THE THEORY THAT THE GENERAL DECREASE in the price of merchandise throughout the world for some years past has been caused by the scarcity of gold is refuted in a recent able article by Dr. Th. Barth, editor of the Berlin, Germany, *Nation*. He acknowledges that the theory is plausible, because within the past thirteen years about \$1,000,000,000 of gold have been absorbed by Germany, the United States, Scandinavia, Holland, and Italy for coinage purposes. But it appears strange that the rate of interest has declined in those countries at the same time. To be sure, the rate of interest is governed by the supply of and demand for loanable capital, and not specially of money; but if there is no demand for the temporary use of loanable money, there can be no scarcity of money, and we find that in gold using countries there is no scarcity of gold. The function of gold in the liquidation of debts is, in fact, greatly overestimated. Every improvement in means of communication diminishes the relative importance of coin as a medium of exchange. During the past decade the annual exchanges effected by the Reichsbank increased from 426,000,000 to 26,325,000,000 marks. By this means the use of probably several hundred million marks have been dispensed with. Add to this the immense amounts exchanged through the Clearing-Houses of London, New York and other business centres, the development of the cable transfer system, and many other devices for simplifying money transactions, and it is evident that the coin circulation has been constantly losing in importance as a medium of exchange. Besides this, the amount of coin absorbed by the countries above-mentioned is a virtual over-statement, because the amount used by them in international exchanges has not been increased. They always held this, either deposited abroad or at home. But, finally, the decrease in prices is more satisfactorily explained on other grounds. The cost of production and transportation has diminished. Ever since steamships, railroads and telegraphs came into use this decrease has been gradually going on. We are approaching the final accomplishment of the great revolution in the means of communication of this age. By its means

the field of competition between man and man and between nation and nation have been infinitely extended. This competition is a powerful incentive to increased economy of production, and the consequence is lower prices. We think these arguments will strike the mind of every intelligent man who has watched the general course of trade for many years past as being most reasonable.

---

THE CHARACTER OF THE PREVAILING SENTIMENT in the far West regarding financial matters is illustrated in a recent editorial in the *San Francisco Chronicle*. In commenting on the plan of Mr. Flannagan for guaranteeing deposits in National banks (which was the subject of an article in the December number of RHODES' JOURNAL OF BANKING) the *Chronicle* protests against the idea of abolishing the bank taxes. "The National bank interest is a proper object of taxation, and there is no reason why it should, after seven years, or after any number of years, escape taxation any more than the tobacco or the whiskey interest. As to the joint and several liability of National banks for each other no objection is likely to be made. The idea thus far is a good one, and no substantial portion of the people will oppose it on the ground that it militates against the interest of State banks. The latter institutions have not inspired the public with a ravening love. What concerns the people of the West most in regard to the National banks is to get a law passed, or regulations adopted, to call in notes of the denomination of \$5, so as to afford a chance for the circulation of silver." It is very evident that the people do not wish this substitution, or else it would have been made long ago. The Treasury Department has for years (up to a recent date) been making every effort to get and keep the silver in circulation with very little success. But now we are told that the \$5 bank notes should be withdrawn so as to force out the silver. By this means the interests of the people, of the Government and of the banks would be sacrificed for the sake of the silver interest. The people would be compelled to receive an unwieldy and depreciated currency in place of notes that are perfectly free from these defects; the Government would have to relinquish the revenue it derives from its tax on the notes, and the banks would be deprived of whatever benefit they gain from the circulation of them—all in order to assist the silver industry. To be sure, the Government gets a profit from the coinage of standard dollars, but this is not an honest gain.

---

ONE OF THE FAVORITE ARGUMENTS of the advocates of the silver dollar is that their opponents are under the influence of "Wall street." It is the bankers and brokers and the soulless corporations of Wall street, representing the "creditor class," who are trying to rob the rest of the country of their favorite coin, in order to make money scarce

and dear, so that the debtor class will have to pay much more, in value, than it borrowed. It is evident that the people who pretend to believe this and those who have been hoodwinked into actually believing it have never made any attempt to correctly distinguish the one class from the other. The large corporations, including the banks, are probably the very largest class of debtors in the country, while the common people who own the deposits in savings banks form a large portion of the creditors. But, waiving this part of the question, the fact is, as those who are in the closest communication with the bankers and brokers in New York know, the latter class are undecided and divided as to what the effect will be upon their individual interests if the currency should be reduced to the single standard. Being accustomed to judge of financial matters, they know the importance of keeping up the high credit of the Government, and of preserving the integrity of the circulation. Further than this, few of them have taken the trouble to look. But some of them, we know, believe that they personally would be better off if there was a sudden change to the silver standard. Altogether the assertion that the bankers and moneyed class oppose such a change for purely selfish reasons lacks every element of probability, and has no evidence whatever to sustain an opinion of that character.

---

THERE IS A BILL BEFORE CONGRESS, introduced by Mr. Morrow, of California, providing for the exchange of mutilated subsidiary silver coins for new and unworn pieces. The present rule governing such exchanges is a gross injustice to persons who unwittingly become possessed of mutilated subsidiary coins. The Government pays no more than the value of the pure silver contained in such pieces. The new subsidiary coins issued from the Mint contain nearly 7 per cent. less silver to the dollar than the standard silver dollar, so that two half-dollars, or four quarter-dollars, cost the Government at present probably not over 74 cents. Now, if a person who may have had two mutilated halves passed on him takes them to the Treasury the officials deduct not only the value of the missing portion of the coins, but also the heavy seignorage or profit which the Government gained on the issue. By this method a man may be cheated of four cents in the first place, but this loss the Government multiplies into a loss of thirty cents. Besides, the loser is nearly always some one too honest to shift the loss upon his neighbor. This is an injustice of long standing which Congress ought to remedy.

---

IT IS TO BE HOPED that, among the multiplicity of matters that are up before Congress, the recommendations of Comptroller Cannon with regard to much needed amendments to the Act of July 12, 1882, to prolong the existence of the National banks, will not be overlooked.

These have special reference to the provision of the Act that banks whose original charters have expired must within three years deposit in the Treasury lawful money to the amount of their outstanding circulation. In view of the fact that this final termination in the case of 270 banks, having nearly \$48,000,000 circulation, expires on February 25, 1886, and the danger of a consequent sharp contraction of the circulation about that time, the Comptroller addressed a circular to these banks some months ago asking them to make their deposits in advance. He has received the ready co-operation of the banks in this step, which was for the benefit of the whole country, so that it is expected that only four to six millions will remain to be deposited at the end of February. Of course, this amount would have no perceptible effect upon the money market. But, although an expected difficulty appears to have been overcome for the time being, the matter will come up again in a much more formidable shape in future unless the Act is amended by extending the time during which the deposit must be made. In 1888 lawful money will have to be deposited by all the banks whose corporate existence was extended during the past year, and up to November 1st these numbered no less than 649, with an aggregate circulation of nearly \$94,000,000. By extending the time during which the deposit must be made to six years the Government would lose nothing and much danger to general business would be avoided.

---

A MEASURE THAT WOULD AFFORD MUCH RELIEF to the crowded calendar of bills in Congress, and which deserves to be passed on its own merits, is one that would enable the National banks to change their name, or location, or to increase their capital stock, upon receiving the approval of the Comptroller of the Currency. There are a number of bills already before Congress for this purpose, and any one of them, simple in form and with the necessary restrictions, ought to be passed this winter. The matters of detail mentioned which are now under the direct control of Congress could certainly be better supervised by the Comptroller, and with a great saving of time and circumlocution.

---

IT APPEARS STRANGE that a great city like Chicago has only one savings bank, which bank does a general banking business besides. There is not a single savings institution of the kind which exerts so wide and beneficent an influence in the Eastern cities. "We have no savings bank," says the *Chicago Tribune*, "in the strict sense of the term, which can be called a great popular institution, commanding the confidence of the working classes and saving and accumulating their surplus earnings solely in their interest." Here is a field ready for the work and attention of the philanthropists of that district.

### THE MONETARY STANDARD.

At a time when the country is beholding an exciting contest on a question involving the integrity of the coinage, to which contest self-interest lends an element of considerable bitterness, it is well to turn to some of the broader aspects of the subject in dispute. A great deal of the argument brought forward to support the continuance of the silver dollar coinage is founded on ignorance or mis-statement of the history of our coinage, and assertions are published abroad daily on this matter at entire variance with facts that any politician or writer might verify with very slight research. A slight sketch of the changes in our coinage since the Mint was first instituted, such as the space here at hand will admit of, will bring into relief the fallacious statements alluded to.

The laws of 1792 under which the first coins of the United States were minted in 1793 were drafted by Alexander Hamilton. Previous to that year the metallic money in use here was composed of foreign silver coins. Hamilton considered that a single gold standard would be the better, as its value would be "more stationary," but he concluded to endeavor to adopt the metal then in use and to supplement it with gold. The outcome was that coinage was begun with a double standard. The silver coins (dollars, halves, etc.) were of equal fineness and full weight, according to value, and the ratio of silver to gold was 15 for 1. The silver dollar contained 15 times as much fine silver as the gold dollar of fine gold. The coinage was free, so that any one bringing to the Mint bullion of either metal might have it coined, and both gold and silver coins were made full legal-tender. The system, therefore, was bi-metallic. The ratio between the value of the coins was close to the natural ratio at the time, and had it remained so the country would doubtless have retained its coinage of both metals.

In a few years, however, there was a change in the relative value of the coins in the markets of the world, and in the year 1800 gold was 1 to nearly 16 of silver. The consequence was that gold, which was now undervalued in the Mint, was in the natural course of international exchanges expelled from this country. By 1820 gold was almost unknown here, and it remained so until 1834.

In the latter year Congress attempted to establish a gold standard in place of the silver mono-metallism which actually existed. For this purpose the weights of fine gold in the eagle was reduced from 247.5 grains to 232 grains, and the silver remaining unchanged the ratio was thus changed from 1 to 15 to 1 to 16. Under this law gold was overvalued, as silver had been previously, and, consequently, the silver was exported. The law of 1837, by which the gold and silver coins were made uniformly 900-thousandths fine only altered the ratio so as to make 1 of gold equal to 15.98 of silver. Under this Act the silver dollar of  $412\frac{1}{2}$  grains first came into existence, the old dollar pieces weighing 416 grains. The amount of pure silver remained unchanged at  $371\frac{1}{4}$  grains of pure silver, however. We have said that under this law silver was undervalued. France had at that time free coinage at the ratio of 1 to  $15\frac{1}{2}$ ,

and other European States also valued silver at a higher ratio than did the United States. An ounce of French or English gold brought to this country would buy 15.98 ounces of silver. It would require only  $15\frac{1}{2}$  ounces of this silver to purchase another ounce of gold in France, leaving 48-100 of an ounce, or 3 per cent., for the expense of transfer and profit. The result was the silver coins, including the fractional coins which were of full weight, were exported, so that the silver circulation left here consisted of worn Mexican and Spanish coins.

To remedy this state of things and to provide a sufficiency of fractional coins the Act of 1858 was passed. This provided that all the fractional silver coins should contain but 884 grains of standard silver to the dollar's worth, instead of  $412\frac{1}{2}$  grains as theretofore. Also, free coinage of the coins was abolished, the bullion for the coins being purchased by the Treasury, so that the silver half-dollars, quarters and dimes were reduced to the condition of token coinage.

It was well understood in Congress that the law of 1858 would establish the gold standard, and this was the intention declared by Mr. Dunham who reported the bill in the House of Representatives. At that time the silver dollar was practically unknown. Between 1793 and 1852 less than \$2,500,000 in these coins had been minted, and nearly all of them had disappeared. The silver dollar was undervalued, as has been observed before, and there was no prospect or intention that it should ever play any practical part in affairs again. As a matter of fact, from 1858 down to 1869 only \$2,000,000 more of these coins were issued, making in all, from the institution of the United States Mint down to the end of 1868, the total coinage of silver dollars only \$4,478,140 against nearly 700 million dollars of gold coins. What a pitiful showing for the "dollar of our fathers." In truth this phrase conveys an impudent fiction. It would be more true to call it the dollar that our fathers rejected.

The experience of this country, as exhibited in this sketch, has been that we have never been able to keep a double standard in operation. The relative values of the coins are sure to vary from time to time, and the dearer coin is certain to give place to the cheaper. There are some of the extreme silver advocates who would gladly see our gold displaced to make room for their favorite metal; but we opine that they represent only a small minority of the people. And yet they will certainly have what they desire unless the present coinage of silver dollars is stopped. See what M. Henry Cernuschi, the most widely known bi-metallist of France, if not of Europe, says on the matter:

"Everywhere, in Europe as in America, people are in expectancy. What are the United States going to do? Are they going to uphold the Silver Act of 1873, are they going to repeal it, or are they going to authorize the free coinage of silver? It is certain that if the Congress of the United States authorized the free coinage of silver all the dollars already coined by the Treasury would instantaneously become good money. Good money also would be the dollars which the public would then get coined. They would all stand the ordeal of fire like rupees and Mexican piastres. But what would happen? The United States would lose the whole of their gold, and, although having a bi-metallic law, they would end by having only silver money like India and Mexico.

"In this way: As soon as the coinage of silver by the United States was free Europe would act toward the United States just as Germany acted toward France

so long as France coined silver. Europe would demonetize large masses of silver and send them to Philadelphia to get them made into dollars, with which dollars she would get gold dollars dispatched to her. It is true that the ratio of weight between the gold and the silver dollar is not  $15\frac{1}{4}$ , but 16, and that by demonetizing her silver to get it coined into dollars Europe would lose the difference—that is to say, 3 per cent. She would lose even more, for the gold dollar would not fail to be at a premium over the silver dollar. But these losses would be nothing in comparison to those which Europe would incur if, to lighten her burden, she was forced to sell at London, destined for Asia, the silver withdrawn from circulation. Unquestionably, if the United States open their Mints to the free coinage of silver all the European States will hasten to profit by it.

"Why is not the coinage of silver free in France? Because, were the coinage free, all the gold would emigrate, and France, deprived of gold, would no longer have a monetary medium either with England, or with Germany, or with the United States. France, therefore, cannot, will not, resume the coinage of silver, unless it be at the same time resumed, firstly, by the United States, and, secondly, by England or Germany.

"Very venturesome would be those who should recommend the United States of America to undertake single-handed what France will undertake only triple-handed."

---

WILLIAM W. CORCORAN.—A Washington correspondent writes: Mr. Corcoran is the Irish shoemaker who has risen to be the chief banker and benefactor of his city. He is well past his three-score years and ten, a well-preserved old gentleman with snow-white hair and beard, cut short, who dresses well, and has a very distinguished air. He dates his fortune from the Mexican war, when he handled the Government loan. Ever since then he has grown richer and richer through the constant improvement in his investments. He has put a good deal of his money into Washington real estate. He is the next to the largest real estate taxpayer here, his real property being assessed at \$891,964. He long since retired from the banking firm of Corcoran & Riggs, which he founded so long ago that the present generation knows the bank only as Riggs & Co. But some of Corcoran's capital is in the bank yet, and as he visits his office in the bank every pleasant day the young men of Riggs & Co. still have the benefit of his counsel. He is a very wise old financier still. There is a romantic flavor in the reputation he has won, for no one can think of him without thinking of his generous benevolence. He has given Washington Oak Hill Cemetery, the Corcoran Gallery of Art and the Louise Home for Gentlewomen. He has endowed the Columbian University and the Episcopal Church of the Ascension. His name is on every subscription list and his private charities are numberless. Historical associations cluster around him. He has been the friend of the great men of politics, art and literature. His banking-house is in the building long occupied by the Bank of the United States. He lives in the residence of Daniel Webster, which he has remodeled and embellished until it compares favorably with any modern house here. He was an intimate friend of Webster, and helped him out of many a financial quagmire. Living happily and peacefully, surrounded by attentive relatives, dividing his years between Washington and the White Sulphur Springs, he bids fair to be a centenarian.

---

NO BRANCH MINTS.—The dignity of the Mint officials receives a mild shock every time their establishment is spoken of as a branch, says a San Francisco paper. The facts, it appears, are that when the Philadelphia Mint was established it was, as the parent, the Mint, and those which were afterwards erected were for a time styled branch Mints. On the creation of the office of Director of the Mint, in 1878, this titular fashion was changed. All the four coining establishments—those of Philadelphia, New Orleans, San Francisco and Carson—then became Mints, under the general control of the bureau, the correct title for them all being "Mint of the United States at San Francisco," or Carson, or wherever it might be situated.

## SAVINGS BANKS OF MASSACHUSETTS.

The Savings Bank Commissioners of Massachusetts have just completed the compilation of the reports of the condition of the various savings institutions for the year ending October 31, 1885.

It will be seen by the figures given below that the year was a favorable one for the depositors. This is shown in an increase in the number of banks and open accounts as well as in the aggregate amount of the deposits, earnings and dividends paid.

There was a decrease of 1-100 per cent. in the average rate of ordinary dividends paid, a very small reduction when we consider the low interest rates that have prevailed of late.

Below will be found some of the more important tables that will appear in the published report :

## CONSOLIDATED TRIAL BALANCE.

<i>Assets.</i>		<i>Liabilities.</i>	
United States bonds.....	\$13,666,046	Deposits .....	\$274,996,412
State, county, city and town bonds .....	29,289,468	Surplus .....	5,210,625
Bank stock .....	441,021	Guarantee fund.....	6,804,464
Loans on bank stock.....	26,174,122	Sundries .....	246,273
Railroad bonds .....	16,127,784		
Real estate by foreclosure....	3,523,249		
Real estate for banking purposes.....	2,395,249		
Loans on mortgage of real estate .....	105,206,175		
Loans on personal security ...	62,373,368		
Loans to counties, cities and towns.....	8,849,564		
Deposits in banks on interest.	12,699,557		
*Sundries .....	3,087,570		
+Cash on hand.....	1,826,801		
	<u>\$287,059,676</u>		<u>\$287,059,676</u>

The whole amount of interest on the profits received or earned by the banks was \$13,869,466.

The percentage of earnings to total assets is 4.83.

Following are the rates of ordinary dividends paid by 166 banks : ‡

2 at 3 per cent.	3 at 3½ per cent.	5 at 4¼ per cent.	2 at 4½ per cent.
1 at 3¾ per cent.	123 at 4 per cent.	17 at 4¾ per cent.	15 at 5 per cent.

\* This item includes loans on railroad bonds, railroad notes, accrued interest premium and expense accounts, etc.

† This item includes \$387,054 deposited in banks not on interest.

‡ No return of dividends from the Framingham Savings Bank, which is temporarily enjoined, and from banks which, having recently commenced business, have paid no dividends.

Below are the amounts of loans, with specified rates of interest :

<i>Per Cent.</i>	<i>Per Cent.</i>	<i>Per Cent.</i>	<i>Per Cent.</i>
\$5,704 at 1½	\$485,000 at 3¾	70,000 at 4½	\$700 at 6¼
58,985 at 2	8,080,870 at 3¾	20,000 at 4 7-10	1,610,285 at 6¼
25,000 at 2½	1,510,000 at 3¾	2,823,004 at 4½	225,000 at 6 6-10
890,879 at 2½	29,770,488 at 4	50,000 at 4½	2,808,751 at 7
17,000 at 2½	275,000 at 4 1-16	58,608,256 at 5	182,818 at 7 3-10
2,272,677 at 3	881,500 at 4½	899,000 at 5½	115,281 at 7½
210,000 at 3½	5,774,725 at 4½	30,000 at 5½	122,145 at 8
25,000 at 3½	50,000 at 4 23-100	13,687,396 at 5½	3,085 at 9
6,787,774 at 3½	260,000 at 4½	47,200 at 5½	
30,000 at 3 60-100	23,152,922 at 4½	37,879,623 at 6	

## COMPARATIVE AGGREGATES.

PITTSBURGH'S CREDIT.—It may be said that the credit of the smoky city is pretty good at home. A re-issue of \$3,100,000 four per cent. city bonds was taken recently by a Pittsburgh capitalist at 105%. The very best index to the financial standing of cities and towns is to be found at home where they are best known.

### THE BANKS OF CONNECTICUT.

The annual report of the Bank Commissioners of Connecticut shows a marked improvement in the condition of the savings and State banks and trust companies for the year ending October 1, 1885. There are in the State eighty-four savings banks, eight State banks and nine trust companies—an increase of two during the year—the City Bank of Hartford and the Saybrook Bank of Essex having changed from National banks to State banks.

#### SAVINGS BANKS.

The following is a general comparative statement of the condition of the savings banks.

RESOURCES.	October 1, 1885.	Change since October 1, 1884.
Loans on real estate.....	\$30,728,616	Inc., \$526,185
Loans on endorsed paper.....	3,097,816	Dec., 704,259
Loans on stocks and bonds.....	6,601,837	Inc., 50,464
Loans on other collaterals.....	178,498	.....
Invested in bank stock.....	6,159,599	Dec., 65,890
Invested in railroad stocks and bonds.....	14,958,400	Inc., 1,232,484
Invested in United States bonds.....	3,249,380	Dec., 737,175
Invested in State, town, city and corporation bonds.....	14,744,488	Inc., 1,211,683
Real estate owned, including banking houses.....	4,879,616	Dec., 87,648
Miscellaneous assets.....	541,928	Dec., 58,087
Cash in bank and on hand.....	3,497,877	Inc., 550,927
<b>Total resources.....</b>	<b>\$97,717,921</b>	

LIABILITIES.	October 1, 1885.	Change since October 1, 1884.
Deposits.....	\$92,481,425	Inc., \$1,366,903
Surplus.....	3,191,095	Inc., 217,871
Interest.....	1,411,779	Inc., 58,966
Other liabilities.....	633,620	.....
<b>Total liabilities.....</b>	<b>\$97,717,921</b>	

The following table shows that there are now 256,097 depositors in the savings banks. If each was an individual and a citizen then more than a third of the State would be personally interested in the banks. Probably, however, in many cases, the same person has accounts in several banks and a number of depositors, no doubt, are societies, institutions, trusts, etc. The Commissioners point out the interesting fact that the deposits have increased \$2,316,000 in counties that have large manufactories and decreased \$450,000 in mainly agricultural counties. It is not necessary, however, to argue from this that manufacturing pays and farming does not. It means that Connecticut farming thrives in the neighborhood of manufacturing centers, and that, therefore, it is

the duty of the State in its legislation, so far as it may, to prevent the concentration of population at a few "competing points."

The depositors increased 3,852 during the year, and only 821 were depositors whose accounts exceeded \$2,000 each. But the fact stands out that these 821 depositors represent \$1,428,881 of the entire increase of deposits, leaving something like \$443,000 to be represented by 3,081 depositors.

MISCELLANEOUS ITEMS.	October 1, 1885.	Change since October 1, 1884.
Number of depositors having \$500 or less.....	202,367	Inc., 2,485
Amount of such deposits . . . . .	\$24,420,506	Inc., \$65,011
Depositors having over \$500 and less than \$1,000.....	37,446	Inc., 282
Amount of such deposits . . . . .	\$19,298,811	Inc., \$442,588
Depositors having \$1,000 and not over \$2,000.....	18,583	Inc., 264
Amount of such deposits . . . . .	\$25,123,362	Dec., \$64,119
Depositors having over \$2,000... ..	7,701	Inc., 821
Amount of such deposits . . . . .	\$23,644,213	Inc., \$1,428,881
Total number of depositors . . . . .	256,097	Inc., 3,852
Total amount of deposits . . . . .	\$92,481,425	Inc., \$1,865,808
Largest amount due single depositor . . . . .	48,002	Inc., 1,863
Number of accounts opened during the year . . . . .	37,584	Dec., 2,976
Number of accounts closed during the year.....	33,702	Dec., 1,279
Income received during the year.....	\$5,202,174	Inc., \$141,423
Dividends declared during the year... ..	3,697,747	Inc., 60,554
Amount of past due paper.....	83,568	.....
Amount of paper charged off the past year.....	17,266	.....
Office expenses, including salaries . . . . .	263,748	Inc., 12,580
State taxes . . . . .	197,104	Inc., 4,960
Deposits, including interest credited....	21,424,759	Dec., 733,708
Withdrawn during the year . . . . .	19,557,967	Dec., 84,267
Net amount from real estate owned . . . . .	121,701	Dec., 54,700
Amount of assets yielding no income . . . . .	737,910	Inc., 77,483
Largest amount loaned to one individual, society or corporation . . . . .	800,000	.....

A comparison of some of the totals for 1875 with those for 1885 is of interest as showing the state of things then as compared with the present. There were at that time 86 banks, 2 more than now. The following table will show some of the most suggestive changes :

	1875.	1885.
Deposits . . . . .	\$73,783,802	\$92,481,425
Loans on real estate.....	51,552,294	39,728,617
Railroad securities... ..	1,168,420	14,953,460
Bank stock.. . . .	3,546,777	6,159,600
State, town, etc., bonds.....	6,817,955	14,744,489
United States bonds.....	4,141,646	3,249,381
Cash.....	2,096,910	3,497,677
Real estate owned.....	581,946	4,879,616
Depositors.....	206,274	256,097
Average deposit. . . . .	357.70	361.12

One deposit reported in 1885 amounts to \$48,000, and several banks have over \$40,000 in single accounts. It has been said that this largest one belongs to a town or church society, or some other impersonality. That does not

alter the fact that it does not properly belong in any savings bank. These institutions were created for people of small means, whose aim was to save something and who needed encouragement, not for the storing of large sums.

The report contains a statement showing the location of the savings banks, the deposits by counties, with the amounts, *per capita*, in each county. The increase in deposits, since the last report, in Hartford county has been \$978,000; in New Haven county, \$863,000; in Fairfield county, \$236,000; in Litchfield county, \$389,000. The deposits have decreased in New London county, \$196,000; in Middlesex county, \$186,000; in Windham county, \$44,000, and in Tolland county, \$24,000, showing that, in those counties having large manufacturing industries, the deposits have increased \$2,316,000, and that in counties mainly agricultural the decrease is \$450,000.

#### STATE BANKS.

The eight State banks have an aggregate capital of \$2,500,000 and deposits of \$3,818,288. The loans, discounts and investments in stocks and bonds amount to \$4,785,839—an increase since the last report of \$920,987. Their assets are \$6,701,972. Besides the items of capital stock and deposits given above the liabilities are: Due bank and bankers, \$446,796; surplus, earnings, profit and loss, and unpaid dividends, \$417,656; circulation, \$19,286.

#### TRUST COMPANIES.

Only six of the trust companies in the State do a banking business. These have a capital of \$976,600 and deposits of \$2,810,416. The loans and discounts, and investments in stocks and bonds, amount to \$2,939,895, an increase of \$425,241.

The three companies dealing in real estate are the Equitable Trust Company, of New London, the Middlesex Banking Company, of Middletown, and the Thames Loan & Trust Company, of Norwich. They have an aggregate capital of \$1,700,000, and no deposit liability.

A PROMINENT TREASURY OFFICIAL ridicules the statement that Secretary Manning recently made a remark upon which the construction might be put that he intended to use silver to some extent in the redemption of bonds under his recent call. This officer says that no effort will be made to pay out silver unless it is desired by the persons to whom the disbursements are made.

**MORTGAGES AS COLLATERAL SECURITY.**—A subscriber in Illinois asks the following question, the reply to which may interest others:

"Are National banks allowed to take mortgages from a *mortgagee* as collateral security, and, should they do so, are said mortgages collectible by the bank? It is claimed by some parties here that taking mortgages in this way is equivalent to taking them direct, and, as they are void when taken direct, are also void when taken as collateral. Is it a fact that they are void when taken direct by banks—except when taken to secure previously made debts?"

Section 5187 of the Revised Statutes prohibits National banks from loaning money on real estate. The Supreme Court of the United States has, however, decided, in the case of the Union National Bank of St. Louis *vs.* Matthews, that where a National bank, on the security of a note and deed, loaned money to "B," who thereupon assigned the same to the bank, the bank was entitled to enforce collection of the note by a sale of the lands pursuant to the power in the deed of trust. Reference is made to this decision on page 91 of the 1885 report of the Comptroller of the Currency. References are also given to similar cases on page 92 of the same report.

## GUARANTEEING DEPOSITS IN NATIONAL BANKS.\*

*To the Editor of Rhodes' Journal of Banking :*

The article in the JOURNAL for December, under the above caption, proposes that the Government should tax either the deposits or circulation of those National banks that are honestly and prudently managed, for the purpose of upholding the credit and—when failure occurred—paying the debts of those that are dishonestly and recklessly managed. This is evidently the meaning of the proposed measure, and I beg to ask : Is it just or right ? Would there not be as much justice in taxing all the railroads for the purpose of creating a fund to pay the debts of those that become bankrupt, or in taxing manufacturers, merchants or farmers for the purpose of paying the debts of such of either of those classes that may become insolvent ?

There is another injustice in the measure proposed to which attention should be directed. There may be in the same town two banks. One, by the honesty, prudence and good management of its officers, has the entire confidence of the community, and, consequently, controls all the most desirable business of the town, while the other, on account of the character of its officers and their reckless management, has very few depositors, although offering such inducements in interest, etc., as no prudent bank would do. Under such circumstances would it be right to tax the well-managed bank in order to build up a credit for the worthless one—enabling its officers to build up a large deposit account by offering extra inducements, and showing that deposits were as safe with them as with any other bank, the Government being responsible in case of loss ?

The actual facts must be borne in mind, as the time will never come when the country will be wholly rid of bank officers who will speculate and take extraordinary risks in spite of stringent laws and capable Bank Examiners.

The passage of such a law would certainly have a tendency to destroy the value of honesty and integrity in bank officers. The Government being responsible, deposits would be as safe with dishonest and incapable officials as with the most reputable bankers in the land.

The author of the proposed measure says that it would increase the number of banks. No doubt he is correct in that, for many persons would at once engage in the business who, without the Government guarantee, would not have credit sufficient to conduct a profitable banking business.

There is no fear but that there will always be banks where really needed, and, if honestly and prudently managed, their deposits will be as large in proportion to their capital as they can safely and judiciously use.

COUNTRY BANKER.

---

\* The author of this article is the President of a bank organized under the State laws and now doing business in a Southern State. He writes : " We have just applied for a National bank charter, and believe that the proposed measure would work great injustice to the well-managed banks, and in its outcome prove to be an impediment to the further expansion and success of the National banking system."

**Methods and Machinery of  
\*PRACTICAL BANKING.**

CONSISTING OF BRIEF DESCRIPTIONS AND SUGGESTIONS RELATIVE TO THE  
METHODS OF CONDUCTING THE BANKING BUSINESS; WITH APPROVED  
MODELS OF BLANK BOOKS AND FORMS FOR THE USE OF  
BANKS OF DISCOUNT, SAVINGS BANKS, ETC.

---

[Prepared expressly for the JOURNAL by the Cashier of a long-established bank, who has had over twenty years' experience in practical banking, and who has always sought for better and safer methods.]

---

**PAPER WITH MANY NAMES.**

The comparative value of single-named paper and paper bearing two or more names—the class generally known as double-name paper—is now being quite widely discussed by bankers. In some quarters it is urged that banks and trust companies should not make a practice of introducing into their loans paper of the single-name class, while from other directions we hear arguments against any statutes or by-laws limiting the loans of banks to notes and acceptances bearing at least two names. The charters of our trust companies, which emanate from the State, are quite rigid in this matter of requiring many names on all paper discounted by them. Individual paper entering into these trust company loans, according to the State laws governing most trust companies, must bear at least three names. Savings banks are generally bound by this same restriction. There is nothing in the National Bank Act of this restrictive character, but very many of the National banks make it a rule never to loan on single-name paper.

There are some absurd, as well as demoralizing, features connected with this matter of restriction in regard to the number of names required on paper entering into the loans of our National banks, savings banks and trust companies. These institutions are, at times, glad enough to buy at paying rates strong paper bearing one good name in which they have full faith, and one or two other names, as the case may demand, of what may be termed a straw-like, or made-to-order, character. This business of affixing to good single-name paper names of straw to meet the double-name demands I have described often takes on quite a ludicrous aspect. Very young men in counting-rooms, junior clerks and the men who "take down the shutters," are found endorsing millions of dollars worth of paper which is passing into loans of banks and trust companies through the hands of brokers and others simply for the reason that the law demands the two or more names. Attempts have been made by Savings Bank Commissioners and United States Bank Examiners to institute reforms in this business, and to put a stop to the use of valueless and practically fictitious names in making acceptable paper for bankers' loans, but these attempts have not been successful.

I have here given a description of a bad drift in paper. But it is easier to give a diagnosis of this case than to point out any positive remedy. But suggestions of a corrective and a remedial character readily come to mind. Paper bearing these made-to-order endorsements is often easily recognizable by Bank Examiners, Commissioners, or experienced bankers. When it crops out in loans of banks and trust companies to an objectionable extent the Examiners and Savings Bank Commissioners should make a note of it and

---

\* Practical Banking Series—Part XVIII.

These papers will be continued through the 1886 volume of the JOURNAL.  
Copyright, 1884. All rights reserved.

send reports of the bank's habits in this regard to the proper quarters. They should also take occasion to suggest to the Managers of the banks which are thus being loaded with objectionable paper that good banking demands a reform.

Any educated banker will hesitate to recommend that all restrictive provisions in laws and by-laws in this matter of single and double paper shall be removed. Yet, as things are now drifting, it would seem as if their existence was taking on a farcical character. The character of our bank loans will always be governed by the character of the men who manage our banks. If injudicious and unreliable men are in charge of the bank loans no rules regarding the number of names which shall be on the paper they take will be of much account.

In the best managed banks, which may be moving along under double-name rules, there will come occasions when it will be perfectly justifiable to take on paper bearing one solid name and another about which no questions need be made; yet such precedents should be followed with extreme care. Such action should be the exception and not a common practice.

#### SHOULD THE DRAFT BE PROTESTED?

The draft was accompanied by a bill of lading, covering a shipment of a lot of flour, and read thus: "On arrival of goods please pay to order of First National Bank \$1000." It came forward for collection, in due course, from a bank in the West to a bank in an Eastern city. The draft was presented to the drawees, who replied that the goods had not arrived, but that they would pay it when the goods did come to hand, since the paper was all right. They further said the flour upon which this bill was drawn might not arrive for several weeks. The draft bore several endorsements, and had been invoiced to the collecting bank without any special instructions not to protest or to hold for any time. Under these circumstances what was the correct course for the bank to take with it? Undoubtedly it was the duty of the bank to present it at once for payment. If payment was refused, under the claim that the goods had not arrived, it was the duty of the bank to obtain its acceptance, which would amount to a guarantee of the drawees that it was right, and that it would by them be paid in accordance with the tenor of its face. In the event of a refusal of the drawees either to pay, or accept, the holding bank should protest for non-acceptance.

It is far better for all parties concerned that drafts should never be drawn in this manner—on this awkward time. The collection-holding bank has no means of knowing when the draft matures—when the goods arrive—except from information furnished by the parties upon whom the draft is drawn.

Under some circumstances banks would be justified in refusing to receive such paper.

#### LONG AND SHORT PAPER.

I have elsewhere remarked that when rates are high, with a prospect of declining at an early date, sagacious bank Managers are inclined to select from the paper offered them for discount those promises to pay which are of long dates. This general rule is reversed when the situation is reversed. When discount-seeking paper bids low interest, and bank Managers believe that early improvement in time rates is in prospect, they prefer to put out their money on call, or on the shortest time, so that they shall soon again have it in hand to sell at the higher prices which they are confidently looking for.

There are other courses of reasoning that influence the action of banks in their selection of dates for their loans. They must aim to scatter and locate their maturities, and place them, as the seasons roll around, in a position to meet the reasonable demands of their customers, and avail themselves of the advantages which must come from being in funds at those seasons when special influences are sure to create large and profitable public demands for money.

The experienced banker knows, for instance, that at certain periods he may, if well intrenched, reap a harvest out of the calls for loans which are sure to come from the movers of various crops. At one period the cotton buyers

will be using vast sums of money, at another the wool men, at another the corn or the wheat or the hog crop will be clamoring for loans. And so we might go on.

He is a sagacious and successful banker who, from observation and large experience, is able to discern the signs of the times in the transactions we have described, and shows the most skill in navigating his loans with a view to making the most of the influences and the elements.

Here are illustrations of the way

#### CROP AND TRADE INFLUENCES

work upon the loan market and control the action of banks in the matter of regulating the rates and dates of the paper they pass into their discount files.

In the centres of the cotton manufacturing interests of the North—or rather in the financial centres of this industry—the banks may, in ordinary times and under ordinary circumstances, count upon a large demand for discount accommodations from the representatives of the cotton mills between the middle of October and the middle of January. In this period the bulk of the cotton crop is thrown upon the market; and in this season of the incoming of the great cotton tide the bulk of the purchases to supply the mills of the North are made. It is a time-honored saying among cotton consumers that a purchase before the holidays is always a good purchase. In carefully managed banks in cotton consuming districts resources are often husbanded to meet the wants of good customers who will press upon them in cotton buying months. As for the cotton growers themselves, it is a generally received idea that they are always in want of money and always receiving advances upon the coming crop.

Among the wool men—those who operate and deal in wool—there is, generally speaking, an active demand for money in the months of the wool clip—months which range with the latitude from April to June. Wool consumers buy at all seasons, since there are few reasons, other than the state of the markets and the state of their finances, to lead them to buy at one season more than another.

The wheat crop and the corn crop, viewed either from the stand-point of the producer or the dealer, are autumn consumers of money. The same may be said of crops in general, with the exception of the examples we have already given.

In some States there is an immense amount of money in tan pits. No reflection is intended upon one of the most solid and enterprising interests existing among us when this quaint financial remark is quoted.

He was a man of wide financial experience. He was asked, "At what time in the year do the tanners generally borrow?" His answer was, "Every day in the year."

It should here be noted that mid-summer and mid-winter are in the North apt to be periods of comparative stagnation in the money market.

#### DISCOUNTING WHEN A BANK'S RESERVE IS NOT UP.

We have already explained what are the reserve requirements of the National Bank Act. Further illustrating the subject we will here only explain the application of the reserve law to a single city. Take Boston for instance. A bank located in Boston is required by the Bank Act to keep a reserve of 25 per cent. of its deposits. The amount which it happens to be holding as a 5 per cent. fund in Washington may be counted as a portion of this reserve. Of the balance of this demanded reserve, one-half must be kept in lawful money—gold, legal-tenders or legal-tender silver—and the other half may be kept on deposit in New York in a bank or banks which have been regularly approved by the Bank Department at Washington as reserve agents, in which place of deposit in New York it may be earning all the interest it can without interfering with its character as a lawful reserve. It will be observed that the balance in New York, no matter how large it may be, can only count as a reserve to the extent of one-half of the 25 per cent. required by the reserve law. It will also be observed that only lawful money can be

counted as a portion of the home reserve. A bank may be carrying along a large quantity of National bank bills and a balance in New York largely in excess of the  $12\frac{1}{2}$  per cent. which the law permits as a reserve there and still not be up in its reserve in accordance with the demands of the law. In such a situation there are banks which will go on discounting and making loans, in the face of the law which says loans must not be made when the reserve is not up, by paying out for the loans made either National bank bills or New York funds, claiming they have a right to do so on the ground that they are not encroaching on their reserves. This course is not a proper one. The Bank Act says distinctly that loans shall not be made when the reserve is under, and the bank has then no right to use any of its assets in making loans, no matter what the character of those assets may happen to be.

#### BANK LOCKS.

Without doubt the best that can be used are of the self-operating time-combination class. These are the finest fasteners for the doors of bank vaults that have so far been invented. Unquestionably ingenuity exercised in the lock-making direction may in time develop new types of locks which will entirely eclipse anything in that line now in use and produce locks that will make those now recommended seem clumsy and antiquated. We have, however, to deal only with the present. The duty of every bank Manager is to see that the bank in his charge is provided with standard vaults and locks of the period. In the matter of caring for the property of his shareholders he is bound to exercise due diligence. In acting as the custodian of special deposits and collateral that are the property of his dealers the law will hold him liable for loss which is the outcome of negligence in not providing proper protection in the way of safe vaults, doors and locks. It is not a valid defence for a bank which has been entered by burglars to argue that it has taken as good care of the collateral upon which advances have been made as of its own special securities. It will be called upon to show that it has maintained the customary guard and that it has not fallen into hasty and careless ways.

Vaults and locks should be often examined, repaired, improved and exchanged.

As an illustration of the progress which has been made in the last few years in a single direction in the matter of material protection for the valuables of banks, it is interesting and important to note that the combination lock, which in its earlier stages was comparatively easily made a victim to Mr. Yale's wonderful micrometer, has now been so improved and perfected as to absolutely defy the searches of this little detector. Every bank Cashier should remember one remarkable fact regarding the modern combination lock. If not properly looked after, regularly and thoroughly examined and cleaned it will be liable to change its combinations. Instances where these locks have themselves changed their combinations have come under my notice.

#### MAKING TRANSFERS.

There are one or two points relative to transfers to which we wish to refer. In canceling the old—the retired—certificates, it is well to draw across their face emphatic ink-lines of cancellation and to cut from them a portion of their signatures. On these retired certificates entries should be made showing the date of their transfer and the page upon the transfer book recording it. These are little points, but there is a right way and a wrong way to do everything. The right way to cancel a signature of a stock certificate by cutting it is not to cut it entirely out but to cut clearly into it, so that the voucher shall show positively that it has been signed even after the cutting has been made. It may become, in some instances, a matter of no little moment to be able to show that a given certificate was once duly signed, though it has long been withdrawn and cancelled.

Here is the usual form of a share certificate, copied from one which had been withdrawn and cancelled in the manner above recommended :

STATE OF MASSACHUSETTS.

**First National Bank of Boston**

PAR VALUE \$ 100.00.

NUMBER 53

SHARES 42

THIS IS TO CERTIFY THAT Robert J. Rhodes of New York City is entitled to two shares in the Capital Stock of THE FIRST NATIONAL BANK OF BOSTON of One hundred Dollars each, transferable only in the Books of the Bank in person or by Attorney in person or by this Certificate.

Witness My Hand and Seal this 17th day of February 1885.

J. J. Rhodes Cashier

Sam'l. S. Rhodes President

CAPITAL \$ 300,000.

It will be noticed that the signatures have been annulled, as we have advised, in such a manner as to leave them in a condition to be easily recog-

nized. By this method of canceling, proof that the signatures have really been attached to the certificates is carefully secured. This affixed stamp is a very useful form. It quite readily explains itself :

**STOCK TRANSFERRED AND  
CERTIFICATE CANCELLED**  
*Nov. 20, '85. Transfer 3962.*

**Record checked by S. S., Pres.**

The initials standing after the words "record checked by" are those of the President of the bank, who, under the system of retiring certificates which we have recommended, makes a final supervision of their withdrawal and cancellation.

#### **BANK WASTE-PAPER BASKETS.**

These are a necessity, but a source of danger. It is not well for the officers of a bank to throw any of the waste paper that accumulates, as they work, upon the floor ; if they fall into this habit money or valuable documents may be lost by throwing them accidentally into the confused mass of litter under their feet. If the floors are kept scrupulously clear of all paper the fallen check or bill will at once attract attention and be rescued. The danger which lurks in the waste-paper baskets is that valuable papers may quickly be hidden in them, and soon be consigned to the janitor's rubbish heap, where an early sale or destruction ensues. We have described a good system for preserving a due time the contents of waste baskets. To these methods of their treatment may be added a suggestion that the contents of each basket be carefully examined by some one competent to distinguish valuable papers from worthless ones before they are emptied into the general heap.

#### **THE CASHIER.**

It is the duty of the Cashier of a bank having many departments and a large corps of officers to see that all this work is well and promptly performed, and to give his attention to a general oversight of the labors of his subordinates rather than to the personal discharge of the details of any division of the labor that is going on about him. The Directors of the bank have a right to expect that he understands all about the business. They are supposed to give him all the help he needs. They hold him responsible for the good conduct and faithful work of this help. In the running of the complicated machinery of which he is the executive head and chief manager he will find that a large share of his time is taken up in settling properly nice questions of action in the vast number of cases of practical banking which are brought before him by the heads of the various departments. He is expected to know the rights and duties involved in every case, and to decide safely and promptly on all matters at issue. Much of his time must also be consumed in holding audiences with dealers and the general public who for one purpose or another are often called calling upon "our bank."

Beyond the work and care described as particularly devolving upon the Cashier there is a round of duties supposed to belong especially to his department and to which he is expected to give particular attention.

#### **THE SPECIAL DUTIES BELONGING TO THE CASHIER'S DEPARTMENT OF NATIONAL BANKS.**

The Cashier is the chief representative of the bank in the matter of his signature. It is difficult for a bank to go behind it or do anything without it. Wherever he signs, in his official capacity, and within the limits of his authority, the bank is irrevocably held, and his authority is, as banks have discovered in cases where they have contested his signature, very wide. The limits set upon its binding power are quite well defined in several recent great legal contests—notably those in which Mellen, Ward & Mower involved the State Bank and Merchants' Bank, of Boston, and to which the United States was a party. These famous cases have been fully reported, and every student of banking, who wishes to follow further the point we have in hand,

is advised to make a careful study of them. In these suits the late B. R. Curtis made some of the most valuable and interesting presentations of facts and arguments bearing upon the Cashier's signature powers.

The Cashier of a bank signs, in connection with the President or Vice-President of the institution, all the circulating notes issued. If he does not do this in his own handwriting he does it in spirit through the hands of the printer, who stamps upon the bank bills the *fac simile* of his signature, of which the Cashier has careful custody, and, in its place, holds the bank fully responsible.

Attempts have been made by the bank authorities at Washington to deprive banks of the privilege of printing their signatures upon bills, but the condemnation of this practice by a Treasury Department which introduced and maintains the use of *fac simile* signatures on every variety of its own enormous issues is extremely inconsistent and has not been enforced.

The National banks are everywhere in the habit of using these labor-saving and extremely convenient stamped signatures upon their bills.

The Cashier draws the checks of a bank and affixes its endorsement where such is needed. In this signing the President may alternate. He signs, with the President, all its certificates of shares issued, and all the reports of the bank made to the Comptroller. To the latter the President's signature is not demanded.

#### THE CASHIER AND THE CORRESPONDENCE OF A BANK.

The Cashier of a bank is supposed to attend to all its correspondence, to send out all its letters, and to receive, open and reply to all letters addressed to the bank. If he does not do all this with his own hands and eyes, as he is likely to do where his bank is a small one and its correspondence comparatively light, he does it through his "doubles"—his Assistant Cashiers and Corresponding Clerks. Where what may be termed the more mechanical part of this correspondence business is deputized, as is the case in large banks, the deputies who may open and answer letters would be deemed entirely remiss in their duties if they allowed a single bank letter to come into or go out of the bank that should relate to anything not of the simplest routine character until both letter and reply were submitted to the Cashier.

In some banks the rule prevails that the Cashier shall sign every letter that the bank sends forth. As I have hinted, this cannot be done where the correspondence is extremely heavy, and in such cases the matter should be compromised by the establishment of a system requiring him to sign or revise all letters of special significance.

In the supervision and general conduct of the correspondence of a large bank, the Cashier who is ready to grasp at all short-hand processes will be quite sure to summon to his aid the stenographer and the type-writer. These two workers, if we may thus express ourselves, are now quite commonly combined in one person. The Cashier dictates to the stenographer and the stenographer turns to his writing machine and makes ready thereon a fair copy of the dictated letter, submitting the same to the Cashier for his approval and signature.

All young men entering banks and counting-rooms, who have good heads and fingers for these trades, are advised to learn short-hand and type-writing.

All telegrams coming to the bank should be handed over at once to the Cashier if he is present.

When the Cashier leaves the bank at the close of business hours, but before his officers have finished their labors, it is well for him to leave behind him an understanding that any incoming telegrams shall be opened by some superior officer, and by him sent to hunt for the Cashier if they are of imperative importance.

#### SPECIAL CARE OF THE OFFICE VAULTS.

The Cashier has in his particular charge the banking rooms which the institution occupies. If they are owned by the bank he sees that they are kept in proper repair, that the taxes and other dues upon them are discharged, and, if portions are underlet, attends to their rent contracts and collections. If the bank is simply a tenant he attends to the matter of lease and rent

payments, and looks after the landlord in regard to repairs that may be needed. It is his duty to see that the rooms are properly equipped for work, kept in order and neatness, that his officers are supplied with room enough for the work in hand, that they have the needful supplies for their departments, and as good light, ventilation and general working comfort as can be afforded, and that the officers who are by the nature of their duties best accommodated by being placed near each other have their locations thus arranged. He is bound to see that the dealers with the bank and the general public that patronizes it are supplied with necessary accommodations, and what are termed the public desks and counters kept in comely order, and supplied with the necessary stationery.

The vaults and strong rooms of the bank are in the special custody of the Cashier. It is his duty to see that the bank is supplied with accommodations of this class of approved and reliable character, and that they are kept in the best condition. If he does not personally lock and unlock his vaults he is expected to see that these matters are most carefully attended to, and to be extremely cautious in deputizing work of this character, for he is by the nature of his office held particularly responsible by the stockholders for the care of all the cash, securities and other valuables of the bank.

#### SPECIAL DUTIES.

There is a yearly round of special duties of the Cashier which come in the following order and character:

On the first of January, as well as on the first of many other months, the United States pays interest upon its bonds. These payments are now almost entirely made by direct remittances to the bond-holders of drafts on United States Sub-Treasurers. In former times holders of securities of this class were obliged to call at the office of the United States Treasurer or of his Assistant Treasurers, there collect their maturing interests, and sign on the Treasurer's books a receipt for the same.

It is the duty of the Cashier to see that he receives all maturing interest due the bank from whatever registered United States bonds the bank may hold, and, in order to conduct this business safely and easily, should have upon his *Vade Mecum*—a most useful auxiliary book I have in another place pictured and explained—an accurate record of all these registered bonds, with a classified statement of their maturing interest.

The opening of the year is a good time in which to make a settlement of all the outstanding bills against the bank for incidental expenses, and systematic Cashiers generally endeavor to square up all the bank reckonings at this date.

#### SEMI-ANNUAL RETURN OF CIRCULATION.

In order to enable the United States Treasurer to assess the duty upon circulation, which is one-half of 1 per cent., every half-year upon the average amount of each bank's notes in circulation, the Cashier of a National bank must, within ten days from the first of January and July of each year, make a return under oath to the Treasurer of the United States of this required circulation average. A bank not promptly making this return is liable to a penalty of \$200. But it is not probable that the Government would enforce this penalty for any slight accidental delay. It was put into the Bank Act for the purpose of punishing wilful neglect. This circulation return is made up in the following manner:

To ascertain the average amount of circulation, add together the daily balances of the notes in circulation from the proper date of the commencement of the liability to duty (including for each Sunday and holiday the balance of the first preceding business day) to and including the 30th day of June, or the 31st day of December, as the case may be. The aggregate of daily balances for the first six months of any year will be divided by 181—the number of days from January 1st to June 30th, except in leap-year, when the sum will be divided by 182. The aggregate of daily balances for the last six months of any year will be divided by 184—the number of days from July 1st to December 31st.

Banks not making daily statements, and obtaining their averages from weekly statements, should add together the weekly balances, including for each day in any

fractional part of a week one-seventh of the weekly balance next preceding such fractional part. The aggregate of balances for the first six months of any year will be divided by the number of weeks from January 1st to June 30th (25 6-7 or 26, as the case may be). The aggregate of balances for the last six months will be divided by 26 2-7—the number of weeks from July 1st to December 31st.

The Bank Act formerly required the banks to make a semi-annual return to the United States Treasurer of the average amount of capital, beyond that invested in United States bonds, average amount of deposits and average of circulation. This was when the banks were under a tax upon these three items, which they have now been relieved of with the exception of that upon circulation. The old law demanding these three returns has not actually been repealed, but it has become a dead letter because the object for which it was enacted has passed away.

Early in January the Cashiers of most National banks will find that they have on their hands the business of attending to the management of the annual meeting of their shareholders. At these meetings the President of the bank presides over such of the shareholders as can be drummed into attendance, and the Cashier serves as clerk. Every shareholder is entitled to one vote on each share held by him. Shareholders may vote by proxies, but no officer of a bank can act as a proxy. No shareholder whose liability on his shares is past due and unpaid can vote on them. As soon as the shareholders have chosen the Board of Directors the Cashier must at once formally notify them of their election by a notice like the following, a copy of one now in actual use:

---

#### FIRST NATIONAL BANK.

Sir:

New York, January 9, 1886.

At a meeting of the Stockholders of this Bank, held at their Banking Rooms this day, you were elected a Director for the year ensuing.

You are requested to attend a special meeting of the Directors this day at One o'clock P. M., for the purpose of organizing the Board.

Per order,

Saml. Davids, Cashier.

Mr. Henry Lincoln.

---

It will be observed that this notification also summons the Director-elect to a meeting of the Board at a later hour of the same day for purposes of organization. At this meeting the Directors take the oath of office, a notary public being present to administer and record this oath because he can do the work in the most formal manner and attest with his imposing seal. The Bank Act does not specify the manner of administering this oath to Directors, and a justice of the peace has, therefore, full qualifications for the work.

The Cashier must see to it that the oaths of the Directors are at once forwarded to the Comptroller of the Currency. The Directors are not qualified to serve until they have been sworn in. If they are not present at the first regular meeting after their election it is customary for the Cashier to send his notary, with a prepared oath form, to search for them at their places of business so that the oaths of the full Board may be sent to the Comptroller at once.

Every National bank is required to have not less than five Directors. In the other direction there is no limit to the number of Directors a bank may have.

Vacancies in a Board of Directors may be filled by the remaining Directors.

The Board, at its first meeting, chooses one of their number as President and, in some cases, another member as Vice-President.

A President of a bank cannot act as proxy at a shareholders' meeting.

The Cashier of a National bank must see that his semi-annual taxes on the circulation of his bank are paid some time in the month of January and

July. These taxes may be paid into any National bank which is a Government depository or direct to the United States Treasury.

The semi-annual dividends of many National banks are paid April 1st and October 1st. In banks where payments are made at these dates the Cashiers find the last half of March and September well filled with special duties relative to preparations for the dividends. They must see that the shareholders' dividend book is duly prepared, that the regular examination of the bank which always precedes the declaration of a dividend is duly attended to, that a complete statement of the net earnings of the bank upon which a dividend is to be based is drawn up, and, when the Directors have declared the dividend, must duly advertise it.

The Cashier must see that his lawful money reserve is well up to the requirements of the law when the bank makes a declaration of a dividend, for all declarations of dividends are forbidden when this is deficient. Within ten days after the declaration of a dividend he must report to the Comptroller of the Currency the amount of the dividend and net earnings in excess of the dividend. This report must be attested by the oath of the President or Cashier.

Once a year, generally in the month of May, the Cashier must return, under oath, to the Assessors of the town or city in which his bank is located, a complete list of his shareholders, with the amount of shares held by each and their legal place of residence.

National banks now quite generally assume and pay the tax on their shares ; but the list in question is necessary, so that the localities where their shares are held shall be duly credited for taxes paid upon them.

The Cashier of every National bank must keep a record of the names, residence and number of shares held by all his shareholders, and this record shall at all times be subject to the inspection of all the shareholders and creditors of the association and also to the inspection of the Tax Assessors in the locality where the bank is situated. A copy of this list, verified by the oath of the Cashier, must be sent to the Comptroller of the Currency on the first Monday in July of each year.

The Cashier is called upon not less than five times each year to make a return to the Comptroller of the Currency, on forms prescribed by him, of the condition of the bank. This statement, which gives in detail all the resources and liabilities of the bank, is called for at unexpected times, and when called for must be at once made up and returned to the Comptroller.

The Cashier must publish, in at least one newspaper in the place where the bank is located, an abstract of these returns to the Comptroller, and forward to the Comptroller proof of such publication. Where there is no newspaper in the town or city where the bank transacts business, a publication of the abstract in a newspaper in the same county will answer the purpose.

The National banks are required by law to hold their annual meetings for choice of Directors some time in January, the precise day to be fixed by the articles of association. As these meetings must be advertised at least thirty days in advance the Cashier must see that advertisements are inserted in the papers some time in December.

I have thus given a hasty summary of the yearly round of the leading special duties of the Cashier of every National bank, a list which shows he has his hands full of important details that must be carefully attended to. To discharge the duties of a Cashier properly requires a clear head, a thorough acquaintance with the theory and practice of banking, unswerving integrity, patience and persistence, and the most systematic habits of business. The man who attempts to fill the position in question without proper qualifications places himself under the harrow. He who is well equipped for doing this Cashier work may do it comfortably and creditably, and may take his place on the harrow rather than under it.

#### MAILING DIVIDENDS.

We have discussed the comparative advantages of the two systems of paying out dividends—that of mailing them to shareholders, and the other method, of ancient date, of requiring each shareholder to come in person or

by order and sign for his dividend on the books of the company making payment. Up to a recent period the last-named mode of distributing a dividend was the only one in use. To-day very many corporations are mailing all their dividends, and the number of companies adopting this mode is constantly increasing. The large railroads were the first to use this mailing method. The banks are rapidly following suit in the matter. In carrying out the mailing plan permanent orders for sending dividends by post are filed with the company, specifying that they shall be so sent until otherwise ordered. In mailing the dividend checks a printed form of letter may be advantageously used. The following form is used by the Chicago, Burlington & Quincy Railroad Company. Probably no railroad has a better system of administering the details of its office affairs than this company:

### CHICAGO, BURLINGTON & QUINCY RAILROAD COMPANY.

ASSISTANT TREASURER'S OFFICE.

49 Sears Building.

*Boston, December 15, 1885.*

*As requested in a permanent order on file in this office, I enclose herein my Check to order, on the Merchants' National Bank of this city, for the amount of Dividend of Two Dollars (\$2.00) per share, payable this day on Stock as of record November 21, 1885.*

*Yours truly,*

**E. E. PRATT,**

*Assistant Treasurer.*

**N. B.—Notice of any desired change of address must be sent me AT LEAST TEN DAYS before the Dividend is payable.**

**E. E. P.**

### QUERY ABOUT MONEY RESERVE.

Can a New York city National bank keep one-half of its lawful money reserve with some other National bank in the same city? The National Bank Act permits this. This is clearly laid down in Section 5195 of that Act. The New York banks have not been in the habit of availing themselves of the privilege thus given. They carry the whole of the 25 per cent. of deposits in lawful money in their own vaults. There is nothing to prevent them, if they so choose, from putting one-half of this 25 per cent. in the hands of some other National bank in New York, where it might be earning some interest. I am perfectly well aware that it is claimed that the Comptroller of the Currency has construed this reserve law, as far as it refers to the point we have in question, differently from the construction we have just given. But law is law, and I hardly see how the Comptroller can claim the right to say that a section of the Bank Act, which is in no ways obscure, is not to be read and understood according to its letter. The banks have the law before them for their guide. Comptrollers' decisions are not United States law except so far as they are entirely in harmony with the United States statutes.

It may be said that a reserve agent of a National bank must, in order to be acceptable, have the approval of the Comptroller. This is law surely; yet it was thus enacted to help to secure for the National banks sound places for the deposit of a portion of their reserve. It can hardly be imagined that a Comptroller would disapprove of a selected reserve agent on any other ground than a want of confidence in the bank thus selected. For illustration: If, according to the provision of the National Bank Act, the Importers & Traders' National Bank, of New York, should decide to put one-half of its reserve in the National Bank of Commerce, New York, would any Comptroller refuse to approve such a reserve agent? If he refused to give his approval on the ground that the bank selected was unsafe as a reserve agent

such a refusal would, of course, seem absurd. If he refused because he held that the selection in question was illegal an appeal to the letter of the law itself ought to settle the matter very quickly in favor of the action of the New York bank. In case of dispute a recourse would very naturally be had to the Supreme Court and not to Comptrollers' decisions.

Some person, writing upon the point we have in hand, has said that it appears to him that the carrying out of this idea of a New York National bank keeping one-half of its reserve in another New York National bank would simply result in a general exchange of reserves, without profit; or, as he exactly puts it, "more book-keeping and no profit." To make clear the incorrectness of this last statement let me give a simple practical illustration. Supposing there were but two National banks in New York city, and these were the First National and the Second National Banks, each with deposits of \$12,000,000. Under the law they would each be required to hold a reserve of \$3,000,000. Let the First National Bank, as the law allows, deposit one-half of its \$3,000,000 in the Second National Bank, and the Second National Bank one-half of its \$3,000,000 in the First National Bank, each receiving 2 per cent. interest upon the \$1,500,000 named, and each having, therefore, \$1,500,000 more to loan, less reserve held upon it, at 3 or 4 per cent. or whatever higher rates it might obtain. Is it not clear to see that each bank would make more money than it would if it kept its whole \$3,000,000 reserve idle in its vaults?

In discussing this reserve question we have nothing to say about the wisdom of a law which permits such a shifting about of reserves as described. We do not see anything more absurd in a New York bank keeping one-half its reserve in another New York bank than there is in a bank in Boston being allowed by law to keep one-half of its reserve in a bank in New York. The question very naturally arises, "Why does this last-named provision of the Bank Act exist? What is the Boston reserve kept in New York for?" The Boston bank is satisfied with the arrangement, because it gets interest upon money that would otherwise be idle. In the true sense of the word, this New York balance is much less a "reserve" for the Boston bank than it would be if it was loaned on call in Boston upon pledge of United States bonds or equally solid security.

In Boston, when New York funds are heavy, selling at a large discount, as they often do, in close times, it seems a far cry to Wall Street.

In some instances is it not a fact that this very money which the Bank Act calls a reserve of the Boston banks is loaned out on Wall Street upon pledge of securities not quite as solid as Governments?

I might note here that, in Pratt's excellent digest of the National Bank Act, a manual on the desk of many of our bankers, there is, on page 20, section 5195, an error in inserting "except New York." This "except New York" cannot be found in the Bank Act.

#### BANK SHARES HELD BY ESTATES—TRANSFER.

In some of the New England States, where the shares belong to the estates of deceased parties who have been residents of other States, transfers can be made, as before mentioned, without taking out letters of administration in the State where the bank is located. There are two ways of safely going through transfers of this type. One is by obtaining from the transferring party a bond of indemnity, securing the bank permitting the transfer from loss on account of the informality permitted, and the other method is to obtain from the Probate Court of the county in which the bank is located a special license authorizing the transaction. Below is an actual license-paper of this description:

#### COMMONWEALTH OF MASSACHUSETTS.

COUNTY OF SUFFOLK PROBATE COURT, ss.:

I, JOHN DOE, Register of the Probate Court in and for said County of Suffolk, hereby certify that, at a Probate Court holden at Boston in and for said County on the 27th day of July in the year of our Lord one thousand eight hundred and eighty-five, Arthur H. White, appointed by the Probate Court for the County of Kennebec, in the State of Maine, Executor of the will of Margeret Oliver, late of Waterville, in said State

of Maine, deceased, and duly qualified and acting as such Executor, was licensed to sell, transfer and convey—or to receive or otherwise dispose of—thirty shares of capital stock of the First National Bank, personal property which he is entitled to as such executor.

I also certify that it appears by the records and files of said Court that said license is now in full force.

In witness whereof I have hereunto set my hand and the seal of said Court this twenty-seventh day of July in the year of our Lord one thousand eight hundred and eighty-five.

JOHN DOZ, *Register*.

#### MUTUAL RELATIONS OF BANK OFFICERS.

We here take a glance at what may be termed the correlations of the banking business, and will show how the various departments and officers in charge are related to one another and intertwined and connected in the routine operations which relate to the management of banking details. In taking this view of the whole corps of officers and their work we must look at the bank which they are running as an entire and complete machine, all the wheels in motion, the whole concern in actual operation and doing its accustomed work with regularity and success and with as little friction as possible. The President, if there is a working officer of this description, stands at the head of affairs, presiding over the meetings of Directors at which all the most important questions relating to the management of the funds of the bank are decided and where the general policy of its administration is discussed and settled. In the interims between the regular meetings of the Board the President is supposed to do nothing relative to the management of his bank not in harmony with the ideas of the Directors, as far as he has been able to ascertain them, and he is also supposed to be in daily consultation with individual members of the Board, particularly those of the Finance Committee, as they from time to time drop in upon him.

The Vice-President, if the bank has one, is a "double" of the President. When the President is absent he assumes his full duties, and when he is present he assists him in the presidential work.

The President looks upon his Cashier as his chief executive officer, and bears somewhat the same relations to him as the captain of the steamer does to his first officer, or the colonel of the regiment to his lieutenant-colonel. He holds him responsible for carrying out the orders executing the will of the Board of Directors, expects him to manage in full the details of the business of the bank, to be responsible for the general administration of affairs by his subordinates, and to be a faithful and skillful counsel and adviser in all matters relative to the affairs of the institution. The Directors are supposed to give the Cashier all the officers he needs for the various departments in his charge, and through their President they hold him responsible for the general faithfulness of these subordinates. The Cashier is an official through whom all the business of the bank may be said to pass. He stands at the head of the establishment, distributes the work, watches its progress, and receives and sums up the results. He stands, as it were, at the gate of the bank, welcomes all who have legitimate business with the institution, receives its correspondence, scatters its contents, whether they are enquiries or remittances, among the departments and officers to whom they belong, and sees that due credits are given, needed replies made, and prompt acknowledgments rendered.

The Cashier, or his direct assistants, checks off the remittances which reach the bank through the mails, receives from the President the paper which has been discounted by the Board, and passes it over to the Discount Clerk for computation and credit.

The Discount Clerk, the official whose sole duty in a large bank is that of calculating the discounts on paper taken by the bank, and filing, recording and attending to the collection of the same, passes the proceeds of all discounts to the Receiving-Teller for credit, to the Cashier for remittance, or pays out the net amounts directly through the hands of the Paying-Teller. As the in-town paper in his files matures he gives the same to one of the Tellers to collect. His out-of-town paper he passes over to the Cashier's

department a sufficient time in advance of its maturity so that it can be sent forward for collection at the points where it is payable. He compares his daily records of maturing paper and discounts paid with the figures on the books of the Paying-Teller and the Receiving-Teller, which must tally with his transactions.

The two Tellers compare their daily balances with those of the Bookkeeper.

The Cashier gathers from the books of the various departments of the bank a comprehensive abstract of all the receipts and disbursements, and makes up a summary of figures which must accurately show in outline the entire transactions of the day.

The Collection Clerk, whose duty it is to take in charge and collect all paper which comes into the bank for collection, other than that which goes at once as cash into the hands of the Teller, is brought into direct connection with the Messenger, who is a deputy of his, and this latter officer makes returns of work to the collection department.

The Book-keeper makes those detailed debits, credits and balances which are the outcome of the transactions in all the other departments, and his pages are both a history and a present statement of the bank's cash affairs.

#### TRANSFERRING POWERS OF TREASURERS.

The Kingston Savings Bank held shares in the Eleventh National Bank of New York, which it had sold and wished to transfer. Their broker in New York presented himself at the Eleventh National Bank with the certificates of the sold shares and a power of attorney signed by the Treasurer of the savings bank, and duly witnessed. Accompanying the power and the certificate was a copy of a vote stating that at a meeting of the Board of Investment of the savings bank the Treasurer was authorized to sell and transfer the shares in question. All these papers thus presented, and calling for a transfer, were in the handwriting of the Treasurer, entirely unsupported by any other names, seals or anything else of a substantiative character. The Eleventh National Bank rightly declined to make the transfer under these circumstances, saying that the whole thing savored too much of the one-man power of doing business.

The things needed in such cases are a duly sealed and witnessed copy of a vote of the Board of Directors or Investment Committee of the bank, showing that the Treasurer has full authority to make the transfer.

When the delegation of the power has been made by an Investment Committee the signatures of a majority of the committee should be affixed to their vote of authorization.

Some bankers take the ground that a copy of Directors' votes or by-laws, showing the power of the Investment Committee, should also be furnished the transferring bank. But it is more generally held that the power of sale and transfer inheres in the Investment Committees of Boards of Direction.

Where the authorization to sell and transfer emanates directly from the Board of Directors, a copy of the special or general vote of this authorization, signed by the clerk, sealed and witnessed, and accompanied by an approval of the President of the Board, is the most desirable form of paper that can be presented to a transferring bank.

#### CANCELING CHECKS.

After paying and duly charging a check banks have a custom of canceling them by punching or making some eccentric cut through their face. There is a point connected with this method which requires notice. Bank Tellers and Book-keepers sometimes cancel checks by mistake. They will, by error, put their punch or cutter through them when they have not been paid and are not to be paid by them for the reason that they are drawn upon some other bank. The canceling is generally considered an evidence of payment or a proof that a check has reached the end of its route. It is therefore the plain duty of any bank which has punched a check wrongfully to make at once, before it has been passed along to the bank upon which it is drawn, a formal record upon the check, and directly under the punch, that the punching has

been done by mistake. This record should be made by the officer who has made the cancellation.

Whenever a check reaches a bank upon which it has been drawn with a punch or cut in it that has been made, as we have described, by error, and yet has no certification upon it of who has made the error, it is the custom and duty of the bank upon which it is drawn and which is about paying it to send it back to the bank or party from whom it has been received in the process of collection, with a demand that the cancellation error shall be guaranteed or duly certified as having been made by mistake.

The question very naturally arises here whether or not a bank upon which a check is drawn would be justified in refusing to pay it if it came to it mutilated in the manner described, provided it could not secure from any previous holder the guarantee or certification mentioned. We reply that, if the check and its presentation were all right in other respects, no bank could be justified in flatly refusing to pay it simply on the ground that it had a cut or a hole in it.

#### ENGLISH PRACTICAL BANKING.

I have called the reader's attention to some novel points in every-day English bank practice. Here are a few other interesting and suggestive facts:

It is the custom in many of the English banks to pay such checks of a customer which come in through a morning's clearing as are within the amount of his balance and to return the rest. This is a method which I have decidedly condemned when discussing this point elsewhere. I now find that the Bank of England treats a failing balance precisely as we have advised. Where a customer's credit balance is insufficient to meet all the checks which pour in upon it at clearing the Bank of England pays none of them—sends them all back through the clearing, with the "N. S." report upon them, a label which, in English banking, means "not sufficient funds."

Another English banking abbreviation is "R. D.," meaning about the same as "no funds," but literally translatable "Refer to Drawer."

London banks endeavor to hunt up drawers of checks which reach them through clearing in a technically incorrect condition, and thus try to have them put right without a recourse to endorsers and drawers through the Clearing-House path.

English banks do not certify checks; all checks paid are returned to the drawers, after the drawers have acknowledged them to be correct and receipted for them.

There is no grace on sight drafts in England.

Bills due on "bank holidays" are payable the day after. Those due on Sunday, Good Friday, Christmas Day, and regularly proclaimed days of fast and thanksgiving, are payable the day before.

#### STOPPING PAYMENT OF LOST VOUCHERS.

In this country and in England—in fact, in all the leading countries of the civilized world—a security payable to bearer is good in the hands of an innocent—a *bona fide*—holder.

We hear a good deal about stopping payment of lost and stolen Bank of England notes, and many writers seem to take it for granted that, if a person has lost one of these notes, he has only to rush to the bank of issue with a statement of its marks and numbers in order to save himself. But, though it is a fact that the Bank of England permits any one who has the dates of a lost note to go through the form of "stopping its payment," it is also a fact that there is nothing in such a "stop" that will in the slightest invalidate the claim upon the bank of any innocent holder of the stopped note.

The status of this question is not quite so satisfactory in Egypt, and possibly in other "outside" countries. I have known of cases where holders of Egyptian bonds have been inconvenienced by the intimation from the Egyptian Government that their particular numbers had been stopped either through theft of the bonds or other irregularity. The world of finance is becoming very compact, and uniform rules should govern in such a matter as in all other details of financial administration.

## BANKING LAW.

### \* LEGAL DECISIONS AFFECTING BANKERS.

#### SAVINGS BANK—POWER OF TREASURER TO BORROW MONEY.

B was the Treasurer and Secretary of the plaintiff, a savings bank, and in these capacities transacted its usual business. B fraudulently obtained a loan of the defendant in the name of the plaintiff and ostensibly for its use. To secure the payment of the moneys thus borrowed he pledged certain bonds to the defendant, the recovery of which is sought in the present suit. The funds thus realized were appropriated by B to his own use. The fact of B's fraud was not disputed, the point in the case being whether B had been actually or apparently clothed with authority to borrow moneys for the plaintiff and to place its securities as collateral. The Court below held that he had no actual authority to borrow money incident to his office, and submitted the question of fact as to whether he had been clothed with such authority by the plaintiff to the jury. The jury brought in a verdict for the plaintiff, and defendant appealed.

*Held*, That the power claimed did not exist *virtute officii*; that it would be truly disastrous to these valuable institutions if they cannot appoint a Treasurer and deposit in his custody their moneys and securities without such situation giving rise to an inevitable inference that such official has been clothed with an unlimited capacity to contract loans and sell and pledge such securities.

Further *Held*, That it was a proper matter to submit to the jury as matter of fact whether or not the plaintiff had put its Treasurer in such an attitude before the public, or before this defendant, as to have warranted a reasonable inference that he was its general agent and had the right to execute the transaction in question.

Judgment affirmed.

Fifth Ward Savings Bank of Jersey City vs. First National Bank of Jersey City, Supreme Court of New Jersey, November 5, 1885.

#### MUNICIPAL BONDS—PURCHASERS' RISK.

By a special Act of the New Jersey Legislature the Board of Chosen Freeholders of Bergen County, a municipal corporation, were authorized to issue certain bonds with which to take up old bonds as they matured. The Act contained certain requirements as to the bonds. The old indebtedness having been all paid, the Collector of the county, without authority, pledged certain of the bonds remaining over for an individual indebtedness. These bonds were not authorized by the Board, and they brought suit against the holder to have them declared void.

*Held*, That the Board of Chosen Freeholders never directed or permitted their issue. That the law under which it derived all its powers provided only for the issue of the bonds to meet the indebtedness from those then about to mature. All such maturing bonds had been surrendered for the new bonds, except a small amount which was paid in cash. The power of the Board under the law was then exhausted. Any further issue was beyond

\*All the latest Decisions affecting Bankers will be found in this Department as early as obtainable. The Editor of the Law Department of RHODES' JOURNAL will furnish, on application of Subscribers, further information regarding any case referred to herein; he will also answer questions in banking law which may be of sufficient general interest as to warrant publication in this Department. A reasonable charge is made for special Replies asked for by Correspondents and not authorized for publication.

its authority. Unless, therefore, there was something in connection with their issue to estop the Board from contesting their validity, they can in no manner bind the county. This is not a case where there existed in the Board a general power to issue negotiable securities, so that parties would be justified in taking them when properly executed in form by its officers. It is a case where there was no power except as specially delegated by law for a particular purpose. All persons taking securities of municipalities having only such special power must see to it that the conditions prescribed for the exercise of the power existed. As an essential preliminary to protection as a *bona fide* holder, authority to issue them must appear. If such authority did not exist, the doctrine of protection to a *bona fide* purchaser has no application.

There is a class of cases where recitals in obligations are held to supply such proof of compliance with the special authority delegated as to preclude the taking of any testimony on the subject and estop the obligor from denying the fact. These have generally arisen upon municipal bonds, authorized by statute, upon the vote of the majority of the citizens of a particular city, county or town, and in which certain persons or officers are designated to ascertain and certify as to the result. If in such cases the bonds refer to the statute and recite a compliance with its provisions, and have passed for a valuable consideration into the hands of a *bona fide* purchaser, without notice of any defect in the proceedings, the municipality has been held to be estopped from denying the truth of the recitals. In the bonds in question, however, there are no recitals. The bank in taking them was bound to ascertain whether or not they were authorized. Had it examined the register of the bonds issued to take up the matured bonds, which was a public record of the county and open to inspection, it would have learned that the bonds which it received were not of the number thus authorized. Contented to rely upon the unsupported representations of the Collector pledging the bonds, it cannot now cast upon the county the consequences of its own mistake.

Judgment declaring bonds void.

Merchants' Exchange National Bank vs. Board of Chosen Freeholders,  
Supreme Court of the United States, November 16, 1885.

#### DEPOSIT WITH CASHIER—LIABILITY OF BANK—STATUTE OF LIMITATIONS.

Suit was brought by Charles Hughes, guardian of E. Bell, against the First National Bank of Waynesburg to recover the amount of certain bonds deposited with the Cashier of the bank in 1871, and the interest of which had been paid up to 1876. It appeared on the trial of the Cashier for embezzlement in 1877 that the bonds had been deposited in 1873 as collateral for the bank's debt, and on its non-payment had been sold. Assurances were given constantly by the Cashier that the bonds were safe and would be returned when wanted. The defense claimed that the Cashier of a bank has no authority, by virtue of his office, to receive bonds for safe-keeping on behalf of the bank, and the bank was, therefore, not liable. The Court below directed a verdict for the defendants on the ground that the suit was barred by the Statute of Limitations, it not having been commenced until 1882. Plaintiff claimed that the fraud was not discovered until April, 1876, and that the Statute of Limitations did not commence to run until that time. On appeal the Court

*Held*, It may be that, in the origin of this transaction, the bank was not responsible for the bonds. They appear to have been received for safe-keeping by the Cashier as an individual transaction and for the accommodation of the plaintiff. There is no trace of any authority from the Board of Directors to receive such deposits. But when the Cashier pledged the bonds for the debt of the bank the matter became a transaction of the bank, the fraud of the Cashier being the fraud of the bank, and his concealment of the pledge became the bank's concealment. The bonds were subsequently sold by the pledgees, and went to pay the bank's debts. The bank cannot retain the fruits of the crime and repudiate the fraud of its agent. No authority is needed for so plain a proposition. The deposit was made in 1871; the

suit was commenced in February, 1882. It was not until April, 1876, that the plaintiff was informed that the bonds had been pledged and sold and the proceeds credited to the bank. The plaintiff had previously called at the bank to get the bonds, but was met with various excuses, such as that the bonds had been sent to Pittsburgh for safe-keeping, and the bank continued to pay him the interest even after they had been sold. This was a fraud and concealment well calculated to throw the plaintiff off his guard. The concealment of the fraud prevented the running of the Statute. From April, 1876, until the commencement of the suit, was less than six years. The jury should have been instructed that if the fraud was concealed from the plaintiff until April, 1876, the plaintiff's claim was not barred by the Statute.

Judgment reversed.

Hughes vs. First National Bank of Waynesburg, Supreme Court of Pennsylvania, October 19, 1885.

---

PAYMENT OF ALTERED CHECK—LIABILITY OF BANK.

Plaintiff, intending to be absent for several days from his place of business, on the 20th of April drew his check on the defendant for \$700 to the order of his clerk, dating it April 22d. The amount was to be drawn by the clerk to pay wages due employes on the 22d in case the plaintiff did not return. The clerk altered the date of the check to the 21st, drew the funds on that day, and absconded.

*Held*, The check as drawn conferred no authority on the bank to pay the amount for which it was drawn out of the plaintiff's funds before its date. Such payment did not, therefore, justify the bank in charging the check to the plaintiff. The bank undoubtedly had the same right as any other person to purchase a post-dated check and enforce it against the drawer in case of his liability thereon. This right to enforce payment, however, depended upon the question as to whether the purchaser became a *bona fide* holder of the paper, and, also, whether it was then a valid obligation of the maker. A material alteration of its terms after execution and before payment would destroy its validity. A change in its date, whereby the time of its payment was accelerated, was undoubtedly such an alteration. The check was not, therefore, a legal obligation enforceable against the drawer by its owner and holder.

Further *Held*, That there is no principle upon which the defendant has the right to charge the check in question for any amount to the plaintiff.

Judgment for plaintiff.

Crawford vs. West Side Bank, New York Court of Appeals, October 6, 1885.

---

PROMISSORY NOTE—COMPELLING ADMINISTRATOR OF PAYEE TO INDORSE.

Where the payee of a note had, for a valuable consideration, transferred it to the holder, but through mistake had failed to indorse it,

*Held*, In an action in equity against the Administrator of the payee, to compel him to indorse it, that such action was properly maintainable.

Hodge vs. Cole, Supreme Court of Massachusetts, September, 1885.

---

PROMISSORY NOTE—ATTORNEY'S FEE.

In a suit to compel the payment of an attorney's fee stipulated in a promissory note.

*Held*, That contracts for the payment of attorney's fees are only upheld upon the ground that they are a reasonable indemnity against loss actually and necessarily occasioned by failure of the payor, and where expenses are unnecessarily, or where none are actually incurred, the contract cannot be enforced. The stipulation for the payment of attorney's fees only becomes operative when expenses have been actually and necessarily incurred in the employment of an attorney for the enforcement of collection consequent upon

the failure of the payor to keep his engagement, and then only to the extent of the expenses actually paid, or to be paid, or reasonably chargeable.

Goss vs. Bowen, Supreme Court of Indiana, October 10, 1885.

## REPLIES TO LAW AND BANKING QUESTIONS.

*Editor Rhodes' Journal of Banking:* POUGHKEEPSIE, N. Y., December 23, 1885.

SIR.—A country bank known as A, receives from B, its city correspondent, a note for collection, payable at a private banking house. A sends the note for collection to C, another country bank, located within ten miles of the place where the note is payable. On the day the note is due it is paid by the maker at the private banking house, and on the same day the latter send a draft on New York to C for the proceeds of the note, and on the same day they fail and close their doors, the draft received not being good. C fails to make any returns to A, claiming that they are not liable, having used due diligence by demanding in person the next day after the failure of the suspended house a return of the note or its equivalent in money. Can A recover from C? Please answer above in your next issue, and oblige, A. J. KETCHUM, *President*.

*Answer.*—We think this case falls within the ruling in *Indig vs. National City Bank*, 80 N. Y., 100, and that C would not be held liable for negligence in the matter of taking the draft in payment. In that case a collecting bank mailed to a bank in Lowville, N. Y., a note there payable, and received by mail a draft on New York in payment thereof, which was dishonored by reason of the failure of the Lowville bank. The collecting bank was sued for negligence, and the Court of Appeals held that there was no negligence shown. In the case of C, the very same thing was done, viz., a draft was taken on New York in payment of the note. The Court of Appeals, in the case referred to, say:

"The loss occurred through the subsequent failure of the bank and the consequent non-payment of the draft. The same result ensued which would have taken place if the defendant had sent the note to a third party as sub-agent for collection. Such sub-agent would have been authorized, under the circumstances of the case, to surrender the note to the bank on receiving its draft on New York, because the proceeds were not to be used in Lowville, but to be transmitted to the defendant in New York or Brooklyn. There is no proof in the case that, if the note had been presented by a third party at the counter of the Bank of Lowville, it would have been paid in cash, but assuming that it would, it would have been the duty of the agent to transmit the funds to the defendant, and a proper method of doing this would have been to purchase a draft on New York."

*Editor Rhodes' Journal of Banking:*

DEXTER, Me., December 19, 1885.

SIR.—The following questions are suggested by correspondence in your last number:

1. If a bank holds a protested note (of its own), the endorser for whom the note was discounted having funds on deposit, can the note be charged against such deposit, and the same held as against outstanding checks?

2. Is the right and duty of a bank, respecting paper held for collection under the above conditions, the same as with paper of its own, as to both promisor and endorser, or either?

I find the JOURNAL interesting and instructive, and shall be glad to continue my subscription.

C. W. CURTIS, *Cashier*.

*Answer.*—1. Yes. A bank has a lien on the deposit of its customer for any indebtedness due by him, and has a right to set off amount of such indebtedness.

2. The second inquiry is, whether a bank holding a note for collection which is not payable thereat, and having funds on deposit of the maker or indorser, has a right, in case the same is protested, to apply such funds to the payment of the note. We do not see how a bank would have any such right without the authority of the depositor so to do. In this case the bank is only the agent of the owner of the note to present the same for payment and, in case of a refusal, take the necessary steps to preserve the liability of the indorsers. When this is done it has performed its whole duty. To apply the funds of the depositor to the payment of the note, without

instructions from him, after he had refused to pay it, would, we think, be wholly beyond its powers. Perfectly good reasons might exist why the note should not be paid which might be entirely unknown to the bank. This is different from a case where a note is made payable at a bank, for in that case the maker, by making it so payable, may be considered as authorizing the application of the deposit to its payment without further instructions. This was stated to be the general rule in our last number, although in Illinois the Court held that a bank had no right to apply its depositor's funds to the payment of a note there payable without his instructions. It is also different from the case put in question 1, for in the former the bank was the owner and, as such, had the right to set off its customer's deposit for any indebtedness due it. In the present case the bank is not the owner and creditor, but simply the agent of the owner for collection, and, as there is no indebtedness to it on the part of its depositor, it cannot take his funds to satisfy an apparent indebtedness to its principal.

*Editor Rhodes' Journal of Banking:*

ALBANY, N. Y., November 23, 1885.

SIR:—Will you kindly answer the following case in your valuable JOURNAL, without mentioning who makes the inquiry. We came near being caught in this way some time since, but were fortunate enough to get open during the morning without breaking the safe:

What would be the proper course to pursue in a case like the following? The safe, which has a time-lock, refuses to open at the proper time in the morning, and the lock shows, from the turning of the dial, that something is out of order. No one in the bank is able to open the safe, and it would take about thirty hours to break it open. All paper falling due that day is locked up in the safe, and it is impossible to get it out, therefore the notes, acceptances, etc., cannot be presented where they are made payable, nor can a notary present them to demand payment. From the books of the bank copies of the papers can be made and presented, with an explanation of the trouble at the bank; but, in case of a refusal to pay except upon the delivery of the original, how can the *endorsers* be held? Some of the papers may be made payable at other banks, but the banks could not pay them unless the original notes or acceptances were delivered. Protesting a copy of a paper would not hold, as a notary must present the paper itself when he makes his demand. Respectfully yours, CASHIER.

*Answer.*—We think the instruments should be treated as lost paper, and copies thereof made out and demand made thereupon, accompanied with a tender of indemnity against the production of the originals. In case of refusal to honor, protest and notice should be made and given upon the copies.

Our correspondent is mistaken in supposing that the *indorsers* would not be held by demand, protest and notice on a copy.

In Daniel on Negotiable Instruments, it is said:

"§ 1464. The loss of a bill or note is no excuse for want of demand, protest or notice, because it does not change the contract of the parties, and the drawer and indorsers will be at once discharged if there be failure in respect of either the demand, protest or notice.

(Citing) 3 Camp., 164.

6 M. G. & S., 196.

"This rule applies whether the bill has been accepted or not; for the loss of the instrument does not relax the duty of the holder to make the demand for acceptance within due season. And it is well settled that demand, protest and notice upon a copy, when the original is lost, is as effectual as if made upon the original itself.

(Citing) 5 Conn., 321.

1 Shaw, 166.

## LAW EDITOR'S NOTES AND COMMENTS.

### POWERS OF BANK CASHIERS.

The Law Editor will give, commencing with the next number, a series of short articles on the powers of Cashiers of banks, legally considered, in which he will review briefly the various legal decisions defining their powers and stating what they have and what they have not the power to do, and the cases in which these officers have been held liable for acts beyond the scope of their authority.

## BANKING AND FINANCIAL NEWS:

WITH COMMENTS ON THE MORE IMPORTANT MATTERS. THIS DEPARTMENT ALSO INCLUDES: A COMPLETE LIST OF NEW BANKS, CHANGES IN OFFICERS, DISSOLUTIONS AND FAILURES.

**\* Call for United States Bonds.**—On December 29th was issued by the Secretary of the Treasury the 132d call for United States bonds, being for the redemption of bonds of the three per cent. loan of 1882. He gives notice that the principal and accrued interest of the bonds herein below designated will be paid at the Treasury of the United States, in the city of Washington, D. C., on the first day of February, 1886, and that the interest on said bonds will cease on that day, viz:

Three per cent. bonds issued under the Act of Congress approved July 12, 1882, and numbered as follows:

\$50—original No. 299 to original No. 303, both inclusive, and original No. 1,314 to original No. 1,367, both inclusive.

\$100—original No. 2,166 to original No. 2,204, both inclusive, and original No. 9,564 to original No. 9,863, both inclusive.

\$500—original No. 1,076 to original No. 1,090, both inclusive, and original No. 4,048 to original No. 4,200, both inclusive.

\$1000—original No. 9,787 to original No. 10,012, both inclusive, and original No. 23,011 to original No. 23,537, both inclusive.

\$10,000—original No. 17,401 to original No. 18,364, both inclusive; total, \$10,000,000.

The last previous call was dated September 26, 1884, the bonds (\$10,000,000) being payable November 1, 1884. Thus we see that the payment of the public debt has been suspended for fifteen months, principally on account of the fear that the Treasury surplus of gold would be replaced by silver.

**Boston Bankers Talking.**—The regular monthly meeting of the Boston Trade Club was held at Young's Hotel on the evening of December 3d, Mr. D. H. Darling presiding. Among the guests were, Daniel Needham, ex-Bank Examiner, Mr. C. Curry, Savings Bank Commissioner, and Mr. J. W. Magruder, National Bank Examiner for Boston. After dinner President Darling made a brief address, in which he outlined the topic of discussion for the evening, and then introduced as the first speaker Colonel Needham. He gave his experience as a bank Director in 1844, when it was considered a great thing to be such an official. "Then the stock-holders attended the meetings and the business men always endeavored to get on the right side of the Director. In those times, particularly in country banks, we knew the standing of every man in the community. A man could not get his paper discounted in any bank outside of his district without creating suspicion. Nowadays the note broker comes in and the borrower does not come in direct contact with the officers of the bank. Business may now be done on a safer basis than formerly, but I do not think so. We shall probably never go back to the old ways and customs. Business has changed. Let a man who twenty years ago made a fortune embark into the same business nowadays and he is sure to go to the wall. Business must be done in the business principles of to-day, not of to-morrow or yesterday. If the men of Boston who years ago would walk up State street at twelve o'clock, the hour of 'change, and talk of the East Indian trade, could be brought back to life, they would not recognize the customs of to-day. I do not know that there are any more failures to-day in proportion to the amount of capital invested than there were in former years. There are no such panics as there were, and we can safely say that the country is firmer and more stable from its bitter financial experiences. Their experiences have made the American people different from any other on the globe."

Mr. C. Curry, State Savings Bank Commissioner, was the next speaker. "The savings bank," he said, "is a most democratic institution. The Massachusetts system was founded in the following manner: A philanthropic gentleman suggested that the poor man should be aided, not by giving alms, but by encouraging habits of thrift and economy.

In 1816 the first legislation in this State as regards savings banks was enacted, and the Provident Institution for Savings was chartered. The deposits of the savings banks in Massachusetts to-day amount to over \$200,000,000, with an average of \$160 to each depositor. The number of depositors of \$50 or less is 300,000 and the whole number 850,000, of whom 400,000 are females. The investment of the deposits is a very important matter, first that the securities should be good, and at the same time yield a profitable return to the depositor; and, second, it is of vital importance to the Commonwealth that the savings banks should be kept in existence." The speaker cited several instances that occurred in 1871, where savings banks had been defrauded by unscrupulous parties and by speculations in real estate, which, for a time, cast a shadow on the reputation of the Massachusetts system of savings banks that before had stood the highest of any in the country. But they have rallied, and to-day stand on a firm basis. "These banks are not only beneficial in a financial way, but in an educational point of view as well. They teach the great mass of our foreign population to acquire habits of thrift and to learn to take care of their money. Strange as it may seem, there are only a few States in which savings banks are successful. They are the outgrowth of certain conditions of society where the population is established, where there is a large number of workers, and where there is a feeling of business confidence. In the New England States they are rapidly accumulating."

Mr. J. W. Magruder, Examiner of the National Banks of Boston, was introduced by the President. He answered several questions propounded by the members on the New York weekly bank statement, how it was made up and classified. The discussion was continued by other gentlemen present.

**Secretary Manning's Report.**—The annual report of the Secretary of the Treasury shows the total receipts of the Government, actual and estimated, for the current fiscal year to be \$315,000,000; total expenditures, including sinking fund, \$290,750,000; estimated surplus, \$24,250,000. For the fiscal year 1887 the total estimated ordinary receipts will be \$315,000,000; the estimated expenditures, \$292,680,552; and the surplus, \$22,069,447.

Under the provisions of the law, United States bonds and fractional currency to the amount of \$45,604,086 were redeemed and applied to the sinking fund during the past fiscal year. The requirements of the fund for the present fiscal year, computed upon the same basis as in former years, will aggregate \$49,000,000. It is believed, however, that the intent of the law will be fully complied with if, in determining the amount to be applied to the fund, the aggregate of the various coin and currency certificates which are held in the Treasurer's cash, as well as the cash in the Treasury available for the reduction of the debt and the amount held as a reserve for the redemption of United States notes under the Resumption Act, shall be deducted from the outstanding principal of the debt, and the bonds issued to the several Pacific railroads added thereto. The amount required to be applied under this method, including interest on bonds previously redeemed, is estimated at \$45,750,000.

The report is largely taken up with the subject of currency reform, which, it says, is first in the order of importance and of time, and fitly precedes other reforms, even taxation reform, because it will facilitate all other reform, and because it cannot safely be deferred. The Coinage Act of 1873 is overloading the Mints with unissued, the Sub-Treasuries with returned, silver dollars, and will unavoidably convert the funds of the Treasury into those depreciated and depreciating coins. The disorders of our currency chiefly arise from the operation of two enactments:

1. The Act of February 28, 1873, which has been construed as a permanent appropriation for perpetual Treasury purchases of at least \$24,000,000 worth of silver per annum, although, from causes mostly foreign, that metal is now of mutable and falling value, which must be manufactured into coins of unlimited legal-tender and issued to the people of the United States as equivalents of our monetary unit.

2. The Act of May 31, 1878, which indefinitely postponed fulfillment of the solemn pledge (March 18, 1869), not only of "redemption" but also of "payment" of all the obligations of the United States not bearing interest, legalized as \$346,000,000 paper money of unlimited legal-tender, and required the post-redemption issue and re-issue of these promises to pay dollars as equivalents of our monetary unit. But these two evils, which are each a separate menace to the public tranquillity and injurious to the public morals and the public faith, do not double the difficulties of a reform of the

currency. Their concurrence may even assist Congress to provide the people of the United States with a better currency than the best now possessed by any nation; a currency in which every dollar note shall be the representative certificate of a coin dollar actually in the Treasury and payable on demand; a currency in which our monetary unit coined in gold (\$550,000,000) and its equivalent coined in silver (\$215,000,000) shall not be suffered to part company.

Such a reform of the whole currency of the United States (setting aside the National bank notes, which are diminishing and well secured) can be undertaken and finished subject to the following conditions:

1. Without shock or disturbance to the industries, the business enterprise, the domestic trade or foreign commerce of the country.
2. Without degrading the United States monetary unit of value to a cheaper dollar, and without raising the United States monetary unit of value to a costlier dollar.
3. Without loss to any who now hold the promise of the United States to pay a dollar.
4. Without reduction of the present volume of the currency or hindrance to its free increase hereafter when every dollar note shall be the certificate of a coin dollar in the Treasury payable on demand.
5. Without pause in the reduction of the public debt, but paying more than three-fifths of all that part of the debt now payable at the option of the United States prior to September, 1891.
6. Without increase of taxation.
7. Without the sale of any silver bought and coined since February, 1878.
8. Without the disuse of the 215,000,000 coined silver dollars of unlimited legal-tender, or any fall or discount in their present received value, and without the disuse of the 550,000,000 coined gold dollars of unlimited legal-tender, or any rise or premium on their present received value.
9. Without prejudice to the adoption hereafter of an international bi-metallic union, with free coinage of both metals for all comers, at a fixed ratio of weights, into coins of unlimited legal-tender.
10. Without the coins of the two metals parting company from each other, whatever may be the temporary fall, if any, in the market price of silver bullion after stopping Treasury purchases.

"I would most respectfully commend to the consideration of Congress the question whether such a reform of the currency ought not now to be endeavored; whether these are not among the prudent and just conditions of its reform; and whether such a reform might not be promoted, with immediate advantage to all our industries and trade, by the repeal of the clause requiring Treasury purchases of silver bullion, and the repeal of the Act making compulsory Treasury issues and reissues of the legal-tender notes."

A chapter is devoted to the subject of the reform of the tariff, which now covers 4,182 different articles. The duties for the past year averaged 46 per cent. *ad valorem*, which is but  $2\frac{1}{4}$  per cent. less than the highest rate of the war period, and is nearly 4 per cent. more than the rate before the latest revision.

**Valuation of Foreign Coins.**—Dr. James P. Kimball, Director of the Mint, has estimated the value of the standard coins of the various nations of the world, to be proclaimed by the Secretary of the Treasury, January 1, 1886. The value of gold coins in circulation is fixed by comparing the amount of pure gold in such coins with the amount in the gold dollar of the United States. In countries having the double standard the silver coins are given the same valuation as the gold coins of the same unit. The value of silver coins of countries of the silver standard is fixed at the value of the pure silver in such coins, taken at the mean price of silver in the London market for the last three months of the year. The mean price of silver for the last three months, compared with its price for the corresponding period in 1884, declined from \$1.000 to \$1.038 per fine ounce a reduction of over six cents. This gives a reduced valuation to the following coins from that proclaimed on January 1, 1885, namely: Florin, of Austria, from 0.39.3 to 0.37.1; boliviana, of Bolivia, from .75.5 to .75.1; peso, of Ecuador, from .79.5 to .75.1; rupee, of India, from .37.8 to .35.7; yen, of Japan, from .85.8 to .81; dollar, of Mexico, from .86.4 to .81.6; sol, of Peru, from .79.5 to .75.1; rouble, of Russia, from .68.6 to .60; mahbub, of Tripoli, from .71.7 to .67.7; peso, of United States of Colombia, from .75.5 to .75.1.

**Report of the United States Treasurer.**—The annual report of C. N. Jordan, Treasurer of the United States, shows that the net revenue of the Government during the last fiscal year was \$323,690,706, or \$24,829,163 less than that of the preceding year, while the expenditure was \$260,226,935, or \$18,100,000 greater than that of the preceding

year. The surplus available for the reduction of the public debt at the close of the fiscal year was, therefore, \$40,323,354 less than was available on July 1, 1884. The assets, according to the new form of statement, on September 30th were \$574,708,256, or an increase of \$55,018,007 over 1884; the liabilities were \$380,381,777, an increase of \$10,216,591 over 1884, and the balance \$194,326,478, an increase of \$44,801,416 over 1884. During the same period there was an increase of \$33,463,633 in the gold assets, of \$22,095,016 in the silver assets, \$6,776,423 in the legal-tender assets, \$171,284 in National bank assets, and \$1,147,107 in National bank deposits. The "bullion fund" or deposits in the Mint were, on June 30th, \$148,504,629 as against \$141,648,068 on June 30, 1884. Silver certificates to the amount of \$40,000,000 were issued and \$20,990,045 were redeemed during the year. Gold certificates of the old issue amounting to \$52,420 were redeemed. Of the new issue \$63,000,000 were issued and \$21,017,100 redeemed. Called bonds of the United States amounting to \$45,968,800 were redeemed, of which amount \$45,588,150 was for the sinking fund. The National banks withdrew \$53,303,350 of bonds held to secure their circulating notes, and \$31,300,700 of bonds were deposited for that purpose, a net decrease of \$22,002,650. There were also deposited by National banks, designated as depositories, \$3,904,450 in bonds to secure public moneys deposited with them, and \$3,357,450 of bonds so held were withdrawn. The total movement of bonds was \$91,865,950. The National banks paid into the Treasury on account of semi-annual duty on their circulation the sum of \$2,704,584, which was \$230,084 less than was paid on that account the preceding year. The unavailable funds of the Treasury were increased from \$29,514,665 to \$29,525,325 during the year. The amount provided for the sinking fund was \$45,585,150. The Treasurer recommends that the provision for the fund be reduced to \$15,000,000 per annum. Notice is given of the suspension of the issuance of one and two-dollar notes, and the economy effected thereby. A reduction in the small note issues is indicated of about \$28,000,000 during the current year.

The Treasurer recommends that the practice of issuing legal-tender gold and silver certificates be discontinued as expensive and dangerous through the accumulation of the immense sums now in the Treasury, the silver certificate especially, on the ground that it has proved to be a positive hindrance to a more extended circulation of the silver dollar. This latter he also considers too expensive a currency for daily use, as, owing to the express charges paid by the Government in putting these coins into circulation, and the further charges paid by the people to return them to the monetary centres where they alone can be used, the coins cause a large loss to the community. It is apparent, he says, that the execution of the coinage law is gradually converting the funds of the Treasury into standard dollars. Every exertion has been made to give an extended circulation to these coins, but without the success which the large expenditure incurred would warrant.

The Treasurer states the amount of fractional coin in the Treasury as \$31,236,899, and recommends the repeal of the redemption law as to these and the minor coins as tending to prevent their over-issue. He further gives a statement of the abrasion upon the coins now in use, and an estimate of what it would cost to replace them with other subsidiary coin of equal or greater value. He recommends the issue of new coins of greater weight and greater beauty, throwing open the designs for the new issue to competition. In order to save the expense of coining and distributing minor coins, when a sufficient supply is already in the Treasury, it is recommended that the coinage be suspended and future demands be supplied from the Treasury offices at the cost of the applicant, as this is the only practicable way in which to prevent a constantly recurring redundancy.

**Maine Savings Banks.**—The annual report of Bank Examiner Richards, of Maine, shows that the number of savings banks in the State is 54; number of depositors, 109,398, an increase of 3,718. The aggregate of deposits November 2, 1885, was \$35,111,600, an increase of \$2,197,764; reserved fund, \$1,220,571. Regular semi-annual dividends have been paid by all, as follows: One bank, 6 per cent. per annum; six banks, 5 per cent.; six banks,  $4\frac{1}{2}$  per cent.; forty-one banks, 4 per cent. The Portland Trust Company, of Portland, and People's Trust Company, of Farmington, have begun business during the past year.

**Freedmen's Savings Bank.**—Comptroller Cannon, *ex-officio* Commissioner of the Freedmen's Savings & Trust Company, has made a report to Congress in regard to the affairs of that institution, from which it appears that the total payments made to

creditors of the company aggregate \$1,720,780, leaving to be paid under the provisions of the Act of February 17, 1883, the sum of \$3,526. The Commissioner renews his recommendation for the relief by Congress of the unfortunate creditors of the institution (mainly colored people of the South) and adds: "The company was chartered by Congress for their special benefit, to encourage industry and thrift, and most of its branches were presided over by the commissioned and uniformed officers of the Government. It was but natural, therefore, for them to assume that the Government would see to the proper management of the institution and would protect them from loss. Objection has been made to the granting of this relief on the ground of its dangerous tendency as a precedent. This apprehension is groundless. There never was but one Freedman's Bank, and it is not likely that the Government will try the banking business again." From the gradual diminution of the amount called for on account of the several dividends declared, it is estimated that the sum of \$950,000 would cover the deficiency between the amount paid (62 per cent.) and the amount to which the creditors likely to call for the same were entitled at the time of the failure of the company. The Commissioner submits a bill designed to accomplish the desired relief, and says that if the relief is granted provision should be made for the transfer to the United States of the remaining assets of the company, as it is probable that a considerable sum may yet be realized from the assets now regarded as of little or no value.

**Important Bank Tax Decision.**—Judge Hammond has rendered in the United States Court at Toledo, O., an important decision concerning bank taxation which is of interest all over the State. In 1883 the Toledo National banks returned to the County Auditor all of their assets for the purpose of having their shares assessed on the tax duplicate. Under the State law the Auditor took the total capital stock and added thereto the surplus of the banks and all their undivided profits and on the aggregate placed 60 per cent.—that being the well-known rule—on the duplicate. Upon this assessment of 60 per cent. the State Board of Equalization for Bank Shares raised the assessment 15 per cent. Actions were brought to enjoin the Treasurer from collecting the tax on that 15 per cent. under an Act of Congress which provides that National bank shares shall not be assessed at a different rate from money and capital in the hands of private citizens. The Court found that county offices all over the State had established the 60 per cent. rule on money, and it holds the action of the State Board of Equalization illegal. The opinion is an exhaustive one.

**The Barron Case Not Closed.**—A local authority says that the Executor of the Barron estate purposes to bring up the case of the Dexter Savings Bank against the Executor again at the January term of the S. J. Court at Bangor, Me. The last decision of the Court was that the bank had no right to use the insurance money which Barron's irregular document assigned to it. Mrs. Barron lives comfortably in Dexter, and has made friends by her determined course in regard to these suits and her efforts to vindicate her husband's memory. The fund raised by the banks of the country for her benefit, and the estate of her husband, form a competence of \$15,000 or \$20,000. She has suffered terribly and her face shows traces of her troubles. She is as plucky to-day as ever and is bound to carry every phase of her cause to the last legal tribunal in pursuit of what she deems justice.

**First National Bank of Vicksburg.**—The announcement was made recently in Vicksburg, Miss., that Mr. Thomas R. Roach, Cashier of the State National Bank of New Orleans, and his brother, Mr. James Roach, Cashier of the Vicksburg Bank, had purchased of Mr. S. T. Barnet, President of the First National Bank of Vicksburg, a controlling interest in the stock of said bank, and that Mr. James Roach had been elected President of the bank, he having resigned his position in the Vicksburg Bank. Thomas R. Roach, James Roach and Douglas S. Wright were elected Directors. President Barnet resigned as President but continues in the Directory. This in nowise affects Mr. Thomas R. Roach's connection with the State National Bank.

**Important Rule as to Items for Collection.**—On the recommendation of the Clearing-House Association of Philadelphia the banks of that city are adopting a new rule to meet the case recently decided against the Merchants' National Bank, which was held liable for the amount of a draft that could not be collected. The provision requires that all notes, drafts, checks, coupons or acceptances discounted or received for collection, or as cash, and payable at points outside of the Clearing-House, will be

taken on condition that each bank is responsible only for good faith and due care in the selection of such other banks or agencies as are employed for the collection of such items.

**The City Bank of Houston, Texas,** one of the oldest financial institutions in the city, and having a paid-up capital of \$500,000, suspended payments on December 19th. Benjamin F. Weems, Cashier, has been appointed Receiver. Although the failure caused some consternation throughout the city it was no surprise to the other banks and business men generally. The total liabilities of the bank, including the capital stock, will exceed \$1,000,000. According to a statement made August 1st last, the amount due depositors in the institution was \$673,000. The bank has been losing money for several years. The present deposits in the bank will reach over half a million dollars. Many poor people were among the depositors.

**Newark Savings Institution.**—George Wilkinson, Receiver of the Newark Savings Institution, has sold at a good price, through Harvey Flak & Sons, of New York, the 24,000 shares of Chesapeake & Ohio stock that were held by him, and, consequently, he is about to declare another dividend of 10 per cent. to the depositors. This will make 85 per cent. paid, with fair prospects of the remaining 15 per cent. being paid after a time.

**Expiration of National Bank Charters.**—During the year 1886 the charters of only 18 National banks in the United States will expire, as against 720 whose charters expired during 1885. The charters of 154 banks in New York State expired during the past year, but not a single one there will expire during the year 1886.

#### MISCELLANEOUS BANK AND FINANCIAL ITEMS.

— Rufe Minor, a celebrated bank sneak thief, was arrested recently in Philadelphia, Pennsylvania.

— The Georgetown (Mass.) National Bank and the Georgetown Savings Bank were burnt out on December 26th.

— Many of the National banks in Ohio are taking measures to contest the payment of the State taxes assessed against them.

— The Assignees of the defunct Highland, Ill., bank are distributing the assets of the same by paying ten cents on the dollar.

— H. J. Shuttleworth, banker and broker at Buffalo, N. Y., who failed last October, has now made an assignment to Henry W. Linderman.

— Ten years ago the aggregate resources of the trust companies of New York State were \$69,654,948. On July 1, 1885, they were \$165,177,908.

— Taking the Bland dollar for a model, saloon keepers have introduced a new drink called the Bland Smile. It is 80 per cent. whiskey and the rest water.—*Life*.

— The accounts of the Receivers of the Lancaster (Mass.) Savings Bank have been referred by the Supreme Court to the Savings Bank Commissioners prior to declaring a final dividend.

— I. N. Israel, of the firm owning three private banks in Texas, which failed some weeks ago, was arrested recently at Wichita Falls and held in \$5,000 to answer a charge of embezzlement.

— George R. Kennedy, *alias* George S. Stewart, was arrested in Chicago on December 13th, charged with the embezzlement of \$3,500 from Wilson, Colston & Co., bankers, of Baltimore, Md.

— The Keystone National Bank, of Philadelphia, is about to erect a new bank building, 88 by 235 feet, on the site now occupied. The capital stock will be increased from \$200,000 to \$400,000.

— The Greenpoint (N. Y.) Savings Bank was burnt out recently, but secured new quarters and resumed business a few days afterward. All the books and papers were preserved intact from the fire.

— The banks of Sacramento, Cal., have placed a discount of one-fourth of 1 per cent. upon all silver received. They claim that silver accumulates so that they have

to ship a surplus frequently to other points. The discount is to cover the expense of such a shipment.

— Andrew Bruon has been held in \$8,000 bail to await the action of the Grand Jury on a charge of embezzling the funds of the defunct Hot Springs (Ark.) National Bank while he was acting as President.

— Much speculation has been indulged in as to the reason why the Hon. John Bigelow resigned the office of Assistant United States Treasurer at New York after he had been confirmed by the Senate.

— Joseph Hoedowitch, the defaulting Teller of the Farmers' National Bank, at Mansfield, Ohio, who fled to Canada, has given information that led to the recovery of about \$210,000 in money and securities.

— Benjamin O. Hubbard, the defaulting Cashier of the late First National Bank, of Monmouth, Ill., has been found guilty on nine counts in the indictment charging him with embezzling \$112,000 of the bank's funds.

— The savings banks in New York State have been preparing to send a petition to Congress praying for the repeal of the Bland silver bill. These banks represent some \$500,000,000 to \$700,000,000, with a clientele of 700,000 persons.

— A bold attempt to rob the safe of the First National Bank, of Mount Pleasant, West Va., was foiled on December 10th by a fortunate accident. The burglars had opened the vault and were attacking the safe when discovered.

— Messrs. Geo. F. Work and Samuel Work, of Philadelphia, have been convicted on the third count of the indictment against them, which charged conspiracy to embezzle \$30,000 from the People's Railway Company. A new trial has been granted.

— In the suit pending at San Francisco, Cal., of Henry Janin against the London & San Francisco Bank to recover the amount paid on a check claimed by the plaintiff to be a forgery, the jury has returned a verdict in favor of Janin for \$24,717. This sum includes \$8,017 interest.

— Dow, Short & Co., private bankers at Syracuse, N. Y., have failed. Charles P. Baldwin is the Assignee. The failure was precipitated by the recent failure of Silverstein & Co., clothing merchants, for whom the bankers carried about \$40,000, which is a total loss. The preferences of the suspended banking firm amount to \$38,000.

— The safe in the banking house of P. Bentel & Co., at Freedom, Pa., was blown open by burglars recently, and about \$10,000 stolen, injured or destroyed. The force of the explosion alarmed the citizens, and the burglars fled with, it is supposed, about \$1,000. The remainder of the money was burned or scattered about, and about \$2,500 may be saved from the remnants.

— Senator Hoar has introduced in the United States Senate again a bill for the relief of the First National Bank of Newton, Mass., directing the Secretary of the Treasury to pay to the bank interest at 5 per cent. on the judgment rendered some years ago in favor of the bank against the Government in the sum of \$375,000. The bill appropriates \$275,000 for the purpose.

— The People's Savings Bank, of Detroit, Mich., has reduced its rate of interest from 4 to 3½ per cent., and it is possible that the other savings banks of the city will follow suit shortly. "We had to do it," said Cashier O'Brien, "because we can't use the money. Money is a drug in the market. Nobody wants to borrow it. We have nearly \$1,000,000 now that we would like to lend on good security."

— The Central Safety Deposit Company, of Chicago (Ill.), has leased from the city the lot on the southeast corner of La Salle and Adams streets for 99 years, free of taxes, at an annual rent of \$35,000, and upon this is to be erected a building costing \$1,000,000, and probably the largest in the city. The \$1,000,000 has all been subscribed. About three-quarters of the capital is from Chicago and the rest from Eastern cities.

— The Farmers' Bank, a private institution managed by prominent citizens of Orrville, Ohio, was closed December 12th. The bank was reported to be shaky some time ago, but was reorganized and thought to be solid. It held the funds of several townships and school districts on deposit, and it is reported that the stockholders are so situated that the depositors will lose all. The failure is said to have been caused by outside speculation.

## THE PRESIDENT ON THE SILVER COINAGE.

In his first message to Congress the President deals with the question of the silver dollar coinage as follows :

Since February, 1878, the Government has, under the compulsory provisions of law, purchased silver bullion and coined the same at the rate of more than \$2,000,000 every month. By this process, up to the present date, 215,750,431 silver dollars have been coined. A reasonable appreciation of a delegation of power to the General Government would limit its exercise without express restrictive words to the people's needs and the requirements of the public welfare.

Under this theory the authority to "coin money," given to Congress by the Constitution, if it permits the purchase by the Government of bullion for coinage, in any event does not justify such purchase and coinage to an extent beyond the amount needed for a sufficient circulating medium. The desire to utilize the silver product of the country should not lead to a misuse or the perversion of this power. The necessity for such an addition to the silver currency of the nation, as is compelled by the Silver Coinage Act, is negated by the fact that up to the present time only about fifty millions of the silver dollars so coined have actually found their way into circulation, leaving more than \$165,000,000 in the possession of the Government, the custody of which has entailed a considerable expense for the construction of vaults for its deposit. Against this latter amount there are outstanding silver certificates amounting to about \$93,000,000. Every month two millions of gold in the public Treasury are paid out for 2,000,000 or more of silver dollars to be added to the idle mass already accumulated. If continued long enough this operation will result in the substitution of silver for all the gold the Government owns applicable to general purposes. It will not do to rely upon the Customs receipts of the Government to make good this drain of gold, because the silver thus coined, having been made legal-tender for all debts and dues, public and private, at times during the last six months, 8 per cent. of the receipts for duties have been in silver or silver certificates, while the average within the period has been 20 per cent. The proportion of silver and its certificates received by the Government will probably increase as time goes on for the reason that the nearer the period approaches when it will be obliged to offer silver in payment of its obligations the greater inducement there will be to hoard gold against depreciation in the value of silver or for the purpose of speculating.

This hoarding of gold has already begun. When the time comes that gold has been withdrawn from circulation then will be apparent the difference between the real value of the silver dollar and a dollar in gold, and the two coins will part company.

Gold, still the standard of value, and necessary in our dealings with other countries, will be at a premium over silver. Banks which have substituted gold for the deposits of their customers may pay them with silver bought with such gold, thus making a handsome profit; rich speculators will sell their hoarded gold to their neighbors who need it to liquidate their foreign debts at a ruinous premium over silver, and the laboring men and women of the land, most defenceless of all, will find that the dollar received for the wage of their toil has sadly shrunk in its purchasing power. It may be said that the latter result will be but temporary, and that ultimately the price of labor will be adjusted to the changes, but even if this takes place the wageworker cannot possibly gain, but must inevitably lose, since the price he is compelled to pay for his living will not only be measured in a coin heavily depreciated and fluctuating and uncertain in its value, but this uncertainty in the value of the purchasing medium will be made the pretext for an advance in prices beyond that justified by actual depreciation. The words uttered in 1834 by Daniel Webster in the Senate of the United States are true to-day: "The man of all others who has the deepest interest in a sound currency, and who suffers most by mischievous legislation in money matters, is the man who earns his daily bread by his daily toil." The most distinguished advocate of bi-metalism, discussing our silver coinage, has lately written: "No American citizen's hand has yet felt the sensation of cheapness either in receiving or expending the Silver Act dollars," and those who live by labor or legitimate trade never will feel that

sensation of cheapness, however plenty silver dollars may become. They will not be distributed as gifts among the people, and if the laboring man should receive four depreciated dollars where he now receives but two he will pay in the coin more than double the price he now pays for all the necessities and comforts of life. Those who do not fear any disastrous consequences arising from the continued compulsory coinage of silver, as now directed by law, and who suppose that the addition to the currency of the country intended as its result will be a public benefit, are reminded that history demonstrates that the point is easily reached, in the attempt to float at the same time two sorts of money of different excellence, when the better will cease general circulation. The hoarding of gold, which has already taken place, indicates that we shall not escape the usual experience in such cases; so if this silver coinage be continued we may reasonably expect that gold will abandon the field of circulation to silver alone.

This, of course, must produce a severe contraction of our circulating medium instead of adding to it. It will not be disputed that any attempt on the part of the Government to cause the circulation of silver dollars worth 80 cents side by side with gold dollars worth 100 cents, even within the limit that legislation does not run counter to the laws of trade, to be successful must be seconded by the confidence of the people that both coins will retain the same purchasing power and be interchangeable at will. A special effort has been made by the Secretary of the Treasury to increase the amount of our silver coin in circulation; but the fact that a large share of the limited amount thus put out has soon returned to the public Treasury in payment of duties leads to the belief that the people do not now desire to keep it in hand, and this, with the evident disposition to hoard gold, gives rise to the suspicion that there already exists a lack of confidence among the people touching our financial processes. There is certainly not enough of our silver in circulation to cause uneasiness, and the whole amount coined and now on hand might, after a time, be absorbed by the people without apprehension; but it is the ceaseless stream that threatens to overflow the land which causes fear and uncertainty.

What has been thus far submitted upon this subject relates almost entirely to considerations of a home nature, unconnected with the bearings which the politics of other nations have upon the question. But it is perfectly apparent that a line of action in regard to our currency cannot wisely be settled upon or persisted in without considering the attitude on the subject of other countries with whom we maintain intercourse through commerce, trade and travel. An acknowledgment of this fact is found in the Act by virtue of which our silver is compulsorily coined. It provides that "the President shall invite the Governments of the countries composing the Latin Union, so-called, and of such other European nations as he may deem advisable, to join the United States in a conference to adopt a common ratio between gold and silver for the purpose of establishing internationally the use of bi-metallic money and securing fixity of relative value between these metals." This conference absolutely failed, and a similar fate has awaited all such subsequent efforts in the same direction, and still we continue our coinage of silver at a ratio different from that of any other nation.

The most vital part of the silver coinage Act remains in operation and executed, and without an ally or friend we battle upon the silver field in an illogical and losing contest. To give full effect to the design of Congress on this subject I have made careful and earnest endeavor since the adjournment of the last Congress.

To this end I delegated a gentleman well instructed in fiscal science to proceed to the financial centres of Europe and, in conjunction with our Ministers to England, France and Germany, to obtain a full knowledge of the attitude and intent of those governments in respect to the establishment of such an international ratio as would procure a free coinage of both metals at the mints of those countries and our own.

By my direction our Consul-General at Paris has given close attention to the proceedings of the Congress of the Latin Union, in order to indicate our interest in its object and report its action.

It may be said, in brief, as the result of these efforts, that the attitude of the leading Powers remains substantially unchanged since the Monetary Conference of 1881, nor is it to be questioned that the views of these Governments are in each instance supported by the weight of public opinion. The steps thus taken have there-

fore only more fully demonstrated the uselessness of further attempts at present to arrive at any agreement on the subject with other nations.

In the meantime we are accumulating silver coin based upon our own peculiar ratio to such an extent and assuming so heavy a burden to be provided for in any international negotiations as will render us an undesirable party to any future conference of nations. It is a significant fact that four of the five countries composing the Latin Union mentioned in our coinage Act, embarrassed with their silver currency, have just completed an agreement among themselves that no more silver shall be coined by their respective Governments, and that such as has been already coined and in circulation shall be redeemed in gold by the country of its coinage. The resort to this expedient by these countries may well arrest the attention of those who suppose that we can succeed without shock or injury in the attempt to circulate upon its merits all the silver provided for by the coinage Act.

The condition in which our Treasury may be placed by a persistence in our present course is a matter of concern to every patriotic citizen who does not want his Government to pay in silver such of its obligations as should be paid in gold, nor should our condition be such as to oblige us, in a prudent management of our affairs, to discontinue the calling in and payment of interest-bearing obligations which we have the right now to discharge, and thus avoid the payment of further interest thereon.

The so-called debtor class, for whose benefit the continued compulsory coinage of silver is insisted upon, are not dishonest because they are in debt, and they should not be suspected of a desire to jeopardize the financial safety of the country in order that they may cancel their present debts by paying the same in depreciated dollars. Nor should it be forgotten that it is not the rich nor the money-lender alone that must submit to such a readjustment, enforced by this Government and their debtors.

The pittance of the widow and the orphan and the income of helpless beneficiaries of all kinds would be disastrously reduced. The depositors in savings banks and in other institutions which hold in trust savings of the poor, when their little accumulations are scaled down to meet the new order of things, would in their distress realize the delusion of the promise made to them that plentiful money would improve their condition.

That disaster has not already overtaken us furnishes no proof that danger does not wait upon a continuation of the present silver coinage. We have been saved by the most careful management and unusual expedient by a combination of fortunate conditions and by a confident expectation that the course of the Government in regard to silver coinage would be speedily changed by the action of Congress.

Prosperity hesitates upon our threshold because of the dangers and uncertainties surrounding this question. Capital timidly shrinks from trade, and investors are unwilling to take the chances of the questionable shape in which their money will be returned to them, while enterprise halts at a risk against which care and sagacious management do not protect. As a necessary consequence, labor lacks employment, and suffering and distress are visited upon a portion of our fellow-citizens especially entitled to the careful consideration of those charged with the duties of legislation. No interest appeals to us so strongly for a safe and stable currency as the vast army of the unemployed.

I recommend the suspension of the compulsory coinage of silver dollars directed by the law passed in February, 1878.

---

**GROWING SCARCITY OF GOLD.**—The *San Francisco Daily Evening Post* says: "We are going back to the condition of things before the discovery of gold in California and Australia. There are no newly-discovered gold fields; and while we know that the supply of gold has fallen off, there is no means of determining in what increasing quantities that metal is entering into the arts and wasting away by loss and the attrition of coin and jewelry. In these days of poor teeth most adults have at least a dollar's worth of gold in their mouths, and every generation will probably bury in the cemeteries of the United States alone say \$50,000,000 in gold. If a miser had placed his money in a fruit can ten years ago and so lost the interest on it he would have recouped it by this time in the increased purchasing power of money." The estimate of \$50,000,000 is probably an exaggeration. In a generation 50,000,000 adults do not die in this country, but 50,000,000 people, young and old.

## THE COMPTROLLER'S REPORT.

The annual report of the Hon. Henry W. Cannon, Comptroller of the Currency, is replete with information useful to the banking community, and with well-considered recommendations touching National bank legislation. We have space in the present number, however, in which to mention only a few of the more practical matters treated in it, or those of most immediate interest:

"During the year ending November 1, 1885, one hundred and forty-five banks have been organized, with an aggregate capital of \$16,938,000. Circulating notes have been issued to these new associations amounting to \$4,274,910. These banks are located by geographical divisions as follows: Eastern States, 4 banks, with capital of \$400,000; Middle States, 20, with capital of \$2,895,000; Southern States, 21, with capital of \$2,425,000; Western States, 76, with capital of \$9,473,000; Pacific States, 8, with capital of \$725,000; Territories, 16, with capital of \$1,020,000.

"Between July 1, 1882, and July 1, 1885, 611 banks have been organized, with a capital of \$61,701,300; that they have deposited \$15,125,300 of bonds, upon which circulation to the amount of \$13,612,770 has been issued. The minimum deposit of bonds, as required by law, for said banks is \$12,232,750, and while the actual deposit has in the aggregate exceeded the minimum, yet this excess has steadily decreased during the three years mentioned. The excess above the required minimum of bonds deposited from July, 1882, to July, 1883, was 28 per cent. of the total deposit. From July, 1883, to July, 1884, this excess was 14 per cent. only of the total deposit, and from July, 1884, to July, 1885, the excess was still further diminished to 8 per cent. This shows conclusively that the banks organized between the periods named have not been induced to enter the system on account of the profit to be derived from the issue of circulating notes, but because it was believed by their managers that they would have a better credit and standing with the public under the National Bank Act than as State or private banks.

"It is also to be noted that the reduction by the Act of July 12, 1882, of the minimum amount of bonds to be deposited by National banks of \$150,000 capital and under to one-quarter of their capital stock has had a tendency to increase the organization of small banks throughout the country.

"While the number of banks organized from July 1, 1879, to July 1, 1882, with a capital of \$150,000 and under was 232, the number of banks of this class organized from July 1, 1882, to July 1, 1885, was 548. These small banks have in many instances been organized to take the place of private banking firms and small State banks, particularly in the West, Northwest, and Southwest. It is believed that this change is to the advantage of the public, as the majority of these banks were previously carrying on a banking business without being subject to an examination of their affairs, and without the security given by the publication of sworn statements of their condition, to which supervision and requirement they will be subject under the National Bank Act. . . .

"It is believed that the National banking system will be continued even if the associations organized under it cannot issue circulation at a profit, inasmuch as the experience under it has shown it is for the best interests of the public, as well as of the banks, that this business should be carried on under a general law having effect throughout all the different States. This statement is made without prejudice to banks organized under the statutes of those States which contain provisions and restrictions similar to those of the National banking law. In many of the States, however, the banking laws are defective, and it is evident that the legislation upon the subject cannot be homogeneous, nor the working of the laws so harmonious and useful under statutes passed by thirty-eight States as under one general law of Congress applicable to all banking institutions."

The Comptroller suggests a few amendments to the Act of July 12, 1882, for the extension of the corporate existence of the National banks. The most important relates to Section 6, which provides that at the end of three years from the date of the extension of any bank it shall deposit with the United States Treasurer lawful money

sufficient to redeem the remainder of the circulation that was outstanding at the date of the extension, and that new notes shall be issued to the bank. It appears that 270 banks, with a circulation of \$47,997,430, were extended on February 25, 1883, and the time for the deposit required by the law is within thirty days from February 25, 1886. From the redemptions of this circulation made in regular course it has for some time been evident to the Comptroller that the amount of the final deposit required by this law to be made in lawful money at that time would be very large, and that this deposit of lawful money within so short a period would perhaps occasion some temporary disturbance at money centres, particularly as some time would necessarily elapse before new circulation to replace that retired could be issued by the banks.

"In this connection," says the Comptroller, "I desire to call attention to a portion of Section 9, which provides that in the aggregate not more than three million dollars of lawful money shall be deposited by National associations during any calendar month in order to withdraw their circulating notes, except when bonds owned by the association shall be called for redemption by the Secretary of the Treasury. It does not appear that lawful money deposits made under Section 6 are exempted from the provisions of Section 9 referred to, and inasmuch as the deposits under Section 6 may at times exceed \$3,000,000 in any one month, there is an apparent conflict in the Act. I therefore recommend that the time of deposit be extended. I also recommend that Section 9 be so amended that its provisions shall not apply to the deposit of lawful money by extended associations."

In anticipation of the difficulty which might arise after February 25, 1886, from the large deposit of lawful money, which, if not made before, would, by the law, be required to be made within thirty days following that date, the Comptroller, early in the present year, began to advise National banks which would be required by Section 6 to make deposits of lawful money on or before March 25, 1886, in order to prevent, if possible, any disturbance, to make such deposits in advance, in sums of \$10,000 or multiples thereof, extending them over a period of some months. These banks were also advised to order in advance the preparation of notes of new design that they might be in readiness to be issued to replace the circulation retired by the deposit of lawful money under Section 6. Early in August a printed circular letter embodying this advice was sent to all the National banks interested. Many of the banks so addressed have responded, and it is believed that the action mentioned has had an excellent effect, and that the amount of lawful money to be deposited within thirty days after February 25, 1886, will be much less than if this action had not been taken.

Notwithstanding that 145 new banks were organized during the past year, with a capital of \$16,968,000, depositing \$4,959,300 of bonds as security for circulating notes, the aggregate of bonds on deposit for that purpose has diminished from \$325,316,300 to \$306,364,550. During the year ended November 1, 1883, there was a net decrease in the bank note circulation of \$8,384,017; during the next twelve months a decrease of \$24,170,676; and for the twelve months ended November 1, 1885, a decrease of \$15,545,461.

"The reduction of circulation of National banks during the year ending November 1, 1885, for reasons other than the call of bonds by which it was secured, was greater than anticipated. The causes which have led to this result are small profit remaining to National banks on circulation after paying the tax of 1 per cent. per annum imposed by the Government; reduction in the rates of interest throughout the country, occasioned by the abundance of money in the financial centres; and, doubtless, uneasiness among certain of the bankers of the country as to the outcome of the increase of silver in the Treasury, such increase indicating that possibly the interest on the public debt, and even some portion of the principal, might be paid in standard silver dollars, and that Government bonds might thereby become depreciated in foreign markets, which would undoubtedly affect their price in this country. The credit and standing of this country is deservedly high, and it is not believed that the people desire either the principal or interest on the bonded debt of this country to be paid in anything but gold coin or its equivalent. This matter was discussed at the time the bonds were issued, during the period of the refunding of the debt, and the preparations for the resumption of specie payments, and the conviction is general that the faith and credit of this Government is pledged for the payment of its securities in gold coin or its equivalent. . . .

"Unless some measures be taken whereby the banks may be enabled to issue circulation at a reasonable profit to themselves, the contraction of National bank-

notes will continue. The profit on circulation may be increased by the removal of the tax and by increasing the amount of currency issued to the par value of the United States bonds deposited," and the Comptroller again respectfully recommends appropriate legislation for that purpose. "Even if this be done, the National bank-note circulation is still liable to reduction and final disappearance with the reduction and final payment of the debt of the United States."

Mr. Cannon takes up and recommends the adoption of the plan proposed by Comptroller Knox in his report for 1883, for a new basis for the circulation.

He proposed that a safety fund should be accumulated: (1) from the gain arising from the accidental loss or destruction of the circulating notes of National banks; (2) from the tax upon circulation; and (3) from interest to be derived at a low rate upon the fund on deposit in the Treasury for the purpose of redeeming the notes of National banks retiring circulation, which now amounts to more than \$30,000,000.

The amount available for a safety fund from the first source is estimated now to be not less than six million dollars, and the amount derived from the tax of 1 per cent. per annum on circulation during the year 1884 was more than three millions. Even if this tax for safety fund purposes should be fixed at one-half per cent., in the course of three years a safety fund would be in hand amounting to more than ten millions of dollars.

"The results of the liquidation of 104 National banks which have failed, and the affairs of which have been liquidated or are in process of liquidation by Receivers under the direction of this office, show in a very interesting manner to what extent it may be safe to permit banks under the National system to issue circulation unprotected by a deposit of United States bonds. Of these 104 banks, 70 have been finally closed, and for them the results are absolute. The remaining 34 are still in process of liquidation, but have progressed so far that the final result can be estimated with comparative accuracy. . . .

