his report original. Many of the old tables will, therefore, not be found in his report, but other new and interesting tables will, in some instances, be found in their place.

Those who prefer the previous arrangement, will naturally conclude that it would have been well to have continued the tables showing the different kinds and aggregate paper circulation of the country, annually, for a series of years, as well as the increase of gold and silver coin. Such tables presented in a condensed form in the report of the Comptroller of the Currency make it unnecessary to refer in addition to the reports of the Treasurer of the United States and of the Director of the Mint, in order to obtain the different kinds and the total amount of coin and currency at different dates in the whole country.

Mr. Trenholm has, however, carefully abstained from treading upon the ground belonging to the Secretary of the Treasury or of any of the other bureau officers.

Mr. Trenholm's well-known opinions in reference to the continued issue of silver coin and the substitution of silver certificates in the place of bank-note circulation will not be found repeated in this report. They are left out, not because the present Comptroller does not agree with his predecessors on these points, for we have already had from him in his addresses at Atlanta and Chicago his decided views upon these subjects, but apparently because he has concluded to confine himself, in his first official report, closely to the duties prescribed in the Revised Statutes of the United States. The tables as presented, however, give to the reader full information in reference to the National banking system as it stands to-day, and much valuable information regarding its progress from its first organization in 1863 to the present year.

Although the Comptroller does not recommend to Congress a specific plan for the continuance of the National banking currency it is well known that he is a warm friend of the National banking system, and desires if possible that the methods which have been so successfully established shall be continued long after the United States bonds now outstanding shall have been finally redeemed in the year 1907. This is evident from the language used by him in the text, which so happily expresses the opinion of those who for so many years have advocated what they believe to be the very best system of banking ever organized in any country.

---

## THE CASE OF THE PACIFIC NATIONAL BANK, OF BOSTON.

---

### DECISION OF THE SUPREME COURT OF THE UNITED STATES.

The late decision of the Supreme Court of the United States in the above case is given in the Law Department of this number of the JOURNAL. The decision is quite fully reported on account of its importance.

Our readers may remember that a few of the stockholders of the Pacific National Bank, nearly all of whom attended the meeting of the shareholders which endorsed the increase of the capital by the vote of the Directors, and authorized the subsequent assessment of one hundred per cent. upon the stockholders of the bank, sent a memorial to Congress, asking an investigation of the acts of the Comptroller. The investigation which followed showed that the Comptroller acted upon such knowledge as had been presented to him by the Examiner, by the Directors, and subsequently by the shareholders themselves at their meeting in Boston on January 10, 1882. The result of the final action of the Comptroller was that the stockholders, who believed that they would, by paying an assessment of 100 per cent. upon the capital, thereafter enjoy an income from a solvent institution, found to their dismay that the bank was still insolvent and that they were called to pay a new assessment of their individual liability, not only upon the original capital, but upon the capital which had been so recently increased. It was not surprising that under these circumstances they should seek relief from such a grievance. They had a right to legal relief if it could be had.

The question was, whether the stockholders or the depositors should suffer. Comptroller Knox promptly decided that the Directors of the bank were

responsible for their mismanagement and that the stockholders must be held responsible for their own acts and their own votes at a meeting where were represented 8,000 shares of stock, at which only 100 shares out of the whole opposed the assessment. Whatever hardships resulted from this vote, and they were almost unparalleled in the history of banking, were really inflicted by the stockholders present upon themselves and their associates. Other stockholders in Boston and its vicinity were responsible for neglecting to attend a meeting of such great importance to the bank, of which they were duly notified.

The Congressional investigation was continued for some days by the Committee on Banking and Currency in their rooms at the Capitol. The stockholders were represented by two distinguished attorneys from Boston and the Bank Examiner by the Hon. Geo. S. Boutwell. Comptroller Knox appeared without counsel and presented a vigorous and exhaustive argument before the Committee, which was subsequently printed.

That the Comptroller was not responsible for the repeated assessments upon the shareholders is evident, for the several positions taken by him, in his argument before the Committee, have all been affirmed, not only by the United States District Court of Massachusetts, but also by the Supreme Court of the United States.

---

**THE BANK PRESIDENT OF TO-DAY.**—It was an old-fashioned notion that the President of a bank must be, or at least ought to be, a merchant in active business. At the time when this theory prevailed the President was very often not only the head of the bank but, for all practical purposes, he was the bank itself. The Cashier was generally little more than a chief clerk. In the last twenty years, however, circumstances have changed and ideas have changed with them. Since the advent of the National system and the great extension of the commerce of the country generally the business of banking has become more and more of a science, subject to its own peculiar principles and rules. And it is a science, too, that is eminently practical in its nature, one that must be learned by day-in and day-out experience. Much information may, and indeed must, be gathered from standard works and from current periodicals devoted to the banking interest, but these cannot, nor are they intended to, supply the place of that peculiar knowledge that comes only from daily use and practice. The details of the banking business have become numerous and complex, and in these days of close competition the Manager must have them at his fingers' ends in order to keep his profits up and his expenses down. A great deal of banking business has to be done nowadays with promptness. Valuable customers come into the bank on business and must be answered definitely and at once. They cannot and will not wait for the Board that meets to-morrow, nor for Mr. President, who will be in about noon. Hence the necessity for having the head of the institution always on hand. These are some of the reasons that have induced the growing custom of filling vacancies in the President's chair by promotion from the Cashiership. This is done not so much out of regard to a general principle as by reason of the fact that, when the vacancy occurs, the Cashier, on account of his practical knowledge of the business, is the best man the Directors can get to fill the President's place.

### THE NATIONAL BANKS AND WAR LOANS.

Much of the opposition to National banks is based upon the idea that these institutions have been permitted to make large profits out of the necessities of the Government without returning any consideration therefor. That the service which the banks willingly yielded to the Government when it was seriously embarrassed has been overlooked is evident in the character of some of the statements made by the opponents of National banks. It has been asserted that the banks never furnished any aid to the Government when the latter needed it; that it was not until after the war was over and the credit of the Government had begun to strengthen that the banks became extensive holders of its bonds. Such statements are so opposed to the easily attainable facts that the most charitable view that can be taken is that they are inspired by short memories or lack of information. It is true that about two years had elapsed since the beginning of the civil war when the act creating the National bank system was passed, that Act having been signed by President Lincoln on February 25, 1863, and it was not until late in that year that many banks were organized under the law. Many of the National banks, however, were successors of State banks, which had responded most liberally to the calls of the Government for financial aid during the early days of the war.

The first loan of money obtained by the Government for the prosecution of the war was made by banks in New York, Boston and Philadelphia. Secretary Chase met representatives of these institutions in a conference in New York, and they agreed to loan the Government \$50,000,000 at once upon an issue of 7-30 bonds. This loan was made on August 19, 1861, and a second for a similar amount was made on October 1st. A third loan for \$50,000,000 was negotiated with the same banks upon an issue of 6 per cent. bonds at a rate equivalent to a loan at 7 per cent. at par. From the banks, therefore, the Government received its first \$150,000,000 used in defraying the expenses of the war, and from the report of Secretary Chase for 1861 it appears that the loans could not have been negotiated elsewhere "upon terms equally advantageous."

To the banks, therefore, belongs the credit of having first given financial aid to the Government when it was sorely pressed, and many times thereafter they, to the best of their ability, furnished assistance even when the credit of the Government was upon a very unstable basis.

The National banks as such were an important element in the strengthening of the credit of the Government. The Act which created the banks, of itself, increased that credit. The annual report of Secretary Chase, dated December 10, 1863, when over 130 National banks had been organized, expressly declares this. After speaking of the loan Act of March 3, 1863, which removed certain restrictions on the issue of the five-twenty bonds, the report says;

"A week earlier, on the 25th of February, an Act, even more important to the credit of the Government—the Act to provide a National currency through a National banking system—had received the sanction of Congress and the President. The salutary effects of these two great acts were soon conspicuous.

"Notwithstanding the aid afforded by the additional issue of the United States notes, under the joint resolution of January, the Secretary had found it impossible to prevent a gradual increase during the session of Congress in the amount of unpaid

requisitions. \* \* \* The loan Act and the National Banking Act were followed by an immediate revival of public credit. Success quite beyond anticipation crowned the efforts of the Secretary to distribute the five-twenty loan in all parts of the country, as well as every other measure adopted by him for replenishing the Treasury."

Such was the result of the passage of the National Banking Act. And now the inquiry arises: What did the National banks do to justify it? The National banks had been in existence two years when the war closed and the Government ceased to be a large borrower. On July 8, 1865, there were 1,294 National banks, and they held \$391,744,850 of United States bonds. To that extent had the banks become creditors of the Government in less than two years, and during a period when public confidence was frequently shaken. They also held \$168,426,166 of legal-tender notes and fractional currency, making a total of over \$560,000,000 for which the Government stood debtor to them at the close of the war. It can not be urged against the banks that they held such a large amount of bonds because of circulation. At that date they had only \$131,452,158 of notes outstanding, or about one-third of the amount of their bonds. At no time since has the circulation of the banks been at so low a ratio as compared with the amount of bonds held, and at no time have the banks held \$60,000,000 more bonds than they did in July, 1865, the largest amount being \$447,600,000 on July 2, 1866, except in 1879 when the banks made large deposits of bonds to secure public deposits of money.

When the banks held nearly \$392,000,000 of Government bonds and \$168,000,000 of Government currency in July, 1865, their total capital was only \$325,834,558, and they risked it all upon the stability of the Government.

That they have made profits may be admitted, although part of them were paid over to the Government through taxation.

Still, the fact remains that the National banks did lend liberally to the Government when it was a borrower, and whatever disposition is to be made of the questions touching those institutions the consideration of them should be approached with no feeling that the banks were indifferent to the welfare of the country when indifference was a crime.

---

WRITTEN MEMORANDA.—It is by far the best plan to make written memoranda of everything as far as practicable, trusting as little as need be to the memory. Varying recollections as to what has been said or agreed upon at verbal interviews are a common source of disagreement. It is not meant that a note of every conversation should be taken, but when recollections are different he has the better of the situation who can draw out a little paper, with the remark, "Here is a memorandum that I made at the time." What is said in this regard applies equally to official intercourse between the various members of a bank's staff. It is very easy, in the rush and hurry of a busy day, to give a wrong order, to misunderstand what is said to you, or to mistake names and amounts—sometimes, perhaps, to do the very opposite of what has been told to you. It takes but a moment to jot down on a piece of paper what is to be done and lay it on a clerk's desk, and then there can be no mistake as to what is desired, and no slip of a treacherous memory about doing it. Men who carry their business in their heads not infrequently carry it wrong, and then, when an error occurs, usually blame anybody and everybody but themselves.

### BI-METALLISM AND SILVER COINAGE.

The *Quarterly Journal of Economics* contains a paper on "Silver before Congress in 1886," from the pen of Mr. S. Dana Horton. The title is hardly comprehensive enough, for Mr. Horton's argument takes a much wider range than merely reviewing the discussions, actions or omissions of Congress in 1886, and really but a small portion of it is addressed to the exploiting of that field. Mr. Horton, it is well known, is a bi-metallist who is opposed to silver coinage in the United States in the absence of an international agreement to coin silver at a fixed ratio to gold. To the demonetization of silver by Germany he traces the source of all financial and industrial troubles, or, as he puts it, "in a word, chronic 'hard times.'" He says:

"The chief monetary features of the period, extending from Germany's retirement of silver coin (1873-4) to the present, are, in brief, as follows (I refer mainly to the occidental world):

"A check of the normal increment of the money stock.

"A divergence from the traditional par between silver and gold.

"Uncertainty of their ever finding a new and permanent parity.

"The degradation of a thousand million dollars worth (in round numbers) of full legal-tender silver coin from the position of international to that of local money.

"The derangement of the calculations of contracts and trade and investment between gold-using and silver-using countries.

"A gradual subsidence of average prices, which still sees no halting-place before it."

The defeat of free coinage in this country and the Conference of 1878, Mr. Horton says, operated to cause a halt in the demonetization of silver. But, we may add, the very Act, of February, 28, 1878, which provided for the Conference of 1878, also authorized the coinage of the silver dollar, and this provision did more to defeat the purpose of the Conference and to prevent the remonetization of silver in Europe than any other known cause. The United States, instead of being represented at that Conference as a country having no greater interest in the restoration of silver as money than the countries with which it conferred, stood before them as pledged to silver coinage independently of what other countries might do. It was not strange, therefore, that England refused to do more than to act as a courteous listener to what other countries had to say. It knew that, by a vote of over 70 per cent. of its Senators and Representatives, the United States had decided to coin silver even after the President had opposed it by his veto. It was only natural, therefore, that England should decline to take upon its shoulders any part of the burden which this country had already fitted to its own.

That Mr. Horton is cognizant of the fatality of the mistake which the United States made in 1878 he has made clear in another portion of his paper. Regarding the extensive use of silver, Mr. Horton says:

"The moneys of Western Europe and America are at par with gold. Eastern Europe and part of South America have much paper and the rest of the world have silver. There is about as much silver money in the world as gold; and there is no very important change or prospect of change in that minute annual increment of the stock of either metal, which seems fated to be the sempiternal object of erroneous reasoning. The money of the occidental 'gold-standard' States contains, including a fraction of 'change,' something near fifteen hundred million dollars of silver, all at par with gold."

The idea Mr. Horton intends to convey is that there is no immediate prospect of a change in the relative productions of gold and silver sufficient to have any important influence upon their relative values. Of course the relative production has changed and is changing, but, with the two metals at a fixed ratio of value for coining purposes, the change would have to be much greater than it has yet been to disturb that ratio, an event which must necessarily be preceded by an inordinate excess of coin in circulation.

Of the effect of silver demonetization, Mr. Horton says :

"Under the unerring gravitation of self-interest, rupee-priced goods are lowering the gold price of gold-priced goods; and so the gold valuations of Europe are breaking to pieces under the competition of the silver valuations of the East, and chiefly, if not wholly, because of the occidental 'corner on gold,' which has lowered the figure of the gold equivalent of rupee prices so as to undermine the old-time valuations of Europe."

To pursue the path of demonetization in Europe, he says, would intensify the embarrassment of the situation on a grand scale. "To-day, the public melting down and selling as bullion of a thousandth part of France's stock of silver dollars would create a panic that would spread from London throughout the world." But isolated remonetization, Mr. Horton holds, will not correct the evil.

The vote in Congress on April 8, 1886, on the bill for free coinage, he considers operated to "kill" free coinage in this country without concurrent free coinage in Europe. The effect of this, he claims, has been to bring bi-metallism into greater favor in England, a claim which we doubt not will be met with loud protests in that country.

To the inquiry, "How is it that no majority has yet been found in Congress to put a stop to the coinage of the silver dollar?" Mr. Horton replies in an interesting array of facts. He says :

"That the passions of the Civil War, in afterglow, had their share in the long struggle which the country went through in order to bring the greenbacks to par with gold will, I doubt not, be generally admitted. The anti-resumptionist party gathered into its ranks all the sections of opposition—the partisan foes of a debt incurred in order to suppress the Rebellion, as well as unpractical spirits who dreamed of an ideal money, or those who thought to fish in the troubled waters of monetary anarchy. Of this party, upon its defeat through the Resumption Act of January, 1875, silver, soon looming above the political horizon, became in time the heir or residuary legatee. To these elements of opposition to the order of things established by the single gold standard law of 1873 were joined the representatives of the silver and gold States, who, seeking protection for the product of their mines, demanded the free coinage of silver as well as gold."

To these were added a large mass of citizens who were accustomed to look upon silver and gold as the historic money metals and who could not find it easy to understand why they should not remain money. Another class was caught by the cry of "more money," which conveyed to them the idea of profit. While the true bi-metallists were not organized in the sense that the "silver men" were, many of them, although looking for the solution of the problem in concurrent action by the nations interested, were disposed to look upon the stoppage of the coinage as a dangerous step.

One other class Mr. Horton fails to mention, although he may have had it in mind when he spoke of the "more money" party. They are the people who saw in the depreciation of the currency an opportunity to gain an advantage over their creditors by paying their debts with cheap money. This

class has come into greater prominence since the decline in the value of silver became more marked.

Mr. Horton holds to the opinion, now generally entertained by prominent bi-metallists, that an international agreement to coin silver at a fixed ratio is surer and more speedy of accomplishment by the refusal of countries now coining that metal to continue it independently.

"The effect must be, other things being equal, a fall in the gold price of silver; and a fall in the gold price of silver is a calamity to Europe. But why is a fall of silver a special calamity to Europe? Because Europe's real interest in silver is greater in proportion than that of the United States. The fall would shake the foundations of European investments. Europe held a thousand millions of full legal-tender silver besides all her change. What security could she feel in its use in case of a sudden decline of the value of the bullion in it? But far beyond this. The fall meant an increase in the silver figures of India's gold debt and a novel dislocation of the business between Europe on one side and Asia and South America on the other. To all these embarrassments there was no end except in a concurrent silver-favoring policy, the monetary future being a stormy sea, with but this one port of refuge. Of course, such a measure would involve no refusal of free coinage on our part when Europe should come to terms; and, if necessary, guarantees of concurrence could be fully set forth in advance, so that stoppage would be explicitly an act or threat of righteous war, to be averted by making a righteous peace."

That the United States has been assisting England in the latter's policy to maintain a gold standard cannot be disputed. Mr. Horton dates this assistance back to 1875, when the Resumption Act of January 14th of that year ordered a coinage of silver change, and to 1876, when a resolution was passed (July 22d) in support of silver coinage; and nearly \$35,000,000 worth of silver was purchased in the interval before 1878. So, when Holland closed her Mints in 1875, and France rejected silver in 1876, and while Germany was melting its thalers, the United States kept up the price of silver as if to help the cause of demonetization.

Other effects of our coinage of silver are stated by Mr. Horton as follows: Our coining silver furnished an argument for monetary statesmen in Europe to the effect that the day was coming when free coinage, or, better still, free bullion certificates, in the United States would make fair weather for Europeans committed against silver. To a friend of silver the stoppage of the coinage seems in the nature of heroic. But Mr. Horton says:

"So far as the United States were concerned the damage to be suffered was unimportant compared with the end in view—a hardship, it is true, for the owners of silver mines if Europe should hold out long; but the interest of silver-mine owners never made the strength of the silver party. Its real strength lay in the opposition to what was known as 'contraction.' Strange to say, it has been possible for the leaders of this party to hold their position upon this line of defence. The idea has been current that an increment to our money stock of at least twenty-four millions a year—a safeguard of that extent against 'contraction'—is created, not by having silver to sell, but by having the Government buy it and coin it. The idea that if it were not coined the silver could be sold in Europe for gold, and the gold brought here to swell the money tide, has failed to penetrate very far, and, where it could make its way, would be met by the allegation that the margin between the silver dollars the bullion would have made and the gold dollars it will buy would be a terrible 'loss' or 'contraction,' or both. If this line of argument could be erased from the records of the politicians what a vacuum would be left!"

The fall in prices of commodities and the decrease of 20 per cent. in the value of silver itself since 1878 are beginning to convince some of the "silver men" that silver inflation has been a failure.

Mr. Horton traces the course of legislation on silver in the last session of Congress, mentioning facts which were of so recent occurrence that it is

unnecessary to recount them here. One point he brings out, however, which is very interesting. It relates to the memorial which was sent to Congress by the so-called National Bi-Metallic Coinage Association, which was nothing more than a convention of silver-mine owners, and which was so feebly supported by even the people living in the silver districts as to call forth protests from certain newspapers which are faithful adherents of the silver cause. Concerning the petition, Mr. Horton says:

"The burden of its many pages was the competition of India and the havoc wrought in the wheat and cotton States, and in general in the foreign export trade of the country by exportation of India products. The cure for all this was to be the free coinage of the silver dollar in the United States at the ratio of sixteen to one. The obvious objection that free coinage here would enable other countries to pour in their silver and take away our gold in exchange for it, relegating us to the silver standard, was met in a peculiar manner. Under the title, 'The Fallacy-Dumping Ground for Silver,' the memorial gives a plain, unvarnished statement about the 'rates of coinage of the several leading nations in this world;' how 'the Latin Union' and how 'the German Empire, as well as the other [*sic*] nations of Central and South America, coin at fifteen and one-half to one,' etc. Of course, if this were true, the cause of free coinage here would be entitled to respect. In fact, if one could say with truth that the German Empire coins and the Latin Union coins at fifteen and one-half to one, there need be no trouble about silver coinage at all in this country, for it was the cessation of coinage in those countries that created the 'silver question.' It must be admitted that, although untrue, the statement was well invented. It is also to be observed with regret that its composition and dissemination reveal at least a phenomenal wilfulness or ignorance. So far as the competition of India is concerned, the point is not a new one; and it is, as has been shown in the preceding pages, a potent argument in favor of stoppage. But, while the Indian question made no figure in the general discussion in Congress, this misrepresentation of vital facts as to coinage in other countries found abundant echo."

---

### DEPRECIATION OF GOLD IN ENGLAND.

A pretty accurate estimate of the depreciation of the gold coinage in England has been made by the Standard's Department. It may detract somewhat from the value of the result that the investigation was confined to London, but it is hardly probable that had it taken a wider scope the result would have been substantially changed.

By an arrangement with seven of the leading London banks a large amount of gold coin was weighed in parcels of 100 sovereigns and 200 half-sovereigns before the coins were assorted or weighed for delivery to the Bank of England. The coins were, in fact, weighed just as they came to the banks from private hands, and fairly represented the condition of the coin in actual circulation.

The legal standard or full weight of 100 sovereigns is 12,327.45 grains and of 100 half-sovereigns 6,163.72 grains, while the legal current weight allowed for 100 sovereigns is 12,250 grains and for 100 half-sovereigns 6,112.5 grains.

The average current weight of 100 sovereigns at each bank varied from 12,244.1 grains to 12,252.7 grains, or from 74.75 to 83.35 grains less than the full standard weight and from 5.9 grains below to 2.7 grains above the legal current weight. In only one bank, however, did the average exceed the legal current weight.

The mean average for all the banks was 12,248 grains, or 79.45 grains below the standard and 2 grains below the current weight. The average weight of 100 half-sovereigns ranged from 6,059.3 grains to 6,068.5 grains, or from 95.22 to 104.42 grains below the standard weight and from 44 to 53.2 grains below the legal current weight. The mean average weight was 6,063.3

grains, or 100.42 grains below the standard weight and 49.2 grains below the legal current weight. The greatest weight of any one parcel of 100 sovereigns was 12,257 grains, or 70.45 grains below the full standard and only 7 grains above the legal current weight, while the lowest weight of any one parcel was 12,232 grains, or 95.45 grains below the standard and 18 grains below the current weight. The greatest weight of any one parcel of 100 half-sovereigns was 6,074 grains, or 38.5 grains less than current and 89.72 grains less than standard weight. The lowest weight was 6,047 grains, or 65.5 grains less than current and 116.72 grains less than standard weight.

It is evident that the depreciation in the half-sovereigns has been very much greater than in the sovereigns.

It is estimated that there are £80,000,000 in sovereigns and £15,000,000 in half-sovereigns in circulation, beside £10,000,000 of sovereigns and £5,000,000 of half-sovereigns in the Bank of England.

As the Bank defaces all light coin which it receives, and charges the depositor with the difference between the nominal and the metallic value of the coin, the coin in the Bank of England is not depreciated to anything like the extent that the coin in active circulation is.

An estimate of the depreciation in the total gold currency of the country is made by the London *Economist* as follows :

<i>Denomination.</i>	<i>Total amount.</i>	<i>Average deficiency of weight in each coin in grains.</i>	<i>Total deficiency in ounces.</i>
Sovereigns.....	£80,000,000	.7945	132,416
Half-sovereigns.....	15,000,000	1.0042	62,762
<b>At Bank of England:</b>			
Sovereigns.....	10,000,000	.2025	6,223
Half-sovereigns.....	5,000,000		
<b>Total deficiency in weight.</b>			<b>201,506</b>

Estimating the value of an ounce of gold at £3 17s. 9d., the loss on account of deficiency in weight is £783,400, or .71 per cent. of the total face value of the coins. This estimate is believed to be too low, as it is known that the banks hold considerable quantities of gold coin too light to be put into circulation at all.

The *Economist* expresses the opinion that it would cost from £800,000 to £850,000 to substitute full weight for light gold coins.

The necessity of getting rid of the light weight coin in England is becoming a pressing one, and the question how it shall be done is a subject of frequent discussion.

**THE PRIZE ESSAY**—The Editor of the JOURNAL has received a greater number of manuscripts on "Domestic Exchanges" than was expected—considering the short time allowed competitors—over twenty having complied with the requirements. As soon as the judges are able to decide which essay is the best, prompt notice will be given and the successful MSS. published herein.

## THE NATIONAL BANKS.

### REPORT AND RECOMMENDATIONS OF COMPTROLLER TRENHOLM.

The annual report of the Hon. William L. Trenholm, Comptroller of the Currency, contains suggestions for the amendment of the National bank laws in several important points, including the contingent liability of shareholders, requirements as to reserve, the limit on loans to individuals, more thorough examination of banks, and their protection against unequal State taxation.

Three thousand five hundred and eighty National banks have organized in all, of which 2,858 are now in operation; of these 174 have been organized during the past year, with a capital of \$21,000,000; bonds, \$3,700,000; circulation, \$2,900,000. Twenty-four banks went into voluntary liquidation during the year, one ceased to exist by expiration of its charter and eight failed. The failed banks have an aggregate capital of \$650,000; surplus and undivided profits, \$204,000; liabilities, \$1,300,000. The creditors of two of these banks have been paid in full, principal and interest. In two cases dividends have reached 50 per cent., in one case 75 per cent., and in one 20 per cent. The total dividends paid during the year by all insolvent banks exceed \$1,600,000, and the accounts of eight banks have been finally closed, leaving 25 insolvent banks still in the hands of Receivers.

Since the beginning of the system, in 1863, only 112 National banks have failed. Of these, 36 have paid their creditors in full and 20 have paid interest besides (15 in full and 5 in part).

An interesting comparison is made between National banks previously existing as State institutions and those originally organized under the National bank law. In each case only 3 per cent. of the number organized became insolvent.

Very full tables are given showing the distribution of the shares of stock in National banks in every State and Territory, distinguishing between the shares held by residents of the State and non-residents, by natural persons and by the various classes of corporations. Total shares, over 7,000,000; total shareholders, 223,000. Over 90 per cent. of all National bank stock is held by residents of the State in which the bank is situated, more than 91 per cent. is held by natural persons, and over 96 per cent. of the number of shareholders are natural persons. Among the corporations holding National bank stock the greatest amount is held by savings banks, trust companies and insurance companies. More than half the entire number of shareholders hold 10 shares or less, about one-third hold over 10 shares but less than 50, while those holding more than 50 shares number but little more than one-ninth of the whole body. Comptroller Knox, in his report for the year 1876, gave the result of similar investigations in reference to the distribution of National bank stock, and in the present report the tables for 1876 and 1886 are both given for the purpose of comparison.

The effect of the reduction of the public debt and the high premium on bonds upon the volume of National bank circulation is fully illustrated in the report.

The reduction of National bank circulation during the year exceeds \$56,000,000. Besides the usual tables showing the condition of National banks

at various dates, the report contains an abstract which specifies each item of their resources and liabilities. The banks in the several States, reserve cities and Territories, have their condition stated separately.

A large diagram exhibiting the main features of the National banking system and their variations during the past 21 years accompanies the report. From this it appears that the aggregate deposits in the banks have increased from \$522,000,000 in January, 1866, to \$1,173,000,000 in October, 1886, while loans and discounts have risen from \$500,000,000 at the former date to \$1,333,000 in 1884 and to \$1,443,000,000 at the latter date. The specie held by the National banks in 1866 was \$19,000,000; in October, 1875, it was only \$8,000,000; in 1884 it was \$140,000,000, while in July, 1885, it was \$177,000,000, and is now \$156,000,000.

Mr. Trenholm concludes his report with the following remarks on the subject of the National banking system:

"In selecting the information presented in this report I have endeavored to exhibit the practical working of the present National currency and bank laws, and I have also had in view the importance of supplying material for a full understanding of the relations between the National banks and the general business of the country in order to explain the widely prevalent desire among business men for some legislation directed to the establishment of these banks upon a more permanent basis.

"The National banking system had its origin during the war, and it will always stand splendid in history as an example of financial skill, successful under very difficult circumstances. The problem in 1863 was how to bring the banking capital of the country to the support of the Treasury, and it cannot be doubted that the banks then had it in their power to exact from the Government concessions far more valuable than those granted them. Even these moderate concessions have long since lost all the elements of monopoly, and the Act of June 20, 1874, actually took away \$55,000,000 of circulation, partly from banks organized during the war, in order to give the privilege of issuing that sum to banks in States that were cut off by the war from access to the National banking system—a measure entitled to honorable consideration, because at that time those States were without sufficient political influence to exact a share in this valuable privilege, and the then existing banks were strong enough to have made a successful resistance if they had been selfishly inclined. The last vestige of monopoly was swept away by the Act of January 14, 1875, which created a free banking system throughout the United States, and, supplemented by the Act of July 12, 1882, brought its benefits within reach of even small communities. Under the sanction of these laws the National banks have become numerous, widely distributed and intimately identified with the varied industries by which our entire population literally obtain their daily bread; but during the same time the rapid reduction of the funded debt of the Government has been introducing into the very basis of the system an element of instability which now hampers its extension, impairs its usefulness, and even threatens its continued existence, while there are still great areas of our country in which the natural resources are awaiting development by just such means as these banks might be made to supply.

"The present financial prospects of the country induce the expectation that the funded debt will be paid off as fast as the bonds mature, and, in conse-

quence. a question has arisen as to what changes should be made in the National bank system in order that it shall not suffer deterioration or destruction upon the withdrawal of the support upon which it is based by the present laws, which require every bank before beginning business to deposit a certain amount in United States bonds. The payment of the 3 per cent. bonds and the maturity in 1891 of the  $4\frac{1}{2}$  per cent. bonds amounting to \$250,000,000 and in 1907 of the 4 per cent. bonds amounting to nearly \$738,000,000 have combined to produce a prospective scarcity in the securities available to the banks as a basis for their corporate existence, and this is reflected in the advance of these bonds to a premium so high that every day their enforced purchase becomes more and more onerous. Banks now holding 3 per cent. bonds and newly organized National banking associations are forced into the market as purchasers of the 4 per cent. or the  $4\frac{1}{2}$  per cent. bonds, and this constant demand, in connection with the prospective scarcity already referred to, sustains and tends still further to elevate the premium on these bonds. As the time approaches for the payment of the  $4\frac{1}{2}$  per cent. bonds it is reasonable to expect a still greater demand for the 4 per cents., and it is a question of serious importance whether the banks can afford to hold or to buy 4 per cent. bonds after 1891.

"In the present age all business men try to anticipate future conditions and to provide well in advance against foreseen contingencies; hence it is to be expected that the banks will not wait until the approach of 1891 to shape their policy with reference to the continued holding of high-priced bonds. For this reason it is not too early now to consider what legislation may be proper to remove this element of future uncertainty from the National banking system, and, looking to the possible consideration of this subject by Congress, I respectfully submit the following statement of the question as it appears from the point of view officially occupied by the Comptroller of the Currency:

"The fundamental postulates underlying every banking system established by law, whatever may be its form, must necessarily be:

"*First*—That banks promote the general welfare of the community; and,

"*Second*—That the particular system established by law is the best obtainable under the conditions prevailing at the time and place.

"These postulates, therefore, underlie our National banking laws. The first postulate will not be questioned, since no people in modern times have ever risen to civilization or maintained their civilization without banks, and least of all can it be questioned in this country where, besides 2,858 National banks now in operation, we have over 5,000 State banks, savings banks and private banks and bankers, whose operations extend into the minutest ramifications of the employments and resources of our 60,000,000 of population. The second postulate involves the question whether the present National bank system should be preserved, and, if so, whether it is good enough as it is or whether it can be improved.

"The National Currency Act of February 12, 1863, was controlled as to its purposes by the paramount necessity of inducing the banks and other capitalists to become purchasers of Government bonds under conditions that would give a basis of solid value to the currency then being paid out in immense volume under the pressure of military exigencies; hence the consolidation of these banks into a National banking system adapted to commercial and industrial needs appears only as a subordinate incident in the general

scheme. As early, however, as the year 1864 it was perceived that the general welfare of the people would be promoted by giving greater cohesiveness and method to the system, regarded more especially in its banking than in its currency features, and from that time to this the effort of legislation has been to subordinate the issuing of currency to the more important functions performed by the banks as institutions of discount and deposit. The effect of this legislation and its wisdom are exemplified in the present high credit and the consequent wide commercial usefulness of National banks. If the system could be preserved purely as one of deposit and discount there would probably arise an almost universal sentiment in favor of bestowing upon its preservation immediate and careful attention, but it is doubtful whether the banks would find sufficient inducement to remain in the system without enjoying some privileges as to the issue of currency, and it has been questioned whether there is power under the Constitution for the charter of National banks except as instrumentalities for a money circulation. It follows, therefore, that any legislation directed to the improvement and permanent establishment of the National banking system must include some provision for the maintenance of a National bank circulation, while on the other hand it appears that whatever opposition exists to the National banks attaches to them mainly as banks of issue, and under our system of Government nothing can be regarded as permanently established until it has obtained the support of well-settled public opinion. Hence it is evident that the problem now to be solved is how to remodel the currency features of the National bank system so as to obtain popular approval of them. Objections to the present National bank currency appear to be comprised within three classes, namely :

"1. A general objection to paper money in any form.

"2. An objection to National bank notes, based upon the assumption that they take the place of an equal amount of paper money that might be issued directly upon the credit of the Government:

"3. The objection that a currency determined in volume by a definite percentage upon deposited securities of high value can never possess the flexibility and elasticity of volume which are the chief commercial advantages of a bank currency in any form.

"Against these objections it is answered :

"1. That the question as to having paper money at all is not at present a practical one, because it is evident that our people will have paper money in one form or another, and that, of all forms of paper money of which we have had any experience, the present National bank currency is the least objectionable even to those who think that all such money should be avoided.

"2. That while a bank currency based on Government bonds and redeemable in greenbacks may be considered as a kind of Government money, on which the banks are getting the profit, yet without this privilege, or some other equivalent to it, the National bank system could never have been established, nor can it now be maintained, and that this is the cheapest price at which the people or the Government could have got any banking system so good in all respects and so valuable as this has proved to be. Another argument is that the Government must pay interest upon its bonds whether these are held by the banks or not ; hence the profit to the banks on these bonds has been obtained without charge on the Treasury ; while, on the other

hand, if the banks had not been offered sufficient inducement to invest in these bonds many more of them would have gone abroad at low prices, and the country as a whole would now be so much the worse off.

"8. That the want of flexibility in the currency and of elasticity of volume are consequences arising from the scarcity of bonds and the high prices to which they have risen, and that this could not have been foreseen nor provided against in the original Acts, but may now be remedied by proper legislation.

"These objections and the answers to them are stated without comment. They seem worthy of consideration. Some suggestions have been made to me as to new legislation on this subject, which, together with such conclusions as I have been able to reach, are subject to whatever disposition Congress may be pleased to order."

---

**CATCH THIEF!**—The banking business is one peculiarly exposed to the attacks of professional thieves and swindlers. Almost every day the newspapers contain accounts of some bold burglary or clever cheat, whereby a bank or its customer is the loser. Burglars seem at times to laugh at locksmiths, and for the bland and guileless confidence man nature seems to provide a fresh crop every year: Safe and vault manufacturers vie with each other in bringing their art to a state of perfection, and, in order probably that the public may not suffer by errors and omissions, each makes it his special business to point out the defects in his neighbor's work. The papers explain again and again, with all the minuteness of circumstantial narration, the various "bluff," "drop" and "confidence" games. The unwary are cautioned and the careless are admonished. Notwithstanding all these untoward influences, however, the craft continue to flourish and multiply. While every protection to prevent theft and precaution against fraud should be adopted, there is one principle that should never be lost sight of and that should be enforced at every cost—always catch the thief. Public attention has been called to a large robbery recently perpetrated upon the Adams Express Company. Now there is one thing that may be taken for granted, the thief or thieves will be caught and punished, probably, before this brief paper reaches the public eye. The Adams Express Company never let up on a man who robs them, and that is the principal reason why it is so safe to send money and other valuables by express. Here is a hint that the banks should improve upon. In every city and throughout the different sections of every State the banks should form a fund for the sole purpose of bringing criminals to conviction and sentence. Each bank should pay into the pool a certain amount, based on its line of deposits, and this should be done regularly and systematically and not by fits and starts. As this is a business that demands, above all things, promptness and celerity, it ought properly to be in the hands of one man, and he should be paid a reasonable sum for attending to it. The moment a theft or swindle is perpetrated the agent of the banks should be notified, and the banks should all stand together and leave no means untried to bring the guilty to punishment. It should be an iron rule that the thief is to be caught no matter what it costs. A few years of such salutary discipline would reduce bank robberies to a minimum, and fewer rogues would go : "unwhipt of justice."

**Methods and Machinery of  
\*PRACTICAL BANKING.**

CONSISTING OF BRIEF DESCRIPTIONS AND SUGGESTIONS RELATIVE TO THE  
METHODS OF CONDUCTING THE BANKING BUSINESS; WITH APPROVED  
MODELS OF BLANK BOOKS AND FORMS FOR THE USE OF  
BANKS OF DISCOUNT, SAVINGS BANKS, ETC.

[Prepared expressly for the JOURNAL by the Cashier of a long-established bank, who had over twenty years' experience in practical banking, and who always sought for better and safer methods.]

**TRUST COMPANIES.**

Although this is a series of practical banking papers trust companies come so near being banks that the National banks who have found them such dangerous and successful competitors for business are often found asserting that they are neither more nor less than banks—State banks sailing under State charters. It is highly proper, therefore, that they should receive some notice. The remark is often heard that depositors put their money in trust companies because they are trust companies, established to hold, *in trust*, moneys, and to invest the same in certain restricted securities of the most unquestionable character. But those best acquainted with both National banks and trust companies know well enough that both classes of institutions, where they are properly managed, invest their deposits, capital, etc., in about the same class of securities, and are equally careful and conservative in the matter of their loans. To be sure the trust companies move along under certain State-made restrictions as regards the character of the investments they may make—restrictions which were framed for the purpose of protecting the “trust funds” which they hold. But along side these trust companies’ State defences may be set the checks and guards against improper and dangerous loans set up by the National banks, which are of a very conservative and sagacious character. With these facts in view it will not take an intelligent financier very long to come to the conclusion that the difference between the two classes of institutions, as far as the question of which is a bank and which is not a bank is concerned, is more technical than real.

Coming back to the point named at the opening of this paragraph, we remark that careful men deposit their money in the average trust company of the period rather than in the average National bank because the former pays more liberal interest upon deposits of all classes. The leading trust companies of our times are strong and well-managed institutions; and they have made considerable money, in most cases, for the fortunate shareholders of their comparatively small capitals. As our leading trust companies are to-day doing an immense banking business of one class at least—that of paying daily a vast number of customers’ checks upon their deposits—it appears every way desirable, looking at the matter from a public stand-point, that they should settle through clearing when they are located in Clearing-House cities. Under their present out-of-clearing method of cashing checks (drafts, the trust companies persist in terming them) the Messengers of banks, who are the largest collectors of these checks, and the general public, into whose hands many of them pass, are put to a vast amount of trouble, which would be obviated were the checks of trust companies made Clearing-House funds.

The present relations of the large trust companies to the National banks in our Clearing-House cities are of such an important character that they are

\* Practical Banking Series—Part XXIX.

These papers will be continued through the 1886 volume of the JOURNAL. Copyright, 1884. All rights reserved.

of a good deal of interest to the financial observer. Out of the connection there may, under some circumstances, be a development of no little financial trouble.

These trust companies scatter among the National banks around them (those banks that are willing to pay a liberal interest upon large, round demand deposits) balances—such of their resources as are accumulating on their hands awaiting investment, or consisting of funds which they do not deem prudent to place beyond their immediate reach. In times of great stringency—of panic—these trust balances must be suddenly reduced at the very time when they are most needed by the banks, which is always the case with demand deposits. The control of the balances in question may, it is often urged, be in the end a source of danger to the National banks, since in their presence lies a temptation to undue extension of bank time loans.

Trust companies often claim that they are not banks because they do not solicit or desire accounts with merchants, and that they are not in any sense the wings of commerce, which regular banks have always been euphoniously termed. If they are not entitled to be so called they certainly have claim to the credit of furnishing a good deal of power to the legitimate wings of trade.

There has been an active discussion in progress in some quarters over the question whether or not trust companies should be obliged—compelled by the laws of the States in which they are located and which have given them their charters—to keep on hand in their vaults stronger reserves, of a character somewhat similar to those required of the National banks by the terms of the Bank Act under which they live and move.

These articles have not for their mission the discussion of theories or the advancing of any partisan views on financial matters, and for these reasons no attempt will be made to present the pros and cons of this exciting trust company reserve question. Bankers and trust company managers who wish to pursue the matter can have easy access to a valuable argument in favor of requiring the trust companies to carry heavier home reserves which has been made by R. D. Smith, Esq., of Boston, and which has been published in a pamphlet; and they can as easily reach the printed reply to the Smith argument made by an able financier, who is in the management of a large trust company.

It has been said that the success of the leading American trust companies has been most marked. This success was a result of the adoption of ideas and methods which had their origin in England. Our great trust companies are, in their most important features, like the joint-stock banks of London. They have, like them, a way of doing an immense business on a small share capital. The writer found the great joint-stock banks of London carrying, on the average, lines of deposits equal to about ten times their capital, and making out of this wholesale business of buying and selling vast amounts of money most enormous dividends for their fortunate shareholders.

Already in these papers has been given in detail London dividend, capital and deposit figures. Here with the trust companies, as there with the London banks, "large sales and small profits" has proved a very successful motto in the two classes of banking under discussion.

Wishing to give in detail some clear idea of the way trust companies work—an explanation of trust company methods and machinery—let us take for explanatory illustration a view of one of the best and most successful of the trust organizations. It has a capital of \$500,000 and deposits of over \$12,000,000.

It allows interest on deposits subject to check at sight; on temporary accounts not less than thirty days.

This company is authorized to receive and hold moneys and property in Trust and on deposit from Courts of law or equity, executors, administrators, assignees, guardians, trustees, corporations, and individuals, AND MAY BE APPOINTED BY PROBATE COURTS TRUSTEE UNDER ANY WILL, UPON SUCH TERMS AND CONDITIONS AS MAY BE AGREED UPON.

Deposits may be made at any time, and interest will be allowed on daily balances of \$500 and upward.

It also acts as Transfer Agent for Railroad and other Stock Corporations, and as agent for the purpose of issuing, registering or countersigning the certificates

of stock, bonds, or other evidences of debt, and for the payment of dividends and interest of corporations, associations, municipalities, State or public authority, and also as agent or attorney for the care and management of invested property, and for the collection of dividends and interest.

It is by law made a legal depository of money paid into Court by the parties to any legal proceedings, or which may be brought into Court by reason of any order or judgment in equity or otherwise.

It will act as **Trustee of Married Women**, and take charge of and manage their separate property.

It offers to the public the advantages of a guarantee capital of half a million dollars, specially invested by requirement of its charter, and a perpetual succession.

In the management of its deposit business, here are a few points :

All deposits made later than one o'clock are placed on interest the next business day.

It pays 3 per cent. on demand over \$500, reserving the right to require five days' notice for payments of \$20,000 and upwards on any one day.

On deposits made for a specified period of six months or more, it makes special rates.

All deposits must be accompanied by a memorandum describing the items separately.

Interest not allowed on temporary deposits if drawn in thirty days.

The company reserve the right at any time to change the rate of interest allowed on deposits.

It particularly requests that checks and drafts not on banks in its own city should be deposited by one o'clock or earlier, so that they may be forwarded for collection the same day.

Office hours, 10 o'clock until 2 o'clock.

In the matter of its investments, here are provisions of its act of incorporation and by-laws :

It shall be lawful for said corporation to invest its capital and all the moneys entrusted to it, or in any way received by it, in the authorized loans of the United States, or of any of the New England States, or cities or towns of this Commonwealth; in the stock of National banks organized within this Commonwealth; in the first mortgage bonds of any railroad company which has earned and paid regular dividends for two years next preceding such investment, or in the bonds of any such railroad company as is unincumbered by mortgage, or in the stock of such railroad companies incorporated by this State; and the said corporation may make loans upon mortgages on real estate within this Commonwealth, or upon the notes of corporations created under the laws of this Commonwealth, and the notes of individuals with a sufficient pledge as collateral of any of the aforesaid securities; but all real estate acquired by foreclosure of mortgages, or by levy of execution, shall be sold at public auction within two years of such foreclosure or levy.

It shall be lawful for the said corporation to invest its capital, and all moneys held by it in trust, in the authorized loans of any of the counties, cities or towns in any of the New England States, or to loan the same to this Commonwealth, or to any county, city or town therein; and said corporation may also invest such capital and moneys in any other securities in which savings banks now are or hereafter may be allowed to invest, and shall be subject to and governed by the provisions concerning savings banks which are contained in the General Statutes.

**DIRECTORS.**—The Board of Directors shall consist of a President, three Vice-Presidents, and fifteen Directors, who shall be chosen annually by the stockholders, by ballot, and who shall continue in office until others are chosen in their stead.

The Actuary shall *ex officio* be a member of the Board of Directors.

Vacancies during the year shall be filled by election by the Board of Directors.

The Board of Directors shall appoint an Actuary, a Secretary, and such Clerks as they shall from time to time think necessary, who shall respectively hold their offices until removed by the Board of Directors.

They shall also determine the powers and duties of the officers of the corporation, fix all salaries, and take such bonds or other securities from any officer as they see fit.

The Board of Directors, by themselves, or by committees, shall have the general management, control and direction of all the business concerns and affairs of the cor-

poration, and of all its trusts and undertakings, with full power to make all investments and to transfer all real and personal property belonging to or in the charge or control of the corporation at their discretion.

They shall have power to declare all dividends, determine upon the form of certificates of stock, and of transfers thereof, and upon a corporate seal; do all other things which by law or the statutes of this Commonwealth the Directors of moneyed corporations are or may be authorized to do; and, generally, to do any and every thing, not repugnant to the charter, which they may deem fit and proper to use and carry into effect the powers of the company.

There shall be a meeting of the Directors, for the transaction of business, once in every month, and as much oftener as it may be found necessary; a quorum of said Board shall consist of not less than seven members.

**CAPITAL STOCK.**—Any member of this corporation who shall be desirous of selling any of his shares, the executor or administrator of any member deceased, and the grantee or assignee of any shares sold on execution, shall cause such, their shares respectively, to be appraised by the Directors, which it shall be their duty to do on request, and shall thereupon offer the same to them for the use of the corporation, at such appraised value; and if said Directors shall choose to take such shares for the use of the corporation, such member, executor, administrator or assignee shall, upon the payment or tender to him of such appraised value thereof, and the dividends due thereon, transfer and assign such share or shares to said corporation: *provided*, however, the said Directors shall not be obliged to take such shares at the appraised value aforesaid unless they shall think it for the interests of the company; and if they shall not, within ten day after such shares are offered to them in writing, take the same, and pay such member, executor, administrator or assignee therefor the price at which the same shall have been appraised, such member, executor, administrator, or assignee shall be at liberty to sell and dispose of the same shares to any person whatever.

It shall be the duty of such executor, administrator, grantee or assignee to offer said shares for appraisal and to be taken by the corporation, if it shall so elect, whenever requested by the Actuary or Secretary, and no dividends or interest shall be paid or allowed after a failure to comply with such request: *provided*, that such request shall not be made until after the payment of one dividend and the expiration of six months from the death of the owner, or sale as aforesaid; but the offer may be made at any earlier period if the party shall prefer.

The Directors shall have the power, and it shall be their duty, to sell and dispose of the shares which may be transferred as aforesaid to the corporation, whenever, in their judgment, it can be done with safety and advantage to the corporation; and in all sales made by the Directors, under any of the aforesaid provisions, it shall be their duty to sell the shares to such persons as shall appear to them, from their situation and character, most likely to promote confidence in the stability of the institution; no greater number than one hundred shares being assigned to any one person; nor, in the case of a person already a member, a greater number than will be sufficient to increase his previous number to one hundred shares.

#### REDEMPTION OF MUTILATED NATIONAL BANK BILLS.

The Treasury Department has established rules for the redemption of mutilated National bank-notes, and these rules have from time to time been changed in many points. These rules are sent in a circular form to all the National banks and in this way have been constantly kept before them since the first establishment of the National banking system. It cannot be positively asserted that these Treasury redemption rules are binding on the banks, but as a general thing the banks have accepted them as their guide, and the bill-holding public have the power to keep the banks up to these rules, since, in case of their refusal to do as well by them in redeeming mutilated notes, they can appeal to the Treasury Redemption Bureau by sending them to Washington and have them redeemed.

Many banks move along without any particular regard to Treasury redemption rules. But as long as these rules are the only ones they are supposed to be amenable to they should be uniformly accepted and acted upon. Carelessness on the part of the banks in this regard grows out of the fact that they reason that the Government is to get all the profits from the lost and worn

out circulation, and so they take little interest in the treatment of their worn and mutilated notes.

#### CLEARING-HOUSE MANAGEMENT.

A vast amount of exchange business and complicated clerical work is transacted in a very short time at the daily morning settlements of the Clearing-House. The representatives of the banks—two from each—who do the work in question should be careful, accurate and capable of performing considerable clerical labor. They should give their undivided attention to their business and should not indulge in idle talk or unbusiness-like behavior. The slightest error on the part of one clerk may prolong indefinitely the entire settlement. It is in view of these facts that Clearing-Houses have inserted in their by-laws what may be termed rigid police rules. The following extracts from the by-laws of one of the best-managed Clearing-Houses in the United States will give a good idea of what they are :

1. For disorderly conduct of any Clerk, or other officer, at the Clearing-House, or disregard of the Manager's rules and instructions, for each offence, \$4.00.
2. For any officer failing to attend punctually at hour for making exchanges, \$4.00.
3. Debtor banks, failing to appear to pay their balances before a quarter past 12 o'clock, \$3.00.
4. Any error in the Credit Ticket (that is, the amount brought), \$2.00.
5. Errors in making the Balance Ticket (that is, the amount received) entries, \$2.00.
6. Failing to deliver Check Tickets before half-past 10 o'clock, \$1.00.
7. All other errors, \$2.00.

Any Clerk, or other officer, who shall repeatedly and perseveringly disobey the orders or instructions of the Manager, shall, with the approbation of the Clearing-House Committee, be expelled, and not readmitted without the written consent of the Committee.

Thirty minutes will be allowed for the morning business of settlement, and for each additional fifteen minutes' detention, \$2 will be added to the fine under No. 5.

Below are a few important points from the general rules of the same Clearing-House which vary but little from those of other Clearing-Houses throughout the country :

Errors in the exchanges and claims arising from the returns of checks or other cause are to be adjusted directly between the banks which are parties therein, and not through the Clearing-House.