"The experience with these 104 banks shows almost conclusively that if their issues to the amount of 65 per cent. of their capital had been secured by a deposit of bonds to an equal amount, the remaining 25 per cent. might have been issued without other security than a first lien on the general assets, and if a safety fund had been in existence it would in the case cited have been drawn upon to the extent of \$62,000 only upon a circulation amounting to \$5,484,700. For a beginning, therefore, it might be safe to authorize banks to issue circulation amounting to 90 per cent. of their capital, 70 per cent. to be secured by an equal amount of United States bonds at par value, the remaining 20 per cent. being issued without other security than a first lien on such assets. But if the law should provide for the accumulation of a safety fund in the manner suggested, then, as such safety fund increased, the percentage of circulation unsecured by bonds might be increased, as the diminution of the public debt might require and the safety fund warrant."

Under Section 12 of the Act of July 12, 1882, silver certificates, when held by any National banking association, are to be counted as a part of its lawful reserve, and National banks are forbidden to the members of any Clearing-House balances in which said certificates shall not be received in settlement of Clearing-House balances. These certificates are redeemable in silver dollars, but have no legal-tender quality between individuals or between banks, although National banks are compelled to accept them in settlement of Clearing-House balances. It hardly seems just or equitable that National banks should be compelled to receive these certificates under these conditions when banks organized under State laws, and private individuals, are not compelled to receive them when tendered.

The Comptroller in his last report to Congress stated that he believed the operation of the present law, which compels the coinage of two million standard silver dollars per month, weighing only  $412\frac{1}{2}$  grains each, with unlimited legal-tender quality, would eventually bring financial disturbance upon the country, and he is still of the same opinion.

The National banks placed in the hands of Receivers to November 1, 1885, has been 104, of which 4 became insolvent, being placed in this category since November 1, 1884.

The Comptroller recommends the abolition of the tax of 1 per cent. annually upon bank circulation, and that the expense of the Comptroller's office be assessed upon the banks, as is now done in the case of the Redemption Bureau.

The expense of the office of the Comptroller for the fiscal year 1885 was \$225,208. The tax on circulation for the same year was \$2,794,584.

## NEW BANKS, CHANGES, FAILURES, ETC.

**New National Banks.**—The Comptroller of the Currency furnishes the following statement of National banks organized since our last report:  
(Names of officers and further particulars regarding new National banks will be found under their proper State headings in this list.)

3402—Ainsworth National Bank, Portland, Oregon. Capital, \$100,000.

3403—First National Bank, Greenwood, Nebraska. Capital, \$50,000.

3404—Citizens' National Bank, Newport, New Hampshire. Capital, \$30,000.

3405—Capital National Bank, Salem, Oregon. Capital, \$75,000.

3406—National Bank of Savannah, Savannah, Georgia. Capital, \$200,000.

[Above banks were omitted under this heading from November '85 JOURNAL, but appeared under respective State and town headings, with names of officers.]

3416—Cheyenne National Bank, Cheyenne, Wyoming Territory. Capital, \$100,000.

3417—Pacific National Bank, Tacoma, Washington Territory. Capital, \$50,000.

3418—First National Bank, Asheville, North Carolina. Capital, \$100,000.

3419—First National Bank, Blue Hill, Nebraska. Capital, \$50,000.

3420—Farmers' National Bank, Webster City, Iowa. Capital, \$50,000.

3421—National Bank of Abbeville, Abbeville C. H., South Carolina. Capital, \$50,000.

3422—Commercial National Bank, Portland, Oregon. Capital, \$100,000.

3423—Tenth National Bank, Philadelphia, Pennsylvania. Capital, \$200,000.

3424—First National Bank, O'Neill, Nebraska. Capital, \$50,000.

3425—National Bank of Washington, Washington, District of Columbia. Capital, \$200,000.

### ALABAMA.

**BIRMINGHAM.**—Jefferson County Savings Bank: President, Christian F. Enslen; Cashier, Eugene F. Enslen.

**GREENSBORO.**—S. W. Chadwick is in the collection business here.

**LIVINGSTON.**—Banking House of Brown Bros. is style of new bank here.

### ARKANSAS.

**PRESCOTT.**—W. H. Terry is proprietor of Nevada County Bank.

### CALIFORNIA.

**WINTERS.**—Bank of Winters reported here.

### COLORADO.

**BURWA VISTA.**—Lincoln, Hockaday & Co.; dissolved.

**BERTHOUD.**—Bank of Berthoud is reported here.

### DAKOTA.

**BURNSFORD.**—J. Schaetzel & Sons are in business here. Style, Union Banking Company. Capital, \$25,000. Cashier, Henry Schaetzel.

**GRAND VIEW.**—Dakota Mortgage & Trust Co. has been recently organized. Capital, \$50,000. President, D. S. Sigler; Cashier, Homer W. Johnson.

**HILLSBORO.**—Hillsboro National Bank; Vice-President, A. H. Morgan; Assistant Cashier, James E. Hyde.

**MINOR.**—J. E. Bishop (Bank of Sargent County); succeeded by D. F. & F. W. Vail.

**PARK RIVER.**—Park River Bank; closing.

**RAPID CITY.**—Black Hills National Bank; Vice-President, James Haft.

**BOUX FALLS.**—First National Bank: R. J. Wells, President, in place of J. B. Young; no Vice-President in place of H. L. Hollister.

### DISTRICT OF COLUMBIA.

**WASHINGTON.**—Bank of Washington; now National Bank of Washington. Capital, \$50,000. Same officers.

## FLORIDA.

KISSIMMEE.—Kissimmee City Bank has been recently started. President, A. E. Drought; Cashier, F. H. Skelding.

JACKSONVILLE.—Florida Savings Bank; Lowell D. Hosmer, Treasurer, in place of Henry S. Ely.

## GEORGIA.

FORT GAINES.—Peterson & Co. is style of new firm here.

## ILLINOIS.

✓ BLACKBERRY.—Read & Baird; succeeded by L. R. Read & Co.

BLOOMINGTON.—First National Bank; Vice-President, George W. Funk.

CHICAGO.—Stout, Haines & Betts is style of new firm here. Partners: Stout & Co., of New York, Chas. J. Haines, J. Sanford Betts.

✓ FAIRVIEW.—Fairview Banking Company has recently started. President, Thos. H. Travers; Cashier, John W. Gaddis.

FARMER CITY.—John Weedman National Bank; Vice-President, T. S. Weedman.

ROCKFORD.—Third National Bank; L. A. Trowbridge, Cashier, in place of Wm. T. Wallis, deceased; George C. Spafford, Assistant Cashier, in place of L. A. Trowbridge.

Winneshago National Bank; W. T. Robertson, Vice-President, in place of M. Starr; Chandler Starr, Cashier, in place of W. T. Robertson; no Assistant Cashier in place of C. Starr.

SPARTA.—Crothers, Allen & Co. have recently commenced business.

✓ WALNUT.—Walnut Bank; discontinued.

✓ WINCHESTER.—Neat Condit & Co. is style of new firm here.

## INDIANA.

CENTREVILLE.—First National Bank; in liquidation.

✓ NORTH VERNON.—Citizens' Bank is reported here.

✓ RICHMOND.—Union National Bank; Vice-President, J. C. Ratliff; Assistant Cashier, Geo. L. Cates.

## IOWA.

✓ AVOCA.—Valley Bank; discontinued.

✓ BAXTER.—Baxter Bank; President, H. J. Ransom; Cashier, G. A. R. Nicholls.

✓ CRESCO.—Kimball & Farnsworth; now Bank of Cresco. President, John Farnsworth; Cashier, H. W. Young.

✓ MERIDEN.—Cherokee County Bank has been recently started. President, T. E. Hills; Cashier, S. S. Striker.

MORRISON.—Bank of Morrison; closed.

✓ PAULLINA.—Baumann & Metcalf (Bank of Paullina); succeeded by Metcalf Brothers.

✓ WEBSTER CITY.—Farmers' Bank; now Farmers' National Bank. Capital, \$50,000. President, J. W. Mattice; Cashier, H. A. Miller.

## KANSAS.

✓ ABILENE.—Citizens' Bank; proprietors, Malott & Co.

✓ ANTHONY.—First National Bank; Assistant Cashier, O. F. Casteen.

Kansas Mortgage & Investment Co. has been recently organized. Capital, \$20,000. President, John D. Brown; Manager, D. M. Kirkbridge.

✓ BLUE MOUNDS.—Bank of Blue Mounds is style of bank recently opened. Cashier, H. M. Brook.

✓ BURDEN.—Burden Bank; President, O. Miles.

✓ COLBY.—Thomas County Bank reported here. Capital, \$10,000. President, Marvin B. Tomblin; Cashier, E. A. Hall.

✓ CUBA.—Cuba State Bank has been recently started. Capital, \$25,000. President, W. P. Rice; Cashier, C. E. Tobey.

✓ ELLIS.—Merchants' Bank has been recently organized under the State laws. Capital, \$50,000. President, W. O. Ray; Vice-President, Wm. O. Harrison; Cashier, H. R. Honey; Assistant Cashier, W. E. Moore.

✓ FREDONIA.—Fredonia Bank has been recently started. Cashier, M. Abernethy.

✓ MOLINE.—Downing & Hanson is new firm here.

✓ OSAGE CITY.—Citizens' Bank reported here. Capital, \$50,000. President, John D. Hall; Cashier, D. C. Lake.

✓ RUSSELL.—Blair & Haskett; Cashier, E. C. Haskett.

✓ WA KEENEY.—Wilson, Murray & Co. is style of new firm here.

✓ WAMEGO.—J. C. Rogers & Co.; succeeded by First National Bank. Capital, \$75,000. President, J. C. Rogers; Cashier, Robt. Scott.

✓ WICHITA.—Bank of Commerce; closed.

## KENTUCKY.

ADAMSVILLE.—W. K. Rayburn & Co. are in business here.

ELIZABETHTOWN.—Harris, Polk & Co.; suspended.

LOUISVILLE.—Louisville City National Bank; 2d Vice-President, M. R. Wheat.

RICHMOND.—First National Bank; J. W. Caperton, President, in place of S. P. Walters.

## LOUISIANA.

NEW ORLEANS.—Germania National Bank; Jules Cassard, President, deceased.

## MARYLAND.

BALTIMORE.—Gilder & Farr (New York) have opened an office here. Manager, Robt. Chamberlaine.

## MASSACHUSETTS.

BOSTON.—Blake Bros. & Co.; London house discontinued.

Clark, Ward & Co.; R. G. Murphy (New York) admitted. New York office will be shortly opened.

Colbron, Chauncy & Co. (New York) have opened an office here. Agent, Frank Seabury.

Curtis & Motley; Allen Curtis and E. Preble Motley have formed a partnership under above style.

William H. Seabury is in the brokerage business on his own account.

C. H. Venner & Co.; Walter B. Adams withdraws to enter business on his own account.

CLINTON.—Lancaster National Bank; closed.

FRAMINGHAM.—Framingham Savings Bank; Treasurer, Luther F. Fuller.

WARE.—Ware Savings Bank; Frederick D. Gilmore, Treasurer, in place of Otis Lane, resigned.

## MICHIGAN.

CHARLOTTE.—E. Buck & Co.; discontinued.

GRASS LAKE.—Reference to defalcation in Farmers' National Bank in December JOURNAL should have read Farmers' Bank.

✓ OWOSO.—Second National Bank; Vice-President, J. Seligman; Assistant Cashier, McE. Miner.

SALINE.—W. H. Davenport is in business here. Style, Citizens' Bank.

ST. LOUIS.—F. G. Kneeland has recently commenced business. Style, Bank of St. Louis.

## MINNESOTA.

DULUTH.—A new bank will open for business February 1. Capital, \$100,000.

LAKE CITY.—First National Bank; in liquidation.

MINNEAPOLIS.—National Bank of Commerce; H. H. Thayer, Assistant Cashier, in place of F. Slocum.

✓ PERHAM.—Farmers & Merchants' Bank has commenced business. Capital, \$75,000. President, Herbert Root; Cashier, Allyn Warner.

WASCOA.—Waseca County Bank; closed.

## MISSISSIPPI.

VICKSBURG.—First National Bank; J. P. Roach, President, in place of S. T. Barnett; Thomas Mount, Cashier, in place of W. S. Jones; no Assistant Cashier in place of Thomas Mount.

Merchants' National Bank has been recently organized. Capital, \$100,000. President, O. C. Wills; Vice-President, William P. Richardson; Cashier, W. S. Jones.

Vicksburg Bank; Vice-President and Acting Cashier, H. C. Kuykendall.

## MISSOURI.

HERMITAGE.—Farmers & Drovers' Bank; closed.

-- MACON.—Bank of Macon has been recently started. President, D. Adams; Cashier, B. Zick.

NORBORNE.—Bank of Norborne; closed.

ST. LOUIS.—Valley National Bank; consolidated with Laclede Bank.

Laclede Bank; S. E. Hoffman, President, in place of Wm. McMillan; W. H. Trask, Cashier, in place of J. T. Birch.

## NEBRASKA.

— BLUE HILL.—First National Bank has been authorized to commence business Capital, \$50,000. President, Christian Koehler; Cashier, Henry Gund Koehler.

— CHADRON.—Chadron Banking Co.; Cashier, F. B. Carly.

**LINCOLN.**—State National Bank: E. E. Brown, President, in place of J. R. Richards; K. K. Hayden, Cashier, in place of L. C. Richards; Assistant Cashier, W. R. Alexander.

**MADISON.**—Madison County Savings Bank: discontinued.

**MARQUETTE.**—E. Farr & Co. (Bank of Marquette); succeeded by J. A. Ruby & Co.

**O'NEILL.**—First National Bank has been authorized to commence business. Capital, \$50,000. President, Patrick Fahy; Cashier, E. S. Kelly.

**STELLA.**—State Bank has recently commenced business. Capital, \$10,000. President, Carlos E. Sweet; Cashier, Arthur C. Sweet.

**TABLE ROCK.**—Bank of Table Rock: succeeded by State Bank of Table Rock. Capital, \$25,000. President, John R. Clark; Cashier, David K. Miller.

**YORK.**—Commercial State Bank; Walter J. Wildman is Cashier, not Walter J. Williams, as reported in December JOURNAL.

#### NEW JERSEY.

**ATLANTIC CITY.**—Merchants' Bank is style of new bank here. Cashier, J. R. Flanigen, Jr.

#### NEW MEXICO.

**ALBUQUERQUE.**—Albuquerque National Bank: George F. Chalender, President, in place of L. Huming; Edmund H. Smith, Vice-President, in place of J. Bell; Assistant Cashier, W. S. Strickler.

**LAS VEGAS.**—San Miguel National Bank; D. T. Hoskins, Cashier, in place of M. A. Otero, Jr.

#### NEW YORK.

**CARMEL.**—Putnam County National Bank; Sylvester Mable, President, deceased.

**FONDA.**—National Mohawk River Bank; J. Leddle Hees, Acting Cashier, in place of Earl S. Gillett, Cashier, deceased.

**NEW YORK CITY.**—Adams, Kellogg & Mason; dissolved. Former partners unite with Constant A. Andrews under style of Andrews, Adams & Kellogg.

Adams & McHarg; dissolved. William Adams and Henry K. McHarg each continues on his own account.

Constant A. Andrews & Co.; succeeded by Andrews, Adams & Kellogg.

Blake Bros. & Co.; London house discontinued.

W. E. Connor & Co.; dissolved. New firm under same style formed by Washington E. and Ezra S. Connor.

Fellowes Davis & Co.; Fellowes Davis and John Porter have formed a partnership under above style.

M. E. De Rivas & Co.; dissolved. New firm under same style formed by M. E. De Rivas and Charles E. Miller.

Drexel, Morgan & Co.; Egisto P. Fabbri retires. Remaining partners continue under same style.

Gilder & Farr open a branch office at Baltimore, Md. Manager, Robt. L. Chamberlaine.

Geo. C. Hance & Co.; dissolved. William W. and B. K. Hance succeed, under style of Hance & Co.

P. Harmony's Nephew & Co.; Miguel R. Martinez and Peter R. de Florez admitted.

Henry & Meserole; Douglas Henry and Jere. S. Meserole have formed a partnership under this style.

H. H. Hollister & Co.; Robert B. Holmes retires.

Hoyt & Bedie; Gerald L. Hoyt and Ben R. Bedie have formed a partnership under above style.

Henry S. Ives & Co.; Edward W. Woodruff withdraws; T. C. Doremus admitted.

R. King, Jr., & Co.; dissolved. R. King, Jr., and Reginald Fry form new firm under same style.

Knowlton & Co.; dissolved. D. Henry Knowlton, J. Sewell Tappan and Chas. H. Hawks form a new partnership under same style.

Leavitt & Davis; dissolved.

Marquand & Parmly; Frederick A. Marquand deceased. New firm under same style formed by Henry Marquand and Duncan D. Parmly.

Martin, Leask & Co.; succeeded by Leask & Co. Partners: George Leask, Julian W. Robbins, Henry S. Warner.

Chas. Minzesheimer & Co.; Charles L. Davis admitted.

W. D. Moore & Co.; dissolved. Frederick L. Moore and Frank Curtis continue under same style.

Wm. Fellowes Morgan & Co.; Wm. Fellowes Morgan and Richard Dixon are in business under above style.

R. G. Murphy; admitted to Clark, Ward & Co., Boston, Mass., who will open a branch office here.

Wm. & John O'Brien; John Maxwell Lummis admitted to an interest.

Patchen Brothers; Samuel W. Patchen deceased.

Peters, Wetmore & Schenck; succeeded by Peters, Schenck & Co.

Schulz & Ruckgaber; Max Ruckgaber, Jr., admitted.

Smith, Ryan & Co.; Lenox Smith, Thomas F. Ryan, and Henry A. Murray have formed a partnership under above style.

Speyer & Co.; Ferdinand Hermann admitted.

Stout & Co.; Chas. J. Haines and J. Sanford Betts admitted to an interest. Branch office opened in Chicago under style of Stout, Haines & Betts.

Thomas Tileston & Co. is style of new firm. Partners: Thomas Tileston, Arthur Lincoln.

Tobey & Kirk; Harry G. Tobey admitted to an interest.

Walker, Golcouria & Co.; dissolved. Joseph Walker, Joseph Walker, Jr., and E. Robbins Walker succeed. Style, Joseph Walker & Sons.

Walsh & Floyd; James W. Walsh, Jr. and Nicoll Floyd, Jr., are in business under above style.

Waters & Lawrence; John R. Waters and William T. Lawrence have formed a partnership under above style.

S. V. White & Co.; A. B. Claffin withdraws. Remaining partners continue under same style.

White, Morris & Co.; Louis E. Blackwell and Chas. O. Morris, Jr., admitted.

Ballin & Co.; Oscar E. Ballin and David James King have formed a partnership under above style.

Walsh & Hackmann; dissolved. New firm under same style. General partners: Chas. Allison Walsh, Oscar Hackman, Geo. P. Toby. Special partners: Seth Barton French, Chas. F. Woerishoffer.

PEEKSKILL.—Westchester County National Bank; Dorlin F. Clapp, President, deceased.

PLATTSBURGH.—First National Bank; Benjamin D. Clapp, Cashier, deceased.

SAG HARBOR.—Sag Harbor Savings Bank; Wm. Lowen, Treasurer & Secretary, deceased.

SYRACUSE.—Dow, Short & Co.; Assignee, Charles P. Baldwin.

TROY.—United National Bank; J. H. Neher, Cashier, in place of G. H. Perry.

WATERLOO.—First National Bank; A. G. Mercer, President, in place of M. D. Mercer; no Vice-President in place of A. G. Mercer.

WHITE PLAINS.—Central Bank; Howard E. Foster, Cashier, in place of J. F. Phillips.

#### NORTH CAROLINA.

ASHEVILLE.—First National Bank; President, William E. Breese; Vice-President, T. I. Gilder; Cashier, James S. Churchill; Assistant Cashier, W. H. Penland.

#### OHIO.

CLEVELAND.—Lamprecht, Hayes & Co.; dissolved. W. J. and H. E. Hayes succeed, under style of W. J. Hayes & Sons.

Lamprecht Brothers & Co.; Wm. H. and G. O. Lamprecht have formed a partnership for transaction of general banking business under this style. Offices, 137 Superior Street.

COLUMBUS.—Merchants & Manufacturers' Bank; President, G. M. Peters.

**LA CROSSE.**—Union National Bank; Vice-President, Mons Anderson.

**MINERAL POINT.**—Jas. Hutchison & Sons is new firm here.

**WAUPACA.**—R. N. Roberts & Co. are in business here. Style, City Bank.

#### WYOMING.

**CHEYENNE.**—Cheyenne National Bank; President, Nathaniel B. Davis; Cashier, John W. Collins.

## R. R. AND INVESTMENT NEWS.

A SYNOPSIS OF INFORMATION REGARDING RAILROAD AND OTHER CORPORATION AFFAIRS OF INTEREST TO BANKERS, INVESTORS, ETC., CLASSIFIED AS FOLLOWS:  
I. NEW ISSUES. II. REPORTS. III. MISCELLANEOUS INVESTMENT NEWS.

### I. NEW ISSUES.

**NEW YORK STOCK EXCHANGE LIST.**—The following securities have been placed on the list:

**Chicago & Northwestern Railway Company**—Northern Illinois Railway's (75 miles) first mortgage 5 per cent. bonds, due March 1, 1910, \$1,500,000, principal and interest guaranteed.

**Northern Pacific Railroad Company**—An additional \$625,000 of general first mortgage gold 6 per cent. bonds, making the total amount listed \$50,508,000.

**Norfolk & Western Railroad Company**—An additional \$501,000 of improvement and extension 6 per cent. bonds, making the total amount listed \$2,106,000.

**Milwaukee, Lake Shore & Western Railway Company**—An additional \$97,000 of Michigan division 6 per cent. bonds, making the total amount listed \$1,112,000; additional 2,500 shares (\$250,000) of common stock, making the total amount listed \$2,000,000; and \$1,000,000 of Ashland division first mortgage 6 per cent. bonds, due in 1925.

**New York, Lake Erie & Western**—Second consolidated 6's, ex-coupon of June 1, 1886, in accordance with the scheme entrusted to Messrs. Drexel, Morgan & Co., which contemplates the funding of coupons past due—June 1 and December 1, 1884, and June 1, 1885, and also coupon to mature June 1, 1886, and the payment in cash of the coupon maturing December 1, 1885.

**Norfolk & Western Railroad Company**—Adjustment mortgage 7 per cent. bonds, due December 1, 1924, but redeemable at 110 at any time after 1894; improvement and extension 6 per cent. bonds, due February 1, 1894, \$2,500,000; and convertible debenture 6 per cent. bonds, due January 15, 1894, \$525,000.

**Wabash, St. Louis & Pacific, Iowa Division**—Bonds secured by first mortgage on the Missouri, Iowa & Nebraska Railroad Company, upon which default has been made since September 1, 1884, or trust receipts representing the bonds deposited with the Metropolitan Trust Company under bondholders' agreement—both amounting to \$2,289,000—in lieu of what heretofore were called "Wabash, Iowa Division, 6's." Bonds to the amount of \$1,186,000 have been deposited up to November 18th.

**St. Joseph & Grand Island Railroad Company**—First mortgage 6 per cent. bonds, due July 1, 1925; interest guaranteed by the Union Pacific Railroad Company under an agreement, \$7,000,000; second mortgage income bond, due July, 1925, interest not exceeding 5 per cent. (if earned), \$1,680,000, and capital stock \$4,600,000. The company is the successor of the St. Joseph & Western Railroad, also of the Hastings & Grand Island Railroad (twenty-five miles), and owns the bridge across the Missouri river at St. Joseph.

**The St. Louis & San Francisco Railway Company**—An additional \$1,454,800 of the common shares of the capital stock.

**Wabash, St. Louis & Pacific Railway Company**—Mercantile Trust Company's receipts to the amount of \$16,000,000, issued for general mortgage 6 per cent. bonds.

**Pine Creek Railway Company**—First mortgage 6 per cent. bonds, due December 9, 1902, \$3,500,000. The payment of both principal and interest is guaranteed jointly and severally by the Central & Hudson, the Philadelphia & Reading and the Corning, Cowanesque & Antrim railroad companies.

**West Shore Railroad**—First mortgage 4 per cent. bonds, dated December 5, 1885, and payable 475 years from January 1, 1886. Pending the delivery of the new engraved bonds by the American Bank Note Company, certificates of Drexel, Morgan & Co. will

be a good delivery. The old New York, West Shore & Buffalo first mortgage 5 per cent. bonds were dropped from the list.

**Denver & Rio Grande Railway**—Receipts for \$38,000,000 capital stock issued by the United States Trust Company for deposits of share certificates, in pursuance of reorganization plan of June 10, 1885. Time for deposits without extra payment will expire January 6, 1886.

**New York, Chicago & St. Louis Railway Company**—Central Trust Company receipts for \$15,000,000 first mortgage bonds.

**Oregon Railway & Navigation Company**—Consolidated mortgage 5 per cent. bonds due June 1, 1925, \$3,000,000. The total issue is \$14,000,000, of which \$11,000,000 has been deposited with the Farmers' Loan & Trust Company to provide for the retirement of \$6,000,000 first mortgage bonds and \$5,000,000 debenture bonds now outstanding.

**Gulf, Colorado & Santa Fé Railway Company**—An additional \$600,000 of first mortgage bonds, making the total issue \$7,500,000; also an additional \$1,356,000 second mortgage bonds, making this total issue \$3,500,000.

**New York, Woodhaven & Rockaway Railway Company**—First mortgage 6 per cent. bonds due January 1, 1902, \$600,000, and second mortgage income bonds bearing 6 per cent. interest if earned, due January 1, 1912.

**Mahoning Coal Railroad Company**—First mortgage 5 per cent. bonds due July 1, 1884, \$1,500,000; principal and interest guaranteed by the Lake Shore & Michigan Southern Railway Company.

**BALTIMORE CITY WATER LOAN**.—Bids were opened on December 15th, in Baltimore, for \$500,000 of Baltimore city water loan, payable at pleasure after 1894. The whole amount was awarded to Blake Brothers, of Boston and New York, at 113.05.

**BROOKLYN ELEVATED**.—This company has mortgaged its entire property to the Central Trust Company of New York to secure the payment of \$1,250,000, which was used to complete the road after it came into the hands of the present company.

**UNITED LINES TELEGRAPH**.—A certificate has been filed in the New York County Clerk's office showing that the capital stock of the United Lines Telegraph Company had been increased from \$10,000 to \$3,000,000.

**NEW YORK & CHICAGO TELEGRAPH**.—The incorporation of this company was effected in New York last month. It is proposed to build a line of telegraph from New York to Chicago. Its capital stock is \$1,000,000, divided into 10,000 shares of \$100 each.

**NEW ENGLAND & SOUTHWESTERN**.—This company has filed a mortgage at Goshen, N. Y., for \$6,000,000 drawn to the Central Trust Company of New York. The mortgage covers the line from the Erie connection to Brewsters, 26 miles, including the projected bridge over the Hudson river at Storm King.

**UNITED LINES TELEGRAPH**.—A mortgage for \$1,200,000, made by the United Lines Telegraph Company to the Farmers' Loan & Trust Company of New York, has been filed in the County Clerk's Office in Ellicott City, Md. The mortgage is to secure an equal amount of bonds payable July 1, 1885.

**NEW YORK, FORDHAM & BRONX**.—This company has been organized with a capital of \$1,000,000 to construct a three mile elevated railroad north of the Harlem Bridge. It will connect with the Second avenue line of the Manhattan Elevated Road and run to the Bronx River, the whole to be completed in five years.

**NEW YORK CITY WATER BONDS**.—The Aqueduct Commissioners authorized the issue of \$2,000,000 of aqueduct bonds to meet expenses on the aqueduct. The bonds are to run twenty years and bear 3 per cent. interest. Offers for \$10,855,000 were received and awards were made as follows: The Dry Dock Savings Bank \$900,000 at 102.68 to 103.02; the Dime Savings Institution, Brooklyn, \$1,100,000 at 102.52.

**KANSAS & ARKANSAS**.—A new company has been formed under this title in Arkansas with a capital of \$8,000,000. It is proposed to build a railroad from the western terminus of the Little Rock & Fort Smith Railroad near Van Buren, Ark., through the Indian Territory to a point near Arkansas City, Kans., on the Arkansas River, the main line and branch to be 320 miles.

**KING'S COUNTY ELEVATED**.—A mortgage for \$7,700,000 has been filed in the Kings County Register's Office by the King's County Elevated Railroad Company. It covers

the equipment and structure for a distance of fourteen miles at \$550,000 per mile. The bonds for Fulton street, already issued, foot up only \$2,750,000, and are for the necessary equipment and five miles of the road. The remainder of the mortgage contemplates the roads to be built on Myrtle avenue and Broadway, and it is liable only for the actual amount of bonds issued.

### II. REPORTS.

**NEW YORK CENTRAL & HUDSON RIVER.**—The annual report for the fiscal year ended September 30, 1885, shows earnings and expenses as follows:

	1883-4.	1884-5.
Total gross earnings.....	\$28,148,669	\$24,429,441
Total operating expenses.....	17,849,313	16,319,372
Net earnings .....	\$10,299,356	\$8,110,069
Summary of income account:		
Total net income.....	\$10,299,356	\$8,110,069
Total disbursements.....	12,790,239	9,063,716
Balance, deficit.....	\$2,490,888	\$953,647

The company paid out \$7,159,643 for dividends in the years 1883-4 and \$3,129,990 in 1884-5.

**OREGON RAILWAY & NAVIGATION.**—The annual report of this company for the year ended June 30, 1885, has just been issued. It shows earnings as follows:

	1883-4.	1884-5.
Total gross earnings.....	\$5,364,906	\$4,082,118
Total operating expenses.....	2,971,456	2,569,358
Net earnings.....	\$2,393,450	\$1,482,760
Summary of income account:		
Total net income.....	\$2,604,894	\$1,621,663
Total disbursements.....	2,674,195	1,852,343
Balance.....	Surp., \$20,699	Def., \$230,680

The company paid dividends aggregating 7½ per cent. in 1883-4 and 4½ per cent. in 1884-5.

**MAINE CENTRAL.**—The annual report of this company is for the year ended September 30, 1885. It shows earnings and expenditures as follows:

	1883-4.	1884-5.
Total gross earnings.....	\$2,816,373	\$2,839,779
Total operating expenses.....	1,750,710	1,730,952
Net earnings .....	\$1,065,663	\$1,108,877
Summary of income account:		
Total net income.....	\$1,076,084	\$1,116,705
Total disbursements.....	1,035,927	1,106,306
Balance, surplus.....	\$10,157	\$10,397

The company paid \$215,532 in dividends in 1884 and \$215,541 in 1885.

**NEW YORK & NEW ENGLAND.**—The annual report of this company for the year ended September 30, 1885, shows earnings and expenditures as follows:

	1883-4.	1884-5.
Total gross earnings.....	\$3,337,901	\$3,288,946
Total operating expenses.....	2,941,625	2,301,715
Net earnings.....	\$396,276	\$987,231
Summary of income account:		
Total net income.....	\$423,123	\$1,010,704
Total disbursements.....	1,097,397	1,124,163
Balance, deficit.....	\$674,275	\$113,459

Included in the disbursements is \$916,273 for interest in 1884 and \$983,221 for interest in 1885, whether paid in full or not.

**ROCHESTER & PITTSBURGH.**—The annual report of this company for the year .

ended September 30, 1885, submitted to the New York Railroad Commissioners, shows the following:

	1883-4.	1884-5.
Total gross earnings.....	\$1,065,173	\$1,216,679
Total operating expenses .....	826,938	849,224
Net earnings .....	\$238,196	\$367,455
Summary of income account:		
Total net income .....	\$242,950	\$367,455
Total disbursements.....	452,182	499,186
Balance, deficit.....	\$209,182	\$131,731

### III. MISCELLANEOUS INVESTMENT NEWS.

**BALTIMORE & OHIO.**—President Garrett, of this road, was re-elected at a meeting of the Directors on December 9th.

**EVANSVILLE, ROCKPORT & SOUTHEASTERN.**—The sheriff of Evansville sold \$375,000 of bonds of this road to quiet title. The virtual owners, Mackey, Nesbet and Hellman, bought them for \$362,161.

**TEXAS & ST. LOUIS.**—The United States Court has ordered the Missouri & Arkansas division of the Texas & St. Louis road to be sold on February 22d. The road is to be extended to St. Louis.

**ST. LOUIS, HANNIBAL & KNOX.**—This road was sold under foreclosure of the first mortgage at St. Louis on December 9th. It was bought for \$370,000 by Mr. John L. Blair who represented the bondholders.

**QUEENS COUNTY VALUATION.**—The total assessed valuation of Queens County this year, shown by the local Assessors, is \$30,020,479, as follows: Jamaica, \$3,806,415; North Hempstead, \$2,887,461; Flushing, \$5,043,897; Oyster Bay, \$3,912,615; Newton, \$2,613,219; Hempstead, \$4,420,202, and Long Island City, \$7,386,670.

**PHILADELPHIA & READING.**—A supplemental bill has been filed in the United States Circuit Court at Philadelphia asking that the \$60,000,000 Reading mortgage be foreclosed. The bill relates that the Fidelity Insurance, Trust & Safe Deposit Company, the plaintiff, had been requested by more than one-tenth of the holders of the bonds to file the bill.

**TEXAS & ST. LOUIS.**—This road was sold at auction at Galveston last month. The sale was made for the satisfaction of claims against the railway company amounting to over \$6,000,000, embracing first mortgage liens and interest of \$4,708,567.50, and debentures, legal expenses and special liens amounting to about \$1,500,000. The property was bid in for \$1,700,000 by Mr. David B. Ogden, representing the bondholders' committee.

**TEHUANTEPEC SHIP RAILWAY.**—The Mexican Congress, on December 10th, passed amended concessions which add to the previous land grant to this company 1,700,000 acres, making the total concession equal to half the area of New Jersey. Mexico guarantees the payment of \$1,250,000 a year for fifteen years, provided the United States or some European nation guarantees \$2,500,000 more for the same period. The time for completing the road has been extended to 1894.

**VIRGINIA'S TAX COUPONS.**—The Great Falls Company is assessed on over 1,700 acres of land in Fairfax County, Virginia. The company tendered to the State officials last month payment of its taxes due the State in tax-receivable coupons. The tender was refused and the company gave notice that under the recent decision of the Supreme Court, making the coupons a valid tender in payment of State taxes, it would resist any attempt on the part of the State to collect the tax. Another suit on this much vexed question is therefore probable.

**LOUISVILLE, NEW ALBANY & CHICAGO.**—A plan for the reorganization of this company has been adopted. The holders of securities are to deposit them with the committee which is to purchase the road for the security holders. Upon each deposit of \$1,000 of special notes with the trust company a payment in cash of \$4 is to be made, with each \$1,000 of the present first mortgage bonds \$5, second mortgage bonds \$2.50, income bonds \$1.25, and with each share of stock 6¼ cents. It is proposed to issue the

following new securities: \$2,000,000 first mortgage bonds, \$3,000,000 second mortgage bonds, \$1,500,000 preferred stock and \$350,000 of common stock.

**MEMPHIS FUNDING OPERATIONS.**—At midnight, on December 1st, the time for funding the Memphis debt expired. Since the first of last September \$767,000 have been funded. Those known to still have outstanding indebtedness, and the amounts they hold, are as follows: P. S. March, New York, \$40,000; John League, Memphis, \$30,000; Mrs. T. A. Fisher, Memphis, \$18,000; J. J. Murphy, Memphis, \$6,000; A. A. Collier, Memphis, \$4,000. The foregoing aggregates \$88,000, and there is about \$12,000 additional in small amounts held by various parties.

**MASSACHUSETTS VALUATIONS.**—The valuation of the State of Massachusetts, as reported by the Assessors, shows a decrease of \$25,456,365 from last year. There was a decrease in real estate of \$22,541,187, and an increase in personal property of \$4,071,823. The total of real and personal property is \$1,782,349,143, an increase of nearly \$200,000,000 during the past five years. The personal property assessed amounts to \$404,855,244, on which the tax is \$3,644,748, real estate paying the balance of \$19,205,596. The statement is made that a decrease in the total tax of \$2,808,223 had taken place. The entire decrease is attributable to the action of the Legislature in limiting the rate of taxation in Boston. The reduction of the tax levy in Boston, owing entirely to the restrictions imposed, was \$2,826,424.

**LOUISVILLE RAILROAD STOCK.**—The city of Louisville has sold all of the stock which it owned in the Louisville & Nashville Railroad. In 1883 the city issued \$500,000 of bonds to the road, receiving therefor an equal amount of the stock of the road. A few years ago the city sold part of the stock, realizing \$800,000, and retained 9,000 shares. Last September 4,000 shares were sold at an average price of 45 per cent. The remaining 5,000 shares have been sold at prices ranging from 50 to 51 per cent. The bonds which were issued to the Louisville & Nashville Railroad for its stock matured in 1883 and were paid off. The city has received for the \$500,000 worth of bonds issued a return which made the investment a very profitable one. The stock, as it was held by the city, brought in no revenue, as the company paid no dividends on it, and its sale was only a question of when the most money could be realized.

**IOWA RAILROADS.**—The Railway Commissioners of Iowa report 7,478 miles of road in operation in the State. The capital stock on broad gauge roads is estimated at \$123,484,621, or \$18,604.46 per mile, and on narrow gauge roads at \$1,267,575, or \$7,826.56 per mile. The total number of stockholders living in the State is 549. The total amount of stock owned by persons living in the State is \$7,956,650. The increased mileage reported is 1,280.14; increased indebtedness, \$16,349,856.59, or \$12,771.93 per mile; total earnings for the year ending June 30, 1885, \$36,123,587.45; total earnings for the year ending June 30, 1884, \$35,736,271.85, an increase over the previous year of 1.07 per cent., or \$388,315.60; total amount of taxes paid by the railroads in the State, \$706,274.43, or \$112,874.98 less than last year.

**NEW YORK, WEST SHORE & BUFFALO.**—The suit to restrain the lease of this road to the New York Central was settled out of Court and no decision was rendered. The company has been reorganized under the name of the West Shore Railroad, with a capital stock of \$10,000,000 and an authorized issue of \$50,000,000 of 4 per cent. bonds. The new company executed a lease to the New York Central Railroad Company for 475 years and transferred to the New York Central the whole of its capital stock. The New York Central guaranteed the bonds, which the new West Shore Company delivered to Messrs. Drexel, Morgan & Co., as the agents and trustees of the bondholders and creditors, and they have been delivered to the proper parties for distribution. The Receivers surrendered the West Shore to the New York Central Company and Mr. J. D. Layng was appointed General Manager. The Directors for the first year are: Ashbel Green, Tenafly, N. J.; Charles Lanier, Edward King, Edward D. Adams, J. Hood Wright, Charles H. Coster, George S. Jones, Howard Mansfield, Herbert E. Kinney, Charles Edward Tracey, George W. Knight and Francis Gordon Brown of New York city, and Joseph P. Ord, of Englewood, N. J. The new company may acquire, with the approval of the Reorganization Committee of the Central Hudson road, railway terminal and ferry property, as may be deemed necessary. The officers of the new company are: President, J. C. Wright, of Drexel, Morgan & Co.; Ashbel Green, Vice-President, and E. D. Worcester, Secretary.

# THE BANKER'S GAZETTE.

The Money Market and Financial Situation.

JANUARY 4, 1886.

The year 1885 closed with a very pronounced improvement as compared with a year ago, and the new year opens more auspiciously than its predecessor. In the last half of the year just ended there has been a quiet but steady growth of activity in most branches of trade, and the fact that there have been no symptoms of an unhealthy "boom" is one of the most satisfactory features of the situation. The period of restriction of production has at last come to an end, and throughout the country there is witnessed a revival in manufacturing industries, while prices for many products have recorded a substantial advance.

In the iron trade particularly there has been a marked improvement and a considerable increase has occurred in the production of iron, steel and steel rails. A large number of furnaces which have been idle for some time have resumed operation, and already orders are reported to be in excess of the capacity to fill them. Steel rails are now quoted at \$35 per ton, while a few months ago they sold as low as \$26 per ton.

There was a large falling off in the construction of railroads during the year, only 3,113 miles being constructed in 1885 against 3,825 miles in 1884, 6,870 miles in 1883, 11,596 miles in 1882, 9,789 miles in 1881, 7,174 miles in 1880, 4,729 miles in 1879, and 2,687 miles in 1878. Not since 1879 has railroad construction been as small as during the past year, but there is evidence that this industry has reached the lowest point likely to be touched for some years to come. We begin the year with a total mileage in the country of 128,492 miles and it is estimated that at least 5,000 miles, and probably more, will be built this year.

An encouraging feature is the substantial increase in railroad earnings reported in nearly every section of the country. Of thirty-three roads reporting for the third week in December only two show a decrease, and one of them a loss of less than \$1,000. For the month of November sixty-five roads reported a gain of \$1,451,450 as compared with the same month of 1884, being an increase of over seven per cent. This is the largest gain for any month in the year. Some roads show very satisfactory increases for the entire year. Canadian Pacific gained about \$2,500,000, Chicago, Burlington & Quincy about \$1,000,000, St. Paul about \$900,000, Northwest about \$800,000, Denver & Rio Grande about \$600,000, Illinois Central about \$500,000, Southern Pacific (Atlantic system) about \$1,200,000 and Union Pacific about \$400,000.

The record of commercial failures for the year shows a favorable change. There were 10,637 failures with liabilities of \$124,220,321 in 1885 against 10,968 with liabilities of \$226,343,427 in 1884, a decrease for 1885 of 331 or 3 per cent. in number, and of \$102,000,000, or nearly 50 per cent. in liabilities. In 1878 the failures numbered 10,478 and the liabilities amounted to \$234,883,132, so that compared with that year the showing in 1885 is very good. One in every eighty-six traders failed in 1885, while one in every sixty-four failed in 1878.

Our foreign trade still is slow in improving, but it is far from being discouraging. The balance of trade continues in our favor, our excess of exports amounting to \$78,732,857 for the eleven months ended November 30, 1885, against \$70,981,406 for the corresponding period in 1884. Our net imports

of gold for the same time aggregated about \$9,400,000, while in 1884 we exported \$15,000,000 more gold than we imported. There was some alarm created last month by the sharp advance in foreign exchange, and for a short time large exports of gold were feared. But the rate of exchange soon fell and only a small amount of gold was shipped. With an increased export movement in grain and cotton, which may be expected, there will be little danger of gold shipments.

The issue of a call for the redemption of \$10,000,000 3 per cent. Government bonds by the Secretary of the Treasury late in the month was viewed with no little satisfaction. It indicates that the Government has strengthened its position with reference to its gold reserve and that it no longer doubts its ability to keep that reserve good, barring unforeseen accidents. For over a year the redemption of bonds has been stopped, and the call just issued, it is hoped, is only the forerunner of others to come.

FOREIGN EXCHANGE was very firm throughout the month, and between the 15th and 22d made a very sharp advance. Bankers' sterling, 60 days, touched \$4.87, the highest since last June, and sight touched \$4.90½, the highest for the year. In the latter part of the month there was a decline, but the closing rates were considerably above those of a month ago. Following are the posted and actual rates of the principal dealers: Bankers' sterling, 60 days, nominal, \$4.86; sight, nominal, \$4.89½; Bankers' sterling, 60 days, actual, \$4.85@4.85½; sight, actual, \$4.88@4.88½; Cable transfers, \$4.88½@4.89¼; Prime commercial sterling, long, \$4.84@4.84½; Documentary sterling, 60 days, \$4.83½@4.83¾; Paris, bankers', 60 days, 5.18¾@5.18½; sight, 5.16¼@5.15½; Paris, commercial, 60 days, 5.21¼@5.20; sight, 5.18½@5.17½; Antwerp, commercial, 60 days, 5.21¼@5.21½; Swiss, bankers', 60 days, 5.19¾@5.18¾; sight, 5.16¼; Reichsmarks (4), bankers', 60 days, 95¾@95¼; sight, 95¾@96; Commercial, 60 days, 95@95¼; sight, 95½@95¾; Guilders, bankers', 60 days, 40¼@40 5-16; sight, 40½@40 9-16; Commercial, 60 days, 40 1-16@40 ¼; sight, 40¼@40 5-16. Paris dispatches quote exchange on London 25f. 23c.

The following shows the posted rates for prime bankers' sterling bills on London at 60 days, and sight, cable transfers, and prime commercial sterling, together with exchange on Paris on December 1st, the changes in the rates as they occurred during the month, and the highest and lowest during the months of November and December, 1885:

+ Ex-interest.

THE NATIONAL BANKS.—The amount of legal-tender notes deposited by the National banks to retire circulation was increased during the month \$1,281,071. The amount is now \$42,606,412, or \$546,217 less than on January 1st, 1885. The circulation outstanding is \$817,073,260, not including \$370,294 gold notes. There was a decrease in circulation for the month of \$73,809 and for the year of \$11,575,424. There was a decrease in amount of bonds deposited, to secure circulation, during the month of \$1,646,800.

The following will show the amount of each description of bonds held by the Treasurer to secure National bank circulation on or about the dates indicated :

	Jan. 1, 1885.	Oct. 1, 1885.	Nov. 1, 1885.	Dec. 1, 1885.
Currency 6 per cents.....	\$3,515,000	\$3,506,000	\$3,506,000	\$3,506,000
4½ per cents.....	50,087,450	48,995,750	49,531,250	49,843,250
4 per cents.....	114,834,650	117,130,650	116,432,650	115,756,150
3 per cents.....	137,596,650	139,523,150	138,869,650	138,523,150
Total.....	\$305,983,750	\$309,159,550	\$308,338,550	\$307,630,550

MONEY AND DOMESTIC EXCHANGE.—Rates for money have been quite firm, ranging from 2½ to 4 per cent. most of the time. There continues to be a scarcity of commercial paper, while the demand is very good. Prime

commercial paper, 60 to 90 days, is quoted at 4 to 4½ per cent., and 4 months' at 4½ to 5 per cent. Good single-name paper, having 4 to 6 months to run, is quoted at 5 to 6 per cent. Following are the rates of domestic exchange on New York: Savannah, buying ½ discount; selling par@½ premium. Charleston, buying 8-16; selling par@½ premium. New Orleans commercial, \$1.25@\$1.50 per \$1,000 discount; bank, nominal. St. Louis, par. Chicago, 40c. per \$1,000 premium. Boston, 20@80c. per \$1,000 premium.

**NEW YORK CITY BANKS.**—During the month the New York banks reduced their loans \$4,400,000. Deposits were also reduced \$8,400,000. The reserve shows a decrease of about \$2,600,000 in specie and \$1,400,000 in legal-tenders. The surplus reserve is now \$24,712,850, or \$1,800,000 less than a month ago, \$16,200,000 less than a year ago, and \$18,000,000 more than two years ago.

The following shows the condition of the New York Clearing-House banks for a number of weeks past, as well as about this time in 1884 and 1883:

1885.	Loans.	Specie.	Legal-tenders.	Deposits.	Circulation.	Surp. Res.
Dec. 26....	\$336,938,300	\$90,988,200	\$27,212,700	\$373,953,000	\$9,324,400	\$24,712,850
Dec. 19....	337,574,300	92,818,100	23,306,200	377,508,000	10,005,700	23,747,800
Dec. 23....	338,726,800	94,019,500	29,069,300	378,121,800	10,082,500	23,558,350
Dec. 5....	338,514,100	91,581,100	23,014,900	377,635,200	10,095,200	23,187,200
Nov. 23....	341,397,000	93,579,300	23,614,200	382,400,900	10,085,500	23,568,275
1884.						
Dec. 27....	335,874,200	88,170,500	36,592,300	335,372,100	11,618,600	40,944,775
1883.						
Dec. 29....	327,535,700	60,468,100	26,479,100	320,798,000	15,456,800	6,748,950

**THE TREASURY.**—The following table will show the condition of the Treasury, as regards the amount of gold and silver held, on the first day of January, 1886, and, for comparison, on the first of November and December, 1885, with the amounts of certificates outstanding, and the balances of coin owned by the Treasury:

	Jan. 1, 1886.	Nov. 1, 1885.	Dec. 1, 1885.
Gold coin and bullion.....	\$253,351,409	\$251,714,508	\$251,945,578
Gold certificates outstanding.....	105,359,601	110,114,740	105,554,082
Gold owned by Treasury.....	\$147,991,808	\$141,600,868	\$146,391,496
Silver dollars and bullion.....	\$109,515,230	\$107,748,299	\$109,151,974
Silver certificates outstanding.....	93,179,465	93,190,886	92,702,442
Silver owned by Treasury.....	\$76,335,765	\$74,557,413	\$76,449,532

The Treasury still further increased its gold reserve last month, the gain in net amount owned being \$1,600,000, of which amount \$1,400,000 was in gold coin and bullion and the remainder a reduction in certificates outstanding. There was also a reduction in net silver, but only about \$114,000. There was an increase in silver dollars and bullion of \$363,000 and an increase in certificates outstanding of \$476,000.

**RAILROAD AND MISCELLANEOUS STOCKS.**—The stock market inclined to dullness in the early part of the month and prices tended downward. The death of Mr. Wm. H. Vanderbilt caused depression in the securities of which he was known to be a large owner, and the decline affected other securities as well. Later confidence became stronger, and before long the Vanderbilt stocks recovered, and at the close of the month were selling nearly as high as before Mr. Vanderbilt's death. The entire list advanced during the last week of the month, and some stocks touched the highest prices recorded during the year. The call for \$10,000,000 Government bonds, and the large disbursements for January interest and dividends are expected to have a favorable influence upon the stock market during the coming three months.

The following table shows the highest, lowest and closing prices of the active stocks at the New York Stock Exchange in the month of December, the highest and lowest since January 1, 1885, and also during the year 1884:

	DECEMBER, 1885.			SINCE JANUARY 1, 1885.		YEAR 1884.

## BANKERS' OBITUARY RECORD.

**Cassard.**—Jules Cassard, President of the Germania National Bank, of New Orleans, died December 12, 1885, aged 63 years. He was one of the strongest financial men of the South, a splendid type of creole industry, enterprise and sagacity.

**Clapp.**—Benjamin D. Clapp, Cashier of the First National Bank, of Plattsburgh, N. Y., and a member of the firm of B. D. Clapp & Co., hardware merchants, at Keesville, N. Y., died December 22d, aged 47 years. He was a member of Assembly from Essex County in 1877-8 and from Clinton County in 1881-2.

**Clapp.**—Dorlin F. Clapp, an old resident of Peekskill, N. Y., died suddenly from a heart trouble, December 24th, aged 65 years. He was the President of the Westchester County National Bank at that place, which institution he entered May 1, 1834. On June 13, 1848, he was made Cashier, and on January 8, 1878, was elected President.

**Gillette.**—E. S. Gillette, Cashier of the Mohawk River National Bank, at Fonda, N. Y., died suddenly on December 14th, aged 58 years. He had been in the banking business for 33 years.

**Green.**—Dr. John Orne Green, an old and well-known physician of Lowell, Mass., who died on December 13th last, was chosen President of the Lowell Bank in 1850.

**Hotchkiss.**—W. H. Hotchkiss, Cashier of the First National Bank, of Burnet, Tex., died December 16th, 1885.

**Moren.**—James A. Moren, the oldest merchant in Halifax, Nova Scotia, died December 2d. He was engaged in the West India trade for many years, and was very wealthy. He was President of the Union Bank for twenty years.

**Patchen.**—Samuel W. Patchen, a well-known member of the New York Stock Exchange, died December 10th, aged about 48 years.

**Wallis.**—William T. Wallis, for the past twenty-two years Cashier of the Third National Bank, of Rockford, Ill., died in November last.

**Woodman.**—Charles Woodman, a wealthy citizen of Dover, N. H., who died December 21st, aged 64, was appointed clerk of the Strafford Savings Bank in 1856, and elected Treasurer of the institution in 1862, serving to August, 1881.

**Woodward.**—Thomas Woodward, one of the old-time merchants of New York, and a member of the Produce Exchange, died December 19th, aged about 70 years. For fifteen years Mr. Woodward was a Director of the Chatham National Bank. He was one of the founders of the Mechanics & Traders' Fire Insurance Company, and was for some time Vice-President of the Mechanics & Traders' Bank.

**NATIONAL BANK STATISTICS.**—Statement of the Comptroller of the Currency on January 1, 1886, showing the amounts of National Bank Notes and of Legal-Tender Notes outstanding at the dates of the passage of the Acts of June 20, 1874, January 14, 1875, and May 31, 1878, together with the amounts outstanding at date, and the increase or decrease.

### NATIONAL BANK NOTES.

Amount outstanding June 20, 1874.....	\$349,894,122
Amount outstanding January 14, 1875.....	351,861,450
Amount outstanding May 31, 1878.....	322,755,995
Amount outstanding at date.....	317,073,290
Decrease during the last month.....	73,309
Decrease since January 1, 1885.....	11,575,424

### LEGAL-TENDER NOTES.

Amount outstanding June 20, 1874.....	\$382,000,000
Amount outstanding January 14, 1875.....	382,000,000
Amount retired under Act of January 14, 1875, to May 31, 1878.....	85,318,984
Amount outstanding on and since May 31, 1878.....	346,681,016
Amount on deposit with the Treasurer U. S. to redeem notes of insolvent and liquidating banks, and banks retiring circulation under Act of June 20, 1874.....	42,606,412
Increase in deposit during the last month.....	1,281,071
Decrease in deposit since January 1, 1885.....	546,217

\*Circulation of National Gold Banks not included in the above, \$370,294.

H. W. CANNON, *Comptroller of the Currency.*

## NOTICES OF NEW BOOKS.

*The Country Banker: His Clients, Cares and Work. From an Experience of Forty Years.* By GEORGE RAE, author of "Bullion's Letters to a Bank Manager." Second edition. London: John Murray. 1885.

This work bears the stamp of the author's experience in nearly everything of which he treats. His maxims and advice as to the treatment of various classes of customers evince that mixture of shrewdness, boldness, conservatism, firmness and courtesy which go to the making of the ideal banker. As to these features of the work, they are as welcome to Americans as to Englishmen, but the larger portion of the matter is applicable only to the latter.

*Practical Economics. A Collection of Essays Respecting Certain of the Present Economic Experiences of the United States.* By DAVID A. WELLS, LL. D., D. C. L., etc. New York and London: G. P. Putnam's Sons. 1885.

These essays, some of which have been published before as magazine articles, are on eminently practical subjects. Of course, a number of them are devoted to various phases of the tariff question, treated in the well-known style of the author. But not the least interesting of the essays are on other subjects. Under the title, "A Modern Financial Utopia," is given a history of fiat money in Texas before its annexation to the United States. There is a chapter on "The Silver Question," in which Mr. Wells argues that silver is inconvenient both for general circulation and for bank reserves, and that the gold standard is a necessity for this country. "Our Experience in Taxing Distilled Spirits" is used to illustrate a natural law governing taxation which it behoves all law-makers to lay well to heart. No one who desires to keep pace with the movement of economic thought can afford to neglect this work.

*The Science of Business. A Study of the Principles Controlling the Laws of Exchange.* By RODERICK H. SMITH. New York and London: G. P. Putnam's Sons. 1885.

This book is number 26 of the series of thoughtful works entitled "Questions of the Day." It is a serious attempt to apply the law of Rhythm of Motion to the great fluctuations in trade and values. These motions are illustrated in the cases of the iron business, railroad building, immigration, stocks, exchange, foreign trade and the traffic in grain. The author seems to have proved his case in so far as there is a rhythmic movement in commerce. "The lowest points at which iron is sold; the time at which the least number of immigrants arrive in the country; the time when railroad building is the least active; the time when stocks reach their lowest points; the time when failures are the most numerous. These times, with but minor differences, occur together. When stocks advance railroad building and immigration increase. When one advances they all advance." This is, in the main, true. But when we come to apply this rule to a particular time, as does the author in his predictions for some years to come, we enter upon precarious ground. We have not data enough presented in the work, as to the past of the market, to predict that the course of the prices of stocks will be downward in 1886, with a slight rise in 1887. We incline to believe that the tables in regard to the stock market would be more valuable had the values been all reckoned on the gold basis during the years when gold was at a premium. However, the work will repay a careful perusal.

---

**TEXAS & PACIFIC.**—On December 16th the United States Circuit Court at New Orleans, on application of the Missouri Pacific Railroad Company, appointed Governor Lionel A. Sheldon and ex-Governor John C. Brown as Receivers of the Texas & Pacific road. The road extends from New Orleans to El Paso, some 1,400 miles, and is a part of the Gould system, with Jay Gould, President, and H. M. Hoxie, First Vice-President. The road has had hard luck since it was built on account of crevasses in Louisiana and washouts in Texas, and its traffic has been suspended for months at a time. It had become burdened with a funded debt of \$27,000,000, which absorbed so much of the earnings in interest that betterment was impossible. It is intended under the order of the Court to improve the roadbed and stock, but to interfere with none of the road's present employes.

## CHRONOLOGICAL RECORD.—DECEMBER, 1885.

1. **TUESDAY.**—Increase in the public debt in November, \$4,887,198.
2. **WEDNESDAY.**—Revolutionists under Manuel Rodriguez have taken control of the State of Nuevo Leon, Mexico.
4. **FRIDAY.**—Senator John A. Logan declined the office of President *pro tem.* of the Senate, offered in caucus.
5. **SATURDAY.**—Discount rate on commercial paper in New York, 4@6 per cent.; call loans, 2@3 per cent.
7. **MONDAY.**—The West Shore Railroad Company was incorporated in New York, and a lease of the property for 475 years executed to the New York Central Railroad. — The Forty-ninth Congress assembled. — Hon. John Sherman elected President of the Senate.
10. **THURSDAY.**—The German Bundesrath unanimously approved the bill for the construction of a ship canal between the Baltic, the Elbe, and the North Sea.
12. **SATURDAY.**—Greece has acceded to the new terms of the Latin Monetary Convention. — Discount rate on commercial paper in New York, 4@6 per cent.; call loans, 1½@2¼ per cent. — Discount rate in London on 8 months' bills, 2¼ per cent.; short loans, 1¼@2 per cent.
19. **SATURDAY.**—Discount rate on commercial paper in New York, 4@6 per cent.; call loans, 2@3 per cent. — Discount rate in London on 8 months' bills, 3¼ per cent.; on short bills, 8 per cent.
23. **WEDNESDAY.**—Rates of foreign exchange advanced to near the gold exporting point.
26. **SATURDAY.**—Hon. John Bigelow declined the office of Assistant United States Treasurer at New York. — Discount rate on commercial paper in New York, 4@6 per cent.; call loans, 2@2½ per cent. — Discount rate in London on 60 days to 3 months' bank bills, 3¼ per cent.; short loans, 2¼ per cent.
28. **MONDAY.**—M. Francois Jules P. Grévy was re-elected President of the French Republic by the National Assembly.
29. **TUESDAY.**—The 182d Treasury call issued for \$10,000,000 of 3 per cent. bonds, maturing February 1, 1886.
31. **THURSDAY.**—A proclamation was issued formally annexing Burmah to the British Empire.

---

**COMPTROLLER CANNON.**—It is reported that the Hon. Henry W. Cannon, Comptroller of the Currency, will tender his resignation about the middle of January. Washington advices—January 4th—state that Mr. Cannon has received and is considering an offer from a New York bank which he is strongly inclined to accept. It is understood that the position he has been tendered is a vice-presidency, which will pay more than his present place. Mr. Cannon was Cashier of the Lumbermen's National Bank, at Stillwater, Minnesota, when called to the Comptrollership. He succeeded the Hon. John Jay Knox, and has made a very good reputation as a financier since his accession to office; his reports, of which he has made two, are models of skilful compilation and valuable information.

---

**THE REDUCED VALUE OF FOREIGN SILVER COINS.**—The circular issued by the Director of the Mint, on January 1, declaring a reduction of the value of silver coins of all countries where there is a single silver standard, is said by officers of the customs service to affect the revenues principally in the importations of Russian wools where the invoice value is stated in Russian roubles. The alleged undervaluation of such wools has been the cause of repeated and bitter complaints, and the reduced estimate of the value of the rouble, of course, lowers still further the valuation. The reduced value of the Mexican dollar affects the customs revenues mainly from the fact that so large a percentage of the importations from China and Japan are on invoices stating the value in Mexican dollars. The reduced value of South American coins of course reduces the duties on most importations from South American countries.

---

**NOTICE.**—The Publishers will be glad to have the JOURNAL's friends use it in making known their facilities for transacting business—Collections, Accounts solicited, Investments, Exchange, and the general banking operations carried on by well-equipped banks. Owing to its wide-spread circulation, the use of its advertising pages is certain to aid bankers very materially in pushing their business. The advertising rates, printed in each issue, are very low considering the JOURNAL's large and constantly growing circulation.

BRADFORD RHODES & CO.

# RHODES' JOURNAL OF BANKING.

---

Vol. XIII.      FEBRUARY, 1886.      No. 2.

---

THERE IS SOME AGITATION IN VERMONT looking to a law to compel the savings banks to invest their savings funds at home instead of in the West. It is claimed that "the same craze for Western investments from which New Hampshire and other New England States have suffered prevails in Vermont to the great detriment of all home interests." It is said further that "the State is being drained of capital" from the cause mentioned. Now this may be true, and it may be that the banks are making unsafe investments. In the latter case the law is perfectly competent to put a stop to them. But we protest that this must be done, if it is done, solely in the interest of the depositors and not for the purpose of supplying capital for borrowers at a cheap rate. If the Legislature should attempt to prevent private capitalists from lending money out of the State with the object of encouraging home industries their act would be considered monstrous. Depositors have a right to get the best rates of interest that the bank managers can safely earn for them. As to unsafe investments, that is another matter entirely.

---

ON THE TWENTY-FOURTH DAY OF DECEMBER LAST the National banks of New York city held 195,512 trade dollars. There are no means of ascertaining how many more are held by institutions and private individuals of the city in addition to this sum, but they certainly amount to many hundreds of thousands. It was recently estimated that over half a million were held in Philadelphia. The *North American* says that many of the merchants took these coins at par in order to relieve their customers, who found themselves in possession of the depreciated currency. Every person knows that the same thing was done throughout the country. The coins gained the universal currency which they obtained a few years ago because they were issued by the United States with its insignia upon them. Besides, they were for a number of years a legal-tender, being declared a coin of the United States, and the largest portion of them were issued before they were deprived of their legal-tender quality. On the other

hand a large number were issued after silver had depreciated in value to such an extent as to make trade dollars worth less than gold dollars in the markets of the world. It is held by those who oppose the recognition of these coins by the Government that the latter gained nothing by the coinage; that the dollars were issued for a special purpose (which was doomed to failure from the first), and that the coins are now all in the hands of speculators. We ask any candid reader to compare these reasons for the repudiation, or any others that have been offered, with the reasons that have been given for the repudiation of debts by many of our States, which has justly been condemned by financial men. There have been few cases indeed in which the States had not better reasons for their action. The question of redeeming the trade dollars outstanding is before Congress again in the shape of a bill introduced by Senator Mitchell, which provides for the exchange of the outstanding coins for standard coins, dollar for dollar. It is rather late to save the honor of the Government in this matter, but tardy justice is better than none.

---

MR. POSEY S. WILSON, ASSAYER OF THE DENVER MINT, has for a long time kept up a single-handed fight in the newspapers of that section of the country against the strenuous silver advocates. When he was first appointed, last year, the papers became suspicious that he was not in favor of the depreciated silver dollar, and continued to harry him until he came out boldly with his views, which were published in the JOURNAL at the time. Ever since he has been the subject of attack—often of a very unjust and inconsistent character—but he has invariably replied with perfect good nature and strong logic. The papers that began the controversy have been glad to end it, as they tacitly acknowledged that they were defeated. When considered from any proper stand-point, Mr. Wilson's trenchant remarks and powerful arguments were calculated to draw many readers over to his side. A curious phase of the matter has been the tone which many of his opponents have taken—implying that they consider it an outrage that the Assayer should hold different views from those of his neighbors regarding the silver coinage. The silver men generally do not wish to argue the matter on even ground, being conscious of the weakness of their case. They prefer to appeal to the instincts of those so blinded by self-interest and egotism as to be wholly unable to accept the truth no matter how clearly it may be presented.

---

THE BILL INTRODUCED BY SENATOR VAN WYCK, of Nebraska, "to prevent demonetization of American coin by certain persons in the United States," which has been the subject of much unfavorable comment by bankers and others, is no more foolish than most of the arguments that are used every day by the advocates of the silver coinage. His idea of making it a criminal offence to execute a

contract calling for the payment of a debt in gold alone is no more absurd—indeed, it is probably not so foolish—than was the attempt to force the New York Clearing-House to use silver. But it is a fresh indication that a dangerous and vicious fallacy is strong at work among the people who are urging on measures of this kind. They are possessed of the preposterous idea that the power of the Government is illimitable. If they can only get a majority to vote in favor of a monstrous injustice—of robbing some one, for instance—they insist that the crime must be carried out to the letter. The most despotic forms of government do not breed more slavish ideas than these. It is time for intelligent people to assert their rights when such doctrines are openly proclaimed.

---

THE BILL KNOWN AT THE LAST SESSION of Congress as the McPherson Bill was introduced in the House of Representatives by Mr. Wilkins this winter, and has been approved by the Committee on Banking and Currency. The bill provides that the Comptroller of the Currency shall be allowed to issue to any National bank circulating notes up to the par value of the United States bonds deposited by it instead of at the ratio of 900 to 1000 as at present. We urged long ago that the friends of the banks should agree to work for the passage of this measure before attempting to carry any other of the many plans proposed. It is the very best of the temporary expedients that have been brought forward to prevent the contraction of the circulation, and it will not stand in the way of action upon any permanent arrangement for the same object. If our advice had been followed we are well assured that the present bank circulation would be larger instead of smaller than it was a year ago. It is said, however, that the bill has a good chance to be passed at this session. In that case, if its provisions are fully availed of, we reckon that it will add about \$35,000,000 to the circulation, which is about two-thirds of the total reduction during the past four years.

---

THE MOST DISCOURAGING feature of the prospect as to legislation on the silver coinage is the fact that men like Senators Sherman and Evarts are not prepared to take a firm stand on the right side. The bill introduced by the former on January 28th would stop the coinage, but continue the regular purchases of silver by the Government. The silver would be held in the Treasury, and coin certificates issued against it. One bad feature of the present arrangement, the issue of 80 cent dollars, would be avoided, but new ones would be added. The Government would be buying silver for which it has no use, and which would, probably, depreciate in value. The currency of the country at the same time would continue to be corrupted by the admixture of an element which is being discarded by all commercial nations, and the danger of a reduction to the silver standard would remain as before.

## ALEXANDER DELMAR AND HIS MIS-STATEMENTS

IN REFERENCE TO THE COINAGE ACT OF 1873.

Mr. Alexander Delmar, who claims the honor of having discovered that the section of the Coinage Act of 1873 which discontinued the coinage of the silver dollar was passed fraudulently, having ceased to find readers on this side of the Atlantic, has recently been publishing his misstatements in England. Notwithstanding the fact that Secretary Manning, in his last report to Congress, pages 28 and 29, says that the statements in reference to the inadvertent or fraudulent passage of the act are entirely without foundation, two leading Southern Senators, in carefully prepared speeches, just delivered, have again repeated the statements which had been already so frequently answered. We therefore copy the following terse and conclusive letter, by ex-Comptroller Knox, from the *London Economist* of December 26, 1885, for the information of all persons who propose to study or discuss the silver question.

*To the Editor of the London Economist:*

SIR:—Mr. Morton Frewen, in a communication to the *London Economist* of October 17, 1885, on the subject of "Silver in the United States," uses the following language:

"For not without reason does a community which remembers the jobbery by which, in 1873, the codification of the Mint Law was secured now object to be relegated to the tender mercies of the banks."

In a subsequent letter in the *Nineteenth Century* of October, 1885, upon "Gold Scarcity and the Depression of Trade," he says:

"In addition to the gold requirements of Germany, the United States, in 1879, resumed specie payments, and silver in that country, having been deprived of its legal-tender value in 1873, gold became the currency basis in America also. There are sufficient reasons for the belief that the demonetization of silver in the States in 1873 was a 'job,' the particulars of which may shortly come to light. Mr. Alexander Delmar, an authority on currency subjects in America, and who was a Federal office-holder at that time, has recently stated publicly that he knows who the financiers in Europe were who had enormously oversold Indian Council drafts and other silver securities, and between whom and the realization of great profits was the single obstacle of the free coinage and legal-tender position of silver in the United States. In any case the fact remains that currency alterations of enormous future importance were sanctioned by Congress, neither party having the least idea of the reforms which were smuggled through under their very eyes."

The statements of Mr. Frewen seem to have been derived from some remarks made by Mr. Alexander Delmar in the *London Institute of Bankers*, and published in its "Journal" of May, 1885. Subsequently, in the *Pall Mall Gazette* of October 1st, a letter of Mr. Delmar is published, purporting to be written from Washington, September 19th, upon the "Silver Fraud," in which he says:

"Up to 1873, the measure of value in the United States consisted of such gold and silver as had been offered for coinage at the Mints and remained in circulation, plus

the paper notes issued by the Government and the banks. In that year the Director of the Mint and Comptroller of the Currency, pretending that the laws relating to money needed codification, obtained permission to arrange them in an orderly manner and submit them to Congress for consideration and adoption. In preparing this condensed Mint Code, these faithless officers omitted the word 'dollar' from the list of silver coins, which the Mint Director had been directed to coin whenever so requested by holders of bullion, an omission which was not noticed by Congress when it adopted the Code as law. As the smaller silver coins had been reduced to 'tokens'—that is, limited in legal-tender—twenty years before, and as no larger ones than the dollar were ever authorized to be coined, the omission of the silver dollar from the law worked the entire subversion of the measure of value, which thereafter became limited to gold coins and paper notes. By the Resumption Act of 1875, to go into effect in 1879, the measure of value was endeavored to be still further limited to gold alone. Notwithstanding the tremendous significance of this demonetization of silver, it was effected without attracting the attention of either the people, the Press, Congress or the President."

On April 27, 1870, the Secretary of the Treasury transmitted to the Senate a report of the writer, who was then Deputy-Comptroller of the Currency, together with a bill "revising the laws relative to the Mint, Assay Offices and coinage of the United States." The report and Bill were referred to the Finance Committee of the Senate, and on May 2, 1870, five hundred copies were ordered to be printed. The report stated that the Bill had been submitted to the officers of the different Mints and Assay offices, to the accounting and law officers of the Treasury, and to many other gentlemen who were known to be conversant with coinage subjects. They were requested to make suggestions in reference to proposed changes in the coinage laws, and in this way the views of more than thirty well-known gentlemen were obtained. The report (Senate Mis. Doc. No. 132, 41st Cong., 2d Session, p. 11,) contains the following paragraph:

**"SILVER DOLLAR—ITS DISCONTINUANCE AS A STANDARD."**

"The coinage of the silver dollar piece, the history of which is here given, is discontinued in the proposed Bill. It is by law the dollar unit, and assuming the value of gold to be fifteen and one-half times that of silver, being about the mean ratio for the past six years, is worth in gold a premium of about 3 per cent. (its value being 1.0812), and intrinsically worth more than 7 per cent. premium in our other silver coins, its value thus being 1.0742. The present laws, consequently, authorize both a gold dollar unit and a silver dollar unit, differing from each other in intrinsic value. The present gold dollar piece is made the dollar unit in the proposed Bill, and the silver dollar piece is discontinued. If, however, such a coin is authorized, it should be issued only as a commercial dollar, not as a standard unit of account, and of the exact value of the Mexican dollar, which is the favorite for circulation in China and Japan and other Oriental countries."

The Hon. Secretary of the Treasury called the special attention of Congress to the Bill in his annual reports for 1870, 1871 and 1872. In his report for December 2, 1873, only about two months previous to the passage of the Coinage Act of 1873, he says:

"In the last ten years the commercial value of silver has depreciated about 3 per cent. as compared with gold, and its use as currency has been discontinued by Germany and some other countries. The financial condition of the United States has prevented the use of silver as currency for more than ten years, and I am of opinion that upon grounds of public policy no attempt should be made to introduce it, but that the coinage should be limited to commercial purposes, and designed exclusively for commercial uses with other nations. . . . Therefore, in renewing the recommendations heretofore made for the passage of the Mint Bill, I suggest such alterations as will prohibit the coinage of silver for circulation in this country, but that authority

be given for the coinage of a silver dollar that shall be as valuable as the Mexican dollar, and be furnished at its actual cost. The Mexican dollar is used generally in trade with China, and is now sold at a premium of about 8 per cent. over the actual expense of coining. As the production of silver is rapidly increasing, such a coinage will at once furnish a market for the raw material and facilitate commerce between the United States and China."

In the course of the discussion in the House the Hon. William D. Kelly, who is now the oldest member of the House of Representatives, and who at that time had charge of the Bill, declared that the Coinage Committee "had proceeded with great deliberation to go over the Bill, not only section by section, but word by word." He also said :

"It is impossible to retain the double standard. The values of gold and silver continually fluctuate. You cannot determine this year what will be the relative values of gold and silver next year. They were 15 to 1 a short time ago; they are 16 to 1 now. Hence all experience has shown that you must have one standard coin which shall be a legal-tender for all others, and then you may promote your domestic convenience by having a subsidiary coinage of silver, which shall circulate in all parts of your country as legal-tender for a limited amount, and be redeemable at its face value by your Government.

"But, sir, I again call the attention of the House to the fact that the gentlemen who oppose this Bill insist upon maintaining a silver dollar worth three and one-half cents more than the gold dollar, and worth seven cents more than two half dollars, and that so long as those provisions remain you cannot keep silver coin in the country."

Hon. Clarkson N. Potter, a well-known representative of New York city, also said :

"This Bill provides for the making of change in the legal-tender coin of the country, and for substituting as legal-tender coin of only one metal, instead, as heretofore, of two. I think myself this would be a wise provision, and that legal-tender coins, except subsidiary coin, should be of gold alone. But why should we legislate on this now when we are not using either of those metals as a circulating medium?

"The Bill provides also for a change in respect of the weight and value of the silver dollar, which I think is a subject which, when we come to require legislation about it at all, will demand at our hands very serious consideration, and which, as we are not using such coins for circulation now, seems at this time to be an unnecessary subject about which to legislate."

The Bill, after discussion, passed the Senate January 10, 1871, and, after amendment, passed the House May 27, 1872. It was returned to the Senate and again passed that body, with some changes, January 17, 1873. The Bill was printed thirteen times by order of Congress, was considered at length by the Finance Committee of the Senate and the Coinage Committee of the House, through five different sessions, and was debated at such length that the reports filled 140 pages of the *Globe*, the official journal of the two Houses.

The question of the inadvertent omission of the silver dollar in the law was discussed at the International Monetary Convention at Paris in 1878, and Mr. Feer Herzog, a delegate from Switzerland, presented extracts from the report of Mr. Knox, showing that the fact of the omission of the silver dollar from the Coinage Act of 1873 had been fully presented to Congress at the time of its passage, and the document presented by Mr. Herzog was printed; a French translation was also added to the French journal of proceedings.

During the early consideration of the Bill the Secretary of the Treasury transmitted, in reply to a resolution to the House of Representatives, a copy

of the correspondence between the Department and the officers of the different Mints and other persons in reference to the revision of the coinage laws, and this correspondence was printed, together with the bill, in a pamphlet of 96 pages. Included in this correspondence was a letter of the Director of the Mint, opposing the passage of the Bill. The question of the discontinuance of the silver dollar was discussed by J. R. Snowden and Dr. Linderman, former Directors of the Mint, by E. B. Elliott, now Actuary of the Treasury Department, and by other persons. Much additional evidence can be given from the *Congressional Record*, and from the financial magazines and journals of the day, to show that the fullest opportunity was given to every one for the free discussion of that section of the Act of 1873 which provided for the discontinuance of the coinage of the silver dollar. It is sufficient to say that from the organization of the Government to 1834 only 1,369,517 pieces of the silver dollar had been coined, and from 1834 to 1873 only 6,676,321, making an aggregate of 8,045,838, or a coinage of only about 100,000 annually. These coins for forty years were worth more than the gold dollar. They therefore disappeared from circulation, and it is probable that at the time of the passage of the Act referred to not more than 1,000,000 of them remained in existence. The Coinage Act of 1873 simply registered in the form of a statute what had been the unwritten law of the land since the year 1834.

I regret to be obliged to add that many of these facts were well known to Mr. Delmar at the time of the preparation of his article for the *Pull Mall Gazette*, and his memory had been refreshed a few weeks previous to the appearance of that letter. So far from Mr. Delmar being "an authority on currency subjects in America," as stated in the communication of Mr. Frewen, he was legislated out of office as Director of the Bureau of Statistics of the Treasury Department, after holding that position for only about two years, and a compilation of statistics prepared by him "for transmission to the United States Commissioner-General for the Paris Exposition of 1867," was suppressed by order of the Treasury Department.

If any of your readers are desirous of obtaining further information in reference to the coinage of the silver dollar and the passage of the Act of 1873 such information may be obtained in the "History of the Various Issues of the Paper Money by the Government of the United States," recently published by T. Fisher Unwin, 26 Paternoster square, also by Chas. Scribner's Sons, New York, or by reference to pages 170-175 of the Report of the Comptroller of the Currency for 1876. Both of these volumes may be found in the library of the Institute of Bankers and of the Statistical Society.

The New York *Sun*, of December 6th, a pronounced silver paper, in a review of "The History of Bi-metallism in the United States," by Professor Laughlin, of Harvard University, just published by Appleton & Co., says: "The often-repeated charge, that the Coinage Act of 1873 was carried through by surreptitious and fraudulent means, is clearly proved to be unfounded. The dropping of the silver dollar was, as the record shows, merely a blunder, based upon the belief that the coin would never again come into use, and it was concurred in without opposition from any quarter."

JOHN JAY KNOX.

NEW YORK CITY, December 7, 1886.

### PRESENT NEEDS OF BANKING.

When one really wishes to accomplish anything there are two points to be always kept in mind: *Never lose sight of it, and never give it up.* In pursuance of the first of these it is proposed, in this paper, to set down a few of the present needs of banking.

#### ORGANIZATION.

Of the first importance may be set down the need of a thorough organization of the banks and bankers throughout the United States. The American Bankers' Association presents at least a nucleus around which such an organization may form. But, useful as the Bankers' Association is—*First*, in promoting sociability and personal acquaintance among bankers, and, *Second*, in doing what it can to shape National legislation affecting the banks—its usefulness would be many times increased if it were supplemented by strong and compact State associations throughout the country; these could be organized both as State and City associations. In the cities of New York, Boston, Philadelphia, Chicago, Baltimore, and elsewhere, where there are, say, twenty-five banks and over, City organizations could be effected to much advantage in addition to State associations. With such an organization as this, and with means of easy and frequent intercommunication, it would be difficult to enumerate all the advantages that would accrue to the banking interest. Not the least would be the ability to mass the whole influence of bankers for the attainment of a common end. Again, there would be a gradual assimilation of the methods of doing business in the different parts of the country and a tendency to a more uniform and, consequently, more stable system of law and customs.

#### SECURITY OF DEPOSITS.

When the United States first conceived and finally perfected a system of banking, by which there was secured to the country a circulating medium which possessed all the advantages of the bank-note with the stability and security of coin, the financiers of Europe, to use an ordinary expression, opened their eyes. But what will be said when we reach that point in the development of our banking system when not only the note-holder but the depositor also is fully secured against any loss or damage from the failure of a bank? That such a thing is feasible and capable of development into a well-ordered plan was shown in the issue of the JOURNAL for December last. Whether it will commend itself to the wisdom of Congress is another question. Suffice it to say that the adoption of such a plan would bring our banking system to a point of perfection of which the foremost financiers of half a century ago never dreamed.

#### STATE AND NATIONAL BANKS.

Notwithstanding the great benefits that the general interests of the country have experienced from the adoption of the National banking system, there still remain a large number of banks and bankers who have hitherto refused, or at any rate have neglected, to come into the system at all. The motives and reasons of the managers of these institutions are numerous, and to themselves, no doubt, perfectly satisfactory. Yet it cannot be denied that their position

is primarily a selfish one, for they enjoy all the benefits of the National system and yet are unwilling to submit to any of its inconveniences. The stand they take is analogous to that of a citizen who enjoys all his civic rights and privileges, and yet grumbles at his tax-bill.

Without lingering upon this branch of the question, it may be well to consider whether some means cannot be devised by which these State banks and private bankers may be brought into the National system. There are two ways of doing this—one, by making it so profitable to go into the National system that stockholders will not organize under any other; another, by making the National banks so secure that the people at large will not bank anywhere else.

Not to delay longer upon this point, let us pass on to the well-worn subject of

#### COUNTRY COLLECTIONS.

In a former issue of the JOURNAL a scheme for clearing country checks through the present system of Clearing-Houses was explained at some length. It consisted, briefly, in sending all checks on country banks directly to designated correspondents in the Clearing-House cities, to be forwarded by these correspondents directly to the bank upon which they are drawn. Such a scheme is perfectly feasible in itself. The opposition comes from the country banks themselves; many of whom are unwilling to give up the profit they make out of over-charges for "exchange," not seeing that the loss of this profit would be more than made up by the general advantages that would accrue from a system of quick and easy country clearing. An incidental, but by no means unimportant, benefit would be the increased use of small checks, and, consequently, increased economy in the use of our circulating medium.

#### UNIFORM LAWS AND CUSTOMS.

There is scarcely anything that offers more obstruction to our commercial prosperity than the diverse system of laws and of customs that obtain in the different States. The hindrance which comes from this source is not the less great because it is, to a certain extent, unnoticed. We have, after a fashion, accommodated ourselves to the present way, and the burden, so to speak, seems less heavy and less of a hindrance than it really is. But the burden and the hindrance are there, nevertheless, as any one who has had occasion to investigate the matter will readily admit.

Whether it would be competent for Congress to enact a general law governing, for example, bills of exchange and promissory notes, as suggested by Mr. C. C. Bonney, of Chicago, in a former issue of the JOURNAL, is, perhaps, open to question. There is, however, great weight of authority in favor of the view that Congress has such power. And certainly a uniform law governing commercial paper in the United States and subject to a uniform interpretation in the Federal Courts would go a great way in facilitating mercantile transactions.

#### FORMS OF COMMERCIAL PAPER.

It would be a great boon to all who have occasion to handle commercial paper if greater simplicity and uniformity were observed in the mechanical execution of checks, drafts, etc. A size a trifle larger than a bank-note is plenty large enough. Let the paper be white or some solid tint and not the Joseph's coat pattern one so often sees. Let the type be clear and plain and banish every unnecessary word. Something like this, for example :

FOURTH NATIONAL BANK,

Rome, New York.

No. 100.

ROME, N. Y., January 9, 1886.

*Fourth National Bank,*

*New York, N. Y.*

PAY TO James H. Clark, — or order,  
*two hundred and fifty  $\frac{25}{100}$  Dollars.*

*\$250.25.*

*H. D. Brown,* CASHIER.

Does not that look better and is it not more business-like than the grotesque designs that one so often sees? And, as a practical question, is it not easier to detect an alteration on such a form as this, printed in good black ink on plain white paper, than on a form covered all over with fancy type and pictures? There is nothing whatever on this form to confuse the eye or distract the Teller's attention. If one wants something expensive, use pure linen paper and have it engraved on a steel or copper plate, and it will be expensive enough and very handsome too.

Did space permit many more things might be enumerated among the present needs of banking, but enough has been said to show that there is still considerable margin left for improvement.

PRACTICAL BANKER.

NEW YORK CITY, February, 1886.

**SAFETY DEVICES.**—The Cashier of a New York bank says: "It is claimed by many who are experts in the business that there is very little difficulty in proving that all, or nearly all, the plans devised for rendering checks unalterable in their amounts by cutting out their figures and by other ingenious plans are not to be depended upon as protectors. To show how little value these so-called protectors possess I may mention that I have been cognizant of instances where the places in a check cut out by punching the figures have been filled up by cutting figures with the machine in another piece of paper and carefully sizing into the punched check the little pieces of paper thus prepared. When the job was finished no traces of the mending and changing were visible. It is in view of such manipulations as these, and also of the fact that the tinted safety papers have so often proved to me to be of far less value as a preventive of alterations than claimed by their inventors, that I have come to the conclusion that the best form of check and draft drawing for general use is that which employs simple goods—white paper and strong black ink—giving the go-by to all the punching, embossing and other safety-check inventions that have so far been offered."

**Practical Banking.—A Question Answered.**—Following is an inquiry from a new subscriber to the JOURNAL—substantially the same as very many recently received at this office—together with a full reply thereto. It will, doubtless, interest many readers of the Practical Banking articles:

*Bradford Rhodes & Co., New York:* HOLT COUNTY BANK, )  
O'NEILL, Neb., January 18, 1886. {

GENTLEMEN:—In how many numbers of the JOURNAL have the articles on "Practical Banking" appeared, and for how much can you furnish the back numbers? Will the series be published in book form? If so, when?

An early reply will oblige

Yours, very truly,

C. W. COOK, Cashier.

*Reply.*—The articles on "Practical Banking" were begun in the August, 1884, issue of the JOURNAL, and have been continued in each succeeding number. To present subscribers we will supply the five chapters which appeared in 1884 at \$1, and the unbound numbers of the JOURNAL for 1885 at \$5. The above, with the numbers of the current volume—year 1886—will furnish subscribers with the "Practical Banking" articles complete, as the series will be concluded this year. We have but a limited supply of the back numbers on hand.

After the series is completed in the JOURNAL we will probably publish it in book form; the volume, however, could not possibly be ready for delivery before the latter part of 1887; therefore, to those who wish to now avail themselves of the benefits to be derived from the articles, we suggest that they secure them in the JOURNAL as they appear.

**Methods and Machinery of  
\*PRACTICAL BANKING.**

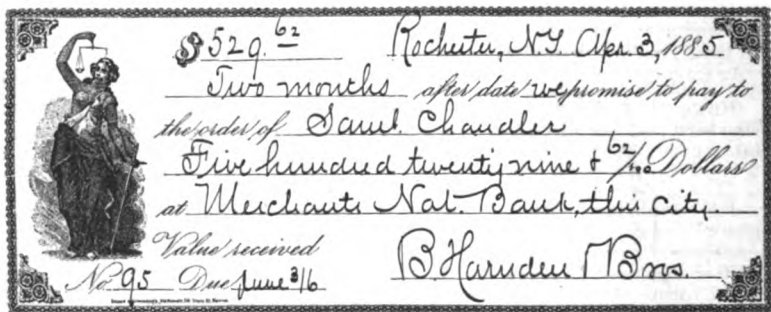

CONSISTING OF BRIEF DESCRIPTIONS AND SUGGESTIONS RELATIVE TO THE  
METHODS OF CONDUCTING THE BANKING BUSINESS; WITH APPROVED  
MODELS OF BLANK BOOKS AND FORMS FOR THE USE OF  
BANKS OF DISCOUNT, SAVINGS BANKS, ETC.

[Prepared expressly for the JOURNAL by the Cashier of a long-established bank, who has had over twenty years' experience in practical banking, and who has always sought for better and safer methods.]

**PROPERTIES AND TERMS IN BANKING.** — I here propose to give a brief description of what may be called, to use a technical word somewhat monopolized in writings of another class, the "properties" in use in banking, and short explanations of many of the terms in common service in banks, and in banking and financial literature. My descriptions and explanations must, of necessity, be brief, practical, and decidedly business-like in their character. For more exhaustive treatment of the matter in hand, and for legal and technical details, recourse can be had to the various manuals usually found in bank libraries, as well as to law reports, legal digests, and treatises bearing upon notes, bills, money, exchange, etc. :

**I. PROMISSORY NOTE.**

A promissory note is a documentary promise to pay. An old English definition of this instrument states it to be a writing which contains a promise of the payment of money or the delivery of property to another, at, or before, a time specified, in consideration of value received by the promisor. From a practical banking stand-point, exceptions would be taken to one feature of this definition—that which speaks of the payment "on or before," since the holder of a time note cannot legally be obliged to accept payment before it is due. This question seldom comes up between payer and payee, yet it is well to understand its bearings in case it should arise. A common style of promissory note, which must, of course, vary in form according to circumstances, is the following :

\* Practical Banking Series—Part XIX.

These papers will be continued through the 1886 volume of the JOURNAL.  
Copyright, 1884. All rights reserved.

In explaining its leading features, their bearings, and the rights and duties of the parties, the order of the statements set forth in the note offers a good arrangement for the order of our explanations.

*The Place Where a Note is Dated.*—This is of far less importance than is generally supposed. A note is always payable where the promisor has a legal place of business, unless it is otherwise specified in the body of the note, no matter where it may be dated. Thus, a promise to pay \$5,000, dated in New York, and signed by a man who is a merchant in Boston, is payable in Boston, unless the body of the paper contains some provision of a contrary character, though the word Boston may not appear on the note.

Notes that pass from hand to hand and through banks for collection or discount, bearing specific places of date but no specific places of payment, are generally supposed to be signed, and so payable, in the places where the promisors do business. Quite often they are not thus executed, and risks and misunderstandings occur from a want of a clear knowledge of the facts we have just explained.

Notes should always be written in their body payable at some definite place. In such a case, the place *where* they are dated appears to be what it really is—of little account.

*The Date of a Note.*—The date of a note is, of course, a matter of the first importance, or it is likely to be so, for the time of maturity generally runs from it, and interest, where interest accrues, is generally calculated from it. In fixing the time of maturity of a note it is far better for the parties concerned to agree upon a fixed date at which it shall be paid, and to insert that maturing date directly in the body of the note in this way: "For value received, I promise to pay on the 6th day of March," etc.—drawing the paper, in matter of date and other points, as it in the form presented above.

There are several leading facts relative to the dates of notes of hand which should here be stated. It is safe to say that a note made and issued on Sunday is an illegal document, and is therefore void. In practical banking notes are discounted and collected without thought of, or reference to, the possibilities of the fact that the paper may have about it such a taint; but every banker ought to understand that there might arise, under some circumstances, what may be termed "Sunday difficulties" about notes. A note may be dated on Sunday and not be open to any objection on that account. In averaging payments and issuing promises to pay of various dates, based upon the result of averaging operations, dates of paper are often thrown into Sunday, and such a location of a date of a promissory note is not "illegal or irregular." Sunday is, of course, a regular working day, as far as maturity of paper and interest are concerned, yet careful calculators are often found studying up plans for avoiding throwing their maturities on a Sunday, since by such they lose a day, as the Sunday note must, by statutes of many States, be paid the day before.

Notes are sometimes unintentionally issued without a date. In case of the decease of a party who has given a note in this way, the holder may prove the date and insert it himself. Where the signer still lives, it is better to hunt him up and get him to put in the figures himself.

Notes whose dates have been altered are often turning up in banks and elsewhere. If the alterations have been made at the right time and by the right person, they are not legally viewed as blemishes.

*Facts Relating to Figures.*—The figures representing the amount for which the note is given are almost always placed where they are shown in the form. The amount in a promissory note can, in this country, be legally and regularly given in figures, writing or cipher, but there are countries where the statutes demand of a note of hand that its amount shall be expressed both in writing and figures.

Our present common note of hand form is of very ancient origin. All its points are fully described and discussed in old French law books. The oldest

French legal authorities take the ground, which is held with us to-day, that where the amount of a note is expressed in figures and writing, and there is a variation between the two, the writing shall take precedence.

The practical view of such variations and the action taken under them by the Discount or Collection Clerk of the bank of the period, is for either of them, when he finds a note of this incoherent character working its way into the files, to stop it immediately and send in search of some reliable parties to it who can tell just what it should have been drawn for.

Bank officers treat checks which do not agree in writing and figures just as they treat these variable notes—refuse to have anything to do with them if they can by any means find parties to them who are able to make them straight.

---

*For Value Received.*—This ambiguous opening phrase, inserted in all negotiable notes, and meaning nothing, since it does not state who has received the value, is one of those continental red-tape forms, allied to the senseless use of seals and antique expressions in law latin, with which many of our modern business and finance papers are encumbered. It may be well enough to keep up its use, since it looks well in a note and adds to its dignified and formal air. But it should be clearly understood that its presence in a promissory note is by no means a legal necessity. Nor is it there by the command of a custom which has any binding power. An honest promise to pay will go alone without the addition or prefix of any such acknowledgment, and can be enforced as well without it as with it. In these days of rafts of accommodation paper, it is a fact that many good notes are signed where no value has been received; and, as all classes of paper follow the fashion of using the words in question, it follows that, in many cases, they are mere fiction.

---

*Promise to Pay.*—It is not easy to misunderstand the force and meaning of this expression. In the negotiable note the promise to pay must be unconditional. It cannot be made to depend upon any contingency whatever.

---

*To the Order Of.*—This expression is also absolutely necessary to a note's negotiability. The payee—the party to whose order it is payable, and who becomes its endorser when negotiated—cannot be legally called upon to meet the note himself, until a formal and positive demand upon the signer of the promise to pay has failed to secure a redemption of the promise. Such demand, accompanied by due notice to the endorser, makes what the banks and notaries term their “protest” of a note, an operation which usually costs the bank in notarial fees from \$1.50 to \$3 on each note.

Here are a few leading points about protesting which are worthy of being noted. Demanding and notifying, constituting what is termed protesting, is best done by a sworn Notary Public, whose broad seal-signature and formal documents are accepted in Court as *prima facie* evidence of the facts stated. When the services of a Notary cannot be obtained to do work of this character it can be placed in the hands of any person. Such unofficial protester must be very careful about all his acts and records, and must be ready, in case his doings are called into Court or questioned in any important way, to furnish witnesses who can confirm his acts by their testimony.

In all protesting, due diligence must be used in making a demand upon the promisor at his place of business, if he has one, or at his residence, if he has no place of business, or at the point where he has made the note payable. Where a promisor makes his note payable at a bank or any other specific point, the demand must there be made, and not at his residence or place of business, though these last may be in the immediate vicinity. This demand must be made on the day of the maturity of the dishonored note, during the business hours of the promisor, or of the office where the note is payable.

Notices to endorser or endorsers must be sent at once—if “out of town” mailed as soon as the day following the demand.

Where a note bears many endorsements, all are mailed to the last one, and he in turn mails to those above him, a day being given for each

re-mailing. It is perfectly legal and regular for a Notary in Boston, protesting a note due there, with many endorsements, the last one of whom is a New York party, and all the rest well-known Boston business men, to mail all the notices to the last endorser in New York, who must in his turn mail back to the one above him in Boston.

These are only a few leading points about protesting an endorsed note. Manuals entirely devoted to the business are in all good bank libraries.

**Dollars.**—The promissory note before us is payable in "dollars." What are they, from the stand-point of the American banker and merchant? The man who owes a note payable in dollars may pay it in various ways, but these all amount to about the same thing, viewed from the debtor's point of view. If the note lies lodged in a National bank for collection, the promisor thereof has a right to pay it in National bank bills, for every National bank is obliged to receive, in payment of debts due it, bills of any National bank. In times when National bank-notes, particularly small ones, have been in over-supply among the banks, they have sometimes attempted to make the point that the payment of collection notes—notes left in their hands by owning depositors—was not the payment of a debt due the bank, and that consequently they were not obliged to receive other than lawful money in settlement of such collections. But the point is a strained one and cannot be maintained. Promisors have the right to pay their "dollars" in lawful money, no matter whether the promises to pay are in the hands of banks or individuals. Legal-tenders. United States notes, gold and silver, with qualifications, are lawful money. Here is a concise table of lawful money :

Gold.			Silver.		
<i>Denominations.</i>	<i>Weight, Grains.</i>	<i>Amount for which a Legal-Tender.</i>	<i>Denominations.</i>	<i>Weight, Grains.</i>	<i>Amount for which a Legal-Tender.</i>
Double Eagle..	516.	Gold coin of all denomina- tions is a legal- tender for any amount.	Standard Dollars	412.5	Unlimited.
Eagle .....	268.		Trade Dollars....	420.	Not legal-t'nder
Half Eagle.....	129.		Dollars .....	412.5	Unlimited.
Three Dollars..	77.4		Half Dollars....	192.9	Ten dollars.
Quarter Eagle..	64.5		Quarter Dollars.	96.45	Ten dollars.
Dollars... ..	25.8		Twenty cents ...	77.16	Five dollars.
Minor.			Dimes .....	38.58	Ten dollars.
Five cents ...	77.16	Twenty-five cts	Half-dimes .....	19.29	Five dollars.
Three cents ...	30.	Twenty-five cts	Three Cents .....	11.62	Five dollars.
Two cents.....	96.	Twenty-five cts	Mutilated Silver and Minor Coins are refused, as there is no provision for their redemption.		
Cents... ..	48.	Twenty-five cts			

It is important to note here that this standard silver coin, the standard "dollar," which is often sarcastically termed by financiers the "buzzard" dollar, is inferior in intrinsic value to a trade dollar, which cannot be forced upon a payee in settlement of a note payable in dollars.

The Silver Act made eighty-five cents or so an American dollar, such as is set forth in the promissory note we have in hand; and this Silver Act, under which we have nominally *assumed* specie payment, upsets any theory that the country has *resumed* that specie payment which in war times we suspended. We have *assumed* payment in silver, but not *resumed* specie payments after the old-time understanding. Thus the matter is understood and reckoned upon in the settlement of the exchanges of the world's commerce.

Resumption of specie payment has always meant, the financial world over, resumption of the payment of gold instead of paper—gold where any amount is concerned, and silver, etc., in change; and this is what resumption really means to-day. Practically most notes are paid by checks,

certified and otherwise, which are the representatives of the dollars we have been describing.

*Payable At.*—The place where a note is payable is one of its most important features. All parties to a note are greatly inconvenienced by its having a place of payment clearly and specifically named in its body. The best way is, if possible, to make a bank that place of payment, for a bank is a central locality for settlements of this sort, is always ready during banking hours for the work of receiving payment, and has the machinery and understands the methods required for the business. It is not a good practice for a merchant to make his notes payable at his own store or counting-room. He is likely to embarrass himself by so doing. For in case he fails to find where his note is held at the time of its maturity, receives no notice from the bank or individual of its place of deposit for collection, he will be obliged to draw his money from the bank and hold it in hand during all the business hours of the day of its maturity. On the other hand, if he has made his paper payable at his bank, he has nothing to do but to put his bank in funds to meet it and order them so to do, for no one holding it can protest it till it has there been presented and turned away dishonored.

In Clearing-House cities, it is particularly advantageous for banks and note-makers that all notes shall be made payable at a bank, since in such cases they can be smoothly and conveniently charged in through the Clearing-House at the morning settlements after the common bank check style.

The note made payable at a bank is ordinarily notified there; yet, if the maker of a note thus drawn wishes to be notified personally, he has only to minute a request of this sort in the margin of his note when he executes it.

*The Signature of a Note.*—It is exceedingly desirable that this shall be so expressed that it can be readily distinguished. There is no banker of experience who will not be able to recall with regret the weary waste of time that he and his officers have been caused by the almost undecipherable signatures that frequently turn up in banks. There are few parties who are called upon to sign notes who cannot, if they so please, affix their names in a readable style. They may not have a talent for elegant penmanship, but, if they aim at legibility when they undertake to write, they can generally make characters which can quickly be translated by the Discount or Collection Clerk. The signature may be made with a pen, a pencil, or, in fact, with anything which will write, and, of course, a writing fluid of any hue or material. A note can be signed in mark, properly witnessed, and a man's initials for his promise will surely bind him. A note may even not be signed at all, or may have been signed with an ink that has afterwards entirely fled, yet the demand upon it shall be good against the party really owing upon the note. Writing is, after all, merely a convenient witness, as it were, and the debtor who expects to escape from meeting his just debts simply because that witness may happen to be absent, in case of a note, for instance, will find that other testimony may be summoned to hold him to his promise.

Where a man wrote a note in liquidation of a claim, and with fraudulent intent inserted a "not" after the word "promise" in the note he signed—literally promised *not* to pay—the swindle, of course, availed him nothing.

## II. A BANK CHECK.

A bank check is about the same thing as an inland bill of exchange. When it is made payable to bearer, it passes by delivery. It is, in general, subject to the rules which regulate the rights and responsibilities to parties to a bill of exchange. Many of the leading characteristics of a bank check are so well understood by every one who is likely to handle such a document or read these papers, that there is little need of enlarging upon them. But here are a few points relative to their various features not well understood by all:

The absence of a date upon a check does not countenance a bank in refusing to cash it. Checks ought to be dated. It is very much better that they should be dated. It is somewhat irregular not to date them. Never—

theless I should never refuse to pay a check that was all right in other points, simply because it bore no date. If I could readily send it back to the drawer, and get him to put in the useful date figures, I should do so. Otherwise I should pay it, and duly charge it to the drawer's account.

Here is a good form of the common bank check. It may serve as a text for the explanation of points of interest and importance in relation to checks.

No. 13501	Chicago, April 31 1884
<b>National Bank of America</b> AT CHICAGO	
Pay to the order of <i>John L. Henderson</i>	
<i>Five hundred and twenty nine</i> <sup>36</sup> / <sub>100</sub> Dollars,	
\$529 <sup>36</sup> / <sub>100</sub>	<i>P. Sampson &amp; Co</i>

Notes made and executed on Sunday are invalid. But a check so dated is not invalid. A bank has no right to refuse to pay it on that account. This is common law and common sense. Making and issuing notes on Sunday smacks of trading on that day. But a person may be really obliged to draw a check on Sunday; as, for instance, for some charitable or religious object, or to pay a minister \$50 for preaching on an exchange.

The death of a drawer of a check renders it in many States legally uncollectible at the bank upon which it is drawn. Banks are really paying checks every day which have been signed by parties deceased. In very many cases they have no means of knowing that death has legally stopped such checks. Such dead checks are perfectly good against the estates of the drawers.

The endorsers of a check stand in a promissory-note relation to it. To hold them on a check which is dishonored, a demand and notice—a regular protest—is necessary. Due diligence must be used in making the demand and in sending the notices to the endorsers. Broadly speaking, a check is always good against the drawer. Yet here is an exception. If by want of exercise of due diligence in collecting, the drawer suffers—loses something—he may claim damages from the careless holder. I have known of a case where a man gave his check for \$5,000 to a party, who carried it in his pocket for some days. During that time the bank upon which the check was drawn failed, and in falling locked up for a small dividend the entire balance of the party who had drawn the check in question. Had the check been presented at once it would have been paid; as it turned out, it was never paid. Verdict: Careless holder loses.

A bank may demand an endorsement of a check payable to order before certification. A bank may refuse to certify for an unidentified endorser. Banks may demand identification of the holder of endorsed bearer-checks.

The written amount in a check rules over the figures. Yet, practically, banks generally demand a reconciliation between the two before cashing, which they obtain by sending the checks for rectification to parties who know the amount for which they should be drawn.

In the matter of signatures to checks the laws which I have described as governing signatures to notes prevail. They may be signed with pen, pencil, or with a mark.

#### RELATIVE VALUE OF GOLD AND SILVER.

The question of the relative value of gold and silver is one that greatly interests all classes. I suppose that most readers are perfectly well aware that silver has been steadily falling in price for a long time. The dollar silver coin, which is current in this country, is down among the eighties on

the world's exchange. The reasons for this decline of silver—for this relative enhancement of the value of gold—are many. Let us consider some of them.

Silver has fallen in value because the demand has not kept pace with the production. Gold has more than maintained its old-time position because the demand for it has increased while the production has been falling off. Silver has fallen in price because far less is used than formerly in art and in mechanics. This is particularly true of the silver situation in England. Much less silverware is now made and sold in England than in former times. Business depression is a leading cause of the decrease there in the use of silverware in families; but fashion has had something to do with the change. Then again the growing custom of using silver-plated ware in place of the solid article exerts a great influence. The popularity of silver-plated ware has been increased by the great skill and thoroughness shown in late years in its manufacture. Many good housekeepers see little necessity of buying solid silverware to tempt thieves, when plated silver that looks as well can be obtained so cheaply. On the other hand there has been a steady increase in the art demand for gold. I have been cognizant of a grim fact (or claimed fact) regarding the art demand for pure gold, that has not attracted very wide attention. It is asserted that in these days of poor teeth the average adult has at least a dollar's worth of gold in his mouth, and that, consequently, every generation buries in the cemeteries of the United States \$50,000,000 in gold. It may be that in England more economy is shown than here in the disposition of dental deposits, for I have seen in London stores any quantity of old false teeth on sale for the gold that was fixed in them. In the *London Times* it is very common to see a long list of advertisements of second-hand clothing and second-hand false teeth for sale.

#### THE TEN PER CENT. LIMITATION.

The ten per cent. limitation of the Bank Act has an application which is sometimes overlooked by bank Managers. National banks are prohibited from loaning over ten per cent. of their capital to any one individual or corporation, except upon paper representing actually existing merchandise. Now this ten per cent. provision must apply to loans made by any National bank to any other bank, National, State or private.

#### THE CLEARING-HOUSE SYSTEM.

This is one of the modern short-hand processes in banking which few students of finance outside of banking circles seem clearly to understand. There is nothing intricate or mystifying in this quick method of making bank settlements. The circle of banks associated in any settling arrangement of this class simply agrees to make a conjunction through representatives—Messengers and Settling-Clerks—and at the place of meeting effect those exchanges which in ante-Clearing-House days were made by the slow and wearisome methods of the old-fashioned familiar type. This old method demanded that every bank having claims upon other banks should send out Messengers to collect the same over the counters, and that all banks having payments to make to other banks should by their representatives make special trips to the creditor banks to cancel the obligations. There was weary traveling for the Messengers, a great amount of paying and receiving by the Tellers, and much incidental risk from exposure of funds, which have to a very great extent been done away with by the institution of Clearing-Houses.

A bank Clearing-House is about the same the world over. We have copied the clearing idea from London, where I found its methods and machinery almost identical with those of New York, Boston and other cities. We have not been using the system long. In Europe it has been in vogue for a hundred years or so.

An explanation of the details of the Clearing-House business may be made plain by taking the reader of these papers directly into a Clearing-House city, not having too large a number of banks in its settlement circle, and carrying him through a morning's settlement by taking him into both banks and Clearing-House, showing him how the banks prepare for the clearings and how the settling-house effects them—introducing incidentally all the leading forms in use by both banks and Clearing-House. Here is the first important form :

FOOTINGS.		41425175	13220108	54645283	47555201	
			BALANCE		7090082	Balance
					54645283	

The banks of this clearing city are, for convenience, all numbered. The figures to the extreme left are their numbers. Off against the numbers are their names. The arrangement of the order of their numbers and names is in accordance with the age of the institutions. The "First Debit" column of

figures represents the amounts of cash, checks, etc., which the bank holds—and has made up before the early morning receipts—against the banks against which the sums are set. "Additions" are the later receipts of demands against these same banks. "Total Debit" the sum of "First Debit" and "Additions." "Banks Cr." the sums which the other clearing banks present to the clearing bank entering settlement with this sheet—the aggregate of the demands of each of its clearing neighbors. The difference between the foot of these two columns is the gain or loss which has been the outcome of the morning's settlement. In this case I have given a sheet where the morning's clearing gain was \$70,900.82.

In entering upon the morning's settlement with the items of demand in hand, as I have described, the Settling-Clerk also bears in his hand a second invoice of each demand item in the shape of a ticket of this character :

## Form 2.

<b>No. 4,</b>
<b>STATE NATIONAL BANK,</b>
<b>FROM</b>
<b>NO. 9, NATIONAL CITY BANK,</b>
..... DOLLS. .... CTS.

In paying and receiving losses and gains between banks which have been made at clearing considerable work in the way of actual transfer of cash is saved by the use of Clearing-House orders, which may be said to pass as cash between the settling banks, and which are received and debited or credited as such by the Clearing-House Manager. Here is one of these orders :

## Form 3.

<b>BOSTON CLEARING-HOUSE.</b>	\$ .....	Boston, ..... 188
	Transfer to the Credit of THE .....	
	..... THOUSAND DOLLARS,	
	And charge the same in Settlement of the balance due to	
	THE .....	
	To N. G. SNELLING, Manager. ...., Cashier.	

*Settling-Clerks.*—Clearing-House work starting promptly at 10 o'clock it is necessary for a Settling-Clerk to be at the bank some time before that hour in order to properly prepare his statement. The preparation of this sheet is conducted differently in banks, but the method which I think is the surest and least liable to errors in settling is this :

After the morning mail is opened, passed to the Receiving-Teller, checked off and entered upon his book in the proper places, the checks which may be charged through the Clearing-House are sorted and listed together on the Clearing-House slip with checks deposited the preceding day (see Form No. 4) :

EXCHANGE SLIP.

No. 3,  
 OLD BOSTON,  
 From No. 46, Nat'l Security Bank  
 \_\_\_\_\_, 18

Form 4.

100	24	4	3 50	133 50	420	553 50
<hr/>						
<hr/>						
<hr/>						
<hr/>						
<hr/>						

After they have all been listed the total amounts of each slip are entered on the Settling-Clerk's statement (see Form No. 1) against the name of the bank corresponding with the name on the head of the slip.

For instance, the total amount of checks which the National Security may have on the Eliot is \$1,542.36, and this is placed against the Eliot on the statement in the column headed "First Debit." The total foot of all these is the amount which the bank carries into the Clearing-House against the other banks.

The only other way is to make up the slips and statement the preceding afternoon, putting in all the checks which have been deposited that day. Of course the slips are listed on the statement under "First Debit." The next morning's checks are entered in the column marked "Additions," and then the total amount against each bank carried out in the column marked "Total Debit." The checks being listed on the slips the foot must correspond with the amounts on the sheet. I think one is more apt to make a mistake this way than in the first method, because, of course, more figures give a chance for error.

The next thing to do is to make out the check tickets (see Form No. 2). It being one of the rules of the Clearing-House that the settlement shall begin promptly at 10 o'clock, sometimes the making out of these tickets has to be left until after the checks have been distributed and a credit foot obtained. They should, however, be sent around before 10:20 o'clock.

The credit ticket, given to the Settling-Clerk at the Clearing-House on arrival at that place, is to give him the amount brought in by the bank, and is as follows:

CREDIT TICKET.	<b>No. 46. BOSTON CLEARING-HOUSE.</b>	
	<i>January 26, 1885.</i>	
	<b>Credit,</b>	
	<i>National Security Bank,</i>	<i>\$546,452.83.</i>
	<i>Jones, SETTLING CLERK.</i>	

The Manager strikes the bell at 10 o'clock, and the Messengers from each bank file around in front of the Settling-Clerk and leave with him the package of checks belonging to the bank in the Exchange. The amounts of each package as they are handed in are put down on the sheet as before only that they go into the column headed "Total Credit." After the amounts of all the packages are taken and put on the sheet a foot is struck and then a balance. For instance, referring to the balance ticket, the total debit shows a foot of \$546,452.83, the total credit shows \$475,552.01, therefore the amount debit being larger than amount credit the bank is said to have gained so much

—say \$70,900.82—now having an amount debit, an amount credit and a balance. The next thing to do is to make out the balance ticket, showing the figures as they are on the sheet. This ticket is handed to the Clearing-House Settling-Clerk, and he proves his sheet after these tickets from the various banks are in:

BALANCE TICKET.	<b>No. 46. BOSTON CLEARING-HOUSE, January 25, 1885.</b>		
	DR. <i>National Security Bank,</i>	AM'T REC'D, \$476,552.01.	
	CR.     "     "     "	AM'T BRO'T, \$546,452.83.	
	BALANCE \$	, DUE CLEARING-HOUSE.	
	BALANCE DUE THE <i>National Security Bank,</i>	\$70,900.82.	
	<i>Jones, SETTLING CLERK.</i>		

The bank Settling-Clerks have from 10 o'clock to 10.30 to make their settlement. It generally takes from five to ten minutes for the Clearing-House clerk to make his settlement, and, if his sheet proves, the work of the morning is ended and the clerks may go home. If an error is shown to be in some of the sheets they must be gone over again; the clerk having the error must send up a corrected balance ticket, and he is fined \$2 for every fifteen minutes after 10:30 that it takes him to find the error.

#### GENERAL BALANCE SHEET.

Following is the form of a General Balance book which is now in use by one of the best-managed National banks in New Haven, Conn. It shows at a glance the actual condition of the bank each day :

	\$1,192,457 34	\$1,192,457 34

A clear explanation of the itemized accounts included in the General Balance

Sheet is also given in the following paragraphs under the headings "Assets" and "Liabilities":

*Assets.*

UNITED STATES TREASURER (Government Bonds) ..... \$300,000.00

The bonds are held by the United States Treasurer as security for \$270,000 of circulating notes, and will only be surrendered upon payment to the Treasurer of a like amount in lawful money to redeem the same.

UNITED STATES TREASURER (Reserve) ..... \$13,500.00

This amount is 5 per cent. of the amount of circulation, and is held by the Treasurer for the redemption of worn and mutilated currency, as required by law, and enables the Treasurer to pay at once for such notes received by him. Upon notice from the Treasurer that a certain amount has been redeemed and charged against the 5 per cent. account, the bank forwards to him a like amount to make the reserve good, charging the same against NATIONAL CURRENCY ISSUED. Upon the receipt by the bank of new notes issued for those redeemed and destroyed the NATIONAL CURRENCY ISSUED account is credited with the same.

BILLS DISCOUNTED ..... \$347,516.36

This is composed of commercial paper and other notes, with bonds, stocks, etc., as security, discounted by the bank. The principal revenue of the bank is from interest or discounts received from the many loan making up the total amount of this item.

BILLS RECEIVABLE .....

This account is sometimes charged with long-time paper received in settlement of notes previously held, and which were not paid at maturity in consequence of failures, assignments, etc. Such paper often represents but a portion of the original loan for which they were accepted, the balance having been charged to PROFIT AND LOSS. If any items of this character are held by the bank it is convenient to put them in the statement under this head for reference, etc.

MERCANTILE NATIONAL BANK, NEW YORK (Reserve) ..... \$79,611.87

NATIONAL PARK BANK, NEW YORK (Reserve) ..... \$44,256.60

HANOVER NATIONAL BANK, NEW YORK (Reserve) ..... \$25,992.85

NATIONAL BANK OF REDEMPTION, BOSTON (Reserve) ..... \$6,062.55

These banks are all reserve agents approved by the Comptroller of the Currency. The total amount on deposit with reserve agents, except such portion deemed necessary for reserve, is drawn against for the daily requirements of business. The law compels the banks to hold, in lawful money, a certain proportion of their deposits (including certificates of deposits) and foreign bank balances. In sixteen of the largest cities it is 25 per cent. of the amount, one-half of which may be on deposit with the reserve agents. In other places it is 15 per cent., three-fifths of which may be held by the reserve agents. By the statement here shown a reserve of \$37,700 is needed, two-fifths of which, amounting to \$27,000, is in lawful money in the vault of the bank, and the balance of \$40,700 on deposit with reserve agents, being only a portion of the amount with them to the credit of the bank. The \$13,500 on deposit with the United States Treasurer (5 per cent. of circulation) is regarded as a deposit with a reserve agent.

EXPENSE ACCOUNT .....

To this account is charged payments for salaries, rents, etc. It was closed December 31, 1885, no entries having been made since that date.

CASH ACCOUNT ..... \$56,187.11

Is cash on hand in the bank, and includes the \$27,000 lawful money reserve.

BOND ACCOUNT ..... \$19,000.00

Represents investments of the bank in bonds of railroad companies, etc.

SUSPENSE ACCOUNT .....

This account represents such items as are in doubt, but which will probably be paid in time, such as past-due commercial paper, etc.

*Liabilities.*

CAPITAL STOCK ..... \$300,000.00

Represents the amount actually paid in by the stockholders, and is an obligation of the bank to them.

SURPLUS FUND ..... \$150,000.00

Represents the profits of the bank over and above those needed for expenses and

dividends, credited up to this account from time to time since the organization of the bank, and is an amount in which the stockholders would participate if the bank was wound up, or in part if the Directors should vote to pay a portion of it in the form of a dividend.

**NATIONAL CURRENCY ISSUED**..... \$270,000.00

Represents the amount of circulating notes received from the Comptroller of the Currency and issued by the bank, the same being 90 per cent. of the amount of United States bonds on deposit with the United States Treasurer as security for the same, 90 per cent. of the amount of bonds being all the currency allowed by law.

**PROFIT AND LOSS**..... \$3,048.81

Represents the amount of earnings from discount of commercial paper and notes secured by collaterals, profits on items collected, and exchange received on drafts issued against deposits with reserve agents (New York or Boston) since December 31, 1885, when the accounts of the preceding six months were closed, and when balance to the credit of profit and loss account was transferred to **UNDIVIDED PROFITS**.

**UNDIVIDED PROFITS**..... \$16,034.48

Represents profits, carried from **PROFIT AND LOSS** account, in excess of what was required for losses, expenses and dividend of January 1, 1886. It is practically the same as **SURPLUS FUND**, and, if added, would make that amount \$166,034.48.

**CERTIFICATES OF DEPOSIT**..... \$11,521.05

Represents certificates issued by the bank for money deposited. They are issued generally to those who keep no regular bank account, and who temporarily deposit funds for which they have no immediate use.

**UNITED STATES TAX**..... \$1,327.28

Represents the amount of United States tax on circulation for the six months preceding January 1, 1886, and not yet paid over to the Government.

**DIVIDENDS UNPAID**..... \$620.00.

Is amount of 5 per cent. dividend, payable January 1, 1886, which is still uncalled for by the stockholders.

**NON-RESIDENT TAX**.....

To this account is charged the amount paid to the Town Treasurer for tax on the shares of stockholders who reside out of the State. The payment is made in October of each year. The bank is reimbursed by deducting the amount of tax so paid from succeeding dividend to non-residents. In case the bank pays no dividend the stockholders are called upon to pay the amount of tax.

**FOREIGN BANKS (Balance)**..... \$37,491.23

This is the amount due to banks out of the city for whom the bank collects (checks, drafts, etc.) in excess of amount due from banks that make collections for it.

**DEPOSIT ACCOUNT**..... \$402,414.49

Is the amount due to depositors having accounts with the bank.

The last two items mentioned are those against which the bank is obliged by law to hold a 15 per cent. reserve.

**What a Well-Known Merchant Thinks of the "Journal."**—The following comes from a member of a well-known mercantile firm in Baltimore, Messrs. C. W. Slagle & Co.:

*Messrs. Bradford Rhodes & Co.:*

BALTIMORE, Md., January 18, 1886.

**GENTLEMEN:**—It is with real pleasure that I look back over the year's reading of your **JOURNAL OF BANKING**. If the publication could be more thoroughly introduced among the bank clerks and business men generally—once known its merits would speedily commend it—incalculable benefits would reward your efforts to dispense a general knowledge of not only banking business but every-day monetary affairs, which it is every good citizen's duty to know. Every school and library should subscribe for the **JOURNAL** and keep its volumes for reference. Enclosed please find \$5 to renew my subscription for 1886. Acknowledge receipt,

And oblige, J. W. SLAGLE.

# BANKING LAW.

## \* LEGAL DECISIONS AFFECTING BANKERS.

### PROMISSORY NOTE—NEGOTIABILITY.

Action was brought on a promissory note, which was defended on the ground of failure of consideration. Plaintiff claimed that it was a *bona fide* purchase for value before maturity; that the note was negotiable, and the failure of consideration was not a defense in the hands of a purchaser for value before maturity. The question presented was whether the instrument was negotiable. It is as follows:

\$40.

COON RAPIDS, Iowa, 5, 4, 1881.

On the 25th day of December, 1881, for value received, I promise to pay J. W. Stoddard, or bearer, \$40, with interest at 10 per cent., payable annually from date until paid, and ten per cent. is to be added to the amount if this note remains unpaid after maturity and is collected by suit. For the consideration mentioned above the undersigned hereby sells and conveys to J. W. Stoddard the following property: One Triumph Drill No. —, upon condition, however, that if this note and mortgage shall be paid on or before maturity thereof then this mortgage to be void; otherwise in full force; and it is further agreed that in case of failure to pay the amount due thereon at maturity, or whenever the holder hereof may deem himself insecure, then he may take said property by virtue of this mortgage and sell the same at public auction, as by law provided, the proceeds of said sale, after deducting all expenses, to be applied on this note and mortgage, the residue, if any, to be returned to the undersigned. (Signed)

SAMUEL TAYLOR.

*Held*, That the note was negotiable.

Bank of Carroll vs. Taylor, Supreme Court of Iowa, December 12, 1885.

### FOREIGN BILLS OF EXCHANGE—PREMATURE PRESENTMENT AND PROTEST—DAYS OF GRACE.

B. & Co., of Illinois, drew a bill of exchange on T, of London, dated March 4, 1878, payable at 60 days after sight, for £850. This draft came into possession of the plaintiff, who caused the same to be presented to T for acceptance, and T accepted the same, indorsing, with his acceptance, thereon: "Due twenty-first May." The date of the acceptance was not shown. On the 21st of May the draft was presented for payment, and, on refusal, the same was protested for non-payment. Plaintiff sued the drawers in the Circuit Court of Illinois, who claimed that they were discharged from liability on the ground that the bill was prematurely presented for payment and protested; that, as the law allows three days of grace on all bills of this character, it should not have been presented for payment or payment demanded until three days after the date named in the acceptance; and that, therefore, the protests were void and inoperative. The Circuit Judge in his opinion said that there was no proof showing when T first saw this draft; that the law applicable to these bills, giving sixty-three days from

\*All the latest Decisions affecting Bankers will be found in this Department as early as obtainable. The Editor of the Law Department of RHODES' JOURNAL will furnish, on application of Subscribers, further information regarding any case referred to herein; he will also answer questions in banking law which may be of sufficient general interest as to warrant publication in this Department. A reasonable charge is made for special Replies asked for by Correspondents and not authorized for publication.

the time they were sighted before they were due, was unquestioned and admitted to be the law governing the right of the parties to this paper; but that this acceptor saw fit to make his acceptance payable on a day certain, and that it must be held, by the terms of this acceptance, that he intended to and did make the bill payable, without further days of grace, on the day named in the acceptance. That, therefore, the bill was properly protested for non-payment and the drawers were liable. On appeal to the Supreme Court this judgment was reversed and the Court

*Held*, That the bill was prematurely protested. That it must appear affirmatively in a case of this kind that the acceptor, in designating the day of payment by the word "due," included the days of grace, or the day so designated cannot be regarded as the peremptory time for payment without any additional allowance.

Acceptances like those in question made upon bills payable so many days after sight are of rare occurrence. But no reported case has been found in England or in this country where such an acceptance has been held to have included by mere force of its words, *ex vi termini*, the days of grace. The time named in the acceptance after the word "due" can be regarded only as the time of payment fixed by the bill, to which days of grace are to be added, and not as a date which includes days of grace.

First National Bank of Chicago vs. Bell, Supreme Court of the United States, November 16, 1885.

#### SUITS BY NATIONAL BANKS—JURISDICTION OF CIRCUIT COURT.

[Section 4 of Chap. 290, Laws 1881-2, is a repeal of Subd. 10, Sec. 629, Revised Statutes, and National banks cannot now maintain suits in the United States Circuit Court against residents of their own State and Judicial District.—EDITOR.]

The National Bank of Jefferson, which is located in the Eastern District of Texas, brought suit against the defendants, who were residents therein, to recover the sum of \$5,000. The defense was that the Circuit Court did not have jurisdiction of the action. Section 629 of the Revised Statutes defines the jurisdiction of the Circuit Court, and the tenth subdivision of that section is as follows:

"The Circuit Court shall have original jurisdiction as follows: *Tenth*. Of all suits by or against any banking association established in the district for which the Court is held, under any law providing for National banking associations."

Without this subdivision the Circuit Court would have no jurisdiction in a suit by a National bank where the parties were residents of the same State and Judicial District. Defendants claimed that this subdivision was repealed by a proviso contained in Sec. 4 of Chap. 290 of the Statutes of 1881-2. Chapter 290 is:

"An Act to enable National banking associations to extend their corporate existence, and for other purposes."

Section 4 preserves all the rights and privileges of these associations, and the proviso therein is as follows:

"Provided, however, that the jurisdiction of suits hereafter brought by or against any association established under any law providing for National banking associations, except suits between them and the United States, or its officers and agents, shall be the same as, and not other than, the jurisdiction for suits by or against banks not organized under any law of the United States which do or might do banking business where such National banking association may be doing business when such suits may be begun; and all laws and parts of laws of the United States inconsistent with this proviso be; and the same are, hereby repealed."

The Court holds that this proviso is hostile to the jurisdiction of the United States Courts, as provided for them in the tenth subdivision of Section 629, and practically and effectually repeals that clause. It is plain that, had the plaintiff bank not been organized under the laws of the United States, it could not have brought suit in this Court, and that the object of the proviso was to deprive the United States Court of jurisdiction of cases by or against National

banks in all cases where State banks could not likewise sue or be sued in the United States Courts. If the plaintiff had been a State bank it could not have maintained suit in this Court, and the National banks are placed on a similar footing by this proviso. All the parties being residents and citizens of this State, this Court is without jurisdiction as to parties, notwithstanding the amount sued for is amply adequate to maintain it. The suit must be dismissed for want of jurisdiction.

National Bank of Jefferson vs. Fore, Circuit Court, Eastern District of Texas, October 21, 1885.

---

**BILL OF EXCHANGE—FAILURE OF CONSIDERATION—KNOWLEDGE OF INDORSEE.**

Action by the indorsee of a bill of exchange indorsed before maturity. The defense was a partial failure of consideration known to the plaintiff when he took the draft. The Court below instructed the jury that "the plaintiff's having notice of said claim of damages and defects before he purchased the bill, if he did purchase it, would not affect his right to recover provided he purchased it before it became due. There being no allegation of fraud in obtaining the bill, the question of notice is not material, provided the bill was purchased for value, in the usual course of business, before it became due." The jury thereupon rendered a verdict for plaintiff. On appeal—

*Held*, The defense of notice was a good defense, and the Court erred in the instruction which cut it off. Partial failure of consideration of a bill of exchange may be set up to an action on the bill, and the defendant may recoup his damages though they be unliquidated. If an indorsee takes a bill, with notice of the failure of consideration, his right to recover cannot be superior to that of his indorser.

Judgment reversed.

Davis vs. Wait, Supreme Court of Oregon, October 21, 1885.

---

**PROMISSORY NOTE—RIGHTS OF BONA FIDE HOLDER—BURDEN OF PROOF.**

Where the maker of a promissory note shows that it was obtained from him by fraud it devolves upon the party seeking to enforce its payment to show that he paid value for it, took it before maturity, and without notice of the maker's defense. It is immaterial whether the immediate indorser of a *bona fide* holder did or did not have notice of the maker's defense; for, if the holder acquired it for value in good faith, before maturity, and without notice, his rights are not affected by the notice to the indorser.

Reichelberger vs. Old National Bank, Supreme Court of Indiana, October 31, 1885.

---

**PROMISSORY NOTE—SURETY.**

Defendant signed in form as joint maker on a note, but in reality as surety, which was known to the plaintiff. Plaintiff extended the time of the maker to pay the note for a valuable consideration.

*Held*, That this discharged the defendant.

Stevens vs. Oaks, Supreme Court of Michigan, October 23, 1885.

---

**BILL OF EXCHANGE—PAYEE TAKING BEFORE ACCEPTANCE.**

In an action by the payee of a bill of exchange, who took it before acceptance, against the acceptor, want of consideration between the drawer and the acceptor is no defense. The same rule applies as to want of consideration in this case as that which is applicable between the maker and payee of a note, or the maker and indorsee. The payee of an accepted bill holds the same relation to the acceptor that an indorsee of a note holds to the maker. There is no ground for the distinction that the rule does not apply because the acceptance was after the bill was purchased. It is immaterial when an acceptance is made; it may be made at any time, and the rights of the payee

and of indorsees are the same after it is made whether they were acquired in anticipation of it or subsequent to it.

*Arpin vs. Owens*, Supreme Court of Massachusetts, October 23, 1885.

### POWERS OF BANK CASHIERS.

**NOTE.**—With this number we commence a series of brief articles upon the powers of the Cashier of a bank as they have been judicially determined. The articles will first treat of his powers and duties in general, and then discuss various particular acts which he has, or has not, the power to do, as, for example, the indorsement of negotiable and non-negotiable paper, the certification of checks, accepting of bills, making of discounts, and the like.

1. *Powers and Duties in General.*—The Cashier of an incorporated bank is regarded in law as its chief executive officer, to manage its concerns in all things not peculiarly committed to the Directors, and he is lawfully empowered to carry the contracts of the corporation into execution as the Directors are lawfully authorized to make them when acting within the sphere of their authority (2 Penn. Rep., 40; 1 Pars. Sel. Cases., Pa., 240). The Cashier is an independent officer, and the agent of the corporation and not of the Directors (69 Pa., 419). The Directors constitute the legislative body of the corporation, and with them rest the general control and government of all its affairs and transactions. The functions of the Cashier in the theory of the law are executive and ministerial, not discretionary or *quasi* judicial. As matter of fact, however, Cashiers, in the conduct of the affairs of banks, frequently to a greater or less extent perform acts which in strict law would fall within the scope of the discretionary power of the Directors, which acts are done, if not by the express authority, at least with the tacit consent of such Directors. An instance of this is the making of discounts, which, according to legal authority, is an inalienable function of the Directors. This question of whether or not the Directors have the power to delegate to the Cashier any of their discretionary powers will be considered hereafter.

There are certain general powers and duties inherent to the office of Cashier. These powers and duties may be stated to be those which judicial decisions have held and banking usages established as inherent functions of the office; and a bank is bound by any act of its Cashier falling within the scope of these general powers unless a deprivation of such power be affirmatively proved and actual knowledge thereof be brought home to the party dealing therewith. The Supreme Court of the United States, in speaking of the ordinary duties of Cashiers, says:

"The Court defines the Cashier of the bank to be an executive officer by whom its debts are received and paid, and its securities taken and transferred, and that his acts, to be binding upon the bank, must be done within the ordinary course of his duties. His ordinary duties are to keep all the funds of the bank, its notes, bills, and other choses in action, to be used from time to time for the ordinary and extraordinary exigencies of the bank. He usually receives directly, or through the subordinate officers of the bank, all moneys and notes of the bank, delivers up all discounted notes and other securities when they have been paid, draws checks to withdraw the funds of the bank where they have been deposited, and, as the executive officer of the bank, transacts most of its business" (21 How., 866).

And in a later case:

"The Cashier is the executive officer through whom the whole financial operations of the bank are conducted. He receives and pays out its moneys, collects and pays its debts, and receives and transfers its commercial securities. Tellers and other subordinate officers may be appointed, but they are under his direction, and are, as it were, the arms by which designated portions of his various functions are discharged. The Directors may limit his authority as they deem proper, but this would not affect those to whom the limitation was unknown" \* \* \* (10 Wall., 660).