Whenever checks which are not good are sent through the Clearing-House they shall be returned by the banks receiving the same to the banks from which they were received as soon as it shall be found that said checks are not good ; and in no case shall they be returned after one o'clock.

The Manager shall immediately report to the Clearing-House Committee any apparent irregularity in the dealings of any bank belonging to the Association that comes to his notice, and receive the instructions of the Committee in regard thereto.

The Committee shall have power to remove the Manager or any of the Clerks, whenever, in their opinion, the interests of the Association shall require it.

The hour for making the exchanges at the Clearing-House shall be ten o'clock A. M. each day. At a quarter past twelve o'clock, noon, the debtor banks shall pay to the Manager, at the Clearing-House, the balances due from them respectively either in coin or in such other currency as the laws of the United States shall require, or in such certificates as shall be authorized by the Clearing-House Association, excepting sums less than one thousand dollars, which may be paid in bills of the debtor bank.

At half-past one o'clock P. M. the creditor banks shall receive from the Manager, at the same place, the balances due to them respectively : provided all the balances due from the debtor banks shall then have been paid to him.

Should any bank fail to pay the balance due from it at the proper hour the amount of such balance shall be immediately furnished to the Clearing-House by the several other banks in proportion to their respective balances against the defaulting bank resulting from the exchanges of that day.

The Clerks and Messengers who represent the banks at the Clearing-House should be extremely prompt in presenting themselves at the set time. Punctuality in this regard means about five minutes before time.

Banks should see that no officers are sent for Clearing-House service, particularly in the capacity of Settling Clerks, who have not natural fitness for their work. An incompetent or careless officer among so many men will set back all the work in hand.

In passing to and from the Clearing-House bearing the checks and cash which are a bank's balances (the grists which run through the mill) Messengers should be extremely careful of the valuables which are of necessity entrusted to them to carry through the streets.

#### TELEGRAPHING IN CIPHER.

The use of impromptu ciphers in making telegraphic transfers of money and in the transaction of responsible wire work has been already explained, but there is a dangerous feature lurking in codes of this type to which particular attention should be drawn. Take, for instance, the identifying cipher extemporized by using the reference to previous correspondence—the “smallest item in last letter” idea. It will be seen at once that a cipher of this character is within the reach of almost any officer of the bank. Any subordinate can, in fact, get up at any time one of these cipher messages. He has only to take the key from the letter copy-book, which is open to the inspection of all the clerks, and with it, if it suits his purpose, can easily commit his bank to almost anything he pleases. For instance, a defaulting officer may send to the bank's correspondent at any point the following message: “Please pay John Jones one hundred thousand dollars and charge same to our account. Smallest item in ours of yesterday, Philadelphia, ten dollars. Signed, R. Smith, Cashier,” and if such a despatch was obeyed, as it might be, some confederate of the defaulter could take the money and a trusting bank be to that extent the loser.

The point treated of is only one more illustration of the dangers environing the use of the telegraph in business relating to responsible action. Banks cannot be too careful in the matter in question. Those institutions which are very careful about locking up their code-books, and never allow them to be opened to but few eyes, have been known to fall into the habit of using ready-made ciphers which were at the command of every man or boy in their bank.

#### WASHINGTON NATIONAL BANK AGENTS.

Our National banks would do well to bear in mind that their responsible and approved agents at Washington, appointed under Sections 5166 and 5184 of the Revised Statutes of the United States to witness the destruction of circulating notes and make an annual examination of their bonds, hold themselves in readiness to furnish early Washington information regarding any matters of special interest to the banks. These agents are as a class gentlemen of wide experience and large intelligence in banking matters, and their facilities for investigating points in banking which have a Washington bearing are quite extensive. They all undertake to furnish information to their patrons on bank matters without charge. Their regular schedule of fees for witnessing the destruction of bills and examining bonds is as follows: Banks with a capital of \$100,000 or less, \$5 per year; banks with a capital from \$100,000 to \$200,000, \$10 per year; banks with a capital from \$200,000 to \$400,000, \$15 per year; banks with a capital from \$400,000 to \$500,000, \$20 per year; banks with a capital over \$500,000, \$25 per year.

#### LONDON PASS-BOOKS.

A description has already been given in these articles of the London system of banking and book-keeping, and instances have been pointed out in which London banking methods might be copied in this country with advantage. Below will be found a *fac simile* of a London bank pass-book (furnished to the author by a London bank officer), that is an exact reproduction of the original, and presents some curious and instructive features. The writer became so much interested in studying English novelties in practical banking as to make a resolution, if he ever visited Europe again, to look particularly into this department of business as conducted in different countries with a view of comparing their systems of practical banking with those in vogue in this country:

Most banks have perforating machines, with which they stamp the cheques with the date on which they are paid & also the credit to the.

This London book needs a few explanations. The custom is to balance such pass-books only once a quarter. It will be seen that in it are recorded the names of the payees of the checks charged, and they are entered in the order of the dates of their payments—both very good ideas. Another novelty in this book, and also one which can be recommended, is its method of entering discounts. Under date of January 30th is an entry which means to state a credit of a promissory note, due March 5th, of £300, which had been discounted for this depositor. Under the same date the depositor is charged with the discount on this note, amounting to £3 15s. On May 3d the dealer is charged with a £300 promissory note of his own which matured, and upon which he made a partial payment only of £200, which is credited him under the same date. This pass-book is occasionally an overdrawn one, and on it there are charges for interest on overdrafts. See June 30th, charge on account of 17s. 6d.

The book is closed by a transfer of the balance to the bank's branch at Bayswater.

The pages of the book shown herewith are reduced about one-half from the original size. Each Form represents two facing pages.

#### DRAFTS WITH BILLS OF LADING ATTACHED.

In collecting documentary paper great care has to be taken in two points. A bank receiving for collection paper with a bill of lading attached, where instructions come with such paper to deliver the bill of lading only on payment of the draft, must be exceedingly careful in taking checks for such payments. In the next place the bank should bear in mind that in handling a bill of lading it becomes for a time the custodian, as it were, of merchandise, and that this merchandise may be of a perishable character. In several cases banks have lost heavily by negligence in presenting for acceptance or payment drafts of the character in question.

#### THE SUFFOLK BANK SYSTEM AND EXPRESS BUSINESS.

When the Suffolk Bank began redeeming and sending home bills of the banks of New England there were no express organizations, and the money packages which had to pass to and fro between the bank and its corresponding country banks went by the hands of private messengers, stage-drivers, etc.

The stage-drivers who were connected with this bank business have nearly all expired. Once in a while some old whip turns up to relate his perilous adventures by road and inns with those old-time bundles of money and bags of coin which came from or traveled towards the Suffolk Bank of Boston. Niles, of the New Hampshire stage lines, may be named as a living typical representative of the coach drivers alluded to.

And those special messengers which the Suffolk employed in the beginning of its work have all passed away with the single exception of the venerable Morse, of Sherburne. Morse was succeeded early by a man known among the country banks as "Old Wyman of the Suffolk." His messages to the country banks were often of an ungracious character, and they seldom welcomed his advent among them with his stacks of their bills and his demands for specie.

When, in his advanced life, Mr. William Wyman gave up traveling for the Suffolk, he retired to a coal business at East Cambridge to which he had been helped by Suffolk friends, and in which he remained until his death.

Without doubt the development and rapid early growth of the express business of New England was largely due to the carrying demands created by the Suffolk system.

At the counters of this bank in the days of its redemption activity might every morning be seen, signing receipts for stacks of packages of country bank bills, those well-known pioneers of the New England express business, Alvan Adams, Col. A. D. Hatch, B. P. Cheney, Fiske of the Vermont lines and a host of others of the same profession, most of whom have passed away.

Mention has been made of Col. A. D. Hatch, still full of activity, who can justly claim to rank as the oldest living express messenger in New England, and who has taken from and delivered to the Suffolk Bank about as many packages of money as any express agent.

# BANKING LAW.

## \* Legal Decisions Affecting Bankers.

### THE PACIFIC NATIONAL BANK CASES.

#### STOCKHOLDERS HELD PERSONALLY LIABLE FOR AN ASSESSMENT ON INCREASED CAPITAL.

The decision of the Supreme Court of the United States in the important series of cases known as the Pacific National Bank cases, holding that, all the requirements of the statute as to the increase of the bank's capital having been complied with, the increase was valid and that the stockholders are liable for the assessment on the increased capital, is given below. The cases are ten in number, but the opinion, which was written by Mr. Justice Matthews, has especial reference to cases Nos. 789 and 820, of John P. Delano, one of the stockholders. The decision in these two cases control the following cases, viz., Nos. 821 to 824, Harvey Mills, the Taunton Savings Bank, the Charlestown Five Cent Savings Bank, and Charles E. Morrison, plaintiffs in error, against Peter Butler, Receiver; Nos. 790 to 793, the same parties; and No. 1,065, Caroline J. Whitney *et al.*, Executors, plaintiffs in error, *vs.* Peter Butler, Receiver. In this latter case the testator of the plaintiffs in error at the time of his death held one hundred shares of the stock of the bank. Before the suspension of the bank the stock had been sold, but, owing to the neglect or oversight of the bank officials, it had not been formally transferred on the bank's books. The Court holds in this particular case that the responsibility of the plaintiffs in error ceased upon the surrender of the certificates to the bank and the delivery to the President of a power of attorney, and that they are not liable for any assessment upon such stock.

The decision in these two cases of Delano is also decisive of some three or four hundred suits against stockholders in the Courts below. The facts with reference to all these cases are briefly as follows:

The Pacific National Bank was organized in Boston on October 10, 1877, having a capital of \$250,000 paid in and the privilege of increasing its capital to \$1,000,000. On November 8, 1879, the bank voluntarily increased its capital to \$500,000. On September 13, 1881, the Directors again voted to increase the capital stock to \$1,000,000, and holders of the old stock were given the right of taking one share of the new stock at par for every share of the old stock held. At this time the bank in reality was insolvent, but the fact was unknown to the stockholders who subscribed \$461,300 of the \$500,000 additional capital, leaving the amount of \$38,700 unsubscribed. Thereafter, on November 18, 1881, the bank suspended, and the stockholders who had not then subscribed to the increase refused to do so. On December 13, 1881, in view of this shortage, the Directors voted to reduce the proposed increase in the capital stock from the nominal amount of \$500,000 to the sum actually paid in, viz., \$461,300. The Comptroller of the Currency assented to this reduction and the capital of the bank thus became \$461,300. Immediately thereafter, the bank becoming again involved, on January 10, 1882, it voted to pay another assessment of 100 per cent. in order to enable it to continue business and prevent its being wound up by a Receiver. On this

\*All the latest Decisions affecting Bankers will be found in this Department as early as obtainable. The Editor of the Law Department of RHODES' JOURNAL will furnish, on application of subscribers, further information regarding any case referred to herein; he will also answer questions in banking law which may be of sufficient general interest as to warrant publication in this Department. A reasonable charge is made for Special Replies asked for by correspondents and not authorized for publication.

assessment the stockholders paid in \$742,800 out of the \$961,300, and the bank was thus enabled to resume business on March 18, 1882. On May 20, 1882, however, the bank failed. Thereafter, on November 27, 1882, the Comptroller of the Currency levied an assessment of 100 per cent. on the stockholders of the bank, amounting to \$961,300, and this being resisted, a large number of suits were instituted by the Receiver to enforce their liability.

The present cases were brought by the Receiver against John P. Delano to enforce his liability as a holder of sixty shares of stock, being an assessment of 100 per cent., including thirty shares of so-called "new stock" created by an increase in the bank's capital made by resolution of its Directors in the autumn of 1881. Delano admits the ownership of thirty shares, but contests his liability upon the other thirty shares which comprise a part of the new or increased stock.

The questions arising upon the records in these cases may be reduced to three. Delano, the plaintiff in error in the action at law, contends:

*First*—That he was not at the time of the appointment of the Receiver, nor at any time, the holder of sixty shares of the stock of the bank, but was in fact and in law a holder of only thirty shares thereof. He contends that the attempt on the part of the Directors and the Comptroller of the Currency in December, 1881, to fix the capital stock of the bank at \$961,300 was contrary to law, and void; that the alleged thirty shares of new stock on which he is sued never had any legal existence; and that he, by virtue of his subscription in September, 1881, for thirty shares in the then proposed increase of capital from \$500,000 to \$1,000,000, and by his other acts, never became liable on account of the debts of the Pacific National Bank beyond his liability as the holder of thirty shares of valid stock.

*Second*—That by his contribution in January, 1882, of an amount equal to the par value of all the stock ever held by him toward the fund which was used in the payment of the debts of the bank, the bank then being insolvent, he in law discharged his liability as a stockholder in said bank and should therefore have judgment in his favor.

*Third*—As appellant in the suit in equity, Delano alleges as ground for reversing the decree dismissing his bill that the contribution made by him on January 23, 1882, of an amount equal in par value to the stock held by him toward a fund which was actually used in the payment of the debts of the bank, the bank then being insolvent, constituted in equity a satisfaction and extinguishment of his liability as a stockholder for the debts of the bank.

Upon the questions thus raised this Court holds:

*First*—As to the validity of the increase of the capital stock, that all the requisitions of the statute were complied with. The circumstance that the original proposal was for an increase of \$500,000, which was subsequently reduced to the amount actually paid in, does not affect the question, for the amount of the increase within the maximum was always subject to the discretionary power of the association itself, exerted in accordance with its articles of association, subject to the approval of the Comptroller of the Currency. In pursuance of law notice was given by the Comptroller to the stockholders of the bank at their regular annual meeting that they must either assess themselves and pay in the whole amount of the 100 per cent. upon their capital stock, fixed at the sum of \$961,300, or in the alternative go into liquidation. In pursuance of this notice, in full view of the facts and with a presumed knowledge of the law, the stockholders, by a vote that was almost unanimous, assented to the first branch of the alternative, and as a condition for being permitted to resume business voluntarily voted the required assessment. The plaintiff in error, it is true, was not present at this meeting, but he had notice of its proceedings, and in pursuance of its vote paid the full amount of the assessment imposed upon him as the holder of sixty shares of the capital stock of the company. In the opinion of this Court it is not open to him now to say that he made his payment in ignorance of the facts or in ignorance of the legal right which he now seeks to assert to avoid the obligation. His payment was voluntary; it was made with knowledge of the facts, or with the opportunity and means of knowledge; and the payment made by himself in conjunction with his co-stockholders was made upon a distinct consideration, whereby the

bank in which he was interested was enabled to undertake anew its regular and active business. Such a course of action on his part must be construed to constitute a complete acquiescence in and ratification of the previous action of the association and the Comptroller of the Currency in reference to the increase of the capital stock, and he cannot now be permitted to deny that he thereby became, and has continued to be, an owner of sixty shares of the capital stock of the bank fixed at the increased sum.

*Second.*—The second ground for defence to the action at law is equally untenable. The assessment imposed upon the stockholders by their own vote for the purpose of restoring their lost capital as a consideration for the privilege of continuing business, and to avoid liquidation under Section 5,205 of the Revised Statutes, is not the assessment contemplated by Section 5,151, by which the shareholders of every National banking association may be compelled to discharge their individual responsibility for the contracts, debts and engagements of the association. The obligations of the shareholders under the two sections are entirely diverse, and payments made under Section 5,205 cannot be applied to the satisfaction of the individual responsibility secured by Section 5,151.

*Third.*—Whatever hardship there may be in the circumstance of the case, this Court is unable to discover any ground of equitable relief. If the assessment was applied by the officers of the bank to the satisfaction of its debts there is nothing to show that it was done ratably as required by Section 5,151. The assessment was not paid by the stockholders for the purpose of effecting a liquidation of the affairs of the bank, but was understood to be the price paid for the privilege of continuing its business in the hope of saving their investment. If it was paid under a mistaken supposition that in the event of future failure nothing more could be required of them, there is nothing to show that the shareholders were led into the mistake by any misrepresentations either of fact or of law on the part of the creditors for whose benefit the Receiver is now acting. The mistake, if any, is one for which each shareholder is alone responsible.

The defences at law and the alleged ground of relief in equity are alike untenable, and the judgment and decree of the Circuit Court must be affirmed.

Opinion by Justice Matthews.

John P. Delano, appellant and plaintiff in error, vs. Peter Butler, Receiver,  
United States Supreme Court, November 1, 1886.

#### LOAN BY SAVINGS BANK ON NOTES—POWER—CONSIDERATION—RECOVERY.

Plaintiff was a savings bank organized under Chapter 324 of the Laws of 1851, by which it was empowered to receive on deposit money and invest the same in securities or stocks of the State of New York or of the United States, or in the stock or bonds of any city authorized to be issued by the Legislature, or in such other manner as was authorized by the Act. The Act further provided that by the consent of all the Trustees amounts not exceeding \$3,000 might be loaned to any individual on unencumbered, productive real estate, and also made it the duty of the Trustees to invest as soon as practicable in public stocks or securities, or in bonds and mortgages, all sums received beyond an available fund to make current payments. In 1871 it made a loan of \$3,000 upon a note signed by twenty-one persons, and \$2,000 upon a note signed by thirteen persons. These loans were made for the benefit of St. Joseph's Church, at Rome, N. Y., but upon the credit of the makers of the notes, to one of whom the money was delivered. On the 1st of July, 1874, the bank still held those notes, upon which there remained due \$3,500; and to pay that sum and to take up these notes it took the note in suit for \$3,500, which, not having been paid, action was brought thereon. Defendants claimed that by the statute under which the plaintiff was organized it had no power to loan its money on the notes in question, and therefore it could not recover.

*Held,* Even if it be assumed that the bank had no right to loan its money upon the two notes which it first took, and that those notes, as securities to it, were wholly void, yet it could recover against the makers of the notes the

amount of the money loaned. The money was not loaned to the church and it did not become liable therefor. As between the bank and the makers of the notes, they were the borrowers and became liable to the bank for the money obtained from it, and it matters not whether they appropriated the money to their own use or for the benefit of the church. The illegal action of the officers of the bank (if it was illegal) in thus investing its funds did not work a forfeiture of the money loaned, and it had a cause of action for the money even if the notes were void. (77 N. Y., 64; 79 N. Y., 437.) Therefore, on the 1st of July, 1874, having a valid cause of action against the makers of those notes for the money obtained thereby, the bank took the note in suit in satisfaction of that cause of action, and surrendered up those notes which were the evidence thereof.

It cannot be said that this note, made, at least in part, by strangers to the prior notes, was taken by the bank simply in exchange for the piece of worthless paper which it before held. It was manifestly taken not as collateral security for, but in satisfaction of, the prior debt, and operated as such. Thus the note in suit is founded upon a good consideration, and is in no sense illegal or unlawful. The bank could have sued the makers of the first two notes and obtained judgment against them for the money loaned, and in satisfaction of such judgment it could have taken any property or thing of value or any security which it could have obtained without violating any law. So, without suit, it could take in payment of its debt any property or any security which it could obtain, and was not confined to the securities mentioned in the Act under which it was incorporated; and this it could do without transcending its powers or violating the prohibition of any statute. Therefore, upon this ground, there was no error in the Court below in holding that the note sued upon was a valid, lawful security and enforceable against the makers thereof.

Further *Held*, That this conclusion is reached the more readily as it is manifestly just that the bank should recover the money loaned. The statute meant for its protection should not be so applied as to work it mischief, unless the law and the facts absolutely require it.

Judgment for plaintiff affirmed.

Rome Savings Bank vs. Krug, New York Court of Appeals, April 30, 1886.

---

**DRAFT DRAWN AGAINST GOODS RECEIVED BY ACCEPTORS—ACTION AGAINST THEM.**

This action was brought to recover upon a draft drawn on the defendants and accepted by them, and also for an amount due upon an account stated. The draft, which was at seven days' sight, was presented to the defendants and accepted by them, payable at a future day; but the person who presented it as the representative of the bank through which it was to be presented declined to accept the acceptance in the manner made, and said it must be returned to England. The draft, however, was not returned to England, but was again presented according to the written acceptance which was made upon it, and was dishonored, the defendants having made no preparation for its payment, on the supposition, as they alleged, that it was not to be presented at the time indicated and was to be returned to England as a dishonored draft. The evidence disclosed that the plaintiffs were the purchasing agents of the defendants in Liverpool, and that the draft spoken of was drawn against purchases, made for the defendants, of merchandise, which was delivered to and received by them. There was no denial of their indebtedness for the amount of the draft; but the technical defense was sought to be successfully employed that the draft, not having been presented in accordance with the acceptance in all respects, the plaintiffs could not recover upon it. This view was not adopted in the Court below for the reason that it was given for goods purchased for and delivered to the defendants, and the plaintiffs could therefore recover under the proofs, using the draft as evidence of the transaction to which it related. The Court, in its charge to the jury, said, substantially, that it was purely a question of fact whether the bill of exchange or draft should be the groundwork of the action or not, holding that it was properly the groundwork, and that the defendants were liable

whether in the form of an action for the goods themselves or upon the bill of exchange. On appeal,

*Held*, This view was the correct one, because not only the draft but the consideration of the draft was established by the facts; and the technical objection, that the action was upon the draft and not for the goods sold, in terms, might, under the provisions of the Code, be disregarded.

Judgment for plaintiffs.

*Jones vs. Sparks*, New York Supreme Court, General Term, First Department.  
Filed June 1, 1886.

**OBTAINING ACCEPTANCE AND PAYMENT OF BILL OF EXCHANGE AFTER BANKRUPTCY OF DRAWERS—NOT AN ILLEGAL PREFERENCE.**

*Baxter & Co.*, bankrupts, before insolvency or contemplation thereof, delivered their bill of exchange drawn on *Jones Bros.*, payable at a future day to *Dennistoun, Cross & Co.*, creditors. Subsequently *Baxter & Co.* became insolvent, and *Dennistoun, Cross & Co.*, with knowledge of the fact, presented the bill to *Jones Bros.* for their acceptance and procured their acceptance, *Jones Bros.* at the time being ignorant of the insolvency of *Baxter & Co.* *Jones Bros.* were consignees of *Baxter & Co.*, and upon acceptance of the bill obtained an equitable lien for its amount upon property of *Baxter & Co.* in their hands. In due course, but after *Baxter & Co.* were notoriously insolvent, *Jones Bros.* paid the bill to *Dennistoun, Cross & Co.* After *Baxter & Co.* were adjudicated bankrupts, *Dennistoun, Cross & Co.*, being creditors upon other demands, proved their claim upon these demands, and the assignee in bankruptcy moved to expunge upon the ground that they had received an illegal preference by the payment of the bill of exchange.

*Held*, The element of intent on the part of the bankrupts to give a preference to *Dennistoun, Cross & Co.* is wholly wanting in the transaction of which the assignee complains; and if there was any preference, which is gravely doubted, it was the result of circumstances beyond the control of the bankrupts and which could not have been foreseen by them when they delivered the bill of exchange. Unless *Dennistoun, Cross & Co.* received some part of the bankrupt property they did not obtain a preferential payment. It does not appear that they received anything except the money of *Jones Bros.* in payment of the obligation of *Jones Bros.* While the effect of their obtaining the acceptance of *Jones Bros.* was to put that firm in a position to reimburse themselves for the amount of the bill out of the property of the bankrupts consigned to *Jones Bros.*, *Dennistoun, Cross & Co.* did not get the property or the avails of it. At most it would seem that they only put it in the power of *Jones Bros.* to obtain property of the bankrupts. They did not obtain a preference by obtaining *Jones Bros.*' acceptance of the bill, and it is not obvious how they would have obtained one if they had sued *Jones Bros.* upon the acceptance and collected the amount by process; and, unless this would have been a preference, there was none in receiving payment from *Jones Bros.* without suit. The order of the District Court refusing to expunge the proof of debt of *Dennistoun, Cross & Co.* and allowing the claim to stand was therefore right.

*In re Baxter*, United States Circuit Court, Southern District of New York, 1886.

**PROMISSORY NOTE—AGENT FOR COLLECTION—RIGHT TO PROSECUTE ACTION AFTER RELEASE BY OWNER.**

C, the holder and owner of a promissory note for \$27,000 executed by defendant, entered into an agreement with the plaintiff to place such note in plaintiff's hands "so as to enable him to manage, transfer and dispose of said note," the agreement concluding in these words: "All proceeds, money or property realized from the transaction after payment of expenses shall be equally divided between the parties; but in no event shall said note be sold or disposed of for a sum of money or other property whereby a net sum shall be realized by said C of less than \$250." Plaintiff thereupon sued defendant on said note. Pending the action the defendant, after some negotiation, obtained

from C a release, which, by a supplemental answer, was set up as a bar to this action. The question to be determined was whether the release from C barred plaintiff's right of recovery? The defendant claimed that the plaintiff was a mere agent whose authority was revocable at the pleasure of C, his principal, and that plaintiff had no such right in the matter as would defeat C's control of the property and his release of any claim thereon. Plaintiff claimed that he was the owner of the legal title and also of a one-half interest in the proceeds of the note.