These general powers and duties of a Cashier are necessarily varied by usage in particular places. Thus, in a particular city, it may be customary

for the Cashiers of banks to certify checks and receive special deposits; and, where a custom of this kind prevails, customers have the right to presume that authority exists in the Cashier to perform such acts, and the bank will be bound thereby. If the Cashier pursues a particular line of conduct for a considerable period, without objection from the Directors, even though he acts without express authority from them, and though his act does not fall within the scope of the general powers regarded as inherent to his office, the bank will, nevertheless, be bound thereby if not forbidden by positive law. Thus, where it was customary for the Cashier of a bank to receive from the customers of the bank stocks and bonds for sale, the bank was held liable for fraudulent misappropriation of securities received from a customer by the Cashier (12 Hun, N. Y., 97).

Extracts from some of the leading decisions, speaking generally on the question of how far a bank is bound by the acts of its cashier, will prove interesting in this connection, leaving for future consideration the particular acts which have been held to be, or not to be, binding on the bank.

Thus, in *Minor vs. Mechanics' Bank*, it was held that the bank is bound by the acts of the Cashier within the scope of his authority, express or implied (*Minor vs. Mechanics' Bank*, 1 Pet., 46).

But the bank is not bound by a declaration of the Cashier not within the scope of his authority, as if, where a note is about to be discounted by the bank, he tells a person that he will incur no risk nor responsibility by becoming an indorser on such note (6 Pet., 51).

Cashiers of a bank are held out to the public as having authority to act according to the general usage, practice and course of business conducted by such institutions, and their acts within the scope of such usage, practice and course of business will in general bind the bank in favor of third persons possessing no other knowledge (1 Pet., 70; 100 U. S., 454; 1 Holmes, 396).

Neither the public at large, nor third persons, usually have any other knowledge of the powers of a Cashier than what is derived from such usage, practice and course of business, and it would be the height of injustice to hold that the bank, as the principal to the Cashier, may set up its secret and private instructions to the officer limiting his authority in respect to a particular case, and thus to defeat his acts and transactions as such agent when the party dealing with him had not, and could not, have any notice of the secret instructions (100 U. S., 454).

Such an officer is, *virtute officii*, entrusted with the notes, securities and other funds of the bank, and is held out to the world by the bank as its general agent for the transaction of its affairs within the scope of the authority evidenced by such usage, practice and course of business (Id.).

Authorities, to show that the acts of a Cashier or other officer of a bank within the scope of the general usage, practice and course of business of banking institutions are binding on the corporation in favor of third persons transacting business with it, are quite numerous, provided it appears that the person dealing with the officer did not know at the time that he was transacting his authority (100 U. S., 454; 15 Pa., 173; 7 Hill (N. Y.), 191; 37 Me., 519).

## REPLIES TO LAW AND BANKING QUESTIONS.

*Editor Rhodes' Journal of Banking:*

CARTHAGE, Mo., January 18, 1886.

SIR:—Please answer the following question in the next issue of the JOURNAL OF BANKING:

John Smith, of St. Louis or Chicago, makes a draft at sight, or time draft, on George Jones, with exchange on St. Louis or New York. On presentation of the draft, Jones agrees to pay the draft, but not the exchange. Am I, as Cashier, compelled to accept the full amount of the draft, without the exchange, or can I follow instructions and protest the draft for non-payment? V. A. WALLACE, Cashier.

*Answer.*—Acceptance may be defined to be an agreement to comply with the request contained in a bill of exchange (3 Pars. on Notes and Bills, 281), and it may be absolute, conditional or qualified. An acceptance wherein the

sum, time, place or mode of payment is varied would be called a qualified acceptance. In the present case, if the bill was accepted as stated, such acceptance would be a qualified one. The holder of the bill has a right to require an absolute acceptance—that is, an acceptance in conformity with the tenor of the bill—and may have it protested in case it is not so accepted.

1 Camp., 425; 7 East, 385; 5 Taunt., 344.

He may, however, at his risk, take a qualified acceptance; and, in such cases, if the qualification be admitted, the acceptor will be bound thereby, as will also the holder.

2 Str., 1152; 2 Wills, 9.

By receiving such qualified acceptance, however, the holder discharges all antecedent parties unless he obtains their consent.

Byles on Bills, \*186; 4 M. & Sel., 462.

The above statement of the law shows the right of the owner in the matter, and our correspondent, as collecting agent, has the right to refuse the qualified acceptance and protest the bill.

*Editor Rhodes' Journal of Banking:*

SCOTTSVILLE, Va., January 15, 1886.

SIR:—Will you kindly give me your views in the next issue on the following:

A, a Cashier of a State bank, borrows of B \$2,000 (B has been a depositor in this bank for years, though living in another State), giving his individual note therefor to B. At the maturity of the note A, the Cashier, writes to his creditor and customer that he (A) had placed that day, March 24, 1883, \$1,000 to his (B's) credit as a payment on his (A's) note, using his official bank letter-heading, at the bottom of which the Cashier's (A's) name is printed. Again, on April 12, 1883, A writes B, "I have placed \$1,000 to your credit, which makes \$2,000 on my note," using the same letter-heading and his (A's) name printed at the bottom as Cashier as in the first case, on which information B drew checks on this bank (of which A was Cashier) from time to time. On July 23, 1883, B asked the Cashier (A) for a statement of his account with the bank, which was furnished, showing a balance still to B's credit in said bank, which balance shows that the \$2,000 reported above as paid by A had been properly credited to B's account with the bank, and new bank book furnished B by Cashier A showing the proper balance on that day. More than one year afterwards, in August, 1884, the bank failed and went into a Receiver's hands, and, with the bank's failure, the Cashier (A) also became insolvent. However, before the failure of the bank, B had drawn out by checks the balance of July 23, 1883, as well as all deposits made by him (B) in said bank after the rendering of the July 23, 1883, balance. After the Receiver took charge of the bank effects he (the Receiver) made a statement of B's account with the bank, in which either the deposit (as per Cashier A's letters) of March 24, 1883, or that of April 12, 1883, is omitted, as the Receiver says that the bank books only show one of these credits, and the Receiver, therefore, claims that B owes the bank \$1,000, while B's bank book, as balanced by Cashier A, and subsequent entries show that he (B) owes the bank nothing.

In view of these facts I would be pleased to have your opinion as to the liability of B to this bank or Receiver for the balance now claimed from him.

Yours truly, JACOB L. MOON, Banker.

*Answer.*—We are of opinion that the bank was bound by the representations of its Cashier, and that B is not liable to the Receiver for the balance alleged to be due. The rule as to the liability of the bank for the acts of its Cashier is stated in our article on the Powers of Bank Cashiers, which commences with this number, and is explicit that the acts of such Cashier, within the scope of the usage, practice and course of business conducted by the bank, will bind it in favor of third persons possessing no other knowledge. (See Law Editor's Notes and Comments.)

The acts stated by our correspondent were all acts falling within the scope of such usage, practice and course of business, and were such as it was part of the ordinary duties of the Cashier, or of his subordinates, to perform.

The bank, through A, its Cashier, informed B, its depositor, that it had collected and credited to his account the sum of \$2,000. By its Cashier it furnished him with a statement showing this credit, and issued him a new

pass-book, wherein the credit was given. It furthermore honored and paid his checks for the full amount. These were acts which, according to law, fell within the scope of the ordinary duties of the Cashier, and, as such, were the acts of the bank. The fact that in reality no credit was given for \$1,000 does not render B liable therefor. The bank, through its duly authorized officer, informed him that the credit had been made, following this representation up with a course of dealing consistent therewith, and it, or its Receiver, is now estopped from denying that statement.

*Editor Rhodes' Journal of Banking:*

SPRAGUE, W. T., December 21, 1885.

SIR.—Will you kindly answer the following question in the next issue of your valuable magazine:

About the 1st of August, 1884, we cashed a check, of which the following is substantially a copy:

\$56 25.

St. PAUL, June 1, 1884.

Pay to Ah Joe, or order, fifty-eight dollars and twenty-five cents.

To First National Bank, Portland.

(Signed,)

N. P. R. R. Co.

This was such a check as the company frequently issues in paying its employees, and the lapse of two months or more would not put any one upon guard, as these checks circulate the same as money. We forwarded this check to our correspondent at Portland, who presented it to the First National Bank, and received payment, we having endorsed the check. On March 18, 1885—over seven months later—our correspondent returns the check to us, saying they had refunded the amount to the First National Bank and had charged the same to us. Accompanying the check was the affidavit of one Black Joe (a Chinaman), who set up that Ah Joe was on his way to China, and that the endorsement on the check was not Ah Joe's, but a forgery. We are satisfied that Ah Joe was properly identified, as we never cash checks for strangers. We cannot at this late day, however, establish his identity. Under the circumstances, upon whom should the loss fall? The check was given for services rendered and the company has a receipt in full. Please cite authorities in your reply.

Yours,

FAIRWEATHER & BROOKE.

Subsequent to receipt of above letter Messrs. Fairweather & Brooke wrote that the fact of the forgery was established in a lawsuit.

*Answer.*—If the payee's signature was, in fact, forged, the following doctrine would apply:

Under a forged indorsement, even a *bona fide* holder without notice acquires no title (57 N. Y., 258; 17 N. Y., 205), and acquiring no title, he could, of course, give none.

An indorser cannot deny the indorsement to himself. If the name of the prior indorser is forged, he, by indorsing it, warrants that he has a clear legal title thereto and that the instrument is the genuine article it purports to be, and he is therefore bound by his indorsement to all parties subsequent to him.

6 EL. & B., 206.

A holder who, indorsing, presents a bill for payment to the acceptors, must be considered as representing, if not warranting, the genuineness of the payee's signature, and, if that is forged, the acceptors who have paid upon a false representation, however innocent, may recover the amount from the holder, and he will have the same remedy against his prior indorser.

McCall vs. Corning, 8 La. Ann., 409.

The rule is well settled that a party paying money under a mistake of fact, as, for example, to the holder of a check under a forged indorsement of the payee's signature, may recover it back; but in a case like the present the decisions hold that demand for restitution should be made within a reasonable time after the forgery is discovered.

Applying these principles to the facts of this case, assuming the forgery as a fact, we find that our correspondents acquired no title to the check in question, and consequently could give none; that by indorsing the same

and obtaining payment from the bank on which it was drawn they warranted the genuineness of the payee's signature, and, upon the faith of this warranty, were paid the money. That the bank paying money for a worthless piece of paper, could not, of course, charge the same to the account of its depositor, and was entitled to be repaid the amount so paid upon demanding the same within a reasonable time after they discovered the forgery.

If, however, the payee's signature was genuine, then, of course, our correspondent was entitled to retain the proceeds of the check. Whether or not the signature was a forgery is a mere matter of proof, and our correspondents are better able than we to judge where the weight of evidence rests. The fact, as stated by our correspondents, is that the payee sued the drawer of the check to recover the amount, and in this suit the forgery was established. Our correspondents were not made parties to that suit, and of course would not be bound by such evidence. The payee may have sworn falsely, and they had no opportunity to cross-examine him or controvert his testimony. He has now left the country, and probably could not be reached to again testify.

Should a suit be now brought to recover the amount on the ground that the payee's signature was genuine, it would, as we have said before, be simply a question of proof as to the fact of whether such signature was or was not a forgery; and it would be for our correspondents to determine whether, in case they honestly believed the signature to be genuine, they could establish that fact by a preponderance of proof. If they could prove that the signature was genuine they would be entitled to recover the money. If not, the loss would rest on them.

**After Careful Comparison.**—The following interesting note—received with remittance for the JOURNAL, 1886—is from the Cashier of the First National Bank at the place named:

*Bradford Rhodes & Co., New York:*

CENTREVILLE, Tenn., January 23, 1886.

GENTLEMEN:—We began in February last by subscribing for your valuable JOURNAL OF BANKING, the first New York draft we made being in payment. Having carefully compared it with several other similar publications, we continue taking your JOURNAL by large odds.

JNO. T. WALKER, Cashier.

**One of Many.**—Here is a sample of many letters which reach this office now-a-days: *Bradford Rhodes & Co., New York:*

MORRILL, Kansas, January 19, 1886.

DEAR SIR:—I have carefully examined the contents of your JOURNAL OF BANKING, a copy of which you sent us as a sample, and I have come to the conclusion that we cannot afford to do without it. Enclosed please find draft for \$5 dollars, for which enter us a subscriber for 1886, beginning with the January number.

Yours very truly,

L. HESSELTINE, Cashier.

**A Country Banker's Opinion.**—There are several points of interest in the following note:

*Bradford Rhodes & Co., New York:*

MONTPELIER, O., January 8, 1886.

DEAR SIR:—I read every page in the JOURNAL—advertisements and all—with a great deal of interest. The articles on Practical Banking are certainly of great value to young bankers—to those inexperienced in the business who wish to learn the very best methods. I find them exceedingly helpful, though I am not what may be termed an inexperienced officer. I hope the "General Balance Book," and other forms, when published, will be fully illustrated and explained. The country bank, where the Cashier does all the work from general manager to roustabout, needs all the condensed forms possible.

Your gallant fight and final victory in the *Thompson's Reporter* matter has certainly won the applause of all respectable and honest people, and especially the new banks and bankers in every part of the United States.

Respectfully yours,

M. E. GRISWOLD, Cashier.

## BANKING AND FINANCIAL NEWS:

WITH COMMENTS ON THE MORE IMPORTANT MATTERS. THIS DEPARTMENT ALSO INCLUDES: A COMPLETE LIST OF NEW BANKS, CHANGES IN OFFICERS, DISSOLUTIONS AND FAILURES.

**Exchange of Fractional Silver.**—Chairman Bland, of the House Coinage Committee, has introduced a bill declaring the repeal of so much of the Act of June 9, 1879, as compels the exchange and redemption of fractional coins.

This bill was framed upon a recommendation of Treasurer Jordan. Under the present law the Treasurer is required to exchange these coins, when presented in sums of \$10, and to forward them through the mails or by express at the public expense. The result is that persons and corporations who receive fractional coins in large quantities, notably passenger railway companies in large cities, return them to the Sub-Treasury for exchange, thus imposing upon the Treasury the labor and expense of again issuing them to those who require small coin to conduct their business. The United States Treasurer, in his annual report, recommended the repeal of the law because it involves unnecessary expense to the Government. The passage of Bland's bill would, it is believed, relieve the Treasury of at least one-half the amount now held in fractional coins and maintain them in circulation. The amount on January 1st held by the Treasury in fractional silver was about \$28,000,000. This is classified as an unavailable asset so long as the Treasury is required to exchange the coins. Past experience shows that no effort that can be made by the Treasurer will materially reduce this amount for a considerable period.

**Assistant Treasurer at New York.**—On January 2d Mr. Thomas C. Acton, Assistant Treasurer of the United States at the port of New York, delivered up his office to Treasurer Jordan, his term having expired on December 31st. Mr. Jordan remained in New York in charge. On January 20th the President sent to the Senate the name of Charles J. Canda, of New York, to fill the vacant position, and he was confirmed on the 23th.

Mr. Canda is a native of France, but came to this country when very young, and is said to be 48 years of age. He first became known to financial circles through his connection with the late William B. Ogden, for whom he was business manager. Later he represented Samuel J. Tilden in railway and other enterprises. He has been active of late in reorganizing some Western railroads, and is now President of the Toledo & Ohio Central Railroad Company. He has been required to give bonds in \$400,000, the bondsmen justifying in twice that amount. New York has had only eleven United States Treasurers since the office was established in 1846, John J. Cisco occupying the position the longest term, eleven years.

**Bank Legislation in Congress.**—The House Committee on Banking and Currency reported favorably on January 26th the bill introduced by Representative George Adams to enable National banking associations to increase their capital stock and change their names or locations. The bill provides that any National banking association may, with the approval of the Comptroller of the Currency, by the vote of shareholders owning two-thirds of the stock, increase its capital to any sum approved by the Comptroller, notwithstanding the limit fixed in the articles of association, and no increase of capital stock, either within or beyond the limit fixed in the original articles of association, shall be made, except as provided in the bill. Section 2 provides that any National banking association may change its name or place where its operations are to be carried on, with the approval of the Comptroller, by the vote of shareholders owning two-thirds of the stock, but no change of name or location shall be valid until the Comptroller shall have issued his certificate of approval.

Section 8 provides that all debts, liabilities, rights, provisions and powers of the association under its old name shall devolve upon the association under its new name. The last section provides that nothing in the Act shall be construed so as to release any National banking association under its old name or at its old location from any liability or affect any legal action in which it may be or become interested.

The same committee has also considered the bill introduced by Mr. Wilkins and generally known as the McPherson bill of last session, and, after prolonged discussion, agreed to report it favorably to the House by a vote of 7 to 4. The bill provides that any National bank shall be entitled to receive from the Comptroller of the Currency circulating notes not exceeding the par value of their bonds deposited to secure circulation. At no time, however, shall the total amount of such circulating notes exceed the actual paid-in capital of such National banking association.

**Savings Banks of Detroit.**—There are nine savings banks in Detroit, the pioneer among them being the Detroit Savings Bank, which was organized as the Detroit Savings Fund Institute in 1849 under a special charter granted by the State on March 5th of that year. The Institute was a simple trust company, without capital, under the management of the Board of Directors, among whom were Elon Farnsworth, Zina Pitcher, Shubael Conant, John Palmer, Levi Cook and others who were then the leading men of the city. During its existence the Institute, which was transformed into the Detroit Savings Bank, with \$200,000 capital, in July, 1871, had opened 55,740 accounts. At present it has 8,000 depositors, whose deposits aggregate \$2,762,000. The other savings banks of the city are the Mechanics', with \$100,000 capital, which is the outgrowth of the private banking house of Wm. A. Butler & Co., started in 1848 and reorganized in 1870; the People's, organized in January, 1871, with \$60,000 capital, since increased to \$500,000; the German-American, which is a reorganization, in 1871, of the private banking firm of Edward Kanter, started in 1853, capital \$100,000; the Wayne County, organized in August, 1871, with \$150,000 capital, and now having deposits of over \$3,000,000; Michigan, organized in February, 1877, with \$60,000 capital, since increased to \$150,000; State, organized in October, 1883, capital \$150,000; Dime, organized in May, 1884, capital \$60,000; and the Citizens', the private banking house of Roberts, Austin & Co., reorganized in March, 1885, with \$100,000 capital. All the savings banks except the Wayne County also transact commercial business.

**Statistics of the National Loans.**—The commission recently appointed by Secretary Manning to collect statistics in reference to the National loans of the United States is said, at the Treasury Department, to have nothing of the nature of an investigating committee about it. Its purpose is to collect data of the expense to which the United States has been put in placing its loans, and to give a detailed history of all interest payments, premium and discount, cost of funding and other expenses connected with the National loans from July 4, 1776, to date. The Treasury Department has compiled a thorough record of the principal of the public debt throughout the history of the Government, and now similar tables concerning its interest and the expenses attending funding are proposed.

**Counterfeits.**—Tellers of the Boston Sub-Treasury report an unusually large number of counterfeit half-dollars of various dates.

A dangerous counterfeit is a \$20-Treasury note of the series of March 10, 1862, letter B, No. 3834. The general execution of the note is good, and about the only noticeable defect is a slight imperfection in the scroll work and the picture of the Goddess of Liberty.

A counterfeit silver dollar, bearing the date 1884, is reported as being widely circulated. Chief Drummond, of the Secret Service Division of the Treasury, says that there is not a silver dollar of any date that has not been counterfeited, but comparatively few are now in circulation. The one referred to is much thicker than the genuine coin, so that it will not pass through the regulation scales, is 30 cents light on the scales, and has a glassy appearance. It has a good ring, but otherwise is so clumsily executed that it should be detected at a glance.

The Chief of the Secret Service Division reports that during the last fiscal year 444 arrests were made, a large majority of which were for passing, dealing in or manufacturing counterfeit money. The amount of counterfeit money captured was \$306,580. A large amount of plates, dies, moulds and counterfeiting material was destroyed. The Chief of the Division expresses the opinion that there is now in

the hands of counterfeiters about \$100,000 in base money. The report says the counterfeiting of coin is on the increase, which, in the case of the five-cent nickel, is due to the disparity between its face and intrinsic value. It also speaks of the good results of the law for the punishment of persons who counterfeit foreign money and securities. The report also says that, while counterfeiters of paper money have been unusually active during the past year, they have been generally unsuccessful in their efforts to float the result of their work. A recommendation is made for legislation prohibiting the making of dies, or moulds for making *fac-similes* for business purposes of United States coins, and another for legislation to extend the powers of the service so as to include authority to act in all cases of frauds against the Government.

**Philadelphia Bank Clerks.**—The Bank Clerks' Beneficial Association of Philadelphia held its seventeenth annual meeting recently, President B. F. Dennison, who was elected to that office for the seventeenth time, occupying the chair. The report showed that there were five deaths during the year, and that there are now 283 members; benefits paid to families during the year, \$3,150; other expenditures, \$183.83; total expenditures, \$3,333.83; dues and assessments received, \$3,149; interest on investments, \$908.89; total receipts of the year, \$3,957.89; cash balance on hand, \$4,129.22; invested fund, \$17,883.33. It was decided that for the coming year the amount of benefit to be paid shall be \$500, with \$10 additional for each year of membership. The following officers for the ensuing year were elected: President, B. F. Dennison; Vice-President, Arthur Wells; Treasurer, R. E. Wright; Recording Secretary, G. A. H. Rose; Corresponding Secretary, A. P. McKinley; Directors, L. Benschaw, W. T. Nelson, Joseph Roberts, W. Depuy, C. S. Austin, Theodore Musgrove, J. B. Stewart, John C. Garland, A. C. Rutherford, J. C. Pinkerton and R. M. Scott.

**The First National Bank of Charleston, S. C.,** has appointed Mr. Henry J. Greer as Acting Cashier in place of Mr. William E. Breese, who has become President of the First National Bank of Asheville. We are assured that the former institution maintains its reputation as the strongest and one of the best managed banks in the South. It has a capital of \$250,000 and surplus of about \$400,000. Dr. Andrew Simonds was its organizer, in 1865, and has been its President continuously since that time. He is generally recognized as possessing financial ability of the first class.

**A Clearing-House at Grand Rapids, Mich.**—The new Clearing-House Association at Grand Rapids, Mich., opened for business, under the charge of Mr. A. P. Porter, Manager, on January 8th. The form of organization is quite similar to that of the Detroit Clearing-House, but somewhat more simple. The total clearings from January 8th to the 18th amounted to \$716,377.11. Mr. Harvey J. Hollister, Cashier of the Old National Bank, is the President of the Clearing-House Association. In replying to an inquiry sent from this office he writes: "We are greatly pleased with results and commend our plan to any city of similar size or even smaller. The time required to transact the clearings of our six banks does not average ten minutes."

**Mr. Geo. A. Butler**, for many years Cashier of the National Tradesmen's Bank, of New Haven, Conn., was elected to the Vice-Presidency of that institution at a meeting of the Board of Directors held January 23d. Mr. Wm. T. Fields, the former Assistant Cashier, was advanced to the position of Cashier. Mr. Butler has been, in fact, the head officer in the management of the bank for some time past and his promotion is well earned; he is known to many of the JOURNAL's readers as a forcible writer on economic topics as well a very capable bank officer.

**Lancaster National Bank, of Clinton, Mass.**—The doors of this institution closed on December 31st, the President, William H. McNeil, having disappeared, and with him a large amount in securities. A few days later some \$15,000 in money and many securities that had been purloined were found at the top of Tinmouth Mountain, near Rutland, Vt. Dr. E. M. Nelson, President of the West Rutland Marble Company, has been arrested on a charge of complicity in the embezzlement. McNeil is supposed to be in Canada. Bank Examiner Gatchell says the bank is "the worst skinned institution" he has ever had anything to do with. He and the Receiver, John W. Corcoran, both say that it is barely possible that the stockholders may escape an assessment.

**The New Deputy Comptroller of the Currency.**—Mr. Valentine P. Snyder, of New York, is thirty-five years of age, and has been employed by National banks at Fishkill and Hudson, N. Y., and the Third National, of New York. He went to

Washington last year as Secretary Manning's private secretary. He has since held the positions of Chief Clerk of the Treasurer's Office and Chief of the Correspondence Division, and has examined and conducted counts at various Sub-Treasuries. He is a personal friend of Secretary Manning and Treasurer Jordan.

**Savings Banks of Rhode Island.**—The State Auditor has made his annual statement of the savings institutions in Rhode Island, from which it appears that they number 37. The depositors number 116,381; amount of deposits, \$51,816,300; increase, as compared with the previous year, \$737,329. The average sum due depositors is \$445.24. The average rate of dividend has been 4.5-7 per cent. The profits, or excess of assets, amount to \$2,560,061. It is the small depositors who have relatively increased in numbers.

**Comptroller of the Currency.**—Henry W. Cannon tendered his resignation to the President on January 22d, to take effect on January 31st, in order to accept the office of Vice-President of the National Bank of the Republic, of New York. Mr. Cannon was requested to postpone his retirement, but his new engagement would not admit of this.

**Drafts of a Fictitious Firm.**—The Cashier of the Homer National Bank, of Homer, N. Y., writes that parties are negotiating drafts in different parts of the State drawn on the Market National Bank, of New York, purporting to be issued by W. H. Banks & Co., Homer, N. Y. There is no such firm. The drafts are fraudulent.

**A Readable Book.**—"England: As Seen by an American Banker," advertised by Messrs. D. Lothrop & Co., in this number of the JOURNAL, is a book of unusual freshness. It is well worth reading. For particulars see the advertisement.

#### MISCELLANEOUS BANK AND FINANCIAL ITEMS.

— W. W. Corcoran, the Washington banker, was 87 years old on December 27th.

— A new savings bank was opened for business on January 20th at Belmont, Mass.

— The Philadelphia Stock Exchange is making a determined war upon the bucket shops.

— Teller wants free and unlimited silver coinage. The Teller may want it, but the Cashiers do not.—*Boston Post*.

— Towers & Green, who have been conducting a small banking business in Washington, D. C., have suspended.

— Some of the business men of East New York, Long Island, have decided to organize a bank with \$50,000 capital.

Senator Van Wyck is exercised over the alleged fact that the seven National banks of the District of Columbia have never paid any local taxes.

— The New York Stock Exchange is again considering means to enlarge or alter its building so as to provide additional accommodation for business.

— Of the \$10,000,000 of 8 per cent. bonds called for payment on February 1st, \$5,009,850 were owned by National banks and held to secure circulation.

— The silver dollar might be made more righteous, ornamental and stylish by having a twenty-cent piece attached to it as a bangle.—*Springfield Union*.

— B. T. O. Hubbard, ex-Cashier of the First National Bank, of Monmouth, Ill., who embezzled about \$110,000, has been sentenced to seven years' imprisonment at Joliet.

— The stockholders of the First National Bank, of St. Johnsbury, Vt., have elected Horace Fairbanks, President, in place of the Hon. Luke P. Poland, who has held the office for twenty-four years.

— A dividend of 12½ per cent. is being paid by Receiver Witters of the defunct First National Bank, of St. Albans, Vt. This dividend amounts to some \$33,500, and makes in all 25 per cent. paid to the creditors.

— J. C. Brown, of the office of the Comptroller of the Currency, where he was in charge of reports of National Bank Examiners, has resigned in order to become statistician of the New York Produce Exchange.

— Messrs. Brown & Anderton, bankers and brokers, of New York, made an assignment on January 15th to Timothy Y. Brown, giving a preference to Alexander Nicolli

for \$78,450. Mr. R. L. Anderton, Jr., of the firm, was a member of the Stock Exchange Governing Committee, but has resigned.

— The California Bank Commissioners recently examined the affairs of the Farmers & Mechanics' Bank, of San Francisco, in liquidation. The assets are only \$64,024, while the liabilities amount to \$213,297, including \$150,825 due depositors.

— The creditors of the old banking house of Charles H. Sweet & Co., of Boston, having been paid the principal in full, have been notified that the interest due on their claims will now be paid. The firm failed about three years ago for \$380,000.

— The Citizens' Bank, of Oberlin, Kana., begins the new year under favorable auspices. Its quarters are fitted up in excellent style, the building being owned by the Cashier, R. O. Kindig, who has a good reputation in the vicinity for integrity and ability.

— The First National Bank, of Anoka, Minn., lost by the fire in August, 1884, \$5,600. This loss has been made good by its profits since. On December 29th it declared a dividend of 4 per cent., carried \$500 to the surplus fund and \$3,170 to undivided profits.

— Mr. Samuel H. Kennedy, who has been President of the State National Bank, of New Orleans, La., since its first organization, has retired, but remains in the Board of Directors. He is succeeded by J. W. Kilbreth, a wealthy retired banker of New York.

— The New Jersey Court of Errors has reversed the decision under which President Daniel Dodd, of the defunct Newark Savings Institution, was convicted of contempt of Court for having loaned its funds to Messrs. Fisk & Hatch at the time the institution was a ward in Chancery.

— Senator Hoar and Congressman Ranney appeared at the United States Supreme Court recently and agreed to have the suits of Receiver Price against the stockholders and Directors of the Pacific Bank, of Boston, advanced. Instead of being heard three or four years hence they will now be argued next autumn.

— The Huron Banking Company, of Huron, Ohio, commenced business December 1, 1885. Mr. V. Fries, one of the largest vessel owners on the lakes and a man of large wealth, is President. Mr. H. W. Rand is the Cashier. The bank is doing a large business. Its facilities for collections are first-class and are remitted for the same day as paid.

— The Assignees of the defunct Shackamaxon Bank, of Philadelphia, have made a formal demand upon the original stockholders to pay over to them 50 per cent. of the par value of the stock which they held and upon which they paid in but \$50 a share, being half the par value. Many of the stockholders have decided to resist the claim.

— The combined capital of the firm of the Rothschilds is now estimated by persons who pretend to know at the sum of \$1,000,000,000, one-half of it gained within the last 25 years and the whole of it within scarcely more than a century. The founder of the family and its fortunes, Mayer Anselm, was a poor clerk in a Hanover banking house.

— The First National Bank, of Cumberland, Md., has elected Mr. Robert Shriver as President to succeed his father, the late Joseph Shriver. Edwin T. Shriver becomes Vice-President, and J. L. Griffith succeeds him in the office of Cashier. The bank is one of the oldest banking institutions in Maryland and enjoys the confidence of a large clientage.

— The United States Circuit Court has affirmed the decision under which William S. Roberts, formerly President of the failed Bank of Augusta, Ga., was brought to New York for trial on a charge of embezzlement. At the time of the failure the bank had in its custody bonds of the Georgetown & Lanes Railroad to the amount of \$140,000, deposited by the Bethlehem Iron Company, of Bethlehem, Penn. The latter held the receipt of the President of the Augusta bank for the deposit. It was learned after the failure that Roberts had hypothecated the bonds and placed them in the Mercantile National Bank, of New York, as his personal property.

— The Grand Jury of the United States Court recently in session at Rutland, Vt., after investigation, have exonerated E. A. Sowles from charges in connection with the affairs of the First National Bank, of St. Albans, of which he was President, by returning "Bill not found." Mr. Sowles and friends regard this as a vindication,

maintaining that there is no probable cause on which to base an indictment, and they regard it as a refutation of the charges made by certain papers and individuals against him.

— The Watertown National Bank is a new Dakota institution which has bought out Mr. W. E. Sibley, of the Dakota State Bank, of Watertown. It has \$50,000, and numbers among its stockholders capitalists of New York, Chicago and Minneapolis. Its officers are: W. E. Searritt, President; Mark W. Sheafe, Vice-President, and E. W. Thomas, Cashier.

— If the Teller of a French bank has doubts as to the honesty of an unknown customer he does not trust to his memory to recall the features of the person he suspects, but gives a private signal to the Cashier, and, while the payment is being made, a camera is secretly brought to bear and the possible swindler departs, unconsciously leaving behind him a proof of identity. This ingenious process has been in operation but a short time.

— At the recent annual meeting of the Board of Directors of the Mechanics & Traders' Bank, of Brooklyn, N. Y., Mr. Archibald, who has served faithfully and creditably as President of the bank for eighteen years, was presented with an elegant and costly sterling silver water pitcher and salver of antique pattern. Mr. Samuel D. Clarke, Vice-President of the bank, was presented with twenty-six volumes of Appleton's Encyclopedia, bound in half morocco. The elegant gifts were received with appropriate remarks.

#### FOREIGN BANKING AND FINANCIAL AFFAIRS.

PERU STATISTICS for the year 1885 give the value of the total amount of silver received at the Mint in Lima, Peru, for coinage as \$1,700,000.

CHINA.—Herr Krupp, of Germany, the Deutsche Bank and the Discount Bank, of Berlin, will co-operate with an influential London firm in issuing in London a loan of £35,000,000 to provide China with armaments and railways.

GERMANY.—The German States will contribute 7,000,000 marks to cover the imperial deficit for the year 1885-6. The deficit for the year 1886-7 will be 1,000,000 marks greater.

Emigration dwindled to 86,000 for the nine months ending October 1, 1885, against 135,000 for the same period in 1884.

CUBA.—At the last meeting of the Directors of the Spanish Bank, of Havana, a dividend of 4 per 100 was declared from the earnings of the past six months, payable in gold.

The Banco Industrial Company has also declared a dividend of 1 per cent. in gold, to be paid to the shareholders from profits of the last six months of 1885.

CANADA.—An official statement shows an excess of expenditure over revenue, at the close of the half year ending December 31st, amounting to \$2,815,150. The total revenue was \$14,755,704, and the total expenditure \$17,570,854. Compared with the last six months of 1884 this statement shows an increase of \$2,710,344 in expenditure and a diminution of \$1,300,789 of receipts. The deficit of the half year 1885-6 is the largest that ever occurred.

ARGENTINE REPUBLIC.—Latest advices from Buenos Ayres state that the forced currency bill has been passed exempting all special gold contracts from the provisions of the law, as likewise the bill for the unification of the three foreign loans. The attempt to include the new Entre-Riano Bank in the forced currency bill signally failed, whilst the emission of the National Bank had been enlarged to the full amount allowed by the charter, which gives that institution an increase of \$12,000,000.

UNITED KINGDOM.—The returns issued by the Board of Trade show that during the month of December the imports decreased, as compared with that month of last year, £1,930,383, and the exports decreased £685,675 as compared with December of 1884.

An Irish banker denies the correctness of Archbishop Corrigan's estimate that Irish-American remittances amount to £8,000,000 annually. He says that the gross amount of drafts payable on American account at all the banks in Ireland is about £400,000 yearly.

The Jersey Bank has suspended. The liabilities are not believed to be heavy as the bank was doing only a small business.

## NEW YORK STATE BANKS.

ANNUAL REPORT OF BANK SUPERINTENDENT WILLIS S. PAINE.

BANKING DEPARTMENT,  
ALBANY, December 30, 1885. }*To the Honorable the Legislature of the State of New York:*

I submit for your consideration the following report relative to the condition and general affairs of the banks, banking associations and individual bankers operating under the laws of this State, together with a report of the condition of the several trust, loan, mortgage, security, guarantee or indemnity companies, as directed by chapter 409 of the Laws of 1882.

## BANKS CLOSED.

In 1883 the Produce Bank, located in the city of New York, was subjected to an examination by my direction. A result of the same was the discovery that the liabilities of the bank exceeded its resources by a considerable amount. A requisition was at once made upon the Directors of the bank to make good its impaired capital. At the expiration of the time prescribed by law a second examination was made, from which it was shown that the deficiency had not been made good as directed, which fact was forthwith reported to the Attorney-General, with the recommendation that an application be made to the Courts for the appointment of a Receiver of the affairs of the association. The officers of the bank subsequently offered to deposit a sufficient sum of money to pay the depositors in full on demand. This offer met with my approval, and the bank continued in existence until November 18, 1884, at which date, its deposits having been reduced to less than \$1,000, an application was made by the Directors of the bank for leave to place its affairs in voluntary liquidation. Charles H. Pendergast, the President of the bank, was appointed its Receiver by Hon. George C. Barrett, one of the justices of the Supreme Court. All depositors of the bank were paid in full.

The Saratoga County Bank, located at the village of Waterford, was, upon the application of its Directors, placed in voluntary liquidation June 16, 1885. Thomas Breslin was thereupon appointed Receiver by Hon. Judson S. Landon, one of the justices of the Supreme Court. No loss to depositors will result from the closing of this bank.

## BANKS FAILED.

During the fiscal year but one State bank has failed—the City Bank, located at Schenectady. Late in 1884 facts coming to my knowledge led me to suspect that the bank was in an unsafe condition to continue business, and an examination of its affairs was made on the 17th of September. The result of such examination showed the capital of the bank to be impaired to the extent of \$49,073.02. A requisition was made on its Directors to make the impairment good. The terms of the requisition not having been complied with during the time allowed by law I reported the facts to the Attorney-General, who applied to the Courts for the relief required. December 16, 1884, John A. De Remer was appointed Receiver of the affairs of the bank by Hon. Judson S. Landon, one of the justices of the Supreme Court. The amount due to depositors at the date of the failure of the bank has been paid in full.

The Receiver of the Atlantic State Bank, of Brooklyn, began paying a final dividend of forty per cent. to the depositors of the bank on November 12th of the present year. Dividends aggregating sixty per cent. had been paid previous to that date. After paying all the depositors of the bank the Receiver states that there will be about \$40,000 for distribution to shareholders should the Courts decide that depositors are not entitled to interest subsequent to May 14, 1884, the date of the failure of the bank. The failure was a result of too intimate relations with the Metropolitan National Bank, of New York, which collapsed a short time previous to that date.

The Receiver of the Wall Street Bank, of New York, which failed August 11, 1884, has since paid its depositors in full.

The Receiver of the State Bank, of Fort Edward, which failed September 9, 1884, has already repaid thirty per cent. to depositors and creditors of the bank, and states

that from the funds and securities on hand he will pay a further dividend of twenty per cent. Additional dividends will depend upon the amount realized from \$44,000 of claims held by the Receiver.

#### CONDITION OF THE BANKS.

At the beginning of the present fiscal year (October 1, 1885,) the number of State banks of deposit and discount engaged in active business was ninety-two, being the greatest number in operation at any one time since the passage of the Act of the Legislature in 1865, enabling the conversion of State banks into National banks.

In the year 1868 but forty-four State banks were engaged in active businesses.

The following summary, compiled from the quarterly reports made to this Department, for the dates nearest the close of the two last fiscal years, shows the condition of the banks on the dates named:

RESOURCES.	Condition Sept. 30, 1884.	Condition Sept. 12, 1885.
Loans and discounts, less due from Directors.....	\$88,515,386	\$97,923,129
Due from Directors .. .. .	8,595,641	2,948,779
Overdrafts.....	280,434	92,277
Due from trust companies, State, National and private banks and brokers.....	11,504,281	12,588,077
Real estate.....	2,732,910	2,929,414
Bonds and mortgages .....	510,129	521,065
Stocks and bonds.....	4,310,684	4,492,565
Specie.....	11,298,772	13,697,201
United States legal-tender notes and circulating notes of National banks .....	7,787,784	7,973,743
Cash items.....	25,504,478	22,453,047
Loss and expense account .....	384,010	389,083
Assets not included in either of the above heads .....	1,041,545	723,236
Add for cents.....	281	283
Total resources.....	\$157,446,275	\$167,667,499
<b>LIABILITIES.</b>		
Capital .....	\$22,150,700	\$22,350,700
Surplus fund.....	6,579,456	6,894,223
Undivided profits.....	5,213,446	4,711,532
Circulation.....	63,658	8,075
Due depositors on demand.....	109,560,334	116,774,018
Due to trust companies, State, National and private banks and brokers .....	11,692,288	14,408,263
Due individuals and corporations other than banks and depositors .....	1,506,839	1,441,693
Due Treasurer of the State of New York .....	12,977	250,061
Amount due not included under either of the above heads .....	666,626	828,796
Add for cents .....	151	151
Total liabilities .....	\$157,446,275	\$167,667,499

#### NEW BANKS.

Since my last report, six banking associations, with aggregate paid-up capital of \$525,000, have been authorized to transact a general banking business under the provisions of the State laws. The name, location and capital of the respective banks are as follows: Genesee County Bank, Batavia, \$50,000; Kings County Bank, Brooklyn, \$150,000; Bank of Mount Vernon, Mount Vernon, \$25,000; Bank of Cape Vincent, Cape Vincent, \$25,000; Herkimer Bank, Herkimer, \$75,000; Union Bank of Rochester, Rochester, \$300,000.

The Genesee County Bank, previous to organization as a State bank, transacted business under the National Bank Act. The Herkimer Bank and the Union Bank of

Rochester, prior to organization under the State laws, were each engaged in private banking. The remaining three banks are new organizations.

#### CHARACTERISTICS OF THE YEAR.

During the year the net increase in resources of the banks reporting was \$10,221,224; the decrease in surplus and undivided profits during the same period was \$287,127; the increase in deposits was \$7,213,884, and in loans and discounts \$9,412,803; the amount due from Directors of the banks decreased \$646,862, and the aggregate of overdrafts was reduced \$168,157. The total of overdrafts on October 1, 1885, was but \$92,277. The amount of legal-tender notes on hand was increased \$185,969 during the year; the increase in specie for the same period was \$2,328,429. The net increase since October 1, 1884, in the number of banks, was three.

#### CIRCULATION.

None of the outstanding circulating notes that are redeemable at this Department have been returned to it for redemption and burning during the last fiscal year. On October 1, 1885, the total of secured circulation outstanding was \$12,141, being notes issued by the Bank of Geneva, Bank of Commerce, in New York, and the Mechanics' Bank, of Brooklyn. The two first-named banks have advertised the final redemption of their circulation. The reduction in secured circulation, by expiration of time for redemption within the year, was \$14,728. The unsecured circulation charged to incorporated banks on the books of this Department at the same date was \$77,979. Such notes are redeemable by the banks by which they were issued.

#### COMPARATIVE EXHIBIT.

The increase and decrease in several of the items of resources and liabilities of the State banks in 1870, 1880 and 1885 are shown by the following table, compiled from the quarterly reports of the several banks made to this Department for the dates named:

<i>Date.</i>	<i>Capital.</i>	<i>Due depositors on demand.</i>	<i>Loans and discounts.</i>	<i>Profits and Surplus.</i>	<i>Total resources.</i>	<i>No. of banks.</i>
September 24, 1870..	\$19,759,810	\$46,535,437	\$46,435,920	\$7,384,299	\$79,281,601	59
September 18, 1880..	18,738,200	61,795,773	66,179,259	8,058,180	99,850,755	68
September 12, 1885..	22,350,700	116,774,018	97,928,129	11,605,775	167,667,499	92

#### BANK DIRECTORS.

In the appendix to this report will be found a list of the names of the Directors of each of the banks of deposit and discount engaged in business. I trust this innovation will meet your approval, as such officers are not only theoretically but in fact the executive officers of our banks.

(List of Directors omitted for lack of space. In the current number of THE BANKER'S REFERENCE BOOK the names are given of the Directors of all banks in Clearing-House cities.—ED.)

#### TRUST, LOAN AND MORTGAGE COMPANIES.

On October 1, 1885, there were twenty trust, loan, mortgage, security, guarantee or indemnity companies or associations in operation in the State. The name, location and capital are as follows:

*New York City*—American Loan & Trust Company, \$500,000; Central Trust Company, \$1,000,000; Equitable Trust Company, of New London, Conn., \$1,500,000; Farmers' Loan & Trust Company, \$1,000,000; Knickerbocker Trust Company, \$800,000; Mercantile Trust Company, \$2,000,000; Metropolitan Trust Company, \$1,000,000; Mutual Trust Company, \$50,000; New York Guaranty & Indemnity Company, \$100,000; New York Life Insurance & Trust Company, \$1,000,000; Real Estate Trust Company, \$150,000; Title Guarantee & Trust Company, \$175,000; Union Trust Company, \$1,000,000; United States Mortgage Company, \$1,000,000; United States Trust Company, \$2,000,000. *Buffalo*—Buffalo Loan, Trust & Safe Deposit Company, \$187,000. *Brooklyn*—Brooklyn Trust Company, \$800,000; Long Island Loan & Trust Company, \$300,000. *Rochester*—Rochester Trust & Safe Deposit Company, \$90,000. *Syracuse*—Trust & Deposit Company of Onondaga, \$100,000.

The aggregate of the several items of resources, liabilities and statistics reported by the trust, loan and mortgage companies of the State given in the annexed table are

compiled from official semi-annual reports to this Department for July 1st of each of the two last years :

RESOURCES.	July 1, 1884.	July 1, 1885.
Bonds and mortgages.....	\$8,589,420.30	\$7,913,795.45
Stock investments.....	30,168,001.12	37,867,187.18
Loaned on collaterals.....	77,237,849.51	67,507,352.31
Loaned on personal securities, including bills purchased.....	10,048,732.82	11,362,111.12
Real estate.....	5,572,247.54	5,722,073.80
Cash on deposit in banks or other moneyed institutions.....	12,478,823.30	22,585,386.99
Cash on hand.....	3,510,666.80	8,598,853.18
Other assets*	3,780,722.86	3,386,372.54
Total resources.....	\$151,629,464.25	\$165,023,132.57
LIABILITIES.		
Capital stock paid in, in cash.....	\$13,852,650.00	\$14,202,900.00
Surplus fund.....	6,096,610.88	6,974,236.27
Undivided profits.....	4,867,914.46	6,022,058.88
Deposits in trust.....	77,378,070.20	75,422,656.49
General deposits.....	38,323,567.08	52,289,212.16
Debentures.....	4,394,000.00	4,023,500.00
Bonds outstanding.....	1,658,685.36	1,623,918.80
Other liabilities.....	3,136,321.74	2,965,255.70
Excess of assets over liabilities.....	1,336,644.58	1,754,165.89
Total liabilities.....	\$151,629,464.25	\$165,177,908.89
SUPPLEMENTARY.		
Debts guaranteed and liability thereon.....	\$81,309.50	\$6,797.08
Interest, commissions and profits received during the six months ending.....	3,709,135.32	2,926,261.22
Interest credited and paid to depositors during the same period.....	1,690,475.08	1,653,815.44
Expenses during the same period.....	356,238.00	362,807.10
Dividends on capital stock declared during the six months ending.....	679,000.00	694,125.00
Amount of deposits made by order of Court during six months ending.....	5,075,387.25	5,879,049.45
Total amount of deposits on which interest is allowed at this date.....	112,021,217.08	119,430,019.81

\* July 1, 1885, deficiency of assets of Equitable Trust Company, \$154,771.12.

The charters of these corporations are obtained through the Legislature, and usually contain very broad powers. Oftentimes more liberality is shown in conferring the same than a due regard for the welfare of the corporation created would justify. The incorporating of these companies by special charters has resulted in establishing a class of financial institutions in this State whose powers, rights and liabilities are not of a uniform character, while all are, to a limited extent, made subject to a general law (Ch. 409, Laws of 1882.) In my former reports it has been recommended that provision should be made for their organization under a general law, to the end that corporations of the same class shall have like powers. This clearly is contemplated by the Constitution of the State, which provides that "The Legislature shall have no power to pass any Act granting any special charter for banking purposes; but corporations or associations may be formed for such purposes under general laws" (Art. VIII., § 4.)

The original purpose in chartering trust companies was to furnish depositories for trust funds. To-day such deposits constitute but a small percentage of those confided to their care. The recent marvelous growth of the trust companies of the State is a result of their having solicited and received general deposits in addition to the trust funds deposited with them. Ten years since the aggregate resources of the trust

companies of the State were but \$69,654,948; on July 1st of the present year their total resources were \$165,177,908.66. The charters for two new trust companies were granted by the Legislature of 1885, viz., The Citizens' Loan Agency & Guarantee Company of New York (Ch. 558) and the State Loan & Trust Company of Brooklyn (Ch. 557).

#### BUILDING, MUTUAL LOAN AND ACCUMULATING FUND ASSOCIATIONS.

It has been stated, in my previous reports, that these associations, while nominally under my supervision, in reality have no official relations with this Department. The business conducted by them does not bear the most remote relation to a banking business, and there is no good reason why they should be required to report to this Department. The recommendation that the law placing them under the supervision of the Banking Department be repealed is therefore renewed.

#### EXAMINATIONS.

For the first time in the history of the State its banks of deposit and discount have been subjected to examination by this Department. Previous to the passage of chapter 47 of the Laws of last year, the Superintendent was not authorized to make an examination of a bank unless he had good cause to suspect that it was in an unsound or unsafe condition to do business.

The recent amendment of the law, in accordance with my previous suggestions, has resulted very satisfactorily.

The Examiners were instructed to carefully ascertain the probable value of assets computing the interest, expenses and rebate of interest to date. With few exceptions all of the institutions examined were found to be in a safe condition. One bank with large capital was no doubt saved from ultimate ruin by the timely presence of the Examiners; two separate channels of defalcation were rapidly depleting this institution, but were fortunately discovered before the capital of the bank was seriously impaired.

The bills receivable of a bank were found to be very largely short. The Assistant Cashier furnished his superiors with a list of bills receivable, from time to time, which was made to agree with the general ledger. This list was taken to be correct without actual examination and comparison of the bills with the list furnished. Large amounts of overdrafts were also found, the Book-keeper having charge of the individual ledger falsifying his balances. This being the first examination of the bank the falsification of accounts may have extended over a period of many years.

Other banks had paid dividends to the full extent of their earnings, and had little, if any, surplus. To each of these letters of admonition were issued, suggesting that dividends should be suspended until the bank had gained a proper surplus. Several banks were found with impaired capital, but on receipt of the statutory notification from me promptly made good the impairment.

It has been found that Examiners are of service where borrowers have discounts in the various banks in a neighborhood, which, in the aggregate, would be much larger than any prudent banker would think of loaning to the individuals or firms. The Examiners in such a case have been enabled to indicate a source of danger to the bank under examination.

A few deductions drawn from these examinations may, with propriety, be inserted here. The practice which prevails, to a limited extent, of a bank loaning upon its own stock, while not illegal, is reprehensible, although it is oftentimes an expedient to keep the voting powers of the stock in the hands of friends. The custom should obtain, as much as possible, of keeping the funds of the bank divided between the Cashier or President and the Teller, the former keeping possession of the reserve or other unusual cash and the latter that of the counter funds only. There are two rules which must be followed in order to carry on successfully a banking business. The first is that enough of deposits should invariably be retained to meet the demand of depositors. Of course the larger the reserve the less the amount which may be loaned upon interest; and, hence, the practice of those engaged in a banking business to contract the loans upon the first indications of general distrust, while often made a subject of criticism, is imperatively dictated by motives of self-preservation. Secondly, a bank should make loans only upon good security, even if the interest received is small. The world-wide confidence in the strength of the Bank of England

is due to the fact that its reserve is invariably, if not in coin, in notes against which there is coin lying in what is termed its Issue Department.

Experience has shown that seldom has a bank failed without its last published statement containing an item indicating a surplus fund or undivided profits. The reason is that its Directors have not had the moral courage to charge off bad debts so soon as their collection is shown to be practically impossible. One thought ought always to be borne in mind, that the possession of ample cash, or its equivalent, is a sign of prudent banking. While the interest upon idle capital may be wholly lost, a bank that is never embarrassed by an unexpected demand for money from its creditors and which is ever prepared to aid its depositors, must obtain a highly desirable prestige.

These examinations will be continued, but Directors should not rely upon the researches of an Examiner rather than their own investigations. Between his visits there may be large embezzlements or misapplications, and in the limited time afforded him it is oftentimes impossible to discover wrong-doing, especially in cases of collusion between several employes. If Directors were all well informed as to their duties and performed the same thoroughly, failures would be exceedingly rare. Every bank should have a by-law requiring its Board of Directors to appoint an Examining Committee as often as once in each three months, whose duty it should be to make a general examination of its affairs, to count not only the cash on hand, but, what is of much greater importance, to examine the cash not on hand but stated to be due from various sources, and to compare its liabilities and resources with the balance on the general ledger. If the general ledger is correctly kept and represents the true condition of the bank nothing can be wrong. So many adjudications have been made from time to time that Directors have their duties plainly defined. If, for instance, notice of illegal transactions is brought to their knowledge, and the same are allowed to continue, they may be compelled to make good any deficiency caused by such illegality. While it is true that the higher qualities of banking—the skillful management of its affairs—are of much greater importance than the constant scrutiny into details, yet the latter is only secondary; each may be valueless without the other.

A few practical suggestions are herewith submitted which may possibly be of service to bank Directors who are not accustomed to analyze the statements made by the institutions under their control. The balance sheets of all State banks (deposit and discount) are substantially in the following form:

#### *Resources.*

Loans and discounts .....	
Due from Directors of the bank included in loans and discounts.....	
Overdrafts .....	
Due from trust companies, State, National and private banks and brokers	
Real estate .....	
Bonds and mortgages.....	
Stocks and bonds ... ..	
Specie .....	
United States legal-tender notes and circulating notes of National banks	
Cash items.....	
Loss and expense account .....	
Assets not included under either of the above heads .....	
Add for cents.....	

#### *Liabilities.*

Capital .....	
Surplus fund.....	
Undivided profits.....	
Circulation.....	
Due depositors on demand .....	
Due to trust companies, State, National and private banks and brokers..	
Due to individuals and corporations, other than banks and depositors...	
Due Treasurer of the State of New York.....	
Amount due not included under either of the above heads .....	
Add for cents.....	

Precisely as all other balance sheets are prepared the balance sheet of a bank is composed of items—the debit and credit. The resources show where the money is

loaned or invested, the liabilities, and the sources from which the money has come. The examinations should be without notice. If the investigation begins with the credit side, the first question which arises is, Were the charges against the items of surplus fund and undivided profits, *e. g.*, exchange, discount and interest, duly authorized by the officers? If interest is paid to depositors next examine the interest account and see whether all amounts due have been credited to depositors and debited the interest account. The liability of a bank to its depositors should be carefully investigated. Such liability may consist of deposits subject to check, certificates of deposit and certified checks. In order to be certain there is no wrong-doing concealed in its credit accounts correspondence should be had with every bank and trust company for verification of amounts alleged to be due to it, and every depositor's book should be called in and written up as often as possible. Other liabilities are the Cashier's checks outstanding given for loans and discounts, bills rediscounted, unpaid dividends and taxes. Next comes the debit side. As before suggested, the cash should be verified, and all cash items, including the bills and checks for the exchanges of the following day, should be fully explained. In connection with loans and discounts, inquiries should be made in reference to notes forwarded for collection, and, if necessary, independent investigations should be had. Each note should be examined. These, with notes forwarded for collection, should equal the amount called for by the general ledger. The two items of due from Directors and overdrafts should receive proper attention, as well as the items of bonds, mortgages and stocks. The examination of the sums due from other banks, *etc.*, will involve delay, but if settlements are often had, as there should be, there is not much danger to be apprehended from those sources. The loss and expense account, which includes taxes paid and other current expenses, should be verified. A constant source of inquiry upon the part of Directors, it may be added, should be as to the conduct and habits of all the employees of the bank.

#### SECURITIES HELD IN TRUST.

The aggregate of the several classes of securities held in trust by the Superintendent for banks, individual bankers and trust companies on the morning of October 1, 1885, is shown by the following table:

Bonds and mortgages.....	\$122,310.00
United States three per cent. stocks .....	110,000.00
United States four per cent. stocks.....	890,000.00
United States four and one-half per cent. stocks.....	92,000.00
United States six per cent. stocks.....	267,000.00
New York State six per cent. stocks.....	2,000.00
Cash.....	7,019.98
	<hr/>
	\$1,490,329.98

The net decrease in securities during the fiscal year was \$12,361.30. Of the securities in the custody of the Superintendent on the morning of October 1st, \$91,000 was held as a guaranty of good faith on the part of banks, banking associations and individual bankers; \$18,641 was held for the redemption of circulating notes issued by such associations; \$38,000 was held subject to the order of banks owing the same; \$1,282,688.98 was held as security for the depositors with, and creditors of, those trust companies which receive deposits of money in this State, being ten per cent. of the capital of such companies as are required by chapter 409, Laws of 1882, to make deposit with the Superintendent.

#### PRIVATE BANKING UNDER CORPORATE TITLES.

In my last report attention was called to the injustice done to regularly organized State banks as well as to the general public in permitting private bankers to transact business under misleading corporate titles. The bill introduced at the last session of the Legislature to accomplish this purpose was so amended previous to its final passage that those private bankers at the time conducting business under corporate titles were excepted from its prohibitions and penalties. In effect by this exemption the right of such bankers to use an artificial or corporate title has by implication, at least, been given Legislative sanction. Thus those private bankers who were fortunate enough to have confiscated a corporate name prior to May 23, 1885, are permitted to exercise privileges which may not be enjoyed by other private bankers. This, certainly, is a most unjust discrimination. All private bankers should have the

right to transact business under deceptive titles or none should be allowed to do so.

Section 4 of Article VIII. of the State Constitution, previously quoted, prohibits the Legislature from granting any special charter for banking purposes, and directs that corporations for such purposes shall be formed under general laws. The clear intent of the foregoing prohibition is that the business of banking shall be conducted under the provisions of general laws which grant to all a uniformity of powers, rights and liabilities. And it is unreasonable that the law-making power of the State is prohibited from granting that which an individual may assume without risk, *i. e.*, a corporate name under which to transact private banking business.

Under the present law a private banker may solicit the deposit of money with his pretended bank, which, in fact, generally lacks the most essential requisite its appropriated title would indicate it to possess, *viz.* : a fixed amount of capital that has been actually paid in, in cash. In the event of the failure of one of these nondescript concerns the depositor has not even the poor privilege of suing the bank that received as such the deposit of his money, for the statutes do not recognize its right to sue and be sued. The only redress of the aggrieved creditor is to sue by name and in their individual capacities the persons who have masqueraded behind the title of a bank. Where failures have occurred it has been demonstrated that, with hardly an exception, individuals transacting business under assumed corporate names have retained the use of their appropriated bank titles until long after their private fortunes have been dissipated, their liability as individuals, consequently, affording no protection to depositors.

Where the integrity and financial responsibility of an individual are of a character to command public confidence that individual has no occasion to assume a deceptive title for business purposes. And against the irresponsible person engaged in the business of banking the public requires and has a right to demand legislative protection. It is argued that it is the duty of a depositor to inform himself as to the character of the concern to which he intrusts his money. While as a general proposition this may be true, yet it is equally true that the official designation of the concern with which his transactions are had should afford him certain information as to its character. The use of the word "bank" should of itself have a distinctive significance, *i. e.*, that the concern using the same is required to make sworn reports of its condition at stated periods of time to either the Superintendent of the Banking Department of this State or to the Comptroller of the Currency at Washington, the presence or absence of the word "National" in the title indicating the officer charged with the supervision of its affairs.

An illustration of the manner in which private bankers operate under corporate titles is shown by two advertisements herewith given, which are taken from a late number of a banker's directory:

<i>"Year established.</i>		<i>Capital.</i>	<i>Surplus.</i>
*1884	Exchange Bank .....	\$40,000	\$2,956
	J. Johnston, Pres. R. P. Grant, Cash.		
	J. Putnam, Vice-Pres. A. A. Warner, Asst. C.		
	Collections remitted at lowest rates.		
	Bk. Manhattan Co., N. Y.; Watertown, Watertown, N. Y.		
*1884	Citizens' Bank .....	\$25,100	\$1,000
	Wm. Rees, Pres. A. F. Barker, Cash.		
	H. W. Morse, Asst. Cash.		
	Collections made on the most liberal terms.		
	Park, N. Y.; Jefferson Co. Nat., Watertown, N. Y."		

The first (Exchange Bank) a regularly organized banking association, is under the supervision of the Superintendent of this Department, reports quarterly, and is subject to all penalties and restrictions of the State banking laws. Before it was authorized to transact business the sum of \$40,000 of capital was required to be paid in, in cash.

The second (Citizens' Bank) is simply a copartnership and has no official relations with the Banking Department of the State, though, so far as the public is concerned, there is nothing in its advertisements and mode of transacting business to distinguish it from a regularly organized banking association.

The Legislature of last year in declining to extend the prohibition against the use of the word "bank" to those private bankers then using such word in a corporate sense, was, perhaps, of the opinion that the proposed law was obnoxious to the declaration

of the Constitution of the State that "no person shall be deprived of his property except by due process of law" (Art. I, § 6.), the theory being advanced that there were cases where private bankers have achieved a reputation in connection with a corporate title which may make the name of their institution of value, and thus a matter of property. If this theory has weight the objection may be met by enacting a law that such "banks" shall use the words "private banker" or the word "unincorporated," or both, in connection with the present title. If these banking concerns were required to report to and made subject to examination by this Department from time to time the evil would be partially cured; but this would be, perhaps, claimed to be an invasion of private rights. The failures of the "Railway Bank," the "Exchange Bank," the "Patchogue & Suffolk County Bank," and like "banks," are too recent and too flagrant not to demand some adequate remedy for the evil.

#### PREVENTION OF DEFALCATIONS.

The primitive idea now to be found among certain Eastern nations that all aliens are barbarians is also to be found imbedded in the laws of the ancient Romans and Greeks. As civilization progressed the belief arose that the custom or law which was binding on men as individuals should also, in some instances at least, be observed by them as members of a State, and the principle of self-preservation that induces the hue and cry after a thief should become applicable to all political societies. That two such nations as the United States and the United Kingdom, speaking the same language and holding so many sentiments in common, should maintain to a marked extent the principle of National exclusiveness is remarkable. The progress of civilized mankind is more and more toward the relaxation of National tendencies as such, and the creation of a federation of all peoples under general laws.

The sovereignty of a nation within its own territory is exclusive and absolute, and the necessity for extradition treaties arises from the fact that the penal laws of the country are of no effect outside of its jurisdiction. Crime is local, and, as a rule, cannot be punished except in the country where it is perpetrated, for, as a matter of theory, it is an offence against the peace and dignity of a State, and can be punished only by the laws of that State, and practically because of the difficulty of procuring evidence. Fugitives from justice, in their efforts to escape the consequences of a certain offence, may flee into the territory of a foreign country. And the purpose of such treaties is to create reciprocal rights, whereby those who have thus fled may be surrendered by the authorities of the places in which they may be found to the end that they may be dealt with in accordance with the law.

Our Government has no right, either by virtue of the Constitution or the laws of nations, to surrender fugitives from justice, and it has been the invariable rule in this country to grant extradition only where pledges of faith have been exchanged and cases stated in which, subject to certain rules, an alleged criminal may be sent back to a foreign Government, the laws of which he is supposed to have violated. In the whole history of this country there has been but one exception to this rule.

The law of England recognizes no obligation on the part of the British Government to surrender criminals accused of crime in foreign countries in the absence of a treaty authorizing the same. And as our Government has never, except, as has been stated, in one instance, recognized the theory of comity or international courtesy, there is no reason to believe that those countries with which we have no treaties, or partly satisfactory ones, will favor us.

There have been but two treaties which refer to extradition between the United States and Great Britain. The first, made on the 19th day of November, 1794, treated of only two cases, and contains the following language: "All persons who, being charged with murder or forgery, committed within the jurisdiction of either, shall seek an asylum within any of the countries of the other." This treaty is generally spoken of as "Jay's Treaty." It was also provided that this portion of the treaty should expire in twelve years. From 1806 until 1843 the relations between the two countries would not admit of an amicable agreement upon matters of this character, and it was not until the last-named year that the second, commonly called the "Ashburton Treaty," came into existence. This, the existing treaty with Great Britain, was concluded between Daniel Webster and Lord Ashburton, as the representatives of their respective Governments, on the 9th day of August, 1842. The ratifications were exchanged at London on the 18th of October following. In the

memoranda of President Tyler, sent to the Senate with the treaty, he said the same was "carefully confined to such offenses as all mankind agree to regard as heinous or destructive of life and property. In this careful and specific enumeration of crimes the object has been to exclude all political or criminal charges arising from wars or intestine commotions." This treaty treated mainly of the suppression of the slave trade and as to the settlement of boundaries. The only portion relating to extradition is the tenth article, which is as follows:

"It is agreed that the United States and Her Britannic Majesty shall, upon mutual requisitions by them or their ministers, officers or authorities, respectively made, deliver up to justice all persons who, being charged with the crime of murder or assault with the intent to commit murder, or piracy, or arson, or robbery, or forgery, or the utterance of forged paper, committed within the jurisdiction of either, shall seek an asylum or shall be found within the territories of the other; provided that this shall only be done upon such evidence of criminality as, according to the laws of the place where the fugitive or person so charged shall be found, would justify his apprehension and commitment for trial, if the crime or offense had there been committed; and the respective judges and other magistrates of the two Governments shall have power, jurisdiction and authority, upon complaint made under oath, to issue a warrant for the apprehension of the fugitive or person so charged, that he may be brought before such judges or other magistrates, respectively, to the end that the evidence of criminality may be heard and considered; and if, on such hearing, the evidence be deemed sufficient to sustain the charge, it shall be the duty of the examining judge or magistrate to certify the same to the proper executive authority, that a warrant may issue for the surrender of such fugitive. The expense of such apprehension and delivery shall be borne and defrayed by the party who makes the requisition and receives the fugitive."

It is provided by the eleventh article of this last treaty that the tenth article shall continue in force until one or the other of the parties shall signify its desire to end it, and no longer. It will be seen in this connection there are but seven extraditable offenses. One of the most frequent crimes—embezzlement—is not included. So far as known no attempts have been made by our Government to remedy the evil but once. In 1859 it made a proposal to Great Britain to amend the treaty by adding to it the offenses of coining, uttering false money and embezzlement. This proposition was favorably entertained. Our Government, however, desired to limit embezzlement to that of public moneys. The British Government refused to accept the limitation, upon the ground that this would make the proposed amendment of little use. The United States made the weak objection that the execution of the amended treaty must depend upon the sanction of Parliament, the common law of England not permitting the surrender of foreign criminals. The negotiations thereupon ended.

In 1870 a statute (33 and 34 Vict., Ch. 52) was enacted by Parliament, which prescribed at length general rules in connection with the giving up of fugitive criminals, and which in 1873 was amended by extending the schedule of crimes covered by the same, and by making accessories, before or after the act, liable to extradition the same as their principals (36 and 37 Vict., Ch. 60.) The Queen is authorized by the second section thereof to direct that this law shall apply to a foreign State so soon as an "arrangement" has been made with such a State in respect to the surrender of such criminals. At the present time, instead of its being necessary to enact a law whenever a treaty of this character is made, these statutes take the place of all previous regulations, because they furnish a series of rules applicable to all treaties adopted subsequent to their creation.

There is no offence which causes greater demoralization to our commercial interests than fraudulent appropriations to their own use of property held by those who act in a fiduciary capacity. Our now existing treaty with Switzerland includes "embezzlement by public officers, or by persons hired or salaried, to the detriment of their employers." That the treaty with Great Britain should be amended to conform with the agreement with Switzerland is a duty of political morality.

It may not be generally known that every extradition treaty now existing between Great Britain and other foreign countries has been concluded since 1870, excepting the one with the United States; and, whereas the American treaty contains only the few crimes above mentioned, every other British treaty comprises all offenses of an important character. An examination made by me shows that embezzlement is specifically mentioned with more or less particularity in all such treaties.

Our own State has been in many ways the leading State of the Union, not only in material things but in the enactment of wise statutes. At a time when it was not thought that the enactment of an extradition law was in conflict with the tenth section

of Article I. of the Federal Constitution, which provides that no State shall enter into any agreement or compact with another State or foreign power, our State enacted in 1832 a law (Ch. 148, subsequently incorporated as Title I., Part I., Ch. 8, §§ 8-11, R. S.), entitled "An Act for delivering up fugitives from justice," which provides that the Governor of this State should have power, and he was thereby authorized, at his discretion, on requisition being made by any Government or its ministers, or officers authorized to make the same, within the jurisdiction of which the crimes hereinafter mentioned should be charged to have been committed, to deliver up to justice any person who, being charged with murder, forgery, larceny or other crime which, if committed within this State, would, by the laws of this State, be punishable by death or imprisonment in the State prison, committed without the jurisdiction of the United States, should seek an asylum in this State, to the end that such person may be transported out of this State to the place where such crimes should be charged to have been committed. It was provided, however, that this should only be done on such evidence of criminality as, according to the laws of this State, would, in the opinion of the Governor, justify the apprehension and commitment for trial of such fugitives from justice, or person so charged, if the offense had been committed within this State; and the expense of apprehending and delivering such person should be defrayed by those who make the requisition and receive the fugitive. It is believed that the Federal Government may well consider the adoption of just such a law in connection with a new extradition treaty with Great Britain.

In one of the cases mentioned in a preceding article the Teller of the bank appropriated a large sum of money. Possibly this sum was taken at the close of business on one day, and before the bank opened the following day the thief was safe in Montreal.

This State has the disadvantage of having a long boundary with the Dominion of Canada, thus making access unusually easy. It is obvious that a proper extradition treaty with England would close that Dominion as an asylum for refugees from justice. This is a matter of pressing importance, and the Legislature of this State should, by resolution or otherwise, ask the proper authority that steps be taken to the end that a result may be reached which will create safeguards for the financial and other institutions of both countries. Banks, being in one sense public institutions, are subjected to keen criticism, and if money is lost by them, especially through embezzlement or the like, it is quickly made the subject of comment, and a serious loss, through the means mentioned, is telegraphed throughout the country. While the record of many of our State banking institutions has always been free from all suspicion of wrong-doing upon the part of their officials, they must be protected from loss by every safeguard which is legitimate to the end that public confidence in their stability may not be shaken. Public opinion should exert its influence in one way or another in order that the Executive Department, or the Senate Committee on Foreign Affairs, should take some action which will afford relief. As the law now stands it is almost an incentive to theft.

There seems to be no great difficulty in agreeing upon international postal rates; the advocates of an international copyright are many, while the subject under discussion, which concerns not one class only but every citizen, is almost wholly neglected. It may be added that it is a remarkable fact that at the present time we have no extradition treaty with Denmark, Greece, Russia and Portugal among the European countries. None with the Central American States, except Nicaragua, Mexico and San Salvador, nor with the Argentine Republic, Bolivia, Brazil, Colombia and Uruguay in South America.

#### TAXATION.

The Legislature of this State provided, in section 812 of the revision of the banking laws (Ch. 409, Laws of 1882), that the stockholders in every bank or banking association organized under the authority of this State, or of the United States, should be taxed on the value of their shares of stock in the same, and that these shares should be included in the valuation of the personal property of such stockholders, in the assessment of taxes at the place where such bank or banking association is located, and not elsewhere, whether the stockholders reside in that place or not; but in the assessment of such shares each stockholder should be granted all the exceptions allowed by law in assessing the value of other taxable personal property owned by individual citizens

of this State, and the taxation should not be at a greater rate than is assessed upon other moneyed capital in the hands of individual citizens of the State.

It was further provided in section 818 of the same statute that the shareholders of any bank, banking association or corporation, doing a banking business under the general banking law or a special charter of this State, should be taxed, with respect to their shares of stock, only at the same rate and place to the same extent and in the same manner as shareholders of National banks may be liable at the same time to be taxed by authority of this State.

The following section (819) enacted that the intent and meaning of section 818 is to place and maintain shareholders of such banks, associations and corporations upon an equality, in the particular in this Act referred to, with the shareholders of National banks.

The National Bank Act contains a provision (section 5219, U. S. R. S.), that nothing in that Act should prevent all the shares in any banking association, organized under that law, from being included in the valuation of the personal property of the owner or holder of such shares in assessing taxes imposed by authority of the State within which such association is located; but the Legislature of each State is authorized to determine and direct the manner and place of taxing all the shares of such associations located within that State, subject only to two restrictions, one of which is "that the taxation shall not be at a greater rate than is assessed upon other moneyed capital in the hands of individual citizens of such State."

It is claimed that not only has our State imposed no tax whatever upon certain other moneyed capital in the hands of individual citizens of the State, within the meaning of the National Bank Act and of the Constitution of the United States, but has, on the contrary, expressly exempted it from taxation within the State, and that in consequence thereof, by virtue of the provisions of our law just mentioned, the shares of stock of our banks of deposit and discount are not liable to taxation, and that the valuation and assessment of the shares of stock in such banks and the levy of taxes thereon are void.

Three illustrations may be given which show the equitableness of this claim. First, the aggregate taxable value of the shares of stock of the life insurance companies incorporated under the laws of this State, in the hands of the individual holders thereof, amounts to more than \$4,000,000, and the aggregate taxable value of the personal property of such companies, consisting of mortgages, loans with collateral security, State, county and municipal bonds, and railroad bonds and shares of stock of corporations (not including stocks of corporations created by the State of New York, and not including the bonds of the United States held by them, aggregating \$8,167,000), amounts to the sum of \$205,000,000.

The only taxes that may be levied upon life insurance companies are by virtue of chapter 534 of the Laws of 1880, which provides that "every life insurance company incorporated under the laws of this State shall annually, on or before the first day of February, pay to the Treasurer of the State, as a tax on its corporate franchise or business in this State, a sum equal to one per centum upon the gross amount of premiums, interest and other income, exclusive of rents, received by such company during the year ending the preceding thirty-first day of December from persons residing in this State, or investments represented by or based upon property situated in this State," and that "the lands and real estate of life insurance companies shall continue to be assessed and taxed where situated for State, city, town, county, village, school, or other local purposes; but the personal property of said companies and shares of stock therein shall hereafter be exempt from assessment or taxation except as in this Act prescribed."

Your attention is called to the fact that this law has never been enforced, for the reason that it is clearly unconstitutional, inasmuch as it does not comply with the following provision of the Constitution: "Every law which imposes, continues or revives a tax shall distinctly state the tax and the object to which it is to be applied, and it shall not be sufficient to refer to any other law to fix such tax or object" (Art. III. § 20.) Consequently no life insurance company pays a tax except on its real estate.

Secondly, under the provisions of chapter 552 of the Laws of 1880, the bonds and stocks of the city of New York, thereafter issued in accordance therewith, for the purposes therein mentioned, are exempt from all taxation excepting for State purposes; and, by the provisions of chapter 522 of the Laws of 1881, all new bonds

thereafter issued by any village, city, town or county of this State, in accordance therewith, and for the purposes therein mentioned, were to be and are exempt from taxation for all purposes; and it is claimed that the aggregate taxable value of the bonds, issued under the provisions of these two statutes, was and is at least \$25,000,000.

Thirdly, our laws nowhere authorize the taxation of the shares of stock or any bonds issued by corporations created by the laws of other States or of foreign countries in the hands of the individual holders thereof, citizens of the State of New York. It is believed that the aggregate taxable value of such shares of stock held by citizens of this State amounts to upwards of \$500,000,000.

A history of the laws of the State relative to the taxation of banks may be found in the last Savings Bank Report to the Legislature.

In *Boyer vs. Boyer* (113 U. S., 689), it was recently decided by the United States Supreme Court that the former decisions of that Court do not sustain the proposition that National bank shares may be subjected, under the authority of a State, to local taxation where a very material part, relatively, of other moneyed capital in the hands of individual citizens within the same taxing district is exempted from such taxation. And while exact equality of taxation cannot be expected under any system, capital invested in National bank shares was intended by Congress to be placed upon the same footing of substantial equality in respect of taxation by State authority as the State establishes for other moneyed capital in the hands of individual citizens, however invested, whether in State bank shares or otherwise.

The action of many of the State banks in co-operating with the National banks in resisting the present unjust system of taxation which obtains in this State is entitled to commendation. It cannot truthfully be said that they are seeking to evade a proper share of the public burthens. The only way in which good government can be perpetuated is by each public spirited citizen exercising a guardianship over his rights and resisting unjust exactions. Bank officers especially should remember that they act as trustees, and that many of their beneficiaries, such as widows, orphans, and the like, are unaccustomed to the transaction of business, and are ill-prepared to defend themselves against unfair discriminations, especially when made under the form of law.

Very respectfully,

WILLIS S. PAINE, *Superintendent.*

**The Seamen's Bank for Savings**, one of the strongest institutions of its class in the world, advertises interest now payable to depositors. The veteran banker and philanthropist, William H. Macy, is President of the Seamen's Bank. For particulars regarding the rates of interest see the notice in this number of the JOURNAL.

**A New Banking Firm.**—Messrs. Chrystie & Janney opened their offices at No. 23 and 25 Nassau street, New York, on January 20th, to engage in business as bankers and dealers in investment securities. The firm is composed of two young men of excellent reputation, and both have had experience in the banking business. Mr. John A. Chrystie was for nine years past with Messrs. Kountze Brothers of this city. Mr. Samuel M. Janney was formerly with Kountze Bros., and until lately was Cashier of the Bank of Del Norte, Colorado. The new firm starts off with excellent prospects of success. They invite correspondence, and promise prompt and careful attention to any business entrusted to them. For references and further particulars see their advertisement—page 11, front part—in this issue of the JOURNAL.

**Royal Insurance Company.**—The annual statement of this staunch company—U. S. Branch, 50 Wall street, New York—is creditable to its managers and gratifying to its policy-holders, showing, as it does, a net surplus of \$2,335,427.89, a marked increase over the previous year. Considering the fact that in the year 1885 the fire losses were very heavy, and very few of the companies made any progress, the figures are all the more significant. The total assets of the Royal now amount to \$4,712,899.16—an increase also over the showing in 1885. Its assets are securely invested, as will be seen by reference to the advertisement in this issue of the JOURNAL.

The Royal is fortunate in its Managers—Messrs. R. F. Boddall and Wm. W. Henshaw—two of the most capable underwriters in the city.

## NEW BANKS, CHANGES, FAILURES, ETC.

 FREDERICTON.—Bank of British North America; Robert Mylla, Agent, in place of E. Napier.

---

**A Solid Banking Institution**—Messrs. BROWN BROTHERS & Co.—Alterations have recently been completed in the building Nos. 50-61 Wall street, corner of Hanover, best known as the home for many years of the leading banking house of Brown Brothers & Co. The corner offices on the first floor were formerly occupied by Messrs. John J. Cisco & Son, whose failure gave the Messrs. Brown the opportunity, without deserting their old quarters, of obtaining the additional room made necessary by the large expansion of their business. The conservative character of the house finds a slight illustration in the fact that it has occupied this same place of business over half a century, with the mere exception of the period when the present building was in course of erection. By the recent enlargement of their accommodations they have acquired the whole first floor on the Hanover street side, giving them room to conduct their collection business in a distinct department, and to provide a cosy bank parlor or customer's reception room, with a Wall street outlook. Even with this enlargement, however, additional room on the second floor is necessarily occupied in order to transact the world-wide business of the house.

Business men generally, in New York or throughout the United States, of course do not require information regarding the standing of the house or the character of its business, but, for the benefit of the young readers of the JOURNAL looking toward commercial or financial life, it may not be amiss to mention that Messrs. Brown Brothers & Co. are leading buyers and sellers of bills of exchange; issue commercial and travelers' credit available in any part of the world; make telegraphic transfers of money between this country, Europe and the British and Danish West Indies; collect drafts drawn abroad on all points in the United States and Canada, and drafts drawn in the United States on foreign countries, etc. A very important share of the financial part of the import and export business of the country is done by Messrs. Brown Brothers. They have in fact taken a leading part in all the financial annals of the country during the half century and more of their existence, and—it is almost needless to say—have attained a position which makes the name of the house a synonym of commercial honor and financial solidity.

A curious item in the history of the firm, perhaps never before made public, is the fact that the establishment of the Philadelphia and New York houses was the result of internal improvement by canal from the Chesapeake to the Delaware River, and from the Delaware to the Hudson, and the elder Brown's wise foresight of consequent shifting in channels of trade. The business was originally founded in Baltimore, in 1796, by Alexander Brown, father of William, George, John A. and James Brown. About 1812, William, afterward Sir William Brown, went to Liverpool and established the house of William & James Brown, which subsequently took the name of Brown, Shipley & Co., under which title the Liverpool and London houses are still widely known. Somewhat later John A. Brown established the house in Philadelphia, and in 1826 James came to New York and began business as William & James Brown, a year or two later the house taking its present name of Brown Brothers & Co. The special object which led the brothers to Philadelphia and New York was to intercept and secure the trade which was expected to escape from Baltimore by way of the canals already mentioned. The first location of the business in this city was in Pine street, but in 1838 it was transferred to the present site, 50-61 Wall street.

The increasing prosperity indicated by the necessary enlargement of their business accommodations now made is one of the deserved rewards of a long and honorable career, but not the only one. The reputation of such a house, if it could be separated from its material prosperity, is even better than the profits of its business, however large.

A representative of the JOURNAL was recently shown through the various departments by Mr. William H. Gillen, who has been associated with the house for over thirty years past. The immense granite vault, steel safes and other safety appliances are marvels of solidity and skill, while the general arrangements for conducting the immense business indicate perfect system in every department.

## R. R. AND INVESTMENT NEWS.

A SYNOPSIS OF INFORMATION REGARDING RAILROAD AND OTHER CORPORATION AFFAIRS OF INTEREST TO BANKERS, INVESTORS, ETC., CLASSIFIED AS FOLLOWS:  
I. NEW ISSUES. II. REPORTS. III. MISCELLANEOUS INVESTMENT NEWS.

### I. NEW ISSUES.

**NEW YORK STOCK EXCHANGE LIST.**—The following securities have been added to the list:

**Richmond & Allegheny**—"Reorganization Certificates" for 100 shares to represent 100 shares of old stock, assessment paid.

**Knoxville & Ohio**—\$2,000,000 first mortgage 6 per cent. gold bonds of 1925.

**NIAGARA FALLS & WHIRLPOOL.**—This company is to issue \$100,000 to build a railroad from Niagara Falls to the Whirlpool, three miles.

**UNITED LINES TELEGRAPH.**—This company filed in Macon County, Ill., last month a mortgage for \$1,200,000 to the Farmers' Loan & Trust Company, of New York. The mortgage bears 6 per cent. interest and falls due in 1906.

**ZANESVILLE, MOUNT VERNON & MARION.**—This company has been incorporated in Ohio with a capital stock of \$25,000 which will hereafter be increased to \$2,000,000. The company will build a line from Zanesville to Marion, Ohio (90 miles).

**PENNSYLVANIA & SCHUYLKILL VALLEY.**—The stockholders of this road have agreed to increase the bonded indebtedness of the company from \$4,500,000 to \$10,000,000, and approved the lease to the Pennsylvania Railroad Company.

**BOSTON & LOWELL.**—At the annual meeting of this company the Directors were authorized to increase the capital stock of the road so far as it may be necessary to purchase the securities, etc., of the railroads which the company is to lease.

**St. LOUIS & CAIRO.**—The stockholders will meet, on March 15th, to ratify the proposed issue of \$4,000,000 bonds. The money realized from the sale of the new bonds will be used to retire the old first mortgage and improve the St. Louis & Cairo roadbed and provide new equipment.

**BALTIMORE & NEW YORK.**—This is the name of a new railroad incorporated in New Jersey with a capital stock of \$1,000,000. The road will run from the Rahway River, near Rahway, to a point opposite Elizabeth. It will be a connecting link in the road which the Baltimore & Ohio is to have to New York.

**NEW YORK FERRY COMPANY.**—This company, which has been reorganized under the title of the Brooklyn & New York Ferry Company, has issued bonds aggregating \$1,000,000, which are made payable in 1911. To secure the issue a trust deed of the property, etc., has been executed to George W. Law and Michael W. Wall.

**CHICAGO, MILWAUKEE & St. PAUL.**—President Mitchell, of this company, is reported as saying that between \$4,000,000 and \$5,000,000 of 5 per cent. bonds will be issued to build the Kansas City extension. It is understood that the extensions now projected by the company will require the issue of from \$10,000,000 to \$15,000,000 of bonds.

**PITTSBURGH'S NEW BONDS.**—In answer to the call for bids for \$3,100,000 of refunding 4 per cent. bonds of the city of Pittsburgh proposals for about \$15,000,000 were received. The whole loan was awarded H. S. A. Stewart, of Pittsburgh, at 105.67. Bids were received from Boston, New York and Philadelphia, but were not up to Stewart's figures.

**MEMPHIS & CHARLESTON.**—This company has temporarily provided for its floating debt. It owed \$700,000 for past-due coupons, equipment and supplies. Gen. Thomas, John P. Martin and others interested in the company have been the principal creditors.

It has been decided to borrow enough money on the \$1,000,000 of second mortgages in the company's treasury until such time as the market will enable the bonds to be sold at a satisfactory price.

**COMMERCIAL CABLE COMPANY.**—A mortgage for \$800,000 has been filed by this company in the Brooklyn Register's office to secure an equal amount of 6 per cent. debenture bonds which will mature in 1901. The mortgage is made to Ernest Weiner Siemens and Johann Carl Ludwig Loeffler, of Berlin, Prussia. Part of the proceeds are to pay a debt of \$397,000 and the remainder to be spent in improving the plant of the company. The money is loaned by a syndicate of German bankers.

**MISSOURI PACIFIC.**—The Directors of this company have issued a circular to the stockholders announcing the proposed issue of \$6,000,000 additional capital stock, the proceeds to be used in the purchase of various branch lines having a mileage of 687 miles. The issue of this stock will make the total \$88,000,000. Stockholders of record on February 6th will be allowed the right to subscribe to \$3,000,000 of the new stock at par, payable in two instalments of 50 per cent. each on March 15th and April 15th. The remaining \$3,000,000 will be kept in the treasury. This \$3,000,000 may be offered at some future time to stockholders. It is given out that the first \$3,000,000 is on branches built from surplus earnings.

**TEXAS & PACIFIC.**—In the reorganization of this company it is proposed to make the capital stock \$33,000,000, holders of the present stock to receive 100 shares of new stock for 300 shares of present stock. This will use up about \$11,000,000 of the new stock. The remainder, about \$22,000,000, is to be sold in the market. The first consolidated bonds to receive new five per cent. bonds at par, interest to begin July 1, 1887; Texas Rio to receive 80 per cent. in new five per cent. bonds and 70 per cent. in an income bond on the Rio Grande division; New Orleans Pacific firsts to receive 50 per cent. in new five per cent. bonds and 50 per cent. in an income bond on that division; the present land grant bonds to receive the lands the company already held against these bonds in full settlement of their lien upon the property.

## II. REPORTS.

**BUFFALO, NEW YORK & PAIDADELPHIA.**—The annual report of this company for the year ended September 30, 1885, shows the following:

	1883-4.	1884-5.
Total gross earnings.....	\$2,614,774	\$2,335,514
Total operating expenses.....	2,087,841	1,880,887
Net earnings .....	\$526,933	\$454,627
Summary of income account:		
Total net income .....	\$569,238	\$512,771
Total disbursements.....	1,406,686	1,087,448
Balance, deficit .....	\$887,458	\$554,672

The road is in the hands of a Receiver, but the report states that no Receiver's certificates have been issued up to the date of the report.

**NEW YORK, NEW HAVEN & HARTFORD.**—The annual report for the year ended September 30, 1885, shows earnings and expenditures as follows:

	1883-4.	1884-5.
Total gross earnings.....	\$3,887,259	\$4,895,824
Total operating expenses.....	4,655,054	4,449,288
Net earnings.....	\$2,232,215	\$2,446,536
Summary of income account:		
Total net income .....	\$2,232,215	\$2,446,536
Total disbursements.....	2,223,044	2,225,068
Balance, surplus.....	\$9,171	\$220,968

The company paid dividends aggregating \$1,550,000 in both years, the surplus mentioned above being the result after paying these dividends.

## III. MISCELLANEOUS INVESTMENT NEWS.

**RAILROAD RECEIVERS.**—There were 44 railroads put into the hands of Receivers in 1885. The roads had 8,386 miles of lines. Their bonded debt amounted to \$198,422,900,

and capital stock to \$187,027,300, or an aggregate apparent investment of nearly \$385,500,000.

**CLEVELAND, AKRON & COLUMBUS.**—This company was reorganized on January 1st, and the principal office established at Akron.

**WHEELING & LAKE ERIE.**—A decree of sale has been entered in the Circuit Court of Cleveland against this road. The minimum price has been fixed at \$500,000.

**NEW YORK CENTRAL.**—Judge Donahue, of the New York Supreme Court, has appointed trustees for the mortgage bonds of this company, which were called in some years ago.

**OHIO CENTRAL.**—This road, which was recently sold, has had its name changed to the Kanawha & Ohio Railroad. The offices of the company have been removed to Charleston, W. Va.

**MEMPHIS, SELMA & BRUNSWICK.**—Mr. E. F. McHenry, of Memphis, has been appointed Receiver of this road. The appointment was made upon the application of the Guaranty Trust & Safe Deposit Company, trustee of the \$1,000,000 mortgage, for the foreclosure of which the trust company has begun a suit.

**POSTAL TELEGRAPH.**—A decree for the sale of the Postal Telegraph Company's property has been granted by Judge Blodgett in Chicago. The property includes all the lines in Illinois and lease of the underground pipes in Chicago. The sale was ordered upon a judgment for \$61,266 obtained by Eugene N. Howell.

**SOUTHERN MARYLAND.**—This road was sold at auction at Philadelphia on January 13th. The sale was made under a decree of the United States Circuit Court for the Maryland District in a suit brought by the Central Trust Company of New York. Franklin R. Gregory, representing the Boston bondholders, bought the road for \$75,000.

**MISSOURI COUNTY BONDS.**—The Ninth National Bank, of New York, has brought a suit against Ralls County, Missouri, on 14 bonds issued by the county in July, 1870, payable 10 years after date. The bonds were part of a subscription of \$275,000 made by the county to the St. Louis & Keokuk Railroad. The bonds and coupons aggregate nearly \$17,000.

**JERSEY CITY FINANCES.**—The report of the Comptroller of Jersey City for the fiscal year ended December 1, 1885, shows that the total liabilities on that date were \$16,011,502; resources, \$10,957,797; net debt of city, except water account, \$5,053,794; decrease of debt during the year, \$224,812. The general bonded debt on December 1, 1885, was \$6,144,416; assessment bonds, \$5,873,500; outstanding temporary loans, \$1,026,000. The water bonds are not embraced in the statement as the water department is self-sustaining.

**BOSTON, HARTFORD & ERIE.**—Some sensation has been caused by the anonymous offer of \$6 per share for the stock of this road. The payment is being made by the American Loan & Trust Company, which announced that no money would be paid until the stock had been deposited. It is understood that a considerable amount of the stock has been deposited. The Boston, Hartford & Erie formerly owned the New York & New England road, but lost it through foreclosure. The stock was presumed to be about worthless, and was quoted at \$2 per share when the offer was made.

**MEMPHIS (TENN.) DEBT.**—The report of the Funding Board of the city of Memphis states that the outstanding bonded indebtedness of the taxing district issued in settlement of the old city indebtedness of every kind is \$3,180,500, and against this the city has assets deemed to be good of \$721,751, which would leave a net debt, after these credits have been applied, of \$2,458,749. Under the usual process of law these assets can be collected within three years if they are urgently pressed to collection. About \$100,000 of the old city debt is yet unsettled.

**MASSACHUSETTS RAILROADS.**—The annual report of the Massachusetts Railroad Commission shows that only eight miles of new road were constructed in the State during the year. The total dividends paid amount to \$4,551,704, an increase of \$16,649 over the previous year. Of the 68 roads 33 paid dividends varying from 2 to 10 per cent. Fourteen companies, with \$8,881,000 permanent investment, had no net income;

fourteen companies, with \$41,946,000 permanent investment, had  $3\frac{1}{2}$  per cent. or less : thirteen companies, with \$37,720,000 permanent investment, had  $3\frac{1}{4}$  to  $5\frac{1}{4}$  per cent. : seven companies, with \$23,408,000 permanent investment, had  $5\frac{1}{4}$  to  $7\frac{1}{4}$  per cent. : nine companies, with \$54,767,000 permanent investment, had  $7\frac{1}{4}$  to  $9\frac{1}{4}$  per cent. : three companies, with \$37,936,000 permanent investment, had  $9\frac{1}{4}$  per cent. or over, and sixty companies, with \$213,665,000 permanent investment, had net income of 7.2 per cent.

**TOLEDO, CINCINNATI & ST. LOUIS.**—This road has been sold under foreclosure, Mr. Sylvester H. Kneeland becoming the purchaser in behalf of certain bondholders. The Toledo division sold for \$300,000 and the St. Louis division for \$301,000. The purchasers represent \$2,300,000 of the \$3,000,000 St. Louis division bonds and \$1,250,000 of the \$1,500,000 Toledo division bonds. It is proposed to consolidate the two on the basis of \$1,000 bonds of the Toledo division being equal to \$1,500 bonds of the St. Louis division.

**ILLINOIS RAILROADS.**—The annual report of the Illinois Railroad Commission shows that there are 54 roads in the State with a mileage of 11,368 miles. The capital stock of the fifty roads reported, including leased lines, was \$683,141,000, an increase over last year of \$16,531,000. The funded debt is \$725,696,000 and floating debt \$46,037,000. The aggregate of stocks, bonded and floating debt is \$1,454,785,000. The total gross income for the year of the roads reporting is \$194,483,000. The gross earnings for Illinois business amount to \$56,961,000. The total operating expenses and taxes paid in Illinois during the year was \$37,331,000. The aggregate gross profit on Illinois business was \$19,630,000. Reports from forty-four roads show an aggregate gross profit of \$19,686,000, and eight show an aggregate gross loss of \$55,000.

**WABASH, ST. LOUIS & PACIFIC.**—The final report of the Master, showing the condition of the debt of this road, finds that the general mortgage bond debt amounts to \$19,300,000 and the collateral trust bond debt to \$11,109,283. The Receiver's indebtedness is \$3,675,000. Over \$1,000,000 is due in rents and interest on bonds to the leased lines.

Judge Walker has entered a decree in the United States Circuit Court at Toledo for the sale of the Wabash Railroad. The decree was auxiliary to the one entered in the main suit pending at St. Louis by Judges Brewer and Treat. The road is to be sold on the consolidated mortgages and subject to all prior liens and mortgages on the several divisions originally forming separate roads. The sale takes place at St. Louis by Edmund T. Allen, Master in Chancery, at a minimum price of \$1,000,000.

**NEW YORK & NEW ENGLAND.**—The formal transfer of this road from the Receiver to the company took place at the close of the business on December 31st. The road was in the Receiver's hands just two years. When he was appointed, January 1, 1884, the floating debt of the company was about \$2,348,000. This has been paid, with interest amounting to \$78,000, as has also the interest on the bonded debt, amounting to about \$1,800,000. The necessary amount was deposited with the trustee of the first mortgage to pay the coupons due January 1st, and from \$1,000,000 to \$2,000,000 has been turned over to the company. The funds to meet these payments were derived from the assets of the company when the Receivership began, the net earnings of the property, the proceeds of the sale of \$1,584,000 of preferred stock, and \$157,000 of second mortgage bonds. For permanent improvements the sum of \$553,000 has also been expended.

**TENNESSEE BOND SUIT.**—In the suit brought by certain bondholders to compel the Funding Board of the State of Tennessee to fund bonds owned by them Chancellor Merritt has decided against the bondholders. The decree says :

"The Court being of opinion that the judgment and decision of the defendants, as a Funding Board, is final and conclusive as to what bonds of the State of Tennessee shall be funded under funding Act of March 15, 1883, and as to the basis upon which, and character and series of, new bonds to be issued by them, as the board understood the Act, shall be issued, and that this Court has no jurisdiction to direct, correct or control judgment and decision of said board with respect thereto, and the Court being further of opinion that this Court has no jurisdiction to compel defendant Bate, Governor of Tennessee, as Governor, to sign the new funding bonds to be issued by said board under said Act of 1883, it is, therefore, considered by this Court that the bill of the complainant be dismissed, and that he and his surety, Juliens, shall pay the costs of this cause, for which execution shall be issued as required at law. Thereupon complainant prayed an appeal to the Supreme Court of Tennessee, which is granted."

## THE BANKER'S GAZETTE.

### The Money Market and Financial Situation.

NEW YORK, February 1, 1886.

There has been a decided check upon speculation for some weeks past, notwithstanding the fact that the indications as to general business have been generally favorable.

The Clearing-House exchanges throughout the country show an important increase over those of the corresponding time of last year, the business failures are fewer, and most branches of industry are in a more healthy condition. But there have been elements at work which have tended for the time being to repress that confidence in the immediate future which caused the strong advance in the stock market last fall.

For one thing the shipments over the trunk lines have been comparatively small, and this, added to the position of hostility taken by the Baltimore & Ohio railroad toward the Pennsylvania railroad, and the attempt of the former to gain an entrance to New York over its own lines, have raised doubts as to the strength of the agreement made some months ago to maintain freight rates.

The falling off in the eastward freight movement appears to be almost entirely in grain and flour, an ultimate result of the light wheat harvest of last year. The price of wheat continues so high as to prevent its shipment abroad, and hence we have not only poor railroad business but a somewhat unsatisfactory condition of foreign trade. Of course, we do not mean that wheat at 90 cents a bushel in New York is high as compared with former years, but it cannot at that price compete in the foreign markets with wheat raised abroad. It is certain that the new sources of cheap supply for the principle staples have permanently reduced the prices of breadstuffs and cotton, and that our present level of prices for these commodities is somewhat too high. The statistics show that our merchandise exports for 1885 were some 200 million dollars less than in the year 1880, and that all of this falling off was in breadstuffs, provisions and cotton. Our total exports have been steadily decreasing from 890 millions, five years ago, to 689 millions last year, but some of this difference is owing to the decline in prices. Of course the imports were reduced in something like a corresponding ratio. During December last there was an excess of exports over imports of merchandise of \$32,378,877, against \$49,173,162 in December, 1884. The excess, notwithstanding the decline, was such as to leave no actual necessity for the shipment of gold abroad, but the figures of the trade at this port indicate that the imports for January have been comparatively large while the exports were small. Hence the rates of exchange have ruled high, and over 1½ millions in gold have gone abroad. This fact, coupled with the fears that Congress will do nothing at the present session to stop the silver coinage, and that a steady gold drain might possibly be started, forms one of the doubtful elements of the situation. Were it not for the silver dollars, the money market would be in a comparatively favorable condition. Money is very cheap abroad and the market is uniformly easy here.

FOREIGN EXCHANGE, owing to causes mentioned above, has been fluctuating about the gold exportation point for some weeks. Following are the

posted and actual rates of the principal dealers: Bankers' sterling, 60 days, nominal, \$4.87½@4.88; sight, nominal, \$4.89½@4.90; Bankers' sterling, 60 days, actual, \$4.86½@4.87½; sight, actual, \$4.88½@4.89½; Cable transfers, \$4.89@4.89½; Prime commercial sterling, long, \$4.86½@4.86½; Documentary sterling, 60 days, \$4.85½@4.86; Paris, bankers', 60 days, 5.17½@5.16½; sight, 5.15@5.14½; commercial, 60 days, 5.19½@5.18½; sight, 5.16½@5.16½; Antwerp, commercial, 60 days, 5.20@5.19½; Swiss, bankers', 60 days, 5.18½@5.17½; sight, 5.15½@5.15; Reichsmarks (4), bankers', 60 days, 95½@95½; sight, 96@96½; Commercial, 60 days, 95½@95½; sight, 95½@95½; Guilders, bankers', 60 days, 40½@40 7-16; sight, 40 9-16@40½; Commercial, 60 days, 40 3-16@40¼; sight, 40¾@40 7-16. Paris dispatches quote exchange on London 25f. 19c.

The following shows the posted rates for prime bankers' sterling bills on London at 60 days, and sight, cable transfers, and prime commercial sterling, together with exchange on Paris on January 1st, the changes in the rates as they occurred during the month, and the highest and lowest during the months of December, 1885, and January, 1886:

+ Ex-interest.

THE NATIONAL BANKS have reduced their holdings of United States bonds to secure circulation some \$3,400,000 during the past month, the decrease being mainly in 3 per cents. A statement of the Comptroller of the Currency shows, however, that the amount of National bank circulation now outstanding is \$317,655,023, an increase of \$581,765 during January.

The following will show the amount of each description of bonds held by the Treasurer to secure National bank circulation on or about the dates indicated :

	Feb. 1, 1886.	Jan. 1, 1886.	Dec. 1, 1885.	Nov. 1, 1885.
Currency 6 per cents.....	\$3,515,000	\$3,515,000	\$3,505,000	\$3,505,000
4½ per cents.....	49,502,950	50,087,450	49,843,250	49,531,250
4 per cents.....	114,627,650	114,834,650	115,758,150	116,432,650
3 per cents.....	124,928,900	127,596,650	128,523,150	128,869,650
Total.....	\$302,574,500	\$305,983,750	\$307,630,550	\$308,338,550

THE TREASURY.—The following table will show the condition of the Treasury, as regards the amount of gold and silver held, on the first day of February, 1886, and, for comparison, on the first of January, 1886, and December, 1885, with the amounts of certificates outstanding, and the balances of coin owned by the Treasury :

	Feb. 1, 1886.	Jan. 1, 1886.	Dec. 1, 1885.
Gold coin and bullion.....	\$251,480,237	\$253,351,409	\$251,945,578

On January 29th the Secretary of the Treasury issued the one hundred and thirty-third call for the redemption of \$10,000,000 bonds of the 3 per cent. loan of 1882. Notice is given that the principal and accrued interest will be paid at the Treasury of the United States, in Washington, on the 1st

day of March, 1886, and that the interest will cease on that day. Following is a description of the bonds: Three per cent. bonds, issued under the Act of Congress approved July 12, 1882, and numbered as follows: Fifty-dollar, original number 298; \$100, original number 2,149 to original number 2,165, both inclusive; \$500, original number 1,063 to original number 1,075, both inclusive; \$1,000, original number 9,189 to original number 9,786, both inclusive; \$10,000, original number 16,449 to original number 17,400, both inclusive; total, \$10,000,000.

**MONEY AND DOMESTIC EXCHANGE.**—The money market is easy, the rate for call loans generally ranging from  $1\frac{1}{2}$  to 3 per cent. There is a good demand for commercial paper at low rates. Prime 60 to 90 days' indorsed bills receivable are quoted at  $3\frac{1}{2}$ @4 per cent.; 4 months' acceptances at 4@5, and good single-names, having 4 to 6 months to run, at  $4\frac{1}{2}$ @6. Following are the rates of domestic exchange on New York: Savannah,  $\frac{1}{8}$ ; selling  $\frac{1}{4}$  premium. Charleston, buying par @  $\frac{1}{8}$ ; selling  $\frac{1}{8}$ @3-16 premium. New Orleans commercial, 75c. per \$1,000 premium; bank, \$1.50 per \$1,000 premium. St. Louis, 75c. per \$1,000 premium. Chicago, 25c. per \$1,000 discount. Boston, 15@25c. per \$1,000 premium.

**NEW YORK CITY BANKS.**—The associated banks of New York have only slightly increased their loans since last month, while their aggregate reserve has been augmented to the extent of over \$15,000,000.

The following shows the condition of the New York Clearing-House banks for a number of weeks past, as well as about this time in 1885 and 1884:

1886.	Loans.	Specie.	Legal-tenders.	Deposits.	Circulation.	Surp.Res.

**RAILROAD AND MISCELLANEOUS STOCKS** have been selling at considerably lower figures than during November last, but lately they have been strongly held. The market has been much quieter than formerly, the outside public, upon whom the large movements in the market depend, apparently waiting to see the outcome of the cut in passenger rates begun by the Baltimore & Ohio, and also the effect of the competition between the coal companies. The earnings of the railroads were unfavorably affected by the weather during the first half of January, but the latest reports generally show an increase over last year.

The following table shows the highest, lowest and closing prices of the active stocks at the New York Stock Exchange in the month of January, the highest and lowest since January 1, 1886, and also during the year 1885:

	JANUARY, 1886.			SINCE JANUARY 1, 1886.		YEAR 1885.

## STOCK EXCHANGE QUOTATIONS.

Revised by the official lists up to the first day of this month. The following tables include all securities listed at the New York Stock Exchange.

Quotations in *italics* indicate the last bid or asked price—there being no quotation in the month last past. The highest and lowest prices for the year 1886 are actual sales.

### FREE LIST.

This "Free List" is made up of securities—both stocks and bonds—which are not regularly "called" at the Exchange. Members are at liberty to deal in them daily, on the Bond Call, but the transactions are infrequent.

## BANKERS' OBITUARY RECORD.

**Armstrong.**—Floyd Armstrong, Cashier of the Mount Holly (N. J.) National Bank, died of consumption on January 10th, aged 37 years.

**Bennett.**—G. A. Bennett, of the firm of G. A. Bennett & Co., bankers and brokers, of New York city, died January 2d. He was formerly a member of the New York Stock Exchange, but sold his seat some years ago.

**Brewster.**—John Brewster, of the banking firm of Brewster, Cobb & Estabrook, of Boston, died at his residence at Cambridge, Mass., January 13th, at the age of 73 years.

**Bull.**—Spencer M. Bull, formerly Vice-President of the Middletown Bank, of Middletown, N. Y., and a prominent merchant of that village, died on his farm at Campbell Hall, on January 5th, aged 76 years.

**Cluck.**—Alva Cluck, aged 61 years, Vice-President of the Cataract Bank, proprietor of the Spencer House, and manager of the International Hotel, Niagara Falls, N. Y., died of typhoid-pneumonia on January 22d.

**Jennings.**—William Jennings, of Salt Lake City, Vice-President of the Deseret National Bank, of that place, and also of the First National Bank, of Ogden, Utah, died January 15th, aged 62 years.

**Kidder.**—Henry P. Kidder, senior partner in the well-known banking firm of Kidder, Peabody & Co., of New York and Boston, died in the former city on January 23th, at the age of 63 years. His banking career was begun in 1847, as a clerk for John E. Thayer & Brother, of Boston, which firm was succeeded by the one above mentioned, when he became its senior partner in 1865. For many years this has been the leading banking house of New England, and became the agent for Barings on January 1st last. Mr. Kidder was largely interested in philanthropic undertakings and was a liberal giver.

**Lowen.**—Captain William Lowen, Secretary and Treasurer of the Sag Harbor (L. I.) Savings Bank, died December 27, 1885.

**Mable.**—Sylvester Mable, for the past 17 years President of the Putnam County National Bank, of Carmel, N. Y., died at his residence in Patterson, N. Y., on January 1st, aged 80 years.

**Morgan.**—D. P. Morgan, a member of the New York Stock Exchange, where he was famous for years as a daring and successful speculator, died at his winter home in Washington, D. C., on January 24th, at the age of 55 years.

**Shriver.**—Joseph Shriver, President of the First National Bank, of Cumberland, Md., died January 1st, in his 80th year. In early life Mr. Shriver was engaged as civil engineer in the construction of the Chesapeake & Ohio canal and the National road west of Wheeling, and later of the Baltimore & Ohio Railroad. His uncle revived the failed Cumberland Bank, of Allegany, in 1834, and Mr. Shriver became its Cashier. He became President in 1852, and retained the office when it became a National bank in 1864. From first to last his management was conservative and successful.

**Warding.**—The Hon. W. E. Warding, formerly President of the Plain View (Minn.) Bank, died of apoplexy on January 23d.

**Wendell.**—Nathan D. Wendell, Vice-President of the Merchants' Bank, of Albany, N. Y., died of heart disease on January 5th, aged about 49 years. He had been connected with the bank since the year 1854, but was well known in more public capacities, having been elected State Treasurer in 1879, besides holding at other times positions of honor and responsibility.

**Woods.**—Harding Woods, Treasurer of the Barre (Mass.) Savings Bank, died December 28, 1885, aged 64 years.

**WANTED.**—A gentleman who has filled the various positions in a bank, and having 19 years' experience—now Cashier of a National bank—wishes to connect himself with a larger institution, and invites correspondence with that end in view.

Refers by permission to the Editor of RHODES' JOURNAL OF BANKING, and to Dumont Clarke, Cashier American Exchange National Bank, New York. Address: "A," care of RHODES' JOURNAL OF BANKING.

## CHRONOLOGICAL RECORD.—JANUARY, 1886.

2. SATURDAY.—Discount rate on commercial paper in New York,  $4\frac{1}{2}\%$  per cent.; call loans,  $2\frac{1}{4}\%$  per cent. — Discount rate in London on 60 days to 3 months' bank bills,  $3\frac{1}{4}\%$  per cent.; short bills,  $3\frac{1}{4}\%$  per cent. — United States Treasurer Jordan took charge of the Sub-Treasury, at New York, in place of Assistant Treasurer Thomas C. Acton. — Decrease in the public debt in December, \$9,089,940.
6. WEDNESDAY.—Heavy floods did much damage throughout the country.
7. THURSDAY.—A new French Cabinet formed, with M. de Freycinet as Prime Minister.
9. SATURDAY.—Intense cold prevailed throughout the country. The railroads of the Northwest blockaded with snow. — The Baltimore & Ohio railroad reduced passenger rates to the West; a new war of rates feared. — Discount rate on commercial paper in New York,  $4\frac{1}{2}\%$  per cent.; call loans,  $1\frac{1}{2}\%$  per cent. — Discount rate in London on 60 days to 3 months' bills,  $2\frac{3}{4}\%$  per cent.; short loans,  $1\frac{1}{4}\%$  per cent.
11. MONDAY.—Franklin B. Gowen was elected President of the Philadelphia & Reading companies.
12. TUESDAY.—The coldest weather known in many years prevailed at the South. — Conrad N. Jordan confirmed as United States Treasurer by the Senate. — The British Parliament opened.
14. THURSDAY.—Secretary Lamar decides that the Government shall bring suit to test the validity of the Bell Telephone patents.
16. SATURDAY.—Discount rate on commercial paper in New York,  $3\frac{1}{4}\%$  per cent.; call loans,  $1\frac{1}{2}\%$  per cent. — Discount rate in London on 3 months' bills,  $2\frac{3}{4}\%$  per cent.; short loans,  $1\frac{1}{4}\%$  per cent.
22. FRIDAY.—The annual meeting of the International Monetary Standard Association was held in London.
23. SATURDAY.—Discount rate on commercial paper in New York,  $3\frac{1}{4}\%$  per cent.; call loans,  $1\frac{1}{2}\%$  per cent. — Discount rate in London on 60 days to 3 months' bank bills,  $1\frac{3}{4}\%$  per cent.; short loans,  $\frac{1}{2}\%$  per cent.
24. SUNDAY.—The British Government informed Greece that it was prepared to send a fleet to prevent Greece from attacking Turkey by sea.
25. MONDAY.—The nomination of Charles J. Canda to be Assistant United States Treasurer confirmed by the Senate.
26. TUESDAY.—The British Salisbury (Conservative) Ministry defeated in Parliament.
28. THURSDAY.—Bismarck declared the purpose of the Government to expel the Poles from Germany. — The British Cabinet resigned.
29. FRIDAY.—The 183d Treasury call issued for \$10,000,000 3 per cent. bonds, maturing March 1st.
30. SATURDAY.—Discount rate on commercial paper in New York,  $3\frac{1}{4}\%$  per cent.; call loans,  $1\frac{1}{2}\%$  per cent. — Discount rate in London on 3 months' bills,  $1\frac{1}{4}\%$  per cent.; short loans,  $\frac{1}{2}\%$  per cent.

## NOTICES OF NEW BOOKS.

*England: As Seen by an American Banker. Notes of a Pedestrian Tour.* Boston: D. Lothrop & Company.

This is not at all a tourist's book after the ordinary pattern. It does not give the scrappy and trite information usually conveyed by those who travel by railway from place to place to see the sights; and, on the other hand, neither is it too scholarly and finical, dealing largely with recondite matters, like the books of travel of some of our writers. The author is evidently a gentleman of intelligence and culture, who yet was not too proud to talk with the common people, and discover to us their ways of thinking and modes of living, as well as those of the richer classes. He saw for himself the things and places treated of, and did not consider a place visited that he did not "walk into, walk through, and walk out of." The titles of a few of the short chapters into which the work is divided will give some idea of its scope: "Co-operation;" "Cocoa Rooms;" "Sunday Observance;" "A Ramble by the Wye;" "Mining;" "Novel Institutions;" "Teachers' Salaries;" "London Streets," etc. The route of the author took him into the by-ways as much as the highways, so that he gets nearer to many things in which we are interested than most travelers, and therefore tells us more things that we want to know. Among the large number of subjects treated are some of special interest to bankers, not less than sixty pages being devoted to an account of the Bank of England, the London Clearing-House, professional auditors, and like matters. But these are not an essential feature of the volume, as it is calculated to interest the reader in any walk of life.

# RHODES' JOURNAL OF BANKING.

Vol. XIII.

MARCH, 1886.

No. 3.

ONE OF OUR WESTERN EXCHANGES, a copy of which has been unluckily mislaid so that its exact words cannot be quoted, takes the JOURNAL very sharply to task on account of the assertion made in the January number that "The large corporations, including the banks, are probably the very largest class of debtors in the country, while the common people who own the deposits in savings banks form a large portion of the creditors." It wonders how we can expect our readers to believe this, arguing that the deposits, for which the banks are debtors, are merely held temporarily to be paid back when called for, but that the loans, for which the banks are creditors, are negotiated for long periods, on mortgage, etc. On this ground our statement is very sharply criticised, that the bankers are not pecuniarily interested in having dearer money through the demonetization of silver. It is useless for us to argue this point further because it happens that the great majority of our readers are bankers who know for themselves what the facts are. They know whether or not they keep the deposits of their customers on hand, waiting for the latter to call for them again, and also whether they generally grant loans for long periods, on bond and mortgage, etc. In the item criticised, however, we took a further stand, saying in allusion to New York bankers: "Some of them, we know, believe that they personally would be better off if there was a sudden change to the silver standard." This has special reference to some Wall street firms who believe that if the circulation were reduced to the silver standard a period of inflation of values and heavy stock speculations would result. So that "Wall Street" and the silver men are not so far apart as the latter would make it appear. But, again, it is estimated by the Director of the Mint that the banks and trust companies of the United States, exclusive of private banks, hold \$187,500,000 of gold. If free silver coinage were instituted this gold would undoubtedly go to a premium of 25 per cent. (the gold dollar being now worth 25 per cent. more than the silver dollar) giving the banks a profit of \$47,000,000. We still hold that the assertion that the bankers and moneyed class oppose a change to the silver

THE UNIVERSITY OF CHICAGO LIBRARY

standard for purely selfish reasons lacks every element of probability, and has no evidence whatever to sustain it.

---

THERE IS A BILL BEFORE THE NEW YORK LEGISLATURE to extend the list of securities in which the savings banks are allowed to invest their funds. It admits the bonds of any city or county outside the State having 40,000 or more inhabitants, and a debt not exceeding 5 per cent. of the assessed value of its property, or where the State law prohibits the contracting of municipal debts in excess of 5 per cent., provided also that there shall have been no default in the payment of principal or interest by such city or county in ten years. There have been reasons urged against this measure on the ground that the banks have not asked for it, and that absolute security should be sought in investments instead of a high rate of interest. Favoring the measure the fact is presented that the field open for the investment of funds under the present law is very restricted and is steadily narrowing through the liquidation of United States bonds; and that the law ought to permit investments in a limited class of strictly first-class securities, the amount of each kind held being clearly set forth in the general savings bank law of the State. Of course, much care and judgment would be required on the part of the Legislature in defining the securities permitted, as experience has shown that there is a wide diversity of opinion even among savings bank officers as to what constitutes "first-class" investments.

Since writing the above the bill referred to was [February 26th] reported adversely by the Assembly Committee on Banks and Banking. In committee it was proposed to amend by restricting the proposed enlargement of the field to cities outside of the State of New York which have never defaulted on their stocks, and whose debt is not more than five per cent. of the assessed valuation; provided, however, that the bonds of no cities shall be eligible if the State in which the city is situated has defaulted on its stocks in ten years. The latter restriction is similar to that now in force in the general savings bank law regarding the investment in State bonds.

---

A FACT OF SOME WEIGHT in the silver coinage controversy is brought out in an interview with Mr. Sidney Webster, a prominent lawyer, published recently in the *New York Tribune*. It appears that about twelve years ago an argument was had before the Supreme Court by the Attorney-General, Mr. Evarts and Mr. Webster, regarding the Act of 1873, which provides that once every year the Director of the Mint shall estimate and the Treasury Department shall declare the value of foreign coins in the money of account of the United States. The Court decided (23 Wallace, 257) that the value thus declared is to be received and enforced in this country whenever the equivalent in our currency of a foreign coin is in question. In its decision the Court further

declared that "The basis of our dollar of account is the standard gold dollar of 25 8-10ths grains, containing one-tenth alloy, . . . gold having become the general medium of international exchange, while silver is regarded more as a domestic coin, and is usually made a legal-tender for only limited amounts." This decision was rendered about the beginning of 1875, and after Congress had, in the law of 1873, abolished the coinage of silver dollars. The status of gold as the unit of value of our coinage, as declared in the decision, was not disturbed by the Act of 1878, providing for the coinage of 2,000,000 standard silver dollars per month, and remains in full effect to-day. It was in view of this feature of the law that the Director of the Mint has, up to the present time, every year estimated the values of foreign coins by comparing them with our gold dollar instead of the "standard" silver dollar. It is frequently claimed by the friends of the silver dollar that these coins are as good as gold because they can be sold almost as high in foreign countries; but the same thing can be truly said of our fractional coins. Two silver half-dollars can be sold abroad for nearly as much as a gold dollar, although they are intrinsically worth considerably less than even a silver dollar. The silver dollars are at present "token coins."

---

A GREAT DEAL OF THE CALLOW WRITING and thinking on financial topics of these times is founded on the idea that the "creditor class" has very much the best of the bargain between itself and the "debtor class" in the long run. And yet, within twenty years, we have seen the earning power of money reduced nearly one-half. The member of the former class who a few years ago had \$100,000 could as easily and safely get \$6,000 or \$7,000 a year in interest as he can now obtain \$3,000 or \$4,000. Moreover, it does not appear that a change can be looked for in this respect, for everything points to low rates for loans in the future. Now, who receives any benefit from this reduction but the "debtor class." It is far easier now for a man to carry a mortgage on his farm than formerly; and yet, if we are to believe the demagogues in and out of Congress, the western farmers are clamoring for free silver coinage so that they may be able to pay off their debts in 80-cent dollars.

---

IT IS NOT UNLIKELY that the joint resolution introduced in the House of Representatives by Mr. Morrison, directing the Secretary of the Treasury to apply all his surplus in excess of \$100,000,000 to the payment of the National debt, is intended by its author to be in a line with the policy advocated long ago by Senator Benton, of the "Thirty Years' View." Benton was a strong advocate of the reduction of the surplus to a minimum amount, and his idea had much to recommend it in his time in the way of economical Government. But one immense difference between the condition of the Treasury now and then is the

\$346,000,000 of legal-tender notes, not to mention the complications that threaten to result from the continued silver coinage. On January 30th the Treasury held in gold (net, over certificates in circulation) \$136,000,000, and in silver dollars (net) \$79,000,000. In order to carry out Mr. Morrison's plan the Treasury surplus would have to be reduced by \$115,000,000, leaving the remaining \$100,000,000 mostly in silver, unless the bonds were paid in that coin. It is almost needless to remark that in either case there would be a total subversion of the policy which has been followed by the Department ever since the resumption of specie payments. If the Chairman of the Committee on Ways and Means had proposed to use a considerable part of the money in the Treasury in cancelling the same amount of greenbacks he would have been following more consistently in the footsteps of Colonel Benton, and might have had the support of many people who believe in sound money and economical administration. As it is they have only to look to the Senate and the President to defeat his resolution in case it passes the House.

---

AS THE MATTER OF THE ESTABLISHMENT of a postal savings bank system for this country is being agitated anew, it is worthy of remark that financial writers of eminence in both Canada and France where the system is now in operation are calling attention to the evils that are resulting from it. They find that it leads to dangerous methods on the part of the authorities. The latter are tempted, partly from demagogism and partly from the desire to have plenty of money to handle, to offer higher rates of interest than other banks or than the Government can properly afford to pay. At the same time there is a large temptation to squander this money in the ways that are so well known that it is needless to recount them. It appears that in the two cases in point the Government is a dangerous banker for the poor man.

---

IT APPEARS THAT Assistant United States Treasurer Flower at New Orleans has found it necessary to put a check upon the receipt of silver dollars in exchange for silver certificates at the Sub-Treasury, the amount of work from this cause being too great for the force at his command. The matter has been considered of sufficient moment as to call for the action of Congress. It has been stated that Mr. Herwig, the late Assistant-Treasurer, while constantly demanding more help, always managed to perform all the duties of his office, and "it is a doubtful compliment to the civil service to plead this [the above] excuse in behalf of the fresh employees for the neglect of duty." Curiously enough, within two weeks after this criticism appeared in print, a clerk under the former management was found guilty of defrauding the Sub-Treasury of over \$25,000, the testimony on the trial showing very grave irregularities in the office.

**HENRY W. CANNON.**

The Hon. Henry W. Cannon,\* who resigned the office of Comptroller of the Currency on February 1st to accept the Vice-Presidency of the National Bank of the Republic in this city, was born at Delhi, N. Y., in 1850. He was educated at private schools and the Delaware Literary Institute of that place, and at an early age was a clerk, and afterwards Teller, in the First National Bank of Delhi. He accepted a position in the Second National Bank of St. Paul, Minnesota, in the year 1870, and in 1871 he removed to Stillwater in the same State and organized the Lumbermen's National Bank, of which he was made Cashier, which position he held for thirteen years. The President of the bank not being an active officer, the management devolved on the Cashier, and during the panic of 1878 the institution was one of those which did not suspend currency payments. During the period of his residence in Stillwater he became identified with many of the principal business enterprises of that city, being Secretary of the Chamber of Commerce, and Secretary, Treasurer and General Manager of the Water and Gas companies, whose principal operations were conducted by him. The bank, the water works and the gas company prospered under his management and are now in successful operation.

During the refunding of the public debt he purchased and exchanged large amounts of Government bonds for the National banks of Minnesota, frequently visiting New York and Washington for this purpose, and also negotiated a large amount of bonds for the city of St. Paul.

He was appointed Comptroller of the Currency to succeed Comptroller Knox in May, 1884, and immediately after his appointment the financial crisis in New York occurred, which occasioned the failure of two large banks in this city and loss and trouble to many of the banks throughout the country.

The financial complications which rapidly followed each other in 1884, and in which the banks of the country were involved, required the exercise of good judgment and financial experience in the office of the Comptroller, and his office during this critical period is universally acknowledged to have been conducted with skill and sagacity. The corporate existence of nine hundred and seventy-one National banks, representing a capital of more than \$270,000,000, expired during his term of office, and the complicated and delicate duties arising from the extension of these bank charters were successfully and skillfully accomplished under his supervision.

He had the confidence of the Secretary of the Treasury, and the most important steps in the administration of the finances were taken after consultation with him.

He is on record upon the important questions of currency and coinage in his two annual reports, in which he has taken positions that he will have no occasion to modify or defend.

The difficult and important work which arose immediately after his appointment and which continued for many months has been accomplished,

\*See title illustration.

THE UNIVERSITY OF CHICAGO LIBRARY

and the whole business of the office has been admirably conducted. The unsigned National bank notes in the vaults of the office, amounting to more than \$71,000,000, have been examined and counted and the general system of the Bureau found to be in excellent condition.

His views upon financial questions were in accord with those of the Administration, and both the President and Secretary of the Treasury urged him to continue to perform the duties of Comptroller for the whole term of his office; but, as there seemed to be but little prospect of legislation, either in reference to the National banks or the coinage of silver, he preferred to engage in active business rather than remain in the service of the Government. He therefore transferred his residence to New York on February 1st to accept the Vice-Presidency of the National Bank of the Republic, which was originally chartered in 1850 as a State institution and became a National bank in 1865. Its capital is \$1,500,000 and its surplus \$500,000. It owns jointly with the First National Bank, of New York, the large building at the corner of Broadway and Wall street, known as the United Bank Building, erected at a cost of more than \$1,200,000 and estimated to be worth \$2,000,000. The site occupied by the building is considered to be for its size the most valuable piece of real estate on the Continent.

---

BALANCING Pass-BOOKS — THE BALTIMORE METHOD. — The banks in Baltimore require customers to write up the checks in their pass-books before sending them in for balance. That is to say, the bank lists the deposits on the left-hand side of the pass-book day by day as they are made. The customer lists the checks on the right-hand side either day by day as he draws them or just before the book is sent in for balance. This system has not been adopted simply to save clerical labor, as might be supposed, but has commended itself to their most experienced bankers for reasons cited below. By this method the pass-book serves as a joint account-book between the bank and the depositor. Thus the bank practically gives a receipt in writing for all money put in, and the depositor likewise gives a receipt (by listing his checks himself) for all money paid out. When the book is made ready for balancing the depositor sees that it agrees with the balance called for by his cash-book. It is then sent to the bank and the clerk sees that it agrees with the bank ledger. The checks are ticked off one by one, those that have not yet been presented for payment being properly noted. This method is an advantage to both parties. The depositor, listing his checks himself, can produce the pass-book as evidence in Court. Should the bank have paid a forged or raised check it is immediately noticed by the ledger clerk and at once reported to the Cashier who is then in a position to take such steps as may be necessary to protect the bank's interests, bringing the matter to the attention of the board of Directors or of the bank's legal advisers. But where the bank lists the checks the customer will be the first to notice the forged or altered check and will take good care to fortify himself with facts, evidence and *legal advice* before saying anything to the bank about it. To sum up: in case of any irregularity, the bank, by the Baltimore method, has the first knowledge of the wrong, which gives it a decided advantage in any further proceedings. It will also be noticed that by the method described above it is made more difficult to falsify the bank's ledgers.

## UNIFORMITY OF THE LAW OF COMMERCIAL PAPER.

The bill "to regulate commerce among the several States, and to codify the law relating to bills of exchange and other commercial paper," which was introduced in the last Congress by the Hon. Luke P. Poland, of Vermont, is expected to receive favorable attention during the present session. Last winter it progressed far enough for Mr. C. C. Bonney, of Chicago, who drafted the bill, to argue its merits before the House Judiciary Committee. No one who gives much attention to the subject of the laws governing commercial paper will dispute the great importance of having them uniform throughout the country. But, on the other hand, every one must recognize the great labor that will be necessary in order to awaken public interest in the matter sufficient to have it carried out. But the object to be attained is worth a great deal of effort, and there is hardly any which better deserves the attention of the business community.

The bill mentioned is based on the recent English Act for the same purpose, and follows it, to some extent, with the design of securing, as far as practicable, international as well as national uniformity of commercial paper. Important provisions are added, however, to adapt the measure to the constitutional and commercial requirements of this country. Being a codification of a large department of the law, the bill is necessarily somewhat voluminous. After some preliminary provisions, it provides for the form and interpretation of bills of exchange, the capacity and authority of parties, the consideration, the negotiation, the duties of the holder, the liabilities of the parties, their discharge, acceptance, payment for honor, lost instruments, sets of bills, conflict of laws, checks on bankers, promissory notes, and sundry supplementary matters, including good faith, warehouse receipts, bills of lading, property orders, and insurance policies.

The following provisions will be read with especial interest. They include some amendments added by the author since the introduction of the bill:

SECTION 1. That to provide for the general welfare of the United States, and to carry into execution, more fully than heretofore, the power to regulate commerce among the several States, and to promote the security and efficiency of the National banks in their commercial transactions, all bills of exchange, promissory notes, checks on banks or bankers, and other negotiable instruments purporting to have been made in one of the United States, or a territory thereof, or the District of Columbia, and payable in any other State, territory or country, are hereby declared to be means and instruments of commerce among the several States; and all such bills, notes, checks and instruments, made or dated on or after the date of the approval of this Act, shall be governed exclusively by the provisions thereof; and all laws or parts of laws of the several States, in any wise inconsistent with the provisions of this Act, are hereby suspended. . . .

SEC. 80. That bills of lading, warehouse receipts, receipts or orders for specific property and promises to pay a definite sum in a specified kind of personal property, are hereby declared to be means and instruments of commerce, and shall be negotiable by indorsement and delivery, and shall be governed by the rules of law relating to promissory notes, so far as the same may be applicable thereto. Mortgages and trust

THE UNIVERSITY OF CHICAGO LIBRARY

deeds securing negotiable paper shall be negotiable in like manner. Promissory notes or drafts, so made payable in personal property, shall be payable therein at the market price thereof in the place of payment, at noon, on the third day of grace after the maturity, and such payment may be made by warehouse receipt. If not so paid the amount shall be payable in money.

SEC. 90. That any bank, banker, or other person who shall, in good faith, advance any money upon any bill of lading, warehouse receipt, or order for personal property, or upon any mortgage or deed of trust of real estate, as collateral security for any bill of exchange, promissory note, or check, or otherwise, in due course of trade or commerce, shall be protected to the extent of such advance in the property covered by such bill of lading, warehouse receipt, or order for personal property, or such mortgage or trust deed and the proceeds thereof, as fully as though such advances had been made in due course, and for value, on a bill of exchange or promissory note only, before the maturity thereof.

SEC. 91. That all policies of insurance on property in or about its transportation in the course of commerce are also hereby declared to be means and instruments of commerce, and are hereby made negotiable in manner aforesaid.

### SAVINGS BANKS OPPOSING SILVER.

RHODES' JOURNAL OF BANKING long ago pointed out the fallacy in the argument of the silver men based on the dictum that a silver standard would be better for the debtor class. We showed that the poorer people did not form the debtor class, while the rich were not necessarily creditors. The savings bank depositors of the country form as distinctly a creditor class as any other body of people, and they would be heavy losers by the debasement of the standard. This statement is confirmed by the action of the representatives of the savings banks of New York and Brooklyn, who, during the past month, adopted the following petition for presentation to Congress:

*To the Honorable the Senate and House of Representatives of the United States in Congress assembled:*

The undersigned representatives of the savings banks of the State of New York respectfully submit that they hold in trust for over 1,166,000 persons their savings, averaging about \$375 for each depositor, and aggregating the sum of over \$437,000,000; that all the funds and property of the said savings bank and all their earnings and accumulations belong exclusively to their depositors, chiefly industrious persons of small means, and that your petitioners have no interest therein except as custodians for said depositors. As such representatives we respectfully petition the Congress of the United States to repeal the law which directs the coinage of the 41 $\frac{2}{3}$  grain silver dollars.

We heartily agree with the opinions expressed upon this subject by the President of the United States in his recent Message, and we pray that it may please Congress to enact that the said coinage be discontinued, for the reason, among many others of weight, that its continuance, unregulated by the demands of trade or by the ability of the circulation to absorb it, tends to sever our currency from the gold standard, to compromise the National credit and to create distrust in the minds of the people.

To make our securities, principal and interest, payable in silver dollars, and thereby to reduce the exchange value of the savings of the people by twenty per centum, would be a loss of purchasing power of the funds in the savings banks of New York State alone equivalent to a shrinking in value of nearly \$100,000,000; and that, as the value of the currency would be alike impaired whether in savings banks or elsewhere, this vast sum would represent only a small portion of that loss to be apprehended from the continued compulsory coinage of the standard silver dollars, the greater portion of which loss must be borne by the industrial classes whose interests we serve.

And your petitioners will ever pray, etc.