*Held*, If plaintiff is the legal owner of the note the ownership is not evidenced by the agreement hereinbefore referred to. No language of transfer or assignment is found therein. It does not appear therefrom that C was parting with the ownership or vesting the title in the plaintiff. On the contrary it appears that the note is C's note, which is placed in the plaintiff's hands to enable him to manage, transfer or dispose of the same. This is language creating an agency. That it intended to create, and does create, an agency is not negated by the fact that the subject of the agency is a promissory note rather than some other species of personal property. It seems to us that the mere temporary custody which a collector has of a promissory note endorsed in blank does not place him in a position to dispute, as against his employer, the question of ownership. Nor is he in a position to say to the party liable on the note that a release obtained from the real and sole owner is not valid to defeat a recovery by the mere agent who happens to be the custodian of the paper. The mere manual holding of the paper would give no right of action to a thief who might sue upon it. The entire destruction or loss of the paper would not bar a recovery by the real owner. The physical custody of the paper is a false element in the controversy to determine ownership as between a principal and his agent. It may be that it cuts a controlling figure as between the agent and the maker of the note when no question is made of the agent's right to represent and act for the owner. When the agent holds a note indorsed in blank and sues upon it in behalf of his principal it is no defense for the maker to say that the plaintiff in the suit is not the owner; but this rule is not to any extent determinative of the rights of the parties here. The agreement says nothing of the right of the plaintiff to bring any suit upon the note, nor of his right to control such suit when brought. Far less does the agreement divest the principal of the absolute ownership of the obligation represented by the paper. The plaintiff's custody of that paper determines nothing as against C's ownership of it or the efficacy of C's release of any obligation represented by it. If plaintiff has any standing it must result from something else than his mere custody of the paper. He is not the owner of it; he is a mere agent entrusted with its custody. Was he such an agent that his principal had not the right to revoke his authority?

Further *Held* (after a review of the authorities as to the powers of an agent coupled with an interest), That the agreement as to the agency shows no valuable consideration passing from plaintiff to C, and the agency would not, under any rule laid down on the subject, be irrevocable.

It results from these views that the release set up is a good bar to the action. If plaintiff has sustained any loss or damage through the action of his principal he may look to him for damages.

Judgment for defendant.

*Flanagan vs. Brown*, Supreme Court of California, July 28, 1886.

#### NEGOTIABLE PAPER—RIGHTS OF BONA FIDE HOLDER—PRESUMPTION.

The holder of negotiable paper who obtains it in good faith, before its maturity, for value, has a good title. In the absence of rebutting proof the law presumes that he is a *bona fide* holder for a consideration without notice, and it is incumbent on the defendant to establish the contrary by satisfactory proof—thereby overcoming the *prima facie* title of the plaintiff—before the latter need do anything more to establish his case than to adduce the bill or note. To support an action by the indorsee of negotiable paper against the maker in the first instance it is only necessary for the plaintiff to put the paper in evidence. Then, if the defendant proves that the paper was put in

circulation by fraud or undue means his defense will prevail, unless the plaintiff establishes that he acted fairly and paid value. This was decided more than seventy years ago in *Holme vs. Karsper*, 5 Binn., 469, and has continued an accepted rule. In *Phelan vs. Moss*, 67 Pa. State, 59, in an elaborate collation of cases respecting the rights of holders of negotiable paper, resulting in an advance in their favor, the doctrine of *Holme vs. Karsper* was recognized thus: It has been held in several cases, and is undoubted law, that the indorsee, in a suit by him against the maker of a promissory note, cannot be called on to prove consideration until the defendant has shown it was obtained or put into circulation by fraud or undue means. (*Knight vs. Pugh*, 4 Watts & S., 445; *Brown vs. Street*, 6 Watts & S., 221; *Hutchinson vs. Boggs*, 28 Pa. St., 294; *Gray's Adm'r vs. Bank of Kentucky*, 29 Pa. St., 365.) The latest decisions have set strongly in favor of the principle that nothing but clear evidence of knowledge or notice, fraud or *mala fides* can impeach the *prima facie* title of a holder of negotiable paper taken before maturity (*Moorehead vs. Gilmore*, 77 Pa. St., 118). But either with respect to this principle or to the earlier principle, "that if an indorsee takes a note heedlessly, under circumstances which ought to have excited the suspicions of a prudent and careful man, the maker or indorser may be let in to his defense," the rule remains unshaken that, if the defendant proves that the note was obtained or put into circulation by fraud or undue means, the plaintiff will be put to proof that he obtained it before maturity in good faith and for value. A man who has lost or been robbed or defrauded is to be considered in the light of an unfortunate rather than an imprudent man, and therefore has a claim to protection against *mala fide* holders. These are the grounds upon which the rule is placed.

Trunkey, J., in *Lerch Hardware Co. vs. First National Bank of Columbia*, Supreme Court of Pennsylvania, March 23, 1886.

---

PROMISSORY NOTE—SUNDAY CONTRACT—DELIVERY.

The note in suit was signed on Sunday, but it was not intended to be delivered on that day, and was not in fact delivered until Monday.

*Held*, A promissory note becomes a contract at the time of its delivery. This contract, then, was made on Monday, and is not subject to the objection urged that it is a Sunday contract.

Bell vs. Mahin, Supreme Court of Iowa, October 5, 1886.

---

PROMISSORY NOTE—ALTERATION—RATIFICATION.

The note in suit was signed by two makers, payable to T, who, it was understood, would loan money thereon. Subsequently one of the makers, without the knowledge of the other and before delivery, erased the name of the payee and substituted that of B, the present plaintiff, who thereupon loaned money on it, and the note was delivered to him.

*Held*, That the alteration was a material one, and the maker who was not notified was not bound on the note unless he ratified the alteration.

Further *Held*, That after such maker had obtained knowledge of the alteration, he having applied to the plaintiff for an extension of time on the note, and having obtained it, this was such a ratification of the alteration as bound him thereon.

Bell vs. Mahin, Supreme Court of Iowa, October 5, 1886.

---

PROMISSORY NOTE—PAROL EVIDENCE TO CHANGE LIABILITY OF MAKER.

In an action brought by the indorsee of a promissory note, who was a *bona fide* holder, for value, and without notice, against the maker, the latter offered evidence to show that, although the note was given by him to the payee, payable to his order, yet it was understood and agreed that it was not to be of any force against the defendant, but was to be immediately transferred to a third party and destroyed.

*Held*, Inadmissible. This evidence is clearly in contravention of the well-established rule of law that parol evidence of matters which take place before or

at the time of making a written contract cannot be received to nullify or vary the written contract made by the parties. This rule has been applied by this and other Courts to promissory notes. (4 Wis., 862; 7 Wis., 532; 12 Wis., 466; 16 Wis., 563; 23 Wis., 21; 42 Wis., 56; Id., 484; 7 Mass., 518; 1 Cow., 249; 1 Hill, 116; 1 Denio, 400.)

*Davey vs. Kelly*, Supreme Court of Wisconsin, September 21, 1886.

#### PROMISSORY NOTES—USURY—BONA-FIDE PURCHASERS.

An indorsee of a promissory note for value, before maturity, and without notice, takes it free from the defense of usury which might have been set up between the original parties.

*Cheney vs. Janssen*, Supreme Court of Nebraska, September 29, 1886.

#### PROMISSORY NOTES—PAROL EVIDENCE AS TO ADVANCEMENT.

It is competent to show by parol the consideration of a promissory note; and where a note is shown to be without consideration, or is shown to be executed merely as evidence of an advancement by a father to a son, it cannot be enforced. (59 Ind., 556, and cases cited.)

*Buscher vs. Knapp*, Supreme Court of Indiana, September 16, 1886.

#### USURY—LOAN BY EXECUTOR.

Plaintiff sued to enjoin the sale of certain real estate under a deed of trust given to secure a promissory note made by plaintiff, and two other persons as his securities, for \$16,000 with interest. The note was payable to the defendant as executor of the estate of P. The contest grew out of the claim of the plaintiff for a deduction of \$1,000 from the face of the note. The facts as to this \$1,000 were as follows: At the time the note was executed plaintiff was embarrassed, and went to defendant to borrow \$15,000. He offered to pay defendant a bonus of \$1,000 for a loan of that amount of money, or for negotiating a loan. Defendant, who was then the executor of the P estate, and President of a bank, agreed to let him have the money from the P estate on the proposed terms, and thereupon the note and deed of trust were executed, and plaintiff received \$15,000, defendant crediting himself with \$1,000. Subsequently plaintiff demanded this deduction of \$1,000 from the note, and this suit was brought to enjoin the foreclosure of the deed of trust.

*Held*, An agent for loaning money may take a reasonable commission from the borrower, even with the knowledge of the lender, and still the transaction will not be usurious, though the amount of interest reserved to the lender be the full lawful interest. (55 Iowa, 555; 28 Minn., 211.) Had the \$1,000 been paid to some third person, solely for negotiating the loan, and without any participation therein by the P estate, it must follow the transaction could not be declared usurious. *Fellows vs. Longyor*, 91 N. Y., 824, was a suit to foreclose a bond and mortgage. In that case Mrs. Longyor gave the bond and mortgage to Downer, guardian, for \$5,000. He, as guardian, assigned the bond and mortgage to Mrs. Fellows, who prosecuted the foreclosure suit. In that case it appears Mrs. Longyor actually got the \$5,000. The transaction was connected with another, and for both Downer individually received a bonus. It did not appear what, if any, specific part of the bonus was to be allowed for the loan of the \$5,000. It is there said the funds did not in equity belong to Downer, but were the property of the estate of which he was the representative; and the conclusion is reached that he could not be considered the lender of the trust funds within the meaning attached to that term by the statute relating to usury. Here the executor, not as such, but individually, is the owner of the note, and in point of fact only \$15,000 was paid to plaintiff. Whether the note should be held to be tainted with usury in the hands of the P estate, or its assignees, other than defendant, presents a question which we do not determine. Defendant, having become the owner of the note, seeks to foreclose the mortgage; and in the case of

*Fellows vs. Longyor* it was an assignee from the estate who sought to foreclose the mortgage. This difference in the parties is material and opens the way for the application of other rules of law. Defendant, as executor, was a trustee. He had no right to speculate with the trust property or to make gains therefrom individually beyond his allowed compensation, and the law fixed the amount of his compensation. It is against public policy to allow an executor or administrator to make commissions over and above that allowed by law by speculating or loaning the trust funds. Defendant's contract for the bonus was illegal—a contract which a Court would not enforce. (Story's Ag., § 330.) A trustee cannot hold on to money thus illegally made by the use of the trust property or by the use of his position as trustee, and he might be required to account therefor to the beneficiary in the trust. (*Bent vs. Priest*; not yet reported.) It is equally clear that the Courts will not enforce the performance of the illegal contract. (Story Eq., § 298.) If the defendant is not here literally seeking to enforce the verbal bargain by which he received the bonus he is seeking to enforce the contract by the enforcement of which he is enabled to hold on to the bonus and without which he cannot retain it. In short, having accounted to the estate for the note, he must now collect the note to the full amount or lose the bonus. It is but an indirect way of recovering back that which was received by an illegal and prohibited contract. We cannot see that, in contemplation of law, defendant occupies any other or better position than that of suing plaintiff directly for the bonus. In such a suit he would not receive the aid of the Courts. It follows that the deduction of \$1,000 must be made from the face of the note.

*Landis vs. Saxton*, Supreme Court of Missouri, June 21, 1886.

#### USURY—WHAT CONSTITUTES AGREEMENT TO TAKE.

Where the plaintiff declined to enter into any stipulation or accept any obligation whatever from the defendant for the payment of more than the legal rate of interest, but left it entirely to his own option whether he should make him donations or gratuities, and where no agreement or understanding that he should do so was in any manner imposed upon the defendant, and no obligation or agreement was made under which the plaintiff could claim more than the lawful rate of interest,

*Held*, That there was no usury. To make a loan of money usurious there must be, within the very language of the statute, an agreement either express or implied to pay more than the legal rate of interest—such an agreement as might be enforced by the creditor if it were not unlawful under the prohibition of the statute.

*Bill vs. Fish*, New York Supreme Court, General Term, First Department. Filed June 1, 1886.

#### USURY—LOAN BY AGENT—COMMISSIONS.

Plaintiff, who resides in Wisconsin, was in the habit of sending money to one M, a loan broker doing business in St. Paul and Minneapolis, to be loaned out by him and under his direction at 10 per cent. interest. The loans were made in plaintiff's name and for him, but plaintiff paid M nothing for his services. In December, 1884, M made a loan to defendant, taking his note, payable to plaintiff, for \$367.50, and as security for the same a chattel mortgage upon certain furniture and fixtures, handing to defendant \$350 of said sum in cash and retaining for his own personal benefit \$17.50. The Court below found that the said M charged the defendant a commission of \$17.50 for procuring the loan, examining the property on which the security was to be given, drawing papers and the like, which commission it was agreed was to go to, and which did go to, the said M personally and none of it went to plaintiff; nor did the plaintiff know anything about it or how the said M remunerated himself for his expense and time in his business as a loan broker, the plaintiff never at any time receiving over 10 per cent. on his loans.

*Held*, Upon the foregoing state of facts the note and mortgage are not shown to be usurious. The sum of \$17.50 does not appear to have been taken for the loan and forbearance of the \$350, but as a commission for

services performed for the borrower. No part of it went to the plaintiff—the lender of the money—but it was contracted for, charged, and taken by M for his own exclusive use. These facts appear to bring the case within *Acheson vs. Chase*, 28 Minn., 211, and to distinguish it from *Avery vs. Creigh*, Supreme Court of Minn., April Term, 1886.

*Vanderburgh, J.* (concurring), holds: I agree that, upon the facts found, the case may fall within the rule laid down in *Acheson vs. Chase*. At the same time it seems to me that it leaves the door open for a practical evasion of the usury laws in many cases. But it would be better, undoubtedly, that a rule which has been recognized and acted on should be changed by legislation, which would of course relate to future contracts only, than that an attempt should now be made to change it by the Courts.

*Mackey vs. Wrinkler*, Supreme Court of Minn., September 30, 1886.

#### ACTION BY NATIONAL BANK—IN NEW YORK COMPLAINT MUST CONTAIN ALLEGATION AS TO WHETHER IT IS A FOREIGN OR DOMESTIC CORPORATION.

In an action by a National bank doing business in the State of New York the complaint alleged: "First, That at the times hereinafter mentioned the plaintiff was, and now is, a National banking association incorporated and doing business under and by virtue of an Act of Congress, entitled 'An Act to provide a National currency,' etc., but contained no allegation as to whether it was a foreign or domestic corporation. Defendants claimed that the complaint was defective.

*Held*, For some inscrutable reason, section 1775 of the Code requires this allegation in every complaint by or against a corporation. The Court below held that, inasmuch as it was alleged in the complaint that the plaintiff was incorporated under the Act of Congress, it was, from the very nature of its incorporation, a foreign corporation, and that where this was a self-evident fact it added no force to the pleading to allege it was a foreign corporation. The difficulty with this position is, that section 3343, subdivision 18 of the Code, says a "domestic corporation" is a "corporation created by or under the laws of the State, or located in the State and created by or under the laws of the United States." \* \* \* Every other corporation is a foreign corporation." Therefore a National bank is either a foreign or domestic corporation, according to its location, within or without this State; and, as this is not specifically stated, the complaint is defective in that particular, and this defect can be taken advantage of by demurrer.

Judgment reversed with leave to amend complaint.

*First National Bank of Northampton v. Doying*, New York Common Pleas, General Term. Filed June 7, 1886.

#### POWERS OF BANK CASHIERS.

*Continued from page 838, November number of the JOURNAL.*

**XI. Power in Respect to Payments.**—It is within the ordinary power of the Cashier to pay the debts of the bank.

Mr. Justice Story, in delivering the opinion of the Supreme Court of the United States in *Fleckner vs. The United States Bank* (8 Wheat., 338, in 1823), after enumerating the general powers and duties pertaining to the office, says: "It does not seem too much to infer, in the absence of all positive restrictions, that it is his duty as well to apply the negotiable funds as the moneyed capital of the bank to discharge its debts and obligations." The payment of a debt due by the bank, or securing the same by a transfer of the securities of the bank, is an act which belongs to the office of Cashier, and is one which he may rightfully do. The duties of the Cashier do not spring out of his election by the Board of Directors, but out of the nature and functions of his office as defined by the general law. That law defines his duties, unless they are made different by the charter and by-laws of the bank.

Certain things he cannot do without the orders of the Board of Directors, but such acts as pertain generally to his office he may do independent and

irrespective of the Board, and one of these acts is to transfer the effects of the bank to pay a debt (*Carey vs. Giles*, 10 Ga., 26). And where the Cashier transferred a note for this purpose it was held that this was within the general scope of his powers and duties, and it could make no difference whether the transfer was made by the Cashier personally or by one of the clerks by the Cashier's direction. (*Kimball vs. Cleveland*, 4 Mich., 606.) The payment of checks by the Cashier, of course, falls within this general rule, but this is generally done by one of his subordinates. (See, also, as to the general power to pay debts, *Crocket vs. Young*, 1 Sm. & M., 241; *Everett vs. The United States*, 6 Porter, 166.)

But the ordinary duties of a Cashier do not comprehend the making of a contract which involves the payment of money without an express authority from the Directors, unless it be such as relates to the usual and customary transactions of the bank. (6 Pet., 59; 21 How., 364.) Thus it is not in the power of a Cashier, or other officer of a bank, to make a valid promise to pay a check not drawn against funds deposited in the bank simply in consideration that the holder of the check will present it through some other bank and have it pass through the Clearing House. Such a promise is wholly outside of the ordinary duties of a Cashier, and would not bind the bank in the absence of proof of express delegation from the Board of Directors of power to make the contract (*Morse vs. Mass. Nat. Bank*, 1 Holmes, C. C., 209).

Neither is it within the ordinary duties of a Cashier to allow a depositor to overdraw his account. Whether the fact that this was done with the knowledge and tacit approval of the Board of Directors would relieve the Cashier from liability in case of loss is a question not free from doubt. Speaking of the matter of overdrafts, the Supreme Court of Pennsylvania, in *Lancaster Bank vs. Woodward* (18 Pa. St., 362), says that, while the practice of paying overdrafts has prevailed to some extent, and it may be true that Boards of Directors have in some instances sanctioned it, it has no authority in sound usage or in law. In an early case in the Supreme Court of the United States, Mr. Justice Story refused to give an instruction that—if it were the established usage and practice of a bank that the Cashier might in his discretion permit customers to overdraw and have checks and notes charged up without present funds in the bank—the jury might infer the approbation, assent and acquiescence of the Board of Directors to such usage and course of business, holding that the usage thus attempted to be sanctioned was a usage and practice to misapply the funds of the bank; that such a usage and practice was surely a manifest departure from the duty both of the Directors and the Cashier, and could not receive any countenance in a Court of justice; that it could not be supported by any vote of the Directors, however formal; and therefore, whenever done by the Cashier, was at his own peril and upon the responsibility of himself and his sureties (*Minor vs. Mechanics' Bank*, 1 Pet., 46, 1\*28).

Payment of overdrafts by a Cashier appointed to keep money and pay it to the checks of persons entitled to draw is, without some special excuse, a violation of duty (*Bank vs. Colder*, 3 Strob. S. C., 403).

A late case, wherein the question of the sanction of the Directors to the practice of allowing overdrafts by the Cashier as relieving him from liability was discussed, was that of *The Market Street Bank vs. Stumpe* (2 Mo. App., 545; decided in 1876). In that case suit was brought against the Cashier and the sureties on his bond, by reason of the Cashier—who also acted as Teller—having paid out to a depositor on his checks a considerable sum of money over and above his moneys on deposit. It was claimed that the sureties were not liable for the overdraft of the depositor, for the reason that overdrafts were allowed and sanctioned by the Board of Directors. On this point the Court holds: "The fact—and it appears to be a fact—that the Board of Directors, or some of them, knew that from time to time one or another depositor was allowed to overdraw his account, is by no means a justification of the act of the Teller in allowing a man, whom he must have suspected to be in straightened circumstances, to overdraw his account nearly \$7,000. It is held that the Directors of a bank have no power to allow overdrafts, and that the fact that they sanction them does not relieve the Cashier or his sureties.

The rule is a most wholesome one; it is well supported by authority, and so far as we know has not been departed from in this State." (Citing *Minor vs. Mechanics' Bank*, 1 Pet., 46.) The Court further holds that an overdraft is a loan, and the Cashier of a bank has no right to loan the money of the bank at will without the usual precautions and formalities.

### REPLIES TO LAW AND BANKING QUESTIONS.

*Editor Rhodes' Journal of Banking:*

ALBION, N. Y., October 15, 1886.

SIR:—I read with interest what you say in the JOURNAL of cases that are continually occurring in the business of a bank. One that I should like your opinion of, if you deem the case worth publishing, is as follows:

First, in order of time, A gave his note for \$2,500 endorsed by B. Second, B gave his note for \$5,000 endorsed by C. Third, B made a draft on C for \$7,500, which was properly accepted by C. Making in all \$15,000. These papers were renewed from time to time until the bank requested B to give a mortgage on his farm as a collateral security for his liabilities. B gave a mortgage for \$15,000 due in one year. After that time expired the bank foreclosed on the mortgage and sold the property for \$8,800. B has never given any directions as to the application of this money. The bank claims the right to apply it, first, in payment of the note given by A, and, second, to pay the note of B. C objects to this application. A and B are now insolvent, but C is responsible. Are we not right in making the application as we see fit?

Yours,

J. M. CORNELL, President.

*Answer.*—On the facts above stated, the law gives the bank the right to apply the money in the manner designated.

*Editor Rhodes' Journal of Banking:*

FORT SCOTT, KANS., October 15, 1886.

SIR:—Will you have the kindness to give your opinion as to the force of the words "acceptance waived" on the enclosed draft:

First National Bank  No. 32	\$ 104 Accepted Waived Cashier of H. C. Co. Received, and charge same to account of Invoice Aug. 30. P. & C. St. John Kas. J. D. M.	FORT SCOTT, KANSAS. 10/15 1886 Thirty days after date Pay to the order of H. C. Co. Ten \$ DOLLARS. 100
---	--	---

And oblige,

A CONSTANT READER.

*Answer.*—We are of opinion that the words "acceptance waived" on the draft enclosed constitute a waiver by the drawer of notice of non-acceptance to him in case the draft is presented for acceptance before maturity and acceptance refused. This opinion is based on the decision of the Supreme Court of Kansas in *Leggett vs. Weed*, 7 Kans., 273, where, although the point is not directly decided, it is intimated that the words "acceptance waived" on a draft payable at a certain number of days after date constitute a waiver of notice of non-acceptance. In that case a draft was drawn payable sixty days after date and contained the words "acceptance waived." The draft had been presented for acceptance, but had never been accepted by the drawee except by a conditional acceptance, which condition had not been fulfilled. No notice of non-acceptance, or of the conditional acceptance, or of non-payment, was given to the drawer. In a suit brought against such drawer thereon, the Court held that he was not liable, saying: "Notice of non-payment

should have been given to him. No excuse for giving such notice had been shown. He had a right to expect the draft would be paid at maturity.

\* \* \* *If it should be admitted or held that Weed (the drawer) waived notice of non-acceptance, still it must be held that he was entitled to notice of non-payment, and, such notice not having been given him, he was released from all liability.*"

The peculiarity of the endorsement of such a term as "acceptance waived" upon a draft of this kind arises from the fact that on such a draft, viz., one payable a certain number of days after date, no presentment for acceptance is necessary, but only a presentment for payment. The words "acceptance waived" cannot, therefore, be taken to mean the waiver of presentment for acceptance, because no such presentment is obligatory upon the holder, and, consequently, a waiver thereof is not necessary. The holder, however, although not required to present such a draft for acceptance, but only for payment, in order to charge the drawer may so present it at any time before maturity, and, in case acceptance is refused, must at once notify the drawer in order to retain his liability thereon.

There have been several decisions, however, wherein the words "acceptance waived" have been construed as applying to drafts of the same character as the one above referred to; and in order to treat the subject generally and to show the different construction given to this term by various tribunals a brief summary of these decisions will be given.

In *Queen vs. Kinnear*, 2 Moody & Robinson's Nisi Prius Cases, B. 117, where a bill was payable twenty-one days after date *without acceptance*, it was held that the drawer might prescribe the terms upon which the payment was to be made, and the Court said: "He has chosen to prescribe that the drawee is to make the payment without acceptance, the meaning of which I take to be that the holder is not to be put to the trouble of presenting it to the drawee before it becomes due; but still, if he should choose to present it, there is nothing to prevent the drawee from accepting it; actual acceptance, of course, is not necessary to make the instrument a bill of exchange."

In *Denegre vs. Milne*, decided in Louisiana (10 La. Ann., 824), it was held that the words "acceptance waived" written across a bill of exchange payable twelve days after sight does not strip the instrument of the character of a bill of exchange or deprive its signers of the character and rights of the drawers of a bill of exchange. That these rights were merely qualified and to this extent, viz., that the insertion of those words created between the drawers and the payee, and those subsequently taking the bill, an agreement that the drawees should not be required to accept the bill upon its sight. The Court held that without these words it would have been the holder's right to insist upon an acceptance upon presentment, protest the bill if acceptance were refused, and take his immediate recourse against the drawers; with them he had only the right to exhibit the bill for sight in order to fix the date of maturity and was bound to wait till maturity for payment by the drawees, by which time the drawer engaged that it should be paid by the drawees. That upon failure of payment, protest and notice, the liability of the drawers, which was previously conditional, would in general become absolute.

In the case of *Webb vs. Mears*, decided by the Supreme Court of Pennsylvania in 1868 (9 Wright, 222), the draft was payable three months after date and was presented to the drawee, and the words "acceptance waived" in this case were written across its face by him. The draft was then returned to the payee by the drawee with a letter stating that it was returned with "acceptance waived" as he was not yet placed in funds to meet it. In a suit to charge such drawee as acceptor the Court, in rendering its decision, quotes the decisions in the cases of *Queen vs. Kinnear* and *Denegre vs. Milne*, *supra*, and then says, speaking of the words "acceptance waived": "The effect of these words when embodied in the bill is to merge the ordinary proceedings on acceptance into those of payment or non-payment, or, in other words, dispenses with acceptance entirely. In the present case, the bill being payable three months after date, by the law merchant it was not necessary to be presented for acceptance." The Court then sets out the facts in the case, showing that the words "acceptance waived" were placed upon the draft by

the drawee and returned because he had no funds, and continues: "Now, whether the word 'waived' is used in the sense imputed to it in the case from the Louisiana reports, or as put off or put aside for the present, or declined, taken in connection with the letter it is clear that there was no acceptance of the draft, nor was it his intention to accept or induce the payee to believe he did;" and the Court, without determining the meaning of the words in this particular case, renders judgment for the defendant because, in whatever sense they were used, it was clear that there was no acceptance by him.

During the trial of this case a notary public was called as an expert to testify as to the meaning of the words "acceptance waived," and his evidence was as follows: "I am a notary public. 'Acceptance waived' is put upon the draft by the drawer to avoid the protest. The drawer may or may not pay as he pleases." Upon being cross-examined, he said: "I have not seen such a draft before." This testimony was objected to and excluded by the Court on the ground of irrelevancy.

A still later case is that of *Carson vs. Russell*, 26 Texas, 452. In that case the form of the draft was substantially the same as the present one, being payable a certain number of days after date and having written across its face the words "acceptance waived." The Court held that the bill, being payable at a certain period after date, it was not necessary to present it for acceptance. It was the right of the holder to do so, and thus in case of acceptance obtain the additional security of the acceptor, or, in case of refusal, fix the liability of the drawer immediately. If he did not choose to exercise his right of presenting the bill for acceptance he was bound to present it for payment when due. But if upon presentment for acceptance the bill was dishonored by the refusal of the drawee to accept, no presentment or demand for payment was necessary. That by the law merchant, though the holder was not bound to present the bill for acceptance, yet if he did so, upon its dishonor by the refusal of the drawee to accept, he was bound to have recourse to protest and notice to fix the liability of the drawer. That by statute in Texas, however, the drawer of a bill of exchange which was not accepted on presentation for acceptance was immediately liable for the payment thereof without the necessity of protest and notice. (O. & W. Dig., Art. 96.) The Court then states that "such being the consequence of the refusal of the drawee to accept, what was the effect of the waiver of acceptance by the drawer? In *Scott vs. Greer* (10 Penn. R., 103), it was held that the waiver of protest by an indorser puts him in the same situation as if the protest had been made and proved. And in *Day vs. Ridgway* (17 Penn., 303), it was held that waiver of notice of protest puts the indorser in the same situation as if the protest had been made and notice of it duly given to him. On the principle of these decisions, does not the waiver of acceptance by the drawer put him in the same situation as if the bill had been presented to the drawee and not accepted by him? If this was not the intention, why waive acceptance? It was not necessary without the waiver to present the bill for acceptance." And the Court reaches the conclusion that the waiver was intended to place the drawer in the same situation as if the bill had been presented and acceptance refused by the drawees, and thus fix the liability of the drawer immediately.

These decisions show that no universal rule exists as to the force and meaning of the term "acceptance waived." So far as its meaning in the present case is concerned, however, the decision of the Supreme Court of Kansas, first above quoted, warrants the conclusion that, in case the draft was presented for acceptance and acceptance refused, the drawer would still remain liable without the necessity of giving him notice of the non-acceptance thereof.

*Editor Rhodes' Journal of Banking:*

SPRINGFIELD, ILL., November 14, 1886.

SIR:—Will you please answer in your valuable JOURNAL the following questions:

If a National bank loan on a note and take for collateral security another note against another party secured by real estate mortgage, should this loan be reported in a statement to the Comptroller of the Currency as a real estate loan? In case such a loan is made can the bank collect by law from the mortgagor if the original borrower

fails? Or, can the mortgagor claim, notwithstanding the mortgage between the original parties was *bona fide*, that the bank acted *ultra vires* in making the loan? "Morse on Banks and Banking," page 568, refers to *Richards v. Kountze*, 4 Neb., 200, but there is no place in this city where I can see such decision. I would like to have your reasoning on it.

A SUBSCRIBER.

*Answer.*—It is now well settled that a mortgage given to secure a loan from a National bank, executed directly to the bank when the loan is made, is valid unless set aside by proceedings instituted for that purpose by the Government. The bank can enforce payment of the mortgage and the mortgagor cannot set up the claim that the taking of the security was unlawful. (*Union National Bank vs. Matthews*, 98 U. S., 621; *National Bank vs. Whitney*, 103 U. S., 99; *Graham vs. National Bank*, 32 N. J. Eq., 804; *Warner vs. De Witt*, 4 Ill. App., 805; *Thornton vs. Exchange National Bank*, 71 Mo., 221; *Wrote's Assignee vs. Armat*, 31 Grattan, 238.)

We should regard the loan mentioned as a real estate loan.

*Editor Rhodes' Journal of Banking:*

WICHITA, Kans., November 11, 1886.

SIR:—As a question of general interest, I would like to ask, is it competent for a notary public, who is Assistant Cashier and a Director in a bank, to protest paper belonging to the bank?

CASHIER.

*Answer.*—In the absence of any statutory prohibition, such as in Indiana, there is nothing to prevent an officer of a bank, who is also a notary public, from performing the functions of the latter office. In Indiana, Section 5,966 of the Revised Statutes of 1881 provides:

"No person holding any lucrative office or being an officer in any bank, corporation or association possessed of any banking powers, shall be a notary public, and his acceptance of any such office shall vacate his appointment as notary."

Neither the National Bank Act, nor any statute in Kansas, contains any such prohibition.

*Editor Rhodes' Journal of Banking:*

SALEM, Mass., October 27, 1886.

SIR:—Will you kindly answer the following questions in your next issue:

1. Is it proper for a person having a note payable to his order, and sending it by mail for discount, to endorse it thus, "Pay to the order of John Robinson, Cashier," signing his own name as endorser?
2. Are silver certificates of all issues and denominations a legal-tender?
3. Suppose a Massachusetts bank desires to abandon the National system, how can it do so? Is there any banking law in this State or any way in which it can continue the banking business?
4. What is the law regarding the liability of several endorsers on a note?
5. What advantage is gained by a bank having notes made by a firm endorsed by the individual members of the firm?

DISCOUNT CLERK.

*Answer.*—1. It has been held that the indorsement of a note to A. B., Cashier, is sufficient to vest the title thereto in the bank of which he is Cashier.

2. Silver certificates are not a legal-tender. They must be received, however, by National banks for all debts due.

3. The National Bank Act (Sec. 5,220 *et seq.*) provides for the dissolution of National banks. It is provided by Section 5,220 that any association may go into liquidation and be closed by the vote of its shareholders owning two-thirds of its stock. The following section provides for the giving of notice to the public and to the Comptroller of the Currency that the affairs of the bank are being closed up, and also makes provision for the notification of the holders of its notes and other creditors to present the notes and other claims against the association for payment. The Act also provides that within six months from the date of the vote to go into liquidation the association shall deposit with the Treasurer of the United States lawful money of the United States sufficient to redeem all its outstanding circulation, and when it has deposited sufficient money for that purpose its bonds shall be reassigned to it, and thereafter the association and its shareholders shall stand discharged from all liability upon the notes and the notes shall be redeemed at the Treasury of

the United States. Banks may also go into liquidation under the Act of July 12, 1882. There is no statute of Massachusetts which provides for the continuance of a National Bank as a State bank after it has been dissolved and gone out of the National system. Chapter 118 of the Public Statutes of Massachusetts of 1882 provides for the organization of banks under the laws of the Commonwealth. Under this Act ten or more persons may form a corporation for the purpose of carrying on the business of banking on the terms and conditions prescribed in the Act.

4. The liability of the indorser of a bill or note is regulated by the law of the place where the indorsement is made. If several persons indorse a note they are not joint sureties to the holder, but each one is severally liable to him. By statutes in some of the States, however, the maker must be first sued and his property subjected to the payment of the note before the indorsers can be looked to. The indorsers are liable to one another in the order of their respective indorsements, so that any later indorser may recover of any prior indorser whatever he may have paid on the note to the holder.

5. By obtaining the indorsement of the individual members of the firm the bank secures their individual liability as well as the liability of the firm. That is, should the note be signed by the firm, but not indorsed by the individual members, and should the firm become bankrupt, the bank might be postponed in its claim upon the individual estates of the partners until the individual creditors were first satisfied, the rule in equity being that the partnership assets go to the partnership creditors and the assets of each partner to his own creditors, only the balance of each fund after the special claims upon it are discharged being applicable to the other class.

*Editor Rhodes' Journal of Banking:*

TROY, N. Y., October 23, 1886.

SIR:—Will you please give me through your valued magazine your opinion on the following question: Would a check on a bank drawn by a person or firm just previous to a general assignment for the benefit of creditors, before the bank had notice that such a check had been drawn, but after it (the bank) had notice of the general assignment, operate as an equitable assignment of the funds in the bank to the credit of the drawers of such check at the time said bank had notice of said assignment? Would not a bank be obliged to pay such a check when presented even if it has paid over all the funds to the assignee on a check made by said assignee and dated subsequent to the check first referred to? By giving this question your attention you will greatly oblige,

Yours respectfully, GEO. H. MORRISON, Cashier.

*Answer.*—The law as to whether a check before presentment operates as an equitable assignment of the funds in the drawee's hands is at variance in different States. We presume our correspondent inquires as to the law in his own State. The New York rule is that a check does not operate as an equitable assignment of the fund in bank before presentment. *Lunt vs. The Bank of North America*, 69 Barb., 223, was a case wherein the facts were similar to those stated in the inquiry. One Conrad, doing business in Chicago and keeping an account at the Importers & Traders' Bank in New York, made a general assignment to the plaintiff for the benefit of creditors on September 30, 1864. At this time he had on deposit with the Importers & Traders' Bank \$37,432.75. Notice of the assignment was immediately given by the plaintiffs, by telegram and letter, to the bank. Thereafter, in October, 1864, certain creditors of Conrad attached these moneys, and the plaintiffs, as assignees, brought this action against the holders of the funds, the attaching creditors and the sheriff. Previous to the assignment Conrad had drawn two checks, one for \$20,000 and the other for \$25,000, on the Importers & Traders' Bank in favor of the Second National Bank, of Chicago, which had been transferred to the defendant, the Bank of North America. The lower Court allowed that bank to prove these checks in evidence, and held that, as they were negotiated at Chicago prior to the assignment to the plaintiff, they constituted an equitable assignment of the fund in the hands of the Importers & Traders' Bank, and therefore ordered judgment in favor of the Bank of North America for the whole fund. On appeal, this judgment was reversed, and the Court held: "Such checks have long been held, both by elementary

writers and judicial decisions in this State, to be of the same legal effect as inland bills of exchange. There is no liability of the party upon whom such an instrument is drawn until after it is accepted. Such check is always revocable by the drawer until payment or acceptance;" and the Court gives judgment for the plaintiffs against the Bank of North America for the return of the fund.

In *Attorney-General vs. Continental Life Ins. Co.*, 71 N. Y., 331, Church, J., holds that checks drawn in the ordinary form, not describing any particular fund, or using any words of transfer of the whole or any part of any amount standing to the credit of the drawer, but containing only the usual request, are of the same legal effect as an inland bill of exchange, and do not amount to an assignment of the funds of the drawer in the bank, saying: "This I believe to be the settled law of this State, as it has been repeatedly affirmed in this Court." (60 N. Y., 153; 48 Id., 682; 57 Id., 270, 459; 46 Id., 83.)

*Editor Rhodes' Journal of Banking:*

SPARTA, Tenn., November 9, 1886.

SIR:—Here is a case on which I would be glad to have your opinion:

We loaned about \$500 to a party, the borrower giving three endorsers upon the back of the note. Notice was given a few days before the note matured, and drawer had notified us with endorsers that the note would have to be protested, as they were unable to pay. The endorsers had told us that they wanted it protested. On November 6th, the last day of grace, at 1 o'clock the note was protested for non-payment and the parties to the note received notices at this office on the same day at about 2 o'clock. The endorsers now claim that the note should not have been protested until the bank closed its doors, and that they want to be released from its endorsement only as a *point of law* and not that they have been *damaged* by its being protested then. No payment was offered at the bank during the entire day or any inquiry made about the paper. Your reply will greatly oblige us.

Yours,

J. N. WALLING, *Cashier*.

*Answer*.—It was at one time seriously questioned whether notice of dishonor could be given on the same day of the demand and refusal of payment of a bill or note, for the reason that the maker or acceptor was entitled to the entire day of maturity in which to make payment, and that until that time expired it could not be regarded as dishonored. At the present time, however, the great current of decisions, as well as all the text writers, hold the rule to be that the holder is not obliged to wait till the end of the day of maturity before protesting and giving notice of the dishonor of a bill or note, but that after demand and refusal of payment on the day the note falls due notice may be given immediately. The following authorities may be consulted as sustaining this rule:

*Bainbridge vs. Manners*, 3 Campb., 193.

*Youngs vs. Lee*, 2 Kern., 551.

*Cook vs. Litchfield*, 5 Sandf., 330.

*Corf vs. McComb*, 1 John. Cas., 398.

*Lindenberger et al. vs. Beall*, 6 Wheat., 104.

*Bussard vs. Levering*, 6 Wheat., 102.

*King vs. Crowell*, 61 Me., 244.

*Coleman vs. Carpenter*, 9 Pa. St., 178.

19 Ves., Ch. 216; 27 Vt., 127; 8 Port. (Ala.), 360; 4 B. Mon., 599; 10 N. H., 526; 1 Metcalf (Mass.), 43.

As early as 1821, the Supreme Court of the United States, in the case of *Lindenberger vs. Beall*, 6 Wheat., 104, said:

"The Court are unanimously of the opinion that, after demand of the maker on the third day of grace, notice to the indorser on the same day was sufficient by the general law merchant."

And, to bring the rule nearer home, the Supreme Court of Tennessee, in *Garland vs. Allen* (decided in 1878), 9 Baxter, 315, in a suit against an indorser who interposed, among others, the defense that a notice to him on the third day of grace was premature, say:

"It is settled that a demand made during the business hours of the day of maturity is sufficient. It is not necessary to wait until the last moment of the last day.

Although by the contract the maker has the whole of that day in which to pay, yet by the law merchant, or the custom which constitutes the law in this regard, it is a part of the implied contract of the indorser that his liability shall be fixed by a demand made on the day of maturity and notice of non-payment."

This is the general rule. In this case the bank owned the note, which was payable at its own banking house. The rule in such cases as to presentment is that where the note belongs to the bank no formal demand is necessary, but it is sufficient if the note is in the hands of an officer of the bank on the day it falls due and no one calls to make payment thereof. Now, the question arises, where, as in this case, no actual demand is necessary, but only a passive holding of the note, can it be considered as demanded and dishonored at any time during banking hours, or only at the close thereof, so as to permit of protest and notice to the indorsers?

The Supreme Court of the United States, in the case of *Bank of the United States vs. Corneal*, 2 Peters, 548 (decided in 1829), in speaking of this subject, say:

"When a note is payable at a bank it is the duty of the payee to be at the bank within the usual hours of business to pay the same, and if he omits so to do, and a demand is then made of payment by the holder within those hours, and it is refused or neglected to be made, the holder is entitled to maintain his action for such dishonor. But when the bank is itself the holder of the note so payable no formal demand is necessary to be made of payment. The maker has the whole period of the usual banking hours to pay it, and if he does not pay it within those hours it is equivalent to a demand and refusal of payment on his part, and the note ought not to be delivered out for protest until after those hours are passed."

This language is quoted with approval in two cases in Tennessee, viz., *State Bank vs. Napier*, 6 Hum., 270, decided in 1845, and *Apperson vs. Union Bank*, 4 Cold., 446, decided in 1867.

Also, in *Ethridge vs. Ladd*, 44 Barb. (N. Y.), 73, the Court say:

"There is a custom at banks which gives to the maker all of bank hours within which to pay, and in order to meet this custom, the note, when payable at a bank, is usually left there, and demand is made at the close of the day."

In view of these cases, it would have been safer for our correspondent to have waited until the close of banking hours before protesting the note and giving the notice. It might be argued, however, that as the maker and indorsers had all previously stated that it would have to be protested, this relieved the bank from the necessity of waiting till the close of banking hours, and justified the notice at 2 P. M.

*Editor Rhodes' Journal of Banking:*

ALTON, Iowa, October 29, 1886.

SIR:—I refused a bill issued by a National bank for \$5 which was minus the President's signature. The bill was all right and had the Cashier's signature on it, but the President had omitted to sign it. Was I right in rejecting it? Please reply in your next issue of the JOURNAL. If taken, what course should I pursue with it?

Yours truly,

M. D. GRUBBS, Cashier.

*Answer.*—In our last issue, at page 889, we stated, in reply to a correspondent, that Section 5,182 of the Revised Statutes provided that such notes should be signed by the President or Vice-President and Cashier, and if not so signed they would be irregular. If taken, we should present it to the issuing bank for payment.

*Editor Rhodes' Journal of Banking:*

FALLS CITY, Neb., November 13, 1886.

SIR:—Will you be kind enough to answer the following question in your JOURNAL:

A borrows from the bank \$500. B, C, D and E sign with him as securities. The Cashier knows they are securities. The note matures. A wishes to renew. He brings in a new note with only B and C as securities. The Cashier, considering the security ample, accepts the new note with A, B and C as securities and delivers up the old note signed by A, B, C, D and E. Are B and C released on account of D and E not signing the note, the Cashier knowing all the time that A is the principal and all the others are sureties? The note is written "We jointly and severally promise to

pay." B and C claim that they are released from all liability because they signed the renewal with the understanding that D and E were also to sign it. The bank had no notice of any such understanding. Yours truly, GEO. W. HOLLAND, *Cashier*.

*Answer.*—We are of opinion that B and C would not be released from liability on the latter note. We do not think the Court would admit parol evidence to show that the apparent contract of B and C, as makers of the note, was not to be obligatory upon them unless it was also signed by D and E, especially in view of the fact that the bank was unaware of any such understanding and parted with the old note on the faith of their obligation upon the new.

*Editor Rhodes' Journal of Banking:* NEW YORK, N. Y., November 18, 1886.

*SIR:*—Is an order on a savings bank in the following form, "Pay to the bearer, A B," etc., a direction to pay to the bearer or to pay to A B? In other words, is the risk of identifying the bearer as the person named in the order cast upon the bank; or, on the other hand, can the bank safely pay to any bearer of the order? Does the language import a representation or warranty that the bearer is A B, or does it only direct the payment to be made to the bearer in case he be A B? F. H., *Treasurer*.

*Answer.*—We should treat the order as though it simply said, "Pay to A B," and do not think the bank could safely pay to any bearer of the order.

#### BRIEF REPLIES TO SUBSCRIBERS.

*CASHIER (Philadelphia, Pa.)*—"Our Messenger presented a draft for acceptance in the usual way. The drawee looked at the draft, wrote his name across the face, and then turned to the Book-keeper and asked how much the drawer had to his credit. Upon receiving the answer, he said, 'I won't accept this draft,' and drew a heavy line through his name. Can we hold him as an acceptor?" *Answer.*—We think not. An acceptance, to be binding, must be a completed act. In this case the act was not complete and would not have been until the accepted draft had been delivered to the Messenger.

*J. C. L. (Cincinnati, O.)*—No, an indorser cannot indorse for part of the amount named in a note or draft. It must be all or none.

*A SUBSCRIBER (Dallas, Texas)*—Drafts on merchants must be presented within reasonable business hours. We think that in New York before eight o'clock would be considered rather "too previous."

*A READER (San Francisco, Cal.)*—Chitty's treatise on bills and notes was first published in 1799. It is a standard authority and is freely quoted in the Courts and by subsequent text-writers.

*G. J. L. (Buffalo, N. Y.)*—Receiving part payment on a note certainly cannot prejudice any of the parties to the instrument, but is rather beneficial to all concerned. If the note is not fully paid at maturity it can be protested for the balance.

*AN INQUIRER (Wilmington, Del.)*—Every National bank is required to deposit with the Comptroller of the United States bonds to an amount equal to one-fourth of its capital stock, but not exceeding fifty thousand dollars. This is to secure a faithful observance of the law, and also for the better protection of the creditors of the bank. The bank may or may not obtain circulating notes on this deposit. Many banks do not avail themselves of the privilege.

*A CASHIER.*—We would not advise you to tender your resignation. Stick to your point and carry it through.

*M. L. M. (Xenia, Ohio)*—Bank book-keeping is not nearly so intricate as mercantile book keeping. The principles of interest, discount, etc., may be learned from any good commercial arithmetic, and larger editions of the text-books on book-keeping usually give very fair sets of bank books.

*A LEGAL FRIEND (Baltimore, Md.)*—We commend to your attention the following remark of Chancellor Kent: "Case after case, and point after point, on all the branches of the law, are constantly arising in the Courts of justice

and discussed as doubtful or new points, merely because those who raise them are not thorough masters of their profession."

N. K. S. (St. Louis, Mo.)—The bank is not bound to inform a depositor what the amount to his credit is; to do so is an act of courtesy merely; to give such information to any one else would be a great impropriety.

L. B. (Denver, Col.)—The powers of the President are legally not much greater than those of any other Director; most of his acts depend upon the sanction of the Board of Directors, either given expressly or else implied from their acquiescence in his acts or from the established course of the bank's business.

CASHIER (Boston, Mass.)—If the over-payment can be proved in Court your shrewd friend would have to return it. The difficulty would be to prove it, as your Teller, it seems, could not swear to the fact positively.

A NEW SUBSCRIBER (Portland, Me.)—The first number of a monthly 4-page paper called *The Safeguard* was issued in 1874, and the JOURNAL succeeded that publication in 1879. We can supply back numbers of the JOURNAL at 50 cents per copy and bound volumes at \$6.25 per volume, post-paid.

TELLER (Carson City, Nev.)—We do not know of any special system by which a Receiving-Teller can settle his cash so as to prove his money independent of Clearing-House checks, etc. We should think that any bank could adjust its books so as to secure that very desirable end.

A BUSINESS MAN (Charleston, S. C.)—No, the bank does not make anything on protests. The fees go partly to the notary and partly to the State.

M. F. J. (Montgomery, Ala.)—It is true that some few National banks are reorganizing under State laws. By far the greater number, however, have given no indication of such an intention. New banks are continually forming under the National Bank Act; for example, near a score were reported in the November JOURNAL. Quite recently a National bank was organized in Philadelphia with a capital of \$1,500,000. The National bank system is scarcely in danger of any very sudden collapse.

X. Y. Z. (Mobile, Ala.)—Your Teller's tray is very conveniently arranged and ought to sell easily, but we cannot honestly say that we think it would pay to patent it.

INQUIRER (Louisville, Ky.)—Though the maker of a note has until three o'clock on the day of maturity to pay it, yet, if it be made payable at a bank, the bank must pay it on demand—provided, of course, that the maker has enough to his credit to meet it.

F. M. L. (Pittsburgh, Pa.)—If the Teller has any doubt as to the sufficiency of the drawer's balance to meet a check he should not pay it before satisfying himself on this point. A Teller should be courteous and gentlemanly in his deportment; nevertheless, he must perform his duty no matter who is offended or whose feelings are hurt.

A CASHIER (Brooklyn, N. Y.)—It is easy to see that your counsel made a blunder—as every man is liable to do. We would suggest to him this scrap of wisdom, "the worst thing that can befall an attorney, next to losing his case, is to lose his temper."

A SUBSCRIBER (Jersey City, N. J.)—Our price for artotype portraits, such as appear as frontispieces to the JOURNAL from time to time, is \$45 per 1,000 copies.

A CLERK (Montgomery, Ala.)—After a careful reading of "Morse on Banks and Banking," we would recommend "Daniel on Negotiable Instruments." It is in two volumes of nearly 1,000 pages each; the price for both volumes, post-paid, is \$12.00.

BOOK-KEEPER (St. Paul, Minn.)—In opening a new ledger you ought to lay it off first on loose sheets of foolscap—writing the names in proper order, assigning the proper number of pages to each name and the extra number at the end of each letter. Then put the ledger folio after each name. When all this is done *correctly* you can head your ledger without danger of mistakes.

## BANKING AND FINANCIAL NEWS:

WITH COMMENTS ON THE MORE IMPORTANT MATTERS. THIS DEPARTMENT ALSO INCLUDES: RAILROAD AND INVESTMENT NEWS, AND A COMPLETE LIST OF NEW BANKS, CHANGES IN OFFICERS, DISSOLUTIONS AND FAILURES.

**A Loophole for Private Bankers.**—A most remarkable omission, according to a dispatch from Jefferson City, Missouri, in the criminal laws of that State has been discovered by the Supreme Court—namely, that a private banker can receive deposits when he knows his bank to be in a failing condition without incurring prosecution. The General Assembly will be asked to remedy the defect.

The discovery of this omission is a very timely reminder of what might be expected were the banking system of the country reconsigned to the care of State Legislatures. With every State setting up a banking system of its own and laws made with a single eye to the advantage of locality, accidental omissions and commissions, as well as other kinds, would be of frequent occurrence. State legislation would make their position safe and comfortable no matter what might occur. It is a fact worthy of mention that the banking fraternity of this country stands very high in the estimation of the people, both for integrity and intelligence. This fact of itself would lead rogues to go into the business if the doors were left open for them to practice dishonesty with comparative immunity. That is what chaotic State laws would do.

**Prepayment of Interest.**—Secretary Manning, on November 10th, issued the following announcement in regard to the prepayment of interest on bonds: "By virtue of the authority conferred by law upon the Secretary of the Treasury, notice is hereby given that the interest due December 1, 1886, on United States coupon bonds of the funded loan of 1891 will be paid without rebate on the presentation of the proper coupons at the Treasury in Washington, D. C., and at the various Sub-Treasuries. The checks for registered interest of that loan will be forwarded to holders as soon as prepared, and may be presented for payment without rebate on or about the 20th inst. Coupons of the 4 per cent. consols of 1907 falling due January 1, 1887, will be paid on presentation before maturity upon a rebate of interest at the rate of 3 per cent per annum. The interest on registered stock of that loan will also be paid on and after December 1, 1886, upon receipt by the Treasurer of the United States of application, accompanied by power of attorney, authorizing that officer to collect the interest for the quarter ending December 31, 1886, and to retain the proportionate amount of rebate, remitting the balance to the applicant."