### THE SILVER QUESTION DISCUSSED.

We have recently received from JOURNAL subscribers a number of communications on the silver question, to some of which we give as much space as can be afforded in this issue. The first is from a subscriber (A. H.) at San Antonio, Texas, who proposes a plan for dealing with the subject by which he thinks the present dangers to the circulation may be avoided without injury to the silver interests :

#### I.

"The discussion of the silver question by the American press, as well as the opinions expressed by leading financiers on the subject, should be made the theme of careful study by the entire banking fraternity of the Union. In fact, any bank official who wishes to improve his knowledge of financial economy in the broad sense of the word should endeavor to profit by the multitude of facts relating to the world's commerce and traffic now daily brought forward by the two parties. So much has been published on the subject that any further effort on any side could possibly prove nothing but repetition. Suffice it to say that I am a strictly gold standard advocate, and that I cannot understand how a banker professing a thorough knowledge of his calling, and having the good of our beloved country at heart, can for a single moment countenance the issue of a debased coin with legal-tender force. I have given the matter deep thought and would recommend the adoption of the following law :

- "1. Suspension of coinage of Bland dollars.
  - "2. Continuance of monthly purchases of silver bullion.
  - "3. The issue of United States legal-tender notes against the bullion thus bought, based upon the gold standard, redeemable at the option of the Treasury, either in gold coin or in silver bullion at its gold value at date of redemption.
  4. The issue of such United States legal-tender notes in payment of outstanding silver certificates.
  - "5. Conversion into bullion of all Bland dollars thus redeemed, and an appropriation to cover the apparent, though not actual, loss.
  - "6. The reduction of all Bland dollars actually remaining in circulation to mere token coins by limiting their legal-tender capacity to \$20.
- "The advantages of such a law would be obvious. The obnoxious and fraudulent Bland dollar could be, in a measure, done away with without injury to our silver interest. The currency of our country would be firmly established on a gold basis, secured by the actual deposit of precious metals. And our volume of currency would expand at the rate of twenty-four million dollars per year, thus counteracting the contraction of our National bank currency.

"The Government would, by such an act, become no more a heavy speculator in specie than it is already, not the slightest doubt would be thrown on our bonds and obligations, gold would remain at home and the necessity for the actual payment in silver bullion would be reduced to a shadow, which might be forced on us in times of war, pestilence or famine, whilst should such calamities overtake us our paper money would still be worth 100 cents in gold.

"As to the market gold value of silver it should be determined by averaging the quotations of the three leading gold countries. This is, in brief, my solution of the difficulty."

As A. H. asks our opinion of his plan, we say that it is perhaps as good as any that could be proposed, which recognizes that the Government must protect the silver interests by buying their product. It would make the Government a dealer in silver bullion, taking the risk of any decline in the price of the metal, but without any view to a gain on its transactions. In short, the problem of compelling the Treasury to buy silver, for which there

is no need in the circulation, and keeping our finances on a stable basis, is one which is in its nature insolvable.

## II.

The next communication is a breezy one, also from Texas. The writer signs himself "Old Time Democrat," and we heartily wish that he had a seat in Congress in place of one of the members of the same party from his section that could be named. There is so much good sense in this letter that it should be published here in full, but the space at command will not admit of this:

"The question before the country is whether or not silver is a better medium of exchange and standard of values than gold. Between the two we must choose. It is certain we cannot have both with each a full legal-tender. All history teaches that two currencies of unequal value will not continue to circulate, side by side, for any great length of time. The less valuable will displace the more valuable. The continued coinage of silver will soon drive gold out of circulation as greenbacks did in 1862. That it has not done so heretofore is because the volume has not been sufficient to fully supply the demands for a circulating medium. I think it safe to say the change will take place during the present year under the operation of existing laws. It has been asserted in behalf of silver that it is more abundant than gold, and by its adoption as the standard there will be no future scarcity of money.

"In reply to this it may be said there will be no future scarcity of money should gold be adopted as the standard, supplemented by the use of silver for small change. One assertion is as good as another. In either event only so much of the precious metals as will be necessary to effect the exchanges of the country will be coined. . . .

"Again, it is urged in behalf of the silver dollar that, being twenty per cent. less valuable intrinsically than the gold dollar, the debtor class will have twenty per cent. advantage of the creditor class in the payment of all existing indebtedness. In answer to this it may be said there is no justice in it, even were it possible for the average debtor to receive the full benefit of the twenty per cent. difference in the value of the dollars. For the past eight years all values have been on a gold basis, and for all debts created during that period the makers have received gold values. Why, then, in payment, should they give less than they received? But it will be impossible for the one to suffer the entire loss, or the other to receive the full benefit of the difference in value of the two currencies, unless payments can be delayed until the adjustment of values to the new currency is completed. . . .

"During the period of this readjustment of values, and when it is completed, we will find the value of all money now in circulation, other than gold, has been reduced twenty cents on the dollar. This circulation now amounts to near \$900,000,000, twenty per cent. of which is \$180,000,000. This shrinkage in value will be a clear loss to the country, and it will fall upon those handling the money during this period of readjustment of values. The debtor, to receive the benefit he is led to expect, must delay payment two, three or five years, perhaps, and then, if some other fellow does not owe him an equal amount, he may reap his twenty per cent. profit. Railroad and other corporations owing large bonded debts will be benefited by the change while the holders of the paper will be losers.

"Banks being the largest debtors (to their depositors) will be greatly benefited. The holders of gold—mostly banks and bankers—will be enabled to realize twenty per cent. premium on it. The holders of the long-time bonds of the United States, some \$987,000,000, will suffer twenty per cent. loss if they hold them to maturity. But if, in beating the bondholders out of \$197,000,000 on their bonds, we at the same time inflict a loss of \$180,000,000 upon the people on the money they are handling every day, have we gained anything? Is the gratification worth the cost? During the period of readjustment of values from gold to the silver basis there will be innumerable losses and gains, and it will be found that nine-tenths of the losses will fall upon the productive and laboring classes, while the corresponding gains will go into the pockets of the merchants, the traders, the speculators and the bankers of the country. . . .

"Another serious objection to silver as the chief circulating medium of the country is its bulk and weight. Five hundred dollars is a good shoulder load; \$100 is exceedingly inconvenient, and even half this sum is a burthen to our pockets. Our

Senators and Congressmen tell us they will remedy this defect by piling up the coin in the Treasury vaults at Washington, and giving us certificates of suitable denominations for use as money. It is rather surprising that our Democratic leaders, State's rights men, anti-bank men, anti-monopoly men, anti-centralization men—as they profess to be—should advocate such a scheme as this. When did they arrive at the conclusion that the people were incompetent to take care of their own wealth, and that it was the duty of the General Government to take charge of it for them? Does it never occur to them that it is dangerous to pile up \$1,000,000,000 or \$1,500,000,000 in one pile and in the keeping of one individual? Have they discovered the political eunuch with the power to protect without the ability to enjoy this great treasure?

“Do they not know that in the event of another great war the Government would hold on to the treasure and spend it regardless of the wishes of the holders of the certificates? Do they not know that with such a treasure at his command the President of the United States could at any moment set himself up as a dictator, and, with the aid of the army, which he also commands, dismiss Congress and ‘run the machine’ himself?”

### III.

Our next correspondent (of Galesburg, Ill.), unfortunately looks at these matters through green spectacles. The existing financial legislation is, in his view, the result of “class legislation.” He evidently believes that it is the favorite amusement of the capitalist to dance upon the corns of the poor man. He proposes an entire new system of circulation, as follows:

“The present agitation upon the discontinuance of silver coinage is the warning note of another battle in the long struggle between productive and unproductive capital. The time is propitious. Nearly two-thirds of the mongrel circulating medium which composes the currency of this country is hoarded away—withdrawn from active circulation. A goodly share is in the Treasury. A large portion of gold coin is held by the National banks, and the reports of savings banks in all the large cities show a large increase in savings deposits. We are left with about nine dollars *per capita* to do the business of the country. Yes, the time is favorable for unproductive capital to advocate the discontinuance of silver coinage. Values of industrial products are now so low that labor barely lives, and productive capital finds no returns. The suspension of silver coinage would still further shrink values and the hoarded dollar of the money power would cover the dollars wrought by the sweat of the brow two to one. Such it has been; such it will be again.

“It is senseless legislation which has forced upon us a gold dollar containing ninety cents' worth of gold rated as a commodity; a silver dollar containing eighty cents' worth of silver rated at a gold standard; a greenback dollar, by consent of the powers that be, interchangeable, but by law a legal-tender, with the stamp of repudiation put upon it by its creator, the Government; a National bank dollar, by the same consent, interchangeable, being one form of indebtedness based upon another form of indebtedness. The system of class legislation which has resulted in such a system of finance should be dropped, and some attention paid by would-be statesmen to the welfare of the business and industrial interests of the country. The spectacle we have all witnessed of these different standards of value and their respective capacities is far from flattering to the intelligence of our legislative financiers. But it is useless to recapitulate the inconsistencies in our currency. They are a subject of ridicule, but not of argument. A fool only argues folly's side.

“The purpose of this article is to present for intelligent consideration a system of finance different from our present system, a sort of compromise for mutual benefit. First, let the Government call in every dollar coined, gold and silver, except fractional currency, as well as National bank notes and greenbacks, substituting therefor a uniform paper money, which should be not a promise to pay, but should read: *This note is a full legal-tender at its face value for all debts, public and private, without reserve, in all parts of the United States, and is interchangeable at its face value for gold or silver bullion, at the option of the holder, at the market price of said bullion on the day of presentation at any Government depository.* Second, let the Government cease the coinage of both gold and silver. Melt into bullion all the present coined metal, and purchase sufficient additional gold and silver bullion to increase the amount

in the United States Treasury to five hundred million dollars' worth. Issue sufficient quantity of the new paper money to amount to twenty-five or thirty dollars *per capita*, or about fifteen hundred millions.

"Let the Secretary of the Treasury purchase each month an amount of gold and silver bullion equivalent to twenty-five or thirty dollars *per capita* based on the average monthly increase of population, being about three million dollars' worth, and issue a like amount of new paper money each month.

"Here we have a system of uniform currency, issued by the Government, based on gold and silver bullion, the only legal-tender within the domain of the United States, each dollar representing a dollars' worth of gold or silver bullion at its market price. No depreciation possible, the only correct standard of value. There is absolutely no need of any other kind of money to do business in the United States. . . ."

Before noticing the main features of the above we should mention that the gold dollar does not contain "ninety cents' worth of gold rated as a commodity." The gold dollar contains just one dollars' worth of gold, in addition to ten per cent. in weight of base metal. But we must coincide with the strictures upon our coinage. We have too many kinds of money. On the other hand, however, our friend proposes no kind of money in its place. Receipts for bullion, either gold or silver, would not be money in the ordinary meaning of the term, and neither would they answer the needs of trade. He speaks of the proposed paper as "dollars," but he does not mention how the dollar is to be defined or determined. We shall defer mention of the other features of the theme until this point is settled.

---

THE ADDITIONAL ACT OF THE MONETARY CONVENTION to admit Belgium to the Union was voted recently by the French Chamber of Deputies without discussion. The report on the bill contained some interesting information on the silver question. The foreign coin of that metal circulating in France was said to represent a nominal value of from 700,000,000 to 800,000,000 francs, the loss on which, at the present depreciation of 22 per cent. on the official value of  $15\frac{1}{2}$ —1, compared with gold, would amount to from 154,000,000 to 176,000,000. The share of Belgian silver in that total is from 300,000,000 to 350,000,000. If that estimate is correct the French silver circulating in Belgium must be from 100,000,000 to 150,000,000, as by the new convention Belgium guarantees that the sum subject to the liquidation clause shall not exceed 200,000,000, or, at least, undertakes to reimburse at once, in gold, all the surplus, in addition to the one-half of the 200,000,000. The liquidation of the Union between the different countries, should it ever be decided on, is fixed to spread over a period of five years. During the first nine months each country will withdraw from its circulation silver of the other contracting States. After the 1st of October of the year the silver coin may be refused in the public offices of the countries of the Union other than those to which it belongs, and during the next three months and fifteen days the contracting powers will exchange, value for value, the coin thus collected. From January 15th of the second year following the termination of the Union each country will draw up an account of the coin it has remaining, and the whole amount must be reimbursed in gold or bills in the next four years, less fifteen days, so that the entire operation may be terminated in five years. Special conditions are, however, accorded to Switzerland, who possesses only a small quantity of National money. Of the 100 millions of five-franc pieces circulating in that country only 10 millions bear the National stamp, the remainder being made up of 60 millions of French coin and 30 millions of Italian. As it would be impossible to withdraw for several years nine-tenths of the legal-tender silver coin from the circulation in Switzerland, France and Italy undertake to redeem the whole in one year. Such an arrangement, should a liquidation ever take place, would permit Switzerland to make a large profit by purchasing and coining silver with the 90 millions of gold received.

Methods and Machinery of  
\*PRACTICAL BANKING.

CONSISTING OF BRIEF DESCRIPTIONS AND SUGGESTIONS RELATIVE TO THE  
METHODS OF CONDUCTING THE BANKING BUSINESS; WITH APPROVED  
MODELS OF BLANK BOOKS AND FORMS FOR THE USE OF  
BANKS OF DISCOUNT, SAVINGS BANKS, ETC.

[Prepared expressly for the JOURNAL by the Cashier of a long-established bank, who has had over twenty years' experience in practical banking, and who has always sought for better and safer methods.]

III. STERLING AND DOMESTIC EXCHANGE.

"PROPERTIES AND TERMS IN BANKING." *Continued from page 97, February number of the JOURNAL.*

Many persons fail to understand the movements of and dealings in exchange, which are such leading features in practical banking. Sterling exchange appears to some the most difficult thing in the world to clearly understand even in these days of such active international banking. National banks all over our country are placing themselves in a position to draw bills on London. A proper explanation of the money movements of the class we have named ought to make them perfectly easy of comprehension by any person capable of understanding the simplest arithmetical problem. Here is all that need be said in explanation of the sterling exchange business:

The legally set-up par value of a pound sterling is with us \$4.86 65-100. If I am in New York and owe £1,000 to a party in London I look about me to see how I can pay the debt in the cheapest way. If I can buy a sight sterling bill on London for the £1,000 at \$4.90 or less I remit it to my London creditor, and that ends the matter. If I cannot buy the bill named without paying more than \$4.90 for it, I ship to my creditor in London £1,000 in cash gold. I ought, however, to note here that, if I am banking in sterling exchange to very large amounts, I might, perhaps, be willing to remit gold rather than pay \$4.89½ for bills. The influence at work to bring me to a decision whether to export the gold or remit the sterling bill is found in the following bill of costs for shipping gold from New York to London:

*Freight*— $\frac{1}{8}$  of 1 %. *Insurance*— $\frac{1}{8}$  of 1 %. *Cooperage*—Too small to consider. *Abrasion*—From nothing to  $\frac{1}{8}$  of 1 % on \$20-pieces,  $\frac{1}{8}$  % to  $\frac{1}{4}$  % on \$10-pieces, and  $\frac{1}{4}$  % to  $\frac{1}{2}$  % on \$5-pieces.

If a party in London owes me £1,000, I collect this debt by selling my sight sterling bill on him for the £1,000 if I can get \$4.88 for it. If I cannot get at least \$4.88 for this bill I import the gold from London. The cost of bringing gold from London to New York is the same as from New York to London.

The philosophy of movements in domestic exchanges is just the same as that described as underlying the sterling exchange business. A brief explanation of domestic exchange methods may make my descriptions of sterling transactions more easily understood, since the domestic exchange matter is free from that confusing element—a variable currency. In sterling exchange we have to do with a mixture of dollars with sovereigns; in domestic exchange we have a dollar at both ends of the route. Here is an account of a domestic exchange transaction which is an every-day occurrence with me, that will give a good idea of the whole circle of the domestic exchange business:

I, a bank in Boston, owe a bank in New York \$100,000, which must be paid at once. I seek for a check on New York, and, if I can get one

\* Practical Banking Series—Part XX.

These papers will be continued through the 1886 volume of the JOURNAL. Copyright, 1884. All rights reserved.

without paying more than fifty cents per \$1,000 for it, I pay my New York debt by remittance of the New York check. If I cannot buy the \$100,000 New York check without paying more than fifty cents per \$1,000 for it, I send the New York bank the gold or legal-tenders, for I can do this by paying not over fifty cents per \$1,000 for the transportation of this cash to New York. If I have owing me in New York \$100,000 which I must collect at once I draw my check on New York for the same and sell it in Boston, if I can do so at a cost not exceeding fifty cents per \$1,000 discount. If I cannot sell this \$100,000 New York check without allowing more than fifty cents per \$1,000 discount, I send the check to New York, draw the gold or greenbacks, and import the same to Boston. This I can do for fifty cents per \$1,000.

It will be observed that the variation in exchange between the two points, which is necessary in order to change the route of the gold or legal-tenders, is just \$1, or twice the cost of its transportation one way. In my sterling figures the same kind of exchange variation existed.

It is easy to perceive, looking at the exchange operations between Boston and New York—looking at them from the stand-point of Boston—that exchange on New York must be low when Boston is selling New York more than New York is selling Boston.

When New York exchange is low in Boston we say that it is in our favor—that the balance of trade between the two cities is in favor of Boston. This happens, for illustration, when Boston, which is the centre of the manufacturing interest of New England, is selling heavily of her mill products in New York, and buying lightly there of that city's foreign goods, shares, bonds, etc. At such times gold and legal-tenders flow in large amounts from New York to Boston, moving over by the great express routes.

A situation of the domestic exchange market which is the reverse of this which I have described will be understood without further explanation.

Exchange on London is low in Boston and New York when the balance of trade between the United States and England is in our favor. The balance of this trade is in our favor when we are sending England more in value of our produce—wheat, cotton and provisions—than we are importing from England of her manufactured goods, or, I might say, are importing of the silks, woollens and fancy goods of the whole of Europe, for our pay for all is settled through London bankers. When London exchange is low here gold comes flowing in upon us from Europe. When, from causes the opposite of those described, we are buying of Europe largely, and sending her little of our wheat and cotton London exchange is high with us and gold moves eastward—flows from New York to London. There are, of course, other elements that are influences. When our United States bonds and other American securities market themselves abroad they make, to the extent of their value, exchange in our favor. When Europe gets alarmed over American securities and begins to send them back upon us sterling exchange feels the movement. And it is, of course, a movement not in our favor.

There are several terms relative to sterling exchange which are often heard on 'Change and read in the papers which should be understood:

Bankers' bills of exchange are bills drawn by bankers upon bankers.

Commercial bills are those based upon movements of merchandise, and drawn by merchants.

Documentary bills are those which are accompanied by the bills of lading.

Posted or nominal rates for exchange, means the rate daily posted upon the bulletins of the dealers in exchange for the use of the general public.

Actual rates are the real terms—the inside terms made to brokers through whom most of the trades are made.

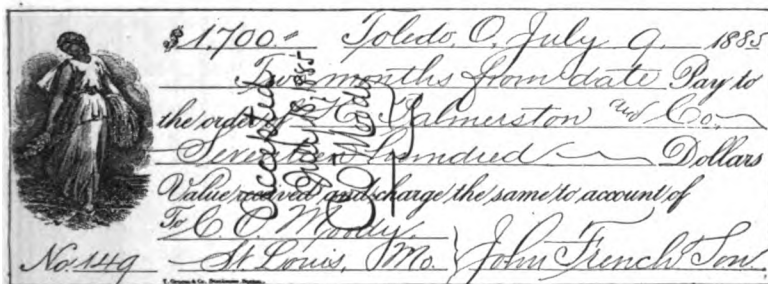

Whatever may be the rates of exchange between domestic points, or between New York, London or Paris, there will always be a demand for bills of exchange—for checks, drafts and letters of credit payable, if we may so express ourselves, at both ends of the route. The retail exchange business of the globe will always be transacted by the use of paper credits. It matters not what may be the rates of exchange between New York and Boston as far as the necessity of a certain supply of checks and bills of exchange for use between these two points is concerned. New York bankers must always be

in readiness to draw on Boston for their customers, and Boston must always be able to draw on New York, and New York and Boston banks and bankers must always be able to draw on London—to draw drafts and to issue letters of credit for travellers for use in Europe.

To meet this convenience demand our New York and Boston bankers ship gold to London when exchange is against us, and, on these gold credits, draw for merchants and tourists.

While traveling in Europe I carried my sterling letter of credit, payable in any sum most anywhere in Europe, and I cannot see how one can travel without such a method of keeping in funds. It would be exceedingly risky, troublesome, and, in fact, almost impossible to travel abroad widely in these days on a pocket supply of cash.

#### IV. DRAFTS AND ACCEPTANCES.

The form here given of an accepted draft may serve as a text for the consideration of points relative to both drafts and acceptances. In the matters of date, signatures, amount in figures and writing and endorsements, the draft and acceptance are under check and promissory note laws already referred to. There are a few points of a distinctive character relative to papers of this description which may not be understood by all. Both before and after the acceptance of a draft the drawee stands, practically, in the same relation to it as an endorser. This answers the question so often raised by bank officers, "Why protest this draft since it has no one to hold but the drawer?" To legally bind the drawer of an unaccepted draft care must be used in its presentation for acceptance, and protest demand and notices served. Drawees have twenty-four hours in which to decide whether or not they will accept a time draft. But when, say at the second date of this twenty-four hours, they do accept, the acceptance must by them be dated—when its "from sight" tenor demands a date—from the date of its presentation—dated back to the time when they first saw it.

When a draft requiring acceptance meets with a prompt and decided refusal of acceptance on its presentation, bank officers often ask the Cashier whether or not it is best to hold the paper in hand the twenty-four hours or give it at once to a notary for immediate protest.

This matter has two aspects. To protest at once, where the refusal has been flat, gives all the parties to the draft, back of the drawee, the advantage of the earliest possible notice of its dishonor, an advantage, in some instances, of considerable value. This might be particularly the case where the draft was for a large amount and based on perishable goods which the consignee was refusing and which the drawer would wish to take in hand at the earliest moment. On the other hand there are many instances where drawees who have refused point blank to accept a draft, change their minds, under influence of circumstances, before the twenty-four hours are up, and finally accept—accept to growl over a protest and perhaps to refuse to pay it altogether.

The decision in the situation in question must be left to be decided by the bank officer by circumstances and by the exercise of good judgment.

A simple protest for non-acceptance of a time draft will permit of its safe

return to the owners. There is no positive legal need that it shall also be protested for non-payment, though it is generally a safe custom so to do.

A full protest—the filling up of accompanying notarial blanks—is always preferable in case the simple protest for non-acceptance is made the final protest.

#### V. DEMAND COLLATERAL NOTES.

The following is about as good a form for a note of this class as can be presented :

6,200. Dollars.	Portland, Me.,	June 3rd, 1885
<p><i>On demand.</i> After date, for value received, <i>with interest @ 4%</i></p> <p><i>payable to</i> THE SEVENTH NATIONAL BANK OF PORTLAND, or order, at its place of business.</p> <p><i>Twenty two hundred</i> Dollars, having deposited herewith as</p>		
<p>COLLATERAL SECURITY.</p> <p><i>20 shares Cho. Bank &amp; Quincy B. B. Co. Stock</i></p> <p><i>\$3000 - Oregon Ry. &amp; Nav. Co. Deb. 7s #2406/8</i></p> <p><i>\$2000 - Mich. Cent. B. B. Co. 4% Nts. #139.1296</i></p>		
<p>with authority to sell the same or any collateral substituted for or added to the above, without notice, either at public or private sale, or otherwise, at the option of the said  <b>Seventh Nat. Bank,</b> on the non-performance of this promise, said bank applying the net proceeds to the payment of this note and accounting to <i>Me.</i> for the surplus,          if any; and it is hereby agreed that such surplus, or any excess of collateral upon this note, shall be applicable to any other note or claim against <i>Me.</i> held by said bank.          In case of depreciation in the market value of any security pledged for this loan, I hereby agree to deposit on demand a further amount of collateral, so that the market          value shall always be at least ten per cent. more than the amount of this note; and failing to deposit such additional security, this note shall be deemed to be due and          payable forthwith, anything heretofore expressed to the contrary notwithstanding, and the holder or holders may immediately enforce themselves by the sale of the security.</p> <p><i>Geo. M. Mansard &amp; Co.</i></p>		

It is a copy from one in actual use in one of our largest banks, and was framed with the greatest care. Notwithstanding all the strength of expression which has been framed into this note, and into the general run of notes of this style, regarding the concession of authority to the payee—the bank, to sell without notice either at public or private sale, or otherwise, all the collateral pledged—it is still a question whether a bank can, under existing statutes and common law, proceed thus summarily and unceremoniously. This point is now in litigation in a well-known case.

In the absence of any final legal decisions, it may be safely assumed that there is a very serious doubt about the right and power of a bank holding collateral under one of these notes to sell out the pledgor in the style specified in the body of the note. Where no time of payment is specified it is payable on demand. In holding endorsed demand notes it is always wise to carry an endorser's waiver of demand and notice, since he is lost if demand is not made within a limited time—60 days in most cases.

In handing collateral demand notes—or, in fact, collateral notes of any time—to the notary for protest, it should be remembered that it is necessary to put the collateral in the notary's hands, or within his reach, so that it may be at once delivered to the promiser in case he pays.

#### VI. NEGOTIABLE BONDS.

Negotiable bonds are simply negotiable time paper, bearing interest and passing by delivery.

A first mortgage coupon bond of a railroad or any other corporation is a time mortgage note, the coupon being a convenient form for paying and endorsing the maturing interest. Printers and engravers have in these modern days exhausted themselves in the work of giving corporation bonds an impressive and attractive appearance, and lawyers, trustees, treasurers and boards of finance have covered some of them with forms restrictive, qualifying, and explanatory; yet, after all, they are simply the corporation's promise to pay, with interest, at some future day a sum of money.

Investors are sometimes heard saying of some homely, cheaply printed, pictureless bond, issued by some economical interior town or city, that it must be a pretty good bond since it looks so poorly. This way of talking expresses a prevalent re-action against the practice of making picture-book style of coupon bonds—a re-action which has in a measure been fostered by the fact that many of the most showy bonds ever thrown upon the market have, in the end, been of value only as room-paper.

In England I found bonds were quite generally termed debentures; but the debenture of our Stock Exchange is simply a corporation's unsecured promise to pay a certificate of its indebtedness.

#### VII. GOLD ON ITS TRAVELS.

I have shown how rates of exchange influence gold movements. Some points relative to the methods and machinery in use by our banks in handling specie, in importing and exporting it, will have a value in this connection.

The gold in our banks is generally in charge of the Paying-Tellers, and lies piled in bags containing \$5,000 each. Each \$5,000 weighs twenty-two pounds. Standard gold is worth \$18.96 an ounce. One reason for great respect for this noblest of all the noble metals comes from the fact that it has varied but a trifle in price since the discovery of America by Columbus. The bags of gold taken on by the Paying-Teller, from whatever source they come, are by him invariably examined and weighed. The contents of each bag are at once poured into his scales, and so he is enabled to assure himself of the quality as well as the quantity of his last invoice of the precious metal. Carelessness in handling gold once permitted a bag of cents, which covered a Paying-Teller's defalcation, to do duty as gold among the Boston banks, for nobody knew how long. It was finally brought up, with a short turn, at the Faneuil Hall Bank, greatly to the astonishment of the bank Managers, by some Paying-Teller, who concluded to look at the inside of that bag.

If on weighing a \$5,000 bag of gold it is found to fall short in weight one-half of one per cent., the Paying-Teller institutes a search for the under

weight coins which have thrown discredit upon the whole bag by their individual deficiencies. His experienced eye at once detects the light coin. These almost invariably show their lightness by their worn and smooth appearance, though there are occasionally instances where clipped gold coins turn up to account for the default in the bag. If they are short in weight from sweating or clipping they are returned as uncurrent to the party depositing the gold, and good coin taken from him in exchange. If the bag turning up short is the property of the bank, with no recourse to any one for reclamation, the reduced coins are taken to specie dealers and sold for the melting pot for the most they will bring.

When a short weight gold coin gets by chance into the hands of the United States Treasurers they are by United States law compelled to stamp it short upon its face, and thus summarily end its travels as money.

Clipping of coins, of which we have spoken, is what its name would indicate—the simple act of reducing its size by cutting pieces out of it. There is a process for debasing gold coin which is more difficult of detection. The pieces are sometimes split open, gold taken from the inside of both pieces, lead or some other heavy, base metal, put in its place, and the two pieces again deftly soldered together. The sweating of gold, which you frequently hear mentioned, is a very ancient mode of cheating. It is done by placing the gold coins in a strong bag and shaking them long and patiently. I have heard that this fraudulent operation was at one time carried on by the aid of some sort of a machine for shaking the bag. One not acquainted with the handling of gold coin would have little idea how easily it can be reduced, and its wearings saved by the process I have described. The natural and unavoidable sweating of the coin which all observing bank officers have noticed, gives one a very good idea of the artificial sweating. In weighing gold, in simply pouring it from the bag and pouring it back, quite an amount of gold dust can be detected upon the bottom of the scale dish.

The other day my Paying-Teller had occasion to weigh \$50,000 in gold; and, after weighing it, brought to me, in illustration of the very point of which I am writing, quite a hand-covering of the gold dust, which he had gathered from his scale.

Gold is a very soft substance. It cannot well be used in jewelry, such as watch chains, watch cases, etc., without being hardened by an alloy to about 14 carats. Used as coin, it must be hardened somewhat, or it would wear out too fast. So the American double-eagle and the subsidiary American gold coins are alloyed with copper to a standard of 21 6-10 carats. Australian gold coins are alloyed with silver, and American gold coins were formerly alloyed with this same metal. English and French gold coins are slightly finer than our own, having a standard of 22 carats.

Our manufacturing jewelers, in melting and working gold, obtain their supply of the precious metal by buying old gold in whatever manufactured shape it may present itself—in ingots, which are simply masses of uncoined gold, and in bullion and coin.

The American double-eagle, which is a favorite piece with consumers of gold in the arts, weighs when fresh from the Mint  $21\frac{1}{2}$  pennyweights. Pure gold is considered worth \$1.04 a pennyweight. As the standard of the double-eagle is 21 6-10 carats it will be readily seen, by a calculation, that it is worth \$20. That is, our American gold coins have not the slightest flat element in them. When new they are worth to melt just as much as they pass for as money.

Bullion gold is not readily obtainable in Boston, but plenty of it can be got in New York city, and in Newark, both of which places consume vast quantities in the arts.

The experienced Paying-Teller knows that gold is so easily worn and defaced that it is very judicious to handle it in the right way. When put in these \$5,000 bags, which I have described, it must not be tied too closely. Space must be left between the string and the gold so that the coins may have a chance to swim round loosely whenever the bag is moved. If tied closely the coins will cut and wear each other and also strain harder upon the bag.

The simple tying of a bag of gold is an art. They are to be opened whenever they pass into new hands, and Paying-Tellers look for a peculiar, handy knot in the string, which can be easily untied without cutting, and the absence of such assures them that some green hand has last had the bag. I have heard an experienced Paying-Teller say he should like to go up and down among the banks telling bank officers how to bag gold, inexperienced ones having caused him so much trouble.

The term carat, of which I have made use, needs a little explanation. It comes from a Greek word, signifying a berry, which was by the Greeks used as a weight of four grains; and in this country and in England, when carat is used by the jewelers to express weight, it stands for four grains. In Germany and France it varies from this. But the term carat is more frequently used to express the purity of coin and manufactured articles which are made wholly or partly of gold. The whole mass is divided into twenty-four parts and as many twenty-fourth parts as it contains of pure gold it is called gold of so many carats. Thus a coin of twenty-two parts of pure gold is called twenty-two carats.

Any experienced Paying-Teller will give you many interesting as well as surprising facts regarding the weight, bulk and supply of gold.

Eight thousand million dollars' worth of gold are now said to be in use in the world. In such statistics as these we shall be satisfied if we get within a few dollars of the truth.

Eight millions of gold are annually consumed in the arts.

The total product of gold from the earliest times amounts to \$14,000,000,000, so it seems \$6,000,000,000 of gold has disappeared. Now comes up very naturally the curious question, Where is it? since nothing made from gold is ever destroyed, and the noble metal is peculiarly indestructible. In olden times immense amounts of gold were used in ornamentations for temples for religious worship. What has become of all those articles made of solid gold of which we read which adorned those ancient edifices? Where are the golden altars, the candlesticks and the clinging vines, all of solid gold, of those ancient temples? In those far-off days of the past vast amounts of gold were used for personal decorations. The painter and the historian have given us glowing pictures of Cleopatra floating down the Nile, reclining amidst her slaves and admirers in scanty attire, loaded with ornaments of gold. What has become of all this twenty-four carat fine ancient jewelry? If you will tell me what has become of the gold of which your watch-case was made that, in wearing for forty years you have seen decrease nearly a quarter in actual weight I will answer all the hard gold conundrums I have just raised. But this, statisticians say, is a fact. Fourteen thousand millions of dollars worth of gold is the total product from the earliest times, and only eight thousand millions are now in existence.

The latest figures I have seen make the gold coin of the United States worth \$287,000,000 and the silver \$112,000,000.

The world's gold product seems to have been declining since 1853, in which year it amounted to \$236,000,000.

The product of the year 1492 was only \$100,000.

It will be seen that a \$5,000 bag of gold weighs about twenty-two pounds. A \$25,000 bag of gold weighs one hundred and ten pounds, and this is about the extreme amount a bank Messenger ought to be permitted to shoulder and carry from one bank to another, though I have known them to carry to the Clearing-House a bag containing \$30,000 or \$35,000.

Those who do not happen to be acquainted with such matters will be surprised by these figures regarding space taken up by gold. A million of gold in \$5,000 bags occupies  $12\frac{1}{2}$  cubic feet. One hundred thousand dollars in gold in \$5,000 stacks can be piled in 2,100 cubic inches.

A room 16 feet high, 16 feet wide, 16 feet long—or, rather, I might say, a room 16 feet every way—will hold all the world's stock of gold—the entire \$6,000,000,000.

Paying-Tellers are sometimes called to make up parcels of gold for shipment to foreign countries. In shipping gold coin to England the shipper generally

sends American double-eagles. He selects these because, being a large coin, there is less shrinkage on them. If they cannot be procured he takes the next best thing, which is the ten dollar gold piece. These he generally packs in rather small size boxes made of very thick pine boards. Sometimes the coin is put into kegs about the size of nail kegs. In both cases the packages are sealed.

The experienced shipper has a very neat way of sealing his boxes which is worth remembering. He sinks the heads of the large screws well down in the boxes and then covers them with his seal of wax.

Boxes for transportation of coin are a very familiar sight to me.

The Suffolk Bank, in Boston, which at one stage of its redemption business carried specie to its vaults from every part of New England, had a huge attic well filled with these solid made old boxes, and in a great many of them were remaining the coin rejected as worthless out of the invoices that old Mr. Wyman and others brought in them.

When put on board ship specie is generally placed in the run of the vessel.

Large shippers of gold have told me that special care is sometimes taken to keep from those on board the ship the fact that specie forms a part of the cargo. But the pursers of our steamers must know all about such matters; and it is now the custom of the papers to report in detail all the movements of specie between this and other countries.

When the American coins reach the other side they find themselves situated pretty much as the English sovereign—the one pound value coin of England—when it comes to see us. They know nothing of dollars and cents in England. We do not count in pounds, shillings and pence here. Both coinage is uncurrent when away from home, and becomes simply merchandise. Here uncurrent coin finds its way through dealers in the article, who sell it to manufacturing jewelers for the melting pot, to travelers who are going to countries where such coins are current, or to the Mints of the United States, where it is recast into current American coin. The coin and bullion we ship to England is treated in the same manner, except that the Bank of England and not the English Government has the monopoly of the coining and recoinage of the Kingdom.

If it is asked why our shippers of gold to Europe do not send bullion rather than American coined gold I reply that bullion of this sort is one of the most difficult things to find. "In fact," said a large shipper of gold to me, "when we want it it seems impossible to get it."

In shipping gold from England to this country the shipper hunts for American double-eagles; but he finds few for the reason, as I have stated, that they are apt to be recoined as soon as they get there. But bullion gold he can get. The Bank of England has vast stocks of it from which the shipments of gold that England makes to all parts of the world are drawn.

The Paying-Teller is sometimes called upon to pay out silver coin for shipment. But most of the silver that has been sent out of this country of late years has gone out in the shape of silver bricks. Once in a while silver coins are called for to ship to China to pay for teas and other commodities.

A gentleman once left Boston in a ship bound for China with \$18,000 in silver dollars in a few nail kegs which he kept with him in his berth all the long and tedious voyage.

The Chinese will have nothing but silver. And they are very particular what sort of silver that is. At one time they would take nothing but the Mexican dollar. It is still very popular there. Our trade dollar was prepared to suit their taste. They possess wonderful skill in judging the merits of a coin. They have professional coin testers who will pass a keg of silver dollars through their hands with amazing rapidity, rejecting by the mere sense of touch the light weight or debased dollars.

The Paying-Teller, in this country, often has presented to him counterfeit silver coins that are really more handsome than the genuine. In testing the quality of silver the following preparation is used by him: Twenty-four grains of nitric silver in crystals is put with fifteen grains of nitric acid and one ounce of water. The coin, having been scraped a little, is touched with

this preparation. If the coin is good there will be no action; if bad, it will blacken.

Our silver coins to-day occupy rather an anomalous position. The Paying-Teller must reject the trade dollar, though it is intrinsically a better dollar than the Bland, or standard, dollar, which last is legal-tender in any amount. But, though it is a legal-tender and standard dollar, it is, when you come to look at it, made up in large amounts so generally unpopular that it is steadily quoted by large specie dealers at 99%. There are, I do not know how many, tons of these dollars hanging heavily on the hands of the United States Government because the people do not like the cumbersome and heavy dollars of our fathers. They prefer paper and gold. It is almost impossible for our Paying-Tellers to induce the treasurers of our manufacturing companies to use them in place of bills.

Here is a table of the standard weights of United States gold and silver coins:

STANDARD WEIGHT OF UNITED STATES GOLD COIN (BY ACT OF CONGRESS, PASSED JUNE, 1854), AND SILVER COIN (BY ACT OF CONGRESS, . PASSED 1878).

#### REGISTERING LETTERS.

Under the registering-letter system of our mails the banks are in the habit of registering those letters which contain cash, bonds, coupons and other valuables which are good in the hands of any holder into whose possession they may either honestly or dishonestly fall. We have elsewhere described this registering system, and explained its advantages and disadvantages.

There is one point, however, to which we have not alluded. If it is a good plan to register letters of the class we have mentioned, why is it not well to go further and register the bulk of the valuable letters which a bank mails? For instance, why should not the interior bank, which daily sends to its corresponding bank in New York a letter containing, it may be, bank checks to the amount of hundreds of thousands of dollars, register such letters? To be sure, these remitted checks are payable to order, and therefore not good in the hands of the wrong holder and not available in dishonest hands unless forgery is resorted to. At the same time a loss of one of these valuable

letters, full of negotiable checks and drafts, would cause an immense amount of annoyance and trouble to the losing bank, and, if registering them would ensure their more prompt and safe transmission, why not have it done?

#### REDEEMING FRAGMENTS OF NATIONAL BANK BILLS.

The custom of the National banks, which they have looked upon as one fully authorized by the Banking Department at Washington, is to redeem at full face value all fragments of notes which are accompanied by a sworn affidavit, attested by a Justice of the Peace, that the missing portions are destroyed. From the fact that the Government will allow full value where the bank has, in cases of mutilations and partial destruction, redeemed at full value, and that the National banks make nothing out of the lost bill item, the banks are not inclined to be very cautious in this matter of redeeming the class of notes referred to. Their carelessness should not be encouraged or approved. In regard to the affidavit in question there is a point of importance. These affidavits should be carefully scrutinized. It is easy enough for rogues to manufacture them for fraudulent purposes and to get up fictitious ones, the fictitious notarial attestations and seals having every appearance of the genuine article. Before a bank redeems a fragment of one of its issue which is presented with an affidavit it should endeavor to satisfy itself that the affidavit is genuine and that the character of the party making the same is reliable.

#### THE SKELETON LEDGER;

##### OR, DEPOSITORS' DAILY BALANCE BOOK.

This form of book-keeping originated in Boston about 1853 and is used by all the banks in that city. It is rapidly extending as its usefulness becomes known.

The accompanying form—see inset—is necessarily contracted in depth and does not show the book in full.

The full-sized leaf is 24 inches long by 19 inches wide, and the book when opened takes a space upon the desk of about 40 inches in width.

The left-hand page begins with Monday, and the work of six days is on the open book—three days on the left-hand page and three on the right. The book accommodates about fifty accounts to the page, and the original line on which the account begins (the names being printed in the margin) is followed through to the end of the book. Quiet accounts—that is, accounts drawing but few checks—are placed between the more active ones, and spaces are left between the letters of the alphabet for new accounts to be written in as they are opened, more space being allowed for the active letters like C, B, H, M, R, S and W than for the others.

If a bank has three hundred accounts it would be best to use eight forms, placing bank accounts after the individual accounts, to be followed by the impersonal accounts.

After the book has been arranged for the business of the bank the balances of the respective accounts are placed in the balance column to the left of the day on which it is proposed to start the work, all the credit balances in *black* ink and all debit balances in *red* ink, Cash being treated as an account and entered in red ink. The footings of the two inks should agree, as they make up the trial balance. When this is done we are ready to begin the day's work.

The checks which are paid through the Clearing-House are entered in red or blue ink, to distinguish them from checks paid over the counter, in the two columns marked "Checks in Detail," and added up, thus furnishing the Tellers proof of the Clearing-House settlement. All checks paid over the counter during the day are entered to the respective accounts in black ink. At the close of the day's business all the short entries are carried into the columns—"Total Checks" and Total "Deposits"—the footings, if the work is correctly done, agreeing with the work of the Tellers. The balances are carried forward, proved, and the book is ready for the next day's work which goes forward from that time.

The book is made to accommodate six months' business.

## BANKING LAW.

### \* LEGAL DECISIONS AFFECTING BANKERS.

#### USURY—CONTRACT BY AGENT.

Where a banker—acting as agent for a depositor who placed money in his hands for investment at the lawful rate of interest—makes a loan thereof, and in addition to the legal rate exacts for his own benefit a further sum in excess thereof without the authority or knowledge of his principal, and the depositor receives no benefit from such usury,

*Held*, That the loan is not usurious. In construing the usury laws, the uniform construction in England and in this Court has been that, to constitute usury within the prohibitions of the law, there must be an intention knowingly to contract for or to take usurious interest. When the contract on its face is for legal interest only, then it must be proved that there was some corrupt agreement or device or shift to cover usury, and that it was in the full contemplation of the parties. There must be an intent to take illegal interest. The depositor, therefore, cannot be charged with taking or reserving usurious interest unless she was bound by the acts of her principal. But she was not so bound; for it is settled that, where an agent, who is authorized by his principal to lend money for lawful interest, exacts for his own benefit more than the lawful rate, without the authority or knowledge of his principal, the loan is not thereby rendered usurious.

*Call vs. Palmer*, Supreme Court of the United States, December 14, 1885.

#### DEMAND NOTE—LIABILITY OF INDORSER.

Defendant was sued as indorser on a demand note, dated March 19, 1866, payable with interest, on which demand was not made of the makers until March, 1877. Plaintiff failing to collect it notified defendant of his intention to hold him liable, and this action was commenced in June, 1878. The Court below, following the rule in *Merritt vs. Todd*, 23 N. Y., 29, that a note payable on demand, with interest, is a continuing security against an indorser until after actual demand, gave judgment for the plaintiff. On appeal, this judgment was reversed by the Court of Appeals, who

*Held*, That while the doctrine of *Merritt vs. Todd* has been so long acquiesced in, and been followed and approved in so many cases, that it would be impolitic now to permit the rule there laid down to be questioned or disturbed, yet the Court below erred in applying such doctrine to the facts of this case; that its true solution is to be found in the rules prescribing the duties and obligations of a creditor to his surety. The authorities now uniformly hold that the statute commences to run upon a note payable on demand, in favor of the maker, at its date, and the expiration of six years from such date constitutes a bar to any action thereon unless a renewal of the cause of action has been effected by partial payment or otherwise. The makers in this case were therefore discharged from liability several years prior to any demand of payment upon them. The obligation which a party assumes upon indorsing a note is, among other things, to pay it in case the parties primarily liable

\*All the latest Decisions affecting Bankers will be found in this Department as early as obtainable. The Editor of the Law Department of RHODES' JOURNAL will furnish, on application of Subscribers, further information regarding any case referred to herein; he will also answer questions in banking law which may be of sufficient general interest as to warrant publication in this Department. A reasonable charge is made for special Replies asked for by Correspondents and not authorized for publication.

thereon, after demand, neglect or refuse to do so. The demand stipulated for is an essential part of the indorser's contract, and the same considerations which induce its requirement also require that it shall be made upon an existing cause of action and of parties who are legally liable to respond in damages for its non-performance. A demand upon a party, after he has ceased to be liable, would be an idle ceremony and a fraud upon the meaning and spirit of the indorser's contract. It would be quite absurd to claim that a note could mature after the parties thereto had been discharged by the expiration of the period of limitation, and a demand upon such parties, after the bar of the statute had fallen, would not, therefore, be a compliance with the conditions of the indorser's liability. We are of opinion that an indorser cannot be held upon a note payable on demand, with interest, unless the holder can show a demand made of the makers upon a subsisting obligation against all of the parties thereto, and be able to deliver to such indorser, upon payment by him, the note unimpaired as an obligation by any act or omission of the holder occurring subsequent to the contract of indorsement.

*Shutts vs. Fingar*, New York Court of Appeals, November 24, 1885.

#### COLLECTION BY BANK—DISPOSITION OF PROCEEDS.

Plaintiff assigned certain notes of C, amounting to \$1,550, to the defendant bank for collection, the defendant agreeing with the plaintiff "to use its best efforts to collect the same, and when collected to pay the proceeds thereof over to the plaintiff, deducting therefrom the necessary costs, commissions and expenses incident to such collection." Defendant at once commenced an action against C to recover the amount thereof, and also \$804 due by C to defendant, and in this action it obtained a judgment for the full amount. Under execution a quantity of C's property was offered for sale, which was bid in by defendant in order to prevent a sacrifice, and for the benefit of plaintiff and defendant, for a sum sufficient to satisfy the execution and pay the cost of sale. A small portion of these goods were sold by defendant; and, after applying the proceeds to the costs and expenses of the suit and sale, a portion of the defendant's demand still remained due and unpaid. The balance of the goods were held by defendant. Plaintiff brought suit for the full amount of \$1,550, with interest, claiming that defendant had no authority to bid in the goods on his account or for his benefit, and that, having bid them in in its own name for a sum sufficient to satisfy the execution, it at once became liable to pay him the amount due on his notes, principal and interest.

*Held*, That defendant was authorized to bid in the goods for the use and benefit of both parties. That when the property was bid in for the use and benefit of both plaintiff and defendant they became interested in it and were entitled to share in its proceeds in the proportions in which their claims against C had paid its purchase price. The title to the whole property was taken in the name of the defendant, but, to the extent of plaintiff's interest, it was held in trust for him. When any of the goods were sold plaintiff was entitled to demand and receive from the defendant his *pro rata* share, after paying costs and expenses, of the moneys for which they were sold.

*Marks vs. Bodie Bank*, Supreme Court of California, November 30, 1885.

#### CERTIFICATE OF DEPOSIT—GUARANTY.

Action was brought on a certificate of deposit executed by the Osage City Bank, payable in New York exchange, and indorsed by defendants in blank contemporaneously with its execution. The defense was a want of consideration.

*Held*, Under the decisions of this Court, the indorsement of the names of third persons in blank upon the back of such an instrument is *prima facie* evidence of a contract of guaranty. It is true that the want of a sufficient legal consideration for a contract of guaranty would constitute a complete defense to an action; but in this case, the guaranty being made contemporaneously with the making of the certificate, it was not necessary that there should be a

separate and a distinct consideration, as would be the case if the contract of guaranty was subsequent to the principal transaction and not for the benefit of the guarantor. The consideration upon which the certificate of deposit was executed is sufficient to sustain the written promise of guaranty which was indorsed upon the certificate before its delivery. In such a case the indorsement of guaranty is deemed to be given for the benefit of the maker of the instrument, and it is also considered that the promise gave credit to the maker upon the strength of the liability of those whose promise of guaranty was written upon the back of the instrument.

Judgment for plaintiff.

Jones *vs.* Kuhn, Supreme Court of Kansas, December 4, 1885.

---

PROMISSORY NOTE—EXECUTION BY AGENT—BURDEN OF PROOF.

Where a promissory note was executed by an agent, and his authority so to do was denied,

*Held*, In an action on the note, that the burden of proof was on the plaintiff to prove such authority.

Miller *vs.* House, Supreme Court of Iowa, December 16, 1885.

---

PROMISSORY NOTE—PAYMENT BY STRANGER.

Where a promissory note was paid by a stranger, who had no interest therein to protect,

*Held*, That the debt was extinguished, and the person paying was not entitled to subrogation. Further held that such payment did not constitute a contract of purchase.

Binford *vs.* Adams, Supreme Court of Indiana, November 24, 1885.

---

SCHOOL DISTRICT BONDS—PURCHASER'S RISK.

In a suit against the defendant, a school district in Iowa, on certain bonds issued by it, it was shown that, at the time of their issue, such defendant was indebted in an amount exceeding the limit of indebtedness imposed by the Constitution of Iowa, and, consequently, could not incur any further indebtedness.

*Held*, That when the plaintiff was about to purchase these bonds, she was bound to know the limit of indebtedness which the Constitution of Iowa imposed upon the district, and was charged with notice that the constitutional limit had been exceeded, and that no part of the bonds offered for sale were legal and valid. Under such a state of facts it cannot be held that the plaintiff is an innocent purchaser. Plaintiff knew, or was bound to know, that at the time of such purchase the district could not lawfully incur any further indebtedness.

Judgment for defendant.

Nesbit *vs.* Independent School District of Riverside, United States Circuit Court, Northern District of Iowa, October, 1885.

---

PRESIDENT OF BANK—NOTICE.

Notice to the President of a bank is notice to the bank.

Ottawaquechee Savings Bank *vs.* Holt, Supreme Court of Vermont, November 28, 1885.

---

PROMISSORY NOTE—WHEN EXTENSION OF TIME DOES NOT RELEASE SURETY.

In an action on a promissory note against defendants, sureties thereon, they claimed to be discharged because of an agreement by the plaintiff with the principal debtor to extend the time of payment thereof. There was no evidence of any consideration of any character paid for such extension, and plaintiff testified positively there was none.

*Held*, As there was no consideration for the extension of time of payment of the note, plaintiff's agreement to that effect was not binding upon her.

There was no contract for extension of time which the law will recognize. The action was properly brought upon the note before the expiration of the time of the alleged extension of payment, and the sureties were not discharged.

Byers vs. Harris, Supreme Court of Iowa, December 15, 1885.

#### PROMISSORY NOTE—TENDER.

Where a promissory note is payable at a particular place, in order to amount to a tender the payer of the note must be at the place of payment at the time it matures, ready and willing to pay the same, and, in case the payee is not there to receive it, he should either deposit the amount of money due in some bank or other place to be paid, or keep it intact; and in either case, if suit be commenced, carry it into Court and deposit it there when he files his answer.

Adams vs. Rutherford, Supreme Court of Oregon, December 3, 1885.

#### POWERS OF BANK CASHIERS.

*Continued from page 109, February number of the JOURNAL.*

*II. Power to Receive Special Deposits.*—A special deposit has been defined to be one wherein the bank becomes the bailee of the depositor, the title to the thing deposited remaining with the latter (*Marine Bank vs. Fulton Bank*, 1 Wall., 256), and it differs from an ordinary deposit, peculiar to the banking business, as, in the latter case, the depositor parts with the title to his money and loans it to the banker, who, in consideration of the loan of the money and the right to use it for his own profit, agrees to refund the same amount, or any part thereof, on demand. It has been claimed in many cases that the receiving of special deposits by banks is no part of the business of banking, and that in the case of banks organized under special Acts or charters which have defined their powers, contracts of this nature made by their Cashiers, or other officers, do not bind the bank. The weight of recent decisions, however, hold the receipt of special deposits as an incident to the banking business, and it must now be regarded as settled that where a usage of receiving such deposits exists, the Cashier, as the executive officer, has the power to bind the bank by their receipt. A review of some of the decided cases will be useful in showing the course and extent of the decisions on this question.

The leading case upon the subject is *Foster vs. Essex Bank*, decided by the Supreme Court of Massachusetts in 1821 (17 Mass., 479). This was an action to recover the value of certain gold doubloons contained in a chest which were deposited by the plaintiff's testator with the defendant and which were subsequently stolen by the Cashier, who absconded. The defendant's Act of incorporation gave no particular authority or power to receive special deposits, but it had been the practice of the officers, which practice was known to the Directors, to receive deposits in this way. The contention of the defendant was that the bank had no power to enter into such a contract; that its powers were fixed by its Act of incorporation, and it could have no powers by implication except such as were necessary to effect the purposes of the institution; that such power was not incidental to a banking institution, it being no more incidental to a bank than to any other corporation to keep a room for the purpose of receiving property, without compensation, at the responsibility of the corporation. The Court held, that notwithstanding the Act of incorporation gave no particular authority or power to receive special deposits, and although there was no regulation or by-law relative to such deposits, yet, as the bank had, from the time of its incorporation, received money and other valuable things in this way, and as the practice was known to the Directors, and the building and vaults of the company allowed to be used for this purpose, the corporation must be considered the depository, and not the Cashier, or other officer, through whose particular agency commodities may have been received into the bank.

The next case was *Lloyd vs. West Branch Bank*, in the Supreme Court of Pennsylvania, decided in 1850 (15 Pa. State, 172), wherein it was held that the

Cashier had no authority to receive, as a special deposit, a sealed package of small notes, and that, if so received, without the permission of the Directors or their knowledge of any usage or practice to receive such packages on deposit, the law would not imply a contract on the part of the corporation with the depositor for the safe keeping of the package. The Court held that the authority to receive deposits conferred by the Pennsylvania banking law did not apply to special deposits, saying: "It was never designed by the provisions of the statute that the bank should be converted into a kind of pawnbroker shop." The case, however, turned upon the question whether there was any general custom or practice on the part of the Cashier to receive such deposits which would make the bank liable for his acts. In the absence of evidence of any such custom the Court held the bank not liable.

In the case of banks organized under the National Banking Act, there has been a conflict of decision as to whether such associations had any power to receive special deposits. By a recent decision of the Supreme Court of the United States, however, this power is upheld. The question arose in *Wiley vs. First National Bank of Brattleboro* (47 Vt., 546). In this case plaintiff had deposited certain United States bonds with the Cashier of the defendant for safe-keeping as a special deposit, and taken a receipt of the Cashier therefor. On demand for the same the Cashier informed him that they were gone. The Court held, in an action against the bank, that the taking of special deposits by National banks to keep merely for the accommodation of the depositor was not within the authorized business of banks organized under the National Bank Act, and the Cashiers of such banks had no power to bind them by such taking. The Court refers to the case of *Foster vs. Essex Bank* (above cited), and states that it is much relied on for the plaintiff, and that no other case as to the scope of the powers of banks appears to have arisen between that and the passage of the National Bank Act. The Court then considers the provisions of the Act which grant "all such incidental powers as shall be necessary to carry on the business of banking, etc.," and holds that the receiving of special deposits is not in any sense necessary to carrying on the business of banking. In commenting upon the subject, the Court says:

"Shareholders in organizing a National bank have a right to understand that they are engaging in no business except that which the Act authorizes, and that the officers chosen by them under the Act would have no authority to enter into any business other than that to bind them; and to allow the officers to jeopardize their interest by engaging in other business to the advantage of other persons would allow the officers to perpetrate a fraud on the shareholders for the benefit of others."

The doctrine in this case is followed in 50 Vermont, 388, and the views expressed in the opinion are concurred in by Judge Allen, of the New York Court of Appeals, 60 N. Y., 294. In the opinion in that case, which was an action to recover the value of a special deposit of bonds in a National bank, he says:

"The deposit of these bonds cannot be distinguished from a deposit of jewelry or plate, or other valuable property, and was a special transaction not within the ordinary course and business of banking, or necessarily incident to it. If authorized, it added greatly to the risk of loss of the shareholders without adding to their gains. It was a holding out of a greater inducement to burglars and robbers from without, and might prove of greater temptation to dishonesty on the part of clerks and employees within the bank."

And he holds that in the absence of proof of express authority from the Directors, or of a general practice, the bank was not responsible for property received by its Cashier.

The doctrine that no power exists in National banks to receive special deposits has been dissented from, however, in later cases in New York, Pennsylvania, and in the Supreme Court of the United States, and such power is now judicially recognized.

In *Pattison vs. The Syracuse National Bank*, New York Court of Appeals, decided in 1890 (80 N. Y., 82), it is held that the power to receive special deposits is incidental to the banking business, and that National banks have

such power. To refute the argument advanced that the receipt of special deposits is wholly outside of and foreign to the banking business, and cannot be regarded as incidental thereto, the Court refers to the history of banking from its earliest period, and says:

"A reference to the history of banking discloses that the chief, and in some cases the only, deposits received by the early banks were special deposits of money, bullion, plate, etc., for safe-keeping to be specifically returned to the depositor. Such was the character of the business done by the Bank of Venice (the earliest bank) and the old Bank of Amsterdam, and the same business was done by the Goldsmiths of London and the Bank of England, and we know of none of the earlier banks where it was not done."

In *First National Bank vs. Graham* (79 Pa., 106), in an action against a National bank to recover the value of certain bonds left for safe-keeping and stolen from the vaults, the Court says:

"The mere voluntary act of the Cashier in receiving the plaintiff's securities would not subject the bank to liability. But if the deposit was known to the Directors, and they acquiesced in its retention, a contract relation was created by which the defendants should be held bound. \* \* The principle announced in the recent Vermont case has never been adopted here so far as it is in conflict with the rule."

And in the same case in the Supreme Court of the United States (100 U. S., 699), decided in October, 1879, the power of National banks to receive special deposits is recognized, the Court saying:

"It would undoubtedly be competent for a National bank to receive a special deposit of such securities as those here in question, either on a contract of hiring or without reward, and it would be liable for a greater or less degree of negligence accordingly. We do not mean that it could convert itself into a pawnbroker's shop. That subject involves topics alien to the case before us, and which, in this opinion, it is unnecessary to consider."

As to the liability of the bank for loss the Court says:

"It is now well settled that if a bank be accustomed to take such deposits as the one here in question, and this is known and acquiesced in by the Directors, and the property deposited is lost by the gross carelessness of the bailee, a liability ensues in like manner as if the deposit had been authorized by the terms of the charter."

As to the liability of a bank in case of the loss of a special deposit, the rule is well settled that, when a special deposit is received by a bank without compensation, it is only a naked bailment and the bank is only liable for gross negligence. 58 Ga., 309; 8 Kan., 136; 80 N. Y., 82.

From a review of the cases we may conclude:

1. That it is not beyond, but within, the power of a banking corporation to receive special deposits, gratuitously or for compensation, unless specially prohibited by charter or organic law.
2. That, where a usage of this kind exists, the receipt of a special deposit by a Cashier will bind the bank.
3. That, in the case of a gratuitous deposit, the bank is only liable for gross negligence with respect thereto.

#### REPLIES TO LAW AND BANKING QUESTIONS.

*Editor Rhodes' Journal of Banking:*

RED WING, Minn., February 8, 1886.

SIR:—We submit a question in regard to the liability of a bank in giving up documentary security. It is an actual case:

A, who is operating a flour mill, sells B, in London, England, a bill of flour. A draws on B at sixty days' sight, sterling exchange, for the amount of the bill, less freight, and attaches bills of lading and insurance certificates. The draft, bills of lading, etc., are made payable to the order of A. He endorses draft, etc., deposits them in his bank, and receives credit for the same. No instructions or hypothecation instrument are given. B accepts draft, and bill of lading and documents are delivered to him. Before the draft became due A and B fail, and the draft is protested for non-

payment. The bank with whom A deposited the draft instructed their correspondents to deliver documents on acceptance of draft, and they now look to A's estate for re-imbursment and have filed claim with the Assignee.

A claims that they have no hold on him and that the Assignee should reject their claim. Is he right?

PIERCE, SIMMONS & Co.

*Answer.*—According to the decisions, the bank was justified, in the absence of positive instructions from A, in directing that the bill of lading should be surrendered on the acceptance of the draft. The case of *National Bank of Commerce vs. Merchant's Bank*, Supreme Court of the United States, October, 1875 (91 U. S., 92), is directly in point. It was a suit brought against the National Bank of Commerce for alleged negligence in surrendering three bills of lading attached to three drafts to the drawees upon their acceptance of the drafts, there being no instructions either to surrender the bills upon acceptance or to hold them until payment of the drafts. Mr. Justice Strong, in his opinion, said :

"The fundamental question in this case is whether a bill of lading of merchandise deliverable to order, when attached to a time draft and forwarded with the draft to an agent for collection, without any special instructions, may be surrendered to the drawee on his acceptance of the draft, or whether the agent's duty is to hold the bill of lading after the acceptance for the payment."

The opinion considers the question fully, and without giving the reasons, space not permitting, the Court holds that, in the absence of positive instructions, a collecting bank is justified in surrendering bills of lading on the acceptance of the drafts without waiting for their payment.

This point is also directly decided in *Lanfear vs. Blossom*, 1 La. Ann., 148, wherein it was held that "where a bill of exchange drawn on a shipment, and payable a certain number of days after sight, is sold, with the bill of lading appended to it, the holder of the bill of exchange cannot, in the absence of proof of any local usage to the contrary, or of the imminent insolvency of the drawee, require the latter to accept the bill of exchange except on delivery of the bill of lading; and when, in consequence of the refusal of the holder to deliver the bill of lading, acceptance is refused, and the bill protested, the protest will be considered as made without cause, the drawee not having been in default, and the drawer will be discharged."

This principle that the agent should give up the bill of lading on acceptance is also affirmed in

21 Upper Canada Q. B., 284, and

2 Upper Canada E. & A., 282.

and the Supreme Court of the United States in the case of the *National Bank of Commerce*, above given, say :

"After a review of the authorities, we feel justified in saying that, in our opinion, no respectable case can be found in which it has been decided that when a time draft has been drawn against a consignment to order, and has been forwarded to an agent for collection with the bill of lading attached, without any further instructions, the agent is not justified in delivering over the bill of lading on the acceptance of the draft."

It follows that the bank has a claim against the estates of both A and B.

*Editor Rhodes' Journal of Banking:*

FREMONT, Neb., February 2, 1886.

SIR:—Referring to inclosed excerpt from an Omaha paper, I would like to know if it is true that at any time in our history "silver was at a premium over gold." If so, why? An early reply will oblige,

Yours, etc.,

L. M. KERN, President.

*Answer.*—The matter in question is treated in the article on "The Monetary Standard" in the January JOURNAL, page 5. In the newspaper clipping enclosed is argued the justice of Senator Eustis's bill for the payment of United States bonds partly in silver. It is claimed that if the obligation to pay in a certain kind of money is to be determined by the kind of money in actual use at the time the contract was made then the bonds should all be paid in Treasury notes, for they were the only legal-tender "in 1871, when the bonds were refunded. Coin, both gold and silver, was an

article of merchandise, and not in use as a circulating medium. The fact that silver was at a premium over gold for so long a time previous to the discontinuance of the dollar coinage in 1873, that there was little of it in the country, is held to be proof that a contract to pay a debt in 'coin' could not mean 'silver coin,' because at the time payment in that coin was not possible." Not so. The proof that 'coin' meant gold lies in the fact that silver had not been the money of commerce (excepting fractional coins) for many years—in fact not to any extent since the year 1834, when Congress established the ratio of 16 for 1 as the weight in fine metal of its silver and gold coins. In the world's markets the ratio ranged from about 15¼ to 15¾ for 1, down to about the year 1872, so that silver was overvalued in our coinage. The new coins were consequently shipped abroad, and gold was the only coin in circulation. It is in this sense that "silver was at a premium over gold." From all the circumstances surrounding the issue of the bonds it is quite certain that their payment in silver was not contemplated, and it is equally certain that the present agitation with that view is only based on the ground that silver is cheap.

*Editor Rhodes' Journal of Banking:* NORTH ATTLEBOROUGH, Mass., Feb. 6, 1886.

SIR:—A draft drawn upon A. B. & Co., Hartford, Conn., is "Accepted and payable at Tenth National Bank, New York city. A. B. & Co." Are the drawers and endorsers holden by protest for non-payment on demand at maturity at "Tenth National Bank," or does the conditional qualification of the acceptance void the same? An answer in your next JOURNAL will oblige

EDWARD R. PRICE, Cashier.

*Answer.*—The drawer and indorsers are not held by the presentment at the Tenth National Bank, New York city, and the protest and notice of non-payment on demand at such place. They were entitled to have the draft presented at Hartford.

Edwards on Bills and Notes, § 536.

19 N. Y., 477.

31 Barb., 408.

*Editor Rhodes' Journal of Banking:*

EASTPORT, Me., February 6, 1886.

SIR:—Please answer the following in the Banking Law Department of the JOURNAL:

A has a deposit in a bank—say \$200—with a written agreement that the deposit shall remain in the bank until certain conditions are fulfilled. The deposit is on interest, and A asks for a statement to be sent to him as to how his account stands or how much his deposit amounts to at a certain date. The Cashier sends him a statement, showing the original \$200 with accrued interest. A makes a draft on the bank, gets it cashed, after showing the Cashier's statement, and the draft (say \$75) is sent to the bank for collection. Is the bank obliged to pay the draft (no notice of the depositor's agreement being stated in the Cashier's statement of balance due A), the conditions of the agreement not being fulfilled?

Yours truly,

TREASURER.

*Answer.*—The bank was not obliged to pay the draft, and they have a right to hold the deposit until the agreement is fulfilled. The furnishing of a statement to A at his request, showing how much his deposit amounted to at a certain date, did not waive that right. Such a statement was no warranty to a party cashing a draft on the faith thereof that on its presentation it would be paid. The whole balance might have been drawn out in the interval.

*Editor Rhodes' Journal of Banking:*

FACTORY POINT, Vt., February 4, 1886.

SIR:—What rate of discount would a National bank located in Vermont (where the legal rate of interest is six per cent.) be authorized to take in discounting a note of even date drawn "with interest at eight per cent. per annum," the note for discount being dated in Illinois and made payable at a National bank in the same State, where eight per cent. may be taken by agreement? See section No. 5,187 National Bank Act.

VICE-PRESIDENT.

*Answer.*—There is no question but what a discount by a National bank located in one State of paper payable in another State at a rate exceeding that

allowed by the law of the State wherein it is located, but legal in the State where the paper is payable, would be held usurious.

Section 5,197, limiting the rate of interest, provides :

(1.) The rate of interest is to be that allowed by the law of the State or Territory where the bank is situated.

(2.) When by such law a different rate is fixed for local banks of issue the rate so fixed is allowed National banks.

(3.) Where no rate is fixed by such law, National banks may charge at a rate not exceeding 7 per cent. per annum, and such interest may be taken in advance.

(4.) The purchase, discount or sale of a bill of exchange payable at another place at not more than the current rate of exchange on sight drafts, in addition to the interest, shall not be considered as taking or reserving a greater rate of interest than that permitted.

This section has been considered in many cases wherein a loan or discount has been universally held to be usurious if in excess of the rate allowed by the State in which the bank is located.

The case put by our correspondent would fall under the last clause of the section. That section is considered in *Wheeler vs. National Bank* (96 U. S., 268), decided in 1877. That was a suit by a National bank in Pennsylvania against the endorser of certain bills of exchange discounted by it. The bills were payable in New York, where the rate of interest was 7 per cent., and the legal rate in Pennsylvania was 6 per cent. Defendant pleaded usury, claiming that the bills were discounted at a higher rate than 6 per cent. The Court said :

"No question having been raised as to the *bona fide* character of the bills, the bank had, by the express words of the statute, the right to charge and receive the current rate of exchange for sight drafts, in addition to the interest at the rate of six per cent. per annum, which is the rate fixed by general statute in the State of Pennsylvania."

And further on :

"It should appear affirmatively that the bank knowingly received or reserved an amount in excess of the statutory rate of interest and the current exchange for sight drafts."

And the case was decided against the defendant because he was unable to clearly establish that a greater rate had been taken.

The rate allowed by the law of Vermont to banks therein being 6 per cent. our correspondent would have a right to charge that rate of interest, and, in addition, the usual rate for collection upon the point where the note is made payable. A discount of 8 per cent. would be usurious.

*Editor Rhodes' Journal of Banking:*

TRINIDAD, Col., February 24, 1886.

DEAR SIR:—In the JOURNAL for February I notice United States 3 per cents quoted on January 1st at 102 "ex-interest." I do not understand the meaning of the term "ex-interest." Will you kindly tell me what it means? Also, inform me if I would have any accrued interest coming to me on bonds purchased during the month of January? Your reply will greatly oblige Yours truly, ASSISTANT CASHIER.

*Answer.*—The rules of the New York Stock Exchange provide that all sales of any security shall be "ex-interest" after a time which is publicly announced. After that time the accruing interest does not go with the sale; it belongs to the seller. It was declared that, beginning January 2d, 3 per cents should be sold "ex-interest," and they immediately at that time dropped off in price to correspond. The same thing occurred with the 4 per cents. It is necessary for the sale to be marked "ex-interest" in order to explain the change in the market. You would not be entitled to the January interest if you had bought bonds in this market at the prices quoted here. In some markets, we understand, bonds are always sold in such a way that the purchaser pays extra for the accrued interest when settling; in New York, on the contrary, the sales are "flat." In the case mentioned above the 3 per cents were called "ex-interest" on January 2d the same as the 4 per cents, although the quarterly interest on

the former was not payable for a month, while that on the latter was payable on that date.

*Editor Rhodes' Journal of Banking:*

CONWAY SPRINGS, KANS., Feb. 10, 1896.

SIR:—A stockman has a sale on Saturday, taking in payment notes made out and dated on Saturday but signed on Sunday. Are the notes good and can they be collected by law?

Yours respectfully,

GEO. B. ARMSTRONG, Cashier.

*Answer.*—The common law did not prohibit the making of contracts on Sunday. By statute in many of the States, however, no contract can be entered into on Sunday, or secular business legally conducted. Bills and notes executed and delivered on Sunday fall within the prohibition of such laws; but it has been held in a number of cases that, even though a note be signed and dated on Sunday, it will be valid if delivered on another day, as it is delivery which completes the contract.

41 Ala., 123; 31 Ark., 123; 15 Mich., 237; 32 Me., 524.

Though the note delivered on Sunday be void it has been held that the payee may recover on the original consideration.

31 Iowa, 112.

And the weight of authority holds that although a contract be entirely closed up on Sunday, yet, if ratified on a subsequent day, it will be valid.

This statement of the law applies where Sunday contracts are prohibited by statute. The statute of Kansas is as follows:

"§ 255. Every person who shall either labor himself, or compel his apprentice, servant or any other person under his charge or control to labor or perform any work other than the household offices of daily necessity, or other works of necessity or charity on the first day of the week, commonly called Sunday, shall be deemed guilty of a misdemeanor," etc., etc.

In the case of *Johnson vs. Brown*, 13 Kansas, 531, which was an action on a contract made on Sunday for the services of a horse in the following week, this statute is construed by Judge Brewer, who said:

"The question in this case is whether a contract made on Sunday is valid. \* \* \* At common law a contract on Sunday was valid; but in England and in every State of the Union have been enacted what are familiarly known as Sunday laws for the prevention of labor and business on that day. Most of these statutes prohibit both labor and business; and under the latter term the making of contracts has been decided to be within the prohibition in many States. Our own statute simply prohibits labor. \* \* \* The thing prohibited is labor, and a contract made on any day to perform labor on Sunday save 'the household offices of daily necessity or other works of necessity or charity' is a contract to do a thing prohibited, and therefore void. *But a contract made on Sunday to perform labor on any other day is valid.*"

Under this decision it would seem that in Kansas the making, execution and delivery of a promissory note on Sunday would be valid.

#### BRIEF REPLIES TO SUBSCRIBERS.

**COUNTRY BANK.**—If your man cannot write his name, let him open the account in the regular way and give a power of attorney to sign checks to some person in whom he has confidence. This is better than having his mark witnessed on every check. It is also better than having your customer learn to write his name, as there might be some difficulty in proving signatures.

**BANK CLERK.**—The Comptroller of the Currency will forward, upon application, a copy of the National Bank Act.

**TELLER.**—A note dated January 5th, and having two months to run, falls due March 5th-8th. If discounted on January 25th the time to figure on is 43 days, *i. e.*, the day on which the note is discounted and the day it falls due are both counted. If it be a leap year the time is 44 days.

**LAWYER.**—The opinion of the United States Supreme Court in the case of *Boyer vs. Boyer* can be obtained upon application to the Clerk of the Court and the payment

of a fee to cover the cost of transcribing. The opinion was published in the JOURNAL some months ago. The report of the Bank Tax Committee of the New York Clearing-House can probably be obtained upon application to the Chairman, Hon. John Jay Knox, President of the National Bank of the Republic, New York. But a limited number of the reports were printed, and the edition may be exhausted.

SUBSCRIBER.—“We have six banks and bankers in our town. Do you think it would pay us to organize a Clearing-House?”

It certainly would. A Clearing-House has recently been organized at Grand Rapids, Michigan, with that number of banks, and has proved a great success. An indirect but great advantage is the bringing of the banks into a compact organization.

CASHIER.—The President of a National bank must be a Director. The Cashier may be a Director, but not necessarily so.

CORRESPONDING CLERK.—Letters should be addressed to banks by their corporate titles, and not by the name of the President or Cashier.

INQUIRER.—“Is the list of shareholders of a National bank open to the inspection of the public?”

Not exactly to the inspection of the public; but every shareholder and creditor of a National bank has a right to inspect the list of shareholders at any time during the business hours of the day. See Revised Statutes, § 5210.

T. J. P.—The Comptroller of the Currency will furnish upon application a book of instruction in regard to the organization of National banks.

SUBSCRIBER.—“We wish to divide our New York account. Is it necessary to have the approval of the Comptroller of the Currency?”

Not simply to divide the account. But, in order to have all your New York funds count as part of your reserve, it would be necessary to have your additional correspondents approved as reserve agents by the Comptroller's office.

A. A. B.—“Can silver certificates be counted as part of our reserve?”

Yes, but under present circumstances it is a much better policy to pay them out as fast as possible, and hold on to all the gold you can get.

B.—The shares of National banks held by non-residents of the State where the bank is situated are taxed in the city or town where the bank is located, and not elsewhere. See Revised Statutes, § 5219.

DEPOSITOR.—No, sir. Neither the Court nor the depositors have any voice in the selection of the Receiver of a failed National bank. The Comptroller of the Currency appoints the Receiver and can also remove him.

COUNTRY BANK.—There are a number of reliable safe manufacturers in the United States who will be glad to give you the information you seek. We would suggest that your safe be set on four small pillars so as to be clear of the floor, and out from the wall so that it may be visible on all sides. A bright light should be kept burning all night. It is not a bad idea to throw a substantial awning over the pavement, making the vicinity of the bank a refuge on stormy nights for chance pedestrians. Publicity is one of the greatest safeguards to a country bank.

EDITOR.—It is the duty of the National Bank Examiner to see that the bank is *legally* managed, *i. e.*, in accordance with the provisions of the National Bank Act. The responsibility for *safe* and *prudent* management rests with the Board of Directors.

GOLD BUG.—Undoubtedly you would be better protected against any future contingency by having all the notes and other contracts drawn payable in gold coin of the present weight and fineness.

TEXAS BANKER.—“Which is the correct form in filling up a draft: ‘one hundred twelve <sup>50</sup>/<sub>100</sub>’ or ‘one hundred and twelve <sup>50</sup>/<sub>100</sub>?’”

The latter is better, but there is no material difference.

## BANKING AND FINANCIAL NEWS:

WITH COMMENTS ON THE MORE IMPORTANT MATTERS. THIS DEPARTMENT ALSO INCLUDES: A COMPLETE LIST OF NEW BANKS, CHANGES IN OFFICERS, DISSOLUTIONS AND FAILURES.

**Lincoln National Bank.**—Mr. W. T. Cornell has been appointed Cashier of the Lincoln National Bank, of New York city, vice Mr. J. H. B. Edgar, resigned. The new Cashier was for twenty years connected with the Union National Bank, on Wall street, and had just been appointed Assistant Cashier of that institution when the shareholders decided, last August, to wind up the bank. Mr. Cornell is a man of excellent reputation and will bring experience and executive ability to the position. The business of the Lincoln National Bank is making satisfactory progress. Hon. Thos. L. James is the President of the bank.

**Coin, Bullion and Trade Dollars in the United States.**—The Director of the Mint has compiled a series of valuable tables regarding the coinage, circulation, etc., which are brought down to January 1, 1886. The statistics are given below:

### ESTIMATE OF TRADE DOLLARS IN THE UNITED STATES JANUARY 1, 1886.

Coinage prior to Act of July 22, 1876 .....	\$15,681,000	
Exported prior to July 22, 1876 .....	12,580,000	
Balance not exported .....		\$3,061,000
Coinage since July 22, 1876 .....	\$30,384,924	
Imported since July 22, 1876 .....	2,074,612	
Total .....	\$32,409,736	
Exported since July 22, 1876 .....	16,424,004	
Balance not exported .....		5,985,732
Total not exported .....		\$9,066,732
Minimum remelted at United States Mints .....	\$500,000	2,000,000
Probably taken out by Chinese .....	1,500,000	
Estimated amount in the country .....		\$7,066,732

### ESTIMATE OF COIN CIRCULATION OF UNITED STATES, JANUARY 1, 1886.

United States Coin.	Gold.	Silver.
Circulation July 1, 1885 .....	\$542,174,693	\$278,324,201
Coinage for the six months ended December 31, 1885 .....	15,532,511	14,462,769
Net imports of U. S. coin (other than trade dollars) .....		213,848
Total .....	\$557,707,147	\$293,590,818
Less deposits of United States coin for recoinage .....	\$195,301	\$136,946
Estimated United States coin used in the arts .....	2,500,000	100,000
Net exports of United States coin .....	1,201,698	
Total loss .....	\$3,896,900	\$236,946
Circulation January 1, 1886 .....	\$553,810,146	\$293,208,872
Bullion in Mints and Assay offices December 31, 1885, available for coinage .....	72,923,721	4,611,078
Total metallic stock, January 1, 1886 .....	\$626,733,867	\$297,804,950

**STOCK AND OWNERSHIP OF GOLD AND SILVER COIN AND OF BULLION AVAILABLE

**Distrust of Banks in Mexico.**—The comparative neglect of banking facilities in this country is a matter which strikes foreign observers with wonder. Our large merchants still continue to do business in actual coin, instead of, as in New York, London, Valparaiso and Buenos Ayres, with checks on bank deposits. In the more progressive nations the relative importance of coin as a medium of exchange is rapidly diminishing. Silver, being a bulky and heavy metal, and gold a more easily transported one, the latter, is for economical reasons, preferred in actual coin shipments. We see it here where the express rates for transferring coin constitute an important item of expense in sending silver no farther from the capital than Vera Cruz. If the banks were more generally used as places for depositing silver, and business payments made by checks, a heavy annual tax on business operations would be saved. But, it is

objected, the mercantile public has no confidence in banks, which simply shows that persistently continued legislative interference with the banking system of the country tends to make the public incredulous as to the safety of banks as places for the deposit of money.—*Mexican Financier*.

**Value of Foreign Coins.**—The following table, just prepared by the Director of the Mint, contains the new estimate of the values of foreign coins:

Country.	Monetary Unit.	Standard.	Par of exchange or equivalent value in terms of U. S. gold dollar.
Argentine Republic .....	Peso .....	Double .....	\$0.96.5
Austria .....	Florin .....	Single silver..	.37.1
Belgium .....	Franc .....	Double .....	.19.3
Bolivia .....	Boliviano .....	Single silver..	.75.1
Brazil .....	Milreis of 1,000 reis .....	Single gold...	.54.6
British Possessions, North America	Dollar .....	Single gold...	1.00
Chili .....	Peso ..	Double .....	.91.2
Cuba .....	Peso .....	Double .....	.93.2
Denmark .....	Crown .....	Single gold...	.26.8
Ecuador .....	Peso .....	Single silver..	.75.1
Egypt .....	Piastre .....	Single gold...	.04.9
France .....	Franc .....	Double .....	.19.3
German Empire .....	Mark .....	Single gold...	.23.8
Great Britain .....	Pound sterling.....	Single gold...	4.86.094
Greece .....	Drachma .....	Double .....	.19.3
Hayti .....	Gourde .....	Double .....	.96.5
India .....	Rupee of 16 annas .....	Single silver..	.35.7
Italy .....	Lira .....	Double .....	.19.3
Japan .....	Yen .....	Single silver..	.81.0
Liberia .....	Dollar .....	Single gold...	1.00
Mexico .....	Dollar ..	Single silver..	.81.6
Netherlands .....	Florin .....	Double .....	.40.2
Norway .....	Crown .....	Single gold...	.26.8
Peru .....	Sol .....	Single silver..	.75.1
Portugal .....	Milreis of 1,000 reis.....	Single gold...	1.08
Russia .....	Rouble of 100 copecks..	Single silver..	.60.1
Spain .....	Peseta of 100 centimes..	Double .....	.19.3
Sweden .....	Crown .....	Single gold...	.26.8
Switzerland .....	Franc .....	Double .....	.19.3
Tripoli .....	Mahbub of 20 piastres ..	Single silver..	.07.7
Turkey .....	Piastre .....	Single gold...	.04.4
United States of Colombia .....	Peso .....	Single silver..	.75.1
Venezuela .....	Bolivar .....	Double .....	.19.3

**NOTE.**—The "Standard" of a given country is indicated as follows, viz.: Double, where its standard silver coins are unlimited legal-tender, the same as its gold coins; single gold or single silver, as its standard coins of one or the other metal are unlimited legal-tender. The par of exchange of the monetary unit of a country with a single gold, or a double, standard is fixed at the value of the gold unit as compared with the United States gold unit. In the case of a country with a single silver standard, the par of exchange is computed at the mean price of silver in the London market for the three months ending December 24, 1885, as per daily cable despatches to the Bureau of the Mint.

**The Silver Market in 1885.**—The annual review of Messrs. Mocatta & Goldsmid, bullion brokers of London, says: "The decline in the value of bar silver which has gradually taken place during the last fourteen years has been more marked in 1885 than

in any previous year. The price on the 1st of January last (1885) was 48½d. per oz., rising in the same month to 50d., which was the highest quotation of the year, and was again touched in the first week of May. On both occasions it fell away immediately to below 49d., remaining near that figure until August, from which period there has been an almost continuous fall till last week, when the lowest price at which silver has been dealt in, with a single exception, was reached—viz., 48½d. per oz. The exception in question was on the 8th of July, 1876, when the culmination of the panic caused by the demonetization of silver by Germany occurred, and one transaction at 48½d. occurred, when there was an immediate recovery, and by the end of the year the price had gradually risen to 57d. The fall has been almost unbroken, although the passage of the Bland bill in the United States in 1878 gave a little firmness to the market for a time, which, however, did not last long, owing to diminished demand for India in that year. For the last two or three years reports have been periodically current that endeavors would be made to obtain a repeal of the Bland bill, and this, with other causes, such as the increase in the amount of the India Council bills, and the general depression of trade, has tended to prevent any recovery in the value of silver. The value of the imports and exports has not varied much from that of the last three years, and the sources of supply and destination of the exports have not sensibly altered. India has taken £8,300,000 against £5,750,000 in 1884. India Council bills and transfers to the extent of £10,840,000 have been sold at prices more or less relative to the quotation for silver from 1s. 7 5-32d. per rupee (for bills) in January to 1s. 5 81-32d. at the end of the year. In the early part of the year most of the Mexican dollars imported were taken for refining purposes, but during March and April some moderate amounts were shipped to China and the Straits. Subsequently the French Government became purchasers in consequence of their operations in Tonquin, and nearly the whole of the arrivals for some months bought for their account at much higher rates than the English banks were able to pay—frequently a premium of 3 per cent. When the price of bar silver began to fall so rapidly the French Government reduced their buying price, step by step, till about the beginning of December, when their orders ceased, and an arrival of dollars (on the 18th inst.) was sold for China at 45 9-16d. per oz., a mere fraction above their melting value. The highest price of the year was 48 13-16d. per oz. in January, and the lowest 45 9-16d. in December, the average being 47 15-16d. against 49 13-16d. in 1884."

#### MISCELLANEOUS BANK AND FINANCIAL ITEMS.

- The people of Sandwich, Mass., are trying to establish a savings bank.
- The People's Bank, of De Soto, Mo., is offering a premium for its stock.
- The litigation growing out of the Shackamaxon Bank failure is proceeding in Philadelphia.
- Ritzinger & Co., bankers, at Indianapolis (with \$30,000 capital), have made an assignment to George B. Yandee.
- Efforts are making to have another savings bank authorized in Gloucester, Mass., but there is considerable opposition.
- J. H. Aufdemorte, late Redemption Clerk at the New Orleans Sub-Treasury, has been found guilty of embezzling \$25,340.
- Lancaster county, Pennsylvania, contains twenty-four banks within its borders, which have an aggregate capital of \$4,200,000.
- The day known in Wall Street as "Black Friday" occurred September 24, 1899. We mention this as it is a frequent matter of dispute.
- Receiver J. D. Harvey, of the Scandinavian National Bank, Chicago, is paying a final dividend of 7½ per cent., making 87½ per cent. in all.
- The Gallatin National Bank, of New York, is erecting an eight story bank and office building, to cost about \$350,000, at 84 and 86 Wall street.
- The jury in the trial of Dr. F. P. Pfeiffer, Cashier of the Gloucester (N. J.) Savings Bank, for embezzlement, found a verdict of "Not guilty."
- The German-American Safe Deposit Company has filed articles of incorporation in New York, with a capital of \$100,000. The incorporators are Isaac E. Gates, Henry

Buckhout, Charles B. Bostwick, John A. Geisenheimer, L. W. Winchester, Calvin Orcutt, William M. Hastings, Woodruff Sutton and Frederick Foster.

— The Philadelphia Stock Exchange has resolved by over a two-thirds vote to reduce the commission on bond transactions from  $\frac{1}{4}$  to  $\frac{1}{8}$  per cent.

— It is reported from Chicago that Mr. W. C. D. Grannis will shortly organize a new National bank, with a capital of \$1,000,000, to be known as the Importers & Traders'.

— The stockholders of the Lancaster National Bank, at Clinton, Mass., have elected Directors and appointed a committee to adopt means for taking the bank out of the Receiver's hands. The total liabilities are \$246,240.

— Hon. Thomas C. Acton, late Assistant United States Treasurer at New York, has received a receipt for \$187,076,849.17, being the sum ascertained by count to have been in the vaults on December 31st last, when he retired.

— Steps have been taken by the Board of Directors of the St. Louis Merchants' Exchange to establish a Stock Board in connection with that body, in which all stocks and bonds properly listed will be called on the floor of the Exchange.

— The millionaire Stanford says "silver is a poor man's money." It costs the poor man just as many hours' work to get his silver money, however, as if it were gold, and yet it is really worth twenty cents on the dollar less.—*Chicago Times*.

— Over \$10,000,000 in treasure was shipped to China during the past year from San Francisco in excess of the amount remitted in payment of the balance of trade against that port, which amounted to \$2,300,000. During 1884 this excess was over \$9,000,000.

— Proceedings have been brought against Samuel Bingham, of the Windham (Conn.) National Bank, on a charge of taking unlawful commissions on commercial paper bought of President Fish, of the failed Marine National Bank of New York.

— On February 24th, George A. Wardner, city book-keeper in the National Exchange Bank, of Milwaukee, shot and fatally wounded Abbott Lawrence, Assistant Cashier in the same bank. Wardner appears to have been suffering from aberration.

— H. P. Mills, President of the Genesee National Bank, Mount Morris, N. Y., has just passed his seventy-ninth birthday, and being unusually vigorous and healthy proposes on his next birthday to take a toboggan ride with Gov. Hill, at Albany.—*Rochester Democrat*.

— The Massachusetts Legislature is considering a bill to provide that savings banks shall not carry on business in buildings occupied by National banks, and that officers of one should not be officers of the other, so that funds cannot be transferred between them to cover up deficiencies.

— The bill authorizing the Treasurer of the United States in his discretion and with the consent of the Secretary of the Treasury to appoint one of his clerks to discharge the duties of Treasurer or Assistant Treasurer in the event of illness or absence of either of these officials has been passed in the House of Representatives.

— The Houston Savings Bank, at Houston, Texas, has failed. After the failure of the City Bank last December there was a run on the savings bank, but payments were promptly met. The bank was chartered in 1871, with an authorized capital of \$800,000, of which \$10,000 was paid in, and last Fall showed a surplus over the paid-in capital of \$61,788.

— Mr. J. M. Hudson has resigned the office of Assistant Cashier of the Merchants & Planters' Bank, of Pine Bluff, Ark., in order to engage in more active and remunerative business. The Directors say: "He has our best wishes and assurances that it will be the pleasure of the bank and of its individual members to contribute to his future prosperity."

— When Cashier Bornemann was restored to his position in the United States Sub-Treasury at San Francisco some weeks ago he refused to become responsible until the cash was counted. When counted a shortage of \$10,000 was discovered. The Treasury Department at Washington was notified on March 3d, and a special agent was sent to investigate the matter.

— We notice important changes in the management of the First National Bank of Trinidad, Col. Mr. M. D. Thatcher, of Thatcher Bros., of Pueblo, has been chosen President, George R. Swallow, late Cashier, becomes Vice-President, and H. J.

Alexander, formerly of the Miners & Merchants' Bank, of Lake City, and later of Denver, becomes Cashier.

— Anti-silver man—"But, my dear sir, how would you like to have your correspondents pay you in cart-wheel dollars?" Silver maniac—"Pay me? You don't seem to understand the people of our section. Nobody owes us anything. We aren't at all selfish in this matter. No, sir, it is you Eastern capitalists who will never look at this question in a broad and disinterested manner.—*Boston Transcript*.

— Colonel B. K. Jamison, the Philadelphia banker, has converted the farm on which he was born, near Saltsburg, Indiana County, Pa., into the Jamison Home, and intends it for an abiding place for all his kith and kin who desire to avail themselves of its hospitality. The farm is quite a large one, beautifully situated, and contains a number of dwelling houses. In one of them the colonel keeps a room ready for his occupancy.

— A statement prepared by the United States Treasurer shows that out of 222,739,761 standard silver dollars coined up to February 20th, \$51,627,889 were in circulation on that date, whereas out of 206,784,381 silver dollars coined up to July 31st last \$39,284,433 were then in circulation. The amount of standard dollars in the Treasury, after deducting silver certificates in circulation February 20th, was \$62,587,346, as compared with \$67,627,842 in the Treasury July 31, 1885.

— A proposition has been made by J. B. Williams, Receiver of the Bedford County Bank, at Everett, Pa., which failed in September, 1884, for a settlement of the claims against the bank, which will probably be accepted by the creditors. The liabilities were about \$147,000, and the assets were about an equal amount, but much of them valueless. The Receiver has realized out of the assets about \$65,000, and the amount the Huntingdon stockholders have agreed to pay in settlement of the large number of suits against them is \$29,000. It is believed that enough will be realized to pay 80 per cent. of the liabilities.

— The report of Willis S. Paine, Superintendent of the Banking Department, in relation to the savings banks of New York State, was presented to the Legislature on March 1st. It is a long and carefully prepared document, and, while largely devoted to figures and statistics of interest to the professional financier, it contains a great number of facts and recommendations of vital importance to every depositor in the State. The total resources of the savings banks of the State on January 1st last were \$584,536,633 and their liabilities \$457,253,744. The number of such banks in existence was 123, ten of which are in process of liquidation and receive no deposits. No new bank was organized during the year 1885. We shall devote more space to the report next month.

#### FOREIGN BANKING AND FINANCIAL AFFAIRS.

**AUSTRALIA.**—A Victorian loan was recently covered in London seven times at 18 above the minimum.

**CHINA.**—A report comes from London that the Chinese Government has pronounced against a new loan, and will postpone the laying of railways.

**SPAIN.**—Senor Camacho, Minister of Finance, proposes the inauguration of reforms throughout the country. He is confident that a financial equilibrium will be restored if his proposals are adopted.

**FORGED PARISIEN BONDS.**—It was recently discovered that a large amount of spurious bonds of 1871 of the city of Paris had been floated throughout France. Their origin was traced to the London firm, "C—, N— & Co.," described as bankers, although the London directory does not contain any such firm. It is estimated that 2,000 of the bonds were sold in France, which would represent 800,000 francs (\$160,000).

**FRANCE.**—The Paris Company of Agents de Change, or privileged stock brokers, has introduced modifications into its regulations to recognize options, and defining the limits within which they may be engaged in.

The French Government has appointed a permanent commission to examine into questions relating to the monetary standard at home and abroad.

**ITALY.**—An important meeting of Managers of the savings banks in the principal cities of Italy has been held at Milan. They constituted the superior council of the newly instituted National bank for the insurance of workmen against accidents

arising during their work. In the first year of operations eighteen thousand workmen availed themselves of the advantages of this system of insurance.

**THE VIENNA CLEARING-HOUSE** (Wiener-Giro und Cassenverein) had net profits of 221,241 florins during 1885, being 97,154 florins more than during the preceding year. It will pay a dividend of 12 florins, or 6 per cent., against 4 per cent last year and 7½ per cent. the year before.

**GREAT BRITAIN.**—The returns issued by the Board of Trade show that the imports during the month of January decreased £6,600,000 as compared with those of the corresponding month last year, and that the exports decreased £900,000 as compared with those of January, 1885.

Sir Charles Henry Mills, of the banking firm of Glyn, Mills & Currie, London, has been elevated to the peerage.

**MEXICO.**—The Government announces that, in conformity with the decree of last June, it will immediately establish an agency at London for the registration and liquidation of Mexican bonds. The appointments in this connection have already been made, Senor Francisco Z. Mena, the present Mexican Minister at Berlin, being appointed as Agent, and Senor Carlos Mexia, now Mexican Consul at Liverpool, as Secretary. A Director, with sub-officials for the settlement of the debt, will be installed in the city of Mexico.

**ARGENTINE REPUBLIC.**—In January, 1885, a decree was passed sanctioning a forced paper currency. In the following August an Act was adopted providing that debts contracted before the decree mentioned in National gold money could be discharged in legal-tender notes. Exception was made of contracts made in specie money, which can be discharged in legal-tender notes at their market value on the day the debt falls due. The result is a series of law-suits for the fulfilment of gold contracts entered into prior to the January decree. It is expected that the Courts will uphold the contracts.

**AUSTRO-HUNGARIAN BANK.**—The annual report of this institution shows that during the past year four new branch offices were opened, so that the bank has now, in addition to the head offices at Vienna and Budapest, 40 branch offices and 20 agencies. The total transactions at all the offices amounted to 1,316,204,915 gulden, a decrease from the total for 1884 of 154,216,344 gulden. The coin and bullion in the coffers of the bank amounted, on December 31, 1885, to 120,723,317 florins in silver, an increase of 3,155,141, and 60,072,718 florins in gold, a decrease of 9,749,414 since the end of 1884. At the end of 1885 the issues of notes amounted to 363,003,020 florins, against which 196,796,035 in cash and bullion was held, the difference of 166,206,984 florins having to be covered by good bills receivable. Of the notes in circulation 57.24 per cent. were covered with coin and bullion in 1885 and 53.50 per cent. in 1884.

**CANADA.**—The official statement of the revenue and expenditure of the Dominion Government for the seven months of the current fiscal year ending January 31st last shows a deficit of \$5,187,287 in revenue. The total revenue was \$17,340,027 and the expenditure \$22,477,314. Such an excess of expenditure is unprecedented in Canadian history, and the Finance Minister is endeavoring to raise a temporary loan from the banks to meet it.

The statement of the condition of the chartered banks doing business in Canada at the end of 1885 shows a slight expansion of business during the year. There has been an increase of \$12,000,000 in aggregate assets and a like increase in liabilities. The amount of public deposits on call in the banks increased from \$42,004,831 in December, 1884, to \$52,119,190 at the close of 1885. In interest-bearing deposits, however, there has been no appreciable increase. The volume of chartered bank notes in circulation now amounts to \$32,362,992, a slight increase over that in December, 1884. The specie reserves continue to diminish, while the volume of Dominion notes handled by the banks have increased monthly. The balances due from United States and other foreign banks are greater by \$3,500,000 than at the end of 1884, while the balances due from British banks are over \$1,000,000 less, which shows that Canada's trade with Great Britain has fallen off during the year. In loans of almost every class there has been an increase, current public discounts being \$3,000,000 in excess of what they were at the beginning of the year. A large amount of over-due debts has been written off, and the banks have begun to invest a large proportion of their reserves in Dominion bonds and other Canadian securities.

## BI-METALLISM IN EUROPE.

The fact transpired in November last that Mr. Manton Marble had returned from Europe after accomplishing a secret mission for the State Department extending since the preceding May and of very considerable importance, financially speaking. The following extract from the President's letter indicates the purport of the mission:

"The President has had in review the several successive Acts of Congress of the United States from March, 1876, to July, 1884, which, authorizing the Silver Commission of 1876-'77, the International Monetary Conference at Paris of April-July, 1881, and also negotiations with foreign Governments under the Act of June 21, 1879, and the Act of August 7, 1882, and the continuance of the same under the Act of July 7, 1884, have sought to prepare for, promote and obtain the adoption of a common ratio between gold and silver for the purpose of establishing internationally the use of bi-metallic money and securing fixity of value between these metals."

In compliance with the uniform purpose indicated in these various Acts of Congress, and in furtherance of their object, Secretary Bayard was directed by the President to request Mr. Marble to proceed to Europe, and by personal conference with the expert advisers and statesmen of the principal Governments of Europe, and in conjunction with the Ministers representing the United States near these Governments, particularly with our Ministers to Great Britain, France and Germany, to ascertain the present opinions and purposes of those Governments in respect to such an establishment, internationally, of a fixed relative value between the two metals, one ratio of weight between coins of gold and coins of silver, the free coinage of both metals at the Mints of all, and the international use of both metals as money of unlimited legal-tender.

In obedience to these instructions, Mr. Marble spent four or five months in personal conference with the principal members and the Finance Ministers of the Governments in London, Paris and Berlin, and in such consultations with the leading economists and monetary experts of the three great Powers of Europe, including all the principal bi-metallists, and also the foremost leaders of the opposition in England.

The result of the investigations was recently reported to the United States Senate in the form of letters from the Ministers of the United States to Great Britain, France and Germany respectively. These officials had been specially instructed to act in conjunction with Mr. Marble, and were possessed of the information gained by him, so that no separate report was made.

Accompanying the communication to the Senate was a report of Mr. George Walker, Consul-General at Paris, who was last year requested to attend the last conference of the Latin Monetary Union.

These communications doubtless give the most reliable information anywhere attainable of the present attitude of the chief nations of Europe as regards silver, which is a matter of great importance in this country at present. They make it evident that there is no probability of those countries renewing the coinage of silver under present conditions. It is plain that if the United States continues its coinage it will receive no assistance in rehabilitating the white metal from the other great commercial nations. The following abstract of the letters spoken of will make this evident enough.

The communication from Minister Phelps, under date of London, October 20th, in which he gives the result of conferences by himself and Mr. Marble with the leading members of Her Majesty's Government, says:

"From these as well as other sources I am satisfied that the British Government will inflexibly adhere to their past and present policy in respect to coinage; that they will not depart from the gold standard now and so long established; that they will not become party to any international agreement or union for the creation of a bi-metallic standard at a common ratio between gold and silver for the purpose of making both an unlimited legal-tender, nor adopt such double standard in Great Britain. On this point both political parties quite concur. And I believe if either were to attempt to introduce such a departure from the existing money standard it would be driven out of power by the force of public opinion."

The letter from Minister McLane, at Paris, dated October 1st, expresses his opinion that, while France would gladly receive the intelligence that the United States would

adopt the French ratio of  $15\frac{1}{4}$  of silver to 1 of gold, no consideration of future consequences could induce her to adopt the American ratio of 16 to 1. Still less would she accept any higher ratio to assimilate the present commercial or market value of silver with the value of gold, nor would she consent at any ratio now to permit an unrestricted, or even a limited, coinage of silver at her Mints. The present purpose of her Government and people is to maintain, if possible, the two metals at their ratio of  $15\frac{1}{4}$  to 1 in domestic circulation and international exchange. Figures are given showing a decided increase in the circulation of silver in France since 1868. In 1868 the proportion of gold to silver in circulation was as 97.72 to 2.28, and in 1878 it was 73.55 to 26.45, and in 1885 it appears to be 69.33 to 30.37. A legal-tender silver coinage of about \$800,000,000 in value was maintained in France in September last, but it is conceded that this result was mainly due to the fact that the coinage of silver was suspended not only in France but in other countries whose coin is allowed to circulate in France. These facts naturally suggest that the United States, the greatest gold and silver country in the world, should suspend its coinage in order to utilize it, not only for circulation, but as part of its Treasury reserve.

Minister Pendleton, in his letter, dated Berlin, October 10th, gives his conclusions briefly as follows:

"The adhesion of Germany to an international bi-metallic union such as was proposed by the United States and France in 1881 can scarcely be expected, it seems to me, within any limit of time now to be predicted. The co-operation of Germany in such a union may be sought with fair hopes of success whenever it becomes possible to include in such a union England and Russia, the former of which seems to cleave tenaciously to her gold mono-metallism, while the latter staggers under the evils of a depreciated and largely fluctuating paper money. The adhesion of England, at least, is certainly now, and would probably for an indefinite period be, regarded by Germany as a *sine qua non*."

Consul-General Walker, in the report to the Secretary of State mentioned above, reviews in detail the changes of sentiment of foreign countries in relation to monetary matters as shown in the proceedings of the monetary conference. Mr. Walker says his information shows that an intelligent majority of the principal commercial centres of Great Britain have reached the conclusion that the silver question is largely responsible for the existing distress, and believes that bi-metallism, to be established by international treaty, is the only sufficient monetary remedy. He continues:

"I beg to reiterate the opinion which I have expressed in former despatches that nothing will so much hasten the adoption in Europe of the monetary policy which we desire to have adopted as the suspension of the silver coinage in the United States. Deprived of this artificial support, silver would rapidly find the level to which the recent military legislation and action of this Continent has doomed it, and those who have promoted that legislation and action as well as those who suffer from it would thus be brought face to face with its legitimate consequences."

We have later news as to the agitation of this question in each of the three countries mentioned above.

At the annual meeting of the International Monetary Standard Association, in London, Mr. H. H. Gibbs, ex-Governor of the Bank of England, who presided, admitted that the progress of bi-metallism was slow in England, but said it was advancing in Germany. The Association resolved to form a gold and silver league on a popular basis. A conference was called by the London Chamber of Commerce for the discussion of the silver question on February 22d, to which the provincial Chambers of Commerce sent delegates. The prevailing sentiment was decidedly bi-metallic, and the following resolution was passed: "We urge the Government to unite with other countries in an endeavor to restore silver to its former function as a legal-tender, thereby giving it a permanent instead of a fluctuating value." The bi-metallists of England are a small but active and influential body who have little to show for their efforts since they organized a few years ago. Whether the proposed league will be more successful remains to be seen.

The French Government has appointed a permanent commission to examine into questions in relation to the monetary standard at home and abroad. There was a debate in the Chamber of Deputies, on February 8th, with reference to the depreciation of the commercial value of silver. The Government was urged to ask for the reassembling of the International Conference of 1881. The Minister of Finance said that most of the powers interested were indisposed to change their present ratio between gold and silver. The Minister of Foreign Affairs said the French Government was not indisposed

to negotiate with other Governments, but that the present time was not favorable for such negotiations, and desired that the question be indefinitely postponed. Thereupon the Chamber postponed indefinitely the further consideration of the subject.

Late in January last, Herr Scholz, the Prussian Finance Minister, declared in the Landtag that the Imperial Government would uphold mono-metallism. He explained that he was not a fanatical partisan of the gold standard, and could sympathize with sufferers for their efforts to raise the value of silver, but the question was an international one and must be treated accordingly. While he would carefully examine the question, he was unable to undertake the introduction of a measure providing for an international double standard. On February 10th a motion was introduced in the Reichstag by Herr Huene, on behalf of the Conservatives, urging a new and searching inquiry into the currency question, with a view of ascertaining whether it would be better to adhere to mono-metallism or return to a double standard. This motion was adopted the next day by a vote of 145 to 119.

We see that, while the subject of the monetary standard is being discussed abroad, the authorities everywhere are agreed that no decided action ought to be taken under the present conditions.

### NEW COUNTERFEITS—BANK NOTES AND COIN.

Chief James J. Brooks, of the Secret Service Division of the United States Treasury Department, informs us that a counterfeit \$5-note on the issue of the First National Bank of New Bedford, Mass., was received at the Treasury Department March 1, 1886. It is photographed, and of the same poor quality as the spurious \$5-note of the Pacific and Boylston banks of Boston, Mass., also of the Dedham and Fall River \$5, the carbon print having a washed or faded appearance, while the pink seal and the Treasury and Charter numbers are in such lurid contrast with the black as to at once proclaim the note a counterfeit. The green in the border on the back of this note is not put on with a brush, as in the foregoing counterfeits, but is printed. Treasury No. B796,654, Charter No. 261, Series 1875, Check letter B.

**Dangerous Counterfeit Dollars.**—Teller Henderson, of the La Crosse (Wis.) National Bank, recently discovered a counterfeit silver dollar that is pronounced by all bank people in that city absolutely the most dangerous ever seen. It is a standard silver dollar of the currency of 1881. The outside is silver, and the die in every substantial particular as clear as the original. It stands all microscopical tests. The only possible means of detection is by weight, it being exactly 47 grains short of the standard, and estimated about 48 grains short of the average.

It is reported that Cincinnati counterfeiters have been issuing a large amount of silver half and quarter dollars of such fine appearance as to deceive most people.

**A POINT.**—Numerous requests reach this office inquiring if there is issued in the United States any publication which can be depended on as a safe protection against the counterfeiter's art. After diligent inquiry we have been unable to find any such publication. The several Bank-Note and Counterfeit "Detectors," "Reporters," etc., are padded up with a vast lot of humbuggery, and it is very seldom that they are of any practical use to the banker. There is not such a vast amount of dangerous counterfeit money in the country as some people are led to suppose. Of course skilful (?) traveling agents go about the country and try and make bankers and others believe that "crooked" money in great quantities is in circulation, and that the woods are full of expert counterfeiters. This is largely a delusion. The Secret Service Bureau of the Treasury Department is managed with great skill and is doing effective work in ridding the field of what may be called dangerous counterfeits. Let us suggest to bank officers to use due diligence in handling money—always make careful examinations, and study critically the distinguishing points of genuine bills and coin. By doing this you will soon be able to pick out the spurious at a glance.

The most reliable information regarding counterfeits—and none will be printed unless we believe it to be trustworthy—will be found under this head in every issue of the *JOURNAL OF BANKING*.

**GUARANTEEING NATIONAL BANK DEPOSITS.**

*Editor Rhodes' Journal of Banking:*

SIR:—I have read with much interest the discussion that has been going on both in the JOURNAL and in other publications regarding the Flannagan bill for guaranteeing deposits in National banks, and, having been in some respects favorably impressed with its merits, I ask leave to try to answer the objections brought by "Country Banker" in the January JOURNAL.

The proposition is not to impose a fresh tax but to set apart as a guarantee deposit fund the proceeds of a tax already in force and which there is not the slightest probability of Congress taking off.

It is rather a gratuitous assumption that, when a bank fails, the failure is always the result of recklessness or dishonesty. It is equally out of place to assume that all the banks that do not fail are honestly and prudently managed.

For railroads, manufacturers, merchants and farmers to make up, by small individual assessments, a pool to pay their creditors would certainly be an excellent arrangement. The difference between such an arrangement and the guarantee deposit scheme is simply that the latter is practicable; the former is not.

Your correspondent seems to be under the impression that the ability to pay its debts is the only inducement a bank can offer in order to obtain business. But such is not at all the case. Ability to make large loans at reasonable rates is a powerful factor in getting accounts. This is why the big firms and corporations go to the big banks, because, when a squeeze in the money market comes, the bank will take care of its own customers first.

Again a great deal of business is procured for a bank through the personal influence of the President, Cashier and Directors. Judicious advertising in reputable banking and financial publications also adds largely to the deposit line. Proper methods of doing business with customers are no mean factor in the prosperity of a bank. These and other ways of getting business, that might be enumerated, are quite outside the question of safety to deposits.

If a competing bank offers ruinous inducements to get business it will simply ruin itself, and that will be the end of it. But in its ruin it will not drag down a host of innocent depositors. The loss will fall both directly and indirectly, precisely where it should fall: that is, upon the owners of the bank, and not upon the business community, who have nothing to do with and no control over its management.

As I understand the matter the Government is not responsible in any case. It only undertakes to faithfully discharge the duties of a trustee as to the guarantee fund as it accumulates. It may be admitted, in general terms, that there will always be people who will do wrong. So the orderly citizen is taxed to maintain Courts and police to restrain the disorderly, the careful citizen is taxed to maintain a fire department to put out the fire of his careless neighbor, and so on through a long list. It may not be abstract right and justice but it is the way of the world and we shall have to put up with it.

I confess I am unable to see wherein the guarantee deposit system would have a tendency to destroy the value of honesty and integrity in bank officials. On the contrary I should think such qualities in their officers and employes would be more highly prized than ever by the stockholders. The number of banks, and consequently the banking facilities, will undoubtedly be increased throughout the country. But if any person who have not mercantile sagacity enough to establish a credit in their own community undertake to go into the banking business their career may be brilliant but it will be very brief and very instructive.

Will "Country Banker" undertake to say that every place in the United States that needs a bank has one, and that every bank has as large a line of deposits in proportion to its capital as it can safely and judiciously use?

There is one point in favor of the guarantee plan which has, thus far, I believe, been overlooked. It is this: Every bank will have its list of correspondents guaranteed. This will result in a more general custom of sending checks direct to destination and will be one step forward towards a system of country clearing.

BALTIMORE, February 22, 1886.

Very respectfully, B. H. J.

## NEW BANKS, CHANGES, FAILURES, ETC.

#### WISCONSIN.

**JANESVILLE.**—First National Bank; no Assistant Cashier in place of J. G. Rexford. Rock County National Bank; no Assistant Cashier in place of S. B. Smith.

**MEMOMONEE.**—A. Tainter & Son have recently commenced business. Capital, \$100,000. Cashier, S. B. French.

**OSHKOSH.**—Union National Bank; J. J. Moore, Vice-President, in place of J. L. Mead.

**A Counterfeit \$2 Treasury Note** has appeared; series, 1880; letter, D; B. K. Bruce, Register; A. U. Wyman, Treasurer. It has a very scratchy appearance. It seems to be the product of a wood-cut. The medallion of Jefferson on left end of face of note is exceedingly poor; the picture of the Capitol in centre of note is a mere outline of same; the letter "y" in name of Treasurer is a "g" in counterfeit; numbering fair; lettering in border and back poor. **LEGAL TENDER** on back reads **LEGAL LENDER** in counterfeit; paper soft and dark; yet the note tendered at twilight is liable to deceive unless scrutinized.

[The above is the description as furnished us, March 5th, by Chief James J. Brooks of the Secret Service Division of the United States Treasury Department. See also our suggestion on page 211.—EDITOR JOURNAL.]

**Guarantee Insurance.**—The attention of the JOURNAL's readers is directed to the announcement of the Guarantee Company of North America in this number—see back cover. In addition to the information conveyed in the Company's card, here are some pertinent facts gleaned from the Thirtieth Annual Report, dated December 31, 1885:

The Company still strictly adheres to its principle of declining to undertake trustee suretyships, for large or small sums—its bonds are strictly confined to officers of public and commercial institutions, and not more than 7 per cent. of its capital is carried on one risk. The total losses paid to date amount to \$388,645.85.

The Company has, during the year, pursued a rigid course toward defaulters, sparing no expense to make such examples of them as, it is hoped, will tend to deter others bonded by it from defrauding their employers, and so render the Company's system the more valuable to their patrons. During the year, in pursuance of this policy, no fewer than 23 fugitive defaulters have been brought to justice.

It is a matter of great regret that no further advancement has been effected in regard to the extradition treaty between the United States and Canada, but the special facilities which this Company possesses through its extensive organization in Canada and the United States as well as other parts of the world are such that it is difficult for defaulters bonded by it to long elude pursuit.

The paid-up capital and resources of the Company on the above-named date amounted to \$825,768.46. Deposited in the United States, \$240,000.

**The "Thompson Reporter's" Latest Dodge.**—We again find it necessary, on behalf of the banking community, to call attention to this concern. With this number of the JOURNAL appears a brief and pointed supplement which needs no extended comment—it tells its own story. If the so-called *Thompson Reporter* could in any possible sense be termed a business competitor of the JOURNAL we would feel some delicacy about exposing its methods, fearing that persons unacquainted with the facts in the case (there are surely very few of such, however, among bank officers in the United States) might be led to believe that we were actuated by personal motives. Fortunately no disclaimer of ours is necessary on this point. If the *Thompson* scheme had never existed—under L. P. Haver's management, or that of any other person—or if the entire concern and all its manipulators were now sunk into the depths of the sea, the business of the JOURNAL would not be affected to the extent of a single penny. When we took the matter vigorously in hand some months ago and secured Haver's conviction our sole purpose was to rid the banking community of an annoying pest; and if the same old game is now being continued by Haver's successors (or tools) a like spirit will prompt our action. After a hasty perusal of this month's supplement our readers can form their own conclusions as to the present status of the so-called *Thompson Reporter*, which is apparently conducted by Anthony Stumpf and C. D. Steurer. The latter appears on the card of the concern as "General Manager," and it is of some interest to note that Steurer was in Haver's employ and was also one of his [Haver's] principal witnesses in the recent trial. Steurer swore, it will be remembered, that Haver was correct in his business methods. He stated on the stand that during his connection with Haver, dating back several years, no bills had been sent out except for services rendered, and that the general workings of the office, with which he was familiar, were straightforward. "I knew what was going on," he explained, "*because Mr. Haver is educating me to TAKE HIS PLACE some day!*" From present indications Steurer finished his education in the Haver school and is now installed in "his place."

## R. R. AND INVESTMENT NEWS.

▲ SYNOPSIS OF INFORMATION REGARDING RAILROAD AND OTHER CORPORATION AFFAIRS OF INTEREST TO BANKERS, INVESTORS, ETC., CLASSIFIED AS FOLLOWS:  
I. NEW ISSUES. II. REPORTS. III. MISCELLANEOUS INVESTMENT NEWS.

### I. NEW ISSUES.

**NEW YORK STOCK EXCHANGE LIST.**—The Governing Committee has listed the following securities:

New York, Lake Erie & Western—\$4,082,000 funded coupon 5 per cent. bonds of 1885-1890.

Norfolk & Western Railroad Company—\$394,000 additional improvement and extension 6's of 1884.

East Tennessee, Virginia & Georgia Railroad Company—Central Trust Company's receipts for first consolidated 5's of 1880, ex-coupons 9 to 12.

Oregon & Transcontinental Company—\$100,000 additional bonds of 1822-1822.

Cincinnati, Washington & Baltimore Railroad Company—\$500,000 prior lien 4½ per cent. bonds of 1893, Nos. 1 to 500 inclusive; \$1,250,000 first mortgage 6 per cent. bonds of 1901, Nos. 1 to 1,250 inclusive; \$5,922,000 first mortgage guaranteed 4½ per cent. bonds of 1901, Nos. 1,251 to 7,172 inclusive; \$3,040,000 second mortgage 5 per cent. bonds of 1901, Nos. 1 to 3,040 inclusive; and \$2,270,000 third mortgage ¾ per cent. bonds of 1901, Nos. 1 to 2,270 inclusive.

Northern Pacific Terminal Company of Oregon—\$3,000,000 first mortgage 6 per cent. gold bonds of 1903, Nos. 1 to 3,000 inclusive.

The Denver & Rio Grande Western Railroad Company recommended that in addition to the present call of Denver & Rio Grande Western Railway Company's first 6's of 1911, covering such bonds, Nos. 1 to 5,857, as have upon them the guarantee of the Denver & Rio Grande Railway Company, the said bonds to be called "assented," each bond under this call to be accompanied by an engraved bond having the same number and representing the detached coupons.

Minnesota & Northwestern Railroad Company—\$2,588,000 first mortgage 5 per cent. gold bonds of 1904, Nos. 1 to 2,588 inclusive.

Tennessee Coal, Iron & Railroad Company—\$620,000 consolidated 6 per cent. bonds of 1901, Nos. 381 to 1,000 inclusive; also, \$7,000 South Pittsburgh Division first 6 per cent. bonds of 1902, and \$3,000,000 stock when engraved certificates are ready and distributed.

**CHICAGO, BURLINGTON & QUINCY.**—Messrs. Kuhn, Loeb & Co., of New York, have taken the \$1,500,000 Iowa Division 4 per cent. bonds, recently issued by the Chicago, Burlington & Quincy Railroad Company.

**THE LONDON STOCK EXCHANGE** has granted quotations to the Louisville & Nashville Railroad Company's further issue of \$1,137,000 6 per cent. 10.40 adjustment bonds, and New York Central 5 per cent. debenture bonds, Nos. 6,501 to 7,850.

**THE ST. LOUIS, KANSAS CITY & COLORADO RAILROAD COMPANY** has filed a mortgage in the Recorder's office at St. Louis in favor of the American Loan & Trust Company for \$20,000,000. The company has already commenced work on the road.

**BUFFALO.**—A bill has been introduced in the New York Legislature authorizing Buffalo to issue bonds to the amount outstanding in March, 1886, to fall due not more than \$100,000 annually. The new bonds are to be issued to redeem previous bonds, and to bear not more than 4 per cent. interest.

**PHILADELPHIA & READING.**—Several blocks of Reading convertible adjustment scrip have been exchanged recently for the income bonds of that company by the

THE UNIVERSITY OF CHICAGO LIBRARY

Trustees. There is only about \$2,250,000 of the adjustment scrip outstanding, not counting that held as collateral for advances.

CONNECTICUT having funded its 3 per cent. State bonds at a premium, and the condition of the treasury being easy, the thirty towns of the State which are burdened by heavy debts, incurred on account of aid to railroads, are asking the State to help them out. A bill has been introduced in the Senate to issue twenty-year bonds with which to take up the town bonds. The towns will be required to set apart a sinking fund to meet these State bonds at maturity.

## II. REPORTS.

NEW YORK, ONTARIO & WESTERN.—President E. F. Winslow, in his annual report for the year ended September 30, 1885, reports the earnings of the company as follows:

	1883-4.	1884-5.
Total gross earnings.....	\$1,789,939	\$1,882,134
Total operating expenses.....	1,754,634	1,652,780
Net earnings .....	\$35,305	\$329,374
Summary of income account:		
Total net income .....	\$328,234	\$329,377
Total disbursements.....	218,491	298,941
Balance, surplus .....	\$19,743	\$29,936

The amount charged to construction and improvements in 1884-5 was \$139,773 against \$704,612 in the previous year.

PHILADELPHIA & READING.—The earnings and income account of the Philadelphia & Reading Railroad and Coal & Iron Company for the year ended November 30th are as follows:

	1883-4.	1884-5.
Total gross earnings.....	\$47,450,844	\$44,643,644
Total operating expenses.....	83,981,942	82,014,947
Net earnings .....	\$13,519,202	\$12,628,697
Summary of income account:		
Total net income.....	\$13,519,202	\$12,628,697
Total disbursements.....	16,874,453	17,226,778
Balance, deficit .....	\$3,355,251	\$4,597,881

CENTRAL OF NEW JERSEY.—The results of the operation of this road by the Philadelphia & Reading for the year ended November 30, 1885, are given by the latter company as follows:

	1883-4.	1884-5.
Total gross earnings.....	\$10,441,095	\$10,800,466
Total operating expenses.....	5,996-114	5,699,200
Net earnings .....	\$4,445,980	\$4,601,266
Summary of income account:		
Total net income.....	\$4,445,080	\$4,601,266
Total disbursements.....	5,920,212	5,939,643
Balance, deficit .....	\$1,474,281	\$1,338,377

Included in the disbursements out of net income is the dividend of 6 per cent. which the Reading agreed to pay under the lease of May 29, 1883.

LEHIGH VALLEY.—The annual report of this company for the year ended November 30, 1885, shows earnings and expenditures as follows:

	1883-4.	1884-5.
Total gross earnings .....	\$8,948,207	\$8,556,917
Total operating expenses .....	5,246,073	4,888,998
Net earnings .....	\$3,702,134	\$3,667,919
Summary of income account:		
Total net income .....	\$4,940,278	\$4,400,268
Total disbursements .....	4,902,804	4,370,160
Balance, deficit .....	\$37,474	\$30,108

Included in disbursements is \$1,660,234 for dividends in 1884-5 against \$2,372,242 in

1883-4. The company paid 10 per cent. on the preferred stock in both years, but only 5 per cent. on the common stock in 1884-5 against 8 per cent. in the previous year.

### III. MISCELLANEOUS INVESTMENT NEWS.

**NEW YORK CITY.**—The decision of Judge J. F. Daly that the city bonds or stock in the possession of the Sinking Fund Commissioners yet represent an existing valid indebtedness of the city has been affirmed by the General Term of the Court of Common Pleas. The decision affects the power of the city to incur further obligations until its present debt is reduced.

**NEW YORK STATE.**—The annual report of the State Assessors for 1885 shows that the assessed valuation of real estate has increased \$802,000,000 over 1875, while the personality shows about \$75,000 decrease in ten years. The report says that it is a significant fact that there is hardly a State in the Union wherein personal property escapes taxation to the extent it does in New York. In Ohio personal estate pays 42 per cent. of the State tax, and in Illinois 37 per cent., while in New York it pays less than 11½ per cent.

**MASSACHUSETTS.**—The annual report of Auditor Charles R. Ladd shows: Cash in Treasury, January 1, 1885, \$1,704,564; received during the year, \$8,876,647; total, \$13,581,212; payments during the year, \$9,187,069; revenue cash January 1, 1886, \$1,324,142. The actual expenses for 1885 were \$4,935,645 and for 1884 \$4,807,083. The estimated expenses for 1886 are \$5,631,517, and the estimated revenue \$4,951,407, making a deficit of \$680,109.

The State Senate rejected the order to investigate the sale by the Governor and Council of the bonds of the New York & New England Railroad held by the State.

**RHODE ISLAND.**—Governor Wetmore, in his annual message to the General Assembly, computes the debt of the State, less the sinking fund of \$490,790, at \$902,307. The bonds of the State, outstanding December 31st, amounted to \$1,367,000. He finds the State in excellent condition at the beginning of the year.

**VIRGINIA.**—The Supreme Court of the United States, in the cases of William L. Royal vs. the State of Virginia, Robert P. Barry vs. E. G. Edmunds (Treasurer of Fauquier county, Va.), R. B. Chaffin vs. William Taylor, and William H. Sands vs. E. G. Edmunds—the Virginia coupon cases—has reversed the decision of the Court of Appeals of Virginia and decided that the tender of coupons in payment of taxes is legal.

**MAINE.**—The State Treasurer's report shows that the total receipts for the year 1885 were \$1,437,660, which, with the cash in the treasury at the beginning of the year, makes a total of \$1,639,979; total expenditures \$1,321,463; cash on hand December 31st \$318,516; sinking fund \$1,960,278, an increase of \$184,078 during the year;—total indebtedness of the State \$3,458,516, a reduction of \$182,078.

**DENVER & RIO GRANDE WESTERN.**—The Coppell committee of bondholders of this road have announced that the effort to secure a majority of bonds has failed. The committee therefore dissolved, and the holders of securities who had deposited them have been requested to withdraw them. It is expected that a plan will now be adopted keeping the interest on the bonds at 6 per cent. and the Denver & Rio Grande Company's guarantee of principal and interest.

**PACIFIC RAILROADS.**—The Secretary of the Treasury has reported to the House of Representatives that the moneys which have from time to time accrued to the fund on account of Government transportation and interest on invested bonds, together with cash payments, amount to \$6,052,340 in the case of the Union Pacific and \$3,177,566 in the case of the Central Pacific Railroad Company. The amounts invested in United States bonds are, for the Union Pacific, \$5,823,530, and, for the Central Pacific, \$2,276,963, leaving an uninvested balance of \$228,800 for the Union Pacific and \$900,602 for the Central Pacific. The Secretary recommends that, in consequence of the premium on Government bonds, in which alone the law permits the investment of these moneys, it would be best to amend the law so that investments may be made in other than Government bonds or its requirements be otherwise changed.

## THE BANKER'S GAZETTE.

### The Money Market and Financial Situation.

NEW YORK, March 1, 1886.

Although the business situation is very fair, and a feeling of confidence is generally entertained as to the future, the stock market is at present under a cloud. There are causes for this of a more or less degree of weight and permanence. The foreign trade is small, with increased imports and decreased exports, and shipments of gold abroad to settle the balance. The ultimate cause of this condition of things appears to be that the depression of business in Europe has not yet begun to yield to the promptings of renewed activity as it has in this country. The result is that prices of merchandise are high here as compared with those abroad, and merchants there cannot buy our goods, while we are purchasing theirs. Some of the figures of the report of the Bureau of Statistics just issued for January will exhibit the condition of the foreign trade for that month as compared with the corresponding month of last year :

	1886.	1885.
Exports of merchandise.....	\$57,959,562	\$80,532,564
Imports of merchandise.....	47,368,490	42,221,171
Balance.....	\$10,591,072	\$38,311,413

It has been hinted that the recent exports of gold (amounting from January 1st until to-day to over \$9,000,000) were partly the result of a movement of securities to this country from Europe, but the firms who generally control such business say that as many securities are being sent abroad as are coming here. The coin shipments have had no visible effect upon the money market, which remains uniformly easy.

The disruption of the Transcontinental Association, the pool which included the Pacific railroads and the Pacific Mail Steamship Company, and the ensuing war of rates has been the chief disturbing factor in the stock market. So far the trunk lines between New York and Chicago have kept clear of the quarrel and there are strong efforts by influential capitalists to settle the difficulty. As the latter arises from a difference of opinion as to the division of the traffic it ought to be settled easily by arbitration.

The coal stocks were pushed up a few weeks ago on the strength of reports of what the Drexel-Morgan syndicate was about to do in re-organizing the Philadelphia & Reading Railroad and building up a strong combination among the coal producers. The action of President Gowen in buying the Vanderbilt holdings of Reading stock appears to have given a set-back to the plans of the syndicate, and matters remain in suspense. In the meantime there is no agreement for the restriction of the coal output—prices are being cut, and the stocks have been receding.

The market for investment bonds has been very active and strong. The broad features of the business outlook are favorable. The railroad earnings, excepting when very bad weather has interfered, generally show large

increases as compared with last year's. The business failures are fewer, and the Clearing-House exchanges indicate a larger volume of business.

As to the bank clearings the latest complete returns at hand are those of the *Financial Chronicle* for seven of the principal cities of the country for the five days ending February 26th. These show a total of \$622,951,888 against a total of \$469,454,858 during the corresponding time last year, an increase of 32.7 per cent. Previous returns show like results. The total clearings at all the Clearing-Houses of the country were, for the week ended February 20, 1886, \$954,874,911; 1885, \$680,840,774; increase, 40.2 per cent.; total outside of New York for the same week of 1886, \$271,405,068; 1885, \$214,787,150; increase, 26.4 per cent.

FOREIGN EXCHANGE has been strong for some weeks past, principally on account of the security of commercial bills drawn against shipments abroad. Following are the posted and actual rates of the principal dealers: Bankers' sterling, 60 days, nominal, \$4.88½; sight, nominal, \$4.90; 60 days, actual, \$4.87½@4.87¾; sight, actual, \$4.89@4.89¼; Cable transfers, \$4.89½@4.90; Prime commercial sterling, long, \$4.86½@4.87; Documentary sterling, 60 days, \$4.86@4.86½; Paris, bankers', 60 days, 5.16½@5.16¾; sight, 5.14½@5.13¾; commercial, 60 days, 5.18½@5.17½; sight, 5.15½@5.15; Antwerp, commercial, 60 days, 5.18¾@5.18½; Swiss, bankers', 60 days, 5.17½@5.16½; sight, 5.15@5.14½; Reichsmarks (4), bankers', 60 days, 95½@95¾; sight, 95½@96; Commercial, 60 days, 95¼@95½; sight, 95 9-16@95 11-16; Guilders, bankers', 60 days, 40 7-16@40½; sight, 40½@40 11-16; Commercial, 60 days, 40¼@40 5-16; sight, 40 7-16@40½. Paris dispatches quote exchange on London 25f. 16½c.

The following shows the posted rates for prime bankers' sterling bills on London at 60 days, and sight, cable transfers, and prime commercial sterling, together with exchange on Paris on February 1st, the changes in the rates as they occurred during the month, and the highest and lowest during the months of January and February, 1886:

JAN.	BANKERS		Cable		PARIS

† Ex-Interest.

THE NATIONAL BANKS.—The amount of United States bonds held to secure bank circulation has been reduced \$5,816,600 during February, the decrease being mainly in 3 per cents. This has not told yet upon the amount of notes outstanding, which increased \$91,348 to \$317,746,871.