This notice permits the anticipation of interest to the amount of \$3,000,000 falling due on December 1st and about \$7,000,000 falling due on January 1st. The purpose of the offer is stated to be to show the willingness of the Department to aid the business interests of the country by preventing stringency in money, and also to afford to holders of the 4 and 4½ per cent bonds the same opportunity that holders of 3 per cent bonds have been given under the open call, except as to the payment of the principal.

**Hayti's Prosperity.**—President Salomon, of Hayti, after a term of seven years in office, has been re-elected to another term. In an address reviewing the events of the past seven years he speaks most encouragingly of the financial condition of the country. He says the National credit has been improved, and progress has been made by the payment in full of the French debt created in 1825, by the establishment of a National bank, by rigid economy, by the withdrawal from circulation of two millions of the three millions of paper money, by the maintenance of the National metallic money at par, and by other progressive measures.

Except as to one point Hayti appears to have followed the policy of the United States, and on that point Hayti is to be congratulated. It has withdrawn

two-thirds of its paper money, while the United States has not only kept its paper money in circulation, but, under the decision of the Supreme Court, has the power to issue unlimited quantities of legal-tender paper. Even Hayti is in advance of this country in this particular.

**Canadian Banks.**—The following is a summary of the assets and liabilities of the chartered banks of Canada, made from the reports furnished by them to the Department of Finance on October 31, 1886 (cents omitted):

ASSETS.	LIABILITIES.
Specie.....	Capital authorized.....
Dominion notes.....	Capital subscribed.....
Notes of and checks on other banks.....	Capital paid up.....
Balances due from other banks in Canada.....	Reserve fund.....
Balances due from agencies of the bank or from other banks or agencies in foreign countries.....	Notes in circulation.....
Balances due from agencies of the bank or from other banks or agencies in the United Kingdom.....	Dominion Government deposits payable on demand.....
Dominion Government debentures or stock.....	Dominion Government deposits payable after notice or on fixed day.....
Provincial, British or Foreign or Colonial public securities other than Canadian.....	Deposits held as security for execution of Dominion Government contracts and for insurance companies.....
Loans to the Government of the Dominion.....	Provincial Government deposits, payable on demand.....
Loans to Provincial Government.....	Provincial Government deposits, payable after notice or on a fixed day.....
Loans, discounts or advances on stocks, bonds, etc., other than Canadian, as collateral.....	Other deposits, payable on demand.....
Loans, discounts or advances on current accounts to municipal corporations.....	Other deposits, payable after notice or on a fixed day.....
Loans, discounts, etc., on current accounts to other corporations.....	Loans from or deposits made by other banks in Canada, secured.....
Loans to or deposits made in other banks, secured.....	Loans from or deposits made by other banks in Canada, unsecured.....
Loans to or deposits made in other banks, unsecured.....	Due to other banks in Canada.....
Other current loans, discounts and advances to the public.....	Due to agencies of bank or to other banks or agencies in foreign countries.....
Notes and bills discounted, overdue and not specially secured.....	Due to agencies of bank or to other banks or agencies in United Kingdom.....
Other overdue debts not specially secured.....	Other liabilities.....
Notes and bills discounted, overdue and other overdue debts secured by real estate or securities.....	
Real estate, the property of the bank (other than the bank premises).....	
Mortgages on real estate sold by the bank.....	
Bank premises.....	
Other assets.....	
<b>Total assets.....</b>	<b>Total liabilities.....</b>

Loans to Directors or firms in which they are interested, \$8,730,167. Average amount of specie held during the month, \$6,064,656. Average amount of Dominion notes held during the month, \$10,244,000.

**Pacific National Bank.**—The history of this bank is one in which all stockholders of banking institutions must be interested. No parallel to it is to be found in this country. The bank was organized in Boston on October 10, 1877, with a paid-up capital of \$250,000, which was increased to \$500,000 on November 8, 1879. This was further increased to \$1,000,000 on September 13, 1881, the stockholders being offered the right to subscribe for one new share for each old share. The bank was insolvent then, although the stockholders did not know it, and they subscribed for \$461,300 of the new stock. On November 18, 1881, the bank suspended, and the stockholders who had failed to subscribe refused to do so. The Directors, on December 13, 1881, voted to reduce the nominal capital of \$1,000,000 to \$961,300, and the Comptroller of the Currency assented. Immediately following this came the crash, and the additional \$461,300 was swallowed up. To prevent the appointment of a Receiver the stockholders voted, on January 10, 1882, to pay an assessment of 100 per cent., and \$742,800 out of \$961,300 was paid in. On March 18, 1882, the bank resumed, only to make a final collapse on May 10, 1882. On November 27, 1882, the Comptroller assessed the stockholders 100 per cent. on \$961,300. The stockholders brought suit to prevent the collection of the assessment, and claimed, first, that the new stock of \$461,300 made under the last voluntary increase was invalid because the whole \$500,000 was not paid in, and therefore was not liable to assessment; and, second, that the paying of the voluntary assessment of 100 per cent., by which \$742,800 was raised, fully satisfied the personal liability. The Receiver contended that the increased stock was legal and subject to assessment because it had been approved by the Comptroller, and that the voluntary assessment went to the credit of the bank to enable it to continue business, whereas there was an independent liability to the creditors of 100 per cent. assessment under the National Banking Law.

The suits were tried originally before Judge Colt, in the United States Circuit Court at Boston, and decided adversely to the stockholders. They were carried to the United States Supreme Court, and there the decision was affirmed and judgment rendered in favor of the Receiver upon the points mentioned. The decision makes the stockholders liable to the amount of \$961,300 with interest at 6 per cent. from November 27, 1882. It is expected that about 40 to 50 per cent. of the amount will be collected, though some of the stockholders will be unable to pay anything.

The cost of the original investment in one share of the Pacific National Bank in 1877 may be figured at about \$1,300, as follows:

October 10, 1877, original investment (one share).....	\$100
November 8, 1879, stock doubled (one share).....	100
September 13, 1881, stock doubled again (two shares).....	200
January 10, 1882, voluntary assessment (four shares).....	400
November, 1882, Comptroller's assessment (four shares).....	400
Interest on assessment, 4 years (four shares), about .....	100
	<b>\$1,300</b>

A stockholder who purchased 50 shares in 1877, investing \$5,000, and held them until 1882, finds that his investment has cost him \$65,000. There are several stockholders owning 100 shares of old stock each, and their investment represents a loss of \$130,000. The Charlestown Savings Bank and the Taunton Savings Bank are among the larger holders of the stock. Their assessment with interest amounts in each case to about \$25,000. The total amount of stock held by savings banks is 1,008 shares, upon which must be paid about \$125,000 to the Receiver. A 20 per cent. dividend has been paid to the creditors from the sale of assets, and the assessment of the stockholders will enable the Receiver to pay 25 or 30 per cent. more, making in all about 45 to 50 cents on the dollar.

The legal aspects of this case are fully reviewed under the Law Department in this issue of the JOURNAL.

**Three Per Cent. Bonds.**—A statement prepared at the Treasury Department shows that, at the close of business on November 6th, of the total \$305,581,250 three per cent. bonds issued, \$52,250 were redeemed in 1883, leaving \$305,529,000 subject to call. Of this amount there has been \$238,621,600 called since. In addition, \$2,770,050 of uncalled bonds were surrendered for redemption, leaving only \$64,137,350 remaining subject to call. On the date mentioned there were outstanding \$21,082,950 of called bonds, of which \$11,273,900 had matured but had not been presented for redemption. The money for their redemption has, however, been taken from the Treasury cash,

and that fund has been reduced accordingly. The remainder of the outstanding called bonds were included in the 144th call and matured on December 1st.

**Texas.**—The Gainesville National Bank reports its condition on September 23, 1886, and makes an excellent showing. Its capital is \$150,000, but its surplus has grown to double that amount, being \$250,000 at the date named. So large a capital and surplus were considered in excess of the requirements of the business, so \$50,000 was placed to the credit of the contingent fund and \$50,000 paid in cash to the shareholders. The bank carries a large line of deposits and loans and enjoys public confidence as the result of its careful and good management.

**City Bank Items.**—The reports of the National banks of the principal cities, made on October 7th, show some important changes as compared with a year ago. The following table shows the principal items for the four leading cities:

	NEW YORK.		BOSTON.	
	1886.	1885.	1886.	1885.
Loans .....	\$253,732,375	\$236,889,911	\$122,538,346	\$125,331,305
Total resources .....	465,051,822	479,249,186	192,043,458	208,495,842
Capital stock .....	45,150,000	45,350,000	50,950,000	50,950,000
National bank circulation..	8,518,500	9,917,442	15,566,700	21,716,837
Individual deposits.....	237,445,718	226,925,999	74,087,299	80,326,965

	PHILADELPHIA.		CHICAGO.	
	1886.	1885.	1886.	1885.
Loans .....	\$79,537,714	\$67,351,229	\$55,401,342	\$46,018,905
Total resources .....	134,068,625	130,835,104	92,165,562	85,190,480
Capital stock .....	20,588,000	18,275,250	13,950,000	11,750,000
National bank circulation..	5,250,513	7,797,648	851,180	722,850
Individual deposits.....	77,924,453	74,830,558	43,650,119	40,970,738

In New York city loans increased nearly \$17,000,000, in Philadelphia \$12,000,000, and in Chicago \$9,000,000, while in Boston they decreased nearly \$3,000,000. The resources decreased \$14,000,000 in New York and \$16,000,000 in Boston, and increased \$3,000,000 in Philadelphia and \$7,000,000 in Chicago. Capital stock increased \$2,000,000 in Philadelphia and Chicago and remained about stationary in New York and Boston. Circulation decreased \$1,400,000 in New York, \$6,000,000 in Boston and \$2,500,000 in Philadelphia, and increased slightly in Chicago. Deposits increased \$10,500,000 in New York, \$3,000,000 in Philadelphia and Chicago, and decreased \$6,000,000 in Boston.

**S. A. Kean & Co.**, of Chicago, successors to Preston, Kean & Co., have opened a New York branch office in the United Bank building, corner of Broadway and Wall street. They make a specialty of investment securities. The New York office is in charge of Mr. A. B. Leach.

**The United States National Bank.**—To provide for their growing business the banking rooms of the United States National Bank, of this city—in the Washington building—have just been enlarged and improved. Several new rooms have been added, and their tasteful counters have also been extended to allow more space for the working force of the bank. President Murray's room, overlooking the main desks, has been refitted; it is now a model banking parlor, airy and light, and furnished in good taste. That the steadily growing and prosperous business of the bank may have long continuance in these commodious banking rooms is the wish of the JOURNAL as well as of the hosts of its readers who do business with the institution.

**The Question of the Right of Treasury officials** to stamp coins with the word "Light" has been raised by the Receiver of the United States Land Office at Marysville, Cal. He forwarded \$1,800 worth of gold coin to the Assistant Treasurer at San

Francisco, who returned 22 pieces, aggregating in value \$57.50, stamped "Light." The Receiver reshipped the coins to the Assistant Treasurer, claiming that he was guilty of violating the law prohibiting the wanton defacing and mutilating of United States coin, and demanding that the coin be placed to his credit or undefaced coin be returned to him. The Secretary of the Treasury ordered the Assistant Treasurer to hold the coin subject to the Receiver's order. The Receiver has announced his intentions of bringing the question before the Courts.

**Responsibility for Collections.**—The following appears on the Cashier's note-head (Collection Form) of the German National Bank, of Little Rock, Arkansas. It is a succinct statement of a bank's responsibility in handling collections, etc.:

"All papers received by this bank for collection or like purposes, involving action through other banks or sub-agencies, is delivered and received only upon condition that this bank is responsible for good faith and due care in the selection of such other banks and sub-agencies, but not for omissions, negligence or default thereof."

#### MISCELLANEOUS BANK AND FINANCIAL ITEMS.

—The Farmers' National Bank, of Bristol, Penn., has declared a semi-annual dividend of 8 per cent.

—German exports to America increased \$17,000,000 in the past year. This included \$4,000,000 worth of sugar.

—The floating debt of Spain is 112,000,000 pesetas. This shows an increase for October of 11,000,000 pesetas.

—Canada is beginning to swap rascals with us, but the balance of trade is still in our favor.—*Macon Telegraph*.

—The assets of the defunct Montreal Exchange Bank have been sold to a syndicate for the benefit of the creditors.

—The Bank of Durham and Eugene Morehead & Co., bankers, of Durham, N. C., were burned out on November 16th.

—The First National Bank, of Indianapolis, Ind., which was established in May, 1863, has decided to wind up its business.

—The New Jersey Trust & Safe Deposit Company has been organized with a capital of \$200,000, to do business in Camden, N. J.

—The Managers of the Consolidated Exchange Clearing-House, of New York, have decided that a revision of the rules is unnecessary.

—Cashier Hedden, of the Mechanics' National Bank, Newark, N. J., who served a term in prison, is about to purchase a farm and become a farmer.

—Baldwin Gardner, stock broker, with liabilities of \$200,000 and no assets, has disappeared from San Francisco. He was President of the Pacific Stock Board.

—The schedules of John M. Moore & Co., stock brokers at 78 Broadway, New York, show liabilities of \$33,470, nominal assets of \$120,470, and actual assets of \$10,243.

—The cart-wheel dollar is a blessing after all. The last express robbers left all the bags of silver behind, carrying them being evidently too much like work.—*Omaha World*.

—The Director of the Mint estimates that 700,000,000 pennies are now in active circulation in the country. The people have more cents than was generally supposed.

—The Tenth National Bank, of Philadelphia, which began business on February 1, 1886, reported deposits on November 1st amounting to \$406,000, and net profits of \$6,715.

—The Bank of Genoa, Italy, has been in existence hundreds of years, and in all that time no change has been made in the mode of governing and regulating its affairs.

—A citizen of Washington sent \$3,370 of Continental currency of 1778 and 1779 to the Treasury for redemption. The Comptroller of the Currency held they were virtually outlawed.

—Nickel coin with old dates, but looking as if they were fresh from the Mint, caused a scare in Washington. They are some of the coin that the Mint has been cleaning up and reissuing.

—The internal revenue collections from July 1st, 1882, to June 30th, 1886, aggregated \$3,436,290,455, or more than enough to have paid off the entire public debt at its highest

figure, \$2,756,431,571. Ten States paid over \$100,000,000 each. New York State paid \$806,700,000.

— The sum of \$63,000,000 is deposited in the Savings banks of California. It is suggested that the magnitude of the amount raises a most important political question—how to get it.

— In 1849 a deposit of \$19 was made in the savings bank at Dover, N. H. On November 16th the book was presented for the first time, and the deposit was found to amount to \$195.88.

— The bank of William M. Dustin, of Lincoln, Ill., which closed its doors on October 28th, made an assignment on November 8th. The liabilities are \$75,821, not including \$45,900 in debts of Mr. Dustin.

— It is said that old bank-notes can be detected by expert Post Office clerks by the sense of smell.—*Exchange*; Of course they can. There is always a hundred scents to a dollar.—*Boston Commercial Bulletin*.

— The deposits in the Government Savings Banks in Canada on September 30th amounted to \$90,731,956. During the month there was \$497,261 deposited and \$494,745 withdrawn, making a net increase of \$2,156.

— The firm of John I. Middleton & Co., cotton exporters, of Baltimore, failed on November 5th. Mr. John I. Middleton was President of the National Marine Bank, of Baltimore, at the time, but immediately resigned.

— Some dissatisfied members of the Chicago Stock Exchange want it closed up because of lack of business. There are 750 members, and the consent of a majority would have to be obtained to close the institution.

— The stamped envelopes the Government sells are a great convenience, especially to travelers, only sometimes it is a little difficult to find some mucilage to stick the flap down when one is away from home.—*Somerville Journal*.

— A new bank, to be called the German-American National Bank, will take the place of the banking firm of Dustin & Co., of Lincoln, Ill., which failed recently. It will begin business on January 1st with a capital of \$100,000.

— The Venezuelan Government has established a Mint at Caracas and begun to coin the product of the gold mines of the country. Foreign money will hereafter be regarded as merchandise and will be received at the Venezuelan market rate.

— Efforts are being made to secure the pardon of James D. Fish, the late President of the Marine National Bank, of New York. He is reported as in a very critical condition of health, and suffering from diabetes, which has reached an advanced stage.

— No Government ever before had \$100,000,000 of surplus revenue, and it is a knock-down answer to some of the sneers of foreign observers and critics that the American Government is economically administered in the face of this great fact.—*Springfield Republican*.

— Colonel Ingersoll wants all religious features abolished from the United States Government. It might not be improper to yield so far to the opinions of Colonel Ingersoll as to advocate the erasure of the legend "In God we trust" from the lying dollar.—*Boston Transcript*.

— The recent rise in the price of silver is understood to be due to the fact that the metal thrown on the market by Germany and Sweden has been absorbed. It is estimated that less than 200,000 ounces of silver is in the New York market and less than 500,000 ounces in the London market.

— It seems the refinement of sarcasm to retire the new silver certificates because the paper on which they are printed proves to be bad. Poor paper would seem to be just the thing on which to print certificates representing dishonest silver dollars. There is an eternal fitness in things.—*Boston Post*.

— For the first time in the history of Canada, Swiss capitalists have been drawn upon for money to be loaned on the security of Canadian mortgages. The Credit Foncier Franco-Canadien has issued in Switzerland 12,000 bonds of 500 francs each bearing 4 per cent. interest and repayable in fifty years by drawings.

— The Riverside Bank has been organized in New York city, with a capital of \$100,000, for which subscriptions for over \$116,000 were offered. It will be located on the west

side of the city near Fifty-ninth street. The following officers have been elected: Floyd Clarkson, *President*; Charles E. Appleby, *Vice-President*; H. C. Copeland, *Cashier*.

— Governor Lee, of Virginia, has written a letter to the effect that if all the obligations of the State are funded under the Riddleberger bill the interest and necessary annual expenses of the State will absorb all its revenues. He says that no more favorable settlement can be made with the creditors without increasing the rate of taxation.

— The Brooklyn (N. Y.) Savings Bank has 500 Chinese depositors. The signature book of the bank is said to look as if a number of flies had crawled into the ink bottle and then walked over the pages. The Chinese keep their pass-books clean and only draw upon them when they take out the whole amount, presumably when they are going home or moving to San Francisco!

— The Comptroller of the Currency has declared dividends to the creditors of insolvent National banks as follows: The Mechanics' National Bank, of Newark, N. J., a fifth dividend ( $1\frac{1}{4}$  per cent.), making in all  $6\frac{1}{4}$  per cent. on claims proved amounting to \$2,627,798; The First National Bank of Union Mills, Union City, Penn., a fifth dividend (5 per cent.), making in all 65 per cent. on claims proved amounting to \$182,453.

— The First National Bank, of Pine Bluff, Ark., closed its doors on November 15th. Charles M. Neel, the President, was the virtual owner and was understood to be worth at least \$3,000,000. He owned several cotton plantations, and had been borrowing money for a long time at 10 per cent. His cotton operations are believed to be the cause of his embarrassment. It is claimed that the bank will pay deposits in full.

— Since 1878 the Georgia Land & Lumber Company, of St. Simon, Ga., and its successor, Dodge, Meigs & Co., have been issuing scrip in the shape of bank paper in payment of wages and other local indebtedness. The Commissioner of Internal Revenue, upon being informed of the facts, notified the companies that they must pay a tax of 10 per cent., which will aggregate \$21,000. The demand will be contested in the Courts.

— The trial of Mr. Richmond J. Lane, late Cashier of the Abington National Bank, Mass., is expected to take place this month. Efforts have been made to compromise the case. It is asserted in behalf of Mr. Lane that he was a victim of the scheming of Mr. George E. Davis, of Boston, who died a few weeks ago. It is said that Davis embezzled \$60,000 or \$70,000 of the bank's money, which had been invested in the Saccarappa Company, the books of which were in the charge of Davis.

— Vague rumors, without any foundation, were set afloat regarding a big default in New Brunswick, N. J., which resulted in runs on November 22d on the New Brunswick Savings Institution and the National Bank of New Jersey. Both banks paid all money that was demanded, and by the close of the day the excitement was over, and some of the depositors who drew out their money early in the day had redeposited it. Both banks are in a sound condition, and the runs upon them were without reason.

— Thirteen National banks in Cleveland, Youngstown and Elyria, Ohio, brought suit in the United States Circuit Court at Cleveland to restrain the Treasurers of their respective counties from collecting taxes on their capital stock. They claimed that they were taxed more than other property and that the individual debts of stockholders should be deducted from the value of the stock. The Court decided both points in favor of the banks, and the case will be carried by the Treasurers to the United States Supreme Court.

— The Republic of Colombia is in a sad financial condition from which the Isthmus alone is exempt. It is stated that all gold, both native (\$90,000,000) and foreign, has left the country. All National and foreign silver of 0.900 fineness—at least \$12,000,000—has followed it. The export of uncoined gold obtained from its mines commenced in 1849, and by 1878 almost all its coined money had followed it. At present the amount in circulation is insignificant, and all its riches which have been exported, as a rule, have been expended uselessly. According to Don Vincente Restrepo, the country has produced \$204,000,000 since the conquest, yet it is barren of money.

— November 4th was a big day with the banks, the obligations of the farmers and planters generally for the past year falling due. Guano, agricultural machinery, factorage, and supplies for the past season, representing an indebtedness of immense

proportions, had matured. Some idea of its volume may be gained when a good authority estimated the transaction figures for the day of all the banks at between \$1,200,000 and \$1,500,000, derived mostly from obligated sources. One of the largest firms in the city, when asked about the liquidations, said they had been very fortunate, only a slight amount remaining on their books uncollected or unsecured.—*Augusta (Ga.) Chronicle*.

—The Bank of British North America has closed its branch in Chicago which was opened in 1880. It lost \$75,000 recently on warehouse receipts issued by N. M. Neeld, of J. C. Ferguson & Co. This, it is stated, is not the cause of closing, as their action was decided upon last August before the loss occurred. It is claimed that the bank can use its money to better advantage in Canada, and will open an agency at Winnipeg. The Bank of British North America was the first to open a branch in Chicago. Subsequently the Bank of Montreal and the Canadian Bank of Commerce established branches there, but the latter dropped out, turning its customers over to the American Exchange National Bank.

### R. R. AND INVESTMENT NEWS.

#### *New Issues.*

**STOCK EXCHANGE LIST.**—The following securities have been added to the list of the New York Stock Exchange:

Toledo, Ann Arbor & North Michigan—First mortgage 6 per cent. gold bonds due May 1, 1924—\$2,120,000.

Detroit, Bay City & Alpena—An additional \$550,000 first mortgage bonds, making the total amount listed up to \$1,800,000.

Valley Railway Company—An additional \$700,000 of consolidated mortgage bonds, making the total amount listed up to \$1,700,000.

Chicago, Milwaukee & St. Paul—First mortgage 5 per cent. bonds, due January 1, 1916, of the Decatur & Great Southern, \$1,000,000.

Chicago, Milwaukee & St. Paul—An additional \$303,000 terminal mortgage 5 per cent. bonds, making amount now listed \$4,303,000.

Boston, Hoosac Tunnel & Western—Debenture 5 per cent. bonds due in 1913 and redeemable at the option of the company at par—\$2,000,000.

Buffalo, New York & Philadelphia—Bank of New York's certificates of deposit for \$7,000,000 consolidated 6 per cent. bonds and \$3,200,000 general mortgage 6 per cent. bonds.

Denver & Rio Grande—First consolidated 4 per cent. gold bonds due January 1, 1906, \$22,575,000; preferred stock, \$23,650,000, and common stock, \$38,000,000—these in lieu of securities of the old company.

Delaware & Hudson Canal—An additional \$1,000,000 capital stock, issued for the purpose of providing money to retire \$1,000,000 Union Coal Company's bonds maturing January 1, 1887; total capital stock now is \$24,500,000.

**EASTERN & BANGOR.**—This company has been incorporated in Pennsylvania with a capital stock of \$600,000.

**WEST COAST TELEGRAPH.**—This company has been organized in California to do a general telephone business. Its capital stock will be \$100,000.

**DULUTH SHORT LINE.**—An issue of \$500,000 bonds of this company has been awarded to the banking firm of Drexel & Co., of Philadelphia.

**OXFORD & KANSAS.**—This company has been incorporated in Nebraska to build a road from Oxford to the Kansas State line. The capital stock will be \$1,700,000.

**HOT SPRINGS, BEAR MOUNTAIN & CRYSTAL SPRINGS.**—This Arkansas corporation will build from Hot Springs to Crystal Springs. The capital stock is \$500,000.

**ST. PAUL, ST. CROIX & LAKE SUPERIOR.**—This corporation has been organized in Minnesota to build from St. Paul to Lake Superior. The capital stock is \$1,000,000.

**KANSAS CITY STREET RAILWAY.**—The Metropolitan Street Railway Company, of Kansas City, has decided to increase its capital stock from \$1,250,000 to \$2,000,000.

**CHICAGO, KANSAS CITY & OMAHA.**—This road will be built from Chicago to Keokuk, Iowa, under an Illinois charter. The capital stock has been fixed at \$5,000,000.

**EASTERN RAILROAD.**—The Directors have decided to issue \$3,150,000 of preferred stock which will be used to retire bonds of the company, thus reducing the bonded

debt to \$10,000,000, after which the law will allow dividends to be paid on the common stock.