The following will show the amount of each description of bonds held by the Treasurer to secure National bank circulation on or about the dates indicated :

	Mar. 1, 1886.	Feb. 1, 1886.	Jan. 1, 1886.	Dec. 1, 1885.
Currency 6 per cents.....	\$3,515,000	\$3,515,000	\$3,515,000	\$3,505,000
4½ per cents.....	48,967,650	49,502,950	50,037,450	49,843,250
4 per cents.....	115,438,350	114,627,650	114,834,650	115,758,150
3 per cents.....	129,336,900	134,928,900	137,596,650	138,523,150
Total.....	\$297,257,900	\$302,574,500	\$305,983,750	\$307,630,550

THE TREASURY.—The following table will show the condition of the Treasury, as regards the amount of gold and silver held, on the first day of March, 1886, and, for comparison, on the first of January and February, 1886, with the amounts of certificates outstanding, and the balances of coin owned by the Treasury :

	Mar. 1, 1886.	Feb. 1, 1886.	Jan. 1, 1886.
Gold coin and bullion.....	\$249,801,087	\$251,480,237	\$253,351,409
Gold certificates outstanding.....	105,637,050	114,474,420	105,359,601
Gold owned by Treasury.....	\$144,164,037	\$137,005,817	\$147,991,808
Silver dollars and bullion.....	\$174,418,874	\$172,630,161	\$169,515,230
Silver certificates outstanding.....	88,390,816	90,069,716	93,179,465
Silver owned by Treasury.....	\$86,028,058	\$82,560,445	\$76,335,765

The result of the operations of the Treasury has been rather favorable, but a comparison with January 1st shows that while the net silver has increased 10 millions the gold has decreased nearly 4 millions. On February 16th was issued the 134th call for the redemption of bonds of the 3 per cent. loan of 1882. Notice is given that the principal and accrued interest of the bonds

will be paid at the Treasury of the United States, in the city of Washington, D. C., on the 1st day of April, 1886, and that the interest on said bonds will cease on that day. The following is a description of the bonds: Three per cent. bonds issued under the Act of Congress, approved July 12, 1882, and numbered as follows: \$50—Original No. 285 to original No. 297, both inclusive, and original No. 1,368 to original No. 1,375, both inclusive. \$100—Original No. 2,108 to original No. 2,148, both inclusive, and original No. 9,864 to original No. 9,879, both inclusive. \$500—Original No. 1,046 to original No. 1,062, both inclusive, and original No. 4,201 to original No. 4,209, both inclusive. \$1,000—Original No. 9,031 to original No. 9,188, both inclusive, and original No. 23,588 to original No. 23,653, both inclusive. \$10,000—Original No. 15,459 to original No. 16,448, both inclusive. Total, \$10,000 000.

**MONEY AND DOMESTIC EXCHANGE.**—The loan market continues easy, the rate for call loans ranging from  $1\frac{1}{2}$  to  $2\frac{1}{2}$  per cent. There is a very moderate supply of bills receivable, and the quoted rates for 60 to 90 days' endorsed paper is  $3@3\frac{1}{2}$  per cent.; four months' acceptances,  $3\frac{1}{2}@4\frac{1}{4}$  per cent. and single-names, 4 to 6 months,  $4@5\frac{1}{2}$  per cent. Following are the rates of domestic exchange on New York: Savannah,  $\frac{1}{8}$ ; selling  $\frac{1}{4}$  premium. Charleston, buying par @1-16; selling @ $\frac{1}{4}$  premium. New Orleans commercial, 25@50c. per \$1,000 discount; bank, \$1.50 per \$1,000 premium. St. Louis, 25c. per \$1,000 premium. Chicago, 25@40c. per \$1,000 discount. Boston, par @8c. per \$1,000 discount.

THE ASSOCIATED BANKS OF NEW YORK have increased their loans up to the neighborhood of the maximum figures, and the surplus reserve is being decreased to a more moderate amount than ruled last year. The changes shown in the table are important this month.

The following shows the condition of the New York Clearing-House banks for a number of weeks past, as well as about this time in 1885 and 1884:

1886.	Loans.	Specie.	Legal-tenders.	Deposits.	Circulation.	Surp. Res.
Feb. 27....	\$349,877,000	\$92,343,800	\$31,157,200	\$890,252,100	\$8,868,100	\$25,987,775

**RAILROAD AND MISCELLANEOUS STOCKS.**—The market has been somewhat depressed of late from the causes mentioned above, but there is a strong undertone, a result of the plethora of money and the prospects for the future. A marked feature of the situation is the heavy demand and improved prices for bonds.

The gross earnings of twenty-six railroads reporting for the third week of February aggregate \$2,113,991 against \$1,762,134 for the corresponding week last year, a gain of \$351,857. There was also a general increase in the preceding week, showing altogether a decided improvement over the previous weeks of the year.

The following table shows the highest, lowest and closing prices of the active stocks at the New York Stock Exchange in the month of February, the highest and lowest since January 1, 1886, and also during the year 1885:

	FEBRUARY, 1886.			SINCE JANUARY 1, 1886.		YEAR 1885.

## STOCK EXCHANGE QUOTATIONS.

Revised by the official lists up to the first day of this month. The following tables include all securities listed at the New York Stock Exchange.

Quotations in *italics* indicate the last bid or asked price—there being no quotation in the month last past. The highest and lowest prices for the year 1885 are actual sales.

### BANKERS' OBITUARY RECORD.

---

**Baldwin.**—Theophilus B. Baldwin, Receiving-Teller of the Third National Bank, of Cincinnati, Ohio, died February 5th.

**Covell.**—Lyman Covell, formerly President of the Chemung Canal Bank, at Elmira, N. Y., died January 16th, aged 91 years.

**Foster.**—William S. Foster, Vice-President and Manager of the National Bank of Derby Line, Vt., died February 7th, aged 48 years.

**Heath.**—William Heath, of the firm of William Heath & Co., bankers and brokers, of New York, which failed on October 2, 1885, died March 1st, aged 51 years. Mr. Heath was one of the best known brokers on the "Street," which he entered in 1860. The unfortunate circumstances under which his firm was carried down have already been recounted. The failure, and his subsequent imprisonment, were the immediate cause of his death.

**Henry.**—Thomas Henry, President of the Mobile (Ala.) Savings Bank, died February 9th, aged 71 years. He had resided in Mobile since 1833, where he amassed a large fortune. Mr. Henry was one of the few Southern merchants who paid after the war every cent which he owed to his Northern creditors when the war broke out.

**Moore.**—William C. Moore, President of the Nyack (N. Y.) National Bank, died February 13th. He was well known in New York financial circles.

**Nourse.**—The Hon. Charles Nourse, President of the Producers' National Bank, of Woonsocket, R. I., died suddenly on March 1st, aged 75 years. Mr. Nourse was a State Senator, and held other offices of trust.

**Robotham.**—William Robotham, Jr., Cashier of the North Ward National Bank, of Newark, N. J., died February 5th.

**Seagrave.**—O. B. Seagrave, of Uxbridge, Mass., the Boston representative of the late banking firm of Raymer, Seagrave & Co., of Toledo, O., died February 25th. He was previously connected with the Bank of Toledo.

**Serrill.**—Thomas S. Serrill, broker and operator in securities, of New Orleans, La., died in February, at Los Angeles, Cal. He possessed a large fortune.

**Smith.**—Dr. Joseph H. Smith, who was for many years a prominent physician and banker of Dover, N. H., died February 25th, aged 80 years.

**Stearns.**—Thomas C. Stearns, of the banking firm of Dillaway & Stearns, of Boston, Mass., died February 4th, aged 68 years. He was a very genial man, and a favorite in Boston society.

**Swire.**—William H. Swire, one of the Assignees of the Shackamaxon Bank, of Philadelphia, died February 17th.

**Taylor.**—William Taylor, a member of the New York Stock Exchange since 1869, died February 1st.

**Thompson.**—John G. Thompson, ex-Sergeant-at-Arms of the House of Representatives, and a prominent Ohio politician, who died February 9th, at Seattle, Wash. T., was at one time a partner in the banking firm of Bailey, Thompson & Co., of Columbus, O.

**White.**—Frederick White, of the firm of White, Morris & Co., and a member of the New York Stock Exchange, died suddenly on February 23d, aged 49 years. Few men were so popular on Wall street.

---

**REPUDIATION SENTIMENTS REBUKED.**—"One of our exchanges, printed in Richmond, says: 'Virginia can repudiate the principal of her debt whenever she may desire and decide to do so.' The highwayman can murder and rob his victim whenever he may desire and decide to do so. But this State has no more right to exercise her power in one case than the robber has in the other. And how does such talk sound when coming from a well-patronized journal published in the capital of the State? Is it at all wonderful that northern capital and northern settlers give Virginia a wide berth?"—*Alexandria (Va.) Gazette.*

## NOTICES OF NEW BOOKS.

*Principles of Political Economy*, by John Stuart Mill. *Abridged, with Critical, Bibliographical, and Explanatory Notes, and a Sketch of the History of Political Economy*, by J. LAWRENCE LAUGHLIN, Ph. D., Assistant Professor of Political Economy in Harvard University. A Text-Book for Colleges. New York: D. Appleton & Co. 1886.

In his preface, Professor Laughlin says: "An experience of five years with Mr. Mill's treatise in the class-room not only convinced me of the great usefulness of what still remains one of the most lucid and systematic books yet published which cover the whole range of the study, but I have also been convinced of the need of such additions as should give the results of later thinking without militating against the general tenor of Mr. Mill's system; of such illustrations as should fit it better for American students by turning their attention to the application of principles in the facts around us; of a bibliography which should make it easier to get at the writers of other schools who offer opposing views on controverted questions, and of some attempts to lighten those parts of his work in which Mr. Mill frightened away the reader by an appearance of too great abstractness, and to render them, if possible, more easy of comprehension to the student who first approaches Political Economy through this author." This explains the purpose of the book, and it has been successfully carried out, the additions to Mr. Mill's original text, on the subjects of a double standard and subsidiary coins, an inconvertible paper currency, the probable futurity of the laboring-classes, protection, etc., being well-timed. Much matter has been omitted that should properly be classed under the head of Sociology, with a view to restricting the field to Political Economy alone and thus aid the student. The editor puts everything by Mr. Mill in large type, his own additions being in smaller print, so that no confusion on this point may arise. Wherever it seemed possible American illustrations have been inserted instead of English or Continental ones, and, in order to interest the reader in home problems, twenty-four charts have been distributed throughout the volume.

*Tables of Discount, or Simple Interest, at the Several Rates of 5, 4½, 4, 3½, 3 and 2½ Per Cent., from 1 to 365 Days, and from £1 to £20,000.* By T. B. GUMERSALL, Accountant. Sixteenth Edition, stereotyped. Warranted Free from Error. London: Effingham Wilson, Royal Exchange. 1885.

We believe this English work to be the most complete of its kind in existence, being distinguished by facility of reference, distinctness of type and accuracy of calculation, as well as by the number of rates of interest given. It is so arranged that the interest or discount on any sum of English money for any number of days at any of the rates mentioned in the title may be obtained by the inspection of one page only. Each rate occupies 80 pages, the last five of which are devoted to the same number of pounds from one to eleven months, and from one to ten years. This is supplemented with tables of brokerage or commission, the whole being accompanied by a time table. The book is recommended to bankers and brokers who may require to reckon interest and commission in British money.

*Railroad Transportation: Its History and its Laws.* By ARTHUR T. HADLEY, Commissioner of Labor Statistics of the State of Connecticut; Instructor in Political Science in Yale College. New York and London: G. P. Putnam's Sons. The Knickerbocker Press. 1885.

In this book of 269 pages (including the index) and of modest pretensions, Mr. Hadley has condensed a vast amount of information on a subject of first-class importance to the business of the country, together with deductions that appear to be carefully and fairly drawn. The historical part includes chapters on "The Modern Transportation System," "The Growth of United States Commerce," and on the railroad systems and legislation of England, France, Central Europe and Italy respectively. These latter are by no means of mediocre importance to us, as they include a consideration of the results of State ownership as it is practiced in Continental Europe, and of the operations of a Government Commission with judicial powers, as in Great Britain. But the subjects of more immediate importance treated here are railroad ownership and speculation, competition and combination in theory and in practice, railroad charges and discriminations, etc. These are matters upon which newspapers and legislators have expended no end of strong language together with a minimum of logic and fairness. Our author, on the contrary, has attempted to search

THE UNIVERSITY OF CHICAGO LIBRARY

into the causes that have led to the evils and anomalies that have been developed in the railroad industry, and finds, as every candid student is certain to do, that they are not generally the result of the villainy of the managers. The true evil connected with individual discrimination is pointed out, and also with stock watering, which is greatly exaggerated in the popular estimation. We cannot afford the space to mention these matters at such length as they deserve.

*Stocks and Shares: A Guide for Investors and Speculators, with a Treatise upon the Infatuation and Danger of Stock Speculation.* By the author of "How to Operate Successfully on the London Stock Exchange." New York: Carroll, Sprigg & Co. 1885.

The advice given in this book is sensible, and appears to be honestly given. The author claims to have had many years of experience in stock speculating, and is, besides, a logical thinker, so that his conclusions are well worth the attention of those who are inclined to speculate. We are certain that many people will save money if they do not gain much by following the author, for his first piece of advice is the same as *Punch* gave to parties about to marry: "Don't!" But to those who are determined to disregard the warning the directions given are indispensable, and even most adepts will be able to glean some information from this book. The example illustrating the method of gaining a profit by buying and selling the same stock at the same time is especially interesting. The methods of dealing recommended are illustrated by cases based on the actual movements of the market.

#### CHRONOLOGICAL RECORD.—FEBRUARY, 1886.

1. MONDAY.—Decrease in public debt in January, \$8,672,554. — A. S. Hewitt introduced in Congress a bill to reduce the tariff.
3. WEDNESDAY.—The new English Gladstone cabinet announced.
5. FRIDAY.—A bill to admit Dakota as a State passed the Senate.
6. SATURDAY.—Discount rate on commercial paper in New York,  $3\frac{1}{4}$ @6 per cent.; call loans,  $1\frac{1}{2}$ @2 per cent. — Discount rate in London on 3 months' bills,  $1\frac{1}{4}$  per cent.; on short bills,  $\frac{1}{4}$  per cent.
8. MONDAY.—A riot with pillage occurred in London.
9. TUESDAY.—Winfield S. Hancock, senior Major-General of the United States Army, died.
12. FRIDAY.—Ex-Governor Horatio Seymour, of New York State, died.
13. SATURDAY.—Discount rate on commercial paper in New York,  $3\frac{1}{4}$ @6 per cent.; call loans,  $1\frac{1}{2}$ @2 per cent. — Discount rate in London on 60 days to 3 months' bank bills,  $1\frac{1}{4}$  per cent.; short loans,  $\frac{1}{4}$ @1 per cent. — Gold shipments to Europe began again.
14. SUNDAY.—Destructive floods occurred in New England.
15. MONDAY.—A bill to reduce the tariff introduced in Congress by Col. Morrison.
17. WEDNESDAY.—The Transcontinental Association (railroad pool) dissolved, and rate-cutting began on the Pacific railroads. — Count de Lesseps arrived with a European delegation at Colon to inspect the Canal.
18. THURSDAY.—The British Parliament re-assembled.
19. FRIDAY.—The price of middling cotton at New Orleans dropped to 8 5-16 c., the lowest price for 88 years.
20. SATURDAY.—The 184th Treasury call issued for \$10,000,000, 8 per cent. bonds. — Word transpired that F. B. Gowen had bought the Vanderlits' holdings of Reading stock and out-maneuvered the Drexel syndicate. — Discount rate on commercial paper in New York,  $3\frac{1}{4}$ @ $5\frac{1}{4}$  per cent.; call loans,  $1\frac{1}{2}$ @ $2\frac{1}{4}$  per cent. — Discount rate in London on 3 months' bills,  $1\frac{1}{4}$  per cent.; short loans,  $\frac{1}{4}$  per cent.
24. WEDNESDAY.—The commercial depression in Sweden reached a crisis.
27. SATURDAY.—Discount rate on commercial paper in New York,  $3\frac{1}{2}$ @ $5\frac{1}{4}$  per cent.; call loans,  $1\frac{1}{2}$ @2 per cent. — Discount rate in London on 3 months' bills,  $1\frac{1}{4}$  per cent.

WANTED.—A gentleman who has filled the various positions in a bank, and having 19 years' experience—now Cashier of a National bank—wishes to connect himself with a larger institution, and invites correspondence with that end in view.

Refers by permission to the Editor of RHODES' JOURNAL OF BANKING, and to Dumont Clarke, Cashier American Exchange National Bank New York. Address: "A," care of RHODES' JOURNAL OF BANKING.

# RHODES' JOURNAL OF BANKING.

Vol. XIII.

APRIL, 1886.

No. 4.

IT IS SURPRISING TO NOTICE THAT, to a large extent, the writers and thinkers who most earnestly urge the establishment of a postal savings bank system are the very ones who every day proclaim their lack of faith in the ability of the Government to manage its own large financial affairs. In spite of their protestations and of the perfect ability of the Government to do it, the latter has persistently neglected to retire its forced issue of legal-tender paper money. Instead of taking the first opportunity to wipe out this relic of war times, the Government is more determined than ever to keep it afloat—a constant menace to all the business of the country in case of another war or other great calamity. Again, the idiotic attitude taken by the Government on the silver question is a constant source of irritation and disgust to the same persons. There never was a plainer case of self-stultification than the present one. We have every day before our eyes the exhibition of about as stupid and foolish a management of finances as can well be imagined (only saved from being disastrous by the firmness of the administration), and yet the people who see this propose to intrust the savings of the poor people in the country to the very parties who are responsible for this. It is doubtless true that there ought to be a well-devised savings bank system in every State in the Union; and there is nothing to prevent the people from instituting and building up such institutions under State jurisdiction, like the excellent ones now in existence in the States of New York and New Jersey, and in New England. The only contingency under which there would be any propriety in putting the peoples' savings under Government control would be in case there was a public debt of such amount that the Government would require the money, and of such permanence as to insure the continuance of the system. These two conditions are conspicuously absent at this time. The gentlemen who are so deeply interested in promoting the postal savings bank scheme cite the success of the system in Great Britain to back up their belief that it would prove equally successful here. This citation of proof is entirely valueless for the reason that the total deposits of the British postal savings banks are invested in English Consols bearing

three per cent. interest—representing the consolidated debt of Great Britain—a feature wholly inapplicable to the United States, as the spirit of our people is opposed to carrying the burden of a National debt except obliged to do so under stress of a war or some extraordinary circumstances. To maintain a public debt to enable the Government to go into the banking business is preposterous.

---

THE INTER-STATE AGRICULTURAL CONVENTION at its recent session at Jackson, Tenn., adopted a resolution to the following effect : The manipulation, by speculators, of the cotton crop of 1885-6 having depressed prices to a point below the cost of production, it is necessary for the planters to unite to protect themselves ; emboldened by past success, the speculator has already fixed the standard price for the crop of 1886-7, and at such a figure that the cotton will yield the producer only seven and one-quarter cents a pound, and it is doubtful if this will allow him a bare living above the expense of farming ; the remedy recommended is, diversified crops—the raising of more grains, grasses, hogs and hominy, and less cotton ; in addition to this the State Legislatures should be petitioned to make dealings for future delivery—unless the commodity is actually on hand to sell, and is actually delivered to the contracting purchaser—a felony, punishable by fine and imprisonment. The first remedy proposed is founded on true principles and upon common sense ; but the idea that the low price of cotton, breadstuffs or provisions is the result of dealing in futures is so childish that a convention of any prominence ought to be ashamed to own it. We have abundant evidence that the reduction in the price of cotton and wheat is owing to the extension of agricultural improvements and of transportation facilities into far eastern countries, especially India, and in view of this fact the advice to raise crops in which there is not so much competition is sound and wise. But nothing except harm can result from the spread of the idea that the prices of great products are or can be permanently fixed by speculators. It is calculated to divert the minds of men from the true remedies that ought to be applied, and lead them to expend their force in vain or in mischievous directions.

---

THE AVERAGE AMOUNT of the loans and discounts of all the Clearing-House banks of New York city, for the week ended March 20th, was nearly \$360,000,000, being, we believe, some millions more than ever before. A comparison with the amount at the corresponding time last year, \$301,000,000, shows a marked difference, but when we compare it with the same time in 1884, \$348,000,000, the amount seems not so extraordinary. Many of the newspapers have been lecturing the banks on this condition of things, taking the ground that the large increase in the loans, which has been progressing now for a number of months past, was the result of speculative dealings and not of legitimate trade. It is held that the condition of general business demanded no

such increase in loans, and that the banks have been aiding speculation instead of putting a check upon it. Not being able to see any just grounds for the strictures mentioned, we have taken the trouble to obtain the views of some of the executive officers of the largest and most conservative of the city banks on the matter. They agree in saying that they believe the criticism is not just. There has been a marked increase in the offers of genuine commercial paper throughout the country districts and in the city, which caused a natural and legitimate increase in the bank loans. Besides this, the banks are less inclined than before to grant loans upon stocks. The bankers believe that the continuance of the silver coinage throws a cloud upon the business situation, and that if it were not for this, and the large strikes of workmen, the condition of business would be very fair and the outlook encouraging.

---

IN A COMMUNICATION TO THE SENATE the Secretary of the Treasury shows that the reduction of the public debt between July 1, 1877, and June 30, 1885, was \$642,176,291, being \$312,647,531 more than the requirement of the sinking fund. The only bonds now due and payable are the \$184,683,250 of three per cents, and if the average rate of payment of the past eight years should be continued these would disappear about the middle of 1888. The next bonds falling due after the threes are the four and one-half per cents of 1891, and, in the case mentioned, it would be necessary to purchase these before their maturity at a premium. The circumstances would seem to call for a change in the law governing the sinking fund, so that over-payments in the past may count to the credit of future years. It might then be possible to arrange to pay the debt no faster than it falls due, which is quickly enough.

---

IN REPLY TO A SENATE RESOLUTION the Secretary of the Treasury recently stated that of the \$10,000,000 of the three per per cent. bonds that were called for payment on April 1st, \$6,385,550 were held in the Treasury as security for National bank circulation. By referring to other sources of information we find that of the total of about \$185,000,000 of three per cents recently outstanding, and which are being rapidly redeemed, \$125,000,000 were held for the banks as a basis of circulation. These figures indicate a rapid decrease in the outstanding notes in future unless something is done to stay it. But it would appear that the subject has almost been lost track of in Congress at this session. The bill of Senator McPherson, providing for the issue of notes up to the par value of the bonds, ought to be promptly passed as an initial measure, and then a commission should be appointed to formulate some permanent scheme during the next recess of Congress.

---

THE IDEA THAT THE GOVERNMENT should adapt its currency with a view to "protecting" the makers of it now turns up in an

THE UNIVERSITY OF CHICAGO LIBRARY

unexpected quarter. Owing to the policy adopted by Secretary Manning of withdrawing from circulation \$1 and \$2 bills in order to give place to the silver dollars the printing of these notes had to be discontinued. This has caused the enforced idleness of a large number of employes in the Bureau of Printing and Engraving, and the Printers' Union, at Washington, has made a proposition to Mr. Graves, the chief of the bureau, to work on half time rather than have their fellow laborers dismissed. The plate printers have been, in the meantime, seeking Congressional aid to save them from further hardship. They are urging that Congress shall pass the resolution of Mr. Ingalls, requiring the Secretary of the Treasury to print \$1 and \$2 bills. They claim that these notes are required in business and by the public generally, and that the Secretary's financial theories should not be permitted to interfere with public convenience or the employment of labor. It being the acknowledged policy of the Government in continuing the silver coinage to aid the silver mining industry, why have not the printers and paper makers an equal right to assistance?

---

THE BENEFITS DERIVED from our National bank currency, as compared with State bank circulation even under the best regulated system possible, are called to mind by a description of the present condition of things in Canada. The Montreal *Shareholder* cites the case of a correspondent who had recently returned from the maritime provinces. He found that, while he could pass United States notes all over the Dominion at par, the paper money of New Brunswick and Nova Scotia could be passed in Quebec and Ontario only at a discount of from 1 to 10 per cent., in spite of the fact that the issuing banks are considered sound, the reason given for the discount being that the banks have no agencies in the upper provinces, where their notes may be redeemed. Under our National banking system every bank is a redemption agent for all the rest, not to speak of the agency at the Treasury Department. The saving in money to the people by this method is immense and the gain in convenience and safety incalculable.

---

BANK SUPERINTENDENT PAINE, of New York State, in his annual report on savings banks, suggests that if that portion of the Bland Act of 1878 which compels the coinage of silver dollars should remain unrepealed, whether it may not be advisable for savings institutions in making loans to stipulate that payments shall be made in gold coin or its equivalent. This advice is based on the theory that the depositors are wards of the State and should be protected from the result of ill-advised Congressional legislation. It ought to be acted upon—with this proviso: that the banks shall hereafter agree to pay their depositors in gold or its equivalent. We recollect that during the war there were cases in which depositors brought gold to the savings banks for safe keeping at a time when the coin was at a high premium, and they were afterward only able to draw out greenbacks of the same face value

## POSTAL SAVINGS BANKS.

The discussion favorable to the establishment of Post Office Savings Banks in the United States has uniformly, and perhaps not unnaturally, been predicated upon the successful working of the system in Great Britain. But the advocates of such a system, either through ignorance or perversity, have with wondrous unanimity failed or refused to recognize certain conditions which made the establishment of some other than the system then existing imperative upon the British Government; and, with equal blindness, they have failed to note the existence of certain conditions there, without which success would have been impossible, which conditions do not exist in the United States.

Among the incitements in 1861 to some change from the old system of savings banks in Great Britain were the following:

Under the prevailing system there had occurred many disgraceful and disastrous failures, the result of embezzlement and fraud, for which the depositors had no redress. They were naturally clamorous for protection, and demanded of the Government the establishment of some system under which it would become responsible for the deposits committed to its keeping.

No such condition as this has ever obtained in the United States. Of the comparatively few failures of savings banks in this country, none can be traced to the efforts of officers to enrich themselves by unlawful appropriation of the moneys intrusted to their keeping. They have almost uniformly resulted from the too liberal discretion afforded by the laws to trustees in making investments. As the result of this liberality became manifest in the considerable failures which occurred in the troublous times of 1873 and after, the several States in which this interest had its largest development revised their laws relating to it, and imposed those restrictions upon the discretion of trustees as a remedy, which, had they been imposed in season, would have proved a prevention. Through these restrictions, properly observed by savings bank officials, and through the system of supervision by a State officer with which these are supplemented, it is scarcely possible that a savings bank in New York or in the New England States should fail. Hence, one material point which Parliament aimed at in the establishment of the Postal Savings Bank system—the better security of depositors—has been effected in this country through the enactment of more carefully considered provisions governing the management and control of these institutions.

Another and even more powerful incitement to some change in the savings bank system of Great Britain was found in the cost to the Government of maintaining the system on the basis then existing. The Government guaranteed to the trustees of savings banks interest at the rate, originally, of £4 11s. 3d. per cent., subsequently reduced to £3 5s. per cent. per annum upon all deposits placed in its charge. The rate paid by the Government upon these deposits very considerably exceeded the rate at which the Government was able to invest these funds, and this excess in 1872 had aggregated the sum of £4,169,427, or over \$20,000,000. This was making savings

THE UNIVERSITY OF CHICAGO LIBRARY

banks, what it was never intended they should be, a charity—depending for support upon the bounty of the Government—and was the subject of earnest and bitter complaint.

A further incitement to some radical change in the system of savings banks was found in the meagre and wholly inadequate facilities furnished by these institutions to their depositors for depositing or withdrawing their moneys.

Of the 638 savings banks in Great Britain in 1861 but 20 were open daily. Some of them allowed deposits to be withdrawn only on two days in the week, and always required previous notice of intention to withdraw, while others allowed new accounts to be opened only on certain days. More than half the savings banks in the United Kingdom were open but one day in the week, and many of them for but one hour of that day. Some with deposits as high as from \$1,000,000 to \$1,500,000 were open but two days in the week, and a leading institution in London closed its doors for one week in each year while preparing its annual balance.\*

The rate of interest paid was very low—in some instances as low as £2 10s. per cent.—which, in view of their receiving from the Government £3 5s. per cent., with no trouble, care or risk concerning investments, gave the banks about 2½ per cent. for simply receiving and returning the moneys of depositors.

In the light of the above facts the incitements to some remedy for existing evils and abuses, it will be seen, were very strong, not to say irresistible.

None of these incitements are operative upon our Government. The system has never and will never, upon its present basis, be a charge of a single dollar upon the general Government. These institutions have always been self-supporting in the States where they have been organized, asking for nothing but the privilege of being—upon such terms as the State should impose, but conferring vast monetary benefits upon the State and upon the people—as reservoirs of capital waiting for investment in State or local securities.

We have already shown that the States themselves have, through their wiser laws, based upon experience, provided ample security for their depositors, which is a good deal more than the general Government did when it went into the savings bank business a few years ago. Before the general Government enters upon a scheme for affording protection to depositors in the future, let it do justice to the defrauded depositors of the Freedman's Savings Bank, whose losses were the result of criminal recklessness in legislation by the general Government, which gave unchecked opportunity for the mismanagement of the funds of the bank.

Heretofore this interest has been regarded as peculiarly one of State, and not of National, concern, and has wisely been left to the control and direction of the States respectively. That all may not have dealt with it with equal wisdom, and that some have not dealt with it at all, is doubtless true. But this is no more of an argument for the interference of the general Government, than is the diversity concerning other subjects of legislation which are left to State control. It is true that the general Government would or could give us uniformity in a system, but is uniformity desirable or practicable? The diversities which exist in the several States will commonly be found to be no more than a rational recognition of differences in the conditions to which the

\* Johnson's Cyclopaedia: Article, "Savings Banks."

laws relating to savings banks must be applied. What may be practicable and salutary in New York or Massachusetts may prove to be wholly impracticable and inoperative in Oregon or Texas. With these diverse conditions it is practicable for the States, by the inauguration of a different system for each, to deal effectively, while it is not practicable for the general Government to deal with them through the establishment of a uniform system for all.

Nor is it any argument in favor of Federal interference that in many of the States there is no savings bank system. The inception of savings banks, both in Great Britain and in this country, was promoted by the existence of conditions which do not obtain alike in all communities. They were adapted to the needs of small wage-earners who are liable in the fluctuations of monetary crises to be thrown out of their accustomed employment and with no resources during a period of idleness. These conditions exist chiefly in cities or populous regions and in manufacturing districts. They are not found to the like extent in regions largely agricultural, for here the necessities of life are always obtainable in exchange for labor, which is not the case in populous communities.

In much the larger part of the territory of the United States the conditions are such that savings banks would have no legitimate mission. When these conditions change, the States in which they are found may be relied upon to make note of the change and to afford the facilities required.

When we come to consider the question of the facilities afforded to their depositors by savings banks in this country, we shall find that there is nothing here, as there was in Great Britain, which calls for the interference of the general Government. The savings banks in New England, New York and in New Jersey are open daily for four or five hours, and in rural regions and sometimes in cities, during certain evenings, for the convenience of depositors, thus affording ample opportunity of access. They are open alike at all times for deposit or withdrawal, and, though reserving the right to demand notice of the latter, it is a right never enforced except in times of panic, and then only in the interest of depositors. Such a thing as closing a bank for a week or even for a day in order to make up its balance was never thought of in this country.

From the foregoing it will be seen that there is no occasion in this country moving to the establishment of a grand National system of savings banks, such as made the demand in Great Britain for something of the kind imperative.

In considering the question of expediency or practicability in connection with the movement in this country, several things are to be noted.

It is conceded that, unless the Government proposes to establish a charity, the rate of interest allowed to depositors must be low—not exceeding, say, two per cent. The prevailing rate in the existing savings banks is from three to four per cent. We may be very sure that depositors will not be in haste to withdraw their moneys from the banks in which they have perfect confidence, and where they get four per cent., in order to deposit them with the Government in which they will have no more confidence and where they will get but two per cent. Nor will new depositors be much more likely to go out of their way to reach the Post Office, when a savings bank can be found upon the same street along which they daily have occasion to pass.

But, unless the Government can receive a very large aggregate of the business from the cities and densely populated sections of the country, it

will be found that the cost of carrying on the system will, with even the low rate of interest proposed, very considerably exceed the rate at which it can invest the moneys committed to it. But we have seen that there is no inducement to the people of cities and towns to place their deposits with the Government. Not one in ten will regard the Government as any more secure than the savings bank which he has known all his life; and, guided by past experience, all are likely to regard it with even more suspicion.

It is estimated that the Government may obtain  $3\frac{1}{2}$  per cent. for the moneys of which it undertakes the charge. This is doubtful; but let us concede its possibility. Then, if 2 per cent. is to be paid to depositors, we have  $1\frac{1}{2}$  per cent. remaining to the Government for the expense of doing the business. It cannot be done for that. In Great Britain the cost is about 1 2-5 per cent. But mark the difference in the conditions. Great Britain has, compared with the United States, a small area and dense population. Owing to the impediments thrown in the way of their depositors by the old system of savings banks, which we have noted, and which are not found with us, the new system was able to draw to itself the largest part of its business from the densely populated centers, which would not be the case with us, and this will prove a material element in the expense of the system to the Government.

To make the conditions in the United States parallel with those of Great Britain, we must imagine our entire population to be concentrated within the limits of the New England States, New York, New Jersey and Pennsylvania. It is obvious that a scheme which might be practicable with a population of 50,000,000, concentrated within the area of the above-named States, might be found to be wholly impracticable applied to the same population scattered over the area of the United States and Territories of twenty times that extent. That is precisely the condition which we have to meet, and it does not seem possible to meet it except at a very considerable cost to the Government.

The superior convenience of the Post Office system is urged in its favor. The British Post Office system has advantages over the British common system. But that, as we have seen, is owing to the defects of the common system—defects which do not exist in the American system. I maintain that the Post Office system would be less convenient than the existing system, and hence less attractive to depositors. Instead of going into a bank, as he does now, presenting his book and drawing his money, the depositor would have to repair to the Post Office, get a blank form of draft, fill it out, sign it and mail it to the Post Office Department at Washington. This does not cost the depositor anything, it is true, for it is part of the expense which the Government agrees to meet. The draft received in Washington in due course, is examined, the signature compared with the original on file in the department, a warrant made out in the name of the depositor on the postmaster, and mailed to the depositor at the address given by him. When received by the depositor he repairs with his book and warrant to the Post Office, presents these, which are again verified, and he receives his money. Here are two visits to the Post Office required to effect the withdrawal of any single sum, besides the interval of waiting, which will, of course, vary with the distance and the postal facilities between the residence of the depositor and the capital.

I do not believe that such a system can be made popular or acceptable to our people, who, in their dealings with savings banks, are accustomed to more

direct methods. That it might be some convenience to those in remote and sparsely settled regions is not denied, but the convenience thus promoted would have to be at a public expense which would far exceed any public advantage which would be derived from it.

Under existing conditions, the establishment of a system of Postal Savings Banks in the United States appears visionary, wild, and chimerical. What changes may be wrought in these conditions within a hundred years that may then invest such a scheme with elements of reason and common sense, we can wait for that hundred years to unfold.

EMERSON W. KEYES.

---

### THE GREENBACK DECISIONS.

Certainly not in this generation, and it is doubtful if ever before, has a decision of the Supreme Court of the United States been greeted with the positive dissent of so large a proportion of the best minds of the country as was the opinion delivered in the case of *Juillard against Greenman* in March, 1884. In that decision, it will be remembered, the highest judicial authority in the land once more affirmed the right of the Government to make its notes a legal-tender, and in language far broader and more emphatic than that used in 1871, the sense of the argument being comprised in these words:

"The power to make the notes of the Government a legal-tender in the payment of private debts being one of the powers belonging to sovereignty in other civilized nations, and not expressly withheld from Congress by the Constitution, we are irresistibly impelled to the conclusion that the impressing upon the Treasury notes of the United States the quality of being a legal-tender in payment of private debts is an appropriate means, conducive and plainly adapted to the execution of the undoubted powers of Congress."

The powers which this decision allows to the general Government have been claimed by many writers to be far broader than the framers of the Constitution intended that they should be, or than the earlier expounders of that instrument believed that it warranted. It has been attacked, both on historical and legal grounds; but until quite recently the matter has had only an academical interest for the public. The little work\* of the venerable historian, George Bancroft, which has just been issued, bids fair to make the subject a question for public agitation.

Mr. Bancroft, of course, argues chiefly in the light of history; and from that point of view, and judging from the facts which he has gleaned from the original records, his case appears to be as clear as could well be imagined. Let us recount these facts in outline.

First is given a sketch of the financial history of the American Colonies from the year 1690, when Massachusetts first authorized an issue of paper money. That history, extending nearly one hundred years, or until the present Constitution of the United States was adopted, is a most deplorable account of repeated paper money issues in the various Colonies, of attempts to make the paper a legal-tender, and to keep its actual equal to its face value, and of the almost invariable final degradation and repudiation of the paper. This history has an important bearing upon the question at issue, as showing (what every American ought to know, but very few do know,) that the people

\*"*A Plea for the Constitution of the United States of America, Wounded in the House of Its Guardians.*" By GEORGE BANCROFT. [Harper's Handy Series.] New York: Harper & Brothers. 1886.

at the time of the formation of the Union had had an abundant experience of the use and evils of fiat money.

The proceedings of the Constitutional Convention of 1787, as recorded in its journal, and in the writings of Madison, Luther Martin and others, leave no room for doubt as to what the prevailing sentiment on this matter was, nor as to what the delegates intended that the Constitution should decree. It is clear that the Federal Congress had the right to issue notes, because the articles of confederation gave it the power "to emit bills on the credit of the United States."

The first draft of the new Constitution contained (eighth clause of seventh article) a similar clause, as follows :

"The Legislature of the United States shall have the power to borrow money and emit bills on the credit of the United States."

The journal of the Convention for August 16th says : "It was moved and seconded to strike out the words 'and emit bills,'" and the motion to strike out these words "passed in the affirmative. Yeas: New Hampshire, Massachusetts, Connecticut, Pennsylvania, Delaware, Virginia, North Carolina, South Carolina, Georgia—9. Nays: New Jersey, Maryland—2."

In commenting on this, Madison says : "Striking out the words cut off the pretext for a paper currency, and particularly for making the bills a tender, either for public or private debts."

Luther Martin, a delegate from Maryland, who opposed the prohibition, has left on record an exactly similar opinion of the effect of striking out the words. So that we have the evidence of one of the authors of the Constitution, who opposed paper money, and of a delegate who was an advocate of it, that paper money was intended to be prohibited.

But the account of the debate on the matter on the day mentioned, as kept by Madison, gives overwhelming evidence of the same thing. It was Gouverneur Morris, of Pennsylvania, who moved to strike out the words granting the power to "emit bills," saying: "If the United States have credit, such bills will be unnecessary; if they have not, will be unjust and useless."

The seconder was Pierce Butler, of South Carolina, who, in the course of the debate, remarked that "paper is a legal-tender in no country in Europe," and he strenuously opposed its being granted to this Government.

Madison interposed: "Will it not be sufficient to prohibit the making" the bills "a tender?"

Nathaniel Gorham, in replying, said that no accompanying prohibition was sufficient to make it safe to grant to the Legislature of the United States the power to emit bills of credit. "If the words stand," said he, "they may suggest and lead to the measure."

Oliver Ellsworth, of Connecticut, afterwards Chief-Justice of the Supreme Court, said: "This is a favorable moment to shut and bar the door against paper money. The mischiefs of the various experiments which have been made are now fresh in the public mind, and have excited the disgust of all the respectable part of America."

George Reed, of Delaware, said: "The words, if not struck out, would be as alarming as the mark of the beast in Revelation."

James Wilson, of Pennsylvania, said: "It will have a most salutary influence on the credit of the United States to remove the possibility of paper

money. This expedient can never succeed whilst its mischiefs are remembered; and, as long as it can be resorted to, it will be a bar to other resources."

John Langdon, of New Hampshire, who was acting under instructions from the towns of his State, said: "I had rather reject the whole plan than retain the three words 'and emit bills.'"

In fact, of the eleven delegates who took part in the discussion, every one, including those who opposed the restriction, understood the vote to be a denial to the Legislature of the United States of the power to emit paper money. This fact proves that the Supreme Court has drifted very far from the position held by the fathers of the Republic.

The decision of the Court is attacked, however, upon more general grounds than those mentioned. The opinion states that "the power of impressing upon bills or notes the quality of being a legal-tender for the payment of private debts was a power universally understood to belong to sovereignty in Europe and America at the time of the framing and adoption of the Constitution of the United States," and furthermore, that the United States possess "the powers belonging to sovereignty in other civilized nations, and not expressly withheld from Congress by the Constitution."

Now, so far is the first proposition from being a fact, the Government of Great Britain, from the time of the revolution of 1688 down to the time of the adoption of our Constitution in 1788, never impressed the legal-tender quality upon any bills. It never intimated that it had the power to do so, and never authorized any person or corporation to do it.

In France, under the corrupt Regency, it is true, a trial was made of paper money with consequences so appalling as to be a warning instead of an example to other countries.

The second clause quoted above from the decision assumes that, apart from the grants by the Constitution, the United States has the power of a sovereign Government; but, as Mr. Bancroft truly says, "this is the language of revolution." It is contrary to the language of the Constitution and to all the authoritative interpretations that have been put upon it until within a very few years. We have the testimony of numerous contemporary authorities, including many of the framers of the Constitution, and the highest judicial authorities since, to the effect that the meaning of that document is directly the opposite of what the decision of 1884 declare it to be. So full and complete are the previous declarations on this important subject that no word short of "revolutionary" can properly characterize the late decision.

We quote here only the words of James Wilson, one of the delegates from Pennsylvania to the Constitutional Convention, and one of the three judges selected by Washington for the Supreme Court. In explaining the new Constitution, he said: "In delegating federal powers, the constitutional authority is to be collected, not from tacit implications, but from positive grant, expressed in the instrument of union. Everything which is not given is reserved."

Similar declarations could be given of Roger Sherman, Oliver Ellsworth, Alexander Hamilton, C. C. Pinckney, James Iredell, Chief-Justice Marshall, the Supreme Court in 1837, Chief-Justice Salmon P. Chase, and even the Supreme Court, as at present constituted, in a decision rendered in October, 1882.

Everything goes to show that the decision of March, 1884 (as well as the greenback decision of 1871), was wrung out of the Court by extraordinary

pressure, either of bad reasons of policy or more direct influences. As it is not merely a single instance of error or injustice, but a standing menace to every business interest, the question of what ought to be done in the premises is of the first importance.

Mr. Bancroft is decidedly opposed to any movement looking to the amendment of the Constitution, holding that the present Court should impartially examine its decision, in which case it is bound to reverse it. The advice is given in a tone conveying sentiments of the most exalted and patriotic character; but, nevertheless, it must remain very doubtful if the members of the Court could be induced to reverse their action, taken so deliberately as it was, and at a time when no special exigency tended to bias their minds.

But there is no doubt whatever that a way can be found to settle the matter satisfactorily, if only by unceasing agitation of it the people are taught to understand its significance.

---

#### POLICY OF THE TREASURY DEPARTMENT.

A resolution introduced in the House of Representatives by Mr. Bland, and passed on February 2d, called upon the Secretary of the Treasury to declare the policy which he had followed and intended to pursue regarding the silver circulation and kindred matters. There has not from the first been any secret respecting these things, and to any one whose eyes have not been blinded by the dust thrown up by the silver men the course of the Secretary of the Treasury has been perfectly plain and consistent. His efforts have been constantly directed toward keeping the Treasury in such a condition that it should be on a gold basis, and with this view he has, in the absence of a repeal of the Bland coinage Act, endeavored by every legal means at hand to put the silver dollars into actual circulation without at the same time making the coin odious. However, the policy of the Secretary is explained very fully in his reply to the resolutions, which, with the appendix, fills a pamphlet of forty pages. The subjects upon which the Secretary was called upon for information and which the reply covers are condensed as follows:

**FIRST.**—Whether or not any agreement or arrangement was made by the Treasury Department with the Clearing-House Committee, or others, in New York, in order to avert a "temporary danger," or to "preserve the gold standard;" and, if so, by what authority of law such arrangement was made and carried out.

**SECOND.**—The amount of silver dollars in the Treasury on March 4, 1885, and on February 3, 1886, unrepresented by outstanding certificates; the amount of silver certificates in circulation on those two dates; and the amount of interest-bearing debt that was subject to call on February 3, 1886.

**THIRD.**—The amount of silver dollars in the Treasury on the aforesaid dates, respectively, that "could" have been applied in payment of the interest-bearing debt and other dues of the Government; and the amount of silver certificates on the latter date that "could" have been reissued.

**FOURTH.**—Whether or not the same policy, as to the payment of silver, is to be pursued in the future as in the past.

The danger into which the National finances were brought by the refusal of the 48th Congress to act upon the silver coinage matter is imperfectly exhibited in the following table, which is given in Mr. Manning's reply. It shows, however, "the gradients where descent is so much easier than the reverse." The gold in the Treasury, besides the \$100,000,000 held as the

minimum reserve to secure the present redemption and future payment of the \$346,681,016 of the United States notes, has been as follows :

January 2, 1885.....	\$41,688,000	July 30, 1885.....	\$25,985,000
March 4, 1885.....	26,368,000	January 2, 1886.....	48,444,000
June 3, 1885.....	14,650,000	February 8, 1886.....	38,219,000
July 29, 1885.....	20,071,000		

Meanwhile the silver dollar circulation was enlarged from March 4, 1885, to March 2, 1886, from about \$40,000,000 to about \$51,500,000. It may be remarked here that in making the above exhibit in this form the Secretary again shows his inclination (if not determination) to carry on the division of his Department, which has to do with the circulation, under the rules which have been found necessary under similar circumstances everywhere in the world before, but which a large proportion of Congress ignore or consider impertinent. He insists, for instance, on considering \$100,000,000 of the gold in the Treasury as purely a reserve for the payment of the greenbacks, although the law hardly authorizes this, in a far more positive way than did any of his predecessors. Whether he is altogether right or not it is not necessary here to say ; but we opine that it is better for him to risk the anger of Congress than to quarrel with the laws which govern the finances of nations as well as individuals.

The matter involved in the first inquiry is answered by the publication of the correspondence between Treasurer Jordan and the New York Clearing-House. The circumstances under which the banks last year gave the Government gold and legal money in exchange for subsidiary silver and silver certificates—"a transaction wherein," says Mr. Manning, "the New York banks showed again, as during the war, their perception of an enlightened self-interest in the dictates of a sterling patriotism"—were recounted at the time. Further light is thrown upon the matter by an exhibit of the seven kinds of money that are receivable on various terms in the Treasury of the United States from their debtors and those payable to their creditors. "The Treasury is a reservoir with incomes and outgoes. By law it receives almost every kind of authorized currency. The outflow authorized by law is far less free and various. The Government could, of course, compel the acceptance of nothing but legal-tender money, even if compulsion were a pecuniary or moral advantage. The actual diversity between the legal circumstances controlling inflow and outflow is obvious at a glance over the table and statutes there cited. Nevertheless, the practice of this Department, becoming within the last twelve-month for the first time difficult, has been uniform, to so provide for the usual wants of the Sub-Treasuries that any creditor of the United States, rich or poor, laborer or contractor, soldier or sailor, Congressman or bondholder, might at all times have his choice among the currencies in which his dues were payable. This procedure, an ordinary commercial convenience at private tills where only thousands of dollars pass from year to year, seems not unsuitable where hundreds of millions ebb and flow, and where those who control the till control the currencies. No kind of currency issued by the United States has been, at any branch of the Treasury, disparaged and discredited by withholding another kind of currency to which it was made by law equivalent.

"I have labored," says the Secretary, "to promote the circulation of silver with unremitting energy. I have pressed its circulation at a constant expense to the

Treasury when other forms of lawful money could have been circulated without such cost. I have pressed its circulation at the expense of the United States notes (ones and twos), which, as fast as redeemed, have been reissued only in larger denominations. I have pressed its circulation at the expense of the circulation of National bank notes. I have upheld its value by never compelling its receipt by any creditor of the Government, and never failing to provide by exchange or transfers whatever currency might be preferred."

Attention is called to the fact that since the resumption of specie payments on January 1, 1879, and despite the Act of February 25, 1862, no distinction has been made between coin and United States notes in the collection of duties or in the payment of principal or interest of the public debt. The fact that the practice has prevailed so long without the interference of Congress is held to abridge the liberty of the present Secretary to enforce a stricter observance of the letter of the statute, which makes duties payable in coin. The question involved would be settled, Secretary Manning says, if Congress would repeal the Act of May 31, 1878, which provides for the compulsory re-issue of redeemed legal-tender notes, and substitute a more abundant and safer currency, consisting exclusively of coin and coin certificates.

The Secretary shows that the various inflows of money to the Treasury cannot be regulated from within the Department. Under the present laws the money most likely to be paid into the Treasury will be the kind not having the legal-tender quality (like silver certificates) and which is therefore more acceptable for liabilities to the Government than to private persons.

But there are other limits, even, with regard to the circulation of legal-tender money in practice. These limits arise from the various uses to which money is put, and from every man's natural endeavor to employ whichever promotes his convenience in daily transactions. Given a supply of other denominations, and the number of one-dollar coins or bills in circulation cannot be made to exceed a certain amount. If forced out, the excess would quickly return to the Treasury. If it were desired to promote the circulation of a silver certificate of a given denomination without reference to the public convenience, it could be accomplished only by shouldering out from concurrent circulation the same denomination of coins or notes.

"Forcing the silver and silver certificate circulation by too large payments therewith of interest-bearing or other debt would exclude the gold circulation and precipitate a silver basis.

"Forcing the silver accumulation is an addition of \$24,000,000 per annum to the vast sum of our Federal taxation.

"Forced silver circulation, forced silver accumulation, these are the alternatives to which silver coinage has brought us now.

"But the time when a choice will remain possible between these bad alternatives, silver storage or a silver basis, is narrowing.

"Reduction of superfluous taxation (unless the reduction shall include the \$24,000,000 spent for silver), reduction of the surplus (if silver debt-payments shall surcharge the circulation), will drive us over the ruinous fall from silver storage to silver basis."

The number of silver dollars in the Treasury, on various dates, is given by the Secretary.

"As to what application 'could' be made of them being questioned," he says, "I respectfully answer, besides what is elsewhere said, that by careful management, so as neither to contract the currency nor to force a silver basis, these silver dollars might all, in time, be applied to withdraw and cancel the United States notes which are 'other dues of the Government' now payable. But my power to do so is left in doubt by the Act of May 31, 1878. I therefore suggested its repeal in order to provide a larger

use for silver. Such a substitution of silver and silver certificates for United States notes, in the circulation, is practicable in time and with care without the hazard of a silver basis. But to force a surplus silver circulation by too large funded-debt payments therewith is not possible without the hazard of a silver basis, as I have above shown in explaining the illegitimate influence of the Treasury upon the circulation under present laws. An economy, vastly greater in dollars and cents, is otherwise possible."

Were the currency so reformed that the receipts and outgoes of the Treasury should consist only of coin and coin certificates the Treasury surplus could be cut down to an easy working balance.

To the fourth inquiry the Secretary replies by calling attention to the only existing law which establishes the *unit of value*, viz.: the Act of February 12th, 1873, which gave this title to the gold dollar of 25 8-10th grains.

"In reply, therefore, to the summons of the House, mindful of that duty and my oath, I respectfully answer that, while the law remains what it is, I shall endeavor in the future as I have endeavored in the past to conform my official acts to the letter and spirit of its plain requirements, and to so exercise every discretionary power with which it is the pleasure of Congress that my office be vested over the contents, the outgoes and the surplus of the Treasury as to maintain every other dollar of their creation in such use and circulation as consists with the preservation of their practical commercial parity with the gold dollar, testing that equality exclusively by the sole 'unit of value.'"

The conclusion of this vigorous paper is devoted to the question of establishing the free coinage of gold and silver, which can be accomplished only, it is urged, by an international concert. This latter we can never have except by an unconditional stoppage of the silver coinage.

---

#### A METALLIC CURRENCY.\*

*Editor Rhodes' Journal of Banking:* DENVER, Colorado, March 8, 1886.

It is a singular thing in the history of financial legislation since our civil war that no public man has taken a stand for that soundest of all currencies—a metallic one.

After studying the nature and function of money, its relation to industry and the fruits of industry, some years spent in practical banking, and some familiarity with commerce and current commercial literature, and especially some knowledge of our mineral resources, I became a confirmed "bullionist."

It has a strange sound to me when men say that a paper circulation is now necessary because gold and silver are so abundant, while in my earlier years they protested that paper money was necessary because gold and silver was so scarce! But whatever the case may have been in other times, we live in a time when gold and silver are produced in sufficient quantity to furnish all that men need in exchanging the products of their labor and in rewarding personal services rendered. The best evidence of this is that we have so much gold and silver as to be able freely to make it into ornaments. This indicates that we *desire*, or covet, these gew-gaws more than we *need* the precious metals of which they are made, for the purposes of a measure of values and medium of exchange.

As to the convenience of metal money, the machinery of banking is so complete, and commercial records so perfect, that money of account, credits

---

\*By the Hon. POSEY S. WILSON, United States Assayer at Denver. The writer's firm stand on the silver question is already well understood by the JOURNAL's readers.

and debits, bills of exchange, checks, certified checks and certificates of deposit, together with the absolute responsibility of carriers, afford every facility for conveying large sums that paper money does. Indeed, paper money itself is dependent on these agencies for handling in large sums. Few men find it necessary to carry large sums of money, and "law and order" afford greater protection now, when it is necessary to carry greater sums, than ever before. Any one may satisfy himself that metal loses less in value by wear than the cost of establishing, and maintaining, a paper currency. This he may do by consulting the coinage laws and "running in" his coin before it wears below the minimum weight, and by consulting tables on the wear of coins.

A metallic circulation needs, for its healthy working, that some regard be had to tariff laws, that they be framed without anything of "obstruction" in them.

Furthermore, a metal currency is healthily self-regulating: when it is redundant it will go where greater honor awaits it; when scarce our fields, mines and factories will bring it in. It will in any case be sufficient to effect exchanges of values and to settle balances, for the products of labor are always offered *in successive portions*; though, when money is redundant, exchanges and settlements go on more rapidly, sometimes even to the degree of wild speculation; but the net gain to society is not greater than where financial processes go with less speed.

POSEY S. WILSON.

## STARTING A NEW BANK.

---

### HINTS TO THE CASHIER.

A Cashier taking charge of a newly organized bank in a country town that has hitherto been without banking facilities, enjoys peculiar advantages. He can, so to speak, bring his depositors up to his hand. His President and Directors will, no doubt, know all that need be known—indeed, all that can be known—about the financial standing of every soul in the place. They can tell whose note will be paid at maturity and who will come for a renewal. They can estimate to a hair's-breadth the value of every endorsement and of every collateral security that may be offered. But when it comes to a practical knowledge of the routine business of banking the Cashier stands alone. Every point of banking practice and of banking law is referred to him for decision, and he is expected to be able to decide. His word is law. We say, then, that such a Cashier enjoys peculiar advantages. It is his own fault if he does not avail himself of them.

In the first place start out with as simple a set of books as possible. Make them so plain that any man who can add two and two can understand them.

Get the Board of Directors into the habit of making a monthly—or at least a quarterly—investigation of the condition of the bank. Do not set out with the idea that you and the President will run the concern, but talk freely to all the Directors about the bank's business. Get them interested in it and in you. Ask their advice and, when you can, take it.

As to the stock, gradually place a little here and a little there among enterprising men of the town. And always be ready to take all stock that is offered.

If you happen to be of an originating turn of mind start a gas company, or a water company, or anything else that will bring money together for

deposit in the bank. In short make a vigorous yet honorable effort to have the bank stand as the financial headquarters of the place and neighborhood.

You will most likely find a good deal of curious money about—worn and mutilated coins and soiled bank notes. Gather this in and get rid of it as fast as possible. Study the wants of the community as to different kinds of money, and always keep plenty of small change on hand. It is a little troublesome but it will pay. Be ready and willing to oblige all who come to the bank. "Sugar catches more flies than vinegar." And every now and then drop a quiet word about the security of the bank vault as compared with old-fashioned safes, or with bureau drawers, tin boxes, or even an old stocking. A little perseverance and tact will draw many an odd dollar out of its hiding place to swell the deposit line of the bank. It is a bad practice to run to the nearest large city to buy paper. The town people put their money into the bank, and the town interests ought to get the benefit that comes from circulating it; therefore use your money to build up local interests and home industries.

There is quite a little item of profit to be picked up by collecting drafts, etc., for the firms who sell goods to your customers. This is a matter in which country banks are somewhat prone to kill the goose that lays the golden egg.

Bank men, as a rule, do not like to deal with ladies; they say ladies are so troublesome. But, my good friend, when you undertook to organize a country bank, trouble was the very thing you might reasonably have expected to undergo. To get the ladies of the town and neighborhood who have money to open personal accounts with the bank is worth from 10 to 20 per cent. on the line of deposits.

It is well to get depositors into good banking habits from the first, such as putting up money in proper shape, filling up deposit tickets, checks, etc., correctly, and many more points which may seem trifling in themselves, but which, when properly attended to, save a deal of time to the bank.

A word in conclusion: Make your head save your hands all the time. Let nine o'clock find you at the bank, and four o'clock find you away from it. If, between these hours, you cannot get through your work, ask the Board to increase the clerical force. Better a moderate salary and good health than a high salary and worked to death to get it. PRACTICAL BANKER.

---

## THE BALTIMORE CLEARING-HOUSE.

### REVISED CONSTITUTION.

The Baltimore Clearing-House having recently revised its Articles of Association a few points about its organization will probably be of interest to the JOURNAL's readers, especially to such as may be contemplating the organization of a Clearing-House in their own city.

The Clearing-House meets at 9 A. M., and the Messengers take about twenty minutes to make up their sheets. Debtor banks must pay in their balances by 11 A. M. and creditor banks may come for their balances at 12.30 P. M. Items which any bank may determine not to pay must be returned before 11 A. M. directly to the sending bank and not to the Clearing-House. In case of the refusal or inability of the sending bank to redeem such items the receiving bank may report to the Manager of the Clearing-House before 12 o'clock the amount of such items, and the Manager is then to deduct from the settling sheet of the two banks the amount so reported and readjust the

Clearing-House statement accordingly. Provision is made for the issuing of certificates of deposit by the Clearing-House to be used in settlements and to be negotiable only among the banks which are members of the Clearing-House.

All checks passed through the Clearing-House must be stamped with name and Clearing-House number of the sending bank.

Notes, excepting for the amounts less than \$1,000, must be put up in packages of \$1,000, or multiples thereof, and must contain notes of one denomination exclusively. One and two-dollar notes are not received. All gold must be put up in canvas bags containing \$1,000, or multiples thereof, and the coins must be of one denomination exclusively.

The expenses of the Clearing-House are paid by an assessment of thirty cents per \$1,000 on the capital of the associated banks respectively.

At meetings for the transaction of business each bank is represented by its President, or Cashier, or by a Director. In order to secure a full attendance banks not represented at such meetings are fined five dollars. There is an annual meeting of the association for the election of officers. With this exception the association has no regular times for meeting, but assembles on a call issued by the President or Vice-President at discretion, or upon the request of the Executive Committee or of any three members of the Association.

Membership is confined to incorporated banks, and no new member can be admitted with a capital less than \$200,000. The admission fee is \$500. Provision is made for the admission of the United States Assistant-Treasurer. Applicants for admission must be examined by the Executive Committee or by the United States Bank Examiner. State banks that are members of the Clearing-House are required to publish sworn statements of their condition in the manner and form and at the time prescribed by the Comptroller of the Currency for the publication of statements by National banks; provided, however, that the State banks shall be exempt from such statements for thirty days preceding and following their semi-annual reports to the Treasurer of the State.

The Executive Committee are vested with large powers. They may peremptorily suspend a member from the Clearing-House "in case of extreme emergency."

"They are also empowered, whenever they shall consider it for the interest of the association, to authorize the Bank Examiner to examine any bank member of the association, and to require from any member securities of such an amount and character as said committee may deem sufficient for the protection of the balances resulting from the exchanges at the Clearing-House."

The following is the section in regard to defaulting banks:

"Sec. IX. Should any of the associated banks fail to pay the balance due from it by eleven o'clock, the depository bank shall notify such delinquent bank, and if, after such notice, the money is not paid by half-past twelve o'clock, such bank shall be considered as ruled out by such default, and notice given thereof immediately by the Depository to the respective banks, who shall forthwith furnish to the Depository the amount of such balance in proportion to their respective balances against the defaulting bank resulting from the exchanges of that day, and the amount so furnished to the Depository shall constitute claims on the part of the responding banks, respectively, against the defaulting bank."

It may be added that the following notice, printed on a card 10 x 12 is posted in all the Clearing-House banks:

"In receiving items on out-of-town points, either as cash, for collection, or for discount, this bank assumes no responsibility, beyond due diligence, for any loss in transportation or by reason of any negligence or default of its correspondents."

**SENATOR BECK ON TREASURY METHODS.\***

Senator Beck, last month, made a savage attack upon a former Comptroller of the Currency, alleging that the Comptroller had, some years before, made a ruling which discriminated in favor of the deposits and reserves of the National banks of the country being deposited exclusively with the National banks located in the principal cities. The former Comptroller would probably admit that it had been his custom to defend the National banking system, and reply that the National banks are subject to restrictions from which State banks and private bankers are free, and that, while there are many State banks and private bankers who conduct their business well and safely, yet, as a rule, the right place and the safe place for the deposits of National banks is with other National banks. Senator Beck, however, insists that the construction of Section 5200 of the Revised Statutes, which provides that the total liabilities to any association of any corporation or firm for money borrowed shall at no time exceed one-tenth part of the amount of the capital stock of such association actually paid in, has heretofore been erroneous. Senator Beck will probably be surprised to find that the construction of the statute to which he refers was not, in the first instance, made by the Comptroller of the Currency, but by the Supreme Court of the United States, which held, some years ago, in the case of *Bank vs. Lanier*, as reported in 11th Wallace, page 875, Justice Davis delivering the opinion of the Court, as follows :

"But a deposit is nothing but a loan of money, and is within both the letter and the spirit of the provision. It is well known that country banks keep on deposit in New York, with bankers and merchants, a considerable amount of money for their own convenience, for which they receive more or less of interest. But whether interest be obtained or not, these deposits are, equally with paper discounted over the counter of the bank, loans of money, and the reason of the rule is equally applicable to them. The banker is accountable for the deposits he receives as a debtor, and the individual borrower of money from the bank sustains no other relation to it. In both cases money is borrowed, to be returned in a greater or less period of time, according to the contract of the parties."

We do not say that this decision is right, but we do say that it is the law as interpreted by the Supreme Court of the United States, and that Senator Beck's controversy is with that Court and not with the Comptroller of the Currency. It is known that the construction of the former Comptroller has, at various times, been reviewed by different Secretaries of the Treasury, and more recently by Secretary Folger, who was at one time Chief-Justice of the State of New York, and, after careful examination, he concurred in the construction of the Comptroller. The Senator compliments the late Acting-Comptroller as being "a very able young man," but he was unwilling to give him the power to approve an increase in the capital stock of a bank even after the stockholders, owning two-thirds of the capital stock, had voted for such increase ! It would seem that Senator Beck ought not only to be Senator, but have entire control of the Treasury Department, for he expressed himself but a few weeks ago as having no confidence in the present Secretary of the Treasury nor in the Treasurer of the United States, and now it seems he has no confidence in the recent Acting-Comptroller nor in the Supreme Court of the United States.

\* Probably a few—a *very few*—of the JOURNAL's readers may have seen a garbled version of these remarks in a weekly sheet published in New York.

### Methods and Machinery of \*PRACTICAL BANKING.

CONSISTING OF BRIEF DESCRIPTIONS AND SUGGESTIONS RELATIVE TO THE  
METHODS OF CONDUCTING THE BANKING BUSINESS; WITH APPROVED  
MODELS OF BLANK BOOKS AND FORMS FOR THE USE OF  
BANKS OF DISCOUNT, SAVINGS BANKS, ETC.

[Prepared expressly for the JOURNAL by the Cashier of a long-established bank, who has had over twenty years' experience in practical banking, and who has always sought for better and safer methods.]

#### ENDORSEMENT OF CHECKS.

There are points relative to the endorsement of checks that should be introduced here. In endorsing it is always best to write across the back of the check, draft, etc., rather than lengthwise. By so doing the vouchers are left in better form for the affixing of other called-for names; and further, such a location of the endorsement is in accordance with well established business customs in this matter, and seems to bind the name more strongly to the form and figures of the paper. The Teller who cashes the endorsed checks expects to find the payee's name thus placed, and it seems to him and to everybody else better placed than if sprawled lengthwise on the document. In endorsing one should always gravitate towards the top of the check if there is any probability that the paper is to travel further and bear more endorsements. Thus, when a bank issues to its customers checks which are payable to and endorsed by its Teller, the Teller's countersign should be well up towards the top of the paper. It is easy, and also important, to recollect that the top of the back of a check is its left face. In an ambitious manual for business men that has been published in this country I find the following bad advice in regard to making endorsements:

Always indorse a check just as it appears on the face. For instance, if the check is payable to "G. Read" indorse "G. Read;" if to "Geo. Read" indorse "Geo. Read;" if to "George F. Read" indorse "George F. Read." If the spelling of the name on the face of the check is wrong indorse first just as the face appears and below it the proper way. For instance, the check is payable on face to "George Reade;" indorse "George Reade," and below this first indorsement write what it should have been, "George Read."

No person should endorse a check that is supposed to be his—to be made payable to him—in any other way than by writing his own name—his legal name, spelled in the right and proper manner. It matters not that the name may be spelled differently—wrongly—in the face of the check. He should allow the error to go no further—should give it no countenance. If the payer of the check is satisfied he is paying it to the right person he does not wish a wrong name—a name, perhaps, that does not really have any relation to the paper upon whose back it is put. If the check is to go further through the exchanges, a guarantee of the endorsement of the payee will be all that is necessary to make it regularly negotiable and satisfactory.

#### BANK HOURS.

It might be well for banks, particularly those located in cities and large towns, to entertain the idea of closing at one o'clock on Saturdays. The London bank clerks have recently petitioned their various Boards of Directors

\* Practical Banking Series—Part XXI.

These papers will be continued through the 1886 volume of the JOURNAL. Copyright, 1884. All rights reserved.

to close on Saturdays at one o'clock. The press of London has favored this early-closing plan with considerable unanimity. The bank Managers and many of the merchants oppose the move, and its success is doubtful. The bank officers of London, and of the United Kingdom generally, work long hours. They do not commence as early as here, but they usually work later. Their general habit is to get a solid lunch at about one o'clock, and to dine at six o'clock. The six o'clock dinner is a very substantial affair in England, and it is not followed by much more in the way of evening teas, lunches, or suppers, except in the case of fashionable, unbusiness people, who turn night into day, going often, in the "season," to both the play and parties on the same evening. The last-named classes do not think of going to bed before midnight, and sleep late in the mornings. These habits of sleeping are not those of the bankers and merchants of London.

#### LETTERS OF CREDIT.

The issue of Circular Credits for the use of travelers in Europe, etc., has now become such a common feature of banking that a special explanation of the methods of issuing these elastic and indispensable bills of exchange, and also of using them, is certainly in place.

Our banks and bankers, who are in this letter of credit business, issue them upon the satisfactory introduction and identification of applicants upon terms which are usually of about this character :

**A.—Against Cash payment** (for sums of £500, and over), without allowance of interest, but free of commission, at selling rate of exchange for demand bills on London on the day of issue.

The unused portion of any such Credit will be refunded at purchasing rate of exchange for demand bills at the time of its return.

**B.—For a Commission of 1 per cent. upon the amount used, as follows :**

**1.—Against Cash payment** (for sums under £500), without allowance of interest, at selling rate of exchange for demand bills on London on the day of issue.

The unused portion of any such credit will be refunded, with its proportion of its commission, at purchasing rate of exchange for demand bills at the time of the return.

**2.—Against the Deposit of an approximate amount of cash.** Re-drafts will be charged in account at selling rate of exchange for demand bills on the day they are received. On deposits of \$5,000, or over, interest will be allowed at 1 per cent. under the current value of money for call loans, but not exceeding 4 per cent. per annum.

**3.—Against satisfactory guarantee of repayment as drafts appear.**

**4.—Against deposit of sound marketable securities.** In the absence of any other provisions for the repayment of the amount used, the securities will be sold as required to pay sums drawn under the Credit. For making such sales, or for the collection of interest or dividends on such securities, a charge of ¼ per cent. commission will be made.

These Credits, bearing the signature of the holder, afford a ready means of identification, and can be availed of wherever he may be in sums to meet his requirements. For this purpose the Credits are specially addressed, and the traveler thereby accredited, by an indication list attached, to bankers of the best standing in all parts of the world.

Letters of introduction should, in all cases, bear the signature of the person introduced.

The terms quoted above are those of Messrs. Brown Brothers & Co., of New York, Philadelphia and Boston ; and, for the better information of the reader, we print a *fac-simile* of their Circular Credit (except as to paper, tint, size, etc.), which will give a much clearer and better idea of its form and availability than any mere written description :

THE UNIVERSITY OF CHICAGO LIBRARY

Brown, Brothers & Co.  
CIRCULAR LETTER OF CREDIT:

No. £24500

New York 26 March 1885

Gentlemen.

We request that you will have the goodness to  
furnish Mr. Henry P. Mustet, the bearer, whose signature  
is at foot, with any funds he may require to the extent of  
£500—say Five Hundred Pounds Sterling  
against his drafts upon MESSRS BROWN, SHIPLEY & CO  
LONDON: each draft must bear the number (No. £24500) of this  
letter, and we engage that the same shall meet due honor.

Whatever sums Mr. Mustet may  
take up, you will please indicate on the back of this Circular  
letter, which is continuous in force till 26 March 1886  
from the present date 26 March 1885.

We are, respectfully,

Gentlemen.

Your obedient humble servants  
Brown, Brothers & Co.

To Messieurs  
The Bankers mentioned on the  
third page of this Letter of Credit.

The Signature of  
Henry P. Mustet

NOT EXCEL  
ION

THE UNIVERSITY OF CHICAGO LIBRARY

The first page is the Credit proper, authorizing the various Correspondents of the house, who are named on the third and fourth pages (some four hundred in number), or any other banker to whom the letter may be presented, to pay the holder of the Credit, whose signature is given on its face, to the extent of £500 sterling.

The second page of the Credit shows how the holder availed himself of the amount, commencing his trip at Liverpool and ending it at Cork, whither he embarked for home.

As stated, there are nearly four hundred names and places upon the indication list attached to the Credit, covering the entire civilized world, so that, with one of these Credits in his possession, the traveler can journey from place to place and make the entire circuit of the globe, and never have in his pocket gold, silver or paper money more than is necessary to pay his immediate expenses.

Wherever he may be the Circular Credit of such a house as Brown Brothers & Co. is the "open sesame" to the banker's vault to get the "wherewithal" for his needs. The risk of loss of money is reduced to a minimum. If the Credit should be lost the chance of its being used by any one else is very remote. In an experience of thirty years the writer can only recall one or two instances where the finder, or stealer, of a Circular Credit successfully made use of it. All the safeguards that the experience of these many years has suggested are thrown around the security of these Credits.

The value and convenience of these Credits, as compared with a Bill of Exchange, is in the fact that the holder carries the means of identification with him, and that he can avail himself of the amount in sums to meet his requirements.

As stated in the circular above quoted, these Credits are issued against "Cash deposits, or satisfactory guarantee of repayment."

In the first instance the traveler deposits his funds with the banker, getting a credit for an equivalent amount. Upon his return to this country, if there is any unexpended balance of the original amount, it is refunded to him.

In the other case, "satisfactory guarantee of repayment," the traveler arranges with his bank, or some one else satisfactory to the banker, to guarantee repayment.

*Settlements.*—If your Credit has been issued *against guarantee of repayment*, as your drafts are paid in London the banker will redraw upon your paymaster in America upon the following form, so that when you return home these statements will afford you particulars of the amounts drawn and paid, without the necessity of a further statement of account:

WHEN REMITTING PLEASE BE PARTICULAR TO MENTION THIS NUMBER.

No. 35/6

NEW YORK, March 31, 1886.

Messrs John Brown & Co., New York.

Dear Sirs,

Our London House having paid the Draft of Mr. H. R. Husted, under Credit No. —, for £ 20, please remit us in settlement thereof as per Statement at foot.

We are,

Yours respectfully,

BROWN BROTHERS & CO.

Statement.

AMOUNT OF DRAFT, £ 20.

DISBURSEMENTS.....	£ 20 @ 4.90	\$ 98 —
COMMISSION, 1 %.....		98
INTEREST, &c. 30 days @ 6 %.....		49
		\$ 99.47

If your Credit should have been issued against *cash deposited*, on your return the banker issuing the Credit will account to you for the undrawn balance in accordance with the terms of the circular printed on page 269.

*Method of Using Letters of Credit.*—The routine one goes through, in foreign lands, in drawing money upon his Circular Credit is a simple one. An explanation of a single transaction will make the matter very clear. I will, for illustration, take a personal reminiscence, which covers the most difficult sort of case which can come up in this drawing business :

I was in the Lake District of England—in Keswick. There was a small bank there. I had never before been in the place, knew no one there and was not known by any one. I was getting out of funds. I entered the little bank, presented my letter of credit for £500, and asked the Manager if he could let me have £50 on it. He looked at this letter of credit, and said, pleasantly, that he did not know me, and that the last time he made an advance to an American upon an American credit he lost his money. The day after his payment the issuers of the Credit (Duncan, Sherman & Co.) failed, and he never heard more of the payee. He asked if I could give him time to wire to London about the payment. I told him I could not, as I was to leave Keswick at once. He then asked me to draw my check on the bill. His bank was not upon its list of payees, yet, after comparing my signature on my check with that of the letter of credit, he readily paid me the £50. Good banking in England permits identification by signature to govern payments.

*Losing a Circular Credit.*—The traveler wishes, of course, to avoid by all means the misfortune of losing or mislaying his Letter of Credit. He should have a special receptacle in which to carry it, and it is important that it be kept free from wearing and defacement. In the rough experience of travel among strangers, in many lands, he may find this hint relative to the care of his funds of some value. Place under your pillow at night watch, money, Circular Credit, etc. But, in order to escape the awkward mishap of leaving these things where you have slept, place them in your hose. You will not be likely to travel far without these. In losing a Circular Credit there need be no serious trouble (though the loss may be embarrassing) if the loser uses the mail and wire to stop its payment at headquarters.

#### BANK SHARES IN HER MAIDEN NAME.

Miss Delia Morse held ten shares of bank stock in her maiden name, and held in her own hands the certificate of the same. A gentleman came to the bank with this certificate, holding also a power of attorney for the transfer of the certificate, signed Delia Morse. The power was filled with an authorization to transfer these ten shares to Mrs. Delia M. Brown. Miss Delia Morse had by marriage become Mrs. Delia Morse Brown, and so she wished to have the stock placed in her new name. The question was at once raised by the Transfer Clerk of the bank as to whether or not the power of attorney was properly signed. This question took an unusual aspect from the curious fact that Mrs. Delia Morse Brown, who appeared upon the power of attorney in her maiden name, had been married but a few days, and had signed the power the day before her marriage. The bank decided, and correctly, that the power could not be received by them in that shape, and that it must be signed "Mrs. Delia Morse Brown, formerly Miss Delia Morse." The delay of the party holding the power to use it until the lady had changed her name rendered it imperatively necessary that this unused power should also have its signature changed. When it was presented there was no longer in existence any such name as the Miss Delia Morse of the certificate, and the obsolete name could not be recognized by the bank.

It is so clearly established that a married lady making a transfer of stock standing in her maiden name must sign her married name, adding the statement, "formerly Miss ———," that no intelligent bankers hesitate over the point. In the case just quoted, like other illustrations that have been brought

THE UNIVERSITY OF CHICAGO LIBRARY

up in these papers, the peculiar facts that the lady was transferring to herself and had signed the power of attorney before she had changed her name made the situation novel and somewhat complicated.

#### CASTING INTEREST.

Shorthand methods of doing this are exceedingly numerous. There are few bank Discount Clerks of long experience in their departments who have not some special process for quickly reaching interest results which they coined to suit their own tastes and to meet the needs of the systems upon which they run their departments. Here is an explanation of one interest-casting method in use in some Boston banks which is certainly quick :

To find the interest upon any given sum for any number of days at 4 per cent., point off three places as the interest for 9 days, and proceed with 9 as the factor in the same way as you do with 6 in 6 per cent. interest.

The interest upon any given sum for 6 days at 6 per cent. is the same as 9 days' interest upon said sum at 4 per cent.

The interest for 6 days upon \$6,000 at 6 per cent. is \$6.00.

The interest for 9 days upon \$6,000 at 4 per cent. is \$6.00.

#### EXAMPLES.

Find the interest upon \$1,000 for 36 days at 4 per cent.

##### *The Old Way.*

Point off three places	\$1,000.00	interest for 6 days at 6 per cent.
Multiply by 6; as 6 in 36 goes 6 times		
and result is.....	\$6.00	interest for 36 days at 6 per cent.
Take off one-third	\$2.00	to make interest 4 per cent.
And we have	\$4.00	interest at 4 per cent.

##### *The New Way.*

Point off three places	\$1,000.00	interest for 9 days at 4 per cent.
Multiply by 4. As 4 multiplied by 9		
is 36 we have.. . . .	\$4.00	interest for 36 days at 4 per cent.

Find the interest upon \$3,000 for 39 days at 4 per cent.

##### *The Old Way.*

Point off two places and divide by 2 as the interest for 30 days, or.....	\$15.00
Point off three places, as 6 days' interest, or .....	3.00
Divide this \$3 by 2, as 3 days' interest, or.....	1.50
And we have as a result 39 days' interest at 6 per cent., or .....	\$19.50
Now take off one-third to make interest 4 per cent., or.....	6.50
And we have the interest at 4 per cent., or.....	\$13.00

##### *The New Way.*

Point off 3 places as interest for 9 days at 4 per cent. and we have \$3.00. Now 9 into 39 will go 4 times, and 3 remaining. 4 multiplied by 3 is \$12.00, the interest for 36 days. The interest for 9 days is \$3.00, and for 3 days it will be one-third as much, or \$1.00. This added to the \$12.00 makes the interest \$13.00, same as above.

##### *Form of Operation.*

$$\begin{array}{rcl} \$3.00 \times 4 & = & \$12.00 \\ \text{One-third of } \$3.00 & = & 1.00 \end{array}$$

Which makes \$13.00 interest at 4 per cent.

#### THE PAYING-TELLER.

It is a most excellent idea for every Paying-Teller to make a point of keeping in stock as nice, new and bright an assortment of bills, large and small, and gold and silver coin of the current denominations as it is within his power to secure. I am now referring, of course, to the supply of miscellaneous cash he carries in his trunks and drawers to meet what may be termed the

demand of the retail branch of his trade—to cash the checks, which are generally small checks, to meet personal wants, that are paid over his counter. I happen to know the Paying-Teller of a large bank, whose general management is a model of system, and who shows his views of neatness and order in his business by fully carrying out this idea. His customers often speak with satisfaction of the fact that their Paying-Teller always manages to pay them in clean and unmutilated bills and change, even down to cents, that is fresh and bright. With a little pains, particularly in our large places, Paying-Tellers may make a marked improvement in this respect. New small bills, silver and cents may, with very little expense, be obtained for old ones at the United States Treasury.

#### SECURITY FOR NATIONAL BANK DEPOSITS.

The plan suggested by Cashier Flannagan, of New York, that the United States Government should set aside as security for deposits the money received from the banks as tax on circulation, together with the profits accruing to the Treasury from circulation which never comes home for redemption, is one which will probably secure some attention. Depositors in National banks have lost, since the National system started, some \$10,000,000 or \$12,000,000 by failures of banks. Here are three facts of interest:

1. The taxes paid each year to the Government on circulation have been much more in every instance than the losses for the corresponding year by depositors in National banks.
2. The taxes paid on circulation, since 1865, exceed by more than fifty per cent. the total amount of proved claims against insolvent National banks for the same time, so that, if the insolvent National banks had had no assets whatever, this tax would have paid all their depositors and left \$19,877,181 in the Treasury, excluding interest.
3. The taxes paid on circulation are more than six times the losses incurred by the public from insolvent National banks, and if these taxes had been applied to the payment of such losses, as is contemplated by a measure recently brought to the attention of Congress, such losses would have been paid in full, and the fund remaining would amount to \$48,832,438, disregarding accumulated interest.

#### COUPONS.

The word coupon is from the French word *couper*, to cut. These little cut-offs, which are really nothing more nor less when surrendered than an interest receipt on a time note—a substitute for a semi-annual or quarterly endorsement of interest paid—are, as their name indicates, a Continental importation. They have been in use with us only a comparatively short time. Many a banker who reads these papers without glasses can recall the time when coupons were not in existence—at any rate not here. They are a convenience; but, viewed in some respects, are what may be termed a great trial to practical bankers—a nuisance. They are always losing and mislaying themselves. To lose one is like losing a gold dollar. They are good in any and all innocent hands; their payment cannot be stopped; they pass from hand to hand as readily as a Bank of England note; fair and honest delivery gives possession. It is easy to say that, as a voucher, they are too small—not big enough in paper, yet they are so numerous one would hardly dare to propose that their size should be increased for fear that they would be monopolizing too much room in the Teller's cash, in Messenger's wallets, and Treasurer's vaults. The mere work of cutting them from the debentures of some of our great bond owners is so tedious that nothing but the consciousness of full proprietorship in every one detached can make such coupon clipping other than the most wearisome drudgery.

Patent coupon cutters, of cunning device, have been invented. I have examined and tried all the successful ones. The best of them are good workers, on some bonds, when the bonds are in fitting shape and order. But at times the best coupon cutter ever planned must give way to what may be termed the hand-picking process—the simple cutting of one coupon at a time with a pair of scissors.

Regular coupons, payable, as they usually are, to bearer, at a specific date, carry grace. Here is the common form in question, which happens to be

envelopes. Here is an excellent form for envelopes required for this coupon use :

FROM			
FIRST NATIONAL BANK OF CHICAGO.			
Coupons <i>Chicago and Western Michigan Railway 7's.</i>			
15	@	35	\$ 525. —
8	@	17.50	\$ 140. —
	@		\$ —
Account of <i>A. Hood, Trustee,</i>			\$ 665. —
PLEASE ENCLOSE COUPONS OF ONLY ONE CORPORATION IN EACH ENVELOPE.			

Where coupons are cut from registered coupon bonds, and passed by the owner through the bank or other collection avenue, they must be accompanied by an order from the person in whose name they are registered for their payment to collecting agent.

The Treasurer of one of our States takes the ground that the coupons themselves must be endorsed with this order. But coupons have not a paper back which is roomy enough for such an endorsement or which was ever intended to be so used.

The United States issues no inscribed coupon bonds. Its registered bonds are simple consols—couponless certificates, and the interest upon the same is sent to the owner in the form of a payable-to-order Treasury draft, the final endorsement of which is the registered holder's receipt for his due interest.

#### NOVELTIES IN ENGLISH BANKING.

Some few of these that came under my observation when studying, while in England, the methods and machinery of English practical banking, are deserving of particular notice. In the matter of gold coinage, I found that the Bank of England seemed to have a nearly complete monopoly of the business. To be sure, any person may take bar gold to the extent of £20,000 to the English Mint and have it, in time, returned to him in sovereigns and half sovereigns to the precise amount which he deposited. But in thus dealing directly with the Mint there are expenses and losses of interest which have to be taken into account. The Bank of England will receive bar gold at £3. 17s. 9d. per ounce, and pay at once in new sovereigns or half sovereigns. Although this Bank of England paying price for gold is slightly below its market value, the difference in question is so slight as to be more than offset by the Mint expenses I have mentioned.

The English sovereign weighs 123.274 grains, and is a legal-tender so long as it does not weigh less than 122.5. When of standard weight it contains 113 1-68d grains of pure gold.

The English half-sovereign is exactly half the size and value of the sovereign. English silver and bronze coins are fiat money—token coins—for their intrinsic value is materially less than their face value.

The seignorage which great Britain makes upon these subsidiary specimens of hard money forms quite a large source of treasury revenue. Thus an ounce of silver, which is really worth 50d., is manufactured by the English Mint into silver coins which will foot up 66 pence. Here is a direct profit of 1s. 4d. an ounce, subject only to the slight cost of manufacturing.

But while English gold coins are a legal-tender to any amount, English

THE UNIVERSITY OF CHICAGO LIBRARY

silver coins are a legal-tender only to the amount of 40s., and bronze coins to the extent of 1s.

Bullion brokers take quite a conspicuous part in London in the business of handling gold. Thus, when an American banker makes a shipment of mixed gold to London it is first passed through the hands of bullion brokers, who pass upon its weight and fineness, charging an established rate of commission for their work, and returning a formal account of sales.

Bank of England notes are a legal-tender everywhere and by everybody in England, with these exceptions—they are not a legal-tender by the Bank of England or any of its branches.

Where Bank of England notes are used as legal-tender in payment of debts the debtor cannot oblige the creditor to return change.

In presenting for redemption Bank of England notes at the counter of the Bank of England or any of its branches, sovereigns may be demanded, but not half-sovereigns or silver.

English country bank notes are not legal-tender.

In sending bank notes by mail the Englishman generally cuts them in halves, takes a careful record of their marks and numbers, and sends one of the halves by registered mail, and the other by ordinary post.

The loser of Bank of England notes may "stop" them at the Bank; but it is a curious fact that he must pay 2s. 6d. for every "stoppage" thus made. And such "stopping" may not amount to much, since the notes in question are perfectly good in the hands of any innocent holder, "stopped" or not "stopped."

Bank of England notes, which have been wholly or partially destroyed, will be redeemed by the bank if satisfactory proof can be furnished the Bank that the missing paper has been destroyed.

English banks and bankers generally furnish their customers with check-books, making no charge for them. Near the end of each check-book so furnished a blank order for a new one is printed so as to remind the owner that it is time for him to send for another book.

English banks and bankers are very desirous that their customers should use an uniform check, so as to reduce the liabilities to check frauds and forgeries.

When an Englishman receives a check which is not dated he is quite apt to insert what he believes should be the correct date and place his initials under the same. The Bills of Exchange Act of 1882 appears to give him authority to make this insertion.

English bankers have a custom of considering a check out of date if the date is twelve months or more old, and of refusing to pay such checks.

Under English law the holder of a check which has been drawn payable to bearer may change it to a payable-to-the-order-of any person, but he cannot change one from order to bearer. This last change can only be made by the drawer, and if he makes such a change he must put his initials under the alteration. This initializing method is not a practice in this country.

English bankers do not deem a pencil endorsement illegal, but refuse such generally (if they can) because they are so easily removed, and so easily become illegible.

In cashing checks payable to bearer English bankers are not required to pay any attention to their endorsements. In cashing checks payable to order they are only required to see that the checks appear properly endorsed. In neither case are the banks required to secure an identification of the party for whom the checks are cashed. Parliament some years ago enacted a law relieving the banks of any responsibility in this matter of identification. London bankers and merchants told me that it would be impossible for London to get through its daily check paying business were identifications demanded, and they wondered how we managed to pull through with an identification system still in vogue.

I have seen the Paying-Cashier of the Bank of England cashing checks for a long line of customers as rapidly as he could throw out the notes and change, paying little attention to the persons of the actual presentors—only

pausing to see that order checks had on their backs the right names, while bearer checks received only a face scanning.

London bankers require special guarantees for stamped endorsements, because, they say, anybody may get hold of the stamps and use them.

Where the initials of the christian names of an indorser agree with his full name they are readily accepted. Thus R D. Smith will be accepted for Richard Dorman Smith.

English bankers term a man who makes his mark in lieu of a regularly written signature a "marksman"—a rather curious use of a word which is always used in a different sense in this country. Their methods of getting up a "signature" by a mark is the same as with us—a method in fact which we have directly copied from them. Thus:

*his*  
Robert X Jones,  
*mark.*

*Witness: James Smith, 40 Regent Street, London.*

Procurator endorsements and signatures are largely in use in English business circles, though they are never accepted in real red tape circles without an accompanying bank guarantee. *P. P.*, or *per pro.*, are the usual forms for expressing endorsements, &c., of this sort.

Where endorsements of payees of checks, drafts, etc., are not forthcoming for one reason and another, banks have a custom which is common with us of allowing such vouchers to be deposited with them on a substitute for an endorsement of this sort: "*Received payment and placed to the credit of so-and-so,*" the signature of the bank receiving the same being attached.

All English checks have to bear a penny stamp, no matter how small may be their amounts.

When English banks receive a check whose figures vary from the words they usually return it, saying, "Words and figures differ."

When an English banker wishes to be advised by wire or post whether a check is paid or not paid he says, "Wire (or write) its fate."

The habit of using alcoholic stimulants is recognized by an English banking custom which requires witnesses to signatures and to payments of cash on checks drawn by persons under the influence of alcohol.

#### THE MOODS OF BUSINESS MEN.

A gentleman seeking an executive position of responsibility through an advertisement in a leading metropolitan paper states that among the qualifications which he possesses is a thorough acquaintance and experience with the moods of business men. He has certainly introduced a very suggestive expression into his card. Treating, as we do, of only the banking side of business, we use the text which the advertiser has furnished us in its application to bank Managers and bank management. Few there are that have had much experience with banks, either as sellers of paper or borrowers of money, who have not discovered that the success of their negotiations is quite often apt to depend as much upon the moods of the men who are at the helm of the banks as upon the actual monetary situation of the institution approached or the real claims of the applicant. This certainly is not as it should be. The ideal bank Manager is one who treats all who approach him with unvarying courtesy, and who never gives way to moods, or is influenced by his own personal feelings. He moves squarely forward upon an abstract business line. He may feel reluctance to making a move of any sort, for some unaccountable reason, or he may have an unreasonable aversion to the medium through which applications reach him, yet if he is a well-disciplined man of business who has learned, as every truly successful financier has learned, that his moods are not to be trusted, he looks cheerfully into all reasonable proposals for loans and discounts, and makes advances, with the proper discretion, when his institution is in a situation to let out funds. There come to all men hours of depression, times when trifles annoy, irritation seems almost a second nature, and the drudgery of business something almost unendurable. Sometimes there are evident reasons for these moods. Illness, loss of sleep, anxiety

over others who are in suffering, often causes the feelings described. But, whether the outcome of something that can be seen, or the result of influences so occult as to be undiscoverable, they must alike be kept down and suppressed, for there is no place for them in the lines of business. The borrowing and lending world must move on and keep these moods and feelings out of sight.

#### A MOST UNSATISFACTORY ENDORSEMENT.

The check was neatly and correctly drawn, and in all points a good check as far as its face was concerned. Here is a *fac-simile* of it:

1000	Dolls. = Cts	Boston, Dec. 30, 1885
<b>OLD BOSTON NATIONAL BANK.</b>		
Pay to	<i>Jones Despatch Co.</i>	or order
<i>One thousand</i>		Dollars
To the Cashier,	<i>Porter Williams</i>	

But the Teller brought it to me, saying that he had sent it through clearing to the bank upon which it was drawn, and that the bank had returned it to him, saying that it would not pay it unless I furnished it with a guarantee of its endorsement. Turning to the back of the check, to find out what was objectionable about the paper, I found an endorsement of this character:

FOR DEPOSIT ONLY <i>Jones Despatch Co.</i>	
---	---

The obnoxious "signature" was the "Jones Despatch Company," and there can be few more objectionable ways of endorsing than the one that had been adopted by the said Despatch Company; and the drawee bank was certainly justified in asking for a guarantee of it.

This unwise custom of putting on as an endorsement, or using in any place as a signature, the name of a company, without in the least individualizing it by signing by an agent, Treasurer, or attorney, seems to have been upon the increase of late and is actually adopted by some very experienced business parties. The practice cannot be too strongly condemned. Doubtless the "Jones Despatch Company," in the case we have given, would be held responsible for such an endorsement as we have described if they had authorized some one thus to sign for them. But the awkward feature of the business lies in the fact that in case of any dispute or complication it might be difficult to prove the correctness of the "signature"—difficult to establish its authorship and its authority. On the other hand, if the Despatch Company endorsed by its Treasurer thus, "Jones Despatch Company, by R. Jones, Treasurer," the check would pass along through settlements without question as far as its endorsement was concerned. Every properly organized company has a

Treasurer, and that Treasurer is the only proper party to indorse and promise for it, unless he is absent, in which case it is usual for the President of the company to sign in his place. In the by-laws of corporations the provision is generally made that the President shall sign in place of the Treasurer in case of need.

#### DELAYED MAILS AND THE CLEARING-HOUSE.

In places where Clearing-Houses do the work of collecting checks the question often arises: What disposition shall be made of those checks which fail of reaching the banks in the usual season owing to mail delays? This question comes up in a shape like this:

A National bank in New York sent to its Boston bank a daily letter, usually containing checks on Boston banks to the amount of many thousand dollars. This regular letter reached the Boston bank, when the mails were not delayed, early in the morning, and in ample season to have its contents collected through the 10 o'clock clearing. A heavy snow-storm keeps the New York mail back, and this letter reaches the Boston bank at 11 o'clock. Now, what is the proper course of the Boston bank under the circumstances? It should be this: The New York bank should at once be wired that their letter has arrived late, so that it may know its contents have not passed into the Boston clearing of that day. Then the Boston bank should carefully look over the contents of this late letter, and, if there are in it any checks of considerable size, they should be at once presented to the banks upon which they are drawn for certification or collection—presented by the hands of Messengers, the same as they would have been in ante-Clearing-House days.

The course we have suggested for such cases as we have described is the only sensible and safe one.

#### INSTITUTE OF CHARTERED ACCOUNTANTS.

England's Institute of Chartered Accountants is one of those old-fashioned British organizations which should be copied in this country. We have from time to time copied many of England's business methods and systems, but there is still considerable to learn from her, and many of her ideas and ways in carrying out the details of vast mercantile and financial transactions might be profitably introduced here. There is one feature of the management of the English Institute of Chartered Accountants which it is proposed by our American Bankers' Association to incorporate into its plan for associate membership in that association and that is a system of what may be termed civil service examinations of bank officers. The English society holds a preliminary examination, an intermediate examination, and a final examination in the month of December of each year, each of which lasts three days. Persons who propose to present themselves for these examinations are required to give at least thirty days' notice. These examinations are held at the Copthall buildings, London, E.C.

#### TAKE A BILL OF SALE.

It is an excellent plan for a bank, in buying paper of dealers and others who do not endorse the paper they negotiate, to take a bill of sale of the same.

Bills of sale should be carefully preserved and filed away like other papers of importance.

The note-broker who sells paper to a bank guarantees its genuineness, and that it is just what it purports to be—that is, he warrants that it is free from the taint of fraud, that it is not a forgery, that it has not been altered, and that a good title goes to the purchaser with the sale. He does not, of course, guarantee that the paper shall be paid at maturity, but he does, by handling it, guarantee that it is an honest and legitimate promise to pay. Just here is where the value of the bill of sale comes in. It is a record in black and white which shows to the purchaser at once where the paper he holds has come from.

The seller of paper is, of course, held as fully in the points we have described without the passing of a bill of sale. But it might, under some circumstances, be difficult to recall and prove the seller's connection with the paper if there was no bill of sale accompanying its conveyance.

## BANKING LAW.

### \* LEGAL DECISIONS AFFECTING BANKERS.

#### WAREHOUSE RECEIPTS—NEGOTIABILITY—PLEDGE.

In October, 1881, defendant sold certain cases of merchandise of the value of \$4,412.06, which had been pledged to it by D. & Co. in 1879, as security for loans made and to be made by defendant to that firm. New loans were made after the pledge from time to time by defendant to D. & Co. upon the security of the merchandise, and at the time of the sale, which was made to satisfy the indebtedness, D. & Co. were indebted to defendant upon one loan of \$2,000, made February 19, 1881, and upon another loan of \$3,000, made January 4, 1881, for which defendant also held additional security. At the time of the original pledge, the merchandise was the property of H (under whom the plaintiff makes title), and had been in the possession of D. & Co., as his factors, for sale. They had stored it with a warehouseman, and had taken a warehouse receipt in the usual form by which the merchandise was deliverable to them or to their order upon the surrender of the receipt. D. & Co. pledged the merchandise to the defendant by the indorsement and delivery of this receipt. B, as the assignee of H, brings this action against defendant, claiming that the act of the defendant in selling the merchandise to satisfy the pledge was a conversion.

*Held*, The loans were made to D. & Co. upon the faith of the merchandise described in the warehouse receipt, and, this being so, the pledge by the factors was as valid, under the provisions of the Factors' Act of this State (New York), as a pledge by the owner would have been. By the statute the factor is to be deemed the true owner of the merchandise so far as to give validity to such a contract, if he has been intrusted with certain documents of title mentioned in the statute by the owner, or if he has been intrusted with the possession of the property for the purpose of sale, or as security for advances to be made or obtained upon it. The case for the plaintiff has been placed upon the theory that the evidence does not show that D. & Co. had ever been intrusted with the documents of title by the owner. Where the merchandise has come into the factor's possession, actual or legal, no evidence of title is required.

Further *Held*, That warehouse receipts, by statute in this State, are negotiable instruments, and, by indorsement, transfer the merchandise for which they are given upon surrender of the receipt.

Judgment for defendant.

Brooks vs. Hanover National Bank, United States Circuit Court, Southern District of New York, January 28, 1886.

#### VIRGINIA COUPONS—LEGAL-TENDER IN PAYMENT FOR LICENSE TAX.

R was convicted in the Hustings Court of the City of Richmond for practicing law without a license. In payment of his license tax R had tendered to the Treasurer of the City of Richmond ten dollars in United States Treasury notes and one coupon for fifteen dollars, together with seventy-five cents in silver coin for the fee of the Commissioner of the

\*All the latest Decisions affecting Bankers will be found in this Department as early as obtainable. The Editor of the Law Department of RHODES' JOURNAL will furnish, on application of Subscribers, further information regarding any case referred to herein; he will also answer questions in banking law which may be of sufficient general interest as to warrant publication in this Department. A reasonable charge is made for special Replies asked for by Correspondents and not authorized for publication.

Revenue. The coupon so tendered was cut from a bond issued by the State of Virginia under the provisions of the Act of March 30, 1871, entitled "An Act to provide for the funding and payment of the public debt," and, at the time it was tendered, was overdue and past maturity, and bore upon its face the contract of the State that it should be received in payment of all taxes, debts, demands and dues due to said State. The Treasurer refused to receive said coupon and money or to grant a license, because the Act of February 7, 1884, forbade him to receive said license tax in coupons, and because the 112th section of the Act of March 15, 1884, provides that all license taxes shall be paid in current money of the United States, and not in coupons. R therefore practiced his profession as a lawyer without a revenue license and was tried and convicted of a misdemeanor.

*Held* (reversing the judgments of the Supreme Court of Appeals of Virginia and the Hustings Court of Richmond), That the tender of the coupon was legal, and the Acts of the State of Virginia prohibiting it are unconstitutional. That R, having been prevented from obtaining a license in violation of his rights under the Constitution of the United States, cannot be punished for so practising without a license.

*Royall vs. State of Virginia*, Supreme Court of the United States, February 1, 1886.

#### LIABILITY OF SAVINGS BANK—PAYMENT TO STRANGER.

This was an action by a depositor against a savings bank to recover the amount of a deposit paid by defendant to a stranger on the production of the depositor's pass-book. The pass-book contained the following by-law :

"All deposits and drafts must be entered in the pass-book at the time of the transaction, and all payments made by the bank upon the presentation of the pass-book, and duly entered therein, will be regarded as binding upon the depositor. Money may also be drawn upon the written order of the depositor, or his attorney, when accompanied by the pass-book. No money shall be received, nor shall any money be paid out, except by the Teller of the bank, in the presence of an officer, or Trustee. No money shall be withdrawn, as a matter of right, without three months' previous notice."

Defendant claimed that this by-law constituted a contract between the depositor and the bank and justified the payment to a stranger upon the production of the pass-book.

*Held*, That the bank was not justified in making such payment, even though the pass-book contained such a by-law, the Court saying :

"Assuming, for the purpose of the argument, that the mere acceptance by the depositor of a pass-book containing by-laws regulating the manner of making deposits and payments constitutes a contract between the parties, we do not think this by-law supports the contention of the defendant. It is argued by it that the phrase 'all payments,' as used therein, means any sum of money delivered by it to any person who may, for the time being, have in their possession the pass-book, and it is only by assuming that such a delivery of money is a payment upon that account that any color of support is afforded to the argument. This may have been the understanding and intention of the bank in framing the by-law ; but, in order to make that understanding obligatory upon the customer, it was also necessary that he should have a similar understanding, or that the law should have been expressed in language incapable of any other fair construction. We do not think that the word 'payments,' as used in it, can, according to the legal or common acceptance or meaning of the word, be construed to mean any sums which the bank might choose to disburse regardless of the person to whom they were made. Payment by a debtor can be legally made only to a creditor, or his authorized representative, and in order to constitute any other transaction a payment it is essential to its validity that it should be authorized by the person entitled to demand it. The defendants have not here shown any such authority. An agreement that payment made in a particular manner should be binding and conclusive upon the depositor does not tend to authorize a payment made to a stranger, or give any other signification to the word 'payment' than it usually bears. The effect which, it is argued, should be

given to the language used can be indulged in only by force of a contract with the depositor; but it is here attempted to imply the contract from the mere use of the words 'all payments shall be conclusive,' etc. This is reasoning in a circle, and proves nothing."

The Court further says that the by-law in question seems to contemplate but two modes of payment, both of which require the presentation of the pass-book as the condition thereof; one, apparently authorizing a payment to the depositor personally, and the other, one which may be made in his absence. That one provides for the conclusive effects of payments made and duly entered in the pass-book and the other for payments made in his absence to a third person having possession of the pass-book. That this provision requires the depositor's written order to accompany the pass-book, and the fair implication from this provision is that no other payments to strangers are contemplated or authorized. *Expressio unius est exclusio alterius*. That any other construction of the by-law would render the clause referred to unnecessary and inoperative, for, if the bank were authorized to make payments to a stranger having possession of the pass-book alone, the provision authorizing the bank to make such payments to a stranger not only having possession of the pass-book but also the depositor's written order would be useless and unmeaning.

The Court therefore holds the payment unauthorized and the bank liable.

Smith vs. Brooklyn Savings Bank, N. Y. Court of Appeals, December 22, 1885.

#### PRESENTMENT AND NOTICE.

In an action against the indorser of a promissory note on which no actual demand had been made of the maker at his residence, but a mere inquiry for such maker at several banks in the place where the note was dated,

*Held*, The making and dating of a note at a particular place is not equivalent to making it payable there; nor does it supersede the necessity for presentment and demand at the residence or place of business of the maker in order to charge the indorsers. Where no residence or place of business can be found, an inquiry at the place of the date of the note might be, perhaps, regarded as essential in the exercise of due diligence. A person who takes a promissory note, by indorsement, if he proposes to hold the indorser, takes it with the knowledge that at its maturity a proper demand must be made upon the maker for payment, and he is under obligations, at the time he receives it, or in due time afterwards, to know, or at least to inquire, where the maker lives. If he does not, and refrains from all inquiry, he should suffer the consequences of not being able to make a regular demand. In view of the peculiarities of the contract of indorsement, and of the rights and responsibilities resulting therefrom, the holder of a promissory note should certainly be held to the exercise of such diligence, in this respect, as ordinary foresight and prudence would suggest; and, in the absence of any effort, he should be held to be affected with knowledge of that which by reasonable diligence he could readily have ascertained.

Oxnard vs. Varnum, Supreme Court of Pennsylvania, January 4, 1886.

#### INDIANA SAVINGS BANKS—SUITS AGAINST OFFICERS.

In an action by certain depositors of the Indianapolis Savings Bank against the officers and Trustees of the bank to make them personally liable for misconduct and violation of duty in the conduct of the bank,

*Held*, That the Auditor of the State was the proper party to bring such action, and alone authorized so to do, and the action by the present plaintiffs could not be maintained.

Ryan and others vs. Ray and others, Supreme Court of Indiana, January 19, 1886.

#### POWERS OF BANK CASHIERS.

*Continued from page 196, March number of the JOURNAL.*

*III. Power to Certify Checks.*—The power to certify checks has been settled in the affirmative by the Supreme Court of the United States in the case of *The Merchants' Bank vs. The State Bank*, decided in 1870 (10 Wallace,

604). Before the decision of this case the question of whether this power was inherent in the office of Cashier and one of the ordinary powers which, without any special authority, he might perform, was not conclusively settled by the decisions, and directly contrary decisions by the Courts of different States on this vexed question existed. In the State of New York it had been held by a line of decisions that the Cashier, or the Teller, whose office has been said to be a mere branch or off-shoot of the office of Cashier, had this power. In all these cases, however, proof of usage was adduced by the Court, who evaded the abstract question by relying upon this testimony. In Massachusetts the case of *Mussey vs. The Eagle Bank* (9 Met., 306), which, in all discussions on the subject, has been referred to as a leading case, laid down the rule that there was no inherent power in the Teller of a bank to certify checks, nor, if a usage so to do should be shown, would such a usage be good at law. This case, although touching upon the authority of the Teller of a bank, is broad enough in principle to cover the authority of the Cashier.

This decision was directly contrary to the New York rule, which held that where a usage to certify was shown, such usage was valid, and the case was disapproved in *Farmers' Bank vs. Butchers' Bank*, 16 N. Y., 125.

The Supreme Court of Pennsylvania in the case of the *Girard Bank vs. The Bank of Pennsylvania Township* (39 Pa. St., 92), also considered the question and held that a check marked "good" by the "proper officer" would bind the funds of the bank. This decision has been regarded by various text writers as very unsatisfactory, as the decision did not state who the "the proper officer" was, whether he was the same in all banks, or whether he derived his power from usage or whether it was inherent.

The law as to the power to certify checks was in this condition (the highest Courts of New York and Massachusetts being directly opposed to each other) when the case of *Merchants' Bank vs. State Bank* was decided by the Supreme Court, and that case has been regarded as settling the question. In it, the power of a Cashier to certify checks is upheld as a power inherent in his office. The Court in its opinion say:

"We have thus far examined the controversy as if the certified checks were void, or had not been given. It remains to consider that branch of the case. Bank checks are not inland bills of exchange, but have many of the properties of such commercial paper; and many of the rules of the law merchant are alike applicable to both. Each is for a specific sum, payable in money. In both cases there is a drawer, a drawee and a payee. The chief points of difference are that a check is always drawn on a bank or banker. No days of grace are allowed. The drawer is not discharged by the laches of the holder in presentment for payment unless he can show that he has sustained some injury by the default. It is not due until payment is demanded, and the statute of limitations runs only from that time. It is by its face the appropriation of so much money of the drawer in the hands of the drawee to the payment of an admitted liability of the drawer. It is not necessary that the drawer of a bill should have funds in the hands of the drawee. A check in such case would be a fraud. All the authorities, both English and American, hold that a check *may* be accepted, though acceptance is not usual. By the law merchant of this country the certificate of the bank that a check is good is equivalent to acceptance. It implies that the check is drawn upon sufficient funds in the hands of the drawee, that they have been set apart for its satisfaction, and that they shall be so applied whenever the check is presented for payment. It is an undertaking that the check is good then and shall continue good, and this agreement is as binding on the bank as its notes of circulation, a certificate of deposit payable to the order of the depositor, or any other obligation it can assume. The object of certifying a check, as regards both parties, is to enable the holder to use it as money. The transferee takes it with the same readiness and sense of security that he would take the notes of the bank. It is available also to him for all the purposes of money. Thus it continues to perform its important functions until, in the course of business, it goes back to the bank for redemption and is extinguished by payment. It cannot be doubted that the certifying bank intended these consequences, and is liable accordingly. To hold otherwise would render these important securities only a snare and delusion. A bank incurs no greater risk in certifying a check than in giving a certificate of deposit. In well-regulated banks the practice is at once to

charge the check to the account of the drawer, to credit it in a 'certified check account,' and when the check is paid to debit that account with the amount. Nothing can be simpler or safer than this process. The practice of certifying checks has grown out of the business needs of the country. They enable the holder to keep or convey the amount specified with safety. They enable persons not well acquainted to deal promptly with each other, and they avoid the delay and risks of receiving, counting and passing from hand to hand large sums of money. It is computed by a competent authority that the average daily amount of such checks in use in the city of New York throughout the year is not less than one hundred millions of dollars. We could hardly inflict a severer blow upon the commerce and business of the country than by throwing a doubt upon their validity. . . . The power of the bank to certify checks has been sufficiently examined. The question now to be considered is the authority of the Cashier. It is his duty to receive all the funds which come into the bank and to enter them upon its books. The authority to receive implies and carries with it authority to give certificates of deposit and other proper vouchers. When the money is in the bank he has the same authority to certify a check to be good, charge the amount to the drawer, appropriate it to the payment of the check, and make the proper entry on the books of the bank. This he is authorized to do *virtute officii*. The power is inherent in the office."

### REPLIES TO LAW AND BANKING QUESTIONS.

*Editor Rhodes' Journal of Banking:*

LEWISBURG, Tenn., February 26, 1886.

SIR:—Please answer the following question in Law Department of the JOURNAL:

A endorses a draft to his bank for collection. The bank forwarded the draft to another bank for collection, with instructions "No pro.," and also marked "No pro." on the end of the draft. Payment was refused and the draft returned. The draft was sent back by the next mail, with instructions written on the back to hold ten days longer; it also had the same mark, "No pro.," on the end. The bank this time secured the acceptance of the draft, but on maturity payment was again refused and the draft protested on the ground that the words "No pro." marked on the end of the draft were not notice, but that notice should have been sent by letter accompanying the draft. Was this right?

J. T. DEAN, Cashier.

*Answer.*—We regard the words "No pro." on the end of the draft as a sufficient instruction not to protest, and think that the collecting bank is not entitled to charge the protest fees.

*Editor Rhodes' Journal of Banking:*

MAROA, Ills., February 10, 1886.

SIR:—Will you please inform me of what advantage is a special guarantee of an endorsement on a draft? Does not a simple endorsement guarantee the instrument to the endorsee (including endorsements that are apparently irregular) as fully as a special guarantee of endorsement?

J. CROCKER.

*Answer.*—The rule is well settled that every indorser of a draft guarantees not only the genuineness but the sufficiency of all previous indorsements. A simple indorsement, therefore, is just as effectual as if the indorser should give a special written guaranty.

*Editor Rhodes' Journal of Banking:* NORTH ATTLEBOROUGH, Mass., March 15, 1886.

SIR:—Will you kindly refer me to the legal decisions upon which are based your remarks upon the dating of checks in the Practical Banking series of RHODES' JOURNAL OF BANKING for February, 1886, page 186. I am in perfect accord with your ideas in the matter, but would like to know what legal basis there is for the position.

E. R. PRICE, Cashier.

*Answer.*—Whether or not a check should be dated in order to be valid has never been judicially decided, and standard text writers differ in their views on the subject.

Morse on Banking (2d Edition), at page 253, in speaking of the requisites of checks, says:

"A check must be dated. It may be dated either on, before or after the day it is issued. But it would seem that if a check is not dated at all, and contains no statement

of a date when it is to be paid, it is never payable; for a check is payable either on the day of its date, or else on some other day specifically designated in it. So, if it is not dated at all, and if no designation occurs, expressed in the body, which might, perhaps, operate to supply the deficiency of a formal dating, it is reasonable to say that it can never become due and payment can never be demanded. If this rule, which is not directly asserted in any adjudication, goes at all too far, it is, nevertheless, utterly impossible to doubt that a bank would be fully justified in refusing pay a check showing an unexplained deficiency of so important a character."

Daniel on Negotiable Instruments, at § 1577, says:

"A check should be dated. It may bear its actual date, or be antedated or postdated. Morse, in his excellent treatise, says: 'But it would seem that if a check is not dated at all, and contains no statement of a date when it is to be paid, it is never payable.' There is no adjudication to this effect: and while it may be that a bank would be warranted in refusing to pay an undated check (and this is doubtful) it would not be unreasonable for it to assume a contemporaneous date, and to pay it accordingly."

We are inclined to the view expressed by Mr. Daniels, and are of the opinion that the absence of a date is not a vital defect.

With reference to bills and notes, it has been held that a date is not essential to the validity of a bill or note.

7 Cowen, 337.  
30 Vt., 11.  
31 Texas, 614.

A check is, in many respects, similar to an inland bill, and the same rule is probably applicable.

*Editor Rhodes' Journal of Banking:*

SPRINGFIELD, Mass., February 24, 1886.

SIR:—Will you please answer the following question in the next number of the JOURNAL:

A deposits money in a savings bank as trustee for B. If A dies has the bank a right to pay the money to B on presentation of the deposit book? SUBSCRIBER.

Answer.—There are statutes both in Massachusetts and New York on the question.

Section 82 of Chapter 116 of the Public Statutes of Massachusetts of 1882, said chapter being "an Act relative to savings banks and institutions for savings," is as follows:

"SECTION 82. When a deposit is made in such corporation by any one in trust for another, the name and residence of the person for whom it is made shall be disclosed, and it shall be credited to the depositor as trustee for such person; and, if no other notice of the existence and terms of a trust has been given in writing to the corporation, in the event of the death of the trustee, the deposit, with the interest thereon, may be paid to the person for whom such deposit was made or to his legal representative."

In New York, Chapter 409 of the Laws of 1882, being "an Act to revise the statutes of this State relating to banks, banking and trust companies," provides as follows:

"§ 258. . . . And whenever any deposit (in a savings bank) shall be made by any person in trust for another, and no other or further notice of the existence and terms of a legal and valid trust shall have been given in writing to the bank, in the event of the death of the trustee, the same, or any part thereof, together with the dividends or interest thereon, may be paid to the person for whom the said deposit was made."

The savings bank undoubtedly has a right to pay the money to B on being satisfied of his identity and of the death of A.

*Editor Rhodes' Journal of Banking:*

BURNET, Texas, February 27, 1886.

SIR:—If you think it will be of general interest to your readers, I would like the following, with your reply, to be published:

A draws a check in favor of B on the First National Bank. When the check is presented A has not sufficient funds to his credit to pay the same. B accepts A's balance, it is endorsed on the check, and the check left with the bank with instructions to apply on it any deposit that A may make. A acknowledges the correctness of the check, and continues to deposit in open account, but instructs the bank not to

THE UNIVERSITY OF CHICAGO LIBRARY

apply deposits on B's check. In the event of other checks being presented for payment against A's account while B's is on file with the bank, how should the matter be treated?

W. H. WESTFALL, *President.*

*Answer.*—The bank should follow the instruction of its depositor, and not apply the subsequent deposits to the payment of the check in favor of B.

*Editor Rhodes' Journal of Banking:*

MT. CARMEL, Ill., March 18, 1886.

SIR:—Having long been a reader and lately a subscriber to your JOURNAL OF BANKING, I make bold in placing before you for your decision a question that has lately come under my observation and troubled me not a little. It is as follows:

A borrows \$100 from a bank, and gives B as personal security; and, as additional security, A gave the bank a collateral note of C for \$150. A's note to the bank falls due and is not paid. B comes forward and offers to pay off A's note to the bank if the bank will surrender the collateral note (a gilt-edge one) on C for \$150, which is not yet due, thereby making \$50 when he (B) collects the note. A has left the country.

DAVID GOWENLOCK, *Cashier.*

*Answer.*—If the accommodation indorser (B) pays A's note, he has a right to the transfer of the collateral security held by the bank. The bank is not obliged to receive payment from B, however. If the note of C is perfectly good, the bank can collect that at maturity and apply the proceeds to the payment of A's note, being accountable to A for any balance remaining after satisfaction of his note.

*Editor Rhodes' Journal of Banking:*

DANVILLE, Ill., February 12, 1886.

SIR:—Will you please answer the following in your next issue:

A draft is issued to the order of Daniel Johns and by him endorsed to Bishop Charles, who is a resident of Brookville, but his residence is not given in the endorsement of the draft by Johns. In some way the draft comes into the possession of a Bishop Charles, who lives at Rockville. He has it cashed by a Rockville Bank, which in due course receives the cash for it. Upon the discovery of the above facts, who must Mr. Johns look to for the recovery of his money? This is an actual occurrence.

ASSISTANT CASHIER.

*Answer.*—We are of opinion that Daniel Johns has a claim against the bank who issued the draft, and that the bank should give him a duplicate draft or its equivalent in money. When the bank issued the draft in question it incurred a liability to pay the same to Daniel Johns or to his order. This it has not done. The payment made was not to Daniel Johns, nor was it to any party deriving title through the order of Daniel Johns. Johns endorsed the draft to Bishop Charles of Brookville, and sent it to him. The endorsee never received it, but it came into the hands of Bishop Charles of Rockville, who forged the name of the endorsee, Bishop Charles, and transferred it for value under the forged indorsement. This indorsement by the wrong Bishop Charles was just as much a forgery as if it had been done by John Smith, and transferred no title to subsequent parties. The draft never reaching the only party through whom title could be transferred, to wit, Bishop Charles of Brookville, the title thereto still remained in Johns, and the case must be treated as one of a lost draft wherein a duplicate can be demanded on tender of indemnity against the production of the original. In this case, however, the original being in the possession of the bank, the necessity for indemnity is obviated. The bank issuing still remains liable to Daniel Johns on the draft. It, in turn, has a claim against the Rockville Bank, who, by indorsing the draft, guaranteed the genuineness of the previous indorsement, provided demand for restitution is made within a reasonable time after the discovery of the forgery.

#### BRIEF REPLIES TO SUBSCRIBERS.

CASHIER.—No, sir; the consent of the Comptroller of the Currency is not necessary to the organization of a Clearing-House nor to a National bank becoming a member thereof. In some cities the membership is limited to incorporated banks, in others private banking-houses are included. The constitution, however, must not forbid

the payment of the balances in silver certificates, as that would exclude National banks. This difficulty is met in practice by a tacit agreement among the banks not to pay balances in silver certificates.

**NOTE TELLER.**—"Should I regard 'No protest' slip attached to drafts and notes, or should I go only by the letter of the correspondent?"

It is safer to go by the letter, without regard to slip. If you have not done so hitherto it would be as well to notify your correspondents by a circular letter that such will hereafter be your custom. The question is fully discussed in the *JOURNAL* for July, 1885.

**T. F.**—Trade dollars cannot be counted as part of your reserve, but they can be carried as cash on hand at their face value.

**B. J. M.**—An acceptance on the back of a time draft, though unusual, is just as good as if it were on the face of the instrument.

**BANK CLERK.**—"Morse on Banks and Banking" is a thorough and comprehensive work. It is written in an easy, clear and pleasant style, and will bear reading several times over. It has the additional advantage of being recognized as an authority by the Courts. We will furnish it (post-paid) for \$6.00, the publisher's price.

**BANKER.**—The *JOURNAL* has repeatedly urged the importance and necessity of the organization of the banking interests. The readiest way to organize a Bankers' Association in any place is to settle upon a time and place of meeting and then send out circulars of invitation to every bank man in the town. A sufficient number will always respond to make the nucleus of an organization. It is better to make it an association of individuals and not of corporate banks and firms.

**NATIONAL BANK.**—National banks, as a general rule, do not deal in bullion, coin, etc., but they are expressly authorized to do so by the Revised Statutes, § 5136 (Comptroller's edition, p. 9).

**DIRECTOR.**—A Director of a National bank must be a citizen of the United States and the owner of at least ten shares of the capital stock of the bank.

**CORRESPONDING CLERK.**—We cannot think your correspondent very blameworthy in supposing "reg. mail" to mean regular mail. As you meant registered mail you should have so written it. Important words should always be written in full.

**GALVESTON.**—The use of electricity as a safety appliance for vaults and safes has been greatly extended the last few years. Its value in this respect can hardly be overestimated. We will furnish plans and estimates upon application.

**DEPOSITOR.**—Your whole position rests upon the theory that the bank holds the money of depositors as a trust fund. This is fundamentally incorrect. The relation between a bank and its depositor is simply that of debtor and creditor.

**SILVER.**—You are wrong. The opponents of the Bland dollar do not seek to demonetize silver. What they claim is that the unit of measure in value (*i. e.*, the dollar) should be as well defined and invariable as any other unit. The Government has no more right, as to previous contracts made in good faith, to alter the amount of fine gold in the dollar, or to substitute a silver dollar for it, than it has to alter the size of the bushel measure or the weight of the pound.

**CASHIER.**—The Board of Directors of a National bank elect the President and can also remove him.

**INQUIRER.**—"Can a Teller return me a counterfeit note the day after I make a deposit?"  
He could return it the day after, but he could not keep it an unreasonable time and then return it.

**F. A.**—"I present a check for \$100, but learn that the drawer has only \$90 to his credit. How can I get the \$90?"

Deposit \$10 to his credit and draw the check.

**WESTERN BANK.**—A raised check is very different, in law, from a forged check. The question is fully discussed in the law books. A proper answer to this question would require too much space.

**M. A. B.**—"Can a bank refuse to take standard dollars on deposit?"

Certainly it can; but it cannot refuse to take them in satisfaction for a debt due the bank.

## BANKING AND FINANCIAL NEWS:

WITH COMMENTS ON THE MORE IMPORTANT MATTERS. THIS DEPARTMENT ALSO INCLUDES: RAILROAD AND INVESTMENT NEWS, AND A COMPLETE LIST OF NEW BANKS, CHANGES IN OFFICERS, DISSOLUTIONS AND FAILURES.

**The New Comptroller and the South.**—The *New York Evening Post* said, recently: "In connection with the recent changes in the Civil Service Commission, at Washington, mention should be made of the appointment of Mr. W. L. Trenholm to the important position of Comptroller of the Currency. Mr. Trenholm was called to the Civil Service Commission because the public service required a man of high principles and superior culture, representing the best type of Southern society, to fill one of the three places on the Board. He would undoubtedly have remained there had not the resignation of Comptroller Cannon made a vacancy requiring, in addition to the foregoing qualities, a special acquaintance with financial studies and a reputation as a sound thinker co-extensive with the section to which Mr. Trenholm belongs. A better selection could not have been made. Mr. Trenholm enters upon the discharge of his new duties at a time when the National banking system is approaching a crisis. The bond security of its circulating notes is being slowly but surely cut away, and the questions relating to its future existence—if it is to continue at all—are among the most perplexing that the Government will have to deal with. It is fortunate that the position of Comptroller of the Currency at such a time is filled by a man like Mr. Trenholm, who has the ear of that portion of the country most hostile to the National banks, and which would, perhaps, be glad to see the old State bank system of the *ante-bellum* period revived."

With the above we heartily coincide, excepting the remarks as to the feeling in the South touching the National banks. From what we hear from banks in that region the above observations exaggerate the truth enormously. The last Comptroller's report shows that a year ago there were only 158 State banks and trust companies in the Southern States with an aggregate capital of \$25,948,951 against, at the present time, 278 National banks having \$42,648,400 capital. It is by no means likely that the National banks would flourish as they do in the South were the popular feeling against them very strong or widely extended.

**Massachusetts Savings Banks.**—The principal statistics in the annual report of the Massachusetts Savings Bank Commissioners for the past year were published in the January number of the *JOURNAL*. The full text, which has just been issued, contains some recommendations worthy of additional notice. It is shown that some of the banks are accustomed to keep large amounts on deposit in one National bank or trust company, awaiting investment, occasionally reaching the limit authorized by law, viz.: twenty per cent. of the total deposits. In case of disaster to a National bank or trust company such a deposit would seriously embarrass and possibly cause the failure of a savings bank. It is therefore recommended that the statute authorizing such deposits be amended so as to limit the amount deposited in any one National bank or trust company by a savings bank to 5 per cent of the total deposits of the latter and to 25 per cent. of the capital stock and surplus of the former. The Commissioners recommend an amendment to the clause regarding loans on personal security so as to make it clear that all such shall be paid at a time not exceeding one year. They believe it for the best interest of the banks that a uniform practice should prevail in regard to the duration of the bonds of the Treasurers of the banks, and recommend that they be limited to a period not exceeding five years. Some of the present bonds have been in force for from ten to twenty years, and in some cases they have been seriously impaired by the death or insolvency of sureties. In an examination of the savings banks the Commissioners are obliged to accept "the amount due depositors" as it appears aggregated in the general ledger. It is impossible for the Commissioners to enter into

a detailed examination of the deposit accounts. But, if each bank were required to make a verification of its depositors' accounts in the form of a trial balance by which the aggregate of the accounts of the individual depositors should be made to correspond with the total amount of the deposits as indicated by the general ledger, it would very materially aid the Commissioners in their examination. Accountants could then be sent by the latter to make an examination of the statement in detail, which might be compared with the depositors' pass-books. Messrs. C. Curry and E. P. Chapin are the Commissioners of Savings Banks of the State of Massachusetts.

**Banks and Corporate Bonds.**—Reference has frequently been made in the JOURNAL to the great superiority of corporate bonds in contrast with those given by private persons, and it is surprising that they are not in universal request, more especially as security for the employees of banks. We are led to make these remarks by having perused the following note cut from the St. Paul *Pioneer-Press* of March 11th:

THE SECOND NATIONAL BANK,  
St. Paul, Minn., March 4, 1886.  
James Grant, Esq., Secretary, Chicago, Ill.:  
DEAR SIR:—I take pleasure in stating that the Guarantee Company of North America has fully and most satisfactorily discharged its obligations to this bank under its guarantee bond (No. 43,117), executed on behalf of W. B. Smith, late Paying-Teller in this bank, who absconded on the 21st day of November last, a defaulter in the sum of forty-five hundred dollars, which sum was promptly reimbursed to the bank by the Guarantee Company, after proof of loss. (Signed,) D. A. MONFORT, Cashier.

Here is the case of a young man, well connected, moving in the best circles of St. Paul society, and implicitly trusted by the officials of the bank and every person who knew him, who, without any apparent reason, all of a sudden falls a victim to temptation, abstracts \$4,500 from the cash-box and absconds. The Guarantee Company of North America are advised of the fact, investigate the circumstances, and promptly reimburse the bank the amount of their loss. Would a settlement have been equally satisfactorily obtained if Smith had given bonds by personal friends? Extremely doubtful. Our observation has been that, when claims arise under bonds by private sureties, all manner of delays occur and excuses are offered for non-payment, sometimes resulting in lawsuits, which, even if successful, entail no end of trouble and considerable expense, and frequently in the claims not being pressed, the bondsmen allowed to escape from their liabilities, and the banks losing their money. Stockholders and the executive officers of banks would do well to seriously consider these facts, with a view to the remedy.

**The Public Debt and the Sinking Fund.**—The Secretary of the Treasury has sent to the Senate his reply to its resolution of March 3d, directing him to inform the Senate how much, if any, the actual payments and purchases of the principal of the public debt since July 1, 1877, have been in excess of the requirements of the laws regulating the sinking fund, and how the existing laws can be carried out in relation to said fund from this time until the \$250,000,000 of 4½ per cent. bonds mature. In his letter he says that the annual application of one per cent. of the entire public debt of the United States, ascertained upon the basis recently adopted by the Department to have been outstanding on July 1st of each year, with an amount annually added thereto equal to one year's interest on the redemptions of each year, shows that the annual requirements of the sinking fund from July 1, 1877, to the close of the last fiscal year would be as follows: For the fiscal years ending June 30, 1878, \$38,724,649; 1879, \$37,554,376; 1880, \$37,512,427; 1881, \$41,203,971; 1882, \$43,460,483; 1883, \$44,109,950; 1884, \$44,203,577; 1885, \$44,009,028, making a total requirement from July 1, 1877, to June 30, 1885, of \$329,528,762. The reduction of the debt during that period was as follows: Total debt, less cash in the Treasury July 1, 1877, \$2,127,410,441; June 30, 1885, \$1,485,234,150; decrease, \$642,176,291. "It will thus be seen," he says, "that the reduction of the debt for the period from July 1, 1877, to June 30, 1885, has exceeded the requirements of the sinking fund by \$312,647,531. The only United States bonds redeemable at the option of the Government now outstanding are the three per cents issued under the Act of July 12, 1882, of which \$194,100,500 were outstanding July 1, 1885. Of this amount \$9,507,250 have since been redeemed, leaving at this date \$184,633,250 to be hereafter redeemed. As these bonds may be absorbed before the maturity of the 4½ per cent. bonds of 1891, which come next in order for redemption, further additions to the fund can only be made by purchase of bonds in open market.

**Registered Letter Facilities.**—A friend of the JOURNAL in Grand Rapids, Mich., writes: "I see in your March number, on page 189, that your 'Practical Banking'"

editor advises that remittance letters be registered. I wish he would place the matter before our Post Office authorities, for certainly it needs attention. Grand Rapids is an inland town of 50,000 people, the banks of which remit daily to New York from \$200,000 to \$300,000, made up of checks and drafts on banks and bankers in that city; but, as registered letters do not travel by night, we would certainly lose the interest for one day. Furthermore, a delay of twenty-four hours in presenting drafts, sent us in payment of collections and foreign discounts from all over the country, would not by any means prove profitable, as we are not informed as to the amount each private or National bank holds at credit with its New York correspondent. I certainly believe a town of 50,000 inhabitants should be entitled to a special delivery clerk. The large cities are entitled to one, of course; but I suppose we will be compelled to await the further expansion of our city limits. W. R."

**Missouri Bonds as a Savings Bank Investment.**—Attorney-General O'Brien of New York State has delivered an opinion recognizing the bonds of the State of Missouri as a legal investment for New York savings banks. The matter is of importance to these institutions, as all bonds issued by Missouri have, since 1882, been held not to be an authorized investment for them, owing to failure on the part of the State to meet the interest due on bonds issued in aid of the Hannibal & St. Joseph Railroad. The suspended interest having been paid during the past year, and provision made for the payment of the bonds at maturity, Bank Superintendent Paine submitted the facts to the Attorney-General to determine whether the deferring of interest was such a default as is contemplated by the savings bank law. As the State of Missouri is soon to issue new securities it is very desirable that savings banks shall be in a position to take them if they desire to do so.

**Receipt of Deposits by an Insolvent Bank.**—The case of the State of Missouri vs. Landis, connected with the defunct bank of Marshfield, for receiving deposits when the bank was insolvent and in falling circumstances was disposed of recently on a demurrer in the LaCade Circuit Court. This decision of Judge Wallace declares, in effect, that section 1350 of the statutes does not apply to private banks and bankers. When Kelsey, of the Morgan County Bank, was arrested under this section, the Secretary of State, who has all the supervision over the banks of the State that the State exercises over them, then stated that this law was not applicable to private banks and bankers; that it was enacted before the State thought or had any idea of regulating private banks or defining their business; and that the word "institution" as used could not, in a criminal proceeding, be construed as meaning other than a corporation. Kelsey was convicted, and the case is in the Supreme Court on this point decided by Judge Wallace. Judge Edwards, before whom Kelsey was tried at Boonville, overruled a demurrer like the one sustained by Judge Wallace.

**Wedding of a Popular Bank Officer.**—It is so seldom that the JOURNAL departs from its regular course so far as to chronicle a wedding that it is a pity that the mention of such an event, which occurred on January 28th, was crowded out of our February number by mistake. This was no less than the marriage of Mr. O. D. Baldwin, the able and popular President of the Fourth National Bank, of New York, to Miss Sadie Young, daughter of the late Charles L. Young. The occasion was graced with music, flowers, and everything that can lend enjoyment to such an affair. Vocal music tendered by the Bank Clerks' Glee Club was particularly appreciated. Among the guests were Mr. and Mrs. Cyrus W. Field, Edward Field, Mr. and Mrs. Jno. P. Townsend, Mr. and Mrs. George Young, Dr. and Mrs. Baldwin, Mrs. Baldwin, mother of the bridegroom; Mr. and Mrs. Albert Young, Louis Ginter, of Richmond; Mr. and Mrs. Ladew, Senator Sabine, Cornelius N. Bliss, R. W. Stuart, Mr. and Mrs. George Arents, Mr. and Mrs. J. H. Inman, and many others. Mr. Baldwin has had to accept the congratulations of an army of friends upon the happy event, not alone from his New York acquaintances, but also from the multitude of bank officers throughout the country who have him "on the list" as a popular gentleman as well as a highly capable bank officer.

#### MISCELLANEOUS BANK AND FINANCIAL ITEMS.

- An attempt is being made to start a National bank at Hammononton, N. J.
- The Treasury Department has prepared a new design for ten-dollar silver certificates, which includes an excellent vignette portrait of the late Vice-President

Hendricks. New designs for certificates of other denominations will be adopted from time to time.

— The Twelfth Ward Bank, of (Harlem) New York city, has begun business with a capital of \$100,000.

— The Fifth Avenue Safe Deposit Company, with a capital of \$100,000, has been incorporated in New York.

— There is a bill before the New York Legislature to reduce the legal rate of interest from 6 to 5 per cent.

— Mr. Bland is a great apple eater, but, strangely enough, he objects to giving \$1 for 80 cents' worth of fruit.—*Boston Post*.

— The suits resulting from the failure of the Shackamaxon Bank, of Philadelphia, reveal the greatest irregularities in the book-keeping and general management.

— The Bank of Cooperstown, Dak., suspended March 23d owing to the recent failure of the Lenham Elevator Company. There were no very heavy depositors.

— Mr. C. F. Evans, of the Market National Bank, of Boston, celebrated on March 2d his eightieth birthday and fifty-second anniversary as an employee of the bank.

— It is now thought that the Framingham (Mass.) Savings Bank will pay the depositors dollar for dollar, but that possibly some interest on deposits may be lost.

— Mr. Isaac N. Stoddard, for nearly forty-five years President and Cashier of the Plymouth (Mass.) National Bank, recently celebrated the fiftieth anniversary of his wedding.

— If the Government will issue no more one and two-dollar bills, they should have made the present issue of some material that could be washed and ironed.—*Newton (N. J.) Register*.

— The 13,000 depositors of the defunct Townsend Bank, of New Haven, Conn., will be paid \$166,202 on May 3d as a final dividend of nearly six per cent. The last previous dividend was paid in 1879.

— The Acting Comptroller of the Currency lately appointed Judge William C. Lamont to be Receiver of the Schoharie County National Bank, of Schoharie, N. Y., vice L. C. Holmes, resigned.

— The Massachusetts Legislative Committee has reported against the bill to make the railroad bonds of Cincinnati a good investment for the savings banks, chiefly on the ground that it would be special legislation.

— The reduction in the public debt during March was \$14,087,884. The United States Treasurer mailed on March 31st 42,284 checks, aggregating \$6,083,252, in payment of the interest due April 1st on registered 4 per cent. consols of 1907.

— Receiver Rich of the defunct St. Albans (Vt.) Trust Company has bargained for the sale for \$40,000 of the Norwood Lumber Company's property in northern New York, which is the only remaining asset of the broken transaction.

— Farnsworth & Rauert, a private concern, trading under the name of the "Bank of North Minneapolis," Minn., closed its doors March 26th. It is said the failure was caused by losses made by officers of the bank who speculated in wheat.

— There is another project on foot to start a bank in Philadelphia. It will probably be known as the Produce National Bank, being started by members of that trade, and it is said enough stock has been subscribed to insure the success of the enterprise.

— A bill has been introduced in the New York Legislature incorporating the Bullion Deposit & Transfer Association, which proposes to serve as an intermediary for the passage of bullion and stocks between the United States and foreign countries.

— Receiver Linus M. Price, of the Pacific National Bank, of Boston, has been succeeded by Mr. Peter Butler, of that city. The bank has been fortunate with some of its assets. The suits in the test cases against the stockholders are set for trial in October next.

— Receiver Hendee, in his suit in the United States Court at St. Albans, Vt., against the First National Bank of St. Johnsbury, to recover a \$30,000 assessment on the stock of the defunct National bank in St. Albans, has obtained judgment for the whole amount, with interest from May 12, 1885. The defendants carry the case to the United

States Supreme Court on a writ of error. It is said the indications are that this and other banks, which objected to paying the assessment levied by the Comptroller, will have to pay, and that depositors will eventually get close to 100 per cent. of their deposits.

— A silver dollar, bright and untarnished, was found lodged in the intestines of a large black bass which was recently caught in a mountain stream in Idaho. Some mean person had probably been feeding the fish those things to make them weigh more.—*Boston Post*.

— A Texas gentleman, who has had experience in commercial affairs, says that he has seen on a warehouse receipt for lard as many as 61 indorsements. That warehouse receipt had evidently done a good deal of service as currency. That is one form of money of the merchant, and on a good basis.

— T. Christie, a trusted clerk of the First National Bank, of Bradford, Pa., was recently discovered to be a defaulter to an amount supposed to be \$80,000, and was arrested. He had been speculating through G. R. Huntley, a broker, who was also arrested. The bank is said to be perfectly solvent.

— The last reported sale of a seat in the Philadelphia Stock Exchange was at \$6,750. It is said that \$7,000 has since been bid. The following officers were elected at the recent annual meeting: President, Bushrod W. Adams; Chairman, T. C. Knight; Vice-Chairman, William J. Morris; Secretary and Treasurer, John C. Johnson.

— "Where do you stand on the silver question, Mr. Steinbecker?" "Vot you mean?" "Well, are you in favor of a single standard or a double standard of value of money?" "Oh, I vas in favor oof a touble schtantart—von to buy mit and von to sell mit. Py chiminy, if ve haf only von schtantart of value vere vill der profits come in?"—*Chicago News*.

— Cashier Samuel Bingham of the Windham National Bank, of Willimantic, Conn., who lies under charge of irregularities in discounting Grant & Ward's paper, etc., has resigned. This matter has been made the subject of newspaper attacks upon Bank Examiner A. B. Mygatt, seemingly with the purpose of obtaining his position for some other person.

— Receiver John W. Corcoran, of the Lancaster National Bank, Clinton, Mass., has been paying a dividend of 25 per cent. The ex-Cashier, Henry Forrester, has been discharged from custody. The bank's claims against the estate of the absconding President, W. H. McNeill, amount to \$151,328. Indictments have been found against McNeill, Dr. Everett M. Nelson and C. H. Veo.

— A bill has been passed in the United States Senate to authorize the Assistant-Treasurer of the United States to act as Treasurer in the absence of the Treasurer, and to authorize the designation by the Secretary of the Treasury of one of the clerks of the Treasury as Acting Assistant-Treasurer for a term not exceeding thirty days at one time, in the absence or illness of either the Treasurer or Assistant-Treasurer.

— The Hon. Hugh McCulloch, ex-Secretary of the United States Treasury, has deeded to the city of Fort Wayne, Ind., his title to the old Broadway Cemetery of ten acres, from which most of the dead bodies have been removed, and which has become of great value. The condition of the deed, which the City Council has by ordinance accepted, is that the property shall be kept improved and be known as McCulloch Park.

— On March 11th the Dime Savings Bank, of New Brunswick, N. J., was closed by the Secretary of State, it having been discovered that the Secretary and Treasurer, Arthur G. Ogilby, was a defaulter for about \$80,000. His friends tried to raise the amount in order to save him from prison, but were not able to get the full sum. He has been adjudged a lunatic, and committed to an insane asylum. Chancellor Runyon has granted a petition of the depositors and will not appoint a Receiver. A committee of the Directors will settle up the bank's affairs.

— The semi-annual bank dividends, payable in Boston on April 1st, compare with those for October last as follows: The City increases from 2 to  $2\frac{1}{4}$  per cent., Commerce  $2\frac{1}{4}$  to 3, Continental  $2\frac{1}{4}$  to 3, Shawmut 2 to 3, Shoe and Leather 2 to  $2\frac{1}{4}$ , and Webster  $1\frac{1}{4}$  to 2 per cent. The Third National resumes after passing once. Monument reduces from 6 to 5, and the Suffolk from  $2\frac{1}{4}$  to 2 per cent. Of the 59 banks within the limits of Boston four now pay 5 per cent. (one  $2\frac{1}{4}$  per cent. quarterly), one  $4\frac{1}{4}$  per cent.,

two 4 per cent., two  $8\frac{1}{2}$  per cent., twenty-one 8 per cent., twelve  $2\frac{1}{4}$  per cent., fifteen 2 per cent., one passes, and one was not decided at the time this compilation was made.

— The insolvent estate of Lawrence Brainerd, the absent President of the St. Albans (Vt.) Trust Company, was wound up recently, the second and last dividend amounting to about two cents and five mills on the dollar. The claim of the trust company against the Brainerd estate amounted to little more than \$250,000, and the share of the dividend amounted to \$4,300, making nearly \$22,000 in all that the trust company gets from that source.

— A rating given a Cincinnati lumber merchant by a commercial agency was made the basis of a suit for \$10,000 on the ground that it misrepresented the plaintiff. The Superior Court has sustained the defense of the agency, which was that the plaintiff "refused to furnish information usually obtained from business men, and that the agency was therefore obliged to make an estimate from outside sources, which was done, it was claimed, without any malice."

#### FOREIGN BANKING AND FINANCIAL AFFAIRS.

CONGO STATE.—Negotiations for a Congo loan have been broken off at Paris.

GREECE.—The Greek Government has negotiated a loan of £800,000 in London.

PORTUGAL.—The Government has issued a decree authorizing free exportation of gold and silver coin.

HOLLAND.—The Government of Holland has decided to convert its 4 per cent. securities into  $3\frac{1}{4}$  per cent. stock.

PERU.—The second dividend on the foreign loan raised by the Peruvian Government in December was paid March 15th.

RUSSIA.—European financiers are occupied with a scheme for the conversion of the Russian debt. The Director of the Berlin Discount Company, who has recently been in St. Petersburg, has arranged with the Rothschilds to convert \$500,000,000 of Russian stock.

INDIA.—Sir Auckland Colvin, in his financial statement for 1885, says that the silver trouble is a source of much anxiety to India, and he urges England to concert measures with America and Europe for the solution of the difficulty by which India is a great loser.

AUSTRALIA.—A dispatch to London from Adelaide says that the losses of the Commercial Bank of South Australia, which has recently suspended payment, amount to £300,000. The Manager of the bank has also suspended. He will probably be arrested. The belief is that the bank has come to grief through inefficient or reckless management, and confidence in the other Australasian banking institutions has consequently not been shaken.

FRANCE.—The Government has issued a new loan, variously stated at 1,000,000,000 and 1,464,000,000 francs, to consolidate the 618,000,000 of 6-year bonds now outstanding and to redeem the floating debt.

Cable dispatches say the recent large arrivals of gold at Paris perplexed the bankers.

M. Cernuschi has resumed his bi-metallism campaign. He attributes all the present troubles to mono-metallism and scarcity of gold.

Devot's Bank, at Calais, has suspended payment. The liabilities are stated to be about 2,500,000 francs.

GREAT BRITAIN.—The *Economist* estimates the budget deficit at £2,500,000, which, it says, will involve the suspension of the sinking fund or new taxes.

The returns issued by the Board of Trade show that the imports during the month of February decreased £2,500,000 as compared with those of the corresponding month last year, and that the exports decreased £470,000 as compared with those of February, 1885.

Arrangements have been made to pay the creditors of the Munster Bank (in Ireland) the first dividend of 10 shillings on the pound.

In the House of Commons, Sir William Vernon Harcourt, Chancellor of the Exchequer, replying to Mr. Goschen, said the Government was not disposed to appoint a special committee to examine into and report upon the silver question,

because the special commission which was now inquiring into the causes of the depression of trade would in all probability cover the silver question in its work.

**GERMANY.**—The dividends recently declared by 35 German and Austrian banks for the past year are lower in 11 instances and higher in 14 instances than the dividends paid by the same banks for the previous year, while in 10 instances the dividends are the same as those of last year.

It is reported that Prince Bismarck entertains favorably a proposal to sustain Mexican finance, with a view of extending Germany's colonial influence.

A conference of German Chambers of Commerce was held in Berlin on March 21st. Herr von Boetticher, Prussian Minister of the Interior, made the opening speech. Herr Dulbrück, who presided, denounced agrarian attempts to alter the currency. Resolutions were adopted opposing any alteration of the currency, against raising the duties on agricultural products, victuals and raw materials, etc.

**CANADA.**—It is reported in Halifax that two of the local banks—the People's and Union—will amalgamate.

The deposits in and withdrawals from the Government savings banks, during the month of January were respectively \$565,333 and \$412,853. The total amount to the credit of depositors on January 31st was \$19,656,023, an increase of \$2,183,496 since January, 1885.

The statement of the chartered banks of the Dominion for February shows their total assets to be \$223,131,130 and liabilities \$141,772,523. Compared with the January statement there is an increase in their assets of \$225,578 and a decrease in their liabilities of \$450,183; and, compared with the statement for February, 1885, an increase of \$10,020,506 in their assets and \$3,940,478 in their liabilities.

The Dominion estimates of the expenditures for the next fiscal year amount to something over \$33,000,000, compared with \$35,000,000 last year. The reduction is due to the fact that no money will be wanted to meet rebellion expenses next year. Expenditures upon public works, railways and immigration are to be reduced, while the charges for interest on the public debt, civil Government and minor services will be increased.

#### R. R. AND INVESTMENT NEWS.

##### *New Issues.*

**NEW YORK STOCK EXCHANGE LIST.**—The Governing Committee has listed the following securities:

Belleville & Carondelet Railroad Company—\$4,850,000 first mortgage 6 per cent. gold bonds of 1893, Nos. 1 to 485 inclusive.

Mexican Telegraph Company—15,000 shares of the capital stock.

Illinois Central Railroad Company—\$1,500,000 four per cent. first mortgage gold coupon bonds of 1861, Nos. 11,001 to 12,500 inclusive.

Chicago, St. Louis & New Orleans—Registered old fives of 1861, into which the coupon bonds already listed may be converted.

Long Dock Company—\$4,500,000 consolidated mortgage gold bonds, from No. 3,001 to No. 7,500. The Long Dock Company is owned by the New York, Lake Erie & Western Railroad Company.

Mexican Central Railway Company—New assented 4 per cent. bonds.

Oregon Short Line Company—\$465,000 additional first mortgage bonds and \$2,765,000 additional stock.

Commercial Telegram Company—2,000 shares of the preferred stock and 18,000 shares of the common stock.

**THE COLUMBUS & ZANESVILLE RAILROAD COMPANY** wants \$15,000 to construct its road to Zanesville, Ohio.

**THE CENTRAL ELEVATED RAILWAY COMPANY**, of Brooklyn, N. Y., has filed articles of incorporation at Albany. The capital stock is \$1,000,000.

**THE MEMPHIS & CHARLESTON RAILROAD COMPANY** has sold to Charles M. Whitney & Co., of New York, the entire block of \$1,000,000 six per cent. general mortgage bonds.

**THE CHEYENNE & NORTHERN RAILROAD COMPANY** has been incorporated, with a capital stock of \$3,000,000, to run north from Cheyenne to Fort Laramie, thence to the

northern boundary line of Wyoming, and thence to the southern boundary of the British possessions.

**THE COLUMBUS, NEBRASKA & WYOMING CENTRAL RAILROAD** has been incorporated, to run from Columbus, Neb., to the western boundary of Nebraska. The capital stock is \$1,000,000.

**PENNSYLVANIA RAILROAD.**—The stockholders at the recent annual meeting voted to authorize the Board of Directors to issue from time to time 300,000 additional shares of the company's stock of the face value of \$15,000,000.

**MINNESOTA & NORTHWESTERN.**—The Secretary of State of Illinois has licensed the incorporation of the Minnesota & Northwestern Railroad Company, with a capital of \$5,000,000, to build a line from Chicago to East Dubuque.

**TEXAS & ST. LOUIS.**—The Farmers' Loan & Trust Company, of New York, as agent for the bond holders' committee of the Texas & St. Louis Railway, has awarded \$300,000 first mortgage certificates at prices ranging from 90 to 92½.

**THE CHICAGO & CENTRAL IOWA RAILROAD** has been incorporated with a capital stock of \$1,000,000, and principal office at Chicago. The proposed road is to be constructed from the town of Lacon, Ill., on the Illinois River, to Keithsburg, on the Mississippi River.

**QUINCY, ILLS.**—The authorities of the city of Quincy, Ills., are offering \$150,000 four-and-a-half per cent. 30-year bonds of that city to take up and refund a like amount of six per cent. bonds maturing July 1st. The interest is collected by the State of Illinois, and the same is payable semi-annually in New York.

**MINNEAPOLIS, SAULT STE. MARIE & ATLANTIC.**—Arrangements, it is reported, have been completed for the construction of this railroad. The Bank of Montreal is to give the company a loan of \$5,000,000 on the guarantee of the Canadian Pacific Company. This will give Minneapolis another through line to the Atlantic seaboard.

**THE STATE LINE & STONY POINT RAILROAD COMPANY** has been incorporated with a capital stock of \$2,500,000. The road is to be constructed from a point in the town of Orangetown, Rockland county, N. Y., on the division line between that State and New Jersey, to a point of connection with the West Shore Railroad at Stony Point—18 miles.

**THE EMPIRE & BAY STATE TELEGRAPH COMPANY** has filed a mortgage for \$500,000 in Brooklyn, N. Y., to secure a loan from the Farmers' Loan & Trust Company of that amount. The company proposes to build lines from New York to Bridgeport, New Haven, Newport, Albany, Philadelphia, Baltimore, Washington, and other cities.

**THE LOUISVILLE, NEW ALBANY & CHICAGO RAILROAD COMPANY** has bought forty-two miles of road from Bedford to Swits City, Ind., with coal mines and stone quarries. It proposes to make this line a standard gauge; also to build twenty-five miles more road. For these purposes the company has authorized an issue of \$10,000,000 of consolidated bonds, of which \$7,300,000 will be reserved to retire prior liens and \$2,700,000 issued in connection with new property. The general and second mortgage bonds, \$1,000,000 each, have already been exchanged for the new consols. As soon as the seconds and generals turned in have been cancelled, application will be made to the New York Stock Exchange to list the consols, which will be a first mortgage on all new road and new property acquired and to be acquired.

#### *Railroad Reports.*

**CHICAGO, MILWAUKEE & ST. PAUL.**—The report for the year ended December 31, 1885, shows that the mileage operated was 4,921 miles against 4,804 miles in the previous year. The earnings were:

	1884.	1885.
Total gross earnings .....	\$23,470,908	\$24,413,273
Total operating expenses.....	13,859,629	14,512,471
Net earnings .....	\$9,611,279	\$9,900,802
Following is a summary of income account for the year:		
Total income.....	\$9,668,676	\$10,006,741
Total disbursements.....	9,239,775	8,490,612
Surplus.....	\$428,901	\$1,516,129

The disbursements include dividends at the rate of 7 per cent. on all stock in 1884.

and at 7 per cent. on preferred and 4 per cent. on common in 1885. The amount of stock and funded debt is as stated below:

	1884.	1885.
Common stock.....	\$30,904,261	\$30,904,261
Preferred stock.....	16,540,968	21,540,900
Funded debt.....	100,254,000	101,470,000

ILLINOIS CENTRAL.—The report for the calendar year 1885 makes the following showing of earnings:

	1884.	1885.
Total gross earnings.....	\$12,190,838	\$12,621,264
Total operating expenses.....	6,128,512	6,626,629
Net earnings.....	\$6,062,321	\$5,994,635

Summary of income account:

Total net income.....	\$6,372,494	\$6,381,228
Total disbursements.....	6,234,566	6,381,178
Surplus.....	\$137,928	\$50

Dividends of 8 per cent. were paid on the stock.

PENNSYLVANIA RAILROAD.—The earnings for the year ended December 31st on all the lines both east and west of Pittsburgh and Erie were as follows:

	1884.	1885.
Gross earnings.....	\$97,849,875	\$92,994,549
Operating expenses ..	64,434,317	61,690,901
	\$33,415,558	\$31,303,648

The balance to the credit of income account, after deducting all payments, was \$8,000,213 for 1884 and \$5,803,522 for 1885. Dividends at the rate of 5 per cent. were paid last year against 7 per cent. in 1884. The balance to the credit of profit and loss, after all deductions, was \$419,734 for 1884 and \$701,275 for 1885.

CLEVELAND, COLUMBUS, CINCINNATI & INDIANAPOLIS.—The report for the year ended December 31st shows the following earnings (exclusive of the Cincinnati & Springfield division):

	1884.	1885.
Total gross earnings.....	\$3,000,346	\$3,453,407
Total operating expenses.....	2,756,749	2,693,561
Net earnings.....	\$243,597	\$759,846

Summary of income account:

Total income.....	\$1,068,798	\$975,878
Total disbursements.....	824,277	857,902
Surplus.....	\$244,521	\$117,976

No dividend was paid last year. The bonded debt was increased from \$8,816,000 to \$10,517,000.

**Current Opinion.**—Jno. W. Faxon, Cashier of the Farmers & Merchants' National Bank, of Clarksville, Tenn., writes March 11, 1886: "Your indexed BANK LIST is the most convenient and perfect bankers' directory I have ever seen. You can always count me as a subscriber. No banker desiring to keep up with the banks of the country should be without it."

We issued a large edition of the January BANK LIST, but at this date have less than fifty copies on hand. The next issue will be out early in July, fully revised and corrected to the latest possible date prior to publication. Subscriptions *should be sent in now*; orders received after publication can rarely be filled. Bankers and others who received a copy of the January BANK LIST will not get the July edition unless they order it—there is no *annual* subscription for the List, nor is it in any case included in a subscription to the JOURNAL. The BANK LIST is well printed on fine paper and handsomely bound in red cloth. The price is \$1 a copy; indexed by States on edge of the book, \$2 a copy.

Title of bank in prominent type, with two or three extra lines referring to collections, etc., costs \$3, exclusive of a copy of the book.

Displayed advertisements of banks, arranged by States, and each advertisement referred to in the general list—terms, one page, \$50; half page, \$30; quarter page, \$17. Payment on receipt of the book.

B. R. & Co.

## SAVINGS BANKS OF NEW YORK.

## ALSO, TRUST, LOAN AND MORTGAGE COMPANIES.

The annual report\* of the Hon. Willis S. Paine, Superintendent of the Banking Department of New York State, on the institutions mentioned in the title, begins by showing the aggregate resources of the several classes of financial institutions, organized and operated under the laws of the State and subject to the supervision of the Banking Department, for each of the last four years in the following table. The total resources of these institutions, January 1, 1882, were \$880,580,082, a net increase during four years of \$224,829,130:

	RESOURCES.			
	Jan. 1, 1883.	Jan. 1, 1884.	Jan. 1, 1885.	Jan. 1, 1886.
Savings banks .....	\$472,927,319	\$490,242,641	\$505,927,496	\$534,536,633
Banks of discount and deposit...	149,261,859	171,591,164	177,445,045	190,576,663
Trust companies .....	143,889,348	164,314,887	158,693,061	176,216,940
Safe deposit companies. ....	2,067,966	3,853,186	3,670,477	4,078,976
	\$768,146,493	\$830,001,878	\$845,736,079	\$905,409,212

The resources of the institutions subject to examination by the Department, including building, mutual loan and accumulating fund associations, exceeded one billion dollars.

The number of savings banks in existence, January 1, 1886, was 123, ten of which are in process of liquidation and receive no deposits. Dormant banks should be required to surrender their charters.

While no formal request has been made during the year for authority to organize a new savings bank, several informal applications have been received from different portions of the State of a character to justify the opinion that the sole purpose in organizing savings banks was that they might be used as tenders to other financial corporations. Such applications have met with no encouragement.

The White Plains Savings Bank has paid all its creditors in full, and, having no remaining assets, the Trustees will apply to the Supreme Court for a decree adjudging the franchise of the bank surrendered and the existence of the corporation ended.

The Park Savings Bank, of the city of Brooklyn, having taken the necessary steps to effect its voluntary dissolution, has filed the required list of names of depositors having unclaimed balances in the bank, and deposited with the Banking Department in trust a sum of money sufficient to pay all creditors in full, thereby terminating the corporate existence of the institution.

On January 9, 1886, Justice Barrett, on motion of the Attorney-General, appointed Scott Lord, Jr., Receiver of the East Side Savings Bank for Sailors, of New York, and its affairs are now in process of settlement. The deposits due are \$516.76: cash on hand \$787.12.

## MORTGAGES.

On January 1, 1886, about twenty-nine per cent. of the total resources of the savings banks was loaned on bonds and mortgages on real estate situate in this State worth at least twice the amount loaned thereon. The aggregate of such loans was \$153,255,439. On January 1, 1885, the amount so loaned was \$141,944,250. During the year the net increase was \$11,311,189. The law restricts the aggregate amount which a savings bank may loan on bonds and mortgages to sixty per centum of the whole

\* Transmitted to the Legislature March 1, 1886.

amount of its deposits. Before that limitation is reached the savings banks may loan \$320,599,888 on present amount of resources.

CONDITION OF THE SAVINGS BANKS, JANUARY 1, 1886.

RESOURCES.		
Bonds and mortgages .....		\$153,255,439
Stock Investments.

Unauthorized investments January 1, 1886, at market values ..		190,729
Average of each account January 1, 1886 .....		378.38

CHARACTERISTICS OF 1885.

On January 1, 1886, the aggregate resources of the savings banks of the State were \$534,536,633. January 1, 1885, they were \$505,927,493, an increase during the year of \$28,609,137. The preceding year the increase was but \$3,684,855.

PRESENT INVESTMENTS.—STOCKS AND BONDS.

More than sixty-one per cent. of the total resources of the savings banks was invested in stocks or bonds of the following classes on January 1, 1886, viz.: United States—District of Columbia 3-65's, bonds of New York State and of other States which had not defaulted in payment of principal or interest on their obligations for ten years previous to making such investments, and in bonds issued by cities, counties, towns and villages of this State. The proportion in which such securities are held and

the increase in the several classes for the past year are shown by the following table. The net increase at par values for the year was \$11,435,499. The increase during the preceding year was \$962,362:

DESCRIPTION.	Par value Jan. 1, 1885.	Par value Jan. 1, 1886.	Increase.
United States.....	\$134,628,660	\$140,666,610	\$6,037,950
District of Columbia 3-65's.....	3,159,000	3,554,000	395,000

## CASH ON HAND AND DEPOSITED.

The total amount of cash held by the savings banks in their own vaults, January 1, 1886, was \$6,273,194. On January 1, 1885, it was \$5,899,279. The aggregate amount of cash deposited with banks and trust companies of the State at the beginning of the present year was \$29,228,685. With the exception of a trifling amount these deposits are earning rates of interest ranging from one to four per cent., the average rate being 2 1-10. The amount of cash uninvested is practically the same now that it was a year ago. January 1, 1885, the amount was \$85,296,004. January 1, 1886, it was \$85,506,879. Two years ago the total sum of cash uninvested was \$40,106,755. The table given below shows the various rates of interest received by the savings banks during 1885 and the amount of deposits on which the different rates are paid:

Rate per cent. received.	Amount of deposit.	Rate per cent. received.	Amount of deposit.
0.....	\$1,195,896.74	3 1/4.....	\$132,645.59
1.....	2,594,742.58	4.....	3,009,381.64
1 1/4.....	6,545,009.63	4 1/4.....	25,000.00
2.....	9,247,065.56	5.....	21,000.00
2 1/4.....	3,191,756.45	6.....	59,124.91
3.....	3,207,031.90		\$29,228,685.00

## LOANS ON STOCKS AND BONDS.

On January 1, 1883, the savings banks held loans on the pledge of a class of securities in which by law they may invest amounting to \$22,245,595. The aggregate of such loans, January 1, 1886, was only \$5,949,192. During a period of three years this class of loans has fallen off about seventy-three per cent., owing largely to the fact that savings banks cannot compete for this safe and profitable business on account of a restriction contained in the present law which prohibits them from loaning in excess of par value upon the pledge of a class of securities which by statute they are authorized to purchase.

The unauthorized loans—that is, loans made previous to the passage of the General Savings Bank Law, and which, under its provisions, could not legally be made—aggregated \$139,621 on January 1, 1886. The decrease during the year was \$46,184. On January 1, 1879, the banks of the State held \$526,999 of such loans.

## REAL ESTATE.

The total amount invested in real estate on January 1, 1886, was \$8,206,215. Of this sum \$6,446,465 were reported at the beginning of the present year as the estimated market value of the sixty banking-houses owned by savings banks of the State. The remaining banks lease the premises occupied by them. The actual cost of the banking

buildings was \$9,306,216. The remaining real estate, amounting to \$1,761,750, consists of property acquired at foreclosure sales where it became necessary for the several banks to become purchasers in order to protect their own interests. The value of real estate other than banking-houses owned by the savings banks, January 1, 1881, was \$4,361,950—a decrease during five years of about sixty per cent.

#### DEPOSITS AND DEPOSITORS.

The amount due to depositors by the savings banks of the State, January 1, 1886, was \$457,050,250. On January 1, 1885, it was \$437,107,501, an increase during the year of \$19,942,749 against \$6,027,491 for the preceding year. The increase from January 1, 1885, to July 1, 1885, was \$8,779,547; from July 1, 1885, to January 1, 1886, it was \$11,163,201.

The aggregate of deposits received during the year 1885, not including interest credited for that period, was \$157,210,736; the amount withdrawn was \$152,400,064. January 1, 1886, the number of depositors or open accounts was 1,208,072, an increase of 42,898 during the year. The increase during 1884 was 17,586. The present average of each account is \$378.33. January 1, 1885, it was \$375.14, an increase of \$3.19 against a decrease of fifty cents during 1884. The table given below shows the amount of deposits, the number of depositors and the average amount due to them on the first day of January for each year since 1858:

YEAR.	Deposits.	Number of depositors or open accounts.	Average of each deposit.	YEAR.	Deposits.	Number of depositors or open accounts.	Average of each deposit.
1858....	\$41,422,672	206,804	\$208.24	1873...	\$285,296,621	822,642	\$346.79
1859....	48,194,847	230,074	209.47	1874...	285,520,085	830,472	340.12
1860....	58,178,160	273,697	208.91	1875...	308,936,649	872,498	348.35
1861....	67,440,397	300,698	224.28	1876...	319,200,202	850,738	371.35
1862....	64,083,119	300,511	213.21	1877...	316,677,285	849,639	372.72
1863....	76,538,183	347,184	220.45	1878...	312,823,058	844,550	370.40
1864....	93,788,384	400,194	234.35	1879...	299,074,639	810,017	369.22
1865....	111,737,763	456,403	244.82	1880...	319,258,501	864,456	369.32
1866....	115,472,566	465,001	248.33	1881...	353,629,657	953,707	370.79
1867....	131,769,074	488,501	270.10	1882...	387,832,893	1,036,108	374.32
1868....	151,127,562	537,466	281.18	1883...	412,147,213	1,085,971	376.05
1869....	169,806,678	588,556	288.51	1884...	431,080,010	1,147,588	375.64
1870....	194,860,217	651,474	296.80	1885...	437,107,501	1,166,174	375.14
1871....	230,749,408	712,109	324.03	1886...	457,050,250	1,208,072	378.33
1872....	267,905,826	776,700	344.92				

#### EXPENSES, ETC.

During the year 1885 the total expenses of the savings banks were \$1,540,161. Of this sum \$1,096,323 were paid for salaries and \$443,838 for other expenses. The average cost of the care of each account during the year 1885 was \$1.27; for the year 1884 it was \$1.28.

The prospect of closing the Receiverships of insolvent savings banks during the present year is good. One of the largest, the Mechanics & Traders' Institution, has been wound up during the last year. The Receiver of the Third Avenue Savings Bank is at present paying a dividend to its depositors at the office of the Knickerbocker Trust Company.

In all cases written application for money of insolvent banks held in trust by the Superintendent is preferable, and persons believing money to be due them will save both time and expense by making inquiry in writing rather than by journeying to Albany.

#### SURPLUS.

The total surplus of the savings banks, January 1, 1886, was \$77,232,889; January 1, 1885, it was \$68,699,001. Such surplus is estimated on market value of stock investments and present value of real estate. Taking stock investments at par value and real estate at market value the surplus is \$24,898,025, an increase during the year of \$8,613,888 on market value basis and \$2,330,292 on par value basis.

## DIVIDENDS OR INTEREST TO DEPOSITORS.

The sum of \$15,151,979 in interest or dividends was paid or credited to depositors during the year 1885. Forty banks, holding deposits of \$176,931,379, paid a uniform rate of four per cent.; one bank, with \$506,022 of deposits, paid four and one-half per cent.; seventeen banks, with \$133,058,023, paid three and one-half per cent. The various rates paid, with the aggregate of deposits, are given in the following table:

Number of banks.	Rate per cent. of interest paid.	Amount of deposits.	Number of banks.	Rate per cent. of interest paid.	Amount of deposits.
6.....	.....	\$1,957	1.....	3, 3½, 4½	\$444,845
1.....	2, 3, 4	27,989,338	2.....	3½, 4	718,715
31.....	3, 4	87,451,595	1.....	3½, 4, 4½	1,093,230
13.....	3	10,103,134	2.....	3½, 4½	5,178,995
17.....	3½	133,058,023	40.....	4	176,931,379

1.....	3½, 3¾	742,427	123.....	.....	\$457,050,250
4.....	3, 3½, 4	5,637,784			

## COLLATERAL LOANS.

The present law authorizes savings banks to loan on any of the securities in which they may invest, bonds and mortgages excepted. The amount which may be so loaned is limited to ninety per cent. of the cash market value of the securities pledged, and in no case may a loan in excess of the par value of a security be made thereon. This provision of the law should, perhaps, be so modified as to permit loans to be made on the class of securities designated to the amount of ninety per cent. of their market value. In the respect referred to, says the report, the law is more stringent than safety requires, as banks may purchase at an unlimited premium the same bond on which they are prohibited from loaning more than its par value. Certainly banks are more safe in holding securities as collateral to a loan than where they hold the same as an investment. In the first instance loss through depreciation in value is borne by the borrower; in the latter case by the bank.

## STATE BONDS.

Mention is made in the report of the opinion of the State Attorney-General, published heretofore, that the savings banks of New York may not lawfully invest their deposits in bonds of the State of Georgia. Also, of his opinion that the deferring of the payment of interest by the State of Missouri in 1882 was not a default within the meaning of the savings bank law, and that savings banks can legally invest in bonds issued by the State of Missouri. The recent issue by the State of Indiana of a considerable amount of its bonds led to the repeated inquiries at the Department for information as to the legal right of savings banks to invest in bonds issued by that State. The Attorney-General, after careful examination of the questions involved, held that neither the bondholders nor the State intended that certain outstanding certificates should be regarded as obligations of the State, and consequently it has not made default within ten years in the payment of the principal or interest of any of its obligations issued under the authority of its Legislature, and that the savings banks of New York State may properly and lawfully invest their deposits in bonds issued by the State of Indiana.

## TRUST, LOAN AND MORTGAGE COMPANIES.

At the present time there are twenty of these corporations in this State—an increase of eight since the year 1880. Of this number fifteen are located in the city of New York, two in the city of Brooklyn, and one in the cities of Buffalo, Rochester and Syracuse respectively.

## ABSTRACT OF SEMI-ANNUAL REPORTS.

Abstracts of the semi-annual reports of the trust, loan and mortgage companies to the Department, dated the first day of the present year, will be found in the following statement:

TABLE SHOWING THE CONDITION OF THE TRUST, LOAN AND MORTGAGE COMPANIES, JANUARY 1, 1898.

NAME.	Location.	Resources.	Capital.	Deposits.	Other liabilities.	Surplus and Profits.
American Loan & Trust Company	New York city	\$8,544,335	\$500,000	\$2,081,066	.....	\$63,210

NOTE.—Deficiency in assets, Equitable Trust Company, \$257,060.

## TOWN AND VILLAGE BONDS.

For the benefit of the public at large as well as the savings banks some source of information should be provided whereby interested parties can inform themselves as to the regularity of the issue of bonds of all towns and villages of this State. To accomplish such purpose a general statute should be enacted requiring that every town and village, before offering any of its bonds for sale, shall record with the clerk of the county in which the town or village is located an accurate description of the proceedings taken, verified by the proper officers. A certified copy of such record to be filed with the Comptroller of the State for the information of the public and with the Superintendent of the Banking Department for the benefit of the savings banks.

## PROPOSED LEGISLATION.

The subject of legislation in connection with investments is one of vital importance; in fact, safety of investments is the foundation on which our savings bank system rests. That the securities in which these banks may invest the deposits confided to their care are at present considerably restricted none will deny, but that the scope of investments cannot with safety be enlarged by general amendments, sweeping in their provisions, is a fact established by the frequent recurrence of default in payment of interest on State, municipal, railroad and other securities which had previously been considered of an unexceptionable character.

On the first day of January, 1875, the aggregate deposits were \$308,935,649; at the commencement of the present year they had reached the astounding aggregate of \$457,060,250. If, as is generally believed, the increase in deposits, averaging \$22,567,944 per annum for the last seven years, has been due to the temporary harboring of wealth in these institutions, it is a grave responsibility to place in jeopardy the usefulness of our savings banks in order to enable those who are abundantly able to personally invest their money to derive advantages which these institutions were never designed to afford. By limiting the aggregate sum to be held to the credit of any one individual the banks can largely exclude capital and thereby remove the necessity for a wider scope of investments for many years to come.

The bill now before the Legislature to allow investments in stocks and bonds of counties or cities of other States is open to grave objections. To authorize savings banks to invest in such bonds, however restricted, would, in practice, lead to many unfortunate investments. The bonds offering the greatest inducements to purchasers would be such as have often been contested and frequently declared to have been issued in violation of some statute or Constitutional prohibition. As a general rule the uncertainty as to the character of an investment increases in proportion to the square of the distance from the investor.

Then, again, the availability of this class of securities must be considered. In case of panic banks holding a large amount of western or southern securities could not, except at great sacrifice—possibly not at all—realize funds on them to pay excited depositors.

The money held by the savings institutions of this State has, as a rule, been deposited by its residents, and it is a question whether money should not be loaned among those from whom it is received. Another view of the question is that actual necessity for enlarging the latitude of investments does not exist. It is not denied that an abundance of the several classes of securities now authorized is obtainable, but it is claimed that owing to the high premiums which they command a sufficient income cannot be derived to enable the banks to pay a rate of interest greater than three to three and one-half per cent. To-day bonds of the United States, redeemable at pleasure, bearing only three per cent. interest, sell in open market at a premium. Their earning capacity is therefore less than the lowest rate of interest paid to the depositors of any savings bank in this State. Under such circumstances it may well be asked, Do depositors need relief or ask for it?

As no practicable method exists of obtaining the views of depositors on this subject, opinions have been solicited from officers and Managers of the savings banks throughout the State, and a large majority of the replies received is to the effect that there is no necessity for a change in the law respecting investments.

"The present law respecting investments has proved to be a wise one and it should not be changed until the subject shall have been most carefully considered in all its ramifications. No necessity exists for immediate action. The law may well be allowed

to remain as it is until a conference can be held to determine whether it is desirable and safe to amend it in the particular referred to, and I would suggest that the Legislature authorize the Superintendent of this Department to assemble in convention at least once in each five years representatives from the savings banks for the purpose of discussing matters pertaining to the management of these sacred trusts. Recommendations emanating from such a body would be entitled to thoughtful consideration by the Legislature of this State as the voice of a majority of those having the welfare of our savings banks at heart."

#### POSTAL SAVINGS BANKS.

The Superintendent notices the recent agitation of the subject of postal savings banks, and argues at considerable length against the idea. In all sections of the country where the population is dense there are various organizations such as building and loan associations and the like, while in those portions where the people are scattered there is always a pressing demand for money; and, to all those who in such localities can obtain as high as seven or eight per cent. the investment with the Government at the only rate it can afford to pay, viz., two per cent., is not desirable. It is reasonable to believe that savings institutions have not been established in certain portions of our country because there is no demand for them.

Local deposits would be more advantageously used for the benefit of a locality than if deposited in postal savings banks, where it would remain like money invested in Government bonds at the present time—dormant. When deposited in State savings banks the money is at once located or invested and business enterprises are promoted.

A pertinent illustration of the possible result of an attempt to introduce a savings bank system of a Governmental or *quasi* Governmental character in this country may be found in the history of the "Freedmen's Savings and Trust Company." If the effect of the failure of this concern will prevent the establishment of postal savings banks, as it should, there will be some compensation for the lamentable result.

#### THE SILVER QUESTION.

The discussion now pending in the State Legislature in connection with the resolutions recently proposed asking Congress to repeal the Coinage Law of 1878, popularly known as the "Bland Act," and the adoption with the approval of the Banking Department of a memorial, which was recently presented to Congress from the savings banks of the State, to repeal the law, render, in the Superintendent's view, a discussion of the propriety of such action relevant to this report. "The savings institutions of the State," he says, "hold in trust for 1,208,000 persons the sum of \$457,000,000—about \$378 being the average due to each depositor. Trustees are prohibited by law from having any interest in the deposits except as custodians. Their action in this connection is due to a philanthropic spirit, and the fact that they are not actuated by self-interest gives more than ordinary emphasis to the request." He argues against the continuance of the silver coinage, against the payment of Government bonds in silver, and the idea that more money is needed in the country. "In the year 1853," the report says, "the gold dollar weighing 26 8-10 grains was made by statute the unit of value. An ounce of standard gold is worth \$18.00, but as the statutory relative worth of gold to silver is as 15 98-100 to 1, the coinage value of an ounce of silver is \$1.1630, but standard silver has been and can be purchased at about ninety cents per ounce; consequently, if the silver dollar of 412 1/4 grains become the unit of value, there will be a shrinkage from the present gold unit a percentage that is indicated by the loss of 26 20-100 cents on \$1.1630, or 22 87-100 per cent. The result will be that every savings bank depositor will, when paid in lawful money, receive in round figures twenty-two per cent. less than he at the present time receives, and the loss to the depositors of these institutions in this State alone will be \$90,551,000, while all articles purchased by him will, however, necessarily be sold at twenty-two per cent. higher in silver than they now bring in gold, because tradesmen will not receive depreciated coin without protecting themselves. In other words, the premium on gold will at once be met by a rise in price. The pay given labor is always slow to appreciate and necessarily very gradually adapts itself to a new order of things. This injustice will be suffered by a portion of our citizens, the most deserving of encouragement, to increase the fortunes of a few persons—comparatively speaking—who, it is believed, do not lack means nor deserve sympathy. And if the Government fail to do

its duty, by the continued coinage of silver, the rich will get the benefit and the poor will suffer. The former when making a contract can insert the stipulation that payment shall be made in the more valuable metal, but the latter, dealing in small amounts and short credits, is not in a position to insist upon such conditions precedent while selling his labor. . . .

"In conclusion it is suggested that, if the Bland Act remain unrepealed, whether it may not be advisable for savings institutions in making loans to stipulate that payments shall be made in gold coin or its equivalent. Indeed, if they are, as has been shown, the wards of the State, is it not the duty of your body to protect their depositors from loss by reason of the result of ill-advised Congressional legislation?"

### NEW COUNTERFEITS—BANK NOTES AND COIN.

**New Counterfeits.**—On March 17th, Chief James J. Brooks, of the Secret Service Division of the Treasury Department, reported as follows: A counterfeit \$5 U. S. Treasury note has been put in circulation. It is of the series of 1880; letter B; B. K. Bruce, Register; A. U. Wyman, Treasurer. The paper is thin and soft, being unsized. There has been no attempt to make the parallel silk threads of the genuine note. The letter "y" in the Treasurer's name is a "g" in the counterfeit. The medallion of Jackson in the lower left corner on face of note is so badly executed that very slight scrutiny of it, taken with the general poor appearance and fiberless texture of the paper, should determine at once the false character of the note. It is evidently from the same hands which produced the counterfeit \$2 U. S. Treasury note, against which the public were warned by this office. Neither of the notes should deceive persons who practice ordinary care in handling paper money.

Chief Brooks sends the following under date of March 31st: The genuine five-dollar National bank note of the series of 1882 has a bust of Garfield in an oval frame on the left end of the face of the note; also a brown back, with the charter number of the bank in large shaded figures set in green in the centre of the back. A counterfeit on this denomination and series has appeared purporting to be an issue of the Central National Bank of Norwalk, Conn., and giving the charter number as 404. It should be sufficient to state that this bank has never issued a note of the series of 1882, and the charter number is not 404 but 2,342. The paper is good; the general appearance of the note when soiled is deceiving. There are so many differences between it and the notes of that series that only a few can be stated. The pink seal on the counterfeit reads: "E PLURIBUS UNUM SIGIL." The genuine seal reads: "THE SAUR AMER SEPTENT SIGIL." In the upper and lower corner of the left end face of the note the word five has been omitted in the counterfeit. The figures of the charter number in the centre of the back are much smaller than in the genuine, and are not shaded. There are many other omissions, but these may well be reserved until a corrected edition of this note shall appear. It is a dangerous note when tendered to a busy or careless merchant. Genuine five-dollar notes on the Central National Bank, of Norwalk, Conn., have a green border on the back and on the front, red seal, red numbers, series of 1875, John Allison, Register.

**Counterfeit Mexican Dollars.**—The Mexican *Financier* says: Every one here knows but too well that our dollar is a coin which is often successfully counterfeited, even to the point of being able to pass in and out of the banks undetected. Sometimes the metal used is lead, but then the fraud is quite easily detected. There are, however, metal compositions which, when well made, are perfectly deceptive, and it is from these false coins that one runs the most danger of imposition. The chief reason why our dollar may be easily counterfeited is that it is a roughly-finished coin which requires no expensive machinery to mint.

**Counterfeiter Arrested.**—The Treasury Department was informed, April 1st, that an agent of the Secret Service had arrested Braden Porter at Plano, Iowa, for counterfeiting, and captured \$450 counterfeit money in his possession.

It will be remembered that Pratt, a traveling agent of a so-called "Counterfeit Detector," was recently arrested at Davenport, Iowa, for passing counterfeit money, a lot of which was found in his possession. He was convicted and sent to prison. The advices do not state whether or not this later capture was another expert traveling agent.

## NEW BANKS, CHANGES, FAILURES, ETC.

### Extracts from Recent Letters.

**GEO. S. CROUCH**, Cashier of the First National Bank, of Morristown, Tennessee: "Please send me back numbers of the JOURNAL to include all the articles on 'Practical Banking.' The writer as well as the other officers and clerks in this bank are highly pleased with the JOURNAL, and gladly add our testimonial of appreciation of its worth and genuine merit to every banker."

**G. B. ARMSTRONG**, Cashier of the Citizens' State Bank, Conway Springs, Kansas: "The JOURNAL has been of great value to me in general banking matters, while its law department has helped me in many cases."

**W. F. VAN BUSKIRK**, Cashier of the Bank of Odell, Illinois: "I have been reading with deep interest the articles on 'Practical Banking' published in the JOURNAL, and would like to have them preserved in book form, re-arranged under topics, and fully indexed. Do you intend to get them out in book form? Such a work would surely have a very large sale."

[The above inquiry is answered in the February JOURNAL, page 91.—EDITOR.]

**J. R. MULVANE**, President of the Bank of Topeka, Kansas: "We have been regular subscribers to the JOURNAL OF BANKING for several years and regard it as the most valuable financial publication now published in the country. We would not be without it for many times its cost. Your articles on general topics, banking usages, and banking law have been very helpful to us. The JOURNAL should be read, referred to, and studied by every banker and bank clerk in the United States."

**JOHN R. LEMON**, proprietor of the Buena Vista County Bank, Storm Lake, Iowa: "The series of papers on 'Practical Banking,' together with the Law department, are alone worth to the employees of my bank many times the cost of annual subscription to the JOURNAL."

**R. E. BOYER**, Cashier of the Creston National Bank, Creston, Iowa: "Early in the year, being in a particularly economical turn of mind, I concluded to discontinue my subscription to the JOURNAL. Hardly a day passed but that I felt the need of its aid. It contains so many correct and valuable suggestions on practical banking matters, and banking Law, that I am certain I shall not be satisfied without it. You will, therefore, please continue my subscription and send the back numbers for the current year."

## THE BANKER'S GAZETTE.

The Money Market and Financial Situation.

NEW YORK, April 2, 1886.

Although there has been no important change in the general outlook, the condition of things has been unsatisfactory for a few weeks past. The most important unfavorable element is the great strike on the Southwestern railroads, with, at times, the fear that it would spread throughout the country. This fear is allayed at present, but confidence—"a plant of slow growth"—has not yet been restored. The exports of gold from the country, which were an important factor in the situation for some time, have been stopped, at least for the present. The latest statistics for this port indicate a falling off in the imports of merchandise so that we may not see any more gold depart this Spring; but this is a matter of conjecture. Most of the specie has been sent to France, and, although the Government finances there are in a somewhat threatening position, cable dispatches from Paris say the bankers of that city are puzzled to account for the influx of gold. It is certain that there is no call for the metal in England or the Bank rate would have been increased above 2 per cent. before this.

In order to exhaust the unfavorable conditions of the present situation, before alluding to the bright ones, it is necessary to mention that the war between the Transcontinental lines is still being waged with much bitterness, the rates at times being cut very low. It has been given out so many times that peace was on the point of being declared that the latest rumor of this nature has been received with slight credence; but it appears that the managers have agreed that Commissioner Fink shall be the arbitrator between them in case they leave the matter to arbitration. One may guess that this somewhat pickwickian condition of things is about to be ended (since the managers have arrived at this point) by the only sensible method which is now open to them.

We have said that there has been no important change in the general outlook. The reports of the markets in various parts of the country indicate a moderately good condition of business. The amount of the loans of the New York banks (about 20 per cent. larger than at the same time of 1885) show that business is more active than at this time last year. The statistics of business failures again show that enterprises have been more successful and profitable. The Mercantile Agency reports that there were 3,203 failures in the United States during the past three months, with liabilities of a little over \$29,000,000. The failures for the corresponding time of 1885 numbered 3,658, with aggregate liabilities of \$46,000,000. These figures speak volumes in relation to the general condition of business. The liabilities for the past quarter are smaller than those for any similar period since 1873, the decline in the Middle States being very marked.

The record of bank clearings tells a similar story. The returns of the *Financial Chronicle* for the five days ended April 2d show an increase in exchanges in the whole country of 36.1 per cent over the corresponding time in 1885, the gain outside of New York being 24.2 per cent.

The railroad reports last published—the Union Pacific, Pennsylvania, and Chicago, Milwaukee & St. Paul Railroads, etc.—make a better showing as to

the results of their operations than were looked for. The railroad earnings during February were encouraging, the total for 66 railroads reporting being \$16,082,394, against \$24,852,151 in February, 1885, a gain of \$1,230,243. But the stock market has, nevertheless, been depressed for some weeks past on account of strikes and unfavorable rumors.

THE FOREIGN EXCHANGE market was strong, being up to the gold exportation point during most of the past month, but it has fallen considerably within a few days past. Following are the posted and actual rates of the principal dealers: Bankers' sterling, 60 days, nominal, \$4.87; sight, nominal, \$4.89; 60 days, actual, \$4.86 $\frac{1}{4}$ @\$4.86 $\frac{1}{2}$ ; sight, actual, \$4.88@ \$4.88 $\frac{1}{4}$ ; Cable transfers, \$4.88 $\frac{1}{2}$ @\$4.89; Prime commercial sterling, long, \$4.85 $\frac{1}{2}$ @\$4.85 $\frac{3}{4}$ ; Documentary sterling, 60 days, \$4.85@ \$4.85 $\frac{1}{4}$ ; Paris, bankers', 60 days, 5.17 $\frac{1}{2}$ @5.16 $\frac{3}{8}$ ; sight, 5.15@5.14 $\frac{3}{8}$ ; commercial, 60 days, 5.19 $\frac{3}{8}$ @5.18 $\frac{3}{4}$ ; sight, 5.16 $\frac{3}{8}$ @5.16 $\frac{1}{4}$ ; Antwerp, commercial, 60 days, 5.20@5.19 $\frac{3}{8}$ ; Swiss, bankers', 60 days, 5.18 $\frac{1}{2}$ @5.17 $\frac{1}{2}$ ; sight, 5.15 $\frac{5}{8}$ @5.15; Reichsmarks (4), bankers', 60 days, 95 $\frac{3}{8}$ @95 $\frac{1}{2}$ ; sight, 95 $\frac{3}{4}$ @95 $\frac{3}{8}$ ; Commercial, 60 days, 95 $\frac{1}{2}$ @95 $\frac{1}{4}$ ; sight, 95 $\frac{1}{2}$ @95 $\frac{3}{8}$ ; Guilders, bankers', 60 days, 40 $\frac{3}{8}$ @40 7-16; sight, 40 9-16@40 $\frac{3}{8}$ ; Commercial, 60 days, 40 3-16@40 $\frac{1}{4}$ ; sight, 40 $\frac{3}{8}$ @40 7-16. Paris dispatches quote exchange on London 25f. 16c.

The following shows the posted rates for prime bankers' sterling bills on London at 60 days, and sight, cable transfers, and prime commercial sterling, together with exchange on Paris on March 1st, the changes in the rates as they occurred during the month, and the highest and lowest during the months of February and March, 1886:

FEB.	BANKERS—		Cable Transfers.	Commercial.	PARIS—	
	60 days.	Sight.			60 days.	Sight.

COINS AND BULLION.—Bar silver is quoted in London at 46 $\frac{5}{8}$ d. per ounce. At this quotation for silver the bullion value of the standard dollar is 79.05 cents.

The following are New York quotations in gold for other coins and bullion:

Trade dollars.....	\$ 82 @ \$ .	Victoria sovereigns.....	\$4 85 @ \$4 89
New (41 $\frac{3}{4}$ grains) dollars	99 $\frac{3}{4}$ @ 1 00	Twenty francs .....	3 85 @ 3 90
American silver $\frac{1}{16}$ s & $\frac{1}{8}$ s.	99 $\frac{3}{4}$ @ 1 00	Twenty marks .....	4 74 @ 4 60
American dimes .....	99 $\frac{3}{4}$ @ 1 00	Spanish doubloons.....	15 55 @ 15 65
Mutilated U.S. silver coin.		Mexican doubloons.....	15 55 @ 15 65
per oz.....	95 @ .	Mexican 20-pesos.....	19 50 @ 19 60
Mexican dollars .....	80 @ 80 $\frac{3}{4}$	Ten guilders .....	3 96 @ 4 00
Peru soles & Chilean pesos	73 @ 74	Fine silver bars, per oz....	1 01 $\frac{3}{4}$ @ 1 03
English silver.....	4 80 @ 4 85	Fine gold bars par @ $\frac{1}{4}$ % premium on the	
Five francs.....	93 @ 95	Mint value.	

MONEY AND DOMESTIC EXCHANGE.—The loan market has been comparatively strong of late, the rate for call loans on stock and bond collateral having recently ranged as high as 5 per cent., but the ordinary rate is about 2 to 3 per cent. Commercial paper is in good supply with a light demand. The quoted rates for 60 to 90 days' endorsed paper is 4 per cent.; four

months' acceptances,  $4\frac{1}{4}$ @5 per cent., and good single-names, 5@6 per cent. Following are the rates of domestic exchange on New York: Savannah,  $\frac{1}{2}$ ; selling  $\frac{1}{4}$  premium. Charleston, buying par; selling  $1-16$ @ $\frac{1}{4}$  premium. New Orleans commercial, 25c. per \$1,000 discount; bank, \$1.50 per \$1,000 premium. St. Louis, par. Chicago, 25@40c. per \$1,000 discount. Boston, 17@20. per \$1,000 premium.

**ASSOCIATED BANKS OF NEW YORK.**—During March the loans were still further expanded and the reserve was reduced to a more moderate figure than we have seen in a long time past. But during the past week the amounts have all been considerably curtailed, a result which appears to have come from the strikes of workmen and the consequent fears of business men.

The following shows the condition of the New York Clearing-House banks for a number of weeks past, as well as about this time in 1885 and 1884:

1886.	Loans.	Specie.	Legal-tenders.	Deposits.	Circulation.	Surp. Res.
Apr. 3....	\$349,806,600	\$78,459,800	\$26,241,100	\$370,838,000	\$7,974,100	\$11,991,400

1884.						
Apr. 5....	347,800,500	65,809,300	24,886,900	343,969,300	14,391,700	4,208,874

**THE TREASURY.**—The following table will show the condition of the Treasury, as regards the amount of gold and silver held, on the first day of April, 1886, and, for comparison, on the first of February, and March, 1886, with the amounts of certificates outstanding, and the balances of coin owned by the Treasury:

	April 1, 1886.	Mar. 1, 1886.	Feb. 1, 1886.
Gold coin and bullion.....	\$242,159,004	\$249,801,087	\$251,480,237
Gold certificates outstanding.....	91,205,830	105,637,050	114,474,420
Gold owned by Treasury.....	\$150,953,174	\$144,164,037	\$137,005,817
Silver dollars and bullion.....	\$177,000,984	\$174,418,874	\$172,630,161
Silver certificates outstanding.....	89,855,286	88,390,816	90,069,716
Silver owned by Treasury.....	\$87,145,698	\$86,028,058	\$82,560,445

While these figures exhibit no important change as regards the silver balance, they show that the Treasury is much stronger in gold than for some months past, notwithstanding the recent bond calls. The Government receipts, especially from customs, have been increasing of late. On March 22d the Secretary of the Treasury issued the one hundred and thirty-fifth call for the redemption of bonds. The call is for \$10,000,000 of the 3 per cent. loan of 1882, and notice is given that the principal and accrued interest of the bonds

herein below designated will be paid at the Treasury of the United States, in the city of Washington, D. C., on the 1st day of May, 1886, and that the interest on said bonds will cease on that day, viz.: Three per cent. bonds issued under the Act of Congress approved July 12, 1882, and numbered as follows: \$50—Original No. 275 to original No. 284, both inclusive, and original No. 1,376 to original No. 1,381, both inclusive. \$100—Original No. 2,049 to original No. 2,107, both inclusive, and original No. 9,880 to original No. 9,916, both inclusive. \$500—Original No. 922 to original No. 1,041, both inclusive, and original No. 4,210 to original No. 4,218, both inclusive. \$1,000—Original No. 7,660 to original No. 9,030, both inclusive, and original No. 23,654 to original No. 23,711, both inclusive. \$10,000—Original No. 14,597 to original No. 15,458, both inclusive. Total, \$10,000,000.

**NATIONAL BANK CIRCULATION.**—The amount of bonds held in the Treasury to secure National bank circulation was decreased \$7,500,000 during March, the 3 per cents recently redeemed not being made good by purchases of other issues. The amount of the legal-tender deposit for the redemption of bank notes was increased by \$4,787,294 to \$56,486,178. The amount of bank notes now outstanding is \$315,891,478, a reduction of \$3,195,883 during March.

The following will show the amount of each description of bonds held by the Treasurer to secure National bank circulation on or about the dates indicated:

	April 1, 1886.	Mar. 1, 1886.	Feb. 1, 1886.	Jan. 1, 1886.
Currency 6 per cents.....	\$3,565,000	\$3,515,000	\$3,515,000	\$3,515,000
4½ per cents.....	49,243,350	48,967,650	49,502,950	50,037,450
4 per cents.....	114,216,550	115,438,350	114,627,650	114,834,650
3 per cents.....	122,691,750	129,336,900	134,923,900	137,596,650
Total.....	\$289,716,650	\$297,257,900	\$302,574,500	\$306,983,750

**GOVERNMENT BONDS.**—The following table shows the closing prices or closing bids at the New York Stock Exchange for the principal issues of Government bonds on each day of the month of March, and the highest and lowest during the month. Actual sales marked \*:

+ Ex-interest.

**RAILROAD AND MISCELLANEOUS STOCKS.**—The market is very dull and depressed, yielding much more readily to unfavorable than favorable news. The strikes are the main feature of the situation. The coal stocks have been exceptionally strong at times on account of the prospect of the formation of a combination among the producing companies. Some of the most shrewd judges are promising marked improvement before long.

THE UNIVERSITY OF CHICAGO LIBRARY

The following table shows the highest, lowest and closing prices of the active stocks at the New York Stock Exchange in the month of March, the highest and lowest since January 1, 1886, and also during the year 1885:

## STOCK EXCHANGE QUOTATIONS.

Revised by the official lists up to the first day of this month. The following tables include all securities listed at the New York Stock Exchange.

Quotations in *italics* indicate the last bid or asked price—there being no quotation in the month last past. The highest and lowest prices for the year 1885 are actual sales.

## STATE SECURITIES.

THE UNIVERSITY OF CHICAGO LIBRARY

## BANKERS' OBITUARY RECORD.

**Binkley.**—Judge C. C. Binkley, President of the Merchants & Planters' National Bank, of Sherman, Tex., died March 15th.

**Canby.**—Thomas F. Canby, President of the Third National Bank, of Baltimore, Md., died March 5th.

**Chaffee.**—Ex-Senator Jerome B. Chaffee, who died March 9th, was, in comparatively early life, a banker in St. Joseph, Mo. He afterwards, from 1857 to 1860, carried on that business in Elmwood, Kan.

**Coan.**—W. F. Coan, President of the Clinton National Bank, Clinton, Iowa, is dead.

**Coffin.**—Charles H. Coffin, Cashier of the Pacific National Bank, of Nantucket, Mass., died suddenly of apoplexy on March 8th. He was for many years engaged in business in Boston, which he was compelled to relinquish about two years ago for the sake of his health. He was one of the most highly respected members of the old Coffin family of Nantucket.

**Dayton.**—James B. Dayton, President of the Camden (N. J.) Safe Deposit & Trust Company since 1874, died March 9th in his 65th year.

**Freer.**—Jonas Freer, President of the Farmers' Bank, of Ashland, Ohio, is dead.

**Green.**—John O. Green, President of the Lowell Institution for Savings, Lowell, Mass., died recently.

**Kelsey.**—George W. Kelsey, President of the Dime Savings Bank of Williamsburgh, of Brooklyn, E. D., N. Y., died March 22d.

**Mangam.**—Darius R. Mangam, for many years a well-known merchant of New York, died March 21st. After retiring from business in 1870 he organized and was made President of the National Trust Company. The subsequent wrecking by outside influences of this institution, which was placed in the hands of William J. Best as Receiver, threw a cloud over the later years of Mr. Mangam.

**Martin.**—Henry H. Martin, President of the Albany (N. Y.) Savings Bank, died March 18th.

**Martin.**—Col. William H. Martin, of the banking firm of Coggin, Ford & Martin, of Brownwood, Tex., died March 20th, after an illness of two months.

**Morris.**—Colonel Thomas Ford Morris, a member of the New York Stock Exchange since 1865, died March 21st. About 34 years ago he entered the Metropolitan Bank, of New York, and for many years had charge of the uncurrent money department. He served as Colonel of the 93d Regiment, N. Y. Volunteers, during the war.

**Ryerson.**—George W. Ryerson, a member of the New York Stock Exchange since 1860, died March 11th.

**Spear.**—Charles Spear, Vice-President of the National Shoe & Leather Bank, of New York, died March 13th. He was for forty years in active business in New York, and was elected President of the above bank on the death of Mr. A. V. Stout, afterwards resigning on account of ill health.

**Stump.**—A. H. Stump, President of the Merchants' National Bank, of Baltimore, Md., died February 19th. He had been a Director of the bank for 35 years, succeeding the late Johns Hopkins as President in 1874.

**Tabor.**—William C. Tabor, President of the New Bedford (Mass.) Institution for Savings, died March 22d, aged 90 years.

**Upton.**—Charles E. Upton, ex-President of the City Bank, of Rochester, N. Y., which failed three years ago, died March 20th.

**Vickrey.**—A. M. Vickrey, banker, of Tipton, Ind., died recently.

**Vilas.**—Samuel F. Vilas, banker, of Plattsburgh, N. Y., died March 24, aged 79 years.

**Wadleigh.**—Gilbert Wadleigh, who was from 1859 to 1864 Cashier of the Souhegan National Bank, Milford, N. H., and from 1871 to 1875 Treasurer of the Milford (N. H.) Five-Cent Savings Institution, died March 13th, aged about 64 years.

**Wheeler.**—Major Stephen H. Wheeler, President of the Mystic (Conn.) National Bank, died March 6th, aged 74 years.

**Whitehouse.**—Edward Whitehouse, a member of the New York Stock Exchange, who retired with a large fortune in 1864, died March 19th, aged 81 years.

NEW YORK CITY NATIONAL BANKS.—The following is an abstract of the reports made to the Comptroller of the Currency, showing the condition of the National banks in the city of New York at the close of business on March 1, 1886, the number of banks being 45. The figures for December 24, 1885, are also given for comparison:

## CHRONOLOGICAL RECORD.—MARCH, 1886.

1. **MONDAY.**—Decrease in the public debt in February, \$2,702,153.
2. **TUESDAY.**—The Associated Chambers of Agriculture of Great Britain adopted a resolution favoring the imposition of import duties on foreign coin. — A treaty of peace between Servia and Bulgaria was signed at Bucharest.
5. **FRIDAY.**—A short strike stopped the traffic on all the street car lines in New York city. — A strike is in progress on the Texas Pacific railroad.
6. **SATURDAY.**—The New York bank loans amounted to \$354,530,000, the largest total on record. — Discount rate on commercial paper in New York, 3@5½ per cent.; call loans, 1@2 per cent. — Discount rate in London on 60 days to 3 months' bank bills, 1¼ per cent.; on short loans, 1¼ per cent.
7. **SUNDAY.**—The strike was extended to the whole Gould Southwestern railroad system of 6,000 miles.
13. **SATURDAY.**—The Swedish Parliament rejected a proposal to levy a customs tax on foreign wheat. — Discount rate on commercial paper in New York, 3@5½ per cent.; call loans, 2@2¼ per cent. — Discount rate in London on 3 months' bills, 1¼ per cent.; short loans, 1¼ per cent.
- 14.—**SUNDAY.**—The Cunard steamship Oregon sunk off Fire Island.
- 16.—**TUESDAY.**—W. L. Trenholm, of South Carolina, nominated for Comptroller of the Currency.
18. **THURSDAY.**—The United States Court, at Knoxville, decreed that the East Tennessee, Virginia & Georgia Railroad should be sold April 19th.
20. **SATURDAY.**—Discount rate on commercial paper in New York, 3¼@6 per cent.; call loans, 1¼@2 per cent. — Discount rate in London on 3 months' bills, 1 per cent.; short loans, 1¼ per cent.
22. **MONDAY.**—The 135th Treasury call for \$10,000,000 three per cent. bonds for May 1st.
27. **SATURDAY.**—The Chicago & Great Southern Railroad was sold under foreclosure, at Indianapolis, to the representatives of the bondholders. — Messrs. Chamberlin and Trevelyan resigned from the British Cabinet. — Discount rate on commercial paper in New York, 4@6 per cent.; call loans, 1¼@2¼ per cent. — Discount rate in London on 60 days to 3 months' bank bills, 1¼ per cent.; short loans, ¼ per cent.
29. **MONDAY.**—It was announced, by mistake, that the great strike on the Missouri Pacific Railroad was settled. — Serious rioting of socialists in Belgium.
30. **TUESDAY.**—The principal part of Key West was destroyed by fire.
31. **WEDNESDAY.**—The strike on the Missouri Pacific Railroad practically ended.

**Bank Railings, Wire Work, etc.**—It is important that bank officers should know something definite about the firm they deal with in ordering bank railings, wire work, etc. There are concerns in this line, here and there throughout the country, which have very inferior facilities for turning out first-class work, and besides have far from a good reputation for promptness and square dealing. We have some such "on the list," and they will not be permitted to use the JOURNAL OF BANKING to aid them in pushing their business if we can help it. In this number will be found the card of the NATIONAL WIRE AND IRON COMPANY of Detroit, Mich., to which we have no hesitation in calling attention. Their work—as well as methods of doing business—has been highly spoken of by the readers of the JOURNAL who have had dealings with them. In verification of this, here is an extract from a letter dated March 21, 1886, written by E. McMahon, Cashier, Superior, Wisconsin: "The railing was received here on the 19th, all in good order. It was set up on the counter yesterday and fits nicely. It is very handsome and was admired by crowds of people all day long. The writer, as well as the other officers of the bank, are much pleased with your work. I cheerfully enclose our check on the American Exchange National Bank, of New York, in payment of the bill rendered."

**Wanted.**—A young man, familiar with all the departments of a small bank, is desirous of connecting himself with an institution having more extensive business. Object—permanent position, or better preparation to organize a bank for himself. Security and best of references given. Correspondence invited. Address "W," care of RHODES' JOURNAL OF BANKING.

**Wanted.**—A young man, having served five years as Teller in a National bank, desires a position as Cashier or Teller in a larger institution, and invites correspondence with that end in view. Can furnish the very best of references. Address "Pennsylvania," care RHODES' JOURNAL OF BANKING.

# RHODES' JOURNAL OF BANKING.

Vol. XIII.

MAY, 1886.

No. 3.

MR. WILLIAM L. TRENHOLM, after filing the necessary bond for \$100,000, was legally qualified and entered upon the duties of Comptroller of the Currency on April 19th. The bankers and business men of the country have reason to be pleased with this appointment, and believe that the functions pertaining to the office will continue to be faithfully and intelligently performed in the future as they have been in the past. Hitherto the Government has been fortunate in its appointments to this important position, and if we may judge from the record made by Mr. Trenholm thus far it will not suffer while in his hands. His National reputation has been gained within a comparatively short period. In his own State he is known as a capable financier. His clear and cogent arguments against the silver dollar coinage made through the press and at the Commercial Convention at Atlanta last year brought him into prominence throughout the country, and his address at the Bankers' Convention at Chicago was probably as strong and full an appeal for the integrity of our currency as ever made. This appointment should have an especially good effect in the South, where so many of the people have been led into the delusion that a stable currency is only desirable for the capitalists and opposed to their interests.

THE DEFEAT IN THE HOUSE OF REPRESENTATIVES, on April 8th, of Mr. Bland's bill for the free coinage of silver has set at rest the worst fears of the friends of honest money. Not that there was any danger of the final passage of the measure, for it was certain to be killed either in the Senate or by the President if it had passed the House, but many of the class mentioned believed the silver cause to be much stronger than it actually was, and that we were drifting into the dangers which they have long feared. We think and have believed all along that this attitude of the advocates of a stable currency—their lack of a backbone and aggressiveness—is one of the reasons why this vexatious matter remains in its present condition. The qualities that are so conspicuous on the wrong side of the question appear to be conspicuously lacking on the other. A few days before the vote on the Bland bill many of

the anti-silver newspapers had acknowledged that they would probably be beaten, thus throwing into the hand of the enemy all the prestige that the assurance of victory lends. One New York paper said, in speaking of the result of the preliminary vote to fix a date for the discussion of the Bland measure: "The vote shows beyond any question that the bill will pass the House when it is put upon its passage." Another said: "The thing demonstrated by this vote is that a large majority of the House is in favor of the free coinage of silver." These mischievous ideas, arising from a lack of faith in the innate honesty and common sense of the American people, have aided the cause of Bland, Warren, Weaver and the rest of the 80-cent dollar clique from the first. These people by their noisy manner and reckless assertions give people of small discernment the impression that they are the leaders of a great party. Men of common sense should not allow themselves to be deceived in this manner. The coinage of silver would be stopped this spring if those who are opposed to it only had the courage of their convictions.

---

A PROMINENT BANKING FIRM in one of the silver-producing districts of the far West writes as follows: "Your views on the silver question are so much at variance with ours that we cannot conscientiously or consistently support your JOURNAL." It is a pity that the writer of the above did not take the trouble to set forth his views on the important subject in question. They would certainly be fairly treated in these pages, and our readers generally—pronounced silver advocates as well as those on the other side—would like to hear what a candid and honest banker of the silver persuasion has to say on the matter. The wide differences of opinion that exist upon it appear to be largely founded on a misconception of certain great facts on the one side or the other, such as: the circumstances under which the bill of 1873, discontinuing the standard dollar coinage, was passed; the amount of the silver coinage previous to that time; the present attitude of France as regards silver; the reason why so many business men wish the coinage discontinued, etc. We have stated these facts together with natural inferences from our point of view from time to time, and if our friends find any errors or fallacies in the statements the pages of the JOURNAL are open to them to set us right. On the other hand, if the advocates of the coinage are candid and disinterested they will be willing to have their mistakes corrected; but the position taken by some of them surely confirms the suspicion that their attitude is not based on a broad and unselfish plane. We are sorry to part company with any portion of the banking interest, but principle must not be sacrificed for the sake of gain or popularity. For the information of our friends not in accord with the JOURNAL's ideas on the silver question we beg to say that its list of readers is increasing as rapidly in the silver-producing sections of the country as in any other, serving to

show that the bankers and others who are most closely allied with the silver interest are not averse to reading a publication which has the courage to maintain its convictions. A weak and vacillating course can never win respect.

---

A CORRESPONDENT AT DETROIT, MICH., writes that the State Tax Assessors are about to begin a movement of great financial interest. They intend taking steps to assess foreign capital for taxation. It is estimated that some \$22,000,000 of eastern capital is invested there at higher rates than could be realized at home. This money has been hitherto exempt, being owned outside of the State, but it is believed that a recent change in the law can be availed of to render all mortgages taxable. If the Assessors are successful the result will be to drive foreign money away, and it is said that this is one of the objects desired. It is also claimed that the movement is incited by the money-lenders of the State, who would be large gainers if loanable capital were made scarcer, but we have no means of verifying this statement. The matter of taxation of moneyed capital is in a state of chaos all over the country. If the capital loaned in Michigan is already taxed in Connecticut the Michigan capitalist should have nothing to complain of, but if it escapes taxation both in the State where it is owned and where it is loaned then the home capitalist is discriminated against. It is doubtless the fact that a great deal of money now escapes taxation by being loaned in States other than the one in which it is owned. The present anomalies in taxation can only be overcome by means of a uniform rule to be accepted by all the States. It would appear to be a just rule that property should be taxed wherever found, but that evidences of debt should be exempt or else be only nominally taxed. This idea is based on the principle that the Government's right to tax grows out of the protection which it provides from lawlessness, etc. It is easy to see, however, how far we are from arriving at any rational system as yet.

---

THE MONTREAL *Shareholder* intimates that in his recent speech on the Irish Home Rule bill, Mr. Gladstone expressed a preference for fiat paper money. Following is the passage in question : "Ireland," said Mr. Gladstone, "might think fit to pass a law providing for the extinction of private issues in Ireland, and that no bank-notes should be issued in Ireland, except under the authority and for the advantage of the State. I own it is my opinion that Ireland would do an extremely sensible thing if she passed such a law. [Hear, hear.] It is my most strong and decided opinion that we ought to have the same law ourselves [cheers] but the block of business has prevented that and many other good things toward the attainment of which I hope we are now going to open the door." We see nothing here toward the application of "rag-baby" to the idea of the statesman. There is no "hint of an intention to substitute Government paper money only for the present

THE UNIVERSITY OF CHICAGO LIBRARY

note currency of the United Kingdom." The idea is that "no bank-notes should be issued . . . except under the authority or for the advantage of the State." This is an opinion that we believe economists the world over are coming to agree upon. It is thoroughly in operation in the United States in the case of the National bank circulation. We understand that Mr. Gladstone would have all the bank issues governed by the State, and that the latter should have its share of the profits. The idea that is opposed to this would admit of the old State bank issues, which hardly any sane person would like to see restored.

---

IT IS NOTICED THAT THE CANADIAN BANKS are withdrawing their business from Chicago in favor of New York. The fact that the rates for loans have been declining in Chicago for a few years past is given as a reason for this; but the rates have also been declining in New York. It is said that there is more competition for paper in New York, and consequently the paper goes there for discount, tending to reduce the demand for loans in Chicago. This is doubtless true, but it appears to be a false reason for the change. May it not be owing to a difference in the taxation of foreign capital at the two competing points, or some cognate cause?

---

IT IS LIKELY that a bill will be passed in the House of Representatives authorizing an issue of \$1 and \$2 silver certificates. If the further coinage of silver were stopped this measure might be accepted by the people generally—wage-earners as well as capitalists—in order to enable the Government to make some use of the surplus silver in its vaults, but as the matter stands the bill would only tend to vitiate the currency throughout. If this policy prevails we may in time see money so cheap that the poorest man may have plenty of it, or can throw it away, for that matter. Second-class dollars are as offensive as second-class eggs.

---

CONSIDERABLE INTEREST has been aroused of late in favor of the redemption of the trade dollars in the country, and some of those who formerly opposed the measure are beginning to see the matter in its true light. Most of the newspapers started their crusade against this coin with the false idea that it had never been a legal-tender, and that it had been fraudulently put in circulation here. They conceded that the Government blundered in ever issuing the trade dollar, but would not admit that it should be responsible for its blunder. The spirit of repudiation underlies this feeling.

---

WE SEE IT STATED HERE AND THERE that there is a scarcity of gold. It is said that the stock of gold in Great Britain is fifty million dollars less than it was five years ago, and that the metal is scarce in France and Germany. A writer, who does not consciously pose as a humorist, estimates that, comparing the demand with the supply, there is a deficit in the supply of gold amounting to over \$100,000,000 every year. We are certain that he underestimates the demand enormously. There is, practically speaking, no end to it.

## INDIA AND THE SILVER QUESTION.

A strong point in favor of the continuance of the silver coinage is the fact that the cotton industry is widely extending in India and that that country is now competing sharply with ours in the world's grain markets. This argument has been repeatedly urged of late by the silver advocates of a certain class, viz : the few who aspire to a reputation for being able to view the silver question as one affecting other nations as well as our own. The theory upon which the claim is based is that the decrease in the price of silver bullion within a few years past has reduced the Indian silver rupee in sterling exchange to such an extent that Indian products can be laid down in Europe at a much lower price than heretofore. This implies that the English importer (for instance) can buy rupees at a much lower price than formerly, but that the ignorant natives of Hindustan will give the same quantity of wheat, labor, etc., for a rupee as ever. By this means, it is claimed, in substance, the exporter from that country can obtain its products at much lower prices than he could a few years ago. This theory is supported by some of the facts in the case. The statistics show that the exports of wheat from India to the principal importing markets of the world have increased nearly fourfold within six years past, while the exports of this grain from the United States during the same period have fallen off about 8½ per cent. It should be mentioned, however, that the exports from Russia have increased even more largely than those from India.

It appears also that at a recent date there were 87 cotton mills in India, consuming over 2,000,000 hundred weights of cotton per annum, which is more than double the quantity that was consumed six years ago. There has also been an immense increase in the amount of cotton manufactures exported to China and Japan.

It is declared by one of the strongest of our advocates of silver coinage that every step in the downward progress of silver "is in an equal measure a bounty on the export of Indian products, the prices of which are paid in silver rupees." He says :

"While the American wheat crop of 1885 was a short one, the present visible supply has reached the enormous figure of 57,981,156 bushels. 'What is to be done with it?' asks a Chicago journal, it adding, 'export demand, a reliance of former years, does not exist.' What would be done with it if the anti-silver men had their way? The coinage of dollars ceased, the rupee of India in sterling exchange fell ten or fifteen per cent. more, and as a consequence the export of Indian wheat the current year (1885-6) doubled that, amounting to 80,000,000 bushels. There is positively nothing but ruin in the anti-silver scheme."

It is evident that this view of the matter leaves out of account everything that has aided the industrial development of India in recent years in the way of railroads, steamboat transportation, the introduction of European machinery and tools, etc.

Let us see what the *Miller's Gazette*, of London, said on this question within a month or two :

"India, by her unexpected development as a wheat exporter in recent years, has become an important factor in the trade. . . . Matters of price do not seem to affect

THE UNIVERSITY OF CHICAGO LIBRARY

the growers . . . It is evident that where farm laborers are to be obtained at 2d. a day it is difficult to decide at what price wheat-growing in India becomes profitable."

But, it must be acknowledged that, all things being considered, the export trade of India probably was stimulated to some extent by the decline in silver, while the decline was in progress. But it is evident that this cannot be a constant factor—it must cease as soon as its cause ceases. The decline of silver has acted upon India to some extent in the same way that an increase in the circulating medium generally acts, by stimulating traffic while not adding anything permanent to the general wealth.

It is a curious thing that the silver men have generally claimed that Great Britain has adhered to its single gold standard in order to gain an advantage over the silver-using countries, while they at the same time declare that India, with its silver standard, is a large gainer by the decline in the price of that metal. It is evident that there must be a mistake on one side or the other.

If India were such a gainer by the present condition of things, we should naturally expect that the authorities there were aware of the fact, and in that case it might be prudent for us to consider whether the United States should not imitate its fiscal system in order to share some of the benefits that we hear so much of in this country. But we find that the Government of India take a view of the case the very reverse of what we have been led to expect they would.

The report of Sir Auckland Colvin, the Indian Finance Minister, rendered at the end of March, says :

"The uncertainty respecting silver entirely neutralizes the most carefully formed forecasts for the future and renders the task of budget making in India almost illusory."

The London *Times* affirms that the Indian Finance Minister is convinced that the success or failure of the present budget will be determined not by the working of the Indian Government but by the decision taken in Washington on silver coinage in America, and insists, in the strongest terms, on the necessity for international action placing the relations of gold and silver upon a recognized and stable footing.

We see nothing here to support the opinion that a further decline in silver is desirable for India. It appears, on the contrary, that stability of values is needed there as in every other country.

---

### SCHOOL SAVINGS BANKS IN EUROPE.

Mons. A. de Malarce, Permanent Secretary of the Savings Institution Society of France, sends a short account of the progress of school savings banks in France and the rest of Europe. He takes much pride in the fact that his country shows most progress in this admirable instrument for the advancement of the working classes, so that France has become, as regards the number of persons who have the benefit of it, far in advance of any other country.

The statistics compiled by the Department of Public Instruction show that in the year 1874 there were only seven school savings banks in France. By 1877 the number had increased to 8,033, having 143,272 pupil depositors and aggregate deposits of 2,984,353 francs.

The figures for January 1, 1886, show an extraordinary extension of this branch of practical instruction. The number of banks at that time was no less than 23,980, with 491,160 depositors and aggregate deposits of 11,934,268 francs. These 24,000 school savings banks have been organized by the teachers

without reward, the Government having given no aid to the movement excepting its countenance, and good words for those who have interested themselves in the cause of the banks. The local authorities, however, have encouraged the teachers by prizes in the shape of medals and by paying the small cost of the necessary printed matter. But the work of starting and carrying on the system has been voluntarily undertaken by the primary teachers throughout the country, a fact which does them great credit.

The pupils in all the schools make free use of the banks, the average so doing being 20 or 21 to each school. This number represents about one-third of all the pupils and generally the older ones.

The amounts deposited are, of course, small, according to the means of saving of the children, averaging about 15 centimes (3 cents) per week for a school year.

The facts mentioned show that this means of instruction is well established and flourishing in France, and public men abroad are striving to emulate this condition of things in their respective countries.

At the sixty-third annual reunion of all the Cantonal societies of public utility of Switzerland, which was held at Geneva recently, Mons. E. Fatio, Manager of the savings bank at that place, introduced a resolution which was carried, looking to the establishment of school savings banks throughout Switzerland.

The latest reports published in other countries show that a great interest is taken in these institutions. In Italy there are 3,456 school savings banks. In Hungary there are 691; of these 517, which reported for 1885, had 23,494 young depositors, whose deposits aggregated 381,185 francs. Germany supports 717 of these banks, with 54,850 depositors, and total deposits of 673,750 francs. The latest statistics compiled in England show that there were 2,886 scholars' banks, which operated in 1,008 different localities.

It is at Liverpool, thanks to the efforts of Mr. Thomas B. Newton, that this branch of education has received most attention in England. In 74 of the schools of that city these banks are in operation. The depositors number 7,329, or one-third of the total number of pupils.

These institutions, it should be understood, are not intended to gather up the savings of the poor. They are not benevolent institutions, and are in no degree in competition with the regular savings banks. Their purpose is to begin to teach the children at an early age habits of thrift and foresight that will be invaluable to them in later life. It is customary to say that there is no place for such institutions in this country, but we believe this to be a serious error. If the strikers of these times had been educated by some such means they would be trying to better their condition in some more practical way than the one they are now employing.

---

**THE FRENCH AS MONEY SAVERS.**—Ferdinand de Lesseps, in a speech made on his return from Panama, March 26th, said: "We promised to complete the canal in 1889; I shall keep my promise. It is due to the savings of the French people that we have been able to successfully prosecute our work." On the same occasion, when Madame Richards presented him a bouquet in the name of the ladies of Saint Nazaire, he said: "I have as many women as men for shareholders of Panama, and they are more reliable than the men. They have never abandoned me"—a remarkable fact, since there are more than 100,000 stockholders in the Panama Canal Company.

### THE SILVER PROBLEM.\*

Referring to my proposition on the silver question and your remarks on the same† permit me to say that it was intended as a compromise measure of which it bears the stamp on its face, and it remains my belief that nothing but such will become our next law.

That mine is a solution thought of by others in the financial world is shown by the almost simultaneous proposition of Earl Grey, in the London *Times* of February 19th, which is in substance identical, and advocates for England the adoption of the same measure as proposed by me two days later on this side. The same principle also underlies the bill brought in by Mr. Sherman on February 27th, though this contains some very objectionable features.

The main point of the bill is, that it shall be optional with the Government—not with the holder—whether to redeem its paper in gold coin or its equivalent in silver bullion. This gives the Treasurer a valuable privilege without injury to the creditors of the United States. One great objection would seem the accumulation of an immense treasure at the seat of our Government and in the power which the possession of such wealth would naturally bestow upon it—endangering the freedom of our country in times of internal dissensions. This possibility could and should even now be forestalled by keeping our coin and bullion more evenly divided between the several Sub-Treasuries.

It cannot be overlooked that the agitation of this financial problem has given rise to two very fallacious opinions—the silver men contending that the appreciation of gold is the cause of the present stagnation of business whilst their adversaries assert that a deluge of silver means the financial ruin of every interest the world over.

The fact should be made known that beyond the period it would take for prices to adjust themselves on a new basis of value and the stigma it would throw upon our National honor abroad things would remain very much the same in the long run as at present.

All prices (if there is a change from the gold to the silver standard) will in a given time have risen proportionately; supply and demand, earnings and expenditures, rents and interest, even gold and silver, will still remain in the same relation to each other, governing commerce, traffic and values as they do now. Labor troubles will come, off and on, and so will good times and bad times. The man owning \$100,000 then will not intrinsically be better off than the one worth about \$80,000 now, nor will the laborer fare better at \$2 per day wages than the one earning \$1.60 now—because neither of them will then get much more or less for one dollar than he can purchase now for 80 cents. During the interregnum pandemonium will of course reign supreme, many new fortunes will be created and tens of thousands will be ruined, but the advantage of making money during that period and keeping it will still

\*The JOURNAL's pages are open to any of its readers who wish to express their ideas therein on the silver question. Our only stipulation is that the communications be as brief as possible, with the points either *pro* or *con* clearly stated.

†See March JOURNAL, page 177.

be with the wealthy (as it always is) and not with the poor, as they are often led to believe.

One great disadvantage of a silver standard, no matter in what country, will always be the comparatively larger and oftener occurring fluctuations of prices and the stimulus thereby offered to speculation, the very cancer of healthy and legitimate business. It is for the reason that no ultimate benefit can possibly come to our country (or consequently to themselves) that experienced and unbiased financiers seriously object to have us thus wantonly run into peril, and that well-posted and well-meaning papers raise their voices in favor of one gold basis. With one word, we do not now want any disturbance of our established currency—financial history having proven many times that disasters are sure to follow in the wake of it when brought on without necessity.

That a continuance of the present coinage will finally force the United States Treasury to silver payments in large amounts, where gold is due by custom, and that in anticipation of such our securities, of which there are probably 1,000 millions owned abroad, will pour in on us and quickly drain us of gold, cannot be doubted. The consequence will be that gold will go up either slowly but surely, or, more probably, however, with one terrible leap, carrying destruction and ruin to many business interests. It must, however, be granted that the States would in a measure be benefited by such a catastrophe, as it will enable us to settle at perhaps 78 cents on the dollar for the hundreds of millions of bonds and stocks held in foreign lands which would not reach our shores before the outbreak of the storm.

It is also the writer's firm opinion that, after the lapse of a certain time after thus defrauding our creditors both at home and abroad, owing to our immense resources and the impossibility of actual bankruptcy, our credit will again be as good or very nearly as good as it now is.

The great question is: Have morals and honesty deteriorated so much that our present business methods, under which people become bankrupt with their pockets full, shall be imitated and thereby sanctioned by our own Government, of which every patriotic citizen, so far, has a right to be proud?

Let us hope that this question will be duly and carefully considered by our law-makers.

A. H.

SAN ANTONIO, Texas, April 10, 1886.

### GOOD TIMES AND BAD TIMES

AS SHOWN IN THE CASH AND PAPER OF THE BANK OF FRANCE.\*

The science of statistics which has given so many useful hints to several industries and to so many branches of trade has been looked to for some time for some laws, or probabilities, affecting business prosperity, or the reverse. It has been argued that statistics founded life insurance, and that the fortunes of vast bodies of men are no more capricious than are their lives.

Monsieur Siegfried, an eminent French economist, has written a very interesting paper—the facts in which are here presented—tending to show that those years which are marked by commercial and financial depression are mirrored, as it were, in the statements of the Bank of France. As soon, in

---

\*Translated from *Le Gênie Civil* for RHODES' JOURNAL OF BANKING.

fact, as general trade begins to languish there is a great rise in the discounts, etc., of the Bank, as merchants are then compelled to negotiate their paper. When the cash, on the other hand, is very large, and the paper low, we may conclude that commerce is flourishing and the merchant's credit good. The researches of M. Siegfried extend over a period of 88 years.

The year 1847 was memorable for universal depression in trade—it might be called the initial *crisis* year. The cash in the Bank of France was then almost insignificant, while the discounts amounted to 800,000,000 of francs. Of course the general trade of the country has multiplied many fold since then. In 1852 a new period of prosperity began; it was reflected in the cash of the Bank, which rose to 600,000,000 francs, while the discounts fell off to 100,000,000 francs.

The year 1857 showed a complete reversal of 1852; the discounts rose to 600,000,000 francs; the cash declined to 100,000,000 francs, and the year was emphatically denominated as a crisis year.

There was a very marked recovery of trade in 1859, and this was again shown in the statements of the Bank—the cash rising to 650,000,000 francs and the discounts dropping to 350,000,000 francs.

Another period of bad years began in 1864. The discounts rose to 780,000,000 francs; the cash was only 140,000,000 francs.

A recovery was noted in 1868. The cash of the Bank ran up to 1,800,000,000 francs, while the discounts were only 380,000,000 francs.

The gloomy times of 1870 were well exemplified in the Bank's accounts; the discounts reached the figure of 1,430,000,000 francs; the cash was only 380,000,000 francs.

Another period of dull times began in 1873. The Bank's cash was 700,000,000 francs, but the discounts were 1,180,000,000 francs.

Prosperous trade was renewed in 1877. The cash rose to 2,280,000,000 francs, while the discounts sank to 350,000,000 francs.

Another crisis came in 1882, when the discounts had risen to 1,620,000,000 francs, and the cash was 1,680,000,000 francs.

From 1882 to the present day the amount of paper negotiated has been declining (in 1885, only 600,000,000 francs) while the cash has been steadily increasing, being now 2,280,000,000 francs (as in 1877).

According to the teachings of the figures given above, France should be approaching a new era of prosperity. There are, however, some co-efficients to be taken into consideration, such as the general condition of trade throughout the world, the political outlook, etc. Railways and electricity have somewhat modified the march of economic phenomena since 1847, but cause and effect remain much the same. The individual can play a greater part than formerly. The markets of the world are working together like a system of electric clocks.

The many disgraceful bankruptcies and ruin of industrial enterprises have made small capitalists timid, and this want of confidence undoubtedly prolongs the bad economic condition in France.

With such a favorable showing of the Bank of France, however, and with the impulsion to manufactures and trade which the preparations for the great Exhibition of 1890 will soon give, we would not be surprised to see a marked improvement within a short time.

## ANNUAL MEETING OF THE BOSTON BANK OFFICERS' ASSOCIATION.

ADDRESSES BY PRESIDENT LUKE, EX-COMPTROLLER KNOX, MAYOR O'BRIEN,  
AND OTHERS.

Nearly two hundred gentlemen connected with the banking institutions of Boston and other cities dined at the United States Hotel in that city on the evening of April 16th. The occasion was the first annual meeting of the Bank Officers' Association of Boston, of which Mr. A. F. Luke, the Cashier of the National Bank of North America, is President. It was altogether a very successful affair. The institution has grown like a mushroom, having sprung into a membership of over three hundred inside of a year.

The members of the Association rejoiced in the presence of Hon. John Jay Knox, ex-Comptroller of the Currency—now President of the National Bank of the Republic in New York city; Mayor O'Brien, who is President of the Union Institution for Savings; ex-United States Treasurer A. U. Wyman, Vice-President of the Omaha National Bank, and Prof. J. L. Laughlin, Professor of Political Economy at Harvard, as invited guests.

Prominent among others who partook of the Association's hospitality and listened to the speech-making were Mr. A. L. Newman, President of the National Bank of the Commonwealth; Mr. John Cummings, President of the Shawmut National Bank; Mr. Moses W. Richardson, President of the Central National Bank; Mr. Asa P. Potter, President of the Maverick National Bank; Mr. Charles O. Billings, President of the Globe National Bank; Mr. James H. Bouvé, President of the Boston National Bank; Mr. John Carr, President of the First National Bank; Mr. George Ripley, President of the National Hide & Leather Bank; Mr. B. E. Cole, President of the National Shoe & Leather Bank; Mr. J. W. Magruder, the National Bank Examiner; Mr. Alfred Ewer, the Assistant National Bank Examiner; Mr. Nathaniel J. Rust, President of the Lincoln National Bank; Mr. T. P. Beal, Vice-President of the Second National Bank, and Mr. N. G. Snelling, Manager of the Clearing-House.

Full justice was done to the excellent dinner set before the bank officials, and it was about 6.30 P. M. when, the cloth having been cleared and the cigars lighted, the President rose to address the company. He was given an enthusiastic reception. When silence had been restored he said:

*Gentlemen of the Bank Officers' Association and Friends:*

As we have with us to-day many gentlemen who are much better fitted by ability and experience to entertain and instruct you than am I, my remarks will be brief that you may have more time to enjoy what they may say to you.

Our first gathering is evidently a success. I cannot remember when before I have partaken of a dinner that tasted so good as this; when before I have seen so much of interest taken and pleasure manifested by the members of any association. Many men have met and taken one another by the hand to-day who have not done so for years before, and who, but for this occasion, would not in all likelihood have done so for years to come. How often do we hear a bank officer say, when asked if he is acquainted with some

THE UNIVERSITY OF CHICAGO LIBRARY

person in another bank, "Oh, no, I don't know him, as I never see any one from other banks excepting the messengers." Let us see to it, now that the opportunity is placed before us, that we do know well those who are working in the same line as ourselves.

I am reminded, as I think of this pleasant meeting to-night, of another meeting of bankers which took place under very different circumstances in London a great many years ago—about 600 years ago, if the account is to be believed. Frederick Martin, in his "Stories of Banks and Bankers," quotes from an old chronicle, stating that on that occasion all the goldsmiths of London and many other gentlemen who were engaged in what then constituted the business of private banking were arrested and tried before the Justices of that city, with the dreadful result of the quartering and hanging of 292 of them for being engaged in that nefarious business. Some of these men were Christians and some Jews. Money lending at that time had not been made legal, and the business continued to be illegal, we are told, until the middle of the sixteenth century. I suppose those old predecessors of ours used to have some kind of meetings for consultation now and then, but so long as the penalty of discovery was hanging, I doubt if any newspaper reporters were present, as is the case with us, I see, to-night. From that time until now the business of banking has gone on, passing through many stages of evolution and improvement, from the beginning, when it was all profit and no respectability, up to the present time, when it is very nearly all respectability and no profit! [Laughter.]

We are gathered here to-night in the furtherance of one of the principal objects of our Association, which is that each member may increase his acquaintance with his fellow-workers in the same calling, and thereby add to his knowledge of and interest in his profession. Through enlarged acquaintance should come wider knowledge, which, in its turn, often leads to opportunity, and always gives power and strength upon the advent of that opportunity. It seems almost too commonplace to say that the young men must take the places of those who have grown mature and desire some rest and leisure after busy years. But do all of us do all that lies in our power to strengthen and prepare ourselves for the succession? Do all of us realize that it is not the end of banking to see that the cash balances or that the deposits add the amount the checks and other vouchers denote they should? All this it is necessary to know, but so far it is merely a matter of arithmetic. It is after this point that hard study begins. Study of history and statistics. Study of theories and men. George Eliot somewhere says: "You must remember it isn't only laying hold of a rope, you must go on pulling." While it is probably a fact that many small interior banks have been well and profitably managed by narrow minds, it is also true, I think, that in the cities and financial centres the largest measure of success has been attained by the men who are constantly striving for more and better knowledge. Our calling invites us to study, inasmuch as it gives us a great deal of time from the detail of our work, and the recompense is such that we are removed from want. To some of us the working days are longer than to others; still the average is, I believe, less than in almost any other business. When I say we are removed from want, I mean, of course, of the common necessities of life. No man, unless ambition be wholly dead within him, can be entirely exempt from want. So, with time and circumstance upon our side, let us strive to furnish the rest. The rest is character, knowledge and ambition. I believe the time is coming when it will be more and more the practice to select bank Managers from the ranks of the bank clerks than it was in the past. It used to be thought an absolute necessity of a bank President that he should have been largely engaged in mercantile pursuits himself, and doubtless such a training was and is a good one. But in the present generation of bank Presidents we find many (I am not speaking of those in this city alone) who are doing great honor to their institutions, and who are now taking a large and influential part in banking interests, whose capability is the result wholly of their experience in different positions in the bank, added to intelligent thought and study. Let us do what we can to make the bank officer more

valuable to himself and to the community in which he lives, and thereby continue to raise the honor of his calling. [Applause.]

The President then introduced, "as one who is held in high esteem wherever banking interests have been established, Hon. John Jay Knox, ex-Comptroller of the Currency and President of the National Bank of the Republic, New York."

Mr. Knox was most cordially greeted upon rising, and during the course of his speech—which was nearly an hour in duration and which had previously been read before the Academy of Political Science of Columbia College, of New York—he was frequently interrupted by hearty bursts of applause.

The subject presented by Mr. Knox was "Legal-Tender in the United States;" but the address was really not only an historical sketch in regard to legal-tender issues, coin and currency, but of all of the paper issues of the Government since its organization. He commenced by referring to the colonial currency, the issue of which as a legal-tender was prohibited by England, and stated that there was good reason to believe that this interference of Parliament had as much to do with the throwing of the tea overboard in Boston harbor and the breaking out of the Revolution as the question of taxation.

He referred to the discussions in the Federal Convention, and read with effect the famous speech of Luther Martin, a member of the Convention, (who had previously "led the partisans of paper emissions in the House of Delegates of Maryland to victory"), delivered in the House at Annapolis just after the adjournment of the Convention. He referred to the circumstances under which the various forms of Treasury notes were issued, and said they were, without exception, made payable at a specified time in the future and bearing interest. He stated that John C. Spencer, the Secretary of the Treasury during the Tyler Administration, evaded the law and issued notes which, in effect, were payable on demand without interest. The Committee of Ways and Means investigated these acts and made an elaborate report, in which it was claimed by the committee that the Constitution authorized the Government to borrow money, but not to issue bills of credit; that borrowing money implied the payment of interest, and that interest-bearing notes, payable at a future day, were a temporary loan, not designed to circulate as money, and could properly be issued, while notes bearing no interest, and payable on demand, were bills of credit, and could be issued only in violation of the Constitution. He then gave a rapid review of the notes issued by the Buchanan Administration and the Lincoln Administration which followed, and gave a graphic sketch of the financial situation at the time of the breaking out of the war and the rapid accumulation of the public debt. He gave a sketch of the discussions in Congress on the legal-tender question, and read extracts from the book of George Bancroft, recently published, and expressed his regret at the late decision of the highest tribunal of the country, and hoped that not many years hence the question would be brought before the Court and the third decision reversed and made to conform to the first.

#### THE SILVER QUESTION.—THE MAJORITY OF BANK STOCKHOLDERS NOT RICH MEN.

In referring to the silver question, he said that the Constitution provided that Congress should have power to coin money and regulate the value thereof, and that the relative value of gold and silver should be determined by the crucial test of the market. The National and other banks and their officers are continually being misrepresented in and out of Congress upon the question of the coinage, and in certain quarters there seems to be nearly as much prejudice now against banks as there was against bankers in the days of the goldsmiths, before the Bank of England was established, as referred to by your President to-night.

The bank with which I am connected has a capital of \$1,500,000, distributed among 450 shareholders, one-third of whom are New England men and women

of moderate means, who have been shareholders for thirty years. Only two shareholders hold as much as 300 shares representing \$30,000. The holdings on the average are \$3,000, and this is about the average held, in the aggregate, by the stockholders of all the National banks. The small stockholders, as well as large, under the National banking system, as you know, are individually liable for an amount equal to the amount invested in the stock. The National bank stock of the country is not held, as a rule, by rich men, nor are the officers of banks generally rich men. The average amount held by each stockholder in the New England States is but \$2,000. The number of stockholders in 1876 in Massachusetts was about 46,000, of whom 30,000 held \$1,000 of stock or less. The whole number of stockholders in New England was about 87,000, about two-thirds of whom held stock varying from \$100 to \$1,000. The same rule held good in New York, where the number of stockholders was 26,000, nearly half of whom were small holders owning stock of ten shares or less. The whole number of shareholders in the Middle States was 68,000, of whom 33,000 held from one to ten shares only each. In the southern and southwestern States there were held 11,004 shares of stock, of which 6,052 were held in sums of ten shares and less, and 2,305 in amounts between \$1,000 and \$2,000. In the western States there were held 17,170 shares, of which 7,394 were in sums of \$1,000 and less, and 3,422 in sums between \$1,000 and \$2,000. The officers and Directors of National banks are the trustees for thousands of these small shareholders, as well as for thousands of small depositors, and there is nothing more absurd than the statement that they desire to maintain gold payments at the expense of the debtor class.

#### THE PEOPLE DIRECTLY INTERESTED IN THE BUSINESS OF THE BANKS.

I estimated the number of pieces of paper discounted in the year 1879 at 6,000,000, and the amount of discounts at \$6,000,000,000, which was \$840 for each voter and \$600 for each family in the country. The deposits, including those of the savings banks, are about \$2,500,000,000, and it is believed that not less than one-fourth of the population, or one-fourth of the families and householders of the Union are directly interested in the loans and deposits of the banks. Those who are familiar with these facts find it difficult to understand the prejudice which prevails in this country alone, both in and out of Congress, against banks that are conducted upon sound principles. The capital and deposits of the banks are loaned to millions of the people, and at the present time largely at rates much lower than the rate fixed by law. The coin and bills receivable held by the banks belong to the depositors first, and the remainder to the stockholders, who, as a rule, are men of moderate means; and it is the duty of the officers of banks to insist that the borrower shall pay dollars having the same intrinsic value as those which were borrowed, in order that depositors may be paid in dollars like those which were deposited. To fail to do this would be a gross negligence of duty.

#### THE PRESENT OUTLOOK.

He said that from the present outlook it would seem probable that the legal-tender notes and the National bank-notes now outstanding would be likely to be reduced by the issue of silver certificates as a substitute, which it is hoped will represent in coin or bullion their par value in gold; and it is not improbable that not many years hence, as suggested by Mr. Bancroft, the present decision of the Supreme Court will again be reversed, it is hoped long before history shall again repeat itself in issues like the assignats of France or the Colonial or Confederate currency of this country.

#### NO PREJUDICE BY THE BANKS AGAINST SILVER AS A MATERIAL FOR MONEY.

Mr. Knox closed with a stirring appeal for international coinage, and said it would be readily seen how false was the charge that there existed any prejudice against silver as a material for money, if it were possible to substitute, in place of all existing coinages, pieces of gold and pieces of silver nine-tenths fine having no other denominational stamp but that of weight. The gold piece or eagle weighing 258 grains would pass as currently in all business

transactions at its present value of \$10 at home or abroad, without the legal-tender quality as with it, except for long-established custom.

The English sovereign, the French 20-franc piece, the German mark, the Russian rouble, the Egyptian piastre, the Indian rupee, the Japanese yen, and the American dollar, which are legal-tender only within the bounds of their own countries, circulate the world over at the same rate per ounce! If these names and other names, which are given to a multiplicity of coins, were not only stricken from the statute book, but expunged from the language with the words "legal-tender," the origin of which is unknown, the true value of gold or silver in grams or ounces would still be recognized by every merchant in the round world! If all men had the right and were accustomed without the incumbrance of fraudulent statutes to contract for grams or ounces of gold, or grams or ounces of silver, at their option, the Mints of all the world might be thrown open to the free coinage of pieces or ingots of gold and pieces or ingots of silver, whose only denomination would be their weight, and no one could say but that even-handed justice was meted out in all payments!

In the course of his address Mr. Knox paid a graceful tribute to the recent book of Professor Laughlin, of Harvard University, on bi-metallism, and also to the writings of Edward Atkinson, whom he quoted as an authority.

Mayor O'Brien, who is President of the Union Institution for Savings, on being presented, said that, after listening to the able address of Mr. Knox, it would be risking too much to say anything on the banking and financial question. He declared that there was no doubt that the banking institutions of Boston were conducted in as creditable a manner as in any city of the world. His Honor complimented the association in having such a large, intellectual and cultured body of men as members. He was sorry that there was not an artist present to photograph the gathering with Mr. Knox at its head. The Mayor closed with the hope that the gathering would continue for many years.

Mr. E. A. Stone, Secretary of the Association, who was then called upon, spoke briefly in regard to the growth and work of the organization, which has an active membership of 320 and several applications for membership on file. It has been encouraged by the various bank Presidents who have become honorary members, and the interest and sympathy of every bank and every bank officer are confidently expected.

Mr. T. Harlan Breed, one of the Vice-Presidents, was the next speaker. He congratulated the Association upon the large gathering, and spoke of the good results that should follow from the work of the Association. He said that the bank clerk occupies a vantage ground where he can stand in political positions. Not being amenable to the curse of a money-paid office, the bank clerk can stand in his integrity and fight the corruption of politics with success. He said that, although the Knights of Labor prohibited bank officers and clerks from becoming members of their order, such officers and clerks belonged naturally to an order of much higher grade, for the character of the business in which they were engaged made it necessary that they should be "Knights of Honor." In closing, he called for an expression of thanks to the invited guests, and a unanimous vote of thanks was adopted amid applause.

Other speeches were made by Professor Laughlin, who spoke of the misunderstandings of the average voter about money and finance and in regard to the banking fraternity, and said that the means of education on

such subjects should be enormously extended; and by Mr. W. H. Sargeant, of the Merchants' National Bank, who spoke words of congratulation. The speeches were interspersed with musical selections rendered by Messrs. Gilbert, King, Asstrand, Burrill, Bell, Andrew, Pray, Remick, Warren and Crocker.

A special feature of the musical part of the entertainment was a humorous song by Mr. Bell, which was a parody upon one of the songs of Koko in the "Mikado" and is printed on another page of the JOURNAL. It was written by a member of the Association, and was most enthusiastically received.

The Entertainment Committee were S. L. Treadwell, of the Washington National Bank; Alfred Ewer, Assistant National Bank Examiner; E. A. Church, Boylston National Bank; T. Frank Pratt, Old Boston National Bank, and J. D. Ferguson, Suffolk National Bank.

---

**LONDON STOCK BROKERS.**—The sworn brokers of the city of London are only admitted to the Stock Exchange after the most careful inquiry as to their antecedents. According to the rules candidates for election must be recommended by three members of not less than four years' standing, each one of whom must have personal knowledge of the applicant and of his circumstances, and who engage to pay £500 each to his creditors in case he becomes a defaulter within four years from the date of his admission. The entrance fee is £100 and the annual subscription £22 1s. If, however, the candidate has been a clerk in the Stock Exchange for four years previous to his application, in which case his character is well known, he requires two sureties only for £300, and his entrance fee is reduced to £63, the annual subscription being the same. The members are divided into brokers and jobbers or dealers, the former buying and selling for the public, the latter speculating on their own account. The brokers have also to take out a license from the Corporation of London under very heavy penalties; but this does not give them a right of admission to the Exchange. Defaulting brokers are most severely dealt with, being expelled the Stock Exchange, and their expulsion is advertised in the general newspapers and the banking publications.

---

**GUARANTEEING BANK DEPOSITS.**—The readers of the JOURNAL are already familiar with the details of a plan for guaranteeing deposits in National banks, which has recently been referred to herein. Three bills to accomplish this object are now pending before the House Committee on Banking and Currency. The bills are similar to each other except in respect to the method of obtaining the money for the guarantee fund. That introduced by Mr. Price, of Wisconsin, proposes to divert the tax on circulation to form the guarantee fund as previously explained. The bill of Mr. Sawyer, of New York, repeals the tax on circulation immediately and imposes a tax of one-tenth of one per cent. on the average amount of deposits. Mr. Hutton, of Missouri, proposes a bill similar to that of Mr. Sawyer, but making the tax on deposits one-twentieth of one per cent. Any practical measure which would make the deposits in National banks as secure as the circulating notes would add enormously to the efficiency of the system, and would be a great boon to the mercantile community generally. From the present outlook in Congress, however, nothing in this direction will be accomplished during the present session.

Methods and Machinery of  
\*PRACTICAL BANKING.

CONSISTING OF BRIEF DESCRIPTIONS AND SUGGESTIONS RELATIVE TO THE  
METHODS OF CONDUCTING THE BANKING BUSINESS; WITH APPROVED  
MODELS OF BLANK BOOKS AND FORMS FOR THE USE OF  
BANKS OF DISCOUNT, SAVINGS BANKS, ETC.

[Prepared expressly for the JOURNAL by the Cashier of a long-established bank, who has had over twenty years' experience in practical banking, and who has always sought for better and safer methods.]

BANKING TELEGRAPHY.

In practical every-day banking a combination of the mail and the wire is in frequent request, and often works most admirably. The experienced banker is quick to discern where these two agencies may be brought together to work towards a desired end, and can, by the exercise of judgment and skill, often do better service with this double team than with either of them taken separately. Instances illustrating this point must readily come to the mind of any banker who reads these notes.

I find for instance that I, in Boston, have in New York a balance of \$100,000, and it is exceedingly desirable that it should be brought home to me at the earliest possible moment. I wire to New York, at 2 o'clock to-day, to remit, and when I reach my desk at 10 o'clock to-morrow morning I find the mail has brought me the \$100,000 in Boston checks or the express the same amount in gold or currency.

I have a collection note due in New York to-morrow about whose fate I am anxious. I write to New York to-day to wire me to-morrow advice of its payment or non-payment, and to-morrow I receive the due telegram.

And so I might go on giving specimens of the endless variety of ways in which banks are wiring for answers by mail and mailing for answers by wire.

But the most striking advantages of telegraphy, as applied to banking, are shown in the business of making direct transfers of money by telegraph, a method which is daily upon the increase, and a description of which must necessarily occupy an important place in any treatise upon practical banking. The methods and machinery of this business are easily described, for, after all, there is nothing complicated nor obscure in transactions of this character, except we may apply these terms to that mysterious agency which no one understands and which no one attempts to explain—the electricity which really does the work.

*Money by Telegraph.*—Money by telegraph is certainly a striking heading. What is the precise method of making remittances in this way?—this is the interesting question we have now in hand. How can I answer it more easily than by giving an exact account of the way I made the last payments by wire, that in their features happen to illustrate quite fully the most common crooks and turns of the money-by-telegraph business? At any rate the reader who understands all that I here describe of a couple of wire transactions in money will readily comprehend the leading characteristics and methods of this branch of modern banking, and can cipher out the rest of the philosophy and practice of this rapid transit traffic at his leisure.

A bank in San Francisco keeps an account with me. In opening this account it informed me that it should do a telegraphic money transfer

\*Practical Banking Series—Part XXII.

These papers will be continued through the 1896 volume of the JOURNAL. Copyright, 1894. All rights reserved.

business with me, and sent a cipher, or code, book to be used by us in doing this wire business. This cipher book simply contains an index list of words and phrases which are put to what may be termed arbitrary use—that is, the very innocent looking words and sentences thus listed stand for amounts and expressions entirely unlike their individual selves. This cipher code book contains a translation of its language set off against each word and phrase. The California bank retains a copy of the book. Both of us keep the code book in very careful custody—under lock and key and at the command only of the officers specially deputed to use it.

*The Code Book and Wires at Work.*—The man lived in San Francisco. His mother was a poor widow in Boston. She was ill—very ill—and she succeeded in wiring her son to that effect, and asking for money immediately. The son paid \$200 into the hands of my San Francisco bank and obtained from that bank what may be termed a \$200 telegraphic check on me in Boston payable to his mother. The San Francisco bank wired to me the check, and here it is, the cipher words and proper names being changed in this copy, because it would not be safe to print the original ones. But the words used in the genuine despatch were fully as incoherent and apparently meaningless :

THE WESTERN UNION TELEGRAPH COMPANY.	
No. 1022 3.	15 May 1885.
Dated San Francisco, Cal.	
To Fourth Nat Bank,	
Boston, Mass.	
Quiet clothe Mrs. Mary	
Jones friendly oak pine loose.	
J. S. Robinson. Cash?	

Here is a translation of the despatch, made by consultation with the cipher book :

" Notify and pay Mrs. Mary Jones, 96 Oak street, two hundred dollars."

*Paying a Telegraphic Check.*—The Messenger of the bank was sent to the street and number named in the telegram in search of Mrs. Mary Jones, the payee. Extreme care is necessary in doing this wire transfer business ; and so, in the case in question, the Messenger, to make doubly sure he had found the right party, and that the telegram under which he was acting was genuine and correct in all points, had some little talk with the Mrs. Jones he found at the given number for the purpose of eliciting from her any facts which appeared to corroborate the correctness of the transaction to which she was to be a party. From the lady he learned that she had a son in San Francisco from whom she was expecting an immediate remittance. It only remained for Mrs. Jones to identify herself—to satisfy the bank that her name was Mary Jones. This having been done she was paid the \$200 and her receipt taken. The San Francisco bank was at once advised by mail of the payment. In due time confirmation by mail of the wire check must be received from the San Francisco bank ; under a proper system a bank does not consider itself done with the payment until such a confirmation has come. The transaction

I have described is a fair specimen of the class of wire payments to which it belongs.

Here is a hasty description of a wire money transfer of another type, which is also a good illustrative case :

Brown & Co., of Boston, ask me, a Boston bank, to pay Jones & Co., of New York, \$100,000 at once by wire. I have no New York cipher. I send this telegram in plain English to my correspondent bank in New York :

— *National Bank, New York:*

*Pay Jones & Co., 10 Wall street, New York, One Hundred Thousand Dollars, and charge my account.* \* \* \* \* *Cdahier.*

My New York bank dare not take any risk with such a telegram as this. The reasons for their hesitation must be evident to any banker. They are found in the fact that under its present system telegraphy is a very loose business. A person can enter any large telegraph office and send in any name any decent sort of a despatch to anybody. For instance, a boy can go into the office of the Western Union in Boston and send in my name a despatch to any of my correspondents anywhere, asking the payment to anybody of any sum of money, with a request that the same be charged to my account. No remedy for this state of things has so far been suggested. The difficulty can only be met by setting up some system of identifying senders of messages, which at present seems impracticable.

But, recurring to my New York telegram, requesting in plain English the \$100,000 payment in New York—returning to it for illustration of the points in hand—the question at once comes up of how shall its correctness—its genuineness—be proved.

To prove a telegram, a despatch can be sent to me, the apparent author of the first despatch, over another line, asking if I have sent such a message. This precaution is often resorted to. It is a measure of prudence, but not one of absolute security, since collusion of rogues may defeat its purpose.

Another solution of the case before us may be reached in this way :

The New York bank may make the wire-requested payment by taking collateral for the telegram—that is, it may pay Jones & Co. the \$100,000 on their depositing that amount of good collateral, the same to be held until they receive a mail confirmation of the despatch.

But the difficulties of the case I have here presented show the great advantages of having in use for such a transaction a good cipher code.

*An Impromptu Cipher.*—Bankers and others sometimes call to their aid in emergencies such as I have just described an impromptu cipher. There are many varieties of these which can be used.

Any bank which is in regular daily remitting correspondence with any other bank at some point more or less distant can extemporize a cipher which shall serve as proof, or identification, of its important business telegrams. I have used this method many times quite successfully. Let it send its money-transfer, or other telegram, involving in their recognition and action a money responsibility, in ordinary plain words, adding, as a key to their real origin, this sort of an expression :

“Smallest check sent you in ours of yesterday, Philadelphia, \$5.75.”

The bank receiving such a telegram turns at once, if it understands this plan, to “ours of yesterday,” and if it there finds “Philadelphia, \$5.75,” it concludes, of course, that the despatch is all right.

I have been amused by instances where I have tried a cipher of this description on banks which had never heard of the method. Such banks have wired back to me that they have received and obeyed my despatch, but did not understand what I meant by my reference to the remittance of yesterday. But the reference, though not directly understood, had evidently served its identifying and proving purpose.

*Accuracy in Telegraphing.*—Accuracy to the very letter in telegraphing is something that cannot be assured in practical telegraphy. Both in domestic

and under-the-ocean-wiring occasional lapses in letters and parts of words are inevitable. A long practical working experience in this business has convinced me of this fact, and the most experienced managers of wires have also testified to the correctness of this statement. In acting upon and working under telegrams relative to payments of money bankers are expected to use good judgment and common sense in translating—making out—the despatches they receive, and often find it wise to overlook slight features of incoherence where the meaning is evidently clear and the variation in names only natural and unimportant. Cable wire work is apt to be more inaccurate than that on short overland lines. In this matter of the transfer of money, and other responsible operations by cable, there is an evident and pressing demand for an improvement which every day becomes more imperative. This is the demand for an international—world-wide—uniformity of currency and language. The world of trade and commerce which is daily becoming more and more closely knit together by the agency of steam, electricity, etc., must in time become even more homogeneous by the adoption of a common language.

The use of words and coined words in telegraphy has encroached upon the profits of the wire lines to such an extent that some of them have had in serious consideration plans for prohibiting their patrons from using these short-hand methods of telegraphic letter-writing. And in one instance, at least, a line having a monopoly of business in its region has absolutely refused to receive for transmission all messages not made up in plain words—straight English.

In cable work there has always been the most extreme economy of words in making up codes for financial and general market reports. I have myself observed many instances where a single word has been made to do cable duty for a very minute report of condition of a foreign market for money, stocks or merchandise.

Signatures to cablegrams are charged a word tariff. To avoid even a signature expense knowing patrons of the cable send their correspondents unsigned messages. A signature in such a case can often be omitted just as well as not, for the character of the telegram reveals to the correspondent its authorship.

All persons having anything to do with telegrams should remember that promptness in handling them—particularly in answering them—is of the first importance. The very word despatch, which has become synonymous with telegram, indicates the imperativeness which characterizes messages of this character.

In banking, these letters by wire have a peculiarly strong claim for celerity of movement on the part of all parties. Any banker of experience can recall instances where delays in attending to messages by wire have sent notes to protest that would otherwise have been saved from dishonor, allowed insurance policies to lapse, perishable consignments of merchandise to be ruined, and financial embarrassments and distress to be precipitated.

#### NATIONAL BANK NOTES.

They are promissory notes, payable on demand. They are in the law issued by a private corporation, for a National bank, though seemingly a public institution in many of its aspects, is nothing more nor less than a private corporation. National bank notes are not lawful money. They are not legal-tender between man and man, yet they are between individuals and National banks, for National banks are obliged to receive them for debts due. All National banks are obliged to receive them from all other National banks in settlement of debts. Their denominations are \$5, \$10, \$20, \$50, \$100, \$500 and \$1,000. The issue of National bank bills of less than \$5 was stopped when specie (or silver) payment was set up.

The National bank bill is redeemable at a central bureau in Washington—and over the counter of the issuing bank—in lawful money (Treasury notes, gold and Bland dollars); their market value is therefore the same as the legal-tender Treasury note. They are receivable at par in all parts of the United States for taxes, excise, public lands, and all other debts due to the United

States except duties on imports, and also for all salaries and other debts and demands owing by the United States to individuals, corporations and associations within the United States, except interest on the public debt and redemption of the National currency.

The arrangements which the National banks in Clearing-House cities make among themselves by which, under a Clearing-House plan for which no special provisions are made in the Revised Statutes of the United States, they bind themselves to make their mutual settlements in lawful money has already been fully explained in these papers. In places where there are no Clearing-House arrangements, and no mutual plans, like a wheel within a wheel, for governing the banks in their dealings among themselves, they pay and receive from each other National bank bills (as the law directs) in the settlement of all their transactions.

The legal obligation of a National bank to meet, if demanded, all claims upon it in lawful money places it at times in singular relations to its dealers. A depositor who has received credit at the desk of the Receiving-Teller of a National bank for his deposit of National bank bills and checks can at once legally demand at the desk of the Paying-Teller that his check drawn against the deposit named shall be paid in gold, silver or Treasury notes, for every individual check drawer can require that his good check upon a National bank shall be cashed in this manner. But when one National bank is a check drawer upon another National bank it must accept National bank bills if such are proffered in payment.

The outstanding circulation of the National banks of the United States is \$313,542,584 according to the official statement of May 1, 1886.

All the different series of the National bank notes have been counterfeited from time to time.

National bank notes are divided into three classes, as follows: 1. The old series bearing the small star-pointed seal, and signed by F. E. Spinner as Treasurer. 2. The series of 1875, bearing the scalloped seal, and signed by John C. New, A. U. Wyman or James Gilfillan as Treasurer. 3. The series of 1882, bearing the large seal (chocolate color), and signed by James Gilfillan or A. U. Wyman as Treasurer.

Photography has not been successfully used either in counterfeiting National bank notes or United States Treasury notes, as the colors on these notes cannot be reproduced by photography.

*Numbers of Genuine National Bank Notes that Have Been Counterfeited.*—For reference, the Treasury numbers have been arranged in numerical order, so that one can see if a certain number should appear on a note. Any banker can get the list. In order to ascertain if a note is genuine, see if the Treasury number on the note comes between a series of numbers given in the list as issued to that bank; if not, the note is a counterfeit. Should the number of the note come between the series of Treasury numbers, deduct the first number of the series from the number on the note, add the difference to the first bank number given in the same series, and if the number obtained is the same as the bank number on the note, it may be taken as genuine. For instance: A \$5-note on the First National Bank, of Boston, Mass., No. 62,540, is presented. It comes between the series of Treasury numbers 62,228–62,722. To decide if it is genuine, from 62,540 deduct the first number of the series, 62,228; add the difference (317) to the first bank number in the same series (7,101), and it makes 7,418. Should this be the bank number on the note it is almost certain the note is genuine. Again, for example, a \$10-note on the First National Bank, of Philadelphia, Pa., is presented, No. 61,188. By observing the list of numbers of this bank it will be seen that no note with such a number has been issued to it; therefore condemn the note at once as a counterfeit. Should the Treasury number happen to come between a series of genuine numbers, the chances are almost infinite that the bank numbers on the note would not come between the bank numbers given in the same series. The large number on each end of the note is the charter number. All National bank notes issued prior to the series of 1875 bear the signature of F. E. Spinner as Treasurer.

All National bank notes issued since 1875 bear the signature of John C. New, James Gilfillan or A. U. Wyman as Treasurer.

*Stolen National Bank Notes.*—The following notes were stolen when unsigned and put in circulation, and are not redeemable by the banks or the Treasury Department. National bank notes are numbered as follows, Treasury numbers on upper right-hand corner and bank numbers on lower left-hand corner:

		\$5's.	
OSAGE, IOWA.			Osage National Bank.
S. B. COLBY, Register.		F. E. SPINNER, Treasurer.	
Bank Nos. 1,751 to 2,200.		Treasury Nos. 560,959 to 561,408.	
PONTIAC, ILLS.			The National Bank of
JOHN ALLISON, Register.		A. U. WYMAN, Treasurer.	
Bank Nos. 741 to 765.		Treasury Nos. 252,111 to 252,135.	
		\$10's and \$20's.	
ALBANY, N. Y.			Merchants' National Bank.
JOHN ALLISON, Register.		JOHN C. NEW, Treasurer.	
Bank Nos. 759 to 766.		Treasury Nos. 45,195 to 45,202.	
BARRE, VT.			The National Bank of
JOHN ALLISON, Register.		F. E. SPINNER, Treasurer.	
Bank Nos. 911 to 936.		Treasury Nos. 982,805 to 982,830.	
BOSTON, MASS.			National Hide & Leather Bank.
L. E. CHITTENDEN, Register.		F. E. SPINNER, Treasurer.	
Bank Nos. 11,919 to 11,972.		Treasury Nos. 22,900 to 22,953.	
NEW YORK, N. Y.			Third National Bank.
L. E. CHITTENDEN, Register.		F. E. SPINNER, Treasurer.	
Bank Nos. 9,414 to 9,428.		Treasury Nos. 644,416 to 644,430.	
		\$50's and \$100's.	
JERSEY CITY, N. J.			First National Bank.
L. E. CHITTENDEN, Register.		F. E. SPINNER, Treasurer.	
Bank Nos. 671 to 750.		Treasury Nos. 19,609 to 19,688.	
LYNN, MASS.			National City Bank.
S. B. COLBY, Register.		F. E. SPINNER, Treasurer.	
Bank Nos. 121 to 150.		Treasury No. 66,796 to 66,825.	

I have given above a list of genuine unsigned National bank notes that have been stolen. These are all supposed to be in circulation, with manufactured signatures, and in the hands of innocent holders. Congress should make an appropriation for their redemption if the parties who allowed them to be stolen in an incomplete state are not to be held responsible for them.

*Silver Certificates.*—These are about as familiar an object in the cash drawers of the Tellers of our National banks as the common Treasury notes or National bank bills. They count in the reserve of a National bank, and must be received by all National banks for debts due. No National bank can be a member of any Clearing-House Association in which silver certificates are not received in the settlement of Clearing-House balances. They cannot be taken by National banks as security for loans, and it is unlawful to withhold them from circulation—to lock them up. These silver vouchers are issued under an Act of Congress of February 28, 1878, and all read payable on demand to bearer in silver dollars at the office of the Treasurer of the United States in Washington, this silver dollar being the standard dollar, of unlimited legal-tender capacity, weighing 412.5 grains, and of which there are now about 180,000,000 in circulation. The silver certificate is not itself a legal-tender, but it is so near being so, from the fact that it can be taken to the nearest Sub-Treasury and exchanged on demand for dollars that are legal-tender, that it practically does legal-tender work in our currency. These certificates are of the denomination of \$10, \$20, \$50, \$100, \$500 and \$1,000. They have been very successfully counterfeited by the photographic pen and ink process, and unsuccessfully by prints from a

poor wood cut. The silver certificates are always signed in *fac-simile* by the Register of the Treasury and the United States Treasurer.

#### BANK-NOTES OF ENGLAND.

The Bank of England has such a well-nigh complete monopoly of the business of circulating paper money in the United Kingdom that many people hardly seem aware of the fact that paper issues are made there by any other banks. Even many Englishmen themselves appear to be scarcely aware that England has any other bank-note than the Bank of England note, for I have seen, in a standard English encyclopedia, this definition of a bank note: "A promissory note issued by the Bank of England, and payable on demand." I have asked a London bank clerk (one of 14 years' service) if there were any bank-notes issued in England or Wales other than the Bank of England notes, only to receive a reply in the negative.

But here is how this matter really stands. Every one, of course, knows that the Scotch and Irish banks have a paper issue of their own, but all do not seem to understand that there are both joint-stock banks and private banks in considerable numbers, both in England and Wales, that issue bank notes.

By the Act of 1844 no bank in any part of the United Kingdom which did not at that time issue notes was allowed thereafter to exercise that privilege. By an Act passed that same year in reference to joint-stock banks, so many restrictions and limitations were introduced as to practically forbid the starting of any new banks. But within a comparatively recent period the Limited Liability Act has given more latitude in the matter of setting up banks.

Of the joint-stock banks of England and Wales, of which there are 120, 56 in the provinces are entitled to issue notes to the extent of £2,738,640; but their actual issue is considerably less. There are 255 private banks in England and Wales, of which 57 are in London. These 117 private provincial banks have an authorized issue of £3,874,621.

To give an exact idea of the way the paper circulation business stands to-day in the United Kingdom I here furnish the last circulation returns of the joint-stock and private banks of the country:

	Sept. 19.	Aug. 22.	Increase.	Decrease.
Bank of England.....	£24,667,598	£25,325,000	.....	£657,405
Private banks.....	1,305,764	1,341,087	.....	35,323
Joint-stock banks.....	1,433,314	1,468,420	.....	35,106
Total in England.....	£27,406,673	£28,134,507	.....	£727,834
Scotland.....	5,638,129	5,568,068	£70,061	.....
Ireland.....	5,529,296	5,675,766	.....	146,470
United Kingdom.....	£38,574,098	£39,378,341	£70,061	£874,304

The English private bankers are below their fixed issue..... £2,107,036

The English joint-stock banks are below their fixed issue..... 921,475

Total below fixed issue in England..... £3,028,511

The Scotch banks are above their fixed issues..... 2,961,779

The Irish banks are below their fixed issue..... 825,198

#### BANK SECRETS.

In these days of regularly published returns of condition and periodical examinations by Commissioners banks have little opportunity for keeping their affairs and their situation hid from public observation. In the old days of banking in this country there was different management from this. There was apt to be thrown an air of what may be termed dignified reticence, if not actual mystery, about the banks and banking of those periods, which was quite in harmony with the fashions in banking in the old country from which we had brought most of the models for our methods and machinery. There are bankers now living who can remember when customers of the leading old

banks of New England always had to take off their hats in coming into the august presence of their bank Managers, and when these institutions were hedged about by a reserve and formal dignity which would astonish a modern bank depositor or paper broker. At the period referred to it was the custom to administer to both officers and Directors oaths of secrecy and faithfulness which were modeled on those in use in London banks. I found the banks of London still using the very forms of oaths of office which were once in vogue here, but which have, with us, quite gone out of fashion. Here are copies of two of these bank oaths which are in use to-day in London banks, the first being the form for Directors and Trustees:

**DECLARATION OF SECRECY FOR DIRECTORS AND TRUSTEES.**—We, the undersigned persons, being respectively the Directors and Honorary Directors and Trustees of the public Joint-Stock Company, called ———, do severally declare that we will respectively, faithfully and impartially discharge the several duties devolving on us as such Directors as aforesaid, according to the deed of settlement of the Company bearing date the      day of      , and any laws and regulations that may be made in pursuance thereof. And we do hereby pledge ourselves, and as inviolably as if we had taken our oaths thereto, that we will observe the strictest secrecy on the subject of all transactions of every description of the Company with their customers for the time being, or with any other bodies or persons whatsoever, and on the subject of the accounts of all bodies and individuals from time to time having accounts with the said Company. Dated this      day of      , 18      ."