**FORT WORTH & DENVER.**—This road will be extended to the Canadian river, and first mortgage bonds will be issued to the construction company at the rate of \$15,000 per mile.

**SAN JOAQUIN & SIERRA NEVADA.**—Stock of this company to the amount of 230,000 shares has been transferred to the Southern Pacific Company, which owns a controlling interest in the road.

**CHESAPEAKE & OHIO.**—The currency bonds of this company are being exchanged for Newport News & Mississippi Valley Company's stock on the basis of \$125 of stock for \$100 of the bonds.

**THE CHARTERS VALLEY GAS COMPANY**, of Pittsburgh, has given notice of an increase in its capital from \$2,000,000 to \$3,000,000. Most of the new stock will be taken by Philadelphia capitalists.

**MISSOURI CENTRAL.**—A road under this name is to be built from Kansas City to St. Louis. A mortgage for \$11,000,000 has been executed to secure an issue of bonds to provide for the construction of the road and equipment.

**EAST TENNESSEE, VIRGINIA & GEORGIA.**—At a meeting of the first preferred stockholders the Directors were authorized to issue the \$1,500,000 new 5 per cent. bonds remaining in the treasury and apply the proceeds to betterments.

**CENTRAL MASSACHUSETTS.**—This company has decided to issue bonds not to exceed \$3,000,000, of which \$2,000,000 will be used to complete and equip the road to Northampton and \$1,000,000 for the branch from Bondville to Holyoke.

**BELVIDERE, DELAWARE.**—The third mortgage 6 per cent. bonds of this company, maturing February, 1897, will be extended 30 years at 4 per cent. per annum. Holders will be given the option of extending them between December 1st and January 1st next.

**VENICE, MARINE & EASTERN.**—A railroad under this name has been incorporated in Illinois, to be built from Venice, Ill., to Edgar County in that State. The capital stock will be \$1,000,000.

**ST. LOUIS, KANSAS & SOUTHWESTERN.**—An issue of \$800,000 gold 6 per cent. bonds of this company has been sold by the St. Louis & San Francisco. The bonds are secured by a mortgage on the line from Arkansas City to Caldwell and are issued at the rate of \$15,000 per mile. The interest is guaranteed by the St. Louis & San Francisco.

**AUGUSTA & KNOXVILLE.**—It is proposed to consolidate this road with others under the name of the Port Royal & Western Carolina Railroad and to issue \$2,000,000 preferred and \$4,000,000 common stock. The stock of the Augusta & Knoxville Company is to be exchanged for 6 per cent. consolidated bonds of the new company.

**INDIANA, BLOOMINGTON & WESTERN.**—The security holders' committee has issued a circular proposing the reorganization of the company and the issue of \$10,000,000 common stock, \$3,325,000 preferred stock, \$2,000,000 second mortgage bonds and \$8,000,000 first mortgage bonds. The outstanding preferred bonds will be retired and the first mortgage and Eastern division bonds exchanged for new first mortgage bonds at par. The second mortgage and debenture bonds will be exchanged for new second mortgage bonds at par, the income bonds for new preferred stock at 70 per cent. of their face value, and the common stock for new common stock at par. Should a consolidation with the Cincinnati, Sandusky & Cleveland and the Columbus, Springfield & Cincinnati roads be effected there will be issued \$12,500,000 first consolidated and \$2,000,000 second consolidated mortgage bonds, \$3,325,000 preferred and \$10,000,000 common stock.

#### *Railroad Reports.*

**BALTIMORE & OHIO.**—The annual report of the Baltimore & Ohio Railroad for the year ended September 30th shows earnings as follows:

	1884-5.	1885-6.
Total gross earnings.....	\$16,616,642	\$18,422,437
Operating expenses.....	10,973,585	12,035,743
Net earnings .. . . .	\$5,643,057	\$6,386,694

The company paid 9 per cent. on its stock during the year. The profit and loss account shows an increase during the year of \$22,845, and the surplus fund, repre-

senting invested capital derived from net earnings and not represented by stocks or bonds, amounts to \$48,047,461.

**INDIANA, BLOOMINGTON & WESTERN.**—The report of this company covering the fiscal year ended June 30, 1886, has been submitted to the Ohio Railroad Commissioners. It makes the following showing:

	1884-5.	1885-6.
Total gross earnings.....	\$2,582,935	\$2,493,536
Operating expenses.....	1,914,510	1,653,754
Net earnings.....	\$668,425	\$839,783
Following is a summary of income account:		
Total net income.....	\$668,425	\$839,783
Total disbursements.....	1,069,660	919,497
Balance, deficit.....	\$421,285	\$79,714

The funded debt is \$14,137,300 and the floating debt is \$1,518,714. As an offset to the latter are items aggregating \$346,787, leaving the net floating debt \$1,171,928.

### NEW COUNTERFEITS, SPURIOUS COINS, ETC.

**COUNTERFEIT SILVER DOLLARS** of short weight have lately been circulated in Roxbury, Mass., druggists being the victims.

**WITHIN THE LAST SIX MONTHS** a large quantity of spurious money, principally 10-cent and 50-cent pieces, has been put into circulation in Huntingdon, Penn., and neighboring towns. The coins were so well executed that they could not be easily detected except by experts. In the house of a notorious burglar named John Wilson, in Huntingdon, a complete outfit of counterfeiter's molds and tools has been found. Wilson has not yet been captured, but several members of a gang to which he belonged have been arrested.

**FRANCIS HUNGERFORD AND JAMES B. LARKIN**, on November 4th, were convicted in the United States District Court, at Little Rock, Ark., for making counterfeit coin. Hungerford is believed to be the oldest counterfeiter in the world, being about 60 years of age. They were sentenced for a long term.

**A CITIZEN OF KINGSTON, ONTARIO**, went to New York a short time ago and purchased, or thought he did, \$1,000 in counterfeit bills for \$80. He was under the impression that he had got what he had bargained for, but on opening his valise for inspection at Cape Vincent the customs officers found the supposed package of money to be merely a roll of sawdust and rubbish.

**TWO MEN, BELIEVED TO BE FOREIGN BOND SWINDLERS**, have been arrested at Buffalo. Their names are Bruno Gottschalk, of Williamsburgh, N. Y., and Charles F. Kopp, of New York. The former was in Buffalo for several days trying to negotiate alleged bonds of various European cities, including Vienna and places in Italy and Russia, which are believed to be copies of originals. The pretended bonds were sold on the installment plan, and each holder was given a chance in a lottery project. Kopp sold bonds similar in character, but he claims that they were sent to him from Europe. A strange fact is that, although the two men were in the same business and at the same time, it is not thought that they know each other.

**COUNTERFEIT \$5 GOLD PIECES** are reported in circulation at Sturgeon Bay, Wisconsin.

**HENRY MAY, WHO WAS RECENTLY RELEASED** from the penitentiary, after serving five years for counterfeiting in Georgia, has been arrested in Buffalo, N. Y., for the same crime. In his room were found dies for making counterfeit half and quarter dollars and some bogus coin, the milling of which was perfect, and the ring so good that the coin might easily be taken as genuine.

**FIVE-DOLLAR GOLD PIECES** are reported in circulation in St. Paul, Minn., which have been split, the gold in the center scooped out and the cavity filled with base metal. The weight of the doctored coin is about the same after as before the process, but there is no ring.

**COUNTERFEIT TWENTY-FIVE CENT PIECES** are reported in circulation in Toronto. They are said to be a good imitation, and unless carefully scrutinized will not be detected.

## OPEN LETTERS FROM BANKERS.

*An Interchange of Opinion by the Journal's readers.*

## "THE MYSTERIES OF BANKING."

[The writer of this letter says: "I have read with much interest the letter from Minnesota, under above caption, in the November JOURNAL, and beg to submit a short paper on the same subject."]

*Editor Rhodes' Journal of Banking:*

SIR:—The fact that some of the men who have been chosen (or have assumed) to take care of the savings of the frugal have proved to be wholly unworthy shows, it is often argued, an alarming decadence in the moral tone of the community. Previous to 1862 bank failures were rare, the banks being, as a rule, safely managed by fit men, which fact alone accounts for the high standing of our old savings institutions.

I do not assert that a high order of financial or executive ability is required for the management of a bank, but integrity and common sense are. The right paths are straight and well broken—what is most needed is a steadiness of purpose to resist the temptations that lead away from them. The public has been marvelously credulous I admit, and in this way are at fault. Any adventurer who can raise money enough to put up a sign and make large promises will find some trusting fools to leave their money with him; it seems to me that such people should be protected against themselves; but efforts which aim to protect people from the consequences of their own folly, however amiable they may be, are rarely successful; it is best in the end to let people reap the reward of their stupidity.

Unfortunately, the average depositor in the bank labors under disadvantages in being without facilities for getting information which would help him to protect himself and facilitate matters for the bank also; but this is one of the unpleasant concomitants of ignorance from which there is no way of escape except through the acquirement of knowledge, which the public does not seem very desirous of securing; until it is mastered a better condition of affairs cannot be attained. This is not clearly expressed, hence I place the following practical illustration before you:

A person deposits \$2,000 in the bank and receives in return from the Teller a certificate reading like this:

*The Minneapolis National Bank*  
*Minneapolis, Minn. Oct 10. 1886*  
*Samuel Greenman has deposited in this Bank the sum of*  
*Two Thousand . . . . . Dollars*  
*payable to the order of himself . . . . .*  
*on the delivery of this certificate properly endorsed.*  
*W. Richards*  
*Cashier.*

*Certificate of Deposit*  
*No 2000*  
*No 5000*

How can he tell if it bears interest or no interest? Is it not the bank's duty to inquire from the customer how he wants the money deposited—i. e., interest bearing or not bearing interest? I certainly think it is. Few banks pay interest when they can avoid it, and I regret to say the class of people who neglect to ask for the interest stamps are the poor and ignorant—those who can least afford to lose it. I do not mean by this that the greater number of depositors are poor and ignorant (some of our most active customers, holding large certificates, are ignorant, and many of our intelligent men are quite poor), but when a man exhibits both the bank cannot afford to profit by it, and the best way to educate him is by giving him something to read. No mistake can be made when you hand him a certificate of deposit bearing upon its

face all the intelligence he is in need of. By doing this the bank acts as an educator and releases itself from all responsibility so far as interest is concerned.

The following form has been used by several large banks for over two years, and I am informed by the Cashiers of two National banks that it has in every instance given entire satisfaction, and, further, that those institutions have profited by the use of it:

\$1000. *The Fourth National Bank*  
*Minneapolis, Minn. Oct 10 1886*  
*Henry Henderson..... has deposited in this Bank*  
*One Thousand..... Dollars*  
*payable to the order of himself..... in current funds*  
*on the return of this Certificate properly endorsed with*  
*interest at three..... per cent per annum for all full*  
*months of left running days. The interest after one year.*  
 NO 5555 *Charles Knight*  
*Cashier*

The rate of interest allowed is written in this form merely as an illustration, and no intelligent bank officer will infer that I advocate paying interest on all deposits, as money is often left on deposit for a short time, and certificates are quite generally used for transferring accounts from one bank to another, when, of course, no interest is paid.

I think Cashiers will admit that this form, if generally used, will put an end to all unpleasant discussions between Teller and customer as to whether the money was deposited on interest or merely left for safe keeping. If the agreement is to pay no interest the word "no" will be written in the body of the certificate before the word interest, which makes it very plain for the customer. Of course, if he is careless enough not to read his certificate and notice that it bears no interest he is at fault and deserves to lose it; but this error seldom occurs, since people are usually careful in such matters.

Yours respectfully,

W. RICHARDSON.

GRAND RAPIDS, Michigan, November 29, 1886.

#### BANK EXAMINATIONS.

##### Editor Rhodes' Journal of Banking:

SIR:—In a recent number of a bankers' publication, in an article on "Auditing Accounts," the writer says: "The best feature of the existing National banking system is the examination of its affairs by public officials." The feature is unquestionably a good one; but allow me to suggest that the examination would usually result in much more good to the bank, and consequently "to all whom it may concern," if made in concert with a committee selected by the Examiner from the bank's stockholders—not necessarily from its Directors.

Assuming that the Examiner is a man accustomed to bank books, accounts, and methods, and "whose practiced eye would be likely to discern errors and frauds, should any exist," it cannot be expected that he will, in the limited time allotted to him, render any material aid as an Auditing Committee. Should frauds be covered up in the book-keeping he will not be likely to detect them unless he has reason to suspect that they exist. His province is rather to assume that the statement as furnished him is correct in the abstract and then seek to determine not only the quantity but the quality of the assets as represented. Any one may invoice the cash correctly, and a stranger can see that notes and bills discounted list what they are reported, but he cannot intelligently judge of their worth. If many pieces are weak, he need not know it (and "straw paper" may look as attractive as the best in the list).

The Directors of a National bank should see that its affairs are carefully and critically examined into from time to time by a competent committee of their own stockholders, without waiting for a visit from the Bank Examiner; but too often, either from carelessness or indifference, or both, the entire active management is left to one man, the Directors considering their work done when reports are certified correct as submitted to them for their signatures. In making such an examination the

stockholders possibly might not always call the Examiner's attention to weak paper (should any be found), but if on the alert he could usually arrive at pretty safe conclusions; and, in any event, the committee would be in position to offer advice and suggestions to the management, if needed.

The knowledge that stockholders not active in the management of the bank are to frequently assist, under competent direction, in making a thorough examination of its resources, liabilities and methods, will have a healthy restraining influence on a management that has not learned or does not appreciate that "no expectation of forbearance or indulgence should be encouraged" (favor and benevolence are not the attributes of good banking: strict justice and the rigid performance of contracts are its proper foundation), while the timid—or listless—management, content to keep 75 per cent. of its deposits in the vault, will get help which may result in putting at least half of this reserve to work, and the careful, conservative, and at the same time enterprising management cannot fail to get advice, encouragement, appreciation and inspiration which will result in good.

Nothing can be more certain than that in banking, "the price of safety is eternal vigilance" (of stockholders), and no one else can so safely and surely educate and enforce practice in this direction as the Bank Examiner.

MYRON CAMPBELL.

SOUTH BEND, Ind., November 27, 1886.

#### CASHIERS AT BOARED MEETINGS.

*Editor Rhodes' Journal of Banking:*

SIR:—A question that does not seem to have been discussed in your valuable JOURNAL has suggested itself to me, and I therefore put it into words with the hope that you may give it space in the JOURNAL for the benefit of persons who may have the same views, yet not putting them into practice, and also for the help of others who have not thought about the subject at all. It is in regard to rules governing stated meetings of bank Directors. These are doubtless very similar, and much the same in all our National banks, yet in detail certain customs become fixed rules simply from habit and not by vote or formal action of the Board. Customs are allowed to creep in bank direction that are sometimes detrimental to the interests of the institution as well as those that are for its advantage.

A custom that does not seem to be the same with all banks is the attendance of the Cashier at board meetings. Many banks insist on this officer having a seat at the Board as Secretary, while some elect him as a Director, and others exclude him from their meetings entirely. The former plan may not be the best for the bank's interest, but the latter is a positive detriment. He should by all means be present at all discount meetings. Being called upon as the managing officer of daily details, he should have every opportunity of hearing the expressions of his Board on the credit of his customers. The help will be mutual. The knowledge he will gain from the attendance at these meetings will prepare him to intelligently meet applications for loans in the absence of the President. It will help him in waiving iron rules where no risk is involved, thereby gaining friends for the institution and indirectly winning profitable customers by the absence of machine-like methods. It will also help him many times in guarding the bank's interest from loss. On the other hand, he will be in possession of many facts concerning the makers and endorsers of notes that his Board cannot well afford to pass by. If he does not know how to take part in the discussions of credits it will be on account of the want of practice. Any man with intelligence enough for this position will educate himself to be thoroughly useful and indispensable to the Board if he feels that they require his presence and expect him to help them, and he will gain and grow in usefulness to the institution by the knowledge acquired from attendance at these meetings.

EXPERIENCE.

WILMINGTON, Del., November 23, 1886.

#### THE NATIONAL BANK SYSTEM AND THE CURRENCY.

*Editor of Rhodes' Journal of Banking:*

SIR:—The National bank system, so far as the issue of currency is concerned, was a device to promote the sale of Government bonds and their distribution among the people. It was also a device to make the people of the whole country personally and peculiarly interested in the maintenance of the Government. It was an ingenious device, and undoubtedly accomplished its purpose. But the purpose of the Govern-

ment is no longer the same. It is the reverse of what it was when the bank system was organized. The present purpose is to call in and pay off the bonds, and the continuance of the system intended to promote their distribution is now an obstacle to their redemption. Why, then, should the system be continued, and why should it not be changed to conform to the change in the purpose for which it was originated? Why should not the law which requires the National bank currency to be secured by Government bonds be annulled?

It will be said that the National bank currency, by substituting absolute security for the doubtful security of the old State bank circulation, has inspired general and unhesitating confidence in bank-notes, prevented great losses to the holders of currency, and furnished a means for the interchange of property unsurpassed in convenience and flexibility. For this reason it is claimed that the system should be continued. In reply to the objection that the Government bonds will be gradually redeemed, it is urged that the Government should issue bonds expressly for the use of National banks as a basis for their circulation. But, in recognition of the questionable wisdom of such a measure, our legislators, and those most interested in the National banks, are earnestly seeking some other way out of the difficulty which confronts them. Various plans have been offered, nearly all of which suggests the substitution of other securities in place of Government bonds. Is any such security necessary, and is not the whole scheme of securing the National bank currency, by deposit of bonds or of any other property, simply one which was engrafted on the bank system by the exigency of war, and is not inherent in nor indispensable to the system?

Cannot a plan for the issue of National bank currency be devised which, while giving all the necessary security, shall free the banks, and through them the people themselves, from the burdensome taxation incident to a deposit of bonds or other property to secure their circulation? In answer to these questions the following plan is offered in the hope that by inviting criticism it may in the end lead to a satisfactory solution of the impending difficulty:

- (1.) All National banks to be allowed to issue currency free of tax.
- (2.) The issue to be limited to two-thirds the amount of their capital.
- (3.) And to be a first lien on their assets.
- (4.) The present supervision of the Government to be continued and the liability of stockholders maintained.
- (5.) Examinations to be made semi-annually; and whenever the capital stock of any bank is impaired 25 per cent. it shall be liquidated and its notes paid off, or adequately secured by deposit of money or Government bonds, before any other debts are paid.
- (6.) It may also be further considered whether the issue of bills under \$5 should not be reserved to the Government, with the intent that the money of the people shall be secured by the entire wealth of the Nation, and with the ultimate purpose to make gold and silver the popular money of the country, and to maintain among its citizens that interest in the stability of the Government which it has hitherto been one of the functions of the existing National bank system to promote.

NEW YORK, December 1.

EDWARD H. AMMIDOWN.

**A COMMUNICATION FROM VICE-PRESIDENT THOMPSON OF THE CHASE NATIONAL BANK.**  
*To the Hon. W. L. Trenholm, Comptroller of the Currency:*

SIR:—Continuing to feel an interest in the currency of the nation, which everybody necessarily handles, I gladly respond to the suggestions made by you at the Bankers' recent Convention, and give you, for what it may be worth, my idea for perpetuating and perfecting the National bank system.

*First*—Amend the National bank law, retaining all its restrictions, ramifications, powers and privileges, so as to legalize the issue of circulating notes to the amount of fifty per cent. of capital without the deposit of bonds as security.

*Second*—In the case of failure the currency to be preferred before any other liability.

*Third*—One per cent. per annum on this currency to be deposited in the Treasury as a *guarantee fund* for the redemption of the notes of any broken bank whose assets may be inadequate to redeem its issue of currency.

By strictly enforcing the requirements of the National bank laws—and by applying the best civil service rules to Bank Examiners—this suggested currency would, I believe,

be sound in principle, and as uniform in value in every part of the country as is our present issue of National bank notes.

This proposed new issue of a circulating medium need in no way interfere with the banks now organized and managed.

The departure can be effected by short and simple amendments to the National bank law.

When the guarantee fund shall amount to more than five per cent. on the notes outstanding the excess can with safety be covered annually into the Treasury.

I believe the results of the twenty-three years of National banking will demonstrate that not over one-tenth of the proposed guarantee fund will ever be required to protect the public against loss, leaving nine-tenths of the accumulation to be covered into the Treasury.

As regards "elasticity" it is apparent that the banks working under the proposed change can retire and re-issue their currency with great freedom and facility as compared with the present system.

The objectors to this proposed change may assert that the "safety fund" system of New York was a failure, and that this is of like character. To this my answer is The contribution to the "safety fund" was only one-half of one per cent. per annum and this contribution ended when 3 per cent. on the capital had been paid; and it was liable for deposits as well as for circulation.

Circulating notes were issued by the bank officers without any restraints, guards or State supervision. The legal limit, however, was two of currency to one of capital.

Several banks made what was called "over issues," rendering false statements, thus avoiding the payment of the assessment to the "safety fund."

The New York "safety fund" was a delusion, and should not be named in connection with our National bank system under which the banks can issue only the notes furnished to them by the Treasury Department.

It seems to me that the proposed amendments to the National bank law will bring a large percentage of the State and private bank interest into the National system—thus benefiting the people by extra safeguards; and it is to the credit of the system that the domestic exchanges are so beautifully and advantageously adjusted.

Yours respectfully,

JOHN THOMPSON, Vice-President, Chase National Bank.

NEW YORK, November 13, 1886.

#### NATIONAL BANK CIRCULATION.

*Editor Rhodes' Journal of Banking:*

SIR:—If you can find room in your new department of "Open Letters from Bankers" (a most excellent feature, by the way), I should like to contribute my mite to the current discussion concerning the best basis for National bank circulation. The National debt is with us for some years to come, and by the end of that time a foreign war or domestic troubles may prolong its stay. Why not make a plan by which the bonds will be more valuable to the banks as a basis of circulation than they are to present holders as an investment, say, by removing the tax on circulation and issuing notes up to the par value of the bonds deposited. I will not enlarge upon this suggestion, though strongly tempted to do so, because I know the JOURNAL's space is valuable.

Yours respectfully,

A SUBSCRIBER.

BALTIMORE, November 22, 1886.

#### BORROWING CLEARING-HOUSE FUNDS.

*Editor Rhodes' Journal of Banking:*

SIR:—I read with much interest the account given by one of your correspondents of the Boston custom of lending and borrowing funds at the Clearing-House. While we have no such custom in Baltimore, yet it is not at all unusual for the banks to borrow Clearing-House funds from each other, settling for them at the Clearing-House the next day, with interest at six per cent., or else paying for them immediately in National bank notes or Eastern exchange. It never occurs to us to consider such borrowing an unfavorable indication of a bank's strength, nor, as I understand the matter, can I see any reasonable objection to the practice.

X.

BALTIMORE, November 18, 1886.

## THE WORLD OF FINANCE.

*Current Opinion on Monetary Affairs from many sources.*

### THE COMING NATIONAL CURRENCY.

[From the New York Sun.]

The coming National currency is to be gold and silver coin and Government paper, and nothing else. Bank notes have had their day, and must disappear with other obsolete contrivances. Even Government paper will have to be reduced to the elegant simplicity of legal-tender notes, and the present anomalous gold certificates and silver certificates will have to be withdrawn. The Government's promise to pay coin, expressed on a legal-tender note, is as good as the coin itself, and if anybody is not satisfied with it, let him take the coin into his own keeping. It is ridiculous for the nation to act as a safe deposit company for people who distrust its plain promises to pay.

### HOW LONG THE NOTES ARE EXPECTED TO STAY OUT.

[From the New York Commercial Bulletin.]

Current statements as to the rapidity of the contraction of the National bank note circulation seem to greatly underestimate the length of time which will elapse before the notes are taken in and destroyed for which the bonds have already been surrendered. The effect of the Treasury methods has been to keep the National bank note circulation in better condition, newer, cleaner and fresher than any other form of currency. The notes are constantly passed in and out of the Treasury, and in every case notes in poor condition have been canceled and replaced. Under the system of redemption, exchange and substitution the notes have been continually passing through the Treasury, and in a comparatively short space of time the entire circulation goes through the process by which new notes are substituted for old. The bank notes outstanding at this time are in remarkably good condition; and, as the average life of a bank note is calculated at five years, the Treasury officials believe that three years is the lowest estimate of the time which will be required for the cancellation of the notes for which deposits of money have already been made. The time thus allowed is ample for putting into circulation the small silver certificates, so that there will be no contraction of their circulation, and for every bank note canceled silver certificates will be substituted.

### PERPETUATING NATIONAL BANK CIRCULATION.

[From the New York Evening Post.]

Plans for perpetuating the National bank currency are multiplying as the session of Congress draws near. One such has been sent to us in the form of an open letter from Mr. John Thompson, Vice-President of the Chase National Bank, to Comptroller Trenholm. Mr. Thompson calls it a plan for perpetuating the "National bank system," although it deals only with the National bank circulation. Bankers ought not to lose sight of the fact that the issue of the National bank notes may come to an end without destroying or impairing the other parts of the system, which are exceedingly valuable in themselves. It is highly important to preserve all the functions of the National banking system even if the note-issuing function expires with the eventual payment of the National debt. These functions are the ordinary ones of conducting the exchanges of the country, through the instrumentality of deposits, discounts, bills of exchange, clearing-houses, etc., which may go on indefinitely without a single National bank note in existence. The country has grown up with the system. All business has adapted itself to it. Laws and decisions have been built upon it so that the whole constitutes an essential part of a business man's education. No National bank is required to issue circulating notes. If it holds United States bonds to the amount of \$50,000 it can go on under the protection and sanction of the National law. Even this requirement might be repealed without touching any essential part of the system, the bond-holding feature being now a mere matter of form. There will be bonds sufficient for this purpose for twenty years to come whether Congress insists

upon this requirement or not. The prime obstacle to the first section of Mr. Thompson's plan, and also to the whole plan, is that the public have become so accustomed to a currency absolutely secure that they will not accept one concerning which there is any doubt or peradventure, or one which requires an argument to show that it is secure. We do not say that a currency cannot be made secure without National bonds or a Government guarantee. We think that it might be made so, but there is not the smallest chance that public opinion can ever be brought to sanction a National currency about which there may be doubts as to its redeemability.