The second is the form for the officers:

**"DECLARATION OF SECRECY BY THE MANAGERS AND CLERKS.**—We, the undersigned persons, being respectively Managers, Accountants, Cashiers, Tellers and Clerks of the ——— Banking Company, do severally declare that we will respectively, faithfully, honestly and impartially discharge the several duties devolving on us as such Managers, Accountants, Cashiers, Tellers and Clerks as aforesaid, according to the directions of the Directors of the Company and any laws and regulations that may be made by them. And we do hereby severally pledge ourselves, and as inviolably as if we had taken our oaths thereto, that we will observe the strictest secrecy on the subject of all transactions of every description of the Company with their customers for the time being, or with any other bodies or persons whatsoever, and on the subject of the state of the accounts of all bodies and individuals from time to time having accounts with the said Company. Dated this      day of      , 18      ."

#### UNITED STATES TREASURY NOTES.

These are known to bankers and to business men generally under several popular names, none of which fit them well. There is no particular propriety in labeling them legal-tenders, par excellence, since they are so no more than any other class of lawful United States money. Neither do they seem particularly entitled to the name of greenbacks, their war-time popular nick-name, since their backs are not much greener in their hue than the National bank bills. But there is one name which bankers are fond of bestowing upon them, which is decidedly incorrect, and that is that of United States demand notes. It is a peculiar fact, and one that few holders of these notes have observed, that, unlike National bank or old State bank issues—in fact unlike all other paper money afloat in this country or abroad—they are actually not even payable on demand. These promises to pay, issued by a Government which was at the time of their issue in a great strait, simply read "United States will pay to bearer;" and this omission to say more—to mention the time when they would be paid—was without doubt more than accident. Other paper money of all lands reads "Will pay bearer on demand." There are about \$346,000,000 in these notes now in circulation under legal-tender enactments which have never been repealed. Their denominations are \$1, \$2, \$5, \$10, \$20, \$50, \$100, \$500, \$1,000.

The old Treasury notes—issues prior to 1869—were made of plain bank-note paper. The issues of a later date have been printed on fibre paper. Of the old issues counterfeits were more numerous than those of the new, though some dangerous counterfeits of the latter have been made. By exercising caution, however, in handling, bank Tellers need never be deceived by

taking counterfeit bills. The Secret Service Bureau of the Treasury Department is now managed with such skill that advice of any new attempts to float "crooked" money is furnished to the bankers before the counterfeiters' plans can be put in operation. This advice is sent out to the banks through the several banking journals as promptly as received from the Chief of the Secret Service Bureau. As a rule the so-called "Counterfeit Detectors" are useless and misleading. If bank Tellers will make a careful study of genuine bills and use the information above referred to they will never be deceived.

All United States notes are printed in sheets of four notes of one denomination on each sheet. Each note is lettered in their respective order in the upper and lower corners diagonally opposite, *A, B, C, D*. The Government has the following system of numbering its notes: All numbers, on being divided by 4, and leaving 1 for a remainder, have the check letter *A*, 2 remainder *B*, 3 remainder *C*; even numbers, or with no remainder, are lettered *D*. Any United States note upon which the number cannot be divided by 4 without showing the above result is a counterfeit.

Treasury notes are now redeemed by the United States Treasurer and his Sub-Treasurers in specie, but not necessarily in gold.

The silver option, which the Government holds, is what leads London to quote our Treasury notes at 85 cents, and bankers and others in New York and Boston to hoard gold whenever a panic comes or is threatened.

Our Treasury notes are lawful money in every capacity in the United States; yet in international exchanges—in the world's commerce—they are short of it by the world's difference in quotations of gold and silver. And so they will remain till they are made redeemable in gold or the world of exchange adopts a bi-metallic standard.

#### COUNTERFEIT UNITED STATES TREASURY NOTES.

#### PROBATE AND BANK SHARE TRANSFERS.

I had been duly shown the probate certificate, and the original certificate of stock was surrendered. Knowing well the parties to the proposed transfer, I had no hesitation in transferring the stock, which stood in the name of a dead shareholder, to the name given me by the executor of the will of the deceased owner. Everything in the case seemed clear and in regular red-tape

form. Six months after I was notified by the executor who had made the transfer in question that everything had gone wrong in the matter—that a will of later date than the one under which he had innocently moved as executor had been discovered, probated by the Court, and was the will now duly in force. The same executor was named in both wills; yet, as this executor wrote, the transfer I had made was null and void, having been made without due authority. But in this case it fortunately happened that the new will was so nearly like the one which had been incorrectly probated that the executor of the new testament found it perfectly easy to guarantee and confirm the first transfer. Had there been radical differences in the two wills the situation might have been embarrassing.

Points of great interest and importance are the outcome of the matter we have in hand. Common and statute law require that wills shall be presented for probate within a certain named reasonable time, and duly advertised notice is given to all concerned to show reasons, if any exist, why the wills that are offered for probate shall not be allowed a probate. When these forms are gone through with, probate allowed, and certificates of same granted, the banks readily proceed to act under such certificates. The allowance of probate to any will that may afterwards turn up is a matter that is left discretionary with the Judge of Probate. It is not to be supposed that the Probate Court grant papers on a second will, except where the situation that might result from such a reopening would be unembarrassing; for it would seem that the neglect to present the right—the last—will at proper time and place should embarrass and entail loss upon the party guilty of neglect, and not upon the innocent.

It may be safely stated that a bank is justified in making transfers under probate papers that are of due form, though it may transpire, as in the case I have named, that the papers may be annulled and new ones issued. There is, of course, no recourse under such circumstances to the Probate Court. It cannot be sued for damages—or rather, if sued, nothing can be recovered from it.

That Probate Courts may make errors is proved by other cases as interesting as the one I have just described. Letters of administration were in one case that has come under my observation granted upon the estate of a person supposed to be dead. Under these letters a deposit in a savings bank was drawn out and paid to heirs. The party then administered upon afterwards “turned up” and demanded his money from the Court. A suit was the result. Final verdict against the bank. It had to pay the deposit to the living owner, having recourse only to the original recipients of the property, who happened to be irresponsible.

#### LOCKS.

In many banks there are practices prevailing in the matter of locks which are of a rather loose and careless character. I have been cognizant of instances where very large banking institutions, with combination locks upon their most important vaults, have allowed one officer (the Cashier) to carry in his head all the combinations, by this arrangement giving him the opportunity to go to the bank at any time of the day or night and open everything—to pass through the inner and outer doors of all the strong rooms. One great point of danger in such a lock arrangement is found in the fact that burglars can capture such officers and conduct them alone to bank vaults, which they have full power to open without the necessity of summoning others.

The large diamond and jewelry dealers of London can teach such banks a profitable lesson in the locking-up business. I have been observant of instances in London where dealers of the class I have named have *seven-man vaults*. That is, they had strong rooms which it took seven men to open. One of the men had the master-key of which the other six had a part. The doors could neither be locked or unlocked without the presence of the seven persons. Every night a pass-word was given out, and the wards of the lock were arranged according to the pass-word.

By the general introduction into bank use here of combination locks a danger has been allowed to creep in which did not often exist under the old-

time fashion of the key locks. Then, well-managed banks were sure to arrange that the keys of the inner and outer doors should be given into the over-night custody of different officers.

#### UNJUST COIN RULES.

The United States Treasury has set up such. Briefly stated they are these: If a standard gold coin, in currency sound, falls short one half of one per cent. of its original standard weight, it is marked light weight the moment it reaches the United States Treasurer or any of his Sub-Treasurers. Having thus condemned it and by the stamp robbed it of its power to travel more as money the Treasury refuses to redeem it at all and thus turns it into simple merchantable gold. In this shape the holder finds that he must lose about three per cent. on it, that being the discount he must allow to the brokers who buy it to sell again to be used in the arts.

Silver coins which have been clipped and bored are placed at a disadvantage by the United States Treasury in the same way. It will not pay for them their proportional value viewed as money coins. It condemns and drives them to the melting pot.

In view of these facts, bankers, business men and others have petitioned the Secretary of the Treasury as follows:

That your petitioners, representing the banking and financial interests in this locality, desire to call your attention to the inadequate means provided for exchanging mutilated gold and silver, and would respectfully suggest that, in view of the large amount of profit accruing to the Government by the coinage of silver, liberal regulations be made for the redemption by the Treasury of all gold and silver coins reduced in weight below the limit allowed by law.

If you would instruct the various Assistant-Treasurers to receive all light weight gold coin and all mutilated silver coin, deducting from the face value of the gold coin presented five cents for every grain or fraction of a grain that was missing, and from silver five cents for every pennyweight missing, and authorize them to receive these light weight and mutilated coins in whatever sums offered, in a few months this class of coin would entirely disappear.

It is not fair to compel the public to lose the difference between the actual and nominal value of silver, and, as nearly \$4,000,000 was carried to the credit of the silver profit fund during the last fiscal year, we think the Treasury can afford to be liberal in providing a fair means for exchanging and redeeming these coins.

#### TESTING COINS.

I have already given a gold and silver test which I found in use in London banks. Here is the United States Mint test for determining whether gold and silver coin is good or bad. Use the liquids as near the edge of suspected coin as possible, that being the part most worn. A drop of the preparation will have no effect on genuine coin, while it can be plainly seen on the counterfeit. Heavily plated coin should be scraped slightly before using:

**TEST FOR GOLD.**—Strong Nitric Acid (36°), 30 parts. Muriatic Acid, 1 part. Water, 20 parts.

**TEST FOR SILVER.**—24 grains Nitrate of Silver. 30 drops Nitric Acid. 1 ounce Water.

#### THE ABRASION OF GOLD.

In cataloguing the items of cost in moving gold between New York and London, I made mention of the inevitable loss from abrasion. It has always been exceedingly difficult to get at the accurate percentage of this abrasion in cases of foreign shipments. The item I here give, now for the first time printed, has therefore a curious interest for investigators of the point in question.

A few years since I was observant of a case where Messrs. ——— shipped from New York to London \$1,000,000 of gold in double-eagles. It was packed in boxes in the style I have described as being common with the New York and Boston bankers in the foreign shipments of gold. By one of those sudden swings in the sterling exchange current that are not uncommon,

THE UNIVERSITY OF CHICAGO LIBRARY

it came about that the most profitable exchange use of that \$1,000,000 in gold could be made by ordering it returned to New York at once in unbroken bulk—in its original unopened boxes. The steamer that bore it to London was met by a cablegram that had passed it on its way, ordering the immediate reshipment of the gold to New York—which was promptly made. The net loss to the New York house from the abrasion consequent upon the two voyages was 1-5th of 1 per cent.

A great New York shipper of gold, who has had these figures which I have just given under his consideration, tells me that his experience (a long one) in shipping gold to and from London has taught him to expect an ocean voyage abrasion loss of about \$186 on every million. But there is a difference of opinion among our gold shippers regarding this matter.

#### \* PRACTICAL BANKING ADDENDA—Forms.

The use of printed forms for various purposes tends greatly to economize both time and labor. This, however, is not their only recommendation. When one writes without carefully considering the force of every word and expression there is always danger of a misunderstanding at the other end of the line—a misunderstanding which may give rise, at some future time, to a long and tedious correspondence or even to a vexatious lawsuit. It has been well remarked that when a person writes for the information of others he should first of all understand his subject in all its bearings, and then take great pains to write exactly what he means, and in such clear forms of expression that even the most careless or obtuse cannot think he means anything else. A printed form, carefully worded to express the intended meaning and nothing more, fulfills this rule. Printer's ink costs less than a clerk's time.

In the last number of the JOURNAL the author of the article on "Practical Banking" gives an excellent form of a coupon envelope. We use a similar one in sending coupons forward for collection. It is small enough to go inside a No. 5 envelope. We have on the lower line the words: "When paid please return this envelope marked *paid*." Coupons of different kinds or belonging to different customers are put in separate envelopes. Coupons deposited for collection are put in envelopes printed in blue ink; those put in as cash items in envelopes printed in red ink. But, in addition to these, we have smaller envelopes, which are distributed in packages to all our "coupon customers," as they are called in bank parlance. Ours are white, but I think light yellow, what printers call canary, would be better. This is the form:

COUPONS deposited in the ..... National Bank, New York, by .....  Payable at .....									
<div style="border-bottom: 1px solid black; margin-top: 5px;"></div>	<div style="border-bottom: 1px solid black; margin-top: 5px;"></div>	<div style="border-bottom: 1px solid black; margin-top: 5px;"></div>	<div style="border-bottom: 1px solid black; margin-top: 5px;"></div>	<div style="border-bottom: 1px solid black; margin-top: 5px;"></div>	<div style="border-bottom: 1px solid black; margin-top: 5px;"></div>	<div style="border-bottom: 1px solid black; margin-top: 5px;"></div>	<div style="border-bottom: 1px solid black; margin-top: 5px;"></div>	<div style="border-bottom: 1px solid black; margin-top: 5px;"></div>	<div style="border-bottom: 1px solid black; margin-top: 5px;"></div>
PLEASE PUT DIFFERENT KIND OF COUPONS IN SEPARATE ENVELOPE.									

It is intended for the customers to fill in the blank after "payable at" with

\* The JOURNAL's readers are invited to contribute additions to the Practical Banking series—i. e. labor-saving forms and other improvements in banking practice which have not already been presented in these articles.

the name of the place where the coupons are payable. This is a great convenience to the bank.

These envelopes are much less liable to be lost than the ordinary brown envelopes in common use without any printing on them.

Distributing the envelopes to customers secures a uniformity which is very desirable.

In sending coupons to corresponding banks we write a letter and enclose it with the coupons in the usual way. In addition to this we send by ordinary mail in a separate envelope a postal card with our own address printed on it and the following on the message side:

**RESERVE NATIONAL BANK, New York.**

..... Bank,

Boston, Mass.

*Gentlemen:—We send you this day by [express or registered mail] bonds and coupons as stated below. Please acknowledge receipt of this card and return it at your earliest convenience.*

*e. g. Sundry coupons as advised by letter, \$1,245.00.*

This card is designed to simply secure a prompt acknowledgment of the receipt of the coupon, advice of collection and payment to follow later. It was adopted on account of some delay in acknowledgments on the part of our correspondents.

Postal cards and stamped envelopes addressed to the bank should be kept on hand to be enclosed with letters requiring an answer to persons not regular correspondents of the bank. It is not only business-like but avoids mistakes in the address.

For his daily cash settlement our Paying-Teller keeps a small neatly bound blank-book printed and ruled somewhat as follows:

**Cash Settlement, ....., 188**

<i>Vault Book</i> .....			
<i>Gold</i> .....			
<i>Silver Dollars</i> .....			
<i>Notes</i> .....			
<i>Fractional Coin</i> .....			
<i>Clearing-House List</i> .....			
<i>Sundries</i> .....			
<i>Total</i> .....			

With the exception of the item styled "vault book" this refers only to the cash in the Teller's drawer for daily use. The bulk of the money, including the reserve, is kept by itself, and an account of it kept in the "vault book." This is after the following manner:

THE UNIVERSITY OF CHICAGO LIBRARY

Date.	Gold Coin.	Gold Certificates.	Silver Certificates.	U. S. Notes.	U. S. Certificates.	Currency.

This book is about twelve inches long. As the money is put into and taken out of the vault in even sums of five and ten thousand dollars the account is very easily kept, the amounts being added on or taken off the footings as they are made. The book can be proved at any time by counting the packages of notes or bags of coin in the vault.

It is hoped that these few forms may afford some useful hints.

PRACTICAL BANKER.

THE "MIKADO" AMONG THE BANKERS.—The following parody upon the "Mikado," composed by a bank officer of the city of Boston, and sung at the recent meeting of the Bankers' Association in that city (a report of which will be found on page 347), was received with enthusiastic applause and heartily encored. It is a parody on a ditty of Koko's:

As it very rarely happens that our grievances are shown,

I've made a little list—I've made a little list—

Of commonplace offenders who, as every bank has known,

Would none of 'em be missed—they'd none of 'em be missed.

There's the man who think's you open at a quarter after eight,

And the woman who invariably comes half an hour too late,

Repeating still the statement, made a dozen times or more,

That she thought the banks of Boston all kept open until four!

Oh, it's very wrong to wish that such from breathing would desist,

But they would not be missed—they never would be missed!

There's the down East lumber dealer, with a check on Tennessee;

For payment he'll persist!—I've got him on the list;

And the lady who's "insulted" when you ask identity—

I don't think they'd be missed—I'm sure she'd not be missed!

There's the bore who wants to tell you how the silver men will vote,

And the man who asks the discount of a twenty-dollar note,

And the "giddy girl" from Chelsea or from Newton Lower Mills,

Who tries to "mash" the Teller when she wants the newest bills,

And the would-be speculator, who for "points" will still insist—

He never would be missed—I know he'd not be missed!

Then the "little short to-day" man, whose check you would not pay,

He swears the bank is wrong—I've got him on the list—

The men who always grudge us each extra holiday,

They never would be missed—you bet, they'd not be missed!

The idlers that roam about from Porter to Cashier,

And leave a roll of silver there, a pile of greenbacks here;

The men who want to catch a train, and at your slowness pout,

And he who interrupts your work to crack some "chestnut" out;

With a hundred other nuisances I have no time to list—

But, oh, they'd not be missed—they'd none of 'em be missed!

# BANKING LAW.

## LEGAL DECISIONS AFFECTING BANKERS.

### BANK AND DEPOSITOR—DUTY OF DEPOSITOR AS TO EXAMINATION OF ACCOUNT—ESTOPPEL.

Plaintiff, a depositor in the Leather Manufacturers' National Bank, sued the latter to recover a balance of account claimed to be due. The main dispute was as to the right of the depositor to question the account rendered by the bank, so far as it charged him with certain checks which he signed, but which, before payment, were materially altered by his clerk without his knowledge or assent. The clerk by whom the checks were altered was the confidential clerk of the plaintiff, had the entire management of the office, kept the books, and had full charge of the account which the plaintiff kept with the defendant. With the knowledge and under the direction of the plaintiff he filled up all checks drawn upon that account, entering on the stub of the check-book the date and amount of each check, the name of the payee and the purpose for which it was drawn. He was well known to the bank as the representative of the plaintiff. The checks in question were at different times filled up by this clerk, B, in pursuance of the instructions of the plaintiff, and, being signed by his employer, were delivered to him and altered by him before being taken out of the office. These alterations were made with great care, and the checks were paid by the bank only after careful examination as to the signature, amount, date and endorsement, there being nothing about them to excite suspicion. The clerk upon receiving the amount would appropriate the excess of the original checks and make false additions in the footings of the check-book to the amount of the increase. The pass-book of the plaintiff was made up at three different times, on each occasion the balance of his account being stated, and the checks returned which had been paid subsequent to the previous balancing. Each time the pass-book was returned with the vouchers the clerk, B, would destroy such of the checks in the lot as he had altered. Subsequently plaintiff, on comparing the pass-book with the stubs of the check-book, discovered the discrepancy. The Circuit Court, before whom the case was tried, instructed the jury to find for the plaintiff. On appeal to the Supreme Court, it was

*Held*, That while it is true that the relation of a bank and its depositor is one simply of debtor and creditor, and that the depositor is not chargeable with any payment except such as are made in conformity with his orders, it is within common knowledge that the object of a pass-book is to inform the depositor, from time to time, of the condition of his account as it appears on the books of the bank. In this way it operates to protect him against the carelessness or fraud of the bank. The sending of his pass-book to be written up and returned with the vouchers is therefore in effect a demand to know what the bank claims to be the state of his account, and the return of the book with the vouchers is the answer to that demand, and in effect imports a request by the bank that the depositor will, in proper time, examine the account so rendered and either sanction or repudiate it. Parties to a stated account may, therefore, be estopped from questioning its conclusiveness, and the doctrine of estoppel by conduct has been applied under a great diversity of circumstances. The Court then gives an extended consideration of the cases in which such doctrine has been defined and applied, and states that these cases are referred to for the purpose of showing some of the circumstances under which the Courts, to promote the ends of justice, have sustained the general principle that where a duty is cast upon a person by the usages of business, or otherwise, to disclose the truth—which he has the means, by

ordinary diligence, of ascertaining—and he neglects or omits to discharge that duty, whereby another is misled in the very transaction to which the duty relates, he will not be permitted, to the injury of the one misled, to question the construction rationally placed by the latter upon his conduct.

The Court further holds, that while no rule can be laid down that will cover every transaction between a bank and its depositor, it is sufficient to say that the latter's duty is discharged when he exercises such diligence as is required by the circumstances of the particular case, including the relations of the parties and the established or known usage of banking business, and it holds that the Court below erred in peremptorily instructing the jury to find for the plaintiff. That the cause of action is peculiarly for a jury to determine, under such instructions from the Court as may be consistent with the principles announced in this opinion. Whether the plaintiff is estopped by reason of negligence to question the correctness of the account as rendered by the bank from time to time is, in view of all the circumstances of the case, a mixed one of law and fact. As there is, under the evidence, fair ground for controversy as to whether the officers of the bank exercised due caution before paying the altered checks, and whether the depositor omitted, to the injury of the bank, to do what ordinary care and prudence required of him, it was not proper to withdraw the case from the jury.

Judgment reversed and cause remanded for a new trial.

Leather Manufacturers' National Bank vs. Morgan, Supreme Court of the United States, March 1, 1888.

#### CHECK PAYABLE TO PARTY GIVING WRONG NAME—LIABILITY OF MAKER TO ENDORSEE.

This was an action against the defendants on a check dated March 31, 1883, payable to the order of Charles Barney, and endorsed in blank. The facts were as follows: On March 27, 1883, a young man registered at the Metropolitan Hotel, Boston, of which the plaintiff was the proprietor, under the name of Charles Barney. On the following day he took to the defendants, who were auctioneers of horses, a team of which he represented himself to be the owner and which he desired them to sell on his account. He gave his name there as Charles Barney. In reply to an inquiry which they sent regarding him, defendants received a telegram that Charles Barney, of Swanzey, was a responsible and reliable man. They thereupon sold the team, and three days later gave him the check sued on. On the same day he left the plaintiff's hotel and in settlement of his board bill endorsed the check of defendants in blank and delivered it to the plaintiff, receiving in cash the balance of its amount. It turned out that Charles Barney was not his true name, and the defendants discovered that he had stolen the team sold by them, and by their order the bank refused to pay the check held by the plaintiff, who thereupon brought this suit. It appeared in evidence that there was a person in existence by the name of Charles Barney, of Swanzey, and it also appeared that the plaintiff made no further inquiry as to the identity of the payee than for information founded upon the representations of his lodger. The Court below instructed the jury as follows:

"If the person who took the team to the defendants' place of business, left it there under the name of Charles Barney, and the defendants in receiving it dealt with him as Charles Barney, and sold the team for him, and three days afterwards gave him the check in the belief that he was Charles Barney, of Swanzey, and was the owner of the team, and said person had, in the meantime, been boarding at the plaintiff's hotel under that name, and had gone by that name while at said hotel, the plaintiff upon the receipt from him of said check in good faith, for a valuable consideration, with his endorsement upon it, acquired a good title to it as against the defendants."

The jury thereupon rendered a verdict for the plaintiff.

On appeal, this verdict was sustained and judgment rendered for the plaintiff. The Court

*Held*, The name of a person is the verbal designation by which he is known, but the visible presence of the person affords surer means of identifying

him than his name. The defendants, for a valuable consideration, gave the check to a person who said his name was Charles Barney, and whose name they believed to be Charles Barney, and they made it payable to the order of Charles Barney, intending thereby the person to whom they gave the check. The plaintiff received this check for a valuable consideration, in good faith, from the same person whom he believed to be Charles Barney, and who endorsed the check by that name. It appears that the defendants thought the person to whom they gave the check was Charles Barney, of Swansey, a person in existence; but it does not appear that they thought so from any representations made by the person to whom they gave the check, although this, perhaps, is immaterial. It is clear from these facts that, although the defendants may have been mistaken in the sort of man, the person they dealt with was the person intended by them as the payee of the check, designated by the name he was called in the transaction, and that his endorsement of it was the endorsement of the payee of the check by that name. The contract of the defendants was to pay the amount of the check to this person, or his order, and he has ordered it paid to the plaintiff. If this person obtained the check from the defendants by fraudulent representations the plaintiff took it in good faith and for value.

Robertson vs. Coleman and others, Supreme Court of Massachusetts, February 26, 1886.

#### BILL OF EXCHANGE—UNCONDITIONAL PROMISE TO ACCEPT.

Plaintiff, the Germania National Bank, of New Orleans, brought this action to recover upon two drafts drawn upon defendants' New York bankers by B. & Co., the drawers, said drawers being insolvent. Plaintiff purchased the drafts from the drawers in reliance upon a letter of the defendants, dated March 7, 1878, which was exhibited to plaintiff. The drafts having been presented to defendants, payment thereof was refused. Plaintiff claimed that the letter of the defendants was an unconditional promise by the defendants to pay the drafts, whereby, under the statute of New York, they became liable thereon. The statute in question (1 Rev. St., § 8) provides:

"An unconditional promise in writing to accept a bill before it is drawn shall be deemed an acceptance in favor of every person who, upon the faith thereof, shall have received the bill for a valuable consideration."

Plaintiff further claimed that, if the letter was not an unconditional promise within the statute, it was a general Letter of Credit, upon faith of which the plaintiff purchased the drafts, whereby an obligation was created on the part of the defendants to repay the sums advanced thereon by the bank.

The letter of the defendants which plaintiff claims was an unconditional promise to accept the drafts, or which was a general Letter of Credit, was sent to B. & Co., the drawers, and is as follows:

"In answer to your favor we reply that we should be pleased to undertake the negotiation in our market of your drafts, accompanied with shipping documents for shipments of cotton, drawn on leading houses in London, Paris, Switzerland and Germany. We will credit you with the rate of exchange which we can procure by our indorsement, and with gold as sold, charging you one-fourth per cent. commission. To facilitate our intercourse we are ready to pay your sight drafts on us, which you advise us as having been drawn against particularly-to-be-described shipments, to the extent of \$50,000, currency, on account of subsequent remittances, which you would then have to send us within a week, whereupon the credit will be renewed of itself. We charge you seven per cent. interest per annum."

B. & Co. acknowledged the receipt of this letter of March 12, 1878, and expressed themselves satisfied with the conditions. The drafts in question had no bills of lading attached, nor were they accompanied with any advice of shipments, but in a letter from B. & Co. to defendants, written on the same day that the drafts were drawn (December 26, 1878), after referring to some prior shipments promised, which had been delayed, they said:

"We beg you to take note of 500 bales more for reimbursement, at 60 days, on London bankers, with the shipment of which we are at present engaged. We have

telegraphed for names of bankers, but expect they will mostly be Huth. We allow ourselves to draw upon you to-day, No. 22, 313, \$15,000, in favor of ourselves; No. 22, 321, \$10,000, do."

The drafts in question were those referred to in this letter, and the paragraph quoted was the only advice of shipments which is claimed to have been made in connection with the drafts.

*Held*, That the letter of defendants was not an unconditional promise within the statute. The promise was coupled with the condition that defendants should be advised by the drawers that the drafts were drawn against "particularly-to-be-described shipments." It can scarcely be claimed that the general notice in the letter of B. & Co., of December 26, 1878, that they were engaged in the shipment of 500 bales of cotton, was a notice of "particularly-to-be-described shipments" required by the letter of March 7th. There was no name of any ship, or of any consignee, and it gave no such information as was contemplated by the parties. Where the condition is a substantive part of the promise, and is a precedent one, and is so coupled with the promise as to show that the promisor did not intend to bind himself except on compliance with the condition, it is impossible in that case to regard a promise to accept as an unconditional promise within the statute. The condition in this case not having been complied with the defendants are not liable thereon as acceptors.

Further *Held*, That it is unnecessary to enter into the question whether defendants are liable to refund the money advanced on the drafts, treating the letter as a general Letter of Credit; for, even assuming that it was a general Letter of Credit, open for acceptance by any person to whom it might be presented by B. & Co. as a ground of credit, it nevertheless simply amounted to a contract on the part of defendants to pay advances made in conformity therewith. They had a right to stand upon the very terms of their contract, and they were not bound unless the condition upon which their obligation depended was fulfilled.

Judgment for defendant.

*Germania National Bank, of New Orleans vs. Taaks and another*, New York Court of Appeals, March 2, 1886.

#### ALTERATION OF NOTE—FILLING IN BLANK.

A note was signed by two makers, reading "payable at —," and afterwards, and before delivery to the payee, in the presence and with the consent of one of the makers, the words "Blandinsville, Illinois," were inserted, making it payable at that place. This was done without the knowledge or consent of the other maker. In an action against the makers by the holder to whom the note had been endorsed by the payee before maturity,

*Held*, That as to the defendant who had consented to the filling in of the note, he was concluded by it and the note was valid as to him.

On the question as to whether the note was obligatory upon the other maker, the Court

Further *Held*, There are cases that hold that filling of a blank left in a note with the place of payment will not render the note invalid in the hands of an innocent holder. The leaving of the blank after "at" has been held as carrying on its face implied authority to fill the blank with the place of payment. In this case one of the makers to whom the note was intrusted by his co-maker for delivery consented that the blank might be filled as was done. That brings the case within the strictest rule held by any of the cases on this subject, and the note was not rendered void by the alteration.

*Canon vs. Grigsby*, Supreme Court of Illinois, January 25, 1886.

#### BILL OF EXCHANGE—LIABILITY OF DRAWER—ADMISSION OF PAROL EVIDENCE AS TO.

K sued C, as the drawer of a bill of exchange to the order of K. The bill had been dishonored and all the steps had been duly taken which were

necessary to fix the liability of C, as drawer. In his answer C claimed that K took the bill of exchange in payment of his (C's) debt to K and agreed to release the former from all liability for the same. At the trial C also offered to prove that it was agreed, at the time the bill of exchange in suit was drawn, that he was not to be liable thereon as drawer. This the Court excluded. Judgment was rendered for the plaintiff. On appeal, the Court

*Held*, The liability assumed by the drawing of a bill of exchange is clearly recognized by the law. The mere act of drawing a bill imports the most certain and precise contract, for presumed adequate consideration, that the bill shall be accepted and paid, and that if it is not the drawer will pay it. It is a firmly settled principle that parol evidence of an oral agreement alleged to have been made at the time of the drawing, making or indorsement of a bill or note, cannot be permitted to vary, qualify or contradict, to add to or subtract from the absolute terms of the contract. The evidence which the Court excluded in the case at bar was offered for the purpose of proving that, at the time of drawing and delivery of the bills in suit, it was agreed between the payee and drawer that the latter should not be liable as such drawer. If this was not an attempt to contradict the plain terms of the contract, as the law interprets it, it is not easy to conceive of a case which would present such a question.

Judgment affirmed.

Cummings vs. Kent, Supreme Court of Ohio, February 23, 1886.

#### PROMISSORY NOTE—PAYMENT IN MERCHANDISE—PRESENTMENT.

Action on the following instrument :

\$104.62.	MINNEAPOLIS, April 30, 1884.
One day after date I promise to pay to the order of H. Talmadge one hundred and four 62-100ths dollars, at Minneapolis, at my place of business, in lime, cement, or hair, at cash price.	
(Signed)	C. L. PROEHL.

Defendant kept on hand in stock at his place of business the articles in which this note was payable, and always was ready and willing to pay in such articles. The note was not presented until August 14th, when plaintiff's agent, after inquiring the price of lime, presented the note and demanded payment; thereupon defendant offered to pay in lime at 75 cents a barrel, but plaintiff's agent objected that the price was too high and went away. The evidence was undisputed that 75 cents was the cash and market price for lime.

*Held*, In an action on the note, that defendant had made no default, but was, and had been, always ready and willing to pay the same. That the place of payment having been fixed, the maker was not required to seek the holder and make or tender payment elsewhere. That defendant was not required to set apart from his stock the exact amount of the articles required to pay the note on the due date, but it was sufficient to keep and have on hand sufficient of the articles with which to pay whenever the note was presented. The defense in this case is not *payment or tender*, but *readiness to perform*. This, we think, is a good defense and was fully established.

Beede vs. Proehl, Supreme Court of Minnesota, February 17, 1886.

#### PROMISSORY NOTE—LIABILITY OF MAKER.

A person who signs a note with full knowledge of its terms, and upon whom no fraud or deceit has been practiced with reference thereto, is liable thereon even though he did not intend to bind himself thereon by signing the same. Jackson vs. Olney, Supreme Court of Massachusetts, October, 1885.

#### PROMISSORY NOTE MADE ON SUNDAY—LIABILITY OF SURETY.

In an action against a surety on a promissory note it is not sufficient to prove that the note was executed on Sunday in order to constitute a good

defense thereto, but it must also be shown that it was delivered and accepted by the plaintiff on Sunday.

Conrad vs. Kuizle, Supreme Court of Indiana, February 11, 1886.

PROMISSORY NOTE—ACCOMMODATION INDORSER—SUBROGATION.

An accommodation indorser of a promissory note executed by two joint makers who pays the same has a right to recover the amount paid by him and to be subrogated to the rights of the original creditor.

Hoffman vs. Butler, Supreme Court of Indiana, February 16, 1886.

RECEIVER OF INSOLVENT NATIONAL BANK—DETENTION OF PROPERTY—UNITED STATES REVISED STATUTES, § 5242.

The Receiver of an insolvent National bank acquires no right to property in the custody of the bank which the latter does not own, as against the real owner, and § 5242 of the Revised Statutes was not intended to protect the Receiver's custody as against such owner.

Corn Exchange National Bank vs. Blye, Receiver, New York Court of Appeals, January 19, 1886.

POWERS OF BANK CASHIERS.

*Continued from page 286, April number of the JOURNAL.*

*IV. Power to Collect and Compromise Debts Due the Bank.*—The power to collect the debts of the bank is one of the powers inherent in the office of Cashier, but there is no implied nor inherent power to compromise a debt, and the Courts are not consistent in their adjudications as to the extent of the power existing in the Cashier to bind the bank in this regard.

In *Reed vs. Bank of Pennsylvania*, 1 Watts and S., 101, the Cashier agreed that if the plaintiffs, who were indorsers on certain protested notes, would confess judgment in favor of the bank, which judgment could be held as collateral security, the bank would bring suit against the makers thereon. The Court said:

"It may, perhaps, be conceded that a Cashier, as Cashier, has a general authority to superintend the collection of notes under protest and to make such arrangements as may facilitate that object by compromise or otherwise . . . but I am not prepared as a general rule to say that the authority of a Cashier extends so far as to authorize him to alter the nature of the debt, or to change the relation of the bank from creditor to the agent of its debtor."

The Court, however, held that the bank by subsequently acquiescing in an arrangement of this kind was concluded by it.

In *Sandy River Bank vs. Merchants' Bank*, Circuit Court of Illinois, 1 Biss., 146, it was held that the Cashier of a bank, as such, has no authority in another State to settle an account, taking private notes and drafts and giving a receipt in full—that in order to bind the bank his power must be in the nature of an appointment as agent.

In a late case in the New York Court of Appeals (*Chemical National Bank vs. Kohner*, 85 New York, 189) plaintiff's Cashier signified his intention in writing to accept a compromise of twenty-five cents on the dollar of defendants' indebtedness, but afterwards repudiated it. In a suit by the bank to recover the full amount, the Court said:

"It appears that the President and Cashier were the active managers of the bank. All these transactions took place in the bank of the plaintiff, and there was no evidence showing, or tending to show, that the Cashier was not authorized to make the compromise, and the compromise was never, at any stage of the transaction, repudiated on the ground that the Cashier entered into it without authority. Under all the circumstances we think it must be presumed that he had such authority, either by usage known to the Directors of the bank, or by some general by-law or resolution of the Board of Directors. It was proved that compromises were matters of common

occurrence in plaintiff's bank, and it cannot be presumed that this compromise, made by the Cashier after consultation with the President, was made without authority, nor can it be presumed that in an ordinary matter of this kind the formal sanction of the Board of Directors was necessary. If the plaintiff had proved affirmatively that the Cashier had transcended his authority, a different question would have been presented for our consideration."

A review of the cases would lead to the conclusion that although the power of compromise is not inherent in the office of Cashier, it being one of those matters which calls for the exercise of discretion, and which is not presumed to be confided to an executive officer, yet the Cashier may derive authority to effect a compromise which will be binding on the bank either from a direct authorization by the Directors or from a usage known to the Directors and acquiesced in by them.

### REPLIES TO LAW AND BANKING QUESTIONS.

*Editor Rhodes' Journal of Banking:*

CORTLAND, N. Y., April 22, 1886.

SIR:—As a subscriber to your excellent JOURNAL OF BANKING I desire to ask the following questions:

1. If A as an endorser waives B's note at maturity for ten days is the waiver entitled to three days' grace?

2. A note written thus: "On or before May 1st I promise to pay, etc." When does it mature, May 1st or 4th? Very truly yours, CHAS. E. SELOVER, Cashier.

*Answer.*—1. We do not think that the maker of the note, B, is entitled to three days' additional grace at the expiration of the ten days to which time the payment of his note has been extended. He does not give a new note in place of the old one, payable ten days after date, on which three days' grace might be added. It is the same note on which the time of payment is extended for ten days. We are not aware that the point has ever been passed upon judicially, but this seems to us the correct view.

2. May 4th.

*Editor Rhodes' Journal of Banking:*

YORK, Pa., April 17, 1886.

SIR.—Here is a question which I would like answered in the JOURNAL: A customer left a draft for collection and said the party on whom it was drawn requested that the draft be sent to the P— Bank, in Pittsburgh, which was done. The draft was paid to the P— Bank and they sent us their draft on New York for the same. The draft was sent to New York, but the P— Bank had no funds in the New York bank and the draft was protested, and at the same time the P— Bank failed. The customer claims that we should stand the loss. Is he correct? CASHIER.

*Answer.*—Whether or not our correspondent is liable to the drawer for the loss on the draft must be determined by the Pennsylvania law. When a bank takes a draft payable at a distant place it must necessarily send it to a correspondent for collection, and it sometimes will pass through the hands of two or three banks located at different places before it reaches the locality where it is made payable. When one of these subsequent banks is negligent or makes default in some manner, whereby a loss results, the question has arisen whether the bank first receiving the draft can be held liable for such default. This question was considered to a certain extent in the October, 1881, number of the JOURNAL, at page 785, and it was there stated that in New York, Ohio and Alabama the rule was that a bank with whom paper is left for collection is directly liable for loss arising from the neglect of its correspondent; also that the Massachusetts rule is that a bank receiving paper for collection is not liable for the neglect of its correspondent, if employed in good faith, and that this was likewise the rule in Maryland, Connecticut, Illinois, Wisconsin, Mississippi, Missouri and Iowa.

In Pennsylvania there were some early cases on the subject; but without giving space to a consideration of these, we think, by the expression of the law contained in the recent decision in the case of *Goodman et al. vs. The Merchants' National Bank*, of Philadelphia, decided June 6, 1884, by the Common Pleas Court, of Philadelphia, which case was affirmed by the Supreme

Court of Pennsylvania, March 31, 1885, that our correspondent is not liable for the loss in question. In that case a check was deposited with the Merchants' Bank, drawn on the Mississippi Valley Bank. The Merchants' Bank mailed it directly to the Mississippi Bank, and received from that bank in payment, by due course of mail, a draft on the Hanover National Bank, of New York, which on the same day was remitted to such last-named bank for payment. The draft was not paid by the Hanover Bank, they having no funds of the Mississippi Bank, which bank in the interim had failed. In a suit by the depositors to recover the amount of the check the Court held that the Merchants' Bank should have sent it to a suitable sub-agent and not direct to the payer, and that the plaintiffs were entitled to recover. The Court says:

"Whatever may have been the rights of the defendant as the holder of the check received under the circumstances set forth in the case stated, in the opinion of a majority of the Court their duty under the law required them to forward it to a correspondent or sub-agent, with instructions to present the same for payment, and if payment was refused to have had it protested and returned at once to the defendant. Had this been done the rights of all parties would have been protected. The conclusion is a legitimate one that had demand been made by an agent of defendant bank the money for the check would have been paid to such agent, whose whole duty would have been performed by transmitting the proceeds of the check to the defendant bank, who would thus have secured the advance which it had made to the plaintiffs, and the transaction as to all the parties concerned would have been properly closed out. It must not be overlooked that the duty which the defendant bank undertook to perform in connection with the collection of the check was voluntarily assumed; it cannot therefore complain if it is held not only to good faith but also to the exercise of such diligence as would protect the rights of all parties. The law imposes no unreasonable obligations upon one who undertakes to do that which the defendant in this case undertook to perform. *The entire measure of that duty was to transmit to a responsible agent for collection, and this the defendant could have done, or declined the performance of the obligation if it had no correspondent or agent to whom it could have transmitted the check for collection, or it could have declined to accept the performance of any duty connected with the collection of the check, except as acting under the instruction and at the risk of the depositor.* . . . . We do not regard it as a fulfillment of the proper measure of the defendants' duty in the premises that they sent the check to the Mississippi Valley Bank directly for payment, nor can we agree that a custom such as is here sought to be set up can be successfully pleaded as a defense in an action by the indorser of a check under circumstances such as those which it is admitted exist in this case. That such a course is frequently adopted may be admitted, but when it is followed it is at the risk of the agent who, of his own choice, transmits the evidence of indebtedness upon which the right to demand payment depends to the party who is to make the payment instead of forwarding it to a sub-agent, with express or implied instructions to do all that is required by way of demand for payment, protest when payment is refused, and return the instrument to the party from whom it had been received. The agreement to transmit for collection is a contract between the bank and its customer; the valuable consideration which supports the agreement as a contract is the use of the money to be collected by the bank so long as it shall be allowed to remain in their hands after it has been collected. This binds the collecting bank to do all that is incumbent on them to do, and *that entire duty, as we have said, is discharged when the check or draft is transmitted to a responsible sub-agent to collect the money. The agent to whom the instrument is sent to make demand for payment then becomes the agent of the depositor or indorser, and is liable to such depositor for loss arising from failure on his part to perform the duty which is incident to an undertaking to collect the money, and such duty is not discharged when anything but money is accepted as payment in the absence of special authority to the contrary.*"

We have quoted fully from this opinion, as it is a late expression of the law which will be of interest to Pennsylvania bankers. The rule there laid down is that the entire duty of a collecting bank is discharged when it *transmits* the check or draft to a responsible sub-agent to collect the money, and such agent then becomes the agent of the depositor. This rule, in our opinion, covers the case of our correspondent. It received a draft from the

drawer and sent it to the Pittsburgh bank for collection. It thus performed its whole duty. The P— Bank then became the agent of the drawer, and having collected the money and failed to transmit it, the loss falls on the drawer. The draft, furthermore, having been sent *at the request of the drawer* to the P— Bank, no question can arise as to the liability of our correspondent for the selection of a responsible sub-agent.

*Editor Rhodes' Journal of Banking:*

LA MOURE, D. T., April 1, 1886.

SIR:—As we are subscribers to your valuable JOURNAL we take the liberty of submitting a question:

On the 5th day of December, 1885, a customer of ours drew a draft (without grace) on a party in Jamestown, Dak., for \$344.10, which was, on the same day, handed us for credit, but with instructions "not to protest," as we likewise instructed our correspondent. On the same day we sent the draft, together with other cash items, to our correspondent in Fargo, Dak., for credit, and on the 7th day of December, 1885, we received advice that we were duly credited with such items. Ten days after receiving advice of credit we paid the same over to our customer. Our correspondent sent the draft to a bank in Jamestown for collection (Jamestown being about 88 miles from Fargo and having daily mail communication). We never heard of the draft again (after receiving advice of credit) until February 13, 1886, when we received a letter from our Fargo correspondent advising us that payment on the draft had been refused and informing us that they had charged the same back to our account and enclosing draft. This item had been reported to us in our monthly statement of account as well as by letter. We returned the draft and refused to allow the same to be charged back to us, on the ground that our correspondent had been guilty of negligence in not at once informing us of the non-payment of the same. Our correspondent refuses to re-credit us, as they claim that our instructions "not to protest" relieved them of the necessity of giving us notice. Kindly give your opinion on this question in your next issue.

Yours respectfully, BUTTON & MOER.

*Answer.*—Although the instructions not to protest may have relieved the Fargo bank from the necessity of giving notice of dishonor, such instructions did not relieve it from the necessity of returning the draft to our correspondent in due season. They did not return it for over two months after it was dishonored, and, if by this delay our correspondent would lose the amount of the draft if it were now returned and charged back to its account. We are of opinion that the Fargo bank cannot so charge it and must stand the loss.

*NOTE.*—It has been held in many legal decisions, and the weight of judicial authority is to the effect that when a party waives *protest* of a negotiable instrument this is a waiver of both *demand* and *notice* on the ground that the term *protest* when used among men of business includes all those acts which are by law necessary to charge an indorser. We do not think that such an extended meaning is intended to be given to the term *protest* when a draft is transmitted with a "no protest" slip or with instructions not to protest. Among bankers themselves differences of opinion exist as to the effect of such no protest instructions, as well as to the sufficiency, as an instruction, of a simple "no protest" slip printed on or written and attached to an instrument; and many bankers refuse to recognize a "no protest" slip as an instruction unless it is also contained in an accompanying letter of instructions. As to this latter we have always held and maintained that the words "no protest" printed or written on an instrument are sufficient, although not also contained in a letter of instructions.

It is our purpose and desire to give a full consideration of this whole subject in a subsequent number. To do this the understanding and usage of bankers on these matters is necessary, in addition to the law on the subject, to arrive at a correct conclusion. We would therefore be obliged to any of our subscribers who may be interested in the matter if they would send us as soon as possible answers to the following questions:

1. When you receive a draft for collection, with instructions not to protest the same, how far do you consider yourself relieved from what would other-

THE UNIVERSITY OF CHICAGO LIBRARY

wise be your duty with regard to the presentment, protest and notice of non-payment of the same?

2. Do you regard the words "no protest" or "no pro.," written on a draft, or printed on the end, or written on a slip and pinned thereto, as a sufficient instruction not to protest, or do you disregard it unless the instruction is also contained in a letter accompanying the draft?

Address replies to above questions to "Law Editor, RHODES' JOURNAL OF BANKING, 78 William St., New York."

*Editor Rhodes' Journal of Banking:*

STANTON, Neb., March 10, 1886.

SIR:—Having found a good deal of valuable information in your JOURNAL OF BANKING, I beg leave to submit the following transaction for your opinion:

We received a draft, drawn by the Williamsburg Bank, on Drexel & Co., Philadelphia, payable to the order of Lewis Ley, Cashier (who was formerly Cashier of this bank). I endorsed the draft: "Pay A. B., for collection and credit of Citizen's Bank, J. Eberly, Cashier" (A. B. being our New York correspondent). A. B. endorsed: "Pay — National Bank, Philadelphia, Pa., or order, for collection account of A. B." The draft was further endorsed: "— National Bank, Philadelphia. Endorsement guaranteed," and was then returned to us for proper endorsement.

I have returned the draft to the Williamsburg Bank, requesting them to send us other paper.

What is the correct procedure under such circumstances, as a change of officers may take place in a bank at any time. Yours truly, J. EBERLY, Cashier.

*Answer.*—It was at one time questioned, but now settled, that where paper is made payable to John Doe, Cashier, the bank of which John Doe is Cashier can recover thereon, parol evidence being admitted to show that John Doe was the Cashier of the bank, and in taking the paper acted as its agent and on its behalf (see 1 Wall., 234). Paper made payable to a Cashier, therefore, vests a good title in the bank of which he is Cashier. The question now is, what course should a bank pursue that receives a draft payable to a party who was formerly its Cashier, but who has ceased to occupy that office? Whether or not, in such a case, the bank takes a good title to the paper has never been, to our knowledge, judicially decided. We are, however, of the opinion that a court of justice would uphold the title of a bank in such a case, and would admit parol proof to show that the intention of the parties was to make the paper payable to the bank. When practicable, the better course would probably be to return the draft and have other paper forwarded. But a case might arise where the bank receives paper for collection indorsed to it for that purpose in the name of a party no longer Cashier, and where time would not permit of its return. In that event we think the bank should treat it as if it was made payable to its present Cashier, and proceed accordingly.

*Editor Rhodes' Journal of Banking:*

DES MOINES, Iowa, April 20, 1886.

SIR:—The following case has arisen:

J. S. O. gives his note to the Western Coal Company, payable thirty days after date. At its maturity C. E. O., a son of J. S. O., calls at the Company's office and says he wishes to renew the J. S. O. note. The clerk in charge of the office, not knowing the parties personally, goes with C. E. O. to the bank where the note has been deposited, takes a new note and surrenders the old. This second note matures and a third one is put in its place in the same manner. When this last note matures the officers of the Company who took the first note discover that the last two notes are signed by C. E. O. and not by J. S. O. The original credit was expressly refused to C. E. O., and given to the father, J. S. O., because he was a responsible man and C. E. O. irresponsible, and there never has been any intention to release J. S. O. Is J. S. O. released by the taking, in the manner stated, C. E. O.'s note and surrendering that of J. S. O.?

Yours, etc., GEO. F. HENRY.

*Answer.*—On the facts stated we do not think the Western Coal Company has a cause of action against J. S. O. on his note, as we do not see that these facts constitute such a case of fraud as would entitle the Company to avoid the transaction wherein they surrendered his note for the note of C. E. O.

In the first place, it must be conceded that the clerk of the Company had authority to act for it in the matter as he did so without objection from the Company, and presumably, as far as the facts show, transacted business of that kind for it. His acts were, therefore, the acts of the Company and binding on it, and his knowledge was the knowledge of the Company. Now, what are the facts? C. E. O. goes to the Company when the note of J. S. O. matures and says he wishes to renew it. The Company, through its authorized agent, thereupon surrenders the note of J. S. O. and takes in exchange the note of C. E. O., which note is subsequently exchanged for a second note of C. E. O. The whole transaction is open. C. E. O. does not represent himself to be J. S. O., and he does not tender a note signed by J. S. O. He gives a note signed by himself. The difference in the signatures on the two notes must have been apparent, and no attempt, according to the facts stated, was made to conceal the fact that C. E. O. was not the party who signed the first note. We do not see how these facts constitute fraud sufficient to avoid the transaction. There was no fraud or deceit unless it was taking advantage of the ignorance of the clerk in the matter, C. E. O. knowing that his note was not acceptable. But, if the clerk had authority to conduct the transaction (and this we presume he had, as his acts seem to have been acquiesced in by the Company until it found he had made a mistake), the Company was bound by his acts.

#### BRIEF REPLIES TO SUBSCRIBERS.

**BOOK-KEEPER**, of Boston, writes: "In your reply to Teller in the March number of the *JOURNAL*, you say that the discount should be figured from January 25th to March 8th on 43 days, as the day the note is discounted and the day it is due should both be counted. Is not this a mistake? The practice, so far as I know, is to include only one day. If you are right, what is your authority?" *Answer*.—In discounting notes it is a general, though not a universal, custom to count both the day the note is discounted and the day it falls due. We do not recollect ever seeing any legal authority for it, probably because the amount involved would scarcely justify a suit either way. It rests, however, on the general principle of fairness, for the man gets his money the morning of the day the note is discounted, and he has until three o'clock on the day of maturity to pay it.

**D. L. J. (Mass.)**.—"Kindly inform me when the following notes are due: July 28th, running 7 months; July 29th, running 7 months; July 30th, running 7 months; July 31st, running 7 months." *Answer*.—They are all due February 28th-March 3d, unless it be a leap year, in which case the first is due February 28th-March 2d and the others February 29th-March 3d. So also August 30th, 1 month date, and August 31st, 1 month date, are both due September 30th. And the same rule applies in similar cases (See Daniel on Negotiable Instruments, sections 624-625).

**TEXAS TELLER**.—"If you wrote your correspondent, 'tel me if this check is paid,' and he did 'tel' you by return mail, he did all that could have been reasonably expected. If you meant 'telegraph' you should have said so.

**HOUSTON**.—"Is it customary to allow rebate on a discounted note paid before it is due?" *Answer*.—No, sir; such a custom would be very unfair to the bank, for it would convert the note into a "call loan" on the part of the former and leave it a definite time loan as to the bank. Occasionally, however, such a rebate is made for special reasons, but even then at a lower rate, usually, than that at which the note was discounted.

**R. B. S.**.—"Our Board of Directors have appropriated \$50 for a library. The bank has just been opened in a small town. Will you inform me what books are the best to form the nucleus of a banker's library, and where they can be purchased?" *Answer*.—We suggest the following: "Morse on the Laws of Banks and Banking" (\$6.00), "Daniel on Negotiable Instruments" (2 volumes, \$12.00), "Gilbart on the Principles and Practice of Banking," an English work (2 volumes, \$5.00), "Story on Promissory Notes" (\$6.00), "Knox on United States Notes" (\$2.50), and "Jevons on Money and the Mechanism of Exchange" (\$1.75). There are also several works which treat exclusively of the National banking laws. By stating exactly what is

required in a letter addressed to this office we will advise correspondents which one to buy. The books above named, as well as any other American or foreign publication on banking, will be furnished by Bradford Rhodes & Co. at publishers' prices. The JOURNAL's series of articles on "Practical Banking" have awakened such a wide-spread interest that we will doubtless feel warranted in publishing them in book form. It is evident from the number of inquiries which have already been received at this office that the book would have a large sale.

**SUBSCRIBER.**—"A draft is drawn as follows: 'To Merchant & Co., Louisville, Ky., payable in New York.' The drawees wish to accept it as follows: 'Accepted, payable at the Third National Bank of Louisville. Merchant & Co.' Can the bank presenting the draft take such an acceptance?" *Answer.*—No, sir. The draft says distinctly "payable in New York," and the drawees have no more right to alter the tenor of the draft in this respect than they have to alter the date or the amount.

**W. L. W.**—"Are not gold certificates a legal-tender?" *Answer.*—Gold coin is a legal-tender in any amount, but gold certificates are not a legal-tender except to the Government.

**READER.**—"Cannot a married woman hold stock in a National bank?" *Answer.*—Certainly she can; but, owing to the diversity of the laws in the different States as to the rights, etc., of married women, the Comptroller advises that they take no part in the organization of a National bank. The stock can be transferred to her after the bank has been organized.

**J. T. F.**—"How can the payment of a certified check be stopped?" *Answer.*—The drawer can stop its payment by giving a bond of indemnity to the bank in case the check turns up in the hands of an innocent holder for value.

**F. D.**—"The President is elected annually, but the clerks hold their places at the pleasure of the Board of Directors.

**BOOK-KEEPER (Ohio).**—"The 'Skeleton Ledger' shown in the March issue of the JOURNAL is often called the Boston plan or daily balance system. It is well thought of by those who have adopted it, and is certainly worth a trial. We could get up one for you at about the same price usually paid for a good blank book made to order and having printed headings, etc.

**DISCOUNT CLERK.**—"There are numerous short methods of calculating discount. Any good commercial arithmetic will post you on these matters.

**TELLER.**—"Even if the Directors do sanction your payment of over-drafts, that would not relieve your bondsmen in case of a loss to the bank. The Directors have no authority to sanction over-drafts.

**PAYING-TELLER (Texas).**—"The regulations governing the issues of new money by the Government can be obtained from the Secretary of the Treasury.

**L. D. M.**—"Coupons pass from hand to hand like bank-notes, and therefore payment on them cannot be stopped. The railroad company will probably pay you the value of the lost coupons upon your proving the loss and giving them a bond of indemnity.

**F. B.**—"Has the National Bank Examiner a right to question the officers and clerks of my bank in regard to the bank's affairs; in other words, is he not obliged to confine himself to the books themselves?" *Answer.*—"The National Bank Examiner has power "to make a thorough examination into all the affairs of the association, and, in doing so, to examine any of the officers and agents thereof on oath" (Rev. Stat., section 5240).

**SUBSCRIBER.**—"The watchman's detector you speak of is very good, but it is expensive. There is a small detector made, about three inches in diameter, which the watchman carries about with him and which answers every purpose.

---

**Notice.**—"A new book entitled "Questions and answers on the National Bank Act" is in process of preparation by a member of the JOURNAL's staff. It will present, in a concise form, replies to questions arising under the National Banking Laws. The price—not yet fixed—will not be over \$1.50. It will be fully described and advertised herein when ready.

## BANKING AND FINANCIAL NEWS:

WITH COMMENTS ON THE MORE IMPORTANT MATTERS. THIS DEPARTMENT ALSO INCLUDES: RAILROAD AND INVESTMENT NEWS, AND A COMPLETE LIST OF NEW BANKS, CHANGES IN OFFICERS, DISSOLUTIONS AND FAILURES.

**Powers of New York State Banks.**—At the request of the Hon. Willis S. Paine, Superintendent of the Banking Department of New York State, the Attorney-General has furnished the following opinion—dated March 28, 1886—as to the powers of the State banks regarding the purchase of commercial paper or of securities not specifically mentioned in the State bank law:

"Your communication requesting my opinion on the question whether a bank incorporated under the general banking law of this State can buy and sell securities other than those expressly mentioned in said statute has been duly received. In reply thereto I beg leave to state that section 37 of chapter 499 of the Laws of 1882, an Act entitled 'An Act to revise the statutes of this State, relating to banks, banking and trust companies,' reads as follows: 'State banks may take and become the owner of any stocks or bonds or interest-bearing obligations of the United States, or of the State of New York, or of any city, county, town or village of this State, the interest of which is not in arrears, and to discount and negotiate bills, notes, and other evidences of debt.' The term 'evidences of debt,' as used in the Revised Statutes in relation to moneyed corporations, means every written instrument or security for payment of money importing on its face the existence of a debt, and whether under seal or otherwise (2 R. S., 7th Ed., 1371). Section 68 of the Banking Code provides that 'the purchase, discount or sale of a *bona fide* bill of exchange, note or other evidence of debt payable at another place than the place of such purchase, discount or sale, at not more than the current rate of exchange for sight drafts, or a reasonable charge for collecting the same, in addition to the interest, shall not be considered as taking or receiving a greater rate of interest than six per centum per annum.'

"In the *Atlantic State Bank vs. Savery*, 82 N. Y., 201, plaintiff purchased the note in question at a greater discount than lawful interest. The defendants claimed that the transaction was a *purchase* and not a *discount*, and that the buying of promissory notes is not within the powers conferred upon a banking association. The plaintiff was empowered to carry on the business of banking by 'discounting bills, notes and other evidences of debt' (Laws 1883, chapter 260, section 18). Section 35 of the Banking Code provides that 'such association shall have power to carry on the business of banking, by discounting bills, notes, and other evidences of debt,' etc., which is identical with the law of 1883. It was held that the purchase of the note was a discount thereof within the meaning of the Banking Act. The Court cites with approval *Tracy vs. Talmadge*, 18 Barb., 456, in which it was said 'now to discount includes to buy, for discounting at most is but another term for buying at a discount;' also, *Johnson vs. National Bank of Gloversville*, 74 N. Y., 329, where the words purchase and discount were used interchangeably.

"The word 'negotiate' means, among other things, 'to transfer, to sell, to pass, to procure by mutual intercourse and agreement with another, to arrange for, to settle by dealing and management' (*Yerkes vs. National Bank*, 69 N. Y., 382). See *Marvine vs. Hymers*, 12 N. Y., 223. The word 'discount' virtually meaning to buy and the word 'negotiate' meaning to sell, among other things, it would seem to follow that a State bank might buy and sell any security or obligation embraced in the term 'evidence of debt,' as defined above.

"This would not include the buying and selling of stocks. 'A share of capital stock is the right to partake according to the amount put into the fund of the surplus profits of the corporation, and ultimately, on the dissolution of it, of so much of the fund thus created as remains unimpaired, and is not liable for the debts of the corporation'

(Burrall vs. Bushwick R. R. Co., 75 N. Y., 211). A shareholder in a corporation has no legal title to its property or profits until a division is made. Hyatt vs. Allen, 56 N. Y., 553. There can be no doubt that certificates of stock are not 'evidences of indebtedness,' and that buying and selling them would be unlawful.

"It may be urged in opposition to these views that the enumeration of the securities in section 37 of which banks may become the owner expressly excludes them from buying those not mentioned. But the authority to 'discount' or to 'buy' is found in section 35, and seems to be contemplated in section 68; and, therefore, the only word in section 37 affecting the question is the word 'negotiate,' which is defined as above stated. I am therefore of the opinion that State banks may buy and sell any securities embraced in the term 'evidence of debt' which may be necessary in the exercise of their legitimate banking powers. My opinion, however, must not be construed as warranting banks to buy and sell evidences of debt for merely speculative purposes. Such acts are clearly beyond the scope and powers of all banks. See opinion of Ruger, Ch. J., in Nassau Bank vs. Jones, 95 N. Y., 115, 121 and 122.

"Very truly yours,

D. O'BRIEN, Attorney-General."

**Liquidation of Failed National Banks.**—A bill supplementary to the National Bank Act of June 3, 1864, which has received the President's signature, being the first piece of completed general banking legislation of the present session of Congress, provides that whenever the Receiver of a National bank shall deem it necessary for the protection of his trust he may apply to the Comptroller of the Currency for authority to use so much money of such trust as is necessary to purchase any property, real or personal, which is about to be sold under execution, foreclosure or other order of Court, and in which such trust may have equities by reason of any bond, mortgage, assignment or other claim. Such requests, if approved by the Comptroller of the Currency, shall be, together with the certificate of facts in the case and his recommendation as to the amount of money which in his judgment should be used and employed, submitted to the Secretary of the Treasury, and, if the same shall likewise be approved by him, the request shall be by the Comptroller of the Currency allowed, and notice thereof, with copies of the request, certificate of facts and endorsement of approvals shall be filed with the Treasurer of the United States. Whenever any such request shall be allowed, the said Comptroller of the Currency is empowered to draw upon and from such funds of any such trust as may be deposited with the Treasurer of the United States for the benefit of the bank in interest, to the amount as may be recommended and allowed and for the purpose for which such allowance was made: *Provided, however,* That all payments to be made for or on account of the purchase of any such property, and under any such allowance, shall be made by the Comptroller of the Currency direct, with the approval of the Secretary of the Treasury, for such purpose only and in such a manner as he may determine and order.

**New York Savings Bank Investments.**—For some time past constant efforts have been directed toward securing recognition of Alabama State bonds as an authorized investment for savings banks of New York State. Bank Superintendent Willis S. Paine has invariably held that bonds of the State named fall within the prohibition of the general savings bank law, but in deference to the opinions of those who have taken an opposite view of the question he recently submitted certain facts connected with the financial history of the State of Alabama to the Attorney-General, with a request that after an examination of the questions involved he would determine whether that State had within a period of 10 years defaulted in the payment of any part of either principal or interest of any debt authorized by any Legislature of such State to be contracted. The opinion holds that bonds issued by the State of Alabama are not an authorized investment for savings banks of the State for the reason that the State is now in default on certain of its obligations. The Attorney-General says that Alabama "several years ago became pecuniarily embarrassed through the efforts to construct lines of railroads almost wholly by its credit. The interest debt of the State on these and other obligations, being unprovided for on maturity, led in 1874 to the appointment of a commission to liquidate and adjust all claims against the State arising from bonds issued or indorsed in the name of the State. The elaborate report of this commission culminated in the enactment of a statute on February 23, 1876, called the 'Funding Act,' enabling the Governor to issue bonds of several classes, designated, respectively, A, B and C, to run 30 years, and to be used in exchange for the bonds issued by Legislative Acts from 1853

to 1872. The bonds in class 'A' were to be exchanged or substituted only for the face value of the bonds issued under the several Acts mentioned, without allowing any interest. The bonds of the second class, known as 'B,' were to be used in taking up bonds issued under Act of April 21, 1873, at the rate of 50 cents on the dollar upon the principal only, no allowance to be made for interest, but as a set-off to such interest unpaid taxes due by railroad companies prior to October 1, 1875, were to be discharged and satisfied. Class 'C' were to comprise bonds to be used only in the retirement and exchange of the first mortgage indorsed bonds of the Alabama & Chattanooga Railroad Company, dated 1869, and to be in full discharge of such bonds.

"The question whether the instances cited place the State of Alabama within the prohibition of that section of the general banking laws of this State, regulating the investment by savings banks, is the inquiry under consideration. I am entirely satisfied from an examination of the statute and facts in question that there has been not only a default in payment of principal and interest by the State of Alabama on its legal obligations, but that the same has been followed by a partial repudiation. It is of no import that the default happened more or less than 10 years ago, so long as it actually exists at the present time, when it is considered that payment of the defaulted sum was pledged by the credit and faith of the State. Once in default always in default until the same has been removed is a maxim of the law which well applies to the matter in question.

"The statute which defines the powers of Trustees of savings banks in the investments of moneys deposited therein should be construed as strictly as possible. It is a plain and clearly phrased law, and no tacit implication should be permitted to be drawn therefrom. . . ."

The New York Legislature of 1882 passed a law authorizing School District No. 8, in the town of Cortlandt, in the county of Westchester, to raise money on its bonds to be issued. A provision of the law was that savings banks of Westchester County might purchase such bonds. Bank Superintendent Paine held that the portion of the Act which empowered savings banks of the county named to acquire such bonds was in direct conflict with the provisions of the State Constitution, and the Attorney-General in a recent opinion arrives at a like conclusion. Owing to the very general belief that the present law governing savings banks is a wise and judicious one and that no radical changes are needed or should be made, it has been found impossible to secure the passage of laws having for their purpose a breaking down of the barriers which now surround these institutions. The question of admitting school district bonds as a lawful investment for savings banks has frequently been discussed, and the weight of opinion has been that such securities are not of a character to commend them for investment of trust funds. During the present session of the Legislature several attempts have been made to authorize savings banks to invest in particular school district bonds by incorporating authority for such investment in the body of bills providing for the issue of bonds of this class.

Attorney-General O'Brien, in giving his opinion regarding the case of the School District above named, says that the provision of the Act authorizing savings banks to invest in its bonds is clearly unconstitutional under section 4 of Article VIII. of the organic law of the State, which provides that the "Legislature shall by general law conform all charters of savings banks or institutions for savings to a uniformity of powers, rights and liabilities," and that the Legislature "shall have no power to pass any Act granting any special charter for banking purposes; but corporations or associations may be formed for such purposes under general laws."

**Proposed Saturday Half-Holiday.**—A good deal of interest has been excited by a movement to close the New York banks at noon on Saturday, and there is a bill before the Legislature intended to enable the banks to legally do so. At a meeting of the Clearing-House Association on the subject, held April 19th, none of the speakers, so far as can be learned, expressed an opinion that any bill should be permitted to pass making Saturday a legal half-holiday all the year round. There seemed to be general consent to a half-holiday during July and August, but none of the bankers are more opposed to the principle of making a legal half-holiday than those who have most carefully studied the question how it can be done without plunging the banks into difficulties of the most embarrassing character. A whole holiday, they say, would be practicable, and objectionable only from an economic point of view, but an attempt

to make a legal half-holiday is surrounded by insurmountable difficulties. This is also said to be the opinion of eminent counsel who have been consulted with regard to proposed amendments intended to provide for situations in which it is foreseen the banks will some times be placed.

**Boston Clearing-House.**—The annual meeting of the Boston Clearing-House Association was held April 12th. The report of Mr. N. G. Snelling, the Manager, shows a surprising increase in business as follows: Total exchanges for the year ending April 1, \$3,721,676,952, an increase over the previous year of \$509,217,148; balances for the year, \$477,631,920, an increase of \$46,363,737. The following officers were elected: Chairman, James H. Beal; Secretary, N. G. Snelling; Clearing-House Committee, John Cummings, R. E. Demmon, Charles O. Billings, George Ripley, George S. Bollens. Messrs. Ripley, of the Hide & Leather Bank, and Bellowa, of the Revere Bank, were chosen in place of Messrs. Vialle and Carleton. The meeting voted to recommend the adoption of a uniform practice by the associated banks, whereby checks should be required in all payments to the banks when cash or Cashier's checks are not tendered.

**The Albuquerque National Bank, New Mexico,** notifies us that since its doors were closed on March 15th its condition had been carefully investigated by a special agent sent by the Comptroller of the Currency and by some of the most competent gentlemen in the Territory. It was found that the capital had been somewhat impaired by injudicious loans and otherwise, but that the deficiency has been made good by an assessment on the shares. A controlling interest in the bank has been purchased by business men representing large business interests and having experience in banking. The Comptroller has authorized the resumption of business, and the capital is to be increased to \$100,000 at once. The officers are John A. Lee, President; S. M. Folsom, Vice-President, and W. S. Strickler, Cashier.

**Missouri.**—In equalizing the assessment of 1885, just completed by the State Board of Equalization, of Missouri, the difference between the increase and decrease in real estate is \$4,479,300, and in the values of horses, mules, sheep and hogs \$61,945, making the increase in real estate and personality \$4,541,245. This makes the total valuation of real estate and personal property in the State exactly \$700,000,000. The probable valuation of the railroad property of the State for 1885—not yet assessed—added to that of the real estate and personality makes the total wealth of the State \$750,000,000 on June 1, 1885.

#### MISCELLANEOUS BANK AND FINANCIAL ITEMS.

— Assistant-Secretary Fairchild has applied to Congress for an appropriation for the storage and transportation of the silver dollar.

— An eighty-cent silver dollar is as much a fraud as an eighteen-hundred-pound ton of coal or a seven-quart peck of potatoes.—*Providence Journal*.

— Isaac Rodgers, who was Cashier of the First National Bank, of Chester, Pa., from 1879 to 1883, has been arrested on a charge of embezzling \$25,000 of the bank's funds.

— The Spring Garden National Bank has been admitted to membership in the Philadelphia Clearing-House Association, and the down-town branch has consequently been closed.

— Receiver Williams, of the bankrupt Mechanics & Laborers' Savings Bank, Jersey City, N. J., has commenced suit against all of the Directors to recover the amount of the deficiency.

— The schedules filed in the case of the insolvent New York stock brokerage firm of Brown & Anderton shows liabilities of \$111,543; nominal assets \$60,485 and actual assets \$24,578.

— Richard H. Harris, Secretary and Treasurer of the Sag Harbor (N. Y.) Savings Bank, was recently discovered to be a defaulter for something less than \$6,000. The bank has an available surplus of \$85,000.

— It has been discovered that three of the banks of Harrisburg, Pa., have lost \$10,000 through forged notes presented by Miss Priscilla B. McClure, of that place, who has always figured in the best of society. The names used as indorsers were those of her mother, Margaret McClure, and brother, William McClure, of Harrisburg, and

cousin, Shoman Furth, of Bellefonte, all of whom are the best of security. They deny the indorsements. The money was obtained in February last, at which time Miss McClure left the city. The notes fell due in April, when the forgeries were discovered.

— G. A. Bennett & Co., bankers and brokers, of New York, suspended April 19th, and assigned to Sinclair T. Hunting. The schedules show liabilities of \$258,397, nominal assets \$339,108, and actual assets \$35,820.

— The United States Senate has passed a bill authorizing the Secretary of the Treasury to refund the Phenix National Bank, of New York city, about \$30,000 of deposits illegally confiscated by the United States.

— It is said that W. D. Cleveland, a merchant of Houston, Tex., is a bigger man in the estimation of his neighbors than President Cleveland. When the savings bank in that city recently failed, he took the books of all depositors having less than \$100 and paid them in full.

— H. P. and F. B. Tracy, of the failed banking firm of H. P. Tracy & Co., Elmwood, Ill., have been arrested on a charge of embezzlement preferred by William Forbes, tax collector of the town, who claims that they persuaded him to deposit with them \$7,500 just before the failure.

— The *Petit Journal*, of Paris, in noticing what RHODES' JOURNAL OF BANKING remarked some time ago as to the effect of the reduction of letter postage to two cents in making postal cards less in demand, expresses the hope that postage in France will soon be reduced to the same amount.

— A charter has been issued at Harrisburg to the Mortgage Trust Company of Pennsylvania, located in Philadelphia. The capital of the organization is fixed at \$500,000, all of which has been subscribed. It is given full power to execute trusts of every kind, the object being to afford investors the additional security of its corporate guarantee.

— The City National Bank, of Williamsport, Pa., was closed on April 20th by order of Examiner Hugh Young. Four years ago the bank was robbed of about \$50,000 by E. Passmore Dietrick, a book-keeper who at times acted as Cashier, and the matter has been kept secret ever since on a promise of his relations to make the amount good. The bank has also sustained other losses.

— The First National Bank, of Angelica, N. Y., has stopped payments on account of an alleged shortage of \$41,000. The Cashier, J. E. Robinson, who is 77 years old, departed for Niagara Falls, Ontario, about a week before the discovery. He says that he knew of a deficiency of only \$12,000. It is proposed to reorganize the bank by reducing the capital from \$100,000 to \$50,000.

— The Consolidated Clearing-House of New York, (limited) has been organized with a capital stock of \$25,000. It has for its object the clearing, between parties, of all contracts, purchases, sales and transactions made between members of any Exchange in New York city, whether made in or out of the Exchange, in respect of securities, stocks or petroleum, or other merchandise.

— Mr. E. B. Shaw has been appointed Cashier of the Fayette County National Bank, of West Union, Iowa, in place of Mr. E. A. Whitney, who resigned in order to start a private bank at Sheridan, W. T. During the time Mr. Whitney served as Cashier, which dates from the first organization of the Fayette County Bank, the latter did not lose a dollar in bad paper. Mr. Shaw has also been with the bank since it started.

— A meeting of holders of several hundred thousand trade dollars was held at Reading, Pa., on April 19th. Letters favoring the passage of an Act for the redemption of trade dollars were read from Senators Mitchell and Cameron and Congressman Ermentrout. Arrangements were made with a view to sending a joint committee to Washington to urge the speedy passage of the bill now before the Coinage Committee.

#### R. R. AND INVESTMENT NEWS.

##### *New Issues.*

CHICAGO & GREAT SOUTHERN.—Henry H. Porter, who recently purchased this railroad under foreclosure for the bondholders for \$501,000, has organized a new

company to operate the road. It is called the Indiana Railway Company, with a capital stock of \$5,000,000. The Directors are Chicago men.

**NEW YORK STOCK EXCHANGE LIST.**—The following securities have been added to the list:

Houston, East & West Texas Railway—First mortgage bonds, numbered 961 to 1344 inclusive.

James River Valley Road—\$735,000 first mortgage 6 per cent. gold sinking fund bonds.

Kansas City & Southwestern Railroad—\$744,000 first mortgage 6 per cent. coupon (gold) bonds, Nos. 1 to 744.

Missouri Pacific Railroad—\$3,000,000 additional capital stock, making total amount listed \$33,000,000.

Gulf, Colorado & Santa Fe Railroad—420 first mortgage bonds, numbered 7301 to 7820 inclusive, making total on list \$7,920,000, Nos. 1 to 7820: also 1,500 additional second mortgage bonds, numbered 3501 to 5000 inclusive, making total on list of \$5,000,000. Nos. 1 to 5000.

Chicago, Burlington & Quincy—\$1,561,000 additional Iowa Division mortgage sinking fund 4 per cent bonds, numbered 15001 to 16591 inclusive, making total on list \$10,591,000 (Nos. 6001 to 16591 inclusive).

New York, Ontario & Western—\$3,000,000 first mortgage bonds, Nos. 1 to 1000 inclusive and Nos. 2001 to 4000 inclusive.

Fort Worth & Denver City Railway—First mortgage bonds amounting to \$850,000.

Indiana, Bloomington & Western Railroad Company—Consolidated income mortgage bonds amounting to \$980,000.

Chicago, Rock Island & Pacific Railway Company—First mortgage extension and collateral bonds amounting to \$980,000.

Wabash, St. Louis & Pacific Railway—Certificates of the Purchasing Committee full-paid for common and preferred stock amounting to \$526,427.

Brooklyn & Manhattan Beach Railway Company—First consolidated mortgage 5 per cent. gold bonds amounting to \$598,000, and preferred stock amounting to \$668,000.

**ILLINOIS CENTRAL.**—A contemporary remarks that it is significant of the changed state of credit in this country that old Illinois Central 8 per cent. bonds falling due next July are refunded at  $8\frac{1}{4}$  per cents.

**THE ARKANSAS & NORTHWESTERN RAILROAD** has been incorporated with a capital stock of \$3,600,000 to run from the northern line of Arkansas, in Benton County, by way of Fayetteville to Clarksville, Johnson County, 130 miles.

**ST. LOUIS & CAIRO RAILROAD.**—At the recent annual meeting it was voted to change the road from narrow to standard gauge and to lay 161 miles of new steel rails. To do this work \$1,400,000 worth of new bonds will be issued.

**THE ANAMOSA, LAPORTE CITY & ELDORA RAILROAD COMPANY** has been incorporated with a capital stock of \$2,000,000. The object is to build a line of railway from Anamosa, Jones County, Iowa, to Eldora, Hardin County, by way of Laporte City.

**THE CHICAGO, KANSAS & NEBRASKA RAILROAD.**—The Kansas extension of the Rock Island has been chartered in Kansas, with a capital stock of \$15,000,000. The entire length of the road is 1,500 miles, and the charter also provides for various branch lines.

**THE TOLEDO, CHARLESTON & ST. LOUIS RAILWAY COMPANY** has been incorporated, with a capital stock of \$4,572,500, to construct a line of railroad beginning at a point on the boundary line between the States of Illinois and Indiana, near Eugene, Ind., to East St. Louis, all in the State of Illinois.

**THE MONTANA WESTERN RAILROAD** has been incorporated with a capital of \$700,000 to build a railroad from Drummond (seventy-two miles west of Helena on the Northern Pacific Railroad) up Flint Creek valley to Phillipsburg and to a junction with the Utah & Northern Railroad near Silver Bow.

**MOBILE & OHIO.**—Arrangements are being made that will give this railroad a through line from New Orleans to St. Louis. The company has made a contract to operate the St. Louis & Cairo Railroad for forty-five years from January 1, 1885.

The latter is a narrow gauge, but will issue \$1,400,000 bonds to lay 161 miles of steel and widen the gauge.

**THE NEW YORK & BOSTON RAPID TRANSIT COMPANY** is organized under the laws of New Jersey. It is stated that so far there has been \$810,000 expended on the line. The company now proposes to build the 183 miles of road for \$25,000,000 of 5 per cent. twenty-year bonds and \$25,000,000 of stock.

**BILLINGS, CLARK'S FORK & COOK CITY RAILROAD COMPANY** is the title of a new organization having a capital of \$1,000,000. The new road will open up the Clark's Fork mining district and will also give a northern outlet to the new oil fields in Southern Montana and Northern Wyoming.

**SAVANNAH, DUBLIN & WESTERN SHORT LINE OF GEORGIA.**--A mortgage for \$3,000,000 has just been executed upon this railroad. A number of Philadelphia capitalists are interested in the enterprise, and A. B. Linderman of that city is the President of the company. It is expected that the line will be completed by October 1st.

**RICHMOND & DANVILLE.**--It is understood that after the Virginia Midland Incomes have been disposed of it is the intention of the Richmond & Danville board to take up the question of the exchange of Richmond & Danville general mortgage fives for debenture incomes. These latter bonds aggregate \$4,000,000, and were issued to provide for the payment of \$1,000,000 capital stock of the Richmond & West Point Terminal Co. at par, for floating debt, and other purposes.

**CANADIAN PACIFIC.**--It is reported that the Canadian Pacific Company has arranged with Baring Bros. of London for the purchase of the remaining \$20,000,000 of bonds, the proceeds of which are to be applied to paying off a part of the indebtedness of the company to the Government, while the balance of \$9,000,000 is to be liquidated by transferring about 7,000,000 acres of land belonging to the original grant of 25,000,000. This will practically make a cash subsidy to the company of \$35,000,000 and a land subsidy of 18,000,000 acres.

**PHILADELPHIA, NEWTON SQUARE & CHESTER.**--A charter has been granted to this company, with a capital stock of \$2,500,000. The President is James B. Washington, of Allegheny City, Pa., and all but one of the Directors are from Pittsburgh. The line will be twenty-five miles long, one terminus being at West Chester and the other at a point on the Philadelphia & Baltimore Railroad where the latter crosses Cobb's Creek, in Delaware County, Pa.

**THE FAIRCHILD & MISSISSIPPI RIVER RAILROAD COMPANY** has been incorporated in Wisconsin with a capital stock of \$1,000,000, divided into 1,000 shares. The length of the line will be about 100 miles, and will run from Fairchild, in Eau Claire County, Wis., to some point on the line of the Chicago, Burlington & Northern Railroad, in Buffalo County, with a branch from Fairchild to some point on the line of the Wisconsin Central Railroad, in Marathon County.

**GEORGIA PROJECTS.**--The cities of Atlanta and Augusta are both working to flank the Georgia Central Railroad system by using the port of Charleston with Western connections. Augusta and Charleston have identified the South Carolina Railroad with the proposed Augusta & Chattanooga Railroad, and are adding to the subscription list at the rate of \$5,000 a day. Atlanta has been forced by freight discrimination to strike out to the sea, and she is now at work raising \$1,500,000 to build an air line direct to Charleston, crossing the Savannah River at some point where large steamers can come up. This line is 200 miles long and the Augusta line is 208 miles. Railroad enterprise in Georgia has sustained a tremendous impetus from these cities projecting these new routes.

**KANAWHA & OHIO RAILWAY.**--At a meeting of stockholders of the Ohio & Kanawha Railway Co., held at Columbus, O., the capital stock was increased from \$300,000, its original capital, to \$8,100,000. Of this increase \$3,000,000 was made first preferred stock, \$2,000,000 second preferred stock, and the residue (\$1,100,000) common stock. Consent of the stockholders was necessary for the purpose of extending the line, paying for the river division of the Ohio Central Railroad, which this company recently bought, and for improving the general condition of the property. It was voted later to consolidate with the Kanawha & Ohio Railway Co., and the new company, under the name of the Kanawha & Ohio Railway Co., will operate their railway from Corning, Perry County,

to a connection with the Chesapeake & Ohio Railway at the mouth of the Ganby River at Kanawha Falls.

**CHICAGO & NORTHWESTERN.**—It is announced that this company has decided upon an issue of \$20,000,000 4 per cent. 40-year bonds. The proceeds are to be used for the extension of the system, and are to be secured by the depositing in trust of first mortgage bonds of proprietary roads at the rate of \$20,000 a mile. The bonds will be similar to the 5 and 6 per cent. sinking fund bonds of 1879, except that they will not be subject to call before maturity. The first issue will be for \$5,000,000, which, it is understood, the company has negotiated with a syndicate represented by Kuhn, Loeb & Co., Brown Bros. & Co., and J. Kennedy Tod & Co.

#### Railroad Reports.

**ATCHISON, TOPEKA & SANTA FE.**—The report of this company for the year ended December 31, 1885, makes the following showing of earnings:

	1884.	1885.
Total gross earnings.....	\$16,291,883	\$15,571,395
Total operating expenses.....	8,975,976	8,314,967

Net earnings ..... \$7,315,907 \$7,256,428

The mileage operated was 2,374 miles in 1884 and 2,397 in 1885. Following is a summary of income account:

	1884.	1885.
Total income.....	\$7,674,690	\$7,614,371
Total disbursements.....	6,830,707	7,110,186

Balance, surplus ..... \$843,983 \$504,185

Dividends at the rate of 6 per cent. per annum were paid on the stock. The balance to the credit of income account on December 31, 1885, was \$7,387,825. The stock of the Southern Kansas (\$5,076,300) is now all owned by the Atchison. The amount of bonds outstanding is \$36,344,000 against \$34,325,500 last year.

**CHESAPEAKE & OHIO.**—The report for the year ended December 31, 1885, shows the following earnings:

	1884.	1885.
Total gross earnings.....	\$3,538,604	\$3,361,235
Total operating expenses.....	2,499,744	2,465,811

Net earnings ..... \$1,038,860 \$895,424

**PANAMA RAILROAD.**—The earnings for the year ended December 31, 1885, as shown in the annual report, were as follows:

	1884.	1885.
Total gross earnings.....	\$3,162,330	\$2,938,827
Operating expenses (including taxes).....	1,743,377	2,655,273

Net earnings ..... \$1,418,953 \$283,554

Following is a summary of income account:

	1884.	1885.
Total income.....	\$1,751,399	\$612,550
Total disbursements.....	1,695,576	1,241,040

Balance..... Surplus, \$55,823 Deficit, \$628,490

The decrease in earnings was caused by political troubles on the Isthmus and the consequent destruction by fire of the company's property at Colon. Dividends amounting to \$700,000 were paid against \$1,120,000 in the previous year.

**CHICAGO, ST. PAUL, MINNEAPOLIS & OMAHA.**—The mileage operated in 1885 was 1,340 against 1318 in 1884. The earnings for the year ended December 31st were:

	1884.	1885.
Total gross earnings.....	\$5,784,381	\$5,514,510
Operating expenses and taxes .....	4,007,022	3,721,151

Net earnings ..... \$1,777,900 \$2,093,659

Summary of income account:

	1884.	1885.
Total income.....	\$2,641,255	\$2,548,889
Total disbursements.....	2,170,361	\$2,085,238

Balance, surplus..... \$470,894 \$763,651

Dividends at the rate of 6 per cent. were paid against 7 per cent. in 1884. The amount of stock and bonds was unchanged.

## BANKERS' ASSOCIATION OF BALTIMORE.

We are pleased to notice the formation of this Association, having for its object "the study and discussion of questions of finance and banking." It cannot fail to be of interest to its members and beneficial to the banking interests of Baltimore. The Association has been in existence only two or three months and its membership is as yet small, but it hopes to grow. The history of its organization is unique. It was commenced by half a dozen clerks who desired to form a little club for their own improvement in the knowledge of the banking business. For various reasons, however, it was found desirable to enlarge the scope of membership, and it now includes the National Bank Examiner and the Cashiers of several of the banks. As the Constitution and By-Laws are very short and to the point we print them as a model for similar organizations which the JOURNAL hopes to see formed in other cities.

### Constitution.

#### ARTICLE I.—*Of the Name and Objects of the Association.*

SECTION 1. The name of this Association shall be the Bankers' Association of Baltimore.

SECTION 2. The object of this Association shall be the study and discussion of questions of finance and banking, and the mutual improvement and benefit of its members.

#### ARTICLE II.—*Of Members.*

SECTION 1. Officers and clerks of incorporated banks and trust companies in Baltimore city, and members and clerks of such firms as are represented at the Baltimore Stock Exchange, shall be eligible to membership in this Association.

SECTION 2. Members may be elected at any regular meeting of the Association by a majority of the members present and voting.

#### ARTICLE III.—*Of Officers.*

SECTION 1. The officers of the Association shall be a President, a Vice-President, a Secretary and a Treasurer, who shall be elected at the first regular meeting of the Association in February of each year, and shall hold their offices for one year, and until their successors shall have been chosen. They shall perform such duties as usually pertain to their positions, and as shall be provided for by this Constitution and By-Laws.

SECTION 2. The Treasurer shall safely keep all money of the Association and shall pay out the same only upon the written order of the President, countersigned by the Secretary.

SECTION 3. In case of a vacancy in any one of these offices the Association shall elect a member to fill the office until the expiration of the term.

#### ARTICLE IV.—*Of Meetings.*

SECTION 1. The regular meetings of the Association shall be on the second Tuesday of every month, except July and August, at such hour and place as may be provided in the By-Laws. In the absence of such provision in the By-Laws the President shall appoint the hour and place of meeting.

SECTION 2. Special meetings of the Association shall be called by the President in his discretion, or upon the written request of five members of the Association.

SECTION 3. A quorum shall consist of six members of the Association.

#### ARTICLE V.—*Of Amendments to the Constitution.*

This Constitution may be amended at any regular meeting of the Association by a resolution adopted by two-thirds of the members present, and voting, provided that such resolution shall have been approved by a majority of the members present and voting at the previous regular meeting of the Association.

#### ARTICLE VI.—*Of By-Laws.*

By-Laws not inconsistent with this Constitution may be adopted, altered or abolished by two-thirds of the members present, and voting, at any regular meeting of Association.

### By-Laws.

1. The hour of regular meetings shall be eight o'clock P. M.
2. The dues shall be one dollar initiation, and an annual fee of one dollar, payable on the second Tuesday in January of each year.
3. The order of business at regular meetings shall be as follows: Calling of the roll; reading minutes of last meeting; election of officers; report of committees; unfinished business; new business.
4. There shall be a Standing Committee on Questions, consisting of three members, who shall keep a record of such questions as may be proposed to the Association from time to time, and of the answers thereto.
5. There shall be a Standing Committee on Correspondence, consisting of three members, whose duty shall be to keep the Association in communication with persons interested in finance and banking throughout the United States.
6. There shall be a Standing Committee on Records, consisting of three members, whose duty shall be to keep a record of the sales of bank stocks at the Baltimore Stock Exchange, of the published statements of the banks, and of such other matters as may be of interest to this Association.
7. The President shall appoint all committees except where it is otherwise ordered by this Association.

## NEW BANKS, CHANGES, FAILURES, ETC.

**New National Banks.**—The Comptroller of the Currency furnishes the following statement of National banks organized since our last report:  
(Names of officers and further particulars regarding new National banks will be found under their proper State headings in this list.)

**LAVALLE.**—Geo. P. Sanford is in business here.  
**WATERLOO.**—E. D. Knowlton & Co. are reported here. Style, Waterloo Bank. Cashier, L. D. Everson.

---

**BUSINESS NOTICES.**

John F. Diemer, who manufactures document tie envelopes, legal wrappers, patent metal-end boxes, expanding files and envelopes, "handy" letter-files, etc., at 71 Fulton Street, New York, turns out work which in this department cannot be surpassed. He believes that the great care and skill employed in manufacturing his large line of filing specialties, and the amount of his own time devoted to every detail of the business, rendered valuable by a practical experience of over seventeen years in this line of manufacture, enables him to fill orders for this class of goods in the best manner and at the least cost to the purchaser. Mr. Diemer's plan of doing business is to give full value to every customer, whether the price is made in advance of ordering or not. These goods are well known by the leading stationers of the country. For further particulars see his advertisement on another page.

Unexcelled.—P. A. McCarthy, President of the Stevens County Abstract and Real Estate Agency, Morris, Minn., writes April 22, 1886: "We like your JOURNAL OF BANKING—think it is unexcelled. It is very valuable to us in our business. Every banker and business man should have it."

## THE BANKER'S GAZETTE.

### The Money Market and Financial Situation.

NEW YORK, May 1, 1886.

To-day being the time set for the beginning of a movement among a great many trades unions throughout the country in favor of limiting the day's labor to eight hours, the probable consequences of it form the chief feature of the present business situation. The recent and the existing strikes, together with the belligerent attitude of the workingmen, have done serious injury to general business this spring, and we appear to be just approaching the crisis of the labor troubles. The feeling of business men regarding the situation is reflected in the stock market, which is much depressed. It is useless to attempt to belittle the seriousness of the matter, but, for the time being, it is easy to exaggerate it. The failure of the strikes on the Southwestern railroad system and the Third Avenue Railroad in this city show that when the workingmen demand what is altogether unreasonable they cannot impede the course of business very long.

In spite of the strikes the usual statistics to which we refer in order to judge of the condition of business in general are not at all discouraging. The total amount of the clearings at the various Clearing-Houses throughout the country for the five days ending April 30th (partly estimated on the basis of the previous week's returns) as collected by the *Financial Chronicle*, was \$622,123,031, against \$540,158,275 in the corresponding week last year, an increase of 15.2 per cent., the increase outside of New York being 13.5 per cent.

The statistics of business failures also continue to compare very favorably with those of last year.

There have been some further shipments of gold to Europe lately, bringing the net gold exports (less imports) from this port up to about \$19,000,000. This outflow is ascribed, both here and abroad, to the demand for specie in France for the purpose of subscriptions to the pending Government loan there, and it is expected that the loan will be awarded very soon, which will set free the gold and change the direction of the current. In the meantime the rates for money accommodation have continued low, and, although the rates have strengthened somewhat, in London the Bank of England rate still remains at only 2 per cent.

The movement of specie depends very largely on the dealings in London in American securities which now form an important feature of that market.

The foreign trade, as exhibited in the March statement of the Bureau of Statistics, presents the same peculiarity that has been noted heretofore. The merchandise exports for the month amounted to \$163,000,000 against \$185,000,00 in March, 1885, and \$191,000,000 in March, 1884. The imports were as follows: 1886, \$164,000,000; 1885, \$137,000,000; 1884, \$170,000,000. It appears, however, that the decrease in exports is largely owing to the reduction in prices instead of in the quantity of commodities moved.

THE FOREIGN EXCHANGE market is quiet, and strong on account of the absence of commercial bills. Following are the posted and actual rates of the principal dealers: Bankers' sterling, 60 days, nominal, \$4.87½; sight, nominal,

\$4.89½; 60 days, actual, \$4.86½@4.86¾; sight, actual, \$4.88¼@4.88¾. Cable transfers, \$4.88¾@4.89¼; Prime commercial sterling, long, \$4.85¾@4.86; Documentary sterling, 60 days, \$4.85¼@4.85½; Paris, bankers', 60 days, 5.17½@5.18½; sight, 5.15@5.14½; commercial, 60 days, 5.18¾@5.19½; sight, 5.16½@5.15½; Antwerp, commercial, 60 days, 5.20@5.19½; Swiss, bankers', 60 days, 5.18½@5.17½; sight, 5.15@5.14½; Reichsmarks (4), bankers', 60 days, 95½@95½; sight, 95¾@95½; Commercial, 60 days, 95 1-16@95 3-16; sight, 95 7-16@95 9-16; Guilders, bankers', 60 days, 40 5-16@40¾; sight, 40½@40 9-16; Commercial, 60 days, 40 3-16@40¼; sight, 40 5-16@40¾. Paris dispatches quote exchange on London 25f. 13¼c.

The following shows the posted rates for prime bankers' sterling bills on London at 60 days, and sight, cable transfers, and prime commercial sterling, together with exchange on Paris on April 1st, the changes in the rates as they occurred during the month, and the highest and lowest during the months of March and April, 1886:

MARCH.	BANKERS		Cable		PARIS	
	60 days.	Sight.	Transfers.	Commercial.	60 days.	Sight.
Highest...	4.88¼	4.90	4.89½	4.86¾	5.17½	5.14½
Lowest...	4.87	4.89	4.88¼	4.85¾	5.16½	5.14
APR. 1....	4.87	4.89	4.88¼	4.85¾	5.17½	5.14½
" 2....	4.87	4.89	4.88¼	4.85¾	5.17½	5.14½
" 5....	4.86¼	4.88¼	4.88¼	4.85¼	5.17¾	5.15¼
" 6....	4.87	4.89	4.88¼	4.85¼	5.17¾	5.15¼
" 13....	4.87½	4.89½	4.88¾	4.85½	5.17¾	5.14½
" 16....	4.87¼	4.89¼	4.88¾	4.85½	5.17¾	5.14½
Highest....	4.87½	4.89½	4.88¾	4.85½	5.17¾	5.15¼
Lowest....	4.86¼	4.88¼	4.88¼	4.85¼	5.17¾	5.14½

COINS AND BULLION.—Bar silver is quoted in London at 46d. per ounce. At this quotation for silver the bullion value of the standard dollar is 77.99 cents.

The following are New York quotations in gold for other coins and bullion:

Trade dollars... ..	\$ 80 @ \$ .	Victoria sovereigns.....	\$4 85 @ \$4 90
New (412½ grains) dollars	99¼ @ 1 00	Twenty francs.....	3 85 @ 3 90
American silver ½ & ¼s.	99¼ @ 1 00	Twenty marks.....	4 74 @ 4 80
American dimes... ..	99¼ @ 1 00	Spanish doubloons.....	15 55 @ 15 65
Mutilated U.S. silver coin,		Mexican doubloons.....	15 55 @ 15 65
per oz.....	95 @ .	Mexican 20-pesos.....	19 50 @ 19 60
Mexican dollars.....	79¼ @ 80	Ten guilders.....	3 96 @ 4 00
Peru soles & Chilian pesos	72¼ @ 73¾	Fine silver bars, per oz.....	1 00¾ @ 1 01¾
English silver.....	4 80 @ 4 85	Fine gold bars par @ ¼ % premium on the	
Five francs.....	93 @ 95	Mint value.	

MONEY AND DOMESTIC EXCHANGE.—The money market presents no special features. The rates for call loans on stock or bond collateral range generally from 2 to 3 per cent., the extremes during the past week being 1½ and 4 per cent. Indorsed bills receivable are quoted at 3¾@4½ per cent., and other grades range as high as 6 per cent. Following are the rates of domestic exchange on New York: Savannah, 1-16; selling 8-16@¼ premium. Charleston, buying par; selling 1-16@¼ premium. New Orleans commercial, 50c. per \$1,000 discount; bank, \$1.50 per \$1,000 premium. St. Louis, 25c. per \$1,000 premium. Chicago, 25c. per \$1,000 premium. Boston, par@5c. per \$1,000 premium.

NATIONAL BANK CIRCULATION.—The amount of Government bonds held by the United States Treasurer to secure National bank circulation has been still further reduced \$4,000,000 during the month of April. The three per cents called for payment have not been replaced by the banks with other issues. The amount of National bank notes now outstanding is \$313,542,584, a

decrease of \$2,848,894 during the past month, and of \$6,909,282 since May 1, 1885.

The following will show the amount of each description of bonds held by the Treasurer to secure National bank circulation on or about the dates indicated :

	May 1, 1886.	April 1, 1886.	Mar. 1, 1886.	Feb. 1, 1886.
Currency 6 per cents.....	\$3,585,000	\$3,585,000	\$3,515,000	\$3,515,000
4½ per cents .....	49,599,750	49,243,350	48,967,650	49,502,950
4 per cents .....	114,114,300	114,216,550	115,438,350	114,627,650
3 per cents .....	118,169,000	122,691,750	129,336,900	184,928,900
Total. ....	\$285,447,950	\$289,716,650	\$297,257,900	\$302,574,500

GOVERNMENT BONDS.—The following table shows the closing prices or closing bids at the New York Stock Exchange for the principal issues of Government bonds on each day of the month of April, and the highest and lowest during the month. Actual sales marked \* :

APRIL.	4½s. '91. coup.	4s. 1907. coup.	3 per cents.	Cy 6s. 1895.	Cy 6s. 1899.	APRIL.	4½s. '91. coup.	4s. 1907. coup.	3 per cents.	Cy 6s. 1895.	Cy 6s. 1899.

+ Ex-interest.

THE TREASURY.—The following table will show the condition of the Treasury, as regards the amount of gold and silver held, on the first day of May, 1886, and, for comparison, on the first of March and April, 1886, with the amounts of certificates outstanding and the balances of coin owned by the Treasury :

	May 1, 1886.	April 1, 1886.	Mar. 1, 1886.
Gold coin and bullion.....	\$240,580,532	\$242,159,004	\$249,801,087
Gold certificates outstanding.....	84,715,225	91,205,830	105,637,050
Gold owned by Treasury.....	\$155,865,307	\$150,953,174	\$144,164,037
Silver dollars and bullion.....	\$178,485,024	\$177,000,984	\$174,418,674
Silver certificates outstanding.....	90,733,141	89,855,386	88,390,816
Silver owned by Treasury.....	\$87,751,883	\$87,145,698	\$86,028,058

It will be seen that there was a considerable increase in the net amount of gold in the Treasury, while the change in the silver held was slight. A bond call for \$10,000,000 is due to-day however. On April 20th the Acting Secretary of the Treasury issued the 136th call for the redemption of bonds of the 3 per cent. loan of 1882. The call is for \$10,000,000, and notice is given that the principal

and accrued interest will be paid at the Treasury of the United States, in the city of Washington, D. C., on the 1st day of June, 1886, and that the interest will cease on that day. Following are descriptions of the bonds: Three per cent. bonds issued under the Act of Congress approved July 12, 1842, and numbered as follows: \$50—Original No. 271 to original No. 214, both inclusive. \$100—Original No. 2,007 to original No. 2,048, both inclusive, and original No. 9,917 to original No. 9,921, both inclusive. \$500—Original No. 908 to original No. 921, both inclusive, and original No. 4,219 to original No. 4,223, both inclusive. \$1,000—Original No. 7,336 to original No. 7,659, both inclusive, and original No. 23,712 to original No. 23,719, both inclusive. \$10,000—Original No. 18,625 to original No. 14,596, both inclusive. Total, \$10,000,000.

**ASSOCIATED BANKS OF NEW YORK.**—The loans have been somewhat reduced since March, probably on account of the restriction of trade caused by the labor troubles. The money reserve has been drawn upon partly for shipment abroad, but the reserve is about as large as it ought to be in healthy times.

The following shows the condition of the New York Clearing-House banks for a number of weeks past, as well as about this time in 1885 and 1884:

1886.	Loans.	Specie.	Legal-tenders.	Deposits.	Circulation.	Surp. Res.
May 1. . .	\$351,296,400	\$72,976,600	\$32,249,700	\$372,801,800	\$7,888,900	\$12,025,850

**RAILROAD AND MISCELLANEOUS STOCKS** are very much depressed by reason of the causes already mentioned. The shipments eastbound from Chicago to through points over the trunk lines are comparatively small, but the earnings statements, so far published, by the Pennsylvania and the Erie railroads are very favorable. The transcontinental war continues, but the railroad companies involved have had to advance the rates on account of the increase of traffic. There has been a rupture in the northwestern pool, but negotiations are in progress for a settlement. An early close of the strike (now virtually defeated) on the Missouri Pacific is confidently expected. The general railroad situation would be good but for the new eight-hour movement. The coal companies hold to their agreement well, and the price of their product, which has been very low since the first of January, has been advanced, with a prospect for still higher prices. The improved condition of the anthracite coal trade is partly attributable to the long strike at the bituminous mines of Pennsylvania, creating an increased demand.

The following table shows the highest, lowest and closing prices of the active stocks at the New York Stock Exchange in the month of April, the highest and lowest since January 1, 1886, and also during the year 1887:

	APRIL, 1886.			SINCE JANUARY 1, 1886.		YEAR 1887.

## NOTICES OF NEW BOOKS.

*The History of Bi-metallism in the United States.* By J. LAWRENCE LAUGHLIN, Ph. D., Assistant Professor of Political Economy in Harvard University. New York: D. Appleton & Co. 1886.

This is probably the most elaborate work that has been produced on the most important financial topic of the times. Professor Laughlin was already well known as a sound writer on economic questions, but this book has raised him to the first rank of native economists. Although the title indicates that it is simply a history of bi-metallism in the United States, the author found it necessary to make it something more than that. The main purpose, however, is to suppress some of the theoretical vagaries of the day by showing what the actual experience of the United States with bi-metallism has been, in contrast with the assertions of many writers as to what it may be in the future. This history is elaborated in the chapters on "The Silver Period, 1792-1834," when gold was driven away under the action of Gresham's well-known law; the "Change of the Legal Ratio by the Act of 1834," and the consequent disappearance of silver; "The Gold Standard, 1858-1873," and the subsequent chapters on the "Demonetization of Silver in 1873" and "Silver Legislation in 1878." A chapter is devoted to "The Present Situation," of which the author observes: "The present Secretary of the Treasury has made it his object, evidently, to adhere to the plan of gold payments, if possible. Another [the present] session of Congress will give an opportunity to save the country from a single silver standard, with all the evils which must invariably accompany a fluctuating and unstable medium of exchange." Five intermediate chapters deal with the history of the late fall in the value of silver, which covers the action of Germany, the Latin Union, etc. All of the matter is illustrated with elaborate tables and sixteen charts, some of which are extraordinarily full and complete. This book is recommended to every one desiring a clear idea of the silver question and bi-metallism.

*The American Dollar; and the Anglo-German Combination to Make Gold Dearer.* Pamphlet. By ROBERT W. HUGHES. West, Johnston & Co., Richmond, Virginia. 1885.

The object of this brochure is a compendious presentation of the facts and arguments in favor of the inviolability of the American dollar. The dollar intended is the silver dollar, which never had any considerable circulation up to a few years ago. The author's theory of the decline in the price of silver is that it is the result of a conspiracy among the great creditor nations to raise the value of legal-tender money by disowning silver. This movement was begun by England—the greatest creditor of all—as far back as 1821, and the author acknowledges that its action had no influence in degrading the value of silver. This appears to us to invalidate his argument. He holds that silver should be supported because it is the money of the poorer classes. But there already is all the silver in England that the poorer classes need, and, besides, it is a legal-tender, for moderate amounts. The present slackness in trade is attributed to contraction of the circulation caused by the demonetization of silver in some European countries; but the statistics show that the monetary supply is abundant. The author is well-informed, and he has collected much material of use to the silver men.

*The Study of Political Economy. Hints to Students and Teachers.* By J. LAWRENCE LAUGHLIN, Ph. D., Assistant Professor of Political Economy in Harvard University. New York: D. Appleton & Company. 1885.

This book of 153 pages is the outcome of an attempt of the author to convey, by lectures to students, an understanding of the position which political economy holds in regard not only to its actual usefulness for every citizen but to its disciplinary power and to the qualities of mind which are necessary for success in its study. The interest which the public now manifests in economic studies is the reason given for putting the material into the present shape for the use of the general reader. No special knowledge of the subject is needed in order to understand every part of the book. It will be found an excellent introduction to the study of the science, or would be useful to those who, without following the study, desire to keep *au courant* with its progress and methods. The latter are well explained in the chapter on "Methods of Teaching Political Economy." A descriptive list of the best works on economic subjects by English, French and German authors is given.

---

**BANKERS' OBITUARY RECORD.**

---

**Babson.**—The Hon. John James Babson, a prominent citizen of Gloucester, Mass., died April 13th, aged 76 years. He was for many years Cashier of the Gloucester Bank, was Bank Commissioner of Massachusetts in 1864 and 1865, and served a number of terms in the Legislature.

**Benjamin.**—Dr. R. H. Benjamin, of Riverhead, L. I., one of the best known physicians of Suffolk county and President of the Riverhead Savings Bank, died April 26th, aged 66 years.

**Borie.**—Henry P. Borie, of the firm of C. & H. Borie, bankers, of Philadelphia, Pa., died March 26th, aged 63 years.

**Case.**—Josiah Case, President of the National Bank of Vernon, Vernon, N. Y., died March 14th, aged 64 years.

**Cooper.**—Charles W. Cooper, Cashier of the Allentown (Pa.) National Bank from 1855 to May, 1885, since which time he was its President, died April 11th, aged 60 years. He was the second oldest member of the Lehigh county bar, and was for a number of years President of the Allentown Board of Trade.

**Dearborn.**—Cornelius V. Dearborn, National Bank Examiner for New Hampshire, died at his home in Nashua, N. H., April 18th. He received his first appointment as National Examiner from President Lincoln. He previously held important State offices.

**Dudley.**—George A. Dudley, Treasurer of the Ellenville (N. Y.) Savings Bank, died March 3d, aged 75 years.

**Eddy.**—The death is announced of Thomas F. Eddy, President of the Second National Bank, of Fall River, Mass., and a leading manufacturer of that place.

**Emory.**—Major George F. Emory, Treasurer of the Union Institution for Savings, of Boston, Mass., died April 14th, aged 74 years. He was General Appraiser for New England under the administrations of Pierce and Buchanan, and was appointed Paymaster by President Lincoln. At the close of the war he became Treasurer of the Union Institution for Savings.

**Hawkins.**—F. A. Hawkins, President of the Citizens' Bank, of Noblesville, Ind., is dead.

**Howe.**—Elbridge Howe, President of the Peoples' National Bank, Marlborough, Mass., died at Santa Barbara, Cal., April 5th, aged 69 years.

**Howes.**—Byron C. Howes, Vice-President of the National German-American Bank, of St. Paul, Minn., died April 4th, aged 53 years. He was previously President of the Farmers & Traders' Bank at Hastings, Minn., and made an excellent record at both places.

**Hull.**—Edgar Hull, President of the German-American National Bank, of St. Cloud, Minn., was killed in the terrible cyclone which struck that place on April 14th. Mr. Hull had about an hour before taken out a life insurance policy for \$5,000. He was the son of the President of the First National Bank, of Kalamazoo.

**Liese.**—Conrad Liese, President of the First National Bank, of Alameda, Cal., died April 8th, aged 52 years.

**Mills.**—E. Scott Mills, of the banking firm of H. S. Mills & Son, Kansas City, Mo., died April 10th.

**Moore.**—Horatio Moore, formerly President of the Waltham (Mass.) Savings Bank, died April 26th, aged 76 years. He was also President of the American Watch Company, and had been identified with the business interests of Waltham for fifty years.

**Parsons.**—Joseph Clark Parsons, of Holyoke, Mass., one of the oldest and wealthiest business men of western Massachusetts, died March 12th, aged 72 years. He was President of the City National Bank of Holyoke and of the Third National Bank of Springfield, Mass., and was interested in other enterprises.

**Perkins.**—Aaron Perkins, formerly President of the Mercantile National Bank of Salem, Mass., died April 14th.

**Porter.**—Deacon Eleazer Porter, of Hadley, Mass., died April 13th. He was Vice-

President of the Northampton Institution for Savings and a Director in the Northampton National Bank. He founded two prizes at Amherst College.

**Roberts.**—Joseph Roberts, a clerk in the Philadelphia National Bank for more than thirty-three years, died March 23d. This event was announced to the Directors by the President in language conveying a high tribute to the deceased, which was published by order of the Board.

**Roe.**—George Roe, who was for seventeen years cashier of the Hackettstown (N. J.) National Bank, and subsequently of the North Ward National Bank of Newark, N. J., died suddenly on April 18th.

**Rumsey.**—Julian S. Rumsey, ex-Mayor of Chicago, Ill., and one of her oldest and most respected citizens, who died April 20th, was President of the Corn Exchange National Bank at the time of the panic of 1873.

**Seyton.**—C. S. Seyton, formerly a member of the New York Stock Exchange, was killed in London, Eng., on April 1st, by the accidental discharge of an electric gun.

**Shannon.**—Patrick Shannon, proprietor of Shannon's Bank, Terre Haute, Ind., died April 9th.

**Shirk.**—Elbert H. Shirk, President of the First National Bank of Peru; President of the Citizens' Bank, Monticello; President of the Tipton County Bank, Tipton, and President of the Citizens' Bank, Delphi, Ind., died April 8th.

**Trabue.**—James Trabue, Vice-President of the Bank of Kentucky, of Louisville, Ky., died February 2d, in his 85th year. Mr. Trabue was forty-two years a Director in the above-mentioned bank, and for fourteen years its Vice-President. He was a gentleman of the strictest integrity, upright and faithful, and was loved and respected by all who knew him.

**Trowbridge.**—Clement J. Trowbridge, one of the best known and most popular brokers in Wall street, died March 29th, aged about 35 years. He had been in ill health for some months, and lately sold his seat in the New York Stock Exchange.

#### CHRONOLOGICAL RECORD.—APRIL, 1886.

1. **THURSDAY.**—Decrease in the public debt during March \$14,087,884.—The Atchison, Topeka & Santa Fe obtained a controlling interest in the Gulf, Colorado & Santa Fe Railroad.
3. **SATURDAY.**—Discount rate on commercial paper in New York, 4@6 per cent.; call loans, 1½@2½ per cent.—Discount rate in London on 3 months' bills, 1½ per cent.; on short bills, 2¼ per cent.—Riot and bloodshed occurred among the railroad strikers at Fort Worth, Tex.
5. **MONDAY.**—The Senate confirmed the appointment of William L. Trenholm as Comptroller of the Currency.—A combination formed by the anthracite coal companies for 1886.
8. **THURSDAY.**—Bland's bill for the free coinage of silver defeated in the House of Representatives.—Mr. Gladstone introduced an Irish Home Rule measure in Parliament.
10. **SATURDAY.**—Discount rate on commercial paper in New York, 4@5½ per cent.; call loans, 1½@2½ per cent.—Discount rate in London on 60 days to 3 months' bank bills, 1½ per cent.; short loans, 1@1¼ per cent.
14. **WEDNESDAY.**—A terribly destructive cyclone occurred at St. Cloud, Minn.
16. **FRIDAY.**—The pig iron manufacturers of Great Britain agreed to restrict the output in order to maintain prices.—The Virginia Midland railroad was leased to the Richmond & Danville Railroad Company for 99 years.
17. **SATURDAY.**—Discount rate on commercial paper in New York, 3¼@6 per cent.; call loans, 1½@2½ per cent.—Discount rate in London on 3 months' bills, 1½ per cent.; short loans, 1¼@1½ per cent.
20. **TUESDAY.**—The 136th Treasury call was issued for \$10,000,000 of 3 per cent. bonds, maturing June 1st.
21. **WEDNESDAY.**—The control of the Cincinnati, Hamilton & Dayton Railroad was secured in the Huntington interest.
24. **SATURDAY.**—Discount rate on commercial paper in New York, 3¼@6 per cent.; call loans, 1½@2½ per cent.—Discount rate in London on 3 months' bills, 1½ per cent.; short loans, 2 per cent.
26. **MONDAY.**—The Italian Chamber of Deputies was dissolved.—A treaty of commerce between France and China was signed at Tien-Tsin.—The first grain fleet of the season from Lake Michigan arrived at Buffalo.

## Claudius B. Patten.

CLAUDIUS B. PATTEN, the late Cashier of the State National Bank, of Boston, Mass., was a man of extensive acquaintance throughout New England, and his sad and sudden death on the 22d of May was widely noticed and commented upon in that section of the country.

Mr. Patten had not been well for some months, having suffered from a persistent attack of insomnia and consequent nervous prostration. In March, feeling the need of a rest from duty, he took a short vacation, and, not receiving the desired benefit, was granted a two months' leave of absence. On the 6th of April he left Boston and crossed the Atlantic in his search for health, but was disappointed. After a very short stay in England he returned to his home to try if rest amid familiar scenes might not restore him to a normal condition. Before any real gain could be noted his friends were shocked by the startling news of his death.

As was his custom, Mr. Patten had been out for an early morning walk, and was returning by one of his ordinary routes over the tracks of the Old Colony Railroad. As he entered a deep, narrow cut by the Savin Hill station the first inward express came rushing along at full speed. In his enfeebled condition, Mr. Patten probably became bewildered by the roar and rush of the swiftly advancing train, and, blindly stepping on the wrong track, he was struck and instantly killed.

Born in Kingston, N. H., April 7, 1828, Mr. Patten came from a family who were widely known in that section of the State.

Early in life he went to Boston, and as a boy made himself useful and noticeable to his employers. His manner and habits won him friends, and through their influence he secured a position as junior clerk in the Suffolk Bank, which was then doing its heaviest business. In this institution he rose steadily until he became Assistant Cashier, and in 1867 was invited to the vacant Cashiership of the State National Bank, which office he ably filled until his death.

For several years Mr. Patten furnished the weekly financial article of the Boston *Commercial Bulletin*, and his letters to the Boston *Journal* and to several leading papers in other places have been numerous and interesting. They were mainly the outcome of a life-long habit of pedestrianism, which gave him opportunity to indulge that faculty of observation which he fully possessed.

The papers on "Practical Banking" which have been appearing in the JOURNAL are from his pen, and are his best as well as his final contributions toward a long-cherished plan for aiding the army of young men who are starting in their career as bank clerks, and who he believed should have every facility given them for improvement and progress in their profession. The articles have aroused a wide-spread interest in banking circles, and have received unstinted praise, not only from clerks and junior officers, but from bankers of extended experience as well. Mr. Patten had fully

THE UNIVERSITY OF CHICAGO LIBRARY

completed his work on this series of papers before he started for Europe last April ; they are the result of over twenty years' practical experience in a bank, supplemented by careful study and research.

Early in 1887, "Practical Banking" may be expected in book form. The articles will be carefully revised and arranged under topical heads.

Beside his writings, Mr. Patten was not sparing of personal effort when young men sought help from him, and many such have grateful memories of his advice and aid.

None of his literary work has appeared in book form, except his notes of English travel, gathered in a vacation tour in 1882, which, under the title of "England : as Seen by an American Banker," have met with a large sale and attracted much attention as being so evidently the result of independent, thoughtful observation as well as for the direct and easy style of expression which is a characteristic of all his writings.

In his extended business career Mr. Patten's stanch integrity and keen, careful attention to the interests of his employers, with an always cheerful and genial manner, won for him a firm reputation and a large circle of warm friends.

In his relations to the officers and clerks of his own bank he lived steadily up to the ideal of courteous, considerate association so fully set forth in his writings, and no unpleasant recollections mar his memory with those who were most intimately associated with him in business life.

# RHODES' JOURNAL OF BANKING.

Vol. XIII.

JUNE, 1886.

No. 6

MR. C. C. BONNEY, of Chicago, has added one more to the many services for which the business men of the country are indebted to him in formulating a bill for the purpose of establishing Courts of Arbitration under the authority of the United States. It is proposed that every Circuit, District and Territorial Court of the United States shall appoint one or more persons to act as arbitrators of such matters within the jurisdiction of these Courts as shall be submitted for arbitration. Evidence is to be heard and the proceedings to be had in a summary and informal way. The arbitrators are to be sworn officers of the Court and their decisions will be filed in the Appointing Court, having the force and effect of a final judgment of such Court. No appeal will be allowed, but the Court may modify or correct the judgment to make it conform to the Constitution or laws of the United States, or can set it aside and recommit the matter for a further award in case the judgment may appear to have been procured by fraud, accident, mistake or like wrong. Finally, provision is made for the costs of the arbitration, for rules to be formulated by the Supreme Court to secure uniformity of practice and procedure, etc. It is not necessary to argue the superiority of Courts of Arbitration over the regular Courts of law in the settlement of most commercial cases in speed, cheapness and the procurement of substantial justice. But neither this bill nor any other will meet a fair consideration in Congress unless it is urged upon that body by the commercial exchanges throughout the country or some other powerful means. Mr. Bonney makes the following points in support of his bill: 1. The proposed system of arbitration could be put in operation throughout the United States at once. 2. It would effectually test the supposed public demand for Courts of Arbitration. 3. It would enable the parties to a controversy to control the expenses of its adjustment, and to avoid the present excessive expenses and delays of ordinary litigation. 4. The machinery of arbitration would be simple and economical. No new system of forms and proceedings would be required. 5. Such Courts of Arbitration would at the same time practically operate as Courts of conciliation

for the settlement of controversies. 6. Safeguards against oppression, fraud and abuse of power are provided, and the actual enforcement of decisions secured, by the power of the Government, if necessary. 7. The reports required would show the utility of the system; also its defects, and what further legislation would be expedient. And, finally, the bill provides for a competent guide of the proceedings in every locality, and without such a guide no system of arbitration can be brought into general use.

OUR PRO-SILVER FRIENDS never tire of citing the example of France which country keeps afloat a much larger proportion of silver to gold than this country. France was found with this silver already coined and in circulation at the time when that metal began its great decline in value, in 1873, but it soon afterward, in common with the rest of the Latin Monetary Union, ceased the coinage in order to preserve its gold. The matter has taken a new phase lately, but no one is likely to hear of it through the silver organs. France has been drawing gold steadily from this country, from England and the rest of the world, and the Bank of France has been piling up its reserve at an astonishing rate. It was given out recently that the coin was needed in order to facilitate the new Government loan, but that has been awarded and still the gold continues to go instead of coming back. The rate at which the reserve of the Bank of France has been growing is shown in millions of francs as follows :

	Gold.	Silver.
January 2, 1885.....	1,001	1,028
January 7, 1886.....	1,151	1,062
April 1, 1886.....	1,280	1,106

These figures come down only to April 1st, and it is certain that the amount, especially of gold, is much larger now. While this change has been going on, we find that silver is down to the lowest price (in gold) that it has ever reached. It will be seen that the policy followed by the United States regarding silver, or at least the policy so strenuously advocated by the silver men, is as different from that followed by France as black from white or folly from wisdom.

THE EVILS ARISING FROM THE MANAGEMENT of the savings banks by the Government, or, in other words, of the postal savings bank system, are fully and powerfully stated in a recent number of the *Montreal Weekly Herald*. It is shown that the Government allows four per cent. per annum on deposits, which is one or two per cent. more than the other banks can afford to pay. The effect is that the banks, especially in the lower provinces where the Government banks are most frequent, are drained of their deposits, so that hardly any of them are as well off as they were ten years ago. True, the deposit of each person

in the Government banks is limited to \$3,000; but persons of wealth are in the habit of depositing their money in the names of each person in the family, and by this means find an easy, steady and profitable investment for surplus capital. But, it may be said, if the Government and the depositor are both satisfied the banks have no right to complain. The difficulty is, however, that the Government is a loser by the operation, although the Administration may continue the present arrangement for ulterior purposes, the same as France is doing now. The Canadian Government could actually borrow the money it needs abroad at a considerable lower rate than it now pays on deposits at the same time saving the expense of managing the banks. In that case the country would gain by the new capital introduced and the banks would not be ruined by the unfair competition of a concern that is independent of the laws that govern private business. There can be no doubt that similar evils to those mentioned would grow up under a postal savings system in this country.

---

THE HOUSE OF REPRESENTATIVES, contrary to the desire of the Treasury Department, has passed a bill to establish a Sub-Treasury at Louisville, Ky. The principal argument in favor of the measure was that the proposed institution would assist the distribution of silver dollars. It is Treasurer Jordan's opinion that the people of that district can at present obtain all of these coins that they desire at a dollar each. It is hard to tell just what the views of the silver men are on this matter, as they appear to be as blind to plain facts as they are deaf to reason, but it has been surmised that they really believe, in spite of the past failure of all attempts to get the coins into circulation, that the Department has never actually exerted itself to that end. We hardly think this is their opinion. True, they insist that the people want the silver coined; but that is a different thing from wanting the coins. The great body of the advocates of the silver coinage believe in it for other people—not for themselves. They believe in it theoretically, but, when it comes to practically carrying ten silver dollars in their trousers pockets they would rather leave that to the man across the street or in some other State.

---

THE GOVERNMENT ACTUARY finds that the average price at the New York Stock Exchange during February for United States four-percents was 124.773, "ex-interest," and for four-and-a-half per cents 112.2. At this rate the purchaser of the former realizes 2.524 per cent. on his investment while the latter yield only 2.162 per cent. A contemporary argues that this fact disproves the statement that Governments can always borrow money more cheaply on long loans than on short ones. We do not uphold any such broad statement, but the fact cited proves nothing to the purpose either one way or the other. The market price of United States bonds is very largely governed by their use as a basis for National bank circulation. The banks are allowed to issue \$900 in

notes against a deposit of each \$1,000 in bonds, face value. At the prices named above \$124,773 would have to be invested in four per cents in order to issue \$90,000 circulation, while an investment of \$112,200 in four-and-a-halves would suffice. This is one reason why the fours do not sell higher. Another reason is that for many investment purposes a bond at a high premium is undesirable.

---

CONGRESSMAN WARNER HAS A SOMEWHAT NOVEL SCHEME for the working of the proposed postal savings banks which is worthy of consideration by the friends of the bill now in the hands of a committee of the House of Representatives. Not that we think that that measure should be passed ; but, if it is, General Warner's plan would obviate many objections to it. He would make the Government responsible for the collection, the safe-keeping and interest of the money of the depositors, but there its function would end in the matter. The money he would turn over to National bank depositories who are to pay as much interest for its use as the depositors would receive. The amount to the credit of each depositor would be limited to \$250. By this means the Government would be prevented from going into the banking business to a greater extent than it is engaged in at present. Also, the postal banks would have a greater assurance of permanence than if the deposits were to be invested in United States bonds.

---

AT A MEETING OF THE INDIAN SILVER ASSOCIATION, held at Simla on May 26th, the cables say, Sir Auckland Colvin, Financial Member of the Indian Council, declared that the future of India depended upon England's adoption of bi-metallism. This may be fairly taken to mean that in order to save India's finances from ruin England must do something toward rehabilitating silver by means of an international agreement. And yet our strongest silver men are eager to have us adopt free coinage of silver in order to compete with India. The facts would indicate that most of these people do not want bi-metallism. They want a sole silver standard, irrespective of the business interests of the country, in order to support the silver mining industry and with a vague hope of being able to pay off their mortgages with cheap money.

---

CONSIDERABLE IRRITATION EXISTS throughout the business community on account of the determination of the Treasury Department to issue no more small bills. It ought to be well understood that the object of the Government is to make room for the silver dollars in actual circulation instead of piling the coins in the already overcrowded Treasury vaults. Certainly, if Congress insists, in spite of common honesty and common sense, on the continuance of the coinage, the only thing to be done is to give the dollars every chance to circulate. For our part, we should like to see the \$5-notes withdrawn, so that the question would be thoroughly tested whether or not the people will tolerate the pretended "Dollar of our Fathers" in actual use.

## THE FOREIGN TRADE.

The present condition of our foreign trade displays a marked contrast with its condition five years ago. At that time the exports of merchandise from this country, especially of breadstuffs and provisions, were immense while the imports were very moderate in amount. Now the case is reversed, the exports, especially of the commodities mentioned, being comparatively small and the imports of general merchandise large. For each of the six years previous to and including 1881 the balance of merchandise exports over imports was very large, amounting to about \$280,000,000 in 1881, \$168,000,000 in 1880, \$265,000,000 in 1879, \$258,000,000 in 1878, \$151,000,000 in 1877, and \$80,000,000 in 1876. This result was largely due to the opening up of railways in the West, thus bringing new arable territory and its products within reach of Europe. As a natural consequence the people believed these conditions would continue to exist since they had prevailed so long. Many newspaper articles—long-drawn and apparently well-considered—and doubtless much legislation were based upon that conviction.

An instance in point we find by referring to RHODES' JOURNAL OF BANKING for the month of April, 1881, in which the following was quoted from a New York newspaper :

"This country is not only sending to other countries a larger quantity than ever before of the necessities of life but is doing a larger part of the work to prepare them for use. The world is beginning to pay us not only for raising wheat but for grinding it; not only for raising cotton but for making it into cloth. As these changes go on the amount of money which this country will require for its products and its labor must surely and rapidly increase. At the same time, owing to the constant development of our industries, the amount which we shall find it advantageous to pay to foreign producers for articles which are also manufactured here will steadily and surely decrease."

Following is part of the comment made at that time by the JOURNAL on the above :

"This has only been quoted here as an example of the loose way in which such matters are often treated . . . So far as it gives the impression that the country is in a prosperous way there is nothing to quarrel with; but let us examine for a moment the exact idea that is conveyed in the language quoted. It is simply this: The country will continue to export a constantly increasing excess of merchandise, and receive money in exchange. Now, the excess for the year ended February 28th last, as shown, was over \$225,000,000. To take it moderately, so as not to lose our breath, let us suppose there was no increase, but that the movement continued at the same rate for ten years. We should then have exported merchandise in excess of the imports to the amount of \$2,250,000,000 and received coin in exchange. Having thus about exhausted the supply of gold in circulation in the world, it would only be a matter of a few years until we had all the silver also . . . The condition of things anticipated in the — never has been and never can be realized in any country."

The above is not cited for the purpose of showing that we were right while others were wrong, but in order to show how very far from the truth a man will come who judges in matters financial and economical that any existing conditions will remain forever or for a long period unchanged. Constant change is the law most noticeably at work in this department of the commercial world. When industry and commerce are most flourishing and prices

THE UNIVERSITY OF CHICAGO LIBRARY

of real and personal property are at the highest point, then is the time for the prudent man to curtail his enterprises, for a period of depression is not far ahead. On the other hand, when the tide of business is at the lowest ebb and prices most depressed, then is the best time to invest in view of the revival of prosperity, which is sure to succeed. These periods, or waves, or cycles in business have been made the subject of calculation by numerous writers and besides lie within the experience of every business man.

The foreign trade is as subject to fluctuations during yearly periods as failures in business, prices of stocks, etc. It is subject to laws which absolutely prevent such a balance of trade in merchandise as to drain any commercial country of its coin so long as that country does not substitute some other medium, such as paper, in place of coin.

In view of the state of our foreign trade only five years ago, and of what the newspapers were saying in regard to it, it is interesting to notice the change in tone that has taken place within about a year or two past. We find that, owing to a number of causes, our exports of domestic products have been falling off largely, and consequently the opinion has been gaining ground that we have lost our foreign markets for wheat, provisions, etc., permanently. The value of the breadstuffs exported during the ten months ended April 30th was only \$95,584,748 against \$135,931,429 in the corresponding time last year. These figures may be compared with \$288,086,885 for the full fiscal year 1880, and \$270,332,519 for 1881, and it will be seen what is the extent of the change in the trade in these commodities. The English authorities give some statistics to the same effect. From October, 1885, to March, 1886, Great Britain imported from the United States only 5,984,000 cwts. of wheat against 10,264,000 in the corresponding six months in 1884-5. But from October, 1885, to March, 1886, 7,486,000 cwts. were imported from India against 4,024,000 cwts. in the same six months of the previous year.

It is on account of such a showing that we read articles in foreign papers with such headings as this: "Has American Decadence Set In?" They feel justified in telling us that

"it is evident that our neighbors [*i. e.* the Americans] are beginning woefully to find that their late contemplations, showing themselves to be independent of the rest of the world, with all the outer barbarians dependent on them, was after all nothing more or less than a delusive dream."

There is some justice in this rebuke, for, as has been mentioned above, the public journals for many years were constantly harping on the tune of our independence of "abroad." This did considerable harm, as from the legislation in this country growing out of it was developed the retaliatory policy of both France and Germany in discriminating against the products of this country.

But it is just as foolish on the other hand to argue that our foreign trade will continue long in its present condition. If we keep our currency sound there is no danger whatever of losing any considerable part of our gold. If we raise a surplus of wheat and cotton these commodities are certain to find a market abroad. To be sure, it appears as though a new and lower range of prices has been permanently established for these products, but it will not take long for American farmers and planters to adjust themselves to the new conditions; in the meantime the people will have the benefit of the reduction.

### BANK LIBRARIES.

There is a superstition that has long haunted mercantile circles both in this country and in England—though on the Continent it never existed—that a man cannot know much about business and at the same time know much about anything else.

There are certain business men, including a due proportion of bankers, who believe of commerce—as certain Mohammedans believe of their religion—that it contains everything that is good, and therefore it is sinful to know anything outside of it. The most usual form which this curious idea takes manifests itself in a mild contempt for the class of persons whom a late Secretary of the Navy briefly characterized as “them lit’rery fellers.”

Indeed, nothing seems to strike a certain class of old bank officers as more amusing than the notion that anything can be learned about the banking business by reading books on the subject or journals published in the interest of the banking community. “*They* never learned anything out of books; not *they*, indeed. Everything *they* know they learned *practically*.”

Oh! that word “practically;” what a city of refuge it is for idleness, ignorance and indolence.