[Mr. Thompson's plan is published in the Department "Open Letters from Bankers."]

#### MONEY IN THE WEST.

[From the *Boston Advertiser*.]

An interesting recent occurrence has been the sale of \$100,000 of 3¼ per cent. Detroit city bonds to a savings bank in Detroit at ¾ per cent. premium. These bonds were advertised in Boston, and the fact that they were taken at a premium in the very city where they were issued illustrates two noteworthy facts. In the first place it shows how such monetary centres as Detroit and Chicago are becoming independent of the East, and in the second place it indicates the permanently low rate of interest upon prime municipal securities in spite of a temporary scarcity of money. But there will be plenty of demand for Boston and New York capital in the newer States of the South and West—like Kansas and Georgia, for example—long after the centres of the middle area of Illinois and Michigan have become independent.

#### FINANCIAL AFFAIRS IN LOUISIANA.

[From the *New Orleans Times-Democrat*.]

Financial affairs are healthy and are becoming more encouraging owing to the reflux of money from the interior, which is creating a freer movement in most lines of trade and industry, causing more money to seek employment in securities, which accounts for the lower rates of local interest as well as the activity and excitement here this week in our stocks and bonds, the most marked improvement being in Louisiana 4's and premiums, the former selling this week as high as 82¼ and the latter reaching the unprecedented figures of 111¼. It is the first time since 1878 that Louisiana bonds have reached such high figures, while the prices of premium bonds have gone up beyond the most sanguine expectations. Both, it is, however, believed, will show a much greater advance, as they are still regarded as greatly below their intrinsic value, especially when compared with securities in other markets; besides, an important feature of our local security markets, and one that must draw the attention of capitalists at home and abroad, is that our city bonds are backed by over \$120,000,000 of real estate and protected by the strongest legal safeguards.

#### COMPTROLLER TRENHOLM AND THE BANKS.

[From the *New York Times*, November 26th.]

Mr. Trenholm declines to state whether his report contains recommendations regarding the basis of the currency, but it is most probable that it does. A man of his habit of mind—acute, observant, thoughtful, and studious—could hardly fail to have something to offer as to the institutions under his charge with regard to the most important crisis they have been called upon to meet. His suggestions would be received with the greatest respect, because they would be carefully matured and based on a very wide range of facts.

We confess that we do not see, however, how even Mr. Trenholm can point out any method of continuing the circulation of the National banks with security equal to that their notes now possess which would find favor in the eyes of a majority in Congress and in those of the bankers as well. That the notes cannot be continued on the deposit of outstanding United States bonds is, we think, generally agreed. A writer in the *Financial and Mining Record* of last week shows that while there is, with money at 6 per cent., a profit of 8 per cent. per annum on circulation secured by 3 per cent. bonds bought at par, there is a necessary loss on circulation secured by 4 or 4½ per cent. bonds bought at the current premium. On the 4 per cents, at 128, the loss is 1.88 per cent. per annum; on the 4½ per cents it is only one-third of 1 per cent.; but it is still a loss. The uncalled 3 per cent. bonds are all but about 12 per cent. in the hands of the Treasurer as security for bank circulation, and they will all be called by the close of the fiscal year. If they cannot be replaced on terms that will be satisfactory to the

banks the circulation by which they are secured must be surrendered and ultimately, though slowly, redeemed and withdrawn.

#### THE NATIONAL BANKING SYSTEM THE BEST.

[From the Philadelphia *North American*.]

Sufficient unto the day is the evil thereof is most people's motto, at least in public affairs, and the extinction of the National bank issues has until lately seemed a long way off. The community is now beginning to perceive that it is not so far off as not to be a live question, and the more thought people give the subject the more desirous they become of preserving the National bank circulation. We need hardly say that this is entirely practicable. If the people will not consent to the indefinite maintenance of so much of the public debt as may be necessary to supply a basis for National bank notes—and many arguments might be advanced in favor of this—it ought not to be difficult to agree upon some satisfactory substitute security. The country is not willing to have the National bank system—acknowledged to be the best in the world—disturbed, and the emission of paper money in times of peace is not properly a function of the general Government. What shall replace the paid-off bonds? That is the question.

#### WILLIAM PURVES.

Late Vice-President and Treasurer of the Philadelphia Saving Fund Society.

#### THE RECORD OF A WELL-SPENT LIFE.

William Purves was born in Philadelphia on December 28, 1800, and died in the same city October 28, 1886. His father was Alexander Purves, a cloth merchant, who gave his son a good education at the school of Mr. Ross, the author of the well-known Latin grammar. Mr. Purves had expected to enter college, but the death of his father obliged him to change his plans, and he accordingly obtained a situation in the carpet store of Lapsley Bros. Two years later he entered the United States Bank, and held the position of Second Teller at the time of the failure of the bank. He was one of those selected to assist in closing its books, which occupied his time for almost two years longer.

For a period of about four years Mr. Purves was engaged in the book business with Henry Perkins, under the firm name of Perkins & Purves.

Mr. Purves finally accepted a position in the Philadelphia bank, and while in that institution made valuable suggestions with regard to better methods of book-keeping which were adopted by the management.

On December 5, 1849, he was elected Treasurer of the Philadelphia Saving Fund Society, and served in that position until November 5, 1884, when he was elected Vice-President. When he first assumed office the assets of the Society were about \$2,000,000 and the depositors numbered about 10,000; at the time of his death the former reached nearly \$30,000,000 and the depositors over 100,000.

The following extract from Resolutions passed by the Society, exhibit his character and qualifications:

"Mr. Purves was peculiarly fitted by nature and education for the position he occupied. He was calm in turmoil and excitement, never losing his balance, and ready at all times to meet with composure every case that presented itself for consideration. His amiable temper and gentle disposition led him to give a ready ear to every person, however humble, who appealed to him for a hearing. He was always courteous to the high and the lowly, especially listening with patience to those who are habitually suspicious about the safety of their money when it is out of their sight and placed temporarily beyond their immediate control. When, however, a person approached him inspired by aims of negotiation, he was ever on the watch, and no man gained an advantage over him. Mr. Purves became very popular in the discharge of his duties, and much of the reputation enjoyed by the Society is due to the confidence reposed in him as a fiducial officer."

Mr. Purves was also connected with many charitable and religious organizations. He was an elder in the First Presbyterian Church for many years, and afterward in the Calvary Presbyterian Church.

One of the Philadelphia newspapers, in referring to his death, said:

"The death of Mr. William Purves, for 37 years Treasurer of the old Philadelphia Saving Fund at Seventh and Walnut streets, is a public loss to Philadelphia. He was honored and respected by all who knew him, and really beloved by the thousands of depositors in the institution for his kind and courteous treatment of all who came in contact with him."

## NEW BANKS, CHANGES IN OFFICERS, FAILURES, ETC.

**New National Banks.**—The Comptroller of the Currency furnishes the following statement of National banks organized since our last report:  
(Names of officers and further particulars regarding new National banks will be found under their proper State headings in this list.)

**WATFORD.**—Bank of London in Canada; J. L. Gower, Manager, in place of T. A. Telfer, deceased.
- MANITOBA.**
- EMERSON.**—G. F. R. Harris; reported sold out.

The Chase National Bank, of New York, has leased the offices now occupied by the Central Trust Company, on the corner of Pine and Nassau streets, and will take possession as soon as the Trust Company moves into its new building on Wall street, which it is expected will be completed in the early spring. It is generally understood that the capital of the bank will be increased when it changes its location. In the last number of the JOURNAL notice was given of the election of Hon. H. W. Cannon, late Comptroller of the Currency, to the Presidency of this institution. At a meeting of the Board of Directors held on December 1st, Mr. C. C. Slade, Cashier, resigned his position, and Mr. Wm. H. Porter, who has been connected with the Fifth Avenue Bank of New York city for the past eight years, was elected Cashier, and Mr. C. C. Slade, Assistant Cashier.

We have it on good authority that Messrs. C. S. Brice, Samuel Thomas, J. G. Moore, Oliver H. Payne and Edward Tuck, of this city, and W. H. McGhee, of Knoxville, Tenn., are now the controlling shareholders. The bank is in excellent shape and its business is growing steadily.

## BANKERS' OBITUARY RECORD.

**Allen.**—Major Lewis Allen, formerly President of the Warren National Bank, at Peabody, Mass., died November 15th, aged 92 years. He obtained the original charter of the bank in 1832, and was its President for more than forty years.

**Arnot.**—Hon. John Arnot, Jr., member of Congress and millionaire banker, of Elmira, N. Y., died on November 20th, aged 56 years. He was Mayor of Elmira three years, a member of the 48th Congress, and was re-elected to the 49th Congress without opposition.

**Baer.**—Bernard Baer, President of the National Bank of Western Arkansas, at Fort Smith, Ark., is dead. He was an enterprising and charitable man.

**Baker.**—Hon. Joseph K. Baker, President of the Cape Cod Savings Bank, of Harwich, Mass., and for many years President of the First National Bank, of Harwich, died November 12th, aged 59 years. He was a member of Congress in 1870 and United States Senator in 1872 and 1873.

**Bancroft.**—Benjamin F. Bancroft, President of the First National Bank, of Salem, N. Y., died on November 23d.

**Carr.**—Stephen B. Carr, Cashier of the People's Savings Bank, Lansing, Mich., is dead.

**Drew.**—Charles Drew, for thirty-two years Clerk and Treasurer of the Fairhaven (Mass.) Institution for Savings, died November 10th, aged 84 years.

**Freeman.**—Captain Richard R. Freeman, President of the Wellfleet (Mass.) Savings Bank since its foundation in 1863, died November 29th, aged 73 years. Captain Freeman, who was one of the wealthiest men in Barnstable County, was a man of great influence and well known in business circles.

**Graham.**—William M. Graham, formerly President of the Wallkill National Bank, which became insolvent in 1882, died at Middletown, N. Y., November 18th, aged 87 years.

**Hamlin.**—George U. Hamlin, of the banking firm of Hamlin & Co., of East Bloomfield, N. Y., died on October 7th.

**Heidelberg.**—Philip Heidelberg, of the banking firm of Heidelberg, Ickelheimer & Co., New York, and Espy, Heidelberg & Co., Cincinnati, Ohio, died November 29th, aged 73 years. He came to this country in 1827 and became closely identified with the business interests of Cincinnati. He removed to this city in 1876.

**Herrick.**—Charles Herrick, Vice-President of the Union National Bank, of Racine, Wis., died of rheumatism of the heart on November 14th, aged 72 years. He was one of the most respected men of Racine and was widely known in Chicago and elsewhere.

**Joseph.**—Laurens Joseph, a prominent member of the New York Stock Exchange, and for ten years a member of the Governing Committee, died November 17th, aged 50 years. He was related to the Rothschilds of Europe.

**Lee.**—Cyrus P. Lee, Secretary and Treasurer of the Erie County Savings Bank, of Buffalo, N. Y., died November 2d, aged 77 years. He was one of the most highly respected citizens of Buffalo, and before taking charge of the savings bank was for many years Chief Clerk in the Buffalo post office.

**McClelland.**—Peter McClelland, one of the leading and wealthiest citizens of Waco, Texas, and President of the Central Bank of that place, died September 25th.

**Matthews.**—William Matthews, Vice-President of the Seventh National Bank, of Philadelphia, Pa., died November 10th, aged 72 years.

**Miller.**—James C. Miller, 30 years of age, Cashier of the German-American Bank, of Minneapolis, Minn., was accidentally killed on November 25th while attempting to board a train at St. Paul. He was a brother of Roswell Miller, General Manager of the Chicago, Milwaukee & St. Paul Railroad.

**Motes.**—Thomas Motes, Cashier of the Pacific National Bank, Pawtucket, R. I., and Treasurer of the Pawtucket Institution for Savings, died November 8d, aged 66 years.

**Newton.**—G. R. Newton, Cashier of the City National Bank, Fort Worth, Tex., is dead.

**Palms.**—Francis Palms, President of the People's Savings Bank, and one of the oldest and richest citizens of Detroit, Mich., died November 24th, aged 78 years.

**Purves.**—William Purves, Vice-President and Treasurer of the Philadelphia (Pa.) Saving Fund Society for thirty-seven years, died October 28, aged 78 years.

**Richards.**—Daniel Richards, President of the First National Bank, of Danvers, Mass., for 30 years, and a Director for 40 years, died November 13th, aged 78 years. He was highly esteemed, and was very active in the affairs of the place in which he lived.

**Robinson.**—Clarence Robinson, a former member of the New York Stock Exchange and of the firm of Nelson Robinson & Co., brokers, died November 21st after a brief illness. He was a member of the well-known Robinson family of Brooklyn who owned a large amount of real estate at Narragansett Pier.

**Smith.**—Alexander Smith, Vice-President of the Third National Bank, of Circleville, Ohio, died November 5th.

**Smith.**—L. P. Smith, of Frendergrast, Smith & Co., bankers, of Mexia, Texas, is dead.

**Stokes.**—A. Y. Stokes, of W. S. Patton, Sons & Co., bankers, of Danville, Va., is dead.

**Van Wyck.**—John Thurman Van Wyck, for forty years connected with the Fulton National Bank, of New York, and for a long time its Receiving-Teller, died November 23d, aged 83 years.

**Wroth.**—John Wroth, Cashier of the Wyoming National Bank, of Wilkes-Barre, Pa., died on November 16th, aged 48 years. He was regarded as a very brilliant business man.

# THE BANKER'S GAZETTE.

## The Money Market and Financial Situation.

NEW YORK, December 2, 1886.

THE BUSINESS SITUATION shows but little change from that of a month ago, and may be considered as healthy and favorable. There has been considerable activity in the speculative markets, particularly in grain and petroleum, while the mining stock speculation in San Francisco appears to have revived. The latter may be viewed with suspicion, as the very rapid advance which has occurred in certain mining stocks on the Pacific Coast seems to have been based upon no material improvement in the properties they represent. The advance in wheat and petroleum has been upon the improved demand for the one and the small production of the other. In the stock market there has been fair activity, but the trading was principally in stocks usually not much dealt in. The stocks of Southern railroads were the most active and many of them made large advances. The Richmond Terminal, the Nashville, Chattanooga & St. Louis, the Memphis & Charleston, the Virginia Midland and Louisville & Nashville were the most prominent in this class. There were also special securities, only recently placed on the market, which advanced very rapidly. Among these were the Philadelphia (Natural Gas) Company and the Tennessee Coal & Iron Company. A large number of securities sold at the highest prices for the year last month.

Improvement is reported in general industries. There are still controversies between capital and labor to be settled in some place, but, as a rule, differences are being disposed of satisfactorily and with fairness to all parties interested. The strike of the pork-packers in Chicago was brought to an end by the voluntary return of the strikers. This strike has been followed by a revival in business in Chicago, which assures activity for some time.

The steel rail industry is in a most prosperous condition. Mr. James M. Swank, General Manager of the American Iron and Steel Association, states that the production of steel rails in 1886 will exceed that of 1882, when 1,284,067 gross tons were produced, the largest production ever reported for one year. The prospect is fair for a still larger output in 1887, as orders have already been booked for 800,000 tons for delivery next year. The price of steel rails has advanced to \$35@36 per ton, and one mill is refusing orders at less than \$37. Mr. Swank thinks that the price will be advanced to \$40 early next year.

The coal trade has not been so active, owing to the prevalence warm weather. The current supply has, however, been used up and stocks kept down to a low point, while prices, although not advanced, have been firm.

There has been a decided improvement in the foreign trade of the country, the exports of merchandise in October showing an excess over the imports for the first time since June. The exports were valued at \$69,633,505 against \$72,824,727 in October, 1885, and \$71,659,582 in 1884, while the imports were valued at \$54,772,260 against \$53,807,937 in 1884 and \$51,975,321 in 1883. The excess of exports over imports was \$14,861,245. For the 10 months ended October 31st, however, the excess of exports is only \$2,238,785. This would justify exports of gold—as a much larger excess of exports of merchandise is necessary to prevent a debit balance abroad—but for the fact that early in the year we exported nearly \$35,000,000 of gold and have since been shipping large amounts of American securities. The effect of this is seen in a net import movement of gold of over \$14,000,000 in the three months ended October 31st and in further imports last month.

The future of the money market is now attracting no little interest. That there is at present a plentiful supply of money is evident from the rates which rule for time money. In Wall street call loans have been as high as

15@20 per cent. on more than one occasion, but borrowers had no difficulty at any time during the month to get money at 6 per cent. even on long time. It is not the immediate course of the money market, however, which is the object of most consideration. The question is, what will be the nature of financial legislation this winter, and will it prevent future contraction? The revenues of the Government are at least \$100,000,000 per annum in excess of the ordinary expenditures. The calling in of the outstanding 3 per cent. bonds will soon retire the last of them, although the Secretary of the Treasury issued no call last month, presumably to await the meeting of Congress. The contraction in circulation, owing to the retirement of National bank notes, will be more or less temporary in character, but, unless some means is devised to prevent the surplus moneys getting into the Treasury, after the 3 per cent. bonds are all retired, or to get them out again after they go in, the contraction will be both permanent and rapid. The issue of silver certificates will not counteract this, for, even if the maximum amount of silver dollars were coined every month, they would not suffice to meet more than one-half the amount of money taken out of circulation, and such a plan would be objectionable in that it would soon bring the currency to a silver basis.

**FOREIGN EXCHANGE.**—Rates varied but little during the month, and have remained at a point which permitted gold importations. Following are the posted and the actual rates of the principal dealers: Bankers' sterling, 60 days, nominal, \$4.81½@ \$1.82; sight, nominal \$4.85@ \$4.85½; 60 days, actual, \$4.80¾@ \$4.81; sight, actual, \$4.83¾@ \$4.84; Cable transfers, \$4.84¼@ \$4.84½; Prime commercial sterling, long, \$4.80¼@ \$4.80½; Documentary sterling, 60 days, \$4.79¾@ \$4.80; Paris, bankers', 60 days, 5.26¼@ 5.25½; sight, 5.23¾@ 5.23½; Paris, commercial, 60 days, 5.27½@ 5.26¾; sight, 5.25@ 5.24¾; Antwerp, commercial, 60 days, 5.28¼@ 5.27½; Swiss, bankers', 60 days, 5.26¼@ 5.25½; sight, 5.23¾@ 5.23½; Reichsmarks (4), bankers', 60 days, 94½@ 94½; sight, 94¾@ 95; Reichsmarks (4), commercial, 60 days, 94½@ 94¼; commercial, sight, 94½@ 94¾; Guilders, bankers', 60 days, 39¾@ 39 13-16; sight, 39 15-16@ 40; Guilders, commercial, 60 days, 39½@ 39 11-16; sight, 39 13-16@ 39¾. Paris dispatches quote exchange on London 25f. 36c.

The following shows the posted rates for prime bankers' sterling bills on London at 60 days, and sight, cable transfers and prime commercial sterling, together with exchange on Paris on November 1st, the changes in the rates as they occurred during the month, and the highest and lowest during the months of October and November, 1886:

OCT.	BANKERS			Cable			PARIS		
	60 days.	Sight.		Transfers.	Commercial.		60 days.	Sight.	
Highest...	4.83	4.86	4.85	4.80¾	5.25¼	5.23

English silver.....	4 80 @	4 85	Fine gold bars par @ ¼ premium on the		
Five francs.....	92 @	95	Mint value.		

THE NATIONAL BANK CIRCULATION was further reduced \$2,216,949 last month, and is now \$299,016,871, or \$18,130,248 less than on December 1st, 1885. There were \$6,968,106 of legal-tender notes deposited in November to retire circulation, making \$88,491,271 now deposited for that purpose, an increase since December 1st, 1885, of \$47,165,930.

The following will show the amount of each description of bonds held by the Treasurer to secure National bank circulation on or about the dates indicated:

	Dec. 1, 1886.	Nov. 1, 1886.	Oct. 1, 1886.	Sept. 1, 1886.
Currency 6 per cents.....	\$3,645,000	\$3,586,000	\$3,576,000	\$3,576,000
4½ per cents .....	59,019,050	57,306,850	56,276,100	52,579,100
4 per cents .....	115,252,700	115,313,150	113,740,850	113,719,750
3 per cents .....	58,994,450	69,538,050	86,515,450	101,219,300
Total. ....	\$236,911,200	\$245,744,050	\$260,108,400	\$271,094,150

ASSOCIATED BANKS OF NEW YORK.—The surplus reserve was increased during the month, and deposits increased at the rate of \$1,500,000 per week, while loans were made freely.

The following shows the condition of the New York Clearing-House banks for a number of weeks past as well as about this time in 1885 and 1884:

1886.	Loans.	Specie.	Legal-tenders.	Deposits.	Circulation.	Surp. Res.
Nov. 27....	\$344,545,000	\$79,554,000	\$18,240,700	\$355,707,800	\$7,991,700	\$8,887,750
Nov. 20...	341,833,500	80,709,700	17,932,000	354,846,800	8,020,400	9,930,000
Nov. 13....	341,946,800	78,005,200	17,816,000	351,719,400	8,116,100	7,891,350
Nov. 6 ....	340,994,900	77,070,000	16,242,600	350,718,800	8,173,200	5,632,900
Oct. 30....	341,401,800	76,631,200	17,049,500	349,128,100	8,237,500	6,398,675

Nov. 29....	285,514,600	85,273,200	38,450,300	325,825,300	11,643,400	42,267,175

MONEY AND DOMESTIC EXCHANGE.—Money has ruled easy during most of the time, although there were temporary advances in rates for call loans, which made quotations as high as 15@20 per cent. The ruling figures were from 5 to 7 per cent. Commercial paper is in demand at rates varying from 5½ to 7½ per cent. according to grade. The following rates of domestic exchange on New York indicate a demand for money throughout the country: Savannah, ¼ discount; selling, ½ discount. Charleston, buying, 8½ discount; selling, par. New Orleans, commercial, \$1.25@\$1.50 per \$1,000 discount;

bank, 75c. per \$1,000 discount. St. Louis, 50c. @ 75c. per \$1,000 discount. Chicago, 40c. @ 50c. per \$1,000 discount.

**GOVERNMENT BONDS.**—The following table shows the closing prices or closing bids at the New York Stock Exchange for the principal issues of Government bonds on each day of the month of November and the highest and lowest during the month. Actual sales marked \* :

NOV.	$\frac{1}{2}$ ss, '91, coup.	ss, 1907, coup.	3 per cents.	C'y 6s, 1895.	C'y 6s, 1899.	NOV.	$\frac{1}{2}$ ss, '91, coup.	ss, 1907, coup.	3 per cents.	C'y 6s, 1895.	C'y 6s, 1899.

17	110 $\frac{3}{4}$					Low	110 $\frac{3}{4}$	* 127	100	125 $\frac{1}{2}$	135 $\frac{1}{4}$

+ Ex-interest.

**THE TREASURY.**—The following table will show the condition of the Treasury, as regards the amount of gold and silver held, on the 1st of December, 1886, and, for comparison, on the 1st of October and November, 1886, with the amounts of certificates outstanding and the balances of coin owned by the Treasury :

	Dec. 1, 1886.	Nov. 1, 1886.	Oct. 1, 1886.
Gold coin and bullion.....	\$254,450,853	\$246,832,148	\$242,009,018
Gold certificates outstanding.....	90,520,633	88,294,969	84,691,607
Gold owned by Treasury.....	\$163,930,220	\$158,537,179	\$157,317,411
Silver dollars and bullion.....	\$189,003,321	\$188,739,180	\$185,020,967
Silver certificates outstanding.....	105,519,817	100,306,800	95,887,112
Silver owned by Treasury.....	\$83,483,504	\$88,432,380	\$89,133,855

**RAILROAD AND MISCELLANEOUS STOCKS** were strong throughout the month until the 30th, when a selling movement caused a break in prices. The highest prices of the year were recorded for a number of stocks, but, as a rule, the most prominent, such as the Vanderbilts, the grangers, and some of the coal stocks, were comparatively quiet.

The latest cable advices from European centres report discounts easy at 2@2 $\frac{1}{4}$  per cent. The London Stock Exchange rate was 4 $\frac{1}{2}$ @4 per cent. Prices at the Stock Exchange during the week were firm, the brighter political outlook, combined with the reduced speculative account at the settlement just concluded, favoring buying. American railroad securities were strong under investment purchases, besides a renewal of speculative activity, and prices at the close were the highest of the week. Business at the Paris Bourse was active and prices firm. New loans closed at an advance of 75 centimes. Credit Foncier closed at 325, Suez Canal at 725 and Panama Canal at 425. On the Berlin Bourse there was increased buying, with a healthy tone in every department. Business on the Frankfort Bourse during the week was good, at slightly enhanced quotations.

The following table shows the highest, lowest and closing prices of the active stocks at the New York Stock Exchange in the month of November, the highest and lowest since January 1, 1886, and also during the year 1885:

	NOVEMBER, 1886.			SINCE JANUARY 1, 1886.		YEAR 1885.

## STOCK EXCHANGE QUOTATIONS.

Revised by the official lists up to the first day of this month. The following tables include *all securities listed at the New York Stock Exchange*. The Quotations indicate the last bid or asked price. In cases where there was no quotation during the past month the latest previous quotation is given. The highest and lowest prices for the year 1885—actual sales—are given for comparison.