We are far from denying that there have been very able financiers who made no pretensions to being what are commonly termed educated men. Most people can call to mind business men of the first rank who could scarce do more than write their names. But our contention is that such men are great, not because of a deficient education, but in spite of the deficiency, a position which is further borne out by the fact that these men are most strenuous in their efforts to secure for their children (and often they go far beyond their own children) that education of which they themselves have so sorely felt the need. These are not the men who are afflicted with the superstition just mentioned, not because they have been taught better by others but because they rise above it by virtue of the greatness of their own character.

In making a plea, then, for bank libraries and for a cultivation of a taste for reading among bank men we feel that we shall have the support, not only of those who were so fortunate as to have enjoyed the advantages of a collegiate training, but also of those truly practical men who are quick to avail themselves of everything which may give one an advantage in the race.

It may be as well, in the outset, to answer one objection which may be formulated as follows: The banking business is one peculiarly hedged about by law and the forms of law. A mere bank man, therefore, constantly reading cases involving banking law and even treatises on the subject is very likely to become his own lawyer, and consequently, as the saying goes, will have a fool for his client. Then comes in that old worn-out couplet about a little learning being a dangerous thing, etc.

In order to reply to this objection it will be sufficient to restate the distinction between a partial knowledge of a subject and a superficial knowledge, the one being a thorough knowledge of a part, the other an

imperfect knowledge of the whole. This distinction is enhanced when a person having only gained the latter kind of knowledge mistakes it for the former.

Take, for example, some well-known treatise, such as "Morse on Banks and Banking." While it may be readily admitted that this excellent work does not contain a tenth part of the law of banking, yet it would surely be idle to deny that, if the reading of it would be highly beneficial to any person engaged in the banking business, the study of it will still be more so. The same might be said of "Daniel on Negotiable Instruments" and the standard works of Story and Chitty.

The attentive reading of such books, the productions of systematic knowledge and trained minds, tends greatly not only to increase the reader's fund of information but also to clarify his ideas and to give him an orderly view of things. Without becoming a lawyer he falls unconsciously into the legal way of reasoning, and of a truth Lord Coke spoke wisely to King James when he said that the reason of the law was not "natural reason." It might take wisdom beyond Lord Coke's to show why it should not be.

It is difficult for any one not the responsible executive head of a large and active bank to realize what a multitude of questions are constantly arising demanding immediate decision—questions which require the most accurate and thorough knowledge of banking law.

But, apart from legal treatises, there are books which treat of the business of banking in aspects scarcely less important.

Where can one find a bank officer who is so wise that he has little to learn from the political economists, among whom may be mentioned (not to disparage others of equal ability) Adam Smith, John Stuart Mill and Mongredien?

There are books that treat of all the practical details of the business, such as Jevons' "Money and the Mechanism of Exchange," Gilbert's "Principles of Banking," not to mention the admirable series of articles now running in the JOURNAL.

In regard to the National banks, viewed as a system, the reports of the Comptroller of the Currency are a mine of information.

The history of the note-issues of the United States Government, as given by the Hon. John Jay Knox in his work on "United States Notes," is well calculated to instruct those of wide experience in handling the currency of the country, as well as the best informed in monetary affairs.

The time has gone by when a banker could sit in his easy chair and let the accumulated treasure under his charge do his thinking for him. That might have done very well in olden times when money was hard to get and difficult to move from city to city, but it does not do in these days of the telegraph and telephone, of coupon bonds and aggregated capital.

If the young Cashier of to-day wants to keep his bank up with the times and to keep in the front rank he must read and study and think. He must at least buy the best books on finance, banking law, and practical banking, and devote some time to careful reading and intelligent study. Life is too short for even the brightest man to learn everything behind the counter or at the ledger; and, besides, the knowledge gained by experience only is apt to be dearly bought.

## TEXAS BANKS AND BANKERS.

\* A REVIEW OF THE BANKING BUSINESS BY A. HANSL, OF SAN ANTONIO.

The average Texas banker cares little about financial economy except so far as it directly bears on his pocket. He is not very solicitous about our money standard, but wants plenty of money in circulation, it matters to him little what kind. The majority are for silver, next come bi-metallists, and lastly the gold advocates, found mainly amongst the National banks. Only a few are so far behind the times that they have never given a thought to a subject so vital to their interests. But many state that they have not given it much consideration, not even sufficient to form an opinion either way.

Occasionally one meets with some sound and terse remarks. A certain bank Cashier in north Texas says, with great justice: "We are gold men, but the majority of our people are for silver until we pay them silver for their checks, when they at once become gold men or greenbackers."

The opinion most current seems to be that the present coinage Act will do for several years to come, until the circulation of silver *per capita* will be nearer that of the States forming the Latin Union. The tendency towards free coinage of silver is more apparent the closer a report comes from a mining district.

It cannot be gainsaid that the study of financial subjects, beyond those turning up in daily home business, is an exception and not the rule with our bankers. It certainly would be a great boon to the Texas banking fraternity if the knowledge of true banking were disseminated more thoroughly by the use of leading journals and standard publications. It is very doubtful whether a moderately complete banking library is owned by a single bank in the great State. Daniel, Morse and Story, indispensable in the East, are almost unknown authorities here, whilst such names as Jevons or Cernuschi would prove sore puzzles to ninety-five per cent. of our men of finance. Better information would lead to a better system, and gradually many abuses or foolish usages would be done away with. No wonder one meets with the most absurd views, either on practical banking or our banking laws, in many who have followed the banker's calling for years and should by this time have routine and law on their fingers' ends.

Such a thing as promptness in meeting home paper is rare indeed. Rich men will let their paper go to protest with the greatest equanimity because their wealth is well-known and a protest cannot hurt them. Instead of having the money ready at maturity, or asking that the time be prolonged in which to pay, the makers will let the day go by without troubling themselves, leaving it to their banker, who will hunt them up. It is the fault of the banks if they allow such business and countenance the disregard of the most important obligations by their customers. They should be educated to better banking ways.

The formation of the Texas Bankers' Association was a step in the right

\* From advance sheets of a work on the resources and needs of Texas, to be published shortly.

direction. It is to be hoped that the banks will take concerted action and suppress all prevalent financial nuisances.

It is also advisable that the several banks of our larger cities should combine for the adoption of such measures as will make business more uniform and pleasant. Capital will go a certain distance and no further. When that point is reached good system and judicious management will insure the final success of a bank.

It is because money is made so easily in the banking business and competition so small that so far bankers could do without thorough information; let competition increase and they will be forced to study their calling more closely for their own protection. Very few seem to have an idea that finance is a science not learned in a day or without close application. As an evidence of what the scientific application of banking will do to advance the interests of one city more than another, take Houston, with a population of nearly 35,000, which is fast outrivaling Galveston and becoming the greatest commercial city of Texas. With all its important business interests and apparent chances of future greatness, Galveston has only two banks with an aggregate working capital of perhaps \$500,000.

Two old, well-established institutions failed in Houston within a year, but gross incompetency and reckless management were the cause of both failures—not the want of patronage.

The following is a list of the population, number of banks and their banking capital in six of the largest cities in Texas:

	<i>Population.</i>	<i>Banks.</i>	<i>Capital.</i>
Galveston.....	30,000	7	\$6,500,000
San Antonio.....	35,000	9	1,500,000
Dallas.....	30,000	6	750,000
Fort Worth.....	22,000	5	1,000,000
Austin.....	20,000	5	500,000
Waco.....	15,000	5	500,000

Excepting a few small concerns included in the above table, all are prosperous, having large deposits.

One million dollars more of banking capital would find room at Houston and bring satisfactory returns. That city is doing five times more business than San Antonio, the largest city in Texas, with nine banks.

Houston and Galveston are the financial outlets of the State, where all interior bankers are forced to keep funds to draw against. These balances are a considerable item, at Houston footing up to \$500,000 every day in the year. The vast amounts of exchange unloaded or purchased there by the other Texas banks, together with the returns of all kinds of produce shipped from and drawn for, amounting to 7,500,000 bales of cotton actually bought and 646,000 bales handled during the year, is another important revenue to the local banks, making it a leading exchange market.

More banking facilities are greatly needed at Houston, and those who will relieve it in that direction can rely upon a liberal patronage and hearty support.

The two banks remaining have had to discard many indifferent accounts, because of their physical inability to cope with all the business pouring in on them since the demise of the other institutions. This is surely a sign needing

no comment and should be made a note of in the East, where fortunes lie almost idle.

A million dollars invested in the banking business at Houston—not by one but by the establishment of several banks—will pay from 8 to 10 per cent. during the first year to those furnishing the money. The prospect of such a small percentage is no great inducement to home capital used to 15 and 20 per cent. profits. Eastern capital, however, would find it a paying investment.

Banks in Texas are often started in the following manner :

A country store-keeper enjoying the confidence of the community, and having a safe conveniently displayed, becomes the depositary of his townsmen, who use his store as a place of rendezvous, where they do their talking. After a while checks on him begin floating about the country, reaching the nearest banking point, making the man's name known. Soon the city banks avail themselves of the chance and pester him with an unprofitable collection business. One thing begets another, and almost unknowingly our friend finds himself the owner of an exchange office in connection with his store. This in time grows into an independent bank, which, after a few years of existence, interests others, obtains a charter, and one nice day opens its doors as a full-fledged National bank, whose crisp, new bank-notes are the pride of the county.

Sometimes merchants, having made an independent fortune, sell out, and, desirous of being of some consequence in the world, or still too young to think of doing nothing, they commence the banking business in their country town, or remove to a place where they can better enjoy their own importance.

Only rarely are National banks brought to life independently by the combined efforts of citizens themselves; if so it happens in the larger cities of the State. Generally they are the outgrowth of successful private institutions.

There are many National banks in Texas, but the public feeling is very frequently against them; it must be on account of the democratic instincts of her people—though not necessarily considered wholly in a political sense. Though there are two hundred National banks in the State their actual working capital is small.

According to our State law the owners of a private bank are liable to its creditors to the full extent of their individual wealth. Therefore some private banks having quite a small working capital, but whose partners are rich in property, cattle or lands, are quoted as being very wealthy by mercantile agencies. This often detracts from the business of banks that have a great deal more money, because outsiders cannot be made acquainted with the true facts.

A law to regulate the operations of private banks is very necessary if only to place them within the pale of just taxation, and some sort of State supervision as to examinations, etc. As it is now they are often quoted immensely wealthy—*i. e.*, far above their actual worth—but when they render their assessments their means shrink far below the capitals of National banks, who cannot hide before the law.

The number of banks showing net earnings not in excess of 12 per cent. are insignificant. From 15 to 18 per cent. is the rule. A few institutions in 12 per

cent. interest sections, with big deposit lines and heavy exchange rates, realize from 20 to 25 per cent. on their capital.

The writer's opinion is that fewer banks, with a larger aggregate capital, would be more beneficial to our State.

Little paper is bought by the banks outright, but they will at times make loans secured by other paper. Loans are generally short, four months being called long and sixty days the favorite time. Interest is always taken off at once.

Only a small percentage of paper being paid when due, many loans are prolonged as often as three times, and interest deducted every time in advance. One needs little skill in figures to conclude that such proceedings at high rates, always upon A1 security, must prove very profitable—in fact, a gold mine—to the bankers, explaining the large percentage of net profits heretofore mentioned. Nor can one fail to perceive that it keeps the borrower's nose everlastingly on the grindstone.

The writer knows of a loan to a well-known cattle man amounting to \$15,000, at  $2\frac{1}{2}$  per cent. per month, for one year, the security being the borrower's cattle, numbering 5,000 head, which were turned into the pasture of the man furnishing the money and kept there under his eyes until the last dollar was paid back. What do you say to this transaction?

The great crops of the State, grain, cotton, cattle and wool, are moved by the agency of the banks, who furnish part of the funds necessary to raise them, taking chattel mortgages, liens or bills of sale from the producers to secure themselves. When the produce goes into the hands of local buyers or commission men, after having been given an adequate margin and a pledge of some sort, these banks advance the money to buy, or rather pay, for what they themselves have already bought. This way of doing business is not as safe as it could be wished, but many million dollars' worth of produce is moved in this manner. In payment of these advances the borrowers turn in bills of lading exchange on eastern markets, which is handled at from  $\frac{1}{4}$  per cent. to  $\frac{3}{4}$  per cent.—sometimes even 1 per cent.—discount, according to locality.

It is the custom for the produce men to arrange with their bank for a certain line of overdrafts, paying the ruling rate of interest on daily balances.

An allowance of interest on credit balances is not known in the interior, and there are only few banks paying interest at all either on open account or on certificates of deposits running a specified time; if they do, the rate allowed is from 3 to 4 per cent. per annum.

---

### REDUCTION OF BANK-NOTE CIRCULATION.

Incredible as it may appear the accounts from Washington say there is no chance for any legislation of importance on financial subjects during the present session. Two bills have been passed in relation to National banks, but they are of minor importance. On the weighty matter of providing against the reduction of the National bank circulation no progress has been made whatever. We looked for at least the passage of the bill to allow banks to issue notes up to the par value of the bonds held to secure the circulation, but even this measure, which was introduced in both Houses early in the session, and against which no objection of any weight was brought, has been smothered

in the committee rooms. In the meantime the circulation is rapidly disappearing.

The only apparent excuse for allowing matters to take their present course is to make room for silver dollars. Surely a worse reason cannot be imagined. To dispense with an honest, safe and convenient form of currency for a dishonest, fluctuating and inconvenient one is an act of folly only to be accounted for by the fact that public interests are sacrificed for private gain.

The rate at which the circulation is decreasing will probably be accelerated hereafter unless Congress does something to stop it, because it is presumed that the Treasury Department will pay off the debt as quickly as the growing surplus in the Treasury will allow. As was shown in the article, "Policy of the Treasury Department," published in the April number of the *JOURNAL*, the Secretary has been solicitous to keep the Treasury on a gold paying basis, and to this end the gold reserve has been well protected. But when once the Treasury reserve is on a proper footing—as at present—the only thing to do is to pay off the debt with the surplus. This surplus has been accumulating rapidly of late, the receipts of the Treasury from customs and internal revenue being on the increase and payments on the decrease. The total receipts of the Government from July 1, 1885, to May 1, 1886, were some \$275,000,000 against \$267,000,000 in the corresponding time of the previous year. On the other hand the expenditures from July 1, 1885, to May 1, 1886, were only \$207,000,000 against \$224,000,000 in the same period of the previous fiscal year. These figures show an accumulation of surplus of \$68,000,000 during the expired ten months of the current fiscal year, while only \$40,000,000 of bonds have been called for payment. It is evident that, unless some of the extravagant pension bills or other schemes for dissipating the public treasure are passed, the bonds will have to be paid off more rapidly in future, with the consequence of wiping out a corresponding amount of National bank circulation.

The amount of the United States bonds held by the Treasurer to secure the circulation on May 8th was only \$283,820,450 against \$332,469,500 on March 1, 1885, a decrease of \$48,649,050 under the present Administration. The following table will show the decrease in the amount of National bank-notes outstanding during the same period and the actual decrease in circulation by reason of the payment of United States bonds :

	<i>Mar. 1, 1885.</i>	<i>May 1, 1886.</i>	<i>Difference.</i>
National bank circulation outstanding.....	\$324,183,607	\$313,542,584	Dec., \$10,641,023
Legal-tender deposit to reduce circulation.	41,411,232	58,220,043	Inc., 16,808,751
Net circulation .....	\$282,772,315	\$255,322,541	Dec., \$27,449,774

Here we see a decrease in the paper circulation of \$27,500,000, or about 10 per cent., within the past fourteen months. But the movement has been going on for a much longer time.

On February 1, 1881, just before the passage of the famous refunding bill which was vetoed by the President, the net amount of bank circulation was \$322,000,000, so that since that time the decrease has been \$67,000,000. This shows at what a rate the currency, which taken altogether is the most satisfactory the country has ever had, is going out of existence.

**Methods and Machinery of  
\*PRACTICAL BANKING.**

CONSISTING OF BRIEF DESCRIPTIONS AND SUGGESTIONS RELATIVE TO THE  
METHODS OF CONDUCTING THE BANKING BUSINESS; WITH APPROVED  
MODELS OF BLANK BOOKS AND FORMS FOR THE USE OF  
BANKS OF DISCOUNT, SAVINGS BANKS, ETC.

[Prepared expressly for the JOURNAL by the Cashier of a long-established bank, who has had over twenty years' experience in practical banking, and who has always sought for better and safer methods.]

**CURIOUS INCIDENTS AND QUESTIONS IN BANKING.**

The value of these papers on Practical Banking will be increased by the introduction of as many illustrative cases of practice in every-day banking of a novel and instructive type as the limits of the series will allow. It is to be hoped that the precedents in the way of action in the cases given, which are here presented, may invariably prove safe guides.

(1.) The draft was sent me for collection by a bank in New York—sent to me in Boston in the regular course of business. It was drawn at sight by some one in Washington, bore several endorsements, and the drawee was addressed New York—that is, the draft was apparently at first regularly drawn on a drawee in that city or who was supposed to be there. But when the draft reached me there had been written in pencil, underneath the name of the drawee, without any obliteration of his New York address, "Hotel Brunswick, Boston." My Messenger presented the draft there for acceptance or payment, and was told that there was no person there of the name sought for—nothing known there of the drawee. What should be done with the draft under these circumstances? I ordered it protested. The fact that it was drawn on a party first set down as in New York, and not otherwise addressed, except in a pencil memorandum underneath, saying, "Hotel Brunswick, Boston," did not justify or render it safe for me to omit to protest in Boston. The New York bank which sent the draft to me in this shape—that is, with a Boston address noted upon it—could not expect me to do otherwise than protest it if not paid, though it had omitted to give me special instructions and had not crossed out the first address when it permitted it to go forward through me to its second address in Boston.

An unaccepted draft may be said to be protestable where the drawee has his legal place of business—his legal residence—no matter how the drawee may be addressed in the matter of his residence.

(2.) The house was failing—in fact *did* fail before 2 o'clock of the day of which we write—and has never paid more than 25 cents on a dollar. I held one of its checks for \$5,000, which we had taken the day before in payment of one of its notes, and had sent the check in through the morning's clearing. Rumors soon reached me that the house was in trouble, and this rumor was confirmed when, just before 1 o'clock, the time when clearing-checks must be returned or considered paid, the Cashier of the bank upon which it was drawn called upon me and asked for further time on it—to hold it, say, till 2 o'clock, as there was not balance enough in the bank to meet all the checks of this name that had come through the clearing. "There is not balance enough

\* Practical Banking Series—Part XXIII.

These papers will be continued through the 1886 volume of the JOURNAL. Copyright, 1884. All rights reserved.

just now," said the Cashier, "though there may be before 2 o'clock." I was, of course, ready to give him permission to hold as requested, for a chance to get my pay was better than receiving the check back unpaid. And this chance was made the most of by allowing the check to remain with the bank upon which it was drawn, for while it remained there uncollected it might be said to be steadily pressing for payment, and, while thus remaining presented, no checks from any other quarter could step in ahead and be collected.

An important point in Clearing-House banking is here brought out which every careful banker will observe and clearly understand. As the hour of 2 o'clock approached, without my hearing anything from my suspended check, I called upon the bank upon which it was drawn. I found the bank was still holding all the checks that had reached it through the Clearing-House that had been drawn by the house that was in trouble—holding them on permission from the owners, because the house in question had not balance sufficient to meet the entire lot.

And this brings out another important point in banking in Clearing-House cities :

First, there not being balance enough to pay *all* these clearing checks, the bank could not pay any of them.

Second, while all these checks remained in the drawee-bank presented through clearing it could not use any portion of the balance against which they were drawn to pay any check of the same name, large or small, which might be presented at the counter of the bank.

As the hour of bank-closing had nearly come round without bringing to the drawee-bank any reinforcement of funds to meet the suspended clearing checks, it came at once to the conclusion to send them all back unpaid to the several banks which had charged them in, who had all given further time on them, and were now anxiously waiting to learn their final fate.

And now the order and method of the return of this immense batch of failed checks became questions of the first importance. The questions were at once solved in the following manner—the only correct manner, and the slightest divergence from which would have thrown upon the returning bank ugly responsibilities. The Messenger was summoned. The dishonored checks were handed to him, and he was told to take them back to the banks which had charged them through clearing in the precise order and method in which he was accustomed to take back unpaid clearing checks—swerving not a hair from his accustomed routine movements when such business was on his hands. The result was that some banks—those nearest to the drawee-bank got hold of the suspended checks earlier than others more distant in location.

All the bank holders of these checks were now on the *qui vive*, for the failure had become town talk. There was a rush for the intact balance which stood to the credit of the failed house at the bank which had sent back all the clearing checks—a rush by the banks holding these refused checks. Those nearest to the drawn-upon-bank got hold of their returned checks the quickest, and were therefore able to present them over the counter and collect them as long as the balance held out, leaving nothing for the later presenters. First come first served. The Paying-Teller could not refuse to apply this rule as the checks came pouring in upon him. The action of the drawee-bank was in accordance with law, custom and common sense, and should be followed by all banks similarly placed.

Some banks have argued that clearing checks drawn upon an inadequate balance should be paid in the order of their dates as long as the balance holds out, the later dated checks being the ones to be finally returned as not good when the balance was exhausted. But this is not correct banking. Other bankers have urged that the inadequate balance should be divided proportionally among the presented clearing checks. This is also incorrect banking.

(3.) The check was drawn on a Boston bank for \$20,000. It was sent to me, in Boston, for collection by a bank in New York. The New York bank had received it from a corresponding bank in Toronto, Canada. It lacked the endorsement of the original payee, a house in Toronto. Unable, of

course, to collect without this missing endorsement, or some responsible guarantee in its absence, I at once wired to the New York bank for instructions, and asked whether I should guarantee the absent endorsement or return the check. The New York bank, a prompt and most systematic correspondent, at once answered as follows :

"Obtain a certification of the check, and then send it to the Toronto bank, with a request that they obtain the endorsement and return the check direct to you for collection for our account."

This is good banking—a way out of an error that could not be improved upon. By this method of handling the check a risk was avoided by obtaining the early certification of "good when properly endorsed," and much time saved by sending the lame check direct to Toronto.

In this illustrative case a very important duty is made prominent—in fact, two duties. One is the necessity of wiring for instructions in critical and unusual circumstances, the other the duty of always obtaining the certification of the kind I have named where checks are refused simply on account of missing or informal endorsement.

Banks sometimes forget to ask for this certification—a certification which no bank ought to refuse under the circumstances described.

---

(4.) The Boston bank received the note from New York for collection. It was drawn for one thousand dollars, payable in Boston, and matured February 1st. It was endorsed by a New York house to whom it had been given for a bill of foreign dry goods. The New York house had passed it into the New York bank where it kept its account for collection and credit. The Collection Clerk of the Boston bank that received it for collection filed it wrongly. It was in a bank that covered its notes, and its clerk covered it as due March 1st instead of February 1st. Sometime before the first of March the mistaken Collection Clerk discovered his error, and promptly made, with anxiety and trepidation, an attempt to collect the past due note, because, as we have stated, the note bore an endorsement which had apparently been legally released by the failure to protest for non-payment at maturity. The clerk discovered that the promisors had failed and gone out of business just about the time the delinquent note was due. The Boston bank made a report of all the facts to the New York bank, returning therewith the unpaid paper. It soon received the paper back from the New York bank, with the statement that their customer, the endorser of the note, refused to have anything to do with it, since they had received due credit for it at their New York bank at the time of its maturity and had every reason to believe it had been paid since they had never heard anything to the contrary. The Boston bank was on the point of assuming the loss—crediting the note back to the New York bank—when it had the good fortune to discover, by means that I need not stop to explain, that the New York endorsers of the troublesome paper knew that it had not been paid when they allowed their bank to give them credit for it—knew that the promisors had failed on that very note, and that the credit for it, which they were receiving, was being made because some bank clerk had made an error. When these rascally endorsers were confronted with these discreditable facts they paid back the money by advice of counsel, who were perfectly aware that under the circumstances their clients were as endorsers held, protest or no protest, in equity if not by law.

---

(5.) It was in the days of the State bank system and before Clearing-House methods were introduced into this country. The daily settlements between the banks located in the city where this incident happened—a New England city of many banks—were made in gold, which was carried from bank to bank in bags of \$5,000 each on the shoulders of the bank Messengers of the period—carried about hither and thither as the debits and credits of the between bank transactions might demand. In time the Messengers and Tellers of the various banks became a little careless in their manipulations of the gold which was doing this balancing duty, and it happened that one day one of the banks in

this circuit of exchanges discovered on its hands, doing duty as a \$5,000 bag of gold, a bag that contained copper cents—the old-fashioned, large and heavy coin of that name. No attempt had been made by the person who at some stage of the travels of this bag among the banks had taken out the gold and put in the copper to graduate its weight in any way by toning it up with lead, etc., and it was, of course, much lighter than the bag of gold for which it was substituted. It is a wonder that this bag was not discovered at once by the first bank where it was paid in by the defaulter; yet it seems the Tellers of those times did not follow closely the practice of pouring out, examining and weighing these settlement bags. In this case the fraudulent bag was not discovered until, when quite a length of time had elapsed, the Teller of the ——— Bank happened to weigh and examine it and made the astounding discovery that he had copper where he should have gold. From that time to the present the banks of the city in question have always insisted that every bag of gold that comes to their vaults shall be opened and weighed. Many a Teller there, as he rattles his gold into the scales, recalls this old copper story—a story that has certainly a sharp moral for bank officers.

(6.) Bank Directors are in the habit of going behind the counters of their bank—of passing round among the different departments, visiting the Cashier and the various officers, sometimes for the purpose of seeing how the machinery of banking is running and often for the purpose of having little items of their banking business attended to. A leading Director, who afterwards became the President of the bank, came to the desk of the Paying-Teller by this inside Director's route of which I have spoken. His errand was in part the collection of his check on the bank which he held in his hand. The Paying-Teller was busy, and so the Director laid his check upon the Teller's desk unobserved by the Teller, and passed on to another department of the bank, intending to return in a few minutes for his money. The Paying-Teller soon saw the check left by the Director. At the same time he saw a gentlemanly appearing man standing in a waiting attitude outside his counter at the opening where the Teller interviews the outside world and passes them over the cash. He jumped at once to the conclusion that this outsider was the holder of the check mentioned, had passed it in and was waiting for his money. The Teller paid the amount of the check to the cool and gentlemanly outsider. The man at once passed out of the bank with the money and was never heard from in that bank again. The Director soon turned back to collect his check and the blunder was at once revealed. In the end the Director was paid the amount of his check, which was charged to the unfortunate Teller. The lessons to be learned from this episode in banking are almost too evident to need mention. Directors should not do business in the careless way I have described.

Tellers should be ever on the alert in the matter of identifications and be exceedingly sure they are paying their money to the right parties.

(7.) The Paying-Teller of the ——— Bank of ———, who was a very careful officer and had long experience in banking, was in the habit of handling, at the time of which we are writing, a very large amount of cash gold. There were then no coin certificates or Treasury notes, and all settlements between banks and all customs duties were paid in the solid gold. Some dealer with the bank passed in his check for \$2,500, and asked that it be cashed in gold—made this request of the busy Teller and then patiently waited for the gold coin to be passed out to him. Soon the bag of gold was shoved out through the aperture. A few minutes after the payment the Teller glanced up from his work and saw the \$2,500-check man still standing before the Paying-Teller's opening in an apparently waiting attitude. The Teller looking at him enquiringly and was told by the customer that he would like his gold. The most startling revelation was then made that the wrong man had taken the bag of gold from under the eyes of both Teller and check drawer and walked out of the bank with it upon his shoulder in regular bank Messenger style. This was afterwards testified to by a bystander. Search

for the thief and the money was unavailing. The bank assumed the loss on the ground, I suppose, that it was one of the legitimate risks of doing a banking business, and deducted the amount from the Paying-Teller's salary. Yet any practical banker must see that there was carelessness both on the part of the Teller and the check drawer which this story may lead other Tellers and check drawers who read it to avoid.

(8.) In the days of the large Suffolk Bank redemption business—redemption of the circulation of the State-chartered banks of New England under what was known the financial world over as the Suffolk Bank system—the Cashier of the Suffolk once delivered into the hands of the agent of the ——— Express a package of redeemed bills of the ——— Bank, which were to be delivered at once to the ——— Bank, and which were, on delivery to the said express agent, charged to the ——— Bank. The package, which was duly receipted for by the express agent, was a bulky one, for it contained some thousands of dollars of small bills. This ends the first chapter of this story. At the close of the month the Suffolk Bank rendered its account to the ——— Bank, upon which stood boldly out the charge against the bank of this aforementioned delivered package. The ——— Bank, on examining the account, reported as a discrepancy this charge for bills redeemed and sent home, which covered the delivery we have described, for they said they had never received such a parcel. The express agent was overhauled. He looked at his records and his receipt for the bills on the books of the Suffolk Bank. He said it did seem as if he took that missing package but he could not imagine what became of it. Here the mystery began. The matter dragged along under this cloud for weeks. Much correspondence was indulged in and a law-suit was imminent. At the end the whole contention was cleared away and the mystery solved by the discovery by the ——— express agent of the lost bills in a sly corner of the box under the seat of his express wagon where the package had been knocking round in the wagon for all those weeks. Had the express agent been particular about squaring his delivery book, and the Suffolk Bank more particular about checking off its acknowledgments for remittances made to the country banks, this annoying redemption disturbance would not have occurred.

(9.) The Paying-Teller was a thousand dollars short at the close of a day of active payments, and, after he had exhausted every means at hand for finding the missing money, and counted and re-counted, added and re-added until he was weary over the fruitless hunt, he began to try to recall, as Paying-Tellers always will under such circumstances, all the paying-out transactions he had gone through during the day with a view of discovering what may be termed an individual location of his loss—that is, he tried to think of some cases in that day's work where he had cashed checks in a way that might account for the missing thousand dollars. After much reflection he suddenly came to the conclusion that the deficiency was caused by over-paying a small check which he had cashed for a man in humble circumstances, a hack-driver who lived in a remote part of the city. Firm in this conviction—really positive in the matter—he hunted up the poor hackman, finding him on his box on a rainy night, and closely questioned him regarding the transaction he had that day with the bank. The driver assured the Teller that he had only the money belonging to him, and, as if to prove it, hauled out of his pocket the roll of bills in just the shape (as he said) that the Teller had paid them to him. There was nothing more that the Teller could do in this direction; but he came away from the man confident that he had placed that thousand—confident, too, that he was a hard and suspicious looking character. A week or two after this, when the Paying-Teller had become thoroughly discouraged over the prospect of finding the "short," a very honest old gentleman, living back in the country, came into the bank and paid the Teller a thousand dollars which he said had been over-paid him on the day of which we have been writing, and which, for some reason or other, he had not promptly discovered and reported. Paying-Tellers are sometimes apt to be too confident in their theories when they come to the

work of "thinking up" the location of an over-payment; and they are also sometimes mistaken when they attempt to judge men by appearances. In the case we have just described we have an illustration of both of these points.

(10.) It was during the time when the National banks were in the habit, under instructions from the Comptroller, of cutting from their worn-out bills (which they sent to Washington to be destroyed and replaced by new notes) the signatures of the President and Cashier. These clippings, each of which made quite a good-sized piece of a bank bill, and had a money-look about them, were not in all cases destroyed—burned as they ought to have been—but were sometimes thrown into the waste-paper baskets in a mass. This was the disposition made of them in the case to which we are now referring. And out of this careless disposition of the heap of fragments of bank bills came the following curious and rather startling result. Sometime after a large cutting of the character described the police of a neighboring town came upon a great quantity of the cut-off-signatures carefully stacked away among the rafters of a stable, where they had evidently been placed for safe hiding by some rogue who had abstracted them from the bank waste-paper, thinking them of some money value. The purloiners of these scraps were never discovered—were, in fact, never hunted for—for the stuff lugged off was, of course, of no value. Yet there was something so unsatisfactory in this idea that valuable signatures—valuable in their proper places—were, if not burned when cut off, liable to be stolen and preserved in the way we have described, that this astonished bank afterwards did what all banks should do under such circumstances—burned all the signatures it detached from its bank notes.

(11.) The bank had made a bad failure. It had overdrawn its account with its correspondent in the city—a bank which was its redemption agent—and all that this redeeming bank had to show for the large overdraft was the same amount in the redeemed bills of the failed bank, which, under the State banking system, then the only system known, were very poor assets. The broken bank had been running along for months upon the most constant and earnest promises by mail and telegraph to remit every day for these redeemed bills to its city correspondent. I was sent as a representative of this creditor city bank with the entire lot of redeemed bills to make a demand for their redemption and to see what I could get out of the broken bank. I found the bank in a wretched condition. It had for a long time been run entirely by its Cashier, who was a man poorly qualified in his best estate to take charge of a bank, but who had such notoriously dissipated habits that he was seldom in a condition to do business of any description. In fact the people of the village, who were his dealers, testified that the Cashier was apt to be found lying drunk on the floor of the bank during business hours. There was hardly a promissory note to be found in the files of his bank that was collectible, and as for cash, it had long been a scarce article. But I have recalled this story of a bank wreck, which finally returned very small dividends to its creditors, mainly for the purpose of mentioning a very curious circulation item that I discovered upon its records which returned to the bank a handsome sum that went to the credit of profit and loss. Early in the war of the Rebellion—a war then not long over—it had made a large loan to a wealthy cotton operator, who had taken his money from them in the shape of a batch of their new bills and gone South with them to operate in the staple product. The rebels captured this entire lot of State bills, and, disgusted because they were not United States Treasury notes, burned the whole parcel.

(12.) It was a check for one hundred dollars, and the presentor of it said he would like it all in ten dollar bills. The busy Paying-Teller, by one of those lapses which will happen to the best of Tellers, reached his hand into the wrong division of his cash drawer—into the partition holding the hundred dollar bills—and passed the check collector ten one hundred dollar bills. The man took them, counted them, passed out of the bank, and continued on his

travels to a distant city, for he was by profession a commercial traveler. At the close of the day's business, when the Teller settled his cash, he found it nine hundred dollars short. He then ran over the various paying-out transactions of the day, and soon vividly recalled this hundred dollar check affair and the blunder he must have made in connection with it. Such things will sometimes flash back upon the minds of experienced Tellers with wonderful clearness. He knew the man at once who had received his \$900. But the thing now was to find him. It is sufficient for an illustration of the point to simply say that he was found and, on refusing to pay back at once the money which belonged to the bank, was arrested on the charge of having \$900 in his possession belonging to the ——— Bank. The man was as much a thief as if he had put his hand directly into the till of a bank and stolen outright \$900. The man who is over-paid by a bank, and who does not promptly report such over-payment to the sufferer, is by the rules of law, equity and common sense deemed guilty of open robbery. Yet there are those who sometimes seem to be hardly aware of this fact.

---

(13.) A Messenger was handed by the Collection Clerk a sight draft upon a well-known lawyer, which he was instructed to collect or get accepted, for sight drafts in the locality of this banking incident carry grace. He took out the paper on his morning route, and in due time found himself doing as he had been instructed—presenting the draft in question to the famous lawyer. This drawee did not seem pleased with the sight of it; in fact seemed to look upon its very polite presentation by the bank Messenger as an unwarrantable intrusion if not an actual impertinence; and the only response he offered was in the shape of a gruff enquiry of what he wanted to have done about the thing, anyway. The tones of the drawee were so overpoweringly forbidding—so like muttered thunder—that the Messenger, who knew very well who he was interviewing, could barely muster courage to tell him that he would be pleased to have him either accept or pay that draft. Even this simple reminder was too much for the equanimity of the lawyer. This being asked to respond—to pay—by a bank runner was to his mind something not to be tolerated. What ensued is best given in the language of that bank Messenger. "I am," says he, "the very man who was kicked out of the office of Daniel Webster for asking him to accept or pay a draft." The Messenger is a man of fine imagination. He did not mean to have it understood that there was actual physical force used in refusing to respond to that paper; but he does mean to say that he was ordered out of that drawee's office by a manner so peremptory that it seemed to him about equivalent to a forcible ejection. Those who have seen Daniel Webster in a displeased mood will understand the situation.

---

(14.) The lady owned twenty shares of stock in the bank, for which she held the usual share certificate made out in her own name. She wished to transfer a portion of this stock for the purpose of selling it. On looking for the certificate, preparatory to visiting the bank to make the desired transfer, it could not be found, though a long and weary search was made for it. She was confident that she had long ago placed it, as was her custom, in what she thought was the safest place in the house, but what that safe place was she could not recall. She finally came to the bank, bringing along her husband, and both united in a request that a new certificate be issued in place of the lost one. Banks are always reluctant to give out these duplicates unless all hope of finding the originals has disappeared; besides, as explained elsewhere, there are in such issues formalities to be gone through in bonds which are very troublesome both to the applicant and the bank. While I was hesitating over the matter, I suggested that further time be taken to make a more rigorous search for the lost voucher, because I had experience with many cases where such a search had been successful under similar circumstances. The lady and her husband went away sorrowful; but they promised to hunt further. Not long after they returned bearing the long lost certificate which the lady said had been found in a favorite safe deposit place of her own invention—in the

bottom of a family trunk under a false bottom made by a newspaper. She had looked in the trunk several times, but had never before looked under the open newspaper at the bottom.

#### THE REDEMPTION BUREAU.

This is a department of the United States Treasury devoted to the work of redeeming, in lawful money, the notes of the National banks. Every National bank is required to keep with the United States Treasury at all times a redemption fund equal to 5 per cent. of its circulation. As the inflowing redemption-seeking notes of a National bank trench upon this 5 per cent. fund the bank is notified of the deficit and must make it up at once. Any individual or bank can obtain lawful money on demand at this Redemption Bureau in exchange for National notes if they present them in sums of one thousand dollars or any multiple of that sum.

When National banks send to the Redemption Bureau National bank bills for redemption in lawful money they do not pay expressage on the National bank bills, but they do pay for the transportation of the lawful money sent back when returns of this character are ordered. They order returns in lawful money when they are in need of small, new Treasury notes. When not in need of these they ask the United States Treasurer to send in payment for the redemptions drafts on the nearest Sub-Treasurer, and in collecting such drafts are obliged to take such denominations of legal-tenders as the Sub-Treasurers see fit to give them—or even to accept silver if the Sub-Treasurers choose to pay in standard silver dollars.

The Redemption Bureau at Washington is the old Suffolk Bank system revised and improved (see David R. Whitney's excellent history of the Suffolk Bank).

The expenses of this National bureau are assessed upon the National banks. Bills for the same are sent the banks once a year. The items of this bill are charges for transportation, costs of assorting, salaries, printing and binding, stationery and contingent expenses. These expenses are assessed upon each bank in proportion to the amount of its circulation redeemed.

The redemption story of a National bank-note, after it reaches the Redemption Bureau at Washington, can be quickly told. The National bills received at the redemption department are at once assorted by the names of the issuing banks—mainly by women—and this work is greatly facilitated by the fact that in addition to the name the distinctive number of each bank is shown upon the face of its notes. After this assorting the worn and mutilated bills which have become through hard service unfit for circulation are destroyed, and those bills which are capable of further circulating service are forwarded by express to the banks whose name they bear.

New currency in sheets is also at once forwarded to the banks to take the place of their worn out notes which have been redeemed and destroyed.

*Destruction of Notes.*—The Redemption Bureau now boils the bank-notes whose usefulness is at an end into pulp by the use of steam and huge cylinders. It formerly burned them. The pulp result is used to make a brown paper which passes into packing use in grocers' stores. In a visit to the Redemption Bureau I was handed a brick made from the bank bill pulp of the department—a solid shapely brick of a gray hue containing the substance of I know not how many hundreds of thousands of paper dollars. The brick now rests in the museum of the Young Men's Christian Union of Boston.

I ought to note here that Mr. Baldwin, the vigorous President of this Union, is entitled to the credit of having first introduced into the literature and lecture field of the day the term *practical banking* as applied to explanations of the methods and machinery of National banking, etc., as by his urgent invitation Mr. Patten, Cashier of the State National Bank of Boston, for four consecutive years lectured at the Union under that heading, and was quite fully reported in the press of the day.

We have spoken of the modern method of destroying unfit-for-circulation bank-notes. We are reminded by these allusions of some old-time experiences

with bank bill destruction when fire was used to end their career. In those old days, under a State system of banking, it was the habit of our banks to burn in the open grates of their Directors' rooms their returned worn and mutilated bills. These bills were allowed to accumulate in the cash of the Paying-Teller until he had on his hands enough of them to make it an object to summon a committee of the Board of Directors to make a business of burning them. At such burnings a brisk coal fire was made in the grate named, and the bills, having previously been recorded by their numbers, marks and amounts in the books of the bank, were thrown into the fire and consumed in the presence of this burning committee. Persons who have not had experience in this sort of business have little idea of how difficult and tedious a thing it is to burn up entirely a bundle of soiled old bank-notes. On the occasions we are describing a deal of stirring of the fire and the bills was necessary, and considerable time was required to complete the destruction. In at least one instance bank bills, whole and partially consumed, were carried by strong chimney drafts out to the street where they were picked up by the astonished news boys and other fortunate finders of the waifs. This remarkable method of issuing circulation was afterwards checked by covering the throats of the chimneys with a wire netting when bills were to be burned in open fires. I remember an instance where a New England bank was in the habit of having its old bills burned in the forge of a blacksmith's shop. This worked well enough until it was discovered that quantities of notes, supposed to have been consumed in that shop, appeared again in circulation, showing that the blacksmiths who had assisted in the work had by sleight-of-hand abstracted the condemned notes while burning them.

#### OVER-ISSUES OF NATIONAL BANK NOTES.

There has been made public within the last ten years at least one instance where National bills printed from genuine plates have in some mysterious way been surreptitiously and fraudulently issued from the banking department of the United States Treasury—issued, of course, with signatures manufactured to order, and either imitations of the autographs which should have been attached or hap-hazard names put on at random in the places where the genuine signatures should have been affixed.

In the tremendous volume of business in circulating money which has been transacted under the National banking system between the Treasury Department and banks since the National bank circulation began, footing up many hundred million dollars, there may have been over-issues from genuine plates that have not been discovered.

There is another phase regarding National bank circulation which takes on an aspect of an interesting and curious character when carefully considered. The point I have in mind may be illustrated by an imaginary case. Suppose that a bank has outstanding a regularly authorized and duly recorded circulation of \$500,000. It gives up this circulation by withdrawing its bonds and substituting in their place \$500,000 in lawful money with the United States Treasury, which relieves the bank from all further responsibility to redeem the notes and places it upon the United States Treasury Department. In time the entire \$500,000 deposit is entirely absorbed in redeeming the notes and still more bills of the same issue come in for redemption. Such a development would prove one of two things. Either fraudulently-issued bills of that bank have been redeemed and destroyed, or the notes in excess of its legitimate issue which are now being presented are the counterfeits or bills issued from genuine plates and completed with forged signatures. If the bills are of the last-named character, and can clearly be proved to be so, the way out of the dilemma is short and easy—the bills will be condemned and thrown back upon their unfortunate owners. But, if they are genuine bills, what shall be done with them? That is the question. Their presentation after the redemption fund of this bank is exhausted shows conclusively that fraudulent bills purporting to be of that bank have been redeemed and destroyed. This destruction has complicated the situation. Of the \$500,000 that have been redeemed and destroyed some have been good and some bad. But no traces of their existence and character

remain. The good and bad have all been paid for, and no recourse can be had to anybody.

The question now arises, how are the genuine bills which remain outstanding to be paid for? They are in honest hands and are good notes. Who is to pay for them?

In the grand circulation-settling day that is to come some time or another it is to be trusted that the Government will have to the credit of profit and loss a fund—the outcome of profit on outstanding bank notes lost and destroyed—which shall be large enough to meet any such contingencies as the one imagined.

#### A CHECK DRAWN FOR CENTS ONLY.

There is a right and a wrong way to do everything. Take for illustration the apparently very simple matter of filling up a check for a fraction of a dollar—say for 75 cents. Checks for sums inside of a dollar are not an uncommon thing in business. I have seen many that were for a small part of a dollar pass through the exchanges of a bank. Some of these were signed by an official used to the faces of very heavy figures—signed by the Treasurer of the United States or his deputies.

There hangs in the office of the Pacific Mills, Boston, the cancelled check of the United States for one cent.

Messrs. Hewins & Hollis, of the same city, have framed and hung in their counting-room one drawn by the same official for two cents.

The other extreme in checks, which naturally comes to mind in this connection, may be seen in the noble old Bank of Commerce, New York, where there hangs on the wall a handsomely framed and splendidly drawn check for \$14,000,000, signed by the solid house of Kidder, Peabody & Co., of Boston.

But the matter in question is the best method of filling up a check for a fraction of a dollar—a filling-up business that is really not so easy as it seems. If any of these little checks are made out awkwardly they are either suggestive of alteration to a larger sum, not easily read at a glance, or open to some other "Paying-Teller criticism."

Here is, I think, the very best form of the little check in question that can possibly be devised:

Wall St. & Broadway.	\$ Seventy-five cents. —	NEW YORK, April 10, 1886.
	<b>FIRST NATIONAL BANK OF NEW YORK.</b>	
	Pay to ————— A. B. Carter —————	or bearer,
	————— Seventy-five cents —————	Dollars.
		100 Day, Knight & Co.

In filling in the above check a line should be drawn with pen and ink through the word **Dollars**.

#### THE BANK WASTE PAPER.

We have elsewhere shown how necessary it is that the waste paper of a bank should be carefully preserved and kept in some accessible shape for a considerable time.

Here is a handy and perfectly practicable plan for caring for the paper in question—a plan which I have introduced into a large bank, and which has served its purpose well:

Plain cotton bags, of a size sufficient to hold the contents of a week of waste-paper baskets, are prepared to the number of eight. When one is filled with the contents of a week's waste baskets it is tied, dated and stowed away.

The bags are thus filled, week after week, till the entire eight are all stowed away in the order of their dates. Then the work of destroying their contents is carefully begun at the bottom bag, and carried along at a destruction rate of one a week. By this method of management the waste paper of a couple of months will always be within easy reach, and in consecutive order, each day by itself, and each weekly accumulation in one bagged division. Two months is about as long as a large and busy bank can hope to keep in hand its waste paper; and if it can do this without getting it into such an inextricable confusion that the porters in search of lost papers of value do not have to hunt through all to be sure they have examined a given day, it will be better than many large banks I am acquainted with have so far succeeded in doing.

#### THE AGE OF BANK OFFICERS.

I have known instances where men ninety years of age have been bank Presidents and carried themselves well in the position even at that advanced age. I have also known Book-keepers in banks who had seen more than fifty years uninterrupted service at their desks. Not long ago an able business man who had just been chosen for the first time in his life to act as the working President of a large bank, and who seemed as active and young as most men of fifty years of age, reported his age to me as over seventy years. In the Bank of England clerks generally begin their terms of service at the age of eighteen. At sixty, if they have served the old bank well, they are entitled to a pension.

A good story bearing upon this point of age in the matter of bank service is told of the late distinguished President of the ——— Bank, of ———. This man had often held forth at the meetings of his Board in declaration of the idea that no man under any circumstances—no matter how apparently superior his qualifications might be—was fit to be President of a bank after he was seventy years old. At such an age, he would say, a man in a President's place is sure to be too conservative—too slow—behind the times. These sentiments he invariably emphasized by announcing that as for himself he should positively retire when he reached the age of seventy, and he wished the Directors to be sure and remember this. By and by the prescribed time came, and the Board, which had not grown over-fond of their Chairman, began to look around for another man to take his place. This movement soon came to the ears of the old President. He was quite indignant. Entering a meeting of his Board one day, he passed over to them in a sharp manner the keys of the bank and his immediate resignation, saying as he did so that they were an ungrateful set of men.

#### SIGNING GOOD-BEHAVIOR BONDS.

We have elsewhere discussed the comparative merits of the two modern systems of bond-giving—that of the method of the fidelity insurance companies and the practice of furnishing individual sureties. There seems no immediate prospect of the entire abandonment of the old-fashioned way of bond-giving—that of furnishing as hostages an employé's best friends—although the company insurance system appears to be coming more and more into vogue. There are to-day on the bonds of the bank officers of New England, if not of those of all quarters of this country, far more individual sureties than those of guarantee companies. There comes to mind, in connection with this matter, a bond incident to which my attention was long ago called. A prominent bank Director and millionaire, in willing his property to his children, placed on record in his will the wish—the injunction—that none of the inheritors of his fortune should ever become sureties for anybody. In view of the fact that this man had been in the management of a large bank, which rigidly required from all its clerks bonds for their fidelity at a time when guarantee companies were unknown, his dying precepts seemed ungenerous and inconsistent. The bank officers of the country to-day have reason to be very grateful to the many noble men who without compensation have generously put their names on their bonds simply out of the kindness of their hearts, feeling satisfied with helping along the deserving.

## BANKING LAW.

### LEGAL DECISIONS AFFECTING BANKERS.

#### INSOLVENT BANK—RIGHT OF DEPOSITOR—GENERAL AND SPECIAL DEPOSITS.

M filed his petition against the Receiver of an insolvent banking company, praying for an order directing the Receiver to pay him the sum of money which he had deposited in his name as "clerk of the court," on the ground that the deposit, being made in his name as "clerk," was a special deposit.

*Held*, The question is, what are the rights of a bank depositor when the bank becomes insolvent? Deposits in banks are either general or special. Upon a special deposit the bank is merely a bailee, and is bound according to the terms of the special deposit; but, on a general deposit without special agreement, the money becomes the property of the bank, and the depositor has no longer any claim on that money; his claim is on the bank for a like amount of money. Upon the insolvency of a bank its general depositors must be paid *pro rata*. The rule that a trustee may follow trust property as long as it can be traced is not applicable to such a case. The addition of the word "clerk" to the name of a general depositor does not make the deposit a special one, nor does it change the liability of the bank.

Petition denied.

McLain vs. Wallace, Receiver, Supreme Court of Indiana, April 23, 1886.

#### ACCEPTANCE OF DRAFT BY EXECUTOR—PERSONAL LIABILITY.

A draft was drawn on Adam Simon, Executor, which, after directing the payment to the payee of a sum of money, contained the words, "and charge the amount against me, and of my mother's estate." The draft was accepted by "Adam Simon, Executor," but was not paid. Suit was brought against the acceptor, and at the trial, after proving the execution of the draft, its acceptance and transfer to the plaintiff by the payee, and offering to prove the payment of a consideration by the plaintiff to the payee, which was objected to by the defendant and excluded by the Court, the plaintiff rested. The defendant thereupon moved to non-suit upon the ground that the obligation was not binding upon the defendant personally, but he was liable thereon, if at all, in his representative character alone, and that it was payable out of a specific fund, and a recovery thereon could not be had without proving the existence and extent of such fund. The Court thereupon non-suited the plaintiff and gave judgment for the defendant. On appeal, this judgment was reversed.

*Held*, The defendant was liable on the draft, if liable at all, in his individual capacity alone. Neither executors nor administrators have power to bind the estate represented by them through an executory contract having for its object the creation of a new liability not founded on the obligation of the testator or intestate. In actions upon contracts made by them, however they may describe themselves therein, they are personally liable. The cases are very numerous to the effect that the addition of an official character to the signatures of executors and administrators in executing written contracts and

\*All the latest Decisions affecting Bankers will be found in this Department as early as obtainable. The Editor of the Law Department of RHODES' JOURNAL will furnish, on application of subscribers, further information regarding any case referred to herein; he will also answer questions in banking law which may be of sufficient general interest as to warrant publication in this Department. A reasonable charge is made for Special Replies asked for by correspondents and not authorized for publication.

obligations has no significance, and operates merely to identify the person, and not to limit or qualify the liability. Being of the opinion, therefore, that the defendant is liable on the draft in his individual capacity alone, the question still remains as to the extent of such liability. After considering this question the Court holds that the mere mention of a fund in a draft does not deprive it, necessarily, of the character of commercial paper, but it must further appear, in order to have that effect, that it contains either an express or implied direction to pay it therefrom, and not otherwise. The question, therefore, to be determined here is, whether the fund in question is referred to as the measure of liability or the means of reimbursement. While the point is not free from doubt, we think a reasonable construction of the draft favors the conclusion that it is mentioned only as the source of reimbursement. The instrument in question is a bill of exchange and rendered the parties executing it liable absolutely for the amount stated therein.

New trial ordered.

Schmittler vs. Simon, New York Court of Appeals, March 9, 1886.

#### PROMISSORY NOTE—FORGERY—RATIFICATION.

In an action on a promissory note against a party whose name had been forged as maker, on the ground that he had subsequently ratified such signature and was estopped from denying it,

*Held*, That simply stating that it would be paid was not sufficient to show an intention to make the note his contract. That, when making such statement, defendant distinctly intimated that such note was a forgery and there was nothing which indicated that it was his intention to make the note his own. Even if he had gone so far as to promise to pay the note it could not be inferred that he intended anything more than to bind himself by his oral promise. What the defendant said amounted either to an expression of an opinion that the maker of the note would pay it or else it was a promise that he himself would pay it. An oral promise to pay the debt of another cannot constitute an estoppel.

Judgment for defendant.

Smith vs. Framel, Supreme Court of Iowa, April 7, 1886.

#### NATIONAL BANK AS COLLECTING AGENT—LIABILITY.

Plaintiff sent to defendant, a National bank located at Ogden, Utah, a draft drawn on B. & S., a firm at that place, payable to defendant at sight. The draft was sent for collection without further instructions. Defendant, on the same day of its receipt, presented it to the drawees and demanded payment. The drawees failed to make payment and defendant took their acceptance, and immediately notified plaintiff of the receipt of the draft and of the acceptance. Defendant then held the draft for the period of 47 days, and returned it by mail to plaintiff with the statement that defendant had been unable to collect. During the time the draft was so held, defendant paid the checks of B. & S. drawn upon it, largely in excess of plaintiff's bill of exchange. Such checks were overdrafts and paid out of the funds of the bank. It also appeared that before defendant received the draft, the drawees, B. & S., had made a deed of trust of their property to H. & Co., the value of which was largely in excess of the amount of plaintiff's draft; and it being ascertained that such deed of trust was defective and invalid, B. & S., two days after the return of the draft to plaintiff, made an assignment of the same property to L., a Vice-President and Director of defendant, in which assignment defendant was preferred in a sum larger than the amount of plaintiff's draft. After this assignment B. & S. were totally insolvent. On the trial defendant claimed that the business of collecting drafts is *ultra vires* of a National bank, and for that reason the undertaking to collect was not binding on the defendant. This claim was overruled.

*Held*, In view of these facts, is the defendant liable? The bill of exchange was due upon presentation. It was placed in the defendant's hands for

collection. It was defendant's duty to take appropriate steps necessary for its prompt payment, and, if defendant could not collect the same, to return the draft at once, or promptly inform the plaintiff of such non-payment. The defendant states in its answer that B. & S. were insolvent during the time it held the draft, yet it did not inform the plaintiff to that effect. The answer admits that, during all that time, the drawees had a large amount of property on which there was an invalid deed of trust. Had the defendant promptly informed the plaintiff of the financial condition of B. & S. the plaintiff could have taken steps to subject the property covered by that deed of trust to the payment of this debt. It appears that the only information defendant gave plaintiff during the 47 days that it held the draft was that the draft had been received for collection and had been accepted, and this information was given on the day that the draft was received. The facts admitted by the answer show such neglect of duty by the defendant, with respect to the bill of exchange sued on, as to render the defendant liable for the amount thereof with interest.

*Mound City Paint Co. vs. Commercial National Bank*, Supreme Court of Utah, February 13, 1886.

PROMISSORY NOTE—GUARANTY—STATUTE OF FRAUDS.

Action against defendant L. S. Stevens (impleaded with James H. Kyner), as guarantor on the following instrument:

"SHOSHONE, Idaho, May 10, 1883.  
 "Due John Gagan, or order, nine hundred and 85-100 dollars, for freighting  
 to India creek.  
 JAMES H. KYNER."

At the bottom:

"Guaranteed by L. S. Stevens. H. A. Hall."

This alleged guaranty was made about June 10, 1883.

*Held*, That although at common law no action could have been maintained jointly against Kyner as maker and Stevens as guarantor, it is permitted by statute (Comp. Laws, 1876, page 1408, § 1240).

Further *Held*, As to the claim that the obligation being to answer for the debt of another, there is no note or memorandum thereof in writing expressing a consideration and signed by the party as required by the statute of frauds, that the object of the statute was to prevent frauds arising out of the temptation to charge upon a solvent person a promise to be answerable for the default of one, who, after obtaining credit, has been found irresponsible. The attempt in the present case is not to charge defendant upon a promise made after obtaining the credit by Kyner. Although there was a month's difference in the time of the execution of the note and the guaranty the guaranty was written before the note was delivered to give it effect. The guaranty, likewise, although written after the date of the note, was so written in pursuance of a prior agreement. In such a case no consideration is necessary and none need be expressed. There is another rule which, when applied to this case, would take it out of the statute. Where the main or immediate object of the party promising is not the payment of the debt of another, but to subvert some purpose of his own, the promise is not within the statute, although its performance may have the effect of discharging the debt of another (*Emerson vs. Slater*, 22 How., 28). The case referred to is somewhat analogous to the present one. In both cases the promisors were interested in having the work done, and that was the motive for their promise—it was to benefit the promisor.

Judgment for plaintiff.

*Gagan vs. Stevens*, impleaded, etc., Supreme Court of Utah, February 13, 1886.

DISCOUNTING DRAFTS FOR WHEAT—LIABILITY OF BANK FOR CONVERSION.

G owned a grain elevator or warehouse at Kasson, and was engaged in the business of receiving wheat of all grades from others on storage, for which, as

received, he issued warehouse receipts; he was also engaged in buying wheat on his own account—all the wheat so deposited by others and that bought by him being commingled in the warehouse according to its grade. It was the practice of G to ship the wheat on hand to Chicago for sale in the following manner: He would deliver it to the railway company and receive bills of lading therefor in which the defendant bank was named as consignee. Thereupon he would draw drafts in favor of the bank on the parties to whom the wheat was to be forwarded, and procure the same to be discounted by the bank, delivering to it the bills of lading. The bank thereupon indorsed the bills of lading in blank, and indorsed the drafts to its correspondents at the places of destination of the wheat and forwarded the bills and drafts attached together to such correspondents with instructions to present the drafts for payment, and, if paid, to deliver them with the bills to the drawee in the drafts. This was done in the present instance. The bank, through its officers, had at all times knowledge that G was receiving wheat for storing and issuing receipts therefor, and mingling such wheat with that purchased by himself, but had no actual knowledge or notice of the actual condition of the storage accounts, or of the amount of the outstanding receipts, or of the amount of wheat in the elevator, or of the financial condition of G. G was insolvent and made an assignment for the benefit of his creditors. At the time of this assignment there was not enough wheat on hand to meet the demands of the plaintiffs and others holding warehouse receipts. In an action against the bank for conversion of the wheat of the plaintiffs,

*Held*, That the question of the liability of the bank is of great practical importance. If banks and bankers cannot take security through the bills of lading upon grain shipped for advances made by them to the shipper, not meddling with the grain itself, without becoming liable as for the conversion of the grain in case the title of the shipper fails, the risk attending such advances will be so great as will tend to deter parties from making them; and we apprehend that thereby the business of shipping grain to market will be seriously interfered with. It is apparent that there was no sale to, nor vesting of the absolute title in, the bank, so that it could pass it to any one else; and no sale, nor disposition of the wheat, nor assumption of right to dispose of it, by the bank to the Chicago parties. Whatever right or interest was vested or intended to be vested in the bank by naming it as consignee in the bills of lading was only for a temporary purpose, to wit, to hold until the drafts should be paid and as a security for their payment. The bank merely took a lien upon it to secure the drafts, and, when the lien was satisfied, surrendered the evidence and means of enforcing it to the persons indicated by G. This was not an appropriation or assumption of such dominion over the wheat, to the exclusion of the real owner, as amounted to a conversion by it.

Further *Held*, That what has been said as to the liability of the bank is in view of the finding that the bank had no knowledge in fact that G was wrongfully disposing of the property of others. Had it known that fact it might have been a party to the conversion.

Lenthold and others vs. Fairchild and others, Supreme Court of Minnesota, March 31, 1886.

#### PROMISSORY NOTE—INNOCENT PURCHASER FOR VALUE.

A purchaser of a promissory note for a valuable consideration before maturity is protected where he had no knowledge of fraud in the procurement of the note between the antecedent parties; but the actual knowledge of impeaching facts at the time of taking the paper, notwithstanding value is paid, will defeat recovery on it.

Crampton vs. Perkins, Court of Appeals, Maryland, March 10, 1886.

#### BANKER'S LIEN—PLEDGE OF NEGOTIABLE SECURITIES FOR AN ANTECEDENT DEBT.

The pledge of negotiable securities for an antecedent debt, not being founded upon a present valuable consideration, is to be taken subject to the

equities subsisting between the pledgeor and third parties. The principle here stated is too well established to be shaken by decisions *extra* this Commonwealth, or by an attempt to introduce the doctrine of banker's liens—a doctrine which, however it may agree with the policy of other States, has no place in our own.

*Liggett Spring and Axle Co. (Limited) vs. The Diamond National Bank*, Supreme Court of Pennsylvania, January 4, 1886.

#### USURY—PROOF THAT PRINCIPAL RECEIVED IS NECESSARY.

Where an agent, loaning for his principal, in addition to the lawful rate, made an agreement with the borrower whereby he was to receive a certain sum as commission,

*Held*, That in the absence of any proof showing that the principal received any of the extra commissions, or was connected in some way with the bargain therefor, the defense of usury must be overruled.

*Nicholas vs. Osborn*, Court of Chancery of New Jersey, April 1, 1886.

#### PROMISE TO PAY AFTER DEATH—PROMISSORY NOTE.

Action on a note against the estate of the maker, wherein he promises to pay the plaintiff \$2,000 one day after his death out of his estate. Defendants claim that the instrument is an attempt to make a testamentary disposition of property and is destitute of all legal efficacy.

*Held*, We cannot concur in this view. There is no attempt to make a testamentary disposition of property. It is a promise to pay money. It differs from an ordinary promise in the single particular that it fixes the time of payment at a subsequent period to the promisor's death. It is, nevertheless, a promise to pay money absolutely and at all events, and it has, therefore, all the essential features of a promissory note.

Judgment for plaintiff.

*Price vs. Jones*, Supreme Court of Indiana, March 9, 1886.

#### SAVINGS BANKS—LIABILITY OF MANAGERS.

The managers of a savings bank who wilfully abuse their trust or misapply the funds of the bank by which a loss is sustained are personally liable as trustees to make good that loss. And they are equally liable if they suffer its funds or property to be lost or wasted by gross negligence and inattention to the duties of their trust.

*Wilkinson vs. Dodd*, Court of Chancery of New Jersey, September 23, 1885.

#### PAYMENT OF DEPOSIT TO COMMITTEE OF LUNATIC.

A payment by a bank to the committee of a lunatic of the moneys on deposit belonging to such lunatic is a valid and legal payment if the adjudication of lunacy is in force at the time the payment is made. When lawful authority is presented by the committee to the bank of its right to receive the deposit the bank is not required to examine and determine the equities of other parties (of which it has no knowledge) to the fund before paying it. It has a right to assume that the committee appointed by the Court has full power to act.

*Viets vs. Union National Bank*, New York Court of Appeals, March 16, 1886.

#### POWERS OF BANK CASHIERS.

*Continued from page 373, May number of the JOURNAL.*

*V. No power to release Indorsers or Sureties.*—In the last number was discussed the powers of a bank Cashier with reference to compromising the debts of a bank. The Cashier, however, has no power to release the indorser or maker of a note, or a surety, from liability thereon. In the case of *Bank of the United States vs. Dunn* (6 Pet., 51) the Court held that the President and Cashier of a bank have no power to bind the bank by an agreement with

an indorser that he shall not be liable on his indorsement, and that it is not the duty of the President and Cashier to make such a contract. This principle was affirmed in *Bank vs. Jones* (8 Pet., 212), and these cases were cited in *Bank of Whitehall vs. Tisdale* (18 Hun., N. Y., 151), decided by the Supreme Court of New York in 1879, where it was held that it is not within the authority of the President of a bank, when he discounts paper for the bank, to promise the maker that he need not pay it.

In the case of *Hodge vs. First National Bank of Richmond*, 22 Grattan (Va.), 51, an action was brought against the executor of the deceased maker of a note, which was sought to be defeated by the production of the written admission of the President of the bank that the note was simply given as a voucher until it should be ascertained that the maker was indebted to the company in the amount thereof, and which admission would have had the effect of releasing the maker from his legal responsibility created by the note. The Court held that neither the President nor the Cashier, nor both combined, could, *virtute officii*, give up a debt or liability to the bank, or bind the bank by such an admission.

### REPLIES TO LAW AND BANKING QUESTIONS.

**NOTE.**—Our article on the subject of the "no-protest" slip, and the effect of an instruction not to protest, will be published in the next number of the JOURNAL. We have received a number of replies to the questions put by us in the May number as to the understanding of bankers in the matter, and these replies show that bankers hold very different views on the question of the sufficiency of the "no-protest" slip as an instruction when unaccompanied by a letter of instructions; also, but to a less extent, differences of opinion exist as to the exact meaning of the term "protest." The subject will be fully treated in the July number.

*Editor Rhodes' Journal of Banking:*

UNIONTOWN, Ala., April 15, 1886.

**SIR:**—A has credit with a bank and draws a check payable to B or order. B presents the check for payment. The bank is ready to honor it, and requests B to endorse the same. B refuses to endorse the check, and insists upon the payment, but offers, however, to give his receipt for the money as paid on the check. Is the bank compelled to pay by law? Will you kindly give the necessary explanation in your valuable JOURNAL.

A. L. ERNST, Cashier.

**Answer.**—The bank can require the indorsement of the payee before paying the money to him, and is justified in refusing to pay without such indorsement.

*Editor Rhodes' Journal of Banking:*

DULUTH, Minn., May 14, 1886.

**SIR:**—Has a bank a right to charge back to a depositor's account a check on itself taken by the Receiving-Teller and entered on depositor's pass-book, but which is subsequently found to be not good—i. e., to overdraw maker's account? If it has, within what time should it be done? Are there any authorities on the subject? Yours,

F. W. PAINE, Cashier.

**Answer.**—Whether a bank receiving a check on itself for deposit can subsequently charge the same back to the depositor on discovering that the drawer's account is insufficient to meet it is a question which at the present time cannot be answered positively either yes or no. In New York, in the case of *Oddie vs. National City Bank*, 45 N. Y., 785, where the bank received a check on itself from a depositor and credited the amount on his deposit ticket, it was held that in the case of a deposit of a check drawn upon itself the bank became at once the debtor of the depositor, and the title to the deposit passed to the bank; and the bank was liable for the amount of the check, and could not return it, even on the same day, although the account of the drawer was insufficient to meet it. The Court said:

"In determining the legal effect of such transactions we must apply the same rules applicable to all contracts and business affairs, and effectuate and carry out the intention of the parties to be gathered from their acts and declarations and the accustomed and understood course of the particular business. Applying these rules.

there can be no doubt but there was an express demand on one side and consent on the other that this check should be placed to the credit of the plaintiffs as a deposit. *The legal effect of the transaction was precisely the same as though the money had been first paid to the plaintiffs and then deposited.* When a check is presented to a bank for deposit, drawn directly upon itself, it is the same as though payment in any other form was demanded. It is the right of the bank to reject it, or to refuse to pay it, or to receive it conditionally; but if it accepts such a check and pays it, either by delivering the currency or giving the party credit for it, the transaction is closed between the bank and such party provided the paper is genuine. In the case of a deposit the bank becomes at once the debtor of the depositor and the title of the deposit passes to the bank. The bank always has the means of knowing the state of the account of the drawer, and if it elects to pay the paper it voluntarily takes upon itself the risk of securing it out of the drawer's account or otherwise."

In California the case of *National Gold Bank vs. McDonald*, 51 California. 64 (decided in October, 1875), gives the rule in that State. In that case a check was handed by the defendant's clerk to the Receiving-Teller, together with the pass-book, without any remark so far as was shown by the evidence, and the Teller made the entry in the pass-book and handed it back. If anything more occurred the evidence did not disclose it. The funds on deposit were insufficient to pay the check and the same was charged back to the defendant's account. Defendant (plaintiff below) thereupon sued the bank. The Court said :

"Does this transaction of itself import an agreement by the bank to accept the check as cash? Is it in law equivalent to a payment of the check? There can be no doubt that if the bank, through its Teller, expressly, or by reasonable implication from his acts and declarations at the time, agrees to accept the check as cash, and to enter the credit to the depositor for the amount, it will be bound by the agreement whether the drawer of the check has funds to his credit or not. But the question here is, whether the mere receipt of the check by the Teller and the entry in the pass-book, nothing more being said or done, of itself constitutes in law, or is to be deemed equivalent to, such an agreement? \* \* \* \* The rule we intend to lay down is that when a check on the same bank is presented by a depositor, with his pass-book, to the Receiving-Teller, who merely receives the check and notes it in his pass-book, nothing more being said or done, this does not, of itself, raise a presumption that the check was received as cash or otherwise than for collection."

In *Peterson vs. Union National Bank*, 52 Pa., 206, the holder of a check deposited it in the bank on which it was drawn, knowing that the drawer had no funds to meet it. It was passed to the holder's credit and charged against the drawer. The Court held that this was not a payment of the check by the bank and that the holder could not recover. This decision was placed upon the ground that the drawing of a check without funds was a fraud, and that the holder, knowing that fact, was a participant in such fraud on the bank and could not take advantage thereof.

It is impossible, in our limited space, to give an extended consideration to this important subject or a review of all the authorities. To summarize the adjudications on the subject, however, we would quote the language of Mr. Morse in his work on banking. He says, at page 377 :

"It will often happen that the holder and the drawer of a check are customers at the same bank and therefore that the check is deposited in the bank against which it is drawn. Slight differences in the circumstances in such cases as these may make very considerable differences in the rights and liabilities of the parties. If the bank credits the depositor upon its own books with the amount of the check, and the transaction is in perfect good faith on the part of the depositor, it seems to be certain that the act of crediting is equivalent to, and for all legal purposes is identical with, an ordinary cash payment. \* \* \* \* If the bank, as probably happens in the great majority of cases, simply takes the check without special remark and notes it in the depositor's bank book, thus treating it in every respect as if it were a check upon any other bank instead of upon itself, it is questionable, upon the authorities, whether or not these facts create a payment and render the bank liable for the amount to the depositor."

The old rule of law is that a bank which accepts a check on itself and credits it to its depositor, by so doing pays it just as effectually as if it handed

out the cash, and that it cannot afterwards cancel the transaction on discovering that it has no funds to meet it. This rule has proceeded on the theory that a banker knows the state of the drawer's account, and if he chooses to pay when without funds he is bound thereby. In the banking business as now carried on, however, where one Teller receives deposits and another pays out the money, it is unreasonable to hold the Receiving-Teller to a knowledge of the state of the accounts of the different depositors, and to hold the bank liable if the Teller receives a check drawn on the bank which two hours afterwards he discovers is not good. A depositor might have a large amount of money to his credit, and five minutes afterwards it might all be paid out by the Paying-Teller without the knowledge of the Receiving-Teller, and if the latter should then receive an over-draft by such depositor and credit the same to the holder, the bank, according to law, could not charge the same back. This rule is certainly unjust, and we think that in the future it will not be recognized by the Courts. The decision in California above quoted shows a tendency to break away from it. The Court there holds that although there can be no doubt that if the Teller expressly, or by reasonable implication, agrees to accept the check as cash, and credits the depositor with the amount, the bank will be bound even if the drawer has no funds on deposit, yet it holds that merely receiving the check without comment raises no presumption of such an agreement, and it should be considered as received for collection.

In the case of our correspondent, therefore, we think that the bank has a right to charge the check back to its depositor, and that it should be considered as received for collection and not as cash. As to the time within which this should be done it is reasonable to presume that it would be allowed the same time as if the check were drawn on another bank in the same place and received for collection.

*Editor Rhodes' Journal of Banking:*

WEEDSPORT, N. Y., May 14, 1886.

SIR:—The following note is dated March 8th, and I claim it draws interest from that time, but some of our men say not:

\$100.

WEEDSPORT, N. Y., March 8, 1886.

Four months after April 1st after date, I promise to pay to the order of B one hundred dollars at Mack, Treat & Co.'s banking house, Weedsport, N. Y., value received, with interest. A.

I would like your opinion on it, and if any law is quoted would like that also.

Yours respectfully, C. M. HENDERSON.

*Answer.*—The words in italics in the note are written and the balance printed. The printed words "after date" which follow the words "Four months after April 1st" are surplusage and are controlled by the written words. The note in effect then is dated March 8th and promises to pay \$100 four months after April 1st with interest, and the question is, can the interest be computed from March 8th or only from April 1st? We think that the interest should run from date. The promisor gave his note on March 8th, and it must be presumed that the consideration he received for it was given at that time, as he states it was given for value received. For this consideration he promises to pay not only the amount of the note at maturity, but also interest, and this interest, or compensation for the use of the money or whatever consideration was given, must be presumed to run from the date it was given and not from any future time.

By making the note payable "four months after April 1st" he does not signify any intention that the interest shall commence to run only on April 1st. It is simply one form of expressing when the note is payable, and is equivalent to saying "Four months and twenty-three days after date I promise," etc.

*Editor Rhodes' Journal of Banking:*

TRAVERSE CITY, Mich., May 17, 1886.

SIR:—Has a Cashier not the right to refuse to permit a shareholder, not a Director or other officer, to examine the books or papers of the bank, and to refuse to give certain

information relative thereto, when he (the Cashier) believes such information will be used to the prejudice of the bank or its customers? If not, a merchant might buy one share simply to have the opportunity of knowing who have deposits, and garnishing where he has claim against a depositor. A reply in the JOURNAL would oblige. B.

*Answer.*—The law grants the right to every stockholder to inspect the books of the corporation of which he is a member. Thus, in "Angell & Ames on Corporations," at § 671, it is said :

"With respect to the members of the corporation, the books of the company are public books; they are common evidence which must, of necessity, be kept in some one hand, and then each individual possessing a legal interest in them has a right to inspect them and use them as evidence of his rights."

See, also, "II. Potter on Corporations, page 780."

In the case of *People vs. Throop*, 12 Wend., 183, the Cashier, with the authority of the Directors of a bank, refused to allow a Director to inspect the discount book, believing such Director to be hostile to the interests of the bank. The Court held that they had no authority to exclude him from an inspection of the books, even though they believed him hostile to the interests of the institution.

In an early decision in Massachusetts (*Union Bank vs. Knapp*, 3 Pick., 96), the Court even held that a depositor had a right to inspect the books on all proper occasions, and that the officers of the bank having charge of the books are so far considered as the agents of both parties.

*Editor Rhodes' Journal of Banking:*

DENVER, Col., May 24, 1886.

SIR:—Will you please give me your opinion as to the liability of a bank under the following circumstances:

A bank having issued a duplicate for an original draft—represented to have been lost—and the duplicate having been paid, in due course the original draft turns up in the hands of a third party, bearing the genuine endorsement of payee, the party holding it having given cash for it and having no knowledge of the duplicate. Can the bank be held on the original draft?

A DENVER SUBSCRIBER.

*Answer.*—In the case of a lost draft it is the practice of banks to issue a duplicate, on receiving indemnity from the party to whom issued against the production of the original. The original draft being indorsed by the payee, and in the hands of a *bona fide* purchaser for a valuable consideration, the bank is liable thereon to the same extent as if no duplicate had been issued.

*Editor Rhodes' Journal of Banking:*

GREENFIELD, Mass., May 20, 1886.

SIR:—I notice in your valuable JOURNAL many questions from subscribers on banking subjects. I desire to ask one.

A National bank is put into the hands of a Receiver and has special deposits from various savings banks bearing interest, so stated, on a pass-book or a certificate of deposit. Are the stockholders of the bank liable for the interest which accrues from the time the Receiver takes possession of its affairs to the return of the money to the savings banks who may have deposited with them?

TREASURER.

*Answer.*—The right to recover interest on a debt due by an insolvent National bank, after the appointment of a Receiver and up to the time of the return of the money, is recognized by the Supreme Court of the United States in the case of *National Bank of the Commonwealth vs. Mechanics' National Bank*, 94 U. S., 437 (decided October, 1876), and also in *Chemical National Bank vs. Bailey*, United States Circuit Court, Southern District of New York, 12 Blatchford, 480 (decided in 1875). In the former case the Court say:

"The fiftieth section of the National Banking Act requires the Comptroller of the Currency to apply the moneys paid over to him by the Receiver 'on all such claims as may have been proved to his satisfaction, or adjudicated in a Court of competent jurisdiction.' The Act is silent as to interest upon the claims before or after proof or judgment. Can it be doubted that a judgment, if taken, would include interest down to the time of its rendition? Section 906 of the Revised Statutes, page 182, declares that all judgments in the Courts of the United States shall bear the same rate of interest as judgments in the Courts of the States respectively where they are rendered. Interest

is allowed by the law of New York upon judgments from the time they are perfected (Rev. Code of New York, Edition of 1880, volume 3, page 637). If these claims (speaking of the claims in suit) had been put in judgment, whether in a Court of the United States or in a State Court of that State, the result, as to interest upon the judgment, would have been the same. It was unnecessary to reduce them to judgment, because they were proved to the satisfaction of the Comptroller. After they were so proved they were of the same efficacy as judgments and occupied the same legal ground. Hence they are within the equity, if not the letter, of these statutes, and bear interest as judgments would have done."

In the case in the Circuit Court, above cited, Judge Wallace says:

"The equity of creditors to receive interest on their claims for the time during which they have been precluded from receiving their principal is obvious. On general principles, and by adjudications in point, their right is clear. There is nothing in the provisions of the Act under which this fund is to be distributed in conflict with this general rule. While the Comptroller is not directed by express terms to allow interest to creditors, the Act contains no language which in terms or by implication prohibits him from doing so."

The right to have interest added as a part of the claim, down to the time of the return of the money, is therefore clear. The question we are asked is: "Are the stockholders liable for such interest?" The National Bank Act provides that each shareholder is liable for all contracts, debts and engagements of the bank, in addition to the amount invested in his shares, to the extent of the amount of his stock at its par value. This liability, however, cannot be enforced at the suit of a creditor. As is held by the Supreme Court of the United States, in *Kennedy vs Gibson* (8 Wallace, 505), it is for the Comptroller to decide when it is necessary to institute proceedings against the stockholders to enforce their personal liability, and whether the whole, or a part, and if only a part how much, shall be collected. These questions are referred to his judgment and discretion, and his determination is conclusive. The Court in that case says, at page 506:

"The claims of creditors may be proved before the Comptroller or established by suit against the association. Creditors must seek their remedy through the Comptroller in the mode prescribed by the statute; they cannot proceed directly in their own names against the stockholders or debtors of the bank."

The answer to the question, therefore, whether the stockholders are liable for the interest which accrues from the time of the Receiver's appointment to the return of the money, is that such interest is a valid claim against the funds in the hands of the Receiver; that the stockholders of the bank are liable, in addition to the amount invested in their shares, to the limit of the par of their stock for the debts and obligations of the association, which liability, in whole or in part, can be enforced only at the instance of the Comptroller; and that such claim should be proved before the Comptroller or established by suit against the association.

In making the foregoing reply we have assumed that the deposits referred to in the inquiry of our correspondent were general deposits, for, although he states them to be special deposits, we do not think they are what the law regards as such. In the case of a special deposit the title to the thing deposited remains with the depositor, who is entitled to the return of the specific thing deposited. Thus, after the failure of a National bank, Section 5228 of the National Bank Act makes it lawful for the association to deliver special deposits. But where a deposit is made, as in this case, with a National bank who mingles it with its own funds, and uses it, allowing interest therefor, it is the case of a general deposit, wherein the relation of debtor and creditor is created and wherein the bank is not required to return the specific thing deposited, but becomes a debtor to the depositor for an equivalent amount of money.

*Editor Rhodes' Journal of Banking:*

PEABODY, Kansas, May 8th, 1886.

SIR:—Please answer the following question in the law department of the JOURNAL:

A gives a note to B, payable at the Peabody Bank, Peabody, Kansas. B deposits it with his banker through the regular course of business. His banker presents the note

for payment on the last day of grace. Have we a right in this State to charge it to A's account without specific directions from A. Respectfully, E. W. DEIBLER, *Cashier*.

*Answer.*—We are unable to find any decision in Kansas on the point. The weight of authority is to the effect that a bank may apply the funds of its depositor to the payment of his note without a special instruction to that effect, but it has been decided the other way in Illinois (41 Ill., 267).

*Editor Rhodes' Journal of Banking:*

INDIANAPOLIS, Ind., May 10, 1886.

*SIR:*—A man buys a draft on New York for \$50 and raises it to \$500. The draft is paid by the New York correspondent. Which bank must stand the loss, the drawing or the paying bank?

CASHIER.

*Answer.*—The paying bank stands the loss, unless the draft was drawn in such a careless or incomplete manner that it might be raised without giving it a suspicious appearance or leaving a perceptible mark.

*Editor Rhodes' Journal of Banking:*

SENECA, Kansas, May 13, 1886.

*SIR:*—Will you please answer the following questions:

Will a garnishment hold against a party having money on deposit in a bank for which the bank has issued a certificate of deposit?

2. If so, what is to protect the third party, to whom the certificate has been transferred, it having been taken by him simply on the credit of the bank, which he knows to be good?

KANSAS CASHIER.

*Answer.*—If the certificate of deposit is negotiable, and is not overdue and dishonored, the third party is protected, and holds it free from all equities against the party to whom issued. If it is not payable at a particular time, and usually it is not, it is not regarded as overdue until actually presented.

In the case of *Gulick vs. The Exchange Bank of Eldorado*, 24 Kansas Reports, 359 (decided by the Supreme Court in 1880), defendant issued a certificate of deposit payable to the order of one D for \$460. Plaintiff recovered a judgment against D for \$160, and caused garnishee process to issue against the bank. The bank denied any indebtedness to D, but admitted having issued him the certificate of deposit. It appeared that, after the garnishment, D presented the paper for payment, which was refused, and shortly after L presented it, duly indorsed by D, and then the bank paid it. Plaintiff sued the bank as garnishee and obtained judgment. The Court in its opinion said:

"The paper, whether negotiable or not in the first instance by the law of the State or the custom of the country, was presented by the payee and holder after the garnishment and payment was refused. It was then, if never before, past-due and non-negotiable paper. As such, the debt evidenced thereby was subject to garnishment and the garnishee process bound the bank."

In this case the certificate of deposit was regarded as overdue and non-negotiable because it had been previously presented and dishonored. If it was not yet due, and, being a negotiable instrument, was held by a *bona fide* third party, the fund represented thereby would not be subject to garnishment.

## BRIEF REPLIES TO SUBSCRIBERS.

F. J. P. (Nashville, Tenn.)—"Can fractional silver coin be counted as part of the reserve fund?" *Answer.*—Yes, it is customary to count all the silver except trade dollars.

F. A. R. (N. Y.)—It is not easy to predict what Congress will do with reference to any particular bill, but from present appearances it is scarcely possible that favorable action will be taken during the present session on the bill for the redemption of trade dollars. We would advise you, however, to hold on to your 5,000 trade dollars a little longer.

C. C. (Tennessee)—The following funds are available as a reserve: Gold coin, gold certificates, silver coin (not trade dollars), silver certificates, United States notes, certificates of deposit for United States notes, Clearing-House certificates for specie or lawful money, and the five per cent. redemption fund with the United States

Treasurer to an amount not exceeding five cent. of the circulation. Your bank being a country bank can, of course, keep three-fifths of the reserve—that is, nine per cent. out of the fifteen—with approved reserve agents.

**CLERK (Kansas City).**—"A sterling time draft has been duly accepted. In calculating its value in American money do I take the rate of exchange on day of acceptance or rate on day of maturity?" *Answer.*—Take the rate on day of maturity—i. e., the last day of grace.

**BOOK-KEEPER.**—There are various ways of filing checks. The dealers in bank supplies keep patent check files always in stock. A simple home-made way, and one that has the merit of being very *elastic*, is as follows: Take a drawer about as deep as a check is wide and divide it by partitions running from front to back into section as wide as a check is long—say a little wider to allow for unusually long checks. Set the checks in the sections, on edge, dividing the batches belonging to each customer by thin pieces of card-board with the proper name on the upper right-hand corner. By arranging the names alphabetically any check can easily be found. New accounts can be set in and old ones withdrawn without disturbing the arrangement of the others.

**MARYLAND.**—The reserve cities are eighteen in number, viz: New York, Boston, Albany, Philadelphia, Pittsburgh, Baltimore, Washington, D. C., Richmond, Charleston, New Orleans, Louisville, Cincinnati, Chicago, St. Louis, Milwaukee, Cleveland, Detroit and San Francisco. As Richmond and Charleston are not enumerated among the cities the banks in which are required to keep a twenty-five per cent. reserve, the Comptroller does not allow the National banks there to act as reserve agents, so that, practically, the number of reserve cities is reduced to sixteen.

**CASHIER (Ohio).**—We do not think it necessary for you to write your name on the back of checks and drafts forwarded by your bank for collection. The banks in Boston require written endorsements on checks and drafts, but the New York banks, without exception so far as we know, use the rubber stamp. Where everything is regular we see no objection to using the stamp.

**CONSTANT READER.**—The authorities are not agreed as to whether a date is *essential* to the validity of a check. You must be governed by the special circumstances of each case.

**PAYING-TELLER (Kansas).**—Very convenient trays for holding silver coin can be made by any good carpenter. They should be made in sizes to hold \$500 in dollars and \$250 in fractional coin. The dimensions can be found by piling the coin on the table and measuring it. Have the trays open at one end and a little higher than the piles of coin. This method is better than using bags for several reasons. It is practically self-counting because after counting one pile the others can be evened up without counting but one here and there for proof. The silver is always ready for use at the Teller's counter. Should it be desirable to put up in bags for transportation the proper number of trays can be easily emptied. Trays can be neatly piled on top of each other, taking up little room, and the money can be readily counted in bulk. When desirable the whole lot can be proved with little trouble.

**TROUBLED BOOK-KEEPER.**—You must excuse us for remarking that any bank Book-keeper ought to know better than to cancel a check in such a way as to deface the signature. From the way the signature looks now nobody can tell who wrote it. If you had been in the habit of looking over the contents of your waste-basket before going home the check would never have been lost in the first place.

**BANK MANAGER.**—Your article is well written and interesting, and displays a very creditable amount of original research, but we regret to say it is somewhat too long and abstract for the purposes of the JOURNAL. Thanks for your attention. We return as requested. We shall be obliged for any items of general interest to the banking community.

**TELLER (St. Louis).**—For authority for the statement that the Directors of a bank are not permitted to sanction overdrafts, and that their doing so will not release the Teller's bond, see report of the Comptroller of the Currency for 1885, page 95, section ix., and case there cited (Market Street Bank vs. Stumpe, 2 Mo., App., 545).

## BANKING AND FINANCIAL NEWS:

WITH COMMENTS ON THE MORE IMPORTANT MATTERS. THIS DEPARTMENT ALSO INCLUDES: RAILROAD AND INVESTMENT NEWS, AND A COMPLETE LIST OF NEW BANKS, CHANGES IN OFFICERS, DISSOLUTIONS AND FAILURES.

**Savings Banks Wanted.**—The *Atlanta Constitution* opposes postal savings banks on the ground that they will tend to prevent the establishment of local savings banks. It argues that savings banks would be of much greater benefit to the South than the postal banks, "because the money they would collect would be invested in the South."

This is in accord with the JOURNAL's idea frequently expressed in its pages. Savings banks operated under the safeguards of rigid State laws are wanted in the South as well as in many other sections of the country: *first*, to induce the people to save a part of their earnings, and, *secondly*, that the accumulated savings may be used to benefit the locality where the savers live. This is the true idea of the savings bank system. The postal savings bank scheme, so far as this country is concerned, is wholly fallacious and should not be encouraged.

**A Clever Swindler Foiled.**—The St. Paul National Bank recently received a letter of advice purporting to be from the Stock Growers' National Bank, of Cheyenne, Wyo., saying a sight draft had been issued on the bank's correspondent in New York city in favor of Mr. Charles M. Morton, who, visiting St. Paul as a stranger, was recommended to the St. Paul National Bank. An identification of the payee's signature was enclosed. As the letter of advice and the accompanying note of identification had no complimentary address, while the envelope contained the Cashier's name, together with the fact that the Stock Growers' Bank has no correspondent in St. Paul, the officials became suspicious and sent inquiries to the other city banks. It was found that similar letters had been received by the Second National, Third National, Germania—in fact, nearly every bank in the city. The only difference was that some of the banks received letters containing the name of A. J. Adams instead of Morton. The next morning a well-dressed young man appeared at the St. Paul bank, and presented a sight draft for \$3,500 requesting \$500 on account in cash. He was arrested on a charge of forgery.

Telegrams were sent to the Stock Growers' Bank and answers received that no letters had been issued either to Adams or Morton. The note of identification contained the seal of the bank, which was well calculated to excite suspicion as to the note's genuineness. The draft presented by the forger is an excellent piece of lithographic work and contains all the devices of a genuine draft—even the amount being perforated in the paper after the usual form. The various amounts represented by the letters of advice to the several St. Paul banks aggregates about \$20,000. The letter-heads, seal and printing on the various papers are all clever forgeries, and that the banks were not victimized is due to the shrewdness of the officials rather than to a lack of foresight in the forger. This is the third attempt within a short time to work St. Paul.

**Bank Superintendent Paine.**—Willis S. Paine, the present Superintendent of the Banking Department, State of New York, was appointed by Governor Cleveland in April, 1883. The term of office is three years, so that Mr. Paine's original term expired in April last. It was generally believed that Governor Hill, the present Executive, would renominate Mr. Paine before the adjournment of the Legislature, but as no name was sent to the Senate for confirmation the incumbent of the office will, of course, hold over. It is understood that the republican Senators, who constituted the majority, paid the unusual compliment of indorsing in secret caucus Mr. Paine, who is a democrat. Mr. Paine's record in this position is exceptionally good, and he should be retained. The office should, as far as possible, be kept aloof from political influence. Since assuming charge of the department Superintendent Paine has prosecuted the arduous

and responsible duties with a rare zeal. He has the ability to cope with the various intricate matters connected with the department. With a two weeks' canvass in 1884 for Comptroller of New York Mr. Paine was defeated by a smaller majority than any of his colleagues on the democratic ticket. At the beginning of the present year he was tendered by President Cleveland the Sub-Treasurership of the city of New York. As this is the principal disbursing office of the Government it was a marked compliment. Mr. Paine declined the place because of the responsibility and confinement.

**Amendment to the National Bank Law.**—The following is the text of the Act "to enable National banking associations to increase their capital stock and to change their names or locations," which originated in the House of Representatives, was amended in the Senate and finally received the President's signature and became a law on May 1, 1886:

"Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That any National banking association may, with the approval of the Comptroller of the Currency, by the vote of shareholders owning two-thirds of the stock of such association, increase its capital stock, in accordance with existing laws, to any sum approved by the said Comptroller, notwithstanding the limit fixed in its original articles of association and determined by said Comptroller; and no increase of the capital stock of any National banking association either within or beyond the limit fixed in its original articles of association shall be made except in the manner herein provided.

"SEC. 2. That any National banking association may change its name or the place where its operations of discount and deposit are to be carried on to any other place within the same State, not more than thirty miles distant, with the approval of the Comptroller of the Currency, by the vote of shareholders owning two-thirds of the stock of such association. A duly authenticated notice of the vote and of the new name or location selected shall be sent to the office of the Comptroller of the Currency; but no change of name or location shall be valid until the Comptroller shall have issued his certificate of approval of the same.

"SEC. 3. That all debts, liabilities, rights, provisions and powers of the association under its old names shall devolve upon and inure to the association under its new name.

"SEC. 4. That nothing in this Act contained shall be so construed as in any manner to release any National banking association under its old name or at its old location from any liability or affect any action or proceeding in law in which said association may be or become a party or interested."

**Greenbacks Not Taxable.**—State Treasurer McFetridge, of Wisconsin, in deciding a wager for Edgerton parties in regard to the taxability of Federal bank-notes, commonly called greenbacks, has published some facts that are familiar to readers of the JOURNAL, but which if known to the people of the country generally would materially affect the amount of taxable property. The Revised Statutes of the United States provide that neither bonds, bank-notes nor Federal securities shall be taxed by any State or municipal organization, and the Supreme Court, in a case in 7 Wallace, 26, adjudged the statute valid. About one-half of our paper money is greenbacks, and it is the custom to assess them the same as National bank-notes, gold or silver; also, banks, in making a statement of the average amount of deposits for the purpose of taxation, frequently include in such average the amount of greenbacks deposited with other money, and thereby materially increasing the taxable average. In this way, it is said, a large amount of illegal taxation has been imposed for many years past.

**Too Much Arrogance.**—Judge Poland, of Vermont, spent some time in Washington recently. In talking with a friend one evening about Silas M. Waite, who wrecked the bank at Brattleborough, he said: "Waite's chief trouble was his arrogance. I remember that soon after the National banks were established I was then Chief-Justice of Vermont and President of the St. Johnsbury Bank. One night I was in Montpelier and fell to discussing the proper interpretation of the Banking Act with Waite and Trenor W. Park, who were also bank Presidents. They gave their opinions, and then asked me for mine. I gave it, and it did not agree with Waite's. When I finished Waite burst out with: 'No one but a — fool would ever make that out of it.' The Supreme Court afterward held my view of the law."

**Bank Officers' Association, of Boston.**—The annual meeting of the Bank Officers' Association was held at the Clearing-House, in Boston, on May 19th, for the election of officers and other business. Interesting reports were submitted by the various officers, showing that the first year of the Association has been a promising one. Fifty-two new members were elected, making a total active membership of 372. The old board of officers were unanimously re-elected, as follows: President, A. F. Luke; Vice-Presidents, T. Harlan Breed, Charles W. Stone; Treasurer, H. A. Tenney; Secretary,

**E. A. Stone:** Directors (for two years), Arthur C. Kallack and James E. Patch. The success of this Association conveys a strong suggestion of what might be done in New York and other cities in the same direction.

**Important Consolidation.**—The Dallas National Bank has been consolidated with the City National Bank, of Dallas, Texas. The commodious offices of the former will be used by the new institution, but it will be known as the City National Bank. By this action Dallas secures a first-class bank, with \$250,000 capital and the coöperation of many strong financiers at home and at a distance. The officers are: J. C. O'Connor, President; J. T. Trezevant, Jr., Vice-President, and E. M. Reardon, Cashier. A number of bankers and capitalists of the East and North are among the stockholders.

**Marine National Bank, of New York.**—The Comptroller of the Currency has declared a dividend of 5 per cent. in favor of the creditors of the Marine National Bank, of New York city, which is now payable. This is the sixth dividend paid to the creditors, making 45 per cent. on claims proved, amounting to \$4,469,589.67.

**The Dakota Bankers' Association** will hold its annual convention at Huron on Wednesday and Thursday, June 23d and 24th. The Association is meeting with success and the convention will be largely attended.

#### MISCELLANEOUS BANK AND FINANCIAL ITEMS.

—The *Raleigh News* says that in North Carolina there is not a single savings bank.  
—A new National bank will go into operation at Haverhill, Mass., on July 1st with a capital of \$150,000.

—Petitions in favor of the redemption of the trade dollar have been pouring into both Houses of Congress from all parts of the country.

—There is one concern in this city that makes a great deal of money and doesn't advertise. It is the Mint.—*Philadelphia North-American*.

—A dividend of 15 per cent. is being paid to the depositors of the insolvent Lancaster National Bank, of Clinton, Mass. This is the second dividend.

—Mr. Walker has introduced a bill in the New York Senate to amend the banking laws so as to allow the State banks to issue certificates of deposit.

—Charles H. Rodgers, late President of the Tradesmen's National Bank, of Philadelphia, left personal property amounting to nearly a million and a half dollars.

—The estate of William Bumm will pay only \$3,192 to the broken Shackamaxon Bank, of Philadelphia, out of the \$180,000 or \$200,000 which W. Bumm & Sons owed the bank.

—The withdrawal from circulation of one and two-dollar bills has made it necessary of late for several of the Maine banks to get silver dollars from Boston in \$500 and \$1,000 lots.

—Mr. William H. English has retired from the Presidency of the First National Bank, of Indianapolis, Ind. He will devote himself to his historical work on the law-makers of Indiana.

—The new Northwestern National Bank, of Philadelphia, began business on May 6th. It will erect a fine building at the corner of Girard avenue and the Ridge during the coming summer.

—We are informed that the Security Bank, at Eskridge, Kan., which started last December, is doing well. The President is W. A. Waugh; Cashier, J. Y. Waugh, and Assistant Cashier, G. G. Waugh.

—Strong efforts have been made in the Massachusetts Legislature to have Cincinnati bonds declared a legal investment for the savings banks of the State, but the measure has finally been defeated.

—The Farmers & Merchants' Bank, of Perham, Minn., under the auspices of the Farmers & Merchants' National Bank, of Valley City, Dak., has suspended business after paying all depositors 100 cents on the dollar.

—C. A. Bowers has been appointed Receiver of the City National Bank, of Williamsport, Pa. The total liabilities are \$285,651, including deposits of \$140,500, besides the capital stock of \$100,000. The assets include over \$150,000 of bills discounted, \$33,000 of

bonds and premiums and \$22,000 in real estate. The liabilities exceed the assets by \$51,000. It is believed that the depositors will receive 25 per cent. of their claims in a short time.

— One reason, says the New Orleans *Picayune*, why a man gets up a syndicate to share in a good thing he has discovered is because he fears it will not be a good thing. Stock companies can bear losses. They are used to it.

— Harry M. Nuthall, a young messenger of the Prescott National Bank, of Lowell, Mass., recently decamped with a considerable sum belonging to the bank. He was arrested with a companion in Montreal and brought back.

— The Directors of the wrecked New Brunswick (N. J.) Dime Savings Bank announce the immediate payment of 50 per cent. of the deposits to the depositors, and will make another payment as soon as they can realize on the other assets.

— R. M. Cooley, of Litchfield, Conn., owns a National bank-note issued some years ago by the Springfield (Mass.) National Bank. In printing the note a singular mistake was made. On its face the note appears as a \$10 bill while on its back it counts for \$20.

— Mr. Bennett has introduced a bill in the House of Representatives to repeal Section 3,412 of the Revised Statutes, by which a tax is imposed on notes of State banks used as circulation.

— John D. Skiles, Assignee of Amos S. Henderson, banker, of Lancaster, Pa., has filed his account of the estate. The assets, after deducting all the expenses, are \$92,242 and the liabilities \$330,000. The creditors will receive between 25 and 30 cents on the dollar.

— The quarterly statement of the Ogdensburg Bank, Ogdensburg, N. Y., makes a very favorable showing. The capital stock is \$100,000, and the surplus \$41,027; loans and discounts, \$404,346; deposits subject to check, \$285,492, and demand certificates, \$150,285.

— John Hitz and Charles E. Prentiss, President and Cashier respectively of the defunct German-American National Bank, of Washington, D. C., have been found guilty on five indictments charging them with making false entries on the books of the bank in 1878.

— It is well to inculcate habits of economy in your children by giving them a toy savings bank and teaching them to save up all their spare pennies. Besides, you will find the bank convenient to borrow from at low interest when you get hard up yourself!—*Exchange*.

— The Bank of Marietta, O., closed its doors April 29th, having made an assignment to T. W. Moore and A. T. Nye, in consequence of embarrassment from real estate transactions. The deposits amounted to over \$100,000. It is thought the real estate will be sufficient to pay all claims.

— Tasker H. Marvin, a member of the New York Stock Exchange and a well-known and successful operator for twenty-five years, failed on May 3d. He was interested largely on the bull side, and the decline consequent upon the recent strikes was the immediate cause of his failure.

— A writer draws attention to the fact that the deposits in the savings banks of the State of New York have increased from \$58,000,000 in 1860 to \$437,000,000 in 1885, and remarks that, as the depositors are largely working people, the laborer's lot cannot be altogether as the demagogues represent it.

— In the schedules filed in the matter of the insolvent assignment of Thomas L. Scovill and James H. Briggs, individually and as surviving partners of the firm of G. S. Bennett & Co., stock brokers, of New York, to Sinclair T. Hunting, the liabilities are shown to be \$256,397, nominal assets \$839,106, and actual assets \$35,820.

— George Edwards, 26 years of age, has been arrested in New York, charged with being an accomplice of George Wickes and "Little Joe" Elliott, the forgers, who are in custody in Rochester, N. Y. These three men started out last summer to victimize the banks of Canada and the United States by means of forged drafts, and obtained a large sum before they were headed off at Rochester.

— A bank in Portland, Me., has on exhibition a check drawn last September by Seldon Connor, Pension Agent, on the United States Assistant Treasurer at Boston, on

which payment has been refused because of its "having been drawn more than four months and the drawer being out of service." The Assistant Treasurer says that the check must "be sent to the Secretary of the Treasury for his action."

— An effort is being made by the employees of the banks of St. Louis to have 1 o'clock P. M. named as the closing hour on Saturdays until early fall, and they have the assurance of the officials of nearly all the banks that their wishes in the premises will be granted if all the banks in the city will join in the agreement. It is understood, however, that two or three small banks are likely to refuse to co-operate in the movement, which will defeat the object.

— It is announced that the First National Bank, of Macomb, Ill., will at once relinquish its charter and retire from business. The bank was organized in 1865 and rechartered in February of last year. Its capital is \$100,000 and its surplus over that amount. The reason for retiring is purely personal on the part of its President, C. V. Chandler, the principal stockholder, who desires to quit the business. A private bank has been started in its place by O. C. Ward & Co., of La Porte.

— Being the oldest and largest incorporated bank in the State and the first National bank ever established in Arkansas, Congress passed a law granting the Merchants, National Bank of Little Rock the privilege of adopting the name of "First National," and the bank has accepted the name. Therefore, on and after July 1, 1886, the name of the bank will be the "First National Bank of Little Rock." There will be no change in the officers, liabilities or privileges, nor in any other particular except a change of name. Hon. Logan H. Roots is President of the bank.

— The Worth County Bank, at Northwood, Iowa, established in 1860 by Messrs. Easton, Pike & Hunter, but which for the past twelve years has been mainly presided over by Mr. T. R. Crandell, is about to pass into the hands of Messrs. Andrews & Carson, who are represented as being gentlemen of undoubted energy, integrity and high financial standing. During his residence at Northwood Mr. Crandell has conducted a safe and conservative banking business, and his name has been synonymous with honorable dealing. The delicate state of his health necessitated this business change.

## B. R. AND INVESTMENT NEWS.

### *New Issues.*

**NEW YORK STOCK EXCHANGE LIST.**—The following securities have been added: Rome, Watertown & Ogdensburg Railroad—837 first consolidated mortgage bonds of \$1,000 each, making \$837,000 now on the list.

Albany & Susquehanna Railroad—117 first consolidated 6 per cent. bonds of \$1,000 each, making \$5,117,000 now listed.

Toledo, Ann Arbor & North Michigan Railroad—1,260 first mortgage 6 per cent. convertible 40-year coupon gold bonds, to be known as "Toledo, Ann Arbor & Grand Trunk Railway bonds."

Rensselaer & Saratoga Railroad—\$3,000,000 additional capital stock, making the total amount \$10,000,000. This new stock is to provide for betterments and improvements.

Rochester & Pittsburgh Railroad Company—Certificates of the Union Trust Company representing stock deposited for exchange into new stock; engraved certificates only to be a delivery.

Fort Smith & Van Buren Bridge Company—\$475,000 first mortgage 6 per cent. sinking fund coupon gold bonds, Nos. 1 to 475 inclusive; principal and interest guaranteed by the St. Louis & San Francisco Railway Company.

Memphis & Charleston Railroad Company—\$1,000,000 6 per cent. 40-year gold bonds, Nos. 1 to 1,000, to be called "Memphis & Charleston 6 per cent. gold bonds of 1924."

Louisville, New Albany & Chicago Railway Company—\$2,500,000 6 per cent. consolidated mortgage gold bonds, due 1916, Nos. 1 to 2,500 inclusive. These bonds are part of an authorized issue of \$10,000,000, and are secured by a mortgage covering the entire property and franchise of the company, together with proprietary rights in the Chicago & Western Indiana and Belt Railway companies.

**THE DENVER & RIO GRANDE RAILROAD** has been foreclosed under the consolidated 7 per cent. mortgage. In the reorganization the common stock remains as it is, at \$38,000,000, and for the assessment of \$6 a share thereon \$12 of new preferred stock will be issued. The \$2,500,000 general mortgage bonds (junior to the consols) receive 90 per

cent. of new preferred stock, and for the old consolidated 7 per cent. bond a new 4 per cent. fifty-year gold bond is given dollar for dollar and \$700 of preferred stock to represent overdue coupons and reduction of interest. The sale of the road is fixed for the 12th of July.

**NEW YORK CITY.**—A recent decision of the Court of Appeals that the sinking fund of the city of New York is not a part of the city debt removes the obstacle to the issue of bonds for the purpose of continuing the water-front improvement. The suit was brought by holders of about \$11,000,000 of New York city bonds and stock to restrain the Sinking Fund Commissioners from issuing \$2,000,000 of Dock Department bonds. The plaintiff asserted that the issue of such bonds is prohibited by the recent constitutional amendment, which limits the amount of indebtedness in any city having 100,000 inhabitants or more to an amount not exceeding 10 per cent. of the assessed valuation of the real estate subject to taxation.

**KINGS COUNTY, N. Y.**—Bids for a new Kings County loan of \$410,000 were recently received by County Treasurer Adams. The loan is divided into three installments—the first of \$133,000, due in 1902; the second of \$133,000, due in 1903, and the third of \$133,000, due in 1904. On these Vermilye & Co., of New York, bid 114.30, 115.10, and 116.03, respectively, and the bids were accepted.

**DECATUR & OHIO RIVER.**—A new railroad known as the Decatur & Ohio River has been incorporated with a capital of \$750,000, of which \$511,400 has been subscribed to build from Fort Wayne through Allen and Adams counties into Van Wert County, Ohio, to Wilbline.

**THE FORT SMITH, ELDORADO & NORTHWESTERN COMPANY**—capital \$500,000—will construct a standard-gauge road and telegraph lines from a point on the Southern line of Kansas, near Chautauqua County, in a northwesterly direction, a distance of 30 miles.

**THE NEWTON & NORTHWESTERN RAILROAD COMPANY**—capital \$4,500,000—which has secured a charter, will run from a point in Harvey County, Kan., in a northwesterly direction to some point on the west line of the State, a distance of 300 miles.

**MOBILE & OHIO.**—The Directors of the St. Louis & Cairo division of the Mobile & Ohio recently held a meeting to arrange for the issuing of \$4,000,000 bonds, voted for by the company, which will be shortly done. The mortgage has already been recorded.

**MICHIGAN CENTRAL RAILROAD.**—Messrs. Blake Bros. & Co. and Vermilye & Co. have been awarded \$1,000,000 of this company's 6's, due 1900, issued to retire \$1,000,000 Grand River Valley 8 per cent. bonds, due July 1, 1896.

#### Railroad Reports.

**KANSAS CITY, FORT SCOTT & GULF.**—The earnings for the year ended December 31st were as follows:

	1884.	1885.
Total gross earnings.....	\$2,422,443	\$2,546,525
Operating expenses and taxes .....	1,407,668	1,558,307
Net earnings .....	\$1,014,750	\$988,218

Following is a summary of income account:

	1884.	1885.
Total income.....	\$1,042,145	\$988,218
Total disbursements.....	1,046,213	964,461

Balance ..... Deficit, \$4,068 Surp., \$23,750

Dividends at the rate of 8 per cent. were paid on the preferred stock and  $\frac{2}{3}$  on the common in 1885.

**LAKE SHORE & MICHIGAN SOUTHERN.**—The report of the year ended December 31st shows that the earnings were as follows:

	1884.	1885.
Total gross earnings .....	\$14,843,564	\$14,138,505
Total operating expenses.....	9,133,521	9,287,537
Net earnings .....	\$5,710,063	\$4,845,968

Following is a summary of income account:

	1884.	1885.
Total income.....	\$5,710,063	\$4,845,968
Total disbursements.....	3,720,970	4,117,456

Surplus for dividend..... \$1,989,993 \$728,512

In 1884 dividends were reduced from 8 per cent. to 5, the amount paid being \$3,478,325, leaving the deficit for the year \$453,932. No dividend was paid in 1885.

The statement for the quarter ended March 31, 1886, shows net earnings of \$1,292,823 and surplus of \$397,497, against a deficit of \$62,607 in the first quarter of 1885.

ST. LOUIS & SAN FRANCISCO.—The report for the year ended December 31, 1885, shows that the earnings compare as follows with those of 1884:

	1884.	1885.
Total earnings.....	\$4,643,596	\$4,383,406
Operating expenses.....	2,135,378	1,949,744
Net earnings.....	\$2,508,218	\$2,433,662
Following is a summary of income account:	1884.	1885.
Total net income.....	\$2,323,054	\$2,453,444
Total disbursements.....	2,141,445	2,070,947
Balance, surplus.....	\$381,609	\$382,497

The disbursements include dividends of 7 per cent. paid on the first preferred stock. During the year the common stock was increased from \$10,500,000 to \$15,500,000 and the bonded debt from \$23,893,000 to \$26,026,000.

DENVER & RIO GRANDE.—The report of Receiver Wm. S. Jackson for the year ended December 31st makes the following showing:

	1884.	1885.
Gross earnings.....	\$5,552,108	\$4,119,053
Working expenses.....	3,758,529	3,966,273
Net earnings.....	\$1,793,573	\$2,138,780

The percentage of expenses to earnings in 1885 was 64.31 against 67.70 in 1884.

CANADIAN PACIFIC.—The report for the year ended December 31, 1885, gives the following comparative showing of earnings:

	1884.	1885.
Total gross earnings.....	\$5,750,521	\$4,368,498
Total expenses.....	4,558,630	5,143,276
Net earnings.....	\$1,191,890	\$3,225,216

The total fixed liabilities are \$61,884,013; add ordinary share capital \$65,000,000; total capital \$126,884,013. The annual fixed charges amount to \$3,110,494. These fixed charges represent 4,388 miles of completed railway; a completed telegraph system, etc.

MICHIGAN CENTRAL.—The earnings for the year ended December 31st were as follows:

	1884.	1885.
Total gross earnings.....	\$11,659,077	\$10,707,394
Operating expenses.....	8,950,132	8,014,008
Net earnings.....	\$2,699,945	\$2,692,791

The income account has the following totals:

	1884.	1885.
Total income.....	\$2,779,808	\$2,785,007
Total disbursements.....	2,659,060	2,675,432
Surplus.....	\$120,758	\$309,575

The balance to the credit of income account on December 31, 1885, was \$916,868. No dividends have been paid since 1883.

#### Miscellaneous Investment News.

THE CHESAPEAKE & DELAWARE CANAL CO. sends the following notice from its office in Philadelphia: "Holders of certificates of the mortgage loan of this company, which matures July 1, 1886, are hereby notified that on producing their certificates at this office on or before June 15, 1886, and procuring them to be stamped with an agreement (as stated below) to extend the term of the same till July 1, 1916, at the rate of 5 per cent. interest, they will be entitled, in the order of the presentation of the certificates, to have the term so extended. This privilege will cease, at the option of the company, after the 15th day of June, 1886, and sooner if the certificates presented for extension shall before that time reach the amount of one million nine hundred and seventy-five thousand dollars, to which amount the extension of the said loan is limited. The excess over one million nine hundred and seventy-five thousand dollars will be paid at maturity and extinguished. Certificates within the limit named, not presented on or before June 15, 1886, will be purchased at this office at par with funds furnished by the Home Improvement Company, hereafter to be called The Investment Company of Philadelphia, who have agreed to buy and extend the same."

## SAVINGS BANKS IN FRANCE.

*Editor Rhodes' Journal of Banking:*

A few items of information gleaned from *Le Petit Journal*—issues of the 10th and 23d ultimo—in regard to the savings banks of France may be of interest to your readers.

The Bank of Deposits & Trusts, a National institution under the direct supervision of Parliament (the Senate and Chamber of Deputies) receives the money deposited in all the savings banks of the Republic and allows interest thereon at the rate of 4 per cent. The money thus received enables the Managers of the savings banks to meet the expenses of administration and pay the depositors  $3\frac{1}{4}$  to  $3\frac{3}{4}$  per cent. The National bank to which these funds are consigned is authorized to invest them only in Government bonds (*rentes*) or other obligations guaranteed by the Government, the value of which is now so high.

The Commissioners say in their annual report just published that they cannot realize the 4 per cent. which they pay to the savings banks; hence the Government is managing the savings deposits at a loss. They therefore recommend that the maximum amount of any one account, now 2,000 francs (\$387), be reduced to 1,000 francs, and that the rate of interest paid to the savings banks be also diminished. This recommendation has produced ferment and discussion.

The Chamber of Deputies is now considering a project for changing the law so as to allow the Commissioners of the National bank to invest the savings of the nation in loans and securities that will yield a larger income than Government bonds—an income that will justify the payment of 4 per cent., as now, to the savings banks. *Le Petit Journal* opposes this scheme on the ground that it will tend to impair public confidence in the savings banks. As an alternative, it says, a better and more feasible way to meet the present exigency is to reduce the interest so that the amount paid to the savings banks shall not exceed the income attainable from *rentes* or Government bonds. The *Journal* would not reduce the maximum of individual accounts but would have the savings banks pay less interest on large than on small accounts, as is the practice in the United States and in England—a plan that would not materially diminish the dividends now paid to small depositors.

The savings banks are awaiting with some solicitude the final action of the Government in regard to the twenty-three hundred million (23,000,000,000) francs which the National Bank of Deposits & Trusts is managing for the five million depositors.

BELOIT, Wis., May 21, 1886.

S. T. MERRILL.

## HOME STUDY OF FINANCE.

The following from a well-known business man contains an important suggestion:  
*Editor of Rhodes' Journal of Banking:*

SIR:—From among the young men now acting as bank clerks are to come those who shall administer the stupendous aggregate of money values which are to roll up in the coming era. Would it not be a wise thing to set forth in your JOURNAL a list of such books as these future bankers should read, and also indicate a course of study which they should pursue to adequately fit them for the great responsibilities ultimately to be thrown upon them? If the Chautauqua system of the study of literature has proved that it filled a want in our social life, could not a similar system for the study of finance be inaugurated with great benefit? If the Wharton School of Finance at the University of Pennsylvania has merit, cannot its course be pursued at home under a corps of tutors designated for that purpose by some competent authority? Let me suggest that you take the matter in hand. When Napoleon once addressed a military school his remarks were as sententious and thrilling as when he addressed his soldiers in Egypt: "Frenchmen! forty centuries look down upon you!" He merely said to the young men: "The loss of this day's lesson may result in the loss of a battle." And so to the future bank President it might be said: "Your failure to learn this fact of finance may result in the failure of your bank."

GERMANTOWN, Philadelphia, June 1, 1886.

H. J. S.

## NEW BANKS, CHANGES, FAILURES, ETC.

**New National Banks.**—The Comptroller of the Currency furnishes the following statement of National banks organized since our last report:

**NEW CASTLE.**—Merchants' Bank of Halifax; F. Yeoman, Agent, in place of C. J. Butcher.  
**PICTOU.**—Pictou Bank; Jeffery McColl, President, in place of R. P. Grant.

# THE BANKER'S GAZETTE.

## The Money Market and Financial Situation.

NEW YORK, June 1, 1886.

The almost total collapse of the strikes which were such a formidable feature of the business situation a month ago has thrown a wholly different aspect upon affairs. The outlook is comparatively clear and hopeful. There are doubtful factors in the situation, however, the most noticeable of them being the condition of the foreign trade and the consequent movement of gold abroad. The latest features show comparative improvement in the exports of domestic productions and a falling off in the imports, and we may reasonably look for a decided increase in the exports within a month or two. An English authority of the highest standing confirms our view of this matter as explained hitherto. The improvement in trade here, which began about the middle of last year, caused an increase in prices that, in the absence of any improvement abroad, has resulted naturally in an increase in merchandise imports and a decline in exports. Business in Europe has now begun to feel the impulse of activity here, however, and a more satisfactory exchange of commodities ought to be reached soon.

The reserve of the Bank of England is down to a very low point, being less than £20,000,000 sterling, or £7,000,000 less than at this time last year, and the Bank of France keeps hold of its recent large accumulations, so that, other things being favorable, it has been very easy to draw gold from this country. The net exports of that metal during April were, according to the official statistics, nearly \$4,500,000, and from January 1st to May 1st \$19,000,000. The amount for the past month was about \$5,000,000 additional.

Of course the dealings in American securities abroad have a large effect on the gold current. During the recent period of dullness and depression in the stock market American stocks and bonds were sold in London, and the present improvement has not resulted in large purchases as yet. It is well known that the dealings in our railroad securities form an important feature of the London market. This appears to be a source of strength when stocks are high in New York and of weakness when they are low. The result of the large transactions in properties so far removed from the market they are dealt in appears to make the fluctuations in price wider than they would otherwise be.

The exchanges at the Clearing-Houses of the country continue to show a gratifying increase over the amounts for last year. The *Chronicle's* tables show that the aggregate for the whole country for the week ended May 22d was 10.8 per cent. larger than for the corresponding week of 1885, and, leaving New York out of the account, the increase was 18.5 per cent.

The business of the railroads shows a more moderate advance from last year. The aggregate net earnings of 21 railroads for the first three months of 1886 and of 5 railroads for the first four months were \$23,514,860, against \$21,428,338 for the same railroads during the corresponding months of last year, an increase of \$2,086,522, or nearly 10 per cent. This is making a better showing than the gross earnings which are published from week to week, and probably better than most people are aware of. But the stock market appears to be now responding to it sufficiently well.

THE FOREIGN EXCHANGE market is rather quiet. The rates for sterling have been fluctuating near or up to the gold exporting point for some days. Following are the posted and actual rates of the principal dealers: Bankers' sterling, 60 days, nominal, \$4.88; sight, nominal, \$4.90; 60 days, actual, \$4.87 @ \$4.87½; sight, actual, \$4.88¾ @ \$4.89; Cable transfers, \$4.89¼ @ \$4.89½; Prime commercial sterling, long, \$4.86¼ @ \$4.86½; Documentary sterling, 60 days, \$4.85¾ @ \$4.86; Paris, bankers', 60 days, 5.18¼ @ 5.17½; sight, 5.15½.

@5.15; commercial, 60 days, 5.19 $\frac{3}{8}$ @5.18 $\frac{3}{4}$ ; sight, 5.16 $\frac{3}{8}$ @5.16 $\frac{1}{4}$ ; Antwerp, commercial, 60 days, 5.20@5.19 $\frac{3}{8}$ ; Swiss, bankers', 60 days, 5.18 $\frac{1}{8}$ @5.17 $\frac{1}{2}$ ; sight, 5.15 $\frac{5}{8}$ @5.15; Reichsmarks (4), bankers', 60 days, 95 $\frac{3}{8}$ @95 $\frac{1}{2}$ ; sight, 95 $\frac{1}{4}$ @95 $\frac{3}{8}$ ; Commercial, 60 days, 95 1-16@95 3-16; sight, 95 7-16@95 9-16; Guilders, bankers', 60 days, 40 5-16@40 $\frac{3}{4}$ ; sight, 40 $\frac{1}{2}$ @40 9-16; Commercial, 60 days, 40 8-16@40 $\frac{1}{4}$ ; sight, 40 5-16@40 $\frac{3}{8}$  Paris dispatches quote exchange on London 25f. 25c.

The following shows the posted rates for prime bankers' sterling bills on London at 60 days, and sight, cable transfers, and prime commercial sterling, together with exchange on Paris on May 1st, the changes in the rates as they occurred during the month, and the highest and lowest during the months of April and May, 1886:

APRIL.	BANKERS		Cable		PARIS

COINS AND BULLION.—Bar silver is quoted in London at 45 $\frac{1}{4}$ d. per ounce. At this quotation for silver the bullion value of the standard dollar is 76.51 cents.

The following are New York quotations in gold for other coins and bullion:

Trade dollars.....	\$ 78 @ \$ .	Victoria sovereigns.....	\$4 85 @ \$4 90
New (412 $\frac{1}{2}$ grains) dollars	99 $\frac{3}{4}$ @ 1 00	Twenty francs.....	3 85 @ 3 90
American silver $\frac{1}{4}$ s & $\frac{1}{8}$ s.	99 $\frac{3}{4}$ @ 1 00	Twenty marks.....	4 74 @ 4 80
American dimes.....	99 $\frac{3}{4}$ @ 1 00	Spanish doubloons.....	15 55 @ 15 65
Mutilated U.S. silver coin,		Mexican doubloons.....	15 55 @ 15 65
per oz.....	88 @ .	Mexican 20-pesos.....	19 50 @ 19 60
Mexican dollars.....	78 $\frac{1}{4}$ @ 79 $\frac{1}{4}$	Ten guilders.....	3 96 @ 4 00
Peru soles & Chilian pesos	71 $\frac{1}{4}$ @ 73	Fine silver bars, per oz....	98 $\frac{5}{8}$ @ 99 $\frac{1}{4}$
English silver.....	4 80 @ 4 85	Fine gold bars par @ $\frac{1}{4}$ % premium on the	
Five francs.....	92 @ 95	Mint value.	

THE TREASURY.—The following table will show the condition of the Treasury, as regards the amount of gold and silver held, on the 1st of June, 1886, and, for comparison, on the 1st of April and May, 1886, with the amounts of certificates outstanding and the balances of coin owned by the Treasury:

	June 1, 1886.	May 1, 1886.	April 1, 1886.
Gold coin and bullion.....	\$236,424,734	\$240,580,582	\$242,159,004
Gold certificates outstanding.....	80,120,025	84,715,225	91,205,830
Gold owned by Treasury.....	\$156,304,709	\$155,865,307	\$150,953,174
Silver dollars and bullion.....	\$180,199,806	\$178,485,024	\$177,000,984
Silver certificates outstanding.....	89,184,129	90,733,141	89,855,286
Silver owned by Treasury.....	\$91,015,677	\$87,751,883	\$87,145,698

There has been but a trifling change in the net gold balance since May 1st, but the net silver is \$3,250,000 greater. On May 22d the Acting Secretary of

The Treasury issued the one-hundred and thirty-seventh call for the redemption of bonds. The call is for \$4,000,000 of the 3 per cent. loan of 1882, and notice is given that the principal and accrued interest will be paid at the Treasury of the United States in Washington on July 1st, and that the interest on said bonds will cease on that day. Following is a description of the bonds: 3 per cent. bonds issued under the Act of Congress approved July 12, 1882, and numbered as follows: \$50—original No. 148 to original No. 270, both inclusive; \$100—original No. 1,884 to original No. 2,006, both inclusive; \$500—original No. 844 to original No. 907, both inclusive, and original No. 224 to original No. 4,225, both inclusive; \$1,000—original No. 6,195 to original No. 7,385, both inclusive, and original No. 23,720 to original No. 31,729, both inclusive; \$10,000—original No. 13,345 to original No. 13,624, both inclusive; total, \$4,000,000.

**NATIONAL BANK CIRCULATION.**—The National banks have reduced the amount of United States bonds held by the Treasurer to secure circulation by 1,540,550 during the past month. Only a comparatively small amount of  $\frac{1}{2}$  and 4 per cents were purchased to replace 3 per cents called for payment. The amount on deposit with the Treasurer to redeem notes of insolvent and liquidating banks and banks retiring circulation is \$61,252,614, an increase of 3,032,571 during May and of \$23,695,801 since June 1, 1885. The amount of notes outstanding at this date is \$311,510,245, a decrease of \$2,032,339 since May 1st and of \$6,914,178 since June 1, 1885.

The following will show the amount of each description of bonds held by the Treasurer to secure National bank circulation on or about the dates indicated:

	June 1, 1886.	May 1, 1886.	April 1, 1886.	Mar. 1, 1886.
Currency 6 per cents.....	\$3,565,000	\$3,565,000	\$3,565,000	\$3,515,000
$4\frac{1}{2}$ per cents .....	49,874,250	49,599,750	49,243,350	48,967,650
4 per cents .....	114,233,400	114,114,300	114,216,550	115,438,350
3 per cents .....	113,134,750	118,169,000	122,691,750	129,336,900
Total. ....	\$280,907,400	\$285,447,950	\$289,716,650	\$297,257,900

**GOVERNMENT BONDS.**—The following table shows the closing prices or closing bids at the New York Stock Exchange for the principal issues of government bonds on each day of the month of May and the highest and lowest during the month. Actual sales marked \*:

+ Ex-Interest.

**RAILROAD AND MISCELLANEOUS STOCKS** are buoyant on a moderate scale. The present bull movement is credited to the action of cliques, especially one imposed of Chicago men who are operating in the granger stocks; but some recovery was natural after the depression caused by the labor troubles.

The following table shows the highest, lowest and closing prices of the active stocks at the New York Stock Exchange in the month of May, the highest and lowest since January 1, 1886, and also during the year 1885:

	MAY, 1886.			SINCE JANUARY 1, 1886.		YEAR 1885.

## BANKERS' OBITUARY RECORD.

**Adams.**—The death is announced of the Hon. Charles Adams, Jr., President of the North Brookfield (Mass.) Savings Bank.

**Bennett.**—Died, at Cambridge, Mass., on May 20th, Jonas Bennett, who was for many years well known in financial circles in Boston, having been Cashier successively of the Faneuil Hall and Third National Banks, and subsequently President of the Fourth National Bank. He retired from active business about seven years since.

**Dodge.**—Harry E. Dodge, of the banking firm of Clark, Dodge & Co., of Wall street, New York, died June 3d, at the age of 43 years. He had been a member of the Stock Exchange for twenty years, where he served two terms as a Governor.

**Glendining.**—George W. Glendining, Cashier of the Stamford (Conn.) National Bank, died about May 7th. Professor George B. Glendining, his father, who was a Director of the same bank, was buried at the same time.

**Gordon.**—Advices from Fredericksburg, Va., mention the death of W. K. Gordon, of the banking house of Conway, Gordon & Garnett, of that place.

**Hamilton.**—The death is announced of H. B. Hamilton, of the firm of Hamilton, Job & Co., of Corvallis, Ore.

**Marshall.**—James C. Marshall, who was formerly for many years President of the Marine National Bank, of Erie, Pa., died May 6th, at the age of 37.

**Mickle.**—Robert Mickle, Cashier of the Union National Bank, of Baltimore, died May 10th, of general debility, aged 38 years. He occupied a high position in financial circles, having been connected with banking interests for over fifty years.

**Muhlenberg.**—Dr. Helster H. Muhlenberg, of Reading, Pa., died May 5th, aged 75 years. During the panic of 1837 he was called to take charge of the Farmers' Bank of that place and was chosen Cashier, in which capacity he served until January last.

**Patten.**—Claudius B. Patten, Cashier of the State National Bank, of Boston, Mass., since 1867, and a valued contributor to the JOURNAL, died May 22d. A sketch of the life of the deceased will be found on page 417.

**Richardson.**—The Hon. George C. Richardson, for many years head of one of the leading dry goods commission houses of Boston, and a Director of the National Union Bank of that city since 1863, died May 20th, aged 78 years.

**Sperry.**—We have been notified of the death of Jared Sperry, President of the Knox County Savings Bank, of Mt. Vernon, Ohio.

**Tabor.**—Stephen H. Tabor, Cashier of the Rhode Island National Bank, of Providence, died April 20th, aged 65 years.

**Withey.**—Judge Solomon L. Withey, of Grand Rapids, Mich., died April 25th, at San Diego, Cal., where he had gone in search of health in January last. He was a Director of the Old National Bank (successor to the First National), of Grand Rapids, at the time of his decease, and had been at different times President of that institution.

**Woerishoffer.**—Charles F. Woerishoffer, of the banking firm of C. F. Woerishoffer & Co., of New York, and one of the largest operators at the New York Stock Exchange, died May 9th. He generally favored the bear side of the market and accumulated a large fortune which he dispensed with princely generosity.

---

**NEW COUNTERFEITS.**—Five-dollar bank-notes raised to tens by painting have been put in circulation in Trenton, N.J. They are of the new issue, bearing Garfield's vignette.

A new counterfeit five-dollar bill was reported to have suddenly made its appearance in New York and Brooklyn recently by which many people had been victimized. The note purports to have been issued by the Central National Bank, of Norwalk, Connecticut, and bears the charter number 404, series of 1882. There is a bust of Garfield on the left end of the face of the note, the engraving of which is considerably blurred, but the paper being good the defect in the engraving would not be readily noticed if the note was soiled. Careful bank Tellers, however, will not be deceived by it.

## CHRONOLOGICAL RECORD.—MAY, 1886.

1. SATURDAY.—Decrease in the public debt in April, \$10,965,887.—Discount rate on commercial paper in New York,  $3\frac{1}{2}$  per cent.; call loans,  $1\frac{1}{2}$  per cent.—Discount rate in London on 60 days to 3 months' bank bills,  $2\frac{1}{4}$  per cent.; on short loans,  $1\frac{1}{4}$  per cent.—A movement of workmen for 8 hours' daily labor began throughout the country.

THE HOUSE OF REPRESENTATIVES has refused to pass an amendment to the Sundry Civil Appropriation bill, ordering the Secretary of the Treasury to renew the issue of \$1 and \$2-notes, by so doing supporting the policy of the Secretary to circulate the silver dollars. At the same time the House has accepted an amendment offered by Mr. Bland, authorizing and directing the Secretary to issue silver certificates of the denominations of \$1, \$2 and \$5 to the amount of the surplus of standard silver dollars in the Treasury. These certificates are to be on the same footing as to redemption and reissue as the larger denominations provided for in the bill of February 28, 1878, and they are to be paid out for the appropriations made in the bill and for all other expenses and obligations of the Government. The apparent effect of the enactment of this clause will be that the currency will soon be inflated to the amount of about \$90,000,000, which is about the sum of the silver dollars now in the Treasury uncovered by certificates. It is a measure to which conservative people would have no decided objection under the present circumstances if the further coinage of the dollars were ordered to be stopped. But, with the coinage continued, it only increases the danger that the currency will be reduced to the silver standard and that the gold will disappear from use. Since 1878 we have coined 233,000,000 silver dollars, and the price of the metal is lower than ever before. There is no reason in continuing this course. The country has all the silver it can handle and a good deal more. The inconvenience of the coins has put a check upon their use hitherto, but the new certificates will do away with this.

A WRITER IN THE BRITISH *Quarterly Review*, speaking of the National banks of the United States, says : "The system upon which their note issue is founded, requiring every note issued to have security of a solid class—that of the funded debt of the United States—behind it, besides making provision for cashing them in specie on presentation, appears to be one of the very best, as well as the simplest, the world has yet seen. It is far superior to that in force in this country." This is the opinion of a disinterested foreigner upon our National banking
